The result coincides with the findings of Ekaterini et al. (2022) and Irvine (2019) who both suggested that teacher experience significantly affects teacher effectiveness, primarily during the initial years of a teacher's career. They argued that improvement generally occurs over the first 4 to 5 years but note that this is an average, with some less experienced teachers improving much more rapidly than others. Pama (2023) elucidated that while experience matters, more is not always better. The relationship between teaching experience and effectiveness is nonlinear, with the greatest gains in the first few years. After that, factors like the teaching environment, subject area, and individual teacher characteristics become more important in determining the effectiveness than total years of experience alone.

On another note, the t-test result of the comparison on the teachers' performance when grouped according to ethnicity. The study categorizes teachers into eight ethnic groups: Bukidnon, Higaunon, Manobo, Matigsalog, Talaandig, Tigwahanon, Umayamnon, and a category for those identifying as none of the above. The t-value obtained from the analysis is 0.439 and a significance level (p-value) of 0.853. Given that the p-value is significantly higher than the conventional threshold of 0.05, the differences in teachers' performance across different ethnic groups are not statistically significant. The study cannot fully determine the effect of ethnicity because majority of the respondents are not part of the Bukidnon tribe. This result implies that teacher performance does not significantly differ based on ethnicity within the respondents of this study. The similarity in performance across ethnic groups suggests that factors other than ethnicity are playing a more critical role in influencing teacher effectiveness.

The results align with the findings of Steinberg and Sartain (2020) that ethnicity does not significantly influence their performance because the professional environment, training, and support systems provided to teachers are designed to be inclusive and standardized across all ethnic groups. This standardization ensures that all teachers have access to the same resources, professional development opportunities, and support networks, thereby creating a level playing field where individual performance is more influenced by these professional factors rather than ethnic background (Joshi & James, 2022).

Finally, the t-test result of the comparison on the teachers' performance when they are grouped according to their attitude towards supervision. The study categorizes teachers into four groups based on their attitudes: very negative, negative, positive, and very positive. The t-value is 23.216 and the significance level (p-value) is 0.000, indicating that the differences in teachers performance are statistically significant. The results imply that a teacher's attitude towards supervision has a significant impact on their performance. Teachers with very positive attitudes towards supervision perform markedly better than those with negative or very negative attitudes. This suggests that a constructive and receptive attitude towards supervision can enhance teacher performance, potentially due to greater openness to feedback, willingness to improve, and a more collaborative relationship with supervisors. Teachers who have positive attitude towards supervision, they are more likely to feel confident in their abilities and more receptive to feedback and guidance from supervisors.

Buagas and Ching (2023) posited that the teachers' positive attitudes toward instructional supervision are positively correlated with their job performance. When teachers view instructional supervision as a tool for professional growth and improving student performance, it leads to better teaching outcomes. Similarly, Echeche (2022) asserted that the impact of positive attitudes on supervision can be seen in the way teachers approach their work. Teachers who have a positive view of supervision are more likely to be proactive in seeking feedback and support, and to be open to new ideas and strategies. This can lead to a more collaborative and dynamic teaching environment, where teachers feel empowered to take ownership of their professional development and to make a positive impact on student learning. Moreover, Dingal (2023) expounded that effective supervision practices by master teachers and supervisors can improve teachers' perceptions of supervision, which in turn enhances their job performance. Felisilda and Malaga (2019) added that the relationship between instructional supervisory practice and teacher job performance is mediated by teachers' attitudes, meaning that positive attitudes help translate effective supervision into improved teaching. Teachers who perceive supervision as meeting their professional needs, fostering collaboration and trust, and providing support and guidance tend to have more positive attitudes.

Research Question 6. Based on the findings of the study, what instructional supervisory plan can be designed?

Table 6. Matrix of School Instructional Supervisory Plan

Year 1							
Areas of Concern	**Objectives**	**Strategies/Activities**	**Time Frame**	**Persons Involved**	**Source of Funds**	**Estimated Budget**	**Expected Outcome**
Professional Growth and Development .	Publishes research or articles in peer-reviewed journals or educational publications related to	Publishes research or articles in peer-reviewed journals Seminar workshops on crafting action research	Whole year round	Master Teacher School Principal Division Office Key Officials	MOOE PTA Fund	100, 000.00	Publish research on international journals Completion of online courses Annual professional development evaluation

	their field of expertise.	Workshops, seminars, and online courses.					
Mentoring on Conduct action research	Conduct in-depth studies or action research	Provide training on action research methodologies. Organize action research symposiums to share findings. Increase teacher participation in action research projects. Improve instructional practices based on research findings**.**	Whole year round	Master Teacher School Principal Division Office Key Officials	MOOE PTA Fund	100, 000.00	Research-based instructional materials Innovative teaching strategies embedded in the lesson exemplar Certificate of trainings Improve students data by applying research findings Completed and implemented action research

Year 2							
Areas of Concern	**Objectives**	**Strategies/Activities**	**Time Frame**	**Persons Involved**	**Source of Funds**	**Estimated Budget**	**Expected Outcome**
Professional Growth and Development	Presents conferences or workshops on the topics related to their field of expertise Equip teachers with the skills to analyze student data Use data to set informed and realistic expectations for the students	Data-Driven Instruction Planning Session Group discussions and activities. Hands-on exercises and simulation Peer-to-peer sharing and feedback.	Throughout academic year	Master Teacher School Principal All teachers (grouped according to their field)	MOOE PTA Fund	50, 000.00	Sample data sets Lesson plan Lesson study results
Supervisory skills on mentoring teachers	Conduct echo seminars in content and self-difficulties	collaborative planning and co-teaching Engage teachers in problem-solving and discussion					Reflective journal Teachers portfolio Students progress report chart

		Encourage teachers to reflect on their experiences, challenges, and growth					

Year 3							
Areas of Concern	**Objectives**	**Strategies/Activities**	**Time Frame**	**Persons Involved**	**Source of Funds**	**Estimated Budget**	**Expected Outcome**
Professional Growth and development	Assist teachers to enhance professional growth and development. Facilitate professional learning communities on advancing teaching practices and pedagogy	Learning action cell sessions In-service training on content and pedagogy Demonstration teaching to enhance teaching practices Class monitoring and evaluation Lesson planning for effective teaching strategies	Throughout academic year	Master Teachers School Principal All teachers (grouped according to major) Division Office Key Officials	MOOE PTA LGU	100,000.00	Post training report and evaluation Teacher-made lesson plans Class observation rating Instructional plan
Supervisory skills on mentoring teachers	Evaluate teacher-made tests and interpret results	Training for teachers in developing high-quality Reviewing and providing feedback on teacher-made tests Analyzing test results	Throughout academic year	Master Teachers School Principal All teachers Division Office personnel	MOOE PTA LGU	100,000.00	Post training report Quarterly test analysis result Test questions with table of specification

Conclusions

From the findings and discussions outlined, the following conclusions are drawn:

1. The characteristics of Master Teachers and teachers within the Division of Valencia City demonstrate a diverse spectrum, encompassing gender imbalance, strong educational commitment, mid-career stability, and ethnic diversity. Moreover, the positive attitudes towards instructional supervision underscore its perceived importance in

enhancing teaching practices and fostering professional growth within the educational community.
2. The excellence of Master Teachers' instructional supervisory skills in pedagogical dimension, and across various domains, proves their profound ability to guide and enhance teaching practices. This mastery not only ensures effective delivery of curriculum but also fosters continuous professional growth among educators.
3. The excellence of teachers' teaching performance in the area of teaching and learning process, and across various dimensions, reflect a commitment to excellence in education. It further affirms their significant contributions to student success and the broader educational community.
4. The significant relationship between Master Teachers' instructional supervisory skills and teachers' teaching performance emphasizes the crucial role of effective instructional supervision in enhancing teaching quality and student learning outcomes.
5. The significant difference of the teachers' performance when grouped according to highest educational attainment and teaching experience underscores the impact of advanced knowledge and seasoned practice on classroom outcomes. This differentiation highlights the important contributions that diverse educational backgrounds and extensive teaching tenure bring to the educational landscape, shaping both student achievement and institutional success.
6. Based on the conclusions established, this study proposed the Theory of Supervisory Impact on Teaching Excellence. This theory posits that consistent and effective instructional supervision by Master Teachers is fundamental in enhancing teaching performance, strengthening educational attainment and teaching experience to increase student success and overall educational improvement.

Recommendations

Based on the relevant findings and conclusions drawn, this study proposed the following recommendations:

1. Master Teachers may continuously refine and expand their instructional supervisory skills, particularly in mentoring and supporting less experienced educators.
2. The teachers could embrace opportunities for professional growth and development, such as participating in workshops, conferences, and continuing education programs to stay update with recent advancements in teaching methodologies, technology integration, and subject area knowledge.
3. The Division may facilitate the adoption and implementation of this study's proposed School Instructional Supervisory Plan by providing comprehensive training for school leaders and instructional supervisors. This can be done through workshops and seminars that focus on the components and benefits of the plan, as well as practical strategies for effective implementation.

Compliance with Ethical Standards

Prior to commencing the study, the researcher undergone an ethics review and earned clearance from the office of the Graduate Studies spearheaded by the research

coordinator. After which a permit letter to conduct the study signed by the dean was given to the researcher. The researcher forwarded it to the Division of Valencia City Schools Division Superintendent for endorsement to the school principals to gather necessary data for the study. The research participants were informed of the purpose and nature of the study, emphasizing that their participation is purely voluntary and does not, therefore, include any monetary remuneration. The researcher also stressed that the participants had the choice to refrain from answering questions that made them feel uneasy. Furthermore, they were assured that the data gathered from their participation was handled with strict adherence to ethical considerations in research. This included maintaining confidentiality, ensuring anonymity where appropriate, and obtaining informed consent prior to participation. Finally, the participants were asked to sign a consent letter, signifying their intention to participate in the study.

Acknowledgments

Immeasurable appreciation and deepest gratitude are extended to the following persons and institutions that in one way or another have made valuable contributions to the success of this study:
Dr. Braziel L. Ongcachuy, the Dean of the School of Graduate and Professional Studies, for her unwavering focus and consistent assistance;
Dr. Gina F. Labitad, her adviser, for the valuable expertise, corrections and suggestions
Dr. Gerlinda G. Corpuz, together with panel members namely Dr. Pepa V. Pontillas, Dr. Carmelita O. Elbanbuena and Dr. Estrella S. Ferenal for the persistent encouragement, intellectual guidance, enduring motivations, patience, and unselfish effort that inspired the researcher;
Ms. Verge Samson, School of Graduate and Professional Studies staff for continuous aid and help.
Jesnar Dems S. Torres, for allowing the researcher to conduct this study through the school heads and all teacher participants in the Division of Valencia City;
Dr. Jahzeel M. Candilasa and Dr. Rosalie Ambasa, for the brilliant ideas and comments contributed;
Dr. Sarah Jane A. Valdez, Dr. Rosalia E. Pastrana, Dr. Melanie P. Suldano and Dr. Jahzeel M. Candilasa for patiently sharing their expertise in the content validation of the research questionnaire;
Her children Yrral Xian and Lyrra Yovela, for the unwavering support, the strength, inspiration and bundle of joy that made her unbearable days brighter.
Her father who is now in heaven, Roberto Mondejar Damacino and to her mother Ninfa Molase Amit, brothers Ronnie, Ronald, Rodjune, Roldan and Robert Rode sisters Rodani and Ronalie, in-laws, nieces, nephews, relatives and friends for their undying support and unfailing trust despite the researcher short comings.
Above all, to God Almighty for the strength in times of burden and challenges, for the bountiful blessings and good health. All these for the glory of God.

MEDIA EXPOSURE AND PARENTAL MEDIATION: IMPLICATIONS ON KINDERGARTNERS' DEVELOPMENTAL SKILLS

Rezzel Mae A. Montecillo

Lourdes College, Cagayan de Oro City, Philippines

https://doi.org/10.5281/zenodo.13291926

ABSTRACT

As digital technologies permeate communication channels, concerns arise regarding the media's influence on young minds. This study investigated if the different types and durations of media affect cognitive, socio-emotional, language, and physical skills, as well as how parental mediation influence these developments. A total of 100 kindergartners who are enrolled in a public school under the Division of Iligan City school year 2023-2024 participated in the study. The study employed a descriptive–correlational research design and used frequency, percentage, mean, and regression analysis. The Early Childhood Care and Development Checklist and a modified parental mediation questionnaire served as the primary research instruments. Findings revealed that the kindergartners' media exposures and parental mediation do not significantly influence their developmental skills. The kindergartners primarily used media for educational and entertainment purposes, with most spending 1-3 hours weekly, although a significant number also engaged for 7-9 hours per week. The developmental skills of the children were generally highly advanced across all measured domains, indicating effective educational practices. Parental mediation was found to be moderate, often involving setting boundaries and providing guidance rather than engaging in shared media activities. The study's significance extends to various stakeholders. Parents gain insights into media's effects on child development, aiding in making informed decisions about media consumption. Kindergarten teachers can adapt teaching strategies to integrate media effectively into the curriculum. School administrators can develop evidence-based programs and policies to enhance students' developmental skills. Additionally, the study offers a foundation for future research on media exposure and parental mediation.

Keywords: *Media Exposure, Parental Mediation, Developmental Skills, Kindergartners, Media Content*

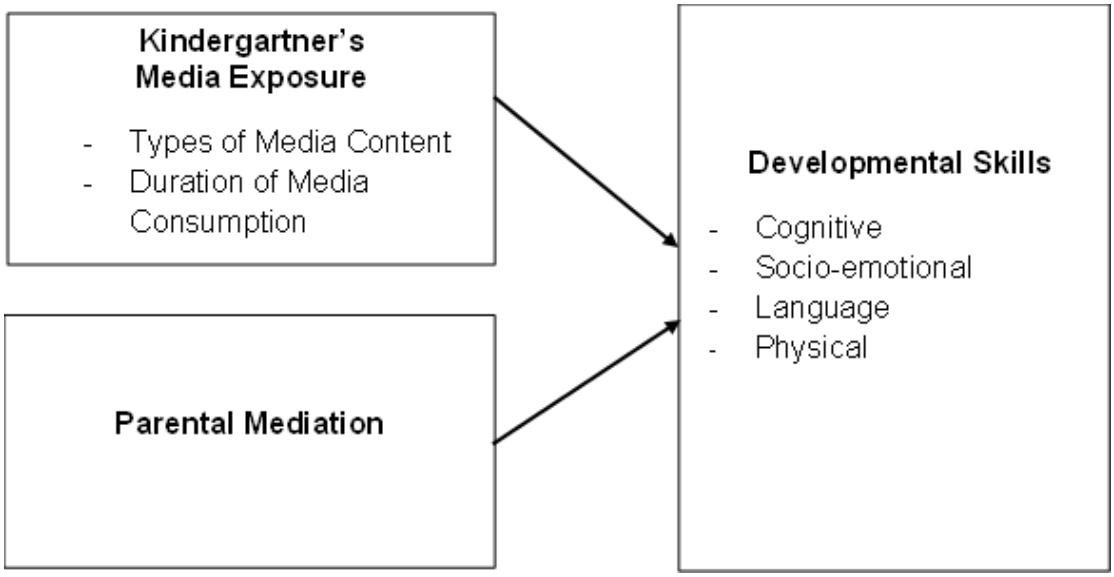
INTRODUCTION

Today's young children engage with media and technology more than ever before as screens permeate their daily lives. Examining how media exposure shapes capacities across domains like cognition, emotion regulation, language, and physicality is vital. Insights can inform guidance around balanced usage in early childhood to promote healthy academic and life trajectories (Hartnett et al., 2023). Exploring media's effects on kindergartners spans child psychology, education, communication, and media studies. As digital immersion escalates in childhood, caregivers, teachers, and policymakers must grasp how media affects developmental competencies. Substantive studies examined connections between screen media exposure and cognitive development in early childhood. Researchers probe how excessive screen engagement may hinder capacities like attention, academic progress, and language. For instance, Madigan and colleagues (2019) found links between higher screen time and reduced verbal expression in toddlers. Similarly, Tamana et al. (2019) associated preschoolers' screen use with escalated risks of attentional difficulties. Additional work by Watt et al. (2019) tied early television watching to poorer executive function at age five. High ambient screen exposure also appears potentially detrimental – Park et al. (2022) tied it to decreases in caregiver-child interaction quality. According to studies, when parents and children discuss what they're viewing or doing online, it may significantly affect how much media influences children (Lafton et al., 2024). This emphasizes that parents can strengthen their bonds with their children and can give them wise decisions in dealing with gadgets and online. In the end, these conversations are crucial in forming kids' digital habits and media resilience. Despite expansive research, gaps persist around media exposure's attributes and parental mediation's role (Cliff et al., 2018; Zahra et al., 2021). This study aimed to address these knowledge gaps by examining media contents and durations of exposure most likely to shape developmental skills, both constructively and problematically. Kindergartners' complex, evolving media landscape (Sahoo et al., 2021) propels an urgent need to equip caregivers, educators, and policymakers with evidence-based guidance around developmentally appropriate usage.

Framework

This study assumes that kindergartners' media exposure and parental mediation influence their developmental skills. For the researcher to be able to explicate this study and achieve its aim, various theories had also been consulted to support the primary factors. The study is mainly anchored upon two different theories; Attachment Theory and Social Cognitive Theory. Attachment Theory, originally formulated by John Bowlby in 1950, has implications for understanding the impact of media exposure on the developmental skills of kindergartners. This theory emphasizes the importance of secure emotional attachments for healthy development and can be a lens through which we examine how media exposure affects the emotional and social skills of young children.

The second theory where this study can be anchored is on Social Learning Theory (Bandura,1986). This theory posits that children learn by observing and imitating others, and as such, media exposure can serve as a potent source of learning and skill development for young children. Kindergartners are in a critical phase of cognitive, social, and emotional development, and the media they engage with can shape these crucial skills. Positive role models and educational content in media can contribute to the enhancement of their cognitive abilities, social interactions, and emotional intelligence (Chen & Xiao, 2022).



Research Objectives

This study aims to investigate the types and durations of media exposure among kindergartners and examine its influence on their cognitive, socio-emotional, language, and physical skills development. Additionally, it seeks to analyze the role of parental mediation in the media consumption of kindergartners and its impact on their developmental skills. The study provides insights for parents, kindergarten teachers, and school administrators regarding the effects of media on child development and offers guidance on media usage and parental involvement. Furthermore, it aims to establish a foundation for future research on media exposure and parental mediation in early childhood development.

METHODOLOGY

The total number of kindergartners is 100 and 100 parents participated in the study. The study employed a descriptive–correlational research design during the conduct of the research. The researcher utilized a standardized questionnaire from Michael Chia (2018) to determine the extent of media exposure. Also, this research adapted and modified an instrument from Nimrod, Elias, and Lemish (2019) on parents' mediation. As to the level

of developmental skills, the researcher adapted the Early Childhood Care and Development Checklist from the Philippine ECCD Checklist. Frequency, percentage, mean, and regression analysis were used to analyze and interpret the results/findings of the study.

RESULTS AND DISCUSSION

Table 1 presents the frequency distribution of kindergartners' media exposure in terms of types of media content. The data illustrate how often kindergartners engage with different types of media content and highlight the varying levels of media usage among them.

Table 1

Frequency and Percentage of Kindergartners' Media Exposures (Types of Media Content)

	RESPONSE MODES								
Activity	**Never**	**1-3 hours / week**	**3-5 hours / week**	**5-7 hours / week**	**7-9 hours / week**	**9 or more hours / week**	**M**	**Int.**	**SD**
Using media for education / learning (e.g. reading digital e-book learning math via educational apps)	18	39	11	22	7	3	2.70	M	1.34
Using media for entertainment (e.g. watching movies, clips, playing games, listening to music)	17	39	30	7	3	4	2.52	M	1.18
Creating media (e.g. interactive digital toys)	34	28	8	24	5	1	2.41	M	1.36
Communicating (e.g. Video chatting with relatives via facetime/ skype/ messenger)	27	35	21	11	3	3	2.37	M	1.24

The data denote that a good number of 39 kindergartners who engaged for 1-3 hours per week utilized media for educational purposes. However, the kindergartners had varying levels of media exposure for education; 18 kindergartners did not use media for education at all and therefore came up to an average engagement of 2.70 hours per week with moderate variability. In contrast, 22 kindergartners utilized educational media for 5-7 hours per week, and smaller data fell into other categories. That kindergartners spend time using media for education might indicate that receivers consider it useful or efficient at least to some extent; however, to make more definite conclusions concerning the role of media in education, more quantitative results and subjective assessments of learning results should be obtained.

Furthermore, the data on kindergartners' media exposure for entertainment purposes show that 30 kindergartners spent 3-5 hours weekly in entertainment media, including watching movies and playing games, which has a higher engagement, 39 kindergartners engaged for 1-3 hours, 17 kindergartners never used it for entertainment, and a few spent up to 9 or more hours per week, with a mean of 2.52, signifying entertainment media is used less intensively than educational media. However, when it comes to media creation, involving activities like using interactive digital toys, is showing the least common type of media activity among kindergartners, with 34 of them never engaging or never using media for that purpose and only 1 kindergartner dedicating 9 or more hours per week. This implies that while kindergartners are consumers of media content, they are not actively involved in producing or creating media themselves, leading to a wide range of engagement levels within this activity having the highest variability among the categories. The data also shed light on the use of media for communication purposes, such as video chatting with relatives, shows that 35 participants affirmed that they used media for 1 to 3 hours a week to communicate, while 27 kindergartners never used it for this purpose and a small data engage for up to 9 or more hours every week. This clearly explains how at such a tender age the media is used as a tool to facilitate communication as well as interpersonal interactions among kindergartners.

Overall, the data denote that media is primarily used for entertainment and communication purposes among kindergarteners, while content creation is not a common activity. A study by Ebbeck, Yim, and colleagues (2019), while primarily focusing on outdoor play, also touched upon the use of media in early childhood education.

Table 2 presents the frequency of kindergartners' media exposure in terms of duration. It highlights the different amounts of time they spend on various media forms.

As regards television usage, the participants are characterized by different exposure times with 20 kindergartners who never watched TV, 24 of them who watched for 1-3 hours or 7-9 hours weekly, and a smaller number of kindergartners who fall into other time categories. The mean usage is 3.10, indicating television is a frequent media form. The findings of the study suggest that parents should limit children's activities to no more than 2 hours of screen time per day excluding the time for doing homework (Legner, 2024). One further important factor is role modeling. The amount of screen time parents and kids spend together is strongly correlated. Such excessive self-watching can be observed when children are brought up in a family where television watching is encouraged (for instance, eating meals in front of the TV, the TV is switched on as soon as the child comes home from school).

Table 2

Frequency and Percentage of Kindergartners' Media Exposures (Duration of Media Consumption)

Total Average Estimated Time Your Child Used Screen Media Per Week	RESPONSE MODES						Mean	Int.	SD
	Never	1-3 hrs/wk	3-5 hours / week	5-7 hours /week	7-9 hours / week	9 or more hours / week			
Television	20	24	16	11	24	5	3.10	M	1.60
Computer (e.g. desktops, laptops)	57	8	10	17	7	1	2.12	L	1.47
Mobile devices (e.g. smartphones, tablets)	19	25	19	21	7	9	2.99	M	1.53
Video game devices (e.g. console and handheld gaming players, virtual reality headset)	37	18	15	6	9	5	2.27	L	1.56
Blu-ray / DVD / CD / Videotape	50	15	17	11	6	1	2.11	L	1.35
Intelligent / technology toys (e.g. programmable toys)	45	20	20	8	5	2	2.14	L	1.32

The use of computers is found to be low, with 57 kindergartners who did not have computers to use, while 17 of them engaged for 5-7 hours, and a minimal number of kindergartners fall into other categories. Mobile devices, including smartphones and tablets, had a more spread of usage with 25 kindergartners who used them for 1-3 hours, 19 of them used it for 3-5 hours, and 21 kindergartners for 5-7 hours per week. A small number of them reached to 9 or more hours; this raised concerns about the potential impact on early childhood development. Video game devices were less used, with 37 of kindergartners never engaging, and only 5 of them used it for extensively or 9 or more hours. Traditional media formats like Blu-ray, DVD, and Videotape are mainly out of favor, with 50 kindergartners never using them or did not own videotapes, minimal engagement in other time duration, and a low mean of 2.11 hours. This indicates that these media formats are becoming obsolete in the context of modern childhood media consumption. Similarly, intelligent technology toys were also underutilized, with 45 kindergartners having no access to technology toys, and very few using them extensively for 1-3 hours weekly for 20 kindergartners and 3-5 hours weekly for still 20 kindergartners. This results in a low mean usage of 2.14 and moderate variability proposing that these toys are not yet a significant part of kindergartners' media habits.

Table 3 shows the amount of parental mediation engaged in by parents with children in kindergarten in terms of frequency, percentage, and mean. It illustrates the extent of parental mediation regarding children's media use, detailing the frequency and level of parental involvement.

Table 3

Frequency, Percentage, and Mean Distribution of Kindergarten Parents' Parental Mediation

Range	Description	Frequency	Percentage
4.51-5.00	Very High	5	5.0
3.51-4.50	High	38	38.0
2.51-3.50	Moderate	42	42.0
1.51-2.50	Low	10	10.0
1.00-1.50	Very Low	5	5.0
	Total	**100**	**100.0**
	Overall Mean	**3.31**	
	Interpretation	**Moderate**	
	SD	**0.81**	

The data revealed that out of 100 parents, only 5 were at a very high level of mediation, while 38 of the parents were actively involved in a high level of mediation.

Furthermore, it reveals that 42 parents had a moderate mediation which means that these parents have a reasonable level of control on the use of the digital media. More so, the data also show that 10 parents were at a low level and 5 at a very low level of mediation, which shows they rarely interfere with their children's use of digital media.

Recent studies support the importance of parental mediation in promoting healthy digital media habits among young children. A study by Livingstone et al. (2021) found that active parental mediation, such as discussing the content and setting boundaries, was associated with reduced screen time and improved digital literacy skills among children aged 4-8 years. Looking at the specific indicators of parental mediation, it is evident that parents tend to have higher levels of involvement in certain areas. For instance, parents scored high in advising their children on the educational or helpful aspects of digital media usage (M=3.78), specifying when their children can play and/or use applications (M=3.69), and specifying how long their children can play and/or use applications (M=3.61). These findings imply that parents recognize the importance of setting boundaries and providing guidance on the appropriate use of digital media. Parents scored moderately in discussing with their children the appropriate use of games, internet, and/or apps (M=3.30), having chats with their children regarding the specific activities they undertake when using digital media (M=3.18), and remaining in the room to monitor the screen when their children use games, websites, and/or apps (M=3.07). These findings indicate that parents could benefit from more active engagement and communication with their children about their digital media experiences. A study by Pérez-Escoda et al. (2021) highlights the importance of parent-child communication in fostering digital literacy skills and promoting responsible media use. However, doing something together with a media device (M=2.75) and engaging in fun activities using a media device, were the lowest among the moderate interpretations. This indicates that parents were less likely to engage in shared digital media activities compared to other mediation practices.

The moderate level of parental mediation can also be attributed to a lack of information on appropriate or efficient ways of mediating. Society should urge parents to be more involved in the way that their children are using digital media hence reducing the effects

that may be brought about by bad use of the devices. Brito et al. (2021) provide information on the need for concerned parents and teachers to ensure the development of young children in the aspects of digital citizenship and media safety.

Table 4 presents a summary of the level of developmental skills among the kindergartners in the study, specifically in the domains of cognitive, socio-emotional, language, and physical development. The mean scores for each domain indicate that the participants exhibited highly advanced skills across all areas.

Table 4

Summary Table of Developmental Skills

Developmental Skills	Mean	Maximum (# of items)	Interpretation	SD
Physical	21.64	24	Highly Advanced	3.92
Socio-Emotional	20.45	23	Highly Advanced	3.45
Cognitive	18.45	21	Highly Advanced	3.82
Language	11.99	13	Highly Advanced	1.84

The mean score for physical development is 21.64 out of a maximum of 24, showing "Highly Advanced" physical skills. Socio-emotional skills have a mean score of 20.45 out of 23, also categorized as "Highly Advanced". Cognitive development is slightly lower but still falls under "Highly Advanced" with a mean score of 18.45 out of 21. Language development, with a mean score of 11.99 out of 13, is again "Highly Advanced," with the least variability.

The interpretation of the mean scores as "Highly Advanced" indicates that the participants demonstrated skills and abilities that are significantly above the expected level for their age group. The highly advanced developmental skills exhibited by the participants underscored the importance of providing high-quality early childhood education that nurtures the holistic development of children. However, the findings highlight also the need for ongoing assessment and monitoring of children's developmental progress. By regularly evaluating children's skills and abilities, educators can identify areas of strength and areas that require additional support (Shine, 2023). This information can then be used to design targeted interventions and adapt the curriculum to ensure that all children have the opportunity to reach their full potential.

Table 5 presents the regression analysis of the influence of different types of media exposure, duration of media exposure, and parental mediation on their developmental skills. Data reveal that the whole model is significant (F=6.94, p=0.000).

Table 5

Regression Analysis of the Influence of the Types of Media Exposure, Duration of Media Exposure, and Parental Mediation on the Kindergartners' Developmental Skills

	Unstandardized Coefficients		Standardized Coefficients		
	B	Std. Error	Beta	t	Sig.
(Constant)	.647	.050		13.03	.000
Using Media for Education/Learning	.021	.014	.241	1.46	.149
Using Media for Entertainment	.033	.011	.334	3.15**	.002
Creating Media	-.031	.015	-.354	-2.10*	.038

PARENTAL MEDIATION	.027	.013	.186	2.02*	.046

Model Summary

R = .556	R2 = .309	Adjusted R2 = .265	F = 6.94**	p = .000

Thus, the null hypothesis is rejected. Kindergartners who are exposed to media and whose parents get highly involved in what their children watch, also have high developmental skills. Furthermore, 30.9 percent of the variability in their developmental skills can be accounted for by a combination of their media exposures and parental mediation. The remaining 69.1 percent can be attributed to other factors not covered in this study such as parental education levels and socioeconomic status, which can provide a more stimulating and supportive environment for development. Additionally, the quality of preschool or kindergarten, including teacher qualifications and peer interactions, plays a critical role. Taking the independent variables individually, data reveal that Blu-ray/ DVD/ CD/ Videotape came out as having the highest significant influence on their developmental skills, indicating that for every unit increase in the parental mediation they received, there is a corresponding .036 increase in the children's developmental skills (B = .036, t = 3.38, p = .001). According to Deepa (2020), these tools facilitate the development of cognitive, language, and socio-emotional skills through content that is attractive and promotes academic information and pre-literacy. Readily available at virtual corner stores with easy-to-use, autoplay options, instructional CDs and DVDs are beneficial in the home school setting. It is also important to point out that DVDs can store considerably more information and transfer it with higher speed than CDs making them more preferable for large-scale educational materials." CDs and DVDs are a useful and flexible means of teaching and consolidating certain skills that will be useful both at home and in school for children even without using the internet.

Using Media for Entertainment ranks the second highest impact variable after the Blu-ray/ DVD/ CD/ Videotape. This has a beta value of = 0. 334 indicating the fact that for

every one standard deviation in the extent to which media is utilized for entertainment, the developmental skills of the kindergartners also improve by 0. 334 standard deviations (B = .334, t = 3.15, p = .002). This signifies a high positive correlation, meaning that an increased amount of media for entertainment is beneficial for the development of children. Furthermore, the significance level (p-value) of 0.002 indicates that this relationship is statistically significant. According to Carson et al. (2021), carefully organizing and balancing educational media with entertainment content resulted in significant enhancements across various cognition domains, including sustained attentiveness, focused attention, and recall achieved under vigilance conditions.

The table also denotes that Creating Media is likely to be significant at a third rank in the significance level. In the following model, it has a standardized coefficient of -0. 354 (B = -0.354, t = -2.10, p = .038) point to the fact that creating media correlates positively with the decline in kindergartens' developmental competency. That is; as the time toward the creation of media increases, the developmental skills inherent among the kindergartners are most likely to decrease. The p-value of 0. 038 indicates that this relationship is statistically significant since it was giving a significance value. This dispels the possibility of the observed effect being chance in this study as well as in the prior research.

The fourth highest influence on kindergartners' developmental skills is parental mediation. This has a beta of 0.186, indicating that there is an increase of 0.186 in every standard deviation (B = .186, t = 2.02, p = .046). This shows a moderate positive impact, suggesting that greater involvement of parents in mediating their children's media use is associated with better developmental outcomes. The study by Zimmer et al. (2019) highlighted the importance of parental mediation in the digital media usage of kindergarten children, emphasizing controlled and supervised media use. This means that parents need to be involved in their children's media activities by monitoring how much time children spend in media and involved in activities being immersed by their children. Similarly, Anyaegbunam et al. (2019) conducted a study in Nigeria to examine whether parental mediation moderates the relationship between exposure to violent media content and aggressive behavior in adolescents. Their results confirmed the significant moderating role of parental mediation in managing children’s media content consumption.

Conclusions

Several implications can be drawn concerning the effects of media exposure and the role of the parents in mediating their children's developmental skills at this early age of readiness for school. The learners achieve impressive results in all the areas, cognitive, socio-emotional, language, and physical skills, which shows that the kindergartners are ready to meet both academic and personal tasks in further stages of their early learning process. In this regard, parental mediation is at a middle level where parents are moderately involved in direct communication with their children concerning media use and in setting guidelines and offering directions, but there is lesser interaction in the co-use of digital devices that could create a stronger bond of parent-child relationship and also in effective mediation. This leads to an agenda for parents to take steps to attend enjoyable media experiences with their children and thus ensure that the technology is

used appropriately. Moreover, media type exposure and parental mediation of these types exert a considerable influence on the kindergartners' development skills. Namely, Blu-ray/DVD/CD/Videotape, entertainment media, creating media, and the active parental mediation processes facilitate these skills. Nevertheless, not all media exposures work to the same advantage therefore pointing out the need to be selective in the usage of Media. In general, it can be stated that the research results stress the importance of appropriate media usage and parents' engagement for the holistic child development of the children. Perhaps, a stronger positive effect on the development of the respective skills can be achieved if parents talk to their child more during media use.

The results of this study align with the Social Cognitive Theory of Albert Bandura, which emphasizes the crucial role of parents in monitoring and guiding their children's activities to ensure that their learning is not hindered. The theory highlights the importance of parental involvement in children's experiences, as it can have a significant impact on their overall development. By actively mediating their children's media consumption, parents can ensure that kindergartners spend an appropriate amount of time using available media at home and engage in activities that promote their cognitive, social, emotional, and physical growth. Similarly, the study also shows a link with John Bowlby's Attachment Theory, with emphasis on the child's attachment to media. Bowlby's theory focuses on the idea that a child with attachment to a certain person who makes him/her feel protected is critical in his/her development. Reflecting on media as an attachment figure, one can touch upon the patterns in children's attachment to media content and devices, as well as the role of development and parental mediation. Kindergartners utilize the media most in the areas of education and entertainment with exposure to media ranging from 1-3 hours to 7-9 hours in one week. This denotes that media is an essential part of their daily existence and thus could serve as media as an object of attachment serving the basic functions of attachment figures in those people's lives. As with objects of attachment, children desire certain interactions and stimulating media experiences that can even be compared to basic needs for the care of parents.

Overall, the present study underscores the critical role of parental mediation and controlled media exposure in fostering the developmental skills of kindergarten learners. As foundational abilities, these skills lay the groundwork for children's future success and well-being. Promoting a balanced approach to media usage, encouraging active parental involvement, and implementing supportive policies and practices, can create an environment that nurtures the holistic development of young children in the digital age.

Compliance with Ethical Standards

The author of this study obtained the respondents’ informed consent and informed them of their freedom to withdraw from the study at any time. Anonymity of the respondents was maintained and the respondents’ well-being was safeguarded. There was no conflict of interest in the conduct of the study. Plagiarism and bias in the interpretation of the findings were strictly avoided and the results were used purely for research.

NEWSROOM TO GOVERNMENT: THE CONTRIBUTIONS OF FORMER MEDIA PRACTITIONERS TO PUBLIC SERVICE DELIVERY TOWARDS THE ENHANCEMENT OF TRANSPARENCY AND ACCOUNTABILITY IN THE BUREAUCRACY

Charissa Luci-Atienza

Graduate School of Business, University of Perpetual Help System DALTA, Las Piñas City, Philippines

https://doi.org/10.5281/zenodo.13371391

ABSTRACT

The study zeroed in on former media practitioners' significant roles and contributions to public service delivery towards the enhancement of transparency and accountability in the bureaucracy. It explored how the migration of former print, broadcast, and multimedia journalists to the government contributed to the delivery of transparent and accountable delivery of public services. The study employed Qualitative Research Design, specifically transcendental phenomenology, to look into and document newsroom-to-government experiences of the 15 research participants in 10 government agencies and institutions. The researcher employed a purposive sampling technique to choose the participants, and used a self-designed and detailed questionnaire, and one-on-one, semi-structured key informant interview sessions as research instruments. The qualitative data collected were manually analyzed, using a combination of narrative and thematic analysis. Based on the study's findings, the participants are mostly print journalists, and are Millennials and Generation X, and majority of whom left their media profession mainly due to economic reasons. Most participants are heavily involved in the delivery of public information services as public communicators for the policies, projects, and programs being implemented by Executive agencies, and Congress. An enhancement policy seeking to strengthen the Public Information Offices (PIOs) of every government agency and instrumentalities by accelerating the level of communications in the public sector through continued skills upgrading; and the creation of fora where they can share best practices, was proposed to strengthen the involvement of former media practitioners in the transparent and accountable delivery of public service.

Keywords: *Former Media Practitioners, Contributions, Public Service Delivery, Transparency, Accountability, Bureaucracy*

INTRODUCTION

The coronavirus disease 2019 (COVID-19) pandemic not only changed the country's political, and socio-economic scene, but also significantly affected the national media landscape. During this period, several key events affecting national and even local media or press happened, including closure of broadcast networks, newsroom layoffs, and overhauls of radio and television (TV) programming, particularly during the government's imposition of lockdowns and quarantines. Economic losses forced the print media sector to suspend their print editions and prioritize strengthening their online presence. Most of the news outlets implemented work-from-home policies, with some adopting skeletal staffing arrangements.

The COVID-19 caught the news media sector flat-footed, given the declining revenues, and the need to tap digital technology to reach out to ballooning social media users. The traditional economic model of journalism which considered advertising revenues and subscriptions as its lifeblood was disrupted by the emergence of digital platforms such as Google and Meta (formerly Facebook), which now control more than half of the global digital advertising market (Westberg, 2024).

Aside from newsroom downsizing, journalists and media workers had faced harassments, imprisonments, and attacks for their doing their job as watchdogs (United Nations Educational, Scientific and Cultural Organization, 2022). Examples include the arrest of Nobel Peace Prize laureate Maria Ressa over tax evasion charges and cyber libel charges, and the infamous killing of famous broadcaster and radio commentator Percy Lapid, highlighting state-sanctioned attacks against journalists.

Amid this challenging media landscape during COVID-19, a number of media practitioners left their profession to join the government service. It was during the pandemic that the transfer of media practitioners to government was remarkably observed.

The Philippine government as the most secured employer during the pandemic welcomed into its arms members of "fourth estate" or the media to be part of its working force. But even before the pandemic, it has been noted that there were broadcast media personalities who entered government through election such as Vice President Noli de Castro and Senator Loren Legarda.

This study aimed at exploring the migration of private media practitioners (the traditional print media, broadcast media covering both radio and TV, and multimedia) to the government service. While there were articles on the cases of media personalities entering the government service and even politics, the reasons behind this trend and its impact on the delivery of government services remained largely unexplored.

There is no available, and official data yet on the total number of journalists from the private sector who entered the government service. The National Union of Journalists of the Philippines, National Press Club (NPC), the Presidential Task Force on Media Security (PTFoMS), and the Philippine Statistics Authority (PSA) relayed to this UPHSD researcher that they do not have the data on the total number of Filipino journalists who lost their jobs or resigned during the pandemic, and who entered the government service. Moreover, the total number of Filipino journalists in the Philippines is also not yet available, according to the NUJP Secretariat, NPC president Leonel Abasola, and PTFoMS Executive Director Paul M. Gutierrez.

As to the number of media outlets under the mainstream or traditional media, Gutierrez disclosed that more than half or 53 percent are radio stations (735), followed by 421 newspapers at 30 percent; 162 television and cable stations at 12 percent; and 73 magazines at five percent, citing the Philippine Information Agency (PIA) data as of July 2023 (Rita, 2024). Rita (2024) reported “the thousands” of media outlets utilizing social media platforms were not included in the total number of media outlets.

The roles and contributions of former journalists in their respective government agencies cannot be overstressed. The study sought to determine as to whether the inclusion of the “fourth estate” or the media in the 1.7 million-strong state workforce is beneficial for the government, particularly in the transparent and accountable delivery of public service.

As of 30 June 2023, the Inventory of the Government Human Resource System (IGHRS) recorded 1, 973, 300 workers (Civil Service Commission’s Integrated Records Management Office, 2023). Of the total, 1,751,975 workers have secured career positions, and 221, 325 have occupied non-career positions (Civil Service Commission’s Inventory of Government Human Resource – Career and Non-Career, 2023, p.1). A total of 832,812 personnel were hired under Job-order (JO) and Contract of Service (COS) status (Civil Service Commission’s Inventory of Government Human Resource – JO/COS Data, 2023).

Considering the need for more empirical evidence on the former media practitioners’ perceptions about public service delivery, this study aimed at probing these gaps by digging into their roles and contributions to public service delivery, particularly in the fulfillment of their respective agencies’ mandate. Data on this aspect is warranted, as this could boost the potential of government’s workforce particularly in the aspect of effectively and efficiently disseminating the programs and projects of the national government, as well as in the national government’s fight against corruption, and campaign for transparency and accountability.

To come up with comprehensive interpretation and analysis of the impending issues on the migration of private media practitioners to government service, parameters were set for the clear appreciation of the respondents’ profile as to their age, gender, length of media experience; media affiliation or news outfit (Print, Broadcast, or Multimedia); Government Agency-Employer (Executive, Legislative, Judiciary or

Independent Public Institution); and Position (Executive, Managerial, Supervisory, or Non-Supervisory).

This paper explored ways on how former media practitioners can effectively engage with the government to curb corruption, and promoting transparency and accountability in the bureaucracy. Likewise, this study developed an enhancement policy that could strengthen the involvement of former media practitioners in the transparent and accountable delivery of public service.

Research Questions

This study aimed to scrutinize the country's media landscape, analyzing the political, social, economic, and personal factors that prompted the media practitioners to leave their job and enter the government service.

This study delved into the roles and contributions of former media practitioners to public service delivery, and to the dissemination and promotion of government's programs and projects in general, and their perception about the delivery of public service.

This paper necessitated the former media practitioners to effectively engage with the government as partners in disseminating its programs and projects to curb corruption, and promote transparency and accountability in the bureaucracy. This study aimed at developing an enhancement policy that could strengthen the involvement of former media practitioners in promoting transparency and accountability in public service delivery.

Specifically, this study sought to answer the following questions:

For purposes of determining the appropriate coding strategy, the following demographics were determined.

- Age;
- Gender;
- Length of Service as Media Practitioner;
- Media Outfits (Print, Broadcast, or Multimedia);
- Government Agency-Employer (Executive, Legislative, Judiciary or Independent Public Institution); and
- Position (Executive, Managerial, Supervisory, or Non-Supervisory).

1. What are the reasons behind the migration of print, broadcast and multimedia journalists to the government service in terms of:
   1.1. political
   1.2. economic
   1.3. social
   1.4. personal?

2. What are the roles of former media practitioners in their respective agencies?

3. What are the perceptions of former media practitioners about public service delivery?

4. What are the former journalists' contributions to public service delivery, particularly in the fulfillment of their agencies' mandate?

5. How can former journalists effectively engage with the government as partners in disseminating its programs and projects to curb corruption, and promote transparency and accountability in the bureaucracy?

6. What policy can be developed to enhance and strengthen the involvement of former media practitioners in promoting transparency and accountability in public service delivery?

METHODOLOGY

This study focused on the major issues and concerns behind the transfer of former media practitioners to government agencies, and their contributions and roles to public service delivery towards the enhancement of transparency and accountability in the bureaucracy.

Scope, Research Locale, and Delimitations/Limitations of the Study

The locale of the study was confined to Metro Manila where major media companies and key government offices and institutions are located.

The study was conducted in nine (9) government agencies and institutions under the Executive, Legislative, and Judicial branches of government, and in one (1) independent public financial institution where fifteen (15) former media practitioners from print, broadcast, and multimedia news sectors are currently working.

Not all former journalists formed part of the study, considering the lack of official data on the total number of Filipino journalists in the country, and the total number of media practitioners who left their profession and entered the government service.

Although, the study took note of the participants' previous media affiliations and years of experience in the news media sector covering the three branches of government: Executive, Legislative, and the Judiciary.

The study only covered the concerned individuals and not their respective agencies. Other issues and concerns related to migration of former journalists to the public sector, and to the private sector were not be thoroughly studied due to time restraint and constrained resources of the researcher.

Participants of the Study

The participants of this study were fifteen (15) former media practitioners, especially those field reporters, who left their profession, and are currently working in nine (9) government agencies and institutions under the Executive, Legislative, and Judicial branches of government, and in one (1) independent public financial institution.

This study looked into their contributions and roles to public service delivery towards the enhancement of transparency and accountability in the bureaucracy via an in-depth one-on-one interview.

Fifteen (15) former media practitioners who worked for Metro Manila-based media organizations were interviewed based on the following inclusion criteria:

1) Worked as a field news reporter or news writer affiliated with print, broadcast (either radio or television), and multimedia companies in Metro Manila;

2) Covered any of the following branches of government: Executive, Legislative, and Judiciary as beat assignment;

3) Had experience in any of the following areas: broadcast, online, documentaries or investigative, public service program or political reporting; and

4) Working in the government regardless of the status of appointment.

The researcher employed a purposive sampling technique to choose the participants of this study and determine their credentials to ensure that they were credible and key sources of factual information, and were qualified to share their inputs and opinions about the research topic.

Demographic Profile of Participants

Amid the use of qualitative approach, the researcher found it significant to know the demographic profile of the participants to fully describe the phenomenon in the study.

These include age, gender, length of service as a media practitioner, previous media outfit or affiliation (Print, Broadcast, or Multimedia), Government Agency-Employer (Executive, Legislative, Judiciary or Independent Public Institution), and Position (Executive, Managerial, Supervisory, or Non-Supervisory).

As to the length of service as a media practitioner, the researcher, as advised by the Research Panel, decided to put a bracket to track down participants' career record in the private sector.

Based on the years of media service in the private sector, the participants were clustered as follows: a. 5 years and below; b. 6-10 years; and c. 11-20 years or more.

These variables were vital for the determination of appropriate coding strategy, creation of the anchor code for each research question, and identification of the relevant excerpts. In this way, there was clear labeling of the codes.

Research Instrument

A critical informant interview guide for the respondents was prepared. The researcher used Key Informant Interviews (KIIs) as a data collection method.

The self-designed and detailed questionnaire zeroed in on the political, social, economic, and personal issues and concerns that prompted the 'fourth estate' members to leave their media profession and enter the government service.

It also focused on the roles and contributions of former journalists in their respective government agencies. It likewise delved into the importance of having media persons in the 1.7 million-strong state workforce, particularly in the delivery of public service.

The researcher used the questionnaire and interview sessions as the research instruments.

Conducting one-on-one interview is needed to excavate crucial and in-depth information from the research participants.

A semi-structured interview was used as a "more powerful" tool to obtain detailed information and evidence from the respondents while considering the focus of the study (Ruslin et al., 2022). The conduct of semi-structured interview due to its flexibility allowed the researcher to bring forward new questions during the interview as a consequence of what the research participants have said.

Reliability and Validation of the Instrument

As the main instrument in the study, the self-designed and detailed questionnaire underwent a stringent validation process. First and foremost, the researcher submitted the questionnaire to the research adviser for review, and comments and suggestions were elicited for fine-tuning.

The interview guide questions were validated by experts on the field of public administration and communications.

The valuable insights of the content validators were pertinent to researcher's quest to have reliable and valid research instrument.

The inputs made by the adviser, Research Panel, and the content validators, particularly the comments and suggestions, were thoroughly considered and included in the questionnaire for its relevance and validity.

Data Generation

After formally securing the green light from the Research Panel and the University of Perpetual Help System- DALTA (UPHSD) Graduate School on 14 July 2024, the researcher proceeded to data gathering, mindful that the reasons why former media practitioners flocked to government service and the determination of their contributions to the delivery of public service were to be described under phenomenological approach.

The researcher prepared a critical informant interview guide for the research participants that included a set of clear, concise, and relevant questions in sync with the research objectives.

The questions prodded the respondents to share their transition from the newsroom grind to government service delivery; the reasons behind their migration to government; their perception about public service delivery; their contributions to public service delivery; and their suggestions regarding the strengthening of their partnership with the government in curbing corruption, and in promoting transparency and accountability in the bureaucracy, and on how to fortify their involvement in promoting transparency and accountability in public service delivery.

After the validation of the questionnaire by the research adviser, Research panel, and experts on the field of public administration and communications, the letter request to conduct the study, and the questionnaire coupled with informed consent form and certificate indicating that the respondents' participation in the study is entirely voluntary, were sent out to the respondents via e-mail and FB messenger from July 21 to July 26, 2024.

Twelve (12) respondents received these documents through e-mail, while three (3) participants got them through FB messenger as their preferred mode of transmittal.

The researcher individually contacted the randomly selected respondents for their preferred interview schedule via e-mail, Facebook messenger, and Viber.

Anticipating the busy schedule of the probable respondents, the researcher made an initial *tête-à-tête* or private conversation with some of them so as to gauge their willingness to participate in the study during the last week of June.

Some of them even referred their colleagues in the government service who could participate in the study.

The researcher formally sought a written or verbal permission from the participants before conducting the face-to-face interviews.

Three (3) respondents managed to sign the Consent Certificate, while the rest opted to signify their voluntary participation by responding affirmatively to the e-mailed letter request, and by saying "Yes" before the start of the Zoom-recorded interview.

The purpose of the study was explained to the respondents in various communication channels. Before conducting the interview, the researcher made sure that the respondents positively responded and voluntarily gave their consent to be part of the study.

The researcher likewise assured the participants that confidentiality, privacy, and anonymity were strictly observed, and that Zoom recordings both audio and video, and all data and information collected were solely used for the research analysis, and scholarly pursuits.

The researcher conducted the in-depth interviews via Zoom from July 23 to July 27, 2024. The interviews lasted 15 to 75 minutes, and were recorded for documentation, transcription, analysis, and decoding.

During the interviews, the researcher took notes to capture unpredictable themes, uncover more insights, and bring forward additional new questions as a follow-up to the information, data, or narratives previously provided by the respondents.

After the interviews, the researcher transcribed verbatim the narratives, and carefully took a second look at notes to ensure accuracy, and to gain a comprehensive understanding of the issues at hand.

Thematic Reflections

Using a combination of narrative and thematic analysis, the qualitative data collected were manually analyzed to find common themes and patterns of occurrence in the responses made by the respondents.

The experiences that were divulged by the research participants were interpreted based on the context of this research. Using the descriptive-focused coding strategy, the researcher engaged in coding the data; identifying, reviewing, refining, defining, and naming the themes.

All relevant excerpts were highlighted and were given a designated code. The researcher likewise managed to establish the link of a new code to existing code.

As part of qualitative data analysis technique such as content analysis, the participants' answers to each question were coded and categorized.

After categorizing the codes, the researcher consolidated the categories and arranged them alphabetically in matrix format via MS Word. A code count was then assigned to identify frequency counts or how many times such particular code was repetitively mentioned by the participants.

Code sorting involved the clustering of answers in a tabular format, while cluster labelling was done to determine the themes for discussion (Adu, 2021).

The researcher found it necessary to allot at least more time for the coding and processing of themes in the coding-recoding process until the final theme was arrived at.

After thoroughly reflecting on the themes in the narratives, the researcher was bound to present the significant insights or findings into the lived experiences of the participants while mindful of the research purpose and the research questions that must be addressed. From these essential insights and findings, conclusions and recommendations were objectively drawn.

RESULTS

The information and the data that were collected, including the narratives of the respondents were presented in text and tabular format.

The systematic presentation of the data was in sync and corresponded to the research questions under the Statement of the Problem, paving the way for evidence-based findings, informed conclusions and data-driven recommendations.

The study, "Newsroom to Government: The Contributions of Former Media Practitioners to Public Service Delivery Towards the Enhancement of Transparency and Accountability in the Bureaucracy," aimed at providing an in-depth analysis of the political, social, economic, and personal issues and concerns that prompted the media practitioners to leave their job and enter the government service.

Furthermore, the study also delved into their roles and contributions to public service delivery, as part of the suggested recommendation to enhance transparency and accountability of the bureaucracy.

Fifteen (15) former journalists working in Metro Manila took part as participants (P) in this study as key informants (as shown in Table 1).

In terms of age, the participants are within the ages of 25 and 58 — three of them belong to the 25 - 35 age brackets; six belong to 36 - 46 age brackets; six belong to 47 - 57 age brackets.

Of the total, seven participants are male, and eight are women.

Based on their profiles, seven participants had extensive media experience ranging from 10 years to 20 years.

Based on the years of media service in the private sector, the participants were categorized as follows: A. 5 years and below; B. 6-10 years; and C. 11-20 years or more.

Following this category, seven participants fall under Category B, five under Category C, and three under Category A.

Data shows that most participants belong to Category B (6 – 10 years) with a media experience ranging from six to 10 years.

During the data gathering, it was uncovered that three participants left their media profession to join the government service during the COVID-19 pandemic.

In terms of media affiliations, nine participants worked as print media journalists, three were employed at multimedia news platforms, and remaining three participants were broadcast journalists.

In terms of government-employer, eight participants are working at agencies under the Executive branch of government, while five are with the Legislative. The two remaining participants work in the Judiciary, and in an independent government financial institution, respectively.

In terms of government positions, most participants are holding key, supervisory, and permanent positions in their respective agencies.

Given the flexibility of the semi-structured interview employed by the researcher, the stints of the participants in their current government agency were uncovered. Eight participants have been working in the government for 10 to 25 years.

The participants' names, media organizations, government agency-employers and current specific positions were not revealed and were kept confidential. The 15 respondents were given aliases (P1 to P15).

All Zoom-recorded interviews which lasted 15 to 75 minutes were held from July 23 to July 27, 2024 with the informed consent of the participants.

Participant 1 worked as print media journalist for 15 years, and has been working in an agency under the Executive branch of government for 25 years.

Participant 2 was affiliated with a broadcast media company, had a nine-year stint in the news media sector, and has been serving an Executive agency for 16 years.

Participant 3 worked at the broadcast news media with 20 years of media experience, held the post of Undersecretary, and is working in the Legislative branch of government.

Participant 4 is a former print journalist for 10 years, and has been working in the Legislative for 14 years.

Participant 5 was with the print media for seven (7) years, and has been working in the Judiciary for 22 years.

Participant 6 was a print journalist for five (5) years before serving the government for 14 years, and has been with an Executive agency.

Participant 7 had a print media experience of six (6) years, and has been working in an independent government financial institution for 16 years.

Participant 8 came from print news media sector with eight (8) years of experience, and has been working in an Executive agency.

Participant 9 was print journalist for 13 years and has been with an Executive agency for six (6) years.

Participant 10 worked with a broadcast media company, had a media experience of 11 years, and has been working in the government for 20 years.

Participant 11 was affiliated with a broadcast media company for 20 years, and has been with an Executive agency for three (3) years.

Participant 12 had a one-year stint in a newspaper company, and has been working with an Executive agency for four (4) years.

Participant 13 worked at a multimedia news platform for six (6) years, and has been with the Legislative for three (3) years.

Participant 14 was a multimedia journalist for 10 years, and has been working in the Legislative for three (3) years.

Participant 15 was a print journalist for four (4) years, and has been affiliated with an Executive agency for three (3) years.

Table 1

Profile of the Former Media Practitioners in Metro Manila

Alias	Age	Gender	Years in Media	Media Outfit	Gov't Agency	Position	Years in Gov't
P1	57	M	15	Print	Executive	Executive	25
P2	47	F	9	Broadcast	Executive	Executive	16
P3	47	M	20	Broadcast	Legislative	Managerial	1
P4	49	M	10	Print	Legislative	Supervisory	14
P5	50	M	7	Print	Judiciary	Supervisory	22

P13	29	F	6	Multimedia	Legislative	Non-Supervisory	3
P14	37	M	10	Multimedia	Legislative	Non-Supervisory	3
P15	27	F	4	Print	Executive	Non-Supervisory	3

This study is grouped into six major segments to correspond to the research questions under the Statement of the Problem (SOP): (1) Political, economic, social, and personal reasons behind the migration of print, broadcast and multimedia journalists to the government service; (2) Roles of former media practitioners in their respective agencies; (3) Perceptions about public service delivery; (4) Contributions to public service delivery; (5) Suggestions to strengthen partnership to curb corruption, and promote transparency and accountability in the bureaucracy, and (6) Policies to be recommended for promotion of transparent and accountable public service delivery.

I. Reasons Behind the Migration of Print, Broadcast and Multimedia Journalists to the Government Service

What are the reasons behind the migration of print, broadcast and multimedia journalists to the government service in terms of:

1.1 Political?

Table 1.1

Political Reasons

Participant Number	Verbatim	English Translation
I. POLITICAL INFLUENCE		
3	So, pinahiram kasi talaga ako nung boss ko, ni Cong X sa campaign ni AAA para maging writer niya. And then, after nung manalo siya, kinuha siyang Secretary. And then, ayun, sumunod naging Usec naman niya ako. So, ayun.	My boss, Cong X asked me to support the campaign of AAA to be his writer. And then, after he won, my boss was appointed as Secretary. And then, I became his Undersecretary.
4	I'm working with former Senate President X. So for me, it was a very prestigious and privileged position working with him.	
5	I'm holding a coterminous post… So I started with Chief Justice X. So from Chief Justice X, now I'm with Chief Justice Y… Kasi pag-co-term trust and confidence ng appointing authority.	I'm holding a coterminous post. So I started with Chief Justice X, and now I'm with Chief Justice Y… Because when you're coterminous, it's based on the trust and confidence of the appointing authority.

II. POLITICAL DENIAL		
4	Dati may sinulat akong articles about, ginagawa pa lang yung Mall X noon. Na-interview ko yung isang official ng City Government X and he told me na may mga crack talaga yung Mall X sa likod. So sinulat ko yun pero dineny niya.	I once wrote articles about the construction of Mall X. I interviewed an official from the City Government X, and he told me that there were indeed cracks at the back of Mall X. So, I wrote about it, but he denied it.
III. MEDIA HARASSMENT		
4	So yung editorial namin kinausap ako. So yun yung time na feel ko na parang, mawawalan pa ako ng trabaho dahil nagsulat ka lang ng totoo. So, may libel case din ako. Siyempre, pag may libel case ka, kasama yung editors mo, parang feeling mo napahamak mo sila. Pero okay naman, na-dismiss naman.	Then our editorial team talked to me. That was the time when I felt like I might even lose my job just because I exposed the truth. I also had a libel case. Of course, when a libel case is filed against you, your editors are your co-respondents, and you feel like you've put them in a difficult position. But it turned out okay, the case was dismissed.
IV. REPRESSION DUE TO MEDIA OWNER'S VESTED INTERESTS		
10	I kind of did not agree with some policies in the workplace, so I left.	
10	Sa private media kasi naka-experience na rin talaga ko ng heartbreak dahil there were stories na trinabaho	In private media, I really experienced heartbreak because there were stories that I worked on,

	mo, yun pala they did not go well with…[the media owner] you know…	but it turned out they didn't go well with… [the media owner] you know…
10	Though there are some cases na desk ang papalit ng angulo without informing me, kasi nabangga ang gusto ng owner. May feeling of betrayal kasi the private outlet claims to be objective.	In some cases, the desk would change the news story angle without informing me because my story did not sit well with the media owner. There's a feeling of betrayal because the private outlet claims to be objective.

Table 1.1 discusses the four major political reasons why former media practitioners left their profession to enter the government service. These are Political Influence, Political Denial, Media Harassment, and Biased and Anti-Workers' Workplace Policies.

I. Political Influence: Three respondents (P3, P4, and P5), two of whom are occupying coterminous posts, entered the government service through political influence or their affiliation with the officials in the government. The researcher believes that given the participants' extensive media experience (ranging from seven to 20 years) and exposure to government dealings and processes, political leaders tapped their expertise to be of service to the government.

II. Political Denial: P4, a former print journalist for 10 years, narrated his experience of writing an exposé about a large shopping mall and eventually being denied by his source who happened to be a city government official. The researcher surmises that there are efforts to restrict press freedom and the public's rights of access to information The press freedom is under threat as shown in the declining support and respect for media autonomy (*Reporters sans frontières* or RSF, *"Global Analysis: 2024 World Press Freedom Index – journalism under political pressure,"* 2024).

III. Media Harassment: P4 experienced harassment for playing his role as a watchdog. He, together with his media company, was slapped with a libel case for publishing an exposé and later, got reprieve from the court by dismissing the case. The World Trends in Freedom of Expression and Media Development: Global Report 2021/2022 titled "Journalism is a Public Good" showed that journalists are threatened with harassment, imprisonment, violence, or death for doing their jobs (United Nations Educational, Scientific and Cultural Organization, 2021). The researcher supposes that the tradition of watchdog in the country's media remains amid threats and harassments.

IV. Media Repression Due Media Owner's Vested Interests: P10 got frustrated with some biased and repressive policies in his previous media company. He felt betrayed after the stories he was working on never got published because they were turned down by the media owner. The news story angles were sometimes changed to cater to the interest of the media owners. The researcher posits that media owners' supposed vested "political and economic interests" caused repression within their organization. The trend of media ownership remains –that "a handful of conglomerates and influential families" have wielding power and influence on news stories that get published to pursue their vested interests (Nuval, 2024). Herman et.al (2023) shared the same concern that the media is being used for political propaganda and the political interests of media owners.

What are the reasons behind the migration of print, broadcast and multimedia journalists to the government service in terms of:

1.2 Economic?

Table 1.2

Economic Reasons

Participant Number	Verbatim	English Translation
I. FINANCIAL SECURITY IN PUBLIC SECTOR		
A. SECURITY OF TENURE		
1	Siyempre, tiningnan mo rin naman, yun, yung Foreign Service, may security of tenure ka.	Of course, you also considered that in the Foreign Service, you have security of tenure.
4	Mas stable yung government. Kasi ang government, habang may tax na kinocollect, di naman nasisira yung government. Nandiyan lang yung government. Unlike yung private companies, pwedeng mag-shutdown, ma-bankrupt, anytime, di ba?	The government is more stable. As long as taxes are being collected, the government won't collapse. The government will always be there. Unlike private companies, they can shut down or go bankrupt at any time, right?

4	Pinaka-stable na trabaho talaga yung sa government. Maganda siya para sa edad ko na ano eh, yung paretire na rin.	Government jobs are the most stable. It's ideal for someone my age who's nearing retirement.
5	Siguro ang best example nito was during the pandemic, na maraming nag-hold up ng mga private organizations. Nung nasa government ka, secured ka eh, regardless of the position.	I think the best example of this was during the pandemic when many private organizations were holding up. But if you are in government, you are secure, regardless of your position.
7	Yung family ko nagsabi na mas stable nga sa government.	My family said that it's indeed more stable in government.
9	Of course, I know that tenure in the government and then yung yung years mo is may value.	Of course, I know that tenure in the government and your years of service have value.
13	I left Print Media Company X at the height of the pandemic and I needed security.	I left Print Media Company X at the height of the pandemic because I needed security.
B. HIGHER COMPENSATION		
3	Siyempre, alam naman natin na mas okay yung sweldo, lalo na sa government. At that time, may position pa, may rank kami, so official kami, so mas mataas talaga yung sweldo.	Of course, we know that the salary is better, especially in government. At that time, I had a position and a rank, so I was an official, and the salary was indeed higher.
4	Compensation really was far [much better] compared to the benefits that we have [had] as journalists.	

5	Kasi (because) the pay is more competitive at least with the [Judiciary].	
7	Feeling ko mas financially stable sa government.	I felt that it was more financially stable in the government.
8	Because the pay wasn't enough. So… and at that time, I wasn't getting any younger. You need something more stable.	I was also seeking better compensation, and yes, better compensation was actually probably the major reason I left the media industry in general.
9	Other [reason] siyempre 'yung compensation.	Another reason, of course, was the compensation.
12	So economic [reason] is yung higher salary.	So, the economic reason was the higher salary.
15	I was also seeking better compensation sana. And yes, better compensation, that's actually like probably the major reason kung bakit po ako umalis ng media industry in general.	I was also seeking better compensation, and yes, better compensation was actually probably the major reason I left the media industry in general.
C. PROVISION OF BENEFITS		
3	Kasi, alam naman natin yung mga benepisyo ng government. Yung lahat, yung mga overtime, nabibigay lahat yun.	Because, as we know, the benefits in government are good. All of them, including overtime, are provided.
3	Ako, sa personal experience ko yan ah, na parang, kumbaga nung nalipat ako sa gobyerno, mas well-compensated, yung mga benepisyo nabibigay, may	Based on my personal experience, when I transferred to the government, I was well-compensated, the benefits were given,

	mga overtime, yung nababayaran nang tama.	overtime was paid properly.
9	Mas maraming benefits. And, of course, there's retirement. I know that there will be a retirement package once I retire. So, compared to the previous company that I worked for, na wala.	There are more benefits. And, of course, there's retirement. I know there will be a retirement package once I retire. So, compared to the previous company I worked for, which had none.
10	Although sa government, particularly sa [Legislative], maayos ang benefits.	Although in the government, particularly in the [Legislative], the benefits are good.
12	I think mas marami rin po benefits sa government compared sa private. And also yung mga scholarship benefits. And then, so, maraming opening for trainings.	I think there are more benefits in government compared to the private sector. Also, there are scholarship benefits. There are many opportunities for training as well.
15	Kasi yung mga former colleagues ko, actually contractual yung ano nila eh, position nila sa government. But, parang na-outweigh talaga ng compensation and benefits yung the fact na they have to be renewed every six months.	Some of my former colleagues were actually in contractual positions in the government, but the compensation and benefits really outweighed the fact that they had to be renewed every six months.
II. FINANCIAL INSECURITY IN MEDIA SECTOR		
A. NO SECURITY OF TENURE		
10	Sa (In) private media, usually there's no clear tenure eh. Sometimes if they want, if they don't want you working for them anymore,	

	somehow, mangyayari ‘yan (that will happen).	
11	Walang sense of stability.	There’s no sense of stability.
B. LOW COMPENSATION		
3	Yung mababa yung sweldo.	The salary is low.
5	I think it's a fact that salary in the media industry isn't competitive, especially in the newspaper industry. Mababa ang salary ko (My salary is low).	
8	The pay for media work was not enough. So I have to look out for, better opportunities for me to use my skill. So, I opted to work in government after.	
14	I think economic kasi mababa lang ng sahod natin eh. Kasi parang ‘yung mga kaklase ko, parang ang tataas na ng mga sahod, tapos parang after 10 years, parang pulubi pa rin ako.	I think it’s economic because our salary was low. My classmates seemed to have higher salaries, and after 10 years, I still felt like I was a pauper.
C. LACK OF BENEFITS		
3	Alam naman natin yung condition natin sa media, di ba, na may mga yung, alam naman natin yung mga kwento na walang benepisyo, gaano, di ba?	We all know the conditions in the media, right? We know the stories about how there are hardly any benefits, don’t we?
4	Not all media entities, not all media outfit gives yung well-compensated package para	Not all media entities, not all media outfits offer a well-compensated

	sa isang journalist, gaya natin.	package for journalists like us.
9	Kung may, kung na-aksidente, parang wala na [insurance].O wala rin namang hazard pay. Parang wala rin hazard pay, night differential. Wala. Ang meron lang is transportation allowance. Pero sobrang liit lang din naman.	If you have an accident, it's like there's no insurance. There's also no hazard pay, no night differential. None. The only thing provided is transportation allowance, but it's very minimal.
11	I think at that time Broadcast Company X particularly don't have any provisions for media practitioners because of the pandemic. I'm working on field kasi documentaries yung mga hawak ko. So, lumalabas kami, pero parang wala ako makita at the time na parang proper provisions of the Office, number one, for health concerns, for our hazard pays.	I think at that time, Broadcast Company X didn't have any provisions for media practitioners because of the pandemic. I was working in the field because I was handling documentaries. So, we went out, but at that time, I couldn't see any proper provisions from the Office, especially for health concerns and our hazard pay.
11	Masyadong masalimuot yung sa amin kasi may utang pa kami sa kumpanya. Kasi hindi nila kami pinapasahod. Ang rule kasi for airing basis kayo. So, syempre, wala kaming ayuda. So, parang ang ginawa nila, they want us to, pwede kaming, alam mo yun, parang pwede kang mag-cash advance. Ako, I have to cut it down eh. Kasi, yun nga, I'm afraid that, you know, if I wanted to leave, hindi ko siya mabayaran. Parang ganon. So, ako,	Our situation was very complicated because we even had debts to the company. They weren't paying us. The rule was that we were paid based on airing. So, of course, we had no provision of assistance. What they did was allow us to take a cash advance. But I had to cut it down because I was afraid that should I decide to leave, I would not be able to pay them. That's how it was. I was

	nakaalis naman ako, kahit may kulang ako sa kanila.	allowed to leave even if I still owed them money.
12	Compared po sa media, and sa private sector, [yung trainings] parang hindi masyadong ine-encourage, or hindi naman ine-ecourage.	Compared to the media and private sector, trainings are not really encouraged or supported.
III. FAMILY NEEDS		
3	I have a family to raise, so yun yung reason din talaga.	I have a family to raise, so that was really another reason.
8	I mean, if you want to start a family after, hindi [salary in media] siya ano eh, hindi siya viable. So, I have to look for a job that would be more suitable to what are my plans.	I mean, if you want to start a family later, [the salary in media] is not viable. So, I had to look for a job that would be more suitable for my plans.
10	But after marriage and having a child, economic also played, also became a factor in leaving my profession as a private media practitioner.	But after getting married and having a child, economics also became a factor in leaving my profession as a private media practitioner.

Table 1.2 presents varied economic reasons why former print, broadcast, and multimedia journalists migrated to the government service. To thresh out the economic difficulties and challenges hounding the news media sector, this study came up with three major themes: (1) Financial Security in the Public Sector, (2) Financial Insecurity in the Media Sector, and (3) Family Needs.

Under “Financial Security in Government” segment, the sub-themes were Security of Tenure, Higher Compensation, and Provision of Benefits. Listed under the “Financial Insecurity in the Media Sector” were No Security of Tenure, Low Compensation, and Lack of Benefits.

I. Financial Security in the Public Sector

A. Security of Tenure: Six (6) participants who are mostly and previously worked as print journalists with age brackets ranging from 29 to 57 years old – P1, P4, P5, P7,

P9, and P13 identified security of tenure as a reason why they jump shipped from the news media sector to the government. The participants believed that the government is providing security of tenure than the private news media sector. This was seen during the COVID-19 pandemic, which significantly affected the country's media landscape as observed by P4 and P5. The World Trends in Freedom of Expression and Media Development: Global Report 2021/2022: *"Journalism is a Public Good,"* stated that the "already shaky" financial fundamentals of the news media industry were hit by the pandemic, which resulted in substantial decline in advertising revenues, job losses or retrenchments, and newsroom closures (United Nations Educational, Scientific and Cultural Organization, 2021).

B. Higher Compensation: Higher, better, and more competitive salary being offered by the government was mentioned as another major factor that attracted former journalists to leave their newsrooms. P3, P4, P5, P7, P8, P9, P12, and P15 did not think twice about leaving their profession because of the government's compensation package. Seven of the respondents came from the print media sector with one (1) to 20 years of media experience. In the World Trends in Freedom of Expression and Media Development: Global Report 2021/2022, *"Journalism is a Public Good,"* the UNESCO (2021) noted the reduction in global newspaper advertising revenue declined by half in the last five years, and that there was a 13-percent decline in global newspaper circulation between 2019 and 2020, citing the PwC's Global Entertainment and Media Outlook 2021-2025. In its 2023 Digital News Report Philippines, the Reuters Institute for the Study of Journalism revealed that print media as source of news among Filipinos is "on a steady decline" from 2020 to 2023 (Media Ownership Monitor Philippines 2023, *"Print media: Readership on the decline",* Vera Files 2023).

C. Provision of Benefits: The government's provision of benefits was identified by P3, P9, P10, P12, and P15 as another reason why they left their profession. Among the benefits cited were overtime pay, retirement package, scholarships, and trainings.

II. Financial Insecurity in the Media Sector

A. No Security of Tenure: The participants from the multimedia and broadcast media sectors who both had extensive media experience mentioned the lack of security of tenure as a reason for leaving the news media industry. P10 and P11 discussed that there is no clear tenure and sense of stability in the private media sector. P10 narrated that they were at the mercy of media owners who have the final say on their fate. Nuval (2024) cited that the media companies are owned by "a handful of conglomerates and influential families." This year's shutdown of the CNN Philippines that displaced 300 employees showed the financial vulnerability of the country's media sector (Cordero, 2024).

B. Low Compensation: Four participants who belonged to print, broadcast and multimedia sectors and whose ages range from 37 to 50 years old zeroed in on low compensation as the reason behind their transfer to government service. P3, P5, P8, and P14 looked at their low compensation as key reason why they chose to work in the public sector. The National Union of Journalists of the Philippines (2023) sought better pay and

working conditions for all Filipino journalists, citing that their "economic and labor rights are as much press freedom issues" (NUJP Labor Day Statement, *"Solidarity on Labor Day: Media Workers Are Workers Too,*" 2023).

C. Lack of Benefits: The lack of benefits was identified as among the reasons why the participants left their print and broadcast media companies. P3, P4, P9, P11, and P12 looked for the following benefits: insurance, hazard pay, night differential, enough transportation allowance, and healthcare protection. P11, who had a 20-year media stint, specifically lamented their broadcast company's failure to provide healthcare protection and hazard pays given the risks of actually contracting the virus at the height of COVID-19 pandemic. The survey conducted by the ICFJ and the Tow Center for Digital Journalism at Columbia University showed that 30 percent of the 1,406 journalist-respondents stated no single piece of recommended protective equipment had been supplied to field reporters, and that the risk of actually contracting the virus was among the biggest challenges faced by the journalists (Posetti et.al. 2020). The survey also found that 67 percent of the respondents rated financial concerns "as a significant difficulty."

III. Family Needs

The participants whose ages range from 43 to 53 years old commonly identified that their quest to start and raise a family prodded them to leave their jobs for government service. P3, P8, and P10 were in unison that they had to find viable and stable source of income for their family.

What are the reasons behind the migration of print, broadcast and multimedia journalists to the government service in terms of:

1.3 Social?

Table 1.3

Social Reasons

Participant Number	Verbatim	English Translation
I. SERVICE TO COUNTRY		
1	Yung nakikita mo nga, yung opportunities available, yung chance to serve the country in a different capacity.	You are seeing the available opportunities, the chance to serve the country in a different capacity.

7	Syempre, siguro, isa na rin na [reason], sa UP ako nag-aral, so parang ni-rationalize ko na giving back din sa government. Giving back to the Filipino people na pinag-aral naman ako, scholar.	Of course, I guess, one reason is that I studied at UP (University of the Philippines), so I rationalized it as giving back to the government. Giving back to the Filipino people who funded my studies, as a scholar.
II. SENSE OF MISSION		
1	You know, when we go into service, sabi ko nga eh (like I said), it's just like I'm still in the newspaper profession eh, because part of our job is to report, right? It's just like I'm just a reporter, like manning the bureau of the Republic of the Philippines, looking for stories to report, stories about developments that affect the Philippines, stories about how our people are, and then you prepare the report.	
2	So it was really a big sacrifice to shift, or to jump ship from private sector to government.	
4	We really roam around the country to help our under privileged fellow Filipinos.	
7	Ang siguro turning point ko na pwede ko ikwento yung isa sa mga last major stories na na-cover ko, yung na lumubog yung Princess of the Stars. Tapos bumabagyo, bumalik pa ako ng pier, tapos i-interview ako ng mga pami-pamilya na	I guess my turning point was, maybe I can share one of the last major stories I covered—the capsizing of the Princess of the Stars. There was a storm, and I went back to the pier and I interviewed the families—about six

	mga anim sa pamilya nila, nalunod yung mga ganon. Tapos parang iniisip ko, para saan ito lahat? So isusulat ko siya, so? Tapos, ano nang mangyayari? Parang yun yung iniisip ko, ano na? Paano ko makakatulong? Eh, isusulat ko lang naman 'to, tapos nakakaiyak. Tapos, so? Ano nga? Ano nangyari? Ano nangyari sa… Although alam ko napakababaw, no?	of them—whose relatives had drowned. I was thinking, what is all this for? So, I'll write about it, and then what? What will happen? I was thinking, what's next? How can I help? I'm just going to write about this, and it's so heartbreaking. So, what then? What happened? What happened to... Although I know it sounds really trivial, right?
III. SOCIAL INFLUENCE		
1	I first heard about the Foreign Service, at a very young age. I would hear my aunt mentioned embassy, consul general, ambassador, and etc. So alam ko na yung mga terms na yan eh (I was already familiar with those terms). Then in, in high school, I had a friend who told me that her mother worked with the former senator Shahani, that she would want to be a diplomat like her one day. So alam mo yun, nasa radar screen (So you know, it was on my radar screen)… But ano, hindi ko siya masyadong siniseryoso noon (But, I didn't take it too seriously back then). But of course, pumasok yan eventually (I considered it eventually).	.

1	Sa (In) Saudi Arabia, I was covering the Consulate, the Philippine Consulate in Jeddah. So the Vice Consul then was telling me that, you know, as a journalist, you have the qualities needed for one to become a diplomat. So, you write well, articulate yourself. So binanggit niya yon (he mentioned it). So he gave me a book, the Foreign Service Code for me to read and see.	
2	Because at that time, what really prompted me to join government was my coverage of the Department of Foreign Affairs when I was asked about the ASEAN Summit in Bali in 2003. And at that time, I had so many questions that no one could answer. So I thought, why am I asking the questions? Maybe I should just pursue the answers myself.	
15	What also prompted me to try sa (working in) government agency is I was influenced also by former colleagues sa (in) Broadsheet X, who made the switch to government agency service.	
IV. WORKING CONDITIONS IN MEDIA SECTOR		
A. SLOW CAREER PROGRESSION		
1	So, this is more on your career change… Parang, if I	So, this is more about your career change… It felt like if I stayed in the

	stay in the newspaper, so I'll be stuck here.	newspaper, I'd be stuck there.
1	So for you to be editor-in-chief, even if I aspire to be one, it's going to take me years.	
9	I decided not to be a reporter anymore because during that time, I was already old enough in the beat and then new reporters are coming in, younger reporters so I just decided to have a career shift.	
B. NO SYSTEM OF MENTORSHIP		
11	So, parang when we are expanding, syempre, yung mga magagaling, nag-expand din yung galing nila to other projects, other programs. So, nawala na yung system of mentorship. Naging, napalitan na lang sya ng raket raket lang yung mga tao.	So, as we expanded, naturally, the talented people also extended their skills to other projects and programs. As a result, the system of mentorship was lost. It was replaced by a situation where people just took on various sideline jobs.
C. DANGEROUS AND RISKY COVERAGES		
4	During 2001, di ba yung EDSA 2, we covered yung ousting of former president Joseph Erap Estrada. So nasa middle kami ng Mendiola noon eh, nung nag-barge yung pro, saka yung nag-ano sila eh, parang collide talaga yung pro and anti-Erap. So, it's very dangerous din.	In 2001, during EDSA 2, we covered the ousting of former President Joseph Erap Estrada. We were in the middle of Mendiola when the pro-Erap groups barged and clashed with anti-Erap groups. It was a very dangerous situation.
4	I also experienced covering 'yung Basilan. 'Yung first	I also experienced covering Basilan during

	Abu Sayyaf hostage-taking incident. I was assigned there. But during that time, nasa Broadsheet X pa ako. So, yung sabi ng editor ko na, mag-cover ka doon for two weeks lang. Tumagal ng isang buwan, di ba? So, yun 'yung mga risky operations.	the first Abu Sayyaf hostage-taking incident. I was assigned there, but at that time, I was still with Broadsheet X. My editor told me to cover it for just two weeks, but it ended up lasting a month. Those were risky operations.
4	Walang ganong clear na ano eh, na agreement [on hazard pay, insurance], wala akong pinirmahan. Basta coverage lang, tawag ng trabaho. Passion. Gano'n naman tayo, di ba? Pag binigyan ka ng assignments, gagawin mo rin. Tsaka during that time, bata ka pa, so very eager ka rin to cover yung mga ganung significant events…Wala kaming pinag-usapan about compensation. Kung anong mangyari sa'yo o insurance, di ba?	There wasn't a clear agreement on things like hazard pay or insurance; I didn't sign anything. It was just coverage, a call of duty. It was all about passion. That's how it is with us, right? When you're given assignments, you do them. Plus, at that time, I was still young and very eager to cover such significant events. We didn't discuss about compensation or any benefits or insurance just in case something happens to me.
D. IRREGULAR WORKING HOURS		
6	Given that our work at Broadsheet X that time was six (6) days a week. We only have 1 rest day. And we, even on rest days or holidays we are on call. So that's why I decided to transfer to a more scheduled occupation	
7	So, medyo nag-take na ang toll yung irregular hours na. Kunyari nung time na umalis ako, medyo may mga mga events non na kahit	So, the irregular hours really started to take a toll. For example, when I left, there were events where you had to go out

	bumabagyo, lalabas ka. Tapos, kahit gabi tatawagan ka…Pati yung mga meeting kasi gabi.	even if it was stormy. And you'd get calls even at night… Plus, meetings were often held in the evening.
7	Galing sa work, pupunta ka pa sa office para mag-attend ng meeting ng gabi. Hindi mo alam hanggang anong oras yun. Siyempre, mga editors, gabi pa sila natatapos. So, hintayin mo yun.	After work, you'd still have to go to the office to attend a meeting at night. You never knew how long it would last. Of course, editors often finished late, so you had to wait for them.
12	Yun din po pala, yung pagpasok, six (6) days per week. So, compared sa government na parang ano lang, 40 hours per week. And then, kapag holidays, holiday talaga. And then, kapag may suspension, suspended din. So, ayun din po. So, naka-contribute din yung mga days off.	Also, working six days a week was another factor. In comparison, government work usually has a 40-hour work week. Plus, holidays are actually observed, and if there's a suspension, it's also enforced. So, the days off were a significant factor as well.
E. MOBILITY		
4	Nag-cocommute tayo, kailangan natin puntahan yung mga event na pumuputok. Pag may sunog, may patayan, kailangan natin puntahan.	We had to commute and needed to go to events where things were happening, like fires or killings.
9	Siguro yung unsafe is dahil wala namang mobility. So, pupunta ka sa coverage na ikaw lang din. Tapos, uuwi ka rin ng ikaw lang din,wala ka namang din sasakyan.	The unsafe part was that there was no mobility support. You'd go to the coverage on your own and then return home alone as well, no vehicle provided for you

F. INTENSE WORKLOAD/UNCLEAR WORK DELINEATION		
4	Ang dami nating beat. And then, ang lawak nung kino-cover natin. Ako yung buong South. So, ilang cities meron sa South. Makati, Taguig, Paranaque, Pasay, Muntinlupa, Las Piñas, Pateros.	We had a lot of beats to cover, and the areas we covered were vast. I was responsible for the entire South. So, that included several cities: Makati, Taguig, Parañaque, Pasay, Muntinlupa, Las Piñas, and Pateros.
11	Binubugbog ako sa trabaho…I was trained to exert all of my efforts di ba?. Lahat kasi doon, parang, money mo, physical mo, lahat. Lahat ang pwede mo ibigay, di ba?	I am really trained to handle intense workload … I was trained to put in all of my effort, right? Everything there was about giving it all—your money, your physical effort, everything. You gave all that you could, right?
13	To be honest po, parang nawalan po ng boundary kasi since we're all working at home and as a media, as a journalist, we work literally 24/7. So, natanggalan po ng boundary ang work and life	To be honest, it felt like there was no boundary anymore because, since we're all working from home and as a media, as a journalist, we work literally 24/7. So, the boundary between work and life disappeared.
15	Sa akin po kasi, I also parang dumating din ako sa point na I wanted clear delineation ng work and personal time. So, I'm pretty sure you understand this na parang kahit na siguro patulog ka na tapos biglang may nag may nag-break na balita, kailangan mong bumangon and you have to work. So parang it's okay for the first few years pero parang you realize then later on na parang mapaisip ka if	For me, I also reached a point where I wanted a clear separation between work and personal time. I'm pretty sure you understand this feeling—where even if you're about to sleep and suddenly there's breaking news, you have to get up and work. It's manageable for the first few years, but then you start to question if this is

	this is something that you can do in the longer run.	something you can sustain in the long run.
V. DYING PRINT MEDIA		
7	Although nung pag-alis ko hindi pa naman ganon ka grabe yung kunwari, effect ng social media sa ano sa newspaper industry. Pero ngayon, super apparent na yun. Pero yun, yung isa ko naisip nung time na yun kasi medyo looming na siya na.	Although when I left, the impact of social media on the newspaper industry wasn't yet that severe. But now, it's become very apparent. That time, it was one of the things crossed my mind, that there was a looming [crisis].
7	So, nung time na yun kasi may looming na parang problem or challenge sa media industry na newspapers are dying parang ganon, so nung time na yun pa, what, 2007 ganon? So may ganon na. So, parang inisip ko, super, super ano eh, parang medyo nakaka-stress din yung isipin yung hindi mo alam kung ano na yung next sa… Ngayon, wala na ng Metro Page, di ba?	So, at that time, there was already a looming problem or challenge in the newspaper media industry, like it was dying This was around 2007, if I recall correctly. It was already becoming apparent. I thought about how stressful it was not knowing what the future would hold. Now, there's no more Metro Page, right?
VI. MEDIA CORRUPTION		
1	Siyempre meron pa rin mga bumabanat na dyan, yung mga ACDC (attack-collect-defend-collect) na mga kasama natin. Kung mayaman lang ako, I want to have a broadsheet for Central Luzon. Train young journalists. Pay them well. Pay them well. Para hindi sila ma-tempt dun sa tumanggap.	Of course, there are still those who criticize, our colleagues in the media who are the ACDC (attack-collect-defend-collect) type. If I were rich, I would want to have a broadsheet for Central Luzon. I would train young journalists and pay them well—pay them well—so they

		wouldn't be tempted to accept bribes.
5	It's a fact din naman, merong developmental journalism. It's something na hindi ko siya ma-take. So, sabi ko, rather than engage in that, you might as well, hanap ka na lang na mas malaki yung sweldo, di ba? I mean, you have to earn your keep, you have to earn your salary. So, para maging effective ka muna, kailangan you have integrity.	It's also a fact that there is developmental journalism, which I find unacceptable. So, I said to myself, rather than engage in that, you might as well look for a job with a higher salary, right? I mean, you have to earn your keep and your salary. To be effective, you need to have integrity first.
VII. MORE TIME WITH FAMILY		
4	I mean, the government we, especially in the [Legislative], we work Monday to Thursday. So you have three days for your family. That's quite convenient for us and spending quality time with my family is one of the most very important things for me as a father, as a husband. Because sometimes if you are a journalist, you cover during weekend, holiday, rainy seasons, typhoon like this, so parang limited yung family time (so family time is quite limited).	
6	At that time, I was newly married and had just given birth. So, I wanted an 8-to-5 job. So that's mainly my motivation, that was my main motivation for transferring to government office.	

7	Inisip ko, siguro, family, yung gano'n na parang ano na next step ko? Paano na 'to?.. Sa media kasi medyo…may priority ka na hindi pamilya mo. Although, meron din naman kaya nila pamilya, pero parang hindi ko kaya eh. Wala akong energy sa ganon	Maybe, I was thinking of my family. So, I was figuring out what my next step should be. In media, you often have priorities and that don't include your family. Although some people manage to balance family life that I couldn't handle. I didn't have the energy for that.

Table 1.3 indicates diverse social reasons why former journalists from print, broadcast, and multimedia companies decided to work for the government. To dig deeper into the social reasons that prodded the participants to leave their profession, this study came up with three major themes: (1) Service to Country, (2) Sense of Mission, (3) Social Influence, (4) Working Conditions in Media Sector, (5) Dying Print Media, and More Time with Family.

The participants exhaustedly narrated their experiences on "Working Conditions in Media" segment that allowed the researcher to create the following sub-themes: Slow Career Progression, No System of Mentorship; Dangerous and Risky Coverages; Irregular Working Hours, Mobility, and Intense Workload/Unclear Work Delineation.

I. Service to Country: The participants, namely P1 and P7 who were an activist, and a government scholar, respectively expressed their patriotic fervor, mentioning that service to country as their reason to serve the government.

II. Sense of Mission: The participants' sense of mission was commonly identified as a reason behind the migration to government service. Making a big sacrifice to make a difference, doing their job dutifully for the interest of the country, and helping their fellow compatriots were mentioned by P1, P2, P4, and P7. Holliday (2021) tagged journalism as "a power-replicating machine" – meaning "without a driving mission", it is guided by profit and, often, power.

III. Social Influence: The participants' involvement in significant national and foreign coverages influenced them to join the government. P1, and P2, who are holding Executive positions, narrated that their exposure to government officials and their kins, and their immersion stint in their respective beats prepared them to be part of government's working force. P15 even cited that her former colleagues in Broadsheet X who joined the public sector convinced her to join the government service.

IV. Working Conditions in Media Sector

A. Slow Career Progression: The participants from print media sector identified the slow career progression in the news media sector. P1, a veteran editor and now an experienced government official, and P9 who had 13-year stint in a daily broadsheet realized the need to change their career because of slow career movement in their respective news outfits.

B. No System of Mentorship: P11, an experienced journalist from the broadcast media, identified the absence of mentorship as among the reasons why she left the industry. P11 narrated that given the changing media landscape due to digital technology developments and the journalists' need to be financially secure, the system of mentorship was not prioritized.

C. Dangerous and Risky Coverages: P4, a male print journalist, narrated his experience of covering dangerous and risky national events, including the ouster of former President Joseph Estrada and the Abu Sayyaf hostage-taking incident in Basilan as among the reasons why he chose to shift from dangerous and risky coverages to government service, realizing that he was sent on a dangerous mission without any security blanket in terms of hazard pay, insurance, and any form of compensation in case of death or injury. In its World Trends in Freedom of Expression and Media Development: Global Report 2021/2022, *"Journalism is a Public Good,"* the United Nations Educational, Scientific and Cultural Organization (2021) said journalism continues to be a "deadly" and "dangerous profession." In 2023, at least 120 journalists and media workers, 68 of whom were involved in the Gaza conflict, lost their lives (International Federation of Journalists, 2023). Based on the UNESCO Observatory of Killed Journalists, print journalists are the second most attacked group (22 percent) (International Federation of Journalists, 2023).

D. Irregular Working Hours: The irregular working hours was factored in by P6, P7, and P12 for leaving their print media companies as the government offered a work schedule that allows more personal and family time. In a statement issued on Labor Day, the National Union of Journalists of the Philippines (2023) pushed for better pay and working conditions for all Filipino journalists, citing that their "economic and labor rights are as much press freedom issues." The journalists' union lamented that media companies do not provide overtime, holiday and night differential pay to compensate the long hours of work being rendered by many journalists, and added that when disasters or calamities strike, many journalists "cover without hazard pay or insurance" (NUJP Labor Day Statement, *"Solidarity on Labor Day: Media Workers Are Workers Too,"* 2023).

E. Mobility: P4 and P9 from the print sector who had 10 to 13 years of media service mentioned mobility as a safety concern. This is an issue, particularly when the journalists are asked to cover disasters or calamities, and other risky coverages without hazard pay or insurance (National Union of Journalists of the Philippines, 2023)

F. Intense Work Load/ Unclear Work Delineation: The participants who are mostly female, and were from broadcast and print news sector mentioned their intense work load or unclear work delineation as a reason for leaving their respective media

companies. P11, 13, and P15 who spent four to 20 years in the media industry left their profession during the COVID-19 pandemic. Meanwhile, P4, a print journalist for 10 years, stated that even before the pandemic, journalists were given heavy workload.

V. Dying Print Media

P7, a former print media journalist, discussed that the impending death of the print media made her think to change her profession. At the time when she departed the industry, the influence of the digital technology and social media was not that apparent. In the Philippines, the Filipinos' support for print media as news source has been declining from 2020 to 2023, according to the Reuters Institute for the Study of Journalism's 2023 Digital News Report Philippines (Media Ownership Monitor Philippines 2023, *"Print media: Readership on the decline",* Vera Files 2023). The 2023 Digital News Report Philippines cited that the most popular sources of news in the Philippines are online and social media, while for those who don't access to digital technology, TV and radio news remain important (Reuters Institute for the Study of Journalism, 2023).

VI. Media Corruption

Two participants who had extensive media experience mentioned that corruption in media exists in the country. P1 and P5 identified envelopmental journalism and ACDC (attack-collect-defend-collect) journalism as forms of media bribery that have been hounding the media industry. Due to low salaries, some of their colleagues succumbed to bribery.

VII. More Time with Family

Participants from the print media mentioned the work schedule in the government that allowed them to spend more time with their family as a reason behind their transfer. P4, P6, and P7 commonly identified the fixed work schedule in the government as more appealing than the erratic schedule in the media sector.

What are the reasons behind the migration of print, broadcast and multimedia journalists to the government service in terms of :

1.4 Personal?

Table 1.4

Personal Reasons

Participant Number	Verbatim	English Translation
I. CHANGE IN ENVIRONMENT		
1	So, parang, hindi naman na-bored or something, but I felt I needed a change in an environment	So, it wasn't really about being bored or anything, but I felt I needed a change in environment.
9	I left the publishing for personal reasons because during that time, I just realized that I don't want to be a reporter anymore. I want to try to work in government. Because I have been in the private industry for a very long time like actually 20 years na kung idadagdag pa yung mga previous work experiences (if you add up my previous work experiences).	
II. PERSONAL/PROFESSIONAL GROWTH		
1	It's more on your personal advancement. Yung challenge kasi they were telling me, the Foreign Service Officers Exam is one of the hardest, if not the hardest, in the Civil Service. Malaki yung casualty rate dyan. And there were about,	It's more on your personal advancement. The challenge was, they were telling me that the Foreign Service Officers Exam is one of the hardest, if not the hardest, in the Civil Service. The casualty

	I think, if I'm not mistaken, 1,500 of us who took it. And only more or less 20 passed. So mataas yung casualty rate. So even, sabi, even lawyers sometimes fail.	rate is quite high. There were about 1,500 of us who took it, and only around 20 passed. So, the casualty rate is high. Even lawyers sometimes fail.
1	Of course, yung opportunities to see the world. Yung i-expand yung ano mo talaga eh, yung horizon mo.	Of course, there are the opportunities to see the world and truly expand your horizons.
2	I didn't even know FSOs (Foreign Service Officers) become ambassador, so it wasn't really the motivation that I will become an ambassador one day. It was just, just really all about the answers to those global and regional questions that I had that I couldn't find answers to, whether school or in the media. Because you know, government officials will not really tell us the real story right.	
4	I was with him (Senate President X) for 14 years. So, it was a privilege and honor. And I learned many things from Senator X, not just professionally but in my own personal life. I gained many wisdom.	
12	And then personal is, I think personal growth din po. And then, kasi mas interested din po ako sa research, and technical, yung mga policy reviews po	And then, personally, I think another reason was also personal growth. I was also more interested in research and technical aspects, such as policy reviews.

III. JOB BURNOUT/HEALTH		
7	Ayun, isa palang [factor], health din, kasi may asthma ako…Pero syempre love ko naman yung work, pero, syempre, meron ka rin ano sa, premium sa health mo, sa sarili mo.	Also, health was a factor because I have asthma… Of course, I love my work, but you also have to prioritize your health and well-being.
7	Tapos, siyempre, yung news hanggang ilang, ano yun, ilang versions yun. Depende pa kung developing story. So, nung time na yun, parang medyo na-burnout ako.	And then, of course, the news can go through several versions, depending on whether it's a developing story. During that time, I felt somewhat burned out.
11	Tapos siguro, mentally, ano talaga siya eh, it's mentally draining. Sabi ko nga, ano siya eh, it's a kind of job that you are physically drained and mentally drained. Alam mo yun, tawag nito, hindi ka matutulog, hindi ka, alam mo yun, wala kang oras ng kain.	And then, mentally, it's really draining. I've said before that it's a kind of job where you are both physically and mentally exhausted. You know, you don't get to sleep, you don't have time to eat...
13	Also, personal things were taking toll on my mental health… Natanggalan po ng boundary ang work and life. So, it affected my mental health. I burned out. Basically, I got tired of doing what I used to love to do.	Also, personal things were taking a toll on my mental health. The boundary between work and life disappeared, which affected my mental health. I burned out. Basically, I got tired of doing what I used to love.
15	Sabi ko, parang kailangan ko talaga ng personal time para makapagtrabaho nang mas maayos. So yun yung reason kaya medyo personal din kung bakit ako naconvince umalis sa media. Sobrang amplified	I said to myself that I really needed personal time in order to work more effectively. So that was one of the personal reasons that convinced me to leave the media. It was greatly amplified

	syempre nung pandemic kasi bilang isolated ka na nga at home, parang mas naging mahirap to set that boundary na.	during the pandemic because, being isolated at home, it became even harder to set that boundary.

Table 1.4 shows three major personal reasons why former print, broadcast, and multimedia journalists left their profession for government service. These are Change in Environment, Personal/Professional Growth, and Job Burnout/Health.

I. Change in Environment: P1 and P9 who belong to the print sector identified a change in environment as reason for leaving the industry amid their 13 to 15 years of media experience.

II. Personal/Professional Growth: The participants who belonged to print and broadcast media sectors mentioned their pursuit of personal advancement and professional growth as a reason for career shift. P1, P2, P4 and P12 whose ages range from 25 to 57 years old mentioned that they wanted to expand their horizon, to grow personally and professionally, and to engage in research and policy reviews.

III. Job Burnout/Health: Job burnout or health has been identified as a personal reason by P7, P11, and P13 why they had to leave their profession. Two of these participants who experienced burnout left their job during the COVID-19 pandemic. P7, P11, and P13 are female and served as media practitioners for six (6) to 20 years. Based on the survey conducted by the ICFJ and the Tow Center for Digital Journalism at Columbia University, 70 percent of the 1,406 journalist-respondents indicated that dealing with the mental health impacts of covering the pandemic were the most difficult aspect of their work (Posetti et.al. 2020). The survey also found that 62 percent of the respondents rated assistance with managing mental health and well-being as an important or very important need.

II. The Participants' Roles in their Respective Agencies

What are the roles of former media practitioners in their respective agencies?

Table 2

Former Media Practitioners' Roles in Government Service

Participant Number	Verbatim	English Translation
I. COMMUNICATIONS		
A. PUBLIC INFORMATION		
1	We need to keep the people informed. We need to keep them inspired. We need to keep them interested. And we need to keep them engaged. So, you can only get them engaged if they're well informed… Inform the people about the good things that our government has been doing.	
2	I'm tasked to do the messaging or to do the press release.	
3	Ako na rin yung gumagawa ng mga press releases ni Cong X.	I am also preparing the press releases for Cong X.
4	Kami gumagawa ng mga captions, press releases ng lahat ng events ng mga senators. Nag-eedit din, proofreading everything, communications dumadaan sa amin. So pinu-proofreading namin lahat. Mga materials, anything related for communications, whether yung press	We handle creating captions and press releases for all the events of the senators. We also edit and proofread everything; all communications pass through us. We proofread all materials, whether it's press releases or other

	releases o yung ginagawang mga materials gaya ng brochures, yung mga mementos, yung mga booklet namin, dumadaan sa amin yan.	communication materials such as brochures, mementos, and booklets. Everything related to communications goes through us.
5	Aside from liaising with the media, I write press releases, and I also edit press releases. Syempre (Of course) when you write, you also cover. So, I'm also in the field from time to time. As I've said, during the Typhoon Carina, I was in the Iloilo to cover the Ethics Summit.	
8	I had the information group, so I managed the development, deployment, and evaluation of the various communication requirements of the Council.	
9	My roles are preparing and disseminating press releases, advisories, information materials to the members of the press.	
10	And then I also write news releases for the senator.	
13	I craft text for our social media contents. This includes photo captions. Basically, those serve as our daily press releases. Also, scripts for audio-visual presentations and social media reels, our art card write-ups, also news monitoring.	

14	Nagsusulat ako press releases, nagsusulat ako ng captions sa social media.	I am writing press releases and captions for social media.
15	[I am] in-charge ng external comms actually. So basically, most of what goes out to the public po, things like press releases, official statements, public advisories, social media posts, talking points ng officials ko.	
B. MEDIA/ PUBLIC RELATIONS		
3	Yung media relations, siyempre, nagagamit ko yun kasi alam naman natin sa Congress, lahat ng mga media doon, halos kaibigan naman natin. Siyempre, ako yung head ng staff niya, ako yung nag-a-arrange sa mga appointments niya (Congressman X).	In media relations, I make use of my connections since we know that in Congress, most of the media there are like friends. As the head of his staff, I am the one who arranges Congressman X's appointments.
5	I liaise with the media. So, when the [Judiciary] needs to contact the media, I am on top of that.	
6	[I'm] liaising with partners on possible projects or programs for our OFWs.	
8	So medyo varied [ang roles] (So, my roles are quite varied). So, it includes events management, media management, public relations, social media management, crisis communication.	
10	Under Office of Senator X, I work in media relations. So,	

	my work would include monitoring news issues. Pag madaling araw pa lang (Early in the morning), I have to send possible issues that might interest the senator. And then, if needed, I also help arrange and transcribe in interviews with Senate media.	
11	I handle media relations.	
14	Aside from that, mga minor roles include yung pag-shepherd ng mga tao, media relations, news monitoring, ganyan. So, more on public relations job.	Aside from that, minor roles include shepherding people, media relations, and news monitoring. So, it's more focused on public relations work.
15	Things like press releases, social media cards, talking points ng mga officials ng government agencies, yun yung mga materials, yun yung mga usual deliverables ko.	Things like press releases, social media cards, and talking points for government officials—these are the materials and usual deliverables I handle.
II. PUBLIC AND CULTURAL DIPLOMACY		
A. PROMOTION OF OFWS' WELFARE AND PROTECTION		
1	So, it's mostly providing consular services to our kababayan, looking after their welfare, extending assistance to those in distress, yung promoting Philippine culture, promoting the Philippines as a tourism and investment destination.	
6	I was assigned to assist the Secretary in special projects on reintegration of [OFWs] and coordinating activities	

	related to the reintegration of OFWs.	
B. PROMOTION OF BILATERAL RELATIONS		
2	I'm really handling the bilateral relations between the Philippines and the United States.	
III. PROGRAM/PROJECT MANAGEMENT		
7	So, parang manager, supervisor ng team. Parang ano ka na team lead ka. So, may mga team ng younger staff na may particular na work streams.	So, it is like a manager or supervisor of a team. You are essentially a team leader. You have teams of younger staff with specific work streams.
9	And then, I also monitor and supervise the operations of the digital media group which handles the agency's social media pages.	
10	Sa project management po, we manage projects that related to science communication, yung pinapondohan ng government…	In project management, we manage projects related to science communication that are funded by the government.
IV. EVENTS MANAGEMENT		
8	So medyo varied [ang roles]. So, it includes events management.	So, the roles are quite varied. They include events management.
10	I'm also an events specialist kasi (because) I handle different events.	
13	Also, our unit po is being tapped, as minsan, as the	Also, our unit is sometimes tapped as

	creative team for the [Legislative's] activities and events.	the creative team for the [Legislative's] activities and events.
V. SUBSTANTIVE POLICY WORK		
2	I was more into the substantive policy [work] because that's what I've always handled since I started in the [Executive agency].	
3	Involved din ako sa paggawa ng legislation, ng mga bills, resolutions, and other functions ni Congressman. So basically yun, ako yung kumbaga, head ng support ni Congressman X.	I'm also involved in drafting legislation, bills, resolutions, and other functions for Congressman X. So basically, I'm the head of Congressman X's support team.
VI. RESEARCH/STUDIES		
8	We also handle the science communication research and development portfolio of the Department, wherein we provide funds for both government and private institutions who would like to do R&D, Research and Development on science communication.	
12	And we also conduct po studies related to the public sector reform.	
VII. CRISIS MANAGEMENT		
8	So medyo varied [ang roles] (The roles are quite varied). So, it includes crisis communication.	

13	And also, sometimes we do crisis management po for the Senate pag necessary (when necessary).	
VIII. OTHER SIGNIFICANT ROLES		
A. ADMINISTRATIVE WORK		
2	Before when I came in, in 2018, I was asked to handle administration, which I really hated because I didn't, I had no idea what admin work is or it's not something that I was interested in.	
B. POLICY/PROGRAM/PROJECT REVIEW		
12	So, we're in charge of policy reviews, policy recommendations on anything related to the governance sector po. So, for example, yung mga (those) related to e-governance, on public accountability, and enhancing government capabilities.	
12	And then we also evaluate and review yung programs and projects relating to civil service and improving service delivery.	And then we also evaluate and review programs and projects related to civil service and improving service delivery.
C. PLANNING		
6	So, in the Planning Office, we support the Secretary directly on plans, on crafting the planning tools of the entire agency.	

D. PUBLIC CONCERNS AND RESPONSE MANAGEMENT		
9	I am also tasked to monitor the operations of the public, and complaints that we receive. So that's, yeah, we receive from other agencies and the public as well through the social media. And then kami yung nagpa-facilitate. So, yung unit na yun is public concerns and response management unit.	I am also tasked with monitoring the operations related to public complaints that we receive. We handle complaints coming from other agencies and the public through social media, and we facilitate the responses. So, the unit I work with is the Public Concerns and Response Management Unit.

Table 2 tackles the wide-ranging roles of the participants in their respective government agencies. Of the 15 participants, 13 of them (P1, P2, P3, P4, P5, P6, P8, P9, P10, P11, P13, P14, and P15) are into communications. These participants who are working in agencies under the Executive, Legislative, and Judiciary are all involved in the delivery of public information services.

Next to public information services, media and public relations becomes the second major role of the participants in their government agencies, with eight participants (P3, P5, P6, P8, P10, P11, P14, and P15) playing such part.

The researcher posits that the mandate of their respective agencies has something to do with the participants' roles in government service.

Three participants (P1, P2, and P6) are involved in the public and cultural diplomacy, which include the promotion of welfare and protection of Overseas Filipino Workers (OFWs), and the promotion of country's bilateral relations. They work in agencies under the Executive branch.

Public and cultural diplomacy, program or project management (P7, P9, and P11), and events management (P4, P11, and P13) are found to be the third major roles of the participants.

While, those participants who are working in agencies under the Executive and Legislative are into substantive policy work (P2 and P3); and are also engaged in crisis communication/ management (P8 and P13).

Other significant roles of the participants include: administrative work, policy/program/project review, planning, and public concerns and response management.

The researcher believes that given their crucial roles in the government service, the participants are still keeping their watchdog roles. Journalism promotes a healthy civic space by providing trusted and fact-based information which is essential to people's participation in a free and open society (Highlights of the World Trends in Freedom of Expression and Media Development: Global Report 2021/2022, "Journalism is a Public Good", United Nations Educational, Scientific and Cultural Organization, 2021). Herman et.al (2023) cited the crucial roles of journalists to bridge the communication between the government and the public. They stressed that the fourth estate should always be on board in public decision or policy-making.

III. The Participants' Perceptions about Public Service Delivery

What are the perceptions of former media practitioners about public service delivery?

Table 3

Perceptions about Public Service Delivery

Participant Number	Verbatim	English Translation
I. COMMITMENT TO PUBLIC TRUST		
2	I don't know if that's unique to me as a former media, but apparently not everyone shares that view or that belief that you have to be competent, you have to be professional, you have to deliver.	
3	Nung napunta ako sa [Agency X], don ko nakita yung pinaka most dedicated, most truthful na mga tao, na nagtatrabaho talaga para sa publiko, para sa gobyerno.	When I was appointed to work at [Agency X], I met the most dedicated, most truthful people, who really work for the public, for the government.
9	So, ngayon, being in the public information, feeling	Now, being in the public information, I feel that I

	ko, mas parang sa akin, mas may accountability sa part ko na eto, part ka na, dapat ikaw yung isa sa mga talagang nagpu-push na talagang makapagbigay talaga ng quality service to the people. So even yung time, kahit weekends, yung para sa bayan. Yun na lang din yung motivation. Motivation ko sa sarili ko, para sa bayan to eh.	have more accountability, especially now I am part of the government, I should be one of those who must really push to provide quality service to the people. Even during weekends, I work for the love of country. That's my motivation—serving the country.
11	I still believe with the importance of ethics. Whatever it is, whether you are in the public service or you are a media practitioner, ethics is very important. Tapos (Then), I also believe that, you know, public service is a public trust; in every, any case, people should trust you whether you are in the, nasa pinaka mababa ka or pinaka mataas (are occupying the lowest or highest position). I'm always on the lookout.	
13	We as public servants should serve people the way we as taong bayans want to be served din. Although now I understand po na may mga bureaucracy or hierarchy po na kailangan sundan. And sometimes it gets frustrating because we tried. Pero, I, personally po, I have the standard na, everything I do or write or produce should be excellent, and if not the best.	We, as public servants, should serve people the way we as citizens would want to be served. Although I understand now that there are bureaucratic or hierarchical processes that need to be followed, which can sometimes be frustrating. However, personally, I maintain the standard that everything I do, write, or produce

		should be excellent, if not the best.
II. PUBLIC SERVICE DELIVERY: A PRIORITY		
1	We're in government, so this [public service delivery] should always be a priority, especially for us in the [Agency X] and the other agencies that also get to work with us overseas.	
2	And because your salaries come from the kaban ng bayan (the nation's coffers), it's not from the private sector, then you shouldn't take it lightly. You should take your work seriously.	
3	Mas maraming populasyon na matandang dalaga sa [Agency X] kasi ganon sila kadedicated sa trabaho nila. Nakalimutan na nila yung sarili nila, yung love life nila para lang sa public service.	There are more single women in the [Agency X] because they are so dedicated to their work. They have forgotten about their own personal life and love life just because of public service.
9	Public service delivery, it must be delivered talaga (really), on point, immediately and then accurately promptly, completely.	
13	Filipinos should get the best service per se from the government.	
III. NEGATIVE TO POSITIVE PERCEPTION		
1	I tell people, you know, when I was a journalist, I was among those criticizing [Agency X]. But you know,	

	when I joined the [Agency X], I saw they've been doing a lot, but they just would not share the story. Not because they don't want to share it, but because they don't have the people who would be able to do the stories for them	
3	Kasi yung, nung nasa media pa lang tayo, lagi yung nakatatak sa atin eh, na government, marumi yan, corrupt yan. Pero nung nakapasok ako sa [Agency X], dun ko nakita andami talagang handang tumulong. Talagang hindi natutulog, hindi umuwi ng bahay para mag-serbisyo sa bayan. Hindi na nakaka-uwi sa pamilya nila para lang tumulong sa bayan kapag may mga sakuna. Honestly, doon talaga na iba yung pagtingin ko sa gobyerno.	When we were in the media, we always had the impression that the government was dirty and corrupt. But when I joined the [Agency X], I saw that there were many people who were genuinely willing to help. They were not able to sleep nor go home just serve the public. They were no longer able to go home just to help during disasters. Honestly, that's when my perception on the government changed.
6	In terms of perception, nagbago, definitely. Kasi nga sabi ko nga, from an 8 to 5 job, akala ko walang ginagawa in the government office. I was proven wrong. I found out na maraming ginagawa and maraming inaayos sa government office.	In terms of perception, it has definitely changed. As I said, from an 8-to-5 job, I used to think that there is no work pressure in government offices. I was proven wrong. I found out that there is a lot of work and that there are many concerns being addressed by the government offices.
15	Nung nasa media kasi ako, I was always critical of the government, actually. In fact, nung college ako, I	When I was in the media, I was always critical of the government. In fact, when I was in college, I

	never imagined working sa government service. Kasi nga, parang when I think of the government, I think of mabagal, I think of inefficient, I think of hindi ganon makatao… But for me, nung pumasok din ako sa government survey, like I said kanina, hindi, hindi nag bago yung view ko sa government. In fact, yung initial view ko of public service was only reinforced when I entered the government service. Nasimula ko na kasing maintindihan, makita yung inner work sa gobyerno. So, feeling ko valid naman yung ibang mga reason kung bakit mabagal.	never imagined working in government service. I thought of the government as slow, inefficient, and lacking in compassion. However, when I joined government service, as I mentioned earlier, my view of the government didn't change. In fact, my initial view of public service was only reinforced when I entered government service. I began to understand and see the inner workings of the government, so I feel that some of the reasons for the perceived slowness are valid.
IV. PUBLIC SERVICE IS INFORMATION DELIVERY		
4	So, one of the basic public services na ginagawa namin is to give yung public, yung precise and accurate information about the institutions. We should inform the public for them to have informed decisions pagdating ng araw, pagdating ng elections, sino ba yung iboboto nila.	One of the basic public services we provide is to give the public precise and accurate information about the institutions. We should inform the public so they can make informed decisions when elections come and choose who to vote for.
5	Pagdating sa (When it comes to) public service delivery, when you're a former practitioner you know what the people needs to hear about, read about. They need to learn about the institution. So basically,	

	pagdating sa Judiciary (with the Judiciary), syempre (of course), since it's the third branch of the government and its primary function is to deliberate cases, mostly, ang dapat na delivery service na ineexpect (the expected service delivery) is to disseminate information about the court's decision.	
10	From my experience po, I view public service in government as similar to that in private media in the sense na, both want to inform the public in a timely and accurate and professional manner. Also in both cases, we also have to keep in mind yung (the) views and positions ng (of the) principal.	
14	I think, pag meron kang background kasi sa media, you are able to understand the dynamics of how you pass information…May times kasi, ang problema is yung public relations mismo na nagsimula sa government, hindi nila alam yung dynamics sa loob ng media. So, with experience sa media, galing ka sa media, papasok ka sa public relations ng government, you're able to, hindi naman perfectly, but rather, you are able to communicate efficiently.	I think having a media background helps you understand the dynamics of how information is delivered. There are times that the problem is public relations that started with government because they don't the dynamics within the media. So, with your media experience, when you eventually handle public relations in government, you are able to communicate more efficiently, if not perfectly.
V. CONTINUED QUEST FOR TRANSPARENCY AND ACCOUNTABILITY		

8	Yung lens mo as a journalist does not really go away. You still seek for transparency and accountability when you're working in the government. Kahit na may inis ka over red tape, and seemingly circuitous processes in government, yun yung nadadala mo from media practice. Yun ding balanced view mo of the world na… and your bias for the truth and for the people that you serve.	Your lens [perspective] as a journalist doesn't really go away. You still seek transparency and accountability when working in government. Even though you may get frustrated with red tape and seemingly circuitous processes in government, that's something you keep from your media practice. As well as your balanced view of the world and your bias for the truth and for the people you serve.
12	I think meron naman pong mga efforts to enhance transparency and accountability…Overall po, may mga accomplishments naman but more work still needs to be done to enhance yung transparency and government efficiency.	I think there are efforts to enhance transparency and accountability…Overall, there have been accomplishments, but more work still needs to be done to improve transparency and government efficiency.
VI. BRINGING GOVERNMENT CLOSER TO PEOPLE		
7	Dito sa government, kunyari, mag-lelead ka ng team na nagpu-push ng ganitong [financial inclusion] tapos makikita mo nagwo-work together. Yung parang sa policy change, basta mas apparent. Mas naco-connect ko siya sa, natutunan ko sa school before, tapos yung family values din, parang yung pagtulong, parang diretso. So kunyari yung financial inclusion or bringing	In government, for example, when you lead a team pushing for something like financial inclusion, and you see everyone working together, it becomes more apparent. The policy change is much more apparent. I can connect it better with what I learned in school and also with family values, like helping others directly. For

	[Agency X] closer to the people.	instance, financial inclusion or bringing the [Agency X] closer to the people.

Table 4 tackles the perceptions of the participants about public service delivery. These perceptions were clustered into six major themes: (1) Commitment to Public Trust, (2) Public Service Delivery: A Priority, (3) Negative to Positive Perception; (4) Public Service is Information Delivery; (5) Continued Quest for Transparency and Accountability; and (6) Bringing Government Closer to People.

I. Commitment to Public Trust: The participants who had a media stint of 6 to 20 years believed that public servants should exemplify professionalism, competence, ethics, dedication and commitment to public trust when it comes to public service delivery. For P2, P3, P9, P11, P13 who were from broadcast, print and multimedia sectors, public service is a public trust.

II. Public Service Delivery: A Priority: The participants were in consensus that the delivery of public service must be prioritized at all costs. P1, P2, P3, P9, and P13 stressed the importance of having an efficient, prompt, and complete delivery of public service.

III. Negative to Positive Perception: The participants narrated how their negative perception about government was changed or how their initial view of government service was reinforced when they entered the government service. P1, P3, P6, and P15 stated that their immersion in their respective agencies that are actively involved in public service delivery made them realize that those in the government have been doing a lot in spirit of genuine service and for love of country.

IV. Public Service is Information Delivery: Providing accurate, credible and precise information in an efficient, timely and professional manner is a form of public service delivery. This was commonly identified by P4, P5, P10, and P14 as their perception about public service delivery. The four participants previously worked as multimedia and print journalists, and their current roles in their respective agencies are into public information services and media relations. As a tool, information empowers people to exercise their basic rights, permits for citizen's participation and public trust in democratic governance and sustainable development (Windhoek+30 Declaration: "Information as a Public Good" issued during the United Nations Educational, Scientific and Cultural Organization World Press Freedom Day Global Conference on 29 April to 3 May 2021 in Windhoek, Namibia). The United Nations Educational, Scientific and Cultural Organization (2021) stressed that the delivery of trusted and fact-based information is vital to people's participation in a free and open society (Highlights of the World Trends in Freedom of Expression and Media Development: Global Report 2021/2022, "Journalism is a Public Good").

V. Continued Quest for Transparency and Accountability: The participants from print media sector pointed out that the continued quest for transparency and accountability in the delivery of public service remains. P8 and P12 believed that more work still needs to be done to enhance transparency and accountability in the bureaucracy. In its Editorial, the Philippine Daily Inquirer (2023) challenged President Marcos Jr. "to reverse" the supposed reduced adherence to transparency and good governance by his predecessor by directing the government institutions to "deepen their commitment to freedom of information (FOI) principles." Citing a Philippine Center for Investigative Journalism (PCIJ) 2022 report, the PDI said the approval of FOI requests only stood at 40 percent, which was only half of its 80-percent approval rate target (Editorial: Strengthening FOI, January 11, 2023 Issue).

VI. Bringing Government Closer to People: Bringing government closer to people is one of thrusts of public service delivery. This was stressed by P7 who has been in government for 16 years and is currently advocating for financial inclusion of marginalized youth sector.

IV. The Participants' Contributions to Public Service Delivery

What are the former journalists' contributions to public service delivery, particularly in the fulfillment of their agencies' mandate?

Table 4

Notion on the Capacity of Former Journalists to Contribute Skills and Expertise to Public Service Delivery

Participant Number	Verbatim	English Translation
1	Of course. Yung nakikita ko, in the 25-26 years that I have been in government service, yung napaka-importanteng aspeto yung public information eh, di ba? Some would call it propaganda, but hindi. It's just providing people with the right kind of information they need to make the right kind of	Of course. From what I've seen in the 25-26 years that I have been in government service, one of the most important aspects is public information, right? Some might call it propaganda, but it's not. It's about providing people with the right kind of information they need to

	decisions, to make the right kind of impressions.	make informed decisions and form accurate impressions.
2	Definitely. I think there are a number of former media in [Agency X].	
3	Honestly, nung una, akala ko wala. Pero yung sa pagsasama namin ni Cong X, na meron din pala kasi. Like for example, tayo, alam natin yung mga red tape sa gobyerno. So, kumbaga may background tayo as a media practitioner. Alam natin kung ano yung mali. Nakikita natin kung ano yung nagpapabagal sa takbo ng gobyerno. So, nakakacontribute din talaga.	Honestly, at first, I thought there was none. But in working with Cong X, I realized there actually is. For example, we know about the red tape in government. Having a background as a media practitioner, we understand what's wrong. We can see what slows down the government's processes. So, it really does contribute.
4	Definitely, ang sagot dyan, siyempre, yes. Kaya nga tayo kinuha ng ng senador o ng government institutions na to because of your skills, di ba? Kasi very, ano tayo, very flexible tayo, nasanay tayo nagko-cover.	Definitely, the answer is yes. That's why we were hired by the senator or by government institutions—because of our skills, right? We're very flexible; we're used to covering various situations.
5	Yes. Yes. Very much. Ang laking bagay if you're a former journalist. Not necessarily from, regardless kung anong medium, be it radio, I mean, be it broadcast or print, ang laking bagay because we understand kung ano yung kailangan… So, ayun, yun ang advantage natin eh. We can spot already kung ano	Yes, definitely. It's a huge advantage to be a former journalist. It doesn't matter what medium you came from—whether radio, broadcast, or print. The important thing is that we understand what's needed. We can already spot what stories will

	yung story na kakagatin and yung talagang newsworthy.	catch attention and what's truly newsworthy.
6	Definitely. As a former journalist, I was always given the task of writing, writing of policy briefs, technical notes.	
7	Oo, kasi, yun nga, parang nakaka-contribute dahil nga may media interface pa rin naman. Lahat ng government agency may media interface. Pero, ano naman eh, kung iisipin mo, super, super madaling intindihin kung yung mga media practitioner, mag-wo-work sa Public Information Office ng mga government agency	Yes, because, you know, it really contributes because there is still media interface. Every government agency has a media interface. But, if you think about it, it's super easy to understand if media practitioners work in the Public Information Office of government agencies.
8	Yes, I think skills and expertise of former journalists are very, very vital in the delivery of public service, just because it ensures that nadadala talaga sa tao yung kailangang ibigay.	Yes, I believe the skills and expertise of former journalists are crucial in the delivery of public service. They ensure that essential information reaches the public effectively.
9	Ang masasabi ko na contribution ko sa… yung skills…So as a journalist, nandoon yung being transparent. Andun din yung, walang biases.	What I can say about my contribution is my skills. So as a journalist, I put premium on transparency and impartiality, no biases.
10	I would agree na (that) former journalists can contribute. They have a lot to contribute in terms of skills and expertise sa public service…The skills in the work ethics that we gain in	

	working for a private media outfit. They help.	
11	I think yes. It's high time that you know, we journalists or the people coming from the media will also consider government office as a, you know, as an opportunity for them to grow as well. Hindi lang naman yung ahensya na yun ang makikinabang sa 'yo. Ikaw rin naman makikinabang sa kanya (It's not just the agency that will benefit from your skills; you will also benefit).	
12	I think nakaka-contribute naman po yung former media practitioners sa public service delivery. So, since they excel in clear and concise effective communication, which I think is crucial in formulating policies, doing public information campaigns. And mas na-uunderstand po nila yung public concerns. Kasi nandoon na sila sa on the ground eh. Na, nakikita nila harapan kung ano nangyayari sa on the ground. So they can bridge the gap po between the government and yung community.	I believe that former media practitioners can contribute significantly to public service delivery. So, since they excel in clear and concise effective communication, which I think is crucial in formulating policies, doing public information campaigns. They also have a better understanding of public concerns because they've been on the ground, witnessing first-hand what's happening. This experience allows them to effectively bridge the gap between the government and the community.
13	Yes po. Yun nga po. Like I said po, with my training as a journalist, syempre, media po as fourth estate, ganun po yung view natin. I	Yes, exactly. As I mentioned, with my training as a journalist, media as the fourth estate. I personally tend

	personally tend to be critical po of myself and my work being a public servant. Kasi, ayaw ko ng mediocre. Deserve ba ng taong 'to yung ginagawa ko?	to be critical of myself and my work being a public servant. I despise mediocrity. I strive to ensure that my work is not mediocre, and constantly question, does the public deserve what I am doing?
14	Oo naman. Again, babalik tayo dun sa point na, the efficiency of delivering information to public. Once you know what the public wants, di ba? Once you know na, kung ano yung papatok, ma-tatailor fit mo yung main message mo sa public, like for example, agenda setting.	Absolutely. We reiterate the importance of having efficiency in delivering information to the public. Once you understand what the public wants and what will resonate with them, you can tailor your main message to fit their needs. Like for example, agenda setting.
15	Yes na yes (Absolutely). 100 percent. I think, I think journalists and yung skills nila (their skills), definitely can be an asset to any government agency. Kasi things na (Things), like writing, no one does it better than journalists. And writing clearly, communicating clearly and effectively, talagang (really) you can rely on former media practitioners who are now working in government service to do that really well.	

Table 4 shows that all the participants agreed that former media practitioners have something to contribute to public service delivery, particularly in the area of public information services. The participants' communication skills, grit, hard work and extensive experiences in the field and trainings make them assets to the government's continued

quest to ensure the efficient, transparent, prompt, and accountable delivery of public service. Herman et.al (2023) said the functions and roles of journalists in supporting communication between the government and the public are important in daily life. Citing Khatimah, they observed that in the sphere of public policy, journalists have been considered “as a part of the Pentahelix elements that cannot be separated and influence each other in a decision or policy-making.”

The researcher believes that with the presence of former media practitioners in some government agencies, bringing the government closer to people by reinforcing the principles of transparency and accountability through the delivery of credible, prompt and accurate public information services is not far-fetched. Press freedom is intended to build a society where citizens are constantly educated, aiding them to have the right judgment to pick good leaders and exercise their democratic rights without fear (Report on State of Media Freedom in the Philippines 2024 presented during the “1st Philippine Media Safety Summit: Surviving Pandemics and Other Provocations by Challenging Current Paradigms,” CMFR, 2 May 2024).

Table 4.1

Participants’ Actual Contributions to Public Service Delivery

Participant Number	Verbatim	English Translation
I. PUBLIC INFORMATION/ COMMUNICATIONS/MEDIA RELATIONS		
1	You have to really mount an effective public diplomacy campaign to make them understand what we do. So, yeah, so I use Facebook a lot. I personally engage people. I encourage them to add me and message me directly, which is what I've actually been doing since the social media came about. Yun nga, yung ako talaga sasagot, sasagutin kapag nag-message (I personally respond to them if they have queries). Kasi	

	iba yung (because) personal engagement [is different].	
2	When I'm tasked to do the messaging or to do the press release, which I still do by the way, right now, it's something I can do with my eyes closed, but I always make sure that it's nuanced and at the same time, you're communicating policy…Basically, that's it, being able to deliver fast and communicating policies well.	
3	Gusto natin yung transparent tayo sa, yung gobyerno sa atin. So, kaya kami, open kami sa media noon… We make it a point na open kami lagi sa media, na pag may kailangan silang tanong, sinasagot agad naming, negative or positive yan, sasagutin namin yan.	We want our government to be transparent. So, we were open to the media back then. We made it a point to make ourselves, our agency always be accessible to the media, responding to their questions promptly, whether the inquiries were positive or negative.
4	Tingin ko yung mapanatili and make sure na accurate yung information na binibigay namin sa public. And I think that's very important. And then, dapat totoo lang yung sinusulat mo. And di siya sugar-coated. So, I think yun ang basic responsibility namin eh.	I think it's crucial to maintain and ensure the accuracy of the information we provide to the public. It's very important that what we write is truthful and not sugar-coated. I believe that's our basic responsibility.
5	I have been espousing this sa mga PIO Chiefs na we have to hold press conferences. Pero ideally kasi, to be on the news,	I've been advocating to PIO Chiefs that we need to hold press conferences. Ideally, to get news coverage, you

	kailangan exposure. And ano exposure na ito? Pag-conduct ng press con. Kasi ang press releases, while it can help, limited yung nare-reach.	need exposure. And what kind of exposure? By conducting press conferences. Press releases, while helpful, have limited reach.
9	Mga requests {sa social media], so kami rin nagfafacilate non. So dapat talaga narereach out talaga, nakakarating sa public, and even public information. Like kanina (July 23 during Typhoon Carina), walang number coding or sinusupend nila yung number coding, anong oras na, hapon na. So nandun na on point na, nagpost kami sa social media. Kailangan namin gumawa ng postings. And then we post it. We disseminate it to everyone, the media, the public.	All requests [on social media], we facilitate the, So we should really reach out to the public, and the public information reaches the public. Like this afternoon (July 23 during Typhoon Carina), the number coding has been suspended. So that's on point, we posted it on social media. We need to make posting and then we post it. We disseminate it to everyone, the media, the public.
10	Medyo may idea na rin ako na what the media will pursue or what they need, the information na kailangan nila. So I could kumbaga, “guide”, or at least give the principal an idea of what the media want. So, kapag tinanong siya or hiningan siya ng statement, may idea siya kung what to answer or what points i-istress niya.	I have a good understanding of what the media will pursue and the information they need. This allows me to "guide" or at least provide the principal with an idea of what the media wants. So, when asked for a statement or response, the principal has already an idea what to answer or the key points that must be emphasized.
11	Pwede ko sabihin na (I can say that my) contribution is that I was able to bring 46 million ROI (return on investment) last year sa	

	media relations naming (in our media relations effort).	
12	So yung own contribution naman po, for me, I think, nakatulong din yung yung networks since parang may connections ka na. Being a reporter kasi marami ka ng networks sa pag-interviews. So, nakaka-help yun sa pagkailangan mo ng data. So, you know na who to contact, meron ka ng contact person. And then, so nakakatulong din siya sa work, especially if you need information or data na wala yung agency.	As for my own contribution, I think my networks have been quite helpful since you have already established connections. As a former reporter, you had established networks because you interviewed a lot. This helps when looking for data. I already know who to contact since you have links with them. This is particularly beneficial, especially if you need information or there is no readily available data in the agency.
13	We produce content po na, thinking how things may be viewed from the other side of the fence na as how media would write it, how the public would take it po on social media. Hindi lang po kami nag-iinform. Parang we consider also the timing, message, value po ng content, before putting it out.	We produce content while considering how things might be viewed from the other side of the fence, such as how the media would write about it and how the public might perceive it on social media. We don't just inform; we also consider the timing, message, and value of the content before putting it out.
14	Other than sending PR, other than releasing newsletters, I was able to help na mag gumawa ng mga media campaign. Kasi hindi lang naman basta release ka ng release, kailangang isipin mo din	Other than sending press releases and newsletters, I was able to contribute by helping to create media campaigns. It's not just about releasing information; you also

	yung timing, yung ano, gestation period, yung mga ganyang bagay. So yan yung knowledge ko na na-impart sa tao sa office. And yung pangalawa, yung kahalagahan din ng media monitoring. I've been telling them na we should get a media monitoring tool na, makikita natin yung mabibase, maa-angle natin. Para data analytics, it's more of the scientific approach of, are we able to hit our targets na parang yung gano baka effective yung PR natin.	need to consider timing, the gestation period, and other factors. This is the knowledge I've shared with the team in the office. Additionally, I've emphasized the importance of media monitoring. I've been telling them; we should get a media monitoring tool so we can track our performance. Data analytics is more of the scientific approach. This helps us evaluate whether we're meeting our targets and how effective our PR efforts are.
15	Because yung mga ginagawa kong deliverables ay for public consumption, andun po yung pagiging detalyado, andun yung pagiging truthful, i-ensure po natin na tama yung nilalagay nating detalye. And andun nga din po yung grit or yung kagustuhan to make sure na okay po yung lumalabas na material sa public. And that it also has an information po na magagamit or beneficial sa public.	Since the deliverables I produce are for public consumption, attention to detail and truthfulness are crucial. We need to ensure that the information we provide is accurate and well-detailed. There's also the grit and determination to make sure that the materials released to the public are of high quality and that they contain useful and beneficial information to the public.
II. PROGRAM DELIVERY/ PUBLIC CONCERNS AND RESPONSE		
3	Nung umupo kami ni Cong. X, we make it a point binawasan namin yung lahat ng mga requirements para	When Cong. X and I took office, we made it a point to reduce all the requirements to speed

	mas mapabilis and sabi namin, lalo na si Cong X, sabi niya na ang gusto ng tao is yung pagkapunta mo makukuha mo yung hinihingi mo. So, we make it a point at that time na dapat pagdating ng umaga ng beneficiaries, kailangan makukuha nila yung kailangan nila within the day. So, nagawa namin yun at that time.	up the process. We said, especially Cong. X, he said that what people need is they get immediate assistance. that when you go you can get what you ask for. So, we make it a point at that time that when the beneficiaries arrive in the morning, they must get what they need within the day. So, we did that at that time.
7	Actually, yung Office namin instrumental din sa pag-form ng (Paleng QR-Ph) dahil in partnership with DILG and syempre yung LGU. So parang nag-work kami together para mag-issue ng guidelines, yung Joint Memorandum Circular, and joining yung LGUs all over the country to implement the Paleng-QR Ph program. Pero yung team namin, yung particular sector na involved kami is yung youth. Kasi yung youth marginalized sector	Actually, our Office was instrumental in forming the Paleng QR-Ph initiative. We collaborated with the DILG and local government units. We worked together to issue guidelines through the Joint Memorandum Circular and engaged local government units across the country to implement the Paleng QR-Ph program. Specifically, our team focused on the youth sector, recognizing that it is a marginalized group.
9	No backlogs…At least sa Office natin, [on] time on target tayo. Kasi may time din yan eh, we respond to the concerns, the complaints we receive. So yung contribution, Complete work task. At saka, another pa na contribution is, dahil nga din, may mga bago na rin kaming mga writers sa office. Contributions ko is to	No backlogs. At least in our Office, we are on time, on target. Because our response is time-bound, we respond to the concerns, the complaints we've received. So, the contribution, Complete work task. Additionally, another contribution is because we have new

	teach them how we work, how we work, how I work nun as a journalist. And, i-impart din sa kanila yung mga learnings na yun para we are on the same page, in sync, lahat ng mga ginagawa namin.	writers in the Office, I teach them how we currently work, how I worked as a journalist. I impart to them all these learnings to ensure that we are all aligned and in sync with our work.
III. POLICY DEVELOPMENT/PROJECT APPROVAL		
6	So, because of my background, I was pushed to this area of policy dev, policy development. So, I think I was able to contribute to that output of the government agency I'm in.	
8	For me, halimbawa, since I sit in the management, yung purview ng tao over the projects or the proposals that go over us, yun yung contribution ko. We ensure that the proposals that we approve are truly beneficial to the people. We ensure na there are safeguards, in terms of accountability and transparency as well for when, when we, when, when we approve proposals.	For me, since I sit in management, my contribution involves overseeing the projects or proposals that come across our desk. We ensure that the proposals we approve are genuinely beneficial to the public. We also implement safeguards to ensure accountability and transparency in the approval process.

Table 4.1 shows how the former journalist-participants translated their roles into concrete actions, providing the complete picture of their actual contributions to government's public service delivery. They are very much involved and engaged in the delivery of public information services.

This study grouped the participants' actual contributions into three facets: (1) Public Information/Communications/Media Relations, (2) Program Delivery/Public Concerns and Response; and (3) Policy Development/Project Approval.

I. Public Information/Communications/Media Relations: Twelve (12) participants who are mostly working in the Executive, Legislative and Judicial branches of government and

had a media experience of one (1) to 20 years are into public information, communications and media relations. P1, P2, P3, P4, P5, P9, P10, P11, P12, P13, P14, and P15 belong to the first group of government communicators.

II. Program Delivery/Public Concerns and Response: Three (3) participants - P3, P7, and P9 are very much involved in the implementation of programs by their respective agencies.

III. Policy Development/Project Approval: Two (2) participants, namely P6 and P8 are into project proposal approval and policy development in fulfilment of their roles.

As former members of the "fourth estate," the participants remain committed to carry over and keep the press' watchdog tradition – always being on a lookout to ensure the transparent and accountable delivery of public service. Journalism promotes a healthy civic space by providing trusted and fact-based information which is essential to people's participation in a free and open society (Highlights of the World Trends in Freedom of Expression and Media Development: Global Report 2021/2022, "Journalism is a Public Good", United Nations Educational, Scientific and Cultural Organization 2021). Herman et.al (2023) cited the crucial roles of journalists to bridge the communication between the government and the public. They stressed that the fourth estate should always be on board in public decision or policy-making.

V. The Participants' Suggestions to Strengthen Partnership to Curb Corruption, and Promote Transparency and Accountability in the Bureaucracy

How can former journalists effectively engage with the government as partners in disseminating its programs and projects to curb corruption, and promote transparency and accountability in the bureaucracy?

Table 5

Participants' Suggestions on How to Strengthen Partnership with the Government as Anti-Corruption and Pro-Transparency and Accountability Mechanism in Public Service Delivery

Participant Number	Verbatim	English Translation
I. OPEN ACCESS/INFORMATION DELIVERY		
3	Sa akin talaga kasi, parang napaka importante ng transparency eh. Kasi, kung transparent ka, kasunod na	For me, transparency is really important. Because if you are transparent, it naturally

	doon yung ma-eradicate mo yung corruption eh, di ba? And kung open ka sa lahat, nakikita ng taong bayan yung ginagawa mo. sa gobyerno.	follows that you can reduce corruption, right? And if you're open about everything, the public can see what you're doing.
4	So, during budget season, di ba, so gumagawa rin kami ng mga press releases. So, bawat ahensya ng gobyerno, tinatalakay sa [Legislative] yung budget. So, we make sure na yung binibigay naming details, tama. Paglabas sa [Legislative] website, pag-blast namin yan sa media entities, tama. So, yung transparency dun, tingin ko, nasa-serve namin. Plus yung accountability na dapat tama yung figures and everything. All information, the data, the figures na nilalabas namin, dapat tama.	So, during budget season, we also produce press releases. Each government agency discusses its budget in the [Legislative]. We make sure that the details we provide are accurate. When we publish information on the [Legislative] website and send it out to media entities, it has to be correct. In terms of transparency, I think we serve it well. Plus, the accountability aspect means that the figures and all the information we release must be accurate.
7	Gumawa ng better communication material, siguro parang seryosohin…So, siguro yun, more, better materials, better communication products para mapansin ng media and ma-report na may ginagawang maayos yung [Independent Public Financial Institution X]. Transparency na rin sa ginagawa namin.	Create better communication materials…So, I think it's about producing better materials and communication products to get media attention and report the good work being done by the [Independent Public Financial Institution X]. It also involves ensuring transparency in what we do.
9	Walang dapat itago… So, dapat talaga transparent	There's nothing to hide… So, a truly

	working relationship. Yes, transparent. And then, you follow the procedure. No shortcuts. You follow the system.	transparent working relationship is necessary. Yes, transparent. And then, you follow the procedure. No shortcuts. You follow the system.
14	Ang lagi ko lang kasing ina-advise sa kanila is hindi mo kailangan magtago… it's more of, wala kang tinatago. Wala kang tinatago. So, it's a matter of how frequent you're informing the public of what's happening, how prompt you are in terms of answering issues.	What I always advise them is that you don't need to hide anything… It's more about not hiding anything. So, it's a matter of how frequent you're informing the public of what's happening, how prompt you are in terms of answering issues.
II. VALUES		
1	Alam mo dapat ano yung mission mo… We get sent out to serve our people, to serve our country. Lalo yung focus mo, huwag ka mawala dun. I'm lucky I belong to an agency of government that is not known for corruption. Maraming safety nets that were put in place to make sure that walang magiging corrupt sa amin.	You need to know what your mission is…We get sent out to serve our people, to serve our country. Stay focused on that. There are many safety nets in place to ensure that no one engages in corruption.
5	First and foremost, dapat you have integrity na muna. When you join the government, mag-join ka for the proper reasons.The only way para makinig sa'yo, yung mga yung mga officials sa government is for you to build that reputation.	First and foremost, you should have integrity. When you join the government, you should do so for the right reasons. The only way to get government officials to listen to you is by building that reputation.

8	If they want to engage government, they would have to, well, participate in the government process. Madaling magsalita if you're outside. Pero once you're in the system and you need to effect change, yun yung challenge. (It's easy to speak from the outside, but once you're inside the system and need to effect change, that's the real challenge). Maraming considerations along the way and you will have to conquer those. Another is that you go back to your why. Why do you want this? And what really drives you? Kasi kung hindi mo i-ga-ground yung sarili mo (If you don't ground yourself), you'll be lost in the system. And sooner or later, you'll just be part of the problem that you hope to solve when you get into government.	
10	One way would be, you have to establish trust with current media practitioners, and with government officials concerned. Siguro find a way to… I don't know if middle ground is the right term, but we have to find a way to relay yung (the) key information sa (to the) media. Yung focus niya (The focus) is promoting accountability, pero (while) avoiding also yung sensationalism na baka matabunan di ba, yung issue dahil may gustong i-promote	

	na something else (that might overshadow the issue because of other agenda).	
III. TRANSPARENCY MECHANISMS/INITIATIVES		
2	That's tough. Because, first of all, those mechanisms have to be in place within government agencies to promote transparency, accountability, anti-corruption. If none, then media will have to be really assertive and will have to take the initiative to demand for that across all government agencies.	
11	It's high time that they see the government as an opportunity for them to work. Hindi naman kailangan na yung trabaho nila dito ay regular positions (It's not necessary that their work here should be in regular positions). I think that the government should also be open in getting them as a consultant, especially for people into communication.	
12	I think they can advocate and help establish transparency initiatives, such as open data platforms and they can also help establish public reporting systems that allow citizens to access information about government operations and about government spending them. I think yun yung nakikita kong role for them	

	(that's the role I see for them).	
15	Proposing activities po na can invite yung transparency and accountability sa mga government employees, sa mga public service, public servants. Pero definitely, kailangan mo po talagang i-formalize yung mga ganong proposals. Like you have to talk to your supervisors maybe. You might have to draft that proposal yourself para maakyat siya sa management for review and their consideration.	Proposing activities that can promote transparency and accountability among government employees and public servants. But definitely, you really need to formalize such proposals. For example, you have to talk to your supervisors and perhaps draft the proposal yourself to submit it for management review and consideration.
IV. TRAINING/IMMERSION		
6	In terms of engagement, I think media practitioners can also look into, they really have to study the agencies they are assigned to cover. Kasi pag may nakatingin sa kanila (Because if you are asserting your watchdog role), we can help them improve, also their processes, they can help them be more accountable as to their mandate, as to their goals and vision.	
13	I think media training po is important. Me, as part of private media before, na we can educate government offices po na how to effectively communicate things or programs, per se, so that people would know and actually engage and	I think media training is important. As part of private media before, we can educate government offices on how to effectively communicate things or programs, per se, so that people are informed, engaged, and

	actually participate sa ginagawa ng government.	involved in what the government is doing.

Table 5 encompasses participants' diverse suggestions as to how they can effectively engage with the government as partners to curb corruption, and promote transparency and accountability in the bureaucracy.

The participants' suggestions were clustered into four themes: (1) Transparency Mechanisms/Initiatives, (2) Values, (3) Open Access/Information Delivery; and (4) Training and Immersion.

I. Open Access/Information Delivery: The participants stated that all-out transparency in the government is a fight against corruption. P3, P9, and P14 stressed the importance of providing full information access to public, and that the government processes and procedures are strictly followed. As government communicators, the participants (P4 and P7) mentioned that there should be a provision of quality communication materials and products, and that accurate and reliable data and information should be made available to the public in a prompt manner. The United Nations Educational, Scientific and Cultural Organization (2021) said the delivery of trusted and fact-based information is significant to people's participation in a free and open society (Highlights of the World Trends in Freedom of Expression and Media Development: Global Report 2021/2022, "Journalism is a Public Good").

II. Values: The participants commonly identified sense of values in terms of untainted integrity, and credible reputation; and commitment to public trust as major key ingredients for their strengthened partnership with the government to lessen corruption, and promote transparency and accountability in the bureaucracy. P1, P5, P8, and P10, who all had extensive media and government experiences, discussed that given the challenges hounding the public sector, it is stressed that to make a difference, one must have the following: integrity and credible reputation, sense of mission, and commitment to serve the public to positively impact the spectrum of governance, particularly in the delivery of public services. Serving the people with integrity, utmost responsibility, and efficiency is non-negotiable. During the 50th anniversary of the Kapisanan ng mga Brodkaster ng Pilipinas (KBP), President Marcos Jr. urged the broadcast organization "take the lead and foster public discussions, truth, and credibility" (Locus, 2023).

III. Transparency Mechanisms/Initiatives: The participants cited the need to put in place pro-transparency and accountability and anti-corruption mechanisms in all government agencies. P2, P11, P12, and P15 who were from print and broadcast media sectors mentioned that necessary initiatives must be implemented to promote transparency and accountability in the government. P12, a female print journalist, specifically suggested that open data platforms and establishment of public reporting systems that allow citizens to access information about the government operations and spending be considered. Meanwhile, P11 manifested that it is about high time for government to considering tapping the expertise of media practitioners as consultants.

IV. Training/Immersion: The participants stressed the need to conduct trainings and immersion stint to move forward the advocacy of promoting transparency and accountability in the government service. P6 specifically stated that the watchdog tradition should be asserted to help government agencies become more accountable as to their mandate, goals and visions. P13, on the other hand, stressed that government offices should be trained or educated on how to effectively communicate public programs so that that people are informed, engaged, and involved in what the government is doing.

VI. The Participants' Policy Recommendations for the Promotion of Transparent and Accountable Public Service Delivery

What policy can be developed to enhance and strengthen the involvement of former media practitioners in promoting transparency and accountability in public service delivery?

Table 6

Participants' Policy Recommendations for Transparent and Accountable Public Service Delivery

Participant Number	Verbatim	English Translation
ACCELERATING COMMUNICATIONS' LEVEL IN GOVERNMENT AGENCIES		
3	We have to accelerate yung level of communications ng mga government agencies. And yung transparency na rin siguro, na yun yung hinahanap din ng media. And not even media, yung publiko mismo, di ba?	We need to accelerate the level of communications within government agencies. And also, improve transparency, which is something that both the media and the public are looking for.
5	I've been suggesting before na maging policy na to make each press conferences, regular. I mean, regular, that this be done on a regular basis. Kasi it's the only way para maka reach out sa tao, maka reach out sa masa.	I've been suggesting before that it should become policy to make press conferences regular. I mean, they should be done on a regular basis. It's the only way to reach out to people, to the masses.

8	Another is the use of technology. One thing that we did is to have the things that we have in, ano, available to the public, para hindi mo na siya ire-request through FOI, di ba? Nandun na siya. And tayo as comms practitioners, look out natin yun na madali siyang mahanap. Kasi tayo yung may ganong lente. Alam natin paano mag-behave yung tao in terms of doing searches, in terms of accessing government services. So, yun, contribution natin yun. We should do that. Pero yun nga, we should not be afraid of technology and instead use it to our advantage.	Another aspect is the use of technology. One thing we did was to make available to the public the information that was previously requested through FOI. It's now easily accessible. As communications practitioners, we need to ensure that this information is easy to find. We understand how people search for and access government services, so this is our contribution. We should embrace technology and use it to our advantage.
9	So, I think one policy which I can suggest is the process, like for example, the documentation. Dapat documented every step of the way. So for that documentation, there should be a process. The scheme should be well-documented. Kung pwede, talagang approved by the management na dapat na andun yun na evidence-based talaga lahat ng mga gagawin. Lahat ng initiatives [well-documented], from visibility up to budgeting pa nga sana eh.	So, I think one policy I can suggest is related to the process, such as documentation. Every step of the way should be documented. There should be a clear process for this documentation. The scheme should be well-documented, and if possible, it should be approved by management so that there is evidence-based documentation for all actions taken. All initiatives should be well-documented, from visibility to budgeting, ideally

15	[Agency X] is a lot of numbers, a lot of data. It's truly difficult to communicate numbers to people. Kung specific po sa agency (If specific for agency), parang (but) there's definitely potential in tapping TikTok. Merong official account si [Agency X] sa TikTok pero it's not yet maximized kasi parang in-explore pa siya sa ngayon. (Agency X has an official TikTok account, but it's not fully maximized yet, as it's still being explored.)	
STRENGTHENING OF FOI		
3	Sa akin talaga, sobrang push sa akin yung yung FOI na yan, yung Freedom of Information, kasi sobrang malaking tulong yan kasi pinaglalaban nga natin yung transparency eh, di ba? So, sa akin talaga, sobrang pabor ako dyan sa FOI na yan.	For me, the Freedom of Information (FOI) is something I strongly support because it's a huge help in advocating for transparency. I am very much in favor of the FOI.
4	Tingin ko kailangan yun (FOI) eh. Kailangan natin ng batas. To strengthen yung public information.	I think we need that (FOI). We need a law to strengthen public information.
7	Parang makakatulong din naman [ang strengthening ng FOI]. Kasi syempre yung mga tao, para empowered sila na magtanong, sila lang mismo.	This could also help (FOI strengthening) because the people are empowered to ask.
8	Kung totoong open data ka, i-open mo talaga…The way forward pag sa FOI is to	If you are truly for open data, have everything opened for access. The

	have it public. Kasi may ang obvious naman na hindi mo talaga pwedeng ilagay sa publiko ay halimbawa, personal information…Pero kung halimbawa proyekto yan na pinopondohan naman ng mga tao, if it is not covered by intellectual property, then why hide it?	way forward with FOI is to have it public. Because obviously, you can't make public personal information. But, for example, if the project is funded by public funds, if it is not covered by intellectual property, then why hide it?
14	Ako talaga Freedom of information. So, pag institutionalize yan, mas empowered yung kumukuha ng information. Not only the media, but the public. So, it will really promote transparency. Kasi easy access yun eh. And for me, kung ikaw nga, politiko naman, kung wala ka naman tinatago, pabor din sa'yo yun.	For me, it's definitely the Freedom of Information (FOI). If it is institutionalized, it will empower not only the media but also the public in obtaining information. This will really promote transparency because it provides easy access. And for politicians, if you have nothing to hide, it would also be beneficial for you.
III. MEDIA HIRING		
5	Ang naisip ko din, ang I've noticed kasi, I'm not familiar with the other institutions, pero siguro, iba kasi yung ano ng Civil Service. Sa government ka kasi, kahit na information officer ka, parang ang strict ng mga qualifications. If you've noticed, pag, I don't know kung may na-interview ka na before, na who said na, pagdating sa civil service kasi, para ma-promote ka, kailangan may MA ka, [may trainings}, may mga fellowship ganyan. Kasi parang, gusto kong maging policy na, alam mo yun,	What I've noticed is that, although I'm not familiar with other institutions, the Civil Service has strict qualifications. Even if you're an information officer, it's quite stringent. If you've interviewed someone before, you might have heard that to get promoted in civil service, you need to have an MA, specific trainings, fellowships, and so on. I think there should be a policy that considers experience, especially for former journalists, not just academic

	hindi lang yun dapat basis, lalo na pag former journalist ka, they have to take into account yung experience ng applicant. That should be considered.	qualifications. Experience should be taken into account for applicants who are former journalists.
7	Siguro, non-discrimination sa hiring ng mga former media practitioners.	Perhaps, there should be non-discrimination in hiring former media practitioners.
8	Kasi ever since I joined government, I've seen so many promising talents na umaalis because the structure is not there for them to stay. Walang plantilla positions. Tapos syempre yung system, minsan may talent na yung former media practitioner, pero minsan ang nakukuha pa rin yung mga bata-bata ng mga kung sino-sino.	Since I joined the government, I've seen so many promising talents leave because the structure isn't in place for them to stay. There are no plantilla positions. Sometimes, even though a former media practitioner has the talent, the positions often go to candidates who have connections.
11	Dapat in-offer nung mga seasoned journalists yung kanilang mismong expertise to the government…There should be a direct collaboration, that kami ang hahawak ng comms nyo. Kami ang tutulong sa inyo. There should be a policy to that.	The seasoned journalists should offer their expertise to the government. There should be direct collaboration [between the government and media organizations] that we will handle your communications, we will help you. There should be policy to that.
IV. SKILLS UPGRADING		
3	Siguro, sa 'kin, i-enhance natin yung communication skills, i-enhance natin yung policy pagdating sa, yung pagturing sa media. Kasi yun, di ba, yung nabanggit ko kanina na palaging ang	For me, we should enhance communication skills and improve policy regarding interactions with the media. Because, as I mentioned earlier, there's often a perception

	tingin lagi ng mga government officials, ng mga public officials sa media is kaaway kasi. Nakita talaga namin na malaking bagay yung communications,i- enhance mo yung communication skills, yung pakikitungo mo sa publiko para may parating mo yung ginagawa mo.	among government and public officials that the media is an enemy. We've seen how important communication is; you improve your communication skills and how you deal with the public iso that you convey what you're doing.
5	Kailangan ng constant learning, hangga't maaari magkaroon ng, what you call this, yung consistent upgrade pagdating sa skills na. If pwede namang i-allow ng institution to provide seminars, for us, para sa mga workers. Kasi ano eh, tawag dito, kailangan ng constant upgrading ng skills eh, lalo na ngayon kasi sobrang fast-paced ang mundo, with the advent ng socmed.	Constant learning is essential. Institutions should allow for continuous skill upgrades. It would be beneficial if institutions could provide seminars for workers. Constant upgrading of skills is necessary, especially now with the fast-paced world and the advent of social media.
13	Media training, trainings on, not necessarily what the media wants, how the media wants to be treated. Pero like, trainings with the media on how to communicate effectively, [on how to effectively report government programs], and also skills enhancement so we know how to be flexible, adapt, innovate.	
V. GATHERING OF GOVERNMENT COMMMUNICATORS		
3	[Gathering of government communicators to share best practices) sa lahat ng	[Gathering of government communicators to share best practices] in all

	government agency, I think, that's very good step na dapat matuloy and huwag mawala. Kasi importante yun eh. Kasi, alam mo yung, di ba minsan nakikita mo naman sa gobyerno, yung hindi-synchronize yung mga communications nila.	government agencies, I think that's a very good step that should continue and not be discontinued. It's important because, sometimes, you see that government communications are not synchronized.
10	Siguro, one suggestion that I could make is regular meetings between former media practitioners and siguro the concerned government officials, lalo na yung mga PIOs. So, mashe-share nila yung experiences nila. And in the process, matututo yung mga PIOs na, ito yung best practices at yung mga mga bawal or unethical sa industriya, para they can they can adopt the good and then they can also avoid the bad.	One suggestion I could make is to have regular meetings between former media practitioners and the concerned government officials, especially the PIOs This would allow them to share their experiences. In the process, the PIOs can learn about best practices and what to avoid or what is considered unethical in the industry. This way, they can adopt the good practices and avoid the bad ones.
12	And we can also create forums where former media practitioners can also mentor and collaborate with current journalists.	
VI. NATIONAL POLICY FOR ALL		
1	It should be a national policy na address sa lahat…What we need are Filipinos na nag-iisip para sa mas nakararami, hindi para sa sarili. If you're in government, how could you help ensure transparency? Be a watchdog.	It should be a national policy that addresses everyone. What we need are Filipinos who think about the greater good, not just for themselves. If you're in government, how could you help

		ensure transparency? Be a watchdog.
2	So the policy should be for everyone. The policy shouldn't be focused on you being a former media practitioner, but it should be for the entire bureaucracy. It's gonna be a tough, job to do. There are policies already in place, but the problem is really the implementation.	
VII. OTHER RECOMMENDATIONS		
A. SOCIAL MEDIA ACCOUNTABILITY		
4	I think that's very important, proposed measure na sana maipasa natin about social media accountability, how to really fight information dissemination, fake news, misinformation, and disinformation.	I think it's very important to pass a proposed measure about social media accountability, focusing on how to effectively combat the dissemination of fake news, misinformation, and disinformation.
B. MEDIA PARTICIPATION IN GOVERNMENT CONSULTATIONS		
6	A. In terms of policy, government kasi has demanded to be consultative. So I think that it should be encouraged, if not mandated, to include the media in consultations, given that the media is one of the stakeholders also in all the things that we do in government.	

C. IMMERSION OF MEDIA IN GOVERNMENT		
6	More of the media side, is to really show…they're really interested in what the government office is doing and how the government office can improve and how the government office can reach to more of its constituents or stakeholders. So, I think yung mas, mas masigasig siguro yung media natin (So I think our media should be more tenacious) in covering issues relating to government agencies.	
D. CREATION OF INDEPENDENT MONITORING BODY		
12	I think the former media professionals, they can help establish independent bodies to monitor and evaluate government transparency and accountability practices. And they can publish their findings and recommendations to foster public trust and to also drive improvements in public service delivery.	
E. GRANTS FOR INVESTIGATIVE JOURNALISM PROJECTS		
12	I think government agencies can encourage investigative journalism. I think government can explore in providing grants or support for investigative journalism projects that focus on government	

	transparency and also public service accountability.	

Table 6 tackles the participants' varied policy recommendations that could enhance and strengthen the involvement of former media practitioners in promoting transparency and accountability in public service delivery. The proposed policies were clustered into seven major themes: (1) Accelerate Communications' Level in Government Agencies; (2) Strengthening of the Freedom of Information (FOI); (3) Media Hiring in Government; (4) Skills Upgrading; (5) Gathering of Government Communicators; (6) National Policy for All; and (7) Other Recommendations.

The first two proposed policies commonly identified by the participants were: Accelerate Communications' Level in Government Agencies; and the Strengthening of the FOI.

I. Accelerate Communications' Level in Government Agencies: Five participants (P3, P5, P8, P9, and P15) agreed that the level of communications in government agencies must be accelerated. Two participants (P8 and P15) specifically sought the use of digital technology in improving the level of communications in the government agencies. The regular conduct of press conferences and media briefings was then proposed by P5, who has been with the Judiciary for 22 years, as a mechanism to enhance transparency and accountability in the government. As the Center for Media Freedom and Responsibility (2024) prodded the newsrooms to take a second look at their old ways, innovate, and explore new approaches to engage the people again and connect with the new ways they live their lives (CMFR Report on State of Media Freedom in the Philippines 2024 presented during the "1st Philippine Media Safety Summit: Surviving Pandemics and Other Provocations by Challenging Current Paradigms," 2 May 2024), the government agencies should put forward innovative reforms to public information delivery.

II. Strengthening of the FOI: To strengthen the public information delivery and promote the culture of transparency and accountability in the country, FOI must be strengthened. This was the common policy recommendation made by five participants, who were mostly senior journalists (P3, P4, P7, P8, and P14). In its Editorial, the Philippine Daily Inquirer (2023) challenged President Marcos Jr. "to reverse" the reduced adherence to transparency and good governance under the watch of his predecessor by directing the government institutions to "deepen their commitment to freedom of information (FOI) principles." Based on the Philippine Center for Investigative Journalism (PCIJ) 2022 report, the approval of FOI requests only stood at 40 percent, which was only half of its 80-percent approval rate target (PDI, Editorial: Strengthening FOI, January 11, 2023 Issue). The PDI (2023) furthered that the Chief Executive should also be a role model of transparency, accountability, and openness for all other state officials to follow.

III. Media Hiring in Government: Tapping the expertise of media likewise surfaced, with four participants (P5, P7, P8, and P11) raising this proposed policy. P5, P8, and P11 specifically pushed for the regularization of experienced media practitioners who are in the government service by considering their extensive media experience as a major factor of providing plantilla positions for them.

IV. Skills Upgrading: Three (3) participants (P3, P5, and P13) who are mostly senior journalists suggested that there must be continued skills upgrading for government communicators for them to effectively communicate policies, and programs in the public sector. P5 specifically mentioned the need for the enhancement of communications and media relations skills due to fast-paced technology and surging social media users. Herman et.al (2023) said media companies, overwhelmed by the social media development, are remiss of providing comprehensive information regarding government programs, and "are not optimal in conveying public complaints to the government." With this scenario, the government communicators should step up and ensure that the public information must be promptly and fully delivered to the people.

V. Gathering of Government Communicators: Three (3) participants (P3, P10, and P12) saw the need to create fora where there will be sharing of best practices, and partnership will be forged between the former media practitioners and current journalists. This will help ensure synchronized communications plans of all agencies. As President Marcos Jr. urged the KBP to "take the lead and foster public discussions, truth, and credibility," (Locus, 2023), the researcher believes that the government communicators should also proactively participate in keeping a well-informed citizenry.

VI. National Policy for All: Two participants (P1 and P2) who both had extensive media and government experience stated that the promotion of transparency and accountability in public service delivery should be the responsibility of all sectors, not just by former journalists who are now working in the government. P1, a veteran news editor and experienced government official, shared that everyone should be a watchdog to really promote transparency and accountability in the delivery of public service. P2 specifically pointed out that the policy should not only focus on being a former media practitioner, but it should be for the entire bureaucracy. Holliday (2021) stressed that "effective democracy requires accurate information that engages communities in civic life." Everyone must be "willing and able to participate, not just as news consumers, but as distributors and—most important—producers of local information" (Holliday, 2021).

VII. Other Recommendations: P4, 6, and P12 also pushed for media involvement in the government process, such as social media regulation, policymaking, evaluation and monitoring of best practices.

Social Media Accountability: P4, an experienced print journalist who has been with the Legislative for 14 years, stressed the need to fight fake news, misinformation, and disinformation which may hamper transparency and accountability in public service delivery. The United Nations Educational, Scientific and Cultural Organization (2021) said the "disinfodemic" or the "pandemic of false information" resulted in the declining trust in media globally, an opportunity for some political leaders to exploit the deluge of

mis- and disinformation to attack the legitimacy of critical and independent media (World Trends in Freedom of Expression and Media Development: Global Report 2021/2022, “Journalism is a Public Good”).

Media Participation in Government Consultations: P6, a female former print journalist who has been with the government for 14 years, cited the importance of including the media in government consultations. She said a media representative should sit as one of the members of a government panel that is deliberating on a certain policy or guidelines. Herman et.al (2023) stressed that the fourth estate should always be on board in public decision or policy-making, as they significantly bridge the communication between the government and the public.

Immersion of Media in Government: P6 also said that the media should be interested in what the government office is doing so they can give inputs as to how such government agency or institution can improve its processes and the public service delivery in general, as well as to how it can broadly reach or cover its clients or stakeholders. President Marcos Jr. had urged the media “to effectively communicate to the public the government’s efforts and initiatives towards our country’s development” (Presidential Communications Office, 2022).

Creation of Independent Monitoring Body: P12, a female former print journalist who is engaged in policy/program reviews and research, said former media practitioners can help establish independent bodies to monitor and evaluate government transparency and accountability practices, given their experience. She proposed the creation of an independent panel, composed of former media practitioners, that will be tasked with keeping an eye on government agencies’ pro-transparency and accountability efforts. The panel will publish the findings and recommendations to foster public trust and to help improve the delivery of public services.

Grants for Investigative Journalism Projects: P12 likewise sought government grants for investigative journalism projects focused on government transparency and public service accountability. She said the government should explore on providing grants to the news media sector to promote transparency and accountability in the government.

DISCUSSION

This section discusses the essential core of the study’s evidence-based findings, informed conclusions and data-driven recommendations, effectively addressing the research problems raised in this study. Under this section, the researcher provides the synthesized insights or findings that form part of the conclusion. Furthermore, this chapter lays down the best possible recommendations, which include policy formulation and program development. These recommendations are based on the insights or findings culled from the study.

The study is summed and divided into seven segments: (1) Participants' Profile; (2) Political, economic, social, and personal reasons behind the migration of print, broadcast and multimedia journalists to the government service; (3) Roles of former media practitioners in their respective agencies; (4) Perceptions about public service delivery; (5) Contributions to public service delivery; (6) Suggestions to strengthen partnership to curb corruption, and promote transparency and accountability in the bureaucracy, and (7) Policies to be recommended for promotion of transparent and accountable public service delivery.

Based on the data presented in a tabular format, the findings or insights of the study were the following:

1. Profile of the Respondents

As to age. Data reveals that the participants are within the ages of 25 and 58 years old. Majority of them are 36 - 46 years old, and 47 - 57 years old, suggesting that the participants in the study are Millennials and Generation X.

As to gender. Data shows that women's all-out participation in the study is evident with eight female former media practitioners joining the study. However, it also showed that men were equally willing to participate in the study with seven of them participating in the study.

As to years of media experience. Most participants had extensive media experience ranging from 10 years to 20 years. Based on their media service in the private sector, the participants were categorized as follows: A. 5 years and below; B. 6-10 years; and C. 11-20 years in service or more. Based on this category, majority of the participants belong to Category B with a media experience ranging from six to 10 years.

As to media affiliations. Majority of the participants were print media journalists, with nine of them participating in the study. Former journalists from the broadcast companies and multimedia news platforms were also equally represented in this study, with the inclusion of three respondents belonging to each sector.

As to government-employer. Majority of the participants are working in agencies under the Executive branch of government. The second largest number of participants is logged in the Legislative.

As to government-positions. Majority of the participants are holding permanent and supervisory positions in the government.

2. Reasons behind the Migration of Print, Broadcast and Multimedia Journalists to the Government Service

A. Political. A relatively small number of participants mentioned political as a reason why they left their profession to enter the government service. The study cites four

major political reasons: political influence, political denial, media harassment, and biased and anti-workers' workplace policies. Of these, political influence emerges as the first political reason, followed by political denial, media harassment, and biased and anti-workers' workplace policies. The study finds that some former media practitioners entered the government service through political influence or their affiliation with the officials in the government. Given the participants' extensive media experience (ranging from seven to 20 years) and exposure to government dealings and processes, political leaders tapped their expertise to be of service to the government.

The study also bares the deliberate attempts to restrict press freedom and the public's rights of access to information by some political authorities and private companies as evident in the political denial of validated news stories, and media harassment through filing of libel cases. Amid threats of harassment, imprisonment, violence, or death, the press tradition of watchdog remains alive.

The study likewise shows that media repression is being perpetuated by the media owners themselves due to their purported vested interests. The supposed vested "political and economic interests" of the media owners who are from influential families, and conglomerates, caused repression within their organization.

B. Economic. Majority of the participants overwhelmingly responded that economic was the reason why they migrated to the government service, making it as the main reason behind the newsroom-to-government phenomenon.

The financial security in the public sector, financial insecurity in the media sector, and family needs were the key reasons behind their decision to leave their respective media companies.

The higher compensation in the government is identified as the top economic reason, followed by the security of tenure, and provisions of benefits

In terms of financial insecurity in the media sector, majority of the respondents identified the lack of benefits (such as overtime and hazard pay and night differential, retirement package, insurance, enough transportation allowance, and healthcare protection scholarships, and trainings), as their major reason for leaving their media companies. This is followed by low compensation and absence of clear tenure.

The study also shows that the participants' quests to start and raise a family, and find a viable and stable family income also become a major factor why they had to leave their media profession.

C. Social. Social was the second leading reason why participants changed their career path. Most participants cited social as their reason for quitting their jobs. This study shows that the working conditions in the media sector prodded them to work for the government. The irregular working hours, the unclear work delineation that resulted in intense workload, and the slow career progression are commonly identified as factors under the working conditions.

The study also finds that the workload in the media sector was more intense and heavier during the COVID-19 pandemic when media companies implemented work-from-home policies.

Next to working conditions, the participants identified their sense of mission, social influence and time with family as another major social reasons.

The study shows the changing media landscape in the country, particularly the influence of the digital technology and social media, and their impact to the news media sector. The dying print media is mentioned as another major reason why the participants changed their profession, given the declining public support for the print media due to the emergence of social media platforms.

Moreover, corruption in the media sector is likewise found as another major social reason. The participants cited that some of their colleagues succumbed to bribery because of low salaries and lack of benefits in the media sector.

It is also disclosed in this study that the work schedule in the government is more family-friendly than in the media sector.

D. Personal. After economic, personal was the third leading reason why media practitioners had to transfer to government service. The participants mentioned personal/professional growth as their first personal reason, followed by health and a change in environment.

This study found that job burnout was prominent during the COVID-19 pandemic.

2. Roles of Former Media Practitioners in their Respective Agencies

Most participants are involved in the delivery of public information services. Next to public information services, media and public relations becomes the second major role of the participants in their government agencies. Public and cultural diplomacy, program or project management and events management are found to be the third major role of the participants.

It is observed that the mandate of their respective agencies dictates the participants' roles in government service.

The participants working in Executive and Legislative agencies are into substantive policy work and in crisis communication/ management, while participants from Executive agencies are engaged in research and conducting studies.

The participants assumed varied roles in the government. These include administrative work, policy/program/project review, planning, and public concerns and response management.

3. Perceptions About Public Service Delivery

Majority of the participants believed that public servants should exemplify professionalism, competence, ethics, dedication and commitment to public trust when it comes to public service delivery; and that efficient, prompt, and all-out delivery of public service must be prioritized at all costs.

The participants' negative perception about the government changed or their initial view of government service was reinforced when they entered the government service. Their immersion in their respective agencies that are actively involved in public service delivery makes them realize that those in the government have been doing a lot in spirit of genuine service and for love of country.

The study shows that providing accurate, credible and precise information in an efficient, timely and professional manner is a form of public service delivery. The participants believe that a well-informed citizenry is instrumental to democratic governance and sustainable development.

The study also reveals that the continued quest for transparency and accountability in the delivery of public service remains, and that more work still needs to be done to enhance transparency and accountability in the bureaucracy.

4. Notion on the Capacity of Former Journalists to Contribute Skills and Expertise to Public Service Delivery

All the participants cast no doubts on the capacity of former journalists to contribute to public service delivery, particularly in the area of public information services. Their current roles in their respective agencies proved that they have something to contribute to the efficient, transparent, prompt, and accountable delivery of public service.

These former media-turned-government workers can be considered as government assets, considering their excellent communication skills, grit, hard work and extensive experiences in the field and their specialized trainings.

The presence of former media practitioners in some government agencies helps bring the government closer to people by reinforcing the principles of transparency and accountability through the delivery of credible, prompt and accurate public information services.

4.1 Contributions to Public Service Delivery

The former journalist-participants' actual contributions to public service delivery reflected on their commitment to effectively, efficiently, and faithfully carry out their roles in the government. Majority of the participants significantly contribute to the delivery of public information services.

The study shows that the participants occupy leadership positions and are tasked with ensuring the implementation of programs by their respective agencies. They are team leaders supervising staff that are involved in the program implementation.

The participants are also engaged in policy development and project proposal approval.

The study shows that as former members of the "fourth estate," the participants remain committed to carry over and keep the press' watchdog tradition – always being on a lookout to ensure the transparent and accountable delivery of public service. It is seen that former media practitioners in the government service are becoming agenda setters and watchdogs in their respective agencies with a battle cry and serious advocacy of pushing for transparency and accountability in public service delivery.

5. Suggestions to Strengthen Partnership to Curb Corruption, and Promote Transparency and Accountability in the Bureaucracy

The open access or the delivery of trusted and fact-based information emerges as the participants' leading suggestion to help strengthen their engagement with the government in terms of curbing corruption, and promoting transparency and accountability in the bureaucracy. Providing full information access to public, and the strict observance of government processes and procedures are essential to the promotion of transparency and accountability in the bureaucracy.

The sense of values in terms of untainted integrity, and credible reputation; and commitment to public trust; and the implementation of transparency mechanisms/initiatives are also proposed.

Moreover, the creation of open data platforms; the establishment of public reporting systems that allow citizens to access information about the government operations, and spending; and hiring of former media practitioners as consultants, and media training/immersion are suggested.

6. Policies to be Recommended for Promotion of Transparent and Accountable Public Service Delivery.

The study shows that first two policies proposed by the participants are: Accelerating Communications' Level in Government Agencies; and the Strengthening of the FOI.

Most participants believe that level of communications in government agencies must be accelerated through the use of digital technology, and that the institutionalization of regular conduct of press conferences and media briefings in all government agencies may be considered. The participants agreed that the FOI must be strengthened to fully enhance public information delivery, and promote the culture of transparency and accountability in the country.

Next to these proposals is the hiring of media professionals in government, given that these practitioners can significantly contribute to government's transparency and accountability bid due to their skill set, exposure and trainings.

Amid the fast-paced digital technology, the continued skills upgrading for government communicators for them to effectively communicate policies, and programs in the public sector is also pushed.

The creation of fora where government communicators can share best practices in communicating government policies and programs is also stressed to help ensure synchronized communications plans of all agencies and institutions in the public sector.

The participants also cited that the promotion of transparency and accountability in the government does not only rest on the shoulders of the former media practitioners and media sector, but to all Filipinos.

Other recommendations include the media involvement in the government process, such as policymaking, evaluation and monitoring of best practices, and social media regulation. The creation of an independent body, composed of former media practitioners, that will keenly monitor government agencies' pro-transparency and accountability efforts is recommended. The government's provision of grants for investigative journalism projects is also encouraged.

Conclusions

The following key points are presented based on the findings of this study:

1. The participants of the study are mostly female and print journalists, and are Millennials and Generation X with an extensive media experience of 10 to 20 years, and are now predominantly working in agencies under Executive branch of government holding permanent and supervisory positions.

2. The participants left their media profession mainly due to economic reasons, and that higher compensation, security of tenure, and proper provision of benefits in the government attracted them to join the government service.

The lack of benefits in the media sector (such as overtime and hazard pay and night differential, retirement package, insurance, enough transportation allowance, and healthcare protection scholarships, and trainings), is identified as major reason behind their migration to government. This is followed by low compensation and absence of clear tenure.

3. The study articulates that those former media practitioners who are currently working in government are very much involved in the delivery of public information services as public communicators for the policies and programs being implemented by agencies under the Executive and Legislative branches of government.

It is also concluded that the mandate of the agency-employers influenced the participants' roles in government service.

4. The participants' negative perception about the government changed or their initial view of government service was reinforced when they entered and immersed themselves in the government service, particularly in the delivery of public services.

The participants make sure they exemplify professionalism, competence, ethics, dedication and commitment to public trust when fulfilling their roles.

The study highlights that providing accurate, credible and precise information in an efficient, timely and professional manner is a form of public service delivery that must be prioritized.

Moreover, it is acknowledged that the continued quest for transparency and accountability in the delivery of public service remains, and that more work still needs to be done to enhance transparency and accountability in the bureaucracy.

5. It is concluded that the expertise and skills set of former journalists can be of significant help to ensure efficient, transparent, prompt, and accountable delivery of public service delivery, particularly in the area of public information services. The participants are government assets that should be fully tapped to reinforce the principles of transparency and accountability, and bring the government closer to people through the delivery of credible, prompt and accurate public information services.

Furthermore, it is affirmed that the participants significantly contribute to the delivery of public information services as government communicators, and as lead persons in the implementation of some government programs.

The participants' leadership positions and their crucial duties and roles in ensuring the implementation of programs by their respective agencies, and their involvement in policy development and project proposal approval showed they have major influence on the delivery of government services, while keeping the fourth estate's watchdog tradition to ensure the transparent and accountable delivery of public service.

6. The study highlights that providing full information access to public, and the strict observance of government processes and procedures are essential to the promotion of transparency and accountability in the bureaucracy.

The former practitioners' sense of values in terms of untainted integrity, and credible reputation; and commitment to public trust should be instilled and that transparency mechanisms/initiatives such as the creation of open data platforms, the establishment of public reporting systems that allow citizens to access information about the government operations, and spending should be pursued.

7. The study underscores the pressing need to accelerate the level of communications in government agencies through the use of digital technology; and to institutionalize the regular conduct of press conferences and media briefings in all

government agencies. The strengthening of FOI to fully enhance public information delivery and promote the culture of transparency and accountability in the country is highlighted.

The hiring of media professionals in government, the continued skills upgrading for government communicators for them to effectively communicate policies, and programs, and creation of fora where government communicators can share best practices in communicating government policies and programs are pressed on.

It is also stressed that the promotion of transparency and accountability in the government does not only rest on the shoulders of the former media practitioners and media sector, but to all Filipinos.

Recommendations

Based on the findings of the study and in light of conclusions drawn, the following significant points are recommended:

1. Consider mapping out the total number of Filipino journalists and former media practitioners in the country. A data repository is warranted as there is no available, and official data yet on the total number of journalists from the private sector who entered the government service, the data on the total number of Filipino journalists who lost their jobs or resigned during the pandemic, and who entered the government service.

2. Consider pushing for reforms enhancing media workers' welfare to foster a healthy media environment. This includes the Congress' revival of the proposed Media Workers' Welfare Act that was passed on third and final reading by the House of Representatives in 2022.

3. Reinforce former media practitioners' contributions to public service delivery by not stereotyping them as communication or media relations officers, but giving them opportunities to assume other key roles related to substantive policy work or policy-making and to be involved in the government processes such as evaluation, review, and approval of government's plans, programs, and projects.

4. Intensify public information campaign on what the government is doing for the people; all agencies are encouraged to aggressively pursue an information campaign to change the bad perception against the government.

Seriously instill professionalism, competence, ethics, dedication and commitment to public trust among public sector workers. Republic Act No. 6713 or the "Code of Conduct and Ethical Standards for Public Officials and Employees" should serve as the bible of all public servants to promote a high standard of ethics in public service. The Code declares that public officials and employees "shall discharge their duties with utmost responsibility, integrity, competence, and loyalty; act with patriotism and justice; lead modest lives; and uphold public interest over personal interest." Public servants must be fully committed to uphold the time-honoured principle of public office being a public trust.

The Public Information Offices (PIOs) of all government agencies and institutions are likewise prodded to exhaust all means to provide accurate, credible and precise information in an efficient, timely and professional manner.

Furthermore, since continued quest for transparency and accountability in the delivery of public service remains, the creation an independent body, composed of former media practitioners, that will keenly monitor government agencies' pro-transparency and accountability efforts may be considered.

5. Consider tapping former journalists who are in the government service or current veteran journalists to conduct trainings and seminars among PIO staff and journalists covering government agencies and institutions as their beat assignments, and consider providing them honorarium or incentives.

Encourage media consultations or consider involving media or former media practitioners working in the government in the government process, such as in policymaking, and in the evaluation and approval of government projects.

Noting that former media practitioners have major influence on the delivery of government services, reinforcing their contributions by opening up opportunities for leadership roles, such as managerial or supervisory posts may be considered.

6. Prod all PIOs of all government agencies to ensure that their official websites fully conform to full transparency, and pattern it after the websites of the Commission on Audit (COA), Sandiganbayan, and the Supreme Court (SC). Since providing full information access to public is important, and that the strict observance of government processes and procedures are essential to the promotion of transparency and accountability in the bureaucracy, such recommendation is strongly recommended.

The sense of values in terms of untainted integrity, and credible reputation; and commitment to public trust should be instilled to all government communicators.

Transparency mechanisms/initiatives such as the institutionalizing the creation of open data platforms among state agencies and institutions; and the establishment of public reporting systems that allow citizens to access information about the government operations, and spending are encouraged.

7. Accelerate communications' level in government agencies. In pursuing this recommendation, the use of digital technology and infrastructure should be seriously considered.

Consider institutionalizing the regular conduct of press conferences and media briefings in all government agencies. This provides avenue for the government agencies to update the public about their plans, programs, and projects and other initiatives, as well answer the pressing concerns and issues hounding their agencies. This will help improve

media and public access to crucial public data and information towards well-informed citizenry.

Drum up campaign support for the strengthening of Freedom of Information (FOI) to convince President Marcos Jr. to sign a written order or an executive order directing government institutions to deepen their commitment to FOI principles. This will help ensure an increased approval of FOI requests made by the public in a bid to fully enhance public information delivery and promote the culture of transparency and accountability in the country

Consider the regularization of experienced media practitioners who are holding coterminous positions, and are hired under the Job Order and Contract of Service status with their extensive media experience as a major factor of providing plantilla positions for them.

Prioritize skills upgrading and conduct trainings among the PIO officers and staff members, and journalists who cover the departments/agencies. There should be continued skills upgrading for public sector communicators for them to effectively communicate government policies, and programs and projects. Also, those reporters who are assigned to cover agencies are encouraged to undergo trainings and seminar to familiarize themselves with the agencies they cover and effectively report on their mandates, programs and projects.

Since this study stressed that the promotion of transparency and accountability in the government does not only rest on the shoulders of the former media practitioners and media sector, but to all Filipinos, all stakeholders, both the public and private sectors are encouraged to work hand-in-hand to enhance transparency and accountability in the bureaucracy.

Also consider the proposed Program on Strengthening the PIOs in Government Agencies created by the researcher based on the findings and insights and conclusions of this study. Amid the changing media landscape and the battle cry to promote transparency and accountability in the government through the provision of public information services, the implementation of the proposed program seeks to enhance the capacity of units or offices serving as information and communications arms of the public sector in delivering the much-needed data and information to the public, and in communicating government policies, programs, and projects and other initiatives. The program also intends to address the gaps and kinks in the delivery of public information services in the public sector.

Compliance with Ethical Standards

The researcher ensured the integrity of research undertaking by strictly following ethical and professional standards set by the Graduate School. Protecting the privacy and dignity of participants was a priority, while ensuring the conduct of the research was

within the framework of ethical considerations: confidentiality, consent, and respect for the participants were adhered to.

The researcher formally sought a written or verbal permission from the participants before conducting the Zoom-aided interviews. Three (3) respondents managed to sign the Consent Certificate, while the rest opted to signify their voluntary participation by responding affirmatively to the e-mailed letter request, and by saying "Yes" before the start of the Zoom-recorded interview.

The purpose of the study has been explained to the respondents in various communication channels. Before conducting the interview, the researcher made sure that the respondents positively responded and voluntarily gave their consent to be part of the study. The researcher likewise assured the participants that confidentiality, privacy, and anonymity were strictly observed, and that Zoom recordings both audio and video, and all data and information collected were solely used for the research analysis, and scholarly pursuits.

The participants were given the leeway, time, and avenue to express their views and opinions freely. The researcher upheld the highest ethical standards without compromising the validity and reliability of the study's findings.

The participants' statements were treated with utmost confidentiality and anonymity through the use of coded aliases during the data analysis.

The participants' names, media organizations, government agency-employers and current specific positions were not disclosed and were kept confidential. The 15 respondents were given aliases (P1 to P15).

Acknowledgments

As French bishop Jean-Baptiste Massieu said that "gratitude is the memory of the heart," this researcher expresses her deepest gratitude to those who have shared their time, resources, and wisdom in helping her complete this study.

Hats off to her dear research adviser, Dr. Ernest R. Vera Cruz for sharing his expertise, and for his constant guidance, encouragement, and never-ending support throughout this research endeavor – from its conception to its birth. His brilliance and passion as academician propelled this researcher to attain greater heights of academic learning;

This researcher is filled with so much gratefulness for the positive criticisms and enlightening inputs made by their father in Graduate School, Dr. Ulysses A. Brito, and the esteemed members of the Research Panel that include her former professor and mentor, Dr. Sarlito S. Ferraren, and newfound guru, Dr. Ely Lumbao.

Their profound insights and professional guidance inspired this researcher to further polish her work until it successfully achieved its completion. Their expertise contributed immensely to the improvement of her thesis, a significant key and the reason behind why she is proud of her academic work.

This researcher profoundly thanks her superiors, and colleagues in the Information and Research Service (IRS) of the Commission on Appointments for their unwavering support, guidance, and inspiration. Special thanks to the head of her IRS Family, Director Raymund A. Alzaga for his guidance, and financial and moral support.

Likewise, sincere appreciation is extended to her direct supervisor, Dr. Ernest R. Vera Cruz for the consideration and leeway extended to her while doing her research work.

Moreover, this researcher cannot not mention the bliss of having the all-out backing and guidance of their Deputy Secretary for Investigation and Appointments Review Arturo C. Paras.

To her lifesavers, Ms. Josephine S. Capoquian, Gina Eufracia R. Villegas, Lianel E. Hernaez, Roy S. Maceda, Arlene M. Dandoy, Ma. Rosalina G. Gonzales, Pamela P. Sebastian, and Andres Santos, your assistance is sincerely appreciated;

Thanks a ton, to her friend, Ms. Ellalyn de Vera-Ruiz, and content validators, namely Dr. Sigfredo G. Dimalanta, Ms. Framelia V. Anonas, and Ms. Lira D. Fernandez for their professional support; and to her cousin, Mr. John Jomwel T. Matutina for his technical support;

To her former colleagues and friends in the media industry, and former news sources who did not think twice about their participation in her study, accept her endless gratitude;

This researcher is forever indebted to her loving parents retired Police Captain Conrado and Mrs. Stella Luci, and brothers Police Lieutenant Colonel Christian and Police Chief Master Sergeant Christopher and their families, and her in-laws for being her fortress and source of strength and inspiration. They were behind her back as she navigated and surpassed the travails of not only academic, but personal life.

This researcher cannot thank enough her good and loving husband, Mr. Bonn Relly S. Atienza for his all-out and loving support, for always being there for her through all the ups and downs, and for bringing out the best in her. His infinite love, unending patience, and constant faith in her whisked away all the doubts and fears of this researcher, making her a bolder and braver academic warrior. To her sunshine and rainbow, her daughter Hesed Maria Mikhael whose power kisses and hugs always make her wonderfully happy and eternally loved! To her angel babies up there in heaven, Jose Miguel and Ave Gael, both of them will always be a part of her. Her family has inspired her to become more committed to this pertinent research endeavor.

For all the sweet and uneasy graces, for everything, this researcher praises and thanks the Lord! All the honor, glory, and praises are His!

C.M.L.A.

PAGSUSURI SA KATEGORYA, KAMALIAN, AT DANAS SA PAGSASALIN MULA SA PILING MAG-AARAL NG SAN NICOLAS NATIONAL HIGH SCHOOL

Necel V. Cagampan
Freddielyn B. Pontemayor, Ph.D.

Language Education Department, Central Mindanao University, Musuan, Maramag Bukidnon, Philippines

https://doi.org/10.5281/zenodo.13572113

ABSTRAK

Nakatuon ang pananaliksik sa pagsusuri sa kategorya, kamalian, at danas sa pagsasalin ng mga piling mag-aaral ng San Nicolas National High School sa Don Carlos, Bukidnon. Ginamit ang pinaghalong deskriptibo-kwalitatibo at kwantitatibong metodo sa pananaliksik na ito. Upang mas lalong maging kapaki-pakinabang at balido ang mga datos ginamit ang Translation Error Analysis (EA) at sinuportahan ng interbyu para masuri ang naging danas sa pagsasalin ng mga piling mag-aaral. Batay sa resulta ng pag-aaral, natuklasan na ang sumusunod ay mga kategorya ng pagsasalin: karaniwang pagsasalin ng salita, pagsasaling idyomatiko, pagsasaling teknikal at pang-agham, at pangmidya. Batay naman sa danas ng pagsasalin, natuklasan din na may mga terminong hindi pamilyar, baryasyon ng wika, at ang pinag-ugatan ng termino, kay narito ang sampung danas ng mag-aaral: (a) Maraming salita na puwedeng itumbas o mga kaugnayang salita sa Filipino ngunit hindi iyon ang tumpak na sagot; (b) Hindi agad nakuha ang ibig sabihin ng salin; (c) Mas madali isalin ang Filipino patungong Ingles; (d) Maraming katumbas o pagpapakahulugan ang salita sa Filipino; (e) Nalilito kung paano ang tamang pagpapakahulugan ng salita/parirala; (f) May mga salita na bago pa sa pandinig; (g) Malalim ang pagpapakahulugan ng mga salita o malalim ang termino; (h) Mas sanay gumamit ng mga terminong Ingles kaysa sa Filipino; (i) May mga termino sa social media hindi masyadong pamilyar; at (j) Walang exact term o eksaktong termino ang ginagamit sa social media.

Mga Termino: *Translation Error Analysis, kategorya, karaniwang pagsasalin, teknikal, idyomatiko, ekspresyon sa social media, danas*

INTRODUKSYON:

Nitong huling dekada 70, nabuhay ang terminong Translation Studies bilang diskurso sa akademikong larang. Naging mas popular ang termino lalo na sa panitikan at ang konsepto ukol sa “translatable” at “equivalence” kapag binibigyang-empasis ang penomenang linggwistik at kultural (Bassnett, 2002). Hindi matatawaran ang naging ambag nina Susan Bassnett at Andre Levefere sa larang ng pagsasalin lalo na kontekstong kultural. Dagdag pa, naka-depende pa rin sa orihinal ang nabuong salin ng tagasalin bagkus sisikapin ng tagasalin na sa pagbuo ng salin maipaparating niya ang kahulugang konstraksyon at kultura para makamit ang layunin maipahatid ang kahulugan at makapag-interak ang ibang kultura (Bassnett, 2002).

Hindi nagtagal, naging propesyon o trabaho na rin ng ilang edukador ang pagsasalin. Hindi man nabibigyan ng kaukulang pansin ang trabaho ng isang tagasalin dahil para sa karamihan nakakulong siya sa orihinal na akda ng awtor ngunit nakasalalay pa rin sa kamay ng tagasalin para maisalin niya ang mga akda o kagamitan na ginagamit ng mga studyante na nangangailangang isalin upang matugunan ang kalubusan ng pagkatuto lalo sa pagdebelop ng ispesipikong kasanayan.

Bunsod nito, naglipana na ang mga babasahin at panooring isinalin sa iba’t ibang wika, hindi rin maiwawaksi ang pagsasalin mula sa ibang wika tungo sa wikang Filipino sa larang ng edukasyon. Resulta nito dumagsa na rin ang popularidad ng social media na naging bahagi na rin ng ordinaryong ekspresyon ng mga indibidwal lalo na sa kabataang lubos na nagtataguyod at dinamikong nagpapalago ng wika.

Subalit, bumulagta ang balitang ipinalabas ng The New York Times ukol sa komento ni Antonio Calipjo Go, supervisor ng Marian School ng Quezon City ukol sa kampanya sa “bad textbook in English.” Nakakaalarma ang sitwasyong ito dahil batay sa naging ebalwasyon, hindi lamang ang aklat sa Ingles ang hindi wasto ang pagkakasalin kundi maging sa wikang Filipino. Batay sa tantiya ni Go, tinatayang nasa mahigit 75% ng lahat ng mga aklat sa elementaryang publikong paaralan na naglalaman ng kamalian. Dahil dito, isang panawagan sa DepEd na anumang maling impormasyong isinusubo sa elementarya, posibleng magkakaroon ng epektong domino sa hayskul maging sa kolehiyo. Samakatuwid, ang implementasyon ng MTB-MLE at K to 12 ay nakatulong sa maraming eskwelahan lalo na ang pagkakaroon ng mga aklat na naisalin sa target na wika ngunit isa pa ring malaking katanungan, pulido o masusi bang naisalin ang mga teksbuk na ito?

Sa ngayon, ang Pilipinas ay kabilang sa mga bansang labis ang pagyakap sa larang ng pagsasalin. Bukod sa pagiging multilingguwalismong estado ng bansa, ang mga babasahin, teorya o konseptong ginagamit sa mga aklat, nakabatay pa rin sa dayuhang wika. Kaya, malaking ambag ang gawang salin upang mas maihatid ng guro ang konsepto nang wasto. May ilang Pilipinong pag-aaral na rin ang nagsagawa ng pag-aaral ukol sa pagsasalin ng mga akdang teknikal, pang-agham, at pampanitikan sa iba’t ibang lente. Dapatwat, sa papel na ito, binigyang-empasis ng mananaliksik ang

pagsasalin sa mga termino na hango sa isang aklat sa pagsasalin sa Filipino na ginagamit ng mga estudyante ng San Nicolas National High School, San Nicolas, Don Carlos Bukidnon.

Paglalahad ng Sulirani:

Ano-ano ang kategorya, kamalian, at danas sa pagsasalin ng mga piling mag-aaral ng Grade 10, Seksyon Narra ng San Nicolas National High School, San Nicolas, Don Carlos, Bukidnon?

Mga Tiyak na Suliranin ng Pag-aaral:

1. Ano-anong kategorya ng pagsasalin sa hanguang aklat sa Filipino ng mga piling mag-aaral ng Grade 10, Seksyon Narra ng San Nicolas National High School?
2. Ano-anong salita/parirala ng bawat kategorya ang kadalasang pinagkakamali ng mga piling mag-aaral ng Grade 10, Seksyon Narra ng San Nicolas National High School?
3. Ano-ano ang naging danas sa pagsasalin ng mga piling mag-aaral ng Grade 10, Seksyon Narra ng San Nicolas National High School?

METODOLOHIYA

Ginamit ang pinaghalong deskriptibo-kwalitatibo at kwantitatibong metodo sa pananaliksik na ito.

Translation Errors Analysis ang espesipikong lente sa pagsusuri ng mga datos batay sa ginawang pagta-tally at paglalatag ng talahanayan ng mga tugon ng kalahok. Nagsagawa rin ng interbyu ang mananaliksik para maisalaysay ng mga kalahok ang kanilang naging danas ukol sa pagsasalin. Ideyal din sa isang pananaliksik ang isang buong seksyon o klase. Ibig sabihin, pokus nito ang Grade 10 ng Seksyon Narra sa ilalim nang pamamatnubay ng mananaliksik. Upang mas lalong maging kapaki-pakinabang at balido ang mga datos, ginamit ang error analysis at sinuportahan ng interbyu para mas maging malinaw ang naging resulta. Lahat ng mga mag-aaral sa seksyong ito ay kumukuha ng Filipino. Ibinatay sa convenience at purposive sampling ang pagpili ng mga kalahok.

Saklaw at Delimitasyon ng Pag-aaral

Saklaw ng pag-aaral ang kategorya, salita/parirala na kadalasang pinagkakamali sa pagsasalin ng mga piling mag-aaral ng San Nicolas National High School, San Nicolas, Don Carlos, Bukidnon. Nasa pamamatnubay ng mananaliksik ang nasabing seksyong napili. Saklaw din ng pag-aaral ang mga gawaing inihanda ng guro sa pagsasalin (karaniwang salita, teknikal, pang-agham, idyomatiko, at ekspresyon sa social media). Hindi saklaw ang mga gawain ukol sa pangungusap at talata at iba pang diskursong pangwika at genreng pampanitikan. Nakapokus lamang ang pag-aaral sa simpleng kasanayan sa pagsasalin batay sa aklat na ginagamit at inihanda ng guro upang maabot ang mga layunin ng pag-aaral.

Hindi na saklaw ng pag-aaral ang ibang seksyon ng SNNHS gayundin ang ilang mag-aaral ng nasabing eskwelahan.

RESULTA AT DISKUSYON

Upang matugunan ang mga tanong sa pananaliksik na ito, tatalakayin sa kabanatang ito ang bawat kategorya, kamalian, at danas sa pagsasalin.

Kategorya at Pagkakamali sa Pagsasalin

Upang sagutin ang una at pangalawang suliranin ng pag-aaral kung ano-anong kategorya ng pagsasalin sa isa sa mga hanguang aklat sa Filipino at salita/parirala ng bawat kategorya ang kadalasang pinagkakamali ng mga piling mag-aaral ng Grade 10, Seksyon Narra ng San Nicolas National High, batay sa aklat na ginagamit ng guro at ng mga mag-aaral pati na rin ang mga natuklasan ng pag-aaral, natuklasan na ang sumusunod ay mga kategorya ng pagsasalin: karaniwang pagsasalin ng salita, pagsasaling idyomatiko, pagsasaling teknikal at pang-agham, at pangmidya. Ang kasunod na bahagi ay detalyadong presentasyon ng bawat kategorya at kadalasang pinagkakamali sa pagsasalin:

<u>Karaniwang Pagsasalin ng Salita</u>

Matutunghayan sa kasunod na talata ang naging tugon ng bawat estudyante ukol sa karaniwang pagsasalin ng mga salita mula sa wikang Ingles patungong Filipino.

Batay sa naging presentasyon at analisis ng mga datos, ang salitang Ingles na *administration*, kapansin-pansin na kahalati sa populasyon o nasa 23 mag-aaral ang nakakakuha ng wastong salin na “pamamahala.” Samantala, 22 naman ang mayroong saling “administrasyon,” na batay sa modyul na sinusunod ng maraming eskwelahan sa buong Pilipinas ang unang saling nabanggit “pamamahala” ang wastong sagot.

Ikalawa ang salitang Ingles na *blank,* kapansin-pansin na mas Marami sa mga mag-aaral ang nakakuha ng tamang tugon sa populasyon, o 42 sa kanila ang nakakuha ng tamang salin. na “patlang.” Samantala tatlong mag-aaral naman ang mayroong salin na ‘blanko.”

Ikatlo, ang salitang Ingles na *clear*, makikita na lahat ng mag-aaral sa populasyon ang nakakuha ng wastong salin na “malinaw.”

Ikaapat, ang salitang Ingles na *complete*, kapansin-pansin na mayroong 28 mag-aaral ang nakakuha ng wastong pagsasalin na “buo” at mayroong namang labing 17 mag-aaral ang nagsalin ng salitang “kompleto” na ayon sa alituntunin “buo” ang wastong salin nito.

Ikalima, ang Ingles na *decision*, kapansin-pansin na mayroong 43 na mga mag-aaral ay nakatanggap ng tamang salin. na “pasya” samantala mayroon namang dalawang (2) mag-aaral ang sumagot ng pagsasalin na “desisyon.”

Ikaanim, ang salitang Ingles na *election*, kapansin-pansin na mayroong 19 na mag-aaral ang nakakuha ng wastong salin na “halalan” at mayroon namang 25 mag-aaral ang nagsalin ng “eleksiyon” na batay sa modyul, “halalan” ang wastong salin.

Ikapito, ang salitang Ingles na *ignorant*, kapansin-pansin na mayroong 44 na mag-aaral na nagsalin ng “mangmang” at mayroon lamang isang mag-aaral ang nagsalin ng salitang “ignorante.” Batay sa modyul “mangmang” ang wastong salin ng salita.

Ikawalo, ang Ingles na *list*, kapansin-pansin na mayroong 28 mag-aaral ang nagsalin ng “tala” at mayroon 17 mag-aaral ang nagsalin ng “listahan” na batay sa modyul na sinusunod ang salitang “tala” ang tamang sagot sa pagsasalin.

Ikasiyam, ang Ingles na *reality,* kapansin-pansin na mayroong 41 mag-aaral ang nakatanggap ng wastong salin na “ katunayan.” Samantala, mayroon namang apat na mag-aaral ang nagsalin ng salitang “totoo,” na batay sa modyul “katunayan” ang wastong sagot sa pagsasalin.

Ikasampu, ang Ingles na *visitor*, kapansin-pansin na mayroong 20 mag-aaral ang sumagot ng “panauhin” at mayroon namang 25 mag-aaral ang nagsalin ng “bisita,” Batay sa modyul na sinusunod “panauhin” ang wastong sagot.

Sa kabuuan, batay sa karaniwang pag-sasalin, kapansin-pansin na mayroon lamang dalawang estudyante ang nakatanggap ng sampung puntos o nakapagsalin sa lahat ng mga salitang isinalin sa wikang Filipino. Samanatala, namang walong mag-aaral ang nakakuha ng siyam na puntos mula sa pagsasalin, at mayroong 14 naman na mag-aaral ang nakakuha ng walong puntos. Makikita sa survey na mayroon 12 mag-aaral ang nakatanggap ng pitong puntos, walong mag-aaral ang nakakuha ng anim na puntos at isang mag-aaral ang nakakuha ng limang puntos. Sa bahaging ito, matutunghayan, karamihan sa naging kalahok nakapagsalin ng tama sa wikang Filipino.

Kung susumahin ang mga naging sagot ng lahat ng mga mag-aaral, kapansin-pansin na batay sa mga salitang lahok, nangunguna ang Ingles na *election* na may pinakakaunting nakakuha ng wastong sagot. 17 lamang ang nakakuha ng wastong salin na “halalan” dahil 28 naman eleksyon ang napiling sagot. Pangalawa, ang Ingles na *visitor*, 20 mag-aaral lamang ang nakakuha ng wastong sagot na “panauhin,” dahil 25 sa kanila na may maling sagot dahil mas pinili nila ang saling “bisita.” Panghuli, ang Ingles na *administration*, 23 mag-aaral lamang ang nakakuha ng wastong sagot na “pamamahala,” 22 ang may maling sagot na “administrasyon.” Sa kasong ito, hati ang mag-aaral sa kung paano ang wastong pagbabaybay at pagsasalin. Sa karaniwang salitang lahok sa nasabing modyul, kung susuriing mabuti, wasto ang saling “eleksyon, bisita, at administrasyon,” batay na rin sa sistema ng pagbaybay na ipinanukala ng KWF 2011 (kung ano ang basa sa Ingles, siya ring sulat ngunit ibaybay lamang sa Filipino) hanggang kasalukuyan (Panitikan ng Daigdig X).

Pagsasaling Idyomatiko

Bukod sa pagiging palasak at bahagi ng diskurso ang mga pahayag idyomatiko sa usaping pagsasalin, ang kasunod na bahagi ay nagpapakita ng lebel ng pamilyaridad sa mga idyoma Ingles ang mga kalahok.

Matutunghayan sa ikalawang bahagi ng pagsasalin ang Idyomatikong Pagsasalin. Ang unang idyomang *bread and butter*, kapansin-pansin na mayroong 25 mag-aaral ang

nakakuha ng tamang pagsasalin na “trabaho o hanapbuhay”. Samantala, 20 namang mag-aaral ang sumagot ng “tinapay at mantikilya.” Batay sa modyul, *bread and butter* ang wastong salin.

Ikalawa, ang idyomang *to have a hand/voice*, kapansin-pansin na mayroong 25 mag-aaral ang sumagot ng “tumulong o pagpasya.” Samantala, mayroon namang 23 mag-aaral ang nagsalin ng “magkaroon ng kinalaman.” Batay sa modyul na sinusunod, “tumulong o pagpasya,” ang wastong sagot sa pagsasalin.

Ikatlo, ang idyomang *dressed to kill,* kapansin-pansin na lahat ng mag-aaral, 45 mag-aaral o ang buong populasyon ay nakakuha ng tamang pagsasalin na may katumbas na “bihis na bihis.” Batay sa modyul, “bihis na bihis,” ang wastong sagot.

Ikaapat, ang idyomang *to give hand,* kapansin-pansin na lahat ng mga estudyante o 45 mag-aaral ang nakapagsalin ng “tumulong.” Batay sa modyul, “tumulong,” ang wastong sagot sa nasabing idyoma.

Ikalima, idyomang *to go with*, kapansin-pansin na lahat pa rin ng mga mag-aaral o lahat ng populasyon na mayroong 45 mag-aaral ang nagsalin ng “sasama/kasama.” Batay sa modyul, “kasama/sasama,” ang wastong sagot.

Ikaanim, ang idyomang *to go on,* kapansin-pansin na mayroon 15 mag-aaral ang nakakuha ng wastong salin na “magpatuloy”. Samantala mayroong 30 namang mag-aaral ang may saling “pumunta” na batay sa modyul, “magpatuloy” ang wastong sagot.

Ikapito, ang idyomang *to have one’s handful*, kapansin-pansin na mayroong 42 mag-aaral ang nakakuha ng wastong salin na “karamay.” Samantala mayroong tatlong mag-aaral ang nagsalin ng “tumulong.”

Ikawalo, ang idyomang *to go after,* kapansin-pansin na mayroong 42 mag-aaral ang nakakuha ng wastong pagsasalin “sundan/sumunod.” Samantala, mayroong dalawang mag-aaral ang nagsalin ng “umiwas” at isang mag-aaral ang nagsalin ng “lumayo.” Batay sa modyul, “sundan/sumunod” ang wastong sagot.

Ikasiyam, ang idyomang *to go away*, kapansin-pansin na mayroong 43 mag-aaral ang nakatanggap ng wastong pagsasalin na “lumayo/umalis.” Samantala, mayroong dalawang mag-aaral ang nagsalin ng “ayaw sumama.” Batay sa modyul, “lumayo/umalis” ang wastong sagot sa pagsasalin.

Ikasampu, ang idyomang *to go against*, kapansin-pansin na mayroong apat lamang na mag-aaral ang nakapagsalin ng tamang pagsasalin na “sumalungat.” Samantala, mayroong 41 mag-aaral ang nagsalin na “ayaw sumama.” Batay sa modyul, “sumalungat” ang wastong sagot sa pagsasalin.

Sa kabuoan, kapansin-pansin na ang mga mag-aaral ay hindi pa ganap na nakakaalam sa pagsasaling idyoma. Makikita sa kabuoang iskor na walang nakakuha ng perpektong puntos. Mayroong limang estudyante ang nakakuha ng walong puntos, mayroon namang pito ang nakakuha ng limang puntos, mayroon namang labingwalong ang nakatanggap ng anim na puntos, mayroon ding 12 ang nakakuha ng limang puntos, at limang naman ang nakakuha ng apat na puntos. Makikita sa resulta ng kanilang pagsasalin na hindi naging madali sa kanila ang pagsasalin partikular na sa bahaging idyoma.

Kung susumahin ang mga naging tugon ng mga mag-aaral, kapansin-pansin na hindi naging madali sa mag-aaral ang pagsasaling idyoma mula sa Ingles patungong Filipino. Narito ang ilan sa nangungunang apat na idyomang nahirapan ang mag-aaral sa pagsasalin: Una, apat lamang sa mag-aaral ang nakakuha ng tamang sagot na

“sumalungat” sa idyomang *to go against* dahil 41 mag-aaral na mas pinili ang maling saling “ayaw sumama.” Pangalawa, mayroong 15 lang nakakuha ng wastong sagot na “magpatuloy” sa idyomang *to go on* dahil 30 ang nakakuha ng maling saling “pumunta.” Pangatlo at pang-apat, ang idyomang *bread and butter* na may katumbas sa Filipino na “trabaho” at *to have hand/voice* na may saling “tumulong o pagpasya,” parehong 25 mag-aaral ang nakatanggap ng wastong sagot dahil may 20 mali ang naging sagot.

Batay sa salitang lahok, kung susuriing mabuti kapag nagsasalin ng mga matalinhagang pahayag o idyoma, kinakailangang isaalang-alang ang mga limitasyon gaya ng diwa o konstektong nilalaman ng pahayag, ang gramatika ng dalawang wikang sangkot at ang mismong kawikaan o idyoma. Bukod dito, kinakailangan ding ikonsidera and diwa sa payak na kahulugan kung hindi nagiging kumplikado ang magiging resulta ng pagsasalin.

Pagsasaling Teknikal at Pang-agham

Matutunghayan sa ikatlong bahagi ang pagsasaling teknikal at pang-angham. Ang simbolong *Fe (iron),* kapansin-pansin na halos lahat ng mga mag-aaral ang nakatanggap ng wastong salin na “bakal” o 44 sa mga mag-aaral samantalang mayroon lamang isangmag-aaral ang hindi nakapagsalin ng tama na sumagot ng (metal). Patunay lamang sa unang bilang, kuhang kuha ng mga mag-aaral ang katumbas ng siyentipikong simbolong bakal.

Ang simbolong *H_2O (water),* kapansin-pansin na buong populasyon o 45 mga mag-aaral ang nakakuha ng tamang pagsasalin na “tubig.” Ibig sabihin nito, may malawak na kaalaman ang bawat mag-aaral sa halaga ng tubig at ang simbolong tinataglay nito.

Ang simbolong *HCL (muriatic acid),* kapansin-pansin na buong populasyon o45 mga mag-aaral ang nakakuha ng tamang pagsasalin na “muriatic acid.”

Ang Ingles na *drawing* naman*,* kapansin-pansin na buong populasyon o 45 mga estudyante ang nakakuha ng tamang pagsasalin na “guhit.”

Ang Ingles na *astronomy*, kapansin-pansin na buong populasyon o 45 mga mag-aaral ang nakakuha ng wastong pagsasalin na “astronomiya.”

Ang Ingles na *bulb*, kapansin-pansin na 42 sa populasyon ng mga mag-aaral ang nakakuha ng wastong pagsasalin sa Filipino na “bombilya.” Samantala, mayroon namang tatlong mag-aaral ang may salin na “ilaw” na batay sa modyul na sinusunod, saling “bombilya” ang wastong sagot.

Ang Ingles na *buzzer*, kapansin-pansin na buong populasyon ng mga mag-aaral o 45 mag-aaral ang nakakuha ng tamang pagsasalin na “buzzer.”

Ang Ingles na *battery*, kapansin-pansin din na buong populasyon o mayroong 45 mag-aaral ang nakakuha ng wastong pagsasalin na “baterya.”

Ang Ingles na *computer,* kapansin-pansin na mayroon lamang apat na mag-aaral sa populasyon ang nakakuha ng wastong salin na “kompyuter.” Samantala, 41 mag-aaral naman ang mayroong saling na “computer.” Patunay na lamang nagkaroon ng kalituhan sa panig ng mga mag-aaral kung pananatilihin ang salitang Ingles o hahanapan ng angkop na salin sa Filipino.

Ang Ingles na *sociology,* kapansin-pansin na buong populasyon ng mga mag-aaral o 45 mag-aaral ang nakakuha ng wastong salin na “sosyolohiya.”

Sa kabuuan ng pagsasaling teknikal at pang-agham, makikita na walang mag-aaral ang nakatanggap ng perpektong puntos, mayroon lamang isang estudyante ang nakakuha ng siyam na puntos, apat naman ang nakakuha ng walong puntos. May labing-apat na mag-aaral ang nakakuha ng pitong puntos, mayroong labing-anim na mag-aaral ang nakakuha ng anim na puntos, pitong mag-aaral ang nakakuha ng limang puntos, dalawang mag-aaral ang nakakuha ng apat na puntos at mayroong isang mag-aaral ang nakakuha ng tatlong tamang sagot lamang. Makikita na sa resulta sa bahaging ito, hindi naging madali sa ibang mag-aaral ang pagsasalin.

Kung susumahin ang mga tugon ng lahat ng mga mag-aaral, kapansin-pansin na sa buong populasyon ng mga mag-aaral ay walang nakakuha ng perpektong sagot ngunit wala ring mag-aaral nakakuha ng mababang iskor dahil buong populasyon nasa 40 pataas ang iskor na nakuha sa bawat aytem. Patunay lamang na kahit hindi perpektong pagsasalin ang natamo ng mga mag-aaral, nasanay sila sa mga simbolo at terminong nauugnay sa teknikal at agham. Sinusugan ang ideyang ito sa naging talakay ni Sison-Buban (2014) ng Pamantasang De La Salle, ang isang partikular na estilo o lengguwahe ng pagsasalin ay hindi makakatulong sa pagsasaling-teknikal dahil ang materyal ay maaaring baguhin upang matugunan ang mga pangangailangan ng mga target na mambabasa. Dagdag pa niya, hindi usapin ng tekstong teknikal ang pagsasaling-teknikal kundi usapin ito ng paggamit ng lengguwaheng teknikal.

Pagsasaling Pangmidya

Kung gaano kabilis ang pag-unlad ng wika at ng mundo, ganoon rin kabilis ang pag-unlad ng midya sa lipunan. Binigyang-halaga ni Dulles (1988) nabanggit sa Manabat (2012), ang media ay hindi lamang isang mapagkukunan ng kaalaman, karunungan, at komunikasyon, ngunit ito rin ay may malaking epekto sa buhay ng mga tao at nakakaapekto sa kanilang mga saloobin at pagpapahalaga sa kanilang kapaligiran. Ang radyo, telebisyon, at pahayagan ay ang mga paraan kung saan ang media ay maaaring makarating sa mga lugar na mahirap maabot. Bata man o matanda, may access sa midya.

Dagdag pa ni Worsnop (2006) na sa kasalukuyan, ang midya ay lumilitaw na nakatuon sa mga kabataan dahil sila ay madaling makipag-ugnayan at makagaya sa mga bagay na kanilang pinapanood at naririnig, na nagpapahintulot sa midya na makakuha ng lubos na pagsunod sa mga kabataan (nabanggit sa Manabat, 2012). Ibig sabihin nito, kabataan ang mas madaling makaadap sa kung ano ang uso at bago na sumasaklaw sa lahat ng erya – wika, kultura, politika, edukasyon, at iba pa.

Matutunghayan sa ikaapat na bahagi ang pagsasaling pangmidya ng mga salita sa wikang Ingles patungong Filipino. Ang terminong *selfie,* kapansin-pansin na buong populasyon o 45 mag-aaral ang nakatanggap ng wastong pagsasalin na “pagkuha ng larawan sa sarili.” Ibig sabihin, sa unang salitang pangmidya, bukod sa pagiging mulat sa kung ano ang popular, ito na rin ang nakaugaliang gawin ng mga mag-aaral bilang pampalipas-oras.

Salitang *trending,* kapansin-pansin na buong populasyon o 45 estudyante ang nakakuha ng tamang pagsasalin na “nauuso.”

Ang salitang *seenzone,* kapansin-pansin na buong populasyon o 45 mag-aaral ang nakatanggap ng wastong pagsasalin na “hindi tinutugunan ang mensahe o binaliwala, o hindi pinansin ang minsahe.”

Ang ekspresyong *pak ganern,* kapansin-pansin 40 mag-aaal na nagsalin na ito ay isang “expression” lamang ng maraming mga kabataan sa ngayon. Mayroon namang dalawang mag-aaral na nagsalin ng “lough out loud.” Mayroon namang dalawang mag-aaral ang nagsalin ng “sana all” at mayroong isang mag-aaral ang nagsalin ng “pak ganern” o walang pagbabago ang salita. Subalit, ang wastong salin sa Filipino nito *“tumpak, gayon yon, tama”* batay na rin sa pagkakagamit at pagpapakahulugan ng marami.

Ang daglat na *LOL,* kapansin-pansin na ang buong populasyon o 45 estudyante ang nakakuha ng tamang salin na “laugh out loud.”

Ang salitang *throwback”* kapansin-pansin na ang buong populasyon o 45 mag-aaral ang nakakuha ng wastong salin na “pag-alala sa nakalipas o binalikan ang nakalipas.”

Ang salitang *hashtag,* kapansin-pansin na buong populasyon ng mga mag-aaral o 45 mag-aaral ang nakakuha ng tamang salin na “karaniwang ginagamit sa mga social network.” Batay na rin sa personal na tugon ng mga kalahok, malay ang lahat ng kalahok kung kalian ginagamit ang salitang ito.

Ang salitang *mag-marites,* kapansin-pansin na ang buong populasyon ng mga mag-aaral ay alam na alam ang pagsasalin nito dahil nakuha nila ang wastong saling “pakikibalita o makikitsismis sa mga bagay.” Batay na rin sa personal na obserbasyon, hindi lamang ang mga mag-aaral ang mulat sa pag-usbong ng ekspresyong ito kundi laganap na sa buong kapuluan ang paggamit bilang panghalili sa pakikipagtsismisan.

Ang ekspresyong *forda go,* kapansin-pansin na mayroong 40 ang sumagot ng pareho lang sa salitang Ingles na “forda go” na ang wastong salin naman tumutukoy sa “isang ekspresyon ng isang komento o simpleng paboritong bagay o gawain”. Samantala mayroong dalawa ang sumagot ng “game na game,” mayroon namang dalawang mag-aaral ang sumagot ng nagsasabing pagbabalik sa nakaraan o nakalipas ang kanilang pagpapakahulugan.

Ang salitang *ferson,* kapansin-pansin na ang buong populasyon o 45 ang nakakuha ng tamang pagsasalin na “tao.” Alam na alam nila ang pagtutumbas dahil halos lahat ay gumagamit ng salitang ito sa kanilang pakikisalamuha sa social media.

Kung susumahin ang mga naging tugon ng lahat ng mga mag-aaral, kapansin-pansin na sa buong populasyon ng mga mag-aaral ay walang nakakuha ng perpektong sagot. Ang social media ay itinuturing na pinakamalakas na organisasyong sosyal dahil mayroon silang kakayahang magbago ng kasaysayan ng bansa.. Isang pagpapatunay lamang na ang pagsasalin ng midya ay may malaking kakayahang impluwensyahan ang paraan ng pagsasalita at pagsusulat dahil nagbibigay interes sa mga tao upang makakuha ng data. Sa kabuoang analisis ng bahaging pagsasaling pangmidya, walang mag-aaral ang nakakuha ng sampung puntos, mayroong limang mag-aaral ang nakakuha ng pitong puntos, 32 ang nakakuha ng anim na puntos at walongmag-aaral ang nakakuha ng limang puntos. Mapapansin din na may tanging ekspresyon na hindi natumbasan ng mga mag-aaral gaya ng *pak ganern*. Batay sa malawakang pagsisiyasayat, ang ekspresyong ito ay komon sa mga Tagalog ispiker.

Kung susumahin ang mga tugon ng lahat ng mga mag-aaral, kapansin-pansin na karamihan sa mga mag-aaral nahirapan nang bahagya sa pagsasalin. Ilan sa itinuturing na dahilan ang pamilyaridad ng at pagkakagamit ng mga salita. Sa kaso ng papel na ito, hindi rin naging madali para sa tagapagsalin ng pangungusap lalo na kapag may mga salitang hindi pamilyar o may kakulangan sa exposure ukol sa pagsasaling gaya nito.

Batay sa sampung salita at ekspresyong inilahad sa itaas, nagkaroon ng pagkalito ang mga mag-aaral. Ang nasabing pagkalito o pagkakamali batay na rin sa pabago-bagong sistemang ipinapatupad at maging sa epekto nito sa konsepto kung ano ang basa, siyang sulat ngunit ibabaybay lamang sa Filipino.

DANAS SA PAGSASALIN

Para sa pangatlo at huling suliranin ng pag-aaral na, “Ano-ano ang naging danas sa kamalian ng mga piling mag-aaral sa pagsasalin?” Sa puntong ito, tatalakayin ang naging tugon ng mga kalahok sa isinagawang panayam ukol sa naging danas ng mga mag-aaral sa pagsasalin. Matutunghayan sa talahanayan ang buod ang kanilang naging tugon

Batay sa naging salaysay ng bawat mag-aaral o kalahok ng pag-aaral narito ang sampung nangungunang dahilan ng kahirapan nila sa pagsasalin (mula sa pinakamarami hanggang sa pinakamadalang na tugon): (a) Maraming salita na puwedeng itumbas o mga kaugnayang salita sa Filipino ngunit hindi iyon ang tumpak na sagot; (b) Hindi agad nakuha ang ibig sabihin ng salin; (c) Mas madali isalin ang Filipino patungong Ingles; (d) Maraming katumbas o pagpapakahulugan ang salita sa Filipino; (e) Nalilito kung paano ang tamang pagpapakahulugan ng salita/parirala; (f) May mga salita na bago pa sa pandinig; (g) Malalim ang pagpapakahulugan ng mga salita o malalim ang termino; (h) Mas sanay gumamit ng mga salitang Ingles kaysa sa Filipino; (i) Mayroong mga termino sa social media hindi masyadong pamilyar; at (j) Walang exact term o eksaktong termino ang ginagamit sa social media.

Batay sa naging iskor, resulta, at panayam ng mga kalahok sa nasabing pag-aaral, marami ang nagsabi na nagkaroon ng kahirapan sa pagsasalin ang halos mag-aaral sa pagsasalin lalo na kapag ang salita o termino na sa kanilang pag-aakala iyon ang wastong salin dahil iyon ang halos naririnig at karaniwang ginagamit ng marami. Halimbawa sa naging tugon ng ilan sa mag-aaral saad ni M2 *“akala ko kasi iyon na ang sagot na napili ko, ‘yon kasi ang kalimitang naririnig ko na ginagamit ng marami, ‘yon na rin ang nakasanayang kong gamitin. Halimbawa ang election, halos kasi kahit sino, mariringig mo eleksyon ang naririnig ko kaya naman saling eleksyon ang pinili ko ngunit, halalan pala ang wasto batay na rin sa katumbas nito.”* Ganito naman ang pagsang-ayon na pahayag ni M8 *“mahirap talaga siya kasi, dahil komon ang salita, akala ko ‘yon din talaga ang sagot pero hindi. Kaya nga, nakakalito sa part naming mag-aaral kung ano nga ba ang susundin kasi kung isi-search mo sa google lalabas din naman ang ganung ispeling eh.”*

Karaniwan itong maituturing dahil ang salita gaya ng eleksyon at administrasyon na nagmula sa Ingles na *election* at *administration* na iyon na ang katumbas sa Filipino. Lingid sa kaalaman din ng maraming gumagamit ng mga nasabing termino na may

katumbas ito sa wikang Filipino batay sa unang Balarilang Filipino na halalan at pamamahala ang wastong salin nito.

Isa rin sa nakikitang dahilan ng mga suliraning inilahad sa itaas ng mga kalahok sa pag-aaral bukod sa kalituhan sa mga terminong hindi pamilyar, o kaya'y teknikal o kaya naman pinanatili kung ang baybay nag salita sa halip na bigyan ng katumbas, sa puntong ito papasok ang konsepto ng baryasyon ng wika. Nabanggit ni Narvaez (2018), nagkakaroon ng baryasyon sa wika na makikita sa baryasyon ng iba-ibang paraan ng pagsasalin sa iisang teksto o dokumento. Iba-iba ang trato sa bawat salita sa magkakaibang wika at ang pagpili ng pantumbas sa isang salita tungo sa isa pang wika ay naiimpluwensiyahan ng layunin ng pagpapakahulugan sa espesipikong sitwasyon at kontekstong kultural. Bilang patunay sa ideya ni Narvaez, malaking factor ang baryasyon ng wika ng mga mag-aaral na nakakaapekto sa resulta ng kanilang pagsasalin. Bawat mag-aaral bukod sa iba-iba ang oryentasyon ng pamilyang kinalakhan, halo-halo rin ang unang wikang natutuhan nila sa kanilang tahanan at higit sa lahat may malaking impluwensya rin sa pamilyaridad at kahusayan sa paggamit ng wika nila ang labas na institusyong panlipunan – eskwelahan at midya.

Konklusyon

Batay sa naging resulta ng pag-aaral, natuklasang may limitasyon sa panig ng mismong nagsasalin at ang nakikinabang ng salin gaya ng ng diwa o konstektong nilalaman ng pahayag, ang gramatika ng dalawang wikang sangkot, at kontekstong kultural. Nagkakaroon ng problema kapag iba ang kontekstong kultural ng orihinal na bumuo ng akda o ekspresyon at tunguhang wika.

Hindi naging suliranin sa mga mag-aaral ang pagsasaling teknikal at pang-agham bagkus, halos lahat ng mag-aaral matataas ang nakuhang iskor mula rito. Sa karaniwang pagsasalin ng mga salita at pagsasaling idyomatiko, nagkaroon ng kahirapan ang mga mag-aaral dahil mula sa sampung salita, tatlo rito ang hindi naisalin nang wasto ng mga mag-aaral. Sa pagsasaling teknikal at pang-agham at pangmidya, halos matataas ang nakuhang iskor ng mga mag-aaral, isang pagpapatunay na malay ang mga mag-aaral sa kung ano ang pinakatinututukan ngayon ng maraming eskwelahan at midya. Maliban lamang sa isang ekspresyon sa midya na hindi pamilyar sa maraming mag-aaral.

Kung susumahin ang mga tugon ng lahat ng mga mag-aaral, kapansin-pansin na karamihan sa mga mag-aaral nahirapan nang bahagya sa pagsasalin. Ilan sa itinuturing na dahilan ang pamilyaridad at pagkakagamit ng mga salita at kakulangan sa exposure ng mga mag-aaral sa gawaing ito.

Batay sa sampung salita at ekspresyong inilahad sa ganang itaas, nagkaroon ng pagkalito ang mga mag-aaral. Ang nasabing pagkalito o pagkakamali batay na rin sa pabago-bagong sistemang ipinapatupad at maging sa epekto nito sa konsepto kung ano ang basa, siyang sulat ngunit ibabaybay lamang sa Filipino.

Panghuli, natuklasan na ang teorya/lenteng Translation Error Analysis na ginamit sa pananaliksik, bukod sa kaangkupan sa instrumentong ginamit para suriin ang bawat parametrong saklaw ng pag-aaral, mabisang lente upang masuri ang kalakasan at kahinaan ng isang salin at materyal na ginagamit ng guro.

Rekomendasyon

Matapos ang masusing pag-aanalisa ng mga datos, nakabuo ang mananaliksik ng mga sumusunod na rekomendasyon:

Una, para sa mga mag-aaral, malaking tulong ang pagbabasa ng mga aklat sa buong proseso ng pagsasalin para magamit sa susunod pang gawain hindi lamang sa loob ng klase maging sa praktikal na layunin at upang magkaroon ng mas angkop na impormasyon at ideya hinggil sa pagsasalin.

Pangalawa, para sa mga magulang, mainam pa rin na magkaroon ng close monitoring sa performance ng mga mag-aaral lalo na sa mga asignaturang nahihirapan sila at matulungan sila sa lubos na pag-unawa ng aralin.

Pangatlo, para sa mga guro mas kinakailangang mabigyan ng mataas na panahon ang pag-aaral sa pagsasalin upang mas mapalawak pa ang kaalaman sa pagsasalin.

Pang-apat, ang naging resulta ng pag-aaral, makakatulong din sa pamunuan ng DepEd upang makapaghanda ng mga seminar ukol sa kasalukuyang trend kaugnay sa pagsasalin at mga bagong impormasyon sa wika.

Panlima, para sa mga mananaliksik, magagamit ang mga datos na ito sa kanilang mga panibagong pag-aaral gamit ang parehong lente ngunit sa ibang kategorya nakapokus.

Research and Health Protocol

Matapos matagumpayang maipasa ng mananaliksik ang panukalang depensa, ang mapagkumbabang paghingi ng research number at Institutional Ethics Review Committee (IERC) permit sa Central Mindanao University ay mga hakbang na ginawa ng mananaliksik bago niya naisagawa ang nasabing pag-aaral. Pangalawa, matapos mapagkalooban ng IERC permit ang mananaliksik, humingi ng permiso mula sa opisina ng tanggapan ng dibisyon dala na ang kanyang naisulat na liham-pahintulot. Kasunod nito, nagbigay ang mananaliksik ng isang kopya ng naaprubahang liham sa punong-guro kalakip na rito ang IERC permit para sa pangangasiwa ng instrumento. Kalakip rin ng liham-pahintulot ng mananaliksik (naglalaman ukol sa Data Privacy Act) para sa mismong pakikipanayam sa mga target na kalahok pinirmahan ng kapwa magulang at mag-aaral ang nasabing consent. Sa kaso ng pag-aaral na ito, hindi maseselan ang mga katanungang nabuo ng mananaliksik, nakabatay ito sa kamalian sa pagsasalin. Ngunit, pananatili pa rin ng mananaliksik na maging kompidensyal ang anomang nakalap na mga impormasyon. Kumuha rin ng sampol ang mananaliksik para maipresenta sa tagapangasiwa ng paaralan na legal at naaayon sa pamantayan ang isasagawang pananaliksik. Gumawa rin ng timetable ang mananaliksik para sa posibleng iskedyul ng bawat mag-aaral na iinterbyuhin. Matapos ang pagkuha ng mga tugon mula sa binuong mga tanong ng mananaliksik, transcribe at nag-encode rin ito ng mga datos na sinundad naman ng pagsusuri sa mga nakalap na impormasyon. Samantala, hindi na kailangan ang isang statistician sa pag-aaral na ito dahil bukod sa iilang mag-aaral lamang ang kinuhang sampol, ang mga katanungan ay nakapokus sa malalimang pag-aanalisa batay sa problema at layunin ng pag-aaral.

Mga Konsiderasyong Etikal

Nabanggit sa ganang itaas ang ilang pamantayan sa pagsasagawa ng pananaliksik na ito ngunit bilang pagtalima sa etika ng pananaliksik, ang paghingi ng permiso sa tanggapan ng dibisyon at punong-guro ng paaralan ay mahalagang kinokonsidera ng mananaliksik. Gayundin, ang paghingi ng *Institutional Ethics Review Committee (IERC)* Permit mula sa CMU bago isinagawa ang pag-aaral ay kinokonsidera rin. Isinagawa ang pangangalap ng datos o pagpapasagot ng talatanungan at panayam sa buwan ng Pebrero 2023.

Sa pagsasagawa ng pag-aaral/panayam, ipapaliwanag ng mananaliksik sa mga respondente ang kalikasan at layunin ng isinagawang pag-aaral at pinapanatiling kompidensyal ang anomang impormasyong nakuha mula sa kanila. May karapatang sagutin ng respondente ang anomang katanungan at may karapatan din siyang kumalas kapag sa tingin niya na ang mga katanungan ay labag o opensibo o kaya nama'y hindi siya komportable. Ibig sabihin din nito, boluntaryo ang pagsali ng respondente sa nasabing panayam.

Bilang bahagi ng tuntunin, ipiresenta sa paaralan ang resulta ng pag-aaral para sa balidasyon bago gawing pinal ang manuskrito.

Pasasalamat

Taos pusong pasasalamat sa ating poong Maykapal sa tibay ng loob, lakas malusog na pangngatawan at sa pagpapanatiling ligtas sa kabila ng mga napagdaanang pamdemya dulot ng COVID-19, sa pagpaparamdam sa Kanyang presensya sa bawat oras upang mapagtagumpayan ko ang gawaing ito.

Buong-puso din akong nagpapasalamat sa mga taong sumuporta sa akin upang mapagtagumpayan ko ang pananaliksik na ito. Una, sa aking buong pamilya lalong lalo na ang aking ina na si Wilma C. Villegas sa pagbibigay ng buhay sa akin at pagtulong pinansiyal. Sa aking mga kapatid na nagbibigay ng kusang loob na tumulong lalong lalo na sa panahong nangangailangan ako.At higit sa lahat ang aking pinaka mamahal na asawa na si Norman Roy A. Cagampan at dalawang anak na sina Nathaneal Hubert V. Cagampan at Nathaneal Homer V. Cagampan na naging inspirasyon ko upang tapusin ang aking pag-aaral.

Gayundin, buong-puso akong nagpapasalamat sa sumusunod:

Una kay G. Randy M. Magsalos na naging gamay ko upang mapadali ang aking mga gawain sa pag-aaral at nagbibigay ng motibasiyon para ipagtuloy ko, Kay Gng. Jocelyn M. Dayata na aking kaklasi at naging kaibigan na naging daan na nagbigay ng inspirasyon upang ako ay muling magpatuloy sa aking pag-aaral.

Pangalawa, sa aking prinsipal na sa G. Jemperly Y. Lorilla sa pagbibigay ng pahintulot na isagawa ko ang aking pananaliksik sa San Nicolas National High School. Sa mga mag-aaral na naging instrument upang maging makatotohanan ang pananaliksik na ito.

Nagpapasalamat din ako sa lahat ng mga naging guro ko sa Central Mindanao University lalong-lalo na kina Prof. Fe H. Mantong at Dr. Julie Ann Orobia na aking naging mga guro.

Walang hanggan at taos-pusong pasasalamat sa aking tagapayo na si Dr. Freddielyn B. Pontemayor sa walang pasubaling pagsuporta sa akin. Hindi ko magagawa ang lahat ng ito kung hindi dahil sa kanyang walang sawang pagtulong sa akin at pagbibigay ng inspirasyon sa tuwing nawawalan na ako ng lakas ng loob. Sa pagbibigay ng gabay sa lahat ng gawain at handing tumulong para mas mapadali ang aking pag-aaral.

Sa lahat ng mga taong nasa likod ng tagumpay na ito, maraming -maraming Salamat po.

Nagpapasalamat,

Necel V. Cagampan

PHYSICOCHEMICAL ANALYSIS OF CHARRU MUSSEL (*Mytella strigata*) POWDER AND ITS ACCEPTABILITY AS KROPEK

Mary Cris J. Gemoros, Junnafe D. Daleon, DTE, Nivea Louwah D. Sermona

Graduate School, University of Science and Technology of Southern Philippines, Cagayan de Oro, Philippines 9000

https://doi.org/10.5281/zenodo.13207966

ABSTRACT

The study aimed to utilize the abundant and invasive *Mytella strigata* found in the Panguil Bay area by incorporating their powder into a processed product, kropek. The physicochemical properties of the *Mytella strigata* powder were analyzed, revealing a pH of 6.32, a bulk density of 0.456 g/cm3, and a moisture content of 5.11%. An experimental research design with 30 respondents was employed to evaluate the sensory qualities of three formulations: (1) 20% *Mytella strigata* powder and 80% cassava flour, (2) 30% *Mytella strigata* powder and 70% cassava flour, and (3) 40% *Mytella strigata* and 60% Cassava powder. The results showed that Formulation 1 was significantly preferred in terms of appearance ($F=4.79$, $p<0.05$) and crispiness ($F=3.82$, $p<0.05$). While there were no significant differences in aroma, color, or taste, the overall acceptability was higher for Formulation 1. The study suggests that lowering the amount of *Mytella strigata* powder in the product could further improve its sensory qualities and that determining the shelf-life of the *Mytella strigata* powder would be necessary for commercial viability. The research study provides a potential solution to address the underutilization of the invasive *Mytella strigata* by incorporating their powder into a popular local snack, kropek. The findings highlight the feasibility of using *Mytella strigata* powder in food product development, with further optimization and commercialization opportunities.

Keywords: *Acceptability level, Kropek, Mytella strigata powder, Physicochemical analysis*

INTRODUCTION

The fishing community in Tangub City has faced significant challenges due to the proliferation of *Mytella strigata*, a species of mussel that has become a growing problem in the region. These mussels clog fish nets, reducing the oxygen available to farmed species such as oysters and milkfish, and hampering the efficiency of aquaculture operations. The dense accumulation of *Mytella strigata* also leads to additional costs for farmers, who must hire assistants to remove the mussels from their nets, highlighting the labor-intensive nature of dealing with this invasive species.

Despite its historical significance, *Mytella strigata* is traditionally consumed in local dishes such as "kinilaw" and "adobo." However, its relatively small size and suboptimal meat quality have limited its culinary appeal when compared to other mussel species. To address this limitation, the researcher explored the innovative application of *Mytella strigata* powder in the production of kropek, a popular snack food in Southeast and East Asia.

Kropek, traditionally a dried product made from ground rice, shrimp, or fish, has evolved into a snack food crafted from ground, flavored tapioca that was shaped and fried (Espejo & Hermes, 1998). This snack food holds cultural significance and is widely enjoyed by people of all ages (Estrella, 2022). In the Philippines, there has been a 13% increase in snacking between 2015 and 2017, indicating a growing demand for acceptable kropek with superior sensory attributes (Taewee, 2011; Adobo Magazine, 2017).

From a practical standpoint, consumers often seek ready-to-eat snacks, quick meals, and easy-to-cook items to optimize their limited cooking time, particularly in the workplace. However, consumers tend to overlook the nutritional content of these processed snacks, which can vary significantly depending on the methods of preparation and processing (Otunola et al., 2012).

On the other hand, the physicochemical properties of food powders, such as pH, bulk density, and moisture content, play crucial roles in determining their functionality and application in food processing. Foods in powder form are convenient to transport and store, and their extended shelf life reduces wastage and promotes sustainable development (Ueda et. al, 2023). The physicochemical properties of food powders, encompassing particle size, shape, and surface characteristics, significantly influence their functional and sensory properties and behavior during processing and storage (Roos & Drusch, 2015). Moisture content is a crucial factor influencing the stability and shelf-life of food powders, as excessive moisture can lead to microbial growth and spoilage (Barbosa-Cánovas et al., 2005).

By incorporating *Mytella strigata* powder into the production of kropek, this study aims to enhance the utility and acceptance of this underutilized species in processed food products, thereby making a substantial impact on the food industry and inspiring new possibilities for *Mytella strigata* utilization.

Research Questions

This study sought to determine the acceptability of the proposed innovative product from *Mytella strigata* powder.

1. What are the physicochemical properties of the powdered *Mytella strigata* in terms of:
   a. bulk density;
   b. pH;
   c. color evaluation; and
   d. moisture content?

2. What is the level of acceptability of the *Mytella strigata* kropek in terms of sensory evaluation (appearance, aroma, color, taste, and crispiness) and in terms of the following formulation:
   a. 20% *Mytella strigata* Powder; 80 % Cassava Flour;
   b. 30% *Mytella strigata* Powder; 70% Cassava Flour; and
   c. 40% *Mytella strigata* Powder; 60% Cassava Flour?

3. Is there a significant difference among treatments regarding appearance, aroma, color, taste, and crispiness?

METHODOLOGY

The study employed descriptive statistics, such as mean and standard deviation, to evaluate the acceptability of products incorporated with *Mytella strigata* powder across various formulations. Additionally, inferential statistics, specifically Analysis of Variance (ANOVA), were used to analyze differences in acceptability among the different formulations of the *Mytella strigata* powder as kropek.

The physicochemical analysis of the *Mytella strigata* powder was conducted in an accredited laboratory. The study utilized purposive sampling with thirty (30) semi-trained food individuals from the University of Science and Technology of Southern Philippines. This group consisted of fifteen (15) students and fifteen (15) teachers, all involved in food-related courses or research.

Before the commencement of the sensory evaluation, the researcher thoroughly and transparently explained the study's objectives and procedures. Participants were explicitly informed that their participation was entirely voluntary and that they could withdraw from the study without facing any adverse consequences. Random codes were systematically assigned to each treatment according to a master list to ensure impartiality and eliminate bias during the sensory evaluation. The respondents evaluated the samples' degree of liking using the 9-point hedonic scale, as developed by Peryam and Pilgrim (1957) as a well-established tool rigorously validated for sensory evaluation and acceptability assessment.

The respondents evaluated the acceptability of Kropek with varying formulations: 20% *Mytella strigata* powder and 80% cassava flour; 30% *Mytella strigata* powder and 70% cassava flour and 40% *Mytella strigata* powder and 60% cassava flour—based on five (5) key food attributes: appearance, aroma, color, taste, and crispiness. These attributes served as the parameters for determining overall preference for the formulated Kropek formulations.

Range of Score	Verbal Interpretation
8.12 - 9.00	Like Extremely
7.23 - 8.11	Like Very much
6.34 - 7.22	Like Moderately
5.45 - 6.33	Like slightly
4.56 - 5.44	Neither like nor Dislike
3.67 - 4.55	Dislike slightly
2.78 - 3.66	Dislike much
1.89 - 2.77	Dislike Very Much
1.00 - 1.88	Dislike Extremely

RESULTS AND DISCUSSION

Research Question 1. What are the physicochemical properties of the powdered *Mytella strigata* in terms of:

a. bulk density;
b. pH;
c. color evaluation; and
d. moisture content?

Table 1
Physicochemical properties of Mytella strigata Powder in terms of pH, Bulk density, and Moisture content

Parameters	Unit	Results	Test Method
ph	-	6.32 @25.6°C	Electrometry
Bulk Density	g/cm3	0.456	Modified Core Method
Moisture Content	%	5.11	Air Oven Drying

Table 1 shows the result that *Mytella strigata* powder has a recorded pH value of 6.32 @ 25.6 0C. It was tested using the electrometry test method. The bulk density was measured using modified core method which yield the result of 0.456 g/cm3.On the other hand, the moisture content of the *Mytella strigata* powder result was 5.11% using air oven

drying.

The pH of *Mytella strigata* powder is measured at 6.32 at 25.6°C using electrometry, indicating a slightly acidic nature. This is consistent with findings from other marine-derived powders, which also exhibit similar pH levels due to their unique biochemical compositions (Mohamadi et al., 2020). The bulk density is recorded at 0.456 g/cm³, determined by the modified core method, suggesting a moderate compactness of the powder. This property is crucial in food processing as it affects the texture and mixing behavior of the powder in formulations (Beuchat et al., 2013; Younes et al., 2016). The moisture content is 5.11%, obtained through air oven drying, reflecting the water retention capability of the powder. Such a moisture level is within the acceptable range for dry powders, ensuring stability and reducing the risk of microbial growth, which is vital for food products' shelf life and safety (Zambrano et al., 2019).

Table 2.
Physicochemical property of Mytella strigata Powder in terms of Color Evaluation.

Parameters	Trials	L*	a*	b*
Colorimeter	1	72.87	-7.47	30.34
	2	72.96	-7.46	30.25
	3	73.01	-7.51	30.35
	Average	72.95	-7.48	30.31

Note: *L** indicates the lightness ranging from 0-100, *a** value gives the degree of (redness-greenness) with a higher *a** value indicating redder, *b** value indicates the degree of (yellowness-blueness), with higher *b** value indicating more yellow.

Depicted in Table 2 are the result of the color evaluation using a Konica Minolta colorimeter. the result revealed that in trial 1, L* had a value of 72.87, a* showed a value of -7.47, and b* had a value of 30.34. On the other hand, in trial 2, the result shows that L* has a value of 72.96, in a*, -7.46, while b* had a value of 30.25; Furthermore, in trial 3, the result shows that L* had a value of 73.01, in a*, -7.51, while b* had a value of 30.35. The overall average value in all trials of L* is 72.95, -7.48 in a*, and 30.31 in b*.

The L* value averaged 72.95, indicating the sample's lightness. The a* value averaged -7.48, suggesting a greenish hue, and the b* value averaged 30.31, highlighting a yellowish tint. These findings align with the established characteristics of seafood powder, noted for its light color and green-yellow spectrum (Smith et al., 2021). The minimal variation in color measurements across trials, with L* values between 72.87 and 73.01, and a* and b* values within -7.51 to -7.46 and 30.25 to 30.35, underscores the reproducibility and stability of the sample's color attributes. This consistency is essential for consumer products, where color uniformity signifies quality and reliability (Jones & Martinez, 2020). The *Mytella strigata* powder sample's light, greenish, and yellowish appearance confirms the expected properties of the ingredients, offering valuable insights for food product development and quality control.

Research Question 2. What is the level of acceptability of the *Mytella strigata* as kropek in terms of sensory attributes (Appearance, Aroma, Taste, and crispiness) with the following different formulations:

a. 20% *Mytella strigata* Powder and 80 % Cassava Flour;
b. 30% *Mytella strigata* Powder, 70% Cassava Flour; and
c. 40% *Mytella strigata* Powder and 60% Cassava Flour?

Table 3
Acceptability of Kropek with Mytella Strigata Powder in Different Formulations

Attributes	Formulation 1			Formulation 2			Formulation 3		
	M	SD	Description	M	SD	Description	M	SD	Description
Appearance	7.87	1.14	Like Very Much	7.27	1.62	Like Very Much	6.67	1.69	Like Moderately
Aroma	7.47	1.61	Like Very Much	7.17	1.66	Like Moderately	6.77	1.74	Like Moderately
Color	7.43	1.46	Like Very Much	7.10	1.90	Like Very Much	6.40	1.77	Like Moderately
Taste	8.43	0.96	Like Extremely	7.97	1.10	Like Very Much	7.47	1.25	Like Very Much
Crispiness	8.43	0.68	Like Extremely	8.30	0.99	Like Extremely	7.77	1.22	Like Very Much
Overall Acceptability	7.85	1.17	Like Very Much	7.56	1.45	Like Very Much	7.02	1.53	Like Moderately

Table 3 shows the result of the acceptability level among the three formulations, which were evaluated based on appearance, aroma, color, taste, and crispiness using mean and standard deviation. Formulation 1 (M=7.87, SD=1.14) and Formulation 2 (M=7.27, SD=1.62) were rated as "like very much" for appearance, while Formulation 3 (M=6.67, SD=1.69) was rated as "like moderately." Formulation 1 also led in aroma (M=7.47, SD=1.61) and color (M=7.43, SD=1.46), followed by Formulation 2 and Sample 3. All Formulations were "liked very much" in taste, with Formulation 1 (M=8.03, SD=0.96) scoring highest. For crispiness, Samples 1 (M=8.43, SD=0.68) and 2 (M=8.30, SD=0.99) were "liked extremely," while Formulation 3 (M=7.77, SD=1.22) was "liked very much." Formulations 1 and 2 were highly acceptable, but Formulation 1 got the highest overall mean score.

In food consumption, the acceptance or rejection of a particular item is primarily dictated by how well it aligns with the consumer's needs, requirements, and expectations (Mosca, 2015). Formulation 1, which contained the least amount of *Mytella strigata* powder at only 20%, demonstrated the highest acceptability level in terms of appearance.

This is likely because cassava flour, which constituted 80% of Formulation 1, contains no pigments that might discolor the product. As a result, Formulation 1 likely exhibited a brighter, cleaner color and a smoother, thinner structure compared to formulations with higher *Mytella strigata* powder content. The absence of pigments in cassava flour and its favorable textural properties contributed to the visual appeal and overall acceptability of the product. The result also conforms with the study of Balaba and Diel (2024) were the treatment with the lowest percentage of *Mytella strigata* powder has the highest over-all acceptability compared to treatment with a higher concentration of Mytella strigata powder.

Research Question 3. Is there a significant difference among treatments regarding appearance, aroma, color, taste, and crispiness?

Table 4.
One-way ANOVA Results in Terms of Appearance

				Test of Homogeneity of Variances		
Formulation	**Mean**	**SD**	**Description**	**Levene's Statistics**	**F**	**Sig**
1	7.87	1.14	Like Very Much			
2	7.27	1.62	Like Very Much	1.585	4.79	.011
3	6.67	1.69	Like Moderately			

Group Differences				
Formulation	**Mean Differences**	**Sig**	**95% Confidence Interval (LL- UL)**	
1-2	.60	.27	-.29	1.49
1-3	1.20*	.01	.28	2.12
2-1	-.60	.274	-1.49	.29
2-3	.60	.41	-.45	1.65

*. The mean difference is significant at the 0.05 level.

Table 4 shows the result of a one-way ANOVA analysis that evaluated the appearance of three food Formulation formulated with varying proportions of *Mytella strigata* powder and cassava flour (Formulation 1: 20% *Mytella strigata* powder, 80% cassava flour; Formulation 2: 30% *Mytella strigata* powder, 70% cassava flour; Formulation 3: 40% *Mytella strigata* powder, 60% cassava flour). The results revealed significant differences in appearance among the formulations ($F=4.79$, $p<0.05$). Formulation 1 ($M=7.87$, $SD=1.14$) was significantly more acceptable in appearance compared to Formulation 2 ($M=7.27$, $SD=1.62$) and Formulation 3 ($M=6.67$, $SD=1.69$). The significant mean differences ($p<0.05$) indicate that Formulation 1 is the most visually appealing.

Table 5
One-way ANOVA Results in Terms of Aroma

Formulation	Mean	SD	Description	Test of Homogeneity of Variances		
				Levene's Statistics	F	Sig
1	7.47	1.61	Like Very Much			
2	7.17	1.66	Like Moderately	0.57	1.33	.27
3	6.77	1.74	Like Moderately			

The table shows the one-way ANOVA results for aroma indicate no significant differences among the three formulations: Formulation 1 (20% *Mytella strigata* powder, 80% cassava flour), Formulation 2 (30% *Mytella strigata* powder, 70% cassava flour), and Formulation 3 (40% *Mytella strigata* powder, 60% cassava flour). The analysis ($F = 1.33$, $p > 0.05$) revealed mean scores of 7.47 (SD = 1.61), 7.17 (SD = 1.66), and 6.77 (SD = 1.74) for Formulation 1, 2, and 3, respectively, with no significant differences at the 0.05 level. Thus, all formulations exhibit similar aroma acceptability, rated moderately by respondents.

Table 6
One-way ANOVA Results in Terms of Color

Formulation	Mean	SD	Description	Test of Homogeneity of Variances		
				Levene's Statistics	F	Sig
1	7.43	1.46	Like Very Much			
2	7.10	1.90	Like Moderately	.80	2.82	0.07
3	6.40	1.77	Like Moderately			

The one-way ANOVA results for color indicate no significant differences among the three formulations: Formulation 1 (20% *Mytella strigata* powder, 80% cassava flour), Formulation 2 (30% *Mytella strigata* powder, 70% cassava flour), and Formulation 3 (40% *Mytella strigata* powder, 60% cassava flour). The analysis ($F = 2.82$, $p > 0.05$) revealed mean scores of 7.43 (SD = 1.46), 7.10 (SD = 1.90), and 6.40 (SD = 1.77) for Formulation 1, 2, and 3, respectively, with no significant differences at the 0.05 level. Thus, all formulations exhibit similar color acceptability, rated moderately by respondents.

Table 7
One-way ANOVA Results in Terms of Taste

Formulation	Mean	SD	Description	Test of Homogeneity of Variances		
				Levene's Statistics	F	Sig
1	8.03	0.96	Like Very Much			
2	7.97	1.10	Like Very Much	1.83	2.33	.10
3	7.47	1.25	Like Very Much			

The table shows the one-way ANOVA results for taste indicate no significant differences among the three formulations: Formulation 1 (20% *Mytella strigata* powder, 80% cassava flour), Formulation 2 (30% *Mytella strigata* powder, 70% cassava flour), and Formulation 3 (40% *Mytella strigata* powder, 60% cassava flour). The analysis ($F = 2.33$, $p > 0.05$) revealed mean scores of 8.03 (SD = 0.96), 7.97 (SD = 1.10), and 7.47 (SD = 1.25) for Formulation 1, 2, and 3, respectively, with no significant differences at the 0.05 level. Thus, all formulation exhibits similar taste acceptability, rated favorably by respondents.

Therefore, the uniform positive feedback ("Like Very Much") across formulations implies successful product development, aligning with recent trends in consumer preference studies where taste remains a critical determinant of product success (Ahmed et.al, 2022).

Table 8
One-way ANOVA Results in Terms of Crispiness

Formulation	Mean	SD	Description	Test of Homogeneity of Variances		
				Levene's Statistics	F	Sig
1	8.43	0.68	Like Extremely			
2	8.30	0.99	Like Extremely	3.23	3.82	.04
3	7.77	1.22	Like Very Much			

Group Differences

Formulation	Mean Differences	Sig	95% Confidence Interval (LL- UL)	
1-2	.13	.90	-.41	.67
1-3	.67*	.04	.03	1.30
2-1	-.13	.90	-.67	.41
2-3	.53	.19	-.17	1.24

*. The mean difference is significant at the 0.05 level.

The table shows the one-way ANOVA results for crispiness indicate significant

differences among the three Formulations: Formulation 1 (20% *Mytella strigata* powder, 80% cassava flour), Formulation 2 (30% *Mytella strigata* powder, 70% cassava flour), and formulation 3 (40% *Mytella strigata* powder, 60% cassava flour). The analysis ($F = 3.82$, $p < 0.05$) and subsequent Dunnett's T3 post hoc test revealed that Formulation 1 ($M = 8.43$, $SD = 0.68$) had significantly higher crispiness scores compared to Formulation 2 ($M = 8.30$, $SD = 0.99$) and Formulation 3 ($M = 7.77$, $SD = 1.22$). This indicates that Formulation 1 is the most acceptable in terms of crispiness.

Conclusions

This study intended to identify the physico-chemical characteristics of *Mytella striga* powder and determine its acceptability level as a kropek with different formulations. Based on the findings, the research objectives were likely achieved.

In conclusion, the evaluation of *Mytella strigata* powder and cassava flour mixtures revealed significant findings. The physicochemical properties, including a pH of 6.32, bulk density of 0.456 g/cm³, and moisture content of 5.11%, indicate the powder's stability and suitability for food applications. Color analysis confirmed consistent lightness, greenish, and yellowish hues across trials. Sensory evaluations highlighted that Formulation 1 (20% *Mytella strigata* powder, 80% cassava flour) was significantly preferred in appearance ($F=4.79$, $p<0.05$) and crispiness ($F=3.82$, $p<0.05$). While aroma, color, and taste did not show significant differences, overall acceptability favored Formulation 1, demonstrating its superior sensory attributes and potential for food product development.

Recommendations

The study's recommendations revolve around harnessing the potential of *Mytella strigata*, an underutilized marine resource, to develop innovative and sustainable food products. For food entrepreneurs, it is suggested to incorporate *Mytella strigata* powder as a functional ingredient, optimize the cassava flour-to-powder ratio, and enhance the appearance and crispiness of the resulting products. This would allow for diversifying offerings and providing consumers with more nutritious options.

Government agencies are urged to support the development and commercialization of *Mytella strigata*-based products by offering technical and financial assistance, as well as establishing regulations and quality standards. This would help ensure the safety and consistency of these novel food items.

Furthermore, future researchers are encouraged to delve deeper into the nutritional and functional properties of *Mytella strigata* powder, explore its feasibility in a wider range of food applications, and investigate the environmental and economic implications of its utilization. This holistic research approach would further bolster the development and commercialization of sustainable *Mytella strigata*-based food products.

Compliance with Ethical Standards

By obtaining informed consent, using random codes, providing orientation and breaks, making safety arrangements, and conducting follow-ups, the researcher systematically carried out the sensory evaluation in an ethical manner that protected participants' rights and welfare.

Acknowledgments

The researcher would like to express her heartfelt gratitude to the following individuals and organizations who have played a crucial role in the successful completion of this research endeavor.

First and foremost, the researcher would like to express her sincere appreciation to her thesis adviser, Dr. Junnafe D. Daleon, for her unwavering guidance, invaluable insights, and constant support throughout the research process. Her expertise and mentorship have been instrumental in shaping the direction and quality of this work.

The researcher would also like to extend her gratitude to the esteemed panel of evaluators, comprising of Prof. Nivea Louwah D. Sermona, Dr. Alenogines L. San Diego, Dr. Grace S. Pimentel, and Prof. Vilma D. Zacal, for their constructive feedback, insightful suggestions, and their willingness to share their knowledge and experience.

The researcher's sincere appreciation goes to Hon. Sabiniano "Ben" S. Canama, the Tangub City Mayor, Hon. Eddie S. Gomez, and the Barangay Council Members of San Apolinario, Tangub City, for their support and collaboration throughout this research endeavor.

The researcher would like to express her gratitude to the University of Science and Technology of Southern Philippines in Panaon, Misamis Occidental, and its esteemed director, Dr. Leny Q. Añasco, for graciously allowing the use of their Food Laboratory facilities, which played a crucial role in the successful completion of this research.

The researcher is deeply grateful to the following individuals for their unwavering support and constant encouragement throughout this journey: Celso C. Almirol, Christopher R. Balaba, Denver Ian L. Gimeno, Arvie Joy A. Llido, Mary Jane A. Moralia, Jed Anthony Ceballos, Engr. Mark Rey Z. Embodo, the BTLED students, and the DTLED faculty. Their contributions, both tangible and intangible, have been invaluable.

Last but not least, the researcher would like to extend her heartfelt appreciation to her parents and siblings, whose unconditional love and support have been a constant source of inspiration and motivation throughout this endeavor.

To all of you, the researcher is genuinely grateful for your involvement and support in making this research successful.

POTENTIALS, RISKS, AND ETHICAL IMPLICATIONS IN THE UTILIZATION OF AI-POWERED TOOLS IN EDUCATION

Genevieve J. Bongcac, PhD
Asuncion P. Pabalan, PhD

Holy Name University, Tagbilaran City, Bohol, Philippines

https://doi.org/10.5281/zenodo.13285255

ABSTRACT

This study aimed to assess the perspectives of educators on the use of AI-powered tools in education, analyze the ethical implications, and propose a framework for responsible utilization. The study was conducted in 10 schools in Tagbilaran City, Bohol, known for their urban location and reliable internet accessibility. A validated interview questionnaire was utilized to gather viewpoints on AI-powered tools, benefits, risks, and ethical considerations. The findings highlighted significant utilization of AI-powered tools in education, including virtual tutoring systems, virtual assistants, chatbots, content creation and recommendation systems, video conferencing applications, and assessment tools. Perceived benefits included enhanced content creation, virtual tutoring support, improved accessibility to information, and administrative efficiency, while perceived risks included overdependence on AI, academic integrity problems, automation concerns, biases, privacy, accuracy and reliability issues. The use of AI-powered tools in education raises ethical concerns, particularly regarding academic integrity. Participants expressed apprehensions about plagiarism and copyright infringement, emphasizing the risk of students exploiting AI to copy content without proper citation, potentially undermining the reliability of academic output. Furthermore, concerns are raised about academic dishonesty, including using AI for exam answers and using AI-generated content as original work, prompting a need for comprehensive strategies to balance the benefits of AI integration with ethical considerations to preserve academic integrity. Overall, the study underscores the importance of responsible AI utilization to maximize benefits while minimizing risks, advocating for clear ethical guidelines, critical thinking skills development, further research, and policy framework for ethical utilization of AI-powered tools in education.

Keywords: *Artificial Intelligence Tools, Potentials, Risks, Ethical Implications, Policy Framework*

INTRODUCTION

The 21st century has been marked by unprecedented technological advancements that have profoundly influenced nearly every facet of human existence. Among the most notable of these influences is the transformation observed in the field of education, largely driven by the proliferation of artificial intelligence (AI) technologies. The integration of AI into educational settings has introduced a range of tools that offer significant potential to enhance both teaching and learning. AI-powered educational tools, including intelligent tutoring systems and adaptive learning platforms, are designed to cater to individual students' needs, learning paces, and styles, thereby fostering greater engagement and comprehension (De La Vall & Araya, 2023). Moreover, the automation of administrative tasks by AI tools enables educators to devote more time to high-value activities such as personalized student interactions.

Recent studies highlight the extensive adoption of AI-based tools in educational contexts. For instance, Garrel and Mayer (2023) found that 63.4% of German students utilize AI tools like ChatGPT for their studies. These statistics underscore the widespread acceptance and application of AI tools in education.

However, the rapid integration of these technologies into educational practices raises several ethical concerns. Issues related to biases, data privacy (Selwyn, 2019), technological dependency (Ghosh et al., 2019), and educator autonomy (Deci & Ryan, 2020) are increasingly prominent. The potential for AI tools to mimic human writing poses additional challenges, such as the risk of academic dishonesty. Despite 75% of students acknowledging the unethical nature of cheating using AI apps, over 30% believe their teachers lack awareness of this issue (Intelligent.com, 2023). These challenges highlight the urgent need for ethical oversight and the development of responsible policies governing the use of AI in education.

The purpose of this study is to investigate educators' perspectives on the use of AI tools in educational settings, focusing on their experiences, challenges, and ethical concerns. By analyzing these perspectives, the study aims to contribute to the formulation of policies and guidelines that address potential harms while maximizing the benefits of AI in education. The findings are expected to provide a foundation for administrators to develop ethical principles and best practices, ensuring that AI tools are used responsibly and effectively to support students' educational needs.

Understanding educators' perspectives on the utilization of AI is crucial for crafting policies that mitigate potential harms while maximizing benefits. A comprehensive analysis of these perspectives will facilitate the formulation of ethical principles and best practices that address educators' concerns and ensure that AI-powered tools effectively support students' educational needs. This study aims to establish a foundational

framework for administrators to develop policies and guidelines regarding the ethical use of AI within educational settings.

The integration of AI into education promises substantial improvements in both teaching and learning outcomes. AI-driven tools have the potential to revolutionize educational experiences by personalizing lessons, automating administrative tasks, and enhancing accessibility. Nonetheless, the advancement of AI also presents significant ethical and societal challenges. To foster an inclusive and equitable learning environment, it is imperative to establish clear policies and guidelines that govern the responsible use of AI in education.

Theoretical frameworks such as the Computational Theory of Mind (McCulloch & Pitts, 1943) provide insights into the similarities between human cognition and computational processes, influencing the development of AI algorithms. The concept of Technological Singularity (von Neumann, 1958) raises concerns about the implications of machines surpassing human intelligence, emphasizing the need for ethical considerations to guide AI's growth (Williams, 2021). Additionally, the study of Machine Ethics or Morality explores the ethical dimensions of AI systems and their decision-making capabilities. The Capability Approach (Nussbaum, 2007) offers a framework for evaluating AI's role in enhancing human agency and autonomy.

The incorporation of AI in education, exemplified by intelligent tutoring systems and adaptive learning platforms, represents a significant advancement. These tools can provide personalized instruction and automate grading processes, improving efficiency and effectiveness (Anderson et al., 1995; Ritter et al., 2007). AI's impact extends to language learning and educational management systems, offering tailored support and enhancing accessibility (Abdulla, 2023; Blikstein, 2018). Despite these benefits, ethical concerns, including data privacy and the potential for increased inequality, must be addressed (Selwyn, 2019).

In summary, the integration of AI in education necessitates a balanced approach that considers both the transformative potential and the ethical implications. Establishing robust guidelines and regulatory frameworks will ensure that AI technologies are used responsibly, promoting equitable access and safeguarding educational integrity.

Research Questions

This study aimed to assess the varying perspectives of educators on the utilization of AI-powered tools within the secondary schools of Tagbilaran City, for school year 2023-2024, analyze the ethical implications of their use, and contribute to the development of a policy framework for responsible and equitable implementation.

Specifically, it sought to answer the following questions:

1. What AI-powered tools are commonly used by educators in the secondary schools of Tagbilaran City?
2. What are the potential benefits of AI-powered tools in education?

3. What are the perceived risks associated with AI-powered tools in education?
4. What are the ethical implications in the utilization of AI-powered tools in education?
5. What policy framework can be developed to address the issues on the utilization of AI-powered tools in education?

METHODOLOGY

This succeeding discussion deals with the research design, subjects of this investigation, research environment, data gathering procedure, the instrument used, and the statistical technique employed in testing the data.

Research Design

This study employed a descriptive qualitative design to thoroughly explore the collective perspectives and experiences of educators, specifically school heads and teachers, regarding the utilization of AI-powered tools in educational institutions. Purposive sampling was used to select participants, focusing on school heads and teachers who were familiar with and actively employed AI tools in their administrative functions and pedagogical practices. Individual interviews were conducted to gather insights into their experiences and opinions concerning artificial intelligence. Through this approach, the researcher aimed to gain a comprehensive understanding of the viewpoints and ethical implications associated with AI-powered tools in education, which would contribute to the development of policy frameworks, strategies, and ethical guidelines for the responsible application of AI tools.

Research Environment

The research was conducted across ten schools in Tagbilaran City, Bohol, including four private and six public schools. The selection of these institutions was based on their geographic location, which was primarily urban and provided easy access to the Internet. Internet connectivity was considered crucial for this study due to its reliance on AI tools requiring online access. Additionally, the researcher's established connections with the secondary schools were essential in facilitating the study.

Research Participants

The study involved school heads and teachers from ten secondary schools in Tagbilaran City, Bohol, including six public and four private institutions. A total of 4 school heads and 11 teachers participated, offering insights into the use of AI-powered tools in education. The participation was predominantly from teachers due to the limited familiarity of school heads with AI tools.

Table 1. Distribution of respondents

	Type of School		Number of Participants	
School	Public	Private	School Heads	Teachers
A	✓		1	1
B	✓			1
C	✓		1	1
D	✓			1
E	✓		1	
F	✓			1
G		✓		1
H		✓		1
I		✓	1	2
J		✓		2
Total	6	4	4	11

Research Instrument

This study utilized a validated, self-designed interview questionnaire. The tool was reviewed and validated by experts in ICT and education to examine various viewpoints and ethical considerations regarding using AI-powered tools in educational settings. The questionnaire targeted teachers and school heads to gather insights on how AI tools affected their responsibilities, potential benefits and risks, and ethical issues. The findings were intended to inform the development of policies and recommendations for AI's effective and ethical use in education.

Data Gathering Procedure

Data collection began with obtaining permission from the Program Head of the Graduate Studies. Following this, the researcher sought approval from the Tagbilaran City Schools Division Superintendent. Formal requests were then sent to the heads of public and private schools. Once approvals were granted, a pre-survey was conducted to identify eligible teachers and school heads who met the criteria. Selected participants received a consent form outlining the study's purpose and procedures. After obtaining their consent, interview schedules were arranged with the participants to ensure convenience and adherence to ethical standards. The interview venues were chosen by the respondents, considering accessibility and availability.

Data Analysis

The data collected from the interviews were processed through the following steps: First, the audio recordings were transcribed verbatim. Next, the transcribed data were systematically organized and coded for analysis. Patterns, themes, and relationships within the data were then identified. Thematic analysis was employed to uncover recurring themes, patterns, and detailed descriptions in the qualitative data. This approach

facilitated the comparison and validation of results. Finally, the identified themes were interpreted within the context of the research objectives and relevant literature.

By synthesizing the findings, the study provided valuable insights for policymakers, curriculum planners, and educators regarding AI's transformative potential and ethical challenges. It assisted in the development of policies that ensure the ethical use of AI in education.

RESULTS

This chapter presents, analyzes, and interprets the study's findings. Employing thematic analysis, the researcher examines school heads' and teachers' perspectives on using AI-powered tools in educational settings, analyzes the ethical implications, and contributes to developing a framework for responsible and equitable integration of these tools.

Table 2 reflects the participants' responses regarding the AI-powered educational tools they have used.

Table 2. Respondents' commonly used AI-powered tools in education

Category	Code
1. Intelligent Tutoring System	Photomath, Brainly, Duolingo, Perplexity
2. Virtual Assistant and Chatbots/Content Creation and Recommendation System	Grammarly, Co-pilot, Quillbot, Chat GPT Gemeni, Elicit.org, Slides AI, Canva AI
3. Video Conferencing and Messaging Apps	Zoom, Google Meet, Messenger
4. Assessment Grading Tool	Gradecam, Zipgrade

The research respondents identified several categories of AI-powered tools they have used, as detailed in Table 2. These categories were based on the tools' functions or modes of operation.

Category 1: Intelligent Tutoring Systems include tools like Photomath, Brainly, Duolingo, and Perplexity. These systems provide personalized and adaptive learning experiences, supporting school heads, teachers, and students by addressing their specific needs.

Category 2: Virtual Assistants, Chatbots, and Content Creation Tools encompass examples such as Grammarly, Co-pilot, Quillbot, ChatGPT, Gemini, Elicit.org, Slides AI, and Canva AI. These tools assist educators with creating content, writing tasks, and multimedia production, enhancing instructional techniques and lesson planning.

Category 3: Video Conferencing and Messaging Applications, including Zoom, Google Meet, and Messenger, play a significant role in remote learning by facilitating collaboration and communication in hybrid or distance learning environments.

Category 4: Assessment Grading Tools, such as Zip Grade and Gradecam, automate the grading process, offering efficient and accurate feedback. These tools help optimize instructional time and provide prompt feedback to students.

The utilization of these AI-powered tools has a notable impact on educational methodologies, offering various approaches to meeting learning needs, improving teaching efficacy, and adapting to dynamic educational settings.

Table 3. Perceived benefits of AI-powered tools in education

Category	Code
1. Enhanced Content Creation or Content Innovation	• Error reduction and enhanced output quality • Tailored lessons • Innovative strategies • Idea generation enrichment
2. Virtual Tutoring and Support	• Improved learning outcomes • Promotion of active learning • Facilitated learning • Reinforcement of understanding
3. Virtual Assistant and Chatbots	• Broader range of ideas • Valuable resource assistance • Enhancement of teaching styles and instructional practices
4. Enhanced Accessibility to Information	• Continuous availability and rapid response provision • Increased speed and convenient access to valuable information
5. Administrative Efficiency	• Increased productivity • Reduced workload and stress • Time efficiency • Automated quiz grading and calculation

Table 3 outlines the respondents' views on the benefits of using AI-powered tools in education. The advantages, categorized into several groups, include enhanced content creation, virtual tutoring and support, virtual assistants and chatbots, and improved accessibility to information and administrative efficiency.

Category 1: Enhanced Content Creation or Innovation highlights how AI tools aid in developing new educational content, reducing errors, and improving the quality of outputs. Respondents reported that AI tools facilitate lesson planning tailored to students' preferences and abilities, introduce innovative teaching methods, and generate additional ideas. These benefits are particularly valuable for lesson planning and addressing instructional needs.

Category 2: Virtual Assistants, Chatbots, and Tutoring reflects the significant advantages of AI tools that support teachers and students. Virtual assistants and chatbots provide diverse ideas, promote active learning, and reinforce concepts. This aligns with research by Idroes et al., which noted that AI's role as a virtual assistant enhances lesson delivery and real-time support, benefiting the teaching process (Idroes et al., 2023).

Category 3: Enhanced Accessibility to Information demonstrates how AI tools improve the speed and convenience of information retrieval. Respondents noted that AI facilitates continuous access to valuable resources, thereby increasing productivity and efficiency. This finding supports Di Xu and Jaggars' (2014) assertion that AI-driven tools offer continuous support and guidance, enhancing the learning environment. Idroes et al. (2023) also highlighted AI's role in providing universal access to education, including for students with special needs.

Category 4: Administrative Efficiency illustrates AI's impact on streamlining administrative tasks, such as grading and quiz calculations. Respondents reported that AI tools reduce workload and stress by automating these tasks, which aligns with Ritters' findings that AI enhances grading efficiency and feedback quality (Ritter et al., 2007). This automation allows educators to focus on other essential aspects of teaching, improving overall productivity and creating a more engaging learning environment.

The utilization of AI-powered tools offers significant benefits in enhancing educational methodologies, improving content creation, supporting teaching and learning processes, and optimizing administrative tasks.

Table 4. Perceived risks or drawbacks caused by AI-powered tools

Category	Code
1. Overdependence on AI	• Dependency on AI-generated ideas or concepts, • Reduced critical thinking, creativity, and academic engagement • Student laziness
2. Academic Integrity	• Difficulty in authenticating students' outputs • Plagiarism/Copyright infringement • Inadequacy of the element of originality in students' outputs
3. Displacement of Teachers	• Teacher job displacement • Teacher workforce reduction • Instructional dilution
4. Biases	• Perspective limitation caused by biased algorithms • Misinformation proliferation
5. Privacy Concerns	• Data privacy violation • Security risks • Unauthorized data access
6. Accuracy and Reliability	• Deprivation of authentic learning • Erroneous quality of content • Unreliability of output
7. Cost and Access	• Educational resource inequities

Table 4 presents the perceived risks and drawbacks associated with AI-powered tools as identified by the respondents. The key areas of concern include overdependence on AI, academic integrity, teacher displacement, biases, privacy concerns, accuracy and reliability, and cost and access.

Category 1: Overdependence on AI highlights the risk that excessive reliance on AI may undermine critical thinking, creativity, and academic engagement among students. Respondents expressed concern that this could foster a culture of student laziness. This aligns with Walter's (2024) findings, which suggest that AI might diminish critical thinking skills.

Category 2: Academic Integrity addresses concerns about verifying the authenticity of students' work. Respondents worried that AI tools could lead to plagiarism and copyright infringement, compromising the originality and uniqueness of student outputs.

Category 3: Teacher Displacement reflects fears that AI might lead to job loss and a decrease in instructional quality due to automation of teaching tasks. Automation could reduce the demand for human labor in tasks like grading and administrative duties, potentially displacing teachers and affecting the quality of education. This concern highlights the potential loss of personalized attention and the unique skills educators bring to the learning process.

Category 4: Bias involves the limitations arising from biased algorithms, including the spread of misinformation. These issues could exacerbate social injustices and undermine efforts for inclusive education. Biased algorithms may lead to inaccurate educational content, impeding students' ability to evaluate information critically.

Category 5: Privacy Concerns pertain to potential data privacy breaches, security vulnerabilities, and unauthorized data access. The increased use of technology in education raises risks of data breaches, threatening the confidentiality of sensitive information and potentially diminishing trust in educational platforms. Effective data protection mechanisms and clear privacy policies are crucial to addressing these issues.

Category 6: Accuracy and Reliability concerns the quality and dependability of AI-generated content. Respondents noted occasional flaws or inaccuracies in AI outputs, emphasizing the need for rigorous review processes to ensure the accuracy and reliability of AI-produced information.

Category 7: Cost and Access highlights the risk of increasing inequities in educational resources due to the unequal availability of AI technologies. High costs and limited internet connectivity can widen the digital divide, as noted by Taylor (2023). This concern aligns with the 2021 European Commission Report and UNESCO's advocacy for strategic goals and fair utilization of AI in education, stressing the importance of addressing disparities in AI access and infrastructure (Nguyen et al., 2022; UNESCO).

Addressing these concerns is crucial for ensuring AI's responsible and equitable integration in education.

Table 5. Ethical implications in the utilization of AI-powered tools in education

Category	Code
Academic Integrity	• plagiarism • copyright infringement • dishonest behavior to gain an unfair advantage in academic assessments/cheating • collaborating with others using AI without permission • difficulty in authenticating students' outputs • inadequacy of the element of originality in students' outputs

Table 5 outlines the ethical implications of integrating AI-powered tools in education. The primary ethical concern identified is academic integrity. Respondents highlighted several issues related to this domain:

Firstly, there is a significant concern about plagiarism and copyright infringement. Respondents noted that students might be tempted to copy content directly from AI-generated sources without proper citation, thereby compromising academic integrity and originality. Such behavior violates established ethical norms and undermines the credibility of students' work.

Additionally, participants expressed worries about academic dishonesty, including the potential for students to use AI technology to generate answers for examinations or produce academic work that is presented as their own without acknowledging the original sources. This misuse of AI tools could provide an unfair advantage and distort the assessment of student performance.

Educators also face challenges in verifying the authenticity of student outputs, especially when AI tools heavily assist in content creation. This situation complicates evaluating the originality of student work and raises concerns about the genuineness of responses.

These concerns collectively underscore the ethical implications of AI in education, emphasizing the need to address these issues to uphold academic integrity. To effectively manage these implications, adopting a balanced approach that integrates AI technology while implementing strategies to mitigate its potential drawbacks is crucial. This approach is essential for preserving the integrity of student learning and maintaining educational priorities in the digital age.

Table 6. Summary of themes on the potentials, risks, and ethical implications in the utilization of AI-powered tools in education

AI-powered Tools Commonly Used by Respondents	Perceived Benefits of AI-powered Tools Used in Education	Perceived Risks of AI-powered Tools Used in Education	Ethical Implications of AI-powered Tools
• Intelligent Tutoring System • Creation and Recommendation System • Virtual Assistant and Chatbots	• Enhanced Content Creation or Content Innovation • Virtual Tutoring and Support • Virtual Assistant and Chatbots • Enhanced Accessibility to Information • Administrative Efficiency	• Overdependence on AI • Displacement of Teachers • Bias • Privacy Concerns • Accuracy and Reliability • Cost and Access	• Academic Integrity

Table 6 summarizes the themes related to four specific sub-problems concerning using AI-powered tools in education. The first column lists the AI-driven tools utilized by respondents. The second column details the benefits perceived from these tools. The third column outlines the perceived risks or drawbacks identified by participants. The final column, "Ethical Implications of AI-Powered Tools," highlights the complex ethical issues associated with AI in education. This table provides a comprehensive overview of the benefits, risks, and ethical considerations, offering valuable insights into the challenges and advantages of AI integration in educational settings.

DISCUSSION

Findings

The following are the significant findings of the study:

1. AI-Powered Tools Commonly Used in Education

The findings revealed that the respondents utilized a diverse range of AI-powered tools in education across various categories. Within the context of Intelligent Tutoring Systems, the respondents commonly employed Photomath, Brainly, Duolingo, and Perplexity to enhance teaching and learning experiences.

Similarly, Virtual Assistants, Chatbots, and Content Creation and Recommendation Systems have been predominantly utilized. Tools such as Grammarly, Co-pilot, Quillbot, Chat GPT, Gemeni, Elicit.org, Slides AI, and Canva AI are particularly popular among users.

Additionally, Video Conferencing and messaging applications like Zoom, Google Meet, and Messenger are extensively utilized for remote learning and collaboration.

Finally, assessment and grading tools such as Gradecam and Zipgrade are employed for efficient evaluation processes. Overall, these findings indicate the

significant integration of AI-powered tools in education, catering to various needs from tutoring and content creation to assessment and communication.

2. Perceived Benefits of Using AI-powered Tools in Education

The perceived benefits of using AI-powered tools cut across various categories. In terms of enhanced content creation or innovation, the respondents highlighted benefits such as error reduction, improved output quality, tailored lessons, innovative strategies, and enrichment in idea generation. Virtual Tutoring and Support through AI tools were perceived to improve learning outcomes, promote active learning, facilitate learning processes, and reinforce comprehension. Virtual Assistants and Chatbots were seen as broadening the range of ideas, providing valuable resource assistance, and enhancing teaching styles and instructional practices. Enhanced accessibility to information was observed, including continuous availability and prompt response provision, increased speed, and convenient access to valuable information.

Administrative efficiency benefits included increased productivity, reduced workload and stress for teachers, time efficiency, and automated quiz grading and calculation, signifying the multifaceted advantages perceived by users or respondents.

3. Perceived Risks or Drawbacks of Using AI-powered Tools

The findings regarding the risks of using AI-powered tools, as per respondents' perspectives, highlight several aspects:

Overdependence on AI was identified as a risk factor, leading to dependency on AI-generated ideas, reduced critical thinking, creativity, and academic engagement resulting to student laziness. Academic integrity problems were also raised, including difficulty in verifying authenticity of students' outputs, plagiarism and copyright infringement issues.

The automation stemming from the use of AI-powered tools also raised concerns about teacher displacement, workforce reduction, and instructional dilution. Biases were also identified as well, such as perspective limitations caused by biased algorithms and the proliferation of misinformation. Additionally, privacy concerns, such as data privacy violations, security risks, and unauthorized data access, were identified. Furthermore, accuracy and reliability issues were pointed out, like the deprivation of authentic learning experiences, erroneous content quality, and the unreliability of outputs. Cost and access inequalities were also recognized, indicating inequities in educational resource distribution. These findings showed the multifaceted risks associated with the adoption of AI-powered tools in education, necessitating careful consideration and mitigation strategies.

4. Ethical Implications on the Utilization of AI-Powered tools in education

The incorporation of artificial intelligence (AI) into the field of education has given rise to a number of ethical concerns, with a particular focus on the issue of academic integrity. The respondent’s express concerns regarding the potential for AI to facilitate plagiarism and academic dishonesty, thereby compromising the principles of originality

and authenticity in academic work. Educators also encounter significant challenges when it comes to verifying student outputs that heavily rely on artificial intelligence. Addressing these concerns is essential to uphold academic integrity, necessitating a balanced approach that maximizes AI's benefits while reducing potential drawbacks to prioritize student learning and development in the digital era.

Conclusions

Artificial Intelligence (AI) holds immense promise in improving various aspects of life, particularly in education where it offers a multitude of benefits. mOREver, alongside these advantages, it is important to address the potential negative impacts it brings. Focus should be placed on mitigating risks through various strategies or interventions. However, it is essential to emphasize the importance of advocating for ethical and responsible utilization of AI in education in order to foster an environment of integrity and uphold academic honesty within schools.

Thus, the need for further research and responsible utilization of AI-powered tools is deemed necessary for a balanced approach that maximizes advantages while identifying solutions to minimize the risks involved.

Recommendations

In the light of the findings and conclusions, the following recommendations are offered:

1. Clear Ethical Guidelines and Supervision Mechanisms on the use of AI-powered tools should be established through the:
    a. development of a comprehensive set of ethical guidelines specifically addressing concerns on academic integrity;
    b. creation of a review process for evaluating AI tools considering factors such as their impact on student learning outcomes, potential biases, and alignment with educational objectives;
    c. implementation of training sessions and seminars for educators, staff and students to ensure they understand and adhere to the ethical guidelines and are competent to supervise and monitor AI tool usage.

2. Critical Thinking Skills Development Activities should be integrated by means of:
    a. designing interdisciplinary projects that require students to analyze and solve complex problems using AI-powered tools, encouraging them to critically evaluate information and consider multiple perspectives;
    b. incorporating debate sessions or discussions focusing on the ethical implications of AI technologies, encouraging students to articulate their viewpoints and engage in respectful discourse.

3. Further research is encouraged and recommended to gain thorough understanding of the impact of artificial intelligence, maximize its potential benefits, and mitigate associated risks.

4. Proposed policy framework for the ethical use of AI should be utilized as bases for formulating comprehensive ethical guidelines anchored on the specific needs of the different educational institutions.

Compliance with Ethical Standards

In accordance with the ethical guidelines in conducting research, the researcher strictly followed the highest ethical standards in conducting the study. The manuscript underwent a thorough assessment by the Holy Name University Ethics Review Board to assure full compliance. Prior to conducting the study, the researcher fulfilled the necessary prerequisites, including obtaining a permission letter and endorsement from the Schools Division Superintendent, among other things.

Before the start of the interview, the participants were reminded of the importance of confidentiality and anonymity during the process, emphasizing that their responses would be treated with the utmost confidentiality and would not be attributed to them individually. The interview lasted for about 25-30 minutes. With the consent of the respondents, the said interview was recorded and later was transcribed. Participation in the study was purely voluntary and the participants were not bound to any responsibility. They might withdraw their participation anytime without penalty.

To ensure the participants' anonymity, strict measures were implemented throughout the research process. All collected data were stored securely and confidentially, with access limited to only to the researcher and authorized personnel directly involved in the study. During data analysis, any identifying information such as names or specific personal details were removed or replaced with codes to maintain confidentiality. After the conduct of the study, all data collected were destroyed. Additionally, in any future publications or presentations, participants would be referred to using generic terms or codes to further safeguard their anonymity.

POLICY FRAMEWORK ON THE ETHICAL UTILIZATION OF AI-POWERED TOOLS IN BASIC EDUCATION

I. RATIONALE

The rapid advancement and widespread adoption of artificial intelligence (AI) technology across various sectors of society have changed ways of life, occupations, and educational practices. Over the past few years, there has been a noticeable rise in the utilization of AI-powered tools within the field of education. These tools have demonstrated their ability to provide innovative methods aimed at improving the overall quality of teaching and learning experiences. The utilization of artificial intelligence (AI) tools in the field of education holds great promise, as it encompasses a wide range of applications which have the potential to bring about a transformative impact on education including customized assistance to students and simplifying administrative responsibilities for educators. However, the rapid adoption or use of these technologies

raises ethical concerns due to their adverse impacts like threats to academic integrity or dishonesty.

Considering the increasing prevalence and usage of AI-powered tools in learning institutions, it is necessary to establish a policy guideline that govern its utilization to ensure that all activities conducted in relation to AI is in line with the desired educational objectives and values. These guidelines can establish specific criteria that educators can follow when selecting and utilizing AI tools, with the aim of maximizing their advantages while reducing any associated risks.

The threat to academic integrity is considered one of the most significant potential risks associated with the utilization of AI-powered tools in education. Given the advanced capabilities of artificial intelligence (AI) in generating content and delivering prompt responses, it is important to acknowledge the potential increase in the risk of students resorting to AI tools that could lead to academic dishonesty, such as cheating or plagiarism. Policy guidelines play an important role in addressing the aforementioned risk by providing a framework that outlines clear standards and corresponding consequences for both students and educators with regards to the ethical utilization of AI technology in order to maintain academic integrity and prevent cheating.

Through the establishment and promotion of a culture centered around integrity and accountability, the implementation of policy guidelines can effectively safeguard the integrity of education. These guidelines serve the purpose of ensuring that AI-powered tools are utilized responsibly, with the primary objective of supporting student learning and fostering their overall development.

II. SCOPE

The scope of this policy is to establish a comprehensive framework for the ethical utilization of AI-Powered tools in the field of education, with the primary objective of upholding academic integrity.

This policy shall apply to:

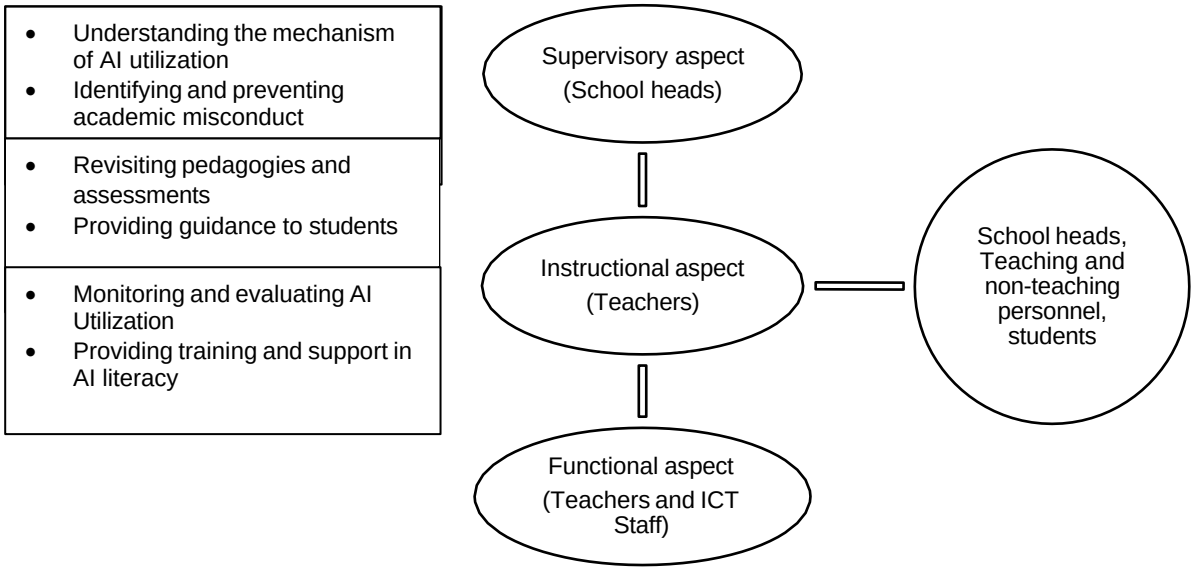
1. School heads and administrators
2. Teaching and non-teaching personnel
3. Learners in public and private elementary and secondary schools

III. POLICY STATEMENT

This policy provides the framework and enabling mechanism for the ethical utilization of AI-powered tools in the basic education department. It is directed towards addressing the issues and concerns and the risks brought about by AI that challenge the integrity of educational process.

IV. POLICY GUIDELINES

A. Conceptual Framework



The conceptual framework outlined covers three major aspects: supervisory, instructional, and functional, each with its own goals and responsibilities aimed at ensuring the ethical utilization of AI-powered tools in education.

Under the supervisory aspect, school heads play an important role in understanding how AI may be appropriately used in education. This entails understanding the fundamental mechanisms of AI technologies, such as their potential, drawbacks, and possible impact on learning and teaching.

School principals are responsible to upholding academic integrity in the schools they supervise. With the emergence of AI technology, they must identify possible areas for academic misconduct caused by AI and adopt measures to prevent it. This may entail creating AI use policies, procedures, and ethical guidelines.

In the instructional aspect, teachers have the main task to revisit their instructional methodologies and assessment methods to effectively use AI in the teaching process. This could include revising pedagogies and developing ways to evaluate AI-generated work and give useful feedback to students. They are also entrusted with the responsibility of ensuring the proper use of AI tools, as well as providing guidance to students throughout the process.

For the functional aspect, teachers and ICT staff are responsible for monitoring and evaluating the effectiveness of AI in education. This includes monitoring student progress and determining the impact of AI on learning outcomes. Teachers and ICT staff must be equipped with the knowledge and skills needed to properly use and guide students with AI tools and technologies. This involves training in AI literacy, learning how

to use AI-powered instructional resources, and troubleshooting any technical challenges that may arise.

B. Guidelines and Procedures

1. The school governing body plays an important role in ensuring the effective and ethical utilization of AI technologies, making sure that they are in line with and promote the educational aims and objectives of the Department of Education.
2. The establishment of a culture of academic integrity within the school community, emphasizing the values of honesty, fairness, and ethical conduct in all academic endeavors must be given priority.
3. School heads should prioritize providing training and support for teachers and staff members to enhance their understanding of AI mechanisms and promote academic integrity in its utilization. This can be achieved through regular workshops and seminars focusing on understanding AI, ethical practices, and plagiarism detection.
4. The school administrators should lead by example, demonstrating ethical leadership in their own actions and decisions and promoting a culture of ethical behavior throughout the school community.
5. School heads should respond promptly and appropriately to any ethical concerns of academic misconduct in AI utilization, conducting thorough investigations and taking corrective actions as necessary to uphold academic integrity and maintain trust within the school community. They must ensure that claims of misconduct are investigated promptly, thoroughly, and impartially, with appropriate safeguards to protect the rights of all parties involved.
6. Teachers should serve as role models of ethical behavior in their own AI-related activities, demonstrating honesty, transparency, and integrity in their teaching, research, and interactions with students. If AI is used in preparing course materials, this should be acknowledged. Strategies for assessing AI-generated work should be developed in order to detect any forms of cheating.
7. ICT staff should support the implementation and enforcement of academic integrity policies and guidelines within the school. They should provide technical guidance and support to teachers and students through training and education sessions in using AI technologies and tools ethically and responsibly.
8. Students should be educated about copyright laws and intellectual property rights, emphasizing the importance of obtaining permission before using or sharing copyrighted materials and encourage originality and creativity while respecting the intellectual contributions of others.
9. A mechanism for monitoring compliance with academic integrity policies and guidelines, including the use of plagiarism detection tools, and investigation of reported violations should be implemented.
10. To uphold academic integrity in schools, it's essential to adhere to the following specific guidelines in using AI-powered tools:
    a. The use of AI for completing assignments, tests, or any evaluations must be approved first by the teacher.
    b. AI tools may be used as an aid in learning and research to gather information, identify relevant sources, and generate ideas for projects and essays, provided

that they are cited appropriately according to established citation styles (e.g., APA, MLA).

c. AI tools may be used to assist with grammar checks, sentence structure, and paraphrasing (with proper citation).

d. Assignments should emphasize critical thinking, problem-solving, and analysis to discourage relying solely on AI. When AI is used for this purpose, teachers have the right to request the original work logs from AI interactions if deemed necessary.

e. Teachers should ensure that AI projects and assignments are evaluated fairly and impartially, based on established criteria and standards. Evaluation criteria should be transparent, communicated in advance, and applied consistently to all students.

f. To check originality of assignments, teachers should employ strategies to detect AI-generated work. (e.g. asking students to discuss or present ideas in class, counter check submitted outputs.)

g. If a plagiarism checker is available, students will be asked to submit similarity index.

h. All forms of academic dishonesty are prohibited including:

- Copying, paraphrasing, or presenting AI-generated contents without proper acknowledgement
- Falsifying data or manipulating research results using AI tools
- Submitting AI-generated work as one's own without proper citation
- Using AI to conduct unauthorized collaboration on individual assignments
- Manipulating AI tools to excel in assessments and examinations
- Using AI to generate fake data or results
- Using of technology in the classroom to gain an unfair advantage over others
- Sharing exam questions or answers with AI-enabled cheating networks for unfair advantage

11. The consequences for violating the AI academic integrity policy should be clearly outlined and enforced to maintain the integrity of the academic institution.

The following are the suggested consequences:

a. Student Violations

First Offense:

- The student receives a formal warning and must attend a session on academic integrity or undergo counselling.
- The student may be required to redo the assignment.

Second Offense:

- The student may receive a failing grade for the subject in which the violation occurred.
- The student could be placed on academic probation for a specified period.

Repeated Offenses:

- The student may face suspension from the school.

- In severe or repeated cases, the student may be expelled from the institution.

b. Faculty and Staff Violations:

- Faculty or staff may receive a formal reprimand and be required to undergo training.
- Continued violations could lead to suspension or demotion.

V. Appeals Process

It is important that the consequences are proportionate to the severity of the violation and that they are consistently applied. The policy should also allow for discretion based on individual circumstances. An appeals process should be in place to ensure that disciplinary procedures are fair, consistent, and conducted in accordance with due process.

VI. Monitoring and Evaluation

The school administration shall oversee the monitoring and evaluation of the implementation of this policy framework to ensure strict compliance. Appropriate monitoring, and evaluation tools shall be developed. This shall include the documentation of good practices as well as issues and challenges in the implementation of the Policy Framework and how they are addressed. Regular reviews will be conducted to assess the effectiveness of these guidelines and adapt them as necessary.

The adherence to this Academic Integrity Policy is essential for maintaining the credibility, reputation, and ethical standards of academic institutions in the age of AI. By steadfastly upholding these principles, it is hoped for that academic integrity will be preserved, fostering a culture characterized by honesty and excellence.

PROCESS EVALUATION FOR THE 8-WEEK READING REMEDIATION: A BASIS FOR ENHANCEMENT

Edwin M. Balderas Jr. [1], Edilhynie M. Jambangan [2]

[1] *Ampon National High School, Davao City, Philippines*
[2] *University of Southeastern Philippines, Davao City, Philippines*

https://doi.org/10.5281/zenodo.13335003

ABSTRACT

This qualitative research study employed phenomenological approach to conduct a process evaluation for the 8-Week Reading Remediation Program in identifying issues and challenges faced by reading teachers and coordinators drawing out proposed improvement to enhance the effectiveness of the program. Based on the findings, the themes derived revealed numerous issues, including insufficient funding, communication gaps, lack of training, limited parental involvement, inadequate monitoring, and implementation deficiencies. As a result, identified themes in the challenges revealed were resource constraints, unfitting materials, scheduling difficulties, teacher-role mismatches, student absenteeism, limited communication, unreliable results, and inconsistent resources. The process evaluation categorized proposed improvement into four components: development focused on securing resources and promoting collaboration, implementation strategies emphasized comprehensive teacher training, schedule adjustments, and elevating reading to a core subject, monitoring initiatives aimed to increase parental involvement and robust program monitoring, and feedback demands consistency to enhance resource quality. The results highlighted the need for substantial program enhancement that provides training on intervention strategies, enhance teachers' skills with localized workshops, develop participatory training programs, implement effective teaching approaches, and examine the effectiveness of localized reading materials.

Keywords: *challenges, enhancement, issues, process evaluation, reading remediation, reading teachers*

INTRODUCTION

Reading is crucial for academic success, as weaknesses in this area hinder learning across disciplines. Remediation of reading inadequacies is vital for reducing educational gaps and enhancing competencies for further education. The prevalence of various reading programs in schools underscores the ongoing significance of reading challenges for learners.

In the global context, Weikert (2018) stressed the importance of reading remediation in addressing learners' unique needs, providing targeted support to prevent long-term academic difficulties and boost confidence. This personalized approach helps close achievement gaps, improve overall academic performance, and align interventions with students' learning styles and preferences to enhance academic success and close learning gaps.

In the Philippines, schools were tasked with fostering proficient readers among students as part of the Department of Education's initiatives like the 3B's Initiative, or "Bawat Bata Bumabasa" (DepEd, 2019). However, the COVID-19 lockdowns have exacerbated the issue of students' reading comprehension nationwide. According to UNICEF, less than 15% of 3 in every 20 learners can read simple texts (de Vera, 2022).

To help struggling readers improve their reading comprehension and prepare for the next grade level in advance of classes during the summer, the Division of Davao City launched the 8- Week Reading Remediation, also known as the 8-Week Reading Curriculum for Struggling Readers (DepEd Davao City, 2021). This program is designed to provide intensive, focused instruction that caters to the individual needs of each student, ensuring they gain the necessary skills to succeed in the upcoming school year.

Despite efforts, the Philippines continues to rank poorly in reading comprehension, placing in the bottom 10 out of 81 countries in the most recent PISA assessment (Servallos, 2023). While there was a slight improvement from being the lowest in 2018 to 76th out of 81 countries in 2022, indicators show a decrease of 4.3 percent in reading comprehension among low-performing students, with no improvement among top-performing students. This ongoing struggle negatively impacts students' academic performance (Southeast Asia Primary Learning Metrics, 2021).

This necessitates further investigation to determine why such issues persist despite the implementation of reading programs. This study also evaluated the effectiveness of the 8-Week Reading Remediation Program by examining the challenges encountered by reading teachers during its implementation. The purpose of this research was to offer recommendations and improvements to enhance the reading program, thereby better addressing the needs of the students.

Research Questions

The research study aimed to explore the issues and challenges received by the reading teachers in the conduct of the 8-week reading remediation program and evaluate its process to seek solutions and improvement. To address the above-cited problem, an answer to the following questions were sought:

1. What are the issues and challenges experienced by the reading teachers in the conduct of the 8-week reading remediation program?
2. What are the proposed improvement of the 8-week reading remediation program?

METHODOLOGY

This qualitative study employed phenomenological approach to explore and understand the lived experiences of people and meanings in natural settings, aiming to provide rich descriptions of complex phenomena, albeit often within a limited scope (Casey, 2000). This method was used in this study to identify the issues and challenges faced by the reading teachers in implementing the 8-Week Reading Remediation Program. The results obtained through in-depth interviews were then used to offer improvements to the program.

Sources of Data

For this study, data were gathered via in-depth interviews with six (6) reading teachers from a designated school cluster within the Division of Davao City. Recognizing the importance of ensuring the accuracy and reliability of these insights, the researcher conducted additional in-depth interviews with three (3) reading coordinators from the same school cluster. This approach was taken to validate and corroborate the teachers' experiences, thereby enhancing the credibility and trustworthiness of the study's findings.

In addition, data saturation was met when the responses of the three (3) reading teachers consistently echoed similar themes, which were then affirmed by the reading coordinators, indicating that a comprehensive understanding had been achieved within the qualitative study

Data Gathering Instrument

The researcher used a semi-structured questionnaire during the interviews that consisted of two parts: the first sought to identify problems that arose during the 8-Week Reading Remediation Program implementation, and the second sought suggestions for improving the program's effectiveness.

The first version of the questionnaire had undergone rigorous validation from experts. After pilot testing and inter-rater reliability assessment with a rating of 3.864, the final

version was created. Then, the questionnaire was utilized during the in-depth interviews to identify areas that required improvement and to solicit ideas on addressing the difficulties associated with the 8 - Week Reading Remediation Program being studied.

Sampling Technique

The participants of this study were selected using purposive sampling from the selected schools in one of the clusters in Davao City. The reading teachers and reading coordinators were also purposively selected using a set of criteria to realistically explain the phenomenon that this study wanted to address.

The selection of reading teachers and coordinators adhered to specific criteria: they had to be reading teachers or reading coordinators within the school, with a minimum of three years teaching experience, proficient in Cebuano, Filipino, and English languages, and had consideration of gender diversity. This specific sampling technique was used to emphasize the specific resemblances among participants and their relevance to the research subject (Etikan *et al.,* 2016).

Procedures of the Study

The data collection of this research employed the following steps;

Seeking Approval of the Research Protocol. The researcher ensured approval and guidance for this study from their advisor, technical panel members, and validators before proceeding with the study.

Seeking permission. The submission of letters was the initial stage. To request approval for the required participation, a letter was sent to the Schools Division Superintendent of Davao City. When the letter was accepted, it was sent to the principals of the chosen schools where the research participants who had been identified were situated.

Securing consent from the participants. Signed consent was also obtained from the study participants. They were informed of the research objectives and provided a clear understanding of the research to be conducted. The participants were also informed of their right to withdraw from the study without consequences.

Setting up the interview. The next step was setting the time and place for interviews. The researcher identified the place and time available and convenient for the participants, which was mutually agreed upon by both parties.

Interview proper. The last stage was the interview proper. The participants were informed of the necessary steps to be taken by the researcher, such as recording their responses on a laptop and taking down notes on their responses. The reading teachers were initially interviewed, followed by interviews with the reading coordinators to validate the collected data. The researcher started using in-depth interviews with participants which involved detailed discussions to explore their perspectives, experiences, and insights on a

particular topic or phenomenon (while maintaining professionalism and respect (Eppich *et al.,* 2019)

Gathering and analysis of the data gathered. The digitally recorded in-depth interviews and focus group discussions were transcribed and analyzed. Additionally, the researcher assured the respondents of the confidentiality of these data.

Data Analysis

In analyzing the interviews, the researcher used Thematic Analysis using the seven steps of Colaizzi's Method to systematically treat the qualitative data collected from participants in the 8-Week Reading Remediation Program.

First, was transcribing the audio-recorded interviews. *Second*, was extracting and numbering of transcriptions according to their significance to the study. *Third,* was formulating a more general statement for each significant statement. *Fourth,* was clustering of the codes to form into themes. *Fifth,* was developing of the exhausted descriptions based on the synthesis of all the theme clusters. *Sixth,* was identifying the fundamental structure through a careful analysis of the description of the phenomenon under study. And *seventh*, was returning to the participants for validation of their answers. The final step had ensured that their intended meaning was conveyed in the fundamental structure of the phenomenon and was given opportunity to provide additional information for the inclusion of the final description of the process of the implementation of the 8-Week Reading Remediation Program.

RESULTS

The Issues and Challenges Experienced by Reading Teachers in the Conduct of the 8- Week Reading Remediation Program

Insufficient funding emerged as a significant issue, while the challenge it posed was the reproduction constraint. The issue on lack of participatory planning between reading teachers led to the challenge on use of inappropriate materials, and scheduling conflict further complicated the planning and execution of the program. Additionally, the issue on the lack of training resulted in lack of teacher participation, while the issue on parental involvement deficiency contributed to higher rates of students' absenteeism, exacerbating the challenge of communication barriers. The limited program monitoring posed a big challenge on the fabrication of results; and data-driven improvements which was hampered by the issue on implementation deficiency and resulted in the last identified challenge which was supplement uniformity.

These themes collectively undermined the program's effectiveness and highlighted the need to enhance the efficacy of reading remediation efforts and achieve meaningful improvements in student literacy.

Insufficient Funding

One of the pressing issues in the implementation of the 8-Week Reading Remediation program was insufficient funding. This referred to the inadequacy of financial resources to cover necessary expenses, such as materials, which hindered the reading program's ability to achieve its literacy objectives. Furthermore, this was seen as a major issue in the aspect of program development. Reading teachers A claimed:

“Yes. One of them is that there were no textbooks. As I said, there were no printed materials. We were not able to print individual reading materials. In our case, we lack enough bond papers and photocopiers.” - Reading teacher A

The same supplies were mentioned by Reading teachers C and F. Teachers utilized printers and bond papers to reproduce materials needed for the reading programs. The statements were as follows:

“We need to consider that some schools like us does not have enough allocations for printers, bond papers and inks. It would break the printers if we print everything.” - Reading teacher C

“Our school faced limited resources in terms of materials, and funding for remediation programs. Uhhm these resources involve the production of reading resources such as photocopy machines, inks and bond papers.”- Reading Teacher C

These statements were affirmed by Reading coordinators A and C:

“The problem with the limitation of printing resources. Ang MOOE man gud is budgeted na ba, di sya pwede na mahurot ra for bond papers tanan or pampalit ug photocopier.” [The problem with the limitation of printing resources.The MOOE was already budgeted and it should not be spent entirely for the purchase of bond papers and photocopiers]. - Reading Coordinator A

“Another is again the financial constraints. Limited financial support was given to us that’s why we were also limited on the implementation since we just used the given budget.” - Reading Coordinator C

Reproduction Constraint

Because of the issue of insufficient funding, the challenge faced by schools in implementing the program was the time constraint in reproducing the reading materials. Thus, the limited supplies and equipment hindered teachers from adequately catering to each student's needs in terms of the learning resources to be used in the remediation.

The shortage of resources, such as modules and books, necessitated the printing of materials within the school premises. This experience was affirmed by Reading Coordinators A and B, as they stated that:

“We couldn’t find time to print and if we could, wala mi photocopier.” [We couldn’t find time to print and if we could, we don’t have photocopier machines. - Reading Coordinator A)

“Furthermore, there was also a constraint in the reproduction of the reading materials would take hours due to the number of pages and the number of students to be provided.” - Reading Coordinator A

The reading teachers D, and C furthered this claim by mentioning:

“Actually, sir sa printing, wala jud nako nabuhat pud sir na maprint tanan para sa mga bata.” [Actually, in printing, I was not able to print enough for all students] - Reading teacher D

“First, ahh the reading materials itself its already a challenge because its only few, we need to print a lot of modules which takes a lot of time and resources.” - Reading teacher D

One major barrier to offering learning materials to every student in need of remediation was thought to be the time required to reproduce the reading materials. The time required for printing had also interfered with teachers' ability to do their main jobs.
Reading teacher B revealed that:

“If the teachers are the one who provide the materials, magtake pa mi ug time namo magprint mi so mabawasan among time for something else like checking of papers, feedbacking sa essay etc.” [If the teachers are the ones who provide the materials, it will take so much time to print and our time for checking papers, feedback and essays and other activities will be lessened.] - Reading teacher B

Lack of Participatory Planning

Another issue experienced by the reading teachers was the lack of participatory planning in the crafting of the program, that hampered its flexibility to cater to different contexts. Participatory planning entailed the essential involvement of reading teachers in program design, prompted by the challenges encountered during implementation. Reading teacher E strongly supported this by stating:

“ahhm ang implementation mismo sa program sir dapat mahan-ay jud siya ilabi na sa ilahang planning gud sir, lisod man gud kung sila sa taas ang magdesign sa program kay di nila masabtan ang situation ni teacher sa field inig implement. Siguro involvement ni reading coor jud sir sa pagplano sa program.” [The implementation of the program itself needs to be organized especially in the planning. It is really difficult when the program

heads design the program, because they can't understand the situation of the teachers in the field during the implementation. I think the reading coordinators should be part of the program planning.] - Reading teacher E

The lack of participatory planning was a common issue among reading teachers in various schools. They emphasized the need for collaborative planning to create contextualized reading materials and flexible schedules, stating:

"Wala man gud nila giklaro ang instructions sir ba na kita na jud ang mangita ug reading passages na fit sa atong context gud sir." [The instruction wasn't clear if it was us who will look for reading passages that would fit our context.] - Reading teacher D

"I guess the heads should think of ways on how to solve this problem in schedules like probably making a separate of different way on how to implement this in our schedule as TVE curriculum, but as you know we only accept and implement what is mandated." - Reading teacher B

These statements underscored the particular difficulties arising from insufficient teacher participation in program planning, notably in the identification of contextualized reading materials. Contextualized teaching and learning in reading comprehension were vital as they facilitated meaningful connections between text and students' lived experiences, thereby enhancing comprehension, retention, and critical analysis skills (Sambayon, et al., 2023).

As affirmed by Reading Coordinator B:

"In terms of strategies, provision of indigenized or localized reading materials provided individually would be the best. However, this could only be achieved if there was a participation of reading teachers and reading coordinators in the crafting of the program." - Reading Coordinator B

Lack of Participatory Planning

Another issue experienced by the reading teachers was the lack of participatory planning in the crafting of the program, that hampered its flexibility to cater to different contexts. Participatory planning entailed the essential involvement of reading teachers in program design, prompted by the challenges encountered during implementation. Reading teacher E strongly supported this by stating:

"ahhm ang implementation mismo sa program sir dapat mahan-ay jud siya ilabi na sa ilahang planning gud sir, lisod man gud kung sila sa taas ang magdesign sa program kay di nila masabtan ang situation ni teacher sa field inig implement. Siguro involvement ni reading coor jud sir sa pagplano sa program." [The implementation of the program itself needs to be organized especially in the planning. It is really difficult when the program heads design the program, because they can't understand the situation of the teachers

in the field during the implementation. I think the reading coordinators should be part of the program planning.] - Reading teacher E

The lack of participatory planning was a common issue among reading teachers in various schools. They emphasized the need for collaborative planning to create contextualized reading materials and flexible schedules, stating:

“Wala man gud nila giklaro ang instructions sir ba na kita na jud ang mangita ug reading passages na fit sa atong context gud sir.” [The instruction wasn’t clear if it was us who will look for reading passages that would fit our context.] - Reading teacher D

“I guess the heads should think of ways on how to solve this problem in schedules like probably making a separate of different way on how to implement this in our schedule as TVE curriculum, but as you know we only accept and implement what is mandated.” - Reading teacher B

These statements underscored the particular difficulties arising from insufficient teacher participation in program planning, notably in the identification of contextualized reading materials. Contextualized teaching and learning in reading comprehension were vital as they facilitated meaningful connections between text and students' lived experiences, thereby enhancing comprehension, retention, and critical analysis skills (Sambayon, et al., 2023).

As affirmed by Reading Coordinator B:

“In terms of strategies, provision of indigenized or localized reading materials provided individually would be the best. However, this could only be achieved if there was a participation of reading teachers and reading coordinators in the crafting of the program.” - Reading Coordinator B

Inappropriate Materials

Due to the lack of participation in the program planning, one of the major challenges that the reading teacher faced was the deficiency of unified materials that fit the needs of the learners. Consequently, it led to confusion among reading teachers as to what materials to use and their appropriateness for each grade level. This situation was witnessed by Reading teachers D and B who pointed that:

“Wala pud tay kanang coming from the division gani sir na unified na materials. We only had the grade 7 baya sir in the Phil IRI. Kahit na ano sir, kanang from 8-12 diba wlay klaro ang materials. Bisan pa ug pre-test sir lisod. Pareho ra ang 8 and 9 and 10 and 11 so the level of the abilities of the learners dili siya ano.” [We also don’t have a unified material coming from the division. We only have the Grade y Phil IRI. We don’t even have materials for Grade 8-12. Even the pre-test is hard because we use that same material for Grades 8,9,10 and 11. The levels are very different.] - Reading teacher D

“The struggle for the implementation in terms of limitation of resources is that we had to print only the materials in the Phil-IRI but in choosing the materials, we were thinking, “tama aba tong pinili namin? Kaya ba to nang bata?” [The struggle for the implementation in terms of limitation of resources is that we had to print only the materials in the Phil-IRI but in choosing the materials, we were thinking, “Have we chosen the appropriate one? Can the student answer this?] - Reading teacher B

Both reading teachers acknowledged the lack of adequate reading materials for remediation, noting that the Phil IRI manual alone was insufficient. Reading Teacher B further elaborated on this issue, stating:

“Sa Phil IRI mao man jud na ang gina-use pero for me, the result is not that reliable. Dili jud siya reliable sir para sa akoa jud. And then, mao mana ang advise sa atoa na kana ang gamiton, so, mao pud jud na akong ginagamit.” [Phil IRI is what we use but for me, the result is really not reliable for me. Then, that is what was advised for us to use, so that was what I was using.] - Reading teacher E

The coordinator’s experiences highlighted the inadequacy of the provided reading materials to be used in the program. As observed by Reading Coordinator B:

“The main resources that we used were coming from the Phil IRI package. However, the package only has until Grade 7 reading materials. When the program was implemented to include the grade 12, there were no materials readily available to be used or as advised, use the grade 7 for the entire year levels.” - Reading Coordinator

Scheduling Conflict

Another challenge brought by the lack of involvement in program planning was the difficulty in scheduling the reading sessions in the congested curricula where time for reading programs competed with many other subjects for attention, leading to a problem known as "subject congestion,” which negatively affected student engagement. The time and resources needed to carry out reading interventions, successfully, were reduced by this dilemma. This case was noted by Reading Teachers B and E:

“The major issue for the implementation of the intervention programs is actually time. Particularly because the big schools and some schools in cluster 9 are specialized STVE curriculum, so we don’t have vacant time, but the other schools have. I’m not sure how many vacant time the other schools have. In our case, we have the standard subjects plus 2 hours of TVE every day. So that’s from grade 7 up to grade 12. Although we have advisers time, it overlaps my other class for other year level.”- Reading teacher B

“Tech Voc school mi sir and we have ten subjects no sa grade 7 to grade ten. 10 subjects kay naa silay entrep and technical drawing and ICF. So, gamay ra pd mi na teachers.. and then ang klase namo is 7:30 to 4:30 loaded kaayo mi sir.. Naay uban gani over kaayo ilang load especially the Tech Voc ahh katong mga nagtrack ug TVE so loaded kaayo mi and ang implementation mismo sa program si kay medyo maglisod jd ko kay di jd ko

makatouch mismo sa mga teachers because mao lage to loaded kaayo sila." [Translation: Since we are under technical vocational curriculum, we have 10 subjects from Grade 7 to Grade 10. Ten subjects because we have entrepreneurship and Technical Drawing and our classes are from 7:30 am to 4:30 pm. We are heavily loaded with subjects. This hinders the implementation of the program because I can't ask for help from other teachers because the other teachers are loaded with subjects] - Reading teacher E

Both reading teachers from a school with a Tech Voc Curriculum highlighted the difficulty of finding time to implement the program due to overloaded subjects and a congested schedule. Reading Teacher D expanded on this, emphasizing the schedule conflicts caused by overlapping activities. Reading Teacher D shared:

"Sa karung face to face sir, medyo overlapping na jud ang activities sir ba. So ang gibuhat namo, wala jud namo to naimplement sir. Because it's hard for us to insert the reading activities because we have 10 subjects baya sir." [Now that we are having face to face, there were overlapping activities. That's why we were not able to implement the program, because it's hard for us to insert the reading activities because we have ten subjects] - Reading teacher D

The time constraints also mentioned by the reading coordinators in the STVE Curricula and the overlapping activities had made it difficult to include in the schedule the Reading Remediation Program. As affirmed by Reading Coordinators A and B:

"Pero kung ako ang pabut-on, cguro need nato pangitaan ug schedule ang remediation diri sa school ilabi na kay ang head sa reading wala siguro kahibalo sa cases nato di sa TechVoc schools." [If I were to decide, we really need to find schedules for remediation especially that our reading head does not know our situation in Tech Voc schools. - Reading Coordinator A

"I think the biggest problem is the schedule. The program was implemented during summer and was later inserted during the school year. However, it was difficult to focus only in reading because teachers have numerous subjects to teach. - Reading Coordinator B

Lack of Training

The insufficient training of reading teachers was a major issue that many reading teachers faced during the program's implementation. The lack of training denoted an absence of systematic instruction or preparation in a particular skill or knowledge area essential to the conduct of reading programs. During implementation, reading coordinators observed this circumstance, as Reading Coordinators A and C disclosed:

"One thing is the training. Most reading teachers lack training in the conduct of the program because only the coordinators were required to join and they were on online format." - Reading Coordinator A

“It would be more effective I think if all teachers are engaged and trained with the necessary skills in implementing the program.” - Reading Coordinator C

These statements accentuated the challenges faced by the reading teachers in the lack of training in the reading program implementation. This resulted in limited training for the teachers under their care. Reading teacher E noted that:

“Kanang ako sir kulang jud ko anang training para maimplement nako tarung ang program. Kanang kulang ko ug dapat jud ko matrain unsay mga pamaagi para mahan-ay despite sa mga challenges ug mga issues na muface nato as reading ano coordinator.” [There must be trainings. I admit that I lack training to implement the program properly. I am really lacking and I need the training on the ways on how to implement the program properly despite the issues and challenges that we face as reading coordinators.] - Reading teacher E

Reading Teacher E emphasized the need for training, admitting that this was a skill she lacked in the program's implementation. Other teachers expanded on this, highlighting that training was essential for establishing a clear direction and vision for the implementation:

“There was no proper training on our end on how to implement or, where to start ahhm what to do with the materials. The materials were provided but we were tasked to choose on our own accord but the problem was again there was no ahh orientation on the timeline on when was the exact date to begin, how to proceed with it, ahmm the papers that should be done with it.” - Reading Teacher B

“Lastly, we need to be properly guided on the implementation through a more comprehensive and teacher training for reading coordinators. I think this will prevent us from being lost in the process.” -Reading Teacher A

Teacher’s Participation

The limited number of reading teachers as program implementers in schools necessitated participation from other teachers to get involved. However, their lack of expertise brought challenges due to their limitations. Undoubtedly, in fostering a holistic approach to literacy development, the involvement of non-language teachers in the reading program gave a huge challenge in enhancing students' overall literacy skills. Consequently, the absence of training among participating teachers uncovered their reluctance to engage, stemming from apprehensions about making mistakes and a lack of preparedness. Reading teachers D and B made a strong claim about this as they revealed:

“Ang teachers pud, one of the science teachers approached me. Willing to help man si Mam. But when she implemented the reading materials na gihatag, na-correct man siya sa bata sa pronunciation. Giduol ko niya “kanang Mam” kanang sorry jud kayo. Gusto jud ko mutabang pero lahi man jud no? Thankful ko kay mam kay willing jud kayo mutabang si mam. Nakatawa lage siya kay ang bata nagcorrect niya. Mao to, wla na siya

nagpadayun." [As for the teachers, one of the Science teachers approached me. She was willing to help, but when she implemented the reading material given to them, she was corrected by the student in pronunciation. She approached me and said, "Ma'am, I am really sorry. I really want to help but this is really different." I am thankful for her willingness to help. She even laughed that a student corrected her. So that was the reason why she didn't continue.] - Reading teacher D,

"Hindi man ako English teacher, hindi man ako Filipino major, pano ko yan gagawin?" Or How am I going to do that when that's not my major or I don't specialize on that?" [I'm not an English teacher, I'm not a Filipino major, how would I do that? Or How am I going to do that when that's not my major or I don't specialize on that?] - Reading teacher B

The hesitation from non-language teachers to become reading teachers reflected their lack of expertise in the field, highlighting the disparity in their skills. Additionally, the heavy workloads and limited number of school personnel further constrained their participation. As Reading Teacher C shared:

"We have limited time and personnel. In our case as a newly established school, we only have few teachers. That means that we handle numerous subjects. I think that was the main reason why most of them are not really into this program because it would be an extra burden for them." - Reading teacher C

Training was very important for the teachers to implement the program effectively. Because of the limited number of language teachers in a school, non-language teachers were asked to assist, consequently causing slip-ups in the implementation, hesitation, and confusion. Furthermore, to meet the needs of the teachers who would carry out the program, it became clear that all needed to receive training. But this problem was exacerbated by time constraints and the lack of initiatives by the personnel in the Department. As confirmed by the Reading Coordinators A, B, and C;

"Ang uban medyo naa pud hesitance na mujoin kay dili lage sila kabalo sa program pud." [Others are hesitant to join because they also don't know how to implement it.] - Reading Coordinator A

"I understand the case of the teachers that they were already bombarded with tasks, ancillaries and deadlines." - Reading Coordinator B

"Because we are all reading teachers. Whatever subject matter you are focused on, we are all considered as reading teachers and we are all capable of teaching our students the skill of reading." - Reading Coordinator C

Parental Involvement Deficiency

One other aspect of the reading program's implementation that was thought to have contributed to the myriads of issues was the deficiency in parental involvement. This referred to the active participation and engagement of parents or guardians in their

children's educational activities, including but not limited to school events, homework assistance, and communication with teachers (Iroegbu and Igweike, 2020). However, the lack of parental participation in the monitoring of students' progress in reading intervention was perceived as a great issue. This condition was also witnessed by Reading Coordinators B and C:

"In terms of monitoring their progress at home, it was really difficult because of the absence of involvement of parent in their child's learning progress." - Reading Coordinator B

"Parental support was also limited during the program. Some parents were not responsive when they were asked to get the reading materials in school." - Reading Coordinator C

The statements of the coordinators confirmed the need for improvement in the participation of parents during the remediation program. It was undeniable that parents should be seen as partners with teachers in fostering student success through collaborative efforts to support academic, social, and emotional development (Lekli and Kaloti, 2015). This difficulty was noted by the reading teachers A, and F as they declared:

"I think the very first thing is the parent's participation. Parents need to monitor their children's progress and guide them in reading at home and refrain them from frequently using their phones." - Reading Teacher A

"Siguro because sa ilang balay jud walay follow up reading from parents and guardians so lisod jud kayo." [Maybe the difficulty was because at home, there was no follow up of their reading tasks from parents and guardians] - Reading teacher E

These statements highlighted the need for more participation from parents in the reading progress of their child. Furthermore, parents had to understand and perform their part in watching over and supporting their children at home (Tomas et al., 2021). This was furthered by Reading Teacher F in her claim that:

"…lack of parental involvement or support from parents to provide guidance to the activities provided to students under remediation." - Reading teacher F

Student's absenteeism

The issue in the lack of parental guidance resulted in a challenge in the student's presence during the program implementation, which affected the consistent participation and had impeded learning outcomes. The persistent or prolonged absence of students from school led to missed opportunities for participating in activities aimed at addressing their reading problems. Dismally, students who should be participating in reading remediation had the highest number of absences during its conduct. The Reading teachers A and D identified this problem and expressed that:

“One of them is the students’ absenteeism, because not all students are present during the conduct of the reading activities. To add, most of the students who are in need of improvement are the ones who are frequently absent.” - Reading teacher A

“But the problem sir is no participation due to absences kay luoy pud sila sir ba. They came from a kanang luoy na family. … xxx … Ang problema wala man pud cooperation sir uy.” [But the problem is no participation due to absences because of their situation at home. They came from a poor family. … xxx … However, I don’t see and cooperation from them.] - Reading teacher D

The reading teachers’ statements emphasized the presence of the students targeted for remediation since reading was a nonstop process of enhancement. In cases where students were sent materials to work on them at home, Reading Teacher E experienced an almost similar dilemma.

“And syempre the long time problem nato which is the absenteeism. Lisod jud sir kay if padad-an ug module di mu-answer. Karun na face-to-face na, di muskwela. Mao jud ni ang struggle sa pagpabasa sa ilaha kay wala man sila.” [and of course, our long-time problem in absenteeism. ..xxx, because when you send them modules, they won’t answer. Now in face-to-face, they won’t go to school. This is the struggle in letting them read and they are not around.] - Reading teacher E

Reading Coordinators A and B confirmed these statements by stating that:

“The primary factor siguro is the absences of the students. Most students jud na kelangan ug remediation sa reading were mostly absent.” [Maybe the primary factor is absenteeism. Most students who are in need of remediation were the ones mostly absent.] - Reading Coordinator A

“However, most were really a problem due to absenteeism. It was really a problem because we needed to provide help for them but the problem is that they were not always in school.” - Reading Coordinator B

Communication Barriers

Monitoring learners' progress in the conduct of the program was seen as a prevalent issue. The barriers to communication referred to the restricted ability to connect and interact due to the absence or unreliability of mobile devices, cellular signals, and Wi-Fi access. In the context of the 8-Week Reading Remediation Program, monitoring the students’ progress with the assistance of the parents enabled teachers to tailor instruction, identify areas needing improvement, and ultimately enhance literacy skills effectively. Nevertheless, reaching these students posed a challenge due to human resource limitations and time constraints. Reading teachers B and D strongly claimed that:

“Majority of the problem was logistic issue. We can’t locate them, we can't reach them and we have difficulty in trying to find them because we don’t have enough people or even time to reach them particularly because teachers already have enough on their plate.” -Reading teacher B

“I tried also sir kanang mag messenger. I let them record their ano activity in reading. Syempre katong musend lng pud ato, those students na mga good students. Sila lang pud ang nagcomply pero katong students na belong to frustration jud very hard for us to reach out the learners.” [I tried to use the messenger app. I let them record their activity in reading. Of course, only those students who are already good were the ones active in submission. Those who belong to the frustration level are very hard to reach out] -Reading teacher D

These statements highlighted the issue in communicating with the learners in terms of sending the materials and tracking their progress. Tracing students' progress was vital as it provided insights into their learning outcomes and developmental journey (Yang and Li, 2018). Reading Coordinator A expanded this by stating:

“We couldn’t reach most of the students and track on their learning progress because most of the students have no cellphones. There were some who had pero [but] mostly walay [no] signal or wifi.” - Reading Teacher A

Reading Coordinators A and C also witnessed this scenario, as they affirmed:

“Another big factor was when this program was conducted during the summer vacation, we couldn’t reach most of the students and track on their learning progress because most of the students have no cellphones. There were some who had pero mostly wala [no] signal or wifi. That’s the biggest factor I think.” -Reading Coordinator A

“The worst case was when we couldn’t reach the learners. I think it was due to the fact that they don’t have cellphones or they lack internet connections at home.” -Reading Coordinator C

Limited Program Monitoring

The lack of effective mechanisms on program monitoring on the learning progress served as a major hurdle in the reading remediation program implementation which contributed to the challenge in the establishment of efficient monitoring schemes. Inadequate monitoring by school administrators or authorities impeded teachers' ability to gauge program’s effectiveness and students' progress. Reading coordinators, as one of the key channels for receiving instructions, even highlighted this situation. According to Reading Coordinator B:

“So far, like what I could notice, the supervising head would only be active during the pretest and post-test. I think the presence of the program heads in terms of constant

updating and monitoring would provide a more effective implementation.” - Reading Coordinator B

Similarly, reading teachers B and E emphasized the importance of constant monitoring in the implementation of the reading remediation program, highlighting the ineffectiveness of executing tasks without proper oversight:

“We’re honestly feeling a bit lost in the process in all honesty. I guess, although I need to understand the part of the heads that it does take time and resources to do the follow up and the meetings but we’re doing this for the students and we want to make a good effort and a good work with a certain standard so I guess if it will cost you that much.” - Reading teacher B

“Implement the program with constant progress monitoring kay useless jud kaayo kung nakaimplement ta ug program pero dili kaayo nato sya inana ka namonitor so dapat mamonitor jud ta kung tama ba ni atong ginabuhat sa atong program.” [We need to implement the program with constant progress monitoring because it is useless to implement a program without monitoring if the tasks in the program were properly executed.] - Reading teacher E

With a similar claim, Reading Teacher D suggested:

“Kana gud sa mga higher level authorities. Magsabot sila ba. Katong nagvisit si EPS diri arun makita pud nila ang sitwasyon and matabangan nila labi na sa schedule namo.” [In the case of the higher-level authorities. They should talk about this. Like the visit of the EPS here in our school to see our situation and to be given help especially in our schedule.] - Reading teacher D

Fabrication of Results

The lack of program monitoring posed a challenge in providing trustworthy assessment outcomes, hence the question of its reliability. The shortage of teachers and the number of tasks that reading teachers were given forced the coordinators to provide reports that were just made made-up. Hence, it was difficult for them to firmly implement the reading remediation program. With this, the Reading Teacher C disclosed:

“Whether we like it or not most of them do this only for the implementation itself, but it's up to us to make-up the results." - Reading teacher C

This full disclosure of reading teachers in the falsification of data highlighted their desperation to accomplish a task, compromising its truthfulness. Though it might seem demoralizing, Reading Teachers E and A furthered:

“…it hard, I only make up results in Filipino and base it on the results in English” -Reading teacher E

“There were cases pa gani na padad-an namo ug reading materials pero wala jud gihapon giansweran. If maansweran man, di pud mi sure if sila ba nag answer.” [There were instances when we sent reading materials to learners, but they were not completed. Even when the materials were returned, we couldn't be certain if the learners themselves had answered them]. -Reading Coordinator A

The Reading Coordinators were well aware of this situation. However, they only grasped the full extent of it due to the heavy workload faced by the reading teachers. This was confirmed by Reading Coordinator B who stated:
“Admittedly, I even understand that sometimes we needed to just create data for compliance because we had no choice due to the numerous deadlines and activities.” - Reading Coordinator B

Implementation Deficiency

Another issue was the implementation deficiency due to ineffective execution of the program. In addition, this deficiency was primarily due to a lack of feedback, hindering the ability to assess progress and make necessary adjustments. The Reading Teachers C and B indicated that:

“One more thing is that the division should provide us feedback at the end of the implementation for us to reflect on the result and for them to know our struggles. You see what happened, instead of addressing our struggles, they even added more grade levels during the following year, that’s why proper feedbacking is really essential.” - Reading teacher C

“ang implementation ngayon is based on reports and if the implementation is done, yes or no, how did you do it but there is no word on dapat ganito ang ginawa mo there is no feedback so, as teachers you know that feedback is important and that is what we are short of from our division coordinator.” [The implementation now is based on reports and if the implementation is done, yes or no?. How did you do it? There were no words like “This is what you should have done”. there was no feedback. As teachers you know that feedback is important and that is what we are short of from our division coordinator.] - Reading teacher B

These statements stressed the need for constant feedback. The reading teachers emphasized this to receive improvement; thus, Reading Teacher E added:

“..and dapat pud siguro after nila magmonitor makabalo pud ta if namao ba ni atong mga trabaho kay arun maimprove gud ta sir and they will know ba our difficulties para ma-address nila. No words man gud ba.” [After the monitoring, we should know if our work was right in order to improve and for them to know our difficulties so they would address them] - Reading teacher E

As highlighted by Reading Teacher E, feedback from the DepEd Division at the end of program implementations was crucial for reflection and addressing challenges. Without

it, the issues persisted, as seen with the perennial matters of additional grade levels and unresolved reading struggles. This called for the necessity of effective feedback mechanisms for reading program improvement. Reading Coordinator A revealed more about the problem by stating that:

“Isa pa, I need pud communication from the program supervisor. So far, wala may feedback sa amoa pud regarding sa unsaon namo pagtabang amoa reading teachers.” [one more thing, I need communication from the program supervisor. So far, there were no feedback to us on how to help our reading teachers.] - Reading Coordinator A

Implementation Uniformity

Due to the issue of implementation deficiency, it resulted to a challenge on supplement inconsistency. Program heads should provide directives to teachers that align with the program objectives, empowering them to adapt strategies based on student needs to maximize the program's impact on literacy development. However, the inconsistency of instructions and directives from program heads to teachers led to confusion, irregularities in implementation, and reduced effectiveness of the reading program. This was true even in the uniformity of materials to be used. Reading coordinator B elaborated:

“We have no standard or uniform reading materials. It was the burden of the teachers to look for them which suits the level of the learners.” - Reading Coordinator B

The participants also highlighted the lack of unified instructions and materials for implementing the reading program, leading to discrepancies in schedules, directives, and resources across different grade levels. Reading Teachers A and D expounded on this by stating that:

“There should also be a unified instruction regarding this implementation, because we didn’t have the same schedule, instruction and reading materials. This is understandable because we have different schedule of classes.” - Reading Teacher A

“Wala pud tay kanang coming from the division gani sir na unified na materials. We only had the grade 7 baya sir in the Phil IRI. Kahit na ano sir, kanang from 8-12 diba wlay klaro ang materials na gamiton.” [We also don’t have unified reading materials to use coming from the Division. We only had Grade 7 coming from the Phil IRI. There were no clear instructions on what to use for the Grade 8-12.] - Reading teacher D

The reading teachers stated the need for unified reading materials to cater to the needs of the learners in every grade level. Similarly, Reading Teacher B demanded for uniformity in templates for monitoring students’ progress, as she stated:

“Although it might seem that it can be done on our own initiative, ahmm, We kind of need the templates for recording the scores, although we can do it by ourselves, but it would be effective if we have a uniform way of monitoring students’ progress.” -Reading teacher B

The Proposed Improvement to Enhance the 8-Week Reading Remediation Program

In the context of the program implementation in the cluster 9, SOP 1 revealed the issues and challenges that the reading teachers experienced during the implementation. It highlighted the need to address these hurdles to enhance the program holistically. These identified issues and challenges formed the basis for proposing solutions, which were categorized under the four components of process evaluation: Development, Implementation, Monitoring, and Feedback. The concentration was to get the proposed solutions based on the identified challenges in SOP 1 as suggested by the participants.

Resource Availability

In the first SOP, the discussion emphasized the challenges faced by reading teachers regarding the accessibility of reading materials in implementing the program. These concerns pertained to the program's development phase, which included issues related to the availability, reproduction, and lack of standardized reading resources. It was emphasized that the availability of diverse reading resources was essential for fostering a successful reading program, as it provided students with access to a wide range of texts catering to their interests and reading levels. In terms of addressing this issue, Reading teachers B and E suggested:

"... the provision of materials. I think we can, kaya man siguro na gumawa na lang kami ng libro na hindi kami yung magprint, like kanang mga procured na books so it would really help if the students had their reading materials not from printed bond paper but hardbound" [...the provision of materials. I think we can make a book that we are not the ones who will print like procured books. It would really help if the students had their reading materials not from printed bond paper but hardbound] - Reading teacher B

"I think the provision of reading materials gud sir. Kanang dili na mi magprint ba or kanang naay books gud na ipanghatag sa school sir. Mas sayon na siya na paagi for us." [I think there should be provision of reading materials like books to be given in school so that we won't need to print. It would be lighter for us.] - Reading Teacher E

The participants saw the importance of physical books being used by students rather than reading materials printed on ordinary bond paper. Students wanted to hold books in their hands, therefore, having printed reading materials available was vital (Elmarash and Mokhtar, 2023). Further, Reading Teacher F highlighted the use of a modern solutions:

"Investing in technology resources such as educational software, digital literacy tools, and online learning platforms, providing a wide range of print and digital materials, including leveled readers, decodable texts, audiobooks, and digital libraries, can support differentiated instruction and engage students with diverse interests and reading abilities." - Reading Teacher F

The statements emphasized the significance of investing in a variety of technology resources, including print and non-print materials, to support differentiated instruction and engage students with diverse reading materials to ignite their interests. Reading coordinators also identified a shortage of materials as a significant challenge, prompting them to suggest solutions to address this issue. Reading Coordinator A and C claimed:

“Isa pa is the materials to be used. Unta naa na para print na lang ta.”[One more thing is the materials to be uses. I hope they are already available for us to just print directly.] - Reading Coordinator A

“Another is creating the materials digital or printed that are more suitable to the learners and not just mere stories, but text materials that students could relate, they may add pictures that are colorful and attractive.” - Reading Coordinator C

Program Collaboration

The challenge of addressing the gap in program planning was highlighted in the initial SOP as it consequently affected the appropriateness of materials to be used and the scheduling conflicts if the implementation. This not only targeted the essential aspect of the program that needed to be addressed but also provided solutions to contextual issues. This was strongly remarked by reading teachers D and E who stated:

“And siguro dapat naay actual planning jud sir na involved ang reading teachers or bisan ang principals sir to identify lang ang mga issues in the program and address them accordingly.” [Maybe there should be actual planning that involves the reading teachers and principals to identify issues in the program and address them accordingly] - Reading teacher D

“…lisod man gud kung sila sa taas ang magdesign sa program, kay di nila masabtan ang situation ni teacher sa field inig implement. Siguro involvement ni reading coor jud sir sa pagplano sa program. [It’s difficult when only the heads are involved in the design of the program because they won’t understand our situation during the implementation in the field. Maybe there should be involvement of the reading coordinator in the planning of the program] - Reading teacher E

Meanwhile, Reading Teacher A stressed the representation of teachers in the actual planning in her statement:

“I think we as teachers or there should be a representative to represent us in the planning of the program. especially that we need a reading material that is fit for the students’ level and that it should be interesting and engaging to students.” -Reading teacher A

The reading teachers emphasized the importance of teacher collaboration in program design, which enhanced understanding of student needs and instructional strategies, leading to personalized interventions for diverse learners. This was attested by the Reading Coordinators A and B who affirmed that:

“Siguro ang hinungdan ani is walay participation sa atong mga reading coordinators sa crafting sa program. This way we can design programs and materials na suited sa atoa learners and sa atoa mga context. [Maybe the cause of the problem is that there was no participation of the reading coordinators in the crafting of the program. This way we can design programs suited for our learners context.] - Reading Coordinator A

“In terms of strategies, provision of indigenized or localized materials provided individually would be the best. However, this could only be achieved if there was a participation of reading teachers and reading coordinators in the crafting of the program.” -Reading Coordinator B

Teachers’ Training

Providing teacher training during the Implementation stage enhanced the competence of reading teachers, reduced errors made by non-language teachers, and boosted their participation in the program. These measures addressed the challenges identified in the initial SOP.

Implementing comprehensive teacher training programs was essential to enhancing the effectiveness of a reading program by equipping educators with the necessary skills and strategies to address diverse learner needs and facilitate optimal student engagement and progress. However, during implementation, this was the main difficulty the coordinators had to deal with. As proposed by Reading Coordinators A and B:

“One thing is the training. Most reading teachers lack training in the conduct of the program because only the coordinators were required to join and they were on online format.” - Reading Coordinator A

“Training is the biggest need that our reading teachers need especially in the implementation of this program. we need to capacitate our reading teachers.” - Reading Coordinator B

The necessity for personnel training depended on their ability to effectively adapt to diverse learner needs during assessment and remediation, as emphasized Reading Teachers C and E:

“Training for the personnel of course that’s they need also enough training to be able to ahh adjust to the different kinds of learners that they are going to assess and that needs remediation.” - Reading Teacher C

“In terms of teacher ahh investing in teacher training... There should be teacher training.” - Reading teacher E

As stated by Reading Teacher C and E, there should be proper training for teachers to cater to the reading needs of learners. Reading Teacher B supported this proposition in her statement:

“The key issue here is on the number one, training, and it should be done in person, because if online which was done before, there are a lot of problems. There will be a lot of confusions and a lot will be hesitant to ask in zoom meetings., So there is a lot of miscommunications that happens when the inquiry is done online so ahmm. Number one issue is, there has to be proper training and it should be done in person.” - Reading teacher B

As proposed by the Reading Coordinators B and D:

“I can only think of utilizing the monthly SLAC sessions. So if we maximize our SLAC and find a way to address the ahmm learning concerns of the students, which is kind of rooted in reading, then we can make it a reading session and maybe do reading a way to do the intervention trainings in between the SLAC session.” - Reading teacher B

“For the SLAC session, make it clear to them what is the program all about, unsay (what) target and goals. The process.” - Reading teacher D

This addressed the common issue of teachers' insufficient training for both language and non-language teacher who implemented the 8-Week Reading Remediation Program. Reading teachers B and A supported this by stating:

“I think this can be done in the school level, like training all reading teachers whether they are language or non-language teachers. We can use the SLAC sessions and invite some speakers” - Reading Coordinator B

“Trainings for reading teachers for the basics of reading to share to other teachers through roll-out sessions or SLAC sessions.” - Reading Coordinator A

Through utilizing School Learning Action Cell sessions, reading teachers could promote a common goal. This enabled them to acknowledge the differences in teaching language and non-language subjects and work together with non-language teachers to teach reading in classrooms (Haukas et al., 2022). Through collaborative inquiry, educators could identify contextual challenges, explore innovative approaches, and implement evidence-based solutions to enhance the quality of education (DO 35, s. 2016).
Although the main differentiation was formed within each topic's framework, the outcome of SLAC sessions might be used to integrate reading through subject integration. Reading Teachers A and B suggested:

“I think the best strategy is integrating reading in all subjects. I really believe reading can be integrate in all subjects. I think students will improve when they make reading habit, for example in mathematics or science. Then the teacher will ask questions regarding the texts read from their lessons. I think this is an effective strategy to enhance the reading of the students. - Reading Teacher A

“Then the outcome of the SLAC would be for teachers to make an effort and integrate in their daily teaching the reading strategies that have been learned in the sessions.” - Reading teacher B

Adjustment of Schedules

The congestion of the curriculum was seen as a huge challenge in the Implementation stage. This was especially because half of the respondents belong to a Strengthened Technical Vocational Education (STVE) Curriculum where 8 subjects were taught within the day.

The development of reading programs necessitated modifications to class scheduling, which provided flexibility and ideal learning environments. It also enabled educators to allocate sufficient time for reading interventions. Therefore, the participants emphasized that the program supervisors should find workable ways to implement the reading intervention and incorporate it into the class schedule for protected time in cases where schools implementing with congested curricula such as the Strengthened Technical Vocational Education (STVE) strand. Reading teachers D and A suggested:

“Sa case sa mga heads sir, sa akoa lang sir. Tech-Voc man mi sir. kabalo man sila na 10 subjects. Siguro kanang mahan-ay unta among schedule. Kanang naa jud time na mapasok namo ang reading.” [In the case of the heads, as for me, since we are Tech-Voc, they know that we have 10 subjects. Maybe they need to arrange the schedules to have time to include reading.] - Reading teacher D

“Pero kung ako ang pabut-on, cguro need nato pangitaan ug schedule ang remediation diri sa school ilabi na kay ang head sa reading wala siguro kahibalo sa cases nato di sa TechVoc schools.” [If I were to decide, we really need to find schedules for remediation especially that our reading head does not know our situation in Tech Voc schools. - Reading Coordinator A

Similarly, Reading Teacher C added:
“Considering that there a lot students that need to be assessed and the limited and overlapping activities, so I guess that it is better to move this program back to the summer vacation. To provide more focus for students in improving their reading.” - Reading teacher C

Furthermore, the implementation of the program during the school year was seen as a struggle as it overlapped with other school activities. Reading Coordinator B also provided a similar solution to the issue:

“As for the scheduling conflict, since we really couldn’t insert this program, I think its better to move it back during summer.” - Reading Coordinator B

Reading as a Subject

To radically address the need to provide a schedule for intervention due to a congested curriculum, the reading teachers also proposed to make reading a standalone subject. This theme advocated for the formal incorporation of reading as a separate subject within educational curricula, emphasizing its critical role in fostering literacy skills and academic success. Reading teachers D and E suggested that:

“Naa untay one hour sir na magabsa lang jud ang bata. Or himuon sya na subject para matutukan jud ang reading kay kung i-insert-insert lang ang English nimo four days, i-insert nimo diha nag-apas pa ko sa competencies. Kay kulang jud.” [There should be an hour that the students will read or make it a subject to have reading as a focus. Because if you only insert it in your four days of classes, it won’t be enough.] - Reading teacher D

“I-consider siya as load para naa jud syay schedule or time na para jud ma ano jud ang reading. Murag ibutang jud sya as subject jud sya. Kay mao man gud na ang pinaka-foundation sa mga students.” [Consider it as a load for it to have a schedule or time to address reading. Maybe make it as a subject, because that is the very foundation of students.] - Reading teacher E

The statements of the reading coordinators proposed to elevate the status of reading by advocating for it to be a stand-alone subject, emphasizing the crucial need for dedicated focus and resources on developing literacy skills. Reading Teacher B added:

“But if if the schedule won’t be moved to the summer, I’d probably go with making it a single load sir or dedicate really a period that student’s main focus is really reading.” - Reading Teacher B
As affirmed by Reading Coordinator A:

“.. or if pwede one load na lang ning reading especially for struggling readers jud.” [If possible, we make reading a teaching load especially for struggling readers] - Reading Coordinator A

Parental Involvement

Parental engagement in reading initiatives was pivotal for children's literacy growth. As outlined in the initial SOP, parental involvement played a vital role in monitoring the program to ensure active participation and attendance of learners during implementation, given that absenteeism posed a significant challenge to the program’s implementation.

Delving deeper, collaborative efforts between parents and English teachers significantly influenced children's reading proficiency and attitudes, underscoring the necessity of actively involving parents in the program. In order to achieve students' reading achievements, the reading teachers recognized this as a significant barrier in the first SOP and emphasized the crucial role that parents should play in cooperating with and

supporting school reading programs. As attested and proposed by Reading Coordinators B and C:
“When the program was conducted during the summer, the parents play a big role in terms of guiding and helping the child at home. However, when the program was conducted in school, the role of the parent was to make sure that the learners were present. “ - Reading Coordinator B

“One more thing is the support coming from parents because they too have a big part in improving their child’s reading abilities in terms of guidance and monitoring of progress.” - Reading Coordinator C

With their firsthand experience, they observed this situation. As suggested by Reading teacher A and F:

“Parents need to monitor their children’s progress and guide them in reading at home and refrain them from frequently using their phones.” -Reading teacher A
“For me, engaging families as partners in the reading remediation process by providing resources, workshops, and support for promoting literacy at home.” -Reading teacher F

As highlighted by the reading teachers, parental involvement in the program directly affects their child's performance and participation, underscoring the necessity for enhanced parental support. This need was reinforced by Reading Teacher D, who expressed:

“Dapat man gud naa jud cooperation ang parents sir kay sila ma magbantay ug mutudlo sa bata sa balay kay we consider them as partners baya.” [There should be cooperation among parents because they will provide guidance and assistance at home and we consider them as partners.] - Reading teacher D

Regular Program Monitoring

The challenge in the absence of regular monitoring, as stated in the first SOP, resulted in questionable assessment results. Thus, this was seen as a vital solution to address reading program issues by providing ongoing assessment and adjustment to ensure the effectiveness of interventions. This was observed by reading teachers A and E who recommended:

“There should also be monitoring in schools or clusters to check the implementation. Though it may be scary to some especially when program heads would come and visit, I think it is very important to provide technical assistance to reading teachers.” -Reading teacher A

“Implement the program with constant progress monitoring kay useless jud kaayo kung nakaimplement ta ug program pero dili kaayo nato sya inana ka namonitor so dapat mamonitor jud ta kung tama ba ni atong ginabuhat sa atong program.” [We need to implement the program with constant progress monitoring because it is useless to

implement a program without monitoring if the tasks in the program were properly executed.] - Reading teacher E

While the reading teachers acknowledged the numerous responsibilities of the program supervisor, they emphasized the essential presence of the supervisor. Reading Teacher B noted:

“I understand he has overlapping responsibilities but ahh it’s a big task to lead reading coordinators of the high School unit particularly because we have non-readers in high school. He should be there with us. So, he has to constantly update us.” - Reading teacher B

The reading teachers articulated a favorable reception to the monitoring initiative by program leaders while also acknowledging the prevailing culture of apprehension among teachers during such engagements. With this, Reading Coordinator B also had a similar proposition:

“I think, I would recommend that there is a need to provide constant monitoring to us coordinators so that we can relay them to our reading teachers.” -Reading Coordinator B

Consistency of Feedback

One of the emphasized challenges encountered in executing the reading program was the presence of feedback from program heads. Participants underscored this as a significant factor in verifying the accuracy of program implementation. Consistent feedback from program heads in the reading program ensures a steady flow of guidance and evaluation for teachers, contributing to ongoing improvement and alignment with program objectives. As stated by reading teachers B and E:

“First is of course the guidance and the follow through and feedbacks from our heads … it could be of great help so feedback from the heads would be a wonderful start.” - Reading teacher B

“…dapat pud siguro after nila magmonitor makabalo pud ta if namao ba ni atong mga trabaho kay arun maimprove gud ta sir and they will know ba our difficulties para ma-address nila. No words man gud ba.” [After monitoring, maybe they should tell us if our implementation was right for us to improve and for them to know our struggles for it to be addressed. There were really no words about it.] - Reading teacher E

Reading Teacher C added:

“One more thing is that the division should provide us feedback at the end of the implementation for us to reflect on the result and for them to know our struggles.” - Reading teacher C

The guidance, follow-through, and feedback from program heads were vital components that could greatly support the implementation of the 8-Week Reading Program, receiving feedback from program heads was an essential starting point for improvement. Reading Coordinator A attested this by stating that:

“Isa pa, I need pud communication from the program supervisor. So far, wala may feedback sa amoa pud regarding sa unsaon namo pagtabang amoa reading teachers sa ilahang mga problems sa pagconduct sa program.” [one more thing, I need communication from the program supervisor. So far, there was no feedback regarding how to help my reading teachers on how to cope with the problems in the program.] - Reading Coordinator A

DISCUSSION

The Issues and Challenges Experienced by Reading Teachers in the Conduct of the 8- Week Reading Remediation Program

Insufficient Funding

The accessibility and utilization of reading materials played a pivotal role in enhancing reading proficiency by affording learners exposure to a breadth of textual contexts, styles, and subject matters. Such exposure fostered the development of critical reading skills, fluency, and comprehension abilities, constituting fundamental components of literacy acquisition and cognitive development (Omuna et al., 2016). Similarly, allocating a budget for reading programs was crucial as it ensured the provision of necessary resources and support systems to foster literacy development and educational equity (Knight et al., 2016).

The fact that there was insufficient funding for reading materials in schools, even with budget allocations from Maintenance and Other Operating Expenses, or MOOE, was another urgent issue. MOOE pertained to a spending category aimed at supporting the operational needs of government agencies, encompassing expenses related to supplies, transportation, travel, utilities such as water and power, and repairs (DepEd Order No. 8, s.2019). However, due to either limited funding or insufficient budget allocation specifically designated for instructional materials, this provision was deficient to cover the costs of printing instructional materials or purchasing books.

Needless to say, to fund or allocate a budget to meet the requirements for reading resources and other basic needs, teachers had to be involved in the process. They get money out of their pockets to placate their instructional needs (Ochada and Gempes, 2018). Other nations, such as Tanzania, experienced a similar scarcity of educational resources, with textbooks, reference books, and other school supplies being unavailable

(Liyomo et al., 2017). Similar to Nigeria, where funding was insufficient, there were also not enough educational resources (Uzuegbu et al., 2013).

Reproduction Constraint

It was highlighted that the teachers faced difficulty in finding time to reproduce reading materials due to their already extensive workload. In the Philippine public school system, educators were allotted a teaching load of six hours, supplemented by an additional two hours designated for pedagogical activities encompassing lesson preparation, assessment, and documentation of academic progress (DepEd Order 5, 2024).

Nevertheless, within the milieu of smaller schools' human resources, educators found themselves burdened by an excess of instructional responsibilities and supplementary tasks, impeding their ability to adequately attend to individual class needs, let alone fulfil their supplementary obligations, thereby impairing logistical challenges such as the production of printed reading materials (Tarraya, 2023).

Research suggested that the acquisition of reading skills was intricately linked to environmental factors, with studies indicating a significant correlation between reading achievement and the presence of literacy materials both at home and in educational settings. For instance, Huang et al., (2019) found a direct association between reading attainment and the accessibility of literacy resources. Therefore, these findings emphasized the critical importance of having abundant literacy materials within a reading remediation program, highlighting the necessity of rich resource environments in both program implementation and educational contexts.

Lack of Participatory Planning

Tailored fit materials were crucial for ensuring the validity of interventions by aligning content with individual learners' needs, thus enhancing comprehension and overall effectiveness (Afflerbach, 2018). Furthermore, personalized reading materials for reading interventions were crucial as they addressed individual learners' specific reading requirements, ensuring content alignment with proficiency levels, interests, and learning styles, thereby enhancing engagement, comprehension, and overall effectiveness of corrective efforts (Frankel and Pearson, 2014). Aside from tailored-fit reading materials, contextualized schedules should also be considered in developing a reading program.

The Strengthened Technical Vocational Education Program (STVEP) which was offered in the cluster under study, emphasized technical and vocational education, augmenting the standard six daily classes in regular high schools' schedules with an additional two hours devoted to specialized subjects (DepEd Order 67, 2012). This caused challenges to the reading coordinators in terms of providing a proper schedule of implementation suited to the tight schedules.

This necessitated the involvement of reading teachers in participatory planning with program heads to determine the effectiveness of the reading program in terms of its execution (Mubita et al., 2017).

Inappropriate Materials

This was not seen as a problem during the first year of intervention because the program was only focused on Grade 7 students (DepEd Davao City, 2021), hence, during the following year, when all grade levels (grades 7-12) were involved, and reading teachers were tasked with selecting reading material from the Phil IRI (Philippine Informal Reading Inventory), confusions had begun.

While the Phil-IRI served as a standardized tool for assessing reading abilities, its scope was limited to Elementary and Grade 7 levels (DepEd-BLR, 2018). Therefore, adaptations or additional assessment tools was necessary for evaluating reading proficiency in higher grade levels or other educational contexts.

The responses also highlighted the lack of standardized materials for reading assessment across grade levels, particularly noting the absence of resources for Grades 8 to 12, leading to challenges in administering a suitable pre-test due to the varying proficiency levels among students.

The significance of an appropriate reading assessment instrument was rooted in its capacity to guarantee the reliability of collected data, permit precise assessment of individuals' reading proficiencies, and guide efficacious instructional interventions (Dougherty Stahl et al., 2019). That was the reason why utilizing a reading assessment designed for Grade 7 across all grade levels raised doubts about its credibility. This situation underscored the necessity for diverse reading approaches and language assessments, as a uniform approach might not be suitable for all learners (Ashton, 2016). Additionally, an increased improvement in reading fluency occurred when reading instruction was customized and tailored to individual needs, especially their lexical level (Forster et al., 2018)

Scheduling Conflict

These were supported by the claim of an overly jammed-packed K-12 curriculum that needed revision (Galvez, 2023). The curriculum offerings of an arts and trade school encompassed various fields such as automotive technology, building construction, cosmetology, drafting, electronics, food trades, garments, machining, PC hardware servicing, plumbing, refrigeration and air-conditioning, and welding. This had caused overlapping responsibilities to reading teachers and other teachers concerned.

Furthermore, the transition to face-to-face learning had resulted in scheduling challenges due to overlapping activities, hindering the implementation of the program. The presence of multiple subjects further complicated the incorporation of reading activities into the curriculum, posing logistical difficulties for the implementers.

Lack of Training

Mentoring teachers was crucial for providing personalized support, guidance, and professional development opportunities to enhance their teaching skills and effectiveness (Vikaraman et al., 2017), especially that even non-language teachers were tasked to handle the 8-Week Reading Remediation Program.

The importance of teacher training programs in fostering effective literacy instruction was exemplified in the study by Ahmed et al., (2021), entitled "The Role of Teacher Training Programs in Optimizing Teacher Motivation and Professional Development Skills" wherein teacher training played a vital role in developing learners' reading skills by bolstering educators' confidence and fostering their professional growth, thereby equipping them with the pedagogical knowledge, instructional strategies, and assessment techniques necessary to effectively cultivate literacy development in their students.

Teacher's Participation

Similar to other professions, teachers needed to maximize their capabilities to deliver high-quality service and excel in their roles. Though it was only a school arrangement to involve non-language teachers participating in the implementation of the program, their roles were seen as vital to the reading program's success. Teacher collaboration strengthened program implementation by leveraging diverse perspectives, pooling resources, and facilitating effective problem-solving, ultimately enhancing student outcomes and fostering a culture of continuous improvement within the educational community (Schleifer, 2017).

Furthermore, remedial reading teachers needed to acquire essential knowledge and skills. The training in language skills was crucial as it would help them understand their teaching role better, making it easier to meet their professional needs effectively (Gatcho and Bautista, 2021).

By engaging educators from diverse subject areas, such as mathematics, science, and social studies, the reading program extended beyond traditional language instruction, fostering a cross-disciplinary approach to literacy education (Fisch and Chenelle, 2018). To provide teachers with the knowledge and techniques they need to create an engaging classroom and prevent mistakes in execution. Thus, thorough training programs on the implementation of the 8-Week Reading Remediation Program were crucial to avoid mistakes

Parental Involvement Deficiency

The responses underscored the crucial role of parental involvement and support in monitoring children's progress, guiding them in reading at home, and providing follow-up to reading activities, thereby addressing the challenge of lack of parental engagement in

student remediation efforts. To address this, parents should be seen as supports in reading intervention, where they provide sustenance to their children's literacy development by offering guidance, feedback, and encouragement during reading activities (Mermelshtine, 2017).

This active involvement also facilitated children's confidence, comprehension, and independence in reading, highlighting the crucial role of parental engagement in fostering literacy skills outside of the classroom. Reading skills could significantly cultivated at home to contribute to students' academic achievement by fostering literacy proficiency and comprehension, crucial for success across various subjects and learning contexts (Castro, et al., 2015).

Student's absenteeism

The acknowledgment by reading coordinators of the challenge posed by student absenteeism underscored the urgency of addressing this issue. It was evident that reducing student absenteeism stood as a crucial factor in improving rates of foundational reading success among students (Anderson, 2022).

Improving the understanding of absenteeism involved identifying its underlying factors. Balkis et al. (2016) found that students' living conditions had a major influence on their attendance and participation in class; the majority of them came from low-income families. Unfortunately, absenteeism affected students' academic performance in addition to impeding their development as readers (Keppens, 2023).

Reading remediation programs were designed to cater to struggling readers. However, without the presence of these learners, the existence and implementation of it would not be successful. In addition, it was important to note that teachers often missed seeing the difficulties of students at home (Buck and Deutsch, 2014) due to different motives; one of the complications was poverty. It was undeniable that poverty was one of the reasons, making it the root cause of absenteeism in schools (Gee, 2018).

Communication Barriers

The difficulty of locating the learners hampered the process of providing them with reading materials and getting their completed answer sheets. Hence, the failure to effectively provide reading interventions resulted in poor performance in other learning areas such as Science and Mathematics as reflected in the recent Program for International Student Assessment (PISA) assessment for the years 2018 and 2019 (Servallos, 2023). In addition, poor reading skills could lead to disengagement, frustration, and a higher likelihood of dropping out of school due to limited academic success and opportunities for advancement, emphasizing the critical role of literacy proficiency in fostering educational persistence and achievement (Mar and Ancho, 2019).

Limited Program Monitoring

The reading coordinators and reading teachers underscored the need for higher-level authorities to be actively involved, suggesting collaborative efforts to address challenges and provide support, particularly in managing schedules and addressing operational constraints, so that the reading remediation program would be successfully implemented. Active program monitoring in schools was imperative for optimizing the effectiveness and efficiency of educational initiatives (Sanchez and Sarmiento, 2020).

Recognizing the pivotal role of monitoring in enhancing teacher performance through accountability and adherence to standards (Bunger et al., 2019), it becomes evident that effective monitoring could ultimately improve students' educational experiences by enhancing teacher effectiveness and engagement.

In the context of the 8-Week Reading Remediation in Cluster 9, identified as a rural area, assessment of program the implementation could have enabled administrators to identify areas for improvement and intervene promptly, ensuring accountability, fostering continuous improvement, and upholding standards of quality, all of which ultimately would contribute to enhancing student learning experiences and academic success.

Fabrication of Results

The risk of falsifying results in reading programs was alarming due to the breach of professional ethics, notably honesty, which was a cornerstone of the code of ethics for professional teachers. Such actions not only undermine the integrity of educational practices but also batter trust among stakeholders, potentially leading to disciplinary actions, tarnished reputations, and a compromised learning environment (Professional Regulation Commission, 2021). The making up of results was due to the pressure given to the coordinators to submit results as mandated.

This dishonesty had a significant impact on the accuracy of the findings. It should be noted that the importance of result reliability relied on its ability to ensure the accuracy, consistency, and validity of findings, thereby enhancing the credibility and trustworthiness of outcomes (Wang et al., 2004). Falsified results in a reading program dented the credibility of educational interventions and misinformed decision-making processes, which led to ineffective resource allocation and hindered student progress (Moran, 2022). Furthermore, falsified data demoralized stakeholders' trust, harming the educational institution's reputation and reducing support for future endeavors.

Implementation Deficiency

The provision of a feedback mechanism was vital as it provided valuable insights, identified areas for improvement, and ensured alignment with overarching goals, ultimately enhancing the effectiveness and efficiency of the initiative (Wisnieski et al., 2020). Moreover, in the absence of feedback, errors were likely to persist, and

deficiencies remained unaddressed, perpetuating a cycle of suboptimal performance and hindering opportunities for improvement (Dawson, et al., 2018).

The Philippine Professional Standards for Supervisors (PPSS) represented a cornerstone in the realm of supervisory practices, particularly concerning the facilitation of reading programs. Within this framework, Strand 3.1 assumed paramount importance, delineating the requisite competencies and responsibilities expected of supervisors tasked with overseeing reading initiatives (DepEd Order 25, 2020). By adhering to the guidelines outlined in Strand 3.1 of the PPSS, supervisors should effectively navigate the complexities inherent in managing reading programs, thereby fostering a conducive environment for literacy development and educational advancement among participants. This scholarly approach underscored the significance of integrating the PPSS within the context of reading program supervision, ensuring adherence to professional standards and best practices aimed at optimizing program outcomes.

Implementation Uniformity

This inconsistency underscored the need for coordinated efforts and clear communication among program supervisors to ensure equitable access to resources and optimize the effectiveness of the reading initiative (Honig and Rainey, 2019). Likewise, the challenge of ensuring a consistent method for recording and reporting results was identified as a significant obstacle requiring constructive feedback for resolution.

The reading teachers also emphasized the reputation of standardized templates for recording scores, suggesting that while teachers could manage independently, uniform monitoring methods would enhance effectiveness in tracking student progress. Furthermore, standardized templates for recording scores were crucial as they ensured consistency, accuracy, and efficiency in tracking student progress, facilitating informed decision-making, and promoting collaboration among stakeholders (Aase, et al., 2020).

Therefore, the directives from program heads to teachers should ensure the alignment with the program objectives and to empower teachers to adapt strategies according to student needs and to maximize the program's impact on literacy development (Bunger, et al., 2019). Incorporating regular feedback mechanisms and fostering a collaborative environment among educators could further enhance the effectiveness of the program. By systematically addressing these areas, schools could foster an environment where teachers feel equipped and supported to navigate the diverse challenges of program implementation.

In conclusion, the data analysis highlighted critical challenges affecting the 8-Week Reading Remediation Program's success. Key issues included insufficient funding, poor communication, and inadequate teacher training, leading to the use of unsuitable materials and misassigned roles. Scheduling difficulties and low parental involvement further exacerbate student absenteeism and inconsistent participation. Additionally, effective program monitoring was hindered by implementation deficiencies and inconsistent supplementary materials. These challenges collectively underscored the

need for targeted interventions to enhance the program and improve student literacy outcomes.

The Proposed Improvement to Enhance the 8-Week Reading Remediation Program

Resource Availability

The participants highlighted the importance of leveraging technology to enhance access to educational content and cater to student needs, aligning with contemporary pedagogical approaches aiming for inclusivity and personalized learning experiences. Consequently, integrating educational technology promoted better reading outcomes compared to traditional ones (Ni et al., 2022). This would enhance accessibility, engagement, and personalized learning experiences and foster literacy development in diverse educational settings.

Giving students access to concrete reading resources could improve their reading habits and interests (Kung, 2017). However, the provision of reading resources to students should not only be limited to print media but also consist of non-print materials.

The significance of tangible reading materials, such as books, over ordinary printed materials was underscored by participants, highlighting students' preference for holding physical books. This insight emphasized the importance of ensuring access to printed reading resources during the 8-Week Reading Remediation Program. By providing students with diverse reading materials, including both print and non-print resources, educators could potentially enhance students' reading habits and interests, contributing to the overall effectiveness of the program in fostering literacy development.

Program Collaboration

The collaboration of program implementers in the program's Development stage was essential given their invaluable expertise and insights necessary for devising tailored and effective strategies that met the diverse needs of students (Afflerbach, 2018). Collaborative efforts enabled teachers to collectively take ownership of program implementation, driving meaningful changes in instructional practices and promoting continuous improvement in reading remediation efforts (Voogt et al., 2018).

Additionally, proper representation of teachers in program planning could address key issues like providing appropriate learning materials for learners. According to Drits-Esser and Stark (2015), working together to share perspectives during program design improved comprehension and produced more effective treatments suited to a range of student requirements. Offering individualized reading materials for interventions implied a customized strategy to meet each student's unique reading demands.

To sum, participatory planning in program design could improve comprehension, engagement, and the efficacy of remedial efforts. Additionally, this underscored the importance of considering learners' proficiency levels, interests, and learning styles when designing the reading intervention, highlighting the potential impact on student outcomes and program efficacy (Frankel and Pearson, 2014).

Teachers' Training

The reading teachers underscored the importance of teacher training in fostering student enthusiasm for reading, enhancing vocabulary, and refining pronunciation skills. Effective training should be done to assess and address existing problems in the implementation and aid the queries stated by the reading teachers. In light of this, the Department of Education should offer more engaging training for teachers.

By giving teachers practical direction, individualized attention, and interactive learning opportunities, in-person teacher training could give reading program teachers and implementers the tools they need to meet the varied learning needs of their students (Heafner, 2022). By doing this, it would be possible to achieve collaborative and participatory planning and develop a cohesive strategy for meeting the needs of the learners.

Training at the school level was a great way to help language and non-language teachers implement the program. The use of SLAC, or School Learning Action Cell, could convene small groups of teachers regularly to reflect on teaching methods, share experiences, and develop strategies for improving learning outcomes.

Interdisciplinary teaching practices were perceived to be one of the most effective ways to enhance literacy skills and knowledge across different learning areas. This was one of the indicators in classroom observations in the year-end assessment of public-school teachers known as the Individual Performance Commitment and Review Form, or IPCRF (DM No. 008, s. 2023).

Using reading to subject integration, teachers could apply content knowledge within and across curriculum teaching areas. Furthermore, integration of reading across all subjects enhanced students' comprehension, critical thinking, and retention, fostering a holistic approach to learning while nurturing a lifelong love for reading (Blintz and Monobe, 2020).

Adjustment of Schedules

This reflected the participant's contemplation regarding the timing of implementing a reading program, expressing uncertainty about integrating it within or after the school year. Clearly, the teachers proposed that school administrators should reorganize schedules to incorporate reading activities effectively within the curriculum, given the demanding nature of their ten-subject structure and limited vacant time slots.

Reading as a Subject

This suggestion highlighted the identification of reading as a core ability and a subject or program that deserved dedicated instructional time. Regular reading increased one's vocabulary, fluency, and comprehension while fostering critical thinking skills and extending one's knowledge across a range of topics. Moreover, the quantity and quality of reading material with varying degrees of complexity was also a better strategy for improving overall reading and literacy, even though the amount of time spent reading was still considered a factor (Zebroff and Kaufman, 2017).

Parental Involvement

According to Iroegbu and Igweike (2020) there was a positive correlation between students' reading comprehension and parental involvement. In the same way that a positive community-school dynamic produced better results for students' well-being and development, increasing parental involvement in their children's reading development would help them succeed more. Thus, parental involvement in school-related activities such as reading would contribute to academic success (Castro et al., 2015).

Regular Program Monitoring

Regular monitoring was essential for enhancing teacher productivity by providing feedback, support, and tailored professional development opportunities to improve instructional practices and maximize student learning outcomes (Qurtubi, 2017). Similarly, progress monitoring among students' reading assessment was essential as it provided insights into individual learning trajectories, informed instructional decision-making, and enabled timely intervention strategies to address any emerging challenges or gaps in reading proficiency (Harper-Young and Harper-Young, 2018).

It might be that teachers experienced a pervasive culture of fear during visits by administrators or program heads since it was characterized by heightened anxiety and apprehension regarding potential evaluation and criticism of their performance (Agalday and Yigit, 2022), this was one way of providing technical assistance to teachers in enhancing program implementation and carrying out their duties and responsibilities (Sangalang, 2019). Nevertheless, the provision of regular program monitoring was crucial to ensuring consistency in providing guidance to the teachers and, in turn, improving the conduct of the reading remediation program.

Consistency of Feedback

This underscored the importance of establishing clear channels of communication between program heads and teacher implementers, highlighting the need for constructive feedback mechanisms throughout the implementation process. Additionally, it emphasized the significance of post-implementation feedback to facilitate reflection,

identify challenges, and inform future improvements in reading program delivery (Opiela, 2018).

The consistency of feedback not only played an important role to teachers, but also a critical move in providing students with timely and targeted support to enhance their reading skills and overall learning experience (Bastola and Hu, 2023).

Conclusions

Based on the aforementioned summary, the study concluded with the following implications:

1. The research underscored the pressing need for targeted interventions to address issues like insufficient resource allocation, lack of appropriate reading materials, and gaps in program design and execution.

2. The challenges hindered the effective delivery of reading remediation services and impeded student progress in literacy development.

3. Educational policymakers and stakeholders must prioritize allocating resources and support mechanisms to rectify these deficiencies, ensuring equitable access to quality reading materials and tailored interventions for students with diverse learning needs.

4. The identified gaps in teacher training, student engagement, and parental involvement emphasized the importance of comprehensive professional development programs and community outreach initiatives to foster a collaborative environment conducive to enhancing reading outcomes.

5. The proposed enhancements for the program, such as promoting teacher collaboration and integrating reading as a core subject, suggested avenues for innovation and improvement in literacy instruction methodologies.

6. Implementing the proposed enhancements could contribute to the overall effectiveness and sustainability of reading remediation efforts, thereby fostering a culture of literacy excellence within the educational system of Davao City.

Recommendations

Drawing from result, recommendations were developed as follows:

1. The School Reading Coordinators may provide training to reading teachers and non-language teachers to promote participation in the implementation of the program. Furthermore, they may design School Learning Action Cells (SLAC) sessions tailored for teacher training in reading, including both language and non-language mentors.

Furthermore, they may participate in professional development workshops and training sessions focused on evidence-based reading instruction and intervention techniques.

2. The Cluster Reading Coordinators may conduct tailored and culturally sensitive training workshops designed to elevate teachers' abilities in crafting personalized reading materials, thereby tackling concerns regarding material suitability and schedule flexibility. These materials would cater to schools with diverse schedules and curriculum offerings, fostering heightened student engagement and participation.

3. The Education Program Supervisor in English may advocate for additional budget allocation to schools to address the need for more photocopiers, printers, and ink supplies, thereby expediting the reproduction of materials. He/she may also develop in-person training programs which include participatory program planning and establish a timeline for regular monitoring of schools or clusters. To ensure consistent feedback and avoid the fabrication of data, the supervisor may utilize online or electronic systems for real-time monitoring, feedback, and reporting of results.

4. The English/Reading Teachers may engage in the training sessions facilitated by the Reading Coordinators to enhance their proficiency in supporting struggling readers. Additionally, they may establish provisions for regular parent conferences and establish communication mechanisms to address the problems in students ‘absenteeism using online, SMS or establishing partnerships with school stakeholders or LGUs to assist in locating students in need of remediation.

5. Future researchers may examine the effectiveness of localized reading materials on reading comprehension and engagement, considering variables like cultural relevance and individual differences, to provide comprehensive insights.

Compliance with Ethical Standards

The following ethical consideration were followed before, during and after the conduct of the study.

Informed Consent. The researcher ensured that prior to conducting the interview, all participants were provided with and signed the informed consent form, detailing the purpose of the study, their rights as participants, and the voluntary nature of their involvement.

Vulnerability of the Research Participant. The researcher assured high confidentiality was also observed since the researcher had personal interaction with the participants through an interview. Aside from the aforementioned, subjects were neither mistreated

or abused, both physically and psychologically, during the interview. Also, the researcher aimed to create and sustain a comfortable environment.

Risks, Benefits and Safety. The researcher posed the risks and benefits of participating in this study. While discussing personal experiences during interviews may cause discomfort or emotional distress, contributing insights could potentially enhance educational programs and practices. Safety measures, including confidentiality and the option to withdraw at any time, will be implemented to mitigate risks. Overall, participation is voluntary, with participant safety being a top priority.

Privacy and Confidentiality. Participants were thoroughly briefed on the study's objectives and reassured that their responses would remain anonymous and confidential. They were informed that their input would be used solely for academic purposes and the specific research at hand, with strict adherence to ethical guidelines to safeguard their privacy.

Archiving the Data. The collected data would be securely archived for a designated period, adhering to ethical guidelines. Stored in password-protected electronic files or locked physical storage, access would be restricted to unauthorized personnel. Participants' confidentiality would be maintained, with identifying information removed. Additionally, the raw data would be deleted three (3) years following the study's publication date.

Acknowledgments

The researcher expresses profound gratitude and genuine appreciation to all individuals who have contributed to the successful completion of this study. Dr. Edilhynie M. Jambangan, his thesis adviser, for her unwavering guidance, invaluable insights, and steadfast support throughout the entirety of this research journey. Her expertise, encouragement, and constructive feedback have been instrumental in shaping the direction and refinement of this thesis. Dr. Ruby A. Serrano, TDAC Chair, for her unwavering support and guidance throughout the success of this paper. Dr. Rogelio D. Rasay III and Dr. Vivien Grace A. Jubahib, TDAC panel members, for their invaluable contributions, perceptive assessments, and helpful feedback, all of which have enhanced the caliber and thoroughness of this thesis, as well as for their dedication, patience, and mentorship.
Dr. Reynante A. Solitario, CESO V, the Davao School Division Superintendent, Public Schools District Supervisors and public-school Principals of Cluster 9, for their continuous assistance in facilitating the execution of the study through the cooperation of their English department heads/supervisors and English teachers. The participants of this study who willingly provided their willing support and extended their priceless time in partaking in the study. His Ampon National High School family, for the unwavering support and collaboration throughout this endeavor. Mr. Lyndon M. Dumael, Mr. Marlon A. Bernados and Ms. Carolyn D. Domingo, his principals, for their understanding, patience, guidance, and unwavering support throughout this undertaking. Cherlene R. Balderas, his beloved wife and Athaliah, his beautiful daughter, from whom he derives inspiration and strength during the trials and challenges encountered on this journey. The

researcher's parents, for the unwavering trust, confidence and support. On top of all, to the Almighty God, the source of all strength, love, mercy and wisdom.

Project BALAY: A NEEDS ASSESSMENT FOR BASIC LITERACY AMONG YOUNG AND ADULT INDIGENOUS PEOPLE

Lorie Jane R. Delos Santos, Dr. Eva V. Briñosa, Enrique T. Magalay, Jr.

College of Teacher Education-English Faculty, Mindoro State University – Bongabong Campus, Labasan, Bongabong, Oriental Mindoro, Philippines

https://doi.org/10.5281/zenodo.13292242

ABSTRACT

Reading and writing skills are crucial for Indigenous communities as they preserve their unique cultures and traditions and aid in recording their language, stories, and historical knowledge. Additionally, they play a vital role in providing a platform for self-expression, allowing Indigenous voices to be heard, and advocating for their rights and interests. With this, the researchers were motivated to conduct the study to determine the basic literacy needs of young and adult Indigenous Peoples (IPs) which would serve as a basis for conducting needed training. This is descriptive research wherein 150 indigenous people from the selected Mangyan communities in Panaytayan, Mansalay, Oriental Mindoro were interviewed using the researchers' checklist to gather the needed data. Frequency and percentage were used in this study. According to the findings, it is evident that the participants have a considerable lack of reading and writing skills. Moreover, the IPs must receive proper training to master the fundamentals of reading and writing competencies. The researchers proposed creating a strategic plan to implement PROJECT BALAY – Basic Literacy for Young and Adult Indigenous people. The primary focus would be honing basic letter recognition skills and targeting reading comprehension and writing skills in older children.

Keywords: *needs assessment, Indigenous people, literacy, reading and writing skills, Panaytayan, Mansalay, Oriental Mindoro, Project BALAY*

INTRODUCTION

Literacy serves as the foundation for education, providing opportunities for personal growth, survival, safety, and stability. The ability to read, write, and comprehend written language is vital for success in all aspects of life - from academics to the workplace to everyday interactions. Developing strong literacy skills allows individuals to effectively communicate, access information, problem-solve, make informed decisions, and engage in community involvement.

Beyond these practical benefits, literacy also plays a crucial role in personal development, shaping individuals' understanding of societal norms and values. As noted by Abad (2020), it fosters human formation and empowers learners to embrace diverse cultures, appreciate literature and the arts, and sharpen critical thinking abilities. Ultimately, literacy opens doors to endless possibilities and enriching experiences.

In the Philippines, there is a deep appreciation for proficient reading and writing skills. As such, the country has wholeheartedly embraced initiatives to improve overall literacy levels, receiving enthusiastic support from both individuals and various organizations (Cristobal, 2015). The government and non-governmental entities alike have joined forces in pursuit of the Education for All (EFA) 2015 plan, which aims to make basic education accessible to all and revolutionize traditional educational practices that have primarily been limited to schools (UNESCO, 2015). This is evident in the enactment of DepEd Order 94 s.2009, which mandates the establishment of EFA division and regional committees to effectively work towards achieving global literacy goals. Likewise, the fourth Sustainable Development Goal of UNESCO places a strong emphasis on the quality of education. It aims to provide inclusive and fair access to education for all individuals, including Indigenous students from Indigenous communities (Rahim, et al. 2022). This not only ensures a high standard of education but also promotes lifelong learning opportunities for these students.

Moreover, the education of Indigenous Peoples (IPs) is held in high regard and receives significant attention in the Philippines. As reported by BusinessMirror (2017), the Department of Education (DepEd) remains committed to its Indigenous Peoples Education (IPEd) Program, actively working towards promoting culturally responsive education and integrating it into the K-12 curriculum. Unfortunately, despite these efforts to promote equality in education, prejudice, and marginalization persist among Indigenous communities (Abad, 2020).

The Indigenous Peoples (IPs) hold generations of collected wisdom within them as they weave a bright tapestry of cultures and customs worldwide. There are more than 17 million indigenous people, representing 110 ethnolinguistic groups in the Philippines (Camaya & Tamayo, 2018; Penaranda, 2019; Eduardo & Gabriel, 2021). Every group embodies a distinctive culture and language passed down from their ancestors (Bastida, Jr. et al, 2022). Bociaga (2020) mentioned that among these groups are the Mangyans, who reside on the island of Mindoro, with an estimated population of 100,000 to 280,000, making up 7.5% to 21% of Mindoro's total population. According to The Library of Congress Research Guide (2023), there are eight identified ethnic groups in the

Philippines, namely: Iraya, Alangan, Tadyawan, Tawbuid, Bangon, Buhid, Hanunuo, and Ratagnon. While commonly known as "Mangyan," only the Hanunuo tribe identifies with this term. It is worth noting as well that these indigenous groups each have their unique languages.

In Panaytayan, Mansalay in Oriental Mindoro resides a vibrant community of the Hanunuo tribes. These indigenous people, known for their rich cultural heritage and deep connection to the natural world, have called this region home for generations. Nevertheless, despite their rich history, there have been reports of illiteracy among the tribe members, attributed to a range of factors. As stated by Bamba, et al. (2021), there remain pockets of illiteracy among indigenous populations, particularly those living in secluded areas where traditional customs and values are still upheld. Unfortunately, these regions are situated far from the public schools, causing students to embark on a long and treacherous journey to receive a formal education. Not only that, but Paul, et al. (2013) also stressed that most of them face many barriers to education, brought on by unfavorable family environments, familial responsibilities including taking care of younger siblings, and poverty.

Given this premise, the researchers are driven to carry out a needs assessment study to gather essential data for the extension program that aims to improve the reading and writing skills of the youth and adults in the chosen Mangyan villages of Panaytayan, Mansalay, Oriental Mindoro. This initiative is crucial in enabling them to achieve economic independence and overall wellness, ultimately shaping them into responsible and thriving members of their community and society.

Research Objectives

The study aimed to determine the writing and reading needs of Indigenous People residing in the selected Mangyan Community in Panaytayan, Mansalay, Oriental Mindoro.

Specifically, the study sought to:

1. determine the knowledge level of the respondents in terms of:
   1.1 reading skills and reading comprehension.; and
   1.2 writing skills.
2. based on the findings of the study what intervention can be proposed?

METHODOLOGY

This study employed a descriptive research method. The Descriptive research method involved determining, describing, and identifying key elements (Ethridge, 2004) to assess the knowledge level of the Mangyan Community in Panaytayan, Mansalay in Oriental Mindoro.

The respondents of the study were the 150 Indigenous people living in the four adapted Mangyan communities in Panaytayan, Mansalay, Oriental Mindoro of the Mindoro State University and LGU Mansalay namely: Calibang; Ether; Tanawan; and

Sinugbuhan. The respondents were taken purposively among the selected communities. The participants were personally approached and provided with a clear explanation of the study's goals. Additionally, before an interview takes place, participants are given a thorough understanding of their rights. They are informed about the purpose of collecting their personal information, how it will be utilized, and who will have access to it. This is all under Republic Act 10173, also known as the Data Privacy Act (DPA), to ensure the protection of the participants. In addition, the respondents are carefully selected based on specific criteria and willingly choose to be a part of the research. Data collection was completed as required.

The main data-gathering tool used for this study to determine the IPs' understanding of basic literacy was a checklist with two major parts. The first part was the survey asked about the reading skills of the respondents while the second part is to assess their writing skills. This checklist was read to the respondents and their responses were analyzed and interpreted.

The results were presented in tabular format using descriptive statistics such as frequency and percentage.

RESULTS

1. Knowledge level of the respondents in terms of:

Table 1. Knowledge level of the respondents in terms of basic reading skills and comprehension

Statements	CAN		CANNOT	
	F	%	F	%
1. Can you recognize the letters of the alphabet? *Makikilala mo ba ang mga titik ng alpabeto?*	48	32%	102	68%
2. Can you read the syllables? *Kaya mo bang basahin ang mga pantig?*	30	20%	120	80%
3. Can you read and understand the words? *Kaya mo bang basahin at unawain ang mga salita?*	18	12%	132	88%
4. Can you read and understand the sentences? *Kaya mo bang basahin at unawain ang mga pangungusap?*	10	7%	140	93%

Table 1 shows that out of 150 participants, only 48 (32%) can identify the letters of the alphabet, and 10 (7%) can comprehend sentences. On the other hand, the majority, 140 (93%), struggle with reading and comprehending sentences, followed by 132 (88%) who struggle with words, 120 (80%) with syllables, and 102 (68%) who are unable to recognize letters of the alphabet.

1.2 Writing skills

Table 2. Knowledge level of the respondents in terms of basic writing skills

	CAN		CANNOT	
WRITING	**F**	**%**	**F**	**%**
1. Can you write the letters of the alphabet? *Kaya mo bang isulat ang mga titik ng alpabeto?*	40	27%	110	73%
2. Can you write syllables? *Marunong ka bang magsulat ng mga pantig?*	34	23%	116	77%
3. Can you write words? *Marunong ka bang magsulat ng mga salita?*	28	19%	122	81%
4. Can you write sentences? *Marunong ka bang magsulat ng mga pangungusap?*	11	7%	139	93%

As indicated in Table 2, 40 participants (27%) could write the letters of the alphabet and only 11 (7%) could write sentences. The data clearly shows that a larger number of participants possess only basic letter-writing skills, rather than more advanced sentence-writing abilities. Conversely, most of them 139 (93%) cannot write sentences, 122 (81%) cannot write words, 116 (77%) cannot write syllables, and 110 (73%) cannot write the letters of the alphabet.

DISCUSSION

1. Knowledge level of the respondents in terms of:

1.1 Reading skills and comprehension

The finding implies that there are some participants with foundational letter recognition skills, but only a small number possess advanced reading comprehension abilities that go beyond basic letter recognition. Thus, the result indicates a potential gap in foundational literacy skills, as there appears to be a low percentage of individuals who can identify letters of the alphabet and an even lower percentage who can comprehend sentences. Shaili (2023) asserts that as children embark on the journey of learning to read and write, one crucial skill they must acquire is letter recognition. This foundational skill allows them to identify letters, enabling them to absorb new vocabulary and improve their reading flow swiftly and effortlessly. This is consistent with Lynch's (2020) claims that developing letter recognition is crucial for mastering reading skills. Without this fundamental ability, children face challenges in understanding letter sounds and identifying words. It becomes increasingly difficult for them to grasp the basics of reading when they are unable to recognize letters and their corresponding sounds.

On the other hand, the majority, 140 (93%), struggle with reading and comprehending sentences, followed by 132 (88%) who struggle with words, 120 (80%)

with syllables, and 102 (68%) who are unable to recognize letters of the alphabet. These findings suggest that this group faces significant challenges in their reading abilities across all levels, including letters, syllables, words, and sentence understanding. While sentences and word recognition appear to be the most troublesome areas overall, lower-level skills like letters and syllables are also problematic for a significant portion of the group. Overall, a significant portion of the group struggles with reading proficiency across all levels. According to, Llego (2022) one of the most common challenges faced by students when it comes to reading is trouble with decoding words, insufficient comprehension abilities, and limited fluency. Further, as cited by Totto and Ramos (2021) from the study of Sünbül et al. (2010) students who struggle with reading fluency and comprehension will have difficulty achieving success.

The data clearly show that the IPs need to learn how to read. Learning to read is crucial for Indigenous empowerment, self-determination, and the preservation of their cultural heritage in a changing world. To address this gap in the reading abilities of the respondents, educational initiatives and support programs could be an immense help in giving them strong foundational reading skills. According to Mesmer (2020), foundational reading skills are crucial for developing advanced literacy. As students improve their word recognition abilities, they are better equipped to understand complex ideas and vocabulary. Furthermore, the ELA/ELD Framework specifically acknowledges the importance of basic skills, or foundational reading skills, as a key teaching and learning principle. This is because having a strong foundation in reading is necessary for becoming independent with written language, as noted by Spycher (2017). This correlates to the ideas of Chamba and Ramirez-Avila (2021), that to become a proficient reader, one must possess five essential elements of reading instruction: phonemic awareness, phonics, word recognition, vocabulary, and comprehension. These elements work together to provide the necessary tools for developing strong reading skills and becoming an accomplished reader (Gunobgunob-Mirasol, 2019). At the same time, Philipps (2022) highlights the critical role that foundational reading skills play in a comprehensive reading program aimed at fostering proficient readers. She stresses the idea that individuals cannot fully comprehend various types of texts without a solid grasp of fundamental reading skills.

Moreover, to enhance the reading skills of IPs, they must develop strong reading comprehension. This fundamental aspect of reading should be approached holistically, as it pertains to all aspects of life (Caraig & Quimbo, 2022). Granda and Ramírez-Avila (2020) similarly define reading comprehension as a vital process that involves absorbing and understanding a text. By making connections between their prior knowledge and new information, readers can effectively comprehend and make meaning of the text.

Further, the findings bring to light a pervasive issue of inadequate education leading to low literacy rates among the participants. The severity of reading difficulties emphasizes the urgent need for intervention within this community. Comprehensive reading remediation initiatives and individualized literacy support may be essential in addressing these deficiencies. Failure to do so may result in persistent struggles that can impact an individual's entire life.

1.2 Writing skills

As indicated in Table 2, 40 participants (27%) could write the letters of the alphabet and only 11 (7%) could write sentences. The data clearly shows that a larger number of participants possess only basic letter-writing skills, rather than more advanced sentence-writing abilities. This demonstrates that letter writing is a fundamental skill that is typically learned earlier than the ability to construct sentences and paragraphs. The comparatively smaller percentage of individuals with sentence writing skills hints at potential deficiencies in the development of advanced writing proficiency.

Conversely, most of them 139 (93%) cannot write sentences, 122 (81%) cannot write words, 116 (77%) cannot write syllables, and 110 (73%) cannot write the letters of the alphabet. This indicates that a considerable percentage of the participants possess insufficient writing skills. This finding aligns with Graham, et al. ‘s (2016) research, examining the writing abilities of elementary students classified as struggling writers. The data revealed strikingly low scores, as only 3% of the students met or surpassed grade-level standards for writing proficiency. They concluded that numerous students are lacking basic writing skills, even at the elementary level. Further, writing is not just a skill, but a powerful tool for communication, self-expression, sharing information, and preserving history (Stone, 2023; Tewari, 2022). Yet, the presence of gaps in the writing proficiency of the respondents can greatly hinder their ability to effectively convey their ideas and connect with others.

The data thus underscores a disconcerting level of illiteracy challenges within the group, emphasizing the pressing need to delve into and resolve these concerns. Targeted interventions are likely necessary to enhance the literacy and writing skills of the respondents. Offering educational opportunities and training in basic writing skills or writing intervention programs to indigenous people is imperative in preserving their cultural heritage and promoting self-governance. Cabigao (2021) concluded in his study that by implementing a writing intervention program, learners can develop their basic writing skills and ultimately bridge any gaps in their learning. Likewise, he said that engaging and well-designed writing activities and exercises play a crucial role in helping learners enhance their fundamental writing skills.

Conclusions

The study revealed significant deficiencies in the reading and writing abilities of the participants. While many were able to identify letters and syllables, a considerable portion struggled with constructing words and sentences in both reading and writing. These findings indicate a pressing need for interventions catering to various skill levels, specifically addressing the gap between basic letter formation and word construction.

Recommendations

From the gathered data, the following recommendations are proposed: prioritizing fundamental skills such as phonemic awareness and phonics to enhance decoding and

word identification, potentially leading to improved reading fluency, comprehension, and writing proficiency

Furthermore, the researchers proposed the creation of a strategic plan to implement *PROJECT - BALAY – Basic Literacy for Young and Adults*. The primary focus would be on honing basic letter recognition skills, while also targeting reading comprehension and writing skills in older children. This strategic plan aims to address the gaps in literacy skills and promote lifelong learning. The implementation process will commence with teaching the fundamentals of identifying, tracing, and comprehending letters of the alphabet, utilizing well-designed instructional materials. As the learners master these fundamental skills, the program will gradually progress to more advanced levels of reading and writing proficiency. The goal is to equip individuals with the ability to effectively comprehend and utilize written language for everyday tasks, such as reading and understanding signs, instructions, and labels.

Additionally, further studies can delve into the underlying factors contributing to the identified challenges, evaluate the efficacy of various intervention techniques, and examine the lasting effects of literacy initiatives on the personal and communal well-being of IPs in Panaytayan Mansalay Oriental Mindoro. These findings highlight the critical need to continuously strive to enhance literacy among IPs in the area.

Compliance with Ethical Standards

Researchers obtained informed consent from respondents, maintained anonymity, protected their well-being, avoided conflict of interest, plagiarism, and bias in interpretation, and used results solely for research purposes.

Acknowledgments

The authors wish to extend their utmost appreciation and gratitude to the following: Dr. Dionisio E. Briñosa, Associate Professor Zussette C. Aplaon, Awati Ti-KAPE Community Development Program members, LGU-Mansalay, and the Indigenous Community respondents from Panaytayan, Mansalay, Oriental Mindoro for contributing much on the realization of this endeavor.

READINESS ON ONLINE DISTANCE LEARNING: ITS IMPACT TO THE MATHEMATICS ACHIEVEMENT OF FIRST-YEAR STUDENTS

Jerwin L. Repollo[1], Jennifer C. Burlado[1] and Romulo G. Doronio[2]

[1]BSEd-Mathematics Department, Agusan del Sur State College of Agriculture and Technology, Bunawan, Agusan del Sur, Philippines
[2]Graduate School, Assumption College of Nabunturan, Davao de Oro, Philippines

https://doi.org/10.5281/zenodo.13270873

ABSTRACT

The study aimed to determine which domain of Readiness on Online Distance Learning can best predict Mathematics Achievement in Mathematics in the Modern World (MMW). A Predictive- correlational method of research was conducted using an adapted and researcher-made questionnaire validated by the experts. The extent of Readiness on Online Distance Learning has the following indicators: technology access, technology skills, study skills, time management skills and motivation adapted from the study of Tuntirojanawong (2013) using the 25-item questions. On the other hand, the researcher's test questionnaire was utilized to determine the mathematics achievements of the first-year students in Mathematics in the Modern World Subject. The statistical tools used were mean, standard deviation, Pearson's product-moment correlation, and multiple regression. It was revealed that the Readiness on Online Distance Learning was evident among first-year students. In addition, the level of mathematics is moderately satisfactory with an average of 2.50 equivalent to the range (80-82%). The null hypothesis was tested at a 0.05 level of significance to test the correlation of variables. Results show that there is a significant very weak positive correlation between the readiness on online distance learning and Mathematics Achievements. Furthermore, Technology Skills is the indicator of Readiness on Online Distance Learning that best predicts the Mathematics Achievement of first-year students.

Keywords: *Readiness on Online Distance Learning, Mathematics Achievement, Predictive-Correlational Design, Philippines*

INTRODUCTION

Mathematics is one of the subjects wherein students are encouraged to master because it is important in the scientific and technological development of countries. However, it was found out that students' mathematics achievement in our country continued to decline, and the participation of the Philippines in Trend in International Mathematics and Science Study (TIMSS) confirmed this bad and shocking condition based on the report posted last 2013. The report added that the achievements of Filipino students in National and International surveys on mathematics lag its neighboring countries like Singapore, South Korea, Hong Kong, Chinese Taipei, and Japan. Thus, even college students from different colleges and universities in the country are not exempted from the problems of low mathematical achievements (Care et.al., 2014).

The global pandemic of COVID-19 has fundamentally affected nearly every area of life, including education. Concerning the issue, student online learning readiness (OLR) is identified as being an important predictor of online learning such as computer skills for social interaction, social communication, and learning outcomes (Kubiatko & Vlckoya, 2010). This is similar to the study of Watkins and Triner (2003) stated that online distance readiness is important for enhancing the delivery, interaction, and facilitation of teaching and learning processes. In addition, the Philippines Commission on Higher Education encouraged higher education institutions (HEIs) to continue with alternative modes of education. As an emergency response to the pandemic, online distance became the modal solution for various academic institutions (Joaquin et al.,2020). Thus, the implementation of any online distance education should be preceded by the measurement of readiness so that the institution can design a suitable and appropriate system to fit learning requirements (Chen & Fu, 2009).

In Agusan del Sur State College of Agriculture and Technology (ASSCAT), Trento Campus, common problems had been observed by the researchers and that was the sudden shift in the education system that leads to a decline in the student's mathematics achievement. The increase in the number of dropouts and students who got an In-process (IP) grade in GE 4 (Mathematics in the Modern World) subject became a problematic issue on the campus since the beginning of the new normal setting. It is the innermost reason that the researcher is interested in conducting a study to determine if there is a significant influence of readiness for online distance learning on the mathematics achievements of first-year students.

The researcher is eager to fill the gap in the literature and seek to establish information on the influence of readiness on online distance learning on the mathematics achievements of first-year students to become a basis for the making of interventions for school administrators and instructors and to be more productive in developing the mathematics achievement of students. Understanding also if readiness for online distance learning among students can relate to the mathematics achievements of the students is a good step in addressing the needs of students to improve their mathematics performance in the time of difficulties of this new normal education.

Research Questions

The main goal of this research was to determine which domain of Readiness on Online Distance Learning can best predict the Mathematics Achievement of first-year students in Agusan del Sur State College of Agriculture and Technology- Trento Satellite Campus.

Specifically, it attended to the following objectives:

1. To describe the level of Student's Readiness on Online Distance Learning when measured according to:
    1.1 Technology Access
    1.2 Technology Skills
    1.3 Study Skills
    1.4 Time Management Skills
    1.5 Motivation
2. To assess the level of Mathematics Achievements among the first-year students of ASSCAT, Trento Campus.
3. To determine the significant relationship between Readiness on Online Distance Learning and Mathematics Achievement among the first-year students of ASSCAT, Trento Satellite Campus.
4. To determine which of the domains of Readiness on Online Distance Learning can best predict the Mathematics Achievement of students in Agusan del Sur State College of Agriculture and Technology- Trento Satellite Campus.

METHODOLOGY

This study used a quantitative research design, specifically the Predictive-correlational technique to investigate which domains of Readiness on Online Distance Learning can best predict the Mathematics Achievements of First Year students. Further, the respondents of the study were first-year students of Agusan Del Sur State College of Agriculture and Technology (ASSCAT), Trento Satellite Campus who enrolled during the first semester, S.Y. 2021-2022. There were 284 total samples from the first-year students of BEED, BSEd-English, BSEd-Math, Applied Math, and AB-English which were obtained using Universal sampling. In addition, data gathering was done through online survey questionnaires through Google Forms after the researchers collected informed consent from the respondents. The procedure is deemed appropriate in the context of the pandemic and following the Inter-Agency Task Force (IATF) for management of emerging infectious disease resolution no. 38 series of 2020.

Moreover, the research instruments of this study consist of two parts. The first part is the independent variable which is Readiness on Online Distance Learning was adapted from the study of Tuntirojanawong (2013). It used a four-point Likert scale (4- Strongly Agree, 3- Agree, 2- Disagree, and 1- Strongly disagree). The second part is the dependent variable which is Mathematics Achievements which was determined using the

researcher's exam in the final term topics under GE 4 (Mathematics in the Modern World) subject. The researcher's exam underwent a pilot testing and item analysis of the selected students. Thus, the expert validators of the test questionnaire played a big part in the success of determining the appropriate validity and reliability of the questionnaires. Using Kuder Richardson Formula (KR20), the test of internal consistency gives a value of 0.75 which means high and acceptable. The study utilized Mean, Pearson's Product Moment Correlation, and regression analysis to measure students' readiness for online distance learning and their mathematics achievements, identifying which domains significantly predict these outcomes.

RESULTS

Table 1. Level of Readiness on Online Distance Learning

Readiness on Online Distance Learning	Mean	Description
Technology Access	2.58	High
Technology Skills	2.94	High
Study Skills	2.73	High
Time Management Skills	2.84	High
Motivation	2.93	High
Overall Mean	**2.80**	**High**

Table 2. Level of Mathematics Achievement in GE 4 (Mathematics in the Modern World)

Grade Scale	Equivalence	Descriptive Rating	Frequency	Percentage
1.00	98-100	Excellent	0	0%
1.25	95-97	Outstanding	0	0%
1.50	92-94	Very Good	4	1%
1.75	89-91	Very Satisfactory	10	4%
2.00	86-88	Good Work	32	11%
2.25	83-85	Satisfactory	41	14%
2.50	80-82	Moderately Satisfactory	60	22%
2.75	77-79	Quit Good Work	28	10%
3.00	75-76	Passing	51	18%
5.00	Below 75	Fail	58	20%
TOTAL			**284**	100%
Total Average		**2.50**	**Moderately Satisfactory**	

Table 3. Significance of the Relationship between Readiness on Online Distance Learning and Mathematics Achievement

	Mathematics Achievement		
Readiness on Online Distance Learning	r-value	p-value	Remarks
Technology Access	0.001	0.993	Not Significant
Technology Skills	0.189	0.001	Significant
Study Skills	0.118	0.047	Significant
Time Management Skills	0.127	0.032	Significant
Motivation	0.134	0.024	Significant
Overall	**0.13**	**0.03**	**Significant**

Table 4. Multiple Regression Analysis in determining which domain of Readiness on Online Distance Learning can best predict the Mathematics Achievement

Readiness on Online Distance Learning	Standardize Coefficient	t-value	p-value	Remarks
Technology Access	0.089	1.514	0.132	Not Significant
Technology Skills	**0.624**	**9.607**	**0.031**	**Significant**
Study Skills	0.111	1.766	0.079	Not Significant
Time Management Skills	0.065	1.102	0.271	Not Significant
Motivation	0.242	3.846	0.048	Significant

DISCUSSION

The level of readiness for online distance learning in terms of the specified indicators obtained an overall mean score of 2.80 which is high. This implies that the readiness for online distance learning among first-year students in ASSCAT, Trento Satellite Campus is evident. The result is similar to the study of Hashim and Osman (2021) revealed that readiness to use e-learning among science students in Tunku Abdul Rahman Putra Form Six College (KiSTARP) is also high. Among the indicators of Student readiness in online learning, Technology Skills got the highest mean of 2.94 which means high. This implies that Technology Skills is evident among the first-year students of ASSCAT, Trento Satellite Campus. Rodrigues et.al (2019) supported the idea that the basic technical skills of devices, together with the Internet, provide students and teachers greater access to online resources for teaching-learning. These skills influence students' academic performance (Lopez & Jose, 2013).

On the other hand, the level of the mathematics achievements of first-year students in the subject of GE 4 (Mathematics in the Modern World) is moderately satisfactory with an average score of 2.50 which is equivalent to the range of 80-82%. The result implied that Students' Mathematics Achievement is moderately Satisfying under the implementation of the new normal Setting in ASSCAT, Trento Satellite Campus. Similar to the findings of Garinganao & Bearneza (2021) where respondents show approaching satisfactory mathematic achievements. Moreover, Peteros et.al., (2020) showed an almost similar result of the approaching moderate performance on the respondents in the study conducted at a Public National High School, in Cebu, Philippines. Additionally, it was also found that the majority of the respondents, 60 students from 284 have a score of 2.50 which is equivalent to 80-82. In addition, 51 students from 284 got a 3.0 which is equivalent to 75-76% indicating that 18% of the respondents with a descriptive rating of passing score. However, 58 students out of 284 got a score of 75 below that is about 8% of the total students. This implies that 8% of the total respondents fail to pass the given final examination.

With regards to the relationship between Readiness for Online Distance Learning and Mathematics Achievement shows a significant very weak positive correlation reflected in Pearson's r which is 0.130, with a p-value of 0.03 showing $p < .05$ level of significance set in this study. This implies that if Readiness on Online Distance Learning among students increases or decreases, their Mathematics Achievement also increases or decrease, although the relationship is very weak. The study of Bovermann, Weidlich, and Bastiaens (2018) in Hagen Germany supports that there was a significant positive correlation found between students' online learning readiness in the dimension of technical competencies. This is like the study of Navani and Ansari (2016) stated that online distance readiness is important for enhancing the delivery, interaction, and facilitation of teaching and learning processes. Moreover, Wang & Guo (2022) highlighted online learning readiness showed a significant positive relationship with online academic performance during COVID-19. These results demonstrated that being ready to study online and having high emotional competence could make adolescents more resilient toward COVID-19 related challenges and help them learn more effectively online.

The Multiple Regression analysis gleaned that among the indicators of Readiness on Online distance learning, Technology Skills, and Motivation significantly predict the Mathematics Achievement of first-year students because of its p-value of 0.031 is lower than the 0.05 level of significance set in this study. Moreover, among the two indicators, Technology Skills is considered as the best predictor because it has the highest standardized coefficient of 0.624. This result supports the claim of Saenz (2015) that the basic technical skills of devices, together with the Internet, provide students and teachers greater access to online resources for teaching-learning. These skills influence students' academic performance (Lopez & Jose, 2013).

Conclusions

Based on the results, it is indicated that the student's readiness on online distance learning is high and evident. Moreover, students' Mathematics Achievements is

moderately satisfactory in the Ge 4 (Mathematics in the Modern World) subject. It was perceived that the high readiness on online distance learning has a significant relationship to the improvement of Mathematics achievement, however weak relationship was observed. In addition, Technology Skill was found to be the best predictor of Readiness on Online Distance Learning helping to improve the Mathematics achievements of the student. Moreover, the teachers must exert extra drive and passion on their teaching specifically in modular learning and Asynchronous flatform since it was found out that most of the students have difficulty in the internet connection at home.

Recommendations

Based on the conclusions drawn, the following recommendations are suggested:

1. ASSCAT, Trento Satellite campus should find any means to develop the readiness on online distance learning of the next incoming first-year students since it was found that high readiness on online distance learning and has a significant relation to good mathematics achievements.

2. Students should be more innovative and trained with new technology that can be useful in their studies to improve their academic performance. They should exert effort in their study because access to the internet at home is not essential to performing at school.

3. Instructors/Teacher shall provide technical assistance to the students to access the learning materials. Also, initial orientation to the students in the platform utilized in the class should be given promptly.

4. School Administrators should plan a learning strategy or method that is appropriate to use in online learning and to plan an alternative way to continue the teaching-learning process despite of pandemic to enhance student learning skills. Hence, readiness on online distance learning has a significant relationship to mathematics achievements, then this variable should be considered by the administrator even after the pandemic crises.
5. Future Researchers should explore other factors that can be related to mathematics achievements since it was found that readiness on online distance learning has very weak relationship to the Mathematics Achievement of the students.

Compliance with Ethical Standards

The study adhered to ethical guidelines set by the ACN Research Committee and followed the steps below in the gathering of data.

Seeking Permission to Conduct the Study. The researchers made a letter to ask permission to the college president of Agusan Del Sur State College of Agriculture and Technology (ASSCAT). After the approval, the researcher wrote another letter

request to inform the Campus Administrator of ASSCAT, Trento Satellite campus about the conduct of the study.

Conduct of the Study. Informed consent forms were secured, providing participants with information about the study's purpose, rights, risks, benefits, safety, privacy, confidentiality protocols, and the researcher's qualifications. Data was collected online using Google Forms, following health protocols set by the Inter-Agency Task Force on Infectious Diseases (IATF). Then, the researchers administered the survey questionnaire and examination for the final term to the first-year students of Agusan Del Sur State College of Agriculture and Technology (ASSCAT), Trento Satellite Campus through the Google form platform. The researcher ensured that respondents were well-oriented as to the mere purpose of the instrument and assured that the data gathered will be treated with the utmost confidentiality.

Acknowledgments

The researchers would like to extend their sincere gratitude and genuine appreciation to the following individuals who helped and contributed to the success and the completion of the study. First and foremost, to the Almighty God, for giving them insight, wisdom, and encouragement to make this study a successful one. Roel P. Villocino, EdD. and the Panel of Examiners, Delfin J. Enargan, MA and Elizabeth D. Dioso, EdD. for sharing their optimum expertise with the researchers and suggestions for improvement. Agusan del Sur State College of Agriculture and Technology, Trento Satellite Campus colleagues, friends, and felatives in several ways supported and encouraged the researchers to complete this undertaking; Most beloved family of the researcher for the unconditional love, incessant moral support, and financial assistance.

ABSTRACT

This study aimed to determine the impacts of 'Read Like Me' to increase the reading comprehension of Grade IV struggling readers in Linawan Integrated School. It was a four-week study; three times a week implementation every Monday, Tuesday and Wednesday. It was an experimental research wherein the researchers implemented 'Read Like Me' to increase the reading comprehension of Grade IV struggling readers in Linawan Integrated School and determine how they influenced the reading comprehension of pupils. The study sample composed of 21 Grade IV struggling readers in Linawan Integrated School who have shown difficulty when it comes to reading comprehension. The research instruments include pre-test, post-test and a daily tracking form to track the participant's words correct per minute (WCPM). Based on the data gathered, the study showed that the mean pretest score of the Grade IV struggling readers before the intervention was 10.71 (SD= 4.43) indicating a lower level of reading comprehension. As a result of the posttest, the pupils got a mean score of 15.62 (SD= 3.98), showed an improvement in their reading comprehension. Moreover, it was revealed that there is a significant difference in the scores of the pupils before and after the 'Read Like Me' intervention. It indicates that repeated reading intervention had a positive impact on the pupil's reading comprehension.

Keywords: *reading, reading comprehension, repeated reading, struggling readers and words correct per minute (WCPM)*

INTRODUCTION

Learning to read was one of the most important skills that children should master. According to WETA Public Broadcasting (2020), reading provided a lot of benefits which include stimulation of the brain, increased imagination and curiosity, decreased stress and anxiety, and children building self-confidence. As stated in DEPED Memorandum No. 173, s. 2019, there was a need to strengthen the reading proficiency of every learner and to nurture the philosophy of reading which a requisite skill in all content areas is. In response to this DepEd Memo, the Division of Dasmariñas released DepEd Memorandum No. 181, s. 2021. It was stated that the Division continuously envisions making every learner a reader even amid this pandemic as indicated in the Division Basic Education Learning Continuity Plan (BE-LCP). According to Romig and Jetton (2023); due to the COVID-19 pandemic, teachers are left to transition from face-to-face instruction to the blended mode of learning (modular and online formats) without much of evidence on how to do so effectively. School closures lead teachers to prepare and implement programs to create new approaches to evidence-based reading intervention. As stated by Lee and Yoon (2017) in their meta-analysis of repeated reading interventions and included peer-reviewed journal articles and dissertations. Repeated reading interventions were more successful with elementary pupils than with secondary pupils, for primary reading levels than with secondary reading levels, with passage preview (modelling) than without, and with non-transfer passages than with transfer passages.

Research Questions

This research focused on the impacts of 'Read Like Me' to increase the reading comprehension of Grade IV struggling readers in Linawan Integrated School.

Specifically, it sought to answers the following questions:

1. What is the mean pre-test score of Grade IV struggling readers in Linawan Integrated School before the 'Read Like Me' intervention?
2. What is the mean post-test score of Grade IV struggling readers in Linawan Integrated School after the 'Read Like Me' intervention?
3. Is there a significant difference between the reading comprehension of Grade IV struggling readers before and after the 'Read Like Me' intervention?

METHODOLOGY

Research Design. This type of research was an experimental research. The vital aspect of experimental research is that researchers control and influence the conditions that determine the events in which they are interested, propose an intervention, and measure the difference that it makes. So, in this study, the researchers implemented 'Read Like Me' to increase the reading comprehension of Grade IV struggling readers in Linawan Integrated School and determine how they influenced the reading comprehension of

pupils. *Subject and Respondents of the Study.* The sample of the population of this study stood at 21 Grade IV struggling readers; giving a total of 21 respondents. *Sampling Techniques.* The method of purposive sampling was used in the study. The participants of this study were the Grade IV pupils in Linawan Integrated School who have shown difficulty when it comes to reading comprehension based on Phil-IRI curriculum-based screening indicating below-grade level reading comprehension. *Research Instrumentation.* The researchers obtained individual reading passages from the educational website of DIBELS-ORF or Dynamic Indicators of Basic Early Literacy Skills for the Grade IV Reading Fluency passages (University of Oregon, Center on Teaching and Learning, 2018). Additionally, researchers developed data collection documents such as a pre-test, post-test, and a daily tracking form to track the participant's words correct per minute (WCPM) wherein was validated by several experts.

The WCPM Daily Tracking form was used to record each session date, a number of words read correctly, the number of words in a text, the percentage range, and the reading level of participants. Additionally, a 20-multiple comprehension questions were made for pre-test and post-test. It was based on the reading passages from DIBELS-ORF used during the intervention process. Furthermore, the pupils were required to read each question and encircle the letter of the best answer. There were four (4) choices in each item wherein the pupils must choose the best answer for each question. The percentage of correct words circled by each pupil on the multiple-choice questions was recorded as a measure of comprehension. Also, a pilot testing of those research instruments happened. *Statistical Treatment of the Data.* Descriptive statistics such as mean were used in analyzing the data generated from the pre-test and post-test of the intervention. Furthermore, the Dependent T-Test or Paired Sample T-Test was used to determine if there is a significant difference in the reading performance of Grade IV struggling readers before and after the 'Read Like Me' intervention.

RESULTS

Table 1. The pretest results of Grade IV struggling readers in Linawan Integrated School before the 'Read Like Me' intervention

	N	Minimum	Maximum	Mean	Std. Deviation
Pre-test Scores	21	3	18	10.71	4.429
Valid N (listwise)	21				

Table 2. The posttest results of Grade IV struggling readers in Linawan Integrated School after the 'Read Like Me' intervention

	N	Minimum	Maximum	Mean	Std. Deviation
Post-test Scores	21	6	20	15.62	3.981
Valid N (listwise)	21				

Table 3. Paired Sample T-Test result

	Paired Differences					t	df	Sig. (2-tailed)
	Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference Lower	Upper			
Pair 1 Post-test Scores Pre-test Scores	4.905	4.312	.941	2.942	6.867	5.213	20	.000

DISCUSSION

As presented in Table 1, it showed that the highest score got by the Grade IV pupils was 18 and the lowest score was 3 (M= 10.71; SD= 4.43) before the 'Read Like Me' intervention happened. This indicates that the pupils have a lower level of reading comprehension. Most pupils scored in the *Frustration* oral reading level wherein the pupils have difficulty in understanding their reading materials. This supported the study of Kudan, H. & Kyol, H. (2018) which states that errors in reading affect the level of comprehension negatively, as they result in pupils losing their understanding.

As revealed in Table 2, it showed that the highest score got by the Grade IV pupils was 20 and the lowest score was 6 (M= 15.62; SD= 3.98). This indicates that there is an increase in the mean score of Grade IV pupils during the post-test. It showed an improvement in their reading comprehension. Thus, the pupils scored in the *Instructional* and *Independent* level of comprehension wherein the pupils can read their own or with the assistance of the teacher. This emphasizes the study of Papadima-Sophocleous and Charalambous (2014) which demonstrates improved results through the assistance of repeated reading to the pupils who are more inclined to read word for word.

As seen in Table 3, a paired sample t-test showed that the performance of students increased after the intervention had been made. There was a significant difference in the scores between the reading comprehension test before (M=10.71, SD = 4.43) and after (M = 15.62, SD = 3.98), t (20) = 5.213, p = 0.000 the intervention. The differences therefore indicate that the Repeated Reading strategy has a positive impact in raising pupils' comprehension levels. The current finding was similar to Dotson-Shupe's (2017) repeated reading study which showed that the repeated reading strategy was successful in increasing the pupils' comprehension abilities and the participants improved their accuracy when reading orally. In addition, Ates (2017) showed that RR develops pupils' metacognitive reading strategies. There is a significant improvement in reading rate and comprehension of the study's experimental group.

Conclusions

Considering the findings of the study, the following conclusions were drawn:
1. The pretest performance of the Grade IV struggling readers were low wherein they fall under the *frustration* oral reading level.
2. As evidenced, the posttest performance of Grade IV struggling readers after the 'Read Like Me' intervention was higher than their pretest performance. This implied that repeated reading intervention uplifted the performance of the pupils and the shift towards higher reading levels.
3. There is an indication that repeated reading improves the reading comprehension of Grade IV struggling readers.

Recommendations

Based on the findings of the study and the conclusions, the following are recommended:
1. Repeated reading strategy may be used to increase the speed, accuracy and reading comprehension of pupils.
2. The use of error correction, feedback, and progress monitoring influenced the motivation to increase the fluency skills of students. The pupils gained confidence with fluency with each passing week. A higher level of pupil achievement in reading can be achieved by combining the essential components of repeated reading.
3. By lengthening the study's timeline, the research could result in more accurate averages and the effectiveness of repeated reading.
4. As the study had its limits, there were some developments in research needed for the accuracy of this study. This study could be developed by future researchers by conducting the same studies on using the repeated reading intervention focusing on the pupil's reading comprehension.

Compliance with Ethical Standards

All the participants were informed about the details of the study. Participation in the study was voluntary, and the pupils could withdraw from the study without any consequences. Furthermore, only the researchers have access to the research data. The researchers respect and protect the confidentiality and privacy of the data and information that will be gathered as required by the Data Privacy Act of 2012 (R.A. 1017).

Acknowledgments

This research paper would not have been possible without the exceptional guidance and support of Prof. Dr. Mario A. Fetalver Jr. His knowledge, enthusiasm and attention to detail have been inspirational in shaping the trajectory of this project. In addition, our sincere gratitude to the generous support of Linawan Integrated School which enabled us to carry out this study. We want to extend our gratitude for their support with data collection and management. To conclude, we would like to thank God and our family. It

would would have been impossible to finish our study without their unwavering support over the past years.

REVISITING GRAMMAR-TRANSLATION AND INDEPENDENT LEARNING METHODS IN TEACHING ENGLISH IN THE NEW NORMAL EDUCATION

Reynante M. Enriquez[1] & Dr. Eva V. Brinosa[2]

[1]Deparment of Education - San Roque National High School, Bulalacao, Oriental Mindoro, Philippines
[2]College of Teacher Education - Mindoro State University Bongabong Campus Bongabong, Oriental Mindoro, Philippines

https://doi.org/10.5281/zenodo.13358451

ABSTRACT

The teachers need to continually determine and decide on the kind of pedagogy that they are using to meet the needs of the learners. Educational pursuit amid and after pandemic should not only be a government's concern, rather, this also includes educators, particularly to those who actively engage in teaching. Thus, Revisiting Grammar Translation and Independent Learning Methods in Teaching Junior High School English for the 21st Century Education in the New Normal was conducted to come up with common strategies supportive of the pedagogy that suit to the current educational setting. Respondents of the study were the randomly selected 266 Junior High School Learners. Self-made questionnaires were used to gather necessary data to address the research problems consisting of four major parts revisiting the description of Grammar Translation, strategies in learning JHS English, the extent of the student's belief in the importance of the use of Independent Learning strategies, issues and challenges in the utilization of said methods, and common strategies that are supportive of the pedagogy suited in the new normal of the 21st-century education. As a result of revisiting, ten teaching strategies were confirmed to be supportive of the pedagogy that suit the new normal of 21st-century education. As an output, the Matrix of Strategies in Teaching English in the New Normal (MSTENN) was proposed for utilization.

Keywords: *21st Century Education, Grammar-Translation, Independent Learning, New Normal Pedagogy, Strategies in Teaching Junior High School English*

INTRODUCTION

The New Normal Education brings global challenges to the people, specifically the academe sectors had a sudden educational makeshift. Educational institutions find means and ways to address the issues by providing exhausting possible resources so that the quality of education is not compromised. Because of these, the teaching-learning processes also encountered problems that burden the teachers and the students. UNESCO (2017), stated that learning must continue because education cannot wait. After all, the world does not want to lose human capital. Likewise, teachers must recognize their roles in the process of adjustments. Department of Education (2020), said that they need to work harder and more creatively to carry out the objectives set of education.

The teaching in the new normal differs due to some practices which were no longer applicable and relevant at present; thus, there was a shift in the pedagogy to make the necessary adjustments. Cooper,(2022) confirmed that teachers are progressively advancing their teaching strategies in line with evidence-based practices and their student's learning needs. They need to be considerate of students' points of view to realize truly learner-centered instruction that utilizes teaching methods and strategies based on students' positive reception and acceptance. Hence, one of the teachers most relevant responses to the instruction challenges in the present is to initiate revisiting various teaching methods and strategies. It would help them adapt to the current instructional milieu and to be able to serve education in the most viable possible way.

While teachers are busy preparing their modules for Modular Distance Learning in a print medium, they continually experience a dilemma with some aspects of teaching. Most of these teachers' present apprehensions are regarding those practices that are hard to reconcile with those observances in instruction during the face-to-face classes when there were no threats of COVID-19 yet. Consequently, the bright side that the COVID-19 crisis presented points to the opportunity for the education sectors and partakers to come together, forge connections and share what works Obana,(2020). With the increasing need to make the Modular Distance Learning-Print (MDL-P) a more adequate and effective tool in teaching, there should also be an accumulating need to adjust teaching methodologies for teachers to employ relevant strategies that support learning in the current situation. Thus, Revisiting Grammar-Translation Method and Independent Learning in Teaching English in the New Normal education became an ever-relevant factor to account for with the usual strategies supportive of the pedagogy that suits the current educational setting.

With the realities and demands of the new normal, students are the direct targets affected by the abrupt changes and challenges. They often encountered difficulties understanding the modules written in English, accomplishing heavily loaded tasks provided in their self-learning modules, doing seemingly child-centered activities, and learning vocabulary and literature, as well as grammar and composition. These challenges emerged as the outcome of the shift in the focus of DepEd learning competencies prescribed by the newly adopted Curriculum Guide setting as Most Essential Learning Competencies (MELCs).

The initial implementation of the Basic Education-Learning Continuity Plan of the DepEd, considered successful as marked by the carrying out of its objectives in the School Year 2020-2021, there is an emerging need for continual adjustments to bring out the quality

of education being aspired for by the country. Parents and students pleaded for instruction more fitting for the learners amid the specific situations that prohibited the face-to-face delivery of teaching-learning processes. Learners particularly longed for Self-Learning Modules (SLMs) that are more considerate of their difficult learning situations.

In addition, most of the parents admitted their limitations to make the teaching facilitation roles with the right and expected outputs that would be the top concern of the teachers. Thus, this study which focuses on review of the use of Grammar Translation and Independent Learning Methods was conducted. It sought to determine whether application of embedded strategies would help carry out lessons in English. It also elaborated the two methods in teaching: to identify the extent of the importance of the strategies utilization, review common issues and concerns among revisited strategies, and name the common strategies supportive of the pedagogy that suits the new normal in teaching. As an output, a matrix of the styles found by learners supportive of the pedagogy that befit the new normal education emerged.

The study was conducted among the students to 824 learners that are 60% of this population belongs to the indigenous, while the remaining percent belongs to non-native lowland learners. The school implemented Modular Distance Learning-Print (MDLP) wherein learners are Home-schooled through the provided Self-Learning Modules (SLMs) with their parents, who are most of them, if not illiterate, have limited educational backgrounds.

Research Questions

This study aimed to revisit the Grammar Translation and Independent Learning Methods in Teaching Junior High School English, analyze issues and concerns on common strategies revisited, and identify which strategies under these methods are supportive of pedagogy that suits the new normal learning.

Specifically, this study sought answers to the following questions:

1. How are the common strategies on the Grammar-Translation Method described interms of:
    - 1.1 teaching vocabulary through wordlists and translation;
    - 1.2 reading literary passage with reading comprehension questions;
    - 1.3 practicing translation of texts to and from Mother Tongue;
    - 1.4 elaborating presentation of grammar rules;
    - 1.5 memorizing grammar rules and vocabulary;
    - 1.6 including antonyms and synonyms, definitions, and other vocabulary exercises based on words in reading texts; and
    - 1.7 providing composition exercises based on topics from reading texts?
2. To what extent Independent Learning Method is used in terms of:
    - 2.1 reflection;
    - 2.2 feedback; and
    - 2.3 decision?

3. What issues and concerns are experienced by learners regarding the use of Grammar Translation and Independent Learning methods in teaching Junior High School English?

4. Based on learners' perspective, which among the strategies of Grammar-Translation and Independent Learning Methods are considered supportive of the pedagogy that suits the new normal education?

5. Based on the results of the study, what teaching strategies be proposed.

METHODOLOGY

This study employed a descriptive research design. Mertler (2016),defined a descriptive research study aims to describe and interpret the status of individuals, settings, conditions, or events. It used a survey rather than an observation technique. The respondents were 266 Junior High School students who were chosen using the simple random sampling technique, and a self-made survey questionnaire was also used to gather necessary data. Gay et.al, (2012), described survey research primarily with the involvement of the collection of data to test premises or to answer questions about people's opinions regarding topics or issues and concerns. To establish reliability and validity, the instrument underwent the necessary procedures including test-retest validation with the aid of the t-test observing the .05 margin of error. Moreover, necessary communications, consents, and permits were observed and secured as deemed needed being an integral part of the processes of inquiry. The data gathered were tabulated, analyzed, and interpreted.

RESULTS

1. Describing common strategies on Grammar Translation Method (GTM)

Table 1.1 Teaching vocabulary through wordlist and translation

Items	Weighted Mean	Rank	Description
1. Presents list of words to learn from the reading text or selection	3.14	2	Useful
2. Provides translation of words from English to Filipino	3.17	1	Useful
3. Indicates translation of words from Filipino to English	3.11	6.5	Useful

4. Posts list of words to learn for every lesson being presented	3.11	6.5	Useful
5. Asks to translate words to the known language	3.12	4	Useful
6. Instructs to keep a list of words and their meaning	3.11	6.5	Useful
7. Requires a notebook intended for vocabulary learning/exercises	3.11	6.5	Useful
8. Prepares vocabulary listing for every lesson being studied	3.13	3	Useful
Overall mean	**3.13**	**Useful**	**Useful**

Table 1.1 showed that in opposition to the usual practice and principles on the instruction of the Second Language (L2), wherein the target language is taught solidly in the instruction process, learners are convinced that it is the other way round. The overall mean of 3.13 indicates that teaching vocabulary through wordlist and translation as part of Grammar Translation's strategies in Teaching English is generally functional, and noted that wordlist and translation are complementary ways of learning vocabulary.

Table 1.2 Description of Reading Literary Passages

Items	Mean	Rank	Description
1. Includes reading materials from any literature	3.23	4	Useful
2. Uses reading comprehension questions to check understanding	3.14	6	Useful
3. Asks to answer questions every after reading	3.28	1	Useful
4. Strengthens understanding of the reading text through guide questions	3.27	2	Useful
5. Gives importance to reading and literature	3.17	5	Useful
6. Present literary piece regardless of length and encourages reading and understanding	3.08	7	Useful
7. Utilizes questions to guide learners in reading activity	3.26	3	Useful

8. Incorporates literature in every lesson taught	3.05	8	Useful
Overall Mean	**3.19**		**Useful**

The overall mean score of 3.19 describes the reading of literary passages, even at low levels, with reading comprehension questions to be functional. As stated, despite learners' seemingly observable apprehension towards incorporating literature in every lesson, the students understand the value of using comprehension questions in reading activities. The overall impression maintained the affirmation of the mentioned strategy, although there is a dichotomy between the students' resistance and their actual perception.

Table 1.3 Description of Practicing Based on Translation of Texts

Items	Mean	Rank	Description
1. Provides exercises that allow learners to use own language to express ideas	2.88	7	Useful
2. Offers activities that encourage translation to and from learner's own language	2.84	8	Useful
3. Asks students to translate words/phrase/sentence to and from English	3.11	5	Useful
4. Encourages learners to understand lesson and relates it to equivalents in own language	3.24	2	Useful
5. Allows students to use Mother Tongue in answering comprehension questions	3.18	4	Useful
6. Gives exercises that allow translation of the reading text from English to Filipino	3.07	6	Useful
7. Permits the use of own language in explaining concepts learned from the reading text	3.25	1	Useful
8. Encourages learners to translate answers from own language to English	3.22	3	Useful
Overall Mean	**3.10**		**Useful**

The computed overall mean score of 3.10 revealed that practicing based on the translation of the text to and from the Mother Tongue is useful in teaching English. As noted, students consider it helpful when the teacher permits the use of their language in explaining concepts learned from the reading text. Despite this, learners do not want teachers to prepare extra activities specifically for translation to and from the Mother Tongue.

Table 1.4 Description of Elaborating Presentation of Grammar Rules

Items	Mean	Rank	Description
1. Presents clear explanation on principles of grammar being taught	3.23	3.5	Useful
2. 2. Demonstrates grammar rules through examples	3.08	6.5	Useful
3. 3. Uses illustrations to present clearly the grammatical concepts	3.08	6.5	Useful
4. 4. Provides complete discussions and details of grammar rules being studied	3.23	3.5	Useful
5. 5. Address complex grammar rules and principles with emphasis	3.24	2	Useful
6. 6. Intensifies grammar rules learning and mastery through progressive exercises	3.06	7	Useful
7. 7. Gives particular reminders on grammar rules exceptions when they should be remembered	3.27	1	Useful
8. 8. Contrasts grammar rules of the target language to the grammar rules of own language	3.03	8	Useful

Overall Mean	**3.15**	**Useful**	

The overall mean score of 3.15 signified that elaborating the presentation of grammar rules is useful for English teaching. Generally, it underlined the importance of clear explanations on the intricacy of grammar rules in English.

Table 1.5 Description of Memorizing Grammar Rules and Vocabulary

Items	Mean	Rank	Description
1. Guides learners to memorize grammar rules and vocabulary	3.18	3.5	Useful
2. Instructs students to master a list of words with their meanings	3.23	2	Useful
3. Gives activities to check the level of student's mastery of grammar rules and vocabulary	3.18	3.5	Useful
4. Checks mastery of grammar rules through the provided activities	3.15	6.5	Useful
5. Emphasizes to the learners the value of memorizing rules and vocabulary	3.15	6.5	Useful
6. Sets mastery of grammar rules and vocabulary as part of subject requirements	3.24	1	Useful
7. Devotes specific part of the lesson for memorization of grammar rules and vocabulary	2.89	8	Useful
8. Employs memorization as technique of learning grammar concepts and vocabulary	3.17	5	Useful
Overall Mean	**3.23**		**Useful**

The computed overall mean score of 3.23 revealed that student memorization of grammar rules and vocabulary is useful in teaching Junior High School English.and setting mastery

of grammar rules and vocabulary as part of subject requirements was described by learners as useful.

Table 1.6 Description of Including Vocabulary Exercises

Items	Mean	Rank	Description
1. Includes exercises on synonyms and antonyms for vocabulary mastery	3.23	2	Useful
2. Incorporates definition of words for vocabulary learning	3.06	6	Useful
3. Provides vocabulary exercises on words coming from the reading texts	3.05	7	Useful
4. Lead students to explore other meanings of words through synonyms and antonyms	3.26	1	Useful
5. Presents activities focused on vocabulary found in the reading text with their meanings	3.12	4	Useful
6. Emphasizes activities for vocabulary mastery in the lesson	2.86	8	Useful
7. Asks students to define words lifted from the literature being studied	3.10	5	Useful
8. Identifies words from the selection which meaning students need to know	3.15	3	Useful
Overall Mean	**3.10**		**Useful**

The overall mean score of 3.10 revealed that vocabulary exercises including antonyms and synonyms, definitions, and others based on words in reading texts was described as useful.

Table 1.7 Description of Providing Composition Exercises

Items	Mean	Rank	Description
1. Includes composition exercises relevant with the reading text	2.87	8	Useful
2. Prepares writing activities based on the given topics	3.26	1.5	Useful
3. Offers opportunity for writing every after reading activity	3.26	1.5	Useful
4. Uses the theme of the reading selection as subject of the composition exercises	3.11	3	Useful
5. Motivates writing interest through appreciation of the literature being read	2.95	6	Useful
6. Performs writing exercises to critic reading materials	2.94	7	Useful
7. Suggests writing themes taken from the topics of the reading text	3.01	4	Useful
8. Requires composition writing as an important course requirement in English	2.99	5	Useful
Overall Mean	**3.04**		**Useful**

Results revealed that students were convinced that preparing writing activities based on the topic of the given selection and offering the students opportunity for writing every after reading are vital in learning the English language. This finding emphasized that learners are inclined to integrating what they have learned into their real-life experiences through writing as shown in the overall computed mean score of 3.04

2. Extent of importance of independent learning with its selected common strategies used

Table 2.1 Extent of importance of reflection as Independent Learning strategy

Items	Mean	Rank	Description
1. Executes reflection as part of diagnostic activities	3.06	6	High
2. Does reflection as formative part of the lesson	3.05	7.5	High
3. Writes reflection as part of assessment of learning	3.28	1	High
4. Integrates reflection as an important process of learning	3.09	3	High
5. Devotes specific time for reflection in each lesson	3.07	5	High
6. Encourages to reflect on the content of the lesson	3.11	4	High
7. Establishes mastery of the lesson through reflection	3.05	7.5	High
8. Strengthens learning plans through reflections	3.12	2	High
Overall Mean	**3.04**		**High**

Having the overall mean score of 3.10, the results revealed that writing reflection as part of the assessment of learning was perceived by learners to be with high extent of importance. This finding indicates that learners recognize the value of doing reflection as evaluative part of learning journey.

Table 2.2 Importance of Feedback as Independent Learning Strategy

Items	Mean	Rank	Description
1. Corrects on reading comprehension activities through given feedback	3.29	3	High
2. Utilizes feedback on grammar and vocabulary exercises	3.09	5	High
3. Improves composition writing skills through feedback given	3.28	4	High
4. Develops positive attitudes towards language study through feedback	3.34	1	High
5. Applies corrections obtained through given feedback	3.05	6	High
6. Seeks feedback from peers and others to strengthen learning	2.86	7	High
7. Boosts learning opportunities through healthy feedback communication	3.33	2	High
8. Communicates feedback in a constructive manner	2.85	8	High
Overall Mean	**3.14**		**High**

The overall mean score obtained was 3.14 indicated that learners value feedback as part of the learning process, regardless how it is given to them.

Table 1. Importance of Decision as Independent Learning Strategy

Items	Mean	Rank	Description
1. Has the freedom to decide which learning activities to do	3.27	2	High
2. Decides on which materials to use for effective learning	3.07	3.5	High

3. Takes responsibility for every learning tasks	3.29	1	High
4. Observes own pacing for the learning processes	3.07	3.5	High
5. Sets own learning targets and makes own learning plan	2.95	8	High
6. Appraises learning progress through self-assessment	2.97	7	High
7. Distinguishes helpful inputs from not helpful ones	3.04	6	High
8. Chooses which tool to use to assess one's learning	3.25	3	High
Overall Mean	**3.14**		**High**

The result revealed that taking responsibility for every learning task was described as high extent of importance with the overall mean score of 3.11. This demonstrated that learners are interested to be empowered as they undertake their learning tasks.

3. Issues and concerns on the use of Grammar-Translation and Independent Learning Methods in teaching Junior High School English

Table 3.1 Issues and concerns on Grammar Translation Method

Items	Mean	Rank	Description
1. Focuses merely on translation	3.10	3.5	Manifested
2. Gives prime importance only to reading and writing but neglects speaking and listening	3.09	5	Manifested
3. Employs teacher-centered instruction	3.28	2	Manifested
4. Emphasizes memorization as best approach to master grammar rules and vocabulary	3.10	3.5	Manifested
5. Allows the use of mother tongue in teaching English	3.29	1	Manifested

6. Teaches vocabulary through lists of isolated words	3.08	6	Manifested
7. Neglects context of texts in the study of literature	3.07	7	Manifested
8. Neglects pronunciation	2.30	8	Less Manifested
Overall Mean	**3.04**		**Manifested**

The overall mean of score of 3.04 revealed that most students confirmed manifestation of the issues and concerns raised on the use of the said method based on their current experience in English language instruction.

Table 3.2 Issues and Concerns on Independent Learning

Items	Mean	Rank	Description
1. Considers setting self-learning goals difficult	3.29	1	Manifested
2. Can do self-assessment in a dishonest manner	2.85	7	Manifested
3. Lacks interest in doing reflection	2.82	8	Manifested
4. Depends highly on feedback of teachers and peers	3.08	3.5	Manifested
5. Affects quality of learning outcomes when given too much freedom	3.07	5	Manifested
6. Fails to use genuine materials when not guided by teachers	3.06	6	Manifested
7. Tends to choose only easy learning tasks or activities	3.09	2	Manifested
8. Doubts on the fairness of the method for all types of learners	3.08	3.5	Manifested
Overall Mean	**3.04**		**Manifested**

The overall mean score of 3.04 confirmed that all the named common issues and concerns under the Independent Learning were manifested based on the respondents' experiences.

Table 4. 1 Common Strategies in Teaching Junior High School English

Items	Mean	Rank	Description
1. Teaching vocabulary through wordlists and translation	3.20	3.5	Supportive
2. Reading of literary passages with reading comprehension questions	3.20	3.5	Supportive
3. Practicing translation of texts to and from Mother Tongue	3.19	6.5	Supportive
4. Elaborating presentation of grammar rules and vocabulary	3.20	3.5	Supportive
5. Memorizing grammar rules and vocabulary	3.19	6.5	Supportive
6. Providing composition exercises based on the reading texts	3.20	3.5	Supportive
7. Including vocabulary exercises on antonyms, synonyms, and definitions others based on words in reading texts	3.17	9	Supportive
8. Using reflection as part of learning process	3.10	10	Supportive
9. Employing feedback regularly to improve learning outcomes	3.18	8	Supportive
10. decide for their own learning goals	3.26	1	Supportive
Overall Mean	**3.19**		**Supportive**

The overall mean score of 3.19 described the common strategies in teaching Junior High School English as supportive of pedagogy that suits the new normal education. As data disclosed, Grammar-Translation and Independent Learning Methods are employing strategies that are relevant to the learning needs of the students at present.

DISCUSSION

The findings indicated in table 1.1,are substantially consistent with what Mart,(2013) said that translation is an aid to enhance proficiency via the target language. According to him, translation is functional in understanding another language studied. It claimed that the Grammar-Translation method indeed is supportive and has a unique role in foreign

language learning that it allows the students to distinguish the differences and similarities between the first language (L1) and the second language (L2), making the students comprehend better light the system of the target language. To support, Kaye,(2021) pointed out that most English Language teachers and theorists nowadays recognize the "validity and value" of translation as strategies in teaching. Designing translation activities well for instruction can hone multiple language learning skills, particularly in the vocabulary aspect. Translation is essential in developing communicative competence, because it demands accuracy, clarity, and flexibility. It was further pointed out that translation trains the reader to search (which is an act of exercising flexibility) for the best words' equivalent (which is an act of valuing accuracy) to communicate the meaning (which is an act of venturing on clarity).

The table 1.2 adheres to relevant guidelines set by the DepEd (Department of Education, (2020) stipulating that the learning competency shall be sub-tasked if it is necessary to allow the learners to easily follow the lesson's progression, following the principles of mastery learning. Engaging students to interact with the literature by asking them to answer given questions after reading was indeed said to be helpful for language learning. The same finding is relevant to what Bowen, (2016) stated that using more enlightened principles while combining them with the systematic approach of Grammar Translation suited learning needs and styles of various learners. This indicates that fluency takes place through reading literary passages after reading in the target language.

The table 1.3 means that respondents believe in the unique role of translation in the teaching-learning process though they do not want their teachers to devise separate activities plainly devoted for translation.This result is supportive of what Khan,(2018) found out that GTM is a very useful method for learners to learn English where learning becomes easy and advantageous noting that learners find hard time learning English through other presently trending methods like direct method and audio-lingual method emphasizing the drawback of the absence of English-speaking communit

In.elaborating presentation of grammar rules, the finding is consistent with Aqel,(2013) found that language skills acquisition and the mastery of the grammatical rules must also be focused on, thus, commending the application of grammatical structure and the practicing of the language skills in general at the target language as to strengthen the required forms that the students need to develop to succeed in the learning of the target language. In this way, learners enjoy the great benefit of full knowledge of the two languages alongside which liberates the students from any tendency of ambiguity of the language being studied. In addition, Chang,(2011) affirmed that being given the significant and necessary elaboration, learners will try to refrain from committing possible the same errors when using the target language and when errors take place, the students are already capable of giving reasons why avoiding repetitive mistakes, as a result. In the light of this finding, it is an important consideration to keep abreast with various activities that could be best employed to making the elaborate presentation of grammar rules more interesting to the learners.

Based from the results from table 1.5, it revealed that learners are more inclined to highlighting the importance of mastering grammar as significant component of language English learning in Junior High School This result directs teachers to set certain learning

rules among their students that emphasize the mastery of grammar and vocabulary. However, as result implied there is no necessity to devoting specific parts of the lesson for plain memorization purposes. This finding reiterated that while students remained to be in good esteem with the usefulness of memorizing grammar rules and vocabulary in learning the English Language, learners understand that it should not be done separately from each part but along with the lesson, Garlock,(2019) claimed that memorization in the context of formal education setting booster learning outcomes. Therefore, as the current research advocates its proper use, memorization which is usually involving a process employing techniques of repetition for mastery becomes an effective propeller to language mastery.

Table 1.6 result emphasized that learners expect their teachers to prepare lessons more on leading and allowing them to discover vocabulary meanings through various exercises like synonyms and antonyms, the definition of words, guided simulations about meanings, and reading text-driven vocabulary exercises. The results implied that students remained to have good esteem with the incorporation of vocabulary exercises in the lesson which is highly based on the selection embedded in the lesson.This result is conforming with the idea on vocabulary integration that taking vocabulary as the core consideration in teaching all grade levels. This entails activities that go beyond vocabulary familiarization and memorization aiming to integrate vocabulary words into learners' language patterns. Thus, it affirms activities that require the application of the learned vocabulary terms in various vehicles of learners' communication as well as remembering the value of word identification activities suggesting that teachers could guide learners to decode words from a given material honing the skills for word identification which consequently leads to stronger functional language used among learners. Using activities on vocabulary exercises make the learners critical ones in understanding and improving their vocabulary skills like what Ilter,(2019) confirmed in his study that doing this has a meaningful impact on learners' comprehension and increasing their proficiency and building the students' vocabularies.

In table 1.7, students, however, expect their teachers to engage them in writing activities that are not solely confined within the theme of the reading text used. While they recognize the value of relating the theme of the selection in their own lives, learners prefer writing activities for free self-expression.Considering this, it is important that composition writing be given particular importance as part of instruction. This kind of activity helps students crystallize and articulate the text's ideas so that they can explore them further. Moreover, activities like this, as Gibson,(2021) recommended, to remind teachers to provide learners high levels of a support system as they engage in the process. In addition, Ball,et.al (2021), noted that designing exercises like this is helpful to roll information providing insight on certain aspects of the story embedded in a literature read. In such manner, the learners are allowed to relay their insights and understanding as well as their opinions or reflection on the given text.

Table 2.1 Extent of importance of reflection as Independent Learning strategy indicates that learners recognize the value of doing reflection as evaluative part of learning journey. It also showed that students are more inclined to reflect as part of the assessment rather than doing it as part of the formative assessment. The finding noted the need for teachers to provide learners time for reflection as part of learning assessment, basis to strengthen

learning plans, deepen important part of the learning process, and understand the content of the lesson. This result is conforming to Cavilla,(2017) claimed that through reflection, learners can develop their ability to actualize the insights they gained into their learning or life experience so that they can do better and level up their learning performances.

The findings show the importance of feedback as independent learning strategy. The learners are more concerned with the availability of feedback because they consider them as part of the independent learning process.The result of this study conforms with the DepEd Interim Guidelines for Assessment and Grading in the Light of Basic Education Learning Continuity Plan stipulating that immediate feedback should be made accessible to the learners to enable them to take full responsibility for their learning and identify areas where they do well and where they need help. Double et al. (2020), revealed that feedback is considered the central component of the learning process which is vital for students' knowledge acquisition and learning progress.

As conveyed, taking responsibility caught the students' closer attention because learners sensed beneficial impact of this practice in their learning performance and outcomes. When learners have full freedom, they also learn to be more responsible for the things they do and accountable of the outcomes. This could also noted that decision-making is an important strategy in independent learning as perceived by learners. This result implied that students learn best when they are given full authority for the decisions they make towards learning. Expressively however, they are not inclined to setting their learning targets and making their learning plans. This finding is highly congruent with Schmitz,(2018), claimed that good decision making is a skill that is essential. This is affirmative with the claim that there is a strong need for individuals who can independently make a good decision nowadays. Improving students means improving their decision-making skills. As clearly affirmed, decision-making must be an important part of teaching using the Independent Learning Method Enriquez,(2018), found out that giving students freedom to decide or choose whatever kind of task or activity they want to engage in relevant with the set learning goals or objectives.

Table 3.1 revealed the Issues and concerns on Grammar Translation Method in which manifestation is considered a product of the learners' previous experiences as well as understanding of the factors influencing their behavior towards the issues and concerns being pointed out. This finding confirmed the issues and concerns raised on the utilization of Grammar Translation Method focuses merely on translation, gives only prime importance to reading and writing but neglects speaking and listening, employs teacher-centered instruction, and emphasizes memorization as best approach to master grammar rules and vocabulary. In addition to these issues, Abbas et al. (2014) signified that the method employs teaching of vocabulary through lists of isolated words and neglecting context of the texts in the study of literature. Although it could be deduced that the emergence of the articulated issues was prior to the pandemic, the manifestations remained to be the same articulating possible drawbacks with the utilization of GTM when not done in a more directed manner. Aqel,(2013) confirmed that utilization of this method should be dynamic and situational.

As regards to the Issues and concerns on independent learning, it is attributed to the learners being used to the kind of instruction readily and constantly directed and guided by

the teachers with a prototype learning process set for them with a conventional setting prior to pandemic. Manifestation on lack of interest in doing reflection was also noted. This result entailed students' perceived difficulty in doing reflection as part of instruction. This difficulty is associated with the lack of understanding of the value of self-reflection and its advantages in the learning process. Students also experienced difficulties in the process relative to lack of readily available guidance, tedious compliance to obligatory reflection writing requirements, and traumatic experience relative to reflection. Other things mentioned were doing self-assessment in a dishonest manner, depending highly on feedback of teachers and peers, affecting quality of learning outcomes when given too much freedom, failing to use genuine materials when not guided by teachers, tending to choose only easy learning tasks or activities, and doubting the fairness of the method for all types of learners.Relevant with this finding, teachers are reminded of "the black holes" in Independent Learning that Foley,(2016) commented on claiming that doing Independent Learning is knowing where teachers need to focus. As expressed, teachers need to find out the key factors on social, cultural, and environmental aspects that describe to what extent of independent learning the learners do actualize, while learners are convinced of the usefulness of Independent Learning Method's utilization. They also acknowledged the disadvantageous side described by the level of manifestations obtained with the use of the method.

The findings revealed that the strategies are deciding for learning goal, doing reflection, advocating vocabulary learning through wordlists and translation, reading of literary passages even at low levels with reading comprehension questions, practicing translation of texts to and from Mother Tongue, elaborating presentations of grammar rules, teaching through memorization, giving composition exercises based on topics from the reading texts, including vocabulary exercises on antonyms, synonyms, and definitions. Likewise,reflection, reading texts, and giving feedback regularly and decision to improve learning outcomes are also contibuting factors. . Concerning these findings, Vega,(2018) confirmed that despite the benefits of translation many linguists and teachers oppose the utilization of this method. There are linguists and grammarians who promote teaching without translating. Azar et.al (2012) insisted that grammar teaching should be done in explicit and implicit ways but without using translation. This position however is contested by the current study revealing students' favorable reception of the use of strategies under Grammar Translation Method at present. More than this, the use of the Independent Learning method is also reaffirmed for its obvious benefits.

Based on the results, students recognized the use of teaching strategies employed under Grammar Translation and Independent Learning Methods as supportive to the pedagogy the suits the new normal set-up. Respective of these results, this study proposed the conceptualization and construction of a matrix for the use of strategies under these methods which would be beneficial to ensuring that teaching Junior High School English in the new normal setting is done relevantly. The matrix is anchored with the Department of Education's Most Essential Learning Competencies (MELCs). Specifically, the matrix covers 10 strategies usable in teaching English across all grade levels in the four learning quarters of a School Year.

Conclusions

Based on the findings of the study, strategies in teaching under the Grammar Translation and Independent Learning Methods were described as useful and highly important, respectively. Most of the common revisited issues and concerns were manifested except the issue on pronunciation. All the strategies employed under the Grammar Translation and Independent Learning Methods are supportive of the pedagogy that suits the new normal of 21st-century education. Therefore, there is an implied need to use a matrix of teaching strategies for the utilization of Grammar Translation and Independent Learning methods.

Recommendations

Given these findings and conclusions, teachers may use strategies employed under Grammar-Translation and Independent Learning Methods. With this, learners, parents, and guardians may be constantly encouraged to be guided by the principles of Grammar-Translation and Independent Learning Methods to avoid the drawbacks relative with the various issues and concerns revisited and to maximize the benefits of utilization. Learners' Materials (LMs) developers and teachers may use the Matrix of Strategies in Teaching English in the New Normal (MSTENN) to ensure that their teaching strategies employ techniques and activities for learning relevant with the current educational setting.

Compliance with Ethical Standards

The utmost level of confidentiality was upheld for all data gathered for this study. Every participant's voluntary engagement was given a high priority including their withdrawal at any time they wish to.Furthermore, the researchers ensured that all the participants were properly oriented and assured that all of the data and results obtained were not disclosed in unauthorized persons and used for the intended purpose only.

Acknowledgments

The authors would like to thankBalugo National High School and Mindoro State University (MinSU) – Bongabong Campus for their support and encouragement, as well as the the authors' loved ones and friends. To God be the glory.

SCHOOL PRINCIPALS' SUPPORT PRACTICES ON TEACHERS' PROFESSIONAL DEVELOPMENT, TEACHERS' COMMITMENT, AND PERFORMANCE: BASIS FOR PROFESSIONAL DEVELOPMENT PROGRAM

Raul B. Chua Jr., LPT, MAT, Ed.D.

Graduate School, Marikina Polytechnic College, Marikina City, Philippines

https://doi.org/10.5281/zenodo.13372738

ABSTRACT

Teachers' professional development is essential in achieving the quality of education with the school principals playing a vital part to obtain a conducive environment for continuous teachers' professional growth. This study aimed to determine the school principals' support practices on the professional development of senior high school teachers and their relationship to teachers' commitment and performance during the school year 2023 – 2024 in the Division of Rizal which served as basis for developing professional development program. This study utilized the mixed method of research specifically sequential exploratory design. The data gathering instrument for the qualitative type was the semi-structured interview questions while the quantitative type used the survey questionnaire and the IPCRF documents. The respondents were 37 school principals and 225 teachers for the quantitative type and eight school principals and 14 teachers for the qualitative type. The qualitative data were transcribed, coded and analyzed using the thematic analysis. Meanwhile, the statistical tools used to treat the quantitative data were the percentage, weighted mean, t-test, Pearson r, and correlated t-test. Findings revealed that school principals provided informational, emotional, appraisal, and instrumental support. While principals felt satisfied with their support practices, teachers desired more instrumental support to enhance their professional growth. Both groups shared similar views on teachers' commitment levels. Teachers developed competencies aligned with the KRAs of the IPCRF. Although principals' support positively influenced teachers' commitment, it did not significantly impact their performance. Based on these findings, a professional development program was proposed to improve and sustain principals' support for teachers' professional development.

Keywords: *school principal support, teachers' professional development, teachers' commitment, teachers' performance, professional development program*

INTRODUCTION

In the United Nations Report in 2022, it was reiterated that education stands as a fundamental right for all Filipinos. This responsibility is embraced by the Department of Education (DepEd) in its mission to uphold and advance quality education which further stipulated that this pursuit of excellence in education is pivotal, equipping learners with the knowledge, skills, and attitudes necessary to fulfill their potential and contribute meaningfully to society. Recognizing the role of quality education, the UN also underscored its significance as a bedrock for sustainable development, enhancing lives and empowering individuals to address global challenges innovatively. Within this context, it focused on improving quality education within the educational framework.

Prior to the UN 2022 report, Siena (2019) mentioned that teachers are the center of educational activities, who serve as architects of the future generation. Their role, according to Siena, "transcends curriculum delivery, extending to cultivating essential skills, and attitudes which are important in navigating an evolving world filled with complexities".

In the same view, Schleicher (2019) stated, "The quality of an education system can never exceed the quality of its teachers." Schleicher also claimed that the teachers' professional development initiatives directly shape the caliber of educators, thus, resonating throughout the educational sphere and affecting students' overall learning achievements. The channels through which teachers' professional growth occur are diverse, encompassing workshops, seminars, collaborative learning communities, peer mentorship, action research, online courses, and advanced degrees. These avenues require dedicated institutional commitment, including time, resources, and support, fostering pedagogical evolution, innovation, and ultimately, augmented student accomplishments.

According to Bernadine (2019), teachers' professional development can be best understood as a systematic process that promotes competence and creativity across their professions. This is aligned with the principles outlined in DepEd Order No. 35, series 2016, which emphasizes its full support for the continuous professional development of teachers. This is firmly rooted in the Enhanced Basic Education Act of 2013 and the Continuing Professional Development (CPD) Law. Furthermore, this is in accordance with DepEd Order No. 42, series 2017, which pertains to the National Adoption and Implementation of the Philippine Professional Standards for Teachers (PPST).

In 2018, Gonong cited one of the findings of the World Bank that a significant number of teachers expressed the need for additional opportunities for professional training and learning. However, Gonong remarked that the path to effective teacher professional development is beset with challenges. He cited hindrances such as constrained time due

to multiple responsibilities, limited access to training in remote areas and financial barriers preventing participation in workshops. Furthermore, Siena (2019) remarked that the cascading training approach in mass settings may dilute content and restrict opportunities for teachers to demonstrate their competencies. These challenges are compounded in the Philippine context, where the soaring number of teachers, lack of administrative support, and complexities in program completion hinder access to professional development. For example, conventional week-long seminars may prove inadequate to sufficiently equip teachers with new curriculum demands.

Teachers' professional development is essential in achieving the quality of education with the school principals playing a vital part in this process. School principals are instrumental in a conducive environment for continuous professional growth. Leithwood et al. (2021) mentioned that effective leadership by school principals involves a profound commitment to the teachers' professional development. This includes providing feedback and support, access to resources, and creating opportunities for professional learning. In addition, Mthanti and Msiza (2023) highlighted that school principals may support teachers to their professional development through motivations to engage, creating learning environment, informing opportunities, and allocating resources.

Teacher commitment involves being dedicated to the school, students' success, and teaching profession. High levels of commitment are often connected with greater performance and a willingness to engage in continuous professional development. In the same view, Medul (2022) underscored that through the provision of school principals' support, the level of teachers' commitment and performance is sustainable.

As observed by this researcher, teachers have limited opportunities in terms of professional development due to several factors like funding, access to training programs, subject or grade-level focus, administrative support, and prioritization of development. As mentioned by Magallanes (2022), one of the Philippine teachers' concerns is the lack of opportunities on professional development that may enable more collaborative activities among teachers. In another article, Morales (2023) mentioned about the unseen struggles of teachers in the Philippines, such as: a) obtaining appropriate training and growth opportunities; b) inadequate financing for professional development programs; and c) insufficient support from educational institutions. He commented that these impede their growth and capacity to give the finest education available.

In another view, one of the reasons why this researcher was challenged to conduct this study is the quality of professional development implemented in the schools. Tupas and Noderama (2020) revealed that majority of the teachers are not satisfied with their professional development program like the in-service trainings that are conducted due to limited time, irrelevant topics for teachers' effectiveness and efficiency, and lack of administrators' support. Relative to this, the researcher would like to determine if this scenario also occurs in the School Division of Rizal where he belongs.

Lastly, limited support on professional development was also observed by this researcher. Garcia and Weiss (2019) stated several supports from school principals that

need to be addressed such as: access to effective and high valued types of professional development, provision of much time and resources needed, intensifying mentoring and coaching experiences, establishment of learning communities, and increasing professional development opportunities.

To address these issues and to foster sustained commitment to professional development, a deeper exploration of the nexus between school principals' practices on teachers' professional development, commitment, and performance are imperative towards education quality. While previous research findings have touched on factors influencing teacher well-being, the specific role of principal practices on these aspects and in shaping commitment and performance still need to be further explored.

As a new principal in one of the DepEd schools in the Division of Rizal, the researcher believes that there is a need to determine the best practices of incumbent school principals to serve as a model for the new and other school principals to improve their teachers' professional growth and development thereby improving also their commitment and performance. From the good practices of the school principals, an innovative professional development program could be developed for the use of the school principals. If this is done, this study hopefully will be able to determine if this could improve the commitment and performance of the teachers, hence this study.

Research Questions

This study aimed to determine the school principals' support practices on the professional development of senior high school teachers and their relationship to teachers' commitment and performance during the school year 2023 – 2024 in the Division of Rizal which served as basis for developing professional development program.

Specifically, it sought answers to the following questions:

1. What are the school principals' support practices on the professional development of teachers based on the results of the interview and focus group discussion with the senior high school principals and teachers?
2. What is the extent of the school principals' support practices on the teachers' professional development on the following categories as perceived by the school principals and the teacher respondents?
    - 2.1 Emotional
    - 2.2 Instrumental
    - 2.3 Informational
    - 2.4 Appraisal
3. Is there a significant difference between the perceptions of the two groups of respondents on the school principals' support practices on the teachers' professional development on the aforecited categories?
4. What is the level of the teachers' commitment as regards the following categories as perceived by the school principals and the teacher respondents?
    - 4.1 School

4.2 Students
4.3 Teaching work
4.4 Profession
4.5 Body of knowledge, skills, and attitudes

5. Is there a significant difference between the perceptions of the two groups of respondents on the level of teachers' commitment on the aforecited categories?
6. What is the level of the teacher respondents' performance based on their Individual Performance Commitment and Review Form (IPCRF) results during the school year 2022 – 2023 on the following domains?

6.1 Content Knowledge and Pedagogy
6.2 Learning Environment & Diversity of Learners
6.3 Curriculum and Planning
6.4 Assessment and Reporting
6.5 Personal Growth and Professional Development

7. Is there a significant relationship between the school principals' support practices on the professional development of teachers and the following variables?

7.1 Teachers' commitment
7.2 Teachers' performance

8. Based on the results of the study, what professional development program could be developed and proposed?

METHODOLOGY

This study used a mixed-method approach, specifically a sequential exploratory design. For the quantitative part, the respondents included 37 school principals and 225 teachers from public senior high schools in the Division of Rizal for the school year 2023–2024. For the qualitative part, eight school principals and 14 teachers were selected. The sample size was determined using Slovin's formula with a 5% margin of error. Teachers were chosen through simple random sampling, while school principals were selected using purposive sampling.

The study utilized two sets of data gathering instruments, one set for the qualitative method and another set for the quantitative research. The questionnaire was validated by five school principals and five master teachers who were not part of the study. Part I of the survey questionnaires for the quantitative phase is on the extent of school principals' support practices on the professional development of senior high school teachers in the following aspects: emotional, instrumental, informational, and appraisal support. It consisted of 20 indicators, five for each type of support. It utilized the 4-point Likert rating scale choices that was arbitrarily set by the researcher. Part II of the research instrument was about the level of teachers' commitment based on the following domains: commitment to the school, students, teaching work, profession, and body of knowledge, skills, and attitudes. The 4-point Likert rating scale that was arbitrary set by the researcher was also used. Another separate instrument was also used. This was the Individual Performance and Commitment Review Form (IPCRF) of the teachers for the school year 2022 - 2023

Data collection occurred in two phases. In the first phase, qualitative data was gathered through a structured interview process following the Initiate–Response–Follow-up (IRF) pattern with audio recording and note-taking. In the second phase, quantitative data was collected by administering survey questionnaires to respondents either in person or through Google Forms for those in more remote schools. The Google Forms link was distributed with the help of the school principal and their administrative staff, and the researcher personally retrieved the completed paper questionnaires.

The qualitative data were analyzed using the thematic analysis (Creswell, 2023) of the transcribed interviews. The transcribed and coded data were analyzed by identifying the patterns or themes using Tesch (1990) strategy. Meanwhile, the statistical tools used to treat the quantitative data were the percentage, weighted mean, t-test, Pearson r, and correlated t-test.

RESULTS

PHASE 1: FOR QUALITATIVE DATA

This phase of the study explored the school principals' support practices on the professional development of senior high school teachers. Five females and three male school principals participated in the interview while 12 females and two male teachers joined the focus group discussion.

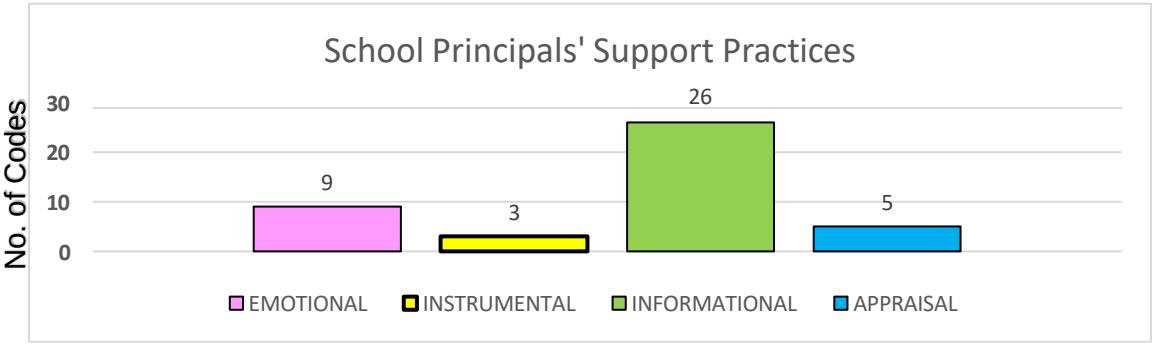

Figure 1. Occurrence of Codes on the Four Types of Support on Teachers' Professional Development based on the Interviews

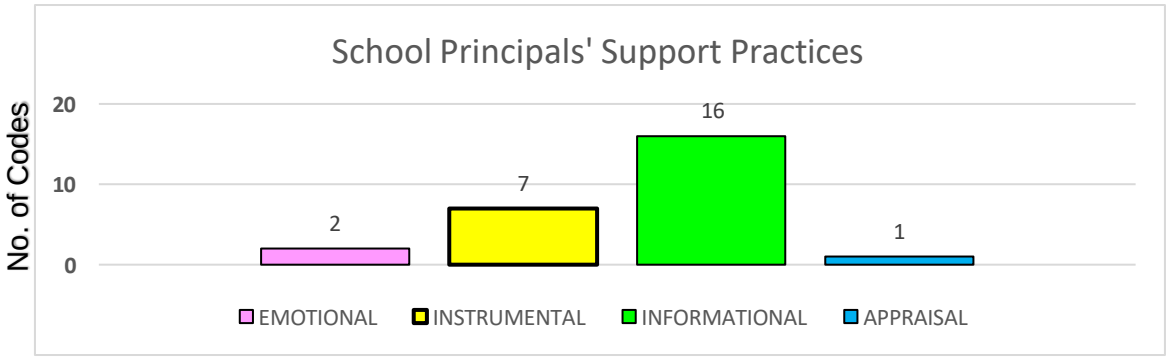

Figure 2. Occurrence of Codes on the Four Types of Support on the Teachers' Professional Development based on the FGD

PHASE 2: FOR QUANTITIVE DATA

This phase of the study is the quantitative component of the Sequential Exploratory Strategy. It deals with the collection of data from the respondents after which the analysis of data followed.

Table 1

Summary of Respondents' Perceptions on the Extent of the School Principals' Support Practices on the Teachers' Professional Development

Joint Display of the Qualitative Analysis and Quantitative Results

QUALITATIVE THEMES	METAINFERENCES	QUANTITATIVE DATA
Theme 1: Emotional Support	***SHSP4:*** *"Of course, moral support, encouraging them to continue their work that they are doing well and, of course to uplift themselves in terms of teaching and learning process."* ***TP4:*** *"When it comes to support, since I'm not fond of going to the office of the principal, for me, I cannot see and feel any support."*	Overall Weighted Mean School Principals: 3.65 (VHE) Teachers: 3.30 (VHE) **Indicator 2:** The school principals address the emotional needs of the teachers regarding their professional growth. Average Weighted Mean School Principals: 3.59 (VHE) Teachers: 3.25 (HE) **Indicator 3:** The school principals create an environment that fosters emotional support for teachers' professional development. Average Weighted Mean School Principals: 3.62 (VHE) Teachers: 3.26 (VHE)
Theme 2: Instrumental Support	***SHSP4:*** *"Financial support. We need them. That's the most important, number one resource that we*	Overall Weighted Mean School Principals: 3.65 (VHE) Teachers: 3.23 (HE)

	should have to give to our teachers." ***TP4:*** *"Personally, I haven't encountered an instance where they told me that they have financial assistance. But maybe for others. But for me, I haven't experienced that."*	**Indicator 3:** The school principals provide school financial support for teachers to attend conferences, workshops, or pursue advanced degrees. Average Weighted Mean School Principals: 3.57 (VHE) Teachers: 3.07 (HE) **Indicator 4:** The school principals allocate school budget for the professional development opportunities, workshops, and training programs to enhance teachers' skills. Average Weighted Mean School Principals: 3.70 (VHE) Teachers: 3.13 (HE)
Theme 3: Informational Support	***SHSP1:*** *"Ok, Mr. Chua. In our school, I extend my support to the teachers' professional development by conducting In-Service Training."* ***TP7*** *"May dalawa kaming INSET at iilan lang na LAC session pero kalimitan ay hindi masyadong quality."*	Overall Weighted Mean School Principals: 3.76 (VHE) Teachers: 3.30 (VHE) **Indicator 4:** The school principals facilitate collaborative platforms, such as discussion forums or online communities, where teachers can share information and insights about professional development opportunities. Average Weighted Mean School Principals: 3.70 (VHE) Teachers: 3.23 (HE)
Theme 4: Appraisal Support	***SHSP7:*** *"I am also providing constructive feedback on the technical assistance on their professional development."* ***TP9:*** *"Our school principal does the observation and critiquing, that's how she did the support for me."*	Overall Weighted Mean School Principals: 3.69 (VHE) Teachers: 3.29 (VHE) **Indicator 3:** The school principals use mechanisms to evaluate and provide constructive feedback to assist teachers' professional development. Average Weighted Mean School Principals: 3.73 (VHE) Teachers: 3.24 (HE)

		Indicator 4: The school principals use self-assessment as a starting point for goal-setting and professional development discussions. Average Weighted Mean School Principals: 3.62 (VHE) Teachers: 3.25 (HE)

Note: 1.00 – 1.75 Very Low Extent (VLE), 1.76 – 2.50 Low Extent (LE), 2.51 – 3.25 High Extent (HE), 3.26 – 4.00 Very High Extent (VHE).

DISCUSSION

School Principals' Support Practices on the Professional Development of Teachers Based on the Result of the Interview and Focus Group Discussion of the Senior High School Principals and Teachers

From the qualitative data, it could be surmised that four types of support have emerged from the interview and focus group discussion session with the school principal and teacher participants. These are informational, emotional, appraisal, and instrumental support as evidenced by the number of codes for each type of support shown in figure 1 and 2.

Figure 1 gives a clear view of the occurrence of the four types of support extended by the school principal participants on the professional development of the teachers. The bar graph shows that the school principals' biggest support on the teachers' professional development was informational, followed by emotional, appraisal, and instrumental. Meanwhile, figure 2 displays the occurrence of codes on the four types of support on the teachers' professional development based on the FGD. The bar graph shows that the principals' biggest support on the teachers' professional development was informational, followed by instrumental, emotional, and appraisal.

From the results of the qualitative data, the data gathering instrument for the quantitative data was developed. Quantitative data were collected, presented, and interpreted.

Extent of the School Principals' Support Practices on the Teachers' Professional Development as Perceived by the School Principal and the Teacher Respondents

Based on the quantitative data collected, table 1 show that the school principals and the teacher respondents perceived the extent of their support practices on the teachers' professional development as Very High as evidenced by the grand weighted means of 3.69 and 3.28, respectively. However, the teacher respondents perceived the extent of school principals' instrumental support on professional development as High Extent only as evidenced by overall weighted mean of 3.23. These findings implies that as regards

the extent of support practices by the school principals on the teachers‘ professional development, school principals are satisfied with the aspects presented while teachers seek more instrumental support from the principals to enhance their professional aspect.

Significant Difference between the Perceptions of the Two Groups of Respondents on the Extent of School Principals' Support Practices on the Four Aspects of Teachers' Professional Development

Table 2 presents the summary of the test of significant difference in the perceptions of the two groups of respondents on the extent of the school principals' support practices on the teachers' professional development on the four categories. The findings of the study showed that the perceptions of the school principals and teachers differ significantly on the extent of the school principals' support practices on the teachers' professional development in terms of emotional, instrumental, informational, and appraisal which are above the critical z value of 1.96 at 5% level of significance. This means that the respondents' perceptions are not the same in all the four categories. The perceptions of the school principals and the teachers regarding the extent of support practices for teachers' professional development differ significantly. This indicates that there is a variation in how the school principals and the teachers view the support provided.

Level of the Teachers' Commitment According to School, Students, Teaching Work, Profession, and Body of Knowledge, Skills, and Attitudes as Perceived by the School Principals and the Teacher Respondents

Table 3 displays the summary of the respondents' perceptions on the level of the teachers' commitment as regards the five categories, namely: commitment to the school, to the student, to the teaching work, to the profession, and to the body of knowledge, skills, and attitudes. The data in the summary table reveal that the school principals and teacher respondents perceived the level of the teachers' commitment as Very High with grand weighted means of 3.63 and 3.57, respectively. This indicates a strong dedication and loyalty among teachers towards their school, students, teaching work, profession, and the body of knowledge, skills, and attitudes. This finding implies that the teachers invest their time and effort doing their work, even beyond the basic requirements of their profession to ensure the success and well-being of their students. More so, the findings reflect the general qualities of a good teacher worth emulating by the members of the other professions. As the saying goes, “once a teacher, he will always be a teacher.” A teacher is one who inspires, motivates, and instills love for learning that extends beyond the walls of the classroom.

Significant Difference between the Perceptions of the Two Groups of Respondents on the Teachers' Level of Commitment to the School, Students, Teaching Work, Profession, and Body of Knowledge, Skills, and Attitudes

Presented in table 4 the summary of the test of significant difference between the perceptions of the two groups of respondents on the level of the teachers' commitment as regards the five categories, namely: commitment to the school, commitment to the

student, commitment to the teaching work, commitment to the profession, and commitment to the body of knowledge, skills, and attitudes. The perceptions of the school principals and the teacher respondents on the level of the teachers' commitment did not show a significant difference. This is evidenced by the computed z values which are all lower than the critical z value of 1.96. Therefore, it indicates that both groups share similar perceptions across all five categories. This finding means that the school principals and the teachers know each other very well because they are both aware of how they manifest their love for work, for their students, their profession, and even the degree of updating themselves on the new trends in education.

Level of the Teachers' Performance Based on the Results of their Individual Performance Commitment and Review Form (IPCRF) during the School Year 2022 – 2023

The data in table 5 reflect that the level of the teachers' performance is Very Satisfactory as evidenced by the grand weighted mean of 4.48. However, KRA No. 1 and No. 2 both got an Outstanding rating as evidenced by the overall weighted means of 4.73 and 4.51, respectively. The three other variables, Curriculum and Planning, Assessment and Reporting, and Personal Growth and Professional Development were also rated as Very Satisfactory as shown by their respective overall weighted means of 4.45, 4.39, and 4.31. These Outstanding and Very satisfactory ratings are indications that the teachers are doing their responsibilities and duties very well according to the standards of teaching. The findings concur with the study of Bancifra (2022) which found out that the teachers are performing within the Very Satisfactory level based on the result of their IPCRF, which implies a strong indication that the teachers' performance exceeded expectations.

Significant Relationship between the Extent of School Principals' Support Practices on the Teachers' Professional Development and Teachers' Level of Commitment

Based on the data in Table 6, the computed t-value of 6.46 is greater than the critical t-value of 1.97 with 223 degrees of freedom at the 5% level of significance. This indicates a significant relationship between the extent of school principals' support practices for teachers' professional development and teachers' commitment. On the other hand, the test for the significant relationship between school principals' support practices for teachers' professional development and teachers' performance shows that the computed t-value of 1.71 is lower than the critical t-value of 1.97 with 223 degrees of freedom at the 5% level of significance. Thus, there is no significant relationship between the extent of school principals' support practices for teachers' professional development and teachers' performance. This implies that while the support provided by school principals for teachers' professional development can influence teachers' commitment, it does not necessarily affect their performance.

Analysis of the Qualitative Analysis and Quantitative Result

The data in table 7 presents a joint analysis of qualitative data derived from interviews and focus group discussions, compared with the results of the statistical analysis. The identified theme of instrumental support was integrated with aspect 2 of school principals' support for teachers' professional development, specifically indicators 3 and 4, yielding weighted means of 3.07 and 3.14, respectively. Additionally, the lack of connections between teachers, as perceived from school principals, emerged as the theme of emotional support, linked to indicator 2, rated as High Extent (HE) with a weighted mean of 3.25. Furthermore, the inadequacy of evaluation tools for goal setting and constructive feedback in teachers' professional development was identified as a theme connected to indicators 3 and 4 of Appraisal Support, with weighted means of 3.25 and 3.24, respectively. Moreover, facilitating collaborative platforms for professional development opportunities was integrated with informational support, emerging as a theme connected to indicator 4, with a weighted mean of 3.23. These findings underscore the importance of acknowledging teachers' professional development needs, providing tangible support mechanisms, addressing emotional needs, and fostering an environment conducive to emotional support for facilitating their growth and development. The results suggest a pressing need to develop an innovative teachers' professional program aimed at enhancing school principals' support for teachers' professional development.

The joint analysis of both qualitative and quantitative data provides valuable insights into the dynamics of school principal support for teachers' professional development. Qualitatively, themes such as instrumental support, emotional support, and appraisal support emerged, highlighting the multifaceted nature of support provided by school principals. Instrumental support, encompassing tangible resources and assistance, was identified as crucial, while emotional support and appraisal support underscored the importance of addressing teachers' emotional well-being and providing constructive feedback for growth. Quantitatively, statistical analysis further explained these themes by assigning weighted means to specific indicators within each theme. For instance, indicators related to informational support received relatively high weighted means, indicating a perceived adequacy of professional development opportunities such as INSET and Lac sessions provided by school principals. On the other hand, emotional support indicators revealed a gap between perceived and provided support, suggesting room for improvement in addressing teachers' emotional needs.

Conclusions

Based on the findings, the following conclusions are drawn.

1. Codes and themes can be identified from the transcribed quotes of the individual interviewees and focus group discussion participants on school principal support practices on teachers' professional development.
2. School principals extended their support for the professional development of teachers.
3. School principals and teachers have viewed differently the support provided for the teachers' professional development.
4. The school principals and teachers have a similar impression of the teachers' level of commitment.
5. The teachers have developed appropriate competencies in their roles based on the KRA's of the IPCRF.
6. The support provided by school principals for teachers' professional development could influence the teachers' commitment but not their performance.

Recommendations

Based on the findings and conclusions drawn from the analysis, the following recommendations are proposed:

1. The proposed Professional Development Program may be submitted to the Office of the School Superintendent of the Division of Rizal for comments and possible implementation.
2. The proposed Professional Development Program for the school principals should be presented by the researcher during the two-day seminar for the participants' comments.
3. Parallel studies using the mixed method may be conducted by other research enthusiasts to verify if similar results prevail.

Compliance with Ethical Standards

In conducting the research, the researcher initially sought permission from the Schools Division Superintendent of the Division of Rizal through a letter which was forwarded to her office through Electronic Core Application of Rizal Education System v. 1.0. (ECARES). After the request letter was approved by the SDS, the researcher was referred to the school principals for their appropriate action with utmost consideration and strict compliance to DepEd Order No. 9, s. 2005. The school principals assisted the researcher in administering and retrieving the survey questionnaire. The respondents were assured that their participation was voluntary and that they could withdraw at any time without consequence. No coercion was applied to compel the respondents to complete the survey questionnaire or participate in the interview. Confidentiality and

anonymity of the provided information were guaranteed, with respondents' names being optional to maintain anonymity. Proper referencing was employed to acknowledge all sources of information utilized in the study, including journals and research studies cited.

Acknowledgments

The researcher extends heartfelt gratitude to Almighty God for the blessings, guidance, wisdom, and inspiration that made this dissertation possible. Special thanks to his family, particularly his mother, sisters, and brother, for their unwavering moral support throughout the study. Sincere appreciation is also due to the experts who generously contributed their time, effort, and expertise, providing invaluable inputs, constructive feedback, and suggestions that significantly enhanced this research. The researcher is grateful to the School Division Superintendent for supporting and approving the request to conduct this study. Acknowledgement is also due to all the Public School District Supervisors, Senior High School Principals, and Teachers of the Division of Rizal for their wholehearted support, cooperation, and generosity in facilitating the data gathering for this research. Finally, thanks to friends, classmates, and colleagues who contributed to the development of this study and to all those who inspired and motivated the researcher throughout this journey.

ABSTRACT

This study assesses the inventory, handling practices, and management of the Science Laboratory at MinSU Bongabong Campus. It aims to evaluate the availability and condition of lab equipment, safety handling practices, and management strategies in place.The research methodology involves conducting an inventory assessment of lab equipment, categorizing items into safety-related common equipment, basic apparatus, measuring glassware, non-measuring glassware, and heating equipment. This assessment will provide insights into the adequacy and functionality of the equipment. Additionally, the study will evaluate handling practices concerning personal protective equipment, emergency equipment availability, and laboratory housekeeping standards. This evaluation aims to identify areas for improvement to ensure a safe laboratory environment. The research will also examine management practices, including equipment calibration and repair, inspection of new and used equipment, and the organization of lab spaces. This will help assess the effectiveness of current management practices and highlight areas for enhancement. The findings will inform an Action Plan aimed at improving the Science Laboratory's inventory, safety measures, and management practices, ultimately contributing to enhanced functionality, safety, and efficiency in the laboratory.

Keywords: *science laboratory, safety measures, handling practices, inventory, assessment*

INTRODUCTION

This study focuses on conducting a comprehensive assessment of the science laboratories at Mindoro State University (MinSU) Bongabong Campus, specifically analyzing the variables of science laboratory inventory, handling practices, and management practices. The aim is to evaluate the current state of these variables within the laboratories at the campus, including the availability and adequacy of lab equipment, the efficiency of the handling process, as will as the effectiveness of the managing process. The assessment will provide valuable insights into the strengths and weaknesses of these variables, identifying areas that require improvement or enhancement within the specific context of MinSU Bongabong Campus. The findings will then be used as a basis for formulating and implementing an Action Plan, tailored to address the identified areas of improvement and enhance the overall functionality and productivity of the science laboratories at MinSU Bongabong Campus. The Action Plan will serve a map to improve the science laboratory of MinSU Bongabong Campus.

Science educators have suggested that using laboratory activities has numerous educational advantages, and the laboratory has been given a central and distinctive role in science education (Konstam et al., 2018).The statement highlights the educational benefits of laboratory activities in science instruction and acknowledges the laboratory's central and unique role in fostering effective learning experiences. By integrating laboratory activities into science instruction, educators can improve students' understanding, critical thinking skills, inquiry abilities, collaboration, and motivation in science.

Science laboratory is a place for conducting experiments and practicum activities. Students will better understand the subject matter if they are actively involved in the learning process. Laboratory works increases learning motivation of students. Laboratory practices play a vital role to reach out the gap between theory and practice (Cullin et.al., 2017). Laboratory applications have been stated to help students define the concepts of science in a more comprehensive and meaningful manner (Harman et al., 2016). Laboratories have long been regarded as an important component in science education (Kwok, 2015). The main purpose of teaching science is to develop the skills of learners, mainly to adapt the dynamic world. The teacher has a great role to reach out this purpose. Science laboratory influence the quality of education and the learning implementation of the teachers and the activities of the students inside the classroom particularly in science. Therefore, the immediate action for updating and improving the science laboratory must be emphasized.

Conducting a science laboratory needs assessment will help the school gain a deeper understanding on science laboratory, prioritize its resources, appeal to stakeholders for donors, and activate linkages with other related agencies.

A science laboratory needs assessment will help to learn about the inventory, handling of material and equipment, and management practices in the laboratory. The

assessment can reveal both a laboratory most pressing needs and leverageable resources so that university can direct funding and resources to produce a well-equipped and knowledgeable student. Nonprofit organizations and related agencies must often make the case for their programs to garner support. A science laboratory needs assessment report, signals that their services and decisions are well-informed and necessary.

Efficient inventory management enhances lab productivity and reduces costs. Managing inventory is essential for the smooth operation of any laboratory, regardless of its size. It can be challenging to monitor consumable supplies, reagents, lab equipment, and instruments. However, implementing efficient inventory management practices can greatly improve productivity and reduce costs. By using simple and creative strategies, you can maximize your lab budget and enhance overall efficiency.

This research focuses on assessing the inventory, handling practices, and management practices of the Science Laboratory at MinSU Bongabong Campus. The study aims to evaluate the availability and condition of lab equipment, assess the handling practices related to safety measures, and examine the management practices implemented in the laboratory.

The research methodology includes conducting an inventory assessment of the lab equipment, categorizing them into common equipment for safety purposes, basic apparatus, glassware apparatus used for measuring, glassware apparatus not used for measuring, and common equipment for heating. The assessment will provide insights into the adequacy and functionality of the lab equipment.

Furthermore, the study will assess the handling practices in terms of personal protective equipment and clothing, availability of emergency equipment, and the level of housekeeping in the laboratory. This assessment will help identify areas for improvement in ensuring a safe and secure laboratory environment.

Lastly, the research will evaluate the management practices in the laboratory, including the calibration and repair of equipment, checking of new and used laboratory equipment, and the cleaning and organization of equipment and countertops. This assessment will shed light on the effectiveness of current management practices and identify areas for enhancement.

The findings of this research will be the basis for formulating an action plan, that provide valuable information for improving the Science Laboratory at MinSU Bongabong Campus. The results will guide the implementation of necessary measures to enhance the inventory, handling practices, and management practices in the laboratory. It is expected that the research outcomes will contribute to the overall improvement of the laboratory's functionality, safety, and efficiency.

Research Questions

This study aims to analyze the inventory, handling and management practices of Science Laboratory of Mindoro State University (MinSU). Bongabong Campus
Specific Questions:

1. What is Inventory assessment of science laboratory of MinSU Bongabong Campus in terms of:
    - 1.1 Common Lab Equipment
    - 1.2 Glassware- Used For Measurement
    - 1.3 Equipment Often Used In Titrations
    - 1.4 Basic Laboratory Equipment

2. What is the extent of satisfaction of the respondents in Handling practices assessment of Science Laboratory of MinSU Bongabong Campus in terms of:
    - 2.1 personal protective equipment and clothing,
    - 2.2 emergency equipment, and
    - 2.3 housekeeping

3. What is the extent of satisfaction of the respondents in \Management Practices assessment of Science Laboratory of MinSU Bongabong Campus in terms of:
    - 3.1 calibration of laboratory equipment
    - 3.2 repairing of Laboratory equipment
    - 3.3 checking of new and used laboratory equipment

4. What specific Action Plan could be proposed based on the findings?

METHODOLOGY

This section presents the research design used to answer the specific research questions as well as the research setting, participants, sampling, and the detailed data gathering procedures, and analysis, and ethical considerations.

Research Design. The research used the descriptive method to conduct this study. Descriptive research employed to describe the status of the laboratory materials, apparatus and equipment in Science Laboratory through inventory assessment. It is also used in describing the Handling practices and Management Practices of Science Laboratory of MinSU Bongabong Campus.

Research Participants and Sampling. Sixty Bachelor of Secondary Education major in Science took part in the study. These number of respondents were selected from the three year level with a total population of 85 students, There were 20 student from second, third, and fourth year respectively and eight faculty members teaching science involved as respondents with a total number 68.

Data Collection. A written request duly noted by the Program Chair (PC) to conduct a study and to distribute the questionnaire to the students and faculty respondents was sent to the Campus Executive Director (CED) for approval. Upon approval the questionnaire was distributed personally to the respondents. Retrieval of the questionnaire was made after one day. The data gathered were tabulated, analyzed and interpreted.

Instruments. To gather the data from respondents, a self-made questionnaire was used as instrument. The questionnaire focused on the handling practices and management practices of science laboratory of MinSU Bongabong Campus. Meanwhile, another source of data was the inventory records of the laboratory equipment from the supply office.

Data Analysis. The quantitative data gathered were treated using Descriptive Statistics such as mean. On the other hand, the inventory records from the Supply Office were also used to described the status of the different science laboratory apparatus and equipment.

RESULTS

This section presents the results of the data analysis done by the researchers. The results were presented in a way that answers the research questions which were previously stated.

Table 1. Inventory assessment of science laboratory of MinSU Bongabong Campus

Common Lab Equipment	Quantity	Good Condition (GC)	Not Good Condition (NGC)	None (N)
Fire extinguisher		/		
Safety goggles		/		
Safety gloves		/		
Lab coats/gown		/		
First aid kit				/
Emergency shower				/

Legend for Inventory Process ***Good Condition (GC) Not Good Condition (NGC) None (N)***

Table 1 shows the inventory assessment of science laboratory of MinSU Bongabong Campus.

Based on the inventory of the science laboratory equipment and materials, it appears that some items were not present, and some were not functioning properly. Additionally, only a few items were found to be in working condition.

Part II. The handling practices assessment of the Science Laboratory at MinSU Bongabong Campus in terms of;

Table 2. Personal Protective Equipment (PPE) and Clothing

Indicator	Mean	Rank	Description
1. Laboratory personnel/instructor/students consistently wear the appropriate PPE (e.g., lab coats, gloves, safety goggles) during all laboratory activities	2.62	2.5	Often
2. Laboratory personnel/instructor provided with proper training on the correct usage and disposal of PPE	2.54	4	Often
3. there is a designated area or facilities for storing and changing into/out of PPE within the laboratory	2.62	2.5	Often

4. There is a clear policy or guideline in place regarding the use of PPE in the laboratory	2.68	1	Often
5. Regular inspections or assessments conducted to ensure compliance with PPE usage among laboratory personnel and instructor	2.47	5	Often
Overall Mean	2.79		Often

Table 2 presents the mean on handling practices assessment of the Science Laboratory at MinSU Bongabong Campus in terms of PPE and clothing. As seen in the table, item 4, there is a clear policy or guideline in place regarding the use of PPE in the laboratory have mean score of 2.68, ranked 1st and with often as verbal description. This implies that a clear policy regarding the use of PPE is essential to properly guided the laboratory users.

It can also be observed from the table that regular inspections or assessments conducted to ensure compliance with PPE usage among laboratory personnel and instructor got a mean score of 2.47, ranked last with often as verbal description. The results revealed that regular inspections or assessments must be conducted for meaningful practices.

Table 3. Emergency Equipment

Indicator	Mean	Rank	Description
1. Emergency equipment, such as fire extinguishers, readily accessible and properly maintained within the laboratory	2.78	2	Often
2. There is a clear procedure or protocol in place for using emergency equipment in case of an emergency situation	2.65	3	Often
3. Laboratory personnel/instructor trained on the proper usage of emergency equipment, such as fire extinguishers or emergency eyewash stations	2.59	5	Often
4. Emergency equipment regularly inspected and tested to ensure they are in good working condition	2.90	1	Often

5. Emergency equipment clearly labeled and their locations prominently displayed within the laboratory	2.62	4	Often
Overall Mean	2.71		often

Table 3 presents the mean on handling practices assessment of the Science Laboratory at MinSU Bongabong Campus in terms of emergency equipment. Emergency equipment regularly inspected and tested to ensure they are in good working condition ranked 1st, described as often which gained mean value of 2.90. Regular inspections and tests on emergency equipment indicate a proactive approach to maintenance and safety.

On the other hand, item number 3 received the mean score of 2.59 with verbal description of often and ranked last. However, there is room for improvement in terms of training laboratory personnel and instructors on the proper usage of emergency equipment.

The overall mean is 2.71 with verbal description of often was achieved. According to Becerik-Gerber et al., (2012) emergency supplies should focus on ensuring ongoing readiness and safety in crisis situations. To analyze the overall results, it can be noted that handling practices in terms of emergency equipment should give attention to ensure continuous preparedness and safety in emergency situations.

Table 4. Housekeeping

Indicator	**Mean**	**Rank**	**Description**
1. The laboratory is maintained in terms of cleanliness and tidiness	2.62	2	Often
2. The laboratory personnel trained on proper housekeeping practices, such as cleaning spills and maintaining a clutter-free workspace	2.54	3	Often
3. There are designated areas or containers for waste disposal within the laboratory	2.21	4	Often
4. The chemicals and hazardous materials properly stored and labeled in the laboratory	2.65	1	Often
5. The laboratory countertops and workspaces are cleaned and sanitized	2.09	5	Rarely
Overall Mean	2.42		Rarely

Table 3 presents the mean on handling practices assessment of the Science Laboratory at MinSU Bongabong Campus in terms of housekeeping.

As seen in the table, item 4, the chemicals and hazardous materials properly stored and labeled in the laboratory have mean score of 2.65 ranked 1st and with often as verbal description. The item implies that the chemical and hazardous materials mus properly stored and labeled in the laboratory to avoid any unnecessary incidents.

It can also be observed from the table that the laboratory countertop and workspace are cleaned and sanitized got a mean score of 2.09, ranked last with rarely as verbal interpretation. The result revealed that the laboratory should prioritize regular cleaning and sanitization to ensure a safe and healthy working environment

However, the overall mean is 2.42 with verbal description of rarely. The results implies that laboratory housekeeping needed more attention of cleaning and sanitation to maintain quality services of the laboratory. Cleaning and sanitation in the lab needed to be prioritized in order to maintain the level of quality services provided by the facility (Housekeeping, 2021).

Table 5. Summary of the mean on the handling practices assessment of the Science Laboratory at MinSU Bongabong Campus

Indicator	Mean	Rank	Description
1. Personal Protective Equipment (PPE) and Clothing	2.79	1	Often
2. Emergency Equipment	2.71	2	Often
3. Housekeeping	2.42	3	Rarely
Overall Mean	**2.64**		**Often**

Table 5 the presents summary of the mean on the handling practices assessment of the Science Laboratory at MinSU Bongabong Campus.

The result shown in the table implies that participants were generally dissatisfied with the variable housekeeping, as it obtained the lowest mean score of 2.42 and was ranked three.

Despite receiving often verbal descriptions, both Personal Protective Equipment (PPE) and Clothing, as well as Emergency Equipment, obtained relatively low mean scores of 2.79 and 2.71 respectively. This suggests that participants were not fully satisfied with these variables. The verbal descriptions often may have been insufficient in addressing any concerns or difficulties related to the use or availability of PPE and Clothing, as well as Emergency Equipment. The overall mean score of 2.64, with a verbal description of often, indicates a generally low level of satisfaction across all variables.

Based on these results, it is evident that there are areas for improvement in terms of housekeeping, as well as the provision and understanding of Personal Protective

Equipment (PPE) and Clothing, and Emergency Equipment. Emergency equipment, such as fire extinguishers, eyewash stations, and emergency showers, plays a critical role in ensuring the safety of personnel and mitigating potential hazards in a laboratory and should be regularly inspected, maintained, and easily accessible to effectively respond to any emergency situation (Kronick et al., 2015).

Part III: The management practices assessment of the Science Laboratory at MinSU Bongabong Campus in terms of:

Table 6. Calibration of Laboratory Equipment

Indicator	Mean	Rank	Description
1. There is a documented calibration schedule for laboratory equipment in place	3.46	3	Often
2. There are trained and qualified personnel responsible for conducting equipment calibration	1.40	4	Never
3. The calibration records maintained and updated for each laboratory equipment	3.39	1	Often
4. The calibration results reviewed and acted upon in a timely manner	3.32	5	Often
5. There are procedures in place for addressing any deviations or issues identified during equipment calibration	3.47	2	Often
Overall Mean	**3.03**		**Often**

Table 6 portrays the mean on management practices assessment of the science laboratory at MinSU Bongabong Campus in terms of calibration of laboratory equipment.

The table described that item 3 the calibration records maintained and updated for each laboratory equipment ranked 1st with the mean value 3.39 with often verbal description. This result asserts that maintaining and updating calibration record of the laboratory equipment manifest a systematic approach in keeping records.

Likewise, item 4, the calibration results reviewed and acted upon in a timely manner have mean value of 3.32, ranked last have often verbal description. This manifest that commitment to review calibration results is commendable.

Generally, table 6 has an overall mean of 3.03 with verbal description of often. The

results implies that the laboratory should continue to prioritize equipment calibration and invest in training personnel to enhance their expertise in this area. This result is supported by Madu (2012) that laboratory should keep placing a high priority on equipment calibration and spend money on staff training to increase their knowledge in this area.

Table 7. Repairing of laboratory equipment

Indicator	Mean	Rank	Description
1. There is a designated process or system in place for reporting and documenting equipment issues or malfunctions	3.56	2	Always
2. There is a trained and qualified personnel responsible for conducting equipment repairs	3.53	3	Always
3. There are established timelines or response times for addressing equipment repairs	3.59	1	Always
4. The equipment repair records maintained and updated for each repair conducted	2.65	4	Often
5. There are procedures in place for prioritizing and scheduling equipment repairs based on urgency and impact on laboratory operations	2.59	5	Often
Overall Mean	**3.18**		**Often**

Table 7 present the mean on managing practicess assessment in terms of repairing of laboratory equipment.

Item 3, there are established timelines or response times for addressing equipment repairs ranked 1st as always which gained 3.59. The result implies that timeline or response timeline indicate a structured and timely approached to equipment repairs.

On the other hand, the item 5, there are procedures in place for prioritizing and scheduling equipment repairs based on urgency and impact on laboratory operation, received the mean score of 2.59 with verbal description of often and ranked last. The results shows that there is a need for prioritizing and scheduling equipment repairs based on urgency and impact.

Furthermore, the table also shows an overall mean of 3.18 with a verbal description of often. The results shows an evident that the laboratory should continue to prioritize equipment maintenance and repairs to minimize downtime and ensure smooth laboratory operations. As an evidence to this statement Bento and Fontes (2015), mentioned that the laboratory should keep giving equipment maintenance and repairs top priority in order

to minimize downtime and ensure effective laboratory operations.

Table 8. Checking New and Used Laboratory Equipment

Indicator	Mean	Rank	Description
1. There is a documented process in place for checking new laboratory equipment before it is put into use	3.56	4	Always
2. The trained and qualified personnel are responsible for conducting checks on new laboratory equipment	3.59	2	Always
3. There are established criteria or standards for checking the functionality and safety of new laboratory equipment	3.60	1	Always
4. There is a process in place for checking and assessing the condition of used laboratory equipment before it is used or acquired	3.57	3	Always
5. There are criteria or standards for evaluating the condition and functionality of used laboratory equipment	3.51	5	Always
Overall Mean	3.57		Always

Table 8 presents the mean on the management practices assessment of the Science Laboratory at MinSU Bongabong CampusCheckingin terms of New and Used Laboratory Equipment.

As show in the table, item 3, there are established criteria or standards for checking the functionality and safety of new laboratory equipment received 3.60 mean score, ranked 1st and verbal description of always. This implies that there is systematic and thorough approach to equipment checks.

Meanwhile, item 5, there are criteria or standards for evaluating the condition and functionality of used laboratory equipment received the 3.51 mean score, which ranked last and with always verbal description. The results manifest that in the laboratory should consider the evaluation of the condition and functionaly of the used laboratory equipment to minimize the risk of using faulty and unsafe equipment.

Finally, the table shows the overall mean score of 3.57, the always verbal description. The result implies that the laboratory should continue to prioritize equipment

checks to ensure the quality and reliability of the equipment used in laboratory operations. According to Asia (2011) that to ensure the quality and dependability of the equipment used in laboratory operations, laboratories should continue to prioritize equipment checks.

Table 9. Summary of the mean on the management practices assessment of the Science Laboratory at MinSU Bongabong Campus

Indicator	Mean	Rank	Description
1. Calibration of Laboratory Equipment	3.03	3	Often
2. **Repairing of laboratory equipment**	3.18	2	Often
3. Checking New and Used Laboratory Equipment	3.57	1	always
Overall Mean	**3.26**		**Often**

Table 9 shows summary of the mean on the management practices assessment of the Science Laboratory at MinSU Bongabong Campus

The results showed in the table is the summary of the mean responses of the participants which generally implied that they more satisfied with the indicator checking new and used laboratory equipment, which received the highest mean score of 3.57 and was ranked as one. The provision of a verbal description always seems to have implied a significant role in improving this aspect. On the other hand, the variable of repairing laboratory equipment received a slightly lower mean score of 3.18 and was ranked as two.

The variable calibration of laboratory equipment received the lowest mean score of 3.03 and was ranked as three. This suggests that participants were relatively less satisfied with this variable. Despite the verbal description often, it may not have been sufficient to adequately address any concerns or difficulties associated with the calibration process of the laboratory equipment. Overall, the mean score of 3.26, with a verbal description of often, indicates a moderate level of satisfaction across all variables.

What specific SciLab Training-Workshop could be proposed based on the findings?

The Proposed Action Plan

Title: Enhancing Science Laboratory Inventory, Handling Practices, and Management Practices Action Plan

Activity	Responsible Parties	Timeline	Resources Required

Assess current inventory system	Laboratory Personnel	Week 1	Inventory records, observation checklist
Update inventory records	Inventory Team	Week 2	Digital inventory management software, labeling materials
Conduct a thorough inventory audit	Inventory Team	Week 3	Physical inventory count, disposal guidelines
Implement a standardized labeling system	Lab Personnel, Inventory Team	Week 4	Labeling materials, labeling guidelines
Establish storage guidelines	Lab Personnel, electrician	Week 5	Storage guidelines, segregation materials
Train staff on handling procedures	Lab Personnel, Training Department	Week 6	Training materials, PPE, handling protocols
Develop safety protocols	Lab Personnel, Maintenance Officer	Week 7	SOP templates, safety guidelines
Implement regular safety inspections	Electrician and Maintenance Officer	Week 8	Implement regular safety inspections
Conduct staff training on safety practices	Lab Personnel, Training Department	Week 9	Training materials, safety equipment
Monitor and Establish a maintenance schedule	Lab Personnel, Maintenance Team	Week 10	Maintenance schedule, equipment checklist
Evaluate and adapt	Lab Personnel , Stakeholders	Ongoing	Feedback forms, improvement plan

DISCUSSION

On table 1, shows several implications. Firstly, the absence of certain equipment means that students and researchers may not have access to all the necessary tools for conducting experiments or carrying out their work effectively. This can hinder their

progress and limit the scope of their scientific investigations. According to the study of Cossa, et.al (2015), laboratory equipment and learning materials are in short supply due to the lack of funds. In connection to the problem of scarcity of laboratory materials the university must identify the most critical items needed for hands-on science activities and prioritize their acquisition. Focus on acquiring equipment and materials that are necessary for fundamental experiments and activities that align with the curriculum.

Secondly, the presence of non-functioning equipment poses a challenge as it may lead to inaccurate results or unreliable data. This can negatively impact the quality of research and experimentation conducted in the laboratory. Always remember that science is an experimental discipline, laboratory becomes an essential part in enhancing students' scientific skills (Suleiman, 2013). This will not be materialized if the laboratory materials are not in good condition or not functioning.

Lastly, the limited number of functioning items can result in a bottleneck, where multiple individuals or groups have to share the available equipment. This can lead to delays, decreased productivity, and potential conflicts over resource allocation. According to Ngozi & Halima (2015) inadequate laboratory facilities hinder effective teaching and learning and may contribute to the poor performance of students.

These are the reason why university and other educational institution must address the inadequacy of laboratory materials to avoid delay and hider laboratory works and activities. A thorough assessment of the inventory should be conducted to identify missing items and repair or replace non-functioning equipment. Adequate funding and resources should be allocated to ensure that the laboratory is well-equipped and maintained to support scientific research and educational activities effectively.

Meanwhile on table 2, the results manifest that the laboratory has a slightly good level of compliance with PPE usage. However, there may be room for improvement, particularly in providing more comprehensive training on PPE usage and disposal and conducting more frequent inspections or assessments to ensure ongoing compliance. The results is supported with Ranney et al.,(2020) that laboratory must provide with Personal Protective Equipment (PPE), includes items like gloves, goggles, lab coats, and respirators, should be worn correctly and consistently to reduce the risk of exposure to chemicals, biological agents, or physical hazards, is crucial in a laboratory setting to safeguard individuals from potential hazards and ensure their safety.

However, on table 3 got an overall mean is 2.71 with verbal description of often was achieved. According to Becerik-Gerber et al., (2012) emergency supplies should focus on ensuring ongoing readiness and safety in crisis situations. To analyze the overall results, it can be noted that handling practices in terms of emergency equipment should give attention to ensure continuous preparedness and safety in emergency situations.

On table 4, the results implies that laboratory housekeeping needed more attention of cleaning and sanitation to maintain quality services of the laboratory. Cleaning and sanitation in the lab needed to be prioritized in order to maintain the level of quality

services provided by the facility (Housekeeping, 2021).

Based from the result on table 5, it is evident that there are areas for improvement in terms of housekeeping, as well as the provision and understanding of Personal Protective Equipment (PPE) and Clothing, and Emergency Equipment. Emergency equipment, such as fire extinguishers, eyewash stations, and emergency showers, plays a critical role in ensuring the safety of personnel and mitigating potential hazards in a laboratory and should be regularly inspected, maintained, and easily accessible to effectively respond to any emergency situation (Kronick et al., 2015).

However, table 6 has an overall mean of 3.03 with verbal description of often. The results implies that the laboratory should continue to prioritize equipment calibration and invest in training personnel to enhance their expertise in this area. This result supported by Madu (2012) that laboratory should keep placing a high priority on equipment calibration and spend money on staff training to increase their knowledge in this area.

Furthermore, the table 7 shows an overall mean of 3.18 with a verbal description of often. The results shows an evident that the laboratory should continue to prioritize equipment maintenance and repairs to minimize downtime and ensure smooth laboratory operations. As an evidence to this statement Bento and Fontes (2015), mentioned that the laboratory should keep giving equipment maintenance and repairs top priority in order to minimize downtime and ensure effective laboratory operations.

Looking on the table 8, it shows the overall mean score of 3.57, the always verbal description. The result implies that the laboratory should continue to prioritize equipment checks to ensure the quality and reliability of the equipment used in laboratory operations. According to Asia (2011) that to ensure the quality and dependability of the equipment used in laboratory operations, laboratories should continue to prioritize equipment checks.

Table 8 states that timely repairs help to reduce downtime, ensure accurate results, and prolong the lifespan of equipment, enabling uninterrupted scientific research and experimentation. Maintaining the functionality and dependability of laboratory equipment is crucial for keeping scientific instruments reliable and functional (De Moraes Ramos et al., 2017). Calibration of science laboratory equipment is a critical process that ensures reliable and consistent results, enabling researchers and students to trust the data obtained from their experiments. It involves ensuring the accuracy and precision of measurement instruments by comparing their readings to known standards (WHO, 2011).

The results also indicates a moderate level of satisfaction across all variables. This suggests that the verbal descriptions often were generally helpful in facilitating understanding and satisfaction, but there may be room for improvement in particular to the said variables.

Conclusions

1. From the findings there are several issues with the science laboratory equipment and materials, including missing items, non-functioning equipment, and a limited number of functioning items.
2. The respondents expressed dissatisfaction with the variables of housekeeping, Personal Protective Equipment (PPE) and Clothing, and Emergency Equipment.
3. The participants were most satisfied with the indicator of checking new and used laboratory equipment, while repairing laboratory equipment received a slightly lower level of satisfaction.

Recommendations

1. The university may conduct a thorough assessment of the inventory to identify missing items and repair or replace non-functioning equipment. Adequate funding should be allocated to ensure the laboratory is well-equipped and maintained.

2. The institution should emphasize the important to improve the provision and understanding of housekeeping, PPE and Clothing, and Emergency Equipment. This can be achieved through regular training and orientation on proper use and availability of PPE and Clothing, as well as ensuring cleanliness and organization in the laboratory for better housekeeping.

3. The university should improve the repair process by addressing any delays or difficulties. This can be done by implementing a system for timely repairs, providing clear communication and updates to participants on the status of repairs, and addressing any concerns or difficulties related to the repair process.

4. The university should adopt the proposed **Enhancing Science Laboratory Inventory, Handling Practices, and Management Practices Action Plan**

Compliance With Ethical Standards

Throughout the conduct of the study, research ethics were considered by the researcher. Aside from the permission secured from the CED, the proposal was presented to the institutional review committee to make sure it would not violate any research ethics and that it would serve its purpose. Voluntary participation was observed right during sampling. The respondents were asked to sign the informed consent. They are assured of the confidentiality, anonymity of their identities and their responses, and were informed of their right to withdraw their participation in the study.

Acknowledgments

I would like to express my heartfelt gratitude to Mindoro State University for providing the resources and support necessary for this study. I extend my sincere appreciation to my co-teachers for their invaluable guidance and encouragement throughout this research process. A special thank you to the student respondents for their willingness to participate and share their insights, which were crucial to the success of this study. Lastly, I would like to acknowledge the supply officer for their assistance in facilitating the necessary materials and equipment. Your contributions have been instrumental in the completion of this work.

SECOND LANGUAGE TEACHING ANXIETY, EFFICACY BELIEFS AND MOTIVATION AMONG K-12 ENGLISH TEACHERS

Ericson Macatangay Macapuno, Ph.D.
Dolores D. Borras, DCOMM

Lyceum of the Philippines University- Batangas, Batangas City, Philippines

https://doi.org/10.5281/zenodo.13160562

ABSTRACT

This quantitative research investigated Second language teaching anxiety, efficacy beliefs, and motivation among 386 English teachers in Batangas City Division, sampled from a larger population of 1100. The participants were mainly female elementary school teachers with master's degrees and 11 to 20 years of teaching experience. They reported experiencing anxiety related to self-perceived language proficiency, student engagement, and time management during second language instruction but expressed confidence in their teaching abilities. Notably, they did not feel anxious about their teaching experience or fear negative evaluations. The study employed statistical analyses, including ANOVA and t-tests, revealing no significant differences in teaching anxiety based on demographic profiles. However, significant variations in efficacy beliefs emerged when grouped by educational attainment, particularly concerning classroom proficiency and instructional strategies. External motivation also showed significant differences based on the teachers' highest educational level. Moreover, significant relationships were identified through Pearson correlation analysis, linking various factors in second language teaching. Key correlations included those between teaching anxiety and self-efficacy, self-perception of proficiency and classroom effectiveness, and various challenges faced in teaching. Based on these findings, an English language teacher improvement plan was developed, and recommendations for future research were made, emphasizing the importance of replicating and referencing this study to further explore these significant relationships and enhance teacher development in second language teaching.

Keywords: *Second Language Teaching Anxiety, Efficacy Beliefs, Motivation, English Teacher Improvement Plan*

INTRODUCTION

Learning a language is an essential part to be able to communicate and to understand the messages a human being wants to convey. Through language, human beings can perform duties and responsibilities, obtain needs and wants, survive day-to-day living, and enjoy entertainment and leisure. All of these are enjoyed in the context of a specific and the same language community. Equally important and capacitating is the ability to learn and utilize a second language (L2), which in turn, expands the opportunities and horizons of an individual. Learning a second language enables a person to transact with people who belong to the speech community that speaks that language.

The significance of language extends beyond individual communities, functioning in global interactions and understanding. Learning a second language does not only broaden one's personal horizons but also fosters intercultural communication and cooperation. In an increasingly interconnected world, proficiency in multiple languages is a valuable skill that opens doors to new opportunities and perspectives.

Today, English as a language, spoken widely all over the world, opens an array of opportunities –communication for business, academia and travel, wide access to online and offline information stored in English medium, wider educational opportunities, better understanding of technological advancements, better chances to learn culture of English-speaking countries, and global citizenship to name a few. The widespread use of English as a language transcends boundaries, making it an essential and required tool for communication and access to opportunities. Whether individuals acquire English as a second language, foreign language, or native tongue, its benefits are unfathomable. To illustrate, its role in facilitating global communication, particularly in business, academia, and travel is important.

In connection to this line of ideas, teaching a second language is challenging as second language teachers play a crucial role as facilitators and conversation partners for second language learners, creating a communicative environment for practice. Various factors such as instructional strategies, L2 proficiency, and feedback techniques impact language learning. Effective L2 teachers must be proficient in the target language to model correct pronunciation and grammar. Their instructional strategies and motivational skills greatly influence learner engagement and progress in language acquisition, highlighting the diverse set of skills and considerations needed to address the unique challenges of teaching a second language.

Establishing on the grounds of the previous situations, it could be deduced that various factors post difficulties in teaching a second or foreign language. More so, these factors accumulate and thus induce second language teaching anxieties that affect the quality of teaching and learning experiences students may get from these language teachers. Second, Language Teaching Anxiety refers to the feelings of unease, nervousness, or stress experienced by language teachers when instructing students in a second language. This type of anxiety can manifest in various forms, such as fear of making mistakes, concerns about students' comprehension, or worries about meeting

educational expectations. Second Language Teaching Anxiety can impact a teacher's confidence, teaching effectiveness, and overall well-being in the classroom (Zhang and Rahimi, 2021).

Previous studies have shown that anxiety in teaching a second or foreign language could lead to domino effects, opening the doors for various educational problems. Teaching anxiety could reduce instructional quality, because anxious teachers may struggle with delivering clear and effective lessons (Horwitz, 2019) and anxious teachers are less likely to implement innovative teaching strategies, opting instead for safer, more traditional methods that may not be as effective in promoting language acquisition (Tsiplakides and Keramida, 2020).

Second language teaching anxiety could also create an emotionally unstable classroom atmosphere which could negatively impact student motivation and engagement (Gkonou et al., 2020) because emotional states of teachers could often be mirrored by their students and could lead to a cyclical effect where anxiety is perpetuated within the classroom (Dewaele and MacIntyre, 2019). The relationship between teacher anxiety and student performance is further supported by studies indicating that high levels of teacher anxiety correlate with lower student achievement in language learning (Khajavy, Ghonsooly, Fatemi, and Choi, 2018).

As built by the foregoing arguments and citations, it can be said that building programs that could support second language teachers in terms of their challenges and difficulties could build initial and foundational steps toward improving teaching and learning English as a second language. Thus, there is a need for teacher training programs and stress management techniques to better prepare educators for the emotional demands of their profession (Gregersen & MacIntyre, 2021) and for ongoing professional development and support that could help teachers manage anxiety and improve their instructional practices (Tran, Baldauf, & Moni, 2019). This is to understand and address anxiety in ESL teaching which is essential for creating a conducive learning environment that could promote teacher well-being and student success (Oxford, 2020; Brown & White, 2020).

While second language teaching anxiety poses threats and difficulties in language teaching, efficacy beliefs of second language teachers could also make or break the teaching and learning outcomes. Soland (2019), defines second language teaching efficacy beliefs as teacher's confidence in their ability to effectively teach a second language to students. It involves the belief that one can successfully plan and execute language lessons, manage classroom activities, and support students in their language learning journey. Teachers with high Second Language Teaching Self-Efficacy Beliefs are more likely to persist in the face of challenges, utilize innovative teaching strategies, and positively impact student outcomes in language acquisition.

In the context of second language teaching efficacy beliefs, Kim and Elder (2021), emphasized the importance of teachers' confidence in their ability to effectively teach a second language. According to them, teachers with high efficacy beliefs are more likely

to implement innovative teaching strategies, persevere through challenges, and positively impact their students' language learning outcomes. They enumerated some key points regarding second language teaching efficacy beliefs including the impact of teachers' beliefs on student performance and motivation in learning a language, various strategies to improve teacher's self-efficacy in second language instruction, different roles of professional support and development in enhancing teachers' efficacy beliefs, the essential connection between teachers' efficacy beliefs and how these affect classroom management in second language classrooms, and finally, some research-based practices for encouraging optimistic efficacy beliefs among second language teachers. Overall, they underscore the significance of empowering teachers with the skills and confidence needed to create a motivating, engaging and effective language learning environment.

On the other hand, teachers could also demonstrate efficacy in providing constructive feedback and assessments which could help second language teachers guide student progress effectively, foster a positive classroom culture collaborating with colleagues for professional growth and improved teaching practices, keep up with current pedagogical research and apply it in the classroom is crucial for staying (Zhang and Rahimi, 2021).

MacIntyre (2018) also discussed about the important roles that teachers' self-efficacy beliefs play in second language learning process. He emphasizes that the confidence of teachers to effectively teach a second language directly influences their instructional routines and practices, and consequently, student outcomes. He added how self-efficacy beliefs results to positive teachers' grit, motivation and positive attitude to adopt innovative teaching strategies in a language classroom. He delves into effective strategies for enhancing self-efficacy in second language instruction, and the importance of professional development, support systems and coaching in improving teachers' confidence to teach and manage classes of second language learners, and to cultivate positive self-efficacy beliefs in the realm of second language teaching. Furthermore, he clearly emphasizes the connection between teachers' self-efficacy beliefs and classroom dynamics, highlighting how confident teachers are more that equipped to manage diverse learning situations and take a lead in fostering positive student learning experiences and engagement in learning a second language.

With the possession of different self-efficacy beliefs on second language teaching, it is also worth taking note of motivation and its role to language teaching and learning. While it has been established in language learning, it is also important to study and describe how it influence the way second language teachers perform their roles in language acquisition and learning. Language teaching motivation refers to the drive, interest, and enthusiasm that a teacher could possess, in inspiring and engaging students in learning a new language, thus could significantly impact teaching effectiveness and student outcomes (Dörnyei & Ryan, 2020).

Various instances inside and outside classroom teaching could manifest motivation in teaching a second language. First is external motivation that plays a crucial role in shaping teachers' involvement, performance, and professional development in

context of teaching a second language. Mercer and Kostoulas (2018) explain that acknowledgement of second language teachers from co-workers, supervisors, and educational institutions for their teaching practices, enthusiasm, innovations, and contributions to language education can uplift teachers' motivation and morale to excel in their teaching roles and responsibilities. In addition, workshops, training programs and professional development opportunities are considered external motivators too, which play a vital role in improving teachers' motivation in second language instruction. Access to these kinds of learning opportunities and resources, inspires and equips second language teachers with positive perspective, fostering their growth and effectiveness in teaching a second language.

On the other hand, Kubanyiova (2020) discussed about the introjected motivation which is a form of internalize drive that affects teachers' performance and attitudes in teaching a second language. This kind of motivation in the context of language learning refers to internal expectations, pressures and standards that teachers carry out on themselves to achieve professional and personal goals in their respective teaching practices. He emphasized that teachers who are well-driven by introjected motivation in second language teaching often present work ethics like perfectionism, self-discipline and strong sense of responsibility. They set optimum standards for themselves, striving to top personal benchmarks of achievement and excellence in facilitating language learning experiences for their students.

Identified motivation, as described by Assor (2019), is a significant factor in second language teaching that enhances teachers' commitment, engagement, and effectiveness. This type of motivation occurs when teachers' personal goals, values, and beliefs align with the objectives of teaching a second language. Teachers motivated by identified factors demonstrate a meaningful connection to their roles, feeling a genuine sense of purpose and relevance in language education. This passion is driven by their recognition of the transformative impact language learning can have on students' lives.

Meanwhile Gao and Lamb (2021), explained that teachers who are intrinsically motivated in second language teaching demonstrate a genuine love for language learning, a deep interest in cultural exchange, and a sincere desire to foster communication skills in their students. Their enthusiasm for the subject matter and joy in witnessing students' progress and growth fuel their commitment to creating dynamic and engaging language learning environments. Aligned with their natural curiosity, creativity, and love for language, intrinsically motivated teachers often seek out innovative teaching methods, incorporate authentic materials, and design interactive activities that inspire student engagement and promote linguistic proficiency. Their intrinsic passion for language education drives them to continually explore new approaches, adapt to diverse learner needs, and cultivate a love for language learning in their students.

It is in these preceding contexts that the study entitled "Second Language Teaching Anxiety, Efficacy Beliefs and Motivation among K-12 English Teachers" was conducted. With the end goal of providing a proposed English language teacher improvement plan, this research investigated the interaction between and among teacher

anxiety, efficacy beliefs, and motivation in the context of English language teaching across different profile variables.

This study could be considered significant to the following: First are the K-12 teachers who teach English as a second language. They will benefit from a better understanding of how anxiety, efficacy beliefs, and motivation impact their teaching practices. This study can provide insights that help teachers improve their well-being, teaching effectiveness, and job satisfaction. Second are the school administrators who could gain insights into the factors that influence the performance and well-being of K-12 English teachers. Understanding teacher anxiety, efficacy beliefs, and motivation can help administrators in creating supportive environments, offering targeted professional development, and enhancing teacher retention.

Teacher educators could also benefit from this study, as they can use the insights to tailor their training programs to address issues related to anxiety, efficacy beliefs, and motivation among pre-service teachers, ensuring they are better prepared for the challenges of teaching English as a second language. Next are the students learning English as a second language in K-12 settings . Teachers who are less anxious, more confident in their teaching abilities, and highly motivated are likely to create more engaging and effective learning environments, leading to improved student outcomes and language proficiency. Finally, are the researchers in the field of education, specifically those interested in second language teaching and teacher well-being. The findings can add to the existing body of knowledge on second language teaching anxiety, efficacy beliefs, and motivation, guiding future research directions and informing best practices in teacher support and development.

Research Objectives

This study aims to determine the second language teaching anxiety, efficacy beliefs, and motivation among K-12 English teachers in Batangas City Division.

Specifically, this research aims to achieve the following objectives:

1. describe the profile of the respondents in terms of sex, educational attainment, teaching position, and years of English language teaching experience;

2. determine foreign language teaching anxiety of the respondents as ***to*** self-perception of language proficiency, teaching inexperience, lack of student interest, fear of negative evaluation, and difficulties with time management;

3. identify the English language self-efficacy beliefs as regards to classroom proficiency, learner-focused instruction, assessment, language instruction, culture, and materials;

4. assess the second language teaching motivation of the respondents as to external motivation, introjected motivation, identified motivation, and intrinsic motivation;

5. test the significant difference in second language teaching anxiety, efficacy beliefs and motivation, when respondents are grouped according to profile variables;

6. test the significant relationship among the three variables; and

7. propose an English language teacher improvement plan.

METHODOLOGY

Research Design

This research study employed a descriptive quantitative design to achieve its objectives, focusing on examining current situations and identifying the attributes of specific phenomena through observation and exploration of correlations among them. It involved gathering descriptive information about events, which facilitated activities such as arranging, tabulating, illustrating, and explaining the collected data (Gay, 2020). This study quantitatively described the English teaching anxiety, efficacy beliefs, and second language teaching motivation among K-12 English teachers in Batangas City Division. In this study, responses of the teachers to the adopted questionnaires were quantified through relevant descriptive scales. Moreover, data that were obtained undergone statistical tests or analysis to examine the significant differences of responses when profile variables were considered. Consequently, relationships between and among these variables were determined. Based on the aforementioned conditions, descriptive quantitative was the most suitable and appropriate design to use.

Participants of the Study

The participants of the study were the 386 basic education English teachers from the Division of Batangas City. These respondents were selected from the 1100 total English teachers from the aforementioned research locale. These respondents were sampled through stratified non-proportional allocation sampling method. In this sampling method, the size of the sample that was drawn from a particular stratum does not proportionate the relative size of that stratum. The total population was divided into different strata or subgroups, then the sample size for each stratum was decided. Finally, respondents were randomly selected from each stratum according to the allocated sample size.

Data Gathering Instrument

Based on literature review, a data-gathering instrument that quantitatively described the teachers' responses was used. This adopted research questionnaire quantitatively gathered data as regards second language teaching anxiety, efficacy beliefs, and second language teaching motivation. Validation from experts and approval from the research adviser were sought. As a result, after incorporating the suggestions of the expert validator, the finalized instrument was then distributed to 30 participants for pilot testing.

Table 1 presents the reliability test results summary based on the pilot testing of the research questionnaire. Adapted from Aydin (2020), the first variable focused on Second Language Teaching Anxiety and outlined the various subdomains that highlighted the anxieties experienced by English Language teachers. The main objective was to create an instrument to assess Foreign Language Teaching Anxiety (FLTA). The subdomains included self-perception of language proficiency, teaching inexperience, lack of student interest, fear of negative evaluation, and difficulties with time management, each with corresponding reliability test results ranging from acceptable to good ratings based on Cronbach alpha values.

Table 1
Summary of Reliability Test Results

Indicators	Cronbach Alpha	Remarks
Self-perception of language proficiency	0.808	Good
Teaching inexperience	0.795	Acceptable
Lack of student interest	0707	Acceptable
Fear of negative evaluation	0.844	Good
Difficulties with time management	0.850	Good
Classroom Proficiency	0.828	Good
Learner-Focused Instruction	0.949	Excellent
Assessment	0.918	Excellent
Language Instruction	0.942	Excellent
Culture	0.789	Excellent
Materials	0.893	Good
External Motivation	0.897	Good
Introjected Motivation	0.930	Excellent
Identified Motivation	0.892	Good
Intrinsic Motivation	0.907	Excellent

George and Mallery (2003) provide the following rules of thumb:
"_ > .9 – Excellent, _ > .8 – Good, _ > .7 – Acceptable, _ > .6 – Questionable, _ > .5 – Poor, and _ < .5 – Unacceptable"

Second language teaching efficacy beliefs consisted of six components: classroom proficiency, learner-focused instruction, assessment, language instruction,

culture, and materials, each with varying levels of reliability ranging from good to excellent based on their Cronbach alpha values. These components were derived from a study by Karas (2019).

The last part of the questionnaire focused on second language teaching motivation, four subdomains are explored: external motivation with a Cronbach alpha value of 0.897, introjected motivation with a value of 0.930, identified motivation with a value of 0.892, and intrinsic motivation with a value of 0.907. These subdomains were rated as either good or excellent and are based on the research by Sato et al. (2022).

Parts II-III of the questionnaire utilized the following scale to describe and quantify the responses of the participants towards survey items.

Option	Range	Verbal Interpretation	Description
4	3.5-4.00	Strongly Agree	High
3	2.50-3.49	Agree	Average
2	1.50-2.49	Disagree	Low
1	1.00-1.49	Strongly Disagree	Very Low

Data Gathering Procedure

Once the adviser and the panel approved the research topic, the research instrument was developed based on the research objectives and literature review. Moreover, it was improved based on the comments and suggestions of the statistician and the validator. This research instrument was transformed into electronic copy, using Google Forms, to easily send it to the respondents and retrieved it thereafter. It also facilitated automation of the collection, tallying, and tabulation of the responses.

Upon approval of the commencement of the study, necessary permits for conducting were pursued and requests on data such as number of respondents were sought. Request letters were sent to the Schools Division Superintendent of Batangas City. As soon as the Schools Division superintendent approved the administration of the research questionnaire, the survey instrument was sent to the respondents through Google Forms. This platform allowed the researcher to harvest the results online, which were tabulated and sent to the statistician for processing and statistical treatment. The researcher then, started to analyze each table of the study, which was validated by the university statistician. Ample interpretations were written and literature reviews were cited to support the researcher's analysis and interpretations.

Data Analysis

In attaining the objectives of the study, descriptive statistics and inferential statistics were utilized. In generating percentage and frequency distribution as related to the demographic profile, such as sex, educational attainment, and teaching position, and years of experience, descriptive statistics was used. In expressing the proportion or part of the sample or variable as compared to its whole, percentage was used. Weighted mean was used to compute the average of the different weights of the indicators/parameters in the questionnaire.

Inferential statistics such as Independent Samples t-Test and Analysis of Variance (ANOVA), Levene's test, and Scheffe's Test were used to determine and describe the significant differences that were present in the variables when the respondents were grouped according to the expressed profile variables. The Independent Samples t Test was used to compare means of independent groups to determine statistical evidence that the population means were significantly different.

ANOVA was used to evaluate the difference between the means of the different groups respective to profile variables. Meanwhile, Levene's Test was used to check the assumption of equal variances before running the ANOVA. Finally, Scheffe Test is a post-hoc test used in Analysis of Variance used to find out which pairs of means are significant. While for the relationship between and among the three variables, namely: work tasks motivation, self-efficacy, and effectiveness, Pearson correlation coefficient (r) was used.

Ethical Consideration

Various ethical considerations were ensured in this study. Before the research questionnaire was disseminated to 386 respondents, the study had been approved by the LPU-B-Research Ethics Review Committee. In consideration of the research protocols, data collection was properly observed in accordance to Data Privacy Act of 2012. This was primarily done using informed consent that was included in the beginning or first part of the questionnaire. This explained to the respondents that all data collected would be used academically, for research purposes, and would be treated with utmost confidentiality.

In the collection of data through the questionnaire, providing of name was optional and was never used to attribute to their responses. No part of the research attributed names or any identifying information to the data they provided. The respondents were asked to provide their school affiliation for monitoring purposes. These pieces of information were not included in the tabulation of data for analysis and interpretation. These raw data were kept secured and confidential in the google drive of the researcher and would be deleted after five years of the completion of this study.

RESULTS AND DISCUSSION

Table 2
Percentage Distribution of the Respondents Profile

Sex	Frequency	Percentage %
Male	18	4.7
Female	368	95.3
Highest Educational Attainment		
Bachelor's Degree	162	42.0
Master's Degree	217	56.2
Doctorate Degree	7	1.8
Teaching Position		
Elementary Teacher (K-6th)	357	92.5
Junior High School Teacher (7th-10th)	24	6.2
Senior High School Teacher (11th-12th)	5	1.3
Years of Teaching Experience		
10 years and below	135	35.0
11-20 years	142	36.8
21-30 years	76	19.7
31 years and above	33	8.5

Table 2 presents the respondent profiles into four categories: sex, level of education, teaching role, and years of teaching experience. These profiles furnish crucial contextual details about the sample population. By comprehending the demographic traits of the respondents, the researcher can evaluate the content validity of the results, ensuring their faithful reflection of the target population.

The data reveals that females represent a significant majority among respondents, accounting for 95.3% (368 individuals), while males comprise only 4.7% (18 individuals) out of a total of 386 respondents. This observation is consistent with findings from Bongco and Abenes (2019), which reference the Philippine Commission on Women data from 2008–2009, showing that 89.58% of public elementary and 77.06% of public secondary school teachers are female. Additionally, Banate and Saquin (2022) noted that in 2019, 87.35% of elementary teachers in the Philippines were female.

One significant reason for the prevalence of female English teachers over male teachers is that teaching, particularly at the primary and secondary levels, is often perceived as a more nurturing profession, which aligns with traditional gender roles that associate women with caregiving and nurturing responsibilities. This perception can attract more women to the profession from an early age. For instance, a study by Thornton and Bricheno (2021) suggested that societal expectations and cultural norms heavily influence career choices, with teaching viewed as a suitable career for women due to its perceived alignment with maternal roles.

Teaching could be typically characterized by relatively lower salaries compared to other professions requiring similar levels of education, which may deter men who often prioritize higher earning potential in their career choices. A report by the National Education Association (2020) highlighted that lower salaries in the teaching profession contribute to the gender imbalance, as women are more likely to accept lower wages due to historically entrenched wage disparities and societal norms regarding women's work.

Moreover, teaching profession is often seen as offering a better work-life balance, with more predictable hours and extended holidays, which can be particularly appealing to women who may bear a disproportionate share of domestic responsibilities. Research by Johnson and Johnson (2022), indicated that many women opt for teaching because it allowed for a manageable balance between professional and personal life, especially for those who plan to have or already have children.

In terms of educational attainment, individuals holding master's degrees dominate, comprising 56.2 percent with 217 respondents. Bachelor's degree holders follow at 42.0 percent, totaling 162 out of 386 respondents, and with doctorate holders representing 1.8 percent, comprising 7 respondents. Pursuing a master's degree is a common avenue for teachers to enhance their expertise in curriculum development and subsequently improve student performance. Obtaining a master's degree allows teachers to specialize, conduct research, and introduce innovative methodologies, thus enriching the education sector, as noted by Nucum (2019).

Many school districts and educational institutions have implemented policies that either require or strongly encourage teachers to pursue advanced degrees. These policies are often tied to teacher certification and continuing education mandates designed to ensure that educators are equipped with the latest pedagogical skills and knowledge. According to Darling-Hammond et al. (2021), the push for higher educational standards among teachers is a direct response to the need for improved student outcomes and accountability in education systems.

Moreover, obtaining a master's degree often opens up career advancement opportunities and higher salary potential for teachers. Many educational systems offer significant salary increments and promotions for teachers who have earned advanced degrees, recognizing the additional expertise and dedication these qualifications represent. A study by Podolsky et al. (2020) found that teachers with master's degrees tend to have higher earning potential and are more likely to be considered for leadership roles such as department heads or administrative positions, making the pursuit of a master's degree an attractive professional investment.

The evolving demands of the educational landscape, including the integration of technology in the classroom and the need for specialized knowledge in areas such as special education and English as a Second Language (ESL), have made advanced degrees more valuable. Teachers with master's degrees are better prepared to meet these challenges and implement innovative teaching strategies that enhance student learning. Research by Kraft et al. (2021) highlighted that advanced education equips

teachers with critical skills in data analysis, curriculum development, and educational research, which are essential in today's complex educational environment.

Among teaching positions, elementary teachers hold the largest share, with 357 respondents, or 92.5 percent, followed by junior teachers at 6.2 percent with 24 respondents, senior high school teachers form the smallest group, with 5 respondents, or 1.3 percent. Republic Act No. 10533, mandating basic education completion for Filipino children aged 5 to 18, comprising six years of elementary and six years of secondary education, influences this distribution. Consequently, the higher number of elementary teachers is driven by legal requirements, with a proportional decrease in higher levels.

Early literacy is crucial for academic success, leading to a higher demand for elementary English teachers who specialize in teaching fundamental reading and writing skills. According to Cunningham and Zibulsky (2020), the early years of education are pivotal for developing literacy skills, making the role of elementary English teachers essential for laying the groundwork for students' future academic achievements.

Secondly, the structure of elementary education typically involves a single teacher responsible for teaching multiple subjects, including English, to a single class of students throughout the day. This model increases the number of teachers needed at the elementary level compared to middle or high school, where teachers usually specialize in one subject and teach multiple classes. Research by the National Center for Education Statistics (2021) indicated that the generalist nature of elementary teaching necessitates a higher number of teachers who are proficient in teaching English as part of a broader curriculum.

Demographic trends show higher enrollment numbers in elementary schools compared to secondary schools, partly due to population growth and compulsory education laws that mandate school attendance at younger ages. As a result, there is a greater demand for elementary teachers to accommodate the larger student populations in the early grades. A report by the U.S. Department of Education (2020) highlighted that the consistent influx of young students requires more elementary teachers to maintain optimal student-teacher ratios, thereby increasing the overall number of elementary English teachers.

Regarding teaching experience, those with 11 to 20 years of experience comprise the majority, representing 36.8 percent, or 142 out of 386 respondents. The bracket of 10 years and below is represented by 35 percent with 135 respondents, followed by 19.7 percent with 76 respondents having 21 to 30 years of experience, and 8.5 percent with 31 years or more, totaling 33 respondents.

The proliferation of teachers with 20 and below years teaching experience could be attributed to several factors, including high turnover rates, especially among newer teachers who may leave the profession within their first few years, may be due to challenges such as workload, insufficient support, and job dissatisfaction. This turnover contributes to a constant entry of new teachers who replace those who are leaving.

Additionally, educational policies and initiatives aimed at reducing student-to-teacher ratios and enhancing educational quality have led to increased hiring, bringing more novice teachers into the system. Retirement of more seasoned teachers also plays a significant role, as it opens up positions that are often filled by those with fewer years of experience. The growing recognition of the need for diverse teaching approaches and the integration of technology in classrooms have driven a demand for younger, more technologically adept teachers.

The increase in teachers with 11-20 years of experience is corroborated by DepEd Data Bits (2022), showing a consistent rise in teacher numbers across all levels from School Year (SY) 2016-2017 to SY 2020-2021, with an overall increase of 21.1 percent. This increase is further detailed with a 14.2% rise for elementary, 21.8% for junior high school, and 101.3% for senior high school levels.

Some school systems have implemented retention policies aimed at supporting and retaining experienced teachers. These policies often include professional development opportunities, mentorship programs, and financial incentives such as higher salaries and retirement benefits for more experienced teachers. According to Sutcher, Darling-Hammond, and Carver-Thomas (2019), retention strategies ensured that teachers remain in the profession, particularly those who have surpassed the early career attrition phase.

Teachers with 11-20 years of experience have accumulated substantial pedagogical expertise and classroom management skills, making them valuable assets to their schools. Their extensive experience allows them to adapt to diverse classroom situations, implement effective teaching strategies, and mentor less experienced colleagues. A study by Kraft and Papay (2020) highlighted that teacher effectiveness improves significantly during the first decade of teaching, stabilizing after about 10 years, which contributes to the higher numbers of teachers remaining in the profession during this period.

Job satisfaction and career commitment often stabilize after the initial years of teaching, leading to increased retention rates among mid-career teachers. Teachers in the 11–20-year range typically have a more stable work-life balance, a deeper sense of professional identity, and stronger connections with their school communities, all of which contribute to their continued presence in the field. Research by Ingersoll, Merrill, and Stuckey (2021) showed that mid-career teachers report higher levels of job satisfaction and a greater likelihood of remaining in the profession compared to their early-career counterparts.

Table 3
Second Language Teaching Anxiety
as to Self-perception of Language Proficiency

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I feel embarrassed when I make mistakes while I am speaking.	2.95	Agree	1
2. I feel tensed when I have difficulties teaching grammar	2.95	Agree	2
3. I feel pressured when students bring unexpected questions.	2.57	Agree	4
4. I feel nervous when I commit mistakes in pronouncing words.	2.67	Agree	3
5. I feel embarrassed when some students speak English better than me	2.50	Agree	5
Composite Mean	**2.73**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 3 presents the respondent's assessment of teaching anxiety as to self-perception of language proficiency. The composite mean of 2.73 indicates that the respondents agreed that they have second language teaching anxiety as to self-perception of language proficiency. The items on embarrassment when making mistakes while speaking and feeling tensed when having difficulties in teaching grammar both got the highest mean score of 2.95. It was followed by feeling nervous when committing mistakes in pronouncing words with 2.67 mean. All three item were verbally interpreted with agree. Meanwhile, feeling pressured when students bring unexpected questions (2.57) and feeling embarrassed when some students speak English better (2.50) were rated the least but still interpreted as agree.

Second language teaching anxiety affects teachers' self-perception of their language proficiency, which can impact their classroom experiences and effectiveness. Key manifestations include embarrassment from making mistakes while speaking and tension when teaching grammar. High anxiety, particularly during speaking activities, can lead to self-doubt and hinder effective communication. This apprehension is often exacerbated when teachers face unexpected student questions, reflecting their concerns about adequately conveying complex language concepts. Aydin (2020) emphasizes how these feelings can negatively influence teachers' language proficiency and overall teaching performance.

Additionally, ESL teachers frequently experience tension and anxiety when teaching complex grammatical concepts. Grammar is often perceived as a particularly challenging area, both for learners and instructors, because it requires precise knowledge and the ability to explain intricate rules and exceptions. Kim and Elder (2021) found that ESL teachers reported higher levels of anxiety when tasked with teaching grammar, as they feared being unable to provide clear and accurate explanations, which could undermine their credibility in the eyes of students.

The third in rank, nervousness regarding pronunciation mistakes indicates anxiety related to oral production. Fear of making pronunciation errors can affect self-perceived language competence. Moreover, teachers may experience nervousness when they make pronunciation mistakes, which can stem from concerns about their perceived linguistic accuracy and credibility as language instructors.

The last indicator, feelings of embarrassment may arise when some students speak English better than the teacher, highlighting the comparison between the teacher's language proficiency and that of their students. Teachers of English as a Second Language (ESL) might experience Second Language Teaching Anxiety (SLTA) related to self-perception of language proficiency. One factor is the fear of making mistakes while speaking, which can lead to feelings of embarrassment. This anxiety is rooted in the high expectations placed on language teachers to model perfect language use. According to Horwitz (2020), teachers often feel pressured to demonstrate language proficiency, and any deviation from this standard can lead to self-doubt and anxiety, impacting their teaching performance and self-esteem.

The self-perception of language proficiency also is involved in SLTA. Teachers who doubt their language abilities are more likely to experience anxiety, particularly when they compare themselves to native speakers or other proficient individuals. This comparison can lead to a heightened awareness of their own linguistic shortcomings, worsening feelings of inadequacy and stress. Faez and Valeo (2021) highlighted that non-native English-speaking teachers often struggle with confidence issues, fearing judgment from students and peers, leading to a heightened state of anxiety in teaching situations. Moreover, institutions often expect ESL teachers to not only teach language but also to serve as cultural intermediaries, which adds an additional layer of responsibility and pressure. This can be overwhelming, particularly for those who are still grappling with their own language proficiency and cultural adaptation. According to Mercer and Kostoulas (2021), these expectations can create a significant emotional burden, leading to increased levels of stress and anxiety.

Table 4 outlines the respondent's evaluations regarding teaching anxiety, specifically concerning teaching inexperience and language proficiency. The composite mean of 2.08 suggests a general disagreement among respondents. Fear in making mistakes while teaching in the classroom obtained the highest mean score of 2.46, followed by, being nervous due to lack of teaching experience with a score of 2.31, both interpreted as disagreement. Conversely, items on feeling worried before entering the classroom and feeling anxious when teaching in the classroom both garnered a weighted mean of 1.90. Finally, feeling tense when in the classroom received a mean score of 1.82. All these criteria were verbally interpreted as disagree.

Table 4
Second Language Teaching Anxiety as to Teaching Inexperience

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I think my lack of teaching experience makes me nervous	2.31	Disagree	2
2. I fear making mistakes while I am teaching in the classroom	2.46	Disagree	1
3. I feel worried before entering the classroom	1.90	Disagree	4
4. I feel anxious when I teach in the classroom	1.90	Disagree	3
5. I feel tensed when I am in the classroom	1.82	Disagree	5
Composite Mean	**2.08**	**Disagree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Of all the indicators, fear in making mistakes while teaching in the classroom obtained the highest mean score. Apprehensions about making mistakes during classroom instruction could be mitigated by regarding errors as integral to the learning process, as highlighted by Dewaele et al. (2019), emphasizing the importance of resilience in diminishing language teaching anxiety. Furthermore, feelings of pre-classroom apprehension and the experience of anxiety or tension while teaching may not solely originate from teaching inexperience but could also be influenced by factors such as lesson preparation and classroom management skills. This viewpoint was substantiated by Zhang's (2022) research, which demonstrated that adept preparation and effective classroom management strategies have the potential to alleviate anxiety among novice language instructors.

Second in rank is being nervous due to lack of teaching experience. When examining the indicators associated with teaching inexperience and second language teaching anxiety from a perspective of disagreement, it suggests a certain level of ease or confidence despite the lack of teaching background. Initially, the notion that a deficiency in teaching experience induces nervousness may not apply to individuals who view their inexperience as an opportunity for personal and professional growth rather than a cause for anxiety. This perspective finds support in a study conducted by Zhang and Rahimi (2020), revealing that novice educators who embraced their lack of experience as a chance for learning exhibited reduced levels of anxiety.

Teaching ESL requires specialized skills and knowledge that go beyond general teaching methods, thus teachers may feel inadequately prepared to address educational needs of ESL students. For instance, a study on pre-service ESL teachers highlighted the challenges they face, such as a lack of self-confidence in their teaching abilities and difficulties in managing the specific requirements of ESL instruction (Ugalingan, Edjan, & Valdez, 2021) Moreover, the pressure to facilitate effective communication in a language

that students are not fluent in adds to the anxiety. Beginning teachers might lack confidence in their ability to create supportive language learning environment. They may also worry about their capacity to assess and track progress accurately, provide constructive feedback, and address the varied proficiency levels within a single classroom. Additionally, the emotional experiences and responses of ESL teachers, including feelings of anxiety and uncertainty, are significant factors that impact their teaching effectiveness (Golombek & Johnson, 2021). These challenges underscore the importance of targeted professional development and support for teachers new to ESL instruction to build their confidence and competence in this specialized field.

Table 5 summarizes the respondents' assessment of teaching anxiety in relation to lack of interest. The composite mean score of 2.66 indicates a general agreement among the respondents. Of all the indicators, respondents agreed most that they feeling stressed when students do not participate in the activities, and it received the highest mean score. This suggests that respondents commonly experience stress when student participation is lacking, because it got the highest mean score of 2.80. It was followed by feeling of discouragement when students lose interest in different macro-skill activities and feeling upset when students are bad at learning the English language because these items got computed weighted mean scores of 2.69 and 2.66, respectively. Respondents agreed to all these statements, as second language teaching anxieties in terms of lack of interest as evinced by their means. Meanwhile, the feeling of tense when students are not interested in the activities (2.36) and feeling of discouragement when my students show disappointment when teaching language (2.52) were still rated as second language teaching anxieties in terms of to lack of interest but got the lowest means. Overall, the respondents' teaching anxiety related to lack of interest appears to be a common experience, with varying degrees of intensity.

Table 5
Second Language Teaching Anxiety as to Lack of Interest

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I feel discouraged when students lose interest in different macro-skill activities	2.69	Agree	2
2. I feel tensed when students are not interested in the activities	2.63	Agree	4
3. I feel stressed when students do not participate in the activities	2.80	Agree	1
4. I feel upset because my students are bad at learning English language	2.66	Agree	3
5. I feel discouraged when my students show disappointment when I teach language.	2.52	Agree	5
Composite Mean	**2.66**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

As mentioned, the respondents feel stressed when students do not participate in activities, thus may reflect a concern about one's ability to engage and motivate learners, which a perceived lack of proficiency can worsen. This most rated cause of teaching anxiety as related to student interest provided highlight a strong connection between self-perception of language proficiency and second language teaching anxiety. According to research, teachers' ability to regulate emotions and build positive relationships with students significantly impacts engagement and motivation (Greenier et al., 2021). Moreover, studies have shown that teacher empathy positively influences student engagement and motivation by creating a supportive and understanding classroom atmosphere (Zhang, 2022). When students do not participate, it can lead to teachers doubting their capacity to connect with and inspire their students, further exacerbating their stress levels. Additionally, the stress experienced by teachers can be linked to broader concerns about maintaining classroom discipline and achieving educational goals (Öztürk, 2021).

ESL teachers might frequently feel stressed when students do not participate in classroom activities. Active participation is crucial for language acquisition, and when students are disengaged, teachers may question their teaching methods and feel a sense of failure. According to a study by Dewaele and MacIntyre (2020), student participation is a key factor influencing teacher emotions, and lack of engagement can lead to significant stress and anxiety for teachers who strive to create interactive and dynamic learning environments.

It can be deduced also that the second cause of teaching anxiety as regards student interest is the feeling of discouragement when students lose interest in different macro-skill activities. It could suggest a personal sense of inadequacy in maintaining student engagement, especially in activities related to different language skills. Additionally, ESL teachers may feel discouraged when students lose interest in different macro-skill activities such as listening, speaking, reading, and writing. These activities are essential for comprehensive language development, and a lack of interest can hinder students' progress. Teachers often invest considerable effort in designing engaging and varied activities, and when these efforts do not result in student enthusiasm, it can be demoralizing. Kim and Kim (2021) found that ESL teachers frequently experience feelings of discouragement and helplessness when their carefully planned activities fail to capture students' interest, contributing to higher levels of teaching anxiety.

Furthermore, teachers can feel particularly upset when students struggle with learning the English language. This situation, and the third indicator can be challenging because it could reflect issues. Teachers may feel that they are not adequately equipped to address these issues, leading to frustration and anxiety. According to Gkonou and Mercer (2022), the inability to effectively support struggling students is a significant source of anxiety for ESL teachers, who may internalize these challenges as personal failures. The pressure to meet educational standards and student expectations further exacerbates this anxiety. ESL teachers are often evaluated based on their students'

performance, and when students do not perform well, teachers may feel that their professional competence is being questioned. This pressure can lead to a constant state of anxiety and self-doubt. A study by Liu and Huang (2020) indicates that performance-related stress is a significant factor contributing to SLTA among ESL teachers, particularly when dealing with unmotivated or struggling students.

The fourth indicator, feeling tense when students show disinterest in activities, may stem from a fear of being unable to meet students' learning needs or expectations, thus reflecting a perceived deficiency in language proficiency. Feeling discouraged when students express disappointment in teaching efforts may exacerbate feelings of inadequacy and self-doubt, particularly if these reactions are interpreted as reflections of the teacher's language proficiency. This association is supported by Liu (2019), who emphasized the role of student feedback in shaping teacher emotions and anxiety in language teaching contexts, and Piniel and Albert (2018), who underscored the importance of managing teacher emotions in the language classroom.

Lastly, the emotional labor involved in teaching can take a toll on ESL teachers' mental health. Constantly trying to engage uninterested students and address their diverse needs requires significant emotional energy. When students do not respond positively, teachers can experience burnout and emotional exhaustion. Mercer and Gregersen (2020) highlighted that the emotional demands of teaching, especially in challenging environments, can lead to chronic stress and anxiety, impacting teachers' overall well-being.

Table 6
Second Language Teaching Anxiety as to Fear of Negative Evaluation

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I feel nervous and uneasy when my mentor-teacher/supervisor observes me teaching English.	2.64	Agree	1
2. I frequently commit mistakes and stutter when I know I am being observed and evaluated.	2.41	Disagree	4
3. I feel nervous about students' negative comments about my teaching performance.	2.33	Disagree	5
4. I feel anxious about my students telling their parents and other people about my mistakes and other negative/poor performance.	2.45	Disagree	3
5. I feel pressured to prepare more than the usual preparations, such as macro skill activities, language	2.57	Agree	2

materials, etc. when I have been scheduled for observation or evaluation.		
Composite Mean	**2.48**	**Disagree**

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

It could be gleaned from Table 6 above the different assessment of the respondents towards teaching anxiety as to fear of negative evaluation. The composite mean of 2.48 indicates that most of the respondents disagreed in general. Of all the indicators, respondents rated the following items most: feeling of nervousness and uneasiness when mentor-teacher/supervisor observes in teaching English, as supported by the mean score of 2.64, followed by the feeling of pressure to prepare more than the usual preparations, such as macro skill activities, language materials, etc., when scheduled for observation or evaluation with a weighted mean of 2.57. Respondents declared that these two are second language teaching anxiety as to fear of negative evaluation.

As evinced by the most-rated indicator, second language teachers might experience nervousness and uneasiness when their mentor-teacher or supervisor observes their teaching. This anxiety stems from the high stakes associated with evaluations, which can impact their professional reputation, job security, and career advancement. According to Kim and Kim (2021), the presence of an evaluator in the classroom heightens teachers' self-consciousness and fear of making mistakes, leading to increased stress and anxiety. The agreement with the criterion above suggests a significant fear of negative evaluation among language teachers, contributing to their experience of second language teaching anxiety. When language teachers experience nervousness and unease during observations by their mentor-teachers or supervisors, it reflects a form of anxiety related to their teaching performance. This anxiety may stem from the fear of being negatively evaluated or judged by others.

The fear of negative evaluation is also linked to the broader implications of evaluations on teachers' self-efficacy and confidence. Negative feedback or perceived criticism can undermine a teacher's belief in their own teaching abilities, leading to long-term anxiety and reduced job satisfaction. A study by Dewaele et al. (2020) found that ESL teachers who receive critical evaluations often experience lingering self-doubt, which can negatively affect their overall teaching performance and well-being.

Moreover, the anxiety associated with evaluations can impact the teacher-student dynamic. Teachers may feel pressured to prioritize performance over authentic teaching practices, which can lead to a less natural and more rigid classroom environment. This shift in focus can hinder the development of a supportive and engaging learning atmosphere. According to Farrell (2021), the stress of evaluations can cause teachers to adopt a more performative approach, which may not align with their usual teaching style and can reduce the effectiveness of their instruction.

Additionally, as suggested by the second most-rated indicator, language teachers often feel compelled to go beyond their usual preparations when they know they will be observed or evaluated. This heightened preparation pressure arises from the fear of negative evaluation. Teachers want to ensure that their lesson plans, materials, and activities are flawless to avoid any criticism. This fear-driven preparation can lead to stress and anxiety (Papi & Khajavy, 2021). This interpretation resonates with research by Malini and Janakavalli (2018) who identified a correlation between fear of negative evaluation and increased preparation efforts among language teachers. The pressure to perform well during observations leads second language teachers to invest significantly more time and effort in preparing for these sessions compared to regular classes. This includes creating detailed lesson plans, preparing extensive macro-skill activities (listening, speaking, reading, and writing), and developing high-quality language materials. The additional workload can be overwhelming and exacerbate feelings of anxiety. As highlighted by Tsui (2020), the preparation for observed lessons often involves an excessive focus on perfection, which can be mentally and physically exhausting for teachers.

Furthermore, the competitive nature of evaluations, where teachers are often compared to their peers, can create additional pressure. This comparison can foster a sense of inadequacy and fear of falling short of expectations, both from supervisors and colleagues. Research by Horwitz (2021) suggested that the competitive aspect of evaluations contributes significantly to SLTA, as teachers strive to meet or exceed the standards set by others in their profession.

On the other hand, the respondents disagreed that the feeling of anxiousness when students tell their parents and other people about teacher's mistakes and other negative/poor performance. (2.45), frequently committing mistakes and stutter when being observed and evaluated (2.41), and feeling nervous about students' negative comments about teaching performance (2.33) are second language teaching anxiety as to fear of negative evaluation.

The respondents' disagreement with the provided indicators suggests a variation in their experience of fear of negative evaluation within the context of second language teaching. Firstly, the lack of anxiety about students disclosing mistakes or negative performance to their parents or others may indicate a level of confidence or trust in their teaching abilities, despite the potential for scrutiny. Similarly, the absence of frequent mistakes or stuttering when being observed and evaluated may reflect a sense of composure or competence in managing performance anxiety, contrary to the expectations of fear-driven reactions. Additionally, the lack of nervousness regarding negative comments from students about teaching performance may suggest resilience or detachment from external judgments, indicating a lessened fear of negative evaluation. This interpretation is consistent with research by Dewaele and Dewaele (2019), who identified coping strategies that mitigate the impact of negative feedback on language teacher anxiety.

Table 7
Second Language Teaching Anxiety
as to Difficulties with Time Management

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I feel tensed when I am not prepared for class.	2.86	Agree	1
2. I am nervous when I finish the activities before the class ends	2.17	Disagree	5
3. I feel panicked when I cannot finish the class on time	2.22	Disagree	4
4. I feel that the allotted time for language activities is not enough for language learning or acquisition to happen.	2.70	Agree	3
5. I experience controlling time limits in activities, such as limiting students' response time, capsulating student group activities, restricting reading time, etc.	2.78	Agree	2
Composite Mean	**2.55**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 7 presents the respondent's assessment of teaching anxiety as to time management. It could be seen that the composite mean of 2.55 indicates that most of the respondents agreed in general. Based on the table, it could be gleaned that the respondents are tensed when not prepared for class (highest mean score of 2.86), experience controlling time limits in activities, such as limiting students' response time, capsulating student group activities, restricting reading time, etc. (next highest mean of 2.78)" and feel that the allotted time for language activities is not enough for language learning or acquisition to happen (with 2.70 mean).

The top indicator of teaching anxiety as related to time management is when language teachers feel tense or anxious due to a lack of preparation for their classes. This anxiety may arise from concerns about delivering quality lessons, meeting students' expectations, or managing unexpected situations. The respondents' agreement with the provided indicators suggests that difficulties with time management contribute to their experience of second language teaching anxiety.

Research by Liu (2019) emphasizes that effective time management is vital for reducing stress among language teachers, as anxiety can negatively impact their motivation, behavior, and performance. Unpreparedness can worsen this anxiety, resulting in less effective teaching. Proper preparation is essential, and failures in this area can diminish confidence and increase anxiety levels. Kim and Kim (2021) also note

that ESL teachers often feel overwhelmed by lesson planning demands alongside other responsibilities, leading to inadequate preparation and heightened anxiety.

The second-rated indicator shows that teachers are anxious when they experience difficulties in controlling time. This observation resonates with the findings by Borg (2020), who highlighted the impact of time constraints on language teaching practices and teacher well-being. Teachers may worry about covering all content within the allotted time, leading to stress and potentially affecting their teaching quality. Feeling that the allocated time for language activities is insufficient can create anxiety for language teachers. Managing time limits is crucial for maintaining a productive learning environment. While setting deadlines for student responses or structuring group activities is necessary, excessive time pressure can contribute to anxiety.

Some teachers reported not feeling panicked when they could not complete their class within the allocated time. While this may be attributed to effective lesson planning, flexibility, or experience, it is essential to recognize that time pressure can still affect teaching quality and student engagement (Papi and Khajavy, 2021).

Moreover, the challenge of controlling time limits in classroom activities adds to this anxiety. ESL teachers often need to balance various activities such as listening, speaking, reading, and writing within a limited time frame. Effective time management is essential to ensure that all learning objectives are met, but it can be challenging to achieve, particularly with diverse student needs and unpredictable classroom dynamics. A study by Richards and Lockhart (2020) found that ESL teachers often struggle with pacing their lessons and managing transitions between activities, which can lead to feelings of inadequacy and stress. Furthermore, the pressure to create engaging and interactive lessons can add to the time management challenges faced by ESL teachers. Developing creative and effective language activities requires significant time and effort, and the fear of not being able to execute these activities within the allotted time can lead to anxiety. According to Tsui (2020), the expectation to deliver high-quality, student-centered lessons can create additional stress for teachers, particularly when they feel they do not have enough time to prepare or implement these activities effectively.

Additionally, unexpected disruptions or deviations from the lesson plan can exacerbate time management difficulties. Teachers may find it challenging to adapt on the fly while still covering the required material, leading to anxiety about falling behind or not meeting curriculum standards. Farrell (2021) highlighted that the ability to adapt and manage time effectively is a skill that develops with experience, and novice teachers, in particular, may experience higher levels of anxiety due to their inexperience in handling such situations.

The diverse proficiency levels and learning paces of students in ESL classrooms can complicate time management further. Teachers need to differentiate instruction and provide additional support to some students, which can disrupt planned time allocations for activities. Dewaele and MacIntyre (2020) found that managing a classroom with

varying levels of English proficiency requires careful time management and flexibility, adding to the overall stress and anxiety experienced by teachers.

Ranking in third is when teachers feel anxious about insufficiency of time for language acquisition activities. Guvendir (2021) emphasized the importance of understanding second language anxiety and its impact on learners. Language teachers may experience anxiety when they perceive time limitations hindering effective language learning or acquisition. This interpretation is supported by research by Gao and Zhang (2019), who discussed the challenges of time constraints in language teaching and its implications for teacher stress. Teachers who feel that time constraints prevent meaningful interactions or comprehensive language practice may struggle to create engaging lessons.

On the other hand, respondents disagreed that feeling panicked when they cannot finish the class on time and being nervous when finishing the activities before the class ends (with weighted means of 2.22 and 2.17 respectively) as indicators of their second language teaching anxiety with respect to time management.

In a study examining Second Language Teaching Anxiety (SLTA) and its correlation with difficulties in time management, it was found that respondents exhibited disagreement with certain indicators related to time management (Aydin, 2018). Respondents disagreed that they feel panicked when I cannot finish the class on time. This disagreement suggests that the respondents did not experience a sense of panic or overwhelming stress when faced with time constraints in the classroom setting.

Additionally, respondents disagreed that they feel nervous when they finish the activities before the class ends. This interpretation aligns with research by Gkonou, Daubney, and Dewaele (2019) that found that language teachers' anxiety levels could vary based on individual factors such as experience, teaching context, and coping strategies. Furthermore, the agreement with this indicator underscores the dynamic nature of SLTA and its interaction with time management skills in language teaching contexts. By understanding teachers' perceptions and experiences related to time management, educators and stakeholders can develop targeted interventions and support mechanisms to enhance teaching effectiveness and alleviate anxiety-related challenges.

Table 8
Summary Table on Second Language Teaching Anxiety

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. Self-perception of language proficiency	2.73	Agree	1
2. Teaching Inexperience	2.08	Disagree	5
3. Lack of Interest	2.66	Agree	2
4. Fear of negative evaluation	2.48	Disagree	4

5. Difficulties with time management	2.55	Agree	3
Composite Mean	**2.50**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 8 displays the summary indicators of Second Language Teaching Anxiety. It can be gleaned from the table above that the composite mean is at 2.50 with verbal interpretation agreement. Though some indicators fell under the category disagree, most of the indicators were under the agreement category, which led to the total mean of 2.50, leading to general agreement.

Table 8 above illustrates that self-perception of language proficiency was at the topmost position, followed by lack of Interest, then difficulties with time management. The computed weighted means were 2.73, 2.66, and 2.55 respectively, with verbal interpretation of agree. The last two indicators were fear of negative evaluation (2.48) and teaching inexperience (2.08), both were interpreted as disagree.

In analyzing the indicators under Table 8, it becomes evident that respondents share similar perceptions regarding their self-perception of language proficiency, lack of interest, and difficulties with time management. Firstly, regarding self-perception of language proficiency, the respondents agree that their self-perceived language proficiency contributes to anxiety in second language teaching. This suggests that teachers who feel less confident in their language abilities may experience anxiety when teaching a second language (Gkonou, Daubney, & Dewaele, 2019). ESL teachers grapple with their self-perception of language proficiency. Teachers who perceive their language skills as inadequate may experience heightened anxiety, particularly when they compare themselves to native speakers or more proficient colleagues. According to Dewaele and MacIntyre (2019), this comparison can lead to feelings of inferiority and self-doubt, which are detrimental to a teacher's confidence and performance in the classroom. Teachers might worry about making mistakes or being unable to provide clear and accurate explanations, which can undermine their authority and credibility. Additionally, cultural and institutional factors can influence these anxieties.

Secondly rated, respondents also agree that a lack of interest is associated with anxiety in language teaching. When teachers are not passionate or interested in the subject matter, it can lead to feelings of anxiety and stress in the classroom (Papi & Khajavy, 2021). The respondents perceive that time management challenges contribute to anxiety. Lack of student interest significantly contributes to teacher anxiety. When students are disengaged or indifferent, teachers may feel that their efforts are unappreciated and ineffective. This sense of futility can lead to discouragement and a lack of motivation, as noted by Kim and Kim (2021). Teachers might feel responsible for their students' lack of engagement, which can lead to self-blame and increased anxiety. The constant struggle to capture and maintain student interest can be exhausting and demoralizing, especially when teachers have put significant effort into lesson planning and activity design.

Student engagement and self-perceived proficiency creates a compounding effect on anxiety. For example, a teacher who is already anxious about their language proficiency might feel even more stressed when students are unresponsive or disinterested. This lack of feedback can reinforce the teacher's negative self-perception, leading to a vicious cycle of anxiety and self-doubt. Farrell (2021) highlighted that this cycle can be particularly damaging for novice teachers who are still building their confidence and teaching skills.

Interestingly, the respondents disagree that fear of negative evaluation contributes to their anxiety. This contrasts with findings from Cheng and Cheng (2010), who emphasized the impact of fear of negative evaluation on language teacher anxiety. Similarly, respondents also disagree on teaching inexperience, indicating a range of experiences among participants. This finding contrasts with research by Botes et al. (2018), which underscored the role of teaching inexperience as a potential trigger for anxiety among language instructors. Overall, the analysis of these indicators provides insights into the complex interplay of factors contributing to second language teaching anxiety among respondents.

Moreover, the pressure to meet educational standards and perform well in evaluations can further exacerbate these anxieties. ESL teachers often face high expectations from supervisors, colleagues, and themselves to deliver effective and engaging lessons. When faced with disinterested students or doubts about their language abilities, the fear of negative evaluation can become overwhelming. Horwitz (2021) pointed out that the pressure to perform can lead teachers to overprepare and second-guess their teaching methods, adding to their stress and anxiety.

Table 9
English Language Self-Efficacy in terms of Classroom Proficiency

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. ***I can use English as the medium of instruction.***	3.37	Agree	1
2. ***I can use English for all classroom functions and interactions.***	3.15	Agree	5
3. ***I can use English to provide spoken and written feedback in class.***	3.20	Agree	3
4. ***I can model natural English use.***	3.18	Agree	4
5. ***I can use common phrases/words that frequently occur in English language classrooms.***	3.34	Agree	2
Composite Mean	**3.25**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 9 presents the respondent's assessment of English Language Self-Efficacy in terms of Classroom Proficiency. It could be gleaned that the composite mean of 3.25 indicates that most of the respondents agreed in general. Respondents agreed that all items are indicators of English language self-efficacy in terms of classroom proficiency. They can use English as the medium of instruction (weighted mean of 3.37), can use common phrases/words that frequently occur in English language classrooms (with 3.34 weighted mean) can use English to provide spoken and written feedback in class (with 3.20), and lastly they can model natural English use and can use English for all classroom functions and interactions (with 3.18 and 3.15 weighted means respectively).

The first indicator, wherein the respondents asserted that they can use English as the medium of instruction, underscores the importance of teachers' confidence in their language proficiency for delivering lessons effectively. Analyzing the indicators of English language self-efficacy in terms of classroom proficiency reveals key insights into teachers' perceptions of their language abilities and their impact on classroom dynamics. Under this indicator, it involves using English as the primary language for teaching various subjects, even in non-native English-speaking countries. Wang (2021) found a strong positive relationship between English medium instruction (EMI) teachers' classroom English proficiency and their teaching self-efficacy. EMI teachers who can effectively use English as the medium of instruction tend to have higher self-efficacy in their teaching roles.

According to Richards and Farrell (2020), comprehensive training helps teachers develop a strong foundation in both language proficiency and pedagogical techniques, enabling them to use English confidently and effectively in the classroom. Additionally, continuous professional development plays a significant role in enhancing ESL teachers' efficacy. Regular workshops, seminars, and courses keep teachers updated with the latest teaching strategies and language trends, further boosting their confidence. Kim and Elder (2021) highlighted that ongoing professional development allows teachers to refine their skills and adapt to new teaching contexts, ensuring they remain proficient and effective in using English as the medium of instruction.

Additionally, the second-most rated indicator is using common phrases/words in English language classrooms indicator. This could reflect the teacher's ability to employ everyday language commonly used in English language classrooms. It includes phrases related to classroom management, instructions, and interactions. The frequent use of common phrases and words in English language classrooms contributes to teachers' sense of efficacy. These commonly used linguistic tools help establish clear and consistent communication patterns, making it easier for teachers to manage the classroom and convey instructions effectively. Research by Dewaele and MacIntyre (2019) indicated that the repetitive use of these phrases helps both teachers and students become familiar with classroom routines, reducing misunderstandings and enhancing overall classroom management.

The third most rated indicator is providing spoken and written feedback in English indicator. This highlights the teacher's confidence in giving feedback to students in spoken and written form using English. The positive feedback and progress of students also reinforce teachers' belief in their efficacy. When students demonstrate improvement in their English language skills, it validates the teachers' methods and use of English as the medium of instruction. According to Faez and Valeo (2021), observing students' progress provides teachers with tangible evidence of their effectiveness, boosting their confidence and sense of accomplishment.

Modeling natural English use indicator refers to the teacher's ability to demonstrate natural and authentic English language use. Modeling helps students learn proper pronunciation, intonation, and language structures. When a teacher models natural English, they demonstrate the rhythm and flow of the language, helping students grasp how native speakers use stress and intonation to convey meaning and emotion. This can significantly improve students' listening skills and their ability to mimic these patterns in their own speech. Research has shown that exposure to authentic language use can enhance learners' phonological awareness and pronunciation skills (Darling-Hammond, et.al., 2021).

Using English for all classroom functions enhances students' listening and speaking skills through immersive activities like discussions and explanations, rather than isolated lessons. Hoang (2021) emphasizes that consistent exposure to the target language in meaningful contexts is vital for language acquisition, allowing learners to internalize vocabulary and linguistic structures. This approach models real-life English use in various scenarios, such as giving instructions and conducting discussions, which helps students develop practical language skills. Additionally, teachers' proficiency in classroom English reflects their confidence and can boost their self-efficacy, suggesting that prioritizing language training in instruction is beneficial for both teachers and students.

Table 10
English Language Self-Efficacy
in terms of Learner-focused Instruction

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. ***I can appropriately use the first language skills of the learners.***	3.32	Agree	5
2. ***I can apply my knowledge of the native language(s) spoken by students when teaching.***	3.35	Agree	1
3. ***I can use my knowledge about learner communities to guide instruction.***	3.35	Agree	2
4. ***I can gauge the language proficiency of the learner to make***	3.33	Agree	4

it a starting point for language instruction.			
5. ***I build up upon what the learners can provide during writing or speaking activities.***	3.34	Agree	3
Composite Mean	**3.34**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 10 presents the respondent's assessment of English language self-efficacy in terms of learner-focused instruction. The composite mean of 3.34 indicates that most of the respondents agreed in general. Based on the table, it can be deduced that the respondents perceived in their skills to apply knowledge of the native language(s) spoken by students when teaching and use knowledge about learner communities to guide instruction, which both gathered a 3.35 weighted mean. The remaining criteria that exhibit their ability to build up upon what the learners can provide during writing or speaking activities (3.34), gauge the language proficiency of the learner to make it a starting point for language instruction (3.33), and appropriately use the first language skills of the learners. (3.32) were also decided as English language self-efficacy in terms of learner-focused instruction.

The indicators showed a strong focus on learner-centered instruction within English Language Self-Efficacy, primarily applying the utilizing teacher's knowledge of students' native language. When teaching English language learners (ELLs), instructors can leverage their understanding of the native languages students speak. This knowledge allows teachers to make connections between the student's first language and English, facilitating comprehension and language acquisition. Soland (2019) discussed the challenges faced by ELLs and the importance of considering their native languages in the teaching process. Teachers can draw on their awareness of learner communities to guide instruction effectively. Understanding students' cultural backgrounds, experiences, and social contexts helps tailor teaching methods and materials to meet their specific needs.

Research by Mills (2020) highlighted the positive relationship between English language proficiency (ELP) and self-efficacy, emphasizing the importance of considering cultural variations in this relationship. Effective instruction involves building upon what learners can provide during writing or speaking activities. Encouraging student participation and valuing their contributions fosters a positive learning environment. Wyatt and Faez (2024) explored self-efficacy beliefs in English language learners and emphasize the significance of empowering students to actively engage in the learning process. Gauging the language proficiency of learners is crucial. Teachers can use this assessment as a starting point for language instruction, tailoring content and activities to address specific language needs.

Understanding students' native languages allows ESL teachers to make meaningful connections between the students' first language (L1) and English. This comparative approach helps in explaining complex grammar rules, vocabulary, and

pronunciation, making the learning process smoother for students. According to Kim and Elder (2021), teachers who utilize their knowledge of students' native languages can effectively scaffold learning, leading to better comprehension and retention of English. Using the native language can lessen students' anxiety and create a more inclusive learning environment. When students see that their teacher respects and incorporates their linguistic background, it boosts their confidence and motivation. Dewaele and MacIntyre (2020) found that students' affective filters are lowered when their L1 is acknowledged and used appropriately, resulting in a more conducive learning atmosphere.

Furthermore, teachers who understand the cultural and linguistic backgrounds of their students can tailor their instruction to meet diverse needs. This cultural competence allows teachers to design lessons that are culturally relevant and engaging, thus enhancing student participation and interest. According to Faez and Valeo (2021), culturally responsive teaching practices are linked to higher levels of student engagement and academic success in ESL classrooms.

Using knowledge about learner communities also enables teachers to create more relevant learning experiences. Teachers can draw on familiar contexts, interests, and experiences of their students, making lessons more relatable and meaningful. Farrell (2022) emphasized that when instruction is connected to students' real-life contexts, it enhanced their engagement and the applicability of language skills.

Exhibited also by the results in the table that teachers are efficacious in using knowledge of learners' communities in crafting language instructions. ESL teachers who are familiar with their students' communities can better address the unique challenges and barriers their students face. This understanding allows teachers to provide targeted support and resources, helping students overcome obstacles to their language learning. Borg (2020) highlights that awareness of socio-cultural factors affecting students' lives can lead to more empathetic and effective teaching strategies.

Collaboration with the learner community also fosters a supportive learning environment. When teachers engage with parents, community leaders, and local organizations, they can create a network of support that reinforces language learning both inside and outside the classroom. Kim and Kim (2021) argue that community involvement is crucial in sustaining student motivation and providing practical language practice opportunities. Teachers' ability to adapt their instructional strategies based on learner feedback and community input reflects their commitment to learner-centered education. This adaptability demonstrates that teachers value their students' perspectives and are willing to modify their approaches to better serve their needs. Richards and Farrell (2020) noted that reflective teaching practices that incorporate learner feedback are essential for continuous improvement and effective instruction.

Table 11
English Language Self-Efficacy in terms of Assessment

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. ***I can design appropriate assessment tasks tests to assess learners.***	3.35	Agree	5
2. I can assess students' oral and written performances and provide immediate feedback.	3.36	Agree	4
3. ***I can connect assessments to stated learning objectives.***	3.39	Agree	3
4. ***I can make appropriate use of assessment results when teaching.***	3.40	Agree	2
5. ***I can use various assessment techniques (e.g. performance-based, portfolios, observation checklists, self-, peer- etc.).***	3.43	Agree	1
Composite Mean	**3.39**	**Agree**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Table 11 shows the respondent's assessment of English language self-efficacy in terms of assessment. The composite mean of 3.39 indicates that most of the respondents agreed in general. All indicators were verbally interpreted as agree. Respondents state that they can use various assessment techniques which gained a weighted mean of 3.43, followed by making appropriate use of assessment results when teaching with 3.40. Next in line is connecting assessments to stated learning objectives with 3.39, and lastly assessing students' oral and written performances and providing immediate feedback and designing appropriate assessment tasks and tests to assess learners, with 3.36 and 3.35 respectively.

Based on this table, it could be deduced that the most rated self-efficacy beliefs of English language teachers in terms of assessment is utilizing various language assessment methods. English language self-efficacy in assessing outcomes encompasses different aspects, including proficiency in employing diverse assessment techniques. Research by Getie and Popescu (2020) highlighted the significance of utilizing various assessment methods, such as performance-based assessments, portfolios, observation checklists, and self- and peer-assessment, to gauge learners' language skills effectively. Teachers who make appropriate use of assessment results enhance their instructional practices. By analyzing assessment data, teachers can identify areas where students need additional support, adjust teaching strategies, and provide targeted feedback.

ESL teachers employ a diverse range of assessment methods, including formative and summative assessments, to gauge student progress and understanding. This variety ensures a comprehensive evaluation of students' language abilities. According to Bailey and Damerow (2020), the ability to use multiple assessment techniques allows teachers to obtain a holistic view of student performance, which is crucial for identifying strengths and areas for improvement.

Additionally, formative assessments, such as quizzes, oral presentations, and interactive activities, provide immediate feedback, enabling teachers to adjust their instruction in real-time. This adaptability helps address student needs more effectively. Richards and Farrell (2020) highlighted that continuous assessment and timely feedback are integral to effective language teaching, as they help teachers to refine their teaching strategies and improve student outcomes.

Summative assessments, such as standardized tests and final exams, offer a broader measure of student proficiency and learning outcomes. Teachers use these results to evaluate the overall effectiveness of their instruction and to make data-driven decisions about curriculum adjustments. According to Borg (2020), using a combination of formative and summative assessments allows teachers to balance immediate instructional needs with long-term educational goals.

Additionally, we can delineate that participants believe that language teachers could be efficacious when they could use results of assessments for instructional decision making. Mills (2020) emphasized the relationship between English language proficiency (ELP) and self-efficacy, highlighting the role of assessment data in shaping instructional approaches. Effective assessment practices align with stated learning objectives. Teachers might design assessments that directly measure the skills and knowledge outlined in their instructional goals. Wyatt and Faez (2024) explored self-efficacy beliefs in English language learners and discuss the importance of aligning assessments with learning objectives. This alignment ensures that assessments serve as meaningful tools for both learners and instructors. Teachers proficient in English Language Self-Efficacy assess both oral and written performances. ESL teachers are adept at interpreting assessment results to inform their teaching practices. This involves analyzing data to identify trends, gaps, and individual student needs. Farrell (2022) emphasized that the ability to interpret assessment data accurately is critical for making informed instructional decisions that enhance student learning.

Providing immediate feedback allows learners to understand their strengths and areas for improvement. Constructive feedback enhances self-efficacy and motivates students to continue learning. More so, effective assessment tasks are carefully designed to evaluate learners' language abilities. Teachers create tasks that align with instructional objectives, consider language proficiency levels, and provide a fair representation of students' skills. Educators' adept in designing such assessments not only assess learners' language skills accurately but also instill confidence in learners by providing fair and relevant evaluation methods.

Teachers also use assessment results to provide personalized feedback and support to students, tailoring their instruction to meet diverse learning needs. This personalized approach helps students to set achievable goals and track their progress. Kim and Kim (2021) noted that effective use of assessment data enables teachers to create individualized learning plans that motivate and engage students. Assessment results help teachers to identify and address language proficiency issues, such as specific grammar or vocabulary weaknesses. By targeting these areas, teachers can provide focused instruction that directly improves student performance. Tsui (2020) pointed out that targeted interventions based on assessment results are essential for addressing specific language challenges and enhancing overall language proficiency.

Workshops, training sessions, and collaborative planning meetings provide teachers with the latest assessment techniques and best practices. Faez and Valeo (2021) argued that ongoing professional development helps teachers stay current with assessment trends and improves their ability to use assessment results effectively.

Collaboration with colleagues and participation in professional learning communities further support teachers' assessment efficacy. Sharing strategies and insights with peers allows teachers to refine their assessment practices and learn from others' experiences. According to Kim and Elder (2021), collaborative professional environments foster continuous improvement and innovation in assessment techniques.

The increasing use of technology in the assessment and evaluation of learning outcomes offers new tools and platforms for ESL teachers to evaluate and track student progress. Digital assessments and online platforms provide immediate feedback and detailed analytics—those which could be helpful for instructional decision making, helping teachers to make more informed decisions. Dewaele and MacIntyre (2020) highlighted that technology-enhanced assessments can enhance the accuracy and efficiency of language evaluations, providing valuable insights into student learning. In this line, assessment as part of the teaching and learning cycle becomes easier not only for language teachers, but as well as with other subject-area teachers.

Table 12
English Language Self-Efficacy in terms of Language Instruction

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. ***I can apply my knowledge of the structure of words (morphology) when teaching.***	3.32	Agree	4
2. ***I can apply my knowledge of sentence and phrase structure (syntax) when teaching.***	3.34	Agree	3

3. ***I can apply my knowledge of word and sentence meaning (semantics) when teaching.***	3.35	Agree	2
4. ***I can apply my knowledge of the sound system of English (phonology) when teaching***	3.41	Agree	1
5. ***I can take into consideration my knowledge about discourse and pragmatics when delivering language instructions.***	3.31	Agree	5
Composite Mean	**3.35**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 12 presents the respondent's assessment of their English Language Self-Efficacy in terms of Language Instruction. The composite mean of 3.35 indicates that most of the respondents agreed in general that they are efficacious when it comes to implementing language curriculum.

With the verbal interpretation of Agree, all items were indicated as English language self-efficacy in terms of language instruction. The topmost criterion is applying knowledge of the sound system of English (phonology) when teaching gained a weighted mean of 3.41, followed by applying knowledge of word and sentence meaning (semantics), with 3.35. Next in line is applying knowledge of sentence and phrase structure (syntax) with 3.34, then applying knowledge of the structure of words (morphology). Finally is taking into consideration the knowledge about discourse and pragmatics with 3.36 and 3.35 respectively.

English Language Self-Efficacy, particularly in the context of language instruction, is often gauged through various indicators that reflect a teacher's confidence in their ability to effectively teach different aspects of the English language. The provided indicators encompass fundamental linguistic components and instructional strategies crucial for language teaching. Applying knowledge of the sound system of English (phonology) when teaching**,** reflects a teachers' confidence in utilizing their understanding of English phonology—the sound system—when teaching. Phonology encompasses aspects such as pronunciation, stress patterns, intonation, and phonemic awareness. Wang, Kim, Sun, and Liu (2021) have explored self-efficacy measures for English language learners (ELLs) and developed the Questionnaire of English Language Self-Efficacy (QESE) specifically for ELLs. Their research sheds light on the importance of self-efficacy beliefs in language instruction. Teachers who feel self-efficacious in this area are likely to provide accurate pronunciation guidance, help learners recognize stress patterns, and enhance overall language fluency.

According to Celce-Murcia et al. (2020), teachers who are well-versed in phonological concepts can provide clear and precise instruction, helping students overcome common pronunciation challenges. Furthermore, teachers use a variety of phonological teaching techniques, such as minimal pairs, phonetic drills, and visual aids,

to enhance students' pronunciation skills. These techniques allow students to practice and internalize the sound patterns of English in a structured and supportive environment. Research by Levis and Moyer (2021) indicated that such targeted phonological instruction significantly improves students' pronunciation and listening comprehension, reinforcing teachers' sense of efficacy.

In addition to phonology, ESL teachers are adept at applying their knowledge of semantics to teach vocabulary and sentence meaning. Understanding the nuances of word meanings, idiomatic expressions, and contextual usage helps teachers provide more accurate and detailed explanations to students. As noted by Schmitt (2020), teachers who are proficient in semantics can effectively address students' questions about word meanings and usage, thereby enhancing their vocabulary acquisition.

Applying knowledge of word and sentence meaning (semantics) when teaching is an indicator that reflects teachers' confidence in effectively utilizing their understanding of word meanings and sentence semantics during language instruction. Semantics includes the study of word definitions, connotations, and how sentences convey meaning. Teachers who possess strong self-efficacy in this area are likely to facilitate vocabulary acquisition, enhance comprehension, and guide learners in using words and sentences appropriately.

Teachers employ various semantic teaching strategies, such as semantic mapping, contextual analysis, and synonym-antonym exercises, to deepen students' understanding of words and sentences. These strategies help students connect new vocabulary to their existing knowledge, making it easier to retain and apply in different contexts. According to Nation and Webb (2020), effective semantic instruction leads to better vocabulary retention and overall language proficiency, further boosting teachers' confidence in their instructional abilities.

The ability to integrate phonological and semantic knowledge also allows teachers to create more engaging and meaningful lessons. By combining pronunciation practice with vocabulary learning, teachers can provide a holistic language learning experience that addresses multiple aspects of language proficiency. According to Richards and Rodgers (2021), this integrated approach enhances student engagement and motivation, as it makes the learning process more relevant and dynamic.

Additionally, ESL teachers' efficacy in phonology and semantics is reinforced by their continuous professional development. Workshops, courses, and collaborative planning sessions keep teachers updated with the latest research and best practices in language instruction. This ongoing learning helps teachers refine their instructional techniques and stay confident in their ability to teach complex linguistic concepts. As highlighted by Farrell (2022), professional development is essential for maintaining high levels of teaching efficacy and staying current with advancements in language education.

The positive feedback and progress of students validate teachers' instructional methods and reinforce their belief in their efficacy. When students demonstrate improved

pronunciation, vocabulary, and overall language comprehension, it provides tangible evidence of the effectiveness of the teachers' phonological and semantic instruction. According to Bailey and Damerow (2020), observing student success is a powerful motivator for teachers and a key factor in their sense of professional efficacy.

Applying knowledge of sentence and phrase structure (syntax) when teaching is an indicator that reflects teacher's confidence in effectively utilizing their understanding of English syntax—the rules governing sentence and phrase structure—when teaching. Syntax covers grammar rules, sentence patterns, and syntactic variations. Derakhshan, Wang, and Sun (2023) conducted a study on Chinese EFL students' academic engagement and psychological well-being, emphasizing the roles of language teachers' affective scaffolding. While not exclusively focused on syntax, their research sheds light on the importance of teacher-student interactions in language learning. Teachers who feel self-efficacious in this area are likely to guide learners in constructing grammatically accurate sentences, identifying syntactic errors, and enhancing overall language proficiency.

Applying knowledge of the structure of words (morphology) when teaching, reflects teachers' confidence in effectively utilizing their understanding of word structure (morphology) during language instruction. Morphology involves analyzing word forms, prefixes, suffixes, and roots. Teachers who feel self-efficacious in this area are likely to guide learners in deciphering word meanings, recognizing word families, and understanding how words are constructed.

Considering knowledge about discourse and pragmatics when delivering language instructions, indicates teachers' confidence in taking into account their understanding of discourse (how language functions in context) and pragmatics (appropriate language use) during language instruction. Discourse involves understanding conversational conventions, narrative structures, and genre-specific language use. Pragmatics, on the other hand, focuses on using language effectively in different social and cultural situations. Mark Wyatt's review of LTSE beliefs (2018), while not exclusively focused on discourse and pragmatics, provides insights into the characteristics of this research field and its implications for teacher education. Teachers who feel self-efficacious in this area are likely to adapt their language instruction to context, teach appropriate communication strategies, and guide learners in using language effectively in real-world scenarios.

Table 13
English Language Self-Efficacy in terms of Culture

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. ***I can use my knowledge of world cultures to guide instruction***	3.30	Agree	4
2. ***I can use my knowledge about cultural values and beliefs when teaching.***	3.35	Agree	1

3. ***I can apply my understanding of the interrelationship of language and culture to inform instruction.***	3.30	Agree	5
4. ***I utilize sentences that are culturally related to the language learners.***	3.34	Agree	2
5. ***I evaluate and use culturally-neutral and respectful contexts when we discuss situations about language learning.***	3.32	Agree	3
Composite Mean	**3.32**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 13 displays the respondents' assessment of English Language Self-Efficacy in terms of Culture. The composite mean is 3.32, which means that the weighted mean of all the indicators is closely related to the calculated mean. This further means that the respondents agreed that all indicators under this section are their English language self-efficacy beliefs when it comes to culture. With all the indicators above, using knowledge about cultural values and beliefs when teaching is at the first rank, it gathered a weighted mean of 3.35 Second is utilizing sentences that are culturally related to the language learners with 3.34, followed by evaluating and using culturally-neutral and respectful contexts when we discuss situations about language learning with a 3.32 weighted mean. The last two criteria, using knowledge of world cultures to guide instruction and applying understanding of the interrelationship of language and culture to inform instruction both gained 3.30 weighted mean.

Based on the data presented on the table, it could exhibit that, with the top two indicators, respondents expressed their efficacy most by manifesting knowledge of culture and knowing how to utilize culturally relevant sentences in various learning contexts. English language self-efficacy in terms of culture involves a teacher's confidence in integrating cultural awareness and understanding into language instruction, acknowledging the diverse backgrounds and perspectives of language learners. The provided indicators highlight key aspects of culturally responsive teaching practices. Using knowledge of cultural values and beliefs in teaching, suggests that educators can draw upon their understanding of cultural values and beliefs to enhance their teaching practices. When instructors recognize and incorporate cultural nuances, they create a more inclusive and effective learning environment for language learners.

Culturally informed teaching practices help address potential cultural misunderstandings and biases. By integrating cultural knowledge into their instruction, teachers can preemptively address and clarify cultural nuances that might otherwise lead to confusion or miscommunication. Kim and Elder (2021) emphasize that awareness of cultural differences is crucial for effective communication and helps build a more harmonious classroom dynamic.

By considering cultural context, teachers can tailor their instructional strategies, materials, and assessments to better resonate with students from diverse backgrounds.

Culturally related sentences can also foster a sense of belonging and validate students' identities. Using culturally related sentences with language learners, Wang and Sun (2020) demonstrated that the relationship between English language proficiency (ELP) and self-efficacy was stronger among East Asian students than among Western students. This finding suggests that self-efficacy plays a more prominent role in some Asian cultures.

Richards and Rodgers (2021) discovered that culturally responsive teaching practices lead to higher levels of student engagement and academic success in ESL settings. Utilizing culturally related sentences and examples in language teaching further strengthens students' connection to the material. When teachers incorporate familiar cultural references, students can better understand and relate to the content, which facilitates language acquisition. According to Dörnyei and Ryan (2020), the use of culturally relevant materials helps students see the practical application of the language in real-world contexts, thereby enhancing their comprehension and retention.

The ability to integrate culture into language teaching is also supported by continuous professional development. Workshops, training sessions, and collaborative planning opportunities provide teachers with the latest research and best practices for incorporating culture into their lessons. According to Faez and Valeo (2021), ongoing professional development ensures that teachers remain current with cultural trends and pedagogical strategies, thereby enhancing their efficacy.

Teachers also rely on collaborative learning communities to share and refine their culturally responsive teaching methods. Peer support and mentorship provide valuable insights and practical strategies for integrating culture into language instruction. Bailey and Damerow (2020) noted that collaboration among educators fosters a culture of continuous improvement and innovation, which is essential for effective teaching.

The positive impact of culturally responsive teaching on student outcomes reinforces teachers' belief in their efficacy. When students demonstrate improved language skills and greater cultural awareness, it validates the teachers' instructional methods. According to Farrell (2022), observing student success as a result of culturally informed teaching practices boosts teachers' confidence and sense of professional accomplishment. Digital resources, such as multimedia presentations and online cultural exchanges, allow teachers to bring diverse cultural perspectives into the classroom. Levis and Moyer (2021) highlight that technology-enhanced instruction can provide immersive cultural experiences that enrich language learning.

The last three indicators show relevant information also about how culture plays important roles in language teaching. By considering that culture is an indicator of efficacious language teaching, respondents agree that these areas are worth examining. Evaluating culturally neutral and respectful contexts in language learning discussions, highlights the need for educators to create a safe space for discussing language-learning experiences. By evaluating contexts for neutrality and respectfulness, teachers can

ensure that discussions do not inadvertently marginalize or stereotype any cultural group. Culturally sensitive discussions promote mutual understanding and empathy.

Using knowledge of world cultures to guide instruction is also an indicator which encourages educators to draw upon their broader understanding of world cultures when planning and delivering instruction. By incorporating global perspectives, teachers can enrich their lessons and help students appreciate the interconnectedness of language and culture.

Applying the interrelationship of language and culture to inform instruction, underscores the symbiotic relationship between language and culture. Language is deeply embedded in cultural contexts, and understanding this interplay informs effective language teaching. Educators who recognize how language reflects cultural norms and values can design more meaningful learning experiences.

Table 14
English Language Self-Efficacy in terms of Materials

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. ***I can use appropriate resources and materials.***	3.48	Agree	1
2. ***I can design and/or adapt materials for instruction.***	3.44	Agree	3
3. ***I can incorporate activities and materials that integrate listening, speaking, reading, and writing***	3.46	Agree	2
4. ***I utilize authentic language materials that are readily available and being used in the industry and in the society.***	3.38	Agree	4
5. ***I outsource readily online materials that are available blogs, social media, news bulletins, and the like.***	3.33	Agree	5
Composite Mean	**3.42**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 14 presents the respondent's assessment of English language self-efficacy in terms of materials. The composite mean of 3.42 indicates that most of the respondents agreed in general that al items are indicators of English language self-efficacy beliefs in terms of materials that are being used in language teaching. Ranking first is the criterion on using appropriate resources and materials which gained a weighted mean of 3.48, followed by incorporating activities and materials that integrate listening, speaking, reading, and writing with 3.46, Next in rank is designing and/or adapting materials for

instruction with 3.44, and lastly utilizing authentic language materials that are readily available and being used in the industry and in the society and outsourcing readily online materials that are available blogs, social media, news bulletins, and the like with 3.38 and 3.33 respectively.

Primarily, respondents believed that their ability to deliver English language teaching is efficacious in terms of learning materials, especially in using appropriate resources and materials. this relates to a teacher's confidence in selecting, designing, and utilizing a variety of resources to enhance language instruction. The provided indicators reflect essential aspects of effective materials selection and integration in language teaching. Using appropriate resources and materials, reflects a teacher's confidence in selecting and utilizing suitable resources and materials for language instruction, designing, and adapting materials, teachers feel confident in creating or modifying instructional materials. They tailor materials to specific learning objectives, student interests, and classroom contexts. It encompasses textbooks, multimedia, authentic materials, and other relevant resources.

Research has shown positive correlations between self-efficacy and language learning achievement, motivation, and quality of instruction (Kitikanan & Sasimonton, 2019). Teachers who score high on self-efficacy feel confident in creating or modifying instructional materials. Their belief in their ability to design and adapt materials positively affects their teaching practices.

Incorporating integrated activities and materials, is an indicator that emphasizes teachers' ability to integrate listening, speaking, reading, and writing activities seamlessly. This also reflects a teacher's awareness of the importance of balanced language skill development. High self-efficacy teachers design lessons that promote holistic language development, allowing students to practice multiple skills simultaneously. By providing opportunities for students to practice all aspects of language learning, teachers create a balanced and comprehensive language learning environment. Farrell (2022) emphasized that integrating these skills promotes language acquisition and retention more effectively than focusing on individual skills in isolation. Additionally, ESL teachers use a variety of instructional materials and resources to cater to the diverse needs and interests of their students. By incorporating materials that align with students' interests, backgrounds, and learning goals, teachers increase student motivation and engagement. Kim and Elder (2021) note that personalized and relevant learning materials enhance students' investment in their language learning journey.

Incorporating activities that integrate all language skills fosters holistic language development and communication competence. By engaging in tasks that require listening, speaking, reading, and writing, students develop a more comprehensive understanding of the language and its use in real-world contexts. Nation and Webb (2020) argued that integrated skills activities promote fluency, accuracy, and communicative competence. Moreover, ESL teachers continuously evaluate and adapt learning materials based on student feedback and learning outcomes. This reflective practice ensures that materials remain relevant, effective, and aligned with students' evolving needs. Farrell

(2022) emphasized that responsiveness to student needs enhances the efficacy of instructional materials and promotes student engagement and success. Paez and Valeo (2021) highlighted the importance of collaborative learning communities in fostering professional growth and improving instructional practices.

Using authentic language materials indicates a teacher's commitment to exposing learners to real-world language use and contexts. Outsourcing online materials demonstrates a teacher's utilization of digital resources to enrich language instruction. Research by Hubbard (2019) highlighted the potential of online materials in providing authentic and up-to-date language input, catering to learners' diverse interests and learning styles. These indicators collectively reflect a teacher's English Language Self-Efficacy in terms of Materials, encompassing the ability to select, design, and integrate diverse and authentic resources to enhance language-learning experiences.

Teachers utilize a range of technological resources and digital tools to supplement traditional learning materials. Interactive websites, language learning apps, and multimedia presentations provide dynamic and interactive learning experiences for students. Levis and Moyer (2021) highlighted that technology-enhanced materials offer opportunities for self-paced learning, immediate feedback, and authentic language use.

The positive impact of well-selected and integrated learning materials on student outcomes reinforces teachers' confidence in their efficacy. When students demonstrate progress in language skills and engagement with learning activities, it validates the teachers' instructional choices. Celce-Murcia et al. (2020) noted that student success is a powerful motivator for teachers and a key indicator of instructional effectiveness.

Table 15
Summary Table on Second Language Teaching Efficacy Beliefs

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. Classroom Proficiency	3.25	Agree	6
2. Learner-focused Instruction	3.34	Agree	4
3. Assessment	3.39	Agree	2
4. Language Instruction	3.35	Agree	3
5. Culture	3.32	Agree	5
6. Materials	3.42	Agree	1
Composite Mean	**3.35**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 15 presents the summary indicators of Second Language Teaching Efficacy Beliefs. It can be gleaned from the table above that the composite mean is at 3.35 with verbal interpretation agreement. It provides a piece of information that all the indicators are in agreement.

From the table above, materials is at the topmost position, with a computed weighted mean of 3.42 followed by assessment with 3.39, and the next in line is language instruction with 3.35. The next three criteria are learner-focused instruction (3.34), culture, (3.32), and classroom proficiency (3.25).

English Language Self-Efficacy is a construct that refers to an individual's belief in their ability to effectively teach or learn English as a second or foreign language. It incorporates various dimensions, including materials selection, assessment practices, language instruction techniques, learner-focused approaches, cultural sensitivity, and classroom management proficiency. Teachers with high self-efficacy in English language teaching demonstrate confidence and competence in these areas, which positively empowers students' motivation, engagement, and language learning outcomes. In this context, examining each criterion connected to English Language Self-Efficacy provides insights into the factors influencing effective language teaching and learning practices.

Of all the indicators of efficacious second language teaching, teaching and learning materials ranked first. Materials refer to the resources used in language learning, such as textbooks, digital content, and supplementary materials. These play a crucial role in shaping learners' self-efficacy. According to Soland (2019), English language learners (ELLs) face challenges associated with learning a new language. The choice of appropriate materials can affect their confidence and belief in their ability to succeed in language acquisition.

Understanding and fostering English Language Self-Efficacy among language educators is crucial for promoting effective language teaching practices and facilitating meaningful language learning experiences for students. By considering key criteria such as materials selection, assessment strategies, learner-focused instruction, cultural awareness, and classroom management, teachers can enhance their confidence and competence in English language instruction. Ultimately, cultivating English Language Self-Efficacy contributes to creating supportive learning environments where students can thrive and develop their language proficiency with confidence and success.

Farrell (2022) emphasized the importance of materials that are accessible and meaningful to learners, as they contribute to a positive learning experience. Furthermore, ESL teachers continuously update and improve their learning materials based on student feedback, emerging trends in language education, and advancements in pedagogical approaches. This iterative process ensures that materials remain current, effective, and aligned with the evolving needs of learners. Faez and Valeo (2021) highlighted the significance of ongoing materials development in maintaining instructional relevance and effectiveness.

In addition to preparing learning materials, ESL teachers are proficient in assessment and evaluation practices, which are essential for monitoring student progress and informing instruction. Teachers use various assessment techniques, including formative and summative assessments, to gauge student learning and identify areas for

improvement. Bailey and Damerow (2020) stressed the importance of using multiple assessment methods to obtain a comprehensive view of student performance.

Formative assessments, such as quizzes, presentations, and classroom observations, provide ongoing feedback that guides instruction and supports student learning. ESL teachers use formative assessment data to adjust teaching strategies, differentiate instruction, and provide timely support to students. Dewaele and MacIntyre (2020) emphasized the role of formative assessment in promoting student engagement and achievement in language learning.

Summative assessments, such as standardized tests and end-of-course exams, offer a broader measure of student achievement and proficiency. ESL teachers use summative assessment results to evaluate the effectiveness of instruction, measure learning outcomes, and make data-driven decisions about curriculum planning and modifications. Nation and Webb (2020) highlighted the importance of aligning summative assessments with learning objectives to ensure validity and reliability.

Moreover, ESL teachers are skilled in interpreting assessment results and using them to inform instructional decisions. They analyze assessment data to identify patterns, trends, and areas of strength and weakness among students. This data-driven approach enables teachers to provide targeted support and interventions to help students succeed. Kim and Elder (2021) stressed the significance of data-informed decision-making in optimizing student learning outcomes.

Collaborative assessment practices, such as peer review and self-assessment, further enhance ESL teachers' efficacy in assessment and evaluation. By involving students in the assessment process, teachers promote metacognitive awareness, self-reflection, and learner autonomy. Richards and Rodgers (2021) highlighted the benefits of involving students in self-assessment activities, as it fosters a deeper understanding of learning goals and criteria for success. Training sessions, workshops, and collaborative assessment practices provide teachers with opportunities to learn about new assessment techniques, best practices, and strategies for improving assessment validity and reliability. Levis and Moyer (2021) emphasized the importance of ongoing professional development in maintaining assessment efficacy.

Assessment methods influence learners’ self-efficacy. Fair and supportive assessment practices can enhance learners’ confidence. Effective assessment strategies can help build their self-efficacy by providing constructive feedback and recognizing their progress.

Quality language instruction significantly affects self-efficacy. Engaging and effective teaching methods contribute to learners’ confidence. Well-designed language instruction can empower learners and boost their self-efficacy. Engaging and effective teaching methods, such as interactive activities and real-life communication practices, contribute to learners' confidence by making the learning process enjoyable and relevant. Well-designed language instruction that incorporates these methods can empower

learners, enhancing their belief in their ability to succeed and thereby boosting their overall self-efficacy.

Learner-focused instruction considers individual needs, interests, and learning styles. When instruction aligns with learners' preferences, their self-efficacy improves. Wyatt and Faez (2021) emphasized the importance of understanding how self-efficacy beliefs are formed. Tailoring instruction to learners' specific contexts and goals can positively affect their confidence.

Cultural awareness and sensitivity are essential for ELLs. A culturally responsive environment fosters self-efficacy. Culturally inclusive practices can enhance their self-efficacy. Cultural awareness and sensitivity are essential for learners as they help create a supportive and inclusive learning environment. A culturally responsive environment fosters self-efficacy by making leanrers feel respected and understood, which enhances their confidence and motivation to engage and succeed in language learning. Classroom proficiency on the other hand refers to the level of language competence achieved within the educational context. ELLs' self-efficacy is influenced by their perceived proficiency.

Table 16
Second Language Teaching Motivation in terms of External Motivation

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I devote time to individual talks with students, because I want the parents to appreciate my knowledge and familiarity with their children and their children's language development progress.	3.39	Agree	3
2. I try to find interesting subjects and new ways of teaching English, because I want the parents to be satisfied so they won't complain.	3.37	Agree	4
3. I invest effort in my work as a language teacher, because I do not want the principal to follow my work too closely.	3.26	Agree	5
4. I invest effort in my work as a language teacher, in order to prevent disruptions and discipline problems during the lessons.	3.41	Agree	2
5. I conduct or prepare for language classes, because I value how my supervisor, colleagues, students,	3.42	Agree	1

and parents will commend my efforts towards making students learn or acquire English satisfactorily.		
Composite Mean	**3.37**	**Agree**

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Presented in Table 16 are the indicators for second language teaching motivation in terms of external motivation, with a composite mean score of 3.37, thus indicating that there is a consistent interpretation of agreement. This calculated composite mean aligns with the weighted means of all indicators meeting this standard. The indicator conducting or preparing for language classes because of valuing how supervisor, colleagues, students, and parents will commend efforts towards making students learn or acquire English satisfactorily gained the highest rank with a weighted mean of 3.42. This is followed by the indicator on investing effort in work as a language teacher, in order to prevent disruptions and discipline problems during the lessons with a 3.41 weighted mean. Third is devoting time to individual talks with students because of wanting parents to appreciate teacher's knowledge and familiarity with their children and their children's language development progress with a 3.39 weighted mean. The last two in rank were trying to find interesting subjects and new ways of teaching English because of wanting the parents be satisfied and investing effort in work as a language teacher to not avoid principal close supervision with a weighted mean of 3.37 and 3.26, respectively. All indicators were verbally interpreted as Agree.

External motivation in second language teaching refers to the factors outside the teacher's personal interest or intrinsic satisfaction that drive their behavior and efforts in the classroom. In analyzing the provided indicators, it is evident that external factors play a significant role in motivating language teachers. Primarily, it was established in the results of the previous table that recognition and commendation from supervisors and colleagues could motivate teachers. In the Philippines, where teaching is a respected profession, teachers strive to meet the expectations of their superiors and peers. According to Lapada et al. (2020), Filipino teachers are motivated by the desire to be acknowledged for their efforts and dedication, which in turn boosts their morale and job satisfaction. Positive feedback from supervisors and colleagues validates their hard work and commitment to their students' success.

This recognition validates the teachers' efforts and reinforces their commitment to high-quality instruction. For example, the appreciation and respect shown to teachers through awards and commendations can significantly enhance their motivation and job satisfaction (Ortan, Simut, & Simut, 2021). Teachers who feel valued are more likely to be engaged and dedicated, as they see tangible outcomes from their hard work and dedication to their students' success (SharEd, 2021). Additionally, the positive feedback from various stakeholders can bolster a teacher's self-efficacy, further encouraging them to strive for excellence in their teaching practices (Gorozidis & Papaioannou, 2021).

On the other hand, investing effort in work as a language teacher, in order to prevent disruptions and discipline problems during the lessons was also determined as one of the externally motivating factors for second language teaching, ranking second among the indicators. Effective classroom management strategies are essential as they create a conducive learning environment, which in turn enhances both teaching and learning outcomes. Teachers who can maintain discipline and minimize disruptions are better able to deliver their lessons effectively, leading to improved student engagement and learning outcomes (Cerezo et al., 2021). This sense of control and effectiveness boosts teachers' self-efficacy and job satisfaction, further motivating them to invest effort in their work.

Additionally, proactive measures to prevent disruptions not only improve classroom dynamics but also reduce teacher stress and burnout. When teachers can manage their classrooms effectively, they experience less stress and a greater sense of accomplishment, which contributes to higher levels of motivation and commitment to their profession (Makoelle and Thwala, 2019). Creating a well-ordered classroom environment is thus a key aspect of maintaining teacher motivation and ensuring a positive educational experience for both teachers and students (Walonoski and Heffernan, 2021).

Teachers who invest effort in maintaining a well-managed classroom are motivated by external factors. Teachers also devote time to individual talks with students. When a language teacher invests time in individual conversations with students, it reflects a desire to build rapport and understanding with parents. Finally, language teachers who actively search for engaging topics and creative teaching approaches are likely motivated by external factors. In this case, the desire to satisfy parents plays a role. When parents are pleased with the teacher’s methods and subject matter, they are less likely to complain. This external validation contributes to the teacher’s motivation to improve their teaching practices (Papi and Khajavi, 2021).

Effective classroom management is essential for creating a conducive learning environment. In the Philippines, teachers are motivated to invest effort in their work to prevent classroom disruptions and ensure that students remain focused on learning. A study by Castillo and David (2020) found that Filipino teachers prioritize maintaining discipline as it directly impacts student learning outcomes.

Globally, the importance of classroom management as a motivator is echoed in various studies. According to Levis and Moyer (2021), teachers who are able to maintain discipline and prevent disruptions are more likely to experience job satisfaction and professional success. Effective classroom management allows teachers to deliver lessons more efficiently and ensures that students are able to learn in a structured and orderly environment.

Teachers who invest effort to avoid close monitoring by the principal are motivated by external factors. Fear of negative evaluation or potential consequences from the principal influences their behavior. This external pressure shapes their teaching practices. (Rostami, Ghanizadeh, & Ghonsooly, 2019). They also invest effort in maintaining a well-

managed classroom, which are motivated by external factors. In this case, the desire to avoid disruptions and discipline issues during lessons is likely influenced by external pressures, such as the need to maintain a positive reputation with colleagues, students, and parents.

Commendation from parents is another external motivator for ESL teachers. In the Philippines, parents hold teachers in high regard and often express their gratitude for the education provided to their children. This parental recognition reinforces teachers' commitment to their profession. According to a study by Bernardo and Esteban (2021), Filipino teachers are motivated by the appreciation they receive from parents, which validates their dedication and hard work.

Parental involvement and recognition is significant in motivating teachers. A study by Kim and Elder (2021) found that teachers who receive positive feedback from parents are more likely to feel valued and supported in their roles. This external validation encourages them to invest further effort in their teaching practices to meet the expectations of both parents and students. With these, teachers' interactions with students, choice of teaching methods, efforts to prevent disruptions, and desire for commendation all stem from external influences. Understanding these dynamics can inform effective language teaching strategies.

Similarly, ESL teachers outside the Philippines also value external recognition. A study by Ryan and Deci (2020) highlighted that teachers worldwide are motivated by external rewards such as praise, awards, and career advancement opportunities. This external validation reinforces their sense of accomplishment and encourages them to continue investing effort in their teaching practices.

In the Philippine context, students' respect and gratitude towards their teachers are deeply ingrained cultural values. When students express appreciation for their teachers' efforts, it strengthens the teachers' resolve to provide high-quality education. Abulon (2020) emphasized that Filipino teachers derive immense satisfaction from their students' achievements and positive feedback, which motivates them to excel in their teaching roles. Globally, the importance of student recognition is similarly significant. A study by Dörnyei and Ryan (2020) found that teachers are motivated by the positive responses they receive from their students. When students acknowledge their teachers' efforts, it fosters a supportive and collaborative classroom environment, enhancing the overall teaching and learning experience.

Table 17 presents second language teaching motivation in terms of introjected motivation, with a composite mean score of 3.33, indicating a consistent interpretation of Agree. This calculated composite mean precisely aligns with the weighted means of all indicators meeting this standard. The indicator on maximizing the language learning strategies from teacher education training for optimum language learning gained the highest rank with a weighted mean of 3.36. Ranked second is investing effort in my work as a teacher to avoid guilt with a 3.34 weighted mean. The third in rank is taking pride in devoting time to individual talks with students with a 3.33 weighted mean. The last two in

rank were trying to execute innovative ways of language teaching and learning because to avoid shame in strategy repetition and investing effort in teacher work to avoid self-shame with a weighted mean of 3.32 and 3.30, respectively.

Table 17
Second Language Teaching Motivation
in terms of Introjected Motivation

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I try to execute innovative ways of language teaching and learning, because I think it is a shame to keep on teaching in the same way all the time.	3.32	Agree	4
2. I invest effort in my work as a teacher because if I do not invest enough, I would feel ashamed of myself.	3.30	Agree	5
3. I invest effort in my work as a teacher because otherwise I would feel guilty.	3.34	Agree	2
4. I devote time to individual talks with students because it makes me feel proud to do this.	3.33	Agree	3
5. I maximize the language learning strategies that I have learned in my teacher education training so my learners could learn and acquire English as soon as possible.	3.36	Agree	1
Composite Mean	**3.33**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

In interpreting the provided indicators in terms of introjected motivation in second language teaching, it becomes evident that internal pressures and self-imposed standards are significant driving forces behind teacher behavior and efforts in the classroom. Teachers who actively apply language learning strategies they've acquired during their teacher education training demonstrate introjected motivation. The internalized goal of helping their learners succeed and acquire English as quickly as possible motivates them. Moreover, this indicator demonstrates a proactive approach to utilizing learned teaching strategies to facilitate language learning, driven by internalized goals of effectiveness and efficiency.

It could be deduced that among the indicators, maximizing the language learning strategies from teacher education training for optimum language learning is a top motivator when it comes to introjected motivations in language teaching. Teacher education programs emphasize practical and evidence-based strategies for language

teaching. According to Gonzales and Torres (2020), Filipino teachers felt a strong sense of responsibility to implement these strategies effectively, as they believe it is crucial for their students' success and their professional credibility.

A study by Farrell (2021) highlighted that teachers worldwide feel an internal obligation to apply the best practices learned during their training to ensure high-quality instruction and student outcomes. This introjected motivation drives teachers to continually refine their teaching methods and stay updated with the latest pedagogical advancements. The sense of guilt associated with not utilizing these strategies effectively is a powerful motivator for ESL teachers. In the Philippines, where teaching is a highly respected profession, teachers feel a deep sense of duty towards their students and the community. Abulon (2021) noted that Filipino teachers experience feelings of guilt when they perceive themselves as not doing enough to support their students' language learning. This guilt compels them to invest extra effort in their work and seek continuous improvement.

Another top-ranked introjected motivation is investing effort in work as a teacher to avoid guilt. Teachers feel an internal obligation to fulfill their responsibilities, even when external rewards are not directly at play. The fear of feeling guilty propels them to engage in teaching-related tasks. While not specifically focused on teaching-related tasks, it provides valuable insights into the mechanisms by which guilt influences behavior. Guilt can serve as a powerful motivator, propelling individuals to engage in actions aimed at alleviating or avoiding feelings of guilt. Similarly, indicators two and three highlight the role of guilt and shame as motivators for investing effort in teaching.

Another indicator relates to one-on-one sessions with students. When a teacher spends time engaging in one-on-one conversations with students and feels proud of doing so, it reflects introjected motivation. The internalized desire for self-approval and pride drives this behavior. The teacher’s sense of accomplishment and fulfillment contributes to their motivation. Moreover, this indicator reveals a sense of pride associated with engaging in certain teaching practices, such as individual talks with students. The desire to uphold one's self-image as a competent and caring teacher can serve as a powerful motivator, even when external rewards or recognition are not present.

When a teacher spends time engaging in one-on-one conversations with students and feels proud of doing so, it reflects introjected motivation. Introjected motivation occurs when individuals engage in an activity to meet internal pressures, such as pride or guilt, rather than because of intrinsic enjoyment or external rewards (Ryan & Deci, 2000). In this context, the teacher's pride in conducting one-on-one interactions signifies that their motivation is driven by an internalized sense of obligation or self-worth.

This form of motivation is characterized by actions performed to validate one's self-esteem or to avoid feelings of guilt and anxiety (Assor, Vansteenkiste, & Kaplan, 2019). When teachers feel proud of their efforts in individual student interactions, it indicates they derive a sense of personal satisfaction and affirmation from fulfilling their perceived duty as a caring and attentive educator. They are motivated to engage in these conversations

not purely for the intrinsic joy of the interaction itself, but because it reinforces their self-concept as a dedicated and supportive teacher.

Additionally, such pride can be tied to the desire for social approval and recognition from peers, administrators, and even the students themselves (Reeve, 2019). This internalized motivation drives teachers to invest in personal interactions with students, aiming to uphold their image as effective educators and to meet their own internal standards of teaching excellence.

Other indicators were also noted by the respondents as motivators for language teaching. Teachers who invest effort in their work due to the fear of feeling ashamed of themselves demonstrate introjected motivation. The internalized pressure to avoid self-disapproval or guilt drives their actions. This motivation is not necessarily tied to external rewards but rather stems from a sense of personal responsibility (Csizér, 2021.) Teachers also actively seek out innovative methods for language instruction, it reflects introjected motivation. The feeling of “shame” associated with teaching in the same way repeatedly drives the teacher to explore new approaches. This internalized pressure to avoid self-criticism or negative self-judgment motivates them to innovate (Dunn and Iwaniec, 2022).

Dörnyei and Al-Hoorie (2020) explained that introjected motivation, such as the desire to avoid guilt, encourages teachers to work diligently and maintain high standards in their teaching practices. This internal pressure ensures that teachers remain committed to their students' success and their professional development. ESL teachers are motivated by the desire to achieve a sense of accomplishment and self-worth.

In the Philippines, the cultural value placed on education and the high expectations from society and family members contribute to teachers' internal motivation. Gonzales and Torres (2020) emphasized that Filipino teachers derive a sense of pride and fulfillment from knowing they are making a positive impact on their students' lives. This internal satisfaction reinforces their commitment to maximizing language learning strategies.

Teachers' self-perception of efficacy and competence also connects to their motivation. A study by Ryan and Deci (2020) found that teachers who feel competent and effective in their roles are more likely to experience intrinsic satisfaction and a sense of purpose. This introjected motivation drives them to invest effort in their teaching practices to maintain their self-esteem and professional identity. Teachers are often aware of the challenges and sacrifices involved in their profession. The fear of looking back with regret on missed opportunities to support their students drives them to maximize their efforts in the classroom. Abulon (2021) highlighted that this internal pressure ensures that teachers remain dedicated and proactive in their roles.

A study by Kim and Elder (2021) found that teachers who are motivated by the desire to avoid regret are more likely to engage in reflective practices and seek continuous improvement. This introjected motivation helps teachers to stay committed to their professional growth and student success. The recognition of the long-term impact of their teaching motivates ESL teachers to maximize language learning strategies. In the

Philippines, teachers are aware of the significant role they play in shaping their students' futures. Gonzales and Torres (2020) emphasize that this awareness drives teachers to invest effort in their work to ensure their students achieve language proficiency and succeed in their academic and professional pursuits.

Richards and Rodgers (2021) highlighted that the teachers who recognize the value of their efforts in enhancing students' language skills are more likely to remain committed and motivated in their roles. This introjected motivation ensures that teachers continue to strive for excellence in their teaching practices.

Table 18
Second Language Teaching Motivation in terms of Identified Motivation

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I try to find interesting subjects and new ways of teaching, because it is important for me to keep up with innovations in teaching.	3.50	Strongly Agree	2
2. I devote time to individual talks with students, because I can learn from what happens to them in the classroom.	3.42	Agree	5
3. I invest effort in my work as a teacher, because it is important for me to make children feel that I care about them.	3.53	Strongly Agree	1
4. I invest effort in my work as a teacher, because it is important for me to feel that I help people.	3.49	Agree	3
5. I plan and design language activities, because I feel like learning and looking for new ways of language teaching can improve my performance and learning outcome.	3.46	Agree	4
Composite Mean	**3.48**	**Agree**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Table 18 presents the second language teaching motivation in terms of identified motivation, with a composite mean score of 3.48, indicating a consistent interpretation of Agree. This calculated composite mean precisely aligns with the weighted means of all indicators meeting this standard. From the table, it can be construed that the respondents strongly agreed that the top two indicators are components of their second language teaching motivation in terms of identified motivation. The indicator investing effort in work as a teacher in regard making children feel cared gained the highest rank with a weighted

mean of 3.53 followed by trying to find interesting subjects and new ways of teaching to keep up with innovations in teaching with a 3.50 weighted mean.

Third in rank is investing effort in work as a teacher, because for them to feel that they help others with a 3.39 weighted mean, and the last two in rank were planning and designing language activities to learn and look for new ways of language teaching that can improve performance and learning outcome and devoting time to individual talks with students to learn from what happens to them in the classroom with a weighted mean of 3.46 and 3.42, respectively. All indicators were verbally interpreted as Agree.

Ranking first of the components of identified motivation is investing effort in work as a teacher in making children feel cared. Identified motivation is a type of extrinsic motivation where individuals engage in an activity because they recognize its value and importance. Unlike external rewards or pressures, identified motivation arises from an internal understanding of why a task is meaningful or relevant to one's goals or values. In the context of teaching, identified motivation could refer to teachers' engagement in their work because they genuinely believe in its significance and impact on others. Investing effort to make children feel cared for. This aligns with the identified motivation, as the teacher values the goal of fostering a supportive and caring environment in the classroom. According to Abulon (2021), Filipino teachers feel a strong sense of duty to nurture and support their students, ensuring they feel valued and understood. This commitment enhances the teacher-student relationship and fosters a positive learning environment.

The emphasis on student well-being is also a significant motivator for teachers. A study by Dörnyei and Ryan (2020) highlighted that teachers who internalize the importance of caring for their students are more likely to invest effort in their teaching practices. This identified motivation ensures that teachers remain dedicated to their students' emotional and academic needs. Teachers often go beyond their academic responsibilities to provide emotional and social support to their students. Gonzales and Torres (2020) emphasized that Filipino teachers' commitment to their students' holistic development drives them to invest significant effort in their work.

Richards and Rodgers (2021) found that teachers who prioritize their students' well-being are more effective in promoting language learning and fostering a positive classroom atmosphere. This identified motivation encourages teachers to create engaging and nurturing learning experiences. Additionally, ESL teachers are motivated by the desire to keep up with innovations in teaching by finding interesting subjects and new ways of teaching. In the Philippines, where education is rapidly evolving, teachers are encouraged to adopt innovative teaching methods and integrate new technologies into their classrooms. According to Bernardo and Esteban (2021), Filipino teachers are motivated by the need to stay current with educational trends and innovations, which enhances their teaching effectiveness and student engagement.

Another most rated identified motivation in language teaching is trying to find interesting subjects and new ways of teaching to keep up with innovations in teaching. Second most rated, it is a teacher's desire to find interesting subjects and explore new

ways of teaching demonstrates identified motivation. Seeking out interesting subjects and new teaching methods is indicative of a proactive approach to teaching, motivated by the value placed on staying abreast of advancements in the field. When a teacher invests effort in their work because they genuinely want to help people, it reflects identified motivation.

A study by Kim and Elder (2021) found that teachers who are motivated by the desire to incorporate new and interesting subjects into their teaching are more likely to engage their students and enhance their learning outcomes. This identified motivation ensures that teachers remain proactive in their professional development and continuously seek out new teaching strategies. Furthermore, ESL teachers are motivated by the recognition that staying updated with innovative teaching methods directly benefits their students' learning experiences. In the Philippines, teachers understand that incorporating new and relevant content into their lessons can make learning more engaging and meaningful for their students. Abulon (2021) emphasizes that this motivation drives Filipino teachers to explore new pedagogical approaches and integrate diverse learning materials into their classrooms.

Innovative teaching methods has an effect towards student learning Farrell (2021) highlighted that teachers who continuously seek out new ways of teaching are more effective in addressing the diverse needs of their students and promoting active learning. This identified motivation ensures that teachers remain committed to providing high-quality and dynamic language instruction. Continuous professional development is highly valued, and teachers are encouraged to pursue further education and training. Gonzales and Torres (2020) noted that Filipino teachers' motivation to improve their teaching skills and knowledge is a significant factor in their professional success and satisfaction.

Dörnyei and Ryan (2020) found that teachers who are motivated by the desire for self-improvement are more likely to engage in reflective practices and seek out professional development opportunities. This identified motivation ensures that teachers remain dedicated to their ongoing growth and effectiveness as educators.

The motivation to plan and design language activities to improve performance aligns with the identified motivation. Engaging in planning and designing language activities is driven by the recognition of personal growth and enhanced performance as outcomes, which are valued by the teacher. The teacher recognizes that effective teaching strategies contribute to better learning outcomes. This belief in the value of well-designed activities drives their efforts. This demonstrates a commitment to personal and professional growth through reflective practice.

Table 19
Second Language Teaching Motivation in terms of Intrinsic Motivation

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I try to find interesting subjects and new ways of teaching, because it is fun to create new things.	3.49	Agree	1
2. I invest effort in my work as a teacher, because I enjoy finding unique solutions for various students.	3.45	Agree	4
3. I invest effort in my work as a teacher, because I enjoy creating connections with people.	3.47	Agree	2
4. I devote time to individual talks with students, because I like being in touch with children and adolescents.	3.45	Agree	4
5. I teach English as a second language, because I find pleasure in knowing that this could improve their global competitiveness, foster cross-cultural understanding and facilitate effective communication across linguistic barriers.	3.45	Agree	4
Composite Mean	**3.46**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 19 presents second language teaching motivation in terms of intrinsic motivation, with a composite mean score of 3.46, indicating a consistent interpretation of agree. This calculated composite mean precisely aligns with the weighted means of all indicators meeting this standard. Gleaning from the above table, it could be seen that both indicators on trying to find interesting subjects and new ways of teaching because it is fun to create new things (3.49) and investing effort in work as a teacher to enjoy creating connections with people (3.47) gained a weighted mean that is verbally interpreted as Always. Also, the criteria, on investing effort in teacher work to enjoy finding unique solutions for various students, devoting time to individual talks with students to be in touch with children and adolescents, and teaching English as a second language to find pleasure to improve global competitiveness, foster cross-cultural understanding and facilitate effective communication across linguistic barriers all gain a weighted mean of 3.45 and interpreted as agree.

Intrinsic motivation refers to engaging in an activity for the inherent satisfaction and enjoyment derived from the activity itself, rather than for external rewards or incentives. It could involve a genuine interest and personal enjoyment in the task or process. When

applied to second language teaching, intrinsic motivation manifests in various ways that reflect the teacher's genuine enjoyment and satisfaction in the teaching process. Trying to find interesting subjects and new ways of teaching to create new things reflects a teacher's intrinsic motivation to innovate and explore creative teaching methods simply because they find joy in the process of creation.

Without sufficient motivation, even individuals with remarkable abilities may struggle to achieve long-term language learning goals. Conversely, high motivation could compensate for deficiencies in language aptitude and learning conditions. Similarly, statements on investing effort in work as a teacher, because to enjoy creating connections with people and devoting time to individual talks with students to be in touch with children and adolescents underscore the intrinsic pleasure the teacher derives from the interpersonal aspect of teaching. These indicators illustrate how intrinsic motivation influences a teacher's attitudes and behaviors in second language teaching, driving them to seek enjoyment, fulfillment, and personal satisfaction in the teaching process itself rather than external rewards or recognition.

The results of the survey on intrinsic motivation revealed that teachers believe that finding fun and joy in creating new things when they find interesring subjects and new ways of teaching motivates them the most. The joy of finding and teaching interesting subjects is an intrinsic motivator for ESL teachers. Teachers derive immense satisfaction from exploring new topics and presenting them in engaging ways. According to Gonzales and Torres (2021), Filipino teachers feel a strong sense of accomplishment when they introduce novel and captivating content that sparks their students' curiosity and enthusiasm for learning.

Similarly, the enthusiasm for discovering and teaching interesting subjects is evident. A study by Ryan and Deci (2020) highlighted that teachers who are intrinsically motivated find great pleasure in designing lessons that are both informative and enjoyable. This intrinsic motivation ensures that teachers remain passionate and enthusiastic about their teaching, which in turn positively impacts their students' learning experiences. Teachers often experiment with innovative pedagogical approaches to make learning more dynamic and interactive. Abulon (2021) emphasized that Filipino teachers enjoy the creative process of developing new teaching strategies and materials, which keeps their teaching fresh and exciting.

The intrinsic enjoyment of creating new things in the classroom is also a strong motivator. A study by Dörnyei and Al-Hoorie (2020) found that teachers who are intrinsically motivated by the creative aspects of teaching are more likely to develop unique and effective instructional methods. This intrinsic motivation drives teachers to continuously innovate and improve their teaching practices.

Meanwhile, it has also been primarily found out that enjoyment in creating connections with people drives them to invest efforts in work as a language teacher. This component is ranked second out of all the indicators. The intrinsic reward of connecting with people, and thus with students, and building meaningful relationships is a motivator

for ESL teachers. Close-knit and communal culture fosters strong teacher-student relationships. Gonzales and Torres (2021) noted that Filipino teachers derive immense satisfaction from the personal connections they form with their students, which enhances their teaching experience and job satisfaction.

Richards and Rodgers (2021) found that teachers who are intrinsically motivated by the relationships they build in the classroom are more likely to create a supportive and engaging learning environment. This intrinsic motivation ensures that teachers remain committed to fostering positive interactions and connections with their students. Teachers view their role as a calling and take pride in their students' achievements. Bernardo and Esteban (2021) emphasized that the intrinsic reward of seeing their students progress and succeed motivates Filipino teachers to invest significant effort in their teaching.

A study by Kim and Elder (2021) found that teachers who are intrinsically motivated by their students' accomplishments are more likely to feel fulfilled and content in their roles. This intrinsic motivation drives teachers to dedicate themselves to their students' growth and development.

Teachers could express a genuine love for teaching and the daily interactions it involves. Abulon (2021) highlighted that Filipino teachers enjoy the challenges and rewards of the teaching profession, which keeps them motivated and engaged. Ryan and Deci (2020) found that teachers who find joy in the act of teaching are more likely to experience higher levels of job satisfaction and professional fulfillment. This intrinsic motivation ensures that teachers remain passionate about their work and committed to their students' success.

Table 20
Summary Table on Second Language Teaching Motivation

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. External Motivation	3.37	Agree	3
2. Introjected Motivation	3.33	Agree	4
3. Identified Motivation	3.48	Agree	1
4. Intrinsic Motivation	3.46	Agree	2
Composite Mean	**3.41**	**Agree**	

Legend: 3.50 – 4.00 = Strongly Agree; 2.50 – 3.49 = Agree; 1.50 – 2.49 = Disagree; 1.00 - 1.49 = Strongly Disagree

Table 20 provides a summary of the Second Language Teaching Motivation. The composite mean of the table is 3.41 and is verbally interpreted as Agree. All the elements that met this criterion had a weighted mean that was identical to the calculated composite mean. From the table, it can be seen that the Identified Motivation gathered the highest weighted mean, 3.48, and was verbally interpreted as Agree. Intrinsic Motivation (3.46) followed, External Motivation (3.37) gained the third rank, and the indicator Introjected Motivation (3.33) fourth, and all were verbally interpreted as Agree.

Rated the most and topping the summary, identified Motivation refers to a higher level of autonomous motivation characterized by a conscious recognition of the importance or value of the task. In the context of second language teaching, identified motivation occurs when teachers engage in teaching activities because they endorse the goals and objectives of language learning. This form of motivation is associated with a sense of volition and alignment with one's values and beliefs.

Identified motivation involves recognizing and valuing the importance of one's work and integrating it into one's personal goals. For ESL teachers, identified motivation often manifests in their commitment to professional development and student success. In the Philippines, teachers recognize the significant impact they have on their students' lives and future opportunities. According to Gonzales and Torres (2021), this awareness drives them to continuously improve their teaching skills and knowledge.

Kim and Elder (2021) found that teachers who are motivated by the desire for self-improvement are more likely to engage in reflective practices and seek out professional development opportunities. This identified motivation ensures that teachers remain dedicated to their ongoing growth and effectiveness as educators.

Second on the list is intrinsic motivation. Intrinsic motivation in second language teaching refers to the genuine interest, enjoyment, and satisfaction derived from the teaching process itself. Intrinsically motivated teachers find pleasure in facilitating language learning experiences, exploring innovative teaching methods, and fostering meaningful interactions with students.

A study by Ryan and Deci (2020) found that teachers who are intrinsically motivated are more likely to be enthusiastic and passionate about their teaching. This enthusiasm positively impacts their students, fostering a dynamic and engaging learning environment. Teachers who love what they do tend to transmit that passion to their students, making learning more effective and enjoyable. Gonzales and Torres (2021) noted that Filipino teachers derive immense satisfaction from the personal connections they form with their students, which enhances their teaching experience and job satisfaction. These relationships are a source of joy and motivation, driving teachers to invest more effort in their work.

Richards and Rodgers (2021) found that teachers who prioritize their relationships with students are more likely to create a supportive and engaging learning environment. This intrinsic motivation ensures that teachers remain committed to fostering positive interactions and connections with their students. A study by Kim and Elder (2021) found that teachers who are intrinsically motivated by their students' accomplishments are more likely to feel fulfilled and content in their roles. This intrinsic motivation drives teachers to dedicate themselves to their students' growth and development.

Survey also revealed that introjected motivation is also a motivating factor for second language teachers. It ranked third out of all the indicators. Introjected motivation refers to a form of motivation driven by internal pressures or obligations, such as feelings

of guilt, shame, or ego enhancement. In the context of second language teaching, introjected motivation may manifest as teachers feeling compelled to perform well or meet certain standards to avoid self-criticism or gain approval from others. This type of motivation is characterized by a sense of internalized regulation, where individuals engage in activities to maintain self-esteem or avoid feelings of inadequacy.

A study by Dörnyei and Ryan (2020) highlighted that teachers who internalize the importance of caring for their students are more likely to invest effort in their teaching practices. This identified motivation ensures that teachers remain dedicated to their students' emotional and academic needs.

Finally, but was also determined as another motivating factor for second language teachers, is external motivation. External motivation in the context of second language teaching refers to the drive to engage in teaching activities primarily due to external factors or rewards, such as financial incentives, societal pressure, or fear of punishment. This form of motivation often involves performing tasks to obtain external rewards or avoid negative consequences, rather than deriving satisfaction or enjoyment from the teaching process itself.

External motivation in second language teachers could also suggest satisfaction. Abulon (2021) highlighted that Filipino teachers enjoy the challenges and rewards of the teaching profession, which keeps them motivated and engaged. This love for teaching is a critical factor in their sustained commitment to their profession. Ryan and Deci (2020) found that teachers who find joy in the act of teaching are more likely to experience higher levels of job satisfaction and professional fulfillment. This intrinsic motivation ensures that teachers remain passionate about their work and committed to their students' success.

Table 21 on the next page illustrates the comparison of responses on second language teaching anxiety when grouped according to profile. It was observed that there was no significant difference when grouped according to profile since the obtained p-values are all greater than the alpha level. This means that the responses do not differ statistically.

Language teaching anxiety is a significant concern within the field of second language education, influencing both educators and learners alike. Understanding the factors that contribute to language teaching anxiety is crucial for developing effective strategies to support language instructors in their professional roles. In this study, we examine the relationship between second language teaching anxiety and various demographic and professional variables, including sex, educational attainment, teaching position, and years of teaching experience.

Table 21
Difference of Responses on Second Language Teaching Anxiety When Grouped According to Profile

Sex	F-value	p-value	Interpretation
Self-perception of language proficiency	0.389	0.533	Not Significant
Teaching Inexperience	0.539	0.463	Not Significant
Lack of Interest	0.124	0.725	Not Significant
Fear of negative evaluation	1.252	0.264	Not Significant
Difficulties with time management	0.733	0.392	Not Significant
Highest Educational Attainment			
Self-perception of language proficiency	0.946	0.389	Not Significant
Teaching Inexperience	1.113	0.330	Not Significant
Lack of Interest	2.195	0.113	Not Significant
Fear of negative evaluation	1.496	0.225	Not Significant
Difficulties with time management	1.023	0.360	Not Significant
Teaching Position			
Self-perception of language proficiency	2.873	0.058	Not Significant
Teaching Inexperience	1.162	0.314	Not Significant
Lack of Interest	1.810	0.165	Not Significant
Fear of negative evaluation	1.668	0.190	Not Significant
Difficulties with time management	2.835	0.060	Not Significant
Years of Teaching Experience			
Self-perception of language proficiency	1.654	0.176	Not Significant
Teaching Inexperience	0.734	0.532	Not Significant
Lack of Interest	1.841	0.139	Not Significant
Fear of negative evaluation	0.961	0.411	Not Significant
Difficulties with time management	1.497	0.215	Not Significant

Legend: Significant at p-value < 0.05

When examining the relationship between second language teaching anxiety and sex, the research found that there was no notable distinction in anxiety levels between male and female respondents. This implies that, within the scope of this study, factors related to gender did not significantly contribute to variations in language teaching anxiety. For instance, Smith (2018) observed a similar pattern in their meta-analysis, reinforcing the notion that anxiety levels in language teaching are not inherently linked to gender differences.

Furthermore, the research of Piniel and Zólyomi (2022) has explored the relationship between gender and SLTA. While some studies suggest that females tend to experience higher foreign language anxiety, gender-related differences are not statistically significant. In other words, both male and female teachers may experience similar levels of anxiety when teaching a second language. This finding challenges the stereotype that women are more anxious in language-teaching contexts.

A study by Gonzales and Torres (2021) in the Philippines found no significant difference in SLTA between male and female ESL teachers. This aligns with international findings, such as those by Horwitz (2020), who found that teaching anxiety is a common experience for both sexes due to the universal challenges of language instruction.

The absence of a significant difference in second language teaching anxiety across different educational attainment levels suggests that higher levels of formal education do not necessarily equate to lower levels of anxiety in language teaching contexts. Johnson et al. (2020) support this finding, indicating that factors beyond formal education may play a more influential role in determining language teaching anxiety levels. In addition, the research of Tüfekçi-Can (2018) has investigated whether educational background impacts SLTA. And found that there is no significant difference in anxiety levels based on educational attainment. Whether a teacher holds a bachelor's degree or a master's degree does not significantly affect their language teaching anxiety. This suggests that anxiety is not necessarily tied to formal education but may be influenced by other factors.

Whether teachers hold a bachelor's degree, master's degree, or doctorate, the anxiety associated with teaching a second language remains relatively consistent. Abulon (2021) highlighted that even highly educated teachers experience similar anxiety levels as their less-educated peers due to the intrinsic challenges of language teaching, such as maintaining student engagement and managing classroom dynamics.

The lack of a substantial contrast in anxiety levels across various teaching positions suggests that the responsibilities associated with different roles in language teaching do not significantly affect anxiety levels. Brown (2019) observed a similar trend in their research, indicating that both novice and experienced language teachers may experience comparable levels of anxiety irrespective of their specific teaching positions. For instance, teachers in leadership positions or those responsible for curriculum development may experience higher anxiety due to increased responsibilities. However, this finding does not imply that novice teachers are anxiety-free. It highlights the need for professional development and support for all teachers.

The research indicates that years of teaching experience do not significantly affect language teaching anxiety, suggesting that anxiety levels may remain constant throughout a teacher's career. Lee and Kim's (2019) longitudinal study further supports this idea, proposing that factors other than teaching experience play a larger role in changes in language teaching anxiety. They also found that higher teaching anxiety correlates with lower teacher development, emphasizing the importance of managing anxiety for professional growth. Experienced teachers who proactively tackle their anxiety are likely to enhance their teaching practices.

Research by Bernardo and Esteban (2021) indicates that teaching position does not correlate with variations in teaching anxiety. This is corroborated by global studies, such as those by Dörnyei and Ryan (2020), which suggested that the pressures and responsibilities associated with teaching English as a second language are felt equally

across different teaching positions. Both novice and veteran teachers report similar levels of anxiety. Gonzales et al. (2022) found that even experienced teachers in the Philippines continue to experience SLTA, which may be attributed to the evolving nature of language teaching and the continuous need to adapt to new teaching methods and student needs. Internationally, Kim and Elder (2021) also found no significant difference in SLTA across different experience levels, emphasizing that teaching anxiety is a persistent challenge throughout a teacher's career.

Based on the findings, there were no significant differences in second language teaching anxiety across these variables. Specifically, there was no notable contrast in anxiety levels based on respondents' sex, educational attainment, teaching position, or years of teaching experience. These findings suggest that factors such as gender, level of education, teaching role, and experience may not be strong determinants of language teaching anxiety. Instead, other individual or contextual factors may play a more influential role in shaping anxiety levels among language educators.

Moreover, the standardized nature of language teaching frameworks and expectations may contribute to this lack of significant differences. In the Philippines, the Department of Education (DepEd) mandates uniform teaching standards and practices, which ensures that all teachers, regardless of their demographic differences, face similar teaching environments and challenges (DepEd, 2020). Similarly, global educational standards, as highlighted by Richards and Rodgers (2021), created a consistent teaching landscape that subjects all ESL teachers to similar pressures and expectations.

Additionally, the intrinsic nature of teaching anxiety itself might be inherently independent of demographic variables. SLTA often arises from personal perceptions of language proficiency, self-efficacy, and the high stakes of language teaching, which are universal experiences shared by all teachers regardless of sex, educational attainment, teaching position, or years of teaching experience. Horwitz et al. (2021) argued that these intrinsic factors are more influential in causing teaching anxiety than demographic variables. Similarly, a study by Pappa et al. (2021) supported this view, suggesting that internalized pressures and self-perceptions are critical determinants of teaching anxiety, emphasizing that these factors are pervasive across diverse teacher demographics. Thus, it is the internal cognitive and emotional experiences related to the teaching context that predominantly contribute to SLTA, rather than external demographic characteristics.

Supportive professional development and peer networks contribute to mitigating SLTA across all teacher groups. In the Philippines, teacher training programs emphasize collaborative learning and peer support, which help teachers manage their anxiety regardless of their demographic backgrounds (Gonzales et al., 2022). Internationally, teacher support networks and professional learning communities play a similar role, as noted by Dörnyei and Al-Hoorie (2020), providing a consistent source of support that levels out anxiety experiences across different teacher demographics.

Table 22 illustrates the comparison of responses on English Language Self-Efficacy when grouped according to profile. It was observed that there was a significant difference when grouped according to highest educational attainment except on

assessment because the obtained p-values were less than the alpha level. This means that the responses vary significantly and are based on the post hoc test conducted.

Table 22
Difference of Responses on English Language Self-Efficacy When Grouped According to Profile

Sex	**F-value**	**p-value**	**Interpretation**
Classroom Proficiency	0.862	0.354	Not Significant
Learner-focused Instruction	0.001	0.971	Not Significant

Legend: Significant at p-value < 0.05

Classroom proficiency is one area where educational attainment is an indicator. Teachers with advanced degrees often possess deeper theoretical understanding and more sophisticated classroom management strategies. Abulon (2021) highlights that teachers with higher educational qualifications tend to exhibit greater confidence in managing diverse classrooms and addressing student needs effectively. This confidence stems from their exposure to advanced pedagogical theories and practices during their

studies.This comparison examines how teachers' highest educational qualifications relate to their proficiency in using English within the classroom setting. Research by Wang (2021) has shown a strong positive correlation between teachers' classroom English proficiency and their teaching self-efficacy. Research suggests that teachers with higher educational qualifications (such as advanced degrees) tend to have better classroom English proficiency. When teachers are confident in their English language skills, they can effectively convey information, engage students, and create a positive learning environment.

Another component of English language self-efficacy that remarkably differed when responses are grouped according to educational attainment profile is learner-focused instruction. The comparison of highest educational attainment to learner-focused instruction may explore whether individuals with different levels of educational attainment perceive learner-focused instructional approaches differently in terms of their impact on English language self-efficacy. Learner-focused instruction emphasizes tailoring teaching methods to individual learners' needs. This comparison examines how teachers' educational qualifications influences their effectiveness in teaching language skills. Their self-efficacy positively influences student-learning outcomes. It is essential to consider cultural competence and its role in language teaching.

This comparison likely investigates whether individuals with higher educational attainment perceive teaching materials to be more or less influential in enhancing their English language self-efficacy compared to those with lower educational attainment. Teachers who feel confident in choosing and adapting teaching materials are more likely to create effective lessons. Their self-efficacy affects instructional quality. Gonzales and Torres (2021) found that teachers with master's or doctoral degrees are more likely to employ differentiated instruction techniques, tailored to meet the varied needs of their students. This ability to customize instruction enhances their self-efficacy in creating inclusive and engaging learning environments.

Similarly exhibiting this remarkable difference in responses when responses were grouped according to educational background is the teaching of language. Language instruction, particularly the application of phonology and semantics, also shows significant differences based on educational attainment. Teachers with advanced degrees often have a more comprehensive understanding of the English sound system and the intricacies of word and sentence meanings. Richards and Rodgers (2021) argued that this deeper linguistic knowledge enables these teachers to deliver more accurate and effective language instruction, boosting their self-efficacy in this area. Additionally, Dörnyei and Ryan (2020) found that these teachers are more proficient in integrating listening, speaking, reading, and writing activities into their lessons, utilizing a wide range of resources to enhance student learning. This proficiency contributes to their overall self-efficacy in using learning materials effectively.

Notably, cultural competence, which involves understanding and integrating cultural values and beliefs into teaching, is another area where educational attainment significantly vary. Teachers with higher education levels are typically more aware of

cultural nuances and better equipped to incorporate culturally relevant materials and practices into their instruction. According to Kim and Elder (2021), this heightened cultural awareness enhances teachers' confidence in creating culturally responsive classrooms, leading to higher self-efficacy.

Finally, it was also found out that educational attainment has something to do when it comes to the efficacy of teachers in terms of teaching and learning materials. it could be inferred that higher educational attainment often equips teachers with a broader range of pedagogical strategies, deeper content knowledge, and more extensive training in utilizing diverse teaching resources effectively. This proficiency contributes to their higher self-efficacy, as they feel more competent and confident in their ability to deliver high-quality instruction and to meet their students' learning needs. Research supports this by indicating that professional development and formal education significantly enhance teachers' self-efficacy (Neumayer DePiper et al., 2021). Additionally, continuous professional development uplifts teachers' self-efficacy in utilizing teaching materials, which keeps them updated with the latest educational tools and methodologies, further enhancing their teaching effectiveness (Mustafa et al., 2021; Hoang & Wyatt, 2021). This highlights the critical role of educational attainment in shaping teachers' self-efficacy regarding teaching and learning materials in the context of English language education.

Generally, educational attainment impacts teacher self-efficacy. Abulon (2021) notes that Filipino teachers with higher educational qualifications often exhibit greater confidence in their teaching abilities, particularly in adapting to diverse student needs and utilizing innovative teaching strategies. This increased self-efficacy is linked to the advanced training and knowledge acquired through higher education programs. A study by Ryan and Deci (2020) found that teachers with higher levels of education generally report higher self-efficacy across various teaching domains. This global consistency underscores the importance of advanced academic preparation in shaping teachers' confidence and effectiveness in the classroom.

Moreover, teachers with higher educational attainment often have greater access to professional development opportunities, further enhancing their self-efficacy. Gonzales and Torres (2021) emphasized that ongoing professional development helps teachers stay updated with the latest educational research and teaching practices, reinforcing their confidence and competence in their roles. The theoretical and practical knowledge gained through higher education also enables teachers to engage in reflective practices, continually assessing and improving their teaching methods. According to Kim and Elder (2021), this reflective practice is crucial for developing self-efficacy, as it allows teachers to identify areas for improvement and implement effective strategies to enhance their teaching. Furthermore, the prestige and recognition associated with higher educational qualifications can positively impact teachers' self-efficacy. Richards and Rodgers (2021) argued that teachers with advanced degrees often receive more respect and recognition from colleagues, administrators, and students, which boosts their confidence and sense of professional competence.

Table 23
Difference of Responses on Second Language Teaching Motivation When Grouped According to Profile

Sex	**F-value**	**p-value**	**Interpretation**
External Motivation	0.278	0.598	Not Significant
Introjected Motivation	0.868	0.352	Not Significant

Identified Motivation	1.481	0.219	Not Significant
Intrinsic Motivation	1.692	0.168	Not Significant

Legend: Significant at p-value < 0.05

Table 23 shows the comparison of responses on English Language Teaching motivation when grouped according to profile. It was observed that there was a significant difference in external motivation when grouped according to highest educational attainment because the obtained p-value of 0.043 was less than the alpha level.

This comparison explores the relationship between an individual's highest educational attainment and their motivation for learning a second language. Individuals with higher education levels may be driven by internal motivations like personal fulfillment and intrinsic interest in language theories, while those with lower education levels might be more influenced by external incentives such as financial rewards or career advancement. Research by Ryan and Deci (2020) indicates that teachers with advanced degrees show higher intrinsic motivation in their teaching practices, contrasting with the external motivations observed in less educated individuals.

This notable finding highlights that teachers with different educational degrees respond to external motivations differently. Some might be motivated by external factors, some might not be. Gonzales and Torres (2021) found that teachers with higher

educational qualifications often participate in academic conferences, publish research, and engage in professional networks, which provide them with external validation and motivation to excel in their teaching roles. This recognition not only boosts their professional profile but also serves as a significant source of external motivation. Furthermore, educational attainment influences the types of external rewards teachers seek. Richards and Rodgers (2021) argued that teachers with higher degrees are often motivated by opportunities to influence educational policy, contribute to curriculum development, and lead professional development programs. These roles provide external validation through leadership and influence, which are critical motivators for teachers with advanced educational backgrounds.

In contrast, teachers with lower educational attainment might be more externally motivated by immediate, tangible rewards such as salary increases, bonuses, and job security. According to Kim and Elder (2021), these teachers often prioritize external incentives that provide direct financial or material benefits. The desire for job stability and financial rewards can be particularly motivating for teachers with lower degrees who may not have the same opportunities for career advancement as their more highly educated counterparts.

The cultural context in the Philippines might contribute in shaping the external motivations of ESL teachers based on their educational attainment. In the Philippines, higher educational qualifications are often associated with greater social status and respect. Abulon (2021) emphasized that teachers with advanced degrees are highly regarded within their communities, which serves as a powerful external motivator. This societal recognition encourages teachers to pursue higher education and excel in their professional roles to maintain their status.

Similar trends are observed by Ryan and Deci (2020) who found that teachers with higher educational attainment in various countries often report higher levels of external motivation related to professional recognition and career advancement. This global consistency suggests that the relationship between educational attainment and external motivation is not unique to any specific cultural context but is a widespread phenomenon.

Moreover, teachers with higher educational attainment are often involved in mentoring and training less experienced colleagues. This responsibility provides them with external validation and recognition from their peers and supervisors. Gonzales and Torres (2021) highlighted that mentoring roles enhance teachers' professional standing and provide external motivation to maintain high standards in their teaching practice.

Richards and Rodgers (2021) argued that institutions often offer incentives such as grants, awards, and recognition programs to teachers with higher educational qualifications. These institutional rewards serve as significant external motivators, encouraging teachers to pursue further education and excel in their teaching roles.

In the Philippines, the Department of Education and other educational bodies provide various forms of recognition and incentives for teachers with advanced degrees.

Abulon (2021) pointed out that these incentives include promotions, salary increases, and opportunities for professional development, all of which serve as strong external motivators for teachers to enhance their educational qualifications. Furthermore, the external motivation of teachers with higher educational attainment is also driven by the desire to contribute to the academic community and make a meaningful impact on educational practices. According to Kim and Elder (2021), teachers with advanced degrees often seek external validation through their contributions to research, curriculum development, and educational leadership. These contributions provide them with a sense of accomplishment and recognition from the academic community, reinforcing their external motivation.

The analysis revealed that there was no statistically significant difference in teaching motivation between male and female respondents. This finding is in contrast with the study of Garcia, Fuentes, and Renobell (2022), who also found a significant disparity in teaching motivation based on gender. These conflicting results suggest that gender differences in teaching motivation may be influenced by contextual factors such as cultural norms, institutional policies, or the specific demographic characteristics of the sample studied (Chen, 2021). Additionally, other research highlights that motivation in teaching is a multifaceted construct influenced by various factors, including personal beliefs, professional development opportunities, and the working environment, which can overshadow gender-related differences (Klassen & Tze, 2021). Therefore, it is crucial to consider a broader range of variables when examining teaching motivation to capture the complexity of this phenomenon.

The study found no significant variance in teaching motivation across different teaching positions. This aligns with the conclusions drawn by Anderson et al. (2020), who similarly reported no substantial differences in teaching motivation among various teaching roles. Interestingly, the analysis demonstrated no significant correlation between teaching position and years of teaching experience. This contradicts the findings of Brown and Smith (2019), who observed a positive relationship between teaching position and years of experience in their longitudinal study.

Presented on the next page, Table 24 shows the results of statistical analysis on the association between Second Language Teaching Anxiety and English Language Self-Efficacy. The results show that there was a significant relationship between Self-Perception of Language Proficiency and Classroom Proficiency; Teaching Inexperience and Classroom Proficiency; Teaching Inexperience and Materials; Fear of Negative Evaluation and Classroom Proficiency; Fear of Negative Evaluation and Materials; and Difficulties with Management and Materials. This was observed since the obtained p-values were less than the alpha level.

It can be deduced from the table that the language teaching anxiety in terms of the respondents' evaluations of their language proficiency and their English language efficacy in terms of classroom proficiency significantly correlates to one another. It exhibits how accurately individuals perceive their language abilities and how these perceptions correlate with their actual proficiency levels demonstrated in educational environments. If

teachers experience high levels of anxiety, they may underestimate their language abilities, leading to a potential disconnect between their self-perception and actual classroom proficiency.

Table 24
Relationship Between Second Language Teaching Anxiety and English Language Self-Efficacy

Self-Perception of Language Proficiency	r-value	p-value	Interpretation

Legend: Significant at p-value < 0.05

Research indicates that teachers who perceive themselves as proficient in the language, they teach are more confidently and effectively in classroom management and instructional delivery. For instance, a study by Richards and Rodgers (2021) found that higher self-perceived language proficiency correlates with higher self-efficacy in classroom settings, as confident teachers are more likely to engage students actively and manage classroom dynamics successfully.

Valdez and Santos (2023) highlighted that ESL teachers with higher self-perceived language proficiency exhibit greater classroom proficiency, as they feel more competent in explaining complex linguistic concepts and addressing student queries. This competence reduces anxiety and enhances overall teaching performance. Tan and Yap (2022) reported that teachers in Southeast Asia who rate their language proficiency highly are less likely to experience teaching anxiety and more likely to demonstrate effective classroom management and instructional skills. This relationship underscores the importance of perceived language proficiency in fostering a conducive learning environment.

On the other hand, it was also noted that A low negative significant relationship suggests that as teaching inexperience increases, teacher classroom proficiency decreases, or vice versa, although the relationship is weak. Those with high self-efficacy are more likely to believe in their ability to effectively teach English, despite any perceived shortcomings in language proficiency. This aspect examines the association between teachers' lack of experience in language teaching and their actual proficiency in classroom instruction. In the study conducted by Kini and Podolski (2019), more experienced teachers confer benefits to their colleagues, their students, and the school as a whole. However, the study conducted by Gore et al. (2024) examined the relationship between years of teaching experience and teaching quality, they **found** no significant differences in pedagogy across the experience range that has less than 1 year to 24 and above years. This challenges the common assumption that experienced teachers are inherently more proficient than beginners are.

Another significant finding relates the teachers' lack of experience as a teaching anxiety indicator and their utilization of teaching materials as component of teaching efficacy. A low negative significant relationship suggests that as teaching inexperience increases, the reliance on teaching materials decreases, or vice versa, though the correlation is weak. There is no specific study that directly examines the relationship between teaching inexperience and teacher use of teaching materials. However, some studies and resources discuss related concepts and factors that may indirectly shed light on this relationship. In the study conducted by Kini and Podolski (2019), teaching experience is positively associated with student achievement gains throughout a teacher’s career. As teachers gain experience, their students are more likely to perform better on measures beyond test scores. The study found that 10th-year teachers working in more supportive schools, with collaboration among teachers, supportive school leaders, resources for improvement, and meaningful feedback, become substantially more effective than teachers in less supportive environments.

The relationship between second language teaching anxiety due to teaching inexperience and English language self-efficacy regarding teaching and learning materials is significant because inexperienced teachers often lack the confidence and skills needed to effectively select and utilize appropriate materials. This can lead to higher levels of anxiety as they may feel unprepared and unable to meet the diverse needs of their students. Abulon (2021) highlighted that in the Philippines, novice ESL teachers often struggle with choosing and integrating materials, which impacts their teaching efficacy. Similarly, international studies by Kim and Elder (2021) suggested that experienced teachers have higher self-efficacy because they are more adept at selecting and adapting teaching resources to enhance student learning. Additionally, Richards and Rodgers (2021) emphasized that effective use of teaching materials is a critical component of successful language instruction, and teaching inexperience can hinder this ability, thus increasing anxiety and lowering self-efficacy.

Furthermore, according to the study of Gore et al. (2024), while initial teacher education (ITE) is important, the contexts of the school and classroom, as well as ongoing participation in various forms of professional development significantly impact teacher expertise. Engaging in goal-directed practice with feedback and support from peers and knowledgeable others contributes to teacher quality. The impact of experience on pedagogical quality is nuanced and not solely determined by years of experience. While teaching inexperience may not directly correlate with specific material use, creating supportive environments, ongoing professional development and collaboration among teachers play crucial roles in enhancing teaching effectiveness and student outcomes.

The fourth significant findings illustrated in the data is the relationship between second language teaching anxiety, specifically regarding the fear of negative evaluation, and English language self-efficacy in terms of classroom proficiency. It could be significant because fear of criticism can affect teacher's confidence and effectiveness. Teachers who fear negative evaluation often experience heightened anxiety, which impairs their ability to manage classrooms effectively and deliver engaging lessons. Abulon (2021) noted that in the Philippines, ESL teachers who are anxious about being evaluated by supervisors or peers show lower self-efficacy in classroom management and instructional strategies. Similarly, Richards and Rodgers (2021) emphasized that anxiety related to fear of evaluation can lead to reduced teaching effectiveness, as anxious teachers may avoid taking risks or trying innovative methods. International research by Horwitz (2021) supported the idea that fear of negative evaluation significantly impacts teachers' classroom proficiency, as it erodes their self-confidence and ability to engage students. Therefore, addressing this anxiety through supportive evaluations and professional development is crucial for enhancing teachers' self-efficacy and classroom performance.

This relationship explores how teachers' fear of negative evaluation, a form of social anxiety, influences their classroom proficiency. A low negative significant relationship suggests that as teachers' fear of negative evaluation increases, their classroom proficiency decreases, or vice versa, although the correlation is weak. Salazar-Ayala et al. (2021) investigated the correlation and predictive relationship between controlling teaching style and fear of negative evaluation mediated by basic psychological

needs frustration. They found that perceived controlling teaching style positively predicted the fear of negative evaluation in students. This relationship was mediated by frustration with basic psychological needs, which, in turn, related to low-quality motivation and a higher level of individualism/competitiveness.

Wang (2021) examined the relationship between English medium instruction (EMI) teachers' classroom English proficiency and their teaching self-efficacy. They found a strong positive relationship between EMI teachers' classroom English proficiency and their teaching self-efficacy. Specifically, the language of instruction had a significant contribution to the variance of teaching self-efficacy. This highlights the importance of prioritizing strategic training in the language of instruction skills for EMI teachers who are not highly proficient in English.

Another significant findings that the table revealed is the relationship that exists between second language teaching anxiety related to the fear of negative evaluation and English language self-efficacy in terms of teaching and learning materials. Teachers who are anxious about being negatively evaluated may hesitate to implement new or innovative materials, fearing judgment from peers or supervisors. In the Abulon (2021) highlighted that such anxiety can lead to a reliance on traditional materials, limiting the dynamic potential of classroom instruction. International research by Horwitz (2021) also showed that teachers who fear negative evaluation often experience lower self-efficacy, impacting their ability to confidently adapt and integrate various teaching materials.

Richards and Rodgers (2021) emphasized that effective use of teaching materials is crucial for successful language instruction, and anxiety in this area can impede a teacher's ability to engage students and enhance learning outcomes. Additionally, Tan and Yap (2022) argued that professional development that addresses these anxieties can significantly improve teachers' self-efficacy and their innovative use of materials in the classroom. Therefore, reducing fear of negative evaluation is essential to empower teachers to explore and utilize diverse teaching resources, thereby enhancing their overall teaching effectiveness.

Meanwhile, another significant findings illustrated in the table shows that there is a low negative significant relationship suggesting that as teachers' fear of negative evaluation increases, their use of classroom materials decreases, or vice versa, though the correlation is weak. Some studies and resources discuss related concepts and factors that may indirectly shed light on this relationship. The study by Mrachko (2019) investigated the effects of professional development and daily e-mail feedback on teacher-initiated positive and negative behaviors in an inclusive elementary school setting. The goal was to increase teacher praise statements while reducing negative statements. The results showed that teacher behavior-specific praise increased and negative statements decreased for most teachers. E-mail feedback was introduced as a novel component of changing teacher behavior.

The study by De Lima and Silva (2018) found that classroom observation is often seen as an inadequate tool for teacher evaluation, with many teachers believing it

contributes little to their professional growth. Pandolpho (2024) noted that when observers score teachers' performance, it can feel like a judgment of their value, highlighting the need to consider teachers' feelings during evaluations. Although the relationship between fear of negative evaluation and the use of classroom materials isn't thoroughly explored, the article emphasizes that teacher responses on questionnaires may not align with their actual teaching practices observed in the classroom, underlining the significance of teachers' perceptions in evaluation processes.

Finally, it was also exhibited in the table that the relationship between second language teaching anxiety related to difficulties with classroom management and English language self-efficacy in terms of teaching and learning materials is significant because poor classroom management can heighten anxiety, affecting a teacher's ability to effectively use educational resources. Teachers who struggle with managing their classrooms often feel overwhelmed and may lack the confidence to implement and adapt teaching materials effectively. In the Philippines, Abulon (2021) noted that teachers facing classroom management challenges are less likely to innovate with teaching materials, resulting in less engaging and effective instruction.

International studies, such as those by Kim and Elder (2021), supported the notion that anxiety due to management difficulties undermines self-efficacy in utilizing teaching materials, as teachers may fear that their efforts will not lead to successful learning outcomes. Richards and Rodgers (2021) emphasized that effective classroom management is a prerequisite for the dynamic use of educational resources, and anxiety in this area can stifle creativity and adaptability in lesson planning. Furthermore, Tan and Yap (2022) highlighted that professional development focused on classroom management skills can enhance teachers' confidence, leading to better use of teaching materials and more effective language instruction.

Table 25
Relationship Between Second Language Teaching Anxiety and Second Language Teaching Motivation

Legend: Significant at p-value < 0.05

Table 25 displays the association between Second Language Teaching Anxiety and Second Language Teaching Motivation. It was observed that there was only a significant relationship between second language teaching anxiety in terms of lack of interest and second language motivation in terms of introjected motivation. This was observed because the obtained p-value was less than the alpha level. This could mean that the more that they are anxious about students having lack of interest to them and their teaching, the more they could be inspired to teach second language by introjected motivation.

Introjected motivation refers to teachers' internalized motivations driven by obligation, guilt, or external pressure, rather than genuine interest in teaching. A study by Cunningham (2020) examined the framework for motivating teacher-student relationships (TSRs), highlighting that positive TSRs are crucial for student engagement and achievement. Intrinsically motivated teachers, who care genuinely for their students, foster better relationships, which in turn enhances students' learning experiences, academic success, and emotional well-being. The study underscores the significant impact of teacher motivation on the quality of classroom interactions and the supportive environment essential for effective teaching and learning.

Wang's (2018) research examined teacher perceptions of student motivation and engagement. Teachers' perceptions of student motivation impact their teaching practices. When teachers believe students are motivated, they provide more support and encouragement. Positive teacher-student interactions contribute to student success. When teachers are intrinsically motivated, they create positive, supportive relationships with students. Positive TSRs lead to better student engagement, achievement, and overall well-being.

Previous research has shown mixed findings regarding the relationship between self-perception of language proficiency and second language teaching motivation. Further investigation might be helpful to clarify and investigate on the nature of this relationship. The relationship between teaching inexperience and second language teaching motivation is complex. The impact of teaching inexperience on motivation may

vary depending on individual factors and contextual circumstances. Abulon (2021) pointed out that teachers who lack intrinsic interest in their profession often rely heavily on introjected motivation, which can exacerbate feelings of anxiety and stress.

According to Kim and Elder (2021), teachers experiencing a lack of interest are more likely to face increased anxiety, which negatively impacts their motivation and teaching performance. This anxiety can stem from a sense of duty or the desire to avoid feelings of guilt, which are key components of introjected motivation. Horwitz (2021) emphasized that such internal conflicts can lead to burnout, further reducing a teacher's effectiveness and satisfaction.

Richards and Rodgers (2021) highlighted that teachers motivated by introjected factors often struggle with maintaining a positive attitude towards their teaching, leading to a cycle of anxiety and diminished motivation. This cycle is detrimental to both teachers and students, as it impacts the quality of instruction and the overall learning environment. Tan and Yap (2022) suggested that addressing these motivational issues through professional development and support systems can help alleviate anxiety and enhance motivation.

Valdez and Santos (2023) observed that professional development programs that focus on reigniting teachers' interest and passion for teaching can significantly reduce anxiety and improve motivation. These programs often include strategies for developing intrinsic motivation, which can counteract the negative effects of introjected motivation. Dörnyei and Ryan (2020) also supported the idea that fostering intrinsic interest in teaching can mitigate the anxiety associated with a lack of interest, leading to more motivated and effective educators.

Williams and Burden (2021) argued that understanding and addressing the sources of teaching anxiety and motivation can lead to better teacher retention and job satisfaction. They suggested that creating a supportive and engaging teaching environment can help teachers rediscover their interest in teaching, thereby reducing reliance on introjected motivation. This holistic approach is crucial for sustaining long-term motivation and reducing anxiety in second language teaching.

Research also suggests that fear of negative evaluation can have a detrimental effect on second-language teaching motivation (Zhang, 2018). It therefore aimed to address and mitigate the fear of negative evaluation, may be important for fostering teacher motivation. Teachers who struggle to maintain control of the classroom environment may experience heightened stress and anxiety, which can detract from their overall motivation to teach effectively. Therefore, effective management strategies and support systems are crucial for sustaining teacher motivation.

Table 26
Relationship Between English Language Self-Efficacy and Second Language Teaching Motivation

Legend: Significant at p-value < 0.01

Presented in Table 26 are the results of statistical analysis on the association between English Language Teaching Efficiency and Second Language Teaching Motivation. The computed r-values indicate a strong direct correlation and the resulting p-values were less than the alpha level. This means that a significant relationship exists, implying that better teaching efficiency indicates higher motivation.

The highly significant positive relationship between teaching motivation and classroom proficiency suggests that teachers who feel more confident in their English language skills are likely to be more motivated in their teaching endeavors. In the study by Dunn and Iwaniec (2022), teachers' classroom proficiency in the target language

significantly impacts their motivation to teach effectively. When teachers feel confident in their language skills, they are more likely to create engaging language learning experiences for their students. Proficient teachers can model correct language usage, provide authentic language input, and facilitate meaningful interactions.

The strong positive relationship between teaching motivation and learner-focused instruction stresses the importance of teacher enthusiasm and commitment in fostering student-centered learning environments. In the study of Lamb (2021), motivated teachers prioritize learner-focused instructional strategies. They adapt their teaching methods based on student needs, interests, and learning styles. Learner-focused instruction includes personalized feedback, interactive activities, and scaffolding.

Kim and Elder (2021) highlighted that self-efficacy also impacts introjected motivation, as confident teachers are less likely to experience anxiety from internal pressures, such as guilt or obligation. Identified motivation, which involves recognizing the personal value of teaching, is strengthened when teachers feel competent and capable in their classroom roles, as noted by Richards and Rodgers (2021). Intrinsic motivation, the internal drive to teach because of personal satisfaction and enjoyment, is significantly enhanced by high self-efficacy. Teachers who believe in their abilities are more likely to find joy and fulfillment in their teaching practices, leading to a more engaging and dynamic learning environment (Horwitz, 2021).

Tan and Yap (2022) further emphasized that teachers with high self-efficacy are more proactive in seeking out professional development opportunities, which can enhance all forms of motivation. This creates a positive feedback loop where improved motivation further reinforces self-efficacy. Valdez and Santos (2023) noted that fostering self-efficacy through targeted support and training can significantly impact teacher motivation, ultimately leading to better educational outcomes. Therefore, the interplay between self-efficacy and various motivational constructs is crucial for the overall effectiveness and satisfaction of second language teachers.

The relationships between English language self-efficacy in terms of learner-focused instruction and various forms of second language teaching motivation is highly significant. High self-efficacy in learner-focused instruction enables teachers to effectively tailor their teaching methods to address individual student strengths and weaknesses, thus enhancing student engagement and learning outcomes (Richards & Rodgers, 2021).

Teachers with high self-efficacy are more likely to be externally motivated by positive feedback from supervisors, colleagues, and students, as noted by Abulon (2021) in the Philippines. This external validation reinforces their belief in their teaching abilities and encourages them to continue implementing learner-focused approaches. Additionally, Kim and Elder (2021) highlighted that high self-efficacy fosters intrinsic motivation, as teachers find personal satisfaction in successfully engaging students and facilitating their learning.

Introjected motivation, driven by internal pressures such as guilt or obligation, is mitigated by high self-efficacy as confident teachers are less likely to experience anxiety from self-imposed demands (Horwitz, 2021). Identified motivation, which involves recognizing the personal value of teaching, is strengthened by self-efficacy as teachers feel more capable of positively impacting their students' learning experiences.

Valdez and Santos (2023) emphasized that fostering self-efficacy through professional development can significantly impact teacher motivation across all dimensions, leading to more effective teaching practices and improved student outcomes. Therefore, the relationship between self-efficacy in learner-focused instruction and various forms of motivation underscores the importance of supporting teachers' belief in their ability to meet the diverse needs of their students.

The highly significant relationship between teaching motivation and assessment practices suggests that different teaching roles may require varying approaches to evaluating student learning. Motivated teachers engage in effective assessment practices. Their motivation influences how they design assessments, provide timely feedback, and evaluate student progress. Assessment aligns with learning objectives and informs instructional decisions. There is no specific reference found for this exact relationship. However, this result can be used for future reference. However, if further insight is needed, research on motivation and assessment can shed light.

Teachers with high self-efficacy in classroom assessment are more likely to implement effective assessment strategies that accurately measure student learning outcomes (Richards & Rodgers, 2021). High self-efficacy enhances external motivation, as teachers seek positive feedback from stakeholders, such as supervisors and parents, validating their assessment practices and instructional decisions (Abulon, 2021).

Moreover, Kim and Elder (2021) suggested that self-efficacy positively influences intrinsic motivation, as teachers find satisfaction in seeing their students succeed based on their assessments. Introjected motivation, driven by internal pressures like guilt or obligation, is lessened by high self-efficacy, as confident teachers are less likely to feel anxious or pressured by self-imposed evaluation standards (Horwitz, 2021). Identified motivation, which involves recognizing the personal value of teaching, is reinforced by self-efficacy as teachers see the direct impact of their assessments on student learning and development.

Valdez and Santos (2023) emphasized that enhancing self-efficacy through professional development positively impacts teacher motivation, leading to more effective assessment practices and student engagement. Therefore, the relationship between self-efficacy in classroom assessment and various forms of motivation highlights the importance of supporting teachers' belief in their ability to accurately assess student progress and make informed instructional decisions.

The significant association between second language teaching motivations and language instruction methods indicates that the nature of one is teaching role can

influence the selection and implementation of language teaching approaches. In the study of Lamb (2021), motivated teachers use innovative and engaging language instruction methods. Their enthusiasm affects classroom dynamics and student learning outcomes. Effective language instruction involves varied activities, authentic materials, and interactive communication.

The highly significant relationship between second language teaching motivations and cultural integration highlights the role of teachers in promoting intercultural competence and sensitivity within language education contexts. In the study by Halimi et al. (2020), cultural context significantly influences teachers' motivation. Collectivist cultural values, respect for authority, and gender-related dimensions impact language instruction. Culturally aware teachers adapt their approaches to meet diverse student needs.

The significant correlation between second language teaching motivations and the use of teaching materials suggests that educators' professional roles may influence their access to and selection of instructional resources. This can be interpreted as motivated teachers carefully selecting and creating instructional materials. Their motivation drives them to find relevant, engaging resources that enhance language learning. Effective materials include authentic texts, multimedia, and culturally relevant content. There is no specific reference found for this exact relationship. However, this result can be used for future reference. However, if further insight is needed, research on motivation and instructional materials can shed light.

Motivated language teachers function critically in shaping effective language instruction. Their proficiency, learner-focused approaches, assessment practices, cultural awareness, and choice of materials collectively contribute to positive learning experiences for students.

Table 27 in the next page that runs to the subsequent pages presents the proposed English language teacher improvement plan that was crafted based on the salient findings in this study. The table is composed of five columns with appropriate headings, namely key result area, program objectives, strategies and activities, success indicators, and persons involved.

The first column, the key result area, presents the significant findings that were lifted from the results of this study. Out of these significant findings, results with similar and/or connected characteristics were analyzed and clustered into areas that could be addressed through specific activities or interventions. The next column, under the heading program objectives, contains the specific program objectives that will be attained to improve and address the situations or problems that were identified in the key result areas.

Under the strategies/activities column, which is the third column, are the specific programs and activities that are suggested to improve the difficulties or address the problems that were analyzed in this study. There are five set of activities that were

identified, namely: 1.) Trainings on Teaching and Planning Language Lessons, 2.) Seminar on Administration and Teacher Support, 3.) Capacity Building on Content, 4.) Materials Development, and 5. Student-Centered Language Teaching.

Success indicators are indicated in the next column. These are the parameters or indicators that would signify the success and/or effectiveness of the activities or programs that were suggested. Mostly, these indicators pertain to outputs that will be produced by the teachers at the end of the activity. These outputs are deemed helpful and capacitating, and thus are tangible aid or assistance for the teachers to overcome difficulties or remediate problems they encounter while teaching English as a second language.

Finally, at the end of the columns are the persons who will be involved in the conduct of the activity. Primarily, the researcher is involved to spearhead the activity and coordinate these activities to the persons involved. Also, the researcher deemed it appropriate to involve the human resource (HR) management department or the human resource training and development (HRTD) or their counterparts. This is to ensure the involvement of the participants and to promote the monitoring of progress and development of individual teachers. Finally, the participants will be the K-12 English Language Teachers who will receive the activities that will be specifically designed to address their difficulties and problems as regards the study's findings.

Table 27
Proposed English Language Teacher Improvement Plan

Key Result Area	Program Objectives	Strategies/ Activities	Success Indicators	Persons Involved
Second Language Teaching Anxiety 1. Self-perception of language proficiency: Feeling of embarrassment when making speaking mistakes	To encourage positive attitudes in speaking L2	**Confidence in Communication Program** This program is composed of activities such as coaching by tenured and conversant teacher-colleague. These activities are practical speaking exercises, team teaching, anxiety management techniques in speaking, conversational gambits a techniques, etc.	85% of the participants are able to express and exhibit decreased anxiety and improved conversational English teaching and speaking skills	-Researcher -division HRTD -School Heads -K-12 Language Teachers
2. Lack of student interest: Stress in students' non-	To capacitate teachers	**Engagement and**	90% of the participants are able to	-Researcher -division HRTD

participation in activities:	with engaging and empowering L2 teaching strategies	**Empowerment Strategies** These strategies pertain to student centered activities that would introduce gamification of learning, group activities, and simulated role playing. Moreover, activities that involve authentic dialogues or situations, multimedia resources, interactive activities, and feedback-rich drills are incorporated	exhibit mastery in the use of varied L2 teaching techniques	-School Heads -K-12 Language Teachers
3.Fear of negative evaluation: Nervousness and uneasiness during English teaching observations by mentor-teacher/supervisor	-To reorient teachers with RPMS-PPST, specifically on class observation	**Seminar on Administration and Teacher Support** -re-orientation on class observation (CO) guidelines and expectations -illustration and exemplification of standards and parameters in class observation	90% of the participants are able to familiarize with the supervisory plan of raters, observation plan of ratee (schedule, topic, activities, compliance to observation parameters)	-Researcher -division HRTD -School Heads -K-12 Language Teachers
4. Difficulties with time management: Tension brought by lack of lesson/class preparation	To capacitate teachers in planning classroom lessons for language teaching	Trainings on Teaching and Planning Language Lessons -language learning motivation techniques -language lesson sequencing and scheduling -techniques in unpacking and	90% of the participant are able to produce budget of work, scope and sequence, teaching, learning, and assessment (TLA) chart containing the specific approach, methods,	-Researcher -division HR/HRTD -School Heads -K-12 Language Teachers

		designing a sequential, progressive, and developmental language lessons -approaches, methods, strategies, and techniques in language teaching and how they are actually being used in a classroom	strategies, and techniques, and, Return Demonstration Teaching	
Teacher Self-Efficacy 1. Classroom Proficiency: using English for all classroom functions and interactions	To create more exposure opportunities for natural English use	**English Immersion Program** This activity would require participants to set personal goals at the beginning. This program is composed of activities that aims to model best practices of successful L2 teachers, establish L2 and native speakers community, and planning for a language-rich classroom and lessons	90% of the participants are able to set L2 teaching goals in terms of fully utilizing English in L2 classroom teaching	-Researcher -division HRTD -School Heads -K-12 Language Teachers
2. Learner-focused Instruction: appropriately using the first language skills of the learners	To recognize and leverage students' linguistic background in teaching L2	**Bilingual Bridging for Effective Learning** This program will capacitate teachers to assess the L1 and L2 proficiency levels of learners to tailor instruction accordingly, using translanguaging,	85% of the respondents are able to show effective use of learners background to create L2 lessons	-Researcher -division HR/HRTD -School Heads -K-12 Language Teachers

		and utilizing learners profile such as socio-cultural background to plan for learning experiences, assessments, supplementary activities, etc.		
3. Assessment: designing appropriate assessment tasks and tests to assess learners.	To enhance teachers' skills in designing diverse and appropriate language assessment tasks and tests.	**Assessment in Language Learning (ALL)** This will cover recall of the foundational knowledge and types of language, literacy, and literature assessment, integrating technology, and the use of authentic language assessment methods	85% of the respondents are able to satisfactorily develop different types of authentic language assessment tasks and tests	-Researcher -division HR/HRTD -School Heads -K-12 Language Teachers
4. Language Instruction**:** considering personal knowledge about discourse and pragmatics when delivering language instructions	To strengthen participants' capacities on the basics of language as used in language teaching.	**Capacity Building on Content** This program will cover te basics of linguistics and its branches, morpho-phonology, syntax, semantics, pragmatics and discourse, application of basic linguistics in classroom teaching, -basic communicative grammar, and communicative language teaching (CLT)	90% of teachers are able to accomplish produce notes and worksheets and perform a return demo	-Researcher -division HRTD -School Heads -K-12 Language Teachers
5. Culture: applying understanding of the interrelationship	To develop skills to effectively integrate	**Improving Cultural Competence (ICC)**	90% of the participants are able to accomplish1-2	-Researcher -division HR/HRTD

of language and culture to inform instruction	cultural elements into language instruction.	This program will be composed of activities that will empower teacher in mapping their local culture and utilize these in indigenization, localization, and contextualiation of teaching and learning, including assessment and materials.	English lessons that integrates local cultural elements	-School Heads -K-12 Language Teachers
6. Materials Provision outsource readily online materials that are available blogs, social media, news bulletins, and the like	To capacitate teachers in developing and creating authentic instructional materials and assessment tools or methods	Materials Development -packaging language instructions -types of instructional materials for language teaching -examples of materials for language teaching -authentic assessments in language teaching	90% of teachers are able to produce: -Teaching, learning and assessment strategies side by side with budget of work, scope and sequence, and the set of instructional materials and assessment tools they have to use	-Researcher -division HR/HRTD -School Heads -K-12 Language Teachers
Second Language Teaching Motivation 1. External Motivation: investing effort as a language teacher to avoid principal close supervision	To improve teacher professionalization by re-introducing classroom observation (CO) for English teachers and technical assistance (TA)	**Professional Teachers Program (PTP)** This program features improved dialogue and communication framework between and among English Language teachers, educational administrators such as supervisors, school heads,	90% of the teachers are able to understand and appreciate the concept of classroom observation, IPCR, and TA.	-Researcher -division HR/HRTD -School Heads -K-12 Language Teachers

		etc. this program will involve the teachers in the planning process of evaluation and assessment, observation, technical assistance, and supervision as regards English Language Teachers' performance		
2. Introjected Motivation: investing work effort to being ashamed of one's self	To capacitate teachers on setting meaningful goals aligned with their values and professional growth.	**Improving Teaching Motivation** This activity will focus on how the teachers can conduct periodic self-reflection sessions where teachers assess their personal goals and values in teaching English. Moreover, activities such as establishment of peer-support group, reflective practices, processing student, peer, and supervisor feedback will be focused and discussed.	90% of the participants are able to set their own meaningful goals in teaching, as aligned with their values and professional growth and values and principles of the department and/or school they belong to	-Researcher -division HR/HRTD -School Heads -K-12 Language Teachers
3. Identified Motivation: devoting time talking to individual students to learn what happens to them in the classroom	To encourage teaching methods that prioritize student well-being and engagemen t and to create a supportive environmen	**English Teachers Care (ETC)** The following activities, which aims to improve student-teacher engagement and teacher professional fulfillment, will be implemented:	90% of the participants are able to identify one empathy issue he/she is facing and will be able to apply one or more principle of SEL or PDET	-Researcher -division HR/HRTD -School Heads -K-12 Language Teachers

	t where teachers feel valued and motivated in their roles.	-social-emotional learning (SEL) sessions -positive discipline in everyday teaching (PDET) -reflective practices -mentorship programs		
4. Intrinsic Motivation • Investing teacher effort to enjoy finding unique solutions for various students • Devoting time to individual talks with students to enjoy being in touch with them • Finding pleasure in improving student global competitiveness, fostering cross-cultural understanding, and facilitating effective communication across linguistic barriers.	To develop teaching style that utilizes strategies and activities that promote student-centered schemes	***Student-Centered Language Teaching*** ***- communication with students and student interaction*** -student centered language learning in young and adult contexts -learner-centered language teaching strategies -application of these strategies in classroom teaching -case analysis -Task-based learning -CLT -Differentiated Instruction -Content-based Instruction (CBI) -Flipped Classroom and Blended Learning -Motivations in learning second language	90% of the participants are able to produce the following outputs: -TLA with specific integration of student-centered language teaching methods or strategies	-Researcher -division HR/HRTD -School Heads -K-12 Language Teachers

Conclusions

1. The respondents are generally female, with master's degree, elementary school teachers who have been teaching for 11-20 years.

2. In terms of second language teaching anxiety, the respondents agree that they are anxious as regards self-perception of language proficiency lack of student interest, and difficulties with time management. Meanwhile, they disagree that they are anxious about teaching inexperience and about fear of negative evaluation.

3. The respondents believe that they are efficacious when it comes to English language teaching classroom proficiency, learner-focused instruction, assessment, language instruction, culture, and materials.

4. The respondents are motivated in second language teaching as regards external motivation, introjected motivation, identified motivation, and intrinsic motivation.

5. In terms of second language teaching anxiety, there is no significant difference when responses are grouped according to profile. Meanwhile, when it comes to efficacy beliefs, responses on classroom proficiency, learner-focused, instruction, language instruction, culture, and materials all vary significantly when grouped according to highest educational attainment. Finally, responses on external motivation vary significantly when grouped according to highest educational attainment.

6. As regards second language teaching anxiety and English language self-efficacy, relationships between self-perception of language proficiency and classroom proficiency, teaching inexperience and classroom proficiency, fear of negative evaluation and classroom proficiency, fear of negative evaluation and materials, and difficulties with management and materials are all significant. When it comes to second language teaching anxiety and second language teaching motivation, relationship between lack of interest and introjected motivation is found significant.

7. An English language teacher improvement plan is proposed based on the findings and key result areas of this study.

RECOMMENDATIONS

1. Curriculum planners may consider the issues presented in this study so that they can create materials that aid teachers in teaching English as a second language with reduced or less anxiety; those which are empowering them as English teachers. More so, this could motivate them further and increase their efficacy beliefs.

2. Second language teachers may consider the results of this study and invest on building their teaching capacities and English language skills to lessen their

anxieties to enrich their efficacy and motivation to teach. Further studies may be executed to investigate more on the variables utilized in this research.

3. Future researchers may do exploratory research to investigate on the significant differences on the perceptions of the respondents when it comes to efficacy beliefs: classroom proficiency, learner-focused, instruction, language instruction, culture, and materials all vary significantly when grouped according to highest educational attainment; and external motivation when grouped according to highest educational attainment.

4. Future researchers may conduct similar studies to examine the relationships between self-perception of language proficiency and classroom proficiency, teaching inexperience and classroom proficiency, fear of negative evaluation and classroom proficiency, fear of negative evaluation and materials, and difficulties with management and materials, and lack of interest and introjected motivation.

5. Significant findings that relate to English Language teacher competence, their confidence, mastery of content, and teaching methodology are worth examining and addressing.

6. Educational attainment as a profile variable may be examined and establish its relationship with efficacy beliefs and external motivation.

7. Other profile variables may be explored to illustrate the differences in the beliefs and responses of the participants.

8. Follow up study or further qualitative investigation may be performed to explore the depths and root causes of the issues and concerns discovered in this study.

9. The proposed English language teacher improvement plan may be tried out by the schools division office and thus by the management teams of the schools to address the identified issues on second language teaching anxiety, efficacy beliefs, and second language teaching motivation.

Compliance with Ethical Standards

The author hereby declares adherence to ethical standards in conducting this research. Informed consent was obtained from all participants, ensuring that they were fully informed about the study's objectives and their rights. Participants were free to withdraw from the study at any point without any negative consequences. Anonymity was diligently maintained, safeguarding the identities of all respondents. The well-being of participants was a top priority, with measures implemented to protect them from any potential harm. The author confirms that there are no conflicts of interest in the conduct of this study, and plagiarism was strictly avoided to uphold the integrity of the research. Furthermore, the interpretation of findings was free from bias, ensuring an objective

analysis. The results obtained from this study are intended solely for research purposes, contributing to the broader knowledge within the field.

Acknowledgements

The researcher extends heartfelt gratitude to several individuals whose invaluable contributions were essential to the completion of this study. Special thanks are given to Dr. Dolores D. Borras for her inspiring guidance as the research advisor, and to Dr. Arnie D. Christian Villena for his steadfast encouragement as Program Dean of the College of Education, Arts and Sciences. The researcher appreciates Dr. Beverly T. Caiga and the panel of experts for their insightful feedback, which significantly enhanced the study's quality. Acknowledgment is also due to Dr. Annalie D. Pateña for her critical assistance in developing the research instrument and analyzing data. The support from Dr. Hermogenes M. Panganiban, along with the dedicated time of Public School District Supervisors, School Principals, and Teachers of the Schools Division of Batangas City, was greatly valued. Additionally, the researcher expresses gratitude to Mrs. Gudilia M. Macapuno for her unwavering inspiration and love, as well as to God Almighty for His divine wisdom and abundant blessings throughout this endeavor.

ABSTRACT

This study assessed the levels of motivation of students in learning science and determined the relationship of students' motivation toward science learning and their science academic performance. The respondents of the study were 87 Grade 11 students at Calawitan National High School, who were enrolled during the School Year 2023-2024. The researchers utilized a descriptive correlational research design to measure the relationship of science motivation toward science learning and science academic performance. The data were gathered through the use of Students Motivation Toward Science Learning (SMTSL)/questionnaire that was adapted from Tuan et al. (2005). The questionnaire was composed of statements divided into six (6) sub-categories namely; self-efficacy, active learning strategies, science learning value, performance goal, achievement goal and learning environment stimulation. The collected data were analyzed using the statistical software Jamovi and interpreted using descriptive statistics and Pearson r moment correlation. Results showed that students agreed that they are motivated in learning science in terms of active learning strategies (M=3.57), science learning value (M=3.55, achievement goal (M=3.87) and learning environment stimulation (M=3.52) while they gave no opinion about self-efficacy (M=2.91) and performance goal (M=3.04) which both contained negative statements. Also, it was found out that students' motivation toward science learning and science academic performance have a significant relationship (r = 0.270*; p- value = 0.011) it means that as the students' motivation toward science learning increases, their science academic performance will become higher and

vice versa. Students who are motivated in learning science tend to have higher science academic performance.

Keywords: *students' motivation toward science learning, science academic performance, active learning strategies, science learning value, achievement goal, learning environment stimulation, self-efficacy, performance goal*

INTRODUCTION

Science education has been considered as one of the most important academic disciplines in schools because of its practical application, scientific knowledge, broad concept and its relevance to the students' lives (Shana & Abulibdeh, 2020). It offers them the opportunity to increase their overall understanding of how things work through the use of critical thinking and analysis of various scientific concepts. However, science as a subject in school has always presented a challenge to both teachers and students.

The Philippine education report of 2023 stated by Philippine Business for Education (2023) recognizes the urgent needs of the learners and educational systems especially in the field of the learners when it comes to their interests and motivation in learning, due to the COVID pandemic in 2019 and this has significantly impacted the lives of the learners when it comes to learning. As stated by Mardianti (2021), interests are depleting overtime because of lack of resource materials, lack of technological resources and proper exposure to learning environments due to the COVID pandemic. Thus, in the case of the PISA results in 2022 resulting in a devastating 3rd to the last rankings when it comes to levels of proficiency in particular in the field of science.

In addition, Salanga and Bernardo (2016) stated that Senior High School Filipino students face struggles due to a lack of motivation. Reasons include beliefs and attitudes about themselves and the subject, teacher competencies, and distractions from peers and family. Teachers have to primarily engage and motivate their students in learning science. Even though engagement does not necessarily result in understanding, especially when it comes to the case of learning science, engaging and motivating students in science is a prerequisite for understanding (Hadzigeorgiou & Schulz, 2019).

According to Njua (2020), it is difficult to meet the learning objectives of a particular course or field of study without motivation. The core of effective teaching is dependent on motivation. Since promoting lifelong learning is the main goal of all education, motivation should be viewed as the main tool for helping students succeed in the sciences. In order to encourage students to pursue interests in science, they need to be internally and extrinsically motivated. Albalate et al. (2018) claimed that without the motivation, surface learning or simply memorization will happen, which will not lead to a proper understanding of essential concepts of science. It is essential that students' motivation towards science learning among the students be assessed (L & H, 2018). As Mauliya et al. (2020) asserted that lack of motivation in students caused poor academic performance.

With the aforementioned articles and studies, the researchers are aiming to know a deeper understanding of the situation, considering the k-12 curriculum and the new 21st century learners. This study aims to assess the Senior High School student's motivation toward science learning as self-efficacy, active learning strategies, science learning value, performance goal, achievement goal, and learning environment stimulation.

Review of Related Literature and Studies

Science learning includes many factors that are the determinants of science learning quality and process (Chan & Norlizah, 2017). The result of the study conducted by Rana et al. (2015) pointed out that motivation towards learning is an important contributor in determining achievement of the students. There are six separate sub constructs that make up the multidimensional construct of motivation. To differing degrees, these structures influence the determination of learning motivation. The performance goal for example is the awareness among the students about what is being expected of them is a most prominent determinant of motivation to learn. In performance goal learning, students are not just involved in science learning and then expect recognition from other people or attention from their teachers. It is more in the direction of what students expect after they study science. It encourages them to engage in science learning (Nasir et al., 2023).

Key findings of Chan and Norlizah (2017) revealed that students' motivation towards science learning have a significant relation to students' science achievement. The findings showed that students who have moderate motivation to learn science have mid-low achievement in science. If students are not driven, they will probably not learn much and will typically find teaching difficult and irritating.

In addition, highly motivated students will probably learn quickly and make any class enjoyable (Filgona et.al., 2020). Self-regulation is very important for managing self-behaviour or motivation, which is essential for a student's educational achievement (Caruth,2018). Intrinsic and extrinsic motivation can also affect the behavior of learners thus affecting their academic performance of the student's when it comes to science subjects (Tokan & Imakulata,2019).

Teachers aim to have a generation of successful students personally and academically. However, various uncontrolled factors can hinder this progress. One way to address this is to empower students' non-cognitive attributes. Therefore, learning in the classroom transitions to student-centered learning, where the main responsibility for progress is on the student. However, if students have destructive learning goals, a low perception of their capabilities, a short interest in the academic task, and limited effort, their learning outcomes will suffer (Alhadabi & Karpinski, 2020).

This study was anchored in the theory of Abraham Maslow's Hierarchy of Needs and Theory of Motivation, which indicates the fundamental basic needs of humans, he proposed that motivation is the result of a person's attempt in fulfilling five basic needs: physiological, safety, social, esteem and self-actualization. Maslow posited that human

motivation arises out of a motivation to progress through this hierarchy of needs. Maslow represented his theory pictorially as a pyramid, similar to the food pyramid, with the bottom representing the base and the most basic level. Once a person satisfies one level of needs, Maslow suggests they then become motivated to reach the next level.

Conceptual Framework

The paradigm included the relationship between the factors affecting the students' motivation toward science learning and academic performance.

Figure 1
Paradigm of the Study

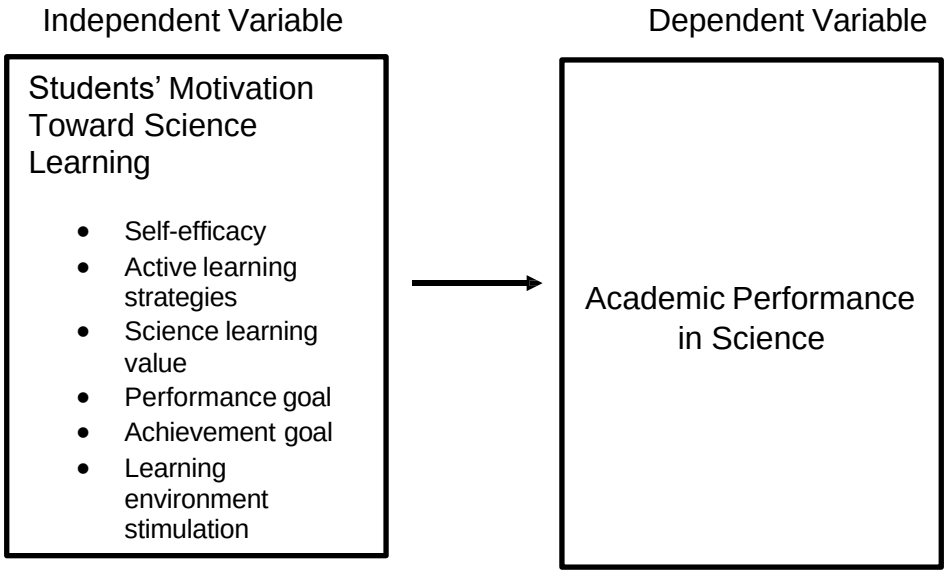

Figure 1 shows the relationship between the independent and dependent variables. The independent variables were the factors affecting students' motivation toward science learning: self-efficacy; active learning strategies; science learning value; performance goal; achievement goal and learning environment stimulation. The dependent variable was the academic performance. It was hypothesized in this study that students' motivation toward science learning has a significant relationship on students' academic performance as indicated by the directional orientation of the arrowhead.

Research Questions

This study aims to describe the Senior High School student's motivation toward science learning and academic performance at Calawitan National High School.

Specifically, it sought to answer the following research questions:

1. How may the student's motivation toward science learning be described in terms of:
    1.1. self - efficacy;

1.2. active learning strategies;
1.3. science learning value;
1.4. performance goal;
1.5. achievement goal; and
1.6. learning environment stimulation?

2. How may the students' academic performance in science be described?
3. Is there a significant relationship between students' motivation toward science learning and science academic performance?
4. Based on the result of the study, what intervention program can be developed to support the student's science performance?

Hypothesis

This study was guided and tested the hypothesis below:

Students' motivation toward science learning has no significant relationship on their science academic performance.

Significance of the Study

This study will help the students to better assess and understand their learning performance in science for self-improvement. This may serve as a source of information about how the various school factors and teacher factors influenced their learning performance in science. For teachers, this will serve as a valuable guide for them to help the students improve their knowledge, understanding and skills in science. It will also serve as a basis for improving instructional materials that still guarantee the quality of education. The result of this study will serve as a guide and reference for the administrators to have a basis in adjusting school policies and systems for students to help them become efficient learners. As a result, it can improve student's learning performance especially in science and even their performance outside school. The conducted study will further open doors for future researchers to refine and expand studies in relation to how motivation affects students' science learning and academic performance. This may serve as a source of information about the identified factors that influenced students' science learning and performance.

METHODOLOGY

Research Design

This study utilized descriptive correlational research design. This type of research design is used to understand the relationship between two or more variables. In this study, the researchers aimed to describe and determine the relationship between students' motivation on science learning and academic performance. According to Aprecia et al. (2021), descriptive correlational research design describes the variables and measures the extent of the relationships that occur between and among the variables.

Respondents and Sampling

Simple random sampling technique was utilized in selecting the student-respondents from the reported total Grade 11 Enrolment in the Senior High School Program. The researchers used the Raosoft sample size calculator in calculating the appropriate sample size for the study. The mentioned formula was used to obtain the needed sample size for the student-respondents in this study. The researchers determined the sample size for student-respondents based on the total of 111 Grade 11 enrollees of Calawitan National High School with a margin of error equivalent to 5% and a confidence level of 95%.

By applying the formula, the researchers determined the total number of respondents who will represent the population. This resulted in a total of 87 student-respondents among Grade 11 students of Calawitan National High School.

Instrumentation

In order to answer the problems provided, quantitative data were gathered using a survey questionnaire. The questionnaire "Students' Motivation Toward Science Learning" (SMTSL) was adapted from Tuan et al. (2005) to describe and measure students' motivation toward science learning. The questionnaire was composed of six subsections such as self-efficacy, active learning strategies, science learning value, performance goal, achievement goal, and learning environment stimulation which was rated using a scale of 4.21 – 5.00 – Strongly agree (5), 3.41 – 4.20 – Agree (4), 2.61 – 3.40 – No opinion (3), 1.81 – 2.60 – Disagree (2) and 1.00 – 1.80 – Strongly disagree (1). Cronbach alpha for the entire questionnaire was 0.89; for each scale, alpha ranged from 0.70 to 0.89. Findings of the study confirmed the validity and reliability of the SMTSL questionnaire (Tuan et al., 2005). The science academic performance of the respondents was gathered from the school record of Calawitan National High School through their adviser.

Data Gathering Procedure

Before the administration of survey questionnaire, the researchers first requested approval from the school principal to randomly selected Grade 11 students in Calawitan National High School as respondents for the study. Upon receiving the approved letter, coordination with the class advisers of Grade 11 students of the aforementioned school was done for the schedule of data collection. The researchers administered the questionnaire through Google Forms. In the administration of survey questionnaire and the respondents were allotted a 10-minute timeframe to complete the questionnaire. The data for science academic performance was collected through the class advisers.

The respondents in the study were informed that their involvement was entirely voluntary and they had the freedom to withdraw from participation at any time. The survey was also anonymous and in order to protect respondents' identities, no personal information was disclosed. Additionally, they were informed that all information gathered would be used exclusively to complete the study and that it will be completely deleted from the researchers' laptop upon completing the study.

Data Analysis

The researchers used a statistical software jAMOVI for the analysis and interpretation of the collected data. The jAMOVI software was found to be simple, flexible and easy to learn with very sophisticated analytical capacity.

Descriptive statistics such as mean was used to describe students' motivation toward science learning and their science academic performance. To test the hypothesis if students' motivation toward science learning has a significant relationship on science academic performance Pearson r moment correlation was utilized.

RESULTS

This chapter deals with the presentation, analysis and interpretation of the data collected and the results of the statistical treatment employed in the study with the purpose of determining the relationship between science motivation toward science learning and science academic performance of Grade 11 students of Calawitan National High School, Calawitan, San Ildefonso, Bulacan.

Table 1. Self-efficacy

Statements	Mean	Standard Deviation	Interpretation
1. Whether the science content is difficult or easy, I am sure that I can understand it	3.64	1.01	Agree
2. I am not confident about understanding difficult science concepts. (−)	2.93	0.950	No Opinion
3. I am sure that I can do well on science tests	3.61	0.969	Agree
4. No matter how much effort I put in, I cannot learn science. (−)	2.31	0.893	Disagree
5. When science activities are too difficult, I give up or only do the easy parts. (−)	2.80	1.09	No Opinion
6. During science activities, I prefer to ask other people for the answer rather than think for myself. (−)	2.69	1.09	No Opinion
7. When I find the science content difficult, I do not try to learn it (−)	2.40	0.994	Disagree
TOTAL	**2.91**	**0.487**	**No Opinion**

Legend:

Scale	Verbal Description
4.21 – 5.00	Strongly Agree (SA)
3.41 – 4.20	Agree (A)
2.61 – 3.40	No Opinion (NO)
1.81 – 2.60	Disagree (D)
1.00 – 1.80	Strongly Disagree (SD)

The table shows the students' science motivation toward science learning in terms of self-efficacy. The calculated total mean for self - efficacy is (M=2.91) with a standard

deviation of 0.487 which is interpreted as “No Opinion”. Since majority of the items in this category were negative statements, it means that respondents believed in their capacity to perform well in science. The students can still understand the science concept whether it is difficult or not and they are sure that they can do well on science tests.

Table 2. Active Learning Strategies

Statements	Mean	Standard Deviation	Interpretation
1. When learning new science concepts, I attempt to understand them.	3.83	0.991	Agree
2. When learning new science concepts, I connect them to my previous experiences.	3.46	0.887	Agree
3. When I do not understand a science concept, I find relevant resources that will help me	3.56	0.997	Agree
4. When I do not understand a science concept, I would discuss it with the teacher or other students to clarify my understanding.	3.60	1.04	Agree
5. During the learning processes, I attempt to make connections between the concepts that I learn.	3.49	0.951	Agree
6. When I make a mistake, I try to find out why.	3.61	1.06	Agree
7. When I meet science concepts that I do not understand, I still try to learn them.	3.51	1.02	Agree
8. When new science concepts that I have learned conflict with my previous understanding, I try to understand why.	3.39	0.867	No Opinion
TOTAL	**3.57**	**0.796**	**Agree**

Legend:

Scale	Verbal Description
4.21 – 5.00	Strongly Agree (SA)
3.41 – 4.20	Agree (A)
2.61 – 3.40	No Opinion (NO)
1.81 – 2.60	Disagree (D)
1.00 – 1.80	Strongly Disagree (SD)

The table shows the students’ science motivation towards science learning in terms of active learning strategies. Majority of the respondents agreed on the statements resulting to a total mean of (M= 3.57, SD=0.796) interpreted as “Agree”. It means that the students engage themselves in various learning strategies to construct new knowledge based on their previous understanding of science concepts.

However, the student gave no opinion (M= 3.39, SD= 0.867) in the statement in item number 8 which is “*When new science concepts that I have learned conflict with my previous understanding, I try to understand why.”*

Table 3. Science Learning Value

Statements	Mean	Standard Deviation	Interpretation
1. I think that learning science is important because I can use it in my daily life.	3.62	1.22	Agree
2. I think that learning science is important because it stimulates my thinking.	3.39	1.10	No Opinion
3. In science, I think that it is important to learn to solve problems.	3.67	0.936	Agree
4. In science, I think it is important to participate in inquiry activities.	3.51	1.08	Agree
5. It is important to have the opportunity to satisfy my own curiosity when learning science	3.55	1.13	Agree
TOTAL	**3.55**	**0.932**	**Agree**

Legend:

Scale	Verbal Description
4.21 – 5.00	Strongly Agree (SA)
3.41 – 4.20	Agree (A)
2.61 – 3.40	No Opinion (NO)
1.81 – 2.60	Disagree (D)
1.00 – 1.80	Strongly Disagree (SD)

The table shows the students' science motivation towards science learning in terms of science learning value, wherein the total mean and standard deviation (M=3.55, SD=0.932) were calculated and interpreted as "Agree". It means that the majority of the respondents understand the value of learning science as it can be used in daily lives, it can help them to solve problems, it can help them to experience inquiry activities and it satisfies their curiosity when they are learning science.

On the other hand, the respondents gave no opinion (M=3.39, SD= 1.10) about the value of learning science in stimulating their own thinking.

Table 4. Performance Goal

Statements	Mean	Standard Deviation	Interpretation
1. I participate in science courses to get a good grade (-)	3.70	1.06	Agree
2. I participate in science courses to perform better than other students. (-)	2.79	0.990	No Opinion
3. I participate in science courses so that other students think that I'm smart (-)	2.43	1.06	Disagree
4. I participate in science courses so that the teacher pays attention to me. (-)	3.14	0.942	No Opinion
TOTAL	**3.04**	**0.697**	**No Opinion**

Legend:

Scale	Verbal Description
4.21 – 5.00	Strongly Agree (SA)
3.41 – 4.20	Agree (A)
2.61 – 3.40	No Opinion (NO)
1.81 – 2.60	Disagree (D)
1.00 – 1.80	Strongly Disagree (SD)

The table shows that student's motivation toward science learning in terms of performance goal. All items in this category are comprised of negative statements. The total mean score of (M=3.04) was interpreted as "No Opinion". It indicates that majority of the respondents have more neutral or mixed opinion regarding their performance goal. Also, it shows that the primary motivation for students in participating in science courses appears to be achieving a good grade. While the desire to appear smart to others such as their peers and teachers is not a significant motivator.

Table 5. Achievement Goal

Statements	Mean	Standard Deviation	Interpretation
1. During a science course, I feel most fulfilled when I attain a good score in a test	4.08	0.943	Agree
2. I feel most fulfilled when I feel confident about the content in a science course	3.80	0.913	Agree
3. During a science course, I feel most fulfilled when I am able to solve a difficult problem.	3.89	0.970	Agree
4. During a science course, I feel most fulfilled when the teacher accepts my ideas.	3.79	1.06	Agree
5. During a science course, I feel most fulfilled when other students accept my ideas.	3.77	0.885	Agree
TOTAL	**3.87**	**0.808**	**Agree**

Legend:

Scale	Verbal Description
4.21 – 5.00	Strongly Agree (SA)
3.41 – 4.20	Agree (A)
2.61 – 3.40	No Opinion (NO)
1.81 – 2.60	Disagree (D)
1.00 – 1.80	Strongly Disagree (SD)

The table shows the students' motivation toward science learning in terms of achievement goal with a total mean score of (M=3.87) interpreted as "Agree", indicating that the majority of the respondents agreed that during science courses they feel confident and fulfilled when they attain good scores, know the content in science courses, being able to solve difficult problems, and teachers and peers accept their ideas.

Table 6. Learning Environment Stimulation

Statements	Mean	Standard Deviation	Interpretation
1. I am willing to participate in this science course because the content is exciting and changeable.	3.53	1.03	Agree
2. I am willing to participate in this science course because the teacher uses a variety of teaching methods	3.43	0.996	Agree
3. I am willing to participate in this science course because the teacher does not put a lot of pressure on me	3.80	0.926	Agree

4. I am willing to participate in this science course because the teacher pays attention to me	3.46	0.998	Agree
5. I am willing to participate in this science course because it is challenging	3.44	0.885	Agree
6. I am willing to participate in this science course because the students are involved in discussions.	3.45	0.912	Agree
TOTAL	**3.52**	**0.793**	**Agree**

Legend:

Scale	Verbal Description
4.21 – 5.00	Strongly Agree (SA)
3.41 – 4.20	Agree (A)
2.61 – 3.40	No Opinion (NO)
1.81 – 2.60	Disagree (D)
1.00 – 1.80	Strongly Disagree (SD)

This table shows the Learning Environment Stimulation of students with a total mean score of (M=3.52) interpreted as “Agree”. This indicates that majority of the students are willing to participate in the science course because the content is exciting, changeable and challenging, the teacher uses a variety of teaching methods and does not apply any pressure on the science course and students are involved in the discussions.

Table 7. Total Mean of Science Academic Performance

	N	Mean	Standard Deviation	Interpretation
Science Academic Performance	87	83.4	5.54	Satisfactory

Legend:

Grading Scale	Descriptor
90 – 100	Outstanding
85 – 89	Very Satisfactory
80 – 84	Satisfactory
75 – 79	Fairly Satisfactory
Below 75	Did Not Meet Expectations

The table shows the respondents’ science academic performance for the school year 2023-2024 with a mean score of (M=83.4). Based on the DepEd K-12 Grading System Step for Computing Grades, the calculated average science academic performance of the respondents can be interpreted as “satisfactory”.

Table 8. Correlational Analysis of SMTSL and Science Academic Performance

	Science Academic Performance		
	Pearson’s r	p-value	Interpretation
Self-efficacy	-0.092	0.398	Not Significant
Active learning strategies	0.358***	0.001	Highly Significant
Science learning value	0.318**	0.003	Significant
Performance goal	0.240*	0.025	Significant
Achievement goal	0.128	0.238	Not Significant

Learning environment stimulation	0.234*	0.029	Significant
SMTSL	**0.270***	**0.011**	**Significant**

Note. * p < .05, **p <.01, ***p < .001

Based on the analysis of data, it was found out that students' motivation toward science learning and science academic performance have a significant relationship (r = 0.270*; p- value = 0.011) it means that as the students' motivation toward science learning increases, their science academic performance will become higher and vice versa. Therefore, the null hypothesis will be rejected. Students who are motivated in learning science tend to have higher science academic performance. This result was supported by Rana et.al (2015), wherein the SMTSL overall scale and science achievement showed a strong positive relationship. Additionally, they asserted that motivation toward science learning can predict science achievement.

It also shows on the table that active learning strategies, science learning value, performance goals, and learning environment stimulation are all significantly correlated with science academic performance. This indicates that these factors are important for improving students' academic performance in science. On the other hand, self-efficacy and achievement goals do not show a significant correlation with science academic performance.

Program of Activities from the Results of the Study

The study reveals that in some items on students' motivation toward science learning in terms of active learning strategies, science learning value and learning environment stimulation received low mean score. Hence, the researchers offer the Program of Activities which is presented in Table 9.

Table 9. Proposed Program of Activities

Objectives	Action	Timeline	Persons Involved	Expected Outcome
Enhance students' learning strategies in science to construct new knowledge	Integrating follow-up questions to the topic allowing students to analyze and formulate an answer.	Year round S.Y. 2024-2025	Teacher, students, and researchers	The students develop active learning strategies in science and are able to construct new knowledge based on the previous understanding.
Increase students' thinking skills in learning science concepts.	Integrating questions about the lesson with a variety of question difficulty	Year round S.Y. 2024-2025	Teacher, students, and researchers	The students will develop higher critical thinking skills in learning science concepts

				through science argument.
Inclusion of variety of teaching methods in science courses	Integrating Student-Centered Learning mainly focusing on students in giving the main idea and key points of the topic	Year round S.Y. 2024-2025	Teacher, students, and researchers	The student's will be more motivated to pursue learning any science courses

Conclusions

The study reveals that students have a positive belief in their capability to perform well in science. They express confidence in their understanding and performance in science-related tasks. When it comes to active learning strategies, the majority of the students utilized various learning strategies to construct new knowledge based on their previous understanding of science concepts. The overall pattern of responses in Table 3 indicates that students have a positive perception of the value of science learning, particularly in practical and curiosity-driven contexts. They recognize its usefulness and its role in providing meaningful and engaging learning experiences. The researchers also find out that students are primarily motivated by the desire to achieve good grades in science rather than by external factors such as their peers or other potential benefits of science learning. The researchers also indicate that students generally feel confident and fulfilled when they achieve good scores in science, have a solid understanding of the content, can solve difficult problems, and receive acceptance from teachers and peers for their ideas.

The students also perceive their science learning environment positively. They find the content exciting, changeable, challenging, and they appreciate the use of varied teaching methods of their teachers. This suggests that the diversity in teaching methods used by the teachers contributes to the students' engagement. Lastly, the positive correlation of SMTSL and science academic performance indicates that students who are more motivated to engage with science learning are likely to achieve higher performance in their science subjects. Motivation plays a crucial role in driving students to put more effort into their studies, which in turn enhances their academic outcomes.

Recommendations

Based on the findings revealed in this study, it is recommended that teachers should continue to foster an environment that builds on students' confidence in their science capabilities and encourages the use of active learning strategies. This can be achieved by integrating real-world applications and problem-solving activities that spark curiosity and interest of the students, thus promoting a motivation alongside the desire for good grades. The use of diverse teaching methods should be expanded to cater different learning styles of the students, keeping the content exciting, challenging, and

relevant. Additionally, recognizing and rewarding not just academic performance but also effort, improvement, and deep understanding can further enhance students' motivation and engagement. Professional development opportunities for teachers such as seminars and workshop training to learn and share innovative strategies will also support these goals. Through implementing these recommendations, teachers can strengthen students' motivation in science learning and drive higher academic performance.

Compliance with Ethical Standards

A variety of ethical issues were taken into account to make sure that this study was carried out properly. Upon conducting the study, all respondents were informed of the goal of the study using the forms that were attached to the questionnaires, as well as their right to withdraw at any time while the data collection was being conducted. The researchers ensured the confidentiality of the data collected from every participant. They remained anonymous respondents in the study.

Acknowledgments

The researchers would like to thank God for providing them with strength and guidance to complete this study. The researchers are deeply grateful to Dr. Bryan DC. Gabriel, for his invaluable support and mentorship. The researchers wish to thank the respondents who participated in this study for their time and insights. Also, appreciation goes to the family and friends of the researchers for their unwavering support and encouragement throughout the conduct of this study.

SHARON IN FILIPINO COLLOQUIAL CONTEXT: A SEMANTIC AND LEXICAL DISCOURSE ANALYSIS

James de Jesus, Hazel Ann Pabro, Julie Mae Sapanta, Shantalmae Bacarro, John Louie P. Guimaras, LPT, MAEd-ELT

Teacher Education Program, Christ the King College, Gingoog City, Misamis Oriental, Philippines

https://doi.org/10.5281/zenodo.13163602

ABSTRACT

This study explores the semantic and lexical factors contributing to the high recognition of the term "Sharon" in Filipino colloquial language, which colloquially refers to the practice of taking home extra food from gatherings. Through semantic and lexical discourse analysis, the study identifies cultural resonance, media influence, mnemonic efficiency, and pragmatic utility as key factors shaping the term's recognition and usage. The term's cultural resonance is deeply rooted in its association with Sharon Cuneta, an iconic figure in Philippine entertainment, whose persona and popular song lyrics have become intertwined with the cultural practice of bringing home leftovers. Media, particularly social media platforms like Facebook and Instagram, amplify the term's usage through viral content such as memes and videos, fostering a shared cultural lexicon and ensuring widespread visibility. The mnemonic efficiency of "Sharon," coupled with its pragmatic utility in succinctly describing a common social behavior, enhances its adoption and retention among speakers. However, the study also identifies sociolinguistic factors such as generational differences and social context that influence the gap between recognition and active usage of the term. Understanding these dynamics enriches our understanding of language evolution in digital contexts and underscores the complex interplay between cultural influences, media propagation, and linguistic practices in contemporary Filipino society.

Keywords: *colloquial language, cultural resonance, lexical analysis, neologism, semantic perception, Sharon*

INTRODUCTION

Neologism is a prominent feature of the Filipino language, with Filipinos frequently repurposing words in new contexts to create additional meanings through attribution and association. This linguistic creativity leads to the development of slang words used in colloquial and informal conversations, often observed in various media outlets.

The proliferation of these slang terms is often triggered by internet video content, the LGBTQ+ community, and niche word-code systems, which subsequently spread across various media platforms. Social media plays a crucial role in hyping and viralizing these terms, analyzing their origins based on events, people, ideas, and phonological attributes. Observable patterns include reversing words (e.g., "petmalu" for "malupit," meaning superb, and "lodi" for idol), creating phonemic rhymes (e.g., "mustasa" for "kamusta," meaning how are you?), borrowing words (e.g., "atashi" for I am), using names and attributing abilities (e.g., "Lydia de Vega" for running fast), and adding letters to utterances (e.g., "majinit" for "mainit," meaning hot).

A notable example is the term "Sharon" or the phrase "balutin mo ako," derived from the song "Bituing Walang Ningning." These terms have acquired new meanings associated with Sharon Cuneta's name and song. This phenomenon is comparable to observations by Behera and Mishra (2013) and reiterated by Ulla et al. (2024). Technology, particularly social media, played a vital role in spreading these terms, making them viral and establishing their meanings in colloquial contexts. Once viral, these terms are often picked up by news outlets and used in articles, becoming widely accepted across different genders and age groups. The term "Sharon" and "balutin mo ako" are also used humorously.

Technology facilitates the establishment and dissemination of terms like "Sharon" or "balutin mo ako" on various news websites and blogs. Social media and news outlets significantly influence the perception and meaning of these terms. Blogs such as "How to Spot a Sharonian" classify different types of "Sharonians" and even provide etiquette for "doing the Sharon." In gay lingo, "Sharon" refers to packing leftover food after an event. Even Sharon Cuneta herself acknowledges the new meaning of her name, as evidenced by a video of her participating in "doing Sharon" at a family event. Media and blogs frequently use "Sharon" or "Sharonian" to describe this action.

Sharon Cuneta, a Filipino icon known as the Megastar, has significantly influenced Filipino pop culture through her work in film and music. Her hit songs, such as "Mr. DJ," "Maging Sino Ka Man," "Langis at Tubig," "Sana'y Wala Nang Wakas," and especially "Bituing Walang Ningning," have cemented her status as a cultural icon. The association of her name and songs with social events and gatherings where food is packed to go has integrated these terms into the Filipino colloquial lexicon. The widespread reach of social

media has further embedded these associations into everyday language, making them a part of informal conversations.

Research Questions

The undertakings of the study were anchored on the following research questions:

1. What are the underlying semantic and lexical factors that contribute to the high recognition of the term "Sharon" in the Filipino colloquial context?
2. How does social media platforms influence the dissemination and reinforcement of colloquial terms such as "Sharon" in the Filipino language?
3. What are the sociolinguistic factors that contribute to the discrepancy between the recognition and actual usage of the term "Sharon" in everyday Filipino language?
4. In what ways do synonymous phrases like "Sharon" or Balutin Mo Ako" interact within the Filipino colloquial lexicon, and what does this reveal about the fluidity of semantic meanings in the language?
5. How do modern technological advancements, particularly social media, shape the semantic and lexical evolution of colloquial language in the Philippines, and what implications does this have for linguistic studies?

METHODOLOGY

The research method for the study titled "Sharon in Filipino Colloquial Context: A Semantic and Lexical Discourse Analysis" was primarily qualitative, focusing on a detailed discourse analysis to understand the semantic and lexical perceptions of the term "Sharon." A self-constructed questionnaire was meticulously crafted to gather data from a randomized sample of participants at Christ the King College in Gingoog City. By utilizing a randomized sample, the study ensured a diverse range of perspectives, enhancing the validity and reliability of the findings. The responses were analyzed qualitatively, allowing for an in-depth exploration of the nuances and complexities in the participants' understanding and usage of the term. The instrument underwent thorough review by all team members and the research advisor to validate its accuracy, with feedback guiding the enhancement of the tool's effectiveness. Following the implementation of necessary corrections, the refined guide questions underwent another review before survey administration.

The research design also incorporated the examination of the role of technology, particularly social media, in the dissemination and reinforcement of colloquial terms. This aspect involved analyzing participants' interactions with social media and how these platforms influenced their recognition and use of "Sharon," highlighting the significant impact of social media on spreading and establishing colloquial terms across the country. The researchers randomly selected 30 students aged between 19 to 34, ensuring a diverse range of perspectives and experiences. By focusing on college students, the study aimed to gather insights from individuals at a similar stage in life, allowing for a

more targeted analysis of the data and revealing patterns and trends specific to this age group.

The data analysis primarily utilized qualitative methods to interpret the responses from the self-constructed questionnaire. Each participant's response was meticulously coded and categorized to identify common themes and patterns regarding the recognition and interpretation of the term "Sharon." This process involved breaking down the responses into meaningful units and assigning them to categories based on their semantic and lexical content. In addition to manual coding, the study leveraged discourse analysis tools to further understand how the term "Sharon" is used and perceived within the broader colloquial context. These tools examined the influence of social media on language, specifically how online interactions shape and reinforce the usage of colloquial terms. By combining these qualitative methods with discourse analysis tools, the study offered a comprehensive and nuanced understanding of the semantic and lexical dynamics of the term "Sharon" in Filipino colloquial language, particularly in the context of modern technological advancements.

RESULTS AND DISCUSSION

Research Question 1: What are the underlying semantic and lexical factors that contribute to the high recognition of the term "Sharon" in the Filipino colloquial context?

The data identified several underlying semantic and lexical factors that contribute to the high recognition of the term "Sharon," which colloquially means "Balutin mo Ako" or "to bring home extra food" in the Filipino context. These factors include cultural resonance, media influence, mnemonic efficiency, and pragmatic utility.

Cultural Resonance

The term "Sharon" derives its cultural resonance from the iconic Filipino celebrity Sharon Cuneta, who is affectionately known as the "Megastar" of Philippine cinema and music. The phrase "Balutin mo Ako" references one of her famous songs, creating a strong association between the act of taking home food from gatherings and the persona of Sharon Cuneta (Ponce, 2019). This cultural resonance is further enhanced by the practice's commonality in Filipino social gatherings, where taking home leftovers is a socially accepted and even expected behavior. The term's connection to a beloved cultural figure imbues it with a sense of familiarity and warmth, making it easily recognizable and widely understood.

Media Influence

Media, particularly social media, plays a crucial role in the dissemination and reinforcement of the term "Sharon." Social media platforms like Facebook, Twitter, and Instagram frequently feature content related to Filipino culture and practices, including

humorous takes on everyday activities such as bringing home food from parties. These platforms amplify the term's usage through memes, videos, and posts that reach a broad audience, ensuring its visibility and relevance (Abu Bakar, 2020). The study found that participants who were active on social media were more likely to recognize and understand the term "Sharon" in this colloquial sense, highlighting the impact of digital media in lexical propagation.

Mnemonic Efficiency

The mnemonic efficiency of the term "Sharon" also contributes to its high recognition. The term is phonetically simple and easy to remember, which aids in its retention and recall among speakers (Himmelmann, 2005). Additionally, the playful use of a well-known name in a new context makes it a memorable and engaging expression. This mnemonic quality ensures that the term is easily adopted into everyday language, as it requires minimal cognitive effort to remember and use.

Pragmatic Utility

The pragmatic utility of the term "Sharon" enhances its widespread recognition and use. The term provides a succinct and culturally meaningful way to describe the common practice of taking home leftovers from gatherings. Participants noted that using the term "Sharon" was a convenient shorthand that conveyed both the action and the cultural nuance associated with it. This utility is a key factor in the term's popularity, as it fills a specific communicative need in Filipino social interactions (Gonzalez, 1998). The ability of a term to encapsulate a widely understood concept in a single, easily recognizable word is crucial for its adoption and longevity in the colloquial lexicon.

The high recognition of the term "Sharon," meaning "Balutin mo Ako" or "to bring home extra food," in the Filipino colloquial context is influenced by a combination of cultural, media-related, mnemonic, and pragmatic factors. The cultural resonance with Sharon Cuneta, the amplification through social media, the mnemonic efficiency of the term, and its pragmatic utility all contribute to its widespread recognition and use. These findings underscore the complex interplay of various factors in shaping colloquial language and highlight the importance of considering multiple dimensions in linguistic analysis. Understanding these factors provides valuable insights into the dynamics of language evolution and cultural influence in contemporary Filipino society.

Research Question 2: How does social media platforms influence the dissemination and reinforcement of colloquial terms such as "Sharon" in the Filipino language?

The data obtained revealed that social media platforms play a significant role in the dissemination and reinforcement of colloquial terms such as "Sharon" in the Filipino language. This influence can be attributed to several factors: the rapid spread of information, the creation of a shared cultural lexicon, the virality of content, and the reinforcement of linguistic trends.

Rapid Spread of Information

Social media platforms like Facebook, Twitter, and Instagram facilitate the rapid spread of information, including colloquial terms and phrases. These platforms enable users to share content instantly with a wide audience, allowing terms like "Sharon" to gain visibility quickly. The study found that participants frequently encountered the term "Sharon" in various social media contexts, from humorous posts to cultural commentaries, highlighting the platforms' role in accelerating the dissemination of colloquial language (Tagliamonte & Denis, 2008).

Creation of a Shared Cultural Lexicon

Social media contributes to the creation of a shared cultural lexicon by providing a space where users can engage with and reinforce cultural references. The term "Sharon," for instance, often appears in memes, videos, and posts that evoke a sense of communal understanding among Filipinos. These shared references help solidify the term's meaning and usage within the community. The study indicates that social media interactions create a collective experience, making colloquial terms more robust and widely recognized (Zappavigna, 2012).

Virality of Content

The virality of content on social media is another critical factor in the propagation of colloquial terms. Content that resonates with users is often shared widely, leading to the rapid adoption of new terms. The term "Sharon" has benefited from this phenomenon, as posts featuring the term can quickly go viral, reaching thousands of users in a short period. This virality ensures that the term remains in active use and continues to evolve with the community's linguistic practices (Burgess & Green, 2018).

Reinforcement of Linguistic Trends

Social media platforms also play a role in reinforcing linguistic trends by providing feedback loops where popular terms are continually used and validated. The study found that frequent exposure to the term "Sharon" on social media reinforces its usage and acceptance in everyday language. Users who see the term regularly are more likely to adopt it in their own speech, creating a cycle of reinforcement that strengthens the term's presence in the colloquial lexicon (Crystal, 2001).

Social media platforms significantly influence the dissemination and reinforcement of colloquial terms like "Sharon" in the Filipino language through rapid information spread, the creation of a shared cultural lexicon, content virality, and the reinforcement of linguistic trends. These platforms not only accelerate the adoption of colloquial terms but also ensure their continued relevance and evolution within the linguistic community. Understanding the role of social media in language dissemination provides valuable insights into the dynamic processes of language change and the powerful impact of digital communication on contemporary linguistic practices.

Research Question 3: What are the sociolinguistic factors that contribute to the discrepancy between the recognition and actual usage of the term "Sharon" in everyday Filipino language?

The acquired data identifies several sociolinguistic factors that contribute to the discrepancy between the recognition and actual usage of the term "Sharon" in everyday Filipino language. These factors include generational differences, social context, linguistic prestige, and semantic drift.

Generational Differences

One significant sociolinguistic factor is generational differences in language use. The term "Sharon" may be widely recognized across different age groups due to its cultural resonance with Sharon Cuneta. However, younger generations may prefer using newer slang terms or expressions, leading to a discrepancy where the term is recognized but not actively used in everyday speech (Labov, 2006). This generational shift in linguistic preferences influences how colloquial terms like "Sharon" are adopted and maintained within different age cohorts.

Social Context

Social context plays a crucial role in determining the usage of colloquial terms. While "Sharon" may be recognized broadly, its usage might be confined to specific social groups or contexts. For instance, the term might be more prevalent among fans of Sharon Cuneta or in certain online communities where references to Filipino pop culture are common. Outside these contexts, speakers may opt for more neutral or widely accepted terms, contributing to the gap between recognition and usage (Milroy & Milroy, 1999).

Linguistic Prestige

The concept of linguistic prestige also influences the usage of colloquial terms like "Sharon." Terms associated with popular culture figures may carry informal or colloquial connotations, which can affect their adoption in formal or professional settings. Speakers may choose to avoid using such terms in contexts where linguistic prestige is valued, opting instead for more conventional expressions to maintain a certain level of formality (Trudgill, 1974).

Semantic Drift

Semantic drift, or the evolution of word meanings over time, can contribute to discrepancies between recognition and usage. The term "Sharon" may have originated with a specific cultural reference to Sharon Cuneta but could evolve to acquire new meanings or associations. As a result, speakers may recognize the term in its original context but hesitate to use it due to potential misunderstandings or shifts in cultural relevance (Labov, 1972).

The discrepancy between the recognition and actual usage of the term "Sharon" in everyday Filipino language is influenced by sociolinguistic factors such as generational differences, social context, linguistic prestige, and semantic drift. Understanding these

factors provides insights into how colloquial terms are adopted, maintained, and sometimes diverge in usage within linguistic communities. Future research could explore these dynamics further to elucidate the complex interplay between cultural references, social norms, and linguistic practices in contemporary Filipino society.

Research Question 4: In what ways do synonymous phrases like "Sharon" or Balutin Mo Ako" interact within the Filipino colloquial lexicon, and what does this reveal about the fluidity of semantic meanings in the language?

The gathered data explores the interaction of synonymous phrases like "Sharon" and "Balutin Mo Ako" within the Filipino colloquial lexicon, revealing insights into the fluidity of semantic meanings in the language. These phrases interact dynamically, influencing each other's usage and contributing to the richness of colloquial expression.

Semantic Overlap and Differentiation

"Sharon" or "Balutin Mo Ako" share a semantic overlap in their colloquial meanings related to taking home extra food from gatherings. However, they also exhibit subtle differences in usage. "Sharon," derived from the name of Filipino celebrity Sharon Cuneta, often connotes a playful or affectionate reference to taking home food, reflecting its cultural resonance with the singer's popular song lyrics (Ponce, 2019). Furtheremore, "Balutin Mo Ako," directly translated as "wrap me up," emphasizes the action of wrapping or packaging food to take away, highlighting a more literal approach to the same cultural practice.

Cultural and Contextual Nuances

The interaction between "Sharon" or "Balutin Mo Ako" underscores the importance of cultural and contextual nuances in colloquial language use. Depending on the social setting or individual preference, speakers may choose one phrase over the other to convey similar actions. This variability reflects the flexibility of the Filipino colloquial lexicon in accommodating multiple expressions for a shared cultural practice, demonstrating how semantic meanings can adapt to different communicative needs (Gonzalez, 1998).

Semantic Fluidity and Evolution

The coexistence of "Sharon" or "Balutin Mo Ako" illustrates the fluidity of semantic meanings in Filipino language usage. Over time, these phrases may evolve in usage and connotation, influenced by shifts in cultural references, generational preferences, and social trends (Himmelmann, 2005). The fluidity allows for creative expressions and adaptations within the language, where synonymous phrases can coexist and contribute to a dynamic colloquial lexicon that reflects the evolving nature of linguistic practices in Filipino society.

The interaction of synonymous phrases like "Sharon" or "Balutin Mo Ako" within the Filipino colloquial lexicon highlights the fluidity of semantic meanings in language.

These phrases not only overlap in their colloquial definitions but also offer nuanced variations that cater to different communicative contexts and cultural references. Understanding this interaction provides valuable insights into how semantic meanings evolve and adapt within a linguistic community, reflecting broader societal changes and cultural influences.

Research Question 5: How do modern technological advancements, particularly social media, shape the semantic and lexical evolution of colloquial language in the Philippines, and what implications does this have for linguistic studies?

Modern technological advancements, particularly social media, play a pivotal role in shaping the semantic and lexical evolution of colloquial language in the Philippines. This influence is multifaceted, involving changes in language use patterns, the emergence of new linguistic forms, and the dissemination of colloquial expressions.

Acceleration of Language Change

Social media platforms such as Facebook, Twitter, and Instagram facilitate rapid communication and information exchange among users. This speed accelerates the adoption and diffusion of new words, phrases, and meanings within the colloquial lexicon. Terms like "Sharon," originally derived from popular culture references, spread quickly through memes, hashtags, and viral content, influencing how Filipinos understand and use language in everyday contexts (Zappavigna, 2012).

Expansion of Linguistic Diversity

Social media's global reach allows for the exchange of linguistic practices and innovations across different regions and communities in the Philippines. Users from diverse linguistic backgrounds contribute to the expansion of the colloquial lexicon by introducing local slang, dialectal expressions, and hybrid linguistic forms. This diversity enriches the semantic and lexical landscape of colloquial language, reflecting the dynamic nature of linguistic evolution in a digitally connected society (Danet & Herring, 2007).

Influence on Language Norms and Identities

The influence of social media on language norms and identities is profound. Online interactions create virtual communities where language practices are negotiated and validated. Terms like "Sharon" may acquire new meanings or connotations through user-generated content, reflecting shifts in cultural attitudes and societal values. This evolution challenges traditional notions of linguistic standardization and highlights the role of digital platforms in shaping contemporary linguistic identities (Crystal, 2001).

Implications for Linguistic Studies

The study of how modern technological advancements shape the semantic and lexical evolution of colloquial language in the Philippines holds several implications for

linguistic research. Firstly, it underscores the need for interdisciplinary approaches that integrate sociolinguistics, digital humanities, and cultural studies to comprehensively analyze language change in digital contexts. Secondly, it highlights the importance of documenting and analyzing online language data to capture emerging linguistic trends and patterns. Finally, it emphasizes the role of language users as active agents in language innovation, challenging traditional notions of language authority and standardization (Tagliamonte & Denis, 2008).

Modern technological advancements, particularly social media, significantly influence the semantic and lexical evolution of colloquial language in the Philippines by accelerating language change, expanding linguistic diversity, influencing language norms and identities, and challenging traditional linguistic frameworks. These developments have profound implications for linguistic studies, calling for new methodologies and perspectives to understand the dynamic interplay between digital communication technologies and language practices in contemporary society.

Conclusions

Based on the findings from the study on the recognition and usage of the term "Sharon" in Filipino colloquial language, several scholarly conclusions can be drawn.

The term "Sharon," referring to the act of taking home extra food from gatherings, is deeply rooted in cultural resonance, media influence, mnemonic efficiency, and pragmatic utility. Its recognition is notably bolstered by its association with Sharon Cuneta, a prominent figure in Philippine entertainment, whose persona and popular song lyrics have become intertwined with this cultural practice. This cultural resonance not only enhances familiarity but also imbues the term with emotional and nostalgic value, making it highly recognizable across different demographic groups within Filipino society.

Moreover, social media platforms play a pivotal role in the dissemination and reinforcement of colloquial terms like "Sharon." The virality of content on platforms such as Facebook and Instagram ensure widespread exposure to these terms, fostering a shared cultural lexicon among users. Memes, videos, and posts featuring "Sharon" contribute to its visibility and ongoing relevance, illustrating how digital media platforms amplify linguistic trends and shape colloquial language evolution. This digital amplification not only accelerates the adoption of new terms but also reflects broader societal shifts in communication norms and practices.

Furthermore, the discrepancy between the recognition and actual usage of "Sharon" in everyday Filipino language underscores complex sociolinguistic dynamics. Generational differences, social contexts, and linguistic prestige all influence whether individuals choose to actively use colloquial terms like "Sharon" in their speech. While widely recognized, its usage may vary based on situational appropriateness or individual linguistic preferences, highlighting the nuanced relationship between linguistic recognition and active usage within diverse social settings.

In conclusion, the study illuminates how semantic and lexical factors intersect with cultural, media-related, and sociolinguistic influences to shape the recognition,

dissemination, and usage of colloquial terms like "Sharon" in contemporary Filipino society. Understanding these dynamics not only enriches our understanding of language evolution but also underscores the multifaceted role of digital media in shaping linguistic practices and cultural identities in the digital age. Future research could further explore how these dynamics continue to evolve and intersect with broader socio-cultural trends, contributing to ongoing discussions in linguistics and digital humanities.

Recommendations

The following recommendations are drawn based on the findings and conclusions made.

Teachers: Use the study on "Sharon" to enrich cultural discussions in language classes, showing how colloquialisms like this reflect cultural icons and media influences. By exploring examples from social media and popular culture, teachers can engage students in analyzing language evolution and identity formation, fostering a deeper understanding of how language interacts with societal changes.

Students: Explore "Sharon" as a case study in cultural and linguistic studies. Investigate its origins in Filipino entertainment, its spread through digital media, and its varying use across different social contexts. This study helps students grasp how language shapes cultural norms and identities, encouraging critical thinking about the impact of digital media on language and the diversity of colloquial expressions in Filipino society.

Language Experts: Use the findings to advance theories on lexical semantics and sociolinguistics, focusing on how colloquialisms like "Sharon" evolve in digital environments. Analyze its cultural meanings and societal influences to deepen understanding of language adaptation to technological and societal changes. This research contributes to broader discussions on linguistic diversity, digital communication, and the interplay between language, culture, and media.

Future Researchers: Further investigate colloquial language evolution in the digital age using methodologies from the "Sharon" study. Explore new approaches to studying linguistic trends on social media, examine generational shifts in language use, and explore the influence of cultural icons on language innovation. This research expands theoretical frameworks in linguistics and informs strategies for documenting and preserving linguistic diversity amid rapid technological advancements.

Compliance with Ethical Standards

Protection of Confidentiality

Ensures the confidentiality of participants' information. Data were anonymized and stored securely to protect participants' privacy and identity.

Informed Consent

The researchers obtain informed consent from participants, providing them with clear information about the purpose, procedures, potential risks, and benefits. The participants freely and voluntarily agreed to participate without any form of coercion.

Withdrawal from participation in the study

The decision to participate in this study was entirely up to the participant. They could refuse to take part in the study at any time without affecting the relationship with the writers. Their decision to refuse would not result in any loss of benefits. The participant had the right not to answer any single question, as well as to withdraw completely at any point during the collection of data.

Acknowledgments

The researchers would like to express their heartfelt gratitude to the following individuals for their invaluable support and assistance in the completion of this discourse project:

We extend our deepest gratitude to our instructor, Mr. John Louie P. Guimaras, for his unwavering guidance, invaluable insights, and continuous encouragement throughout this research journey. Your mentorship has been instrumental in shaping our ideas and refining this work.

We would also like to thank our families for their unconditional love, support, and understanding during the long hours spent on this project. Your belief in us kept us motivated during challenging times.

Special thanks to our colleagues and friends who provided constructive feedback and shared their expertise, enhancing the quality of this paper.

We also express our appreciation to all the participants who generously contributed their time and knowledge to this study. This work is dedicated to everyone who has played a part, big or small, in making this research a reality. Thank you.

Above all, we thank God for empowering and sustaining us in this journey.

BUOD

Ang pag-aaral na ito ay hinggil sa pagsuri sa *alignment* ng mga kagamitang pampagtataya sa Filipino sa K to 12 MELCs. Ang mananaliksik ay gumamit ng deskriptibong paglalarawan. Ang mga respondente ay tatlumpung (30) guro na nagtuturo ng asignaturang Filipino mula baitang 7 hanggang baitang 10 mula sa limang (5) distrito ng Dibisyon ng Negros Oriental. Ang pinakabatayang kasangkapan ng mananaliksik ay ang sarbey- kwestyoneyr at *hard copy* ng *written works* at *quarterly* na pagtataya. Ang ginamit na estadistikang tritment ay *mean.* Napatunayan sa pananaliksik na “malawak na malawak” na ginamit ang *multiple choice* sa *written works*, samantalang “malawak” naman sa performans na pagtataya katulad ng *project-based, speech*, *simulation* at *written* performans. Para naman sa *quarterly* na pagtataya, “malawak na malawak” na ginamit ang *multiple choice*. Ang pinakamataas na porsiyento naman ng hindi naka-*align* sa *summative* na pagtataya sa kompetensi ng MELCs ay 75% mula sa 24 na aytem, sa bahagyang naka-*align* naman, ang pinakamataas ay 56% mula sa 25 na aytem. Para sa *quarterly* na pagtataya, ang pinakamataas na porsiyento ng naka-*align* ay 85.42% sa Filipino 9, at sa bahagyang naka-*align*, 47.92% sa Filipino 8. Napatunayan din na “napakalawak” ng naranasang hamon ng mga guro sa pag-*align* ng *written works*, performans, at *quarterly* na pagtataya kaugnay sa kahingian ng kompetensi.

Keywords: *Alignment ng pagtataya, Lawak ng nararanasan sa paggawa ng pagtataya, quarterly na pagtataya*

INTRODUKSYON

Ang pagtutugma o *alignment* ng istandard na kurikulum, layunin sa pagtuturo at pagkatuto, gawaing pangklasrum at pagtatayang pangklasrum ay nakatulong sa pag-implementa sa kahingian ng istandard na kurikulum. Napabuti nito ang katangi-tanging pagtuturo, at napaunlad ang pagtatamo at pagkatuto ng estudyante (Nasstrom & Henriksson, 2017). Subalit, ang pandaigdigang usaping ito ng edukasyon ay patuloy pa ring nakikitaan ng problema ng mga tagapagturo at maging ng mga implementor ng kurikulum. Napatunayan sa pananaliksik nina Turan- Ozpolat at Bay (2017), anila, ang pagsusuri na ginawa ng iba't ibang bansa tulad ng Estados Unidos at Tsina ay nakitaan ng hindi pagkakatugma sa pagitan ng istandard na kurikulum at ang aktuwal na implementasyon ng kurikulum. Bilang pag-aksyon, nang maisagawa ng mga estudyante nang ganap at maayos ang pagsusulit, ang guro ay dahan-dahang bumuo ng mga tugon batay sa pilosopiya ng pagtuturo sa paraan ng pagbigay ng pagtatasa gamit ang *trivia* (Lu & Jiang, 2022). Nakita rin nina Yang (2017), at Lu & Jiang (2022), na nakatuon ang guro sa pagbahagi ng kaalaman na dapat nakatuon sa matutuhan ng mga estudyante sa partikular na antas. Kaya, kadalasan ang partisipasyon ng mga estudyante sa gawaing pangklasrum ay pawang pagsasaulo sa mababababaw na impormasyon, gawain at ang pagtataya ay hindi lumilinang sa masusing pag-iisip ng mga estudyante.

Sa kasalukuyan, napakahalagang komponent ang paraan ng pagtataya ng guro sa pagtamo at pagsukat sa isang ispisifik na kalalabasan ayon sa kahingian ng K-12 kurikulum. Sa pananaliksik nina Damit, Omar, at Puad (2021), kanilang binigyang tuon ang hamon na kinakaharap ng implementasyon ng K-12 kurikulum sa pinakamababang antas ng implementasyon ng kurikulum, kulang sa oras na inilaan ng guro para sa aktibidad pangklasrum at pagtatasa sa mga gawain. Subalit, hindi nila naisama sa kanilang pananaliksik ang pagtutugma ng mga gamit pantasa para sa iba't ibang gawaing pangklasrum tulad ng pasulat na pagtataya at aktuwal na performans na pagtataya. Ilan ito sa mga nakita ng manaliksik na kailangan pang galugarin sa pamamagitan ng pagsaliksik. Nakita rin ng manaliksik na wala pang pananaliksik na nakatuon sa pagtutugma ng mga pagtataya kaugnay sa paggamit ng K to 12 partikular sa *Most Essential Learning Competencies* (MELCs) dahil kakaimplementa pa lamang nito sa taong pasukan 2020. Isa pang nakita ng mananaliksik na ang nakaraang pananaliksik kaugnay sa pag-*align* o pagtutugma ng kurikulum at pagtataya ay nakatuon lamang sa asignaturang *TLE* na pokus ang pagbuo ng banghay-aralin at pagsasanay sa mga kasanayang pagmanipula lamang (Alonzo, Laverett, & Obsiona, 2021).

Mula sa mga nabanggit na suliranin sa itaas, nabuo ang pananaliksik na ito. Ninanais ng mananaliksik na mabusisi kung may pagtutugma (*alignment*) ba ang kagamitang pantasa sa asignaturang Filipino. Ninanais din na masuri ng mananaliksik kung may pagtutugma ang kompetensi ng paksa sa kanilang ginawang pagtataya at ang naranasang hamon ng guro kaugnay sa pagtutugma ng pagtataya.

PAGBANGGIT NG MGA SULIRANIN

Ang pag-aaral na ito ay dinisenyo upang masuri ang *alignment* ng mga kagamitang pantasa sa Filipino sa K to 12 *Most Essential Learning Competencies* upang maging batayan sa paglalahad ng rekomendasyon.

Nilayon din nitong masagot ang sumusunod na espisipikong mga suliranin:

1. Gaano kalawak ang paggamit ng mga guro sa mga sumusunod na uri ng pagtataya sa asignaturang Filipino:
   1.1 Para sa *written works*:
      a. pagsusulit
         a.1 *multiple choice;*
         a.2 *matching type;*
         a.3 *essay;*
         a.4 tama o mali;
   1.2 Para sa performans na pagtataya:
      a. *project-based performance*
         a.1 *portfolio*
      b. *speech performance*
         b.1 talumpati;
         b.2 pagkukuwento;
         b.3 pagsasalaysay;
      c. *simulation*
         c.1 pagsasadula
      d. *written performance*
         d.1 maikling kuwento;
         d.2 tula;
         d.3 editoryal;
         d.4 teksto (naglalahad);
         d.5 pabula;
         d.6 dula;
         d.7 talumpati;at
   1.3 Para sa *quarterly* na pagtataya:
      a. *multiple choice;*
      b. *matching type;*
      c. *essay;*
      d. tama o mali?
2. Naka-*align* ba ang mga pagtataya sa kompetensi ng MELCs?
3. Gaano kalawak ang nararanasang hamon ng mga guro sa sumusunod na pagtataya sa paghahanay nito sa kompetensi ng paksa?
   3.1 *written works* na pagtataya;
   3.2 performans na pagtataya; at
   3.3 *quarterly* na pagtataya?

METODOLOHIYA

Disenyo ng pananaliksik

Ang mananaliksik ay gumamit ng deskriptibong paglalarawan. Ang deskriptibong paglalarawan ay ginamit upang masusing ilarawan ang *alignment* ng mga pagtataya sa kompetensi ng MELCs. Sinuri rin dito ang lawak ng paggamit ng mga guro sa iba't ibang uri ng pagtataya at lawak ng nararanasang hamon ng mga guro sa paghahanay ng pagtataya sa kompetensi ng paksa.

Ang pinakabatayang kasangkapan ng mananaliksik sa pagkalap ng mga datos ay ang sarbey- kwestyoneyr at *hard copy* ng mga pagtataya sa *written works* at *quarterly* na pagtataya mula sa mga gurong respondente na nagtuturo ng asignaturang Filipino. Ito ay ginamit upang masuri ang *alignment* ng mga kagamitang pampagtataya sa Filipino sa K to 12 *Most Essential Learning Competencies* upang maging batayan sa paglahad ng rekomendasyon at pagbuo ng *action plan*.

Ang mga datos na nalikom ay sinuri at binigyan ng pagpakahulugan para sa paksang pinag-aralan ng mananaliksik.

Respondente ng pananaliksik

Ang mga respondente ng pananaliksik na ito ay mga guro na nagtuturo ng asignaturang Filipino sa Baitang 7 hanggang Baitang 10 ng Dibisyon ng Negros Oriental sa taong panuruan 2023-2024. Ang mga respondente ay nagmula sa limang distrito ng dibisyon. Ang mga paaralan ay ang Tayasan National High School, Jimalalud National High School, Jimalalud National High School – Tamao Extension, Bangcal High School, Owacan Provincial Community High School, La Libertad Technical Vocational School at Pacuan National High School. Pinili ang lahat ng gurong nagtuturo ng asignaturang Filipino mula sa mga nabanggit na paaralan dahil iilan lamang ang mga gurong nagtuturo ng Filipino. Ang kabuoan ng populasyon ng mga respondente ay umabot ng tatlumpu (30). Ipinakita sa ibaba ang distribusyon ng mga respondente sa bawat paaralan:

Paaralan	**Populasyon**
Tayasan National High School	4
Jimalalud National High School	6
JNHS – Tamao Extension	1
Bangcal High School	2
Owacan Provincial High School	2
La Libertad Technical Vocational School	7
Pacuan National High School	8
Kabuoan	**30**

Instrumento ng pananaliksik

Sa pagkalap ng mga mahahalagang datos, ginamit ng mananaliksik ang instrumentong sarbey-kwestyoneyr, at ang *hard copies* ng mga pagtataya na nakuha mula sa mga respondente.

Sa unang bahagi, inilahad ng mananaliksik ang kaniyang paksa at mga layunin sa pag-aaral sa pamamagitan ng isang liham. Ginawang malinaw ang mga panuto upang maintindihan kaagad ng mga guro/respondente ang mga ito.

Ang mananaliksik ay sumangguni sa kaniyang tagapayo at tatlong eksternal na eksperto (*external expert*) upang masiguro ang baliditi ng nilalaman ng instrumento. Sinuri ng *validators* ang kaisahan ng mga aspekto sa mga *indicator*s na isinama. Ang mga suhestiyon at mga puna ng mga nagwasto ay malugod na ikinonsider ng mananaliksik alang-alang sa ikabubuti ng kabuoan ng pananaliksik at sa modipikasyon nito batay sa baliditi ng kwestyoneyr. .

Sa pagsigurado naman sa relayabiliti ng instrumento, dumaan ito sa isang *dry-run* na isinagawa sa distrito ng Tayasan I, Jimalalud I & II, La Libertad I & II. Ang mga respondente sa *dry-run* ay mga guro sa *senior high school* na nagtuturo ng asignaturang Filipino. Iilan lang ang mga guro sa *senior high school* na nagtuturo ng asignaturang Filipino sa limang distrito (Tayasan I, Jimalalud I & II, La Libertad I & II), kaya ang mga respondente para sa *dry-run* ay umabot lang ng labing-anim (16) at ang datos na nakuha ay ginamitan ng *Cronbach's Alpha Test* sa tulong ng estatistisyan*.* Ang naging resulta sa *Cronbach's Alpha Test* ay ang mga sumusunod batay sa iba't ibang aspekto: *written* na pagtataya = 0.867; performans na pagtataya = 0.794; *quarterly* na pagtataya = 0.925. Batay sa naging resulta, relayabol ang lahat ng aytem na isinama sa sarbey-kwestyoneyr dahil lumampas ang lahat ng kategorya sa 0.70 bilang batayan sa pagiging relayabol ng bawat aytem na isinama.

Gumamit din ang mananaliksik ng *modified alignment tool*, ang pinagbatayan sa pagbuo ng ginamit na *tool* ay ang *resources* na nagmula sa *Learning Resource* ng Dibisyon ng Negros Oriental. Humingi ng tulong at gabay ang mananaliksik sa dibisyon upang ma-*modify* at makagawa ng *alignment tool*. Upang marebyu ang *tool,* ipinakita ito ng mananaliksik sa kaniyang tagapayo, estatistisyan at *external expert.* Upang makompleto ang instrumento ng mananaliksik, gumamit din ng *Most Essential Learning Competencies* (MELCs) bilang batayan kung ang mga katanungan sa pagtataya at kompetensi ay magka-*align*.

Pamamaraan ng pananaliksik

Pagkatapos ng paunang pagdepensa*,* isinaalang-alang ng mananaliksik ang lahat ng mga puna at mga mungkahi ng miyembro ng mga panelista. Pinuntahan ng mananaliksik ang Dibisyon ng Negros Oriental upang sumangguni sa proseso nang mapahintulutan na magsagawa ng pag-aaral sa mga paaralan. Nagbigay ng bagong proseso ang dibisyon kaugnay sa mga hakbang. Ang unang hakbang, isang liham ang

ginawa ng mananaliksik para ibigay sa punong guro ng paaralan, kalakip ang liham na nilagdaan ng tsirman ng Paaralang Panggradwado ng Unibersidad ng Foundation, at tagapayo. Pagkatapos sumang-ayon ng punong guro, isang liham bilang tugon naman ang ibinigay sa mananaliksik, nakasaad sa liham na sumasang-ayon ang punong guro na magsagawa ng pag-aaral ang mananaliksik sa paaralan at nakasaad din sa liham ang *endorsement* ng punong guro para sa pahintulot ng pandistritong superbisor.

Sunod, isang liham naman ang isinulat ng mananaliksik para sa pandistritong superbisor kalakip ang *endorsement* mula sa punong guro, pagkatapos sumang-ayon ng superbisor, isang *endorsement* naman ang ginawa para sa tagapamanihala o *superintendent* ng Dibisyon ng Negros Oriental bilang suporta at pagsang-ayon na pinahintulutan nila ang mananaliksik na makapagsagawa ng pag-aaral sa kanilang distrito. Pagkatapos, isang liham naman ang isinulat para ibigay sa tagapamanihala o *superintendent* ng Dibisyon ng Negros Oriental upang makahingi ng pahintulot na makapagsagawa ng pag-aaral.

Humingi rin ang mananaliksik ng kopya ng *summative* na pagtataya mula sa mga respondente, isang kopya ng pagtataya na ginamit nila sa ikalawang markahan ng taong panuruan. Ang kopya naman ng *quarterly* na pagtataya ay kinuha mula sa Dibisyon ng Negros Oriental, sa kadahilanang, ang ipinapagamit ng dibisyon ay ang *unified* na pagtataya para sa markahang pagsusulit. Ang nakuhang pagtataya ang ginamit para sa analisis ng *alignment* nito sa kompetensi. Ang mga resulta sa huli ay iti*nally* ng mananaliksik gamit ang MS Excel at pagkatapos ay ginawan niya ng analisis at interpretasyon ang resulta.

RESULTA

Ipinapakita sa Talaan 1.1 na ginamit ng lahat ng mga gurong respondente ang pagpipili (*multiple choice*) bilang paraan ng pagtataya sa *written works* at hindi ginamit ang sanaysay (*essay*).

Talaan 1.1.
Lawak ng Paggamit ng mga Guro sa mga Paraan ng Pagtataya sa Written Works ng Asignaturang Filipino (N = 30)

Paraan ng Pagtataya	Frequency	Bahagdan	Lawak ng Paggamit
Multiple Choice	30	100.00	Malawak na Malawak
Tama o Mali	3	10.00	Napakaliit na Lawak
Matching Type	1	3.33	Napakaliit na Lawak
Essay	0	0	Hindi Ginagamit

Scale	Berbal na Deskripsyon
81% - 100%	Malawak na Malawak
61% -80%	Malawak
41% - 60%	Katamtaman
21% - 40%	Maliit na Lawak
1% - 20%	Napakaliit na Lawak
0%	Hindi Ginagamit

Ipinapakita sa Talaan 1.2 na malawak na ginamit ng mga gurong respondente ang apat na kategorya ng performans na pagtataya (*project-based, speech, simulation, written performance).*

Talaan 1.2.
Lawak ng Paggamit ng mga Guro sa Performans na Pagtataya sa Asignaturang Filipino (N = 30)

Performans Na Pagtataya:	Mean	Berbal na Deskripsyon	Lawak ng Paggamit
1. Project-Based Performance			
• Portfolio	3.63	Madalas	Malawak
2. Speech Performance			
• Pagsasalaysay	4.20	Madalas	Malawak
• Pagkukuwento	4.03	Madalas	Malawak
• Talumpati	3.67	Madalas	Malawak
Average	3.97	Madalas	Malawak
3. Simulation			
• Pagsasadula	3.73	Madalas	Malawak
4. Written Performance			
• Maikling Kuwento	3.80	Madalas	Malawak
• Teksto (Naglalahad)	3.80	Madalas	Malawak
• Tula	3.63	Madalas	Malawak
• Dula	3.53	Madalas	Malawak
• Talumpati	3.47	Madalas	Malawak
• Pabula	3.23	Minsan	Katamtaman
• Editorial	2.80	Minsan	Katamtaman
Average	3.47	Madalas	Malawak

Leyenda:	**Scale**	**Berbal na Deskripsyon**	**Kaakibat na Lawak**
	4.21 – 5.00	Palagi	Napakalawak
	3.41 – 4.20	Madalas	Malawak
	2.61 – 3.40	Minsan	Katamtaman
	1.81 – 2.60	Bihira	Maliit na Lawak
	1.00 – 1.80	Hindi Kailanman	Napakaliit na Lawak

Ipinapakita sa Talaan 1.3 na malawak na malawak na ginamit ang pagpipili (*multiple choice*) bilang paraan ng pagtataya sa *quarterly exam*.

Talaan 1.3
Lawak ng Paggamit ng mga Guro sa mga Paraan ng Pagtataya sa Quarterly Exam ng Asignaturang Filipino (N = 30)

Paraan ng Pagtataya	Frequency	Bahagdan	Lawak ng Pag-Gamit
Multiple Choice	30	100	Malawak na Malawak
Tama o Mali	0	0	Hindi Ginagamit

Matching Type	0	0	Hindi Ginagamit
Essay	0	0	Hindi Ginagamit

Scale	Berbal na Deskripsyon

Naka-*align*	Ang aytem ay naglalaman ng katanungan na tumutugma sa hinihingi ng kompetensi.
Bahagyang naka-*align*	Ang aytem ay naglalaman ng angkop na paksa subalit hindi tumutugma ang katanungan sa hinihingi ng kompetensi.
Hindi naka-*align*	Ang aytem ay naglalaman ng katanungan na hindi tumutugma sa hinihingi ng kompetensi.

Ipinapakita sa Talaan 3.1 na napakalawak ng naranasang hamon ng mga guro sa paghahanay ng *written works* na pagtataya sa kompetensi ng paksa.

Talaan 3.1

Lawak ng Nararanasang Hamon ng mga Guro sa Written Works na Pagtataya sa Paghahanay nito sa Kompetensi ng Paksa (N = 30)

Ang mga sumusunod ay ang mga hamon sa pag-*align* ng pagtataya sa kompetensi:	Mean	Berbal na Deskripsyon	Lawak ng Paggamit
1. Pagtiyak na ang pagtataya ay naaayon sa kakayahan ng bawat estudyante na sasagot.	4.73	Matinding Pagsang-ayon	Napakalawak
2. Paghanay sa pagtataya na lumilinang sa Higher Order Thinking Skills ng estudyante.	4.73	Matinding Pagsang-ayon	Napakalawak
3. Pagpili ng angkop na pagtataya sa paksang tatalakayin batay sa kompetensi.	4.67	Matinding Pagsang-ayon	Napakalawak
4. Pagtiyak sa kalidad ng mga tanong ayon sa hinihingi ng kompetensi.	4.60	Matinding Pagsang-ayon	Napakalawak
5. Paggawa ng Talaan ng Ispesipikasyon ayon sa lebel ng kahirapan ng mga kompetensing gagamitin.	4.43	Matinding Pagsang-ayon	Napakalawak
Composite	4.63	Matinding Pagsang-ayon	Napakalawak

Leyenda:	**Scale**	**Berbal na Deskripsyon**	**Kaakibat na Lawak**
	4.21 – 5.00	Matinding Pagsang-ayon	Napakalawak
	3.41 – 4.20	Sumasang-ayon	Malawak
	2.61 – 3.40	Bahagyang Pagsang-ayon	Katamtaman
	1.81 – 2.60	Bahagyang Pagtutol	Maliit na Lawak
	1.00 – 1.80	Tumututol	Napakaliit na Lawak

Ipinapakita sa Talaan 3.2 na napakalawak ng naranasang hamon ng mga guro sa paghahanay ng performans na pagtataya sa kompetensi ng paksa.

Talaan 3.2

Lawak ang Nararanasang Hamon ng mga Guro sa Performans na Pagtataya sa Paghahanay nito sa Kompetensi ng Paksa (N = 30)

Ang mga sumusunod ay ang mga hamon sa pag-*align* ng pagtataya sa kompetensi:	Mean	Berbal na Deskripsyon	Lawak ng Paggamit
1. Pagtiyak sa performance task na nakapupukaw sa interes ng mga estudyante	4.67	Matinding Pagsang-ayon	Napakalawak
2. Pagbuo ng scoring rubric sa mga kompetensi na napabilang sa performans na pagtataya.	4.60	Matinding Pagsang-ayon	Napakalawak
3. Pagtiyak na ang performans na pagtataya ay batay sa kompetensi.	4.53	Matinding Pagsang-ayon	Napakalawak
4. Pagtiyak sa ugnayan ng nagawang gawain sa kompetensi	4.47	Matinding Pagsang-ayon	Napakalawak
5. Pagsagawa sa performance task sa limitadong oras/panahon.	4.20	Sumasang-ayon	Malawak
Composite	4.49	Matinding Pagsang-ayon	Napakalawak

Leyenda:	**Scale**	**Berbal na Deskripsyon**	**Kaakibat na Lawak**
	4.21 – 5.00	Matinding Pagsang-ayon	Napakalawak
	3.41 – 4.20	Sumasang-ayon	Malawak
	2.61 – 3.40	Bahagyang Pagsang-ayon	Katamtaman
	1.81 – 2.60	Bahagyang Pagtutol	Maliit na Lawak
	1.00 – 1.80	Tumututol	Napakaliit na Lawak

Ipinapakita sa Talaan 3.3 na napakalawak ng naranasang hamon ng mga guro sa paghahanay ng *quarterly* na pagtataya sa kompetensi ng paksa.

Talaan 3.3

Lawak ng Nararanasang Hamon ng mga Guro sa Quarterly na Pagtataya sa Paghahanay nito sa Kompetensi ng Paksa (N = 30)

Ang mga sumusunod ay ang mga hamon sa pag-*align* ng pagtataya sa kompetensi:	Mean	Berbal na Deskripsyon	Lawak ng Paggamit

1. Pagtiyak na angkop sa bawat kompetensi ang quarterly na pagtatayang gagamitin.	4.57	Matinding Pagsang-ayon	Napakalawak
2. Paggawa ng TOS ayon sa lebel ng kahirapan (mahirap, average, madali)	4.53	Matinding Pagsang-ayon	Napakalawak
3. Pagtiyak na gumagamit ng HOTS ang quarterly na pagtatayang gagamitin.	4.53	Matinding Pagsang-ayon	Napakalawak
4. Pagtiyak na ang distractor sa multiple choice na pagtataya ay malapit sa sagot.	4.47	Matinding Pagsang-ayon	Napakalawak
5. Pagtiyak na ang quarterly na pagtataya ay dumaan sa Quality Assurance na proseso bago gamitin.	4.40	Matinding Pagsang-ayon	Napakalawak
Composite	4.50	Matinding Pagsang-ayon	Napakalawak

Leyenda:	**Scale**	**Berbal na Deskripsyon**	**Kaakibat na Lawak**
	4.21 – 5.00	Matinding Pagsang-ayon	Napakalawak
	3.41 – 4.20	Sumasang-ayon	Malawak
	2.61 – 3.40	Bahagyang Pagsang-ayon	Katamtaman
	1.81 – 2.60	Bahagyang Pagtutol	Maliit na Lawak
	1.00 – 1.80	Tumututol	Napakaliit na Lawak

DISKUSYON

Lawak ng Paggamit ng mga Guro sa mga Paraan ng Pagtataya sa Written Works ng Asignaturang Filipino

Ipinapakita sa Talaan 1.1 ang lawak ng paggamit ng mga guro sa mga paraan ng pagtataya sa *written works* ng asignaturang Filipino. Ang kopya ng pagtataya na ginamit sa pagkuha ng mga datos para sa talaan na ito ay nagmumula sa mga gurong respondente. May apat (4) na paraan ng pagtataya na isinasaad, una ang pagpipili (*multiple choice)* na may isandaang porsiyento (100%) ng mga respondente na gumagamit dito bilang paraan ng pagtataya na katumbas ng “malawak na malawak” na paggamit nito. Ang resultang ito ay pinatotohanan ng pananaliksik na isinagawa ni Jones (2022), aniya may iba't ibang dahilan kung bakit ginagamit ang pagpipili *(multiple choice)* bilang paraan ng pagtataya sa loob ng silid-aralan. Isa na rito ang pagiging *flexible* sa oras na ginugol nito para sa isang aralin. Maaari itong maibigay nang mabilis sa mga estudyante at nasasagutan din nang mabilis na hindi nakakakuha ng oras sa talakayan,

dahil dito may panahon pa upang makapagbigay ng fidbak sa naging resulta ng pagtataya. Dahil madali itong sagutin, ibig sabihin, maaaring magbigay ng maraming katanungan ang guro upang matasa ang kaalaman at natutuhan ng estudyante.

Sinuportahan naman ito ng pag-aaral nina Moreno et al. (2015), ayon sa kanila, kahit na marami pang ibang paraan ng pagtataya na maaaring gamitin para i-*assess* ang pagkatuto ng mga estudyante, ang pagpipili (*multiple choice)* parin ang pinakapangunahin at pinakakaraniwang ginagamit.

Sunod naman ang tama o mali (*true or false*) na may sampung porsiyento (10%) ng mga respondente na gumagamit dito bilang paraan ng pagtataya na katumbas ng “napakaliit na lawak” ng paggamit. Sunod ay ang pagtutugma (*matching type)*, na may 3.33 porsiyento (3.33%) ng mga respondente na gumagamit nito bilang paraan ng pagtataya na katumbas ng “napakaliit na lawak” ng paggamit, at sanaysay (*essay)* na nakakuha ng 0% o walang respondente ang gumagamit nito. Sa resultang ito, masasabing hindi makukuha ng mga estudyante ang mga benepisyo ng paggamit ng sanaysay (*essay)* dahil hindi ito ginagamit ng guro bilang paraan ng pagtataya. Sinuportahan ito ng pag-aaral na isinagawa ni Famin (2024), aniya, ang pagsulat ng sanaysay (*essay)* ay nakapagbibigay ng maraming benepisyo sa mga estudyante . Sa paglalahad ng kaisipan, *idea*, at pananaliksik sa pamamagitan ng pagsusulat ng sanaysay (*essay)*, mapauunlad ng mga estudyante ang kanilang kakayahan na hindi lamang mananatili sa silid-aralan. Ang proseso ng pagsasaayos, pagsusulat at pagrerebisa ng isang sanaysay (*essay)* ay nagpapalakas din sa kritikal na pag-iisip ng mga estudyante, na isa sa mahahalagang kakayahan para magtagumpay sa akademiks at propesyonal na larangan. Sa madaling salita, mas mainam na magbigay din ng sanaysay (*essay)* na pagtataya.

Lawak ng Paggamit ng mga Guro sa Performans na Pagtataya sa Asignaturang Filipino

Ipinapakita sa Talaan 1.2 ang lawak ng paggamit ng mga guro sa performans na pagtataya sa asignaturang Filipino. Makikita na may apat na kategorya ng performans na pagtataya. Una sa mga kategorya ang *project-based performance,* ang nakapaloob sa kategoryang ito ay ang *portfolio* na may *mean* (μ) na 3.63, ibig sabihin, “madalas” na ginagamit ang pagtatayang ito. Batay sa isinagawang pag-aaral nina Muin et al. (2020), anila, ang *portfolio* ay ginagamit bilang isang alternatibong pagtataya para sa pagkatuto ng mga estudyante, kaya mainam din na gamitin ito nang madalas. Ganito rin ang napatunayan sa pag-aaral nina Syzdykova et al. (2021), malawak na nagagamit ng mga guro ang pagtataya sa performans ng mga estudyante gamit ang *portfolio*. Kadalasan, ito ay naisasagawa sa makabagong paraan, ang pagbuo ng *e-portfolio* na mas nagigiliwang gawin ng mga estudyante sa makabagong henerasyon dahil sangkot nito ang teknolohiya.

Ang sunod na kategorya naman ay ang *speech performance* na nangunguna sa *average* na 3.97 o “madalas” na ginagamit ang pagtatayang ito. Ang nakapaloob sa *speech performance* ay ang (a) pagsasalaysay na may *mean* (μ) na 4.20, (b)

pagkukuwento na may *mean* (μ) na 4.03, at (c) talumpati na may *mean* (μ) na 3.67. Ang mga pagtataya na ito ay “madalas” na ginagamit. Kaugnay nito, ayon kay Grant (2022), ang performans na may kinalaman sa pagsasalita ay nagbibigay ng pagkakataon sa mga estudyante na tingnan ang kanilang sarili sa positibong perspektiba. Pinapalakas din nito ang kumpyansa sa sarili at hinuhubog ang iba pang kasanayan. Bukod dito, hinuhubog din ng pagsasalita ang kritikal na pag-iisip, na mahalaga para sa kinabukasan.

Ang sunod na kategorya ay ang *simulation,* ang nakapaloob sa kategoryang ito ay ang pagsasadula na may *mean* (μ) na 3.73, ibig sabihin “madalas” din itong ginagamit. Napatunayan sa pananaliksik ni Nazarov (2022), na mas madalas at malawak na nagagamit bilang pantasa sa performans ang pagsasadula at *simulation* ng mga estudyante kaugnay sa pagtuturo ng banyagang wika. Ito ang kadalasang nagagamit na pagsasanay sa mga estudyante sa pagsasalita.

Ang huling kategorya ay ang *written performance*, na may *average* na 3.47, o “madalas” na ginagamit ang performans na ito. Ang pagsulat ng maikling kuwento, mga teksto, tula, dula at talumpati ay madalas na ginagamit ng mga guro sa pagtataya sa *written performance* ng mga estudyante . Ito ay nangangahulugan na sa pagtatasa ng mga guro sa pasulat na kakayahan at kasanayan ng mga estudyante, malawak na nagagamit ng mga guro ang pagsulat ng maikling kuwento, dula, mga teksto, at talumpati upang magbigay ng detalyadong fidbak sa pag-unlad ng mga estudyante sa kanilang kakayahan sa pagsulat. Ito ang kadalasang ipinapagawa ng guro sa pagpapaunlad ng kasanayang interpretatibo at analitikal na aspeto ng mga estudyante.

Ganito ang napatunayan sa pananaliksik ni Suskie (2018), kaniyang inilahad na ang madalas na ginagamit ng mga guro sa pagtatasa sa pasulat na performans (*written performance*) ng mga estudyante ay sa mga anyong maikling kuwento at dula, pagsulat ng mga teksto, talumpati dahil nakatutulong ito sa pagpapabuti ng kasanayan ng mga estudyante sa pag-aanalisa, pagbigay interpretasyon at kung paano sila nakikisalamuha sa kanilang mga naisulat (McTighe & Ferrara, 2021).

Kaugnay ng nabanggit na resulta, isinaad mula sa pananaliksik nina Van Drie et al. (2021), na mas tinututukan ang pagkatuto sa pagsusulat ng iba’t ibang genre ng teksto o sulatin upang mapataas ang kasanayan sa literasiya ng mga estudyante, kaya maraming genre ng teksto ang ipinagagawa sa mga estudyante. Dagdag pa na dapat turuan ang mga estudyante kung paano bumasa at sumulat ng iba't ibang uri ng teksto mula sa iba't ibang larangan (Shanahan & Shanahan, 2008).

Lawak ng Paggamit ng mga Guro sa mga Paraan ng Pagtataya sa Quarterly Exam ng Asignaturang Filipino

Ipinapakita sa Talaan 1.3 ang lawak ng paggamit ng mga guro sa mga paraan ng pagtataya sa *quarterly exam* ng asignaturang Filipino. Ang *unified quarter exam* sa Filipino mula sa Dibisyon ng Negros Oriental ang ginamit sa pagkuha ng mga datos para sa talaan na ito. Nakuha ng *multiple choice* ang isandaang porsiyento (100%) ng mga

respondente na katumbas ng “malawak na malawak” na paggamit ng ganitong paraan ng pagtataya.

Makikita sa talaan na *multiple choice* lamang ang ginamit, ito ay alinsunod sa DepEd order No. 55, s. 2016 kaugnay sa *policy guidelines on the national assessment of student learning for the K to 12 basic education program*. Nakasaad sa kautusan na dapat masukat ng bawat aytem sa pagsusulit ang mga kasanayan sa wika gamit ang *learning area content* at *numeracy skills*; at ang pormat ng pagsusulit ay sa paraang *multiple choice*. Dagdag pa rito, ang Dibisyon ng Negros Oriental ay nagsagawa ng *unified* na *quarterly exam* sa Filipino mula unang markahan hanggang ikaapat na markahan at ang pagsusulit ay lahat nasa *multiple choice*.

Ipinapakita ng pananaliksik na ang mga pagpipili *(multiple-choice questions*) (MCQs) ay malawak na ginagamit ng mga guro, lalo na sa panahon ng *quarterly assessments*. Ito ay dahil sa ilang mga benepisyong hatid ng MCQs, tulad ng mabilis ang pagwawasto, kakayahang saklawin ang malawak na sakop ng nilalaman, natatasa ang iba’t ibang antas ng taksonomiya, at potensyal para sa obhektibong pagmamarka (Weimer, 2018; Villanueva,2023).

Alignment ng mga Summative na Pagtataya sa Kompetensi ng MELCs

Ipinapakita sa Talaan 2.1 ang *alignment* ng mga *summative* na pagtataya sa kompetensi ng MELCs. Ang kopya ng mga *summative* na pagtataya na ginamit at inalisa sa talaan na ito ay nagmumula sa mga gurong respondente. Makikita rito na sa 15 na aytem ay may 46.67% na hindi naka-*align.* Sa 20 na aytem, may 50% na hindi naka-*align,* habang sa 24 na aytem, may 75% na hindi naka-*align,* makikita na sa bawat aytem ito ang pinakamataas na hindi naka-*align*. Sa 25 na aytem naman, may 20% na hindi naka-*align,* at sa 30 na aytem, may 23.33% na hindi naka-*align.*

Sa pag-aaral na isinagawa ni Scott (2019), aniya, guro ang lumilikha ng mga pagsusulit at ang mga estudyante naman ang sumasagot sa mga ito. Kapag ang kinalabasan ng pagtataya ay naka-*align* sa inaasahang kalalabasan, ibig sabihin ang ibinigay na pagtataya ay indikasyon na may natutuhan sila. Kapag ang kinalabasan naman ng pagtataya ay hindi umayon sa inaaasahang kinalabasan, maaaring ipagpalagay na ito ay bahagi lamang ng performans para ma-*assess* ang kanilang kaalaman at natutuhan.

Ipinapakita ng pananaliksik na ang mga guro ay minsan nagsasagawa ng mga pagtatasa na hindi tumutugma sa mga kakayahang nais nilang sukatin. Halimbawa, ipinakita ng isang pag-aaral ng RAND na may mga hindi pagkakatugma sa paggamit ng mga guro sa mga *instructional materials* at ang kanilang pagsunod sa mga pamantayan o kompetensi ng estado. Ang *misalignment* na ito ay madalas na nagmumula sa magkakasalungat na mensahe tungkol sa kung ano ang bumubuo ng mga pamantayang nakahanay sa kasanayan, na nagreresulta sa paniniwala ng mga guro na sila ay sumusunod sa mga pamantayan kahit na maaaring sila ay gumagamit ng mas tradisyonal at mababaw na pamamaraan ng pagtuturo (Kaufman et al., 2018).

Bukod pa rito, isang pag-aaral na nakatuon sa K to 12 Humanities and Social Sciences (HUMSS) curriculum sa Pilipinas ay nagpakita ng mga hamon tulad ng hindi balanseng alokasyon ng oras para sa mga kakayahang pagkatuto at kakulangan ng mga espesyalistang guro at mga kagamitan na naaayon sa pagtatasa ng kompetensi. Ang mga isyung ito ay nag-aambag sa agwat sa pagitan ng mga layunin ng kurikulum para sa mas matibay na mga programang pang edukasyon upang matiyak ang mas mahusay na pagkakahanay ng pagtataya at ng kompetensing sinusuri sa ginagawang pagtataya sa kakayahan ng mga estudyante (Estrera, 2020).

Alignment ng mga Quarterly na Pagtataya sa Kompetensi ng MELCs

Ipinapakita sa Talaan 2.2 ang *alignment* ng mga *quarterly* na pagtataya sa kompetensi ng MELCs. Ang kopya ng *quarterly* na pagtataya na ginamit at inalisa sa talaan na ito ay nagmumula sa Dibisyon ng Negros Oriental, ginawa ng mga piling gurong manunulat sa Filipino mula sa iba't ibang distrito ng Dibisyon. May 48 na bilang ng aytem sa bawat pagtataya mula Filipino 7 hanggang Filipino 10. Sa naka-*align,* makikita na may 85.42% mula sa Filipino 9, 75% mula sa Filipino 10, 54.17% mula sa Filipino 7, at 52.08% mula sa Filipino 8. Sa bahagyang naka-*align* naman, may 47.92% mula sa Filipino 8, 45.83% mula sa Filipino 7, 25% mula sa Filipino 10, at 14.58% mula sa Filipino 9.

Ang resulta ay sinuportahan sa pananaliksik nina Fulay et al. (2023), kanilang napatunayan na ang pagkabuo ng *quarterly exam* ay may kaisahan (*aligned)* sa mga nakasaad na kompetensi ng MELCs sa kurikulum sa Matematika. Ibig sabihin ang mga pagtatasang ginawa ng mga guro ay may kaisahan (*coherence and aligned*) sa kahingian ng MELCs dahil mas fokus ang kurikulum na ito sa performans ng mga estudyante. Subalit sa pag-aaral nina Bastasa, Bernaldez, at Genita (2024), kanilang napatunayan na ang *quarterly* na pagtataya kaugnay sa paggamit ng di-pamilyar na bokabularyo, pagkakasunod ng mga pangyayari sa wika at panitikan ay may bahagyang pagkakaisa (*aligned*).

Ang *alignment* sa kurikulum ay maaaring makaapekto sa *learning outcomes* ng mga estudyante. Kapag nagkakatugma ang pagtataya sa mga layunin at kompetensi, tataas ang posibilidad na makakamit ang mga inaasahang kalalabasan (Anderson, 2005; FitzPatrick, Hawboldt, Doyle, & Genge, 2015; Ziebell & Clarke, 2018).

Lawak ng Nararanasang Hamon ng mga Guro sa Written Works na Pagtataya sa Paghahanay nito sa Kompetensi ng Paksa

Ipinapakita sa Talaan 3.1 ang lawak ng nararanasang hamon ng mga guro sa *written works* na pagtataya sa paghahanay nito sa kompetensi ng paksa. May limang aytem na inisa-isa kaugnay sa aspektong ito na nakakuha ng kabuoang komposit na 4.63 na katumbas ng "napakalawak" na nararanasang hamon sa pagtutugma o pag-*align* ng *written works* na pagtataya sa kompetensi at paksa. Pahiwatig lamang ito na hindi madali ang paglikha at pag-*align* ng mga pagtataya. Sa kabila ng mga hamon na nararanasan ng guro, kinakailangan pa rin na gawin niya ang pagtataya nang mas maayos upang

maging epektibo ito dahil ang kalidad na pagtataya ay kinakailangang balido at maaasahan (Rose & Johnson, 2020).

Ganito rin ang napatunayan sa pag-aaral nina Nguyen et al. (2022), anila na napakalaking hamon sa mga guro ang maghanda ng mga pagsusulit na balanseng natatasa ang kritikal na pag-iisip ng mga estudyante , pagtatasa sa panghabambuhay na kasanayan, at higit sa lahat ang gumawa ng mga katanungan na lumilinang sa *21st century skills.* Ang mga ito ay iilan lamang sa mga hamon na kinahaharap ng mga guro lalo na na marami rin silang obligasyong ginagampanan sa paaralan.

Lawak ang Nararanasang Hamon ng mga Guro sa Performans na Pagtataya sa Paghahanay nito sa Kompetensi ng Paksa

Ipinapakita sa Talaan 3.2 ang lawak ng nararanasang hamon ng mga guro sa performans na pagtataya sa paghahanay nito sa kompetensi ng paksa. May limang aytem na inisa-isa kaugnay sa aspektong ito na nakakuha ng kabuoang komposit na 4.49 na katumbas ng “napakalawak” na nararanasang hamon sa pagtutugma o pag-*align* ng performans na pagtataya sa kompetensi o paksa. Ang resultang ito ay sang-ayon sa pananaliksik nina Care et al. (2018), kanilang napatunayan na napakalaking hamon para sa mga guro ng wika at panitikan ang pagbuo ng pagtataya na may pag-uugnay sa pangangailangan para sa malinaw na pag-unawa sa kinakailangang kasanayan ng mga estudyante na nakakuha ng kanilang interes at ang pangangailangan para sa malinaw na paglalarawan ng iba't ibang antas ng kakayahan at mga kasanayan. Madami rin ang oras na dapat gugugulin sa pagbuo ng rubrik para sa pagtatasa.

Sa paggawa ng mga performans na pagtataya, hindi lamang mahalaga para sa isang guro na maunawaan ang mga hamon o limitasyon kapag binubuo o dinidesenyo ang mga pagsusulit, kundi dapat ding malampasan niya ang mga hamon at limitasyong ito (Hang & Van, 2020).

Kapag ang mga pagsusulit ay maayos na naisagawa, maipapakita nito ang tunay na antas o lebel ng tagumpay ng mga estudyante . Maraming guro ang nagbibigay ng malaking importansiya sa pagtuturo at pagbibigay ng pagsusulit o pagtataya (Sukardi, 2008; Husin et al., 2023).

Lawak ng Nararanasang Hamon ng mga Guro sa Quarterly na Pagtataya sa Paghahanay nito sa Kompetensi ng Paksa

Ipinapakita sa Talaan 3.3 ang lawak ng nararanasang hamon ng mga guro sa *quarterly* na pagtataya sa paghahanay nito sa kompetensi ng paksa. May limang aytem na naglalarawan kaugnay sa aspektong ito na nakakuha ng kabuoang komposit na 4.50 na katumbas ng “napakalawak” na nararanasang hamon sa pagtutugma o pag-*align* ng *quarterly* na pagtataya sa kompetensi o paksa. Ibig sabihin hindi rin masasabing madali ang paggawa at pag-*align* ng mga *quarterly* na pagtataya dahil sa mga hamon na nararanasan ng mga tagagawa nito.

May ibang pananaw sina Louzi et al. (2022), anila, ang mga guro na regular na nagsasagawa ng *formative assessments* ay mas handa na makapagbigay ng *quarterly assessments* na maayos na mailalarawan ang husay ng kanilang mga estudyante sa kurso. Ibig sabihin, magiging madali na lamang sa guro ang makapagbigay ng *quarterly* na pagtataya dahil regular ang pagbibigay nito ng mga *formative* na eksam. Ang nakuhang marka sa pagsusulit ay nakaaapekto rin sa antas ng kaalaman ng isang estudyante. Ang papel ng guro bilang tagagawa ng pagsusulit ay talagang mahalaga. Dagdag pa, dapat na handa ang guro na lumikha ng praktikal na *quarterly assessment* pagkatapos ng taon kapag sila ay makapaglikha ng angkop na *formative assessment* sa buong taon.

Inilarawan na isa sa mga hamon ang pagtiyak na ang mga *distractor* ay dapat malapit sa tamang sagot, kaugnay dito, sa natuklasan mula sa pananaliksik na isinagawa nina Nengsih et al. (2022) nakita nila na pagtapos ianalisa ang pagtataya, ang *distraction* na inilalagay sa bawat aytem ng pagsusulit ay hindi angkop. Ito ay dahil hindi inilagay nang maayos ng guro ang mga *distractions*, at ang mga *distraction* para sa mga estudyante na hindi makasagot sa mga tanong ay hindi rin angkop.

Kongklusyon

Batay sa mga nalikom na resulta, malinaw na lumalabas ang ilang mga isyu sa sistema ng edukasyon, lalo na sa paghahanda at pagpapatupad ng mga pagtataya. Napuna na may mga hindi akma na pagtataya sa mga layunin sa pagkatuto at nagbabagong kurikulum (MELCs) na maaaring maging dahilan upang hindi maisakatuparan ang paggamit ng kurikulum sa epektibong paraan. Ang pananaliksik ay nagpapakita rin ng lawak ng mga hamon na kinakaharap ng mga guro sa paghahanda ng mga pagtataya, kasama rito ang kakulangan ng sapat na panahon at kagamitan, teknikal na kaalaman sa paglikha ng makabuluhang mga pagtatasa, at ang pangangailangan para sa patuloy na pag-aaral upang maisama ang mga bagong mga kinakailangang mga kasanayan. Sa kabuoan, mahalagang tugunan ang mga nabanggit na hamon upang mapabuti ang kalidad ng edukasyon at pagpapahalaga sa tamang proseso ng pagtatasa na may kalidad at epektibo para sa lahat ng uri ng mga estudyante.

Rekomendasyon

Batay sa mga nakalap na mga datos, narito ang mga rekomendasyon upang tugunan ang mga isyu sa paghahanda at pagpapatupad ng mga pagtataya:

Para sa mga Guro

1. Mas mainam kung ang gagawing pagtataya ay tiyak na naka-*align* sa kompetensi ng paksa. Bago magdisenyo ng pagtataya, siguraduhing nauunawaan nang lubusan ang mga layunin na nais makamit. Alamin ang nais na masukat o masuri sa mga estudyante at tiyakin na ang mga tanong sa pagtataya ay nakatuon sa pag-abot ng mga layunin na ito. Mahalaga rin ang patuloy na pag-aaral at pagpapalawak ng kinakailangang mga kasanayan sa larangan ng pagtatasa.

Para sa mga Punong Guro

2. Magsagawa ng regular na *monitoring* at ebalwasyon upang matiyak na ang mga pagsusulit ay tumututok sa mga *learning objectives* at *academic standard*s. Mainam na mag-organisa ng mga *training sessions o workshops* sa paaralan upang maipamalas ng mga guro ang tamang *alignment* ng kanilang pagtataya sa layunin ng pagtuturo. Magbigay rin ng mga *resources* at *tools* na makatutulong sa kanila sa pagbuo ng epektibong pagtataya.

Para sa mga Superbisor at/o Administrador

3. Mahalaga na repasuhin at i-*adjust* ang mga kasalukuyang mga pagtatasa upang masiguro na ang mga ito ay tumutugma sa mga layunin sa pagkatuto at nagbabagong kurikulum (MELCs). Bigyan ng konstruktibong *feedback* at suporta ang mga guro upang masubaybayan nila ang tamang *alignment* ng kanilang mga pagtataya sa mga *learning objectives*. Hikayatin ang mga guro na mag-*collaborate* at magtulungan sa pagdevelop at pag-*review* ng mga pagtataya.

Para sa Departamento ng Edukasyon

4. Magpatupad ng malawakang *training programs* para sa mga guro at administrador kaugnay sa *assessment design* at *alignment*. Bigyang pansin ang *research* at *development* upang makahanap ng bagong metodo at *best practices* para sa assessment alignment.

Para sa mga Gurong Nagtuturo ng Filipino na Hindi dalubhasa sa Filipino

5. Sumali sa mga pagsasanay at pag-aaral sa wikang Filipino upang mapabuti ang kaalaman at kasanayan sa pagtuturo ng asignaturang ito. Mahalagang makipag-ugnayan sa mga kasamahan sa paaralan na may malalim na kaalaman sa asignaturang Filipino upang magkaroon ng suporta at gabay sa paggawa ng angkop na pagtataya.

Para sa Susunod na Mananaliksik

6. Magsagawa ng malaliman o komprehensibong pag-aaral sa *alignment* ng pagtataya sa kurikulum upang maunawaan pa lalo ang kasalukuyang estado ng kaalaman at matukoy ang *gaps* na kailangan pang punan. Pumili ng angkop na metodolohiya na makapagbibigay ng pinakamainam na datos para sa iyong pag-aaral. Isama sa pag-aaral ang epekto ng mga bagong teknolohiya sa pagtatasa tulad ng *online assessment tools, adaptive learning platforms,* at *data analytics* sa pagpapabuti ng kalidad at epektibong pagtatasa.

Etikal na konsiderasyon

Ipinakita ng mananaliksik ang mga kailangang etikal na konsiderasyon sa pagsagawa ng pag-aaral. Tiniyak ng mananaliksik na manatiling kompidensyal ang kasagutan ng mga respondente. Ang dignidad at pribadong punto sa mga kasagutan ay isinaalang-alang.

Ang mananaliksik ay sumunod din sa mga protokol ayon sa mga etikang nakasaad ng *Ethics Committee* ng Unibersidad ng *Foundation*. Isang malawakang konsultasyon ang isinagawa sa pagpili sa paksa para sa pananaliksik na ito at ang pagpili nito ay batay sa mga dahilang kailangang napapanahon at dahil hindi pa ganoon karami ang bilang ng mga nag-aaral sa paksang ito.

Pasasalamat

Taos-pusong ipinaaabot ng mananaliksik ang pasasalamat sa Poong Maykapal sa talino at kalusugan na ibinibigay upang maisagawa nang kalugod-lugod at matagumpay ang pananaliksik na ito. Nagtagumpay ang pananaliksik na ito dahil sa tulong ng sumusunod:

Dr. Cristina P. Calisang, tagapayo ng mananaliksik, dahil sa kaniyang walang sawang pag-unawa at pagtulong sa pamamagitan ng pagtama sa mga kamalian habang isinagawa ang pananaliksik. Ang mananaliksik ay sadyang mapalad na nagkaroon ng tagapayong tulad niya.

Dr. Maria Chona Z. Futalan, estatistisyan, dahil sa kaniyang mahalagang mga suhestiyon lalo na sa pagpaalala sa mga simulain upang maisakatuparan sa itinakdang panahon ang pananaliksik. Ang mananaliksik ay kumikilala ng utang na loob sa kaniya.

Sa mga panelista: Dr. Romario Ybañez, Dekano ng paaralang graduwado, Dr. Erlinda N. Calumpang, Tsirman ng MAEd Program, Dr. Felipe B. Sullera Jr., G. Shem Don C. Fabila, na nagbahagi ng kani-kanilang angking kakayahan at talino sa pamamagitan ng mga suhestiyon at komento upang mas maging mabuti ang pananaliksik.

Dr. Neri C. Ojastro, CESO V, *Schools Division Superintendent* ng Dibisyon ng Negros Oriental; Dr. Emelyn D. Bolongaita, Dev.Ed.D, *Public School District Supervisor* ng Tayasan I District, Gng. Jiji S. Taladua, *District in Charge* ng Jimalalud I District, Dr. Ernesto C. Paculanang, *Public School District Supervisor* ng Jimalalud II District, G. Randy D. Dunque, *Public School District Supervisor* ng La Libertad I District, Dr. Menchu T. Santos, *Public School District Supervisor* ng La Libertad II District; at, kina G. Diofel A. Cacas, Punong Guro ng Tayasan National High School, G. Ernewin B. Estoconing, Punong Guro ng Jimalalud National High School, Gng. Chengrose L. Otoc, Teacher In-Charge ng Jimalalud National High School- Tamao Extension, Gng. Malou D. Amaro, Teacher In-Charge ng Bangcal High School, G. Harry A. Vidal, Head Teacher ng Owacan Provincial Community High School, G. Claudio F. Macahilos, Punong Guro ng La Libertad

Technical Vocational School, Gng. Maria Joana L. Pacunla, Teacher In-Charge ng Pacuan National High School. Ang mananaliksik ay taos-pusong nagpapasalamat sa kanilang pahintulot na ibinigay upang maisagawa ang pananaliksik sa lokasyong napili.

G. Shem Don C. Fabila, Bb. Ritchel Elnar, at G. Kendrick Kitane, ang *external validators* ng mananaliksik, para sa pagsuri sa baliditi ng talatanungan at sa pagsilbi bilang inspirasyon ng mananaliksik. Malaki ang utang na loob na tinatanaw ng mananaliksik.

Dr. Rosela Abiera, sa kaniyang ibinahagi na *resources* na nagamit ng mananaliksik upang maisagawa ang *modified alignment tool*. Lubos na nagpapasalamat ang mananaliksik sa kaniya.

Bb. Arlene L. Decipolo at Gng. Ana Melissa V. Tubio , matalik na kaibigan ng mananaliksik, para sa pagtulong sa mananaliksik na maisagawa nang maayos ang *action plan* at sa hindi pag-aalinlangan na tumulong sa mananaliksik sa kahit anong oras. Inspirasyon sila ng mananaliksik na ipagpatuloy ang pag-aaral na ito. Malaki ang utang na loob at pasasalamat ng mananaliksik sa kanila.

Bb. Ritchel Elnar, matalik na kaibigan ng mananaliksik, sa kaniyang pagtulong at hindi pag-iwan sa mananaliksik sa panahon na kailangan ng matapos ang *manuscript* para sa *design hearing*. Walang katapusang pasasalamat ang ibinibigay ng mananaliksik sa kaniya.

Bb. Lourva Estrellanes, Bb. Leny An Estoconing, Bb. Marne Alberto at Gng. Clea De La Peña, sa kanilang suporta at matinding paniniwala sa mananaliksik na matatapos niya ang pag-aaral na ito. Nagsilbi silang dagdag na lakas sa mananaliksik.

Leizel F. Zaldarriaga, pinsan ng mananaliksik, sa kaniyang walang humpay na suporta at pagbibigay ng motibasyon sa mananaliksik na matapos nang matagumpay ang pag-aaral na ito. Inspirasyon siya ng mananaliksik na ipagpatuloy ang mga pangarap nito sa buhay.

Iniaalay ng mananaliksik ang kaniyang pagsisikap sa kaniyang pamilya G. Gannie T. Mongcopa, Gng. Erlinda L. Tilos, G. Cesario A. Tilos, Achilles L. Teofilo, Cyrell L. Tilos, Cindy L. Tilos, Earl John L. Tilos, Carl L. Tilos, at sa kaniyang yumaong kapatid (+) Lovely Mae L. Teofilo at yumaong ina (+) Jocelyn L. Mongcopa.

SNUMBOOK AS HOME TASKS FOR AN ENHANCED NUMERACY LEVEL OF GRADE 7 STUDENTS

Mary Grace M. Buenviaje, MAT

Mathematics Department, Guinayang National High School, San Mateo, Rizal, Philippines

https://doi.org/10.5281/zenodo.13291873

ABSTRACT

This study examines the effectiveness of SNUMBOOK, a home task tool, for non-numerate Grade 7 students at Guinayang National High School in San Mateo Suboffice, Division of Rizal, for the SY 2023-2024. It addressed the identification of least mastered numeracy topics, evaluates SNUMBOOK's content, format, presentation, organization, and accuracy by parents, teachers, and experts, and analyzes the differences in these evaluations. The study also assessed student engagement—cognitive, behavioral, emotional, and social—before and after using SNUMBOOK, and measures the pretest and posttest performance of students. Methodologically, a descriptive and quasi-experimental one-group pretest-posttest design was employed, involving 60 evaluators and 30 students. Data were gathered using questionnaires and pretest-posttest assessments, analyzed using statistical methods such as mean percentage, Wilcoxon Signed Rank Test, Kruskal-Wallis Test, and Spearman's Rho. Results indicated significant improvement in numeracy and engagement levels post-intervention. SNUMBOOK was highly rated across all evaluative criteria with no significant differences among respondent groups. The engagement levels increased significantly, correlating positively with academic performance. Enhanced practice, support, and communication were identified as areas of improvement. The study concludes that SNUMBOOK effectively enhanced numeracy and engagement, suggesting its broader implementation and potential adaptation across various disciplines.

Keywords: *SNUMBOOK, numeracy, student engagement, educational tool, pretest-posttest, home tasks*

INTRODUCTION

This study focused on the development and validation of SNUMBOOK for Grade 7 students classified as non-numerate and emerging numerate based on competencies identified from the Numeracy Assessment Tool of DepEd Rizal. The primary objective was to enhance the numerical abilities and engagement levels of students at Guinayang National High School in San Mateo District, Rizal. Implemented during the second quarter of the school year 2023-2024, SNUMBOOK aimed to improve basic numeracy skills in Mathematics. To ensure its effectiveness, the material was evaluated by twenty parents, twenty Math teachers, and twenty experts from public schools in San Mateo, Rizal.

Participants in this study included thirty Grade 7 students identified as non-numerates and emerging numerates during the academic year 2023-2024. The study focused on basic mathematical skills, with the SNUMBOOK used as home tasks validated using Department of Education evaluation tools. Student performance was measured using pre-tests (without SNUMBOOK) and post-tests (after using SNUMBOOK) based on the Numeracy Assessment Tool. Additionally, the level of engagement of respondents was evaluated before and after using the developed material.

Many students transitioning from primary to secondary education have been found to be below their expected numeracy level, a concern highlighted by DepEd's introduction of its MATATAG agenda. The first 'Ma' in MATATAG stands for "make the curriculum relevant to produce competent and job-ready, active, and responsible citizens" (Department of Education, 2023). This foundational principle underscores the necessity of this study. Research such as that of Songsirisak (2019) suggests that homework can improve student learning but may reduce free time. Tucker (2020) concluded about how home-based activities have been shown to enhance pupils' grades and foster independent and responsible learning. Inspired by these findings, the researcher of this study developed SNUMBOOK to increase student engagement in Mathematics and improve numeracy. Unlike the KUMON method, which focuses on a home-based individualized learning program, SNUMBOOK was tailored to meet the needs of public-school students lacking grade-level mathematical competency.

There are several literatures that supports the efficacy of home-based activities in enhancing academic skills. Burke (2020) notes that these activities allow students to explore their comprehension at their own pace, fostering diverse learning methods. This aligns with the study by McCormick et al. (2020) among low-income families which concluded that home learning activities can significantly improve academic skills, a finding pertinent to this study since many participants come from low-income families with limited access to technology and private tutoring. Layug ((2021) increased the numeracy of grade 7 students through different interventions such as provision of added materials and remedial classes.

Pelayo (2023) found that remedial lessons and learning support tools helped Grade 9 pupils with non-numeracy. This supports the current study's use of SNUMBOOK

for additional learning. Belleza (2023) showed that global learning packets with family involvement improved non-numerate students' numeracy, emphasizing the relevance of parental engagement and innovative resources. An intriguing study by Munro et al. (2021) found that home numeracy exercises increase children's math skills. Nelson (2023) had the same findings with a conclusion that home math activities with parents improve math achievement by 84%. Luna (2023) established that the MATHSANAY Numeracy Projects greatly enhanced non-numerate pupils' skills. This suggests SNUMBOOK could close numeracy gaps as well.

The current study aimed to address the research gap in effective interventions for non-numerate Grade 7 students. By developing and validating SNUMBOOK, the researchers seek to provide a practical and impactful solution to enhance students' numerical abilities and engagement in Mathematics.

Research Questions

This research determined the effects of SNUMBOOK on the level of engagement and performance of the grade 7 students of Guinayang National High School, San Mateo District, Division of Rizal during the second quarter period for the school year 2023-2024.

Specifically, this research answered the following questions:

1. What were the least mastered topics measured in the Numeracy Assessment that were developed in the SNUMBOOK?
2. What was the evaluation of parents, Mathematics teachers, and experts on the developed SNUMBOOK as home task for grade 7 students in terms of?
   a. Content;
   b. Format;
   c. Presentation and Organization; and
   d. Accuracy and up-to-datedness of information?
3. Were there significant differences in the evaluation of the SNUMBOOK by the three groups of respondents based on the aforementioned criteria?
4. What was the level of engagement of the students before and after the use of SNUMBOOK in terms of:
   a. Cognitive Engagement;
   b. Behavioral Engagement;
   c. Emotional Engagement;
   d. Social Engagement?
5. Was there a significant difference in the level of engagement of the students before and after the use of SNUMBOOK?
6. What was the performance of the students during the pretest and posttest with SNUMBOOK?
7. Was there a significant difference between the mean scores of the pretest and posttest of the students?

8. Was there a significant relationship between the mean scores of the level of engagement and mean scores of the academic performance of the students after the use of SNUMBOOK?
9. What were the areas improved through SNUMBOOK with Parental Involvement at Homes?
10. What were the comments and suggestions of the teachers and students in using SNUMBOOK?

METHODOLOGY

Locale of the Study

The study was conducted at a public secondary school in the San Mateo District, Rizal, during the second quarter of the school year 2023-2024. The focus was on Grade 7 students identified as non-numerate and emerging numerate based on competencies from the Numeracy Assessment Tool of DepEd Rizal.

Sampling Method and Respondents

Purposive sampling was used to select the study participants. The respondents included:

- **Parents:** Twenty parents of Grade 7 students.
- **Math Teachers:** Twenty Math teachers from public schools in San Mateo District.
- **Math Experts:** Twenty experts in Mathematics education.
- **Students:** Thirty Grade 7 students identified as non-numerate and emerging numerate.

Demographics of Respondents

The student respondents were assessed using the Numeracy Assessment Tool to determine their numeracy levels. The parents, Math teachers, and experts were chosen based on their involvement with the participating students and their expertise in Mathematics education.

Data Gathering Procedure

The data collection process involved several steps:

1. **Permission and Consent:**
    - Permission was obtained from the Research and Development Office, the Superintendent of Rizal Schools Division, and the principals of participating schools.
    - Informed consent was secured from the parents of student respondents.
2. **Development of SNUMBOOK:**
    - Home tasks were developed based on feedback from the researcher's adviser, critics, and Math experts.

- The revised SNUMBOOK was validated by five secondary education experts and further refined.

3. **Implementation:**
   - A pretest using the Numeracy Assessment Tool was administered to the students.
   - Students identified as non-numerate and emerging numerate were given the SNUMBOOK for home-based tasks.
   - After completing the SNUMBOOK exercises, a posttest and engagement survey were administered.
4. **Evaluation:**
   - Questionnaires were distributed to parents, Math teachers, and experts to evaluate the SNUMBOOK.
   - Interviews were conducted with parents to assess their involvement and the areas improved through SNUMBOOK.

Instruments Used

1. **Numeracy Assessment Tool (NUMAT):**
   - Utilized to measure students' numeracy levels as both pretest and posttest.
2. **Questionnaire-Checklist for Parents, Mathematics Teachers, and Experts:**
   - Evaluated content, format, organization, and accuracy of SNUMBOOK using a four-point Likert scale (Strongly Agree to Strongly Disagree).
3. **Interview Questionnaire for Parents:**
   - Assessed areas improved through SNUMBOOK.
4. **Math and Science Engagement Scales:**
   - Adapted from Ming Te Wang et al. (2016) to measure students' engagement levels before and after using SNUMBOOK.

Data Analysis

Statistical Treatments

1. **Weighted Mean:**
   - Used to assess the input of teachers, experts, and parents on SNUMBOOK.
2. **Mean Percentage Score:**
   - Calculated to determine the mastery level of students on specific topics.
3. **Wilcoxon Signed Rank Test:**
   - Evaluated the significant difference between pretest and posttest scores, as well as engagement levels before and after using SNUMBOOK.
4. **Kruskal-Wallis Test:**
   - Tested the significant difference among the evaluations of parents, Math teachers, and experts.
5. **Spearman Rho:**
   - Examined the relationship between students' engagement levels and academic performance.

Score Range and Verbal Interpretation for the Pretest/Posttest

76-100	Above Numerate
51-75	Numerate
25-50	Emergent Numerate
00-25	Non-numerate

Scope and Limitations

This study focused on developing and validating SNUMBOOK for Grade 7 students classified as non-numerate and emerging numerate. The implementation was limited to the second quarter of the school year 2023-2024 and was evaluated by a specific group of parents, Math teachers, and experts from public schools in San Mateo, Rizal. The study did not cover other grade levels or students outside the identified numeracy levels.

RESULTS and DISCUSSION

1. The least mastered topics measured in the Numeracy Assessment that were developed in the SNUMBOOK

Table 1: Mean Percentage Score and Mastery Level of Topics in the Numeracy

	TOPICS	MEAN PERCENTAGE SCORE	MASTERY LEVEL
ORAL TEST	Oral Counting	84.00	Near Full Mastery
	Rational Counting	75.40	Near Full Mastery
	Number Identification	89.40	Near Full Mastery
WRITTEN TEST	Number discrimination	60.00	Near Mastery
	Missing Number	65.40	Near Mastery
	Addition	54.70	Near Mastery
	Subtraction	46.70	Low Mastery
	Addition and Subtraction	49.30	Low Mastery
	Multiplication	30.70	Low Mastery
	Division	19.30	Low Mastery
	Multiplication and Division	15.00	Low Mastery
	Word Problems	4.00	Low Mastery
	Geometric Pattern	24.00	Low Mastery
	Geometric Visualization	6.00	Low Mastery

Table 2: Least Mastered Topics in Numeracy Assessment as the Basis for Developing the SNUMBOOK

	Topics
1	Number Discrimination
2	Missing Number
3	Addition

4	Subtraction
5	Multiplication
6	Division
7	Word Problems
8	Geometric Pattern and Visualization

As shown in Table 1, the results of the Numeracy Assessment for Grade 7 students show that the average score for topics covered in the written test is below 75%, indicating a level of near mastery and low mastery. The results indicate that the students found the topics covered in the written test as challenging. It identified specific areas where Grade 7 students should improve their abilities and acquire the needed skills. The least-mastered skills identified provided the basis for the topic necessary for students who had low numeracy levels in the development of the SNUMBOOK. On the other hand, Table 2 shows the least mastered topics identified using the Numeracy Assessment Tool provided by the Department of Education (DepEd) of Rizal. These topics present challenges that impede students' progress, resulting in difficulty in understanding previous concepts and limiting their ability to grasp new ones. The scores of the respondents reveal weaknesses in their numeracy skills for the written topics specified in Table 3. As a result, these topics have been included in the home tasks for the grade 7 students for the academic year 2023-2024 as part of the Mathematics Department's intervention program.

The topics covered address the essential numeracy abilities necessary for achieving numerical competency at the grade 7 level. The content begins with number discrimination and the identification of missing numbers, and then advances to fundamental mathematical operations. This is consistent with the findings of Padlan et al. (2023), who conducted research involving grade 10 participants. The investigation revealed that the average scores of the respondents in the areas of addition, subtraction, multiplication, and division were regarded as 'requiring improvement. SNUMBOOK progress further with the inclusion of word problems, geometric pattern, and visualization for the students to apply their skills in real-life scenarios and spatial reasoning.

2. The evaluation of parents, Mathematics teachers, experts, and parents on the developed SNUMBOOK in terms of content, format, presentation and organization, and accuracy and up-to-datedness of information.

Table 3. Respondents' Evaluations on the Developed SNUMBOOK in Terms of Content

Indicators	Respondents					
	Parents		Teachers		Master Teachers	
	WM	VI	WM	VI	WM	VI
1. Content is suitable to the student's level of development and has the potential to arouse the interest of the students.	3.85	SA	3.80	SA	3.85	SA

2. Material contributes to the achievement of specific objectives of the subject area.	3.75	SA	3.60	SA	3.70	SA
3. Material enhances the development of desirable traits such as higher cognitive skills, critical thinking skills, creativity, learning by doing inquiry, problem-solving, etc.	3.70	SA	3.65	SA	3.70	SA
Continuation of Table 3. Respondents' Evaluations on the Developed SNUMBOOK in Terms of Content						
4. Materials are free of ideological, cultural, religious, racial, and gender biases and prejudices.	3.60	SA	3.70	SA	3.70	SA
5. Adequate warning and cautionary notes are provided in the activities where safety and health are of concern.	3.85	SA	3.75	SA	3.80	SA
Overall Weighted Mean	**3.75**	**SA**	**3.70**	**SA**	**3.75**	**SA**
Standard Deviation	**0.48**		**0.50**		**0.44**	

Legend: WM –Weighted Mean VI – Verbal Interpretation SA – Strongly Agree

It can be observed in Table 3 that parents, Math teachers, and experts have an evaluation with a verbal interpretation of **'Strongly Agree'** on the content of the SNUMBOOK. This confirms that the content of the developed SNUMBOOK is suitable to the student's level of development, contributes to the achievement of specific objectives, enhances the development of desirable traits, is free of ideological, cultural, religious, racial, and gender biases and prejudices and has adequate warning and cautionary notes.

Table 4. Respondents' Evaluations on the Developed SNUMBOOK in Terms of Format

Indicators	Respondents					
	Parents		Teachers		Master Teachers	
	WM	VI	WM	VI	WM	VI
1. Size and spaces of letters are appropriate to the intended users.	3.65	SA	3.55	SA	3.60	SA
2. Printing is good quality.	3.65	SA	3.85	SA	3.75	SA
3. Illustrations are easily recognizable, properly labeled, and supplement the text.	3.75	SA	3.80	SA	3.70	SA
4. Layout is simple and pleasing.	3.55	SA	3.95	SA	3.75	SA
5. Harmonious blending of illustrations and text.	3.55	SA	3.70	SA	3.70	SA
Overall Weighted Mean	**3.63**	**SA**	**3.77**	**SA**	**3.70**	**SA**
Standard Deviation	**0.53**		**0.47**		**0.46**	

Legend: WM –Weighted Mean VI – Verbal Interpretation SA – Strongly Agree

It can be seen in Table 4 that the parents, Math teachers, and experts evaluated '**Strongly Agree'** on format of the developed SNUMBOOK. This shows that the format of the finished SNUMBOOK is appropriate, with the right font size, spacing, and illustrations. It also has simple and pleasing layout that is easy-to-understand and the illustrations and text have harmonious blending.

Table 5. Respondents' Evaluations on the Developed SNUMBOOK in terms of Presentation and Organization

Indicators	Respondents					
	Parents		Teachers		Experts	
	WM	VI	WM	VI	WM	VI
1. Presentation is engaging, interesting, and understandable	3.80	SA	3.80	SA	3.80	SA
2. There is a logical and smooth flow of ideas.	3.60	SA	3.70	SA	3.90	SA
3. Vocabulary level is adapted to the student's likely experience and level of understanding.	3.70	SA	3.75	SA	3.70	SA
4. Sentences are suitable to the comprehension level of the students.	3.55	SA	3.70	SA	3.70	SA
5. Sentences and paragraph structure are varied and interesting to the students.	3.70	SA	3.70	SA	3.80	SA
Overall Weighted Mean	**3.67**	**SA**	**3.73**	**SA**	**3.78**	**SA**
Standard Deviation	**0.47**		**0.47**		**0.42**	

Table 5 with weighted means that are verbally interpreted as 'Strongly Agree' validates that presentation and organization of the developed SNUMBOOK is interesting, engaging, and easy to understand; the ideas are reasonable and flow well; the language is appropriate for the students' level of understanding and experience; the sentences and paragraphs are well-structured and varied.

Legend: WM –Weighted Mean VI – Verbal Interpretation SA – Strongly Agree

As shown in Table 7, the evaluations of parents, Math teachers and expert respondents on the SNUMBOOK as home tasks content, format, presentation and organization, accuracy, and up-to-datedness of the information do not show significant difference. This means that the respondents' evaluations are the same. Table 7 shows that in all categories, the respondents evaluated **strongly agreed** with the created SNUMBOOK, indicating that it meets the needs of students and is suitable. It can be concluded that the developed material shows an organized and systematic approach that corresponds to the Department of Education Curriculum requirements.

4. The level of engagement of the students before and after the use of SNUMBOOK in terms of Cognitive Engagement, Behavioral Engagement, Emotional Engagement, and Social Engagement

Table 8. Level of Mathematics Engagement of the Students Before and After the Use of SNUMBOOK as regards Cognitive Engagement

COGNITIVE ENGAGEMENT	Respondents			
	Before		After	
	OWM	VI	OWM	VI
1. I go through the work for math class and make sure that it's right.	1.80	ML	3.50	VHL
Continuation of Table 8. Level of Mathematics Engagement of the Students Before and After the Use of SNUMBOOK as regards Cognitive Engagement				
2. I think about different ways to solve a problem.	1.67	ML	3.37	HL
3. I try to connect what I am learning to things I have learned before.	1.83	ML	3.40	HL
4. I try to understand my mistakes when I get something wrong.	1.77	ML	3.63	VHL
5. I would have to do the work rather than be told the answer.	1.70	ML	3.63	VHL
6. I think that hard when I am doing work for class.	1.57	ML	3.40	HL
7. When work is hard, I study each parts carefully.	1.67	ML	3.40	HL
8. I consistently put in the effort required to meet the necessary standards.	1.43	LL	3.53	HL
Overall Weighted Mean	**1.68**	**ML**	**3.48**	**HL**
Standard Deviation	**0.49**		**0.60**	

Legend: OWM –Overall Weighted Mean VI – Verbal Interpretation LL-Low Level
ML- Moderate Level HL- High Level VHL-Very High Level

Table 8 illustrates the level of Mathematics engagement of students before and after the utilization of SNUMBOOK in terms of cognitive engagement. The overall weighted mean for cognitive engagement before using the SNUMBOOK was 1.68 with a verbal interpretation of '**moderate level**' with a standard deviation of 0.49. After the usage of SNUMBOOK, the overall weighted mean increased to 3.48 with standard deviation of 0.60 and yields a verbal interpretation of '**high level**'.

This result shows that students are more interested in working on math problems, thinking about different ways to solve them, making connections between what they are learning and real life, realizing their mistakes, doing the work instead of being told the answer, and working hard when they are working on classwork after the use of the developed SNUMBOOK.

Table 9. Level of Mathematics Engagement of The Students Before and After the Use of SNUMBOOK as regards to Behavioral Engagement

BEHAVIORAL ENGAGEMENT	Respondents			
	Before		After	
	OWM	VI	OWM	VI
1. I stay focused.	1.67	ML	3.67	VHL
2. I put effort into learning math.	1.80	ML	3.60	VHL
3. I keep trying even if something is hard.	1.87	ML	3.60	VHL
4. I complete my homework on time.	1.40	LL	3.20	HL
5. I talk about math outside of class.	1.57	ML	3.27	HL
6. I participate in class.	1.63	ML	3.30	HL
Continuation of Table 9. Level of Mathematics Engagement of The Students Before and After the Use of SNUMBOOK as regards to Behavioral Engagement				
7. I give my full attention in class and avoiding things.	1.47	LL	3.67	VHL
8. I seek the help of my teacher if I don't understand.	1.73	ML	3.57	VHL
Overall Weighted Mean	**1.64**	**ML**	**3.49**	**HL**
Standard Deviation	**0.57**		**0.66**	

Legend: OWM –Overall Weighted Mean VI – Verbal Interpretation LL-Low Level
ML- Moderate Level HL- High Level VHL-Very High Level

The level of mathematics engagement of students before and after the use of SNUMBOOK in terms of behavioral engagement is presented in Table 15 indicating a '**moderate level**' of engagement with overall weighted mean at 1.64 with standard deviation of 0.57 before the implementation of SNUMBOOK. the overall weighted mean increased to 3.49 with standard deviation of 0.66 and is interpreted as '**high level**'.

The rise in the results shows that the use of SNUMBOOK has improved students' focus and effort in math class, encouraged them to try new things even when they're difficult, pushed them to turn in their homework on time, increased their level of engagement outside of class, and encouraged them to ask their teacher for clarification when needed.

Table 10. Level of Mathematics Engagement of the Students Before and After the Use of SNUMBOOK as regards Emotional Engagement

EMOTIONAL ENGAGEMENT	Respondents			
	Before		After	
	OWM	VI	OWM	VI
1. I look forward to math class.	1.50	ML	3.67	VHL
2. I enjoy learning new things about math.	1.90	ML	3.73	VHL
3. I want to understand what is learned in math class.	1.83	ML	3.67	VHL

4. I feel good when I am in math class.	1.50	ML	3.70	VHL
5. I often feel happy in math class	1.97	ML	3.63	VHL
6. I think that math class is interesting.	1.70	ML	3.67	VHL
7. I want to be in math class.	1.30	LL	3.67	VHL
8. I care about learning math.	1.93	ML	3.70	VHL
9. I often feel excited when I am in math class.	1.43	LL	3.53	VHL
Overall Weighted Mean	**1.67**	**ML**	**3.66**	**VHL**
Standard Deviation	**0.78**		**0.57**	

In can be seen from Table 10 the level of mathematics engagement of the students before and after the implementation of SNUMBOOK in terms of emotional engagement. The overall weighted mean of the students pre-SNUMBOOK was at 1.67 with a verbal interpretation of '**moderate level**'. After the use of the developed material, the overall weighted mean increased to 3.66 and verbally interpreted as '**very high level**'. The findings indicate that the utilization of SNUMBOOK leads to increase of emotional engagement among students. The students now await math class with enthusiasm, get enjoyment from acquiring new mathematical concepts, and feel pleasure when engaging in arithmetic activities.

Table 11. Level of Mathematics Engagement of the Students Before and After the Use of SNUMBOOK as regards Social Engagement

SOCIAL ENGAGEMENT	Respondents			
	Before		After	
	OWM	VI	OWM	VI
1. I get confident when I learn new things about math.	1.80	ML	3.70	VHL
2. I build on others' ideas.	1.43	LL	3.40	HL
3. I try to understand other people's ideas in math class.	1.73	ML	3.50	VHL
4. I try to work with others who can help me in math.	1.70	ML	3.53	VHL
5. I try to help others who are struggling in Math	1.47	LL	3.33	HL
6. I care about other people's ideas	1.67	ML	3.53	VHL
7. When working with others, I share ideas	1.50	ML	3.23	HL
Overall Weighted Mean	**1.61**	**ML**	**3.46**	**HL**
Standard Deviation	**0.53**		**0.65**	

Prior to using SNUMBOOK, Table 11 reveals that the overall weighted mean was 1.61 with a standard deviation of 0.53 and a "moderate level" of verbal interpretation. With a verbal interpretation of "high level," the students' overall weighted mean improved to 3.46 with a standard deviation of 0.65 after the use of SNUMBOOK. The increase in results indicates that students are engaging in more social interactions after the use of SNUMBOOK. During group math activities, students actively participate by sharing their own ideas, actively expanding on the ideas of others, collaborating with classmates, and demonstrating enhanced confidence.

5. The significant difference in the level of engagement of the students before and after the use of SNUMBOOK

Table 12. Summary of Test of Difference in the Level of Math Engagement of the Students Before and After the Use of SNUMBOOK

	Before		After		z-value	p-value	Decision	Interpretation
	Mean	SD	Mean	SD				
Cognitive	1.68	0.20	3.49	0.38	4.79	0.000	Reject Ho	Significant
Behavioral	1.66	0.29	3.49	0.50	4.79	0.000	Reject Ho	Significant
Emotional	1.70	0.30	3.65	0.43	4.79	0.000	Reject Ho	Significant
Social	1.61	0. 30	3.46	0.44	4.79	0.000	Reject Ho	Significant

Presented in Table 12 the summary of the test of difference in the level of engagement before and after the use of the developed SNUMBOOK. The unanimous computed p- value of 0.000 across all areas is less than the level of significance at 0.05. Therefore, the null hypothesis is rejected statistically. This implies that the difference between the level of engagement before and after is significant.

There is evidence to suggest that the developed SNUMBOOK enhances level of cognitive, behavioral, emotional, and social engagement of students in math and promotes an enriched math learning experience.

6. The performance of the students during the pretest and posttest with SNUMBOOK.

Table 13. Performance of the Respondents During the Pretest and Posttest in the Numeracy Assessment

Score	Descriptor	RESPONDENTS			
		Pretest		Posttest	
		f	%	f	%
76 - 100	Above Numerate	0	0.0	17	56.67
51 - 75	Numerate	0	0.0	12	40.00
26 - 50	Emerging Numerate	28	93.33	1	3.33
0 - 25	Non-numerate	2	6.67	0	0
Total		**30**	**100.0**	**30**	**100.0**
Mean		**41.77**		**74.40**	
Standard Deviation		**7.46**		**12.54**	
Descriptor		**Emerging Numerate**		**Numerate**	

Note: f- frequency

Table 13 presents the distribution of students' scores during the pretest and posttest in learning basic math skills using the SNUMBOOK as home tasks.

As seen the Table 13, the pretest results show that 28 out of 30 students, or 93.33%, received scores ranging from 26 to 50, placing them in the emerging numerate level, while 2 out of 30 students, or 6.76%, received scores ranging from 0 to 25, placing them in the non-numerate level.

After being immersed to the developed SNUMBOOK, 17 out of 30 or 56.67% of the students fall under **Above Numerate Level.** There are 12 out of 30 or 40.00% of the students fall under **Numerate Level**. The number of participants fall under **Emergent Numerate Level** was reduced to 1 out or 30 or 3.33%, and none of the students of the students fall under **Non-numerate Level** in the posttest. Furthermore, the pretest performance of the students has a mean score of 41.77 and a standard deviation of 7.46, interpreted as **Emerging Numerate**. The posttest performance of the students has a mean score increased to 74.40 and a standard deviation of 12.54 with verbal interpretation of **Numerate.** It can be concluded that academic performance and the level of numeracy among students have increase.

The current study yielded the same result as the study of Belleza (2023) about the increase of the post-test scores of the students after utilizing learning packets at home with parental involvement. Just like this study, Belleza (2023) invited parents to be hands-on and take charge of the numeracy skills of their children when they do home-based activities. This result means that the developed SNUMBOOK enhanced the level of numeracy and academic performance of the students.

7. The significant difference between the mean scores of the pretest and posttest of the students.

Table 14. Test of Difference Between the Mean Scores of the Pretest and Posttest

Tests	Mean Score	SD	z-value	p-value	Decision	Interpretation
Pretest	41.77	7.49	4.78	0.000	Reject Ho	Significant
Posttest	74.40	12.19				

Note: α = 5%

As apparent from Table 14, the computed p- value of 0.000 is less than the level of significance of 0.05 resulting in the statistical decision to reject the null hypothesis. Therefore, there is sufficient evidence to support that there is a significant difference between the mean scores of the pretest and the posttest of the respondents There is proof to suggest that the students' numeracy level and academic performance increased after completing the SNUMBOOK.

The finding proves that SNUMBOOK is a beneficial tool for both teachers and students, successfully enhancing their mastery of numerical abilities, promoting academic progress, and enhancing numeracy level when utilized as tasks to be completed at home with the help of parents.

8. The relationship between the mean scores of the level of engagement and mean scores of the academic performance of the students after the use of SNUMBOOK

Summarized in Table 15, Spearman Rho coefficients (0.41, 0.57, 0.56, 0.47) reflecting the correlation between the level of engagement and academic performance of the students reveals a moderate positive correlation. With computed p-values (0.023, 0.000, 0.000, 0.009) less than the level of significance at 0.05, the statistical decision is to reject the null hypothesis. This shows a significant relationship between all aspects the level of engagement and academic performance after the utilization of SNUMBOOK.

Table 15. Test Relationship Between the Level of Engagement and the Academic Performance of the Students After the Use of SNUMBOOK

	Spearman-Rho Value	Strength	p-value	Decision	Interpretation
Cognitive Engagement Academic Performance	0.41	Moderate	0.023	Reject Ho	Significant
Behavioral Engagement Academic Performance	0.57	Moderate	0.000	Reject Ho	Significant
Emotional Engagement Academic Performance	0.56	Moderate	0.000	Reject Ho	Significant
Social Engagement Academic Performance	0.47	Moderate	0.009	Reject Ho	Significant

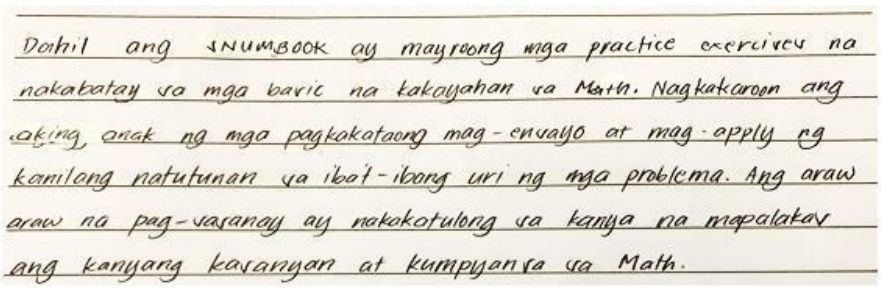
There is confirmation to suggest that as the level of cognitive, behavioral, emotional, and social engagement of students in math improves the students' academic performance also improves.

This confirms the SNUMBOOK could enhance the level of engagement and academic achievement of the students.

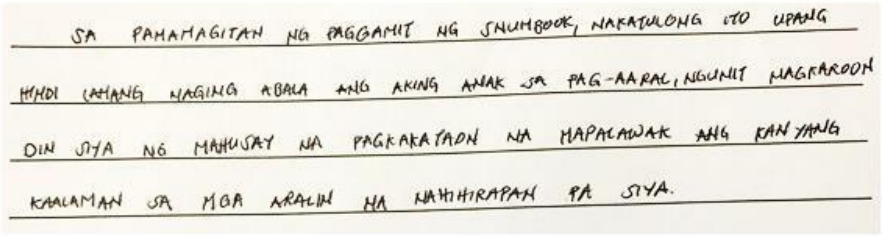
9. The areas improved through SNUMBOOK with Parental Involvement at Homes

The following are the answers of parents in the interview as regards to the areas
improved through the SNUMBOOK.

a. **Increased Practice and Reinforcement.** The answers of the parents that shows increased in practice and reinforcement as shown below:



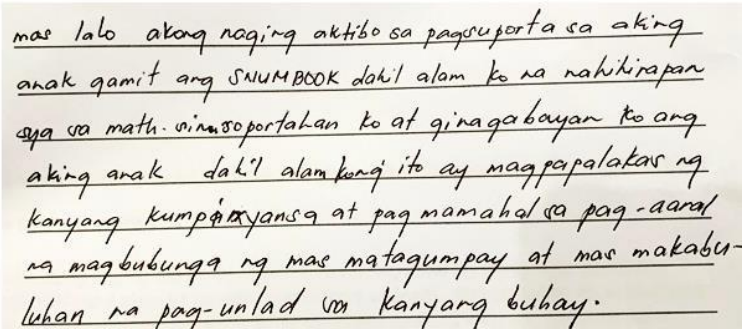
Dahil ang SNUMBOOK ay mayroong mga practice exercises na nakabatay sa mga baric na kakayahan sa Math. Nagkakaroon ang aking anak ng mga pagkakataong mag-enyalo at mag-apply ng kanilang natutunan sa iba't-ibang uri ng mga problema. Ang araw araw na pag-sasanay ay nakakatulong sa kanya na mapalakas ang kanyang kasanayan at kumpiyansa sa Math.



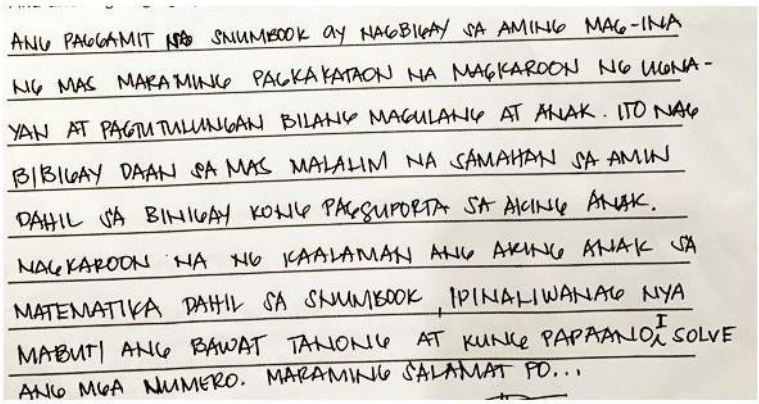
SA PAMAMAGITAN NG PAGGAMIT NG SNUMBOOK, NAKATULONG ITO UPANG HINDI LAMANG MAGING ABALA ANG AKING ANAK SA PAG-AARAL, NGUNIT MAGKAROON DIN SIYA NG MAHUSAY NA PAGKAKATAON NA MAPALAWAK ANG KANYANG KAALAMAN SA MGA ARALIN NA NATUTUHAN NA SIYA.

As seen in the answers the SNUMBOOK provided the students with additional practice materials that reinforced the development of their numerical skills. The parents noted that they appreciated how the materials kept their children busy while they were at home. They also appreciated the chance for their children to practice mathematics at home.

b. **Support and Encouragement.** The answers of the parents on the improved support and encouragement were presented below.



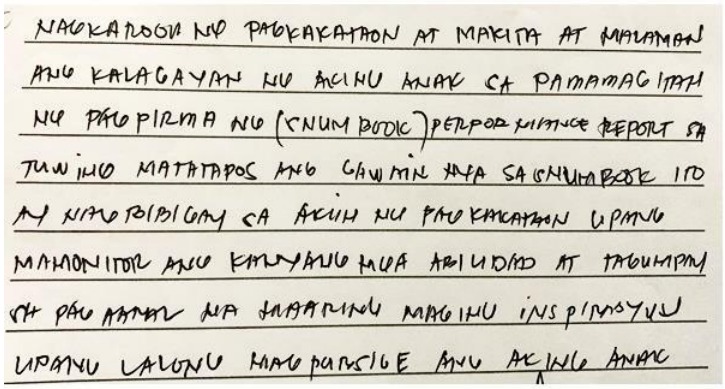
mas lalo akong naging aktibo sa pagsuporta sa aking anak gamit ang SNUMBOOK dahil alam ko na nahihirapan siya sa math. sinasoportahan ko at ginagabayan ko ang aking anak dahil alam kong ito ay magpapalakas ng kanyang kumpiyansa at pag mamahal sa pag-aaral na magbubunga ng mas matagumpay at mas makabuluhan na pag-unlad sa kanyang buhay.



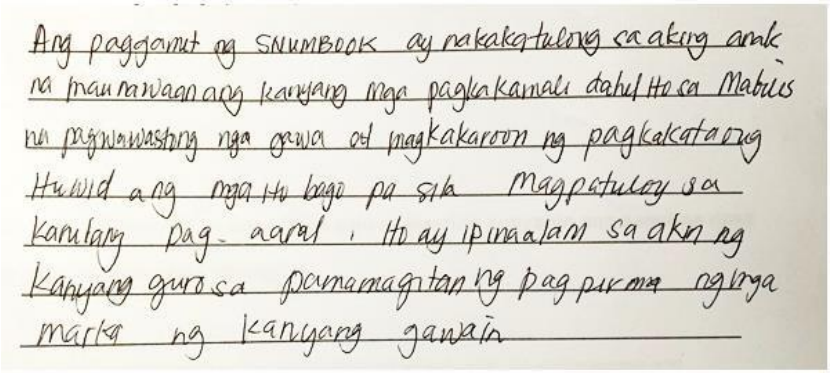
ANG PAGGAMIT NG SNUMBOOK AY NAGBIGAY SA AMING MAG-INA NG MAS MARAMING PAGKAKATAON NA MAGKAROON NG UGNAYAN AT PAGTUTULUNGAN BILANG MAGULANG AT ANAK. ITO NAG BIBIGAY DAAN SA MAS MALALIM NA SAMAHAN SA AMIN DAHIL SA BINIGAY KONG PAGSUPORTA SA AKING ANAK. NAGKAROON NA NG KAALAMAN ANG AKING ANAK SA MATEMATIKA DAHIL SA SNUMBOOK, IPINALIWANAG NYA MABUTI ANG BAWAT TANONG AT KUNG PAPAANO I SOLVE ANG MGA NUMERO. MARAMING SALAMAT PO...

As gleaned in the answers the material improves the support and encouragement of the parents and the teachers. The students learned to ask questions from the teachers to understand their SNUMBOOK activities further. At home, the parents noted that they were often asked by their children to explain the tasks and guide them in accomplishing their tasks. Several parents shared how they fully supported their children and encouraged them to finish all tasks no matter how challenging the tasks were.

c. **Communication.** The answers of the parents on the improved communication were stated below:



NAGKAROON NG PAGKAKATAON AT MAKITA AT MALAMAN ANG KALAGAYAN NG AKING ANAK SA PAMAMAGITAN NG PAGPIRMA NG (SNUMBOOK) PERFORMANCE REPORT SA TUWING MATATAPOS ANG GAWAIN NYA SA SNUMBOOK ITO AY NAGBIBIGAY SA AKIN NG PAGKAKATAON UPANG MAMONITOR ANG KANYANG MGA ARIUNDIN AT TAGUMPAY AT PAG AARAL NA TAPATANG MAGING INSPIRASYON UPANG LALONG MAGPURSIGE ANG AKING ANAK



Ang paggamit ng SNUMBOOK ay nakakatulong sa aking anak na maunawaan ang kanyang mga pagkakamali dahil dito sa Mabilis na pagwawasto ng gawa at magkakaroon ng pagkakataong Huwag ang mga ito bago pa sila Magpatuloy sa Kanilang Pag-aaral. Ito ay ipinaalam sa akin ng Kanyang guro sa pamamagitan ng pagpirma ng kanyang Marka ng kanyang ganap

The teachers were able to clearly show to the parents about the mathematical skills of their children through the SNUMBOOK. The parents were able to share to the teachers as well about exactly which part of the SNUMBOOK their children are still hard up with. Generally, the implementation of the SNUMBOOK opened a communication between the parents and the teachers as they partnered up to help the students improve their mathematical skills.

This suggests that structured parental involvement in facilitating the SNUMBOOK has cumulative effects, resulting improvement in numeracy skills among learners with low numeracy level, allowing them to continue learning basic numeracy at home.

10. The comments and suggestions of the teachers and students in using SNUMBOOK.

The comments given by parents, mathematics educators, and experts on the utilization of SNUMBOOK to enhance the developed home tasks for Grade 7 are as follows:

The material was well thought of and could really help students. (b) The SNUMBOOK, will help the students to develop their skills and interest in learning the concept in Mathematics. (c) The SNUMBOOK is great and very engaging because of the creativity on how it is made. (d) The contents are amazing and appropriate to the level of the learner. (e) The presentation of the SNUMBOOK is engaging and the skills are applicable to slow and average students. It is highly recommended. (f) Suitable for non-numerates/ remedial students. (g) The materials are good activity supplement for the non-numeric students, and it is innovative that may catch the interest of the students. (h) The module is interactive and interesting. (i) It is well organized and easy to understand. (j)Congratulations! It was a good and entertaining SNUMBOOK. I hope that our future learners will utilize your skill numeracy booklets. (j)Your skill numeracy booklet was entertaining.

The student will surely love to answer this booklet. (k) The material has clear illustration and consistently formatted. This will help avoid confusion and make it for students to follow along. (l) Students will be able to study and appreciate mathematics at their own pace with the aid of this SNUMBOOK, with SuperNumboy's help the topics are presented in an interesting and understandable manner. (m) Excellent! Big help for students struggling in Math especially those who are non-numerate. (n) I am sure and confident that the developed material will greatly help the students to master their skills in mathematics and will encourage them to learn mathematics. Well done! Congratulations! (o) The SNUMBOOK, is appropriate for their developmental stage and can spark curiosity. (p) The arrangement is lovely rather than appealing. Overall, it's excellent.

The following **suggestions** were offered by the respondents on SNUMBOOK as home task for Grade 7 students with low numeracy level.

"I suggest adding some items that are more challenging or with hots questions." (b) Make the font size uniformed. (c) Use simple words and instructions. (d) Usage of bi-lingual instruction could be used for student to better comprehend the SNUMBOOK. (e) Avoid using dark and bright colors for illustrations on activities to give highlights in the text balloons. (f) If possible, consider incorporating interactive elements, such as foldout diagrams and pop-ups. (g) Don't overcrowd the page with too much information. (Use simple terminologies. (h) If possible, definition of terms or glossary maybe added for fully understanding of concepts especially the difference between subtraction and addition with and without regrouping. (i) I suggest you add more exercises for each skill to improve mastery. (j) Create an example box for each skill.

The SNUMBOOK can aid student in learning math, according to the respondents. It is entertaining due to its distinctive style and student-friendly information. The content is highly recommended because it engages both average and slow learners. Students that are remedial or non-numerate can benefit from SNUMBOOK. Students who don't like numbers will be interested in these imaginative activity additions. The curriculum required parents' direction in addition to the students' full engagement. It's easy to understand, interesting, and well-organized. However, they recommended include a few more difficult topics or questions with HOTS. Consistency in font sizes helps to simplify words and directions. Home tasks in two languages could aid in SNUMBOOK comprehension. It is not appropriate to use bright or dark colors while drawing text balloon highlights. It is advised to use foldout diagrams and pop-ups as interactive elements. Don't fill the entire page. Definitions or glossaries let students add and subtract without having to regroup.

Conclusions

Based on the results of the study, the following conclusions were drawn:

1. The evaluations of parents, Math teachers and experts on the developed SNUMBOOK do not differ significantly as to Content, Format, Presentation and Organization, and Accuracy and up-to datedness of the information. SNUMBOOK meets students' needs and is well-suited, organized, and methodical, aligning with the curriculum criteria set by the Department of Education.
2. The developed SNUMBOOK enhances the level of numeracy and is effective material to improve learning, as evidenced by the increase in the post test. As a result, the numeracy level of student is enhanced.
3. The cognitive, behavioral, emotional, and social engagement of students is improved after the usage of the developed the usage of SNUMBOOK. Thus, it promotes an enriched math learning experience.
4. There is a significant relationship exists between the level of engagement and the of the academic performance of the students after the use of SNUMBOOK. Therefore, this proves that if the level of engagement improves, the level of academic performance of the students also improves. Thus, students must be engaged to improve mastery and proficiency in Mathematics.

Recommendations

Based on the findings and conclusions drawn, the following are recommended:

1. Students who struggle with numeracy may utilize the SNUMBOOK due to its ability to accommodate individual learning speeds and enhance their numerical proficiency even at home.
2. Teachers may engage in collaborative efforts to apply the discoveries of the study towards the improvement and enhancing of home tasks.
3. School administrators may continue to provide their support, make any required modifications, and guarantee the full implementation of assigning home tasks, as it helps pupils improve their numeracy skills and actively participate in mathematics.
4. Other educational institutions in the district may utilize this resource as it has the capacity to assist the students to reach their desired level of numeracy and enhances mathematics engagement both within the classroom environment and at home.
5. Future researchers may carry out a comparative study in different academic disciplines and adapt or improve the content based on the students' requirements.

Compliance with Ethical Standards

The study followed the ethical guidelines for conducting research with the student respondents. Before commencing the data collection process, the researcher made certain that informed consent was acquired from the parents and the student participants. The participants were provided with information regarding the study's objective, the utilization of the data, and the voluntary aspect of their involvement. In addition, the participants' information was ensured to be confidential, and any identifiable data was eliminated during the data processing phase to safeguard their privacy.

Acknowledgments

The author wishes to thank the teachers of the Mathematics Department of Guinayang National High School for their help in the conduct and completion of this study. The SDS of the Division of Rizal, the PSDS of the District of San Mateo, and the School Head of Guinayang National High School where the study was conducted are also acknowledged for taking part in this academic endeavor. Reynaldo C. Rivera, Jr., Dr.

Edgardo G. Canda, Floro T. Del Pilar III, Dr. Jose A. Procalla, Jr., the husband and the family of the author who provided support and inspiration in the conduct of this study.

ABSTRACT

The study was about the utilization of social media marketing in the selected enterprises in the City of San Pablo, Laguna. The quantitative approach is used in this study to ascertain social media marketing adoption in SMEs as well as marketing strategies and challenges and proportional random sampling technique to analyze 374 owners and managers of the SME's. Moreover, the research made use of a self-made survey questionnaire instrument in data gathering. The frequency count and percentage were utilized to ascertain the business profile of the respondents in terms of nature of business, years of operation, and monthly revenue of the business. Mean and Standard Deviation were used to determine the perception of the respondents in terms of the extent of utilization of social media marketing of the respondents. Kruskal Wallis Test was used to test the difference between the business profile and the utilization of social media marketing in SMEs. This research aims to evaluate the academic literature regarding the potential and difficulties of using social media marketing in the selected enterprises (SMEs), as well as to suggest marketing strategies and obstacles to decide the use of social media marketing in SMEs. The study recommended marketing best practices aimed to improve the use of social media marketing.

Keywords: *social media marketing, social media, interactivity, informativeness, personalization, trendiness, word of mouth.*

INTRODUCTION

In the fast-paced digital landscape of the 21st century, the emergence of social media has revolutionized the way businesses connect with their target audience. Social media marketing is already an essential component of contemporary marketing best practices enabling organizations to harness the power of online communities and platforms to promote products, services, and brands (Gamundoy et al, 2020). As a dynamic and ever-evolving field, social media marketing requires constant adaptation and creativity to effectively engage with the audience in an environment that is subject to rapid change (Smith, 2020). On the other hand, SME's find themselves at the intersection of opportunity and challenge. These nimble and innovative businesses, often constrained by limited resources, have been presented with a unique avenue for growth and market expansion through social media marketing. As SMEs navigate the complex landscape of modern commerce, harnessing the potential of social media platforms has become a pivotal strategy (Anderson, 2021).

Jamil et al (2022) stated that social media has the potential to serve as an effective promotional instrument for attracting visits to business pages. Meanwhile, in a study conducted by Cheung et al (2021), it was underscored that the utilization of social listening technologies enables the monitoring of online reach expansion through the examination of a business's connections, fans, and followers.

In a recent study conducted by Farivar and Richardson (2021), it was observed that customers' inclination to persist in using a certain product or service is significantly impacted by their level of pleasure after receiving the service. Based on research in the field of social media studies, it has been found that contentment plays a significant role in influencing individuals' intentions to continue using social media platforms. Consequently, subsequent to availing a service, a consumer will evaluate their level of satisfaction. As noted by Mahendra (2021), the level of consumer satisfaction has a significant impact on their likelihood to engage in repeat purchase intention. Based on the author, the satisfaction of a client with a product or service directly influences their inclination to engage in repeat purchases. The retail industry was significantly impacted by the explosive rise of internet purchasing, which forced traditional brick-and-mortar businesses to change to be competitive in the new retail landscape (McKinsey, 2020). Online revenue was increasing by April 2020, and it was obvious that this tendency will carry over into the post-quarantine era.

Online buying was easy and convenient, but firms needed to be motivated if they were to prosper, especially in eCommerce. Businesses needed to concentrate on their target market, make use of social media platforms, and cultivate consumer trust by offering high-quality content and first-rate customer support if they were to compete in the online marketplace. The term e-commerce, sometimes known as "electronic commerce," describes the buying and selling of goods and services online. As more people utilize the Internet for business and shopping, its popularity has expanded (McKinsey, 2020).

This study's main goal is to determine the difficulties faced by small and medium-sized businesses in San Pablo City, Laguna, as reported by respondents, managers, and business owners. It is anticipated that by better comprehending these obstacles, SMEs would become more competitive and, in due course, develop and expand their enterprises. Regarding the type of business, medium enterprise firm owners with a capitalization of at least 11,000 and ten years of operational experience are most likely to use the service type. They all acknowledged that the numerous requirements in company loan applications provide some challenges when trying to obtain funding. Additionally, because of the significantly lower prices that unregistered businesses are offering on the market, they are vulnerable to the increasingly fierce competition that develops among them. Certain SMEs in this instance have been unable to compete with the microbusinesses. They all dispute that the emphasis on support is solely for microenterprises, and they agree that the LGU does not have enough funding to assist in further developing the SME sector.

Research Questions

The study generally aimed to determine the social media marketing in the selected enterprises in the City of San Pablo, Laguna.

Specifically, the study sought answers to the following questions:

1. What is the business profile of the respondents, in terms of:
    - 1.1. nature of business;
    - 1.1. years in operation; and
    - 1.2. monthly revenue?

2. What is the extent of social media utilization with regards to:
    - 2.1. Interactivity;
    - 2.2. Informativeness;
    - 2.3. word of mouth;
    - 2.4. personalization; and
    - 2.5. trendiness?

3. Is there a significant difference between the utilization of social media marketing when grouped according to their business profile of the respondents?

4. What marketing best practices may be shared to enhance the social media in the selected enterprises in San Pablo City, Laguna?

METHODOLOGY

A quantitative method approach design was employed in this study. This method is used to utilized in examining the business profiles of respondents in San Pablo, Laguna, focusing on elements such as the nature of their businesses, years in operation, and monthly revenue. It would also be used in the exploration of variables related to the

utilization of social media marketing for selected enterprises of the City of San Pablo, Laguna in terms of interactivity, informativeness, personalization, trendiness, and word of mouth.

The study focused on the perspectives of the owners and managers of SMEs in San Pablo City regarding the utilization of social media marketing as part of their business strategies. The population size considered for the study was 14,680 registered SMEs. Based on a response distribution of 50%, the recommended sample size was determined to be 374 respondents.

The study parameters were established using the Raosoft calculator to ensure accurate results. The margin of error was set at 5%, indicating the acceptable degree of deviation from the true population parameter. The confidence level was set at 95%, indicating the level of certainty in the obtained results.

Proportional Stratified Random sampling techniques were employed in this research. This involves selecting a sample from a larger population in such a way that each individual or element has an equal chance of being chosen. This method helps ensure that the sample is representative of the entire population, making the results more generalizable and less prone to bias (Creswell, 2014).

The researcher conducted the study in San Pablo, which included selected enterprises and kiosk locations. This survey was carried out through the assistance of the Business Permit and Licensing Office (BPLO). This survey aimed to determine the total number of SMEs operating in the town of San Pablo. The formal request was submitted to the Business Permit and Licensing Office (BPLO) by means of an official written correspondence, which was thereafter transmitted electronically via email. Following the researcher's request for authorization to investigate the quantity of registered SMEs in the town of San Pablo, the survey results were subsequently provided at the San Pablo Capitol. Consequently, it was determined that the total population of SMEs numbered at 14,680 registered establishments classified as small and medium companies SMEs.

In order to collect information from small and medium enterprises in San Pablo City, Laguna, the research instrument for this study was a self-made survey questionnaire. There are two key components to the questionnaire, each of which addresses a different area of the study issue.

The first part is the Business Profile of the respondents. The purpose of this section is to obtain respondents' business-related information. It contains inquiries about the type of business, number of years in operation, and monthly revenue of the SMEs in San Pablo City, Laguna. The second part consists of Extent of Utilization of Social Media Marketing by the respondents. This section analyzes the utilization of social media marketing as perceived by the managers and owners of the SMEs. It includes a series of questions aimed to assess the respondents' thoughts about their preferred option.

A 4-point likerts scale was used to gauge the perception of Small and Medium Enterprises (SMEs) regarding the utilization of social media marketing.

A crucial aspect of this study is the creation of a survey questionnaire that is both valid and trustworthy. The establishment of its validity and reliability is crucial for the successful execution of the study. The initial step will involve doing a comprehensive assessment of existing literature and engaging in consultations with subject matter experts. These activities aimed to develop a questionnaire that effectively encompasses the pertinent constructs and variables. After the formulation of the questionnaire, a group of specialists conduct a comprehensive evaluation to determine its content validity, thereby verifying that the questions are aligned with the objectives of the study. Following the process of content validation, a pilot test is administered to a limited sample of small and medium-sized enterprise (SME) owners and managers in a nearby municipality in Laguna, in order to detect any potential ambiguities or concerns pertaining to the phrasing and structure of the questions. The feedback acquired from the pilot test were utilized to enhance and fine-tune the questionnaire. Additionally, internal consistency metrics such as Cronbach's alpha were obtained at 0.759 interpreted as acceptable.

The researcher carried out the subsequent actions to collect the primary data. Before conducting the study, the researcher first obtain approval from the Dean of the Graduate School of the Pamantasan ng Lungsod ng San Pablo. Once approved, the researcher formally asked for authorization to conduct a survey and personal interview of SMEs in the City of San Pablo, Laguna, with the support of the City Mayor. In parallel, the researcher simultaneously conducted surveys in the area of San Pablo City, Laguna, and retrieved completed questionnaires and interview transcripts the same day. The researcher examined, totaled, and summarized the responses before sending the information to the statistician for data analysis.

The quantitative data collected for this study were analyzed using descriptive statistical tools.

Frequency count and Percentage were used to determine the business profile of the respondents in terms of nature of business, years of operation, and monthly revenue of the business. While,

Mean and Standard Deviation were used to determine the perception of the respondents in terms of the extent of utilization of social media marketing of the respondents. And,

Kruskal Wallis Test was used to test the difference between the business profile and the utilization of social media marketing in SMEs.

In this study, the research objectives revolve around recognizing the utilization of social media marketing in the selected enterprises in San Pablo City, Laguna. The scope of social media platforms includes using Facebook, TikTok, Instagram, WhatsApp, Messenger, Twitter, and reels. The study assessed the level of utilization of social media marketing activities. The study involved a random 374 owners and managers of selected SME’s in San Pablo City, Laguna.

DISCUSSION

Table 3.1 ***Business Profile in terms of Nature of Business***

Nature of Business	***Frequency (f)***	***Percentage (%)***
Food Service and Accommodation	32	9
Insurance Activities and Financial	38	11
Human Health and Social Work	30	8
Information and Communication,	76	20
Manufacturing	80	21
Other Service Activities	16	4
Professional, Scientific and Technology	43	11
Real Estate Activities	12	3
Wholesale and Retail Trade; Rep	47	13
Overall Mean	**374**	**100.0**

The data from table 3.1 demonstrated the company profile in terms of the nature of business. The majority of the respondents were from the manufacturing sector with frequency of 80 (21%). While the sector of real estate has the least number of respondents with a frequency of 12 (3%).

This implies that San Pablo City is a hub of manufacturing business and companies in the regioned, considered as one of the advanced agro-industrial economies in CALABARZON based on DTI-4A data.

Table 3.2 ***Business Profile in terms of Years in Operation***

Years in Operation	***Frequency (f)***	***Percentage (%)***
10 years and below	203	54
11-20 years	77	21
21-30 years	94	25
Overall Mean	**374**	**100**

The data from table 3.2 illustrated the business profile in terms of Years in Operation, with the majority of businesses operating for less than 10 years with a frequency of 203 firms (54%). This result implies that many SME's in San Pablo City are still new which can indicate that the business landscapes in the city are promising for SME's.

The results are supported by Alayuddin (2008) study that the length of a business's operation is its duration and can have an impact on a person's zakat compliance behavior. This is so that a business's stability can be gauged by how long it has been in operation.

Meanwhile, Kamarudin (2018) provides an explanation of the duration of business finding financial stability is the biggest obstacle in the first three years of business

operation, according to operations based on a start-up business graph created by Syamsul Anuar and cited by Kamarudin, 2018 enterprising people now attempt to put their concepts into practice and market their goods. Consequently, business owners must effectively manage their funds at this point in running their company.

Table 3.3 ***Business Profile in terms of Monthly Revenue***

Monthly Revenue	**f**	**%**
₱250.000 and below	227	61
Above ₱ 2,000,000.00 to ₱ 8,000,000.00	20	5
Above ₱ 800,000.00 to ₱ 2,000,000.00	127	34
Overall Mean	**374**	**100**

The data from table 3.3 showed that most respondents earned less than ₱250,000.00 pesos monthly revenue with a frequency of 227 (61%). The second group earned between ₱800,000.00 and 2,000,000.00, with a frequency of 127 (34.0%). The final group earned between ₱2,000,000.00 and 8,000,000.00, with a frequency of 20 (5%).

The results imply that many businesses in San Pablo are considered as small scale enterprises because this is where business owners are visible and many are still starting from scratch, there are still more people with monthly incomes of 250,000 or less. In San Pablo City, Laguna, there are a lot of manufacturing companies that actually begin with a small investment and work their way up to a large income.

According to the Philippine Statistics Authority's (PSA) 2022 the country had 1,109,684 registered firms. Large firms account for 4,541 with MSMEs accounting for 1,105,143. The percentage of all establishments that are micro, 90.49% (1,004,195), small, 8.69% (96,464), and medium, 0.40% (4,484), are the next highest (DTI, 2021).

Table 4.1 ***Extent of Social Media Utilization in terms of Interactivity***

Indicators	**Mean**	**Std. Deviation**	**Interpretation**
I believe that utilizing social media…			
1. allows my business to communicate directly with my target audience through comments, direct messages, or live chat features.	3.93	0.25	Very High Extent

2. helps me to gather valuable feedback from my customers essential in understanding their preferences, concerns, and making improvements on my products or services.	3.83	0.37	Very High Extent
3. facilitates the creation of communities, groups, forums and dedicated hash tags where my customers can engage with each other.	3.60	0.49	Very High Extent
4. helps me to actively involve the audience and boosts engagement	3.65	0.48	Very High Extent
5. allow me to showcase my brand personality and engaging content, humor, and a conversational tone help in humanizing the brand.	3.83	0.38	Very High Extent
Overall Mean	**3.77**	**0.23**	**Very High Extent**

Legend: $3.51 - 4.00$ *Very High Extent;* $2.51 - 3.50$ *High Extent;* $1.51 - 2.50$ *Low Extent;* $1.00 - 1.50$ *Very Low Extent*

The data from table 4.1 presented an overall mean of 3.77 with an interpretation of “very high extent” on the extent of social media utilization in terms of interactivity. Allowing the business to directly communicate with the target audience is the highest indicator with a mean of 3.93 and a *sd* of 0.25. On the other hand, the lowest indicator is facilitating the creation of communities, groups, and forums to engage customers with a mean of 3.60 and a *sd* of 0.49.

The results imply that the lowest signal indicates how crucial it is for neighborhood groups to be aware of what is happening in one other's businesses, while the highest signal illustrates how advantageous it is for managers and business owners to communicate with customers more effectively over business conversations when they have problems.

The study is supported by Ismail (2018) who asserted that social media marketing facilitates consumer interaction, communication, and access to product imagery and information, hence increasing brand equity and ultimately improving product recognition. Social media marketing can be achieved through a wide range of channels, such as information sharing via blogs, forums, and online communities. In order to establish brand communities on the virtual level (sphere), a number of firms aim to increase the degrees of communication and interactions with customers.

Table 4.2 ***Extent of Social Media Utilization in terms of Informativeness***

Indicators	Mean	Std. Deviation	Interpretation
I believe that utilizing social media…			
1. helps me educate the audience about industry trends, products, and relevant topics.	3.92	0.27	Very High Extent
2. helps me provide educational content that is of value to my audience, tutorials, and other informative resources related to my products or services.	3.79	0.41	Very High Extent
3. by sharing customer testimonials and success stories on social media serves as reliable proof and create positive impact to customers.	3.59	0.49	Very High Extent
4. using frequently asked questions (FAQs) and conduct Q&A ensure that customers have access to relevant information and clarifications.	3.63	0.48	Very High Extent
5. helps me to promote and host webinars or online events and allow me to dive deeper into specific topics and engage with my audience in a more comprehensive way.	3.68	0.47	Very High Extent
Overall Mean	**3.72**	**0.24**	**Very High Extent**

Legend: $3.51 - 4.00$ *Very High Extent;* $2.51 - 3.50$ *High Extent;* $1.51 - 2.50$ *Low Extent;* $1.00 - 1.50$ *Very Low Extent*

The data from table 4.2 presented an overall mean of 3.72 with an interpretation of “very high extent” on the extent of social media utilization in terms of informativeness. Educating the audience about industry trends, products, and relevant topics revealed as the highest indicator with a mean of 3.92 and a *sd* of 0.27. The lowest indicator having access to relevant information and clarifications with a mean of 3.63 and a *sd* of 0.48.

The results imply that in terms of informativeness the best way to help business owners and managers become knowledgeable about new products, trends, and business-related subjects is to teach them how to educate themselves so that they can tell others about how these things will benefit their companies. On the other hand, the most detrimental way to be informative is to share customer success stories and testimonials on social media because they provide trustworthy evidence and have a good effect on customers.

Table 4.3 ***Extent of Social Media Utilization in terms of Personalization***

Indicators	Mean	Std. Deviation	Interpretation
I believe that utilizing social media…			
1. helps me provide tools to segment audiences based on demographics, interests, and behaviors that messages resonate with each group.	3.78	0.42	Very High Extent
2. allows me create and share customized content that aligns with the interests and preferences of my audience.	3.91	0.29	Very High Extent
3. encourages customers create and share content related to products or services not only serve as social proof but also personalize the brand experience.	3.55	0.50	Very High Extent
4. providing exclusive access new products or content creates a sense of exclusivity and makes customers feel valued and connected to the brand.	3.91	0.28	Very High Extent
5. helps me create a personalized email campaign to gather information from social media to inform the content.	3.81	0.39	Very High Extent
Overall Mean	**3.79**	**0.20**	**Very High Extent**

Legend: $3.51 - 4.00$ *Very High Extent;* $2.51 - 3.50$ *High Extent;* $1.51 - 2.50$ *Low Extent;* $1.00 - 1.50$ *Very Low Extent*

The data from table 4.3 presented an overall mean of 3.79 with an interpretation of “very high extent” on the extent of social media utilization in terms of personalization. As indicated by the findings, the highest indicator is the development and distribution of tailored content that corresponds to the preferences and interests of the target audience with the mean of 3.91 and the *sd* of 0.29. Conversely, the lowest indicator is granting customers exclusive access to new products or content in order to foster a sense of exclusivity, value, and connection to the brand with the mean of 3.91 and the *sd* of 0.28.

The results imply that they come from producing material that appeals to clients' desires and helps them relate to current trends. The least favorable aspect is that it promotes users to produce and disseminate information about goods and services that not only acts as social proof but also adds personality to the brand experience. The degree and simplicity with which customers can access information and services from a brand's social media pages is known as personalization.

In the study supported by Seo et al. (2018), the purpose of the personalization component is to foster customer happiness through interaction and communication between the specific user and the business. Peer-to-peer communication between the

company and the individual user can help the customer feel valued and different from competitors by giving them a sense of being heard.

Table 4.4 *Extent of Social Media Utilization in terms of Trendiness*

Indicators	Mean	Std. Deviation	Interpretation
I believe that utilizing social media…			
1. helps my business to track the performance of my content and identify what is working well and stay on top of trends.	3.69	0.46	Very High Extent
2. helps participate and boost my business by visibility and engagement creating content incorporating trending elements into my marketing strategies.	3.71	0.45	Very High Extent
3. to introduce new features and content formats regularly can leverage my business trends and interact with my audience.	3.83	0.38	Very High Extent
4. provide my business the ability to share real-time updates and allow quick adaptation to trends, industry news, and current events.	3.68	0.47	Very High Extent
5. by partnering with influencers who have a strong presence on social media will give my business access to a larger audience.	3.85	0.35	Very High Extent
Overall Mean	**3.75**	**0.23**	**Very High Extent**

Legend: $3.51 - 4.00$ *Very High Extent;* $2.51 - 3.50$ *High Extent;* $1.51 - 2.50$ *Low Extent;* $1.00 - 1.50$ *Very Low Extent*

The data from table 4.4 presented an overall mean of 3.75 with an interpretation of “very high extent” the extent of social media utilization in terms of trendiness. Collaborating with influential individuals to enable access to a larger audience is the most significant factor with a mean of 3.85 and a *sd* of 0.35. On the other hand, the ability to share real-time updates and quickly adapt to trends is the least important factor for social media utilization, with a mean of 3.68 and a *sd* of 0.47.

The results imply that social media platforms employ algorithms to determine hot subjects and keywords, which leads to trending content. These algorithms are made to examine the activity, including the quantity of shares, likes, comments, and searches. This identifies the subjects and content that are causing the most amount of interaction. A topic is designated as trending and prominently featured on the platform's homepage after it achieves a specific level of engagement.

Table 4.5 ***Extent of Social Media Utilization in terms of Word of Mouth***

Indicators	Mean	Std. Deviation	Interpretation
I believe that utilizing social media in marketing…			
1. leverages word of mouth marketing to promote our products and services.	3.90	0.30	Very High Extent
2. through social media influencers enhance the impact of word-of-mouth referrals.	3.67	0.47	Very High Extent
3. actively encourages our consumers to post positive experiences on social media platforms.	3.72	0.45	Very High Extent
4. assists in the proactive monitoring and response to consumer comments, reviews, and recommendations on social media platforms.	3.96	0.20	Very High Extent
5. leads to customer testimonials and shared experiences and become a means to augment our word-of-mouth marketing endeavors.	3.74	0.44	Very High Extent
Overall Mean	**3.80**	**0.16**	**Very High Extent**

Legend: $3.51 - 4.00$ *Very High Extent;* $2.51 - 3.50$ *High Extent;* $1.51 - 2.50$ *Low Extent;* $1.00 - 1.50$ *Very Low Extent*

The data from table 4.5 presented an overall mean of 3.80 with an interpretation of “very high extent” on the extent of social media utilization in terms of word of mouth. The highest indicator, with a mean of 3.96 and an *sd* of 0.20, is proactive monitoring and reaction to consumer comments, reviews, and recommendations on social media platforms. On the other hand, the least significant measure is the increase in the effectiveness of word-of-mouth recommendations through social media influencers, with an average score of 3.67 and an *sd* of 0.47.

The results imply that the best way to measure word-of-mouth marketing is to use it to support proactive social media platform monitoring and customer comments, reviews, and recommendations. Conversely, the weakest finding suggests that social media influencers amplify the effects of word-of-mouth recommendations.

The term "e-WOM" refers to any consumer-generated content, whether favorable or unfavorable, that is shared online with other consumers (Chu & Sung, 2018). Consumers talking to consumers about brands are known as e-WOM in social media usage

Table 5.1 ***Test of Difference between the Utilization of Social Media Marketing in SMEs when Grouped According to Nature of Business***

Variable	H-Value	P-Value	Decision	Interpretation
Interactivity	176.34	0.00	Reject Ho	Significant
Informativeness	173.97	0.00	Reject Ho	Significant
Word of mouth	127.19	0.00	Reject Ho	Significant
Personalization	159.73	0.00	Reject Ho	Significant
Trendiness	142.82	0.00	Reject Ho	Significant

Legend: $p < 0.05$ *Significant;* $p \geq 0.05$ *Not Significant*

The data from table 5.1 presented the results of a statistical test comparing the use of social media marketing in the selected enterprises based on their business nature. Given that the p-value for all variables is 0, the appropriate course of action is to reject the null hypothesis. All of these variables show highly significant differences between the groups.

Based on the data, it can be concluded that P values are zero (0) for all evaluated variables, such as interactivity, trendiness, personalization, informativeness, and word of mouth. This implies that there is no visible variation in the use of social media marketing based on the type of business.

The study supported by the List of Establishments report from the Department of Trade and Industry (2020) states that there are 957,620 registered commercial enterprises in the nation. Of them, 99.51% are MSMEs and 0.49% are major firms. 88.77% of MSMEs are microenterprises, 10.25% are small businesses, and 0.49% are medium-sized businesses. The top industry sectors, which accounted for approximately 83.77% of all MSME establishments, are (1) wholesale and retail trade; (2) accommodation and food service activities (134,046); (3) manufacturing (110,916); (4) other service activities (62,376); and (5) financial and insurance activities (45,558). Repair of motor vehicles and motorcycles (445,386) is another prominent industry sector. Before the pandemic, MSMEs created about 5.38 million jobs, or 62.66% of all occupations in the nation. Microenterprises accounted for 29.38% of these jobs, followed by 25.78% and 7.50%.

Table 5.2 ***Test of Difference between the Utilization of Social Media Marketing in SMEs when Grouped According to Years of Operation***

Variable	H-Value	P-Value	Decision	Interpretation
Interactivity	78.89	0.00	Reject Ho	Significant
Informativeness	113.05	0.00	Reject Ho	Significant
Word of mouth	53.91	0.00	Reject Ho	Significant
Personalization	90.51	0.00	Reject Ho	Significant
Trendiness	57.56	0.00	Reject Ho	Significant

Legend: $p < 0.05$ *Significant;* $p \geq 0.05$ *Not Significant*

The data from table 5.2 displayed the results of a test comparing the use of social media marketing in the selected enterprises based on the number of years they have been in operation. Since the p-value for all variables is 0, it is appropriate to reject the null hypothesis. Similarly, with the previous table, all of these variables show significant differences between the groups.

All of the variables that were tested in terms of the social media marketing activities show that. The choice is to reject the hypothesis because the P-values are zero. This suggests that the use of social media marketing does significantly differ based on the number of years of business.

The study supported by Shinozaki and Rao (2020) reported that 59.6% of the MSMEs surveyed had been in business for less than 5 yrs. (start-ups primarily micro-enterprises and in services). These were followed by those that had been in business for six to ten years (18.8%), eleven to fifteen years (8.5%), sixteen to thirty years (9.6%), and more than thirty years (3.4%). A female head was present in over half (56.1%) of the MSMEs surveyed. Women owned MSMEs made up 59% of micro-enterprises, 51% of small business, and 17% of medium enterprises, according to company size. They made up 56.0% of businesses in the manufacturing sector, which was followed by businesses in the service sector (58.1%). In the agricultural sector, women owned 44.4% of the businesses, a smaller ratio than in other industries.

Table 5.3 ***Test of Difference between the Utilization of Social Media Marketing in SMEs when Grouped According to Monthly Revenue***

Variable	H-Value	P-Value	Decision	Interpretation
Interactivity	127.97	0.00	Reject Ho	Significant
Informativeness	128.41	0.00	Reject Ho	Significant
Word of mouth	113.99	0.00	Reject Ho	Significant
Personalization	171.26	0.00	Reject Ho	Significant
Trendiness	91.32	0.00	Reject Ho	Significant

Legend: $p < 0.05$ *Significant;* $p \geq 0.05$ *Not Significant*

The data from table 5.3 presented the results of a statistical test comparing the use of social media marketing in the selected enterprises based on their monthly revenue. Considering that the p-values for all variables are zero, rejecting the null hypothesis is the appropriate statistical decision. All of these variables show highly significant differences.

The information suggests that the hypothesis should be rejected because the P-values for every variable examined interactivity, informativeness, personalization, trendiness, and word-of-mouth were below the P-value of 0.5. This implies that there is sufficient evidence to say that monthly income affects the utilization of SMM in SME's.

The study supported by Shinozaki and Rao's (2021) findings, over ½ (61%) of the companies reported average revenue wages of no more than 9,000 pesos. Then came

35.1%, whose average monthly salary fell between 9,001 and 18,000. Less than 5% of the sample consisted of companies paying an average monthly salary of more than 18,001. Notably, the average wage at more than 4/5 of the businesses in Region 1 (83.7%) and Region 9 (Zamboanga Peninsula, 82.8%) was less than 9,000. In contrast, the only regions with businesses reporting monthly pay of more than 27,000 were the NCR, Region 4-A, Region 5 (Bicol), and Region 10.

According to Abrigo (2020) asserts that as an organization grows in size, the average monthly wage tends to climb. From 3% for micro-enterprises to 11.0% for small and 20% for medium-sized enterprises, the percentage of businesses with average salaries above P18,000 grew. On the other hand, the proportion of businesses with an average salary of no more than P9,000 dropped from 67.6% for micro, to 29.9% for small, and to just 24.0% for medium-sized businesses. By sector, a comparable pattern was seen. From 72% in agriculture to 66% in manufacturing and 55% in services, the percentage of businesses with an average salary of less than P9, 000 decreased. On the other hand, almost 50% of the businesses in all three sectors stated that their average salary was no higher than P9, 000.

Conclusions

The study determined the utilization of social media marketing in the selected enterprises in the City of San Pablo, Laguna. This study presented the business profile of the respondents namely, nature of business, years of operation and monthly revenue toward social media marketing activities in terms of interactivity, informativeness, personalization, trendiness and word of mouth. A researcher made a questionnaire administered to the 374 respondents, both owners and managers of SME’s.

Based on the results the majority of respondents in the nature of business category belonged to the manufacturing sector, followed by those with 10 years or less of operation, and finally, those with monthly revenue under 250,000.00 and below. This information was derived from the owners' and managers' business profiles.

All of the variables that measured the extent that social media marketing was used interactivity, informativeness, personalization, trendiness, and word-of-mouth had higher composite means and were interpreted as highly significant.

The generated computed probability values on the utilization of social media marketing when grouped according to their business profile of respondents where nature of business, years in operation and monthly revenue is .000,.000,.000,.000,.000 respectively. The null hypothesis was rejected because the five variables' estimated probability values were less than the 0.05 level of significance. Therefore, there were significant differences in the perceptions of the respondents when grouped according to business profile nature of business in terms of interactivity, informativeness, personalization, trendiness, and word of mouth.

Based on the aforementioned findings of the study, the data analysis leads to the conclusion that the results validate the hypothesis that was developed for this investigation. The stated hypothesis is there is a significant difference between the utilization of social media marketing when grouped according to the business profile of the respondents. It has been confirmed that social media marketing in the selected enterprises in the City of San Pablo, Laguna, was perceived to have benefits including interactivity, informativeness, personalization, trendiness, and word of mouth to a very high extent. Nonetheless, the majority of users say they are happy with the tools that social media marketing offers and want to maintain the techniques that are attainable but not measurable for their businesses to a very high extent.

Recommendations

Based on the findings and conclusions drawn from the study on the utilization of social media marketing in the selected enterprises in the city of San Pablo, Laguna the following recommendations are provided:

SMEs Owners and Managers. Make use of the various accessible business strategies. Utilize social media marketing strategies for your company to help it expand into new markets for goods, services, and innovation. It generates prospects for accumulating wealth and increasing income. It fosters freedom and initiative while also creating opportunity.

Local Government Unit of San Pablo City, Laguna. The researcher recommends that local collaborations for economic growth be supported by the government. The municipal administration should plan how to work with the chosen businesses to form alliances for regional economic growth. These alliances may make it easier for the businesses to buy items and services together, which would raise demand for those goods and services.

Future researchers. Make use of this study as a platform for other research endeavors. It has the potential to be a further source of information that researchers who wish to organize a study on a related topic can use as a reference for their next research.

Compliance with Ethical Standards

The researchers obtained informed consent of the respondents and notified them of their freedom to withdraw from the study at any time. Their anonymity was maintained and their well-being was protected. There was no conflict of interest in the conduct of the study. Plagiarism was strictly avoided and there was no bias in the interpretation of the findings. Finally, the results were used purely for research.

Acknowledgments

The success of this study required the help of various individuals; without them, the researcher might not have met his objectives in doing this study. With much pride and

joy, the researcher extended his heartfelt appreciation and gratitude to the following people for their invaluable help and support.

First and foremost, it is the researcher's pleasure to express his appreciation to:

President of Pamantasan ng Lungsod ng San Pablo, for his excellent advice, dedication, and genuine concern;

Dean of Graduates School, for her great recommendation, time, effort, and utmost concern;

To my Research Adviser who gave her a chance to prepare this meaningful research with endless patience for reading the manuscript and guidance for every revision and changes;

To my Subject Specialist, for imparting his knowledge, valuable assistance and suggestions;

To my Technical and Language Critic, for sharing his ideas for the improvement of this study, and for his patience, understanding and encouragement and for his concern;

To my Statistician, for her sincere guidance and professional assistance of the data and for educating the researcher about the whole process of this study;

To my External Panel, who motivated the researcher to finish this study, giving thoughts, advice, and ideas for the improvement of the study;

Above all, to Jesus Christ, Lord and Savior, for giving the wisdom, strength, support and knowledge in exploring things; for the guidance in helping the researcher surpass all the trials he encountered and for giving determination to finish this study.

SOLID WASTE MANAGEMENT AWARENESS AND PRACTICES AMONG JUNIOR HIGH SCHOOL STUDENTS

Aira V. Corporal, LPT, Charles M. Pangilinan, LPT, Bryan DC. Gabriel, PhD

Graduate School Department – Bulacan Agricultural State College
San Ildefonso, Bulacan, Philippines

https://doi.org/10.5281/zenodo.13329911

ABSTRACT

This paper examines the solid waste management awareness and practices among junior high school students, using non-experimental quantitative research design specifically, the descriptive and comparative research designs, utilizing adopted structure survey questionnaire about Awareness of Students on Waste Management and Practices on Solid Waste Management. Participants of this study were selected using stratified random sampling. Findings of this study revealed that junior high schools exhibit a commendable awareness about solid waste management (mean=4.36). The results also revealed that in terms of segregation and reduce practices students demonstrate excellent performance (mean=3.09), (mean=3.25), respectively. The results showed that there is a highly significant difference among the awareness and practices of junior high school students.

Keywords – *solid waste management awareness, solid waste management practices, descriptive research design, comparative research designs*

INTRODUCTION

Context and Rationale

Globally, poor solid waste management is a major contributor to both plastic pollution, which harms the marine environment and is projected to cost $13 billion

annually, and climate change, which accounts for 5% of worldwide carbon emissions. Inadequate Municipal Solid Waste Management (MSWM) systems are the source of about 80% of plastic found in the ocean. According to Bundhoo (2018), growing amounts of solid waste are a global concern, with least developed countries (LDCs) being disproportionately impacted by inadequate waste management systems. This exponential growth in the generation of solid waste is even more concerning. In the most impoverished nations, it is predicted to triple by 2050 and to double in large and medium-sized cities. With the lack of sanitary landfills, recycling centers, and incinerators in low-income nations, this is particularly concerning. As such, the majority of their garbage is disposed of in open dumps, badly managed, and without treatment (Vergara and Jammi 2023).

Solid waste management practices have always been a major concern in the community on a daily basis. It is seemingly impossible to implement the practices and consciousness in regard to having no commitment and support from the local authorities. It should start from the foundation of education to further implement such practices and consciousness in regard to having no commitment and support from the local authorities. It should start from the foundation of education to further implement such practices and, students are the one who shapes the current generations and generations to come. This study focused on assessing how the junior high school students perceive the essence of solid waste management and practices and how they practically help the community. The students are commonly subjected to the production of waste management, in some other aspect of being uneducated in realizing the effects of it. As stated by Molina and Catan (2021), many of them have not enough knowledge regarding the effects of improper waste disposal, solid waste prohibited activities and even school initiatives toward the practices of a clean and safe environment.

According to the World Bank (2024), the globe annually produces 2.01 billion tonnes of municipal solid garbage, of which, at the very least, 33 percent are not managed in a way that is safe for the environment. The amount of waste produced daily per person in the world varies greatly, ranging from 0.11 to 4.54 kg on average. High-income nations produce almost 34%, or 683 million tonnes, of the world's trash, but making up only 16% of the global population. Overall, waste production and income level are positively correlated. Compared to low- and middle-income countries, where it is anticipated to increase by at least 40%, high-income countries are predicted to see a 19% increase in daily per capita trash creation by 2050. When income levels rise, waste creation rises more quickly at low income levels than it does at high income levels after first declining at the lowest income levels. By 2050, it is anticipated that the overall amount of garbage produced in low-income nations will have increased by more than three times.

As such, the process of managing waste has been a huge control of humans in light of a day-to-day cleaning drive. It is a humanitarian concern in which should focus our minds and attention to prevent the disease it can bring to the general public. If it can’t practice the proper ways of disposing of products, it can lead to a socio-economic problem that needs to be recalibrated and changed. According to Ike et al. (2018), solid waste is an environmental concern and challenge of today’s generation. Solid waste

management sometimes ascribed from poor collection of waste and disposal methods and lack of dangers in poor sanitary areas. Furthermore, if we can no longer contain the waste disposing every day, we will fail to plan the waste management system and can nearly affect the public health of the people. Solid waste is a serious problem that world is facing on a daily basis. It is a constant improper practice of humans, disposing of their trash in a winding way. Yet, it is one of the most pressing issues that needs to be changed.

Partly, the collaboration within the people in the community broadens the scope of awareness and practices which can improve the habit and attitude of people toward solid waste. It is something that concerns the community, on how they navigate the importance of waste management, in making unwanted waste to be more convertible and equitable towards a healthier environment (Schiavo, 2021).

This carries the objective of identifying students' awareness and practices on waste management. Along with this, the research determines the level of awareness about waste management in terms of regulations, standards, and health and environmental effects. Additionally, this determines the level of solid waste management practices of students in terms of segregation and reduction. Furthermore, this will compare the level of awareness and practices about waste management among junior high school students. Lastly, it will develop a program that will contribute to students' awareness and practices in waste management.

As specified by Akintunde (2017) with increased knowledge, individuals tend to make environmentally friendly decisions and take responsible steps towards achieving a sustainable environment. Thus, the people in the society will live in a healthy and pollution free environment.

Review of Related Literature and Studies

One of the main duties of municipal administrators and a useful stand-in for good governance is solid waste management, or SWM. Sustainable urban management (SWM) reduces negative effects on the environment and public health, preserves resources, and makes cities more livable. SWM practices that are not sustainable, however, have a detrimental effect on environmental sustainability and public health. This problem is further worsened by fast urbanization as well as institutional and budgetary constraints (Abubakar et al, 2022).

According to Muljaningsih and Galuh (2018), waste is an inevitable by-product of human activities. Nature of waste is determined by the material being consumed by the people and waste management is linked to human lifestyle. Absence of proper waste management is one of the pressing environmental issues that is directly influenced by modern lifestyle (Kumar & Kumar, 2020).

As specified by Asteria and Haryanto (2021), integrated waste management highlights the 3R rule consisting of reduce, reuse, and recycle followed by incineration

and final disposal which is ideally conducted where waste material originates. Subsequently, 3R faced challenges when society had limited awareness regarding classifying and segregating waste. (Muljaningsih & Galuh, 2018). Lack of awareness and practices can hinder effective waste management.

In the study of Pujara et al. (2019), a popular approach for disposing of MSW in most Indian cities, except metro areas, is open dumping. Due to the direct burning and/or degradation of wastes, this method emits harmful and greenhouse gases (GHGs), which pose serious dangers to the environment and human health. Consequently, there is a great demand for integrated solid waste management (ISWM), which uses a variety of techniques including incineration, composting, anaerobic digestion, refuse-derived fuel, material recovery facilities, and sanitary landfilling. As stated by Debrah et al. (2021), the issue of solid waste management (SWM) is complex and involves elements of politics, socioeconomics, institutions, and the environment. Metropolitan spaces in emerging countries are facing a major difficulty due to exponential increase in metropolitan areas. The disparity in environmental awareness between young and old people in developing nations causes problems with waste management or ecology, which leads to unsustainable development and has serious repercussions in low- income countries. As stated by Bautista (2019), many environmental issues facing the planet must be addressed on a personal level, necessitating the development of awareness among people that will lead them to adopt ecologically friendly behaviors.

Conceptual Framework

This study was used Input-Process-Output Model. The focus of this research was to determine the students' level of awareness and practices on solid waste management.

For input, it is about waste management awareness and solid waste management practices. Waste management awareness has three indicators which are awareness on regulations, awareness on standards, and awareness on health environmental effects. On the other hand, solid waste management practices has two indicators which are segregation and reduce.

For process, descriptive analysis was used to describe the level of waste

management awareness of students and comparative analysis was used to compare the level of solid waste management practices among junior high school students.

For output, the research proposed a program named Waste Wise: Promoting Sustainable Practices in Solid Waste Management.

Research Questions

The purpose of this study is to know the level of solid waste awareness and practices among junior high school students.

Specifically, this study answer the following questions:

1. How may the solid waste management awareness of junior high school students be described in terms of:
   1.1 Awareness on regulations;
   1.2 Awareness on standards; and
   1.3 Awareness on health environmental effects?
2. How may the solid waste management practices of junior high school students be described in terms of:
   2.1 Segregation; and
   2.2 Reduce?
3. Are there significant differences in solid waste management awareness and practices among the different grade levels of junior high school?
4. What program on solid waste management awareness and practices can be developed based on the results of the study?

Hypothesis

This study was guided and tested the hypothesis below:

There are no significant differences in solid waste management awareness and practices among the different grade levels of junior high school.

Significance of the Study

This study was essential and important in the field of science education. It shows the level of awareness and practices among junior high school students on the importance of solid waste management. As for students, the strategy to conduct activities in the study may help the students in providing them an opportunity and chance to dig deeper about one's eco- consciousness in the impact of solid waste management on the student's level of awareness. Next is the teachers, the result of the study served as a guide to implement programs and practices to help reduce wastes in proper way of disposal. Thus, extend the knowledge on solid waste management practices to further disseminate the information in public to provide feasible activities on solid waste problems. As for the school administrators, the study's conclusions helped administrators run their own institutions and provided a platform for motivating educators to adapt different programs and practices to instill the importance of solid waste management in the general public.

The Department of Education (DepEd) will serve as a bridge to improve the existing curriculum that will disseminate information about solid waste management to develop public awareness of the solid waste problem with the integration of environmental awareness and knowledge in their curricula. Lastly, the future researchers feel that this study's findings assisted later researchers in performing a similar study with additional factors or in-depth investigation. In addition, the researchers will implement programs to instill the awareness of having good solid waste management and further develop strategies and programs to help ensure the continuing education and information on solid waste management.

METHODOLOGY

Research Design

This research utilized the non-experimental quantitative research design using descriptive and comparative research designs to develop and propose a program on solid waste management and practices. Descriptive evaluation quantitative research design is an approach that provides a detailed description about the experiences or perspective of respondents. Descriptive comparative quantitative research design is an approach that involves comparing the behavior of different groups. Descriptive evaluation quantitative research design was used to describe the level of students' solid waste management awareness and practices. Additionally, descriptive comparative quantitative research design was employed to compare the solid waste management awareness and practices among the different grade levels of junior high school.

Respondents and Sampling

A total of 112 junior high school students participated in the study, of which 26 are Grade 7 students, 29 are Grade 8 students, 28 are Grade 9 students and 29 are Grade 10 students. They were chosen because they are capable of providing information that is being asked in the study. Informed consent was used in accordance with ethical guidelines. Informed permission forms were given to the participants, who were asked to indicate to them whether or not they were willing to participate in the study.

Furthermore, a stratified random sampling method was used to randomly select the students per level of junior high school students. Thus, the probability of selecting a cluster is commensurate with its size.

Instrumentation

Awareness of Students on Waste Management. Data on students' level of awareness in waste management was collected using a structured questionnaire adapted from a research study entitled Student's Awareness on Waste Management: Their Effect on Waste Management Practices by Annaliza Panganiban-Santos, MaEd and Ray Rudolf Pastrana (2021). The questionnaire is composed of three indicators

such as awareness on regulations, awareness on standards, and awareness on health and environment effects. Awareness on regulations have three statements. Awareness on standards composed of six statements. Awareness on health and environment effects have two statements.

The survey questionnaire entitled Awareness of Students on Waste Management was composed of five indicators and rating scale these are very great extent (5), great extent (4), moderate extent (3), least extent (4), and none at all (1).

Practices on Solid Waste Management. Data on students' level of waste management practices was collected using a structured questionnaire adapted from the research study entitled Level of Awareness and Practices on Solid Waste Management among Students in Iligan National High School, Iligan City by Cahoy (2013). The questionnaire is composed of two indicators which are segregation and reduce. Practices on solid waste management in terms of segregation and reduce have five statements each.

The survey questionnaire entitled Practices on solid waste management in terms of segregation and reduce was composed of four indicators and rating scale these are always (4), often (3), seldom (2), and never (1).

Data Gathering Procedure

The researchers prepared all the necessary documents such as letter of approval and survey questionnaire. After getting permission, the researchers met with the students, gave them the assent and consent form, and explained to them why the study was being conducted. They were also informed that the answers they provided on the questionnaire would be kept completely confidential and used only for that purpose. First, the researchers gave the letter of approval to the school of the participants asking for the permission to conduct the study. Next, the survey questionnaires were distributed and momentarily answered by the students. Last, the collection of survey questionnaires. After the student answered the questions, the researchers explained the nature of the checklist in view of the awareness and practices on solid waste management. The assessment took only 60 minutes.

Data Analysis

After collecting all the questionnaires, data were organized, tallied, tabulated and analyzed using some statistical tools. Descriptive statistics such as mean and standard deviation were used to describe the students' level of awareness and practices in solid waste management. One-Way Anova was performed to compare solid waste management awareness and practices among the different grade levels of junior high school.

RESULTS AND DISCUSSION

In this study, 112 respondents from junior high school were included in descriptive statistics and one-way anova analyses. The results aimed to assess and compare the level of solid waste management awareness and practices among junior high school students. Descriptive statistics were used to analyze the awareness and practices of students on waste management. One-way anova was used to test if there is a significant differences in solid waste management awareness and practices among the different grade levels of junior high school.

Table 1.
Awareness of Students on Waste Management

Awareness of Students on Waste Management	**Mean**	**Verbal Interpretation**
Awareness on Rules	3.77	Great Extent
Awareness on Standards	4.50	Very Great Extent
Awareness on Health and Environment Effects	4.81	Very Great Extent
Overall	**4.36**	**Great Extent**

Legend:
4.50-5.00 Very Great Extent
3.50-4.49 Great Extent
2.50-3.49 Moderate Extent
1.50-2.49 Least Extent
1.00-1.49 None at all

The data in Table 1 shows the mean and verbal interpretation on the Awareness of Students on Waste Management in terms of regulations, standards, and health and environmental effects was great extent as shown by the overall mean value of 4.36. Among the three indicators students poses high level of awareness on health and environmental effects as shown in the table (mean=4.81). On the other hand, they demonstrate great extent of awareness on rules (mean=3.77).

The results implies that the junior high school students possess satisfactory level of awareness about solid waste management. The findings of this study support the studies conducted by Paghasian (2017), according to their study the students have enough knowledge about solid waste management. It is also parallel to the study of Panganiban-Santos and Pastrana (2021), revealed that junior high school and senior high school students have very great extent awareness in terms of solid waste management.

Table 2.
Practices on Solid Waste Management in Terms of Segregation and Reduce

Practices of Students on Waste Management	**Mean**	**Verbal Interpretation**
Segregation	3.09	Good

Reduce	3.25	Very Good
Overall	**3.17**	**Good**

Legend:
3.25-4.00 Very Good
2.50-3.24 Good
1.75-2.49 Fair
1.00-1.74 Poor

The Table 2 shows the practices on solid waste management in terms of segregation and reduce among the junior high school students. The total mean score response of segregation got 3.09 with a verbal interpretation of 'Good' in which revealed that students perform so well in segregating mixed-waste processes suggesting that these students really segregate the waste properly, because the students classify the waste properly and at the same time, they keep separate containers of trash based on its physical properties and students oftentimes segregate non-harmful waste from toxic waste to prevent failing to segregate trade waste that ends up mixed in the bins. On the other hand, the mean score interpretation regarding the practices on solid waste management in terms of reduce among the junior high school students got the overall total mean interpretation response of 3.25 with a verbal description of "Very Good' suggesting that the students still practiced the reduction of materials on solid waste management. Implying that most students practiced reducing waste materials in order to not contribute in building up waste products and still indicates that the students had a good practice for waste reduction through bringing reusable water bottles than buying water in one-used.

Overall, the overall total mean interpretation got 3.17 with a verbal description of 'Good' suggesting that students maintain a clean environment and support the prevention of contamination. These outcomes suggest that most of the students segregating and reducing their waste into respective containers and classify the waste based on its type. Segregation of waste is still being practiced to recycle and help treat waste directly. In line in supporting the waste segregation process, the study findings of Verma and Borongan (2022) suggests that the existing solid waste collection routes require route optimization. We have determined the distance between the central garbage collection office and the bin using the shortest path routing method, ensuring that the collection vehicle visits more bins along the route. In order to maximize fuel efficiency and provide affordable collection management, the collection route is optimized. In result of this, waste management in the city is made easier by employing this technique.

Moreover, this also implies that the students are more environmentally aware to reduce their usage of materials in all aspects of living. As stated by Dahlawi and Sharkawy (2021) that a good program for the practical use of this rubbish, starting with sorting and recycling, reduces the quantity of waste that ends up in landfills, preserves resources, and promotes recyclable materials. In result, waste combinations that aren't necessary can be seen and can help with appropriate segregation techniques.

Table 3.
One –way Analysis between Awareness and Practices of Students on Waste Management

Groups	F	P	Interpretation	Decision
Awareness	20.13	0.001	Highly Significant	Reject the HO
Practices	3.08	0.034	Highly Significant	Reject the HO

The table 3 shows the result of one –way analysis of variance among the awareness and practices of students on waste management. The results show that students' awareness sig. one-way (0.001) is less than alpha value of (0.01). This means that the null hypothesis is rejected which signifies that there is a highly significant difference among the awareness of junior high school students. However, students' practices in solid waste management has a p-value of (0.034) which is less than the alpha value of (0.01). This means that the null hypothesis is rejected which signifies that there is a highly significant difference among the practices of junior high school students.

The results of the study regarding the solid waste management practices, attitudes, and awareness of university staff and students are closely related, which implies that education is a strategic way to successfully implementing a solid waste management program. In order to ensure that the goals for the well-being of people and the environment are realized, schools have a significant role to play in raising people's awareness of the implications of their activities. More precisely, through good environmental education, academic community members develop positive attitudes, become more worried about the growing problem of solid waste, and are motivated to work together to mitigate the issue (Madrigal and Oracion, 2018). Results of this study was parallel to the study of Molina and Catan (2021), revealed that senior high school students in Zamboanga City, Philippines demonstrate good solid waste management in terms of segregation and reduce.

Table 4.
Waste Wise: Promoting Sustainable Practices in Solid Waste Management

Component	Objective	Strategy	Person Responsible	Budget
Education and Awareness	• Increase awareness about sustainable waste management	• Conduct school seminars • Distribute brochures • Integration of solid waste	Teacher and School Administrator	Php 1000.00

	practices among junior high school students.	management in school curriculum		
Implementation of Sustainable Practices	• Promote recycling projects	• Provide recycling bins • Create recycling organization and sell it	School Administrator, Utility Worker, and School Club Officers	Php 1000.00
Community Engagement	• Engage the community in eco-friendly activities	• Organize a clean-up drives activities • Encourage students to create a youth-led organization	Community Officer, Community, and School Administrator	Php 500.00
Monitoring and Evaluation	• Assess the state of solid waste in the community	• Conduct a monitoring activities thrice a week • Conduct a research on how to solve solid waste management challenges	Monitoring Team and Researcher	Php 2000.00

The results of the study may be an important baseline in improving and expanding the existing solid waste management awareness and practices programs and initiating new programs to reduce system waste scantines. These initiatives will enable the nearby communities and schools to encourage them how to manage the garbage and actively divert waste to promote waste reduction.

Conclusions

The solid waste management methods and awareness among junior high school students are presented in this study. The findings showed that students understand the meaning of solid waste, the consequences of improper disposal, activities that are prohibited when it comes to solid waste, school initiatives related to solid waste, the significance of solid waste management, and students' duties. Students, however, know very little about the several rules that are pertinent to solid waste management. These results imply that extensive informational campaigns about rules pertaining to solid waste management should be carried out by educational institutions and other interested parties. The following factors can be blamed for the amount of solid waste management awareness: friends, peers and school. This research implies that the government can use

these channels to spread knowledge about intensively solid waste management. In terms of segregation, reduction, reuse, recycling, and disposal, the results also showed that students follow good solid waste management procedures in having environmental awareness on a day-to-day basis. The researchers proposed a program named Waste Wise: Promoting Sustainable Practices in Solid Waste Management.

Recommendations

Based on the findings of the study, several recommendations are proposed such as encouraging students to participate in recycling programs, incorporating educational programs about solid waste management awareness and practices into school curriculum at all levels to possess environmentally behaviour at an early age, developing solid waste management policies for school to maintain the cleanliness of school. Furthermore, future researchers may utilized this a basis for their research study about solid waste management awareness and practices.

Acknowledgements

Recognition is owed to individuals whose most significant support and influence made a lasting mark on our work. They have volunteered their assistance, made a significant contribution, and deserved respect. The study's completion is appreciated by the researchers. Without those individuals' assistance, the research would not be able to be completed. First and foremost, we are grateful to God Almighty for His unending love, care, and blessings, which have enabled the researchers to confidently and courageously tackle every challenge that lies ahead in finishing this study. The next person we spoke with for advice on how to carry out this study was our thesis adviser, Bryan Gabriel, PhD. He is available to help every step of the way as we conduct this research. He highlights the things that we still ought to have done, and that was a huge assistance. Finally, thank you to our family, friends, and coworkers for your encouragement and support in seeing this project through to the end. The researchers are appreciative of their motivation and spiritual support.

Compliance with Ethical Considerations

To adhere to ethical considerations in conducting this research, all participants were required to read and sign a consent form indicating their voluntary agreement to participate in this study. To safeguard participants' confidentiality, names, addresses, and other personal details were not included in the study. Data collected from the volunteered participants were stored only in the temporary folder on the researchers' laptop. Access to the data was strictly limited to the researchers themselves to ensure security. All the data were handled with utmost care such that only the researchers were able to analyse them to avoid the unauthorized transfer or access of data. After finalizing the paper, the researchers waited until the full completion of the study, after which the researcher deleted all files in the personal laptop and the researchers did not keep any copy of the respondents' data.

SPECIAL SCIENCE SCHOOL SYSTEM (SSSS): IMPLEMENTATION AND CHALLENGES

Cristine M. Cagas
Vera A. Villocido, MA

Holy Name University, Janssen Heights, J. A. Clarin Street Dampas District 6300 Tagbilaran City, Bohol, Philippines

https://doi.org/10.5281/zenodo.13193564

ABSTRACT

This study explores the implementation of the Special Science School System (SSSS) in public elementary and secondary schools in Valencia District, Bohol, Philippines, during the school year 2023-2024. It uses a mixed-methods approach, combining quantitative survey questionnaires, qualitative key informant interviews (KIIs), and focus group discussions (FGDs) to completely analyze the amount of implementation and obstacles faced by school administrators and teachers. The findings reveal differences in perspectives between administrators and teachers, with administrators generally having more positive attitudes towards Special Science School System. Resource limits, time constraints, and reluctance to creative instructional practices are some of the challenges. Nonetheless, both groups emphasize the importance of cooperation, professional growth, and community connections in facilitating implementation. The study emphasizes the importance of continuous evaluation, specialized training, and longitudinal studies to track the program's progress and efficacy. The study recommends regular assessments, targeted professional development initiatives, and longitudinal research to ensure the SSSS's successful implementation and sustainability, to improve scientific education and contribute to the nation's sustainable development objectives.

Keywords: *Science education, Special Science School System*

INTRODUCTION

The ultimate aim of science education is to cultivate scientific literacy among learners, equipping them to meet the demands of a rapidly evolving global landscape. However, the Philippines faces substantial challenges in achieving this goal, as reflected in the country's performance in international assessments. Filipino students' achievements in science have consistently lagged behind their global peers, with the Trends International Mathematics and Science Study (TIMSS) 2007 and the Programme for International Student Assessment (PISA) 2018 indicating significant difficulties in basic scientific skills. Notably, the PISA 2018 report revealed that 81% of Filipino students struggled with fundamental math skills, reading comprehension, and scientific reasoning. This trend continued in the PISA 2022 results, where the Philippines ranked 77th out of 81 countries, showing minimal improvement.

According to Parojenog and Pabalan (2024), despite ongoing efforts by the Philippine government to enhance education quality, the country is facing an educational crisis, particularly in science education, which is vital for personal and national development. The persistent gap in science achievements highlighted by TIMSS 2007 and PISA assessments underscores the urgent need for reforms in science education.

In response to these challenges, Philippine Basic Education emphasized the necessity for a revised curriculum that aligns with the nation's aspirations. This revised curriculum aims to develop lifelong learners with 21st-century skills, discipline, and patriotism. It seeks to prepare students for higher education, employment, and global competitiveness.

The Schools Division of Bohol (SDO-Bohol) introduced the Special Science School System (SSSS) to address these issues. This initiative includes elementary and secondary schools with advanced teachers and minimal facilities to support Special Science Classes (SSC). The SSSS is designed to offer enhanced science education to talented learners, fostering their skills in advanced subjects such as Enhanced Math, Enhanced Science, Creative Technology, and Science Research.

This study is grounded in three prominent curriculum evaluation models: Stake's Responsive Evaluation Model, the Context, Input, Process, Product (CIPP) Model, and Goal-Based Evaluation Theory. Stake's Responsive Evaluation Model, developed by Robert Stake in the 1970s, emphasizes addressing stakeholder needs and understanding diverse perspectives, supporting a collaborative approach to evaluating and improving the SSSS implementation. The CIPP Model, created by Daniel Stufflebeam in the 1987, provides a comprehensive framework for evaluating educational programs through context, input, process, and product components. This model will guide the assessment of the SSSS by analyzing contextual factors, evaluating resource adequacy, examining program delivery, and assessing overall effectiveness.

Based Evaluation Theory, pioneered by Ralph W. Tyler, focuses on evaluating the extent to which a program achieves its predetermined goals and objectives. This theory will be used to measure the SSSS's success in meeting its intended outcomes.

Division Memorandum No. 0322 series of 2023 and DepEd Order No. 55 series of 2010 provide legal support for this study. They outline policies and guidelines for strengthening science and mathematics education and ensuring that the SSSS adheres to national standards.

The implementation of the SSSS presents both opportunities and challenges. Previous studies, such as those by Montebon (2014) and Beasley (1999), highlight the potential of new programs to enhance learning but also emphasize the importance of careful implementation and continuous evaluation. Professional development for teachers and support from school administrators is crucial for the program's success. The research will draw insights from related studies by Atchuela (2019), Sumardani (2021), Bangcaya and Alejandro (2015), Macaranas and Robles (2023), Decenorioa et al. (2016), and Madani (2020) to address the challenges and opportunities in implementing the SSSS.

This research aimed to provide a comprehensive investigation into the implementation of the SSSS in the Valencia District of Bohol, focusing on how the special science classes were rolled out, the challenges encountered, and the program's overall impact. By identifying both the advantages and disadvantages of the SSSS, the study offered actionable recommendations for enhancing science education. The ultimate goal was to better prepare learners for science careers and contribute to sustainable national development. By leveraging theoretical frameworks and practical insights, this research provided valuable contributions to improving science education and supporting the development of scientifically literate individuals in the Philippines.

Research Questions

This study aimed to assess the implementation of the Special Science School System (SSSS) in both elementary and secondary public schools within the Valencia District, while also identifying the challenges encountered during the initial stages of its implementation.

Specifically, it sought to answer the following questions:

1. What is the extent of implementation of the SSSS as perceived by the administrators, and teachers in terms of:
    - 1.1. curriculum implementation;
    - 1.2. instructional program; and
    - 1.3. instructional support?
2. What is the level of the challenges encountered by the school administrators, and teachers in implementing the SSSS in terms of:
    - 2.1. pedagogical content knowledge;
    - 2.2. curriculum and planning; and
    - 2.3. assessment and reporting?

3. Is there a significant difference between the administrators' and teachers' perceptions in terms of:
    3.1. extent of implementation; and
    3.2. level of challenges?
4. Based on the results of the study, what can be proposed to improve the implementation of the SSSS?

METHODOLOGY

Research Design

This study employed a concurrent parallel mixed-method approach, or triangulation design, combining qualitative and quantitative data collection and analysis. This mixed-method design was well-suited for investigating the new special science class program's implementation and challenges, as it provided a more comprehensive understanding of the research problem than qualitative or quantitative approaches alone.

Research Environment

The study was conducted at Valencia Technical Vocational High School (VTVHS) and Valencia Central Elementary School (VCES), both public schools in Poblacion Oriental, Valencia, Bohol. These schools, representing the entire district of Valencia, were approved for adopting the SSSS curriculum. Their selection was based on their capacity to offer the special science program by the requirements outlined by the division's supervision committee, following an on-site inspection and a thorough review of facilities and inventories.

Research Participants

The study focused on school administrators and teachers from public secondary and elementary schools as its main participants. Purposive sampling was employed to ensure key stakeholders were included in establishing the Special Science School System (SSSS). The sample comprised ten personnel from the district's participating schools, including two school principals, two program coordinators, a head teacher, and five master teachers. These individuals played crucial roles in overseeing and implementing the SSSS at their schools. Additionally, the study included all twenty teachers who represented the curriculum in Valencia's primary and secondary schools. These teachers were responsible for handling subjects within the Special Science Class (SSC) and adhering to the guidelines of the SSSS.

Table 1. Distribution of Participants of the Study.

Grade Level	School Administrators	Teachers	Total
Elementary (VCES)	5	8	13
Secondary (VTVHS)	5	12	17
Total	**10**	**20**	**30**

Research Instrument

The study employed a survey questionnaire, key informant interviews (KIIs), and focus group discussions (FGDs) to assess the implementation of the Special Science School System (SSSS). The survey questionnaire, designed based on Macaranas and Robles (2023), evaluated curriculum implementation, instructional program effectiveness, and support systems. It measured participants' perceptions of SSSS implementation across three categories: curriculum and planning, assessment and reporting, and topic knowledge and pedagogy.

For qualitative insights, KIIs and FGDs used adapted guide questions from the survey to explore specific observations and challenges related to SSSS implementation. These guide questions addressed discrepancies in survey responses regarding implementation extent and encountered difficulties.

A panel of experts—the researcher's school principal III, the district's SSSS program coordinator, and a master teacher in science—reviewed the questionnaire to ensure its content validity. Their feedback led to refinements of the questionnaire. The researcher's thesis adviser also reviewed the final version to ensure it aligned with the research objectives.

To evaluate the instrument's clarity and effectiveness, a pilot test was conducted with 15 participants (5 school administrators and 10 science teachers) from a comparable district. Feedback from this pilot test was used to make further improvements.

Data Gathering Procedure

The researcher obtained permission for the study from the Schools Division Superintendent of Bohol. An endorsement letter was then sent to the selected school administrators. The science coordinator, master teachers, and head teachers were informed about the study to secure their support and guidance.

Prior to data collection, a request letter and manuscript were submitted to Holy Name University's Ethics Review Board (ERB) for ethical review. After receiving approval, the researcher adhered to the ERB's guidelines and protocols.

Survey questionnaires and focus group discussions (FGDs) were conducted over a six-day period: two days for distribution, three days for completion, and one day for retrieval. Separate FGDs for administrators and teachers, each lasting 60 minutes, used open-ended questions to discuss SSSS implementation and challenges. FGDs were conducted impartially, and manual transcription of discussions ensured accuracy. Participants reviewed transcripts for transparency. Those unable to attend FGDs were interviewed via key informant interviews (KIIs).

Data Analysis

The study employed both quantitative and qualitative methods to ensure result validity and reliability. Quantitative data was organized and analyzed using Microsoft Excel for descriptive statistics and the Statistical Package for the Social Sciences (SPSS) for advanced analysis. T-tests compared mean scores between teachers and school administrators to identify significant differences in perceptions of SSSS implementation.

Qualitative data, being categorical, were analyzed using thematic analysis. This process involved transcribing data, generating codes to capture key responses and themes, and refining these codes through cross-referencing with transcripts. This approach enabled the integration of qualitative insights with quantitative survey results, providing a comprehensive understanding of the SSSS implementation.

Treatment of Data. The study used both quantitative and qualitative methods to evaluate the administrators' and teachers' assessed implementation levels of the Special Science School System (SSSS) and the difficulties they encountered during the initial year of operation.

The following are the statistical treatments that were employed in achieving the research objectives:

To determine both the extent of implementation of the Special Science School System (SSSS) and the level of challenges encountered throughout its implementation process, the researchers applied the weighted mean formula:

$$WM = \frac{\sum \text{fx}}{\text{N}}$$

Where :

WM = Weighted Mean
$\sum fx$ = the sum of frequencies and its weight
N = the number of participants

The computed weighted mean was interpreted using the following scales:

Scale	Description
3.26 - 4.00	Fully Implemented
2.51 - 3.25	Mostly Implemented
1.76 - 2.50	Partially Implemented
1.00 - 1.75	Not at all implemented

Scale	Description
4.21 - 5.00	Extremely Challenging
3.41 - 4.20	Very Challenging
2.61 - 3.40	Moderately Challenging
1.81 - 2.60	Slightly Challenging
1.0 - 1.80	Not at all challenging

In order to ascertain any meaningful distinctions between the perspectives held by administrators and teachers concerning the extent of the implementation of the Special Science School System (SSSS), as well as their perceptions regarding the level of challenges faced during its implementation, the t-test formula was used:

t-value

$$t = \frac{\bar{x}_1 - \bar{x}_2}{\sqrt{\frac{s_1^2}{n_1} + \frac{s_2^2}{n_2}}}$$

$\bar{x}_1$: Mean value of the first group
$\bar{x}_2$: Mean value of the second group
n_1 : Size of the first group
n_2 : Size of the second group
s_1 : Standard deviation of the first group
s_2 : Standard deviation of the second group

Thematic analysis served as the qualitative method utilized to interpret the data obtained from the focus group discussions to distinguish the specific observations the administrators and teachers have about the implementation of SSSS, employing manual transcription to transcribe the spoken words into written text. Throughout this process, the administrators' and teachers' interview responses were carefully refined and merged, focusing on finding commonalities in their concepts. These combined answers were then arranged into discrete themes and descriptions that captured the main aspects of their perspectives. The final themes were collated, totaled, and evaluated in accordance with the issue statement, which made it possible to fully comprehend the data and enable more in-depth comprehension of the study goals.

RESULTS

This chapter discusses the school administrators' and teachers' responses which were summarized using descriptive statistics (weighted mean) and inferential statistics (t-test) for quantitative data. Content analysis was applied for qualitative data in which responses were organized according to themes. Discussion notes from transcriptions were woven into the form of narratives.

Table 2. Extent of Implementation in Curriculum Implementation.

Curriculum Implementation	Administrators		Teachers	
	WM	Description	WM	Description
Admission – Meeting the standard admission policies that are clear and easy to follow based on the issuances and guidelines.	3.40	Fully Implemented	3.00	Mostly Implemented
Retention – Meeting the standard and clear policy in student retention in the program.	3.00	Mostly Implemented	2.95	Mostly Implemented
Curricular Programs – Complying with the learning competencies intended for Special Science School System (SSSS) implementing schools.	3.40	Fully Implemented	2.80	Mostly Implemented
Co-curricular Programs – Providing co-curricular programs that are clear, accepted by learners, and do not disrupt instructional time.	3.10	Mostly Implemented	2.65	Mostly Implemented
Composite Mean	3.23	Mostly Implemented	2.85	Mostly Implemented

LEGEND: 1.0-1.75 Not all Implemented; 1.76-2.50 Partially Implemented; 2.51-3.25 Mostly Implemented; 3.26-4.0 Fully Implemented

Table 2 shows the extent of implementation of the Special Science School System (SSSS) as perceived by the participants in terms of curriculum implementation.

The results indicate that administrators perceive a higher degree of curriculum implementation compared to teachers. Administrators rated the implementation with a weighted mean of 3.23, ranging from 3.00 to 3.40, suggesting they view it as meeting expectations from "mostly implemented" to "fully implemented." In contrast, teachers rated it lower, with a composite mean of 2.85, ranging from 2.65 to 3.00, indicating that while they view the SSSS implementation positively overall, some areas do not fully meet their expectations.

Regarding admission policies, administrators reported a higher level of implementation (weighted mean of 3.40) compared to teachers (3.00). Administrators emphasized fairness and thoroughness in admissions, using multiple assessment methods and ensuring inclusivity. In contrast, teachers expressed concerns about the lack of transparency and inadequate communication in the admissions process, noting that unclear guidelines and limited assessment procedures affect the effectiveness of student selection.

Both administrators and teachers rated retention rules and curricular programs reasonably well, though administrators gave slightly higher scores. Co-curricular

programs were rated lower by both groups, with administrators scoring 3.10 and teachers scoring 2.65, indicating a need for improvement to fully meet expectations.

These findings align with Atchuela's (2019) study, which also reported positive perceptions of curriculum implementation due to the effective application of objectives and instructional methodologies. The consistency of these results underscores the importance of these aspects in achieving successful curriculum implementation.

Table 3. Extent of Implementation in Instructional Program.

Instructional Program	Administrators		Teachers	
	WM	Description	WM	Description
Faculty Development – Giving seminars and training attended by teachers are related to the needs of the special science school system.	2.70	Mostly Implemented	1.95	Mostly Implemented
Teachers Qualification – Ensuring that the academic preparation of the teachers matches the requirements of the curriculum.	3.60	Fully Implemented	2.85	Mostly Implemented
Instructional Strategy – Instructional activities that show systematic organization, implementation, and evaluation following a class size for quality and excellence through sound classroom management.	3.10	Mostly Implemented	2.75	Mostly Implemented
Composite Mean	3.13	Mostly Implemented	2.52	Mostly Implemented

LEGEND: 1.0-1.75 Not all Implemented; 1.76-2.50 Partially Implemented; 2.51-3.25 Mostly Implemented; 3.26-4.0 Fully Implemented

Table 3 presents the extent of the Special Science School System (SSSS) implementation in terms of the instructional program as perceived by administrators and teachers.

Administrators rated teachers' qualifications highest, with a weighted mean of 3.60, indicating they view this component as well-implemented. They emphasized the importance of professional development and qualified teachers for the Special Science Class (SSC), with one administrator noting, "We prefer teachers with academic skills, allowing only master teachers and those with advanced degrees to teach this class." Another administrator highlighted the need for action research among SSC teachers to enhance instruction. This underscores administrators' commitment to supporting continuous teacher improvement.

Teachers rated qualifications with a weighted mean of 2.85, reflecting their recognition of the importance of qualified educators, though slightly lower than administrators' ratings.

Both groups rated faculty development lowest, with administrators scoring 2.70 and teachers 1.95, indicating a belief in its implementation but also suggesting room for improvement.

Instructional strategies were rated similarly by both groups, around 3.10, indicating general agreement that these strategies are implemented effectively. Administrators emphasized their comprehensive approach to performance evaluation and support, including monitoring, feedback, and professional development. They also valued professional learning communities and mentorship.

The composite means are 3.13 for administrators and 2.52 for teachers, both within the "mostly implemented" range. Administrators generally perceived a higher level of implementation than teachers, though both groups identified areas for improvement. These results align with Sumardani's (2021) study, which also indicated effective teaching approaches, but highlighted faculty development issues not covered in that research, suggesting differing views on training and support.

Table 4. Extent of Implementation in Instructional Support.

Instructional Support	Administrators		Teachers	
	WM	Description	WM	Description
Laboratory Facilities, Equipment, and Supplies – Providing appropriate lab equipment apparatuses, considering advances in science and technology which allow for small group work.	3.0	Mostly Implemented	2.55	Mostly Implemented
Library Facilities and Services – Providing relevant and updated book selections with extensive collection of science and math- oriented books which meet the demands of the special science school system program.	2.4	Mostly Implemented	2.20	Mostly Implemented
ICT Integration – Teachers develop science lessons by designing informative PowerPoint, web pages, flash animations, and digital video productions.	3.40	Fully Implemented	2.90	Mostly Implemented

Physical Facilities (School Site, Buildings, and Classrooms) – A well-planned campus with adequate buildings for the social, cultural, and sports activities of learners with enough tables, chairs, and technology.	3.20	Mostly Implemented	2.50	Mostly Implemented
Composite Mean	3.0	Mostly Implemented	2.54	Mostly Implemented

LEGEND: 1.0-1.75 Not all Implemented; 1.76-2.50 Partially Implemented; 2.51-3.25 Mostly Implemented; 3.26-4.0 Fully Implemented

Table 4 presents the extent of implementation of the Special Science School System (SSSS) as perceived by participants regarding instructional support. Overall, perceptions are positive but vary between administrators and teachers.

Both administrators and teachers rated laboratory resources as "mostly implemented," with weighted mean (WM) scores of 3.0 and 2.55, respectively. However, teachers' lower scores suggest areas needing improvement in laboratory equipment. Similarly, library services and facilities received moderate scores of 2.4 and 2.20, indicating challenges in maintaining current and relevant book selections.

Administrators perceived ICT tool usage in science lessons as "fully implemented," with a WM score of 3.40, reflecting their commitment to integrating technology and enhancing learning experiences. This contrasts with teachers, who emphasized the need for more interactive, experiential learning approaches to boost engagement. Teachers also highlighted the importance of collaborative professional learning communities, aligning with research on effective leadership and stakeholder involvement in education.

The data reveals a dynamic SSSS implementation process, underscoring the need for continuous adaptation to technological advancements. Both administrators and teachers agreed that physical facilities were "mostly implemented," with WM scores of 3.20 and 2.50, indicating the general adequacy of school infrastructure. This suggests that while the SSSS has made significant strides, ongoing professional development, and support are necessary to integrate technology and enhance instructional practices fully.

Table 5. Level of Challenges in Pedagogical Content Knowledge.

Pedagogical Content Knowledge	Administrators		Teachers	
As an administrator/teacher, I face challenges in…	WM	Description	WM	Description
1. Supporting teachers in applying knowledge of content within and across curriculum teaching areas.	3.40	Moderately challenging	3.10	Moderately challenging

2. Ensuring teachers have extensive knowledge of content beyond their area of specialization.	3.10	Moderately challenging	3.20	Moderately challenging
3. Encouraging teachers to motivate learners to investigate content to expand knowledge and satisfy curiosity.	3.30	Moderately challenging	3.30	Moderately challenging
4. Helping teachers make intra- and interdisciplinary content relationships.	3.20	Moderately challenging	3.30	Moderately challenging
5. Confirming teachers address content accurately aligned to discipline.	2.90	Moderately challenging	3.40	Moderately challenging
Composite Mean	3.18	Moderately challenging	3.26	Moderately challenging

Legend: 1.0-1.80 Not at all challenging, 1.81-2.60 Slightly challenging, 2.61-3.40 Moderately challenging, 3.41-4.20 Very Challenging; 4.21-5.0 Extremely challenging

Table 5 illustrates the perceived challenges administrators and teachers face in implementing the Special Science School System (SSSS) related to pedagogical content knowledge. Both groups reported similar difficulties, with weighted mean scores ranging from 2.90 to 3.40, indicating "moderately challenging" conditions.

Administrators found confirming teachers' alignment of content to discipline the least challenging, with a WM score of 2.90, while supporting teachers in applying content knowledge across curricula was the most challenging, with a WM score of 3.40. An administrator noted that the absence of centralized teaching materials and lack of prior training sessions hindered teachers' development, and another pointed out teachers' limited engagement in embracing new approaches. Administrators also reported being overwhelmed by other tasks, affecting their focus on supervising the SSSS.

Conversely, teachers viewed ensuring content accuracy and alignment with core ideas as the most challenging, with a WM score of 3.40. They struggled with balancing depth of understanding against curriculum coverage within tight time constraints and keeping up with evolving scientific knowledge. They also faced difficulties in integrating new discoveries into their teaching.

Both administrators and teachers faced challenges in assisting with intra- and interdisciplinary content relationships and motivating students, with a WM of 3.30. Overall, the composite mean scores for administrators and teachers were 3.18 and 3.26, respectively, reflecting a "moderately challenging" view of SSSS implementation in pedagogical content knowledge.

These findings align with studies by Atchuela (2019) and Macaranas and Robles (2023), highlighting the importance of effective implementation strategies and addressing

challenges in content alignment and application within specialized science education programs.

Table 6. Level of Challenges in Curriculum and Planning.

Curriculum and Planning	Administrators		Teachers	
As an administrator/teacher, I face challenges in…	WM	Description	WM	Description
1. Supporting sequenced teaching and learning processes to meet curriculum requirements.	3.0	Moderately challenging	3.60	Very challenging
2. Ensuring teachers plan well-structured lessons connecting concepts.	3.30	Moderately challenging	3.15	Moderately challenging
3. Confirming teachers sequence activities to scaffold learning objectives.	3.10	Moderately challenging	3.30	Moderately challenging
4. Helping teachers connect outcomes to previous and future learning.	2.80	Moderately challenging	3.25	Moderately challenging
5. Providing appropriate teaching and learning resources including ICT.	3.10	Moderately challenging	3.25	Moderately challenging
Composite Mean	3.06	Moderately challenging	3.31	Moderately challenging

Legend: 1.0-1.80 Not at all challenging, 1.81-2.60 Slightly challenging, 2.61-3.40 Moderately challenging, 3.41-4.20 Very Challenging; 4.21-5.0 Extremely challenging

Table 6 presents the perceived challenges administrators and teachers face in implementing the Special Science School System (SSSS) concerning curriculum and planning.

There are notable differences in how administrators and teachers perceive these challenges. Administrators find supporting sequenced teaching and learning processes less difficult than teachers, who rate it as extremely challenging. Teachers struggle to relate outcomes to past and future learning, whereas administrators find this task less challenging. The composite mean scores of 3.06 for administrators and 3.31 for teachers indicate that both groups view curriculum and planning challenges as moderately challenging.

Administrators rated supporting sequenced teaching and learning processes as moderately challenging, with a weighted mean score of 3.0. They face difficulties in

collaborative planning due to varying faculty objectives and time constraints. One administrator highlighted the need for a more inclusive approach by stating, "Others like teachers and staff represent us in overseeing the new program."

In contrast, teachers found implementing sequenced teaching and learning processes to meet curriculum requirements challenging, with a weighted mean of 3.60. Due to limited instructional time, teachers struggle to make science concepts relatable and face issues with rushed, superficial treatment of topics. This highlights the difficulty in balancing curriculum demands with maintaining instructional quality.

Weighted mean scores ranging from 2.80 to 3.30 reflect challenges from "moderately challenging" to "very challenging." Administrators rated assisting teachers in connecting results to past and future learning moderately challenging (WM = 2.80), while teachers found it more challenging (WM = 3.25). Both groups agreed that planning well-structured lessons and sequencing activities to support learning objectives were relatively challenging, with a WM of 3.30.

The differing perceptions between administrators and teachers on various curriculum and planning difficulties align with findings from Macaranas and Robles (2023) and Atchuela (2019), which emphasize the need to address challenges in curriculum planning and implementation within specialized science education programs.

Table 7. Level of Challenges encountered in Assessment and Reporting.

Assessment and Reporting	Administrators		Teachers	
As an administrator/teacher, I face challenges in…	WM	Description	WM	Description
1. Implementing diagnostic, formative, and summative assessments consistent with curriculum.	3.10	Moderately challenging	3.20	Moderately challenging
2. Supporting teacher use of assessment strategies for learner self-monitoring.	2.90	Moderately challenging	3.35	Moderately challenging
3. Ensuring assessments are embedded and aligned with content standards.	3.10	Moderately challenging	3.25	Moderately challenging
4. Monitoring and evaluating learner progress and achievement.	3.0	Moderately challenging	3.20	Moderately challenging

5. Facilitating communication of learners' progress to stakeholders.	3.10	Moderately challenging	3.20	Moderately challenging
Composite Mean	3.04	Moderately challenging	3.24	Moderately challenging

Legend: 1.0-1.80 Not at all challenging, 1.81-2.60 Slightly challenging, 2.61-3.40 Moderately challenging, 3.41-4.20 Very Challenging; 4.21-5.0 Extremely challenging

Table 7 outlines the perceived challenges faced by administrators and teachers in implementing the Special Science School System (SSSS) related to assessment and reporting. Both groups view these challenges as moderately difficult, with composite mean scores of 3.04 for administrators and 3.24 for teachers.

Teachers identified using assessment strategies for learner self-monitoring as the greatest challenge, with a weighted mean of 3.35. Administrators, however, rated this challenge as the least difficult, with a weighted mean of 2.90. Other challenges, such as integrating assessments with content standards and communicating learner progress to stakeholders, were similarly rated by both groups, with mean scores of 3.10 to 3.25.

Further insights from key informant interviews (KIIs) and focus group discussions (FGDs) reveal that administrators face logistical issues, such as ensuring access to necessary resources and managing various administrative tasks, which impact the assessment process. Conflicts and resource constraints also hinder effective teacher-student conferences and the monitoring of student performance.

Teachers highlighted the need for adaptive teaching methods to address varying levels of prior knowledge among students, emphasizing the importance of differentiated instruction and engaging assessment strategies. These challenges underscore the need for ongoing support and professional development to enhance assessment practices within the SSSS.

These findings align with Sumardani's (2021) study, which stresses the importance of addressing assessment challenges and ensuring conformity with content standards for effective SSSS implementation.

Table 8. Difference between participants' perceptions on implementation.

Variable	Mean$\pm SD$	Computed T-value	P-value	Decision on Ho	Interpretation
Extent of Implementation of administrators & teachers	Teacher: 2.65 ± 0.35 Administrator: 3.12 ± 0.34	-7.03	0.003	Reject Ho	Significant

Table 8 shows a significant difference between administrators' and teachers' perceptions of the Special Science School System (SSSS) implementation. Administrators reported a higher mean perception score (3.12 ± 0.34) compared to teachers (2.65 ± 0.35). The computed t-value of -7.03 and p-value of 0.003 indicate statistical significance, leading to the rejection of the null hypothesis.

This suggests that administrators perceive a higher extent of SSSS implementation than teachers. The discrepancy may be due to administrators' broader oversight and access to institutional data, which influences their view of implementation effectiveness. In contrast, teachers are more focused on daily classroom issues and interactions. Administrators have access to additional information, such as resource distribution and professional development programs, which shapes their understanding of the SSSS implementation.

Table 9. Difference between participants' perceptions on the level of challenges.

Variable	Mean$\pm SD$	Computed T-value	P-value	Decision on Ho	Interpretation
Level of challenges of administrators & teachers	Teacher: 3.27 ± 0.12 Administrator: 3.09 ± 0.14	3.27	0.013	Reject Ho	Significant

Table 9 reveals a significant difference between administrators' and teachers' perceptions of the challenges encountered in implementing the Special Science School System (SSSS). Teachers reported a higher mean score of 3.27 compared to administrators' mean score of 3.09. The computed t-value of 3.27 and p-value of 0.013 indicate statistical significance, leading to the rejection of the null hypothesis.

This difference suggests that teachers view the challenges of implementing the SSSS as more significant than administrators do. This disparity reflects the distinct experiences and roles of the participants, with teachers having a more nuanced understanding of the obstacles due to their direct involvement in curriculum delivery and instruction. Teachers face practical difficulties in the classroom that administrators may not encounter firsthand.

DISCUSSION

Findings

The following are the highlights of the study:

1. Administrators and teachers have differing perspectives on the extent of the implementation of the SSSS. Teachers report a lower mean of 2.65, indicating a less favorable view, but administrators report a higher mean of 3.12, indicating a relatively strong assessment of implementation. Specifically,

1.1. In terms of curriculum implementation, administrators generally rated the implementation higher than teachers across various aspects such as admission policies, retention rules, curricular programs, and co-curricular programs with a composite mean of 3.23 for administrators and 2.85 for teachers. The lower composite mean from teachers indicates that some areas fell short of their expectations.

1.2. In terms of the instructional program, both groups prioritized teachers' qualifications. Administrators scored it as "fully implemented" with a composite mean of 3.60, while teachers, rated it as "mostly implemented" with a composite mean of 2.85. This highlights mutual acknowledgment and recognition that ensuring teachers' academic preparation coordinates with the curriculum requirements is critical for effective SSSS implementation.

1.3. In terms of instructional support, administrators and teachers generally perceived the implementation positively, with some variations. The composite mean for instructional support was 3.0 for administrators and 2.54 for teachers. The divergence of perceptions stems from differing vantage points of school administrators and teachers. The variation stresses the need for continued efforts in bridging the gap between organizational aspirations and classroom realities.

2. The level of challenges encountered by school administrators and teachers in implementing the Special Science School System (SSSS) is perceived to be moderately challenging, with administrators rating the challenges slightly lower with a mean of 3.09 than teachers with a mean of 3.27. Specifically,

2.1. In terms of pedagogical content knowledge, both administrators and teachers rated the challenges with a composite mean of 3.18 and 3.26, respectively. The contrast in the identification of the most challenging task underscores the varying priorities among participants in which school administrators focused on cross-curricular integration while teachers grappled with the complexities of content delivery.

2.2. For curriculum and planning, administrators rated the challenges with a composite mean of 3.06, while teachers rated them slightly higher at 3.31. It was easier for school administrators to support sequenced teaching and learning processes than teachers who find it extremely difficult. The contradiction of perceptions reveals different realities faced by administrators focusing on curricular alignment while teachers were occupied with the integration of conceptual understanding across learning experiences.

2.3. In assessment and reporting, administrators and teachers rated the challenges with composite means of 3.04 and 3.24, respectively. Results highlight the need for professional development and resource allocation, empowering teachers with strategies to integrate monitoring assessments.

3. There is a significant difference between the administrators' and teachers' perceptions of the extent of implementation of the SSSS. Administrators conveyed a higher mean perception score (3.12 ± 0.34) compared to teachers

(2.65 ± 0.35). The computed t-value of -7.03 and the p-value of 0.003 indicate statistical significance.

4. There is a significant difference between the administrators' and teachers' perceptions of the level of challenges encountered in the implementation of the SSSS. Administrators reflected a lower mean perception score (Mean±SD: 3.09±0.14) compared to teachers' (Mean±SD: 3.27±0.12). The computed t-value of 3.27 and a p-value of 0.013 indicate statistical significance.

Conclusions

The implementation of the Special Science School System (SSSS) in qualified schools was a significant milestone, with the introduction of transparent admission rules, efficient screening processes, and inclusive admission practices. However, the implementation process was not without obstacles. Resource restrictions, time constraints, and reluctance to innovative educational methodologies surfaced as major roadblocks. Despite these challenges, administrators and teachers emphasized teamwork, professional development, and community collaborations to improve the implementation process emphasizing the necessity of adaptability and ongoing support in overcoming obstacles and ensuring the successful implementation of the SSSS program. It indicates that implementation techniques must be evaluated and refined on an ongoing basis to handle emerging issues and maximize the SSSS's efficacy in improving scientific education.

Recommendations

The following are hereby recommended:

1. School administrators in the Division Office should undertake regular assessments of the SSSS implementation process to monitor perception changes and address differences between administrators and teachers. Surveys, focus group discussions, and key informant interviews can be used to acquire qualitative information on their thoughts.
2. Administrators and teachers should be provided with specialized professional development opportunities to address specific implementation problems. Workshops, seminars, and training sessions can focus on curriculum preparation, instructional methodologies, and collaborative practices to help teachers apply the SSSS more effectively.
3. Other schools or districts that are planning or already implementing the SSSS should establish mechanisms for continuous feedback, monitoring, and evaluation. Regular assessment and collaborative analysis can facilitate a shared problem-solving approach that enhances the quality and effectiveness of the SSSS implementation.
4. Future researchers should consider undertaking longitudinal studies to monitor the progress and efficacy of SSSS adoption over time. By gathering data at numerous periods in time, researchers can obtain insight into the program's

sustainability, detect developing difficulties, and assess the long-term impact on student outcomes.

Compliance with Ethical Standards

Any ethical concerns that could have risen throughout the study were resolved by securing necessary permits. Also, the researcher personally handed the research tools to the schools, with the assistance of the administrators, which included the informed consent form and questionnaires. Before data collection began, all research terms and conditions were fully disclosed to maintain transparency. Despite receiving clearance from the school principals and administrators, the researcher obtained informed consent from participants by individually requesting them to participate and providing thorough information about the study, including potential risks and benefits, as well as privacy safeguards. Each participant was asked to review and sign the informed consent form, indicating their comprehension and willingness to be involved in the study. It was optional to provide the participants' names, which were coded to preserve their identity. To safeguard data, further confidentiality measures were put in place, such as limiting access to physical and electronic resources. The study closely followed data privacy and research ethics guidelines, and participants were made aware of their freedom to withdraw from the study at any moment without facing consequences.

PROPOSED ENHANCEMENT PROGRAM

Rationale

The Department of Education initiated the implementation of the Special Science School System (SSSS) aimed at advancing science education within the region's secondary schools (DepEd Order No. 55 series 2010). Although significant progress has been made, there are still underlying issues that need to be addressed in order to guarantee the program's long-term viability and effectiveness. The developmental plan that has been suggested aims to tackle these obstacles and use prospects to improve the execution of the SSSS.

Through a strategic emphasis on critical domains such as the need for clearer admission requirements, diverse screening processes, and enhanced faculty support. These insights emphasize the importance of refining existing practices and fostering a collaborative environment to overcome implementation hurdles and ensure the program's success. The plan aims to cultivate an atmosphere that promotes program success and students' overall growth. The strategy prioritizes these areas in an effort to foster an atmosphere that will facilitate the successful implementation of the SSSS. The school offering Special Science Class (SSC) may overcome obstacles and fully implement the SSSS, boosting scientific instruction and supporting learners' holistic development, by working together and implementing focused interventions.

Objectives

The primary goal of this Enhancement Program is to improve the operation of the Special Science School System (SSSS) in implementing schools by focusing on critical areas for development. Specifically, the initiative seeks to:

1. Create and implement targeted professional development programs for teachers to improve instructional methodologies, classroom management approaches, and methods for engaging unmotivated learners;
2. Provide a forum for continued dialogue and cooperation amongst community people, educators, parents, and school administration to address issues, get input, and promote a feeling of responsibility and support for the SSSS implementation;
3. Give administrators access to mentorship and leadership development programs to improve their capacity to oversee implementation processes, resolve issues, and foster a welcoming and inclusive school environment that promotes student achievement; and
4. Prioritize areas that administrators and teachers have recognized as vital when evaluating resource allocation and usage methods to ensure adequate provision of materials, technology, and support services required for successful SSSS implementation.

Matrix

Objectives	Activities	Persons Involved	Timeframe	Success Indicators
Create and implement targeted professional development programs for teachers	1. Conduct needs assessment to identify areas for improvement in instructional methodologies	School administrators, Department of Education	3 months	Increased teacher competency in identified areas
	2. Develop curriculum for professional development workshops	Curriculum developers, Teacher trainers	2 months	Completion of workshop curriculum
	3. Facilitate workshops and training sessions	Facilitators, Subject matter experts	Year round	Attendance and participation rates
	4. Provide follow-up support and resources for continued professional growth	Teachers, Professional development coordinators	Year round	Feedback from teachers on usefulness of support
Provide a forum for continued dialogue and cooperation amongst stakeholders	1. Establish regular meetings or forums for stakeholders to discuss SSSS implementation issues	School administrators, Teachers, Community members	Year round	Increased collaboration and communication
	2. Encourage active participation and feedback from all stakeholders	Facilitators, Moderators	Year round	Number of meetings held, attendance rates

	3. Implement mechanisms for collecting and addressing concerns raised during meetings	School administrators, Department of Education	Year round	Timely resolution of issues raised
Give administrators access to mentorship and leadership development programs	1. Identify experienced mentors or leadership coaches to provide guidance and support	Department of Education, Experienced teachers	1 month	Availability of mentors/ coaches, selection criteria
	2. Develop leadership training curriculum focusing on oversight, issue resolution, and inclusivity	Curriculum developers, Leadership trainers	2 months	Completion of curriculum development
	3. Facilitate leadership training sessions	Trainers, Facilitators	Year round	Attendance and participation rates
	4. Provide ongoing support and feedback for administrators' growth and development	Teachers, Professional development coordinators	Year round	Feedback from administrators on usefulness of support
Prioritize areas for resource allocation and usage based on identified needs	1. Conduct comprehensive evaluation of current resource allocation and usage practices	School administrators, Department of Education	2 months	Identification of areas for improvement
	2. Gather input from teachers and administrators on resource needs and challenges	School administrators, Teachers	1 month	Feedback from stakeholders on resource allocation
	3. Develop revised resource allocation plan addressing identified needs and challenges	Resource allocation committee	1 month	Completion of revised resource allocation plan
	4. Implement revised resource allocation plan and monitor effectiveness	School administrators, Department of Education	Year round	Improved access to necessary resources

STATUS OF HEALTH PROGRAMS, ACTIVITIES AND CHALLENGES EXPERIENCED OF PERSONS DEPRIVED OF LIBERTY (PDLS) IN THE CORRECTIONAL FACILITIES IN METRO MANILA

Ma. Ellaine Keith F. Dela Paz, Elrick Arnel G. Acevedo, Clover D. Mendoza, Jannah Nicole M. Rosales, Martin Angelo G. Sales, Elwyn Brian Javier, RN, MMEM

College of Nursing, World Citi Colleges, Quezon City, Philippines

https://doi.org/10.5281/zenodo.13292646

ABSTRACT

The health and well-being of Persons Deprived of Liberty (PDLs) in the Philippines are the focus of this nursing research. PDLs encompass individuals in detention facilities awaiting trial, serving sentences, or under various custody forms, reflecting an international commitment to human rights within criminal justice systems. This study evaluates cell conditions, food quality, cleanliness, and overall well-being among PDLs while exploring international best practices to enhance their living conditions and mental health. Concerns such as elevated suicide rates and drug misuse underscore the critical mental health challenges faced by PDLs, exacerbated by prolonged incarceration. By providing insights into these issues, the research aims to inform prison administrators and policymakers on improving PDLs' well-being and treatment. The ultimate goal is to promote a humane and rights-based criminal justice system in the Philippines, thereby enhancing the health and quality of life for PDLs. Emphasizing the importance of comprehensive policies addressing health and well-being across structural and social dimensions, this study advocates for creating a supportive prison environment that prioritizes PDLs' health and facilitates their successful reintegration into society.

Keywords: *Persons Deprived of Liberty, prison conditions, mental health, Philippines, criminal justice reform*

INTRODUCTION

The health of Persons Deprived of Liberty (PDLs) in the Philippines is an urgent matter that has to be addressed. The overall health issues that inmates in the nation deal with

have been the subject of several studies. Persons Deprived of Liberty (PDLs) environment should be a top-tier priority due to the overwhelming crowd inside the prison. Unsafe cells have far-reaching consequences. Prison (un)safety is instrumentally alarming because it implies future increases in criminal reoffending and public health problems. Higher reoffending rates are associated with lower prisoner health and poorer prison living quality (Auty & Liebling, 2020). Furthermore, prison health is public health. Considering the conditions under which they are being held, the persons deprived of liberty (PDLS) are still human and deserves humane treatment. Authorities have deteriorated already inadequate health, preventing access to healthcare and productive activities (Ismail, 2019). PDLs health is deteriorating, which is critical for behavior change and has serious consequences for re-entry results.

Rehabilitation starts at their health changes and strategies how the coping mechanism they have in their environment. Prison systems often neglect physical activities, resulting in unhealthy living conditions due to overcrowding and limited opportunities. Despite this, many inmates who do engage in sports, dancing, and games report significant physical and mental benefits. Research indicates that the psychological and relaxing effects of these activities are positively correlated with participation in games and sports (Baldonado et al., 2022). The prison environment significantly impacts inmates' physical and mental health. Challenges include safety concerns for transgender inmates (Brown, 2014), stigma and anxiety for sexual offenders (Blagden et al., 2014), and overall stress and anxiety due to the restrictive and unease-inducing nature of prison life. The environment also hampers effective communication and access to healthcare, particularly for those with disabilities or special needs (Perrett et al., 2019; Dodd et al., 2022). These conditions hinder social skills and reintegration into society post-release (Januin et al., 2023).

Emotional well-being is crucial for inmates, especially older individuals with mental health conditions (Lima et al., 2022). Studies highlight the importance of addressing the emotional challenges faced by aging prisoners and the need for supportive relationships to enhance self-efficacy and overall well-being (Lorito et al., 2017; Crewe et al., 2013; Noujaim et al., 2017). A comprehensive approach to emotional support within the prison system is necessary. Access to healthcare in prisons is limited by various barriers, including judicial obstacles and the impacts of the war on drugs (Shortis et al., 2022; Beckett et al., 2005). Ensuring community-equivalent healthcare and addressing transitional care between prison and the community are crucial for the well-being and rehabilitation of inmates (Simpson et al., 2021; Abbott et al., 2017).

The availability and accessibility of healthcare facilities within prisons are critical. Spatial accessibility to medical services, including maternity services for women, plays a significant role in ensuring adequate healthcare (Tao et al., 2020; Paynter et al., 2020). Evaluating and improving the distribution of these facilities can help address healthcare disparities (Jin et al., 2019). Providing necessary medical services, especially for managing infectious diseases like HIV/AIDS, is essential (Pedroso et al., 2023). Addressing the physical activities, environmental conditions, emotional wellness, healthcare access, and facility availability in prisons is vital for improving the health and well-being of inmates. This requires a comprehensive and empathetic approach that recognizes the unique needs of different inmate populations.

This study also aims to learn more about the conditions within the cells, the cleanliness of the surroundings, and the well-being of the PDLs. The study also hopes to discover different approaches used by other nations in dealing with situations of this nature, and it hopes to implement any ideas or strategies learned there to aid the Philippines' environment and PDLs. According to a report by the National Library of Medicine, "suicide rates among prisoners are six times higher than those of the general population, raising concerns about their mental health." This is more common for PDLs who have been in jail for more than a year; they claim that they misused drugs for their self-control or to relax; many of them have poor mental health which causes anger, frustration, and anxiety. They also claimed that they misused drugs for their self-control.

Understanding the larger environmental and organizational variables that lead to poor mental health in prisons should be given more thought. Additionally, this data can be utilized to guide administrators and decision-makers in the jail system.

Research Questions

The study generally aims to evaluate and determine the public health challenges faced by the Filipino Persons Deprived of Liberty or PDLs of Metro Manila. Specifically, this research aims to provide answers to the following questions:

1. What is the current state of PDLs in Correctional Facilities in Metro Manila, and its impact to their overall well-being?

2. What healthcare activities are implemented in the Correctional Facilities in Metro Manila?

3. What are the primary obstacles encountered by Persons Deprived of Liberty (PDLs) in the Correctional Facilities of Metro Manila?

4. What are the recommended comprehensive measures and strategies to effectively address the various health concerns of persons deprived of liberty (PDLs) in Metro Manila's correctional system, while promoting a holistic and rehabilitative approach?

METHODOLOGY

The researchers utilized a descriptive qualitative research approach to assess an overview of the current health programs, activities, and obstacles in Metro Manila facilities. Semi-structured interviews were utilized to gather data with the aim to gather valuable insights directly from healthcare professionals, enhancing the understanding of the health-related conditions within the correctional facility. The study followed with a phenomenological design involving coding key concepts, organizing codes into themes, and refining them for meaningful insights, particularly in exploring human experiences and perspectives.

The research locale was conducted within Metro Manila (Parañaque City), Philippines. The study targets Healthcare workers and nurses who have a minimum of one year of experience working with PDLs in correctional facilities, have a comprehensive understanding of the health programs in place, and can provide insights into the well-being of PDLs and officers who have a minimum of one year experience and roles in the day-to-day functioning of the correctional facilities. Their perspectives are essential for understanding the overall conditions within the facilities. Lastly, supervisors and chief wardens hold leadership positions within the facilities. Purposive sampling was used to determine data saturation, guaranteeing a comprehensive representation of diverse perspectives. Data sources, such as healthcare providers and administrators, bolster the study's credibility. The participants are provided with the findings to validate and ensure that their viewpoints are faithfully portrayed.

Furthermore, the research used a Roy's Adaptation Model (1976) framework to interpret the data acquired. Data consists of things that may be assessed based on respondents' perceptions. Before the questionnaire was ready for the interview, the researchers underwent an evaluative assessment, which assured the guided questionnaire's validity with three (3) validators who checked for content adequacy, lack of bias, and relevance. Feedback on potential modifications was encouraged. The documents and authorization letter required for data gathering have been managed.

Before data collection, the researchers sought assistance from the Bureau of Jail Management and Penology in the National Capital Region, Philippines, to reach potential participants. With the assistance of officers and wardens, the researchers found participants needed for data collection. The data-gathering procedure was conducted from April 3rd and April 26th, 2024. For ethical considerations, Informed Consent was given before proceeding with the interview. Finally, the researchers coded key concepts, organized codes into themes, and analyzed the participants' responses.

RESULTS

Comprehensive Wellness rehabilitation program for PDL's

This theme describes the Person Deprived of Liberty (PDL) and the need for proper access to services that can help their health and well-being. The facilities offer activities and programs that address the physical, mental, emotional, and sometimes spiritual needs of the PDLs. Regular exercise and indoor and outdoor sports aim to encourage physical health and teamwork. The monthly Frolics program is arranged to promote social interaction, enjoyment, and closeness through these events. Mental health needs are catered to through therapeutic interventions and counseling sessions, offering support to address psychological needs and personal challenges. The implementation of the livelihood program gives the PDLs opportunities to develop skills and improve their personal lives. These programs provide vocational training and job readiness courses based on the needs of the person by providing PDLs with practical skills. To improve their possibility of finding work and reintegrating into society after they are released. It also

helps build a purpose and self-worth, motivating them to make positive changes in their life.

1. Comprehensive Wellness Rehabilitation Program at the Correctional Facilities in Metro Manila

Table 1. Comprehensive Wellness rehabilitation program for PDL's

Themes	**Subthemes**
Comprehensive Wellness and Rehabilitation	Regular Exercise Regimen
	Monthly Frolics Program
	Scheduled Sport Activities
	Therapeutic Intervention and Community Programs
	Comprehensive Health Strategy
	Counseling and Psychological Interventions
	Variety of Recreational Options
	Comfortable Accommodations
	Routine and Structure
Cultivating Health and Building Resilience	Improved physical health
	Improved mental health
	Positive outlook in life
Holistic Wellness and Engagement Activities	Regular morning exercise and sunning
	Implementation of Livelihood programs
	Sport activities
	Board games for entertainment

As stated by the participant " *Mas hinahanap na nila yung activities kasi nabu-bored sila sa loob ng jail, sa loob ng cell. So, yung mga activities, pag-gising pa lang sa umaga, nagkakaroon na sila ng activities. Exercises, minsan umiikot sila sa loob ng cell, minsan sa buong floor.Tapos, naglilinis, may kanya-kanya silang mga responsibilities. Tapos, after nun, pagkatapos ng mga prayer, yan. So, ano yun, sa psychology, nakakatulong sa kanila yun…Pag dating naman ng gabi, yan pa rin. Madalas, ah, pelikula na naka save, mga movies. Yun. So, yun matakaw sila dyan sa panunood.*" The participant said that PDLs are more likely to look for distractions and activities so they do not get bored throughout the day. Sports are the foundation of a healthy life, and physical activity is necessary for physical and mental health (Warburton & Bredin, 2017) (White et al., 2017).

As stated by Jail Officer "*Meron din naman tayong ginagawa na program every month yan. May naman tayong naka-structured na mga program. And yung mas-awaited na program, yung National Correctional Consciousness Week, it's a one-week na activity yun ng BJMP na parang that is correctional week. Parang foundation day natin…. Every month kasi may mga ano eh, ang tawag dito, meron tayong mga occasions. So as much as possible, meron tayong program per month.* "According to the officer, the more they are engaged in program activities, the less they can think of bad things like running away. Participation in monthly programs and activities encourages social interaction and a sense of building closeness and brotherhood inside (Elena & Nansy, 2022). Regular socializing lessens the feeling of loneliness and isolation and leads to better mental health for the PDLs.

Implemented Health Care Activities in the Correctional Facilities

The following theme describes the Person's Deprived of Liberty (PDL) involvement in holistic and wellness activities. These activities involve implementing various procedures and programs in correctional facilities that address the PDL's overall health. These programs aim to meet patients' mental, emotional, and occasionally spiritual requirements in addition to their physical wellness. Correctional facilities strive to create an environment that supports rehabilitation and personal development by providing access to programs and services that include physical exercise regimens, mental health counseling, educational opportunities, artistic expression outlets, social connection initiatives, and accommodations for diverse spiritual or religious practices. These all-encompassing strategies aim to lower recidivism rates by enabling people to overcome obstacles, create healthy coping strategies, and learn skills that enable a smooth transition back into society.

Balancing Privacy and Practicality explores how to navigate privacy laws to ensure respectful communication and resource access. Breaking Barriers in Facing Stigma and Health Disparities seeks to combat discrimination against (PDLs) and marginalized genders, fostering equality in healthcare. Transparency in restroom design is also promoted. Physical fitness programs and activities encourage paid labor and inclusive sports participation. They also support frequent outdoor activities like sunbathing to improve general health.

2. Health Care Activities

Table 2. Implemented Health Care Activities in the Correctional Facilities

Themes	**Subthemes**
Breaking Barriers in Facing Stigma and Health Disparities	Stigma among PDLs
	Attitude toward marginalized gender
Balancing Privacy and Practicality	Privacy laws
	Consent and communication
	Transparent restroom
Physical fitness activities / program	Sports programs
	Compensated labor
	Regular sunning

Jail Officer in Male Dorm mention about the stigma among PDLs is about HIV and the participant said is ‘’Well basically, *yung rule of law natin na bawal silang ipagkalat, yung confidentiality natin number one yun. And then...With regular, kasi maintenance na kasi ininom nila eh. So continuous, yes continuous yung medications nila. In the follow up check up kasama nila*.” Healthcare providers play a crucial role in the lives of PLHIV, but stigma and discrimination among medical care providers towards HIV patients can hinder effective prevention and treatment efforts (Elamin et al., 2019). Discrimination by healthcare providers, such as administering HIV tests without consent, refusing treatment, or disclosing confidential information, can lead to negative consequences (Dong et al., 2018). Additionally, discrimination due to adolescent HIV can indirectly impact retention in care through increased internalized stigma (Pantelic et al., 2020).

As stated by Jail Officer 2 shares about the attitude toward marginalized gender that *“Uhh, ideally dapat talaga naka-naka-separate ng pdl with special needs Bakit sila nagsama dun sa special needs? Kasi syempre meron silang*
special attention na pwedeng dapat na pinoprovide natin sa kanila so ang mga senior citizen nakahiwalay yan, ang mga kinaklasify kasi natin dito sa jail pagdating na na dito, kinaklasify natin sila. Ito para sa mga petty crimes lang, o mababa lang mga kaso nito. Ito para sa mga gantong age range. Ito para sa mga matataas ang mga kaso nito sa dorm nito.Dito ang mga senior citizens, and PWD para sa sama sila. Sigurong, kinaklasify din natin. Pero with regards to the transgender, hindi natin sinaseperate, nahiwalay. Sinasama natin sila, doon pa rin sa mga cells. Pero if open naman ang jail management,

kung may mga violation against them, halimbawa, may harassment na ginagawa sa kanila".

It is essential to consider the influence of education and prior experiences on attitudes towards marginalized groups, as training programs and exposure to diverse perspectives can help foster more inclusive attitudes (Nayak, 1999; Özkan & Küçükkelepçe, 2019). Additionally, societal attitudes toward gender roles and norms can affect perceptions of marginalized genders, highlighting the importance of promoting egalitarian views (Beji & Murat, 2022; Trogrlić et al., 2020). Factors such as age, gender, and personal experiences have been identified as significant influences on attitudes toward various social issues, including substance use disorders (Abuhammad et al., 2022).

As stated by the Jail officer in the male dormitory, *"Monthly may tinatawag kami ang Frolics. Frolics yung parang... Parang.. Masayang program. Para malibang sila. Then afternoon may schedule kami dito sa taas, sila naglalaro sila ng volleyball, badminton, basketball, and yung mga activities sila dito."* Implementing sports programs in correctional facilities has been shown to impact the physical and mental well-being of incarcerated individuals positively. Research indicates that sports can improve prisoners' general health, emotional management, and self-perception (Arana et al., 2018). Furthermore, sports-based interventions have been found to motivate imprisoned individuals in reentry programs, ultimately aiming to reduce reoffending rates (Meek & Lewis, 2013). These programs promote physical activity and promote health initiatives within prison settings (Meek & Lewis, 2012).

As stated by Jail Officer in Male Dormitory *"From the deped, meron tayong ALS. And ano tesda, pumapasok dito. So they already have the skills bago lumabas."* In the Philippines, providing education to individuals deprived of liberty, such as those in prison, is crucial for rehabilitation and reintegration into society. The Department of Education (DepEd), Commission on Higher Education (CHED), and Technical Education and Skills Development Authority (TESDA) have been recommended to expand their community services to enhance the delivery of the Alternative Learning System (ALS) among incarcerated individuals (Petrola et al., 2022). ALS is a non-formal education program that can help prisoners acquire essential skills and knowledge.

As stated by Chief Jail Nurse Male mentions that *"Yung privacy kasi parang mawawala sa'yo kung ikaw ay nakulong. Paano ba yan? Parang pila-pila ang pag punta sa CR minsan, sabay-sabay pa. I mean, LIGO. Hindi naman yung pupunta sa CR mismo, as in comfort room, sa ligoan. Minsan may oras yung pagligo, minsan sabay-sabay".* In providing a transparent restroom for a person deprived of liberty, it is essential to consider the ethical implications and human rights aspects associated with such facilities. Persons deprived of liberty, whether in prisons, healthcare facilities, or other settings, often face challenges in accessing essential services, including healthcare (Pedroso et al., 2023).

As stated by Jail officer 2 Male Dormitory mentions that "On a regular basis there are sunning as well as sports fest for physical activities". In the context of persons deprived of liberty in the Philippines, engaging in physical activities can be a beneficial and constructive approach. Research has shown that individuals deprived of their liberty often

face challenges related to health, access to proper nutrition, and limited physical exercise opportunities (Hattori et al., 2020). Encouraging physical activity among this population can help address these issues and promote overall well-being. A study conducted in a district jail in the Philippines aimed to determine the types of physical activities available to persons deprived of liberty and their level of satisfaction with these activities (Baldonado et al., 2022). Implementing structured physical activity programs within correctional facilities can improve physical health and contribute to mental well-being and social interaction among inmates.

Chief Jail Nurse Female dormitory mentions that *"May consent siyempre. May consent. Di namin sila pinipinit. Kasi isang ano yun eh, diba bawal."* In the Philippines, obtaining consent for HIV screening among persons deprived of liberty is crucial to uphold their rights and dignity. International human rights laws emphasize the importance of obtaining consent before subjecting individuals to HIV testing. This requirement aligns with the need to respect the liberty and security of individuals, especially those in vulnerable situations such as incarceration (Eba, 2015). Providing healthcare services, including HIV testing and treatment, to persons deprived of liberty is essential for their well-being and is mandated by laws in various countries (Pedroso et al., 2023; Cardoso et al., 2022; Bossonario et al., 2020).

Primary Obstacles encountered by PDLs at the Correctional Facilities in Metro Manila

Within correctional institutions, PDL presents particular healthcare difficulties that need careful attention to protocol enforcement, schedule adherence, and the creation of rules to maintain orderliness. Even with these initiatives, there are still obstacles to receiving healthcare, such as a shortage of specialized clinics, inadequate medical equipment, and budgetary limitations. Court rulings requiring proper medical treatment emphasize how urgent it is to solve these issues. In addition, pregnant people in correctional settings must get compassionate treatment according to the principles of maternal health equity.

According to certain participants, health aid is available inside the cell for them 24 hours a day, and they also mentioned whether or not there was a sick person inside the cell. They added that the PDLs consistently adhered to the facilities' timetable and procedures and always respected the area's cleanliness and regulation. Some participants also mentioned that they did not have enough medicine for PDLs who depended on it for daily requirements. Indeed, the area needs more money to meet PDLs' needs in some areas. Regarding the prenatal checkup, they stated that it is scheduled and that hospital support is always available nearby.

3. Primary Obstacles

Table 3. Primary Obstacles encountered by PDLs at the Correctional Facilities in Metro Manila

Themes	Subthemes
Protocol enforcement	Schedule and routine
	Policy for orderliness
Addressing Healthcare Barriers and Improving Access in Correctional Facilities	Lack of medical equipment
	Lack of clinic
	Court order for adequate medical care
	Financial constraints
Ensuring and Compassionate Care in Maternal Health Equity	Prenatal Checkup
	Lactation area
	Hospital assistance
	Prenatal care is provided in a female dorm

As stated by the participants *"mula 5 o'clock ano na yan start na ng gising nila. Ano na yan start na kami ng zumba. May mga uh personal na ano na rin sila uh breakfast. Uh rest and relaxation, meron na rin silang uh when it comes to relaxation wala talagang uh activity. Ako prefer ko kasi kaya sinasabi ko rin sa kanila na kahit yung sunday meron man lang tayong day in a week na medyo pahinga kayo, lie low kayo sa mga activities para makapahinga rin naman"* The participants said that PDLs are entirely engaged inside the facilities. The cultural program seeks to foster a sense of camaraderie among PDLs, growth of self-confidence, and the sharing of cultural abilities as a constructive kind of entertainment. Dance, music, theater/drama, and art workshops are among the cultural activities permitted for prisoners (BJMP 2024).

Other participants said *" Sa medical supplies. Huwag medicines ma'am ah. Halimbawa, suwero, halimbawa butterfly. Ano lahat to? Ilalapit ko lahat kay Warden. Sir, wala na po tayong ganto." The facilities can provide basic needs for medication or necessary things medical supplies inside the area, but when it comes to more specific medical needs they*

need to notify the warden first, one of the participants said that Lahat naman ng medical needs ng PDL na aattend, kung may kailangan for laboratory, bukas kung yung medical mission kung ano yung nirequest ng doctor, tina triage din namin yun. Kung sino yung sense of urgency, kung urgent pa ba, selective, yun ang ginagawa namin. Kung masakit naman sila, nadadala naman namin sila sa hospital kasi malapit lang yung hospital dito, nadaanan ninyo na yun." It is stated that they can offer medical support to PDLs who require laboratory testing and urgent hospital needs at a doctor's request. If they cannot arrive, they will be admitted to the hospital because the current hospital is quite far away. According to the (BJMP 2024), they offer medical services. PDL health services include illness promotion, prevention, treatment, and rehabilitation interventions. When a PDL is accepted, they have a medical evaluation. During their incarceration, PDLs get regular health monitoring, medical consultations, health education and counseling, and medication, if available. PDLs can exercise and receive daily sun exposure to maintain their physical health.

As stated by the participants *"Prenatal niya. Naka-schedule naman yun. So ano naman yun, Madali na kausap ang court. Naka-schedule na siya. Lahat na ng ating services na available doon sa hospital, dadalhin nalang natin si Buntis."* while the other participants said *"Pagdating sa maternal, prenatal, dinadala namin muna sa barangay. sa barangay muna and then i-endorse ng barangay dyan sa OSPA. Wala kaming namimiss na prenatal minsan pa mas nasasamahan ko yung PDL sa kanyang prenatal kesa dun sa asawa ng sa nag-prenatal." Regarding prenatal care, one of them noted that BJMP never skips a prenatal checkup for PDLs."minsan mas nasasamahan ko yung PDL sa kanyang prenatal kesa dun sa asawa ko"* This indicates that they provided excellent care for PDLs in need of prenatal support. According to one study, the jail should designate a space easily accessible for all required prenatal and postnatal care and treatments. This space can also be used as a nursery suitable for nursing newborns delivered to a mother-PDL, provided that trained staff is present and the facility is always used with the child's best interests in mind (Borlongan, 2021).

Improvement and Referrals

This describes the Person's Deprived of Liberty (PDL) access to health services through facilities and other forms. This involves using correctional facilities' healthcare infrastructure corresponding with treatment standards; certain participants state that they have scheduled routine medication distribution and continuous nursing supervision in every cell with nursing aids available inside to give them the report. Some participants also brought up comprehensive prenatal care and hospital support for their pregnant PDLs. This term encapsulates the idea that pregnant individuals receive thorough and consistent prenatal check-ups, ensuring they receive appropriate medical attention and support leading up to delivery. Additionally, it highlights the importance of hospital assistance in providing necessary care and support during labor, delivery, and the postpartum period, further emphasizing the comprehensive nature of the services provided to pregnant individuals.

4. Recommendation

Table 4.1. Improvement and Referrals

Themes	Subthemes
Modernized and Well-Maintained Facilities	Utilization of appliances for ventilation
	Removal of excess non-essential belongings
	Supply of potable water
Prompt hospital referral for pregnant PDLs	Regular check ups
	Hospital assistance

The infrastructure and environment in which care is delivered from the first line of defense: Their modernized, maintained healthcare units are critical to ensuring that the sick behind bars receive the required attention. They are responsible for on-the-spot general health care needs and addressing emergency medical situations within prisons. Facilities were invested in modernization, using appliances for ventilation and removing excess unessential objects to make the environment or providing potable water alongside an effortful landscaping plan that follows suit with sustainable agriculture principles; they create not only a place where healing and good health can thrive but also someplace where healthy living becomes possible. Through this upgrading work, not only does the quality of care get better, but it also maintains the dignity and rights of the people living there.

Chief Jail Nurse in Female Dorm mentions that "*may mga provided naman ang electric fan dyan. As of now ngayon talaga mainit.*" added by the Jail Officer shares that *"Okay lang, sa ventilation talaga passing through lang yung ano tawag dito, yung air jan. So syempre, iiwasan din natin. Since yun na nga lang yung way of entry and exit ng air within the facility. Kasi kung... So ngayon, especially ngayon, na sobrang init. Talagang... Kailangan yun. Marami lang talaga tayong window. Syaka may canopy. Pero grilled yun. Highly secured naman yun. Naka-double grills yun. Pero yun lang. Iniiwasan lang natin na walang mga blockage doon. Kasi yung iba, nagalagay sila ng... Kung alam niyo yung term na kubol na tinatawag. o parang naggagawa sila ng parang nilalagyan na ng kurtina yung mga cells o yung mga higaan nila yung mga bunks so yun, ina-avoid natin yun tinatanggal natin yun para at least minimize yung ay hindi, ma-ano talaga natin ma-maximize yung flow ng air in yung ventilation Kasi talaga wala talaga tayong magagawa. Nasa Pilipinas tayo alam natin nyan, mainit talaga dito. And syempre hindi rin natin sila pwedeng ganda ng air conditioning system. Number one, that is very… costly yun, very expensive yun on the part of the government. Kasi pinapakain na nga natin sila, alamin na ba kung gaano kalaki ang ginagasos. Actually liability ng government ang mga PDL. Kasi siyempre, pinapakain natin sila. At the same time kung mag-air ka pa sila, dagdag*

pa yun sa cost. So okay na lang nung may mga fan. Inaano natin naman, mayroon tayong mga exhaust fan diyan. Mayroon din tayong mga... mayroon din sila mga fan per dorm. Na talaga enough naman para well ventilated yung air."

As both participants mentioned, the care provided by correctional officers and healthcare professionals plays a significant role in safeguarding inmates' physical and mental health. Several studies have highlighted the importance of adequate healthcare services and the role of officers in ensuring the safety and well-being of individuals in custody. In addition to improving the health of PDLs, attending to these requirements as soon as possible has been shown by studies to lower criminality and, eventually, imprisonment rates. Moreover, Programs that offer support in these areas have been shown to enhance rehabilitation efforts. Furthermore, organizational factors and community involvement are crucial in prisoner rehabilitation and reintegration (Santora & Lillefjell, 2014).

Warden in Female dorm mentions that "*so before ako mag one month nawala na yung mga kurtina kaya nakikita nyo po sila through and through. Nagpatanggal ako ng mga excess as in sobrang dami ng uh di lang gamit, daga. Which is natakot ako. Sabi ko bakit napakaraming daga. As in parang may- may naghahabulan sila in you front talaga. Ang lalaki talaga as in di sila natatakot. Only to find out na napakarami naming gamit sa loob. Napakarami nang excess. Meron ako pinalabas sa kanila na 'ito lang po yung kailangan na nasa jail'. Uh sa ngayon, nasa process pa rin ako kaya ayan mero nyung staff namin. Meron sila na dorm by dorm sila tapos nag account sila 'ano yung gamit mo?' so ito hindi pwede, tanggal. Tapos another one is pag nagge-greyhound kami, everyday may greyhound eh, almost everyday. So pag may nakikita na 'ito hindi dapat to dahil according sa napagusapan' so tatanggalin natin either ipauwi mo sa family mo or.".*

The participants need to be more concerned about considering the impact of overcrowding and clutter on indoor air quality and overall living conditions. Research has shown that overcrowded and cluttered living spaces can lead to poor ventilation, which in turn can contribute to the spread of airborne diseases and increase the risk of respiratory infections among PDLs. Inadequate ventilation in overcrowded residences has been linked to an increased risk of tuberculosis transmission (Ramaliba et al., 2017). To address the issue of poor ventilation in overcrowded and cluttered living spaces, it is essential to implement strategies to improve airflow and air quality. This may include regular cleaning to reduce dust and allergens, decluttering for better air circulation, and ensuring ventilation systems function correctly. In conclusion, overcrowded and cluttered living spaces can lead to poor ventilation, which can have negative implications for the health and well-being of inhabitants. By prioritizing proper ventilation and reducing overcrowding and clutter, it is possible to create healthier indoor environments and mitigate the risks of poor air quality.

A Warden in the Female dorm shared that "*nagrequest din ako sa uh Maynilad, sana ma-approve. Uh nagrequest ako ng fountain. Kasi ano eh ano nga yung tawag dito. Uhm syempre yung tubig dito syempre di naman lahat potable. Uhm ang PDL kung san naman talaga- even tayo matipid diba. Hindi naman lahat yan may kakayanang bumili ng mineral*

water. So kahit saan lang yan iinom. Sa gripo. Eh hindi naman natin sure kung potable yung diba yung nasa gripo. So what we did, isa sa request namin kay Maynilad is baka meron silang mabigay na yung fountain. Kasi uh meron silang uh inapprove sa ano sa ibang- may nalaman kaming inaprubahan nila sa ibang jail".

The participant requested potable water with the assurance of clean, drinkable water to ensure hydration and promote the health of the PDLs. Prisons struggle with inadequate sanitary facilities, dangerous and polluted water supplies, and water scarcity. The lack of access to clean water, overcrowding, and inadequate sanitation facilities have exacerbated the spread of diseases within prison environments (Hout, 2022; Mhlanga-Gunda et al., 2022). The right to clean water is crucial for maintaining the health and well-being of PDLs, and the failure to provide this basic necessity can lead to protests and riots among incarcerated individuals (Mhlanga-Gunda et al., 2022).

Pregnant PDLs receive thorough prenatal care, frequent checkups, and quick access to required medical procedures by placing a high priority on rapid referrals. This supports pregnant people's access to appropriate healthcare, regardless of their circumstances, and also encourages favorable outcomes for both the mother and the fetus.

A Jail Officer shared that "Well*, basically number one would be regular check-up. Regular check-up. Because monitoring the baby is very important. Noh? Including… vaccines hindi lang para sa vitamins really good vitamins" Added by the Chief Health Service that "Ito pag may buntis kami… Kapag may dala dito sa aming buntis… I pre-natal namin sila agad. I-request namin sa court na need ng prenatal checkups, Tapos, ayun. Pag nanganak, yan, tatakbo din namin yun sa hospital. Tapos, yung check-ups nila, ano talaga, kung ano yung date na ano. Talagang follow-up talaga. Meron naman sila."*

Regular check-ups and medical assistance provided by correctional facilities play a crucial role in addressing the healthcare needs of incarcerated individuals. Regular check-ups and hospital assistance for pregnant inmates are crucial to ensure the well-being of both the mother and the developing fetus. Research emphasizes the importance of better policies, enforcement, and standard practices to improve the health and welfare of pregnant incarcerated women (Kelsey et al., 2017). Early and regular prenatal care is highlighted as essential in preventing adverse outcomes for pregnant women (Ssetaala et al., 2020). Additionally, stresses the significance of providing dietary supplements, nutritious meals, and nutritional counseling to incarcerated pregnant women, although adherence to these guidelines in jail facilities may be lacking (Forestell & Dallaire, 2018). Incarceration presents unique challenges in providing healthcare services due to factors such as limited budgets, high inmate turnover, and larger inmate volumes. Despite these challenges, it is essential to streamline care for pregnant inmates to ensure they receive necessary check-ups and assistance during their pregnancy (Yi et al., 2016). Additionally, nursing care plays a significant role in supporting pregnant women during their incarceration and the postpartum period ("Nursing Care of Incarcerated Women During Pregnancy and the Postpartum Period," 2018).

Behavioral Management and Protocol among the PDL Population

Correctional institutions come with conducting behavioral management implemented in the facility among the PDLs that comes with the rules and protocols. This theme describes the protocol management inside the facility with the officers' initiative and the PDLs' cooperation and how they abide by the rules. Creating programs for inmate development to get them ready for their ultimate reintegration into society is the primary goal of the Directorate for Inmates Welfare and Development. The Bureau of Jail Management and Penology (BJMP) implements the Therapeutic Community Modality Program (TCMP), which intends to change people's thinking and behavior through structured processes. The TCMP has four interconnected developmental aspects: behavior management, emotional and psychological, intellectual and psychological, and vocational and survival skills.

Table 4.2. Behavioral Management and Protocol among the PDL Population

Themes	**Subthemes**
Holistic Wellness and Engagement Activities	Regular morning exercise and sunning
	Implementation of Livelihood Programs
	Sport Activities
	Board games for entertainment
Protocol Enforcement	Schedule and routine
	Policy for orderliness
Comprehensive Wellness and Rehabilitation	Regular Exercise Regimen
	Monthly Frolics Program
	Scheduled Sport Activities
	Therapeutic Intervention and Community Programs
	Comprehensive Health Strategy
	Counseling and Psychological Interventions

	Variety of Recreational Options
	Comfortable Accommodations
	Routine and Structure

As stated by one of the participants, *"Oo, meron. Kasi part yun ng TCMP program noh. Pagkagising nila hanggang sa pagtulog nila yun yung TCMP program. So meron silang final accounting dito by 10.30 p.m. So that after that final accounting na 10.30, dapat ano na yun, tulog na silang lahat. Kasi gigising sila the next morning at 5 am. Kasi start na sila ng exercise tapos mag-almusal na sila."*. The participant stated that the PDLs act according to the routines they follow in their daily activities. The routine comprises waking up and sleeping at the scheduled time, doing recreational activities throughout the day, and relaxing in their free time. These activities promote self-growth and self-discipline to improve their well-being in the correctional facility. An increase in the length of physical activities in jail has been recognized as one of the several approaches that will have the most beneficial impact in decreasing inmates' high risks of many diseases and improving prisoners' health and well-being (Mukiza, 2014).

Another participant shared, *"Yung program na yan ay yung therapeutic community modality program or yung TCMP diyan naman kasi ang focus niyan is to address nga yung behavior ng mga PDL natin. So kung halimbawa ay talagang problem sila sa community, kung doon nagkakaroon sila ng parang conflict with the community, conflict with the family, we are trying na i-reassess nila, i-reevaluate nila yung sarili nila through that program para mas mad-discover din nila yung sarili nila. Kasi para siyang ano eh, para siyang… counseling, group counseling isa yun sa ginagawa natin para program dito hindi lang sa focus sa medical condition siyempre holistic kasi tayo dapat diba hindi lang focus tayo sa isang bagay hindi tinitignan din natin yung pwedeng natin maitulong sa kanya holistically kasama dun yung behavior nila psychological, ganyan may mga psychological ano din tayo dito may counseling na ginagawa, may naman psychological interventions especially kung meron sila may psychiatric patients din ano sila so actually iba-iba na pwede ko pang i-discuss na yan pero mostly yun lang naman pa sa ngayon, actually exercise zumba nag - ganyan sila, nag coconduct sila dito ng stress ano tawag dito, stress management every day may stress management sila kasi syempre we know now you are a person deprived of liberty talaga syempre since you are parang separated from your family yung liberty mo talaga wala din, at talagang pinagkait sayo most of our clients stressed sila talagang in the first months or years nalang nalang nandito in denial pa yan, parang ayaw pa nila na… Bat yun, since yun tinatulungan din natin sila holistically, not only medically pero ah mas i-address natin yung consensual condition din."*. The participant shared their approach to how they help the PDLs not just in their health but also in terms of their psychological and emotional well-being. According to BJMP (2024), the program teaches and models positive thinking, pro-social values, sound decision-making, and positive coping. The program teaches the participants how to cope in an environment away from the norm with positive thinking and approach to their life in the

facility through a psychological approach and recreational activities. They deal with the PDLs through counseling and stress management to address their needs.

Another participant stated *"Meron tayong tinatawag na TCMP. Hindi sya- hindi ko sya maconsidered na recreational. Uh pero sya yung parang backbone ng aming buong programs. TCMP stands for Therapeutic Community Modality Program. Lahat ng jails nagaano yan, kaya ala singko pa lang gising na sila kasi nakalagay na yan sa aming schedule. Hanggang pagtulog nila, lahat ng ginawa nila nakabond yan doon sa TCMP namin. So may mga nakalagay don about TV viewing, may oras kami ng panonood, siguro part ng recreational. Meron din sila,hindi lang umaga na zumba. Uh nag-ano kasi kami ng mga over- lalo na yung mga overweight, yung mga ano natin. Uh may additional silang extra uh exercise sa hapon.".* The different recreational activities that are implemented for the PDLs includes morning sunning, zumba, and additional exercise for the overweight PDLs.

Another participant stated the protocol when it comes to orderliness among the PDLs, *"Actually sila-sila mismo sa baba eh kasi pagpasok nila diyan may rule na bawal mag ingay. So kapag kagaling sa personnel, lalo pag galing sa personnel, automatic yan."* The noise pollution in the facility is neutralized by having the rule that they are not allowed to produce any noise that is concerning. The PDLs are disciplined when it comes to orderliness in their dorms.

According to Mukiza (2014), he stated that first, there was a statistically significant decrease in the rate of depression, low levels of worry, stress, boredom, anxiety, aggression, identity loss, remorse, and danger associated with improvement among prisoners who regularly engaged in some form of physical activity compared to those who did not. Second, prisoners who engaged in physical activity markedly improved their social skills and fitness levels. Third, it was revealed that prisoners who engaged in exercise or sport did so for enjoyment, fun, and a good feeling from the activity. He said that engagement in physical activity provides a good outlet for prisoners to think through some of these demands as a way of learning to adapt.

DISCUSSION

The significance of a multimodal rehabilitation strategy that acknowledges the many needs of PDLs and seeks to enable them to live healthier, more purposeful lives both inside and outside of prison. Establishing a welcoming atmosphere in prisons that puts PDLs' overall health first and encourages a smooth transition back into society. In order to guarantee fair access to treatment and assistance, it highlights the necessity of comprehensive policies that target a variety of facets of health and well-being in addition to tackling structural and social barriers. It draws attention to the difficulties and initiatives involved in meeting inmates' healthcare needs, especially those of people who are incarcerated (PDLs).

Ensuring the needs of vulnerable populations are addressed calls for a synchronized holistic approach in the health sector. One of the most ignored populations in health conversations is the First PDLs incarcerated within correctional facilities. Historically, the health of a PDL was associated with negligence, stigmatization, and systematic challenges from the jail environment setup. However, establishing the Comprehensive Wellness Rehabilitation Programs has always been a transformative initiative in advancing the well-being and health of the PDLs. The core of any comprehensive approach is engaging the PDLs with various wellness activities. The viewing of PDLs as intrinsic beings with the right to health facilitates their professional and emotional empowerment. Structured activities, such as exercise, therapy sessions, and creative outlets, offer personal growth and rehabilitation venues within Correctional facilities. Comprehensive Wellness Rehabilitation Programs' success is also based on healthcare that should be distributed through all personnel; not only does the PDL healthcare address concerns early and frequently, but health disparities are mitigated through the assessment and assistance of the habilitation professional. Whether chronic condition management or behavioral health support, Comprehensive Wellness Rehabilitation Programs ensures that no PDL is left behind in pursuing a healthy journey. Healthcare solutions are offered on an affordable, accessible basis. There are also calls for more funds to increase supporting facilities. PDLs no longer need to jump through bureaucratic hoops for essential medical assistance. Instead, they have access to various health services that meet the desired goals; they facilitate timely remedies to enhance overall health and wellness outcomes. Protocol management also contributes to making Comprehensive Wellness programs more well-woven. The latter incorporates the integration of clear criteria and steps necessary for efficient health provision to PDLs. Besides, it resolves the problem of past prisons' perceptions and difficulties and boosts responsibility in service responsiveness.

With the lack of nurses and other healthcare workers in the Philippines, health is crucial in this marginalized group. Health care is often—if not most of the time, overlooked upon persons deprived of liberty as people with a negative perspective of them have influenced it. As student nurses, we must advocate for wellness and create an impact in health care for them, as they also deserve the tender love and care that everybody needs. In this matter, student nurses often choose their field of specialty in areas in the hospital. The researchers consider working as nurses in correctional facilities as it also enhances their skills and broadens their perspective as nurses. Improving nursing skills such as vital signs monitoring, primary emergency care for injuries, pharmacology study, and prenatal care is also essential in caring for PDLs.

Overall, the impact of Comprehensive Wellness Rehabilitation Programs is not limited to correctional facilities. With the introduction of e-visits and online hearings, PDLs can now communicate with loved ones at a distance and eradicate the geographical barriers to access to judicial trials. Increases in sleep rotations, a change in environment, and involvement in purposeful activity all increase the well-being of PDLs, allowing for a greater sense of dignity and identity in extreme conditions.

Therefore, the researchers should stand at the forefront of driving health transformation regarding PDLs. Advocate for implementing and expanding the Comprehensive Wellness Rehabilitation Programs from within the individual capacities in the health disposition. It can play an active part in ensuring that PDLs are adequately taken care of and that their fundamental rights to health and humanity are honored. The Comprehensive Wellness Rehabilitation Programs program offers a ray of hope for PDLs in the penal and incarceration environment. These programs offer a holistic solution by meeting the wellness needs of the PDLs involved and actively encouraging them to participate in ensuring they have a bright and promising life.

Conclusions

Based on the indicated findings, the following conclusions were drawn to show the need to provide individuals deprived of liberty (PDLs) in correctional facilities with comprehensive healthcare. These themes include organizing programs to support mental and physical health and guaranteeing overall well-being and recovery. Furthermore, programs are in place to include PDLs in various health activities to dispel stigma and build resilience. Healthcare evaluation and assistance protocols are prioritized, emphasizing ensuring equity, removing care obstacles, and enforcing procedures. Accessible healthcare is also prioritized through updated facilities, effective referral protocols, and timely medical care. Finally, organized protocols that include routine evaluations and emergency reactions serve as a framework for administering health services in correctional facilities. At some point, these principles protect PDLs' dignity and well-being by promoting a kind and all-encompassing approach to healthcare.

The topics covered in correctional institutions for People Deprived of Liberty (PDLs) emphasize the significance of comprehensive healthcare and behavioral management. The physical, mental, emotional, and behavioral needs of PDLs are all addressed by these activities. For PDLs to be prepared for reintegration into society and to promote recovery, systematic programs—like consistent exercise routines, counseling sessions, treatments, and vocational training—must be implemented. Protocol management in facilities also guarantees respect for laws and regulations, which helps create a secure and encouraging atmosphere favorable to constructive development. This is made possible by the collaboration of officers and PDLs. Targeting behavioral modification through interrelated developmental features, the Bureau of Jail Management and Penology (BJMP) created the Therapeutic Community Modality Program (TCMP) as an example of this method. These programs strive to facilitate rehabilitation, lower recidivism rates, and uphold the dignity and well-being of PDLs in correctional environments by addressing behavioral management and offering chances for personal growth.

Recommendations

After having comprehensively understood the study and outlined the findings identified, the researchers recommend the following solutions be considered:

Future Researchers. The researchers suggest that staff should know the most prevalent hospital patients' conditions and PDLs. Similarly, the well-being of the PDLs should still be a serious consideration. The dignity of every person should be preserved, and treating the PDLs should meet the established ethical standards. The investigation should also be shared, and future topics should be considered. Similarly, the study should be available to a broader audience to prevent misconceptions about the individuals.

Government / BJMP. The researchers recommend increased resource allocation of healthcare staffing, training, and continuous medical education to enhance service quality. Develop some specialized programs like the Parenting and Family Support Program that offer a helping hand to parents, giving them tools and guidance to connect with their kids and become better caregivers. From parenting classes to counseling and supervised visits, strengthening the bond of the PDLs with their family. Self-Assessment and Personal Development Program, a journey of self-discovery and improvement. Through journals, mindfulness activities, workshops, and deep discussions, participants explore their values, strengths, and dreams, paving the way for personal growth and fulfillment.

Strengthen the relationship and partnerships with external health providers, NGOs, and Community-Based Organizations to increase access and improve gap-filling systems. Develop stigma policy programs that cannot segregate or discriminately alert PDLs access and create equitable access to healthcare.

Facilities. The researchers suggest that investment in medical facilities at correctional facilities will improve the healthcare system's infrastructure. In addition to expanding the capacity to handle a larger population of PDLs, improving the infrastructure will create a conducive environment for PDLs.

Public Awareness. The researchers recommend that people talk about their experiences of change during their incarceration, help young individuals avoid criminal acts that they may regret in the future, and help people understand better their different experiences inside the jail and how they cope with those experiences to be better people.

Compliance with Ethical Standards

In conducting the study, ethical considerations were prioritized in conducting the study to ensure the well-being and rights of the participating healthcare workers and officers or wardens. Researchers abide by all relevant laws, rules, and regulations. Before data collection, informed consent is acquired, and participant protection measures are incorporated into the research design.

Additionally, researchers work to optimize any potential rewards from their work. Participation in this research is optional, and individuals retain the freedom to withdraw from the study at any point without facing any negative consequences. The names and identities of study participants will not be disclosed, and all information will be maintained and managed with the highest confidentiality.

Acknowledgements

The researchers would like to acknowledge their sincerest appreciation for their Research Adviser, Mr. Elwyn Brian Javier. The researchers wouldn't have completed this research paper without the support of our beloved Research adviser. The researchers feel thankful for his guidance, expertise, motivation, and help in the creation of this Research Paper.

Similarly, the researchers would like to thank all of the officers, warden and nurses, BJMP especially in Parañaque City Jail, for their cooperation and efforts in assisting us throughout our journey in gathering our data.

We would also like to thank our supportive professors as our research instrument validators Mr. Michael John Agustin**,** Mr. Carlo Roy Roslinda and our ever-supportive professors, Mr. Robert Juanes, Mr. Kevin De Vera for always supporting us in everything we do. we will not make it this far without all of your support, guidance and faith in us.

Lastly, the researchers would like to thank God, without him, the researchers would not have completed this paper. His guidance and glory is what would help the researchers in the near future.

STRATEGIC ADAPTATION IN THE MODERN ERA: LEVERAGING INTERNAL AUDITOR FOR ENHANCED RISK MANAGEMENT IN ORGANIZATIONAL CHANGE

Antonette Recodig Ranara, Erwin Babaran Quendangan, MBA, PhD

School of Graduate Studies, AMA University, Quezon City, Philippines

https://doi.org/10.5281/zenodo.13270761

ABSTRACT

In today's rapidly evolving business environment, marked by technological advancements and dynamic market conditions, organizations must continually adapt to remain competitive and sustainable. This study investigates the crucial role of internal auditors in facilitating strategic adaptation through enhanced risk management during organizational change. By leveraging their unique skills and capabilities, internal auditors can effectively identify, assess, and mitigate risks associated with strategic transformations. The research employed a quantitative approach with a Likert scale design to evaluate internal auditors' contributions, assess the effectiveness of to enhance their capabilities, and identify factors influencing strategic adaptation. A sample of 101 internal auditors, selected using stratified sampling, participated in the study. Data collection involved structured questionnaires, unstructured interviews, and online research, with a pilot test conducted for refinement. Accurate statistical methods provided robust conclusions and informed recommendations. Results indicated that respondents strongly agreed on the high effectiveness of internal auditors in risk management, enhancing Kotter’s 8 steps in organizational change. Key components on Training and Professional Development, Utilization of Related Technology, Collaboration and Communication, and Regular Risk Assessment and Feedback Mechanisms were rated as extremely effective, giving management flexible and affordable implementation options. Additionally, factors influencing the need for strategic adaptation were found to have a very high overall influence, highlighting the necessity of prioritizing these efforts to maintain effective risk management in the face of technological advancements and organizational change. Implementing the recommendations will help organizations

establish a solid foundation for effective risk management, strategic adaptation, and sustainable growth. Although the exact relationship between internal factors and risk identification components may be uncertain, improving these areas will enhance organizational resilience and readiness for future challenges.

Keywords: *Modern Era, Internal Auditor, Risk Management, Organizational Change, Technological Advancement*

INTRODUCTION

In the contemporary business environment, characterized by rapid technological advancements and dynamic market conditions, organizations face increasing pressure to adapt and innovate to maintain competitiveness and sustainability. This study, investigates the pivotal role of internal auditors in facilitating strategic adaptation during organizational change. By examining how internal auditors can enhance risk management practices, this research aims to address significant gaps in the current literature and provide actionable insights for organizations navigating technological transformations.

Technological advancements such as artificial intelligence, automation, and digital platforms have profound implications for organizational structures, processes, and cultures (Smith & Johnson, 2023). These innovations necessitate comprehensive risk management strategies to mitigate potential disruptions and leverage new opportunities. Internal auditors, traditionally seen as guardians of financial integrity, are increasingly recognized for their strategic role in assessing and managing risks associated with technological change (Garcia & Thompson, 2024). However, there remains a gap in understanding the specific contributions of internal auditors in the context of organizational change driven by technological advancements.

The impact of technological advancements on organizational change management is well-documented. Smith and Johnson (2023) highlight the challenges and opportunities posed by emerging technologies, emphasizing the need for effective change management strategies. Generational dynamics further complicate this landscape, as different cohorts perceive and respond to change differently (Chen & Davis, 2022). Leadership plays a crucial role in guiding organizations through digital transformations, with effective communication and collaboration being key (Garcia & Thompson, 2024). Risk management practices are also evolving in response to technological advancements. Wang and Smith (2023) explore how technologies like artificial intelligence and blockchain influence risk management during organizational change, underscoring the need for adaptive strategies. Additionally, Lee and Johnson (2022) examine how generational dynamics impact risk perception and management, highlighting the importance of tailored communication strategies. Internal auditors are at the forefront of these changes, adapting their roles to address new challenges. Zhang and Patel (2023) investigate how internal auditors navigate technological advancements

and generational dynamics, while Wang and Lee (2022) explore the integration of technology in internal audit practices. These studies suggest that internal auditors' expertise in risk assessment and their ability to leverage technology are crucial for effective risk management in the modern era.

Despite the extensive research on technological advancements and risk management, there is a notable gap in understanding how internal auditors specifically contribute to strategic adaptation during organizational change. This study aims to fill this gap by exploring the enhanced role of internal auditors in managing risks associated with technological transformations. The timeliness of this topic is underscored by the ongoing digital revolution and the need for organizations to remain agile and resilient.

By focusing on the strategic integration of internal audit practices with organizational change initiatives, this research proposes an innovative framework that leverages internal auditors' capabilities to support and enhance Kotter's 8 steps for successful organizational change. The study's findings will provide practical insights and recommendations for organizations seeking to improve their risk management practices during periods of technological change. Recent literature refines Kotter's influential model for organizational change, highlighting the importance of data-driven urgency (Reissner, 2021), diverse coalitions for risk mitigation (Mantere & Vaara, 2020), agile strategies (Kotter & Scharmer, 2020), advanced communication (Gandz, 2022), digital empowerment (Fleming & Spicer, 2020), rapid experimentation for quick wins (Jones & Linder, 2021), embedding risk management in culture (Champoux & Peters, 2020), and fostering innovation and risk-taking (Bouckenooghe et al., 2023). However, there is a significant research gap regarding the role of internal auditors in identifying, assessing, and mitigating risks at each step of Kotter's model. This study is timely and relevant due to the rapid pace of technological advancements and complex organizational environments, aiming to enhance internal auditors' capabilities in strategic adaptation and risk management, thus ensuring organizational resilience and competitiveness.

In conclusion, this research contributes to the existing body of knowledge by addressing a significant gap in the literature, offering timely and relevant insights, and proposing a new approach to leveraging internal auditors for enhanced risk management in organizational change.

Research Questions

In this study, the focus is on exploring and enhancing the role of internal auditors in managing risks and supporting strategic adaptation during organizational change. Rather than framing the research around primary and sub-questions, the study adopts a set of research objectives to comprehensively address the various dimensions of this topic. The objectives provide a structured approach to investigate the capabilities of internal auditors, the influence of technological advancements, and the internal factors affecting strategic adaptation. This objective-driven approach allows for a thorough examination of the complexities involved, enabling a more detailed and actionable understanding of how internal auditors can optimize their contributions in dynamic business environments.

To explore how internal auditors can enhance risk management during organizational change by leveraging technological advancements and strategic adaptation.

1. To determine the demographic profile of internal auditors, including age, years of experience as auditor, and gender, and examine how these factors might affect their effectiveness in risk management.
2. To evaluate the contributions of internal auditors in identifying, assessing, and mitigating risks during organizational change, and assess the impact of technological advancements on these contributions.
3. To identify the capabilities of internal auditors that need strengthening in the context of:

    - Training and professional development
    - Utilization of technology
    - Collaboration and communication
    - Regular risk assessment and feedback mechanisms

4. To determine the internal factors influencing the need for strategic adaptation during organizational change, such as:

    - Workplace environment
    - Skills assessment
    - Leadership alignment
    - Technological advancement
    - Change management

5. To investigate the relationship between risk identification components and internal factors influencing strategic adaptation.
6. To apply research findings to develop or enhance a framework that aligns the role of internal auditors with organizational change and strategic adaptation in the modern era

METHODOLOGY

The study was conducted in various organizations across different industries, focusing on those undergoing significant organizational change due to technological advancements. Specific details regarding the institutions involved are withheld to maintain confidentiality. Stratified sampling was employed to ensure representation across different organizational roles within the internal audit function. This method helps in capturing diverse perspectives and experiences relevant to the study. The respondents consisted of 101 internal auditors selected through the sampling process. They varied in terms of age, gender, years of experience, and organizational roles. Demographic data were collected to understand how these factors might influence perceptions and practices related to risk management during organizational change. Data were collected using structured surveys questionnaires supplemented by unstructured interviews. The survey instrument included items designed to assess the effectiveness and of the of internal auditors in managing risks associated with organizational change, and internal factors influencing the need for strategic adaptation. The questionnaire utilized a 5-point Likert scale ranging from "Strongly Disagree" to "Strongly Agree." Prior to full implementation, a pilot test was conducted with 21 internal auditors to refine the questionnaire for clarity and coherence. The survey instrument comprised 30 items addressing various aspects of internal auditors' roles and capabilities in risk management during organizational change. The questionnaire was researcher-designed based on a comprehensive review of relevant literature and prior research. It aimed to capture perceptions on internal auditors' effectiveness, the impact of technological advancements, and strategies for enhancing risk management practices. Quantitative data analysis involved descriptive statistics such as frequencies, percentages, weighted mean, and standard deviation, to summarize survey responses, data distribution, provides an average considering varying importance, measures data spread, and gauges overall sentiment or consensus and correlation analysis to explore relationships between variables.

The scope of the study focused on the internal auditors' contributions to risk management in the context of organizational change driven by technological advancements. Limitations included potential response bias in self-reported data and the generalizability of findings beyond the sampled organizations. The study did not address specific proprietary information or disclose identifiable details of participating institutions due to confidentiality agreements.

RESULTS

Figure 1: *Respondents as to Gender*

Gender	*f*	*%*	*Rank*
Male	47	47%	2
Female	50	50%	1
LGBTQ	3	3%	3
Prefer not to disclose	1	1%	4
Total	**101**		

Figure 2: *Respondents as to Age*

Age Range	***f***	***%***	***Rank***
20 below	0	0%	8
20 to 25	2	2%	7
26 to 30	12	12%	6
31 to 35	18	18%	3
36 to 40	14	14%	5
41 to 45	21	21%	1
46 to 50	19	19%	2
Above 50	15	15%	4
Total	101		

Figure 3: *Respondents as to Year of Experience as Auditor*

Age Range	***f***	***%***	***Rank***
Less than 1 year	0	0%	5
1 to 3 years	6	6%	4
4 to 6 years	14	14%	3
7 to 9 years	28	28%	2
More than 10 years	53	52%	1

Figure 4: Internal Auditors Contribution

Internal Audit Contribution	**Mean**	**Standard Deviation**	**Net Agreement Rating**
Risk Identification	4.91	0.31776	99.01
Risk Assessment	4.97	0.169767	100.00
Risk Mitigation	4.96	0.195027	100.00
Providing recommendations	4.97	0.169767	100.00
Collaborating with stakeholders	4.95	0.258566	99.01

Figure 5: The effectiveness of the following components to strengthen the capabilities of the internal auditors in identifying, assessing and mitigating risk

1. Training and Professional Development	**Mean**	**Net Agreement Rating**	**Verbal Interpretation**	**Rank**
A. Organizational Culture	4.99	100.00	Extremely Effective	1
B. Flexibility and Agility	4.95	100.00	Very Effective	4
C. Employee Empowerment and Engagement	4.98	100.00	Extremely Effective	2

1.25	0.05	3	0.4472

DISCUSSION

The data on figure number 4 regarding the contribution of internal auditor reveals a highly positive perception of internal audits' contributions to risk management, with respondents overwhelmingly agreeing on their significant role in risk identification, assessment, mitigation, and providing recommendations. The low standard deviation indicates a strong consensus among respondents, reinforcing the positive feedback. With net agreement ratings reaching 100% for key areas, there is near-universal endorsement of internal audits' effectiveness. This strong agreement underscores internal audits' critical role in enhancing risk management and stakeholder collaboration during organizational change, particularly in the context of technological advancement.

The data on figure number 5 regarding the effectiveness of the components to strengthen the capabilities of the internal auditors in identifying, assessing and mitigating risk associated with organizational change considering technological advancement evaluates various components essential for enhancing the capabilities of internal auditors in managing risks associated with organizational change, especially in the context of technological advancements. It covers training and professional development, technological tools, collaboration and communication, and feedback mechanisms.

Organizational culture and continuous employee training are identified as the most effective components in strengthening internal auditors' capabilities. A strong organizational culture fosters an environment where auditors feel supported and aligned with company values, crucial for managing risks during technological changes. Similarly, continuous training equips auditors with up-to-date skills to handle evolving risks effectively. Empowering and engaging employees also plays a significant role by making auditors more proactive and adept at applying their knowledge to risk management. Although slightly less critical, the design of physical workspaces enhances productivity and collaboration, supporting auditors' ability to manage risks.

Technological tools are crucial in supporting internal auditors. Data analytics and business intelligence tools are rated as the most effective, enabling efficient processing and analysis of large data volumes to identify risks and trends. Blockchain technology and cybersecurity tools are also highly effective, providing transparency, security, and protection against cyber threats. AI and ML technologies are valued for their advanced analytical capabilities, while Robotic Process Automation (RPA) is recognized for automating repetitive tasks, allowing auditors to focus on more complex risk management activities.

Collaboration and communication are fundamental to effective internal auditing. Collaboration platforms, brainstorming sessions, and regular team meetings are deemed extremely effective in facilitating seamless interaction and collective problem-solving. Knowledge sharing platforms also play a crucial role in continuous learning and adapting to technological changes. Survey and polling tools, while slightly less critical, contribute significantly to understanding stakeholder feedback and enhancing communication within the audit process.

Continuous improvement is rated as the most effective, ensuring that risk management processes are regularly reviewed and enhanced. Comprehensive risk identification is crucial for detecting all potential risks, providing a solid foundation for subsequent efforts. Scenario planning and sensitivity analysis help auditors prepare for various contingencies, enhancing their ability to manage risks. Integrating technology into audit procedures and risk quantification are also vital, enabling more efficient risk assessment and prioritization.

Feedback mechanisms are vital for continuous improvement in internal auditing. Open communication channels are the most effective, fostering transparent dialogue and timely feedback. Peer reviews and knowledge sharing are also highly effective, encouraging collaborative learning and refinement of risk management techniques. The 360-degree feedback mechanism provides a comprehensive view of an auditor’s performance, while performance metrics and KPIs, though slightly less impactful, are essential for setting standards and monitoring progress. Integrating feedback into audit processes is crucial for implementing improvements based on feedback.

Overall, the high ratings across all components reflect strong agreement on their effectiveness in enhancing internal auditors' capabilities. The emphasis on organizational culture, training, and employee engagement underscores their importance in managing risks associated with technological advancements. Technological tools, effective collaboration and communication, and robust feedback mechanisms are all crucial for supporting auditors in adapting to and mitigating risks in a rapidly changing environment.

The data on figure number 6 regarding Internal factors influencing the need for strategic adaptation in the workstation evaluates the influence of various components of the workplace environment, skill assessment, leadership alignment, technological advancement, and change management in influencing the need for strategic adaptation in the workstation. Each component is assessed based on mean scores, net agreement ratings, and verbal interpretations, with employee skills and training being highlighted as the most effective workplace environment component. Continuous skill development programs equip employees with the knowledge and competencies required to navigate technological advancements, emphasizing the importance of investing in employee development to manage risks associated with organizational change effectively.

Skill assessment identifies and leverages internal auditors' capabilities, particularly during organizational change and technological advancements. Skills gap analysis is crucial for determining specific skills and competencies lacking within the organization,

enabling the development of targeted training programs. Diversity and inclusion bring varied perspectives and innovative ideas critical for effective risk management and problem-solving. Encouraging innovation and creativity within the organization supports strategic adaptation, while technology literacy ensures employees can effectively use new technologies. Recruitment strategies, although rated lower, remain influential for building an adaptable workforce.

Leadership alignment is critical for guiding organizations through change and ensuring successful strategic adaptations, especially with technological advancements. Clear vision and direction from leadership are essential, alongside a deep understanding of technology trends to inform decision-making. Effective resource allocation supports strategic initiatives, and a commitment to innovation drives the development of new solutions to manage technological risks. Aligning leadership styles with organizational culture facilitates smoother transitions and greater acceptance of changes.

Technological advancement significantly drives organizational change, with the integration of new technologies into business processes being the most influential component. Effective integration enhances efficiency and productivity, ensuring competitiveness and minimal disruption. Cybersecurity risk is crucial due to increased threats from new technologies, requiring robust measures to protect assets and maintain trust. Disruptive innovation challenges existing business models, necessitating quick adaptation. Ethical and social implications must be considered for positive reputation and compliance, while the rapid pace of technological change requires agile and responsive strategies.

Effective change management is essential for navigating organizational change complexities, particularly with technological advancements. Continuous improvement and feedback loops are the most influential components, emphasizing ongoing evaluation and process enhancement. A supportive organizational culture and adaptive behavior are critical for fostering an environment that embraces change, mitigating resistance, and promoting smooth transitions. Assessing change readiness evaluates an organization's capacity to handle change, identifying potential barriers and areas needing support. Well-designed training programs enhance employee competency and confidence, facilitating adaptation to new challenges.

Engaging stakeholders is crucial for successful change management, involving them in the change process to build support, address concerns, and consider all relevant insights. Effective stakeholder engagement, while slightly lower in ranking, remains essential for comprehensive change management. Overall, these components collectively influence the need for strategic adaptation in the workstation, ensuring organizations effectively manage risks associated with organizational change and technological advancements.

The data on figure number 6, The calculated t-value (0.4472) is compared to the critical t-value from the t-distribution table at df=3 df = and α=0.05. The critical value for a two-tailed test with df = 3 at α=0.05 is approximately 3.182. Since the calculated t-value

(0.4472) is less than the critical value, it indicates that the correlation is not statistically significant to conclude that there is a relationship between internal factors influencing strategic adaptation and components of identifying risk.

Conclusions

The study conclusively demonstrates that internal auditors play an indispensable role in safeguarding organizations against risks during periods of change. Their ability to adapt and leverage modern tools and practices positions them as key contributors to organizational resilience and success in the dynamic business landscape of the modern era. The extremely positive feedback from respondents affirms the importance of these strategies, providing a clear roadmap for enhancing risk management through effective internal auditing practices. Ultimately, it is up to the management to decide which measures are most applicable and affordable for their organization, ensuring that risk management practices are tailored to their specific needs and constraints.

By implementing the recommendations, organizations can build a robust foundation for effective risk management, strategic adaptation, and sustainable growth. While the specific relationship between internal factors and risk identification components may not be definite, strategic improvements in these areas can collectively strengthen organizational resilience and readiness for future challenges. Continual evaluation and adaptation of strategies will be essential in maintaining competitive advantage and achieving long-term success

Recommendations

To enhance the capabilities of internal auditors in managing risks associated with technological advancements, organizations should focus on cultivating a strong organizational culture and investing in continuous training programs that emphasize the latest technological trends and risk management techniques. Employee engagement should be enhanced through initiatives that empower and motivate auditors to proactively contribute to risk management. Additionally, prioritizing the integration of advanced data analytics, business intelligence tools, blockchain, and cybersecurity technologies will improve data processing, transparency, and security. Leveraging AI, machine learning, and RPA can further enhance predictive analytics and automate routine tasks, allowing auditors to concentrate on strategic risk management. Promoting collaboration and communication through robust platforms, regular brainstorming sessions, team meetings, and knowledge-sharing initiatives will foster innovative thinking and problem-solving. Finally, fostering a culture of continuous improvement and implementing transparent feedback mechanisms, including 360-degree feedback and peer reviews, will ensure auditors are continuously developing and adapting to new challenges. By implementing

these strategies, organizations can significantly strengthen their internal audit function, making it more resilient and effective in the face of technological advancements.

To progress strategic adaptation and effectively manage risks associated with technological advancements, organizations should focus on several key areas. Investing in comprehensive training programs will ensure employees stay updated on the latest technological advancements and best practices, fostering continuous learning and professional development. Creating a flexible and agile work environment is crucial, along with implementing agile methodologies to streamline processes. Empowering and engaging employees by promoting a culture of trust and active participation in decision-making will drive proactive risk management. Cultivating a supportive organizational culture that values collaboration, innovation, and openness to change, along with recognizing and rewarding aligned behaviour, is essential. Optimizing physical workspace design to facilitate both individual and collaborative work will enhance productivity and well-being. Regular skills gap analysis and targeted training programs are necessary to address deficiencies. Fostering diversity and inclusion, encouraging innovation and creativity, and enhancing technology literacy among employees will further strengthen the workforce. Additionally, optimizing recruitment strategies to attract adaptable, innovative talent, implementing robust cybersecurity measures, and fostering continuous improvement through regular feedback are vital. Engaging stakeholders in the change process ensures their insights are considered, contributing to a resilient internal audit function capable of navigating technological advancements and organizational change.

Based on the analysis regarding the significant relationship between components of identifying risk in organizational change and internal factors influencing strategic adaptation, several recommendations can enhance organizational practices. Although the correlation between internal factors and risk identification components is weak and not statistically significant, organizations should continue to prioritize and improve specific internal factors such as leadership alignment, workplace environment, skills assessment, technological advancement, and change management. Strengthening these areas can contribute to overall organizational resilience and adaptability. Additionally, enhancing risk identification processes independently, through regular assessments, technology utilization, effective collaboration, and feedback mechanisms, is crucial. Adopting an integrated approach that aligns internal factors and risk identification components strategically can enhance organizational agility. Continuous monitoring, investing in research and development, fostering cross-functional collaboration, and benchmarking against best practices will further improve adaptability and risk management.

Future research should delve deeper into the interactions between internal factors and risk identification components to understand their combined impact on organizational adaptation and resilience. Investigating specific contexts and industries, conducting longitudinal studies, and examining the role of emerging technologies in risk management processes are essential. Comparative studies across different organizational sizes and

structures can identify tailored best practices, contributing to more effective risk management strategies.

Compliance with Ethical Standards

This research has been conducted with strict adherence to ethical standards to ensure the integrity and credibility.

Ensuring that all work presented is original and that any use of others' work is properly cited. Proper attribution has been given to all sources of information, including ideas, text, and data, through comprehensive citation practices. All direct quotes, paraphrased ideas, and data sourced from existing literature are accurately cited using the appropriate academic citation style. The analysis, discussions, and conclusions presented are based on the author's original research and insights. Plagiarism detection software was used to check the originality of the content to ensure that no unintentional plagiarism occurred. This step verifies that all parts of the thesis are unique and correctly attributed to their original sources.

All participants involved in this research were fully informed about the purpose, procedures, risks, and benefits of the study. Written informed consent was obtained from each participant prior to their involvement. The confidentiality of all participants has been rigorously maintained by anonymizing their data and securely storing all sensitive information. Pseudonyms and codes were used to protect participants' identities, and any identifying details have been omitted or altered to prevent disclosure. All findings reflect the true outcomes of the research conducted. Limitations and potential errors have been transparently acknowledged to provide a clear understanding of the study's scope and boundaries.

This ethical statement serves to assure that the research presented in this thesis was conducted with the highest level of ethical integrity, contributing to the advancement of knowledge in the field of risk management during organizational change.

Acknowledgments

I extend my deepest gratitude to the Lord, whose grace and guidance have been my constant source of strength throughout this journey of research and discovery.

I am profoundly thankful to my advisor, Dr. Erwin Quendangan, whose invaluable insights, mentorship, and unwavering support have shaped this study into what it is today. Your patience and dedication to my academic growth are deeply appreciated. To Maam Imelda Antonio, for her invaluable assistance with the statistical analysis. Her expertise and guidance were instrumental in interpreting the data and ensuring the accuracy of the results presented in this research. To Bro. Jeff Thomas for his meticulous review and editing of the manuscript. His keen eye for detail and mastery of grammar significantly improved the clarity and readability of this research.

I express my heartfelt thanks to Dr. Jenny Lyn Abamo, Dean of AMA School of Graduate Studies, for the encouragement and resources provided that facilitated the completion of this research.

To my beloved family and loved ones, your endless love, understanding, and encouragement sustained me through the challenges and triumphs of this endeavor. Your unwavering support means everything to me.

A special acknowledgment to my APO brothers and sisters and friends who provided encouragement, motivation, and moments of respite throughout this journey. Your camaraderie and friendship are treasured beyond words.

A sincere acknowledgment to the AMA Auditors who participated in the pilot test, your feedback and insights were invaluable in refining the research instrument. Your willingness to help even amidst your busy schedules is deeply appreciated.

Lastly, to the respondents who generously shared their time and perspectives for the final study, I am grateful for your willingness and dedication to participate even amidst busy schedule and online communication, your participation was pivotal in gathering valuable data that contributed to the findings and conclusions of this research.

Thank you all for being part of this significant chapter in my academic and personal growth.

TEACHERS ENGAGED IN ONLINE BUSINESS IN RELATION TO JOB PERFORMANCE

Nerissa B. Cabarubias

Tipolo Elementary School, Tipolo, Ubay, Bohol, Philippines

https://doi.org/10.5281/zenodo.13372986

ABSTRACT

This study investigates the relationship between teachers' perceptions of online business and their job performance in Ubay I, II, and III Districts, Division of Bohol, for the academic year 2020-2021. The research aimed to understand the profiles of teacher-respondents engaged in online business, their perceptions towards online business across various contexts, and the impact of these perceptions on their job performance. Key areas explored include the demographic profile of respondents, their assessment of online business in technological, organizational, environmental, and beneficial contexts, and the effect of their online business activities on teaching skills, management skills, discipline/regularity, and interpersonal relations. The study found that while teachers generally perform well across all job performance dimensions, with high ratings in teaching skills, management skills, discipline/regularity, and interpersonal relations, there was no significant relationship between demographic factors and job performance. However, significant relationships were found between perceptions of online business and job performance, particularly in terms of discipline/regularity and overall performance. Based on these findings, the study recommends enhancing support and training for teachers, promoting positive perceptions of online business, implementing monitoring and evaluation systems, addressing issues of discipline and regularity, encouraging long-term engagement in online business, and conducting further research to explore additional influencing factors. These recommendations aim to support teachers in balancing their online business activities with their professional responsibilities, ultimately enhancing their job performance and contributing to more effective teaching environments.

Keywords: *Discipline, E-business, Job performance, Online business, and Perceptions*

INTRODUCTION

The COVID-19 pandemic has brought about significant changes in various aspects of life, including the way people engage in economic activities. As the world continues to recover, individuals, including the aging population, have increasingly turned to online platforms for buying and selling goods, utilizing social media and other digital tools to sustain their livelihoods. This shift has led to a burgeoning online retail environment where even government employees, such as teachers, have started to participate in online business ventures.

As noted by Ablaña and Isidro (2015), the pressures of modern society—characterized by complex social, economic, and political challenges—demand that government employees adopt innovative strategies to meet these demands. Despite being employed, many workers still struggle to escape poverty, with estimates from the International Labour Organization (ILO) suggesting that up to 40% of workers globally earn less than the poverty line of $2 or ₱100 per day (Melamed, Hartwig, & Grant, 2011). In the Philippines, where the government is the largest employer, teachers play a crucial role in ensuring the functionality of the education system (Ablaña et al., 2015).

Job satisfaction is a critical factor influencing teachers' commitment and productivity within school organizations. Satisfied teachers are more likely to be engaged and committed to their work, leading to better participation and overall performance (Shila & Sevilla, 2015; Sadasa, 2013). However, job satisfaction is closely linked to work compensation, which in turn affects teaching performance (Baluyos, Rivera, & Baluyos, 2019). Given the economic challenges exacerbated by the pandemic, many teachers have sought additional income through online businesses, raising questions about the potential impact of these activities on their job performance.

The working environment plays a vital role in maintaining staff motivation and productivity. A poor working environment can lead to decreased job satisfaction, ultimately affecting performance (Ozgen & Yalcin, 2010). Institutions must strive to improve the quality of work life to foster a productive and motivated workforce (Solmus, 2011). The relationship between job performance and factors such as job satisfaction, work environment, and compensation has been well-documented (Motowidlo, 2011; Rao & Kumar, 2014). However, the rise of online business activities among teachers presents a new variable that warrants investigation.

Teachers' job performance is influenced by various factors, including their knowledge, responsibility, and the teaching environment (Rao & Kumar, 2014). Leigh and Mead (2015) highlighted the decline in teaching quality due to outdated preparation and stagnant compensation schemes. Hakanen, Bakker, and Schaufeli (2011) introduced the Job Demands–Resources Model, suggesting that job performance is affected by both job demands (e.g., burnout, ill health) and job resources (e.g., engagement, commitment). Understanding the balance between these factors is essential for improving teacher performance.

Lambert (2014) emphasized that factors such as mindset, immersion in different environments, and reflective practice can significantly enhance job performance. Additionally, passion for teaching, as described by Vallerand (2010), can drive motivation and job satisfaction, leading to improved performance. Ho, Wong, and Lee (2011) found that harmonious passion positively correlates with job performance, mediated by cognitive absorption.

Given the complexities of these dynamics, this study aims to investigate the relationship between teachers' engagement in online business activities and their job performance in the Ubay I, II, and III Districts during the School Year 2020-2021. By exploring these variables, the study seeks to provide insights into how teachers balance their professional responsibilities with external economic activities, and how this balance affects their overall job performance.

Research Questions

The main thrust of the study was to determine teachers' perception towards online business in relation to job performance in Ubay I, II, and III Districts, Division of Bohol of the School Year 2020-2021. The findings of this study served as bases for proposing sustainability plan.

Specifically, it sought to answer the following questions:

1. What is the profile of the teacher- respondents engaged in online business in terms of:
    - 1.1. age;
    - 1.2. sex;
    - 1.3. highest educational attainment;
    - 1.4. teaching experience;
    - 1.5. online business platform/s; and
    - 1.6. years in online business?

2. What is the perception of the respondents towards online business in terms of:
    - 2.1. technological context;
    - 2.2. organizational context;
    - 2.3. environmental context;
    - 2.4. beneficial context?
3. What is the respondents' assessment on the job performance of teachers engaged in online business towards their:
    - 3.1. teaching skills;
    - 3.2. management skills;
    - 3.3. discipline/ regularity; and
    - 3.4. interpersonal relations?

4. Is there a significant relationship between the teachers' job performance and their profile?

5. Is there a significant relationship between the teachers' perception towards online business and job performance in terms of:

5.1. teaching skills;
5.2. management skills;
5.3. discipline/ regularity; and
5.4. interpersonal relations?

6. On the bases of the findings of the study, what sustainability program may be proposed?

METHODOLOGY

This section focused on the methodology that was utilized in the conduct of the study. It also outlined the research design, the procedure that was followed, the process of collecting the data, and the analysis. During the collection process, the ethical considerations were also discussed.

Research Design

This study employs a quantitative correlational research design, utilizing a questionnaire as the primary method for data collection. The correlational approach was chosen to examine the relationship between engagement in online business activities and job performance.

Research Environment and Research Participants

This study was conducted in the second congressional district of Bohol, specifically in the Ubay I, Ubay II, and Ubay III districts. These locations are situated in the northeastern part of Bohol Province and form a zone district under the Department of Education (DepEd). A total of 30 elementary schools from these districts were included in the research.

The research subjects were selected through purposive sampling, comprising 10 elementary schools per district. The sample included 76 teachers engaged in online business and 30 elementary school heads, resulting in a total of 106 respondents who were actively serving during the 2020-2021 school year. The distribution of respondents is presented in Table A.

Table A
Distribution of Respondents

Name of Schools	Teachers with Online Business	School Heads	Total
I. Ubay I District

Grand Total	**76**	**30**	**106**

Research Instrument

To assess teachers' perceptions of online business and its impact on job performance in Ubay I, II, and III Districts for the 2020-2021 School Year, a modified questionnaire was used. This questionnaire was structured into three sections: the first section collected demographic data, the second section evaluated the impact of online business on operational, managerial, strategic, and beneficial aspects, and the third section measured job performance using a 4-point Likert scale across four dimensions: teaching skills, management skills, discipline/regularity, and interpersonal relations. The instruments used were adapted and validated to ensure their reliability and relevance.

Data Gathering Procedure

The researcher first secured approval from the Dean of the College of Advanced Studies and obtained an official permit from the Schools Division Superintendent of the Department of Education for the Ubay I, II, and III Districts. Additionally, permission was sought from the School Heads of each institution and the teachers involved in the study. Questionnaires were personally distributed to the respondents, who were given a thorough explanation of the study's purpose. Assistance was provided to clarify any difficult words or questions, and respondents were allowed sufficient time to complete the questionnaires.

Following data collection, the responses were tallied, tabulated, and collated. The data were then analyzed using descriptive and inferential statistics to address the specific research questions.

Data Analysis

To determine the demographic profile of the teachers, perceived online business, and level of job performance of teachers; the Percentage, Weighted Mean, Chi-Square, and Spearman Rank Correlation Coefficient were used.

6. To determine the socio-demographic profile of the respondents, percentage was used.

Formula:

$$P = f/n \times 100$$

Where:

P = percentage
F = frequency of responses
N = number of cases

2. To determine the perception of the teachers with online business, and teachers' job performance, the weighted mean was used.

Formula:

$$WM = \frac{\sum f(x)}{N}$$

Where:

WM = weighted mean
$\sum f(x)$ = summation of frequency of scale value x
N = number of cases

Composite Mean. The same scale will be used in interpreting the composite weight means:

$$\frac{\text{Sum of Weight Means}}{\text{Number of Items}}$$

3. To determine the significant degree of relationship between the teachers' job performance and their profile, the data were subjected to Chi-Square test.

Formula:

$$\chi^2 = \sum \frac{(f_o f_e f_e)^2}{}$$

Where:

$\chi 2$ = correlation coefficient
fo = observed frequency
fe = expected frequency

The obtained Chi-Square ratio was checked against the Table of Significant values at 0 .05 level.

4. Spearman Rank Correlation Coefficient was used to determine the degree of correlation between the perceived online business as to teaching performance of teachers with the formula:

Formula:

$$r_s = 1 - \frac{6\sum D^2}{n(n^2 - 1)}$$

Where:

r_s = Spearman rank Correlation Coefficient

$\sum D^2$ = sum of the squares of the difference between rank x and rank y

n = sample size

6 = constant

RESULTS

This chapter covers with the presentation, analysis and interpretation of the gathered data was to determine the teachers' online business in relation to job performance in Ubay I, II, and III Districts, Division of Bohol of the School Year 2020-2021.

Table 1 presents the profile of teachers engaged in online business. The majority of these teachers (71.05%) are between 31 and 35 years old, indicating that this middle age group is most active in online business. The study shows a significant gender imbalance, with 98.68% of the respondents being female, suggesting that online business is predominantly undertaken by women in this group. In terms of education, nearly all respondents (98.68%) have completed coursework towards a Master's Degree, highlighting a high level of educational attainment. Most teachers (67.10%) have 11 to 15 years of teaching experience, with no teachers having over 21 years of experience in online business, suggesting a preference for those with moderate experience. All respondents use Facebook as their primary online business platform, underscoring its importance and dominance in their business activities. Finally, over half of the respondents (51.32%) have been engaged in online business for less than one year, while 32.89% have been involved for three years or more, indicating a mix of new and more established online entrepreneurs among the teachers.

Table 2
Perception of the Respondents Towards Online Business

Statement	Teachers		School Heads		Overall		
2.1 Technological Context	**WM**	**VI**	**WM**	**VI**	**WM**	**VI**	**Rank**
1. Online business is a great benefit to my product.	3.54	SA	3.77	SA	3.66	SA	1
2. ICT is compatible with the way we do business.	3.70	SA	3.13	A	3.42	SA	4
3. Overall, using online business is easy for me.	3.36	SA	3.90	SA	3.63	SA	2
4. The cost of using online business is low.	3.07	A	3.68	SA	3.38	A	5
5. I can communicate others to buy using online business.	3.54	SA	3.42	SA	3.48	SA	3
Average Weighted Mean	**3.44**	**SA**	**3.58**	**SA**	**3.51**	**Strongly Agree**	
2.2 Organizational Context							
1. I have the skills needed to do online business.	3.50	SA	3.52	SA	3.51	SA	3
2. I have sufficient financial resources to implement online business in business operations.	3.79	SA	3.71	SA	3.75	SA	1
3. I emphasize research and development (R&D), technological leadership, and innovation as I do online business.	3.24	A	3.48	SA	3.36	SA	5
4. I have a clear plan regarding the use of online business.	3.67	SA	3.61	SA	3.64	SA	2
5. I have a clear standard operating procedures (SOP) in running a business.	3.59	SA	3.32	SA	3.46	SA	4
Average Weighted Mean	**3.57**	**SA**	**3.53**	**SA**	**3.54**	**Strongly Agree**	
2.3. Environmental Context							
1. Our customers and / or business competitors encourage us to implement online business.	3.53	SA	3.48	SA	3.51	SA	2.5

2.	The government is actively providing various facilities to support the application of online business.	3.54	SA	3.52	SA	3.53	SA	1
3.	Telecommunications infrastructure (such as the internet network or electronic payments) is reliable to support the use of online business.	3.30	SA	3.71	SA	3.51	SA	2.5
	Average Weighted Mean (AWM)	**3.45**	**SA**	**3.57**	**SA**	**3.52**	**Strongly Agree**	
2.4. Beneficial Context								
1.	Increased business productivity.	3.82	SA	3.35	SA	3.59	SA	3
2.	Reduced business costs.	3.64	SA	3.74	SA	3.69	SA	1
3.	Creates better management of resources (e.g, inventory, human resources, etc.	3.25	SA	3.55	SA	3.40	SA	4
4.	Helps me earn extra income other than my salary.	3.87	SA	3.39	SA	3.63	SA	2
5.	Helps me pay expenses at home.	3.49	SA	3.10	A	3.30	SA	5
	Average Weighted Mean	**3.61**	**SA**	**3.43**	**SA**	**3.52**	**Strongly Agree**	
	Overall Average Weighted Mean	**3.52**	**SA**	**3.53**	**SA**	**3.53**	**Strongly Agree**	

Legend:

Rating Scale	Descriptive Interpretation	Weighted Mean (WM)
3.25 – 4.00	Strongly Agree (SA)	
2.50 – 3.24	Agree (A)	
1.75 – 2.49	Disagree (DA)	
1.00 – 1.74	Strongly Disagree (SDA)	

Table 2 indicates that respondents generally view online business positively. In the technological context, "Online business is a great benefit to my product" received the highest mean of 3.66, while "The cost of using online business is low" had the lowest mean of 3.38, both reflecting strong agreements. In the organizational context, the highest mean of 3.75 for "I have sufficient financial resources to implement online business" shows strong confidence in financial readiness. The environmental context highlighted significant government support with a mean of 3.53 for "The government is actively providing various facilities to support the application of online business," and the beneficial context identified "Reduced business costs" as a major advantage with a mean of 3.69. Overall, the average mean across all contexts is 3.53, demonstrating a strong overall agreement on the positive impact of online business.

Table 3
Respondents' Assessment on Job Performance of Teachers Engaged in Online Business
N_1= 76; N_2=30

Statement	Teachers		School Heads		Overall		
3.1 Teaching Skills	**WM**	**VI**	**WM**	**VI**	**WM**	**VI**	**Rank**
1. Apply a variety of instructional materials aside from Learning 2. Activity Sheets and Modules provided by the department.	3.72	O	3.71	O	3.72	O	2.5

2.	Solve students' problems outside teaching specially in their written/performance output.	3.51	O	3.35	O	3.43	O	4
3.	Cooperate with other teachers while doing my job.	3.43	O	3.26	O	3.35	O	5
4.	To advance my pupils learning, I also relate effectively with their parents by giving clear direction in Weekly Home Learning Plan.	3.53	O	3.65	O	3.59	O	2
5.	Assist the school head to solve our school problems like issues and concerns on Distant Learning Modality.	3.71	O	3.32	O	3.52	O	3
	Average Weighted Mean	**3.63**	O	**3.44**	O	**3.54**	**Outstanding**	
	Overall Average Weighted Mean	**3.59**	O	**3.49**	O	**3.54**	**Outstanding**	

Legend

Rating Scale	Verbal Interpretation	Weighted Mean (WM)
3.25 – 4.00	Outstanding (O)	
2.50 – 3.24	Very Satisfactory (VS)	
1.75 – 2.49	Satisfactory (S)	
1.00 – 1.74	Poor (P)	

Table 3 assesses the job performance of teachers engaged in online business across four key areas: teaching skills, management skills, discipline/regularity, and interpersonal relations. The data reveals that teachers excel particularly in providing interventions for pupils, with a weighted mean of 3.81 in teaching skills. In management skills, they demonstrate strong performance in handling additional tasks, scoring 3.85. Discipline and punctuality are also strong, with a mean of 3.72 for starting work on time. Lastly, interpersonal relations are marked by cordial relationships with colleagues, achieving a mean of 3.79. Overall, the average weighted mean across all areas is 3.54, indicating an outstanding level of job performance.

Table 4
Relationship Between the Teachers' Job Performance and Their Profile
N = 76

Teachers Job Performance and their Profile as to…	X^2	df	p-value	Interpretation	Decision
Age	1.677	2	0.432	Not Significant	Failed to Reject H_0
Sex	6.688	1	0.010	Significant	Reject H_0
Highest Educational Attainment	0.154	1	0.695	Not Significant	Failed to Reject H_0
Teaching Experience	0.886	3	0.829	Not Significant	Failed to Reject H_0

Number of Years in Online Business	3.926	2	0.140	Not Significant	Failed to Reject H_0

**Correlation is significant at 0.05 level (2-tailed)*

Table 4 examines the relationship between teachers' job performance and their profile characteristics. The analysis shows that job performance is not significantly related to age, highest educational attainment, teaching experience, or number of years in online business, as indicated by p-values of 0.432, 0.695, 0.829, and 0.140, respectively. In contrast, there is a significant relationship between job performance and sex, with a p-value of 0.010. This implies that gender differences impact job performance, leading to the rejection of the null hypothesis in this case.

Table 5
Relationship Between the Teachers' Perception Towards Online Business and Job Performance
N = 76

Teachers' Perception Towards Online Business and Job Performance as to…	r	p-value	Interpretation	Decision
Teaching Skills	-0.047	0.685	Not Significant	Failed to Reject H_0
Management Skills	-0.172	0.137	Not Significant	Failed to Reject H_0
Discipline/regularity	0.276	0.016	Significant	Reject H_0
Interpersonal relations	0.211	0.067	Not Significant	Failed to Reject H_0
Overall Job Performance	**0.812**	**<.001**	**Significant**	**Reject H_0**

**Correlation is significant at 0.05 level (2-tailed)*

Table 5 analyzes the relationship between teachers' perceptions of online business and their job performance. The data reveals that perceptions of teaching skills, management skills, and interpersonal relations do not significantly impact job performance, with p-values of 0.685, 0.137, and 0.067, respectively. However, perceptions of discipline/regularity have a significant relationship with job performance (p-value = 0.016), indicating that regularity and discipline influence job performance. Additionally, the overall job performance shows a strong significant correlation (p-value < 0.001), suggesting a robust association between general perceptions of online business and overall job performance.

DISCUSSION

Findings

The data gathered were then analyzed and interpreted and after a thorough and careful analysis of gathered data, the researchers' arrived at the following valuable findings:

The research findings provide a comprehensive view of the respondents' profiles, perceptions, and job performance. Among the 76 teacher-respondents, the majority are

aged 31-35 years and are predominantly female. Most have pursued graduate-level education, with 67.10% having 11 to 15 years of teaching experience. Facebook is the universal platform used for online business, and over half have been engaged in it for less than a year. Regarding perceptions of online business, respondents show strong agreement across all contexts: technological, organizational, environmental, and beneficial, with an overall average mean of 3.53. In terms of job performance, teachers excel in teaching skills, management skills, discipline/regularity, and interpersonal relations, each category rated as "Outstanding," with an overall mean of 3.54. Analysis reveals no significant relationship between teachers' profiles and job performance in areas such as age, education, teaching experience, or online business duration. However, significant relationships are found between perceptions of online business and job performance in terms of discipline/regularity and overall performance, though not for teaching skills, management skills, or interpersonal relations.

Conclusions

Based on the research findings, it can be concluded that teachers engaged in online business demonstrate a high level of job performance across various dimensions, including teaching skills, management skills, discipline/regularity, and interpersonal relations. The strong agreement in their perceptions of online business across technological, organizational, environmental, and beneficial contexts underscores its perceived value and positive impact on their professional roles. Despite these favorable views and high-performance ratings, the study reveals no significant relationship between demographic factors and job performance, suggesting that factors such as age, educational attainment, and teaching experience do not significantly influence the effectiveness of teachers' job performance in this context. However, there is significant evidence that perceptions of online business are related to job performance, particularly in terms of discipline/regularity and overall performance. This highlights the importance of a positive perception of online business in enhancing teachers' professional effectiveness, although it does not uniformly impact all aspects of job performance.

Recommendations

Based on the study's findings, the following recommendations are proposed:

1. **Enhance Support and Training.** Given the positive impact of teachers' perceptions on their job performance, it is recommended to provide targeted support and training that further enhances their skills in online business. This can include professional development programs focused on integrating online business practices with teaching, as well as workshops on effective online business management.
2. **Promote Positive Perceptions.** Schools and educational institutions should actively promote and support positive perceptions of online business among teachers. This can be achieved through regular communication about the benefits and successes of online business, as well as by providing resources and incentives that highlight its value in enhancing professional performance.

3. **Monitor and Evaluate.** Implement regular monitoring and evaluation systems to assess the impact of online business on teachers' job performance. This should include feedback mechanisms to identify areas for improvement and to ensure that the online business practices are effectively supporting teachers' professional roles.
4. **Address Disciplinary and Regularity Issues.** Since discipline and regularity are significantly related to job performance, schools should focus on strategies to address and improve these areas. This might involve developing clear guidelines and support systems to help teachers manage their time and responsibilities effectively.
5. **Encourage Long-term Engagement.** Given the high percentage of teachers with less than a year of online business experience, it is important to encourage long-term engagement. Providing ongoing support and fostering a community of practice can help teachers build sustained online business practices that contribute positively to their job performance.
6. **Further Research.** Conduct further research to explore other potential factors that may influence the relationship between online business perceptions and job performance. This could include examining the impact of specific online business strategies and tools, as well as the role of external support systems.

By implementing these recommendations, educational institutions can better support teachers in integrating online business practices, ultimately enhancing their overall job performance and contributing to more effective teaching environments.

Compliance with Ethical Standards

This study adhered to ethical standards by obtaining informed consent from all participants, ensuring confidentiality, and maintaining voluntary participation without coercion. No harm came to participants, and the study received ethics committee approval. Researchers declared no conflicts of interest and reported findings transparently and honestly. Cultural sensitivity was respected throughout the research process.

PROPOSED SUSTAINABILITY PLAN

Rationale

The primary goal of education is to facilitate learning, and the environment where teaching and learning occur significantly impacts the quality of this learning experience (Hasbay, 2018). Job satisfaction is crucial for ensuring teachers' commitment and productivity within a school organization. Satisfied teachers are more likely to be engaged and committed, enhancing their overall job performance (Shila et al., 2015; Sadasa, 2013). Job satisfaction is thus a fundamental requirement for effective work performance (Baluyos et al., 2019).

In recent years, e-business has evolved rapidly, driven by technological innovations that present new opportunities. This shift involves transforming traditional business models and adapting to new competitive landscapes. E-business now involves various structural patterns, including e-channels, click-and-brick models, e-portals, e-market makers, and mobile portals (Putra et al., 2020).

Given these dynamics, and based on the findings and conclusions, a sustainability plan is proposed to balance teachers' online business activities with their job performance.

Objectives

This program aims to:

1. Conduct a virtual re-orientation for teachers engaged in online business, focusing on the DECS Manual 2000 handbook and the Code of Ethical Standards for Teachers, particularly concerning discipline and regularity.
2. Enhance the morale of teachers involved in online business.
3. Monitor the performance of teachers engaged in online business.

Mechanics of Implementation

With approval from the examining tribunal, the researcher will present the proposal to the district supervisors of Ubay I, Ubay II, and Ubay III Districts. Feedback, suggestions, or recommendations will be incorporated to tailor the plan to specific needs.

Schedule of Implementation

The program will be presented during the Summer Assessment and INSET sessions in June, and the implementation will commence in the subsequent school year.

Monitoring and Evaluation System

A monitoring and evaluation tool will be developed to assess the effects of the sustainability program. This system will facilitate continuous improvement and refinement of the plan to ensure its effectiveness.

TEACHERS' PRACTICES AND STUDENTS' ACADEMIC ACHIEVEMENT: BASIS FOR SCHOOL DEVELOPMENT PROGRAM

Chiminie R. Salva, Gina F. Labitad, Ph.D.

PHINMA Cagayan De Oro College, Philippines

https://doi.org/10.5281/zenodo.13151110

ABSTRACT

Teachers' practices play a pivotal role in shaping the academic achievement of students, transforming classrooms into dynamic spaces where engagement and support foster academic excellence. The "Engagement-Driven Academic Success Theory" emphasizes the role of interactive teachers' practices in enhancing students' academic achievement. This study includes analyzing the characteristics of respondents and evaluating teachers' practices in various aspects such as classroom participation, extracurricular activities, personalized attention, professional development, parental communication, lesson preparation, collaboration with colleagues, and innovative teaching methods. Additionally, the study seeks to assess students' academic achievement in English, Science, Mathematics, Filipino, and Araling Panlipunan, identify the significant effects of teachers' practices on academic achievement, determine the relationship between teachers' practices and respondents' characteristics, and propose a school development program. The research surveyed four hundred six (406) teachers and eight hundred twelve (812) learners from the Valencia City Division who participated in the study. Data from the respondents was gathered using research-made questionnaires. The study employed a complete enumeration method to include the total population in the research. Data analysis involved descriptive statistics, mean, standard deviation, Pearson Moment Correlation, and a one-way ANOVA to draw meaningful conclusions about the relationship between teacher practices and academic achievement. Findings showed that certain aspects of teacher practices, such as lesson preparation and parental communication, had significant positive correlations with academic achievement in specific subjects. The study recommends targeted strategies to promote teacher engagement and student academic achievement, including professional development programs, support for extracurricular activities, and collaboration among educators.

Keywords: *Teachers' Practices, Students' Achievement*

INTRODUCTION

Teachers provide students with a wide range of support, including academic instruction, emotional assistance, appraisal, and instrumental guidance. They also create a positive learning environment that fosters student growth and success. They are at the forefront of education, where students have high expectations for the learning that will mold them into independent and competitive individuals. Indeed, teachers are widely recognized as key figures who influence students' psychological well-being, behavior, and academic success.

As, Inayat and Alit (2020) emphasized the importance of educational institutions providing professional development training to teachers for effective content delivery and lesson preparation. Despite ongoing training, students may still lack motivation in the classroom, leading to low participation and performance. Effective delivery of the school curriculum by teachers can foster activities, collaboration, and innovative teaching methods, positively impacting students' academic performance. Facilitating meaningful learning experiences can inspire students to showcase their talents, enhance motivation, and channel their interest productively towards academics.

The Republic Act (RA) No. 4670, also known as the Magna Carta for Public School Teachers, focuses on safeguarding the physical and mental health of teachers while regulating their work hours for lesson preparation and teaching responsibilities. Additionally, teachers play a crucial role in the Department of Education (DepEd), ensuring the delivery of the curriculum and services and promoting a holistic approach to classroom leadership. Teachers are pivotal in creating a student-centered learning environment and safeguarding the well-being of learners. It is vital for DepEd to alleviate teachers' non-work-related burdens to enhance the curriculum and establish a more supportive learning atmosphere.

Similarly, for students to succeed in learning a foreign language, teachers must be actively involved and confident in their abilities (Bao et al., 2021, 2022). However, teacher engagement showed a negative relationship with burnout. While students play a primary role in their learning and success, teachers and parents also significantly impact school advancement.

Teachers have expressed concerns regarding professional development, citing limited opportunities for external seminars, delays in scheduled activities, and challenges in implementing faculty development (Padillo, 2021). Inadequate lesson planning, inappropriate strategies, and classroom management issues can hinder teachers from meeting their teaching objectives, impacting students' learning goals (Ali, 2021). Some educators face difficulties in communicating with parents, providing personalized attention, and dedicating ample time for lesson planning. Factors affecting innovative teaching methods, such as personal dedication, teaching philosophies, commitment, and

expertise, pose challenges that prompt teachers to collaborate with peers (Hashim et al., 2019).

Addressing these challenges is crucial to fostering innovation and creativity among teachers, ensuring effective mechanisms to achieve educational goals. Even with attempts to tackle these obstacles, there is a need for further action to guarantee that teachers and students truly reap the rewards of proper lesson preparation and classroom management. As Khan (2020) highlighted, this could mean introducing more inclusive and thorough educational initiatives to empower teachers to manage the intricate aspects of lesson planning and classroom management effectively.

The study aims to understand the relationship between teacher practices and academic achievement, considering factors such as position, teaching experience, highest educational attainment, and subject taught. By examining how these variables interact with teacher involvement, a more comprehensive understanding can be achieved.

Moreover, it would be beneficial to examine any potential differences in the effectiveness of teacher practices across different subject areas (English, Math, Science, Filipino, and Araling Panlipunan). Variations in teaching methodologies, content complexity, and student interest levels may lead to differential impacts on academic achievement within each subject domain.

Furthermore, considering the unique cultural and contextual factors within the Valencia City Division, exploring any specific challenges or opportunities related to teacher practices and student achievement could provide valuable insights for enhancing educational practices in the division.

Research Questions

This study aimed to determine the student's academic achievement in the Division of Valencia City during the School Year 2023–2024. The result of the study would be the basis for a school development program. Specifically, it sought to answer the following questions:

1. What are the characteristics of the respondents in terms of position, teaching experience, highest educational attainment, and subject taught?
2. How do the respondents assess their practices- with regard to classroom participation, extracurricular activities, personalized attention, professional development, parental communication, lesson preparation, collaboration with colleagues, and innovative teaching methods?
3. What is the level of learners' academic achievement in English, Science, Mathematics, Filipino, and Araling Panlipunan during the 3rd and 4th Quarters?
4. Is there a significant effect of teacher practices on learners' academic achievement?
5. Is there a significant relationship between teachers' practices and each of their characteristics?
6. Based on the study's findings, what school development program can be designed?

METHODOLOGY

This section presented the techniques and protocols used in the research investigation. It provided in-depth descriptions of the research design, setting, respondents, research instrument, instrument validation, data gathering procedure, statistical treatment of the data, and ethical considerations of the study.

Research Design

This research study was underpinned by a descriptive method, a crucial choice that allowed to determine the level of teachers' involvement and academic achievement of public junior high school students. This method, by its very nature, enabled to establish the level of teacher practices based on various factors and how these variables influence the academic achievement of the learners.

Additionally, descriptive research design was widely employed across diverse fields. Its primary objective was to systematically observe and document all variables and conditions influencing the phenomenon (Singh, 2023). This method formulated its hypothesis as data were collected. The descriptive research design disallowed interventions or manipulation of the variables. The first goal was to seek the level of teacher involvement in academic achievement among all study respondents. It was then very appropriate to use the implied research design.

Study Setting

A research study was meticulously carried out in the Department of Education, Division of Valencia City, focusing on medium, large, and mega schools within the division. The selection of participating schools was carefully done to ensure diverse representation and respondent cooperation. Valencia City, officially known as the City of Valencia, is a 2nd-class component city in Bukidnon, Philippines, with a population of 216,546 as per the 2020 census. It became a city under Republic Act No. 8985 in January 2001, standing as the most populous inland city in Mindanao and a key hub for trade and commerce in Bukidnon. The study's location in the highly populated Valencia City Division provided valuable insights. The researchers strategically sampled schools of various sizes to gather comprehensive data, with a focus on respondents' voluntary participation to ensure data accuracy. The study's setting was chosen meticulously to align with the research criteria, ensuring the collection of pertinent and reliable information.

Research Respondents

The study was conducted in the Valencia City division. The participating teachers were from a mix of medium, large, and mega secondary schools within this division. The 406 teachers represented a cross-section of the teaching staff in the area. The 812 student participants were from the junior high school department, meaning they were in grades 7–10, in the same Valencia City division. The study focused on the academic

performance of these students across five core subject areas: English, science, mathematics, Filipino, and Araling Panlipunan.

The table below shows the distribution of respondents by school.

Distribution of Respondents

Name/Category of School	Total # of Respondents
A. Medium Scool	
A.1. Catumbalon National High School	29
A.2. Guinoyoran National High School	17
A.3. Lilingayon National High School	25
A.4. Conception National High School	18
B. Large School	
B.1. Lurugan National High School	45
B.2. Tongan-Tongan National High School	45
C. Mega School	
C.1. Valencia National High School	227
Total	**406**

Sampling Technique

The researcher employed a complete enumeration method to determine the total population for this study. All 406 Valencia City Division secondary school teachers were included as respondents. This approach was opted for the small sample size, which allowed for precise statistical analysis considering the entire test statistic distribution. Additionally, the 812 student participants from the junior high school department were also part of the complete enumeration, with data collected on their academic performance across the five core subject areas. The data analysis examined all possible elements in the finite teacher and student information set, providing a representative snapshot of the Valencia City education system. Descriptive statistics analysed the data, the Pearson correlation coefficient, and a one-way ANOVA. Descriptive statistics were used to summarize and characterize the key variables, such as teacher demographic profile and student academic performance. The study computed the Pearson correlation coefficient to analyse the links between variables, including teacher qualifications, teaching experience, and student achievement. The study conducted a one-way ANOVA to find out if there were any statistically significant differences in student achievement based on various teaching practices. This comprehensive analytical approach allowed the researchers to thoroughly understand the factors influencing academic performance within the Valencia City secondary schools.

Research Instruments

The data collection instrument for this study was a survey questionnaire designed to gather valuable insights into teachers' practices and their effect on student's academic achievement. The researcher developed and validated the research instrument.

The first part included questions about the teachers' respondents' profiles, such as position, teaching experience, highest educational attainment, and subject taught. The second part of the survey questionnaire focused on various aspects of teachers' practices in classroom participation, extracurricular activities, personalized attention, professional development, parental communication, lesson preparation, collaboration with colleagues, and innovative teaching methods. The last part of the questionnaire assessed the learner's academic achievement in English, Science, Mathematics, Filipino, and Araling Panlipunan.

The finalized survey questionnaire was then administered to a representative sample of participants from medium, large, and mega schools within the Division of Valencia City. Participation in the study was voluntary, and the researchers considered the respondents' willingness to cooperate during the data collection process.

Validity and Reliability of Instrument

The study utilized a researcher-made survey questionnaire as the data collection instrument, which underwent rigorous validation to ensure reliability and validity. Content validity was confirmed through consultation with three education experts, who unanimously agreed that the instrument comprehensively addressed key constructs related to teachers' practices and learners' academic achievement. The survey questionnaire was endorsed for its relevance, format adherence, and suitability in academic and research contexts.

To establish reliability, internal consistency using Cronbach's alpha and test-retest reliability were employed. The survey questionnaire demonstrated a very high level of internal consistency with an overall Cronbach's alpha value of 0.957. Factor analysis confirmed the instrument's construct validity, ensuring effective measurement of intended factors and variables.

Pilot testing was crucial in refining the survey instrument based on participant feedback, enhancing clarity and comprehensibility. The finalized survey instrument was then administered to participants from various school categories within the Division of Valencia City, with voluntary participation ensuring cooperation during data collection. This validated instrument provided reliable data for examining the relationship between teachers' practices and students' academic achievement, laying the foundation for a school development program.

Categorization of Variables and System of Scoring

The following categories were created to facilitate data analysis and interpretation.

Part 1. Respondent's Characteristics

Position

- Master Teacher III
- Master Teacher II
- Master Teacher I
- Teacher III
- Teacher II
- Teacher I

Teaching Experience

- 30 years and above
- 25-29 years
- 20-24 years
- 15-19 years
- 10-14 years
- 5-9 years
- 4 years and below

Highest Educational Attainment

- Doctorate Degree
- Master's Degree with PhD Units
- Master's Degree
- Bachelor's Degree with MA Units
- Bachelor's Degree

Subject Taught

- English
- Science
- Mathematics
- Filipino
- Araling Panlipunan

Part 2. Teacher Involvement

Scale	Range	Description	Interpretation
4	3.21 – 4.00	Always	Very High
3	2.61 – 3.20	Most of the Time	High
2	1.81 – 2.60	Sometimes	Low
1	1.00 – 1.80	Never	Very Low

PART 3. Academic Achievement

Grade Average	Description
90 and above	Outstanding
85 to 89	Very Satisfactory
80 to 84	Satisfactory
75 t0 79	Fairly Satisfactory
74 and below	Does Not Meet Expectations

Data Gathering Procedure

Prior to commencing the data gathering activity, the researcher obtained approvals from the Dean of Graduate Studies at PHINMA Cagayan de Oro College and the DepEd Valencia City Division Superintendent. Approval from the seven participating school heads was secured after submitting a research consent letter, allowing for the initiation of data collection procedures.

The two-week data collection activity began following approvals from relevant authorities and school heads, resulting in a 100% recovery rate from 406 teacher respondents. Before distributing the research questionnaire, a brief orientation was conducted to stress the importance of honest responses for unbiased and valid results.

The researcher employed Google Suite to create a data collection form, utilizing technology to reach teacher respondents in remote areas safely and efficiently. The Google Forms link was shared via email and messaging platforms, accompanied by clear instructions and deadlines. Follow-up reminders were sent to enhance response rates. Data collected through the online form was automatically organized and securely stored in a database, facilitating efficient and accurate data analysis.

Statistical Treatment of Data

This study used descriptive statistics to analyse and interpret the data, providing a clear overview of the study results and discussions. Descriptive statistics help outline the key characteristics of the data, offering basic descriptions of the sample and measurements, which are essential for most quantitative data analyses and are complemented by straightforward graphical representations for analysis.

For Problem 1, the respondents' characteristics in terms of position, teaching experience, highest educational attainment, subject taught, frequency, and percentage were used. For Problem 2, on the level of teachers' practices, the mean and standard deviation were employed and presented in tables. However, in Problem 3, the assessment of academic achievement, frequency, and percentage were used. In Problem 4, regression analysis determined the significant effect of teachers' practices and academic achievements. This further analysed whether the set null hypothesis is acceptable or not. However, in Problem 5, to determine the significant relationship between academic achievement and the respondents' characteristics, Pearson's correlation coefficient (r) was utilized. This demonstrated whether the two variables were correlated or related.

Ethical Considerations

The research study prioritized ethical considerations to protect the rights of human participants and uphold research integrity. Ethics review and approval were obtained, with voluntary participation for teacher respondents and parental consent for student participants. Confidentiality measures were strictly implemented to safeguard potentially identifiable data, ensuring data privacy and trust.

The study's goals encompassed understanding real-life phenomena, effective treatments, and academic behaviour. Written, informed consent was obtained to protect participants' rights, with a focus on maintaining confidentiality in potential publication content. Ethical considerations extended to the dissemination of research findings, emphasizing the importance of accuracy, benefit, and respect for participant confidentiality in contributing to academic knowledge advancement.

RESULTS

This section outlines the study's key components, including results, interpretation, and analysis, aiming to drive positive changes in teachers' practices and student success through the portrayal, explanation, and application of research results.

Problem 1. What are the respondents' characteristics regarding position, teaching experience, highest educational attainment, and subject taught?

Table 1. Respondents Characteristics

Indicator	Frequency	Percentage
Teaching Position		
Teacher 1	243	59.85
Teacher 2	60	14.78
Teacher 3	72	17.73
Master Teacher 1	31	7.63
Master Teacher 2	0	0.00
Master Teacher 3	0	0.00
Total	406	100.00
Teaching Experience	Frequency	Percentage
21 and above	57	14.04
16-20 years	43	10.59
11-15 years	65	16.01
6-10 years	160	39.41
0-5 years	81	19.95
Total	406	100.00
Highest Educational Attainment	Frequency	Percentage
Doctorate Degree	0	0.00
Master's degree w/PhD	51	12.56
Master's Degree	102	25.12
Bachelor's Degree w/MA	173	42.61
Bachelor's Degree	80	19.70
Total	406	100.00
Subject Taught	Frequency	Percentage
English	66	16.26
Science	74	18.23
Math	66	16.26
Filipino	74	18.23
Araling Panlipunan	77	18.97
Other Subjects	49	12.07
Total	406	100.00

The distribution of respondents' characteristics revealed a significant presence of teachers in the Teacher 1 position, comprising 59.85% of the respondents. This high frequency may be attributed to turnover rates, limited career progression options, or a disparity between the supply and demand of experienced teachers. To address these challenges, the study suggests fostering a supportive work environment, structured career pathways, and comprehensive professional development opportunities to enhance teacher retention and success (Hattie, 2019).

On the other hand, the Master Teacher 1 position had the lowest frequency, with only 7.64% of respondents occupying this role. Barriers such as limited training access, lack of mentorship, and insufficient incentives for higher qualifications may contribute to the scarcity of teachers in advanced positions. The study recommends implementing professional development initiatives, mentorship programs, clear career paths,

recognition incentives, and supportive leadership to address this gap (Vagi et al., 2019). The absence of Master Teacher 2 and Master Teacher 3 positions signifies a significant void in top-tier professional recognition and expertise, suggesting potential barriers hindering teachers from advancing to these higher levels.

The research underscores the significance of investing in the growth of early-career educators, establishing clear career pathways, and offering advanced teaching roles to attract and retain high-performing teachers. By tackling these issues, educational institutions can cultivate a more experienced, engaged, and effective teaching workforce, ultimately leading to enhanced student outcomes.

The distribution of respondents based on teaching experience indicated that 39.41% were in the 6–10-year category, a crucial period for educators to refine their instructional practices and become expert teachers. Research by Kraft and Falken underscores the significance of comprehensive, sustained, and content-focused professional development programs to enhance teacher practices and student outcomes. These programs should be multifaceted, sustained, and tailored to teachers' needs to improve student achievements and cultivate a proficient teaching workforce.

However, 10.59% of respondents fell into the 16–20-year experience range, suggesting potential mid-career attrition due to burnout, lack of support, and work-life balance issues. Implementing personalized professional development, mentorship initiatives, and work-life balance programs is essential to retain experienced educators and contribute to long-term student success and the educational community. The study by Vagi, Pivovarova, and Barnard (2019) emphasizes the importance of targeted support and retention strategies, beyond the initial induction phase, to mitigate teacher attrition and enhance the overall teaching workforce quality.

The distribution of respondents based on their highest educational attainment revealed that 42.61% held a bachelor's degree with a master's degree, showcasing a workforce that values continuing education and professional development. Teachers with advanced degrees often possess enhanced content knowledge and pedagogical skills, leading to improved student outcomes and effective classroom management. Higher levels of educational attainment among teachers have been linked to better student performance and more effective teaching practices (Darling-Hammond et al., 2020).

Ghanizadeh and Rostami's study (2021) highlighted that teachers with a master's degree exhibit higher self-efficacy and confidence in various aspects of teaching, contributing to improved student achievement and job satisfaction. However, the low representation of teachers with a master's degree and a PhD suggests potential barriers to pursuing doctoral-level education. Strategies to incentivize and support advanced degrees are crucial to attract and retain highly educated teachers and enhance the quality of the teaching workforce.

The distribution of respondents based on the subject taught highlighted a notable presence of teachers in Araling Panlipunan, potentially influenced by curricular

requirements and student interest. In contrast, subjects like Music, Arts, Physical Education, Health Education (MAPEH), Edukasyon sa Pagpapakatao (ESP), and Technology and Livelihood Education (TLE) had lower frequencies, indicating a focus on core academic subjects over elective or specialized areas. Addressing this imbalance through interdisciplinary integration and targeted professional development initiatives could bolster the teaching workforce in these subjects and promote a more well-rounded curriculum for holistic student development.

Cohen and Hill's study (2020) stresses the importance of a balanced curriculum in nurturing multiple intelligences, enhancing student engagement, and fostering equity and inclusion. Integrating non-core subjects like MAPEH, ESP, and TLE can enrich the learning experience, establish interdisciplinary connections, and cater to diverse student interests and talents. By rectifying disparities in subject representation, educational institutions can establish a more inclusive learning environment that empowers all students to realize their full potential.

Problem 2. How do the respondents assess their practices in classroom participation, extracurricular activities, personalized attention, professional development, parental communication, lesson preparation, collaboration with colleagues, and innovative teaching methods?

Table 2.1. Distribution of Respondents' Assessment of their Practices in Classroom Participation

Indicators	Mean	SD	Description
As a teacher…			
I lead the discussions and activities to motivate students to participate throughout the period.	3.70	0.46	Always
I promote student participation to enrich both creativity and mind-fullness.	3.72	0.45	Always
I ensure that classroom participation is a positive experience for every student.	3.75	0.44	Always
I encourage students to share their thoughts and opinions in class to enhance self-confidence.	3.79	0.41	Always
I employ interactive teaching methods like discussions, debates, or Q&A sessions for student engagement.	3.50	0.58	Always
I use approaches to actively involve students in hands-on activities or group work during lessons.	3.58	0.53	Always
I empower students to ask questions and engage in meaningful dialogue.	3.64	0.53	Always
I facilitate the discussions and activities for a better understanding of the concepts.	3.70	0.46	Always
I engage my students in interactive discussions and develop better outcomes.	3.65	0.49	Always
I provide feedback and foster a collaborative learning	3.54	0.57	Always

environment.

Overall	**3.66**	**0.49**	**Always**

Legend : 3.21-4.00 Always/Very High 2.61-3.20 Most of the Time/High 1.81-2.60 Sometimes/Low 1.00-1.80 Never/ Very Low

Table 2.1 analyzes teachers' classroom participation practices, showing a mean of 3.66 (SD = 0.49), indicating consistent engagement. Factors like training, resource access, and institutional support contribute to this engagement. Zhong and Li (2020) highlight the positive impact of teacher engagement on student achievement, especially in online learning environments. Strengthening interactive teaching approaches can enhance students' learning outcomes.

Encouraging students to share thoughts and opinions promotes self-confidence, inclusivity, and motivation in the classroom. Student self-efficacy predicts academic success, making student expression crucial for their engagement and motivation. Interactive methods like discussions, debates, and Q&A sessions, with a mean score of 3.50 (SD = 0.58), demonstrate a commitment to engaging students. However, there is room for improvement and innovation in their implementation.

Interactive methods like discussions and debates enhance understanding, critical thinking, and communication skills. Cochrane et al. (2019) emphasize that active participation fosters critical thinking, engagement, and skill development. These methods not only enhance academic performance but also prepare students for future success by developing essential skills like communication and teamwork.

Table 2.2. Distribution of Respondents Assessment of their Practices in Engagement in Extracurricular Activities

.

Indicators	Mean	SD	Description
As a teacher…			
I take an active role in planning and managing extracurricular activities.	3.11	0.72	Most of the Time
I initiate and organize extracurricular activities to enhance the talents of my students.	3.02	0.74	Most of the Time
I organize or lead some extracurricular activities relevant to the appropriate grade-level competencies.	2.98	0.77	Most of the Time
I participate in extracurricular activities outside of the scheduled school day.	2.94	0.83	Most of the Time
I encourage and assist students who want to participate in extracurricular activities.	3.32	0.70	Always
I eagerly participate in extracurricular activities to share my knowledge and skills.	3.13	1.40	Most of the Time
I attend and support students during extracurricular events, such as sports competitions or performances.	3.26	0.69	Always
I render extra hours to help motivate students to pursue extracurricular activities.	3.04	0.73	Most of the Time
I am involved in supervising and coordinating school clubs or societies.	2.96	0.81	Most of the Time
I allow project collaboration as part of extracurricular initiatives.	3.12	0.74	Most of the Time

Overall		**3.09**	**0.81**	**Most of the Time**

Legend : 3.21-4.00 Always/Very High 2.61-3.20 Most of the Time/High
1.81-2.60 Sometimes/Low 1.00-1.80 Never/ Very Low

The analysis of teacher practices in engagement in extracurricular activities reveals a high commitment level, with an overall mean of 3.09 (SD = 0.81). While teachers show dedication to holistic student development, there are disparities in participation levels across schools. Encouraging uniform practices through policies and support systems can maximize the benefits of extracurricular activities, promoting equity and inclusion.

One teacher, focusing on encouraging student participation, achieved a high mean score of 3.32 (SD = 0.70), reflecting a very high commitment level. Consistent support for students in extracurricular activities fosters holistic education, empowering students to explore interests and develop life skills. Teacher encouragement plays a vital role in promoting student success and participation in these activities, as highlighted by Rodriguez and Martinez (2020).

Conversely, teacher participation in extracurricular activities outside the scheduled school day received a lower mean of 2.94 (SD = 0.83), indicating room for improvement in consistency. The variability in engagement suggests factors like support, resources, and motivation influence educators' involvement. Addressing these challenges can strengthen a holistic approach to education, ensuring equal emphasis on academic and non-academic aspects.

Table 2.3. Distribution of Respondents' Assessment of their Practices in Personalized Attention

Indicators	Mean	SD	Description
As a teacher…			
I offer personalized support to students who encounter academic challenges.	3.34	0.61	Always
I adjust my teaching methods to meet each student's individual needs and learning interests.	3.52	0.55	Always
I regularly integrate interests and preferences into the curriculum to ensure personalized learning experiences.	3.45	0.57	Always
I identify and address individual learning difficulties by offering additional support and resources to students.	3.33	0.61	Always
I schedule individual conferences or meetings with students to discuss their goals and progress.	3.23	0.68	Always
I tailor my teaching methods to meet the specific learning needs of each student.	3.34	0.61	Always
I consistently provide personalized feedback to individual students regarding their academic progress.	3.33	0.61	Always
I give each student individualized feedback to ensure their academic needs are met.	3.34	0.60	Always
I consistently provide individualized feedback to students on their assignments and assessments.	3.21	0.64	Always
I employ teaching strategies that cater to the diverse learning needs of each student for an inclusive learning environment.	3.38	0.61	Always

Overall	**3.35**	**0.61**	Always	

Legend *: 3.21-4.00 Always/Very High 2.61-3.20 Most of the Time/High*
1.81-2.60 Sometimes/Low 1.00-1.80 Never/ Very Low

The analysis of personalized attention practices among teachers reveals a high level of commitment, with an overall mean score of 3.35 (SD = 0.61), described as very high. Teachers consistently provide individualized support, adapting their teaching methods to meet the unique needs of each student. This personalized approach is crucial for addressing diverse learning needs and fostering student engagement and academic success.

One teacher, focusing on adjusting teaching methods to meet individual student needs, achieved a high mean score of 3.52 (SD = 0.55), indicating a strong emphasis on personalized teaching. Adapting teaching strategies to align with students' needs and interests creates an inclusive and effective learning environment, supporting equitable learning opportunities.

In contrast, providing individualized feedback to students on assignments and assessments received a slightly lower mean score of 3.21 (SD = 0.64), suggesting challenges in consistent implementation. Time constraints and workload issues can hinder educators from delivering personalized feedback effectively, highlighting the need for additional support and strategies to maintain this practice consistently.

The research by Cohen and Hill (2020), Darling-Hammond et al. (2020), Hattie (2019), Ingersoll and Strong (2019), and Shute (2019) emphasizes the importance of personalized teaching strategies, mentoring programs, and individualized feedback in supporting student learning, engagement, and academic performance. These studies underscore the transformative impact of personalized approaches on student growth and success, highlighting the significance of ongoing professional development and institutional support in enhancing teaching practices.

Table 2.4. Distribution of Respondents' Assessment of their Practices in Professional Development

Indicators	Mean	SD	Description
As a teacher…			
I improve my teaching abilities by taking part in professional development training.	3.43	0.65	Always
I participate in ongoing training sessions the school or district offers to stay informed about educational trends.	3.39	0.64	Always
I proactively seek and engage in various professional development opportunities to refine my skills and expertise.	3.36	0.64	Always
I attend workshops, conferences, or seminars to enhance my teaching skills and knowledge.	3.32	0.65	Always
I pursue advanced degrees or additional certifications to further develop my expertise in the subject matter.	3.20	0.74	Most of the Time
I remain abreast of the latest educational approaches and advancements for continuous improvement in my practice.	3.29	0.62	Always

I remain abreast of the latest educational approaches and advancements for continuous improvement in my practice.	3.45	0.59	Always
I collaborate with colleagues to share best practices and innovative teaching strategies as part of my personal and professional development.	3.36	0.65	Always
I engage in reflective practice and establish personal and professional development goals for continuous improvement.	3.33	0.59	Always
I apply insights gained from professional development in my daily teaching practices.	3.39	0.60	Always
Overall	**3.35**	**0.64**	**Always**

Legend *: 3.21-4.00 Always/Very High 2.61-3.20 Most of the Time/High 1.81-2.60 Sometimes/Low 1.00-1.80 Never/ Very Low*

The analysis of teachers' practices in professional development indicates a high level of commitment, with an overall mean score of 3.35 (SD = 0.64), categorized as Very High. Teachers show consistent engagement in professional development activities, highlighting a strong dedication to continuous improvement and growth in their teaching practices. Ongoing participation in professional development is crucial for enhancing teaching skills, keeping abreast of educational trends, and enhancing student outcomes.

Padillo (2021) emphasizes the significant impact of professional development on improving teaching practices and student learning outcomes. These programs equip teachers with essential skills and strategies to deliver effective and personalized instruction, ultimately enhancing student engagement and academic success. Research by Adeniran, Ishaku, and Akanni (2020) also underscores the importance of continuous professional development in maintaining teacher engagement and addressing learning disparities.

Sanchez (2022) and Ansong (2024) highlight the necessity of well-designed professional development programs tailored to meet the specific needs of teachers and students. These initiatives provide practical strategies that can be directly implemented in the classroom, significantly influencing teaching practices, confidence, and job satisfaction. Continuous learning through professional development is vital for teachers to navigate challenges and ensure a high-quality education for students.

One indicator, focusing on staying informed about the latest educational approaches, received the highest mean score of 3.45 (SD = 0.59), reflecting a strong commitment to continuous learning and adaptation. Teachers who remain updated on educational advancements can implement innovative teaching strategies, enhancing student engagement, motivation, and academic achievement.

On the other hand, the indicator related to pursuing advanced degrees or additional certifications received a lower mean score of 3.20 (SD = 0.74), indicating challenges in consistent engagement with further education. Darling-Hammond et al. (2019) emphasize the importance of advanced education and specialized training in deepening subject matter expertise, adapting teaching strategies, and meeting diverse learning needs. Educators with higher levels of education are more likely to integrate innovative teaching techniques and benefit from ongoing learning opportunities.

Table 2.5. Distribution of Respondents' Assessment of their Practices in Parental Communication

Indicators	Mean	SD	Description
As a teacher...			
I regularly communicate with parents or guardians regarding their child's academic progress.	3.43	0.60	Always
I promote parents' involvement in supporting their child's education and in a collaborative home-school partnership.	3.51	0.57	Always
I promptly respond to messages from parents seeking information or updates about their child's education to ensure open lines of communication.	3.56	0.55	Always
I organize quarterly parent-teacher conferences, or as needed, to discuss students' overall development and performance.	3.54	0.56	Always
I provide parents with opportunities for teaching methods and classroom activities to enhance transparency.	3.33	0.67	Always
I communicate with parents about the child's behavioral issues or concerns that need to be addressed.	3.52	0.61	Always
I share information about upcoming school events, projects, or assignments with parents.	3.50	0.60	Always
I actively seek parental input and involvement in the child's educational journey for shared decision-making.	3.41	0.60	Always
I regularly provide constructive feedback to parents on ways they can support their child's learning at home to promote effective home-school partnerships.	3.39	0.64	Always
I collaborate with parents to address academic challenges and improve coping mechanisms.	3.39	0.60	Always
Overall	**3.46**	**0.60**	**Always**

Legend *: 3.21-4.00 Always/Very High 2.61-3.20 Most of the Time/High 1.81-2.60 Sometimes/Low 1.00-1.80 Never/ Very Low*

The analysis of teachers' practices in parental communication reveals a high level of commitment, with an overall mean score of 3.46 (SD = 0.60), described as Very High. Teachers consistently engage in effective communication with parents, emphasizing the importance of maintaining open and meaningful dialogue to enhance student success and the educational experience.

Research by Tutt (2021) and Hawthorne (2022) highlights the significance of effective parental communication in education, addressing common challenges and fostering strong home-school partnerships. Effective communication leads to improved student outcomes, enhanced teacher provision, and increased parent engagement in their child's education.

One indicator, focusing on promptly responding to parent messages seeking information or updates about their child's education, received the highest mean score of 3.56 (SD = 0.55), demonstrating a strong commitment to maintaining open lines of communication. This practice fosters trust, collaboration, and positive relationships between parents and teachers, contributing to student well-being and academic success.

In contrast, the indicator of providing parents with opportunities to learn about teaching methods and classroom activities received a lower mean score of 3.33 (SD = 0.67). While educators value transparency and parent involvement, there may be variability in how consistently these opportunities are provided, indicating a need for more structured approaches to enhance parent engagement.

Table 2.6. Distribution of Respondents' Assessment of their Practices in Time Spent on Lesson Preparation

Indicators	Men	SD	Description
As a teacher….			
I dedicate time to plan and prepare for daily lessons thoroughly.	3.41	0.56	Always
I engage in strategic long-term curriculum planning to ensure comprehensive coverage of topics throughout the academic year.	3.29	0.62	Always
I invest extra time beyond regular school hours to prepare materials and resources for classroom instruction.	3.31	0.60	Always
I update and adapt lesson plans to address the evolving needs of the students.	3.44	0.56	Always
I use a variety of assessments (e.g., essays, quizzes, projects) that align with learning objectives and accurately measure student understanding of the course material.	3.54	0.54	Always
I collaborate with colleagues to share lesson plans and resources, reducing individual preparation time.	3.34	0.63	Always
I participate in professional development activities focused on improving lesson planning and preparation skills.	3.34	0.63	Always
I allocate time for reflection on the teaching practices and adjust to improve student learning.	3.36	0.58	Always
I involve students in planning to solicit their input and feedback on learning activities to enhance relevance and engagement.	3.25	0.65	Always
I invest additional time in planning and organizing initiatives relevant to the lesson.	3.27	0.63	Always
Overall	**3.35**	**0.60**	Always

Legend *: 3.21-4.00 Always/Very High 2.61-3.20 Most of the Time/High*
1.81-2.60 Sometimes/Low 1.00-1.80 Never/ Very Low

The analysis of teachers' professional development practices indicates a high level of commitment, with an overall mean score of 3.35 (SD = 0.64), signifying a Very High dedication to continuous improvement. Teachers exhibit consistent engagement in professional development activities, emphasizing the importance of ongoing learning to enhance teaching skills and student outcomes. Padillo (2021) highlights the significant impact of professional development on teaching practices and student learning, equipping educators with essential skills for effective instruction.

Research by Adeniran, Ishaku, and Akanni (2020) reinforces the necessity of continuous professional development to maintain teacher engagement and address learning disparities. Sanchez (2022) and Ansong (2024) stress the need for well-tailored professional development programs to meet the specific needs of teachers and students, enhancing teaching practices and job satisfaction. Staying informed about the latest educational approaches received the highest mean score, indicating a strong

commitment to continuous learning and adaptation, leading to innovative teaching strategies and improved student engagement.

Conversely, pursuing advanced degrees received a lower mean score, suggesting challenges in consistent engagement with further education. Darling-Hammond et al. (2019) underscore the importance of advanced education in deepening subject matter expertise and adapting teaching strategies. Educators with higher levels of education are more likely to integrate innovative teaching techniques and benefit from ongoing learning opportunities.

Table 2.7. Distribution of Respondents Assessment of their Practices in Collaboration with Colleagues

Indicators	Mean	SD	Description
As a teacher….			
I collaborate with colleagues on joint lesson planning or curriculum development.	3.33	0.65	Always
I participate in professional learning communities or collaborative teacher teams.	3.36	0.60	Always
I share teaching strategies and resources with my colleagues to foster a collaborative learning environment.	3.32	0.61	Always
I engage in interdisciplinary collaboration with colleagues from other subject areas.	3.32	0.66	Always
I collaborate with colleagues to share insights and develop effective interventions.	3.42	0.61	Always
I actively engage in collaborative professional development opportunities with colleagues, focusing on implementing evidence-based practices to enhance student learning outcomes.	3.44	0.59	Always
I involve colleagues in discussions about innovative teaching methods and educational trends.	3.37	0.63	Always
I work collaboratively with colleagues to create a supportive and cohesive classroom environment.	3.37	0.62	Always
I help my colleagues to organize and supervise extracurricular activities.	3.32	0.61	Always
I seek input and feedback from colleagues on their teaching practices for mutual professional growth and improvement.	3.36	0.63	Always
Overall	**3.36**	**0.62**	**Always**

Legend *: 3.21-4.00 Always/Very High 2.61-3.20 Most of the Time/High 1.81-2.60 Sometimes/Low 1.00-1.80 Never/ Very Low*

Table 8 provides a comprehensive analysis of teachers' collaboration practices, revealing a strong culture of collaboration that enhances teaching effectiveness, problem-solving support, and professional growth. This collaborative environment fosters shared best practices and mutual support, promoting a supportive teaching community. Studies by Ruano (2019), Sannen et al. (2021), Muckenthaler et al. (2020), Drossel et al. (2019), and De Jong et al. (2022) align with these findings, emphasizing the positive impact of effective collaboration on student achievement and the importance of dense networks for inclusive teaching practices.

The research underscores the significance of teacher collaboration in professional development and educational effectiveness, leading to continuous improvement and better student outcomes. The high level of engagement in collaborative activities reflects a well-established norm among teachers, enhancing the professional environment and fostering growth. The emphasis on evidence-based practices and shared learning opportunities highlights educators' commitment to lifelong learning and skill enhancement.

While sharing teaching strategies and resources received a slightly lower mean score, educators still value collaboration and recognize its importance in fostering a supportive learning environment. Collaborative efforts not only enhance pedagogical skills and teaching effectiveness but also promote innovation, creativity, and job satisfaction among teachers. By working together, educators can create a culture of continuous improvement and excellence in education, benefiting both teachers and students alike.

Table 2.8. Distribution of Respondents' Assessment of their Practices in Innovative Teaching Methods

Indicators	Mean	SD	Description
As a teacher…			
I integrate technology into my lessons to enhance student engagement.	3.53	0.60	Always
I employ various creative teaching approaches in the classroom to meet the needs of students with different learning styles and preferences.	3.44	0.60	Always
I facilitate project-based learning and hands-on experiential approaches in my teaching for active learning.	3.38	0.61	Always
I tailor-fit lessons to accommodate diverse learning styles and preferences for equitable learning opportunities.	3.35	0.58	Always
I utilize flipped classroom techniques for pre-learning before in-class discussions.	3.32	1.43	Always
I integrate real-world applications to contextualize content and enhance its relevance for students.	3.48	0.57	Always
I incorporate collaborative learning activities as teaching methods to develop teamwork among students.	3.56	1.93	Always
I utilize gamification strategies to increase student engagement and motivation.	3.26	0.66	Always
I incorporate creative assessment methods to gauge student understanding.	3.30	0.62	Always
I adapt different teaching approaches to match each student's needs and interests.	3.42	0.55	Always
Overall	**3.40**	**0.82**	Always

Legend *: 3.21-4.00 Always/Very High 2.61-3.20 Most of the Time/High*
1.81-2.60 Sometimes/Low 1.00-1.80 Never/ Very Low

The distribution analysis of respondents' practices in innovative teaching methods reveals a high level of commitment, with an overall mean score of 3.40 (SD = 0.82), described as Very High. Teachers demonstrate a strong willingness to incorporate innovative teaching

strategies, emphasizing student-centred approaches and dynamic instructional methods to enhance learning outcomes.

Research by Karolčík and Marková (2023) highlights the importance of teachers' perceptions of innovative teaching methods in designing effective professional development programs and support systems. Overcoming implementation challenges and fostering widespread adoption of innovative practices can positively impact student motivation, learning outcomes, and engagement.

One indicator, focusing on incorporating collaborative learning activities to develop teamwork among students, obtained the highest mean score of 3.56 (SD = 1.93), demonstrating educators' high value for collaborative learning. These activities promote social interaction, critical thinking, and essential interpersonal skills, contributing to improved student engagement and academic achievement.

In contrast, the indicator of utilizing gamification strategies to increase student engagement and motivation received the lowest mean score of 3.26 (SD = 0.66), indicating a consistent but slightly lower application of gamification. Despite this, educators recognize the potential benefits of gamification in enhancing learning experiences, suggesting a willingness to explore innovative approaches to boost student engagement and motivation.

Jones and Smith (2021) emphasize the positive impact of gamification strategies on student engagement and motivation. By incorporating game elements into educational tasks, educators can create interactive and enjoyable learning experiences that resonate with students' preferences for interactive and experiential learning.

Table 2.9. Summary of the Respondents' Assessment of Their Practices

Variables	**Mean**	**SD**	**Interpretation**
Classroom Participation	3.66	0.49	Very High
Extracurricular Activities	3.09	0.81	High
Personalized Attention	3.35	0.61	Very High
Professional Development	3.35	0.64	Very High
Parental Communication	3.46	0.60	Very High
Lesson Preparation	3.35	0.60	Very High
Collaboration with Colleagues	3.36	0.62	Very High
Innovative Teaching Methods	3.40	0.82	Very High
Overall	**3.38**	**0.67**	**Very High**

Legend : 3.21-4.00 Always/Very High 2.61-3.20 Most of the Time/High
1.81-2.60 Sometimes/Low 1.00-1.80 Never/ Very Low

The assessment of teachers' practices in Table 2.9 reveals a high level of engagement and dedication, with an overall mean score of 3.38 (SD = 0.67), interpreted as Very High. This indicates that teachers are committed to their responsibilities and actively involved

in their roles, enhancing the educational experience for students through effective teaching practices.

According to Harris and Jones (2020), teacher involvement in community and extracurricular activities significantly enhances the educational experience for students. Engaging in extracurricular activities as mentors, club advisors, or community liaisons builds stronger student relationships, improves academic performance, and fosters personal development. Teachers' involvement outside the traditional classroom setting creates a supportive and personal environment for students, guiding them through academic challenges and personal growth.

Specifically, the variable of classroom participation received the highest mean score of 3.66 (SD = 0.49), indicating highly active and engaged teachers who lead discussions, encourage student participation, and utilize diverse teaching methods. This dynamic and interactive learning environment fosters strong student-teacher relationships, enhances student engagement, and promotes holistic student development.

Smith and Brown (2019) emphasize the significance of active teacher participation in classrooms for improving student engagement and learning outcomes. Teachers' interactive lessons, collaborative projects, and discussions create a dynamic learning environment that motivates students, enhances critical thinking skills, and fosters positive attitudes towards learning. Investing in comprehensive teacher professional development opportunities focused on active teaching practices can significantly enhance the overall learning experience for both teachers and students.

On the other hand, the variable of extracurricular activities received a lower mean of 3.09 (SD = 0.81), interpreted as High. While teacher involvement in extracurricular activities was notable, it was not as robust as classroom participation. This indicates the need for schools to better integrate and value teachers' participation in extracurricular activities to foster a more holistic student development approach. Rodriguez and Martinez (2020) highlight the positive impact of teacher involvement in extracurricular activities on students' overall development and academic success, emphasizing improved social skills, motivation, and academic performance.

Problem 3. What is the level of learners' academic achievement in English, Science, Mathematics, Filipino, and Araling Panlipunan during the 3rd and 4th Quarter general weighted average?

Table 3.1. Distribution of Respondents on Academic Achievement in English 3rd and 4th Quarter

Category	**Frequency**	**Percentage**	**Description**
90-and Above	**380**	**46.80**	**Outstanding**
85 – 89	358	44.09	Very Satisfactory

80 – 84	64	7.88	Satisfactory
75 -79	**10**	**1.23**	**Fairly Satisfactory**
74 and below	0	0.00	Does not Meet Expectations
Total	**812**	**100.00**	
Mean		92.87	Outstanding
Standard Deviation		0.81	Outstanding

Legend: 90–100% Outstanding, 85-89% Very Satisfactory, 80-84% Satisfactory, 75-79% Fairly Satisfactory, 74% below Does Not Meet Expectations

The analysis of learners' academic performance in English in Table 3.1 showcases exceptional results, with an overall mean score of 92.87 (SD = 0.81), described as Outstanding. The high proportion of learners achieving scores of 90 and above reflects exceptional understanding and competency in English, highlighting the effectiveness of teaching methodologies, learning environment, and dedication of students. The absence of students in the "Did not Meet Expectations" category underscores the success of the educational environment in meeting or exceeding academic standards in English.

According to Smith and Johnson (2019), learners' academic performance in English is influenced by their level of engagement and motivation in the classroom. Actively participating in class discussions and demonstrating interest in English language activities contribute to better academic outcomes. Genuine interest and engagement in the subject matter enhance students' involvement and participation in learning activities, leading to improved academic performance.

Table 3.2. Distribution of Respondents on Academic Achievement in Science for the 3rd and 4th Quarter

Category	Frequency	Percentage	Description
90 and Above	362	44.58	Outstanding
85 – 89	**372**	**45.81**	**Very Satisfactory**
80 – 84	66	8.13	Satisfactory
75 -79	**12**	**1.48**	**Fairly Satisfactory**
	0	0.00	Does not Meet Expectations
Total	**812**	**100.00**	
Mean		88.84	Very Satisfactory
Standard Deviation		0.77	Very Satisfactory

Legend: 90–100% Outstanding, 85-89% Very Satisfactory, 80-84% Satisfactory, 75-79% Fairly Satisfactory, 74% below Does Not Meet Expectations

The performance analysis of learners in Science presented in Table 3.2 reflects outstanding academic achievement, with an overall mean score of 88.84 (SD = 0.77), described as Very Satisfactory. Most students achieving Outstanding and Very Satisfactory scores highlights the strong foundation in scientific concepts and

understanding among the learners. The absence of students in the lower performance categories underscores the excellence of Science education within the school.

Lee and Kim (2020) emphasized the significant impact of hands-on laboratory activities and inquiry-based learning on learners' academic performance in science. Engaging in practical experiments and investigations enhances students' understanding and achievement in science, providing a comprehensive grasp of scientific principles.

Table 3.3. Distribution of Respondents on Academic Achievements in Mathematics for the 3rd and 4th Quarter

Category	Frequency	Percentage	Description
90 and Above	304	37.44	Outstanding
85 – 89	**384**	**47.29**	**Very Satisfactory**
80 – 84	120	14.78	Satisfactory
75 -79	**4**	**0.49**	**Fairly Satisfactory**
74 and below	0	0.00	Does not Meet Expectations
Total	**812**	**100.00**	
Mean		87.93	Very Satisfactory
Standard Deviation		0.74	Very Satisfactory

Legend: 90–100% Outstanding, 85-89% Very Satisfactory, 80-84% Satisfactory, 75-79% Fairly Satisfactory, 74% below Does Not Meet Expectations

The analysis of learners' academic performance in Mathematics presented in Table 3.3 indicates a very satisfactory mean score of 87.93 (SD = 0.74), reflecting the school's success in delivering a Mathematics education program that supports the majority of students in achieving a high level of mastery in the subject. The significant proportion of students achieving very satisfactory grades underscores the effectiveness of the institution's teaching methodologies and support systems.

Thompson and Green (2021) highlighted the impact of differentiated instruction strategies on improving students' academic performance in Mathematics. Adapting teaching methods to meet students' diverse needs enhances their understanding and mastery of mathematical concepts, promoting academic success.

Table 3.4: Distribution of Respondents on Academic Achievement in Filipino for the 3rd and 4th Quarter

Category	Frequency	Percentage	Description
90 and Above	**438**	**53.94**	**Outstanding**
85 – 89	320	39.41	Very Satisfactory
80 – 84	42	5.17	Satisfactory
75 -79	**12**	**1.48**	**Fairly Satisfactory**

74 and below	0	0.00	Does not Meet Expectations
Total	**812**	**100.00**	
Mean		93.55	Outstanding
Standard Deviation		0.85	Outstanding

Legend: 90–100% Outstanding, 85-89% Very Satisfactory, 80-84% Satisfactory, 75-79% Fairly Satisfactory, 74% below Does Not Meet Expectations

The analysis of learners' academic performance in Filipino presented in Table 14 reveals an outstanding mean score of 93.55 (SD = 0.85), indicating exceptional proficiency and mastery in the Filipino language. The high frequency of outstanding performance underscores the school's success in delivering a curriculum that nurtures robust Filipino language skills and deep appreciation among the students.

Santos and Reyes (2019) emphasize the significant influence of language proficiency and cultural background on Filipino learners' academic performance. Their research highlights the importance of fluency in Filipino and a strong connection to Filipino culture in achieving better educational outcomes.

Table 3.5. Distribution of Respondents on Academic Achievement in Araling Panlipunan for the 3rd and 4th Quarter

Category	Frequency	Percentage	Description
90 and Above	**504**	**62.07**	**Outstanding**
85 – 89	260	32.02	Very Satisfactory
80 – 84	44	5.42	Satisfactory
75 -79	4	0.49	Fairly Satisfactory
74 and below	**0**	**0.00**	**Does not Meet Expectations**
Total	**812**	**100.00**	
Mean		87.93	Very Satisfactory
Standard Deviation		0.74	Very Satisfactory

Legend: 90–100% Outstanding, 85-89% Very Satisfactory, 80-84% Satisfactory, 75-79% Fairly Satisfactory, 74% below Does Not Meet Expectations

The analysis of learners' academic performance in Araling Panlipunan presented in Table 3.5 showcases an impressive overall mean score of 87.93 (SD = 0.74), described as Very Satisfactory. The high percentage of students achieving outstanding grades in Araling Panlipunan reflects the institution's success in providing quality education and fostering a learning environment that supports academic excellence.

Cruz and Santos (2020) highlighted the impact of integrating local history and community-based learning activities on enhancing learners' academic performance in Araling Panlipunan. Engaging in projects that explore local history and community issues leads to a deeper understanding and higher achievement in the subject.

Table 3.6: Summary of the level of students' Academic Achievement

Variables	Mean	SD	Description
English	92.87	0.81	Outstanding
Science	88.84	0.77	Very Satisfactory
Mathematics	87.93	0.74	Very Satisfactory
Filipino	93.55	0.85	Outstanding
Araling Panlipunan	92.76	0.79	Outstanding
Overall	**91.19**	**0.79**	**Outstanding**

Legend: 90–100% Outstanding, 85-89% Very Satisfactory, 80-84% Satisfactory, 75-79% Fairly Satisfactory, 74% below Does Not Meet Expectations

The study indicates consistently high academic performance among learners across various subjects, with an impressive overall mean of 91.19 (SD = 0.79), reflecting outstanding achievement. Students demonstrate proficiency in multiple subjects, showcasing the effectiveness of current educational practices and educators' commitment to facilitating student success.

Active learning strategies, such as group discussions and hands-on projects, positively correlate with academic performance, fostering deeper understanding and retention of course material. Exceptional performance in Filipino subjects underscores students' mastery of language, literature, and cultural aspects, enhancing the school's reputation and instilling pride in stakeholders.

Language proficiency plays a vital role in learners' academic success in Filipino subjects, emphasizing the significance of language competence within the educational system. Mathematics, with a mean of 87.93 (SD = 0.74) described as Very Satisfactory, shows room for improvement compared to other subjects, prompting a focus on enhancing instructional practices and exploring innovative approaches for better student achievement.

Garcia and Martinez (2020) highlight the essential role of effective teaching in improving students' mathematical proficiency. Teachers' subject knowledge, teaching skills, and ability to create a positive learning environment significantly impact students' comprehension and mastery of mathematical concepts.

Problem 4. Is there a significant effect of teacher practices on learners' academic achievement?

Table 4.1. Effect on Teachers' Practices on Students' Academic Achievement

Table 4 shows the findings of the study on the significant relationship between teacher practices and academic achievement in English, Science, Math, Filipino, and Araling Panlipunan subjects. It highlights the importance of teacher involvement, including classroom participation, extracurricular activities, personalized attention, professional

development, parental communication, lesson preparation, collaboration with colleagues, and innovative teaching methods.

Students' Academic Achievement	Teachers' Practices								Overall
	Classroom Participation	Extracurricular Activities	Personalized Attention	Personal Development	Parental Communication	Lesson Preparation	Collaboration with Colleagues	Innovative Teaching Method

Legend: **S**- Significant **NS**- Not Significant

The study examines the relationship between various forms of teachers' practices and students' academic achievements in different subject areas. While the overall correlation between teacher practices and educational attainment is not statistically significant, analyzing specific dimensions of teachers' practices provides essential insights.

In English, parental communication positively influences academic achievement, suggesting that increased levels of interaction between parents and teachers are associated with improved student performance. Lesson preparation and innovative teaching methods yield significant positive effects, indicating that meticulous lesson planning and integrating creative teaching approaches are vital in boosting student outcomes in English. The findings emphasize the importance of effective communication between parents and teachers, thorough preparation of lessons, and the adoption of innovative teaching techniques as critical factors in enhancing academic achievement in the English subject area.

In Science, Innovative Teaching Methods have a potential positive significance, indicating an area ripe for deeper exploration. Factors like personalized attention, professional development, parental communication, and lesson preparation display positive correlation coefficients, indicating higher levels of science achievement. Conversely, classroom participation, extracurricular activities, collaboration with colleagues, and innovative teaching methods demonstrate negative correlation coefficients, suggesting lower science achievement.

In Mathematics, personalized attention significantly impacts math performance, indicating that when teachers offer tailored attention and support to students, it significantly enhances their math proficiency. Effective lesson planning is pivotal in shaping the connection between teacher engagement and academic success, stressing the necessity of prioritizing and improving lesson preparation strategies in educational environments.

In Filipino, none of the factors exhibited statistical significance, suggesting that the relationships between these factors and the achievement of the Filipino subject did not reach statistical significance levels. Further analysis is necessary to grasp the implications of these results within the study's context, delving into potential reasons for the absence of essential relationships and contemplating additional variables that could impact academic achievement in the Filipino subject.

Collaboration with colleagues among the teacher practices factors means a noteworthy impact on academic achievement in Araling Panlipunan, highlighting the value of collaborative efforts among teachers in enhancing student outcomes. However, the absence of significant results for other teacher practices such as classroom participation, extracurricular activities, personalized attention, professional development, parental communication, lesson preparation, and innovative teaching methods suggests that these specific factors may not have had a statistically significant influence on academic achievement in Araling Panlipunan.

Problem 5. Is there a significant relationship between teachers' practices and each of their characteristics?

Table 5. Relationship between Teachers' Practices and the Respondents' Characteristic

Respondents' Characteristics	Teacher's Practices

Legend: **S**- Significant **NS**- Not Significant

Table 5 shows the relationship between teachers' practices and respondents' characteristics. It aims to identify potential correlations between teachers' involvement

and personal attributes, revealing the nuanced connections between these variables and their instructional practices.

Table 5 examines the relationship between teacher practices and respondent characteristics such as position, teaching experience, highest educational attainment, and subject taught. It evaluates how various aspects of teacher involvement correlate with these characteristics using correlation coefficients and significance levels. The results highlight the importance of inclusive professional development for all educators to enhance teaching practices, with a positive correlation between job satisfaction, career advancement, and course preparation. Additionally, the study emphasizes the positive link between professional development, innovative teaching methods, and teaching experience, underlining the need for ongoing learning for instructional improvement. While certain factors like educational attainment and subjects taught show little correlation with teacher involvement, understanding these dynamics can help promote collaboration among teachers. Considering teacher characteristics such as position and experience is crucial when planning professional development activities (Hashim et al., 2019; Padillo, 2021).

Problem 6. Based on the study's findings, what school development program can be developed?

Table 6. School Development Plan

Table 6 shows the study's findings: a school development program can be designed to leverage the significant relationships between various aspects of teacher practices and students' academic achievement**.**

Year I. Foundation to Empower Teachers							
Areas of Concern	**Specific Objectives**	**Strategies/ Activities**	**Time Frame**	**Person/s Involved**	**Source of Fund**	**Estimated Budget**	**Expected Outcome**
Extracurricular Activities	Expand the range of extracurricular activities to cater to a broader array of student interests and talents	Collaborate with community organizations to provide unique extracurricular opportunities.	Quarterly	-SSG Coordinator -BSP Coordinator -GSP Coordinator -MAPEH Coordinator	-SSLG Fund -BSP and GSP Fund	P 15,000	-A broader range of activities that meet varied student interests, resulting in increased satisfaction and skill development.
Mathematics	-Improve student academic performance, with a focus on enhancing mathematics outcomes.	-The proposed plan includes a workshop series to enhance teachers' mathematical content knowledge, pedagogical training to improve their pedagogical skills, and a mentorship program to provide guidance and support to new teachers, promoting professional growth and development in mathematics instruction. strategies, and the use of technology in mathematics instruction.	- Start at the beginning of the school year - Monthly - Quarterly	-Mathematics Department -Mathematics Teacher -Classroom Adviser -School Administrator -Grade level Coordinator	-MOOE -Mathematics Department Fund	P 20,000	-Improved student academic performance in mathematics, with a focus on increasing the overall mean score. - Increased student engagement and confidence in the subject.
Mathematics	-Enhance students' understanding and performance in mathematics through targeted interventions and support.	-Provide targeted interventions such as tutoring, small group instruction, and after-school programs.	Whole year round	-- Mathematics Teacher -Classroom Adviser -	-School Fund	P 10,000	Higher proficiency levels in mathematics, as evidenced by improved test scores and performance on standardized assessments
	Develop and implement strategies to make mathematics more engaging and relevant to students.	Incorporate real-world applications and problem-solving activities in lessons.	Beginning of the school year	-Curicculum implementer -School Administrator	-MOOE -School fund	P 10,000	-Greater student interest and engagement in mathematics, leading to increased participation and enthusiasm in class activities.
	-Improve student performance and interest in mathematics	-Implement interactive math competitions - Introduce math-themed events and challenges -Provide peer tutoring and support sessions	Quarterly	-Mathematics Teacher -Student Math Leaders	MOOE	P 15,000	Enhanced math proficiency, increased enthusiasm for the subject, and improved problem-solving skills

DISCUSSION

The survey conducted among 406 teachers and 812 Junior High Students revealed significant relationships between teacher practices and learners' academic achievement. The program aims to enhance teacher educators, promote collaborative practices, and personalized teaching approaches to improve academic performance. The assessment showed strong teacher engagement, with interactive teaching methods positively impacting student performance. While extracurricular activities present an area for increased engagement, significant correlations were observed between teacher involvement and academic achievement in specific subjects. Parental communication,

lesson preparation, innovative teaching methods, personalized attention, professional development, and collaboration with colleagues all positively influenced student performance in various subjects. However, the overall impact of teacher practices on academic achievement across all subjects was not statistically significant, suggesting the need for a broader approach for widespread improvement. The study emphasizes the importance of active teacher participation in enhancing academic performance and suggests targeted professional development to elevate student achievement further. The "Engagement-Driven Academic Success Theory" highlights the pivotal role of teacher practices in shaping academic outcomes, particularly in subjects like Filipino, emphasizing the significance of interactive teaching methods in promoting student success.

Conclusions

The survey involving 406 teachers and 812 junior high students highlighted the substantial impact of teacher practices on academic achievement. Notably, classroom participation and the exceptional performance in the subject of Filipino underscored the effectiveness of interactive teaching methods in engaging students and promoting academic success. The strong correlation between teacher engagement and student performance emphasizes the crucial role of interactive teaching practices in enhancing academic achievement. In conclusion, the study emphasizes the vital contribution of teacher practices, particularly classroom participation, in fostering academic success, especially in subjects like Filipino. The findings underscore the significance of prioritizing and enhancing teacher engagement to sustain and improve student achievement, ultimately leading to enhanced educational outcomes.

Recommendations

Based on the conclusion drawn from the study, the following recommendations are provided:

1. The school leader should implement extracurricular activities that promote hands-on learning, teamwork, and creativity, which can complement traditional classroom instruction and foster a holistic educational experience.

2. The division and school leader must allocate resources and funding to support extracurricular activities, develop policies that adjust teacher workloads to prioritize

extracurricular activities and recognize and provide incentives for extracurricular involvement.

3. Mathematics teachers should actively participate in professional development opportunities to enhance their skills and knowledge, implement evidence-based instructional practices, and provide targeted support for struggling students.

4. Mathematics classes, incorporating interactive problem-solving activities, Mathematics competitions, and peer tutoring sessions, can stimulate student interest and deepen their understanding of mathematical concepts.

5. Schools should incorporate interactive strategies in extracurricular activities and mathematics classes to boost student engagement and academic achievement. This fosters a culture of active participation, critical thinking, and academic excellence among students.

6. In order to apply the significant conclusion of the study, educators, school administrators, and learners should all embrace the development program offered by the researcher.

Compliance with Ethical Standards

The research on teacher practices and academic achievement, involving 406 teachers and 812 junior high students, prioritized ethical considerations to ensure the rights and privacy of participants. Key ethical considerations included voluntary participation, informed consent procedures, and strict confidentiality measures. Teachers voluntarily participated, while student participants obtained parental consent through their class advisers. Confidentiality measures were strictly upheld to protect potentially identifiable data. The study's ethical framework aimed to produce reliable results while respecting participant rights and privacy. By adhering to ethical guidelines, the study aimed to contribute valuable and trustworthy insights to academic knowledge and uphold the integrity of research practices.

Acknowledgments

The researcher expresses deep gratitude for dedicating this humble endeavour to her cherished husband, Ramel N. Salva. His enduring love, boundless patience, and unwavering support have been the driving forces behind her academic journey. The researcher also extends this dedication to her siblings, nieces, nephews, in-laws, relatives, and friends. Their encouragement has been a steadfast source of inspiration and strength throughout this endeavour. This work is dedicated to the author's parents, especially to her late father, whose passion for knowledge fuelled her own scholarly pursuits.

The researcher is deeply grateful to her esteemed thesis adviser, Dr. Gina F. Labitad, whose invaluable guidance and unwavering support have been instrumental in illuminating the author's path through the uncertainties of this academic journey. To the

members of the researcher's dissertation committee, Dr. Gerlinda G. Corpuz, Dr. Braziel L. Ongcachuy, Dr. Carmelita O. Elbanbuena, Dr. Pepa V. Pontillas, and Dr. Estrella S. Ferenal, the author is thankful for their insightful feedback, thoughtful critiques, and for helping strengthen this study.

Dr. Erlinda Quirap and Dr. Mahalia Sultan are acknowledged for their meticulous editing and proofreading to ensure the clarity and accuracy of this research. Ms. Soraya L. Redoble, the statistician, provided expert guidance in the data analysis, ensuring the rigor and validity of the findings. The researcher also thanks the numerous people who helped make this work possible, including the personnel at the School of Graduate Studies, especially Mr. Verge Samson, and others who gave of their time and skills. Their efforts and assistance were crucial to the completion of this study.

Above all, the researcher expresses thanks to the Almighty God for His mercy and direction during this academic endeavour.

ABSTRACT

This descriptive study examined the connections between work task motivation, self-efficacy, and effectiveness among K-12 teachers in a city in the Philippines. A sample of 426 teachers was drawn from a larger pool of 1,424 Basic Education Teachers using stratified non-proportional allocation sampling during the 2023-2024 school year. Data collection involved a modified questionnaire that evaluated work task motivation, self-efficacy, and effectiveness. The instruments used for data collection were subjected to reliability testing to ensure their accuracy and consistency. Findings indicated that most respondents were female with a Master's degree, teaching in elementary schools with 10 years or less of experience. They demonstrated high motivation in various responsibilities, including class preparation and student evaluation. Respondents also reported strong self-efficacy in executing teaching duties, such as adapting instruction and maintaining discipline, and were effective in subject knowledge, assessment, and communication. Notably, differences in work task motivation and self-efficacy were observed based on sex and years of teaching experience, particularly in tasks related to assessment and class preparation. The study found significant relationships between work tasks motivation, self-efficacy, and teacher effectiveness. Based on these assessments and relationships, a professional development program for Basic Education Teachers in Lipa City is proposed to enhance these key variables, aiming to improve teaching performance and educational outcomes.

Keywords: *professional development program, teacher effectiveness, teacher self-efficacy, work tasks motivation*

INTRODUCTION

Teaching is a noble profession that is being looked up to by society when it comes to training and educating future generations. This might be true despite issues being faced by teachers in general. Teachers perform duties of shaping the intellectual, social, and emotional dimensions of students, laying the foundation for lifelong learning and success. Across nations and cultures, educators are known for dedication, passion, and commitment to the societal improvement. Being facilitators of knowledge and models to youth, the teaching profession encompasses diverse roles and responsibilities that range from curriculum design, curriculum implementation, instructional delivery to classroom management and student assessment. Teachers have been known to be doing their best when they are effective, though most of times the term is being interchanged with efficiency. To be known as effective, teachers should possess a substantial amount of knowledge of subject matter delivered through pedagogical expertise and a genuine concern for their students' well-being.

One indicator and could also be a correlate of teaching effectiveness is motivation to do the tasks that are relative to the holistic implementation of the curriculum. This could be collectively known as work task motivation (Garcia, 2021). Work tasks motivation, as an emerging area of study, focuses on determining the intrinsic and extrinsic factors that drive teachers to perform their duties with dedication, enthusiasm, and commitment. Research indicates that motivated teachers are more likely to excel in various aspects of their profession, which could include motivations for class preparation, teaching, evaluation of students, administrative tasks, and complementary tasks.

Recent studies suggest that teachers who experience personal fulfillment in their work tend to exhibit higher motivation and effectiveness in their roles. This research highlights the positive correlation between work task motivation and both teacher performance and job satisfaction. Specifically, intrinsically motivated teachers often engage more in class preparation, showcasing enhanced creativity, resourcefulness, and effectiveness in developing instructional materials and lesson plans. Additionally, teachers who feel autonomous and competent are more likely to deliver engaging and impactful lessons, emphasizing the importance of intrinsic motivation in the teaching profession (Deci & Ryan, 2000).

One of the primary roles of teachers is to deliver teaching and learning activities for the learners to experience. Class preparation is a critical task for teachers, involving the meticulous planning and organization of lesson content to ensure effective instruction. This process includes designing lesson plans, selecting appropriate materials, and creating engaging activities that align with curriculum standards. Furthermore, motivated teachers are more proactive in using formative assessment strategies (Hattie, 2019) and demonstrate efficacy in administrative tasks (Bandura, 2019). In terms of complimentary tasks, intrinsic motivation fosters a culture of continuous improvement and collaboration among educators, leading to enhanced student outcomes and school effectiveness (Darling-Hammond, 2020). While teachers' primary tasks are to teach and to monitor student progress and development, it is also imperative for teachers to perform teaching-

related activities. These are sometimes called administrative tasks. Administrative tasks are an integral part of a teacher's responsibilities, encompassing a wide range of activities that support the overall functioning of the school. Administrative tasks are crucial for maintaining the structure and accountability of the educational environment (Ingersoll et al., 2019).

In addition to work tasks motivation, another related concept that significantly influences teachers' effectiveness and job satisfaction is self-efficacy. Self-efficacy refers to teachers' beliefs in their capabilities to organize and execute instructional tasks effectively (Bandura, 1997). Self-efficacy could influence various aspects of teaching, including instruction, adaptation to individual student needs, student motivation, classroom management, collaboration with colleagues and parents, and resilience in the face of change. Teachers with high levels of self-efficacy are more likely to approach instructional tasks with confidence and creativity, resulting in more engaging and effective lessons (Tschannen-Moran & Hoy, 2001). Moreover, self-efficacious teachers demonstrate greater adaptability and flexibility in tailoring instruction to meet the diverse learning needs and preferences of their students (Bandura, 2021).

Self-efficacy is also an indicator to ensure that instructions or teaching and learning activities are adjusted to individual student needs. Teachers with high self-efficacy are more likely to recognize and address diverse learning styles and abilities in their classrooms (Schunk & DiBenedetto, 2020). They feel confident in differentiating instruction and providing appropriate support for students who may need extra help or advanced challenges (Goddard et al., 2020). This adaptability is essential for creating an inclusive learning environment where all students can thrive. Teachers who believe in their ability to meet individual needs are also more persistent in finding effective strategies and interventions; their self-efficacy contributes to better student engagement and achievement, as they can tailor their teaching to ensure every student reaches their full potential.

Furthermore, self-efficacious teachers are adept at motivating students to set high expectations for themselves, persevere in the face of challenges, and take ownership of their learning (Tschannen-Moran & Hoy, 2001). Additionally, teachers with strong self-efficacy beliefs are better equipped to maintain discipline and create a positive classroom environment conducive to learning (Bandura, 1997). They could demonstrate effective classroom management strategies, establish clear expectations, and provide consistent support and encouragement to their students.

Another dimension of teaching that needs teacher self-efficacy is the area of student discipline. Teachers with high self-efficacy are confident in their ability to establish and enforce clear behavioral expectations and classroom rules (Tschannen-Moran & Hoy, 2020). They are more consistent in applying disciplinary measures and are better at de-escalating conflicts and addressing disruptive behavior. This confidence allows them to create a safe and orderly learning environment where students feel respected and focused on learning (Miller et al., 2021).

Moreover, self-efficacy is closely linked to teachers' ability to collaborate with colleagues and parents effectively. Those teachers who believe in their ability to work collaboratively are more likely to seek support, share resources, and engage in professional dialogue to enhance their practice (Tschannen-Moran & Hoy, 2001). They also demonstrate greater resilience in coping with change, whether it be curriculum reforms, policy shifts, or technological advancements, by viewing challenges as opportunities for growth and innovation (Bandura, 1997).

To sum of the efficacy of teachers, coping with changes and adapting to new challenges in the educational landscape would help teachers perform their duties and responsibilities. Teachers with high self-efficacy are more resilient and adaptable, able to embrace new technologies, curricula, and teaching methods (Vaughan, 2020). They view changes as opportunities for growth rather than obstacles, which enables them to stay current with educational advancements and improve their teaching practices.

The foregoing discussion elaborated how important teacher self-efficacy is in teaching and in the performance of teaching related duty. The succeeding discussions will also elucidate the importance of teacher self-efficacy and work task motivations and their roles in teacher effectiveness, by shaping teachers' beliefs in their abilities to manage classroom tasks, engage students, and foster a positive learning environment. As previously discussed, effective teachers can deliver high-quality instruction that engages students and fosters deep understanding of the material, leading to improved academic performance. Their ability to manage classrooms efficiently and create a positive learning environment also contributes to higher student motivation and reduced behavioral issues (Hattie, 2020). Effectiveness could be primarily characterized by a teacher’s ability to teach and deliver instructions. A deep understanding of the content allows teachers to explain concepts clearly, answer student questions confidently, and make connections between different topics (Ball et al., 2020). Teachers with strong subject knowledge are better equipped to create engaging and relevant lessons that capture students' interest and facilitate learning (Hill & Chin, 2021). Moreover, they can identify and address student misconceptions more effectively, ensuring a solid foundation in the subject (Cochran-Smith & Villegas, 2020).

Paired with effective delivery of instruction is assessment. It is a fundamental aspect of teacher effectiveness, as it provides critical insights into student learning and instructional impact. Effective teachers design and use a variety of assessment tools, including formative and summative assessments, to measure student progress and identify areas for improvement (Brookhart, 2021). They use assessment data to inform their instructional decisions and adjust their teaching strategies to meet student needs (Popham, 2020).

To make the foregoing components of teaching effectiveness possible, creating a positive learning environment is a key element. Effective teachers establish a classroom climate that is safe, inclusive, and conducive to learning (Pianta & Hamre, 2020). They build strong relationships with their students, promoting trust and respect, which are essential for a supportive learning atmosphere (Jennings & Greenberg, 2020).

Finally, a teacher could be considered effective when he or she can communicate well with students, colleagues, administrators, and stakeholders. Teachers who communicate clearly and effectively can convey complex ideas in an understandable manner, facilitating student comprehension (Fisher et al., 2021). They use a variety of communication strategies, including verbal explanations, visual aids, and interactive discussions to engage students and support their learning (Graham et al., 2021).

With the previous descriptions of what effective teaching is, in the context of motivation and efficacy, it could be delineated that teaching profession is tedious, taxing, and is a demanding task. In the context of the Philippines, teaching profession is governed by a trifocalized system, the Department of Education (DepEd) for Basic Education, Commission on Higher Education for Tertiary and Graduate Studies, and Technical Skills Development Authority (TESDA) for technical-vocational careers. Basic Education is managed by the stringent standards and regulations by DepEd. Filipino teachers undergo rigorous training and professional development to stay abreast of emerging trends, technologies, and pedagogical approaches. Despite challenges, teaching remains a sought-after profession in the Philippines, attracting individuals who are into social services and teaching inclined, as well as those who are looking for jobs with high rates of employability.

The DepEd's mandate extends beyond academic instruction to encompass the promotion of values education, citizenship, and lifelong learning among students. Teachers in DepEd-managed schools are tasked to implement national education policies, curriculum frameworks, and assessment standards to ensure consistency and quality across the educational system.

Lipa City, as situated within the province of Batangas exemplifies the diverse and dynamic landscape of education in the Philippines, particularly within the City Schools Division. With its large population and numerous educational institutions, Lipa City serves as a hub for learning, catering to thousands of students across various grade levels. Within the Schools Division of Lipa City which is governed by DepEd, teachers undertake a multitude of responsibilities beyond traditional classroom instruction. In addition to delivering curriculum content, educators in Lipa City are tasked with administrative duties, extracurricular activities, and community engagement initiatives to enrich students' learning experiences.

Through collaborative efforts among educators, administrators, and stakeholders, Lipa City's schools strive to create inclusive and nurturing environments where every student can thrive academically, socially, and emotionally. The Schools Division of Lipa City boasts curricular and curricular-related activities, but not limited to curriculum development in the form of creating modules and audiovisual learning materials; academic competitions such as press conferences, science congress, math quiz bees, etc.; sports involvement, technical and vocational skills competitions, foreign language integration to curriculum. Curriculum and teaching-related tasks are also being prided by them, such as the conduct of educational research, school-based management, and

teacher professionalization among others. All of which are dominated and/or manned by teachers in the field.

With teachers having so much on their plates and as characterized by the multifaceted dynamic educational landscape in Lipa City, teachers face numerous challenges in performing their tasks efficiently and effectively. The diverse range of teaching and non-teaching tasks assigned to them could often lead to time constraints and dilemmas, making it difficult to devote adequate attention to each aspect of their role. With the provision of DepEd Order no. 2, s. 2024 wherein administrative tasks will be removed to teachers, there are still a number of ancillary tasks or quasi-assignments that could emerge throughout the academic year.

The rationale for conducting a study entitled "Teachers' Work Tasks Motivation, Self-Efficacy, and Effectiveness: Basis for Professional Development Program" in the Schools Division of Lipa City roots down from the interconnected factors that impact teacher performance and student outcomes. As discussed earlier, teachers in Lipa City face a multitude of challenges, including diverse teaching and non-teaching tasks, resource limitations, and socio-economic factors, which can affect their motivation, self-efficacy, and effectiveness in the classroom. These challenges are worsened by the demands of the teaching profession, the expectations placed on educators, and the complexities of the educational landscape.

To be able to explore and describe work tasks motivation, self-efficacy, and effectiveness among K-12 Basic Education teachers in the Schools Division of Lipa City are essential, primarily because of several reasons. Teacher motivation could directly influence their engagement, commitment, and job satisfaction, which, in turn, impact student learning outcomes and overall school effectiveness. By exploring the factors that drive teacher motivation, such as intrinsic and extrinsic motivators, schools can develop strategies to enhance teacher morale, retention, and performance.

On the other hand, self-efficacy beliefs significantly influence teachers' instructional practices, classroom management, and ability to adapt to changing educational contexts. Teachers with high levels of self-efficacy are more likely to employ effective teaching strategies, provide differentiated instruction, and foster positive learning environments. Identifying areas of strength and areas for growth in teachers' self-efficacy can inform targeted professional development initiatives aimed at enhancing teaching effectiveness and student achievement.

Finally, describing teacher effectiveness as measured by subject matter knowledge, instructional planning and strategies, assessment practices, learning environment, and effective communication is an important aspect because it could be equated with quality education and positive student learning outcomes. By assessing teachers' effectiveness across these dimensions, schools can identify areas of improvement and provide targeted support and resources to enhance teaching practices and student learning experiences.

Therefore, conducting a study on teachers' work tasks motivation, self-efficacy, and effectiveness in Lipa City's Schools Division is essential for informing evidence-based professional development programs that is tailored to the needs of educators. By understanding the interconnectedness of these factors, schools can cultivate a culture of continuous improvement, foster teacher growth and development, and ultimately, contribute to the further enhancement of the quality of education for all students in Lipa City.

Research Objectives

This study aims to determine the relationship among work tasks motivation, self-efficacy, and teaching effectiveness of K-12 teachers in the Schools Division of Lipa City. More specifically, it seeks to attain the following objectives:

1. describe the profile of respondents in terms of sex, educational attainment, teaching position, and years in service.

2. assess the work tasks motivation of teachers with regard to class preparation, teaching, evaluation of students, administrative tasks, and complimentary tasks.

3. identify the teacher self-efficacy as to instruction, adapt instruction to individual needs, motivate students, maintain discipline, cooperate with colleagues and parents, and cope with change.

4. determine the teacher effectiveness as regards subject matter knowledge, instructional planning and strategies, assessment, learning environment, and effective communication.

5. test the significant difference in work tasks motivation, self-efficacy, and effectiveness when respondents are grouped according to profile variables.

6. test the significant relationship among the three variables.

7. propose a professional development program for K-12 teachers based on the results of the study.

METHODOLOGY

Research Design

The research employed a descriptive design, which focuses on systematically gathering information to accurately depict the characteristics of populations or phenomena, as outlined by Gay (2020). This method aims to provide a clear and precise snapshot of current conditions or behaviors, ensuring that the study environment remains

unaffected by the research process. By doing so, it allows for a detailed understanding of the subject under investigation without introducing bias or influence.

This research primarily dealt with quantitative data to describe existing phenomena and circumstances about the work task motivation, efficiency, and effectiveness of teachers. For this reason, this research design was deemed appropriate as utilized in this study. Quantitative data came from accomplished questionnaires. This questionnaire contained descriptive statements which were quantitatively rated by the respondents. The data were processed statistically to further attain research objectives.

Participants of the Study

This study sought the participation of the basic education teachers from the schools division of Lipa City or DEPED Lipa City. These basic education teachers belong to levels from kinder until grade 12. These levels encompass kindergarten, elementary school, high school, and senior high school, as described from the Philippine educational system.

The Schools division of Lipa City is an administrative unit in the DEPED Region IV-A CALABARZON within the DEPED Central Administration. Today, DEPED Lipa City oversees 61 public elementary schools, seven public elementary schools with junior high school, and 18 secondary schools which are strategically distributed all over the 20,940 hectares of Lipa City. The schools division office (SDO) is located at J.P. Laurel Highway, Barangay Marawoy, Lipa City, Batangas.

The population of the study is composed of 426 Basic Education teachers from Kindergarten to Grade 12. These participants were selected from the 1424 public school teachers from the Schools Division of Lipa City in Lipa City, Batangas. In determining the actual participant or the population of the study who will participate in answering the survey questionnaire, stratified non-proportional allocation was used. This refers to a sampling method wherein the size of the sample that is drawn from a particular stratum does not proportionate the relative size of that stratum. Moreover, schools with less than 20 teaching staff were excluded from the sampling procedure.

Data Gathering Instrument

After the topic was approved by the dissertation adviser, the researcher crafted research questionnaire based on the objectives of the study, validated research instruments, and related literature and studies available online and offline. Once the adviser and the researcher have already agreed and finalized the instrument, it undergone validation from a research and statistics expert. Consequently, when the instrument was validated, it was administered for pilot testing to determine its reliability.

The instrument is divided into four parts: profile of respondents, teacher's work tasks motivation, teacher's self-efficacy, and teacher's effectiveness. Part 1, the profile of respondents is a researcher-made part which aims to harvest the data on sex,

educational attainment, position, and years of teaching experience of the respondents through checkboxes survey.

Part II is work task motivation, adapted from Fernet (2008) was created and further validated to measure the teachers' motivation toward specific work tasks. This is designed to assess five motivational constructs toward six work tasks (e.g., class preparation, teaching). The instrument has five subdomains or sub-variables: class preparation, teaching, evaluation of students, administrative tasks, and complimentary tasks. This study adapted the subdomains of the survey questionnaire, but the work motivation items were modified to specifically describe the actual tasks the teachers do in relation to teacher's responsibilities.

Part III is teacher self-efficacy which was adapted from Skaalvik & Skaalvik, (2007). This instrument was used to measure teacher's self-efficacy having six subdomains or sub-variables namely: instruction, adapt instruction to individual needs, motivate students, maintain discipline, cooperate with colleagues and parents, and cope with change. This study have fully utilized the original instrument in its survey questionnaire.

Part IV focuses on teacher effectiveness, utilizing an instrument designed to measure teachers' self-assessments across various areas of their performance. This study examines five key sub-variables: subject matter knowledge, which evaluates teachers' understanding of the content; instructional planning and strategies, assessing the methods employed for teaching; assessment, which looks at how teachers evaluate student learning; learning environment, focusing on the classroom atmosphere created for students; and effective communication, which gauges how well teachers convey information and engage with students.

Table 1
Reliability Test Results Summary

Indicators	Cronbach Alpha	Remarks
Class Preparation	0.808	Good
Teaching	0.811	Good
Evaluation of Students	0.891	Good
Administrative Tasks	0.915	Excellent
Complementary Tasks	0.932	Excellent
Instruction	0.846	Good
Adapt Instruction to Individual Needs	0.807	Good
Motivate Students	0.926	Excellent
Maintain Discipline	0.898	Good
Cooperate With Colleagues and Parents	0.927	Excellent
Cope With Change	0.901	Excellent
Subject Matter Knowledge	0.794	Acceptable

Subject Matter Knowledge	0.881	Good
Assessment	0.887	Good
Learning Environment	0.902	Excellent
Effective Communication	0.848	Good

George and Mallery (2003) provide the following rules of thumb:"_ > .9 – Excellent, _ > .8 – Good, _ > .7 – Acceptable, _ > .6 – Questionable, _ > .5 – Poor, and _ < .5 – Unacceptable"

Results of the reliability test revealed that for work task motivation, class preparation, teaching, and evaluation of students gained 0.808, 0.81, and 0.891 Cronbach alpha values respectively, giving them good remarks. Administrative tasks and complementary tasks resulted into 0.915 and 0.932 Cronbach alpha values respectively, giving them excellent remarks.

Meanwhile, for the teacher self-efficacy, the subdomains instruction, adapt instruction to individual needs, and maintain discipline got 0.846, 0.807, and 0.898 respectively, giving them good remarks. Meanwhile, motivate students, cooperate with colleagues and parents, cope with change all were remarked as excellent because these items garnered 0.926, 0.927, and 0.901 Cronbach alpha values respectively.

For the last variable, teacher effectiveness, the following subdomains gained the following results: subject matter knowledge, assessment, and effective communication got 0.881, 0.887, and 0.848 respectively. On the other hand, learning environment got 0.902 which was interpreted as excellent.

Data Gathering Procedure

Upon approval of the topic, research instrument was subjected to validation and reliability testing. Necessary permits were secured from the schools division superintendent and the principals of the selected schools in DEPED Lipa City to determine the number of respondents and the participating schools, and finally, requesting the approval of the conduct of the study. After determining the exact number of participants, these data were communicated to the school principals for their kind assistance in disseminating the research questionnaire.

The validated and tested research instrument was transformed into electronic copy, through Google Forms, for convenience of dissemination. The link was distributed to the participants of the study tthrough the principals of the schools. The link was attached to the message formally requesting the participation of the teachers and the total number of responses needed. Attached also to the communication is a screenshot of the approval to conduct the study, as signed by the schools division superintendent. Moreover, the assistance of the concerned Public Schools Division Superintendent was sought to facilitate the distribution of the link to the respondents and the accomplishment of the survey questionnaire.

The progress of accomplishment of the questionnaire, together with the number of responses elicited, the schools that already participated, and other related information were easily accessed by the researcher for monitoring purposes. This was done through

the feature in the Google Forms called the responses tab. In this tab, all the mentioned features are accessible. Accessible also were the actual responses elicited that can be shown individually, per respondent, or summarized per question or item. Once the target number or responses per school was collected, the accepting responses feature of the form was closed. The needed data were harvested and imported through the spreadsheet feature located in the same page with the responses tab and the accepting responses feature.

When the responses were completed, results and/or data were gathered and sent for data processing and treatment. Once the tabulated data were sent back by the statistician, these were interpreted, analyzed and associated with current related literatures and studies. These were arranged and similarities or associations were established. Similar significant findings were clustered and addressed for the proposal of a program.

Data Analysis

To perform the data analysis, the following statistical tools were used. Frequency and percentage distribution were used to describe the profile of the respondents in terms of sex, educational attainment, teaching position, and years in service.

On the other hand, weighted mean and ranking were used to assess the work tasks motivation of teachers with regard to class preparation, teaching, evaluation of students, administrative tasks, and complimentary tasks; identify the teacher self-efficacy as to instruction, adapt instruction to individual needs, motivate students, maintain discipline, cooperate with colleagues and parents, and cope with change and determine the teacher effectiveness as regards subject matter knowledge, instructional planning and strategies, assessment, learning environment, and effective communication.

The result of Shapiro-Wilk Test revealed that p-values of the main variable was greater than 0.05 which means that the data set is normally distributed. Therefore, Independent sample t-test for two groups and Analysis of Variance for three groups were used as part of the non-parametric tests to determine the significant differences.

Likewise, Pearson Product Moment Correlation was used to test the significant relationship of the treated variables. In addition, post hoc test was also conducted. The following Likert Scale was used in assessing the variables: 3.50- 4.00 correspond completely/always; 2.50-3.49 to correspond very Strongly/often; 1.50 – 2.49 correspond very little/sometimes; and 1.00 – 1.49 does not correspond at all/never. In addition, all data were treated using a statistical software known as PASW version 26 to further interpret the result of the study using an alpha level of 0.05 and 0.01.

Ethical Considerations

To ensure that all research protocols in data collection was properly observed in accordance to Data Privacy Act of 2012, informed consent was included in the beginning or first part of the questionnaire. This informed consent explained to the respondents that

all data that will be collected will be used academically, for research purposes, and will be treated with utmost confidentiality. With these, no possible physical, psychological or other risks was foreseen to be associated with the research, research environment, and the participants.

No participant was identifiable to anyone because no names were collected. Aside from the researcher, a university statistician accessed the raw data for processing and application of necessary statistical tools. Because no names were collected, data were processed anonymously.

Objective results were available to the researcher, the statistician, and the panelists of oral defense. The dissertation will be available in the university library and could be accessible worldwide once published in a research journal. With such circumstances, necessary permits were sought. Any accomplished survey questionnaires that are written or stored electronically will be destroyed after five years.

RESULTS AND DISCUSSION

Table 2
Percentage Distribution of the Respondents' Profile

Sex	**Frequency**	**Percentage %**
Male	58	13.6
Female	368	86.4
Educational Attainment		
Bachelor's Degree	199	46.7
Master's Degree	219	51.4
Doctorate Degree	8	1.9
Teaching Position		
Elementary Teacher (K-6th)	239	56.1
Junior High School Teacher (7th-10th)	141	33.1
Senior High School Teacher (11th-12th)	46	10.8
Years of Teaching Experience		
10 years and below	204	47.9
11-20 years	132	31.0
21-30 years	59	13.8
31 years and above	31	7.3

Table 2 describes the profiles of the respondents, it is divided into 4 groups; respondent's sex, educational attainment, teaching position, and years of teaching experience. The profile of the respondents provides essential contextual information about the sample population. By understanding the demographic characteristics of the respondents, the researcher can assess the content validity of the findings, ensuring that they accurately represent the target population.

The collected data indicates that females represent the majority of respondents, comprising 368 individuals or 86.4% of the total 426 participants, while males make up only 58 respondents, or 13.6%. This gender distribution is consistent with previous studies, such as those by Bongco and Abenes (2019), which showed that from 2008 to 2009, 89.58% of teachers in public elementary schools and 77.06% in public secondary schools in the Philippines were female, according to the Philippine Commission on Women (PCW, 2014). Similarly, the research conducted by Banate and Saquin (2022) corroborates these findings, with a reported 87.35% of elementary school teachers being female in 2019.

Teaching in the Philippines is predominantly a female profession. Studies indicate that women comprise the majority of educators in the country, which has significant implications for gender dynamics in the educational sector. According to De Guzman and Tan (2019), female teachers account for about 75% of the teaching workforce in primary and secondary schools. This trend continues in higher education, where females also dominate the faculty positions, as highlighted by Cruz and Dela Cruz (2020). Additionally, Alonzo (2021) found that the feminization of teaching in the Philippines has led to a more nurturing and inclusive classroom environment. However, Balboa and Santiago (2022) argue that this gender imbalance may reinforce traditional gender roles and limit male participation in the teaching profession. Moreover, Del Rosario (2023) points out that despite their numbers, female teachers often face challenges in career advancement and leadership roles within educational institutions. The dominance of women in teaching also impacts policy development and educational reforms, as noted by Ramirez and Bautista (2019). Consequently, the profession's gender composition influences both educational outcomes and the professional experiences of teachers.

Regarding educational attainment, individuals who are holding master’s degree represent the largest group, with a frequency of 219, or 51.4 percent. Following this, those with bachelor’s degree constitute 46.7 percent, totaling 199 out of 426 respondents, and lastly, individuals with doctorates account for 1.9 percent, totaling 8 respondents. To improve the abilities and knowledge in curriculum building, and eventually the performance of their students, a significant majority of the teacher respondents sought Master's degree as a form of professional development.

Pursuing master's degree enables teachers to become experts in their field, conduct research, and bring new ideas and methodologies to their schools, ultimately contributing to the overall enhancement of education. According to Nucum (2019), in today’s highly competitive job market, one needs to update set of knowledge and skills every now and then. With a master's degree, it could be of assistance in gaining specialized knowledge in advancing one’s profession.

Various reasons motivate teachers to pursue further studies. One primary motivation is the potential for career advancement and higher salaries, as noted by Santos and Reyes (2019). A master's degree often opens opportunities for leadership roles such as department heads or school administrators, which are typically associated with better pay and job security (Martinez & Cruz, 2020). Additionally, teachers seek

advanced degrees to enhance their teaching skills and stay updated with the latest educational trends and methodologies, as highlighted by Alvarado (2021). The pursuit of a master's degree also reflects a commitment to lifelong learning and professional growth, which is essential in the ever-evolving field of education (De Leon, 2022). Furthermore, obtaining a master's degree can increase a teacher's credibility and respect among peers and students, as discussed by Rivera (2023). Some teachers are motivated by personal fulfillment and the intrinsic value of higher education, which contributes to their sense of achievement and satisfaction. The pursuit of advanced degrees is also influenced by institutional policies that encourage or require further education for career progression. Additionally, scholarships and financial incentives provided by government and educational institutions play a significant role in enabling teachers to pursue higher education (Gonzalez & Santos, 2020). Ultimately, the decision to pursue a master's degree is driven by a combination of career aspirations, personal growth, and institutional support.

Within teaching positions, elementary teachers have the highest representation, with 239 respondents, or 56.1 percent, followed by junior teachers, with 141 respondents, or 33.1 percent. Senior high school teachers comprise the smallest group, with 46 respondents, or 10.8 percent.

Per Republic Act No. 10533, otherwise known as the Enhanced Basic Education Act of 2013, and under the mandate of the Constitution of the Philippines, the Department of Education, children residing in the Philippines, between the ages of 5 and 18, are required to complete basic education, which consists of six years of elementary education and six years of secondary education. Because of this, every Filipino child must enroll in and complete basic education to comply with the law. Because of this reason, the number of teachers at the elementary level is higher than others. However, the decrease in the number of learners as they reach higher levels is also paralleled by the decrease in number of teachers.

Regarding teaching experience, respondents with 10 years and below employment experience hold the highest rank, representing 47.9 percent, or 204 out of 426. Following this, the bracket of 11 to 20 years of experience is represented by 132 respondents, or 31 percent, and the 21 to 30 years bracket is represented by 59 out of 426 respondents, or 13.8 percent. Furthermore, 7.3 percent, or 31 respondents, have 31 years of experience or more.

The increase in the number of teachers in the 10 years and below bracket of teaching experience is supported by the report of DEPED Data Bits (2022). There is a consistent increase in the number of teachers in all levels from SY 2016-2017 to SY 2020-2021. The overall percentage increase from SY 2016-2017 compared to SY 2020-2021 is 21.1%. For each level, the percentage increase is 14.2% for ES, 21.8% for JHS, and 101.3% for SHS.

This predominance is a notable trend in the education sector. According to Delos Santos and Reyes (2019), a significant proportion of educators fall within this experience

bracket, reflecting a relatively young teaching workforce. This trend is driven by high turnover rates and the influx of new graduates entering the profession, as highlighted by Cruz (2020). Additionally, the appeal of early career opportunities and the availability of teaching positions contribute to this demographic pattern (Garcia & Alvarez, 2021). However, Martinez and Cruz (2022) point out that the high number of early-career teachers may impact the overall quality of education due to their limited experience. Despite this, young teachers bring fresh perspectives and innovative teaching methods to the classroom, which can be beneficial (Lopez, 2023). The predominance of less experienced teachers also indicates a need for robust professional development programs to support their growth and effectiveness (Rivera & Santos, 2020).

Table 3
Work Tasks Motivation in terms of Class Preparation

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. Because it is my primary duty as a teacher	3.89	Correspond Completely	1
2. Because I am driven by the fact that I am developing a plan that will gradually inculcate significant learnings to the students	3.81	Correspond Completely	2
3. Because I find it rewarding when everything that I will do in my class are well planned and thought of	3.78	Correspond Completely	3
4. Because these are required of me as a teacher, in terms of documentary requirements and submittals	3.68	Correspond Completely	4
5. Because my colleagues look up to me in terms of my planning strategies	3.32	Correspond Very Strongly	9
6. Because my immediate heads and supervisors praise and commend me when I plan for class	3.34	Correspond Very Strongly	8
7. Because failures and unforeseen circumstances lessen my interest and my drive to continue sessions in classes	3.26	Correspond Very Strongly	10
8. Because I receive enough support from the administration regarding class preparation techniques and strategies	3.43	Correspond Very Strongly	7
9. Because my colleague and I always collaborate and coordinate on the matters we have to prepare for classes	3.54	Correspond Completely	6

10. Because there are existing policies, implementing rules and regulations, work plan, established routine, and the like that are well documented and communicated to the teachers, for their perusal, guidance, and compliance	3.59	Correspond Completely	5
Composite Mean	**3.56**	**Correspond Completely**	

Legend: 3.50 – 4.00 = Correspond completely; 2.50 – 3.49 = Correspond very strongly; 1.50 – 2.49 = Correspond very little; 1.00 - 1.49 = Does not correspond at all

It could be gleaned from table 3 the respondents' assessment of work tasks motivation in terms of class preparation. The composite mean of 3.56 indicates that they correspond completely. Among the items cited, primary duty as a teacher ranked first with a mean score of 3.89, followed by being driven by the efficacy of a lesson brought about by the plan and finding planning rewarding.

Class preparation is motivated by the sense of duty, preparing for class, teachers fulfill their fundamental responsibility, ensuring that students receive the best possible education. Another motivation stems from the desire to develop a plan that gradually imparts significant learning to the students. Teachers are driven by the knowledge that their preparation will facilitate meaningful learning experiences. the satisfaction of seeing a well-prepared and thought-out class is rewarding. Teachers find fulfillment in knowing that their careful planning enhances the teaching experience, leading to improved learning outcomes.

The need for planning is one of the mandated responsibilities of public school teachers, according to DO 42, S. 2016 – policy guidelines on daily lesson preparation for the k to 12 basic education program. Daily lesson preparation is part of the teacher's core function as a facilitator of learning inside the classroom, one of the aims of these guidelines is to empower teachers to carry out quality instruction that recognizes the diversity of learners inside the classroom and is committed to learners' success.

Effective teachers are effective planners as it would be difficult to perform effective instruction without having a concrete solid plan beforehand. It is important then that planning is effective for the instructional events to be effective and for learning to follow. An effective teacher should then be able to plan in a manner that understands the complexities of teaching and learning using a variety of skills and understanding to meet the needs of all students.

Prevalent motivation to prepare and plan for lessons could be an indication for a commitment to delivering quality education. Research by Santos and Reyes (2019) indicates that the majority of teachers engage in extensive lesson planning to enhance student learning outcomes. Additionally, Martinez and Cruz (2020) found that motivated teachers invest significant time and effort in preparing instructional materials tailored to their students' needs and interests. This dedication to planning is driven by a desire to

create engaging and effective learning experiences in the classroom, as highlighted by Alvarado (2021). Moreover, Rivera (2022) suggests that teachers who are motivated to plan lessons are more likely to adapt their teaching methods to accommodate diverse learning styles and abilities. The importance of thorough lesson planning is further emphasized by Garcia and Alvarez (2023), who argue that it positively influences student engagement and academic performance. Overall, the predominance of motivated teachers who prioritize preparation and planning contributes to a dynamic and effective teaching environment.

Meanwhile, items as regards praise and commendation from immediate heads and supervisors for planning (3.34), colleagues' admiration (3.32), and demotivation brought by failures and unforeseen circumstances (3.26) rated the least. Praise and commendation from immediate heads and supervisors for planning classes effectively serve as positive reinforcement, validating the effort and dedication put into the preparation. Further, the fact that colleagues look up to one's planning strategies adds another layer of motivation. Knowing that peers respect and admire one's planning skills fosters a sense of professional pride and responsibility. There are instances when a teacher encounters failures or unexpected events during their class sessions, which reduces their enthusiasm and motivation to continue teaching. However, due to class preparation, this becomes the teacher's last worry. Thorough preparation ensures that the teacher has a contingency plan to address such situations, minimizing their impact.

An effective method for motivating and uplifting your teaching team is to offer praise and recognition. It was mentioned in Education Advanced (2022), that showing appreciation for teachers' dedication and hard work makes them feel valued. In addition, receiving recognition from the school administration reassures teachers that they are skilled at their job and that leadership recognizes their contributions. This is also revealed in the study of Ewim, Unachuckwu, and Ugwu (2020), that the reward practices adopted by principals for enhancing teachers' work attitude in secondary schools include recommending outstanding staff for promotion and issuing commendation letters to dedicated staff.

On the other hand, teachers' motivation to prepare and plan for class may not necessarily be influenced solely by praises from immediate heads, as other factors play significant roles in their dedication to lesson preparation. Research by Cruz (2019) suggests that while positive feedback from immediate supervisors is valued by teachers, intrinsic motivations such as personal satisfaction and professional growth are stronger drivers for lesson planning. Additionally, Delos Santos and Reyes (2020) found that teachers prioritize student outcomes and instructional quality over external recognition when planning their lessons. Furthermore, Alvarado (2021) highlights that teachers are more motivated by autonomy and a sense of purpose in their work rather than extrinsic rewards. Studies by Martinez and Cruz (2022) indicate that effective planning is more likely to be influenced by collaborative work environments and supportive school cultures rather than praise alone. Garcia and Alvarez (2023) argue that while recognition from superiors is appreciated, it is not the primary factor motivating teachers to plan lessons thoroughly. In fact, excessive praise without substantive support or resources may even

lead to cynicism among teachers regarding the value of such recognition. Therefore, while acknowledgment from immediate heads can boost morale, it is not the sole determinant of teachers' motivation to prepare and plan for class.

Moreover, Rivera (2019) suggests that teacher motivation is multifaceted, encompassing intrinsic factors such as passion for teaching, commitment to student success, and personal fulfillment. Delos Santos and Reyes (2021) emphasize that professional development opportunities, instructional resources, and autonomy in decision-making are more significant motivators for teachers' lesson planning efforts. Hence, an environment that fosters collaboration, provides resources, and values professional growth is crucial in promoting effective lesson preparation. In conclusion, while praise from immediate heads may contribute to teachers' motivation to some extent, it is only one piece of the puzzle. A holistic approach that addresses intrinsic motivations, professional needs, and collaborative support systems is essential for fostering a culture of thorough lesson planning and instructional excellence.

Table 4
Work Tasks Motivation in Terms of Teaching

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. Because I'm paid to do it	3.20	Correspond Very Strongly	10
2. Because the society expects us to perform this kind of duties	3.56	Correspond Completely	8
3. Because I am stirred when students reach the "ah" moment when they discover their own learning	3.60	Correspond Completely	6
4. Because I feel valued when students listen to me	3.80	Correspond Completely	1
5. Because I find it rewarding when I accomplish the learning plan and reach the lesson objectives satisfactorily	3.80	Correspond Completely	2
6. Because the environment where I teach is well lit, properly ventilated, and conducive to learning	3.57	Correspond Completely	7
7. Because all the teaching and learning materials are readily available for teacher's and students' use	3.23	Correspond Very Strongly	9
8. Because I feel there is a need for me to educate the young minds	3.74	Correspond Completely	5

9. Because I feel ennobled and honored to have participated in shaping intellects and upholding values	3.75	Correspond Completely	4
10. Because I feel being a second parent that I am obliged to listen to my student's needs, concerns and queries, and their life issues	3.75	Correspond Completely	3
Composite Mean	**3.60**	**Correspond Completely**	

Legend: 3.50 – 4.00 = Correspond completely; 2.50 – 3.49 = Correspond very strongly; 1.50 – 2.49 = Correspond very little; 1.00 - 1.49 = Does not correspond at all

As seen from table 4, presented are the respondents' assessment of work tasks motivation in terms of teaching. The composite mean of 3.60 indicates that they correspond completely. The top components indicate motivation as feeling valued when teaching and finding it rewarding when finishing and accomplishing lesson both have a weighted mean of 3.80 and verbally interpreted as corresponded completely. The criteria feeling ennobled and honored and being obliged as second parents followed next with a 3.75 weighted mean and also interpreted as correspond completely.

Teachers are often motivated by the sense of validation and recognition they receive when students actively listen to them. When students engage attentively with the material presented by their teachers, it signifies not only respect for the educator's knowledge and expertise but also an acknowledgment of the teacher-student relationship. According to Bannisy (2023), good listening fosters social connections and enhances well-being, it improves trust and well-being between the interacting partners, and positive outcomes at work–like enhanced job performance and reduced burnout–in work environments with a good listening culture.

Additionally, research by Santos and Reyes (2019) indicates that teachers often derive satisfaction from observing students' attentive behavior, which validates their teaching efforts. In similar context, studies by Alvarado (2020) suggest that positive student-teacher interactions, characterized by active listening and participation, contribute to teachers' sense of fulfillment and professional efficacy. Furthermore, Garcia and Alvarez (2021) found that teachers perceive active listening as a sign of respect and appreciation from students, which reinforces their commitment to teaching. According to Martinez and Cruz (2022), teachers view students' engagement and attentiveness as indicators of instructional effectiveness, boosting their confidence and motivation. Moreover, Rivera (2023) highlights that teachers feel a sense of validation and accomplishment when they see evidence of students understanding and internalizing the content they deliver.

Teachers' motivation is also influenced by the emotional connection they establish with their students, as suggested by Delos Santos and Reyes (2020). When students actively listen and respond positively, teachers feel valued and respected, fostering a positive classroom environment. Additionally, Alvarado (2021) emphasizes that teachers

perceive active listening as a form of acknowledgment and recognition of their expertise and efforts. Therefore, student attentiveness and engagement play a crucial role in motivating teachers to invest more in their teaching practices. In conclusion, the sense of validation and recognition derived from students' active listening is a powerful motivator for teachers, impacting their professional satisfaction, efficacy, and commitment to excellence.

Teachers dedicate substantial time and effort to create lesson plans that cater to their students' varied needs. The successful execution of these plans, demonstrated by students' understanding and mastery of learning objectives, serves as validation for the teachers' instructional methods. According to Johnson (2019), the success of teachers is closely linked to the success of their students, emphasizing the importance of well-prepared and documented lesson plans in achieving educational goals. Furthermore, many teachers perceive their roles as extending beyond academics, viewing themselves as second parents who nurture and support their students' overall development. This is expected of them when they choose their vocation. Under DepEd guidelines issued in 2012, all public school teachers serve as “second parents” in school and must adhere to a zero-tolerance policy on child abuse. As mentioned in the study of Bayuca (2020), the order not only aims to protect children but also seeks to cultivate a nurturing and respectful environment in which every child can thrive.

On the other hand, it can be delineated that the indicators on societal expectations (3.56), availability and accessibility of instructional materials (3.23), being paid to teach (3.20) were rated the least. Teachers often find motivation in fulfilling the expectations set by society regarding their role in educating the next generation. Similarly, Lee et al. (2020) explored the impact of societal expectations on teacher motivation and found that teachers who perceive a strong societal mandate for education are more likely to feel motivated and engaged in their teaching practices.

The availability of teaching and learning materials motivates teachers to engage effectively in their profession. The availability of such resources not only facilitates effective teaching but also contributes to teachers' sense of efficacy and job satisfaction, thereby motivating them to teach with enthusiasm and dedication. While intrinsic motivations often drive teachers, the financial aspect also plays a significant role in motivating individuals to pursue a career in education.

Moreover, Lestari, Lian, and Putra (2021) investigated the impact of financial compensation on teacher motivation and found that competitive salaries and benefits are important factors in attracting and retaining qualified educators. This study emphasized that adequate remuneration serves as a form of recognition for teachers' expertise and dedication, motivating them to perform their duties effectively. Teachers rely on their salaries to meet their financial needs and sustain their livelihoods. Adequate remuneration not only recognizes teachers' professional worth but also motivates them to perform their duties effectively, thereby contributing to the overall quality of education.

In contrast, research by Cruz (2019) indicates that teachers often feel burdened by societal expectations, such as pressure to produce high-performing students, which can undermine their intrinsic motivation. Moreover, Delos Santos and Reyes (2020) found that while instructional materials are essential for effective teaching, their availability does not necessarily correlate with increased teacher motivation. Similarly, Alvarado (2021) highlights that monetary compensation, while important for livelihood, is not the primary driver of teacher motivation; rather, there are factors like job satisfaction and professional fulfillment that play more significant roles. Furthermore, Garcia and Alvarez (2022) argue that intrinsic motivations, such as the desire to make a difference in students' lives, outweigh external rewards in influencing teachers' commitment to their profession. Additionally, Martinez and Cruz (2023) suggest that teachers are more motivated by a sense of purpose and passion for teaching than by external factors alone.

The societal expectation for teachers to produce high-performing students can create undue pressure and detract from their intrinsic motivation to teach effectively (Cruz, 2019). While the availability and accessibility of instructional materials are important, they do not necessarily correlate with increased teacher motivation and may not compensate for other motivational factors (Delos Santos & Reyes, 2020). Monetary compensation, although crucial for teachers' livelihoods, is not the primary motivator for their commitment to teaching (Alvarado, 2021). Instead, teachers are more motivated by intrinsic factors such as job satisfaction, a sense of purpose, and professional fulfillment (Garcia & Alvarez, 2022).

Table 5
Work Tasks Motivation in terms of Evaluation of Students

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. Because I find this task important for the academic success of my students	3.80	Correspond Completely	2
2. Because I believe there is a need for me to establish objective data for instructional decision-making	3.75	Correspond Completely	6
3. Because this task allows me to attain work objectives that I consider important	3.77	Correspond Completely	3.5
4. Because I am well equipped with assessment and evaluation methods, strategies, and techniques	3.60	Correspond Completely	10
5. Because I find it fulfilling when students progress from one learning level to another, or one lesson to another	3.81	Correspond Completely	1
6. Because I believe religiously finishing the work plan or work procedure is an	3.71	Correspond Completely	7

integral part of learning and is a substantial indicator of learning success			
7. Because this is a required task for a teacher to do and to establish	3.68	Correspond Completely	9
8. Because I believe in the principles of schema, stock knowledge, and pre assessment wherein establishing starting point of learning opportunities is important	3.69	Correspond Completely	8
9. Because contextualization and localization of teaching and learning is important	3.75	Correspond Completely	5
10. Because learning styles and learning characteristics are important considerations when determining teaching methods and strategies	3.77	Correspond Completely	3.5
Composite Mean	**3.73**	**Correspond Completely**	

Legend: 3.50 – 4.00 = Correspond completely; 2.50 – 3.49 = Correspond very strongly; 1.50 – 2.49 = Correspond very little; 1.00 - 1.49 = Does not correspond at all

Table 5 presents the respondents' assessment of work tasks motivation in terms of evaluation of students. The composite mean of 3.73 indicates that they correspond completely. Ranking first of the indicators is about fulfillment in student progression. It gathered a weighted mean of 3.81 and was verbally interpreted as corresponded completely. The second is finding it important for student academic success with 3.80 weighted mean. The criteria about attaining work objectives and considering learning styles and characteristics were both at 3.5 ranks with a weighted mean of 3.77.

When teachers assess students' learning, they can observe tangible evidence of growth as students move from one learning level to another or from one lesson to the next. This sense of fulfillment reinforces teachers' belief in the effectiveness of their instructional methods and motivates them to continue investing time and effort in evaluating student progress.

Teachers find it important to evaluate student progress for the learner's academic success. As mentioned in the study of Patrice and Andala (2023), the assessment of students in the form of summative and formative is the best predictor of academic achievement. Furthermore, in the study of Shabbir et. al, (2021), evaluation not only improves students' grades but can also improve students' behavior, the mental level with the help of evaluation which leads to a balanced development of a child. In addition to that, Ismail et.al (2022) cited that assessment intends to improve learning and is used to reduce the gap between students' present instructional situation and their target learning objectives.

In addition to, research by Cruz and Dela Cruz (2019) highlights that teachers often find immense satisfaction in observing their students' growth and development over time. Additionally, Alvarado (2020) suggests that the sense of accomplishment teachers feel when their students achieve academic milestones is a significant driver of motivation. Furthermore, Martinez and Garcia (2021) found that teachers prioritize student academic success as one of their primary goals, often going above and beyond to ensure their students' learning needs are met. Considering students' diverse learning styles and characteristics is crucial for effective teaching, as emphasized by Rivera and Santos (2022). Teachers who tailor their instruction to accommodate different learning preferences and abilities are more likely to experience satisfaction and fulfillment in their profession (Delos Santos & Reyes, 2020). Moreover, according to Gonzalez and Alvarez (2023), teachers perceive student progression as a reflection of their effectiveness as educators, motivating them to continuously improve their teaching practices.

More so, teachers derive fulfillment from witnessing the progress and success of their students, which serves as a powerful motivator in their profession (Cruz & Dela Cruz, 2019). The sense of accomplishment that comes from seeing students achieve academic milestones drives teachers' commitment and dedication to their work (Alvarado, 2020). Martinez and Garcia (2021) emphasize that teachers prioritize student academic success as one of their primary goals, often investing significant time and effort to support their students' learning journey. Recognizing and accommodating students' diverse learning styles and characteristics is essential for effective teaching and student success (Rivera & Santos, 2022). Teachers who adapt their instruction to meet individual needs are more likely to experience satisfaction and fulfillment in their roles (Delos Santos & Reyes, 2020). Moreover, teachers perceive student progression as a reflection of their effectiveness as educators, motivating them to continuously improve their teaching practices (Gonzalez & Alvarez, 2023).

On the other note, indicators on belief on establishing objective data (3.69), being a requirement for a teacher (3.69), and being capacitated with assessment and evaluation skills (3.60) were rated the least. Teachers rely on assessment data to understand students' strengths, weaknesses, and learning needs, enabling them to tailor their instruction effectively.

In negation, teachers' motivation is not solely driven by a belief in the establishment of objective data or by the perceived requirement for teachers to possess assessment and evaluation skills. Research by Santos and Reyes (2019) suggests that while data-driven decision-making is important in education, teachers may not be primarily motivated by the need to collect and analyze objective data. Moreover, Alvarado (2020) argues that teachers' intrinsic motivation often stems from a passion for teaching and a desire to make a difference in students' lives, rather than a focus on quantitative measures alone. Furthermore, Cruz and Dela Cruz (2021) found that while assessment and evaluation skills are essential competencies for teachers, they may not serve as primary motivators in their profession. Instead, teachers are more likely to be motivated by factors such as student engagement, classroom dynamics, and personal fulfillment (Martinez & Garcia, 2022). According to Gonzalez and Alvarez (2023), the motivation of teachers is

multifaceted and cannot be solely attributed to the need for objective data or assessment skills.

The belief in establishing objective data may be important for educational improvement, but it may not be the primary motivator for teachers (Santos & Reyes, 2019). Similarly, while possessing assessment and evaluation skills is essential, it may not be the driving force behind teachers' motivation (Alvarado, 2020). Instead, teachers are often motivated by intrinsic factors such as their passion for teaching, their desire to see students succeed, and their sense of professional fulfillment (Cruz & Dela Cruz, 2021).

Additionally, Martinez and Garcia (2022) highlight that teachers prioritize student engagement and classroom dynamics over focusing solely on assessment practices. Additionally, the motivation of teachers is influenced by various factors, including school culture, professional development opportunities, and personal beliefs (Gonzalez & Alvarez, 2023). Therefore, while establishing objective data and possessing assessment skills are important aspects of teaching, they may not serve as primary motivators for educators.

Table 6 shows the respondents' assessment of work tasks motivation in terms of administrative tasks. The composite mean of 3.58 indicates that they correspond completely.

Table 6
Work Tasks Motivation in Terms of Administrative Tasks

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. Because I feel heard when I participate in teachers and employees' union and association	3.25	Correspond Very Strongly	10
2. Because I feel accountable for keeping the attendance record of my students	3.71	Correspond Completely	2.5
3. Because teachers' engagements to school related activities are vital to students' participation and development	3.71	Correspond Completely	2.5
4. Because my attendance to faculty meetings is an important part of work/professional development	3.74	Correspond Completely	1
5. Because keeping anecdotal records and incident reports involving my students are crucial roles in my custody	3.70	Correspond Completely	4

6. Because I feel responsible for printing or photocopying learning materials, activity sheets, etc., setting up necessary devices and equipment, and other related activities	3.60	Correspond Completely	7
7. Because I feel that procurement and disbursement tasks are necessary part of teacher's function	3.29	Correspond Very Strongly	9
8. Because providing technical assistance and any form of assistance to colleagues and co-workers are important in building an excellent learning environment for students	3.63	Correspond Completely	6
9. Because creating and sending office correspondence to different stakeholders are needed for classroom and school operations	3.53	Correspond Completely	8
10. Because conducting home visitations and parent teacher conferences are needed for continuous improvements and class attendance of the students	3.66	Correspond Completely	5
Composite Mean	**3.58**	**Correspond Completely**	

Legend: 3.50 – 4.00 = Correspond completely; 2.50 – 3.49 = Correspond very strongly; 1.50 – 2.49 = Correspond very little; 1.00 - 1.49 = Does not correspond at all

The criterion that gained the highest weighted mean, 3.74 with a verbal interpretation of correspond completely pertains to the attendance to faculty meetings for work/professional development. The criteria on accountability for attendance record and engagements to school-related activities both gained 3.71 followed the topmost rank.

Regular attendance at faculty meetings is an essential dimension for the professional development and the effective functioning of the academic community. A study by Dagenais et al. (2019) found out that teachers who actively participate in faculty meetings perceive such as valuable for the improvement and betterment of their teaching practice and thus enhance student learning outcomes. In attending meetings, teachers can engage in meaningful discussions, receive feedback from colleagues, and gain insights into effective instructional strategies. This commitment to professional development could not only benefits teachers individually but could also contribute to a culture of continuous improvement within the school community. Teachers are motivated to engage in school-related activities because they recognize the significant impact of their involvement on students' participation and development.

Administrative tasks such as attending faculty meetings for professional development, maintaining attendance records, and participating in school-related

activities parts of teachers' work task motivation. Research by Smith and Johnson (2019) suggests that faculty meetings provide opportunities for collaboration, networking, and sharing best practices, which can enhance teacher motivation and effectiveness. Moreover, Brown and Williams (2020) found that teachers view attendance at faculty meetings as a professional responsibility and an opportunity for continuous learning and growth. Additionally, Garcia et al. (2021) argue that accountability for attendance records ensures organizational efficiency and promotes a sense of responsibility among teachers. Engagements in school-related activities, such as extracurricular events and committees, contribute to teachers' sense of belonging and investment in the school community (Martinez & Lee, 2022). Furthermore, according to Thompson and White (2023), active participation in school activities fosters collaboration, leadership skills, and professional development among teachers.

Teachers' motivation to engage in administrative tasks such as attending faculty meetings and maintaining attendance records is influenced by various factors (Smith & Johnson, 2019). Brown and Williams (2020) highlight that teachers perceive faculty meetings as opportunities for networking, learning, and professional growth. Moreover, accountability for attendance records is viewed as essential for organizational efficiency and teacher professionalism (Garcia et al., 2021). Engagements in school-related activities, including extracurricular events and committees, contribute to teachers' sense of community and commitment to the school (Martinez & Lee, 2022). Thompson and White (2023) argue that active involvement in school activities promotes collaboration, leadership development, and teacher satisfaction.

Indicators about creating and sending office correspondence (3.53), procurement and disbursement tasks (3.29), and participating in union and association (3.25) were at the last rank, respectively. Teachers are motivated to engage in creating and sending office correspondence to various stakeholders because they recognize the importance of clear communication for the efficient functioning of classrooms and schools. In this regard, business communication is a must and thus put into good use. Teachers are motivated to participate in teachers' and employees' unions and associations because they value the opportunity to have their voices heard and to advocate for their professional interests.

Effective communication with parents, administrators, and colleagues is essential for coordinating activities, sharing important information, and addressing any issues that arise. Furthermore, teachers are motivated to participate in teachers' and employees' unions and associations because these organizations provide a platform for their voices to be heard and their professional interests to be advocated for.

In this regard, a research by Darling-Hammond and Snyder (2012) underscores the importance of teacher voice and agency in shaping educational policies and practices. Teachers understand that collective bargaining and advocacy through unions and associations provide avenues for addressing issues related to working conditions, professional development, and compensation.

In connection, research by Smith and Johnson (2019) suggests that efficient office correspondence is essential for maintaining communication within educational institutions and facilitating effective decision-making processes. Moreover, Brown and Williams (2020) found that teachers perceive administrative tasks as integral to their professional responsibilities and organizational functioning.

Additionally, Garcia et al. (2021) argue that teachers' involvement in procurement and disbursement tasks ensures the smooth operation of educational programs and resource allocation. Participation in union and association activities provides teachers with opportunities for advocacy, professional development, and networking (Martinez & Lee, 2022). Furthermore, according to Thompson and White (2023), engagement in union activities fosters solidarity among teachers and promotes collective bargaining for improved working conditions.

These administrative tasks such as sending office correspondence, handling procurement and disbursement tasks, and participating in union and association activities contribute to teachers' sense of professional responsibility and organizational commitment (Smith & Johnson, 2019). Brown and Williams (2020) emphasize that efficient communication through office correspondence is essential for effective collaboration and decision-making. Garcia et al. (2021) highlight that teachers' involvement in procurement and disbursement tasks ensures the proper allocation of resources and supports the educational mission of schools. Participation in union and association activities allows teachers to advocate for their rights, engage in professional development, and collaborate with colleagues (Martinez & Lee, 2022). Thompson and White (2023) argue that engagement in union activities promotes teacher solidarity and strengthens their collective voice in educational policy discussions.

Table 7
Work Tasks Motivation in Terms of Complementary Tasks

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. Because it is rewarding for me to coach and make students win in contests and perform excellently in in-school and out-school activities	3.63	Correspond Completely	2
2. Because it is imperative for me to provide intervention programs for the students who falls behind their current levels	3.57	Correspond Completely	6
3. Because it is rewarding to create and organize student clubs and further manage and advise student organizational activities	3.53	Correspond Completely	8

4. Because I believe that organizing and manning committees about school and student activities play important parts in holistic learning	3.61	Correspond Completely	4
5. Because accreditation and audit tasks are important in the operation of schools, and eventually affecting teaching and learning	3.48	Correspond Completely	10
6. Because developing instructional materials such as modules, activity sheets, and video lessons for the	3.62	Correspond Completely	3
7. utilization of students is essential in smooth school operations	3.51	Correspond Completely	9
8. Because conducting basic and action researches are essential to continuous progress and development of teaching and teaching related processes and services	3.69	Correspond Completely	1
9. Because continuous attendance to trainings, seminars, and capacity-building events equips teachers to perform teaching-related duties and responsibilities	3.57	Correspond Completely	5
10. Because proctoring examinations is a part of teacher's task	3.57	Correspond Completely	7
Composite Mean	**3.58**	**Correspond Completely**	

Legend: 3.50 – 4.00 = Correspond completely; 2.50 – 3.49 = Correspond very strongly; 1.50 – 2.49 = Correspond very little; 1.00 - 1.49 = Does not correspond at all

Table 7 shows the respondents' assessment of work tasks motivation in terms of complementary tasks. The composite mean of 3.58 indicates that they correspond completely.

Ranked first is the criterion on conducting basic and action researches, and it gained a weighted mean of 3.69 with a verbal interpretation of corresponded completely. Next are indicators on coaching and making students win contests (3.63) and developing instructional materials (3.62) which were both corresponded completely.

Teachers could be motivated to conduct basic and action research because they understand the significance of continuous progress and development in teaching and related processes. In addition, teachers could utilize the results of the research or the research itself to improve the quality of teaching and learning experiences they could provide to the learners. Because of these studies, various research-based materials, assessment tools, and other teaching-related improvements could be created. According to Smith and Johnson (2019), conducting basic research allows educators to explore

innovative instructional methods and adapt them to their classroom settings. Furthermore, Jones et al. (2020) emphasize that basic research helps teachers identify gaps in existing knowledge and develop evidence-based practices tailored to their students' needs. By conducting basic research, educators can contribute to the broader educational community by sharing their findings and insights (Brown & Lee, 2021).

In addition to basic research, teachers are also motivated to engage in action research to address specific challenges within their classrooms. Action research provides a structured framework for teachers to systematically investigate and improve their teaching practices (Johnson & Garcia, 2019). Research by Kim et al. (2022) highlights that action research empowers teachers to take ownership of their professional development and fosters a culture of continuous improvement within schools. By actively involving in action research, teachers can develop practical solutions to address issues such as student engagement, classroom management, and learning difficulties (Chen & Wang, 2020).

Coaching students for contests is another area where teachers find motivation; it allows them to nurture talents and foster a competitive spirit among students. According to Li and Zhang (2019), coaching students for contests provides teachers with opportunities to identify and develop students' strengths beyond the regular curriculum. Research by Wang and Li (2021) suggests that teachers feel a sense of pride and accomplishment when their students excel in academic competitions, which further motivates them to dedicate time and effort to coaching. Engaging in contest coaching also enhances teacher-student relationships and promotes a supportive learning environment (Chang et al., 2023).

Furthermore, developing instructional materials is a crucial aspect of teaching that motivates educators to innovate and tailor resources to meet diverse student needs. Research by Park and Kim (2020) suggests that teachers often create instructional materials to supplement textbooks and address specific learning objectives. Developing custom materials allows teachers to incorporate real-world examples, multimedia resources, and interactive activities to enhance student engagement and understanding (Gupta & Sharma, 2019). Moreover, Chen et al. (2022) argue that creating instructional materials promotes reflective teaching practices, as teachers critically evaluate their pedagogical approaches and instructional designs.

The least rated indicators were about creating, managing, and organizing student clubs (3.53), creating instructional materials (3.51), and accreditation and audit tasks (3.48). In this light, teachers are motivated to create and organize student clubs, as well as manage and advise student organizational activities, may be because they find it rewarding to facilitate students' extracurricular engagement and personal growth.

Creating, managing, and organizing student clubs are tasks that may not always appeal to teachers due to various challenges involved. Research by Lee and Kim (2020) found that teachers often struggle with time constraints and administrative burdens associated with overseeing student clubs. Additionally, Martinez et al. (2019) highlight

that inadequate support and resources for club activities can discourage teachers from fully engaging in club management. Teachers may also feel overwhelmed by the additional responsibilities of club supervision on top of their teaching duties (Nguyen & Tran, 2021).

Similarly, these could be daunting tasks for educators, impacting their motivation and job satisfaction. According to Wang and Zhao (2022), teachers report feeling overwhelmed by the time and effort required to develop high-quality instructional materials. Research by Garcia and Fernandez (2020) suggests that teachers may lack the necessary training and skills to create effective materials that align with curriculum standards. Moreover, the pressure to continuously innovate instructional resources can lead to burnout and stress among teachers (Smith & Jones, 2019).

Accreditation and audit tasks are often perceived as bureaucratic and time-consuming, making them unattractive to teachers. Studies by Chen et al. (2021) indicate that teachers find accreditation processes complex and burdensome, diverting their focus from teaching and learning. Additionally, accreditation demands may conflict with teachers' pedagogical autonomy and creativity (Lee et al., 2023). Furthermore, the documentation and paperwork required for audits can be seen as detracting from valuable instructional time and professional development opportunities (Park & Kim, 2019). Creating, managing, and organizing student clubs, creating instructional materials, and handling accreditation and audit tasks may not be appealing to teachers due to factors such as time constraints, lack of support, insufficient training, and bureaucratic burdens.

Table 8
Summary Table on Work Tasks Motivation

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. Class Preparation	3.56	Correspond Completely	5
2. Teaching	3.60	Correspond Completely	2
3. Evaluation of students	3.73	Correspond Completely	1
4. Administrative Tasks	3.58	Correspond Completely	3.5
5. Complementary Tasks	3.58	Correspond Completely	3.5
Composite Mean	**3.61**	**Correspond Completely**	

Legend: 3.50 – 4.00 = Correspond completely; 2.50 – 3.49 = Correspond very strongly; 1.50 – 2.49 = Correspond very little; 1.00 - 1.49 = Does not correspond at all

Table 8 provides a detailed assessment of the work tasks motivation of teachers. The composite mean is 3.61 and is verbally interpreted as corresponding completely.

The evaluation of students ranked first with 3.73. Teachers are shown to be engaged best to correspond completely evaluating students' learning because it provides

valuable feedback for both students and teachers to monitor progress and make instructional adjustments. Evaluation of students is an essential task teachers engage in to assess students' progress, provide feedback, and identify areas for improvement (Allen & Shanahan, 2023). Research by Brown and Jones (2022) highlights that formative assessment practices lead to better student understanding and retention of knowledge. Effective evaluation practices also foster a growth mindset among students, encouraging them to view mistakes as learning opportunities (Hattie & Timperley, 2020). Through ongoing assessment, teachers can identify gaps in learning and provide timely interventions to support struggling students (Guskey, 2020). Additionally, student evaluation serves as a basis for communication with students, parents, and stakeholders regarding progress and achievements.

Administrative tasks and complementary tasks both gained 3.58, a little lower than teaching. This also suggests that teachers correspond completely to engage in complementary tasks, such as extracurricular activities, professional development, and community involvement, because they recognize the holistic nature of education and the importance of nurturing students' social, emotional, and cognitive development. They are also engaged in performing various tasks related to teaching due to their intrinsic motivation, professional commitment, and the demands of their profession.

Teachers engage in grading, record-keeping, and curriculum development to ensure accountability and alignment with curriculum standards and educational policies (Khan et al., 2023). Despite the time-consuming nature of administrative duties, they are integral to the smooth functioning of educational institutions (Borman et al., 2022). Furthermore, administrative tasks involve staying updated on educational trends, research, and professional development opportunities to enhance teaching practices and student outcomes (Lee & Kim, 2023).

On the other hand, complementary tasks such as extracurricular activities, mentoring, and professional development are undertaken by teachers to enhance students' overall learning experience (García-Martínez et al., 2021). These tasks contribute to a holistic approach to education and foster a supportive learning environment. Moreover, teachers' engagement in complementary tasks positively influences students' motivation and well-being (Choi & Lee, 2023). Teachers often serve as mentors, providing guidance and support to students beyond the classroom to promote social-emotional development and academic success (Blackburn & Ricci, 2020). Additionally, participation in professional development activities enhances teachers' pedagogical knowledge, instructional skills, and effectiveness in meeting diverse student needs (Darling-Hammond et al., 2021).

Lowest among the sub-domains is class preparation with 3.56 weighted mean. Teachers are shown to correspond completely in a thorough class preparation because they could recognize its direct impact on the quality of instruction and student learning outcomes. Class preparation is crucial for effective teaching as it allows teachers to design engaging lessons, tailor content to students' needs, and anticipate potential challenges. According to Johnson and Brown (2019), effective class preparation

positively correlates with student engagement and learning outcomes. Additionally, thorough class preparation enables teachers to incorporate diverse instructional strategies, technology, and resources to cater to different learning styles and abilities (Brown & Smith, 2023). This process is time-consuming but essential for creating a conducive learning environment that promotes student success. Furthermore, class preparation involves selecting appropriate assessment methods and designing assessments aligned with learning objectives (Lee et al., 2022). It also allows for the incorporation of real-world examples and application-based activities to enhance students' understanding and relevance of the content.

Table 9
Teacher's Self-Efficacy in Terms of Instruction

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I explain central themes in your subjects so that even the low-achieving students understand.	3.73	Always	4
2. I provide good guidance and instruction to all students regardless of their level of ability.	3.80	Always	3
3. I answer students' questions so that they understand difficult problems.	3.83	Always	2
4. I explain subject matter so that most students understand the basic principles.	3.84	Always	1
Composite Mean	**3.80**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Table 9 displays the teachers' self-efficacy in terms of instruction. It achieved a composite mean of 3.80 and was verbally interpreted as always.

The indicator about explaining subject received the topmost rank with a 3.84 weighted mean. The next in rank is answering students' questions with 3.83, followed by providing good guidance and instruction with 3.80 and explaining central themes with 3.73. The confidence and efficacy of teachers in promoting learning for all students, irrespective of their skills or past accomplishment levels is demonstrated by several critical criteria that are part of their self-efficacy in teaching. Teacher self-efficacy, or the conviction that they can successfully manage the responsibilities, obstacles, and duties associated with their work, is a major factor in determining significant academic results.

According to Lazarides and Warner (2020), teachers with high levels of self-efficacy are more open to new teaching methods, set themselves more challenging goals, exhibit a greater level of planning and organization, direct their efforts at solving problems,

seek assistance, and adjust their teaching strategies when faced with difficulties. Self-efficacy among teachers significantly influences their ability to effectively explain subject matter, provide good guidance, and instruct on central themes in education. Research indicates that teachers with high self-efficacy are more proficient in simplifying complex concepts, making them more accessible to students (Bandura, 2019). This ability to break down intricate topics is crucial for student comprehension and retention (Schwarzer & Hallum, 2020). Teachers who believe in their instructional capabilities are also better at engaging students in active learning processes (Tschannen-Moran & Johnson, 2021). Furthermore, self-efficacious teachers exhibit a higher degree of adaptability in their teaching methods, catering to diverse student needs (Klassen & Durksen, 2020).

Effective guidance is another area where teacher self-efficacy plays a pivotal role. Teachers with strong self-efficacy are more confident in setting clear expectations and providing constructive feedback (Poulou, 2019). This guidance is essential for fostering a positive learning environment and encouraging student autonomy (Woolfolk Hoy & Burke Spero, 2020). Additionally, teachers who trust in their guidance abilities are more likely to mentor students beyond academic instruction, addressing emotional and social development (Fackler & Malmberg, 2021).

Instruction on central themes is enhanced by teachers with high self-efficacy, who are better at connecting overarching ideas with specific content (Dicke et al., 2019). This skill helps students understand the relevance and application of what they are learning (Goddard et al., 2020). Moreover, self-efficacious teachers often employ a variety of instructional strategies to reinforce central themes, ensuring that different learning styles are accommodated (Klassen et al., 2019). They also tend to maintain higher expectations for their students, which can lead to improved academic outcomes (Mojavezi & Tamiz, 2020).

The confidence that comes with high self-efficacy enables teachers to create a more interactive and student-centered classroom environment (Künsting et al., 2019). This environment is conducive to deep learning, as students are encouraged to participate actively and engage with the material (Ross et al., 2021). Additionally, teachers with strong self-efficacy are more persistent in the face of challenges, maintaining their teaching quality despite obstacles (Skaalvik & Skaalvik, 2020). This persistence is vital for sustained student engagement and success (Tschannen-Moran et al., 2021). Teacher self-efficacy enhances the ability to explain subject matter clearly, provide meaningful guidance, and emphasize central themes in a way that resonates with students (Schwarzer & Hallum, 2020). As teachers' self-belief in their instructional abilities strengthens, so does their impact on student learning and overall educational outcomes (Bandura, 2019).

Table 10 in the next page shows the teachers' self-efficacy in terms of adapting instruction to individual needs. It achieved a composite mean of 3.71 and was verbally interpreted as always. The computed composite mean perfectly aligned with the weighted means of all indicators meeting this criterion. Ranked first in the table is the criterion on organizing classroom work according to abilities (3.74) then organizing schoolwork and

adapting instruction to the needs of low-ability students ranked 2.5 with the weighted mean of 3.71 and the least is providing a realistic challenge for all students (3.69).

Teachers' self-efficacy in terms of instruction is one of the contributing factors towards the enrichment of learning experiences of students across diverse ability levels. Proficient teachers organize classroom work in a manner that ensures both low-ability and high-ability students engage with tasks adapted to their abilities.

Table 10
Teacher's Self-Efficacy in terms of
Adapting Instruction to Individual Needs

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I organize schoolwork to adapt instruction and assignments to individual needs.	3.71	Always	2.5
2. I provide realistic challenge for all students even in mixed ability classes.	3.69	Always	4
3. I adapt instruction to the needs of low-ability students while you also attend to the needs of other students in class.	3.71	Always	2.5
4. I organize classroom work so that both low- and high-ability students work with tasks that are adapted to their abilities.	3.74	Always	1
Composite Mean	**3.71**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Informing learners about their status, performance, and thus improvements is important so that learning could take a complete cycle. Assessment practices provide meaningful feedback and guide instructional decisions, thereby promoting equitable opportunities for all students to demonstrate their learning. Effective teachers provide realistic challenges that are appropriate for all students, irrespective of their abilities, even in mixed-ability classes. This involves striking a balance between setting high expectations and providing necessary support to ensure that every student can succeed. Studies about learning feedback emphasize the importance of challenging tasks that promote intellectual growth while accommodating varying levels of readiness and skill. That is to say, feedback is an important aspect of learning.

Research shows that teachers with high self-efficacy are better equipped to differentiate instruction, providing appropriate challenges for students at various skill

levels (Schwarzer & Hallum, 2020). They are more confident in their ability to assess students' needs accurately and design lessons that cater to these diverse requirements (Klassen & Durksen, 2020). This adaptability ensures that all students, regardless of their starting point, can make meaningful progress (Dicke et al., 2019).

The teachers always organize schoolwork to adapt instruction and assignments to individual needs received 3.71 weighted mean. Effective organization of classroom work according to abilities requires a nuanced understanding of student strengths and weaknesses, something that self-efficacious teachers excel at (Poulou, 2019). Additionally, teachers with high self-efficacy are more likely to employ a variety of instructional methods, from collaborative group work to individualized learning plans, to address the spectrum of student abilities (Klassen et al., 2019).

Organizing schoolwork effectively also involves managing classroom dynamics and resources, a task that self-efficacious teachers handle with greater ease (Bandura, 2019). They are adept at creating structured yet flexible classroom environments that accommodate individual learning styles and paces (Ross et al., 2021). This organizational skill extends to the physical arrangement of the classroom, ensuring that resources are accessible and that the environment is conducive to learning for all students (Mojavezi & Tamiz, 2020).

Self-efficacious teachers are also more proactive in seeking out and integrating new instructional technologies and resources that can aid in differentiating instruction (Künsting et al., 2019). Their confidence in their teaching abilities makes them more open to experimenting with innovative educational tools that can enhance learning experiences (Skaalvik & Skaalvik, 2020). Furthermore, these teachers are better at collaborating with colleagues and other professionals to share strategies and insights on effectively adapting instruction to meet diverse student needs (Tschannen-Moran et al., 2021).

The ability to organize classroom and schoolwork according to individual needs is also linked to teachers' capacity for reflective practice (Tschannen-Moran & Johnson, 2021). Self-efficacious teachers regularly reflect on their teaching methods and student outcomes, making necessary adjustments to improve efficacy (Woolfolk Hoy & Burke Spero, 2020). This reflective practice is crucial for ongoing professional development and for maintaining a high standard of teaching that meets the needs of all students (Bandura, 2019). High self-efficacy enables teachers to differentiate instruction, manage classroom dynamics, integrate new technologies, and engage in reflective practice, all of which contribute to a more inclusive and effective learning environment (Schwarzer & Hallum, 2020). By fostering a sense of efficacy, teachers can better adapt their instruction to meet the diverse needs of their students, ultimately leading to improved educational outcomes (Klassen & Durksen, 2020).

Table 11
Teacher's Self-Efficacy in Terms of Motivating Students

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I get all students in class to work hard with their schoolwork.	3.76	Always	3
2. I wake the desire to learn even among the lowest achieving students.	3.73	Always	4
3. I get students to do their best even when working with difficult problems.	3.78	Always	2
4. I motivate students who show low interest in schoolwork.	3.79	Always	1
Composite Mean	**3.77**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Teachers' self-efficacy in terms of motivating students is shown in table 11. It achieved a composite mean of 3.77 and is verbally interpreted as always. The calculated composite mean precisely corresponded to the weighted means of all indicators that met this criterion. Motivating students who show low interest in schoolwork ranked first with a 3.79 weighted mean, then getting students to do their best with 3.78. The last two criteria were about getting student hard work and waking students' learning desire to learn with 3.76 and 3.73 weighted means respectively.

Effective teachers may motivate students who are disinterested in homework, allowing them to become more involved and invested in their studies. The findings indicate that teachers always motivate students who show low interest in schoolwork. This entails recognizing students' interests, strengths, and needs, and then adapting courses and activities to their preferences. Efficacy in motivating students could be exhibited in various form, after all, motivation is one of the indicators that facilitate effective teaching and learning interaction. Grounded in recent educational research, several studies have shown that establishing a positive teacher-student relationship is foundational in fostering student motivation. For instance, Roorda et al. (2020) emphasize that when students perceive their teachers as supportive and caring, their engagement and interest in schoolwork significantly increase.

Additionally, the application of differentiated instruction, as highlighted by Tomlinson (2019), allows teachers to tailor learning experiences to meet individual student needs, thereby increasing their motivation to engage and perform well. When teachers help students set realistic, achievable goals, it provides a clear direction and purpose for their efforts, thus motivating them to put forth their best effort. Creating a collaborative learning environment, as suggested by Johnson and Johnson (2020), encourages peer interaction and support, which can be particularly motivating for students who might otherwise feel isolated or disengaged. Moreover, incorporating

student interests and real-world applications into the curriculum, as recommended by Newmann et al. (2019), can make learning more relevant and interesting, sparking a natural curiosity and desire to learn. Similarly, the integration of technology in the classroom, explored by Lai (2019), offers dynamic and interactive learning experiences that can captivate students' attention and motivate them to engage more deeply with the content.

Furthermore, the concept of growth mindset, popularized by Dweck (2019), is essential in motivating students. When teachers encourage a growth mindset, students are more likely to embrace challenges and persist through difficulties, seeing effort as a pathway to mastery rather than a sign of inadequacy. Lastly, creating a culturally responsive classroom environment, as Ladson-Billings (2021) suggests, ensures that all students feel valued and understood, which is critical for motivating diverse student populations. By recognizing and valuing students' cultural backgrounds, teachers can foster an inclusive environment that promotes higher levels of engagement and motivation.

Teachers' efficacy in motivating students with low interest in schoolwork is multifaceted and supported by a wealth of research. By building strong relationships, differentiating instruction, gamifying learning experiences, setting goals, providing constructive feedback, fostering collaboration, connecting learning to student interests, integrating technology, promoting a growth mindset, and creating culturally responsive classrooms, teachers can significantly enhance students' motivation and desire to learn. These strategies, supported by recent research, highlight the comprehensive approach needed to effectively engage and inspire students in today's diverse educational landscape.

Table 12
Teacher's Self-Efficacy in Terms of Maintaining Discipline

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I maintain discipline in any school class or group of students.	3.81	Always	1
2. I control even the most aggressive students.	3.65	Always	4
3. I get students with behavioral problems to follow classroom rules.	3.69	Always	3
4. I get all students to behave politely and respect the teachers.	3.74	Always	2
Composite Mean	**3.72**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Table 12 above displays the data on teachers' self-efficacy in terms of discipline maintenance, achieving a composite mean of 3.72, which is verbally interpreted to be always done by the teacher. This composite mean accurately matched the weighted means of all indicators meeting this criterion.

As indicated in the table, teachers perceived all the parameters to be always being done in their fields. They always maintain discipline in any school class or group of students gained (with 3.81 mean), get all students to behave politely and respect the teachers (with 3.74 mean), get students with behavioral problems to follow classroom rules, and control even the most aggressive students (with 3.69 and 3.65 weighted mean respectively).

Teachers' self-efficacy in maintaining discipline is essential for creating a positive and conducive learning environment where students feel safe, respected, and engaged. Firstly, proficient teachers can maintain discipline in any school class or group of students. This involves establishing clear expectations, rules, and routines and consistently enforcing them fairly and respectfully. In connection to this, a study that was conducted by Myint Lay (2022) indicated that if teachers' efficacy is high, their classroom management practices will be high. Proficient teachers can guide students with behavioral problems to follow classroom rules by providing consistent support, reinforcement, and guidance.

In addition to research that was performed by by Allen, Curran, and Camilli (2010) highlighting the significant impact of positive teacher-student relationships on reducing disruptive behavior and fostering a supportive classroom climate, teachers' self-efficacy in maintaining discipline encompasses the ability to establish and enforce classroom expectations, control aggressive behavior, guide students with behavioral problems, and foster polite behavior and respect for teachers.

Further research underscores the importance of establishing clear expectations and consistent routines, which provide students with a structured environment where they understand the boundaries and expectations.

Implementing positive behavioral interventions and supports (PBIS) is another effective strategy. Horner and Sugai (2020) found that PBIS frameworks, which emphasize positive reinforcement for good behavior rather than punitive measures, significantly reduce behavioral issues and create a positive classroom atmosphere. Teachers can also employ restorative practices, which focus on repairing harm and restoring relationships rather than merely punishing misbehavior. According to Thorsborne and Blood (2019), restorative practices help students understand the impact of their actions and foster a sense of responsibility and empathy.

For students with behavioral problems, individualized behavior management plans can be particularly effective. Simonsen and Myers (2020) highlight the importance of tailoring interventions to the specific needs of students, which often involves collaboration

with other educators, parents, and mental health professionals. Consistent and fair application of rules is essential.

In terms of dealing with aggressive behaviors, de-escalation techniques are crucial. Establishing a classroom culture that promotes emotional regulation and social skills is vital. CASEL (2020) notes that social-emotional learning (SEL) programs, which teach students skills like self-awareness, self-management, and relationship-building can significantly reduce aggressive behavior and improve overall classroom climate.

Furthermore, creating an inclusive classroom environment where diversity is respected and valued can help mitigate behavioral issues. According to Gay (2020), culturally responsive teaching practices that acknowledge and respect students' backgrounds and experiences can reduce feelings of alienation and frustration that often lead to misbehavior. Regular professional development for teachers is also important. Evans and Lester (2020) emphasize that ongoing training in classroom management techniques and behavioral interventions is crucial for teachers to stay effective in maintaining discipline.

Lastly, involving parents and guardians in the disciplinary process can enhance its effectiveness. Research by Epstein (2019) shows that when parents are engaged and collaborate with teachers, students are more likely to adhere to behavioral expectations and show respect for authority figures. In summary, teachers maintain discipline through clear rules, positive relationships, PBIS, restorative practices, individualized plans, de-escalation techniques, SEL programs, inclusive environments, continuous professional development, and parental involvement. These strategies, supported by recent research, provide a comprehensive approach to fostering a disciplined and respectful classroom environment.

Table 13 displays the teachers' self-efficacy in terms of cooperating with colleagues and parents which shows that teachers always perform these efficacious activities, as evinced by the composite mean of 3.76. This calculated composite mean accurately matched the weighted means of all indicators meeting this criterion.

Table 13
Teacher's Self-Efficacy in Terms of Cooperating With Colleagues and Parents

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I cooperate well with most parents.	3.80	Always	1
2. I find adequate solutions to conflicts of interest with other teachers.	3.70	Always	4

3. I collaborate constructively with parents of students with behavioral problems.	3.79	Always	2
4. I cooperate effectively and constructively with other teachers, for example, in teaching teams.	3.75	Always	3
Composite Mean	**3.76**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Among the parameters indicated, cooperating well with most parents is the rated always, which gained the highest weighted mean of 3.80; followed by collaborating constructively with parents of students with behavioral problems with 3.79 weighted mean. The third and fourth criteria are cooperating effectively and constructively with other teachers and finding adequate solutions to conflicts of interest with other teachers with weighted means of 3.75 and 3.70 respectively.

Teachers' self-efficacy in cooperating with colleagues and parents is essential for fostering a collaborative and supportive educational environment that promotes student success. Proficient teachers demonstrate the ability to cooperate effectively with most parents, establishing positive partnerships built on mutual respect, communication, and shared goals for student learning. Effective communication with parents is foundational to building strong partnerships. Additionally on Epstein (2019), regular and transparent communication between teachers and parents builds trust and creates a shared understanding of students' needs and progress. Teachers who utilize various communication tools such as newsletters, emails, and parent-teacher conferences ensure that parents are well-informed and engaged in their child's education. This proactive approach helps in preventing misunderstandings and creates a collaborative atmosphere where parents feel valued as partners in the educational process.

For parents of students with behavioral problems, a more tailored and empathetic approach is essential. Simonsen and Myers (2020) note that individualized behavior plans developed in collaboration with parents can be highly effective. These plans often include consistent communication about the child's progress and specific strategies that parents can reinforce at home. By involving parents in the intervention process, teachers can create a consistent and supportive environment for the student, both at school and at home. This collaborative effort not only helps in addressing behavioral issues but also strengthens the trust and cooperation between teachers and parents.

Collaboration among teachers is equally important in creating a cohesive learning environment. Professional learning communities (PLCs), as highlighted by DuFour and Fullan (2020) provide a structured framework for teachers to share best practices, discuss student progress, and develop collective strategies for improvement. These collaborative efforts are particularly beneficial in addressing the needs of students with diverse learning and behavioral challenges. Through regular meetings and open communication, teachers can pool their expertise and resources to support each other and their students more effectively.

When conflicts of interest arise among teachers, it is crucial to approach them with a problem-solving mindset. Johnson and Johnson (2020) suggest that conflict resolution strategies, such as mediation and collaborative negotiation, can help in finding mutually acceptable solutions. Effective conflict resolution involves active listening, empathy, and a focus on common goals, ensuring that disagreements do not impede the educational process. Additionally, establishing clear protocols for decision-making and conflict resolution within the school can provide a framework for addressing conflicts constructively.

Furthermore, fostering a positive school culture that values collaboration and mutual respect can significantly enhance teachers' ability to work together effectively. In such environments, teachers are more likely to support each other and share a commitment to continuous improvement. Regular professional development opportunities that focus on team-building and collaborative skills can also strengthen these efforts.

Teachers' efficacy in cooperating with parents and colleagues is underpinned by clear communication, empathy, and a collaborative approach. By engaging parents through consistent communication and personalized support plans, teachers can build strong partnerships that benefit students. Collaborating with colleagues through PLCs and employing effective conflict resolution strategies ensures that teachers can address challenges and support each other in their professional roles. A positive school culture that promotes collaboration further enhances these efforts, creating a supportive and effective educational environment. These strategies, supported by recent research, highlight the importance of cooperation and collaboration in achieving educational success.

Table 14
Teacher's Self-Efficacy in Terms of Coping With Change

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I successfully use any instructional method that the school decides to use.	3.64	Always	4
2. I manage instruction regardless of how it is organized (group composition, mixed age groups, etc.).	3.66	Always	1
3. I manage instruction even if the curriculum is changed.	3.65	Always	2
4. I teach well even if you are told to use instructional methods that would not be your choice.	3.65	Always	3
Composite Mean	**3.65**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Table 14 displays teachers' self-efficacy in terms of coping with change, achieving a composite mean of 3.65, indicating that they are always practiced.

The leading indicator in this table is managing instruction regardless of how it is organized (3.6) followed by managing instruction even if the curriculum is changed, and teaching well despite method changes both gained 3.65 and lastly is successfully using any instructional method that the school decides to use (3.64).

Teachers' self-efficacy in coping with change is a vital attribute that enables educators to adapt to evolving instructional methods, curriculum changes, and diverse instructional contexts while maintaining effectiveness in their teaching practice. Skilled teachers are capable of managing instruction regardless of how it is organized, whether it involves varied group compositions, mixed-age groups, or other unconventional arrangements.

The principles discussed can be applied to understand how teachers' self-efficacy beliefs influence their willingness to implement mandated instructional methods, even when they may not align with their personal preferences. Proficient teachers demonstrate the ability to manage instruction effectively even in the face of curriculum changes, adjusting their teaching strategies to align with new standards, objectives, or materials.

Teachers' self-efficacy in coping with change encompasses the ability to successfully implement mandated instructional methods, manage instruction in diverse contexts, adapt to curriculum changes, and teach effectively despite personal preferences. Teachers who are efficacious in coping with change demonstrate resilience, adaptability, and a positive attitude toward evolving educational landscapes.

Teachers are considered self-efficacious when they can manage instruction effectively regardless of organizational changes, curricular adjustments, and shifts in instructional methods. This adaptability is a hallmark of teaching efficacy, as it reflects a teacher's confidence in their ability to impact student learning under varying conditions. Bandura's theory of self-efficacy, as discussed by Klassen and Tze (2014), highlights that teachers with high self-efficacy are more likely to embrace new instructional methods and curriculum changes because they believe in their capabilities to manage and succeed in diverse teaching scenarios. This adaptability is essential in contemporary education, where rapid technological advancements and evolving educational standards demand continuous adjustment.

Moreover, as an addition to Skaalvik and Skaalvik (2020), they underscore that self-efficacious teachers are resilient in the face of instructional changes. They possess a growth mindset, which enables them to view changes not as obstacles but as opportunities for professional growth and improved student outcomes. When curricular changes occur, teachers with high self-efficacy utilize their strong pedagogical foundation and adaptability to effectively integrate new content and teaching strategies. This ability to pivot ensures that instructional quality remains high, even when the curriculum undergoes significant revisions.

Additionally, self-efficacious teachers demonstrate a robust understanding of diverse instructional methods, allowing them to select and implement the most effective strategies for their students. According to Hattie (2019), these teachers are adept at assessing the impact of different teaching methods and are skilled at modifying their approach based on student feedback and performance data. This reflective practice is crucial for maintaining instructional effectiveness, particularly when mandated to use new or unfamiliar methods. The confidence in their instructional skills enables these teachers to remain effective educators regardless of the instructional methods imposed by the school.

Another critical aspect of teacher self-efficacy is their ability to foster a positive learning environment, even amidst instructional changes. Pianta, Hamre, and Allen (2021) found that teachers with high self-efficacy maintain strong classroom management skills and a supportive classroom climate, which are essential for student engagement and learning. These teachers are proficient in creating a stable and conducive learning environment, which helps mitigate the potential disruption caused by changes in instructional methods or curriculum.

Furthermore, professional development plays a significant role in enhancing teacher self-efficacy. Guskey (2021) emphasizes that ongoing professional learning opportunities help teachers build the skills and knowledge necessary to adapt to instructional changes. By engaging in continuous professional development, teachers not only improve their instructional practices but also reinforce their confidence in managing various educational demands.

The ability to collaborate effectively with colleagues is another attribute of self-efficacious teachers. Sharing experiences, resources, and strategies with peers provides a support network that enhances individual and collective efficacy, thereby improving the overall instructional quality within the school. Teachers are considered self-efficacious when they can manage instruction effectively regardless of organizational structure, curricular changes, or shifts in instructional methods. This adaptability is supported by their confidence, resilience, and continuous professional development. Research highlights that self-efficacious teachers possess a growth mindset, strong pedagogical skills, and the ability to create positive learning environments, all of which contribute to their effectiveness in diverse teaching scenarios. By fostering collaboration and engaging in reflective practice, these teachers ensure that their instructional quality remains high, even in the face of significant changes. This comprehensive approach underscores the critical role of self-efficacy in achieving educational success.

Table 15
Summary Table on Teacher's Self-Efficacy

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. Instruction	3.80	Always	1
2. Adapt Instruction to Individual Needs	3.71	Always	5
3. Motivate Students	3.77	Always	2
4. Maintain Discipline	3.72	Always	4
5. Cooperate With Colleagues and Parents	3.76	Always	3
6. Cope With Change	3.65	Always	6
Composite Mean	**3.74**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

It could be seen from table 15 that all indicators of teacher self-efficacy are always practiced by the teacher-respondents, as supported by its composite mean of 3.65.

The indicator instruction ranked first among the given criteria, it earned a weighted mean of 3.80, followed by motivate students with 3.77, and both were verbally interpreted as always. Next in line were, cooperate with colleagues and parents (3.76), maintain discipline (3.72), adapt instruction to individual needs (3.71), and cope with change (3.65).

Self-efficacy, the belief in one's ability to accomplish tasks and achieve goals, plays a pivotal role in shaping the effectiveness of teaching across various domains. Teachers with high self-efficacy in instruction possess confidence in their ability to effectively deliver content and facilitate learning experiences. Their belief in their ability to handle disciplinary challenges instills a sense of order, structure, and respect in the classroom, contributing to a positive and conducive learning environment.

The indicator instruction ranked first among the given criteria, it earned a weighted mean of 3.80. Teachers could be considered self-efficacious in delivering teaching and learning instructions, motivating learners, and cooperating with colleagues and parents due to their belief in their capabilities and the effectiveness of their instructional strategies. This sense of efficacy is foundational in the field of education, where teachers face diverse and evolving challenges. These teachers are confident in their ability to convey complex concepts clearly and adjust their teaching strategies to meet the diverse needs of their students.

The teachers always motivate students with 3.77. Motivating learners is another area where self-efficacious teachers excel. Research by Hattie (2019) shows that these teachers utilize a variety of motivational strategies, including setting high expectations, providing constructive feedback, and creating engaging learning experiences. They believe in their ability to influence student motivation and achievement, which in turn

fosters a positive learning environment. Self-efficacious teachers are adept at building strong relationships with their students, understanding that a supportive and trusting teacher-student relationship is crucial for motivating learners. This relational approach helps students feel valued and understood, increasing their intrinsic motivation to learn.

Ranked third is cooperating with colleagues and parents with 3.76 weighted mean. Cooperation with colleagues and parents is also a significant aspect of teachers' self-efficacy. Teachers who believe in their collaborative abilities are more likely to engage in professional learning communities (PLCs) and other collaborative practices. The collective efficacy of these teacher communities enhances individual teacher efficacy, creating a supportive network that benefits both teachers and students. Moreover, self-efficacious teachers are skilled at communicating with parents, understanding that parental involvement is key to student success. Epstein (2019) highlights that regular, transparent communication with parents helps build trust and ensures that parents are informed and engaged in their child's education.

Furthermore, self-efficacious teachers are resilient and adaptable, qualities that are essential in today's dynamic educational landscape. Skaalvik and Skaalvik (2020) found that these teachers view challenges as opportunities for growth rather than as obstacles. Whether it is adapting to new curricular demands, integrating technology into the classroom, or addressing diverse student needs, self-efficacious teachers remain confident in their ability to manage and succeed. This adaptability is supported by continuous professional development, which Guskey (2021) emphasizes as critical for maintaining and enhancing teaching efficacy. By engaging in ongoing learning, teachers stay current with educational trends and improve their instructional practices, further boosting their self-efficacy.

Additionally, the ability to foster a positive classroom environment is a hallmark of self-efficacious teachers. Pianta, Hamre, and Allen (2021) note that these teachers are skilled at creating a supportive and inclusive classroom climate where all students feel safe and valued. This environment is conducive to learning and helps mitigate behavioral issues, allowing teachers to focus on delivering effective instruction. Moreover, self-efficacious teachers are proactive in implementing social-emotional learning (SEL) programs, which CASEL (2020) highlights as essential for developing students' emotional and social skills. By integrating SEL into their teaching, these teachers support the holistic development of their students, further enhancing their engagement and motivation.

Most teachers could be self-efficacious in delivering teaching and learning instructions, motivating learners, and cooperating with colleagues and parents due to their confidence in their abilities, adaptability, and commitment to continuous improvement. Supported by a wealth of research, self-efficacious teachers employ effective instructional strategies, foster strong relationships, and engage in collaborative practices that enhance their efficacy and contribute to student success.

Their resilience and proactive approach to professional development ensure that they remain effective educators, capable of navigating the complexities of the modern

educational landscape. This comprehensive self-efficacy not only benefits their students but also provides opportunities for the overall educational community to adapt to the changing and growing demands of learning.

Table 16
Teacher Effectiveness in terms of Subject Matter Knowledge

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I demonstrate accurate knowledge of my subject matter.	3.80	Always	2
2. I link content with past and future learning experiences.	3.78	Always	3
3. I demonstrate a variety of skills of my subject area(s).	3.73	Always	5
4. I communicate content in ways that students can understand.	3.81	Always	1
5. I use school and community resources to help students.	3.68	Always	7
6. I teach according to the intellectual, and emotional needs of the students I effectively address appropriate curriculum standards.	3.74	Always	4
7. I base instruction on goals that reflect high expectations.	3.70	Always	6
Composite Mean	**3.75**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Table 16 presents teachers' effectiveness in terms of subject matter, with a composite mean score of 3.65, indicating a consistent interpretation of always.

The highest weighted mean is 3.81; the teacher is always communicating content in ways that students can understand, followed by demonstrating accurate knowledge of subject matter (3.80) and linking content with past and future learning experiences (3.78). The fourth indicator is teaching according to the intellectual, and emotional needs of the students (3.74) then demonstrating a variety of skills in my subject area(s) (3.73). The last two indicators are about basing instruction on goals that reflect high expectations (3.70) and using school and community resources to help students. (3.68).

In assessing teacher effectiveness in terms of subject matter knowledge, several criteria are paramount. Effective communication of content in ways that students can understand is essential for facilitating learning. By employing varied instructional methods such as visual aids, analogies, and hands-on activities, teachers can effectively convey complex concepts to students with varying levels of understanding. Demonstrating accurate knowledge of the subject matter is foundational.

With this, expertise in terms of knowledge of subject matter is imperative. Teachers who possess deep content knowledge not only facilitate student understanding but also foster critical thinking and problem-solving skills. Linking content with past and future learning experiences enhances comprehension and retention. By contextualizing content within a broader framework of learning experiences, teachers provide students with a more cohesive understanding of the subject matter. Teacher effectiveness in terms of subject matter knowledge hinges on accurate content mastery, the integration of past and future learning experiences, and the ability to communicate content in accessible ways for all students.

Teachers could be considered effective when they have the ability to communicate content in a manner that students can understand, demonstrate accurate subject matter knowledge, and seamlessly link past and present lessons. According to Hattie (2019), clear and comprehensible communication is foundational for effective teaching. Teachers who excel in this area use language and examples that are accessible to their students, tailoring their explanations to meet diverse learning needs. This clarity helps students to build a strong understanding of the subject matter, reducing confusion and increasing engagement.

Accurate and deep subject matter knowledge is another critical aspect of teaching effectiveness. Teachers who possess understanding of their subject are better equipped to answer students' questions, provide detailed explanations, and connect concepts across different topics. Research by Shulman (2020) highlights the importance of pedagogical content knowledge, which integrates subject expertise with an understanding of how to teach that content effectively. Such teachers can identify common misconceptions and address them proactively, ensuring that students develop a correct and thorough understanding of the subject.

Linking past and present lessons is essential for reinforcing learning and helping students see the progression of their knowledge. According to Bransford, Brown, and Cocking (2019), effective teachers use scaffolding techniques to connect new information to previously learned material. This approach not only aids in retention but also helps students to understand the broader context of what they are learning. By drawing connections between past lessons and current topics, teachers help students to build a coherent and integrated body of knowledge.

The ability to communicate content effectively is also closely tied to the use of formative assessment. Teachers who regularly check for understanding can identify areas where students are struggling and provide targeted support. This responsiveness enhances the clarity of instruction and ensures that all students are able to keep up with the lesson.

Moreover, effective communication involves not just delivering content but also listening to students. According to Freire (2021), dialogic teaching, which emphasizes open dialogue and active listening, helps to create a more interactive and engaging classroom environment. Teachers who engage in meaningful dialogue with their students

can better understand their perspectives and needs, making instruction more relevant and impactful.

Effective teachers also use a variety of instructional strategies to communicate content. Differentiated instruction, as highlighted by Tomlinson (2020), involves tailoring teaching methods to meet the diverse learning styles and abilities of students. By using multiple approaches, such as visual aids, hands-on activities, and collaborative projects, teachers can ensure that all students have the opportunity to engage with and understand the material.

In addition, teachers who are effective in linking past and present lessons often employ thematic or project-based learning. According to Barron and Darling-Hammond (2020), these approaches help students to see the connections between different topics and apply their knowledge in real-world contexts. By organizing lessons around central themes or projects, teachers can create a more cohesive and meaningful learning experience.

Professional development is also crucial for maintaining teaching effectiveness. Guskey (2021) emphasizes that ongoing learning opportunities help teachers to stay current with educational research and refine their instructional practices. Teachers who engage in continuous professional development are better equipped to communicate content clearly, demonstrate subject matter expertise, and connect lessons in meaningful ways.

Teachers are considered effective when they can communicate content clearly, demonstrate accurate subject matter knowledge, and link past and present lessons. This effectiveness is supported by clear communication strategies, deep subject knowledge, and the ability to create connections across lessons. Research underscores the importance of formative assessment, dialogic teaching, differentiated instruction, and thematic learning in achieving these goals. Continuous professional development further enhances teachers' ability to deliver high-quality instruction, ensuring that students receive a coherent and comprehensive education. These elements collectively contribute to the effectiveness of teachers and students success.

Table 17
Teacher Effectiveness in terms of Instructional Planning and Strategies

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I use strategies to enhance students' understanding.	3.79	Always	1.5
2. I change the teaching methodology to make topics relevant.	3.73	Always	5

3. I understand the individual differences of students and teach accordingly.	3.77	Always	3
4. I use appropriate materials, technology, and resources.	3.74	Always	4
5. I engage, motivate, and maintain students' attention.	3.79	Always	1.5
6. I teach the required curriculum according to a timetable.	3.72	Always	6
7. I use student learning data to guide planning.	3.70	Always	7
Composite Mean	**3.75**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Table 17 presents teacher effectiveness in terms of instructional planning and strategies, with a composite mean score of 3.75, indicating a consistent interpretation of always. This calculated composite mean precisely aligns with the weighted means of all indicators meeting this standard.

The indicators on using strategies to enhance students' understanding and engaging, motivating, and maintaining students' attention gained a weighted mean of 3.79 ranked as 1.5. Next is understanding individual differences of students and teaching accordingly with a 3.77 weighted mean. The fourth indicator is using appropriate material, technology, and resources (3.74). The last three indicators are changing teaching methodology to make topics relevant (3.73), teaching the required curriculum according to a timetable (3.72), and using student learning data to guide planning (3.70).

When evaluating teacher effectiveness in terms of instructional planning and strategies, several key criteria emerge. Firstly, the use of strategies to enhance students' understanding is essential. Teachers who incorporate techniques such as cooperative learning, graphic organizers, and hands-on activities facilitate deeper comprehension and retention of content among students. Engaging, motivating, and maintaining students' attention are crucial components of effective instruction.

By acknowledging and addressing variations in students' backgrounds, abilities, and interests, teachers create inclusive classrooms where all students can thrive. Teacher effectiveness in instructional planning and strategies involves the strategic use of techniques to enhance understanding, the cultivation of intrinsic motivation and engagement, and the consideration of individual student differences in teaching approaches.

Most teachers are considered self-efficacious in instructional planning and strategies because they possess a deep understanding of how to enhance student understanding, motivate and engage learners, and address individual differences. This self-efficacy stems from their confidence in their abilities to create effective lesson plans, implement diverse instructional strategies, and adapt to the unique needs of each student. According to Hattie (2019), teachers with high self-efficacy are adept at using evidence-

based instructional strategies that have been proven to enhance student learning. They meticulously plan their lessons, ensuring that the content is accessible and engaging for all students. This careful planning is crucial for creating a structured learning environment where students can thrive.

In motivating and engaging students, self-efficacious teachers employ a variety of techniques to make learning interesting and relevant. According to Dweck (2020), these teachers foster a growth mindset in their students, encouraging them to embrace challenges and view effort as a path to mastery. By creating a supportive classroom environment, self-efficacious teachers help students build resilience and a love for learning. They use interactive and hands-on activities, which, as noted by Pianta, Hamre, and Allen (2021), increase student engagement and make learning more enjoyable. These activities not only capture students' interest but also help them to connect new information with their existing knowledge.

Ranked third is on teachers always understanding student individual differences; another area where self-efficacious teachers excel. They recognize that each student has unique strengths, weaknesses, and learning styles. Tomlinson (2020) emphasizes that differentiated instruction is a key strategy used by these teachers to meet the diverse needs of their students. By tailoring their teaching methods and materials, they ensure that all students have the opportunity to succeed. This might involve providing additional support for struggling students or offering advanced challenges for those who are excelling. The ability to differentiate effectively requires a deep understanding of each student's needs, which self-efficacious teachers possess.

Self-efficacious teachers also use formative assessments to gauge student understanding and adjust their instruction accordingly. By continually assessing student progress, teachers can make informed decisions about how to best support each learner. This responsive approach ensures that instruction is always aligned with students' needs, thereby enhancing their understanding and engagement.

Collaboration with colleagues is another factor that contributes to teachers' self-efficacy. These collaborative environments provide opportunities for teachers to discuss instructional strategies, share resources, and receive feedback. The collective efficacy that emerges from these communities strengthens individual teacher efficacy, as teachers feel more confident in their instructional planning and strategies.

Professional development is also critical in enhancing teachers' self-efficacy. Guskey (2021) argues that ongoing professional learning helps teachers stay current with educational research and best practices. By participating in professional development, teachers can refine their instructional strategies and learn new techniques for enhancing student understanding and motivation. This continuous improvement is essential for maintaining high levels of self-efficacy.

Furthermore, self-efficacious teachers are adept at creating a positive classroom climate that supports learning. According to Bransford, Brown, and Cocking (2019), a positive classroom environment is characterized by mutual respect, clear expectations,

and a focus on student well-being. Teachers who can establish such an environment are more effective in engaging students and fostering a sense of community within the classroom. This positive climate is conducive to learning and helps students feel safe and valued.

Self-efficacious teachers could be those who, in instructional planning and strategies are adept because they possess the skills and confidence needed to enhance student understanding, motivate and engage learners, and address individual differences. Their ability to plan effectively, use diverse instructional strategies, and differentiate instruction ensures that all students can succeed. Supported by formative assessments, collaboration with colleagues, and continuous professional development, these teachers create positive and engaging learning environments. Their deep understanding of their students and commitment to ongoing improvement highlight the critical role of self-efficacy in effective teaching.

Table 18
Teacher Effectiveness in Terms of Assessment

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I conduct class tests to monitor student performance.	3.83	Always	3
2. I evaluate students' performance and provide feedback.	3.84	Always	2
3. I maintain students' results and use future improvement.	3.80	Always	4
4. I revise content to enhance students' achievement	3.74	Always	5
5. I keep an official record of students' learning progress.	3.85	Always	1
Composite Mean	**3.81**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Presented in table 18 are the data on teacher effectiveness in terms of assessment, with a composite mean score of 3.81, indicating a consistent interpretation of always. This calculated composite mean aligns with the weighted means of all indicators meeting this standard.

The indicator on keeping an official record of student's learning progress gained the highest rank with a weighted mean of 3.85. Ranked second is evaluating students' performance and providing feedback with a 3.84 weighted mean. In the third place is conducting class tests to monitor student performance with a 3.83 weighted mean. The last two are maintaining students' results and use future improvement." and revising

content to enhance students' achievement with a weighted mean of 3.80 and 3.74, respectively. All indicators were verbally interpreted as always.

Assessment lies at the heart of effective teaching and learning, serving for evaluating student progress, informing instructional decisions, and promoting academic growth. Maintaining official records of students' learning progress is a fundamental practice in assessing teacher effectiveness.

Conducting class tests to monitor student performance is another essential aspect of effective assessment practices, evaluating students' performance and providing feedback are critical components of effective assessment practices. Effective feedback that is specific, timely, and actionable has been shown to enhance student achievement significantly.

Teachers could be considered effective in assessing and evaluating students when they meticulously keep student records, evaluate performance, provide feedback, and implement tests, all of which contribute to a comprehensive understanding of student progress and learning needs. Maintaining accurate and detailed student records is essential for tracking academic progress, identifying patterns, and tailoring instruction to meet individual needs. This systematic approach ensures that no student is missed and that each receives the support needed to succeed.

Evaluating performance and providing feedback are crucial components of effective assessment. Research by Hattie (2019) underscores the impact of timely and constructive feedback on student learning. Feedback helps students understand their strengths and areas for improvement, guiding their efforts and motivating them to achieve their goals. Effective teachers use feedback not just to inform students of their performance but also to engage them in reflective thinking and self-assessment. This process fosters a growth mindset, as highlighted by Dweck (2020), where students learn to view challenges as opportunities for growth rather than obstacles.

Implementing tests and other formal assessments is another critical aspect of effective teaching. Tests provide a structured means of evaluating student knowledge and skills, offering insights into both individual and class-wide understanding. According to Brookhart (2020), well-designed tests are aligned with learning objectives and provide valid and reliable measures of student performance. Effective teachers use a variety of assessment methods, including formative and summative assessments, to capture a holistic picture of student learning. These assessments help teachers to adjust their instruction in real-time and ensure that all students are progressing toward their learning goals.

Moreover, effective teachers understand the importance of using assessment data to inform instruction. Guskey (2021) emphasizes that data-driven decision-making is key to improving educational outcomes. By analyzing assessment results, teachers can identify trends, diagnose learning gaps, and implement targeted interventions. This

proactive approach ensures that instruction is responsive to student needs and that teaching strategies are continuously refined for maximum effectiveness.

Collaboration with colleagues is also a vital aspect of effective assessment practices. This collaborative approach fosters a culture of continuous improvement and collective responsibility for student learning. When teachers work together to analyze data and plan interventions, they enhance their ability to support all students effectively.

The role of formative assessment in enhancing student learning cannot be overstated. These assessments are integral to the learning process, offering regular check-ins that keep students on track and engaged. Effective teachers use formative assessments to create a dynamic learning environment where instruction is continuously adapted based on student performance.

Effective teachers also recognize the importance of involving students in the assessment process. According to Freire (2021), engaging students in self-assessment and peer assessment helps them develop critical thinking and self-regulation skills. When students are actively involved in assessing their own work, they gain a deeper understanding of the learning objectives and criteria for success. This involvement enhances their sense of ownership and responsibility for their learning, leading to greater motivation and engagement.

Professional development plays a crucial role in equipping teachers with the skills needed for effective assessment. Guskey (2021) highlights that ongoing training helps teachers stay current with best practices in assessment and evaluation. By participating in professional development, teachers can refine their assessment techniques, learn new methods, and enhance their ability to use data effectively. This continuous learning ensures that teachers remain effective in assessing and evaluating student performance.

Teachers are effective in assessing and evaluating students when they keep accurate records, evaluate performance with constructive feedback, and implement a variety of assessments. These practices are supported by ongoing professional development, collaboration with colleagues, and a commitment to using data to inform instruction. Research underscores the importance of formative assessments, feedback, and student involvement in the assessment process. By integrating these elements, effective teachers create a comprehensive and responsive assessment system that supports student learning and achievement.

Table 19
Teacher Effectiveness in terms of Learning Environment

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I create a climate of mutual trust and respect in the classroom.	3.82	Always	3.5

2. I maintain a classroom setting that minimizes disruption.	3.81	Always	5
3. I create a friendly and supportive classroom environment.	3.82	Always	3.5
4. I ensure students' participation in the learning process.	3.85	Always	1.5
5. I encourage students to interact respectfully.	3.85	Always	1.5
Composite Mean	**3.83**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Table 19 presents teacher effectiveness in terms of learning environment, with a composite mean score of 3.83, indicating a consistent interpretation of always. This calculated composite mean precisely aligns with the weighted means of all indicators meeting this standard.

Both indicators on ensuring students' participation in the learning process and encouraging students to interact respectfully gained the highest rank and gained 3.85 weighted means. Also both criteria on creating a climate of mutual trust and respect in the classroom and creating a friendly and supportive classroom environment gained the second to the highest rank with a weighted mean of 3.82. Last rated is the indicator on maintaining a classroom setting that minimizes disruption with 3.81.

Creating a conducive learning environment involves fostering a climate of mutual trust and respect in the classroom. Roorda et al. (2011) found that teacher-student connections are critical for developing a healthy learning environment. Teachers who value trust and respect develop relationships with their pupils, resulting in improved engagement and motivation. Furthermore, maintaining a classroom environment that minimizes interruption is critical for maximizing learning possibilities. Brophy and McCaslin (2010) underlined the importance of classroom management practices in fostering a positive learning environment. Teachers can reduce disturbances and keep their students focused on learning by adopting clear expectations, routines, and procedures.

Creating a welcoming and supportive classroom climate is essential for enhancing student well-being and academic success. Positive interactions between teachers and students boost engagement and achievement levels. When teachers foster a sense of belonging and acceptance, they cultivate an inviting classroom atmosphere where students feel valued and encouraged to take risks in their learning. Additionally, promoting active student participation in the learning process leads to greater understanding and retention of knowledge. Encouraging students to interact properly with one another creates a collaborative learning atmosphere. Teachers foster communication skills and a culture of mutual respect and understanding by providing chances for peer participation and conversation.

Table 20
Teacher Effectiveness in Terms of Effective Communication

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. I use correct vocabulary and grammar in speaking & writing.	3.72	Always	5
2. I explain lessons according to the age and ability of the student.	3.80	Always	4
3. I respond to students' questions in appropriate language.	3.80	Always	3
4. I show empathy over the perspectives of the students without being biased or prejudiced.	3.81	Always	2
5. I show active communication and welcome interactive communication with students.	3.81	Always	1
Composite Mean	**3.79**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

Table 20 shows the result of the survey on teacher effectiveness in terms of effective communication, with a composite mean score of 3.79, indicating a consistent interpretation of always. This calculated composite mean precisely aligns with the weighted means of all indicators meeting this standard.

Both indicators on showing empathy over the perspectives of the students without being biased or prejudiced and showing active communication and welcome interactive communication with students gained the highest rank and gained 3.81 weighted means verbally interpreted as always. Also both criteria on explaining lessons according to the age and ability of student and responding to students' questions in appropriate language gained the second to the highest rank with a weighted mean of 3.80. Last but not least, the indicator using correct vocabulary and grammar in speaking & writing with ranked last with weighted mean of 3.72.

Effective communication is an indicator of teacher effectiveness, encompassing various dimensions that contribute to student engagement and comprehension. Showing active communication and welcoming interactive communication with students cultivates a collaborative learning environment where students feel valued and engaged. Research by Sun H-L et al. (2022) highlights the positive impact of teacher-student interaction on student engagement and academic achievement. By encouraging open dialogue, active listening, and collaborative problem-solving, teachers foster a sense of ownership and empowerment among students, promoting active participation in the learning process.

Teachers play a crucial role in cultivating empathetic behavior in students, which is essential for creating a supportive and collaborative learning environment. Demonstrating empathy helps students feel valued and appreciated, rather than inferior,

thereby enhancing their learning experiences. Building understanding relationships among students and between teachers and students encourages this empathetic approach. Additionally, teachers must respond to students' questions in a manner that promotes comprehension and encourages inquiry. The way teachers communicate significantly impacts students' interest and attitude, contributing to a fun and effective learning atmosphere.

To demonstrate empathy towards their students' perspectives without bias or prejudice, teachers may observe active engagement in communication, welcoming interactive dialogues, tailoring lessons to the age and ability of their students and responding to questions in an appropriate language. According to Cooper (2020), empathetic teachers can understand and appreciate their students' viewpoints and emotional states, which fosters a trusting and supportive classroom environment. This empathy helps teachers to connect with students on a personal level, making them feel valued and understood. Such a connection is crucial for creating a positive learning atmosphere where students feel safe to express themselves and engage in learning activities.

Active communication in education is a vital process that goes beyond merely sharing information; it includes listening to students and fostering a two-way dialogue. Freire (2021) highlights the significance of dialogic teaching, which promotes meaningful conversations between teachers and students. This method allows students to express their thoughts, ask questions, and engage actively in their learning, thereby enhancing their motivation and involvement. Teachers who practice active listening show respect for student input, which further boosts engagement. Additionally, encouraging interactive communication is essential for social interaction, which contributes to cognitive development. By creating opportunities for collaborative learning, teachers facilitate the development of critical thinking and problem-solving skills among students.

Tailoring lessons to the age and ability of students is another critical aspect of effective communication. Tomlinson (2020) highlights the importance of differentiated instruction, which involves adapting teaching methods and materials to meet the diverse needs of learners. Effective teachers are skilled at presenting content in ways that are accessible and engaging for their students, considering factors such as developmental stage, prior knowledge, and individual learning styles. This adaptability ensures that all students can understand and engage with the material, regardless of their starting point. Additionally, responding to students' questions in appropriate language is essential for maintaining clarity and comprehension. Hattie (2019) notes that effective teachers use language that is suitable for their students' age and developmental level. By simplifying complex concepts and using examples that are relevant to students' experiences, teachers can make learning more relatable and easier to grasp. This clear communication helps to prevent misunderstandings and ensures that students can follow along with the lesson.

Creating an inclusive and respectful classroom environment is also crucial for effective communication. By showing respect for different cultures and perspectives,

teachers can foster an inclusive atmosphere where all students feel welcome and valued. This inclusivity is fundamental for building a classroom community where open and honest communication can flourish. Moreover, effective teachers are aware of the impact of their own biases and strive to communicate in ways that are fair and unbiased. According to Milner (2020), teachers who are conscious of their implicit biases can better ensure that their interactions with students are equitable and respectful. This self-awareness helps to create a classroom environment where all students are treated with dignity and respect.

Professional development is key to enhancing teachers' communication skills. Guskey (2021) emphasizes that ongoing training helps teachers to refine their communication techniques and stay current with best practices. By participating in professional development, teachers can learn new strategies for engaging students, fostering dialogue, and responding to diverse learning needs. This continuous improvement is essential for maintaining high standards of communication in the classroom. Effective communication also involves clear and consistent feedback. According to Brookhart (2020), providing timely and constructive feedback helps students to understand their progress and areas for improvement. Feedback should be specific, actionable, and delivered in a manner that encourages students to reflect and take ownership of their learning. This feedback loop is crucial for supporting student growth and development.

Practices on demonstrating empathy, engaging in active and interactive communication, tailoring lessons to the developmental needs of their students, and responding appropriately to questions are supported by ongoing professional development, a commitment to inclusivity and respect, and a focus on providing clear and constructive feedback. Research underscores the importance of empathy, dialogic teaching, differentiated instruction, and culturally responsive practices in fostering effective communication. By integrating these elements into their teaching, effective teachers create a supportive and engaging learning environment that promotes student success.

Table 21 provides a summary of the teacher's effectiveness. The composite mean is 3.79 and is verbally interpreted as always. All the elements that met this criterion had a weighted mean that was identical to the calculated composite mean.

Table 21
Summary Table on Teacher Effectiveness

Indicators	Weighted Mean	Verbal Interpretation	Rank
1. Subject Matter Knowledge	3.75	Always	4.5
2. Instructional Planning and Strategies	3.75	Always	4.5
3. Assessment	3.81	Always	2

4. Learning Environment	3.83	Always	1
5. Effective Communication	3.79	Always	3
Composite Mean	**3.79**	**Always**	

Legend: 3.50 – 4.00 = Always; 2.50 – 3.49 = Often; 1.50 – 2.49 = Sometimes; 1.00 - 1.49 = Never

From the table, it can be seen that learning environment gathered the highest weighted mean, 3.83, and verbally interpreted as always. Assessment (3.81) and effective communication (3.79) gained the second and third spot. The indicators subject matter knowledge and instructional planning strategies both gained 3.75.

Teacher effectiveness refers to a set of within-person attributes—personality, motivation, beliefs, and dispositions—that interact with contextual factors (cultural, social, educational) to influence student outcomes, according to Educational Research Review (2019). Creating a positive and inclusive learning environment is essential for teacher effectiveness, as it sets the stage for student engagement, motivation, and academic success. A supportive learning environment is characterized by clear expectations, mutual respect, and opportunities for collaboration. Teachers who establish a positive classroom climate foster a sense of belonging and psychological safety, where students feel valued, respected, and motivated to learn.

Classroom environments that promote collaboration, autonomy, and a growth mindset foster greater academic success among students. Effective classroom management strategies, such as proactive behavior management and equitable classroom practices, contribute to a conducive learning environment. Improvement practices play a crucial role in informing instruction and promoting student learning. Clear and effective communication is essential for fostering positive teacher-student relationships and facilitating learning.

Teachers who communicate clearly, provide constructive feedback, and actively listen to students' perspectives promote a sense of trust and engagement in the classroom. Moreover, effective communication enhances instructional delivery and ensures that students understand learning objectives and expectations (Salamondra, 2021). Effective teachers carefully plan their instruction and employ a variety of strategies to meet the diverse needs of students.

According to Marzano (2019), effective teachers create classrooms where students feel respected and valued, which in turn fosters a sense of belonging and motivation to learn. This environment is nurtured through consistent routines, clear expectations, and positive relationships between students and teachers. When students feel secured and supported, they are more likely to take academic risks and engage deeply with the material.

In addition to creating a positive classroom climate, effective teachers are adept at performing learning assessments and evaluations. Assessments are essential tools for understanding student progress and guiding instruction. Moreover, Guskey (2021) emphasizes that effective assessments are aligned with learning objectives and provide

meaningful data that can be used to improve instructional practices. By using a variety of assessment methods such as quizzes, observations, and student reflections, teachers can gain a comprehensive understanding of student performance and needs.

Effective communication involves not only delivering clear and understandable instructions but also actively listening to students and engaging in meaningful dialogue. According to Freire (2021), dialogic teaching, which emphasizes open communication and collaboration help to build a more interactive and engaging learning environment. Teachers who communicate effectively can explain complex concepts in ways that are accessible to students of varying abilities and backgrounds. Hattie (2019) notes that clarity in communication is linked to higher student achievement, as it helps to prevent misunderstandings and ensures that students know what is expected of them.

Furthermore, effective communication extends beyond the classroom to interactions with parents and colleagues. Epstein (2019) discusses the importance of family and community involvement in education. When teachers communicate effectively with parents, they can build strong partnerships that support student learning at home and in the community. This collaboration enhances the overall educational experience and helps to address any issues that may arise. Additionally, effective teachers collaborate with their colleagues to share best practices, discuss student progress, and develop cohesive instructional strategies.

Professional development is crucial for maintaining and enhancing teacher effectiveness. Guskey (2021) argues that ongoing professional learning helps teachers to stay current with educational research and best practices. By participating in professional development, teachers can refine their skills in creating conducive learning environments, conducting assessments, and communicating effectively. This continuous improvement is essential for adapting to the evolving needs of students and the educational landscape.

Creating a conducive learning environment also involves differentiating instruction to meet the diverse needs of students. Tomlinson (2020) emphasizes the importance of differentiated instruction in addressing the varying abilities, interests, and learning styles within a classroom. Effective teachers use a range of instructional strategies and materials to ensure that all students have access to the curriculum and can succeed. This approach requires a deep understanding of each student's needs and the flexibility to adapt teaching methods accordingly.

Skills on the ability to provide a conducive learning environment, perform learning assessments and evaluations, and communicate effectively are interrelated and collectively contribute to a successful teaching and learning experience. Research underscores the importance of a positive classroom climate, ongoing assessment and feedback, clear and interactive communication, and professional collaboration in achieving these goals. By continuously improving these aspects of their practice, teachers can enhance their effectiveness and support student success.

Table 22
Difference of Responses on Work Tasks Motivation when Grouped According to Profile

Sex	F-value	p-value	Interpretation
Class Preparation	0.393	0.531	Not Significant
Teaching	4.739	0.030	Significant
Evaluation of students	8.736	0.003	Significant
Administrative Tasks	1.858	0.174	Not Significant
Complementary Tasks	5.878	0.016	Significant
Educational Attainment			
Class Preparation	0.607	0.546	Not Significant
Teaching	2.412	0.091	Not Significant
Evaluation of students	0.735	0.480	Not Significant
Administrative Tasks	1.245	0.289	Not Significant
Complementary Tasks	0.925	0.397	Not Significant
Teaching Position			
Class Preparation	2.703	0.068	Not Significant
Teaching	0.553	0.575	Not Significant
Evaluation of students	0.717	0.489	Not Significant
Administrative Tasks	0.862	0.423	Not Significant
Complementary Tasks	0.830	0.437	Not Significant
Years of Teaching Experiences			
Class Preparation	2.964	0.032	Significant
Teaching	1.521	0.208	Not Significant
Evaluation of students	1.031	0.379	Not Significant
Administrative Tasks	1.733	0.160	Not Significant
Complementary Tasks	2.971	0.032	Significant

Legend: Significant at p-value < 0.05

Table 22 presents the comparison of responses on work tasks motivation when grouped according to profile. It was observed that there was a significant difference in teaching, evaluation of students, and complementary tasks when grouped according to sex; and on class preparation and complementary tasks when grouped according to years of teaching since the obtained p-values were less than the alpha level. This means that the responses differ statistically and it was found that females and teaching for more than 31 years have better assessment than others.

On the significant difference of responses on teaching when grouped according to sex, research indicates that there are differences in work task motivation between male and female teachers. Differences in work task motivation based on sex also extend to the evaluation of students. Variation in work task motivation based on sex also influences preferences for complementary tasks among teachers.

Work task motivation also varies based on teachers' years of experience, particularly in relation to class preparation. Relating to this, variation in work task

motivation based on years of experience also influences preferences for complementary tasks among teachers.

The motivation for teaching, assessing and evaluating students, and performing complementary tasks can differ significantly between male and female teachers due to various psychological, social, and contextual factors. Research by Klassen and Tze (2019) indicates that gender differences in motivation can be attributed to varying levels of self-efficacy and work-life balance considerations. Female teachers often report higher intrinsic motivation for teaching, driven by a strong desire to nurture and support students' development. This nurturing aspect is closely tied to societal expectations and traditional gender roles that position women as caregivers, which can influence their professional motivations and priorities.

Moreover, female teachers tend to emphasize the importance of creating supportive and inclusive classroom environments. According to a study by Van den Borre, De Fraine, and Van Damme (2020), women are more likely to adopt student-centered teaching practices that focus on the emotional and social needs of students. This approach aligns with their intrinsic motivation to foster a positive learning atmosphere and address the diverse needs of their students. In contrast, male teachers often prioritize discipline and structure in the classroom, which reflects a more extrinsic motivation driven by the desire to maintain control and authority.

When it comes to assessment and evaluation, gender differences also emerge. Female teachers are generally more inclined to use formative assessments and provide ongoing feedback to support student learning. This preference for continuous assessment reflects their commitment to student growth and development, as well as their empathy and understanding of individual student needs. Male teachers, on the other hand, may lean towards summative assessments and standardized testing, valuing objective measures of student performance. This approach can be linked to a more analytical and results-oriented mindset, which is often encouraged in men through socialization and educational experiences.

The performance of complementary tasks, such as administrative duties and extracurricular activities, also shows gender-based differences. Female teachers are often more involved in tasks that require collaboration and community building, such as organizing school events and participating in parent-teacher associations.

Work-life balance is another critical factor influencing motivation and task performance. Klassen and Tze (2019) found that female teachers often face greater challenges in balancing professional responsibilities with family obligations, which can impact their motivation and energy levels. Despite these challenges, women often demonstrate a high level of dedication to their teaching roles, driven by their intrinsic motivation and commitment to student success. Male teachers, while also facing work-life balance issues, may experience different pressures and societal expectations, which can shape their professional motivations and priorities differently.

Professional development and career advancement opportunities also play a role in shaping motivation. According to a study by Smith and Gorard (2020), women in teaching are often motivated by opportunities for professional growth and development, seeking out training and mentoring to enhance their skills and knowledge. This pursuit of continuous improvement reflects their commitment to providing high-quality education and staying current with best practices. Male teachers, while also valuing professional development, may be more motivated by opportunities for leadership and career advancement, driven by a desire for recognition and status within the profession.

Gender differences in motivation are also influenced by perceptions of self-efficacy and job satisfaction. Female teachers often report higher levels of job satisfaction and a stronger sense of self-efficacy in their teaching roles, which can enhance their motivation and performance. This positive self-perception is linked to their empathetic and supportive teaching style, which fosters a sense of fulfillment and purpose. Male teachers, while also experiencing job satisfaction, may derive their motivation more from external validation and achievements, such as student performance and career progression.

The motivation for teaching, assessing and evaluating students, and performing complementary tasks differs between male and female teachers due to a complex interplay of psychological, social, and contextual factors. Female teachers tend to be driven by intrinsic motivation, empathy, and a commitment to student well-being, while male teachers often emphasize discipline, structure, and extrinsic motivators. These differences are reflected in their approaches to teaching, assessment, and task performance, and are influenced by work-life balance, professional development opportunities, and perceptions of self-efficacy. Understanding these gender-based differences can help in creating supportive and equitable work environments that recognize and address the unique motivations and challenges faced by male and female teachers.

The motivation for teaching, assessing and evaluating students, and performing complementary tasks can differ significantly between male and female teachers due to various psychological, social, and contextual factors. Research by Klassen and Tze (2019) indicates that gender differences in motivation can be attributed to varying levels of self-efficacy and work-life balance considerations. Female teachers often report higher intrinsic motivation for teaching, driven by a strong desire to nurture and support students' development. This nurturing aspect is closely tied to societal expectations and traditional gender roles that position women as caregivers, which can influence their professional motivations and priorities.

Moreover, female teachers tend to emphasize the importance of creating supportive and inclusive classroom environments. According to a study by Van den Borre, De Fraine, and Van Damme (2020), women are more likely to adopt student-centered teaching practices that focus on the emotional and social needs of students. This approach aligns with their intrinsic motivation to foster a positive learning atmosphere and address the diverse needs of their students. In contrast, male teachers often prioritize discipline and structure in the classroom, which reflects a more extrinsic motivation driven by the desire to maintain control and authority.

When it comes to assessment and evaluation, gender differences also emerge. Female teachers are generally more inclined to use formative assessments and provide ongoing feedback to support student learning. This preference for continuous assessment reflects their commitment to student growth and development, as well as their empathy and understanding of individual student needs. Male teachers, on the other hand, may lean towards summative assessments and standardized testing, valuing objective measures of student performance. This approach can be linked to a more analytical and results-oriented mindset, which is often encouraged in men through socialization and educational experiences.

The performance of complementary tasks, such as administrative duties and extracurricular activities, also shows gender-based differences. Female teachers are often more involved in tasks that require collaboration and community building, such as organizing school events and participating in parent-teacher associations.

Work-life balance is another critical factor influencing motivation and task performance. Klassen and Tze (2019) found that female teachers often face greater challenges in balancing professional responsibilities with family obligations, which can impact their motivation and energy levels. Despite these challenges, women often demonstrate a high level of dedication to their teaching roles, driven by their intrinsic motivation and commitment to student success. Male teachers, while also facing work-life balance issues, may experience different pressures and societal expectations, which can shape their professional motivations and priorities differently.

Professional development and career advancement opportunities also play a role in shaping motivation. According to a study by Smith and Gorard (2020), women in teaching are often motivated by opportunities for professional growth and development, seeking out training and mentoring to enhance their skills and knowledge. This pursuit of continuous improvement reflects their commitment to providing high-quality education and staying current with best practices. Male teachers, while also valuing professional development, may be more motivated by opportunities for leadership and career advancement, driven by a desire for recognition and status within the profession.

Gender differences in motivation are also influenced by perceptions of self-efficacy and job satisfaction. Female teachers often report higher levels of job satisfaction and a stronger sense of self-efficacy in their teaching roles, which can enhance their motivation and performance. This positive self-perception is linked to their empathetic and supportive teaching style, which fosters a sense of fulfillment and purpose. Male teachers, while also experiencing job satisfaction, may derive their motivation more from external validation and achievements, such as student performance and career progression.

Motivation for teaching, assessing and evaluating students, and performing complementary tasks could differ between male and female teachers due to a complex interplay of psychological, social, and contextual factors. Female teachers tend to be driven by intrinsic motivation, empathy, and a commitment to student well-being, while

male teachers often emphasize discipline, structure, and extrinsic motivators. These differences are reflected in their approaches to teaching, assessment, and task performance, and are influenced by work-life balance, professional development opportunities, and perceptions of self-efficacy. Understanding these gender-based differences can help in creating supportive and equitable work environments that recognize and address the unique motivations and challenges faced by male and female teachers.

The motivation for class preparation and the performance of complementary tasks vary significantly among teachers with different years of teaching experience due to various factors including professional development, burnout, self-efficacy, and evolving educational priorities. Experienced teachers often display high levels of efficiency in class preparation due to their accumulated knowledge and refined instructional strategies. According to a study by Huberman (2019), veteran teachers tend to have well-established routines and a deep understanding of curriculum requirements, allowing them to prepare lessons more effectively and with greater confidence. This proficiency can lead to a higher intrinsic motivation, as experienced teachers are able to focus more on innovative teaching methods and student engagement rather than the basics of lesson planning.

In contrast, novice teachers often face challenges in class preparation due to their limited experience and familiarity with the curriculum. Research by Ingersoll and Strong (2020) indicates that beginning teachers typically spend more time on lesson planning and often experience higher levels of stress and anxiety about meeting instructional standards. This initial struggle can affect their motivation, leading to a reliance on prescribed materials and a more cautious approach to teaching. However, this phase also presents an opportunity for growth and development, as new teachers bring fresh perspectives and enthusiasm to their roles, which can positively impact their motivation over time.

The performance of complementary tasks, such as administrative duties, extracurricular activities, and collaboration with colleagues, also differs among teachers based on their experience. Experienced teachers often take on leadership roles within the school, such as mentoring new teachers, leading professional development sessions, and participating in school committees. Their extensive experience allows them to navigate these tasks with confidence and effectiveness, further enhancing their job satisfaction and motivation.

For less experienced teachers, complementary tasks can be a source of both opportunity and challenge. As noted by Smith and Gorard (2020), novice teachers may feel overwhelmed by the additional responsibilities beyond their core teaching duties, which can impact their overall job satisfaction and motivation. However, engaging in these tasks also provides valuable learning experiences and opportunities for professional growth. New teachers often bring energy and innovative ideas to extracurricular activities and collaborative projects, which can invigorate the school environment and foster a culture of continuous improvement.

Professional development plays a crucial role in shaping the motivation of teachers at different stages of their careers. For experienced teachers, ongoing professional development is essential for maintaining enthusiasm and staying updated with the latest educational trends and research. According to Guskey (2021), veteran teachers who actively engage in professional learning opportunities are more likely to remain motivated and committed to their teaching practice. On the other hand, professional development for novice teachers often focuses on building foundational skills and confidence. Effective induction programs and mentorship can significantly boost the motivation of new teachers by providing support and guidance during their initial years.

Burnout is another factor that influences the motivation of teachers with varying levels of experience. Huberman (2019) suggests that experienced teachers are at risk of burnout due to the cumulative stress of years of teaching and the demands of maintaining high standards. This burnout can lead to a decline in motivation, particularly for tasks that are perceived as routine or administrative. Conversely, novice teachers may experience burnout due to the steep learning curve and the pressures of adapting to a new professional environment. Addressing burnout through supportive school cultures and work-life balance initiatives is crucial for sustaining motivation across all experience levels.

Self-efficacy, or the belief in one's ability to succeed also affects teachers' motivation for class preparation and complementary tasks. Experienced teachers often have higher self-efficacy, as their years of practice have reinforced their skills and knowledge. This confidence translates into a greater willingness to take on additional responsibilities and explore innovative teaching strategies. In contrast, new teachers may struggle with self-efficacy, particularly in their early years. According to Bandura (2020), building self-efficacy through positive feedback, professional development, and supportive mentorship is essential for fostering motivation and resilience among novice teachers.

Motivation for class preparation and the performance of complementary tasks varies among teachers with different years of teaching experience due to factors such as professional development, burnout, self-efficacy, and evolving educational priorities. Experienced teachers often exhibit high levels of efficiency and confidence, allowing them to excel in both instructional and complementary tasks. Novice teachers, while facing initial challenges, bring enthusiasm and new ideas that contribute positively to the school environment. Professional development, supportive school cultures, and strategies to enhance self-efficacy are key to sustaining motivation across all levels of teaching experience.

Table 23
Difference of Responses on Teacher Self-Efficacy when Grouped According to Profile

Sex	f-value	p-value	Interpretation
Instruction	22.623	0.000	Significant
Adapt Instruction to Individual Needs	7.640	0.006	Significant
Motivate Students	18.749	0.000	Significant
Maintain Discipline	7.777	0.006	Significant
Cooperate With Colleagues and Parents	32.974	0.000	Significant
Cope With Change	3.329	0.069	Not Significant
Educational Attainment			
Instruction	0.419	0.658	Not Significant
Adapt Instruction to Individual Needs	0.360	0.698	Not Significant
Motivate Students	0.068	0.934	Not Significant
Maintain Discipline	2.091	0.125	Not Significant
Cooperate With Colleagues and Parents	1.748	0.175	Not Significant
Cope With Change	2.313	0.100	Not Significant

Maintain Discipline	2.205	0.087	Not Significant
Cooperate With Colleagues and Parents	0.703	0.551	Not Significant
Cope With Change	3.097	0.027	Significant

Legend: Significant at p-value < 0.05

Table 23 displays the comparison of responses on teacher self-efficacy when grouped according to profile. It was observed that there was a significant difference when grouped according to sex except on coping with change; and years of teaching

experience when grouped again according to coping with change since the obtained p-values were less than the alpha level. This means that the responses differ statistically and it was found that females and teaching for more than 31 years have better assessment than others.

Variations in teacher self-efficacy based on sex can influence instructional practices. Differences in teacher self-efficacy based on sex can also impact the ability to adapt instruction to individual student needs. Variations in teacher self-efficacy based on sex can influence the ability to motivate students. Moreover, differences in teacher self-efficacy based on sex can impact the ability to maintain discipline in the classroom and can influence the ability to cooperate with colleagues and parents.

Differences in teacher self-efficacy based on years of teaching experience can influence the ability to cope with change. Teacher self-efficacy, which encompasses delivering teaching and learning instruction, adapting instruction to individual needs, motivating students, maintaining discipline, and cooperating with colleagues and parents, could vary between male and female teachers due to several factors including socialization, gender norms, and professional experiences. In terms of delivering teaching and learning instruction, research by Goodwin and Kahn (2019) indicates that male teachers often exhibit higher confidence in their subject matter expertise, potentially stemming from societal expectations that position men as authoritative figures in academic disciplines. This confidence translates into a higher sense of self-efficacy when presenting content and managing classroom discussions. Female teachers, while equally knowledgeable, may experience lower self-efficacy due to internalized stereotypes and biases. However, their teaching often benefits from a strong emphasis on relational skills and empathy, which enhances their ability to connect with students and facilitate understanding.

When it comes to adapting instruction and teaching to individual needs, female teachers frequently excel. According to a study by Johnson and Blackwell (2020), women are more likely to adopt student-centered approaches, focusing on differentiating instruction to cater to diverse learning styles and needs. This adaptability is driven by their intrinsic motivation to support all students, reflecting a nurturing attitude that is often culturally associated with women. Male teachers, while capable of adapting instruction, may be more inclined to follow structured lesson plans and standardized methods, which can sometimes limit flexibility but provide consistency and predictability in teaching.

Motivating students also reveals gender-based differences in self-efficacy. Female teachers often employ relational and emotional strategies to engage students, creating a supportive and inclusive classroom environment that fosters motivation. As highlighted by Van den Borre et al. (2020), their approach includes understanding students' social and emotional needs, which enhances intrinsic motivation and engagement. Male teachers, on the other hand, may use more authoritative and performance-based methods to motivate students, emphasizing achievement and discipline. This approach can be effective in promoting extrinsic motivation and high academic standards but may not always address the holistic needs of students.

Maintaining discipline is another area where gender differences in self-efficacy are evident. Male teachers often report higher confidence in managing classroom behavior and enforcing rules, which aligns with traditional gender roles that associate men with authority and control. According to Marzano (2019), their discipline strategies tend to be more structured and punitive, aiming to maintain order and minimize disruptions. Female teachers, while also effective in maintaining discipline, typically use more relational and restorative approaches, focusing on building positive relationships and understanding the root causes of behavioral issues. This method fosters a more supportive classroom environment but may require more time and emotional labor.

Cooperating with colleagues and parents showcases distinct gender-based differences as well. Female teachers are generally more collaborative and communicative, often engaging in professional learning communities and seeking support from colleagues. In terms of parent-teacher interactions, female teachers tend to emphasize building strong relationships with parents, involving them in their children's education, and fostering a partnership approach. This strategy aligns with their empathetic and relational style, which can lead to positive outcomes for student learning and behavior.

Male teachers, while also capable of effective collaboration, may adopt a more independent approach to their professional responsibilities. According to Smith and Gorard (2020), men are often motivated by a desire for autonomy and may focus on individual accomplishments and leadership roles. This can result in less frequent but potentially more impactful collaborations, as male teachers may take on mentoring roles or lead professional development initiatives. In parent-teacher interactions, male teachers might emphasize clear communication and setting expectations, aiming to establish authority and professionalism.

The impact of work-life balance on self-efficacy is also significant and varies by gender. Klassen and Tze (2019) found that female teachers often face greater challenges in balancing professional duties with family responsibilities, which can affect their overall job satisfaction and energy levels. Despite these challenges, many women demonstrate resilience and a strong commitment to their teaching roles, driven by intrinsic motivation and a desire to support their students. Male teachers, while also dealing with work-life balance issues, may experience different societal pressures and expectations, which can shape their professional motivations and sense of efficacy differently.

Burnout is another factor that influences self-efficacy and shows gender differences. Huberman (2019) suggests that female teachers are at a higher risk of burnout due to the emotional labor involved in their relational teaching practices and the demands of balancing multiple roles. Addressing burnout through supportive school cultures and work-life balance initiatives is crucial for sustaining motivation and effectiveness among female teachers. Male teachers, while also susceptible to burnout, may experience it differently, often related to pressures of maintaining classroom discipline and meeting performance standards.

Gender differences in perceptions of self-efficacy and job satisfaction is another concern. Female teachers often report higher levels of job satisfaction and a stronger sense of self-efficacy in their relational and inclusive teaching practices. This positive self-perception is linked to their empathetic approach and commitment to student well-being, which fosters a sense of fulfillment and purpose. Male teachers, while also experiencing job satisfaction, may derive their motivation more from external validation and achievements, such as student performance and career progression.

Teacher self-efficacy in delivering teaching and learning instruction, adapting instruction to individual needs, motivating students, maintaining discipline, and cooperating with colleagues and parents varies between male and female teachers due psychological, social, and contextual factors. Female teachers tend to emphasize relational and inclusive teaching practices, formative assessments, and empathetic communication, while male teachers often focus on authoritative teaching styles, summative assessments, and clear, direct communication. Professional development, work-life balance, burnout, and perceptions of self-efficacy also contribute to these gender differences. Understanding these distinctions can help in creating supportive and equitable work environments that recognize and address the unique strengths and challenges faced by male and female teachers.

Teacher self-efficacy in coping with change could significantly vary among teachers with different years of teaching experience due to their accumulated skills, adaptability, and resilience developed over time. Novice teachers often face challenges in coping with change due to their limited experience and developing pedagogical skills, which can lead to lower self-efficacy when implementing new teaching strategies or adapting to curriculum changes (Johnson & Blackwell, 2020). They may struggle with classroom management and integrating innovative instructional methods, impacting their confidence and effectiveness. In contrast, experienced teachers tend to have higher self-efficacy in coping with change because of their extensive practice and familiarity with diverse teaching environments and challenges (Goodwin & Kahn, 2019). This experience enables them to draw on a repertoire of strategies and solutions when faced with new situations, enhancing their adaptability and resilience.

Additionally, experienced teachers are more likely to have developed strong professional networks and support systems, which are crucial in navigating changes effectively (Smith & Gorard, 2020). These networks provide access to resources, collaboration opportunities, and emotional support, contributing to higher self-efficacy. Furthermore, experienced teachers often engage in continuous professional development, which keeps them updated on new educational trends and practices, further boosting their confidence in coping with change (Klassen & Tze, 2019). In contrast, novice teachers may feel overwhelmed by the rapid pace of change and the constant demand for adaptation, resulting in higher stress levels and lower self-efficacy (Huberman, 2019).

The ability to reflect on past experiences also plays a crucial role in self-efficacy. Experienced teachers can draw from previous successes and challenges to inform their

approach to new changes, providing a sense of competence and assurance (Van den Borre et al., 2020). This reflective practice is less developed in novice teachers, who may not have as many experiences to reference, leading to uncertainty and lower self-efficacy. Moreover, experienced teachers often possess better-developed problem-solving skills, allowing them to navigate complex changes more effectively (Marzano, 2019). Their ability to anticipate potential issues and proactively address them enhances their confidence and capability in managing change.

Conversely, the enthusiasm and openness of novice teachers towards innovation can sometimes offset their lack of experience, as they may be more willing to experiment with new approaches and technologies (Freire, 2021). This willingness to embrace change can lead to innovative practices and improved self-efficacy over time, as they gain successful experiences. However, without adequate support and mentoring, this enthusiasm can wane, leading to burnout and reduced self-efficacy (Smith & Gorard, 2020).

Teacher self-efficacy in coping with change could also vary significantly with years of teaching experience. Experienced teachers generally exhibit higher self-efficacy due to their extensive practice, developed support networks, continuous professional development, reflective practices, and problem-solving skills. Novice teachers, while enthusiastic, may struggle with lower self-efficacy due to their limited experience and developing pedagogical skills, highlighting the importance of support and mentoring to foster their adaptability and resilience.

Table 24
Difference of Responses on Teacher Effectiveness when Grouped According to Profile

Sex	**F-value**	**p-value**	**Interpretation**
Subject Matter Knowledge	14.806	0.000	Significant
Instructional Planning and Strategies	9.592	0.002	Significant
Assessment	8.777	0.003	Significant

Effective Communication	0.929	0.427	Not Significant

Legend: Significant at p-value < 0.05

Table 24 presents the comparison of responses on teacher effectiveness when grouped according to profile. It was observed that there was a significant difference when grouped according to sex because the obtained p-values were all less than the alpha level. This means that the responses differ statistically and based on the survey conducted, it was found that females have better assessment than males.

Based on the results, it could be gleaned that variations in teacher effectiveness based on sex can influence subject matter knowledge. Moreover, it could also be discerned from the results that the differences in teacher effectiveness based on sex can also impact instructional planning and strategies.

Additionally, variations in teacher effectiveness based on sex can influence the assessment practices of the respondents. The findings also revealed that differences in teacher effectiveness based on sex can impact the learning environment. In terms of differences in the responses as regards teacher effectiveness based on sex, it could influence the communication skills. It could also be delineated that when it comes to teacher effectiveness, the differences in responses based on years of teaching experience can impact the ability to cope with change.

Teacher self-effectiveness, encompassing subject matter knowledge, instructional planning and strategies, assessment, learning environment, and effective communication, often differs between male and female teachers due to a range of psychological, social, and contextual factors. Subject matter knowledge is a crucial component of teacher effectiveness, and research suggests that gender differences can influence perceptions of competency and expertise in this area. According to Goodwin and Kahn (2019), male teachers often display higher self-efficacy regarding their subject matter knowledge, which can be attributed to societal expectations and gender norms that traditionally position men as more authoritative figures in academic fields. This heightened self-efficacy enables male teachers to confidently deliver complex content and engage students in deeper analytical discussions.

On the other hand, female teachers, while equally knowledgeable, may experience lower self-efficacy related to subject matter due to internalized stereotypes and biases.

According to Johnson and Blackwell (2020), female teachers often exhibit strong relational skills and empathy, which can positively impact their instructional strategies. They tend to adopt student-centered approaches, focusing on creating inclusive and supportive learning environments that cater to the diverse needs of their students. This emphasis on relational pedagogy enhances their effectiveness in instructional planning and strategies, allowing them to differentiate instruction and provide personalized support to students.

In terms of assessment, gender differences are evident in the types of assessments utilized and the feedback provided. Female teachers are more likely to employ formative assessments and provide ongoing, constructive feedback, fostering a growth mindset in their students. The creation of a conducive learning environment also shows gender-specific tendencies. Female teachers are generally more adept at building inclusive and emotionally supportive classrooms, as noted by Van den Borre et al. (2020). Their ability to foster positive student-teacher relationships and address the social and emotional needs of students contributes to a safe and nurturing learning environment. Male teachers, while also capable of creating supportive classrooms, often emphasize discipline and order, reflecting a different aspect of a conducive learning environment. According to Marzano (2019), this approach can be effective in maintaining classroom management and ensuring a focused learning atmosphere.

Effective communication is another area where gender differences in self-effectiveness are observed. Female teachers often excel in empathetic communication, actively listening to students and encouraging open dialogue. Freire (2021) underscores the importance of dialogic teaching, which is frequently practiced by female educators who prioritize building strong interpersonal connections with their students. Male teachers, while also effective communicators, may adopt a more direct and authoritative style, which can be beneficial in conveying clear expectations and maintaining classroom order. Hattie (2019) notes that clarity in communication is crucial for student understanding and achievement, and male teachers' straightforward approach can effectively achieve this clarity.

Professional development and career progression also influence gender differences in self-effectiveness. According to Smith and Gorard (2020), female teachers often seek out continuous professional development to enhance their skills and knowledge, driven by a desire for self-improvement and professional growth. This commitment to lifelong learning positively impacts their instructional effectiveness and ability to adapt to new teaching methods and technologies. Male teachers, while also valuing professional development, may focus more on leadership opportunities and career advancement, motivated by a desire for recognition and status within the profession.

Klassen and Tze (2019) found that female teachers often juggle professional responsibilities with family obligations, which can affect their energy levels and overall job satisfaction. Despite these challenges, women demonstrate resilience and dedication to their teaching roles, driven by intrinsic motivation and a strong sense of commitment to

their students. Male teachers, although also facing work-life balance issues, may experience different societal pressures and expectations, which can shape their professional motivations and effectiveness differently.

Huberman (2019) suggests that female teachers are at a higher risk of burnout due to the emotional labor involved in their relational teaching practices and the demands of balancing multiple roles. Addressing burnout through supportive school cultures and work-life balance initiatives is crucial for sustaining motivation and effectiveness among female teachers. Male teachers, while also susceptible to burnout, may experience it differently, often related to pressures of maintaining classroom discipline and meeting performance standards.

Gender differences in perceptions of self-efficacy and job satisfaction also play a significant role. Female teachers often report higher levels of job satisfaction and a stronger sense of self-efficacy in their relational and inclusive teaching practices. This positive self-perception is linked to their empathetic approach and commitment to student well-being, which fosters a sense of fulfillment and purpose. Male teachers, while also experiencing job satisfaction, may derive their motivation more from external validation and achievements, such as student performance and career progression.

Table 25

Legend: Significant at p-value < 0.01

Table 25 shows the association between work task motivation and teacher self-efficacy. The computed r-values indicate a moderate direct correlation and the resulting p-values were less than the alpha level. This means that a significant relationship exists and implies that the better the work tasks motivation, the better the teacher's self-efficacy.

It could be gleaned from the aforementioned results that work task motivation significantly impacts teacher self-efficacy in class preparation. The education environment significantly influences teacher self-efficacy in teaching. The work task motivation plays a significant role in shaping teacher self-efficacy in evaluating students.

The work task motivation plays a significant role in shaping teacher self-efficacy in evaluating students; this influences handling administrative tasks and in performing complementary tasks. Teachers who are intrinsically motivated exhibit higher levels of self-efficacy because they derive personal satisfaction and a sense of accomplishment from their work, which enhances their confidence in their teaching abilities (Klassen & Tze, 2019). This intrinsic motivation often leads to greater persistence in the face of challenges, as these teachers are driven by internal rewards such as the joy of teaching and seeing their students succeed. When teachers are motivated by their tasks, they are more likely to engage in reflective practices and continuous professional development, which further boosts their self-efficacy (Goodwin & Kahn, 2019).

Work task motivation also fosters a positive attitude towards teaching, which is crucial for maintaining high levels of self-efficacy. Teachers who find their work meaningful and fulfilling are more likely to set high goals for themselves and their students, leading to improved performance and satisfaction (Johnson & Blackwell, 2020). This positive mindset creates a conducive learning environment, where both teachers and students thrive. Additionally, motivated teachers are more likely to adopt innovative teaching strategies and adapt to changes in the curriculum, enhancing their self-efficacy through successful implementation and positive feedback from students (Smith & Gorard, 2020).

Extrinsic motivation, such as recognition and rewards, also plays a role in enhancing teacher self-efficacy. When teachers receive positive feedback and acknowledgment for their efforts, it reinforces their belief in their teaching abilities and motivates them to maintain high standards (Klassen et al., 2020). However, the impact of extrinsic motivation on self-efficacy is often mediated by intrinsic factors, as the most effective teachers are those who balance external rewards with internal satisfaction (Marzano, 2019).

Teacher self-efficacy, in turn, influences work task motivation by shaping teachers' perceptions of their capabilities and the value they place on their tasks. Teachers with high self-efficacy are more likely to view their tasks as achievable and worthwhile, which enhances their motivation and commitment to their work (Freire, 2021).

The supportive school environment also plays a critical role in fostering the relationship between work task motivation and teacher self-efficacy. Schools that provide professional development opportunities, collaborative teaching cultures, and supportive leadership enhance teachers' motivation and self-efficacy (Smith & Gorard, 2020). When teachers feel supported and valued, they are more likely to invest in their professional growth and feel confident in their abilities, which positively impacts their motivation and teaching outcomes (Van den Borre et al., 2020).

Furthermore, the alignment between teachers' personal goals and the school's mission enhances work task motivation and self-efficacy. Teachers who perceive their work as aligned with their personal values and professional aspirations are more motivated and exhibit higher self-efficacy (Johnson & Blackwell, 2020). This alignment fosters a sense of purpose and direction, which is crucial for sustaining motivation and confidence in the long term (Goodwin & Kahn, 2019).

The relationship between work task motivation and teacher self-efficacy also extends to student outcomes. Teachers who are motivated and self-efficacious are more effective in engaging and motivating their students, leading to higher academic achievement and positive attitudes towards learning (Marzano, 2019). This impact on students further reinforces teachers' self-efficacy, as they see the tangible results of their efforts, which boosts their motivation to continue striving for excellence (Klassen & Tze, 2019).

Gender differences also play a role in the relationship between work task motivation and self-efficacy. Female teachers often exhibit higher levels of intrinsic motivation and relational teaching practices, which enhance their self-efficacy and effectiveness (Smith & Gorard, 2020). Male teachers, while also motivated, may place more emphasis on external rewards and performance metrics, which can influence their self-efficacy differently (Klassen et al., 2020).

Effective Communication	.537**	0.000	Highly Significant

Legend: Significant at p-value < 0.01

Table 26 above indicates the association between work task motivation and teacher effectiveness. The computed r-values indicate a moderate direct correlation and the resulting p-values were less than the alpha level. This means that significant relationship exists and implies that the better the work tasks motivation , the more effective the teachers are.

It could be gleaned from the findings that work tasks motivation significantly influences teacher self-efficacy in class preparation. The work task motivation significantly influences teacher self-efficacy in teaching. Moreover, the work task motivation plays a significant role in shaping teacher self-efficacy in evaluating students. The work task motivation influences teacher self-efficacy in handling administrative tasks.

The work task motivation influences teacher self-efficacy in performing complementary tasks. The relationship between work task motivation and teacher effectiveness is highly significant, deeply impacting various dimensions of teaching and learning. Motivated teachers exhibit a strong commitment to their professional responsibilities, which translates into enhanced effectiveness in delivering instruction, engaging students, and fostering a positive learning environment (Klassen & Tze, 2019).

On the other hand, intrinsic motivation, driven by a passion for teaching and the desire to make a difference in students' lives, leads to greater job satisfaction and dedication, resulting in higher teacher effectiveness (Goodwin & Kahn, 2019). Teachers who are intrinsically motivated are more likely to invest in continuous professional development, stay abreast of new educational practices, and implement innovative teaching strategies that cater to diverse student needs (Johnson & Blackwell, 2020).

Moreover, extrinsic motivation, such as recognition, rewards, and career advancement opportunities, reinforces teachers' efforts and contributes to their overall effectiveness. When teachers receive acknowledgment and support from their administration and peers, it boosts their morale and encourages them to strive for excellence in their teaching practices (Marzano, 2019). This positive reinforcement creates a virtuous cycle where motivated teachers feel valued and empowered, leading to improved teaching outcomes and higher student achievement (Smith & Gorard, 2020). The supportive school environment plays a critical role in nurturing both intrinsic and extrinsic motivation, providing the necessary resources and professional development opportunities that enhance teacher effectiveness (Klassen et al., 2020).

Furthermore, motivated teachers are more adept at creating an engaging and inclusive classroom environment. Their enthusiasm and passion for teaching are contagious, inspiring students to participate actively and take ownership of their learning (Van den Borre et al., 2020). This positive classroom climate fosters student motivation, leading to better academic performance and a deeper understanding of the subject matter (Goodwin & Kahn, 2019). Effective teachers, driven by their motivation, use a variety of instructional methods to cater to different learning styles, ensuring that all students have access to quality education (Johnson & Blackwell, 2020).

Motivation also influences teachers' resilience and ability to cope with stress and challenges. Teachers who are motivated by their work are more likely to view challenges as opportunities for growth and development rather than obstacles (Klassen & Tze, 2019). This resilience enables them to adapt to changing educational demands, implement new curricula, and incorporate technology into their teaching, all of which are essential for maintaining high levels of effectiveness in a dynamic educational landscape (Smith & Gorard, 2020). Additionally, motivated teachers are more likely to seek out collaborative opportunities with colleagues, sharing best practices and supporting each other in their professional growth (Vangrieken et al., 2017).

The alignment between teachers' personal goals and the mission of the school further enhances their motivation and effectiveness. When teachers perceive their work as meaningful and aligned with their values, they are more likely to invest in their professional responsibilities and strive for excellence (Johnson & Blackwell, 2020). This sense of purpose and direction is crucial for sustaining long-term motivation and effectiveness, as it provides teachers with a clear vision of the impact they want to make in their students' lives (Freire, 2021).

The relationship between motivation and effectiveness also extends to teachers' ability to engage with parents and the wider school community. Motivated teachers recognize the importance of building strong relationships with parents and involving them in their children's education, which enhances student support and academic outcomes (Marzano, 2019). Effective communication and collaboration with parents are key components of teacher effectiveness, and motivated teachers are more likely to initiate and maintain these positive relationships (Smith & Gorard, 2020).

There is a significant connection between a teacher's motivation and their effectiveness, particularly in engaging with parents and the broader school community, motivated teachers understand the crucial role that strong relationships with parents play in enhancing student support and academic success. This understanding drives them to actively seek out and foster these relationships. Teachers who are motivated are more inclined to communicate and collaborate effectively with parents, recognizing that such partnerships can lead to improved educational outcomes for students.

Consequently, the effectiveness of teachers is partly dependent on their motivation to build and sustain these positive interactions, as supported by research findings from Marzano (2019) also Smith and Gorard (2020). This inference suggests that increasing teacher motivation could lead to better parent-teacher relationships, ultimately benefiting student achievement.

Legend: Significant at p-value < 0.01

Table 27 presents the association between teacher self-efficacy and teacher effectiveness. The computed r-values indicate a strong direct correlation and the resulting p-values were less than the alpha level. This means that was significant relationship exists and implies that the better the teacher's self-efficacy, the more effective the teachers are.

Teacher self-efficacy is highly significant in influencing teacher effectiveness in instructional practices. According to studies such as those referenced by Marzano (2019), teacher self-efficacy is highly significant in shaping how teachers plan, implement, and adapt their instructional strategies to meet student needs effectively. Teachers with high self-efficacy beliefs demonstrate greater confidence in their ability to manage classroom dynamics, engage students in learning, and facilitate academic growth.

Teacher self-efficacy plays a highly significant role in adapting instruction to individual student needs. According to Henson et al. (2019), teachers with higher levels of self-efficacy are more likely to employ flexible instructional strategies that cater to diverse student abilities and learning preferences.

Teacher self-efficacy is highly significant in motivating students. A longitudinal study by Jansen et al. (2021) highlights that teacher self-efficacy predicts students' academic motivation and achievement over time. Teachers who perceive themselves as effective in influencing student outcomes are more likely to maintain high expectations for all students, regardless of their backgrounds or prior academic performance. This consistency in belief and practice contributes to a motivational climate where students feel empowered to overcome challenges and strive for success.

Teacher self-efficacy plays a crucial role in promoting collaboration with colleagues and parents, as it is linked to effective communication and relationship-building skills. Educators who have confidence in their abilities to engage parents successfully foster trust, respond to concerns, and develop partnerships that enhance student learning and well-being. This positive relationship between teachers and parents creates a supportive home-school connection, which ultimately leads to improved educational outcomes for students.

More so, teacher self-efficacy is highly significant in coping with change. Harris and Jones (2021) discussed how teacher self-efficacy influences educators' ability to adapt to changes in educational policies and practices. Teachers with high self-efficacy are more resilient and proactive in embracing new teaching methodologies, technologies, or curriculum revisions. Their belief in their ability to navigate change fosters a positive attitude towards innovation and continuous improvement, mitigating resistance and promoting a culture of adaptability within schools.

The relationship between teacher self-efficacy and teacher effectiveness is highly significant and has profound implications for educational outcomes. Teachers with high self-efficacy are more likely to implement innovative teaching strategies, maintain high expectations for all students, and persist in the face of challenges, all of which contribute to greater effectiveness in the classroom (Klassen & Tze, 2019). This confidence enables teachers to create a positive and inclusive learning environment where students feel supported and motivated to succeed.

Furthermore, teachers with high self-efficacy are more resilient and adaptable, qualities that are essential for effective teaching. Research has shown that self-efficacy is a strong predictor of teacher effectiveness across various contexts and educational levels. The impact of self-efficacy on teacher effectiveness is also evident in the way teachers approach assessment and feedback. The supportive role of school leadership and collegial collaboration in enhancing teacher self-efficacy and effectiveness cannot be overstated. The relationship between self-efficacy and effectiveness is also influenced by the alignment of teachers' personal goals with the goals of the school.

Table 28
Proposed Professional Development Program

Key Result Areas (KRAs)	Strategies/ Activities	Success Indicator	Person/ Office Responsible
Work Tasks Motivation in terms of Class Preparation *Objectives: To re-capacitate teachers with strategies and techniques in approaching classroom routines and incidences* Teacher Effectiveness in terms of Subject Matter Knowledge *Objectives: To empower teachers in using contextualized, indigenize, and localized instructional materials to use school and community resources to help students.* Teacher Effectiveness in terms of Instructional Planning and Strategies *-To capacitate teachers in using student learning data, such as pre and post test results, student demographics,*	**From Planning to Teaching: Instructional Planning and Classroom Management Seminar-Training** In this activity, trainings and seminars will be administered to re-capacitate teachers on methods and rigors of instructional planning and classroom management. Proposed contents are, but not limited to: 1. Instructional decision-making during classes 2. Incidental teaching 3. Positive discipline in everyday teaching (PDET) 4. Contextualizing teaching and instructional materials 5. Community-based teaching 6. Utilizing and maximizing the use of student	90% of the teachers will be able to produce the following outputs: -contextualized instructional materials (community-based) -processed student data (considering privacy policies) -established classroom routine (documented)	Proponent Resource Person Training and development section of SDO Lipa City Participants Principals and SDO Key Personnel

anecdotal records, etc., for interventions and supplementary learning provisions Teacher Effectiveness in terms of Learning Environment *-To revisit the establishment of classroom routine in maintaining a classroom setting that minimizes disruption.*	data 7. Establishing classroom routine across all levels 8. Contextualization, localization, and indigenization 9. Research-based Intervention Programs and supplemental activities.		
Work Tasks Motivation in terms of Teaching *-To survey the availability of teaching and learning materials for teacher's and students' use* Teacher's Self-Efficacy in terms of Instruction *-To produce relevant thematic explanations and connections of lessons to be presented to the students in the beginning of lessons* Teacher's Self-Efficacy in terms of Adapt Instruction to Individual Needs *-To re-introduce differentiated instructions (DI) and multiple intelligences (MI) in*	**Recapacitating Teachers of 21st Century Teaching Methods in Teaching 21st Century Learners** Lecture, demonstration, and return demonstration are the strategies suggested to address clustered KRAs on teaching and learning. Proposed contents are, but not limited to: 1. Unpacking and dissecting of learning competencies for teaching 2. Packaging lessons for all levels of learners 3. Re-introduction of teaching approaches,	85%-90% of the participants will be able to produce the following outputs at the end of the training: -budget of work for at least 1 quarter -matrix of lessons indicating teaching, learning, thematic topics, and assessment strategies -teaching methods, strategies, and techniques bank"	Proponent Resource Person Training and development section of SDO Lipa City Participants Principals and SDO Key Personnel

teaching standardized classrooms to provide realistic challenge for all students even in mixed ability classes Teacher's Self-Efficacy in terms of Cope With Change *-To revisit prominent schools of thoughts and prominent pedagogies (2C-2I-1R) that are being used in DEPED to rationalize the use of any instructional method that the school and department decides to use*	methods, and strategies side by side with concrete examples across all learning areas. This training/seminar should also concretize these strategies vis-à-vis learning objectives or competencies, the corresponding lesson development, assessment, grading/rubric, instructional materials, and the like. 4. Teacher's Self-Efficacy in terms of Motivating Students *-Re-introduction of the use of criterion-based rubrics in assessing learning outcomes to present learners with achievable*	**Discipline, Motivation, and Learning in the 21st Century Classroom** In this area, the following are the proposed contents, but are not limited to: 1. Seminar on student	90-95% the participant in the training are expected to produce: -anonymous list of student with corresponding disruptive or deviant behavior (may be	Proponent Resource Person Training and development section of SDO Lipa City Participants Principals and SDO Key Personnel

goals to awaken the desire to learn even among the lowest achieving students Teacher's Self-Efficacy in terms of Maintaining Discipline *-To utilize positive discipline in everyday teaching (PDET) and Social-Emotional Learning (SEL) techniques in maintaining classroom discipline; in controlling even the most aggressive students*	motivation and behavior 2. Case study analysis presentation of varied learner behaviors and aptitudes. 3. Both psychological first aid capacity training for teachers 4. "What to do" seminars for varied classroom scenarios that involve motivation and behavior 5. Teacher empowerment of (PDET) and (SEL)	collaborative across levels, if teachers are dealing with same set of students) -intervention plan for the student (utilizing SEL and PDET techniques)	
Work Tasks Motivation in terms of Evaluation of students *-To revisit assessment and evaluation methods, strategies, and techniques* Teacher Effectiveness in terms of Assessment *-To empower teachers in setting up SMART objectives to facilitate revising contents to*	**Assessment and Evaluation in the 21st Century Educational Landscape** To re-capacitate the participants in terms of assessment and evaluation, the following topics and/or activities are proposed: 1. An inventory of assessment and evaluation methods and where to use them— participants	85%-90% of the participants are expected to produce: - budget of work for at least 1 quarter and matrix of lessons indicating teaching, learning, and assessment strategies (continuation or in collaboration with the training on teaching and learning -assessment and evaluation strategy bank	Proponent Resource Person Training and development section of SDO Lipa City Participants Principals and SDO Key Personnel

enhance students' achievement	will be re—introduced with the mentioned topic. More so, they will be presented with specific instructional scenario wherein assessment strategies are used for an identified learning objective or competency 2. Revisiting assessment for learning, assessment of learning, and assessment as learning		
Work Tasks Motivation in terms of Administrative Tasks *-To revisit teachers' responsibilities and privileges, including participating in teachers and employees' union and association* Work Tasks Motivation in terms of Complementary Tasks *-to clarify and reiterate scope of work and tasks and responsibilities*	**Quasi-Assignments, Administrative Tasks, and Professionalization: A Revisit** In light with DEPED Order 002, s. 2024, administrative tasks for teachers are removed, and thus specified in the memo are a roster of specific and existing duties and responsibilities that should be lifted from the teacher's tasks. Despite of this, there are still remaining quasi-	95%-100% of the participants are expected to produce: -roster of localized remaining quasi-assignment and administrative tasks for teachers as juxtaposed to the DEPED calendar (including timeline)	Proponent Resource Person Training and development section of SDO Lipa City Participants Principals and SDO Key Personnel

stipulated in position description forms (PDF) for each career stage, including but not limited to accreditation and audit tasks, etc.	assignments that are being performed by teachers in relation to professionalization and other administrative roles. Topics regarding this matter are suggested, but not limited to: 1. Orientation on the remaining administrative related tasks and quasi assignments 2. Inventory of these tasks, specific timeline, and persons concerned as juxtaposed with DEPED calendar to let teachers prepare and schedule activities beforehand a. Accreditations (visits for SBM, etc.) b. Contests and specific dates c. Trainings and seminars with specific dates to help them for instructional planning and adjustments		

Teacher's Self-Efficacy in terms of Cooperate With Colleagues and Parents *-To empower teachers with interpersonal skills and conflict resolution management* Teacher Effectiveness in terms of Effective Communication *-To re-capacitate teachers in communicating in the workplace, through various media and forms, through the use of correct vocabulary and grammar in speaking & writing.*	**Seminar on Interpersonal Relations and Communication in the Workplace** Related to this topic are the activities pertaining to the maintaining and uplifting of teacher professionalization and development of interpersonal relations. Topics such as below are suggested, but not limited to: 1. Specific strategies on how to deal with partnerships for teaching and learning a. Partnership with parents b. With industry c. With academe d. With community e. With other teachers for collaboration 2. Technical writing for teachers 3. Conversational gambits and communicative English	90-95% of the participants in the training workshop are expected to produce the following: -examples of technical documents related to teaching and learning -narrative reports -request letters of different styles -memo -incident report -anecdotal -and others, as applicable	Proponent Resource Person Training and development section of SDO Lipa City Participants Principals and SDO Key Personnel

	4. Conflict resolution		

Table 28 in the preceding pages presents the professional development program that is proposed for the Basic Education Teachers in the Schools Division of Lipa City. The proposed program is divided into four columns, as indicated: Key Result Areas (KRAs), the corresponding strategies or activities, the success indicators, and the person or office responsible.

The proposed program is intended to be implemented in a staggered manner, across the whole fiscal year. This program will be strategically implemented into different legs. Each leg is named under six key activities, namely: 1.) Instructional Planning and Classroom Management, 2.) Teaching and Learning, 3. Discipline and Motivation, 4.) Assessment and Evaluation, 5.) Quasi-Assignments, Administrative Tasks, and Professionalization, and 6.) Interpersonal Relations and Communication. These activities are formulated to address the clustered issues and concerns that were drawn out from the results of this study, which are presented in the first column through the heading *key result areas (KRA)*.

The proposed professional development program for Basic Education Teachers is firmly rooted in the principles of work task motivation, teacher self-efficacy, and teacher effectiveness. By addressing key areas of instructional planning, classroom management, teaching and learning, discipline and motivation, assessment and evaluation, quasi-assignments, administrative tasks, professionalization, and interpersonal relations and communication, the program provides a comprehensive approach to professional development. This approach not only enhances teachers' motivation and self-efficacy but also significantly improves their effectiveness in the classroom, leading to better educational outcomes for students.

Research has consistently demonstrated that well-structured professional development programs that align with these core principles significantly enhance teachers' instructional practices and overall effectiveness in the classroom (Desimone & Garet, 2015).

Instructional Planning and Classroom Management are critical components of effective teaching. Teachers who are well-prepared and possess strong classroom management skills are better able to create conducive learning environments that promote student engagement and achievement (Marzano, 2019). This aspect of the program directly taps into teachers' work task motivation by providing them with practical strategies and tools to plan and manage their classrooms efficiently, thereby enhancing

their self-efficacy (Bandura, 1997). When teachers feel competent in their ability to plan and manage their classrooms, their confidence increases, leading to more effective teaching practices.

The Teaching and Learning component focuses on equipping teachers with innovative instructional strategies that cater to diverse learning needs. Discipline and Motivation are pivotal in maintaining a positive and productive classroom environment. This component of the program addresses the motivational aspects of teaching, helping teachers to develop strategies that enhance student motivation and engagement. By building their skills in discipline and motivation, teachers' self-efficacy is reinforced, as they feel more capable of handling classroom challenges and promoting positive student behavior (Klassen & Tze, 2019).

Assessment and Evaluation are essential for monitoring student progress and informing instructional decisions. This aspect of the program enhances teachers' self-efficacy by equipping them with the skills to conduct accurate assessments and use data to improve their teaching practices. When teachers are confident in their ability to assess and evaluate student performance, their overall effectiveness in the classroom is significantly enhanced (Hattie, 2009).

The inclusion of Quasi-Assignments, Administrative Tasks, and Professionalization in the program acknowledges the multifaceted nature of the teaching profession. This component of the program helps teachers develop the necessary skills to manage these tasks efficiently, thereby reducing job-related stress and enhancing their motivation.

Interpersonal Relations and Communication are fundamental to building a collaborative and supportive school environment. Effective communication skills are essential for fostering positive relationships with students, colleagues, and parents (Van den Borre et al., 2020). This component of the program focuses on enhancing teachers' interpersonal skills, which are critical for creating a positive school culture and promoting collaborative practices. Teachers who are skilled in communication are more likely to build strong relationships, receive support from their peers, and engage in collaborative problem-solving, all of which contribute to their self-efficacy and effectiveness (Johnson & Blackwell, 2020). By addressing key areas of teaching practice and providing opportunities for professional growth, the program fosters intrinsic motivation among teachers, encouraging them to strive for excellence in their work. Extrinsic motivators, such as recognition and career advancement, are also incorporated to reinforce teachers' efforts and enhance their commitment to their professional responsibilities (Marzano, 2019).

Each component of the program is designed to build teachers' confidence in their skills and abilities, thereby enhancing their self-efficacy. Teacher effectiveness, which refers to the impact of teachers' practices on student learning and achievement, is the ultimate goal of the professional development program. Effective teachers are those who

can create positive learning environments, engage students in meaningful learning experiences, and foster academic success.

Conclusions

The following were concluded from the results of this study:

1. The respondents were predominantly female with Master's degree, who teach in the elementary school and have 10 years and below teaching experience.
2. In terms of work tasks motivations, the respondents corresponded completely to performing responsibilities as regards class preparation, teaching, evaluation of students, administrative tasks, and complimentary tasks.
3. The respondents deemed they were always self-efficacious or confident in performing teaching-related duties in connection to instruction, adapting instruction to individual needs, motivating students, maintaining discipline, cooperating with colleagues and parents, and coping with change.
4. The respondents perceived they were always effective in performing duties as related to subject matter knowledge, assessment, learning environment, and effective communication.
5. In terms of work task motivation, indicators on assessments on teaching, evaluation of students, and complementary tasks differed according to sex. On the other hand, assessments on class preparation and complementary tasks varied according to their years of teaching experience. When it comes to identifying self-efficacy, components on assessments on instruction, adapting to individual needs, motivating students, maintaining discipline, and cooperating with colleagues and parents varied when the respondents were grouped according to sex. Meanwhile, assessments on coping with change differed according to years of teaching experience. Finally, when respondents were grouped according to sex, teacher effectiveness was assessed differently in the aspects of subject matter knowledge, assessment, learning environment, and effective communication.
6. Highly significant relationships exist between work task motivation and teacher self-efficacy, work task motivation and teacher effectiveness, and teacher self-efficacy and teacher effectiveness. This could imply that teachers who are more motivated by their work tasks tend to have higher self-efficacy. Moreover, higher levels of motivation in work tasks are associated with greater teacher effectiveness. Finally teachers with higher self-efficacy tend to be more effective in their teaching.
7. A professional development program for the Basic Education Teachers in the Schools Division of Lipa City based on the assessments, significant differences, and significant relationships of the variables of the study was proposed.

Recommendations

1. DEPED may look into the results of this study to consider how work tasks motivation, self-efficacy, and effectiveness of teachers relate, correspond, and interact with each other to further associate them with teachers' welfare,

capacities, performance, and efficiency. This could be beneficial in implementing programs and policies for the wellbeing of teachers and the performance of their duties.

2. DEPED Lipa City may utilize and/or adopt the professional development program that is proposed for the Basic Education Teachers in the Schools Division of Lipa City.
3. School administrators may look into the result of this study and take into consideration work task motivations, efficacy, and effectiveness in planning for professional development of teachers and taking it into account in the school implementation plans, procurement plans, and other related matters.
4. K-12 teachers may refer to the findings of this research as regards motivation for work tasks, efficacy, and effectiveness to try to understand the effects of these indicators to their performance. More so, they can use the suggestions in the action plan to further improve their performance in terms of the mentioned indicators.
5. The Professional Development Program for K-12 teachers may be tabled for discussion, implementation and further evaluation.
6. Future researchers may investigate the significant differences in the respondents' assessments of the three variables when the participants were grouped according to different profile variables. More so, these variables can be investigated as to their mediating effect, significant effect, moderating effect, etc.

Compliance with Ethical Standards

This declaration affirms that the author has adhered to ethical research practices in conducting the study. Informed consent was obtained from all respondents, ensuring they were fully aware of their participation and had the freedom to withdraw at any time without consequence. Anonymity was rigorously maintained to protect the identities of participants, and their well-being was prioritized throughout the research process. There are no conflicts of interest associated with this study, and strict measures were taken to avoid plagiarism. Furthermore, the interpretation of findings was conducted without bias, and the results are solely intended for research purposes, reflecting a commitment to integrity and ethical standards in academic inquiry.

Acknowledgements

The researcher would like to express sincere gratitude and heartfelt appreciation to the mentioned individuals for their invaluable assistance and fruitful ideas, which greatly contributed to the successful completion of this study. Special thanks are extended to Dr. Arnie Christian Villena, the esteemed adviser and Program Dean of the College of Computing, Arts, and Sciences (CCAS), for providing essential supervision and guidance during the development of this research study. Additionally, gratitude is owed to Dr. Reymund Ferry and Dr. Allan Tipan, the dedicated dissertation professors, for their significant support in shaping and refining this research endeavor. The researcher also appreciates Dr. Annalie Pateña, the research statistician and validator of research instruments, whose substantial contributions were integral to achieving the research instrument through her invaluable assistance in instrument development and

data processing. Acknowledgment is due to Dr. Beverly Caiga and the panel of reactors for their constructive feedback that enhanced the quality of the study. Furthermore, the researcher expresses appreciation to Dr. Felizardo O. Bolaños, Schools Division Superintendent of Lipa City, along with the Public Schools District Supervisors, School Principals, and Teachers of the Schools Division of Lipa City, for their patience, generosity, and unwavering support. Heartfelt thanks are also given to Mr. Victorino B. Saner (✝) and Mrs. Zaida G. Saner, the beloved parents of the researcher, for their inspiration, understanding, financial support, and care. Above all, gratitude is extended to God Almighty for His grace, mercy, guidance, strength, and the continuous flow of blessings and wisdom that enabled the researcher's perseverance.

ABSTRACT

The study aimed to create and validate a midterm test questionnaire for Calculus 1, tailored for 2nd-year Bachelor of Secondary Education students majoring in Mathematics at Agusan del Sur State College of Agriculture and Technology. As an instrumentation study, it involved creating a 100-item multiple-choice test based on the official syllabus. The test was reviewed by three experts for refinement and by 15 student validators for its structural soundness. The validity of the test was determined to be nearly perfect and highly acceptable. It was subsequently pilot-tested with 81 4th-year BSEd Mathematics students and subjected to item analysis, including evaluations of the difficulty index, discrimination index, and reliability. The test achieved a reliability coefficient of 0.81, demonstrating strong internal consistency. These results indicate that the developed test is an effective tool for classroom assessment.

Keywords: *Test Questionnaire Development, Validation, Item Analysis, Mathematics Education*

INTRODUCTION

A strong foundation in Calculus 1 is essential for success in subsequent calculus courses and real-world applications. However, students, especially future mathematics teachers, often face significant challenges in calculus due to ambiguously worded exams, which hinder their ability to demonstrate knowledge (Fatimah & Yerizon, 2019; Brown & Knight,

1994). Unclear language, vague terms, and lack of context in exam questions can lead to student confusion and incorrect answers that may not accurately reflect their understanding (Schoenfeld, 1992). Additionally, unclear instructions can prevent students from applying appropriate problem-solving strategies, disadvantaging those with weaker language skills and undermining the assessment's validity.

Preparing a test questionnaire is an important step while conducting educational research, which must be carefully planned so that it may state correctly about the cognitive gains. In test development—not only is operationalizing the construct vital but a well-designed plan upfront regarding what we are assessing–is key to valid findings (Irwing & Hughes, 2018; Lane et al., 2016). A table of specifications is an instrument to ensure the test harmony with learning objectives and also can stress thinking skills (Fives & Barnes, 2013; Retno et al., 2019). It includes item creation, expert review, pilot testing, data analysis, and a host of other activities to establish the reliability of the test. It has been well-documented that higher-order thinking skills are difficult to measure (DeBarger et al., 2016; Mamolo, 2019), and models for creating effective tests in the context of validation have been proposed.

Exam questions should be straightforward and explicit to promote equal evaluation. To guarantee fairness, educators should thoroughly evaluate and pilot-test these questions (Haladyna & Rodriguez, 2013). Calculus learning that is both successful and accurate depends on a well-designed and tested test questionnaire. Since content, format, and accuracy are crucial for test validity, Kline (2005) emphasizes the serious risks associated with depending on invalidated instruments. Furr (2021) highlights the detrimental effects of poorly constructed questionnaires, pointing out that in the absence of appropriate validation protocols, educators frequently have imprecise notions of what constitutes a good evaluation. A well-crafted and verified test questionnaire in calculus not only guarantees accurate evaluation but also propels student advancement and informs focused training. Such evaluations are essential for recognizing learning issues and directing effective training, as suggested by Black and Wiliam (2018). Validity and reliability are essential for an accurate and fair assessment (Taherdoost, 2016; Kara & Çelikler, 2015).

Regarding questionnaire development, the school is still in its infancy, especially in mathematics education. As a result, the motivation behind this project is to develop and validate questions measuring specific topics on the Calculus 1 midterm exam. We aim to assist with the evaluation process by providing teachers with some useful tools for evaluation. These surveys will help teachers identify if any students need more attention, keep a check and balance on students' performance, and understand what all the comprehension or understanding of things are. In the end, it aims to advance our field of educational evaluation as a whole.

Research Objectives

This study aimed to develop and validate the test questionnaire for the Calculus 1 midterm. Specially, it sought to answer the following:

1. develop a midterm test questionnaire on selected topics on Calculus 1 based on the domains of Revised Bloom's taxonomy.
2. determine the validity of the developed test questionnaire;
3. determine the reliability of the developed test questionnaire.

METHODOLOGY

Research Design

The study employed instrumentation to develop and validate test questionnaires that include midterm topics in Calculus 1, following the approved syllabus. Instrumentation research includes testing, developing, and applying measurements including questionnaires (Biddix, 2018). The focus of instrumentation research works on composing the items properly which effectively measures what it is intended to measure; this does not only mean that these tools have to be valid but also reliable. These include clearness of the items, content validity to verify whether an instrument covers all essential features of a construct, and scoring consistency (Kline 2005).

Research Instrument

This study utilized an adapted instrument to assess the developed Calculus 1 midterm test questionnaire. The content validity, face validity, and reliability coefficient tools are from Oducado (2020), Desai and Patel (2020), and Longe and Maharaj (2023) respectively. Face validity is determined using a yes/no approach to assess if items measure intended concepts, while content validity is evaluated using a 5-point Likert scale. Scales utilized in this study are presented in Tables 1, 2, 3, 4, 5, and 6.

Table 1. Interpretation and Acceptability of % of Agreement (Face Validity)

% of agreement	Strength of Agreement per question or overall	Action for each Question / entire tool
< 80	Poor	Restructure
80 - 90	Substantial	Substantial Revise
90 - 100	Full	Retain

Table 2. Content Validity Interpretation

Mean Range	Verbal Description	Qualitative Interpretation
4.21 – 5.00	Very High	Very much acceptable
3.41 – 4.20	High	Acceptable
2.61 – 3.40	Moderate	Moderately Acceptable
1.81 – 2.60	Low	Slightly Acceptable
1.00 – 1.80	Very Low	Not acceptable

Table 3. Reliability Coefficient Interpretation

Reliability	Interpretation
0.90 and above	Excellent
0.80 - 0.89	Good
0.70 – 0.79	Average
0.60 – 0.69	Questionable
0.50 – 0.59	Poor
0.50 or below	Unacceptable

Table 4. Index of Difficulty (P-Values)

P-value range	Interpretation
0.00 – 0.20	Very Difficult Item
0.21 – 0.40	Difficult Item
0.41 – 0.60	Moderately Difficult Item
0.61 – 0.80	Easy Item
0.81 and above	Very Easy item

(Padua & Santos, 1997)

Table 5. Index of Discrimination (D-Index).

D value range	Interpretation
-1.00 – -0.60	Questionable Item
-0.59 - -0.21	Not Discriminating
-0.20 – 0.20	Moderately discriminating
0.21 – 0.59	Discriminating
0.60 – 1.00	Very Discriminating

(Padua & Santos, 1997)

Table 6. The Decision for Discrimination Index and Difficulty Index.

Discrimination Index (D-Value)	Difficulty Index (P-Value)	Decision
Acceptable	Acceptable	Retained
Not Acceptable	Acceptable	Revised
Acceptable	Not Acceptable	Revised
Not Acceptable	Not Acceptable	Rejected

(Padua & Santos, 1997)

Process in the Development of Test Questionnaire

This research adapted the Development and Validation Design utilized by Mamolo (2021), which included four stages: conceptualization, development of the test, trial of the

test, and testing. This study involved conceptualizing, developing, validating, and pilot testing.

Conceptualization

The initial step was to determine the relevant concepts for the selected midterm topics in Calculus 1. When creating the midterm test, the items were constructed to represent each concept based on the syllabus. The identified topics in midterm Calculus 1 are conics, limits and continuity, fundamentals of derivatives, derivatives of trigonometric and inverse trigonometric functions, derivatives of hyperbolic and inverse hyperbolic functions, and applications of derivatives. This is based on the approved syllabus of the Institution and considering CMO No. 75 series 2017, Policies Standard and Guidelines.

Development of the Test

This phase involves creating a table of specifications based on the syllabus covering midterm topics and afterward drafting test items. The number of items per topic is based on the number of teaching hours with its respective percentage. The conics with 8 hours; the limits and continuity 8; fundamentals of derivatives 4; derivative of trigonometric and inverse trigonometric functions 4; derivative of hyperbolic and inverse hyperbolic functions 4; and applications of derivatives 4. There are 25 items on each topic of conics and limits (Item Number 1 – 50), 13 item questions each for fundamentals of derivatives and derivatives of trigonometric and inverse trigonometric functions (Item Number 51 - 76). Lastly, 12-item questions each on the topic of the derivative of hyperbolic and inverse hyperbolic functions and applications of derivatives (Item Number 77 – 100).

After crafting the test, it undergoes many reviews and refinement. Scoring guidelines and completeness criteria were also established. Some test items are derived from previous questionnaires and utilize a multiple-choice format appropriate for the assessed year level. The test questionnaire encompasses questions of varying difficulty levels.

Validation of the Test Questionnaire

The Calculus 1 midterm test questionnaire was then validated by three experts, with at least a master's degree and three years of teaching experience. This process followed Gilbert and Prion's (2016) guidelines, where the involvement of three experts provided acceptable evidence of content validity. The validators were provided with TOS, course syllabus, and validation tool.

In addition, 15 fourth-year BSEd-Mathematics students measured the test face validity after the pilot testing phase. These students were purposively and randomly selected among the test takers. They look at the structure of the questionnaire to ensure its significance and effectiveness, contributing to the overall quality of the test.

Pilot Testing

The test questionnaire was administered to 81 fourth-year Mathematics education students after the validation. The pilot testing was designed to evaluate the quality of specific test items, the total effectiveness of the test, and the suitability of the test's structure (Syahfitri et al., 2019).

Subsequently, an item analysis was done to gauge the difficulty and discrimination index of each test item. This process helped the identification of problematic items needing revision or removal. Kuder-Richardson 20 (KR-20) was utilized to determine its internal consistency and reliability (Bobbit, 2022).

RESULTS AND DISCUSSION

The Validity of the Test

The expert valuation of the Calculus 1 midterm test questionnaire revealed a good content validity, with an overall mean score of 4.00 which implies a high level of agreement among experts about its conformity to the intended construct. Also, it means that the questionnaire accurately and comprehensively measures what is aimed at (Haynes et al., 1995). This score scale implies that the test items well fit into the assessment objectives and content displaying experts' consensus on their relevance (Lynn, 1986; Cook & Beckman, 2006).

High content validity is pivotal for the effectiveness and relevance of tests since it ensures chances that the questionnaire will result in correct and significant outcomes. Recent studies emphasize that powerful content validity increases the credibility and reliability of an evaluative tool hence making it important to researchers as well as practitioners (Thompson, 2023). The expert assessments confirmed that the test elements were properly representing their domains which is paramount for its overall validity and utility.

Furthermore, an analysis of the questionnaire's face validity was conducted referring to how it looks from the perspective of those taking it. The face validity received a 95% rating which means that the test content is clear and follows the course objectives (Creswell & Creswell, 2018; Bolarinwa, 2015). This high rating is important because this infers that students would deal with it much more seriously leading to less anxious situations thus improving accuracy levels (Simonson et al., 2021; Sireci & Benítez, 2023). In addition, students' involvement in the validation process is a good practice when doing educational assessments (Lane 2014).

Item Analysis

For the Calculus 1 midterm test, table 7 indicates the item difficulty levels; this is an important measure of the extent to which each question is difficult for students. In

assessments, item difficulty which is the fraction of students answering a question correctly, is essential to maintain overall fairness and balance (Siregar et al., 2023). This metric provides insight into how one can design an exam that suitably stretches the students while also representing their actual capabilities.

The test items were categorized according to the level of difficulty, with 9 very difficult items, 15 difficult,10 moderately difficult, 9 easy, and 27 very easy. This distribution shows there is a wide range of difficulty which is crucial for us to develop a more complete assessment. The presence of 24 very difficult and difficult items is especially helpful in distinguishing between students who possess a better understanding of the material and those that require further assistance (Miller et al., 2021). These difficult items assess individuals at higher levels of understanding as well as problem-solving ability hence making them significant in testing high-performing students (Anderson et al., 2001).

The enclosure of 36 very-easy and easy items guarantees that students can access the test at their level, giving them an opportunity to showcase what they know (Nunnally & Bernstein, 1994). At the same time, 10 questions of moderate difficulty serve to strike a balance so that no one is mainly treated as either normal or above normal in these tests. With a balanced distribution, everyone has an equal chance, which leads to a true representation of student performance based on it (Kline, 2005; Simoson et al., 2021).

Table 7. Item Difficulty of the Test Questionnaire

Difficulty Index	Frequency	Percentage	Test Item Number/s	Verbal Interpretation
0.00 – 0.20	9	13%	36, 39, 40, 48, 49, 54, 66, 77, 100	Very Difficult Item
0.21 – 0.40	15	19%	11, 16, 45, 56, 60, 61, 63, 68, 70, 71, 76, 79, 80, 94, 97	Difficult Item
0.41 – 0.60	10	17%	3, 5, 8, 13, 22, 23, 35, 82, 84, 88	Moderately Difficult Item
0.61 – 0.80	9	13%	4, 10, 12, 34, 50, 62, 65, 81, 95,	Easy Item
0.81 and above	27	38%	1, 2, 7, 15, 20, 26, 27, 29, 30, 31, 32, 37, 43, 44, 46, 47, 51, 42, 53, 55, 72, 87, 92, 93, 96, 98, 99	Very Easy item
Total	70	100%	70	

Table 8 summarizes the item discrimination in the Calculus 1 midterm examination, which is often regarded as a significant part of educational assessment. Item discrimination indicates whether test items can effectively distinguish between students who have high scores and those who do not. When the level of item discrimination is high, it shows its ability to separate these two groups constituting a good quality test (Cohen & Swerdlik, 2009).

The analysis showed that there are different levels of discrimination among the test items. Five items were distinguished as being very discriminating, which means they are efficient in differentiating those who understand the content from those who do not. Such items greatly improve both the validity and reliability of a given exam (Kelley & Preacher, 2019). Moreover, 26 discriminating items can effectively separate various performances, which significantly adds to the general reliability of this test (Muñiz & Fonseca-Pedrero, 2019).

Most of the test items (34) had moderate levels of discrimination thus providing sensible differentiation. In general, these items are not as precise as the highly discriminating ones but they still contribute positively towards students' performance assessment (Osterlind, 2010). However, five items were found to have marginal discrimination signifying that they did not distinguish effectively among students' abilities. In order not to compromise the overall reliability of the tests and also ensure an accurate measure of students' understanding, it may be necessary to revise or replace such low-discrimination items (Downing, 2003).

Table 8. Item Discrimination of the Test Questionnaire

Difficulty Index	Frequency	Percentage	Test Item Number/s	Verbal Interpretation
-1.00 – -0.60	5	7%	27, 43, 62, 63, 70	Questionable Item
-0.59 - -0.21	0	0%	0	Not Discriminating
-0.20 – 0.20	34	49%	1, 2, 11, 15, 16, 20, 26, 29, 30, 14, 37, 39, 40, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 61, 66, 68, 72, 92, 93, 94, 95, 98	Moderately discriminating
0.19 – 0.59	26	37%	3, 4, 5, 7, 8, 10, 12, 13, 32, 35, 36, 56, 60, 65, 77, 79, 80, 81, 82, 84, 87, 88, 96, 97, 99, 100	Discriminating
0.60 – 1.00	5	7%	22, 24, 34, 71, 76	Very Discriminating
Total	70	100%	70	

Table 9 shows that out of the 70 items in the Calculus 1 test questionnaire, 23 were appropriate for inclusion in the final version. They met the expectations of being impartial and difficult enough to assist in making a distinction between high achievers and low achievers, as well as being challenging (Kline, 2005). Hence, the preservation of these items is key in upholding an equitable and consistent assessment that quantitatively indicates the essential content areas and performance levels.

On the contrary, 12 items were flagged for revision because of discrimination ability or difficulty problems. The items were inappropriate for inclusion in the final test in their

current form (Haladyna & Rodriguez, 2013). Consequently, there is a need to revise these items so that they can be clearer and more effective about the test's aims and also serve as better measures of student knowledge.

Furthermore, 35 items were disqualified because they were found to have serious weaknesses concerning their discrimination, difficulty, or both. An item that is too difficult or too easy, or if it does not discriminate effectively between low and top performers, does not contribute valuable information to the overall assessment and can undermine the reliability and validity of the test. The removal of such items is pivotal for maintaining the quality and fairness of the test as they may incorporate bias and inaccuracies (Cook & Beckman, 2006). It is important to carefully select and revise test items based on discrimination and difficulty indices so that a fair and reliable assessment tool can be developed that measures what it was designed to measure reliably to enhance education outcomes (Miller et al., 2021).

Table 9. Summary of Item Analysis for the test questionnaire in Calculus 1 (Midterm)

Final Evaluation/Remark	Frequency	Percentage	Item Number/s
Items to be Retained	23	33%	3, 4, 5, 8, 10, 13, 22, 23, 34, 35, 45, 50, 56, 60, 65, 71, 76, 79, 80, 82, 84, 88, 97
Items to be Revised	12	17%	7, 12, 16, 31, 36, 61, 63, 68, 77, 81, 96, 100
Items to be Rejected	35	50%	1, 2, 11, 15, 20, 26, 27, 29, 30, 32, 37, 39, 40, 43, 44, 46, 47, 48, 49, 51, 52, 53, 54, 55, 62, 66, 70, 72, 87, 92, 93, 94, 95, 98, 99
Total	70	100%	70

Reliability of the Test

The validated Calculus 1 midterm examination was pilot-tested to 81 fourth-year mathematics students. An item analysis was then carried out to help ensure that there were no items on the test that had poor correlations. At first, a reliability coefficient of 0.49 was observed, indicating that there was a low level of internal consistency among the test items (Kline, 2005). It was noted that 30 items had bad correlations which meant they did not accurately measure what they were supposed to measure hence these were deleted from the examination.

Reliability analysis was done on 70 items that had remained after the elimination of 30 poor-performing items. This adjustment led to a significant increase in the KR-20 value, which rose to 0.81. KR20 is used for measuring the internal consistency of dichotomous tests such as true-false or multiple-choice tests (Crocker & Algina, 2008). Therefore it is essential for educational testing reliability assessment. Overall test reliability was

enhanced as poor-performing items were removed; these were items that did not discriminate between different students' performance levels well enough and were either too hard or too easy.

The improvement of reliability is important because it allows for test results to be consistent and accurate across different times it is administered. Also, it shows that there is a likelihood that similar results will come up when the tool is used on diverse groups of learners who have similar levels of abilities thus supporting its validity (Furr, 2021). A major approach followed in modifying the examination through the removal of poorly functioning items is guaranteed to make sure that the evaluation measures what it intends to measure and does so reliably.

Conclusions

The test questionnaire on Calculus 1 was constructed based on the approved syllabus topics. The test quality and its validity were checked through the creation of a Table of Specifications (TOS) based on Revised Bloom's Taxonomy. This test evaluation shows that there is strong content validity since the ratings are within the "acceptable" range and thus the items are relevant and representative of subject matter. In addition, the face validity score for this test was "full" which means it is an accurate representation of the content intended to be measured, thus confirming that questions truly reflect all desired learning outcomes.

As indicated by the findings, the Calculus 1 midterm assessment shows a variety of item difficulties and levels of discrimination that influence the test's general effectiveness. The exam contained many easy and very easy items which may result in disparity in testing advanced students at different levels of proficiency. In this regard, the discrimination analysis showed that there are items that discriminate highly, moderately, or hardly respectively. This means that some of the questions are good at separating students with varying abilities while others are not good at distinguishing between them.

A decision to keep 23 items, modify 12 items, and eliminate 35 items from the final test denoted a commitment to improving its validity and reliability. Retaining the most effective items guarantees a solid basis of reliable measures whereas revising and excluding various items show an attempt at enhancing the general quality of the test. By carefully selecting and modifying according to difficulty and discrimination indices, such that students will have their understanding better assessed through the final test whose results provide important feedback on learning outcomes. This process of continual improvement follows recommended practices in education assessment which help in making sure that this examination is just and also effective in distinguishing diverse degrees or levels of student performance.

Recommendations

Based on the findings there are some recommendations on the way to improve the quality of the assessment tool. It is important to carry out regular item analyses for forthcoming

versions of the test. This helps identify and delete items that have poor correlation with total test scores helping to maintain internal consistency and reliability of the assessment. The general quality of the test is retained by only including items that correctly measure the intended constructs.

Continuous validation studies are necessary for them to corroborate the test's reliability and validity among various populations. Even though acceptable marks were obtained from the validation, using the test in larger and more varied samples could offer more proof of the effectiveness of the assessment tool. In this respect, persistent validation is crucial in justifying its application and keeping it nonbiased within greater student pools.

Changing items that perform poorly is another priority. The new items should be subjected to a rigorous process of testing and review before they are included in the test to ensure that it remains wide-ranging and reflect the totality of learning competencies spelled out in the syllabus. This ensures high levels of reliability and validity on the part of the test over an extended period.

It is recommended that teachers be offered training in the crafting of valid tests. Training educators on how to write clear, concise, and valid test items could lead to quality assessment. In addition, incorporating feedback mechanisms that allow students to report on any ambiguities or difficulties during the test can provide valuable information for further improvement. This way, students are involved in their assessment process to make it more comprehensive and highlight areas that need adjustments.

Compliance with Ethical Standards

This research was conducted adhering to proper ethical standards and as well as strictly complying with all guidelines set by institutions and laws.

Acknowledgments

The authors express deep appreciation to all respondents for their time, openness, and important input; it was evident that their participation played a significant role in the outcome and findings of this study.

https://doi.org/10.5281/zenodo.13291630

ABSTRACT

This qualitative research aims to understand the impact of negotiation behavior on distributors' decision-making process when granting preferred customer status to wholesalers. The study will involve interviews with 10 wholesalers and 10 distributors using semi-structured questionnaires. The distributors will be the unit of analysis, and the study will measure the effects of negotiation behavior on the decision-making process using a 3-decision-making process. The research will identify different negotiation behaviors used by wholesalers, such as competitive and integrative, and recommend strategies to improve their chances of obtaining preferred customer status. The findings show that integrative activities have a favorable impact on outcomes, while competing behaviors have no influence. Distributors value effective communication, account expertise, and punctuality, while preferred customer status is based on character and loyalty. Wholesalers value professionalism, honesty, partnership, and ethical procedures to achieve favored status. Both parties emphasize the importance of developing relationships, mutual satisfaction, ethical behavior, and integrative negotiation behaviors for effective negotiations.

Keywords: *Preferred customer status, negotiation behaviors, wholesalers, distributors*

INTRODUCTION

Negotiation processes between distributor and wholesaler businesses are critical for business relationships. According to David S. Bauders, CEO of SPARXiQ, negotiating dynamics have a considerable impact on distributor earnings, with skilled negotiation methods leading to big margin improvements. Bauders emphasizes the necessity of negotiation training for sellers, citing a considerable skill gap between buyers and sellers in the wholesale distribution market (Bauders, 2023).

Saorin-Iborra and Cubillo (2018) suggest that a distributor company's negotiation strategy can affect the wholesale company's satisfaction, which in turn affects the relationship quality and long-term profit maximization. This study uses the negotiation behavior continuum to analyze distributor decision-making processes, focusing on the distributor as the unit of analysis.

Furthermore, Bauders (2023) emphasizes the negative consequences of accepting poor compensation without using good bargaining methods. In a competitive climate where buyers are skilled negotiators, distributors must develop advanced negotiating skills in order to get fair terms that represent the value they provide to their buyers.

Boothby et al. (2023) note the potential of negotiation research to provide useful insights for enhancing decision-making in real-world social interactions. Researchers can assist distributors and wholesalers in improving profitability in the wholesale distribution industry by establishing realistic frameworks and tactics for handling negotiation dynamics.

Preferred customer status is crucial in distributor negotiations as it significantly influences the outcome. These customers, who have made multiple transactions or spent a certain amount, often receive special benefits like discounts and early access to new products. Understanding their status can help both parties modify their approach, potentially leading to increased discounts or negotiation on other terms (Fuchs, 2023).

In the context of distributor-wholesaler partnerships, preferred customer status is a strategic designation that distributors give to particular wholesalers. Preferred customer status in distributor-wholesaler relationships refers to a strategic arrangement in which selected clients are granted special rights and rewards based on their purchase history or other qualifying considerations. These "preferred" clients receive preferential treatment, which may include discounts, exclusive product access, or other benefits designed to improve their experience and encourage continuous involvement with the distributor or wholesaler.

Preferred customer status impacts inventory management, allowing businesses to control inventory levels and reduce stockouts. Pricing benefits, such as discounts or preferential terms, are crucial for maintaining wholesale profit margins. These customers can optimize pricing strategies, stay competitive, and protect profitability, thereby enhancing business performance (Surefront, 2023).

Preferred customer status is a key factor in the distribution industry, as it enhances customer satisfaction, loyalty, and business growth. It allows preferred clients to receive personalized support, tailored marketing, and exclusive deals, which can lead to increased sales and revenue. This status also strengthens the inter-organizational ties between wholesalers and distributors, fostering relationship growth and supplier loyalty. (Surefront, 2023).

Obtaining preferred customer status also encourages wholesalers to commit to the relationship and innovate, leading to improved quality and innovation. It also positively impacts distributors' pricing, as they often pay lower costs for goods. Understanding distributor satisfaction is crucial for a company's competitive advantage in the distribution business. (Surefront, 2023)

Negotiation behaviors are essential for improving the competitive environment, but there is a lack of research on these behaviors on the Saorín-Iborra continuum. This study aims to focus on customer negotiation behaviors and their impact on distributors' decision-making processes, aiming to optimize negotiation strategies and enhance competitive advantage.

The distribution industry plays a crucial role in the market supply chain, ensuring efficient movement of goods from manufacturers to end consumers. Effective distribution helps manage inventory levels, minimize carrying costs, and meet customer demand. Understanding negotiation dynamics is crucial for optimizing costs, managing risks, and achieving overall business success. Bemelmans et al. (2015)

In conclusion, understanding negotiation behaviors and granting preferred customer status is essential for optimizing business relationships, building mutually beneficial partnerships, and generating success in the distribution industry.

Research Questions

This This study explored the importance of 13 negotiation behaviors in the decision-making process of distributors when granting preferred customer status. It fills a gap in the literature by focusing on the effects of these behaviors on the decision-making process of distributors. Previous studies have only examined customer satisfaction, not negotiation behaviors. The study provides a theoretical contribution by filling a literature gap by examining the importance of negotiation behaviors in the decision-making of the distributors while providing preferred customer status to the wholesaler. Specifically, this paper sought to answer the following:

1. From the point of view of the distributors, what is extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status:
   a. Good working Relations;
   b. Working Relationships that convey competitive advantage; and
   c. Recognition of the buyer as a customer of choice?

2. From the point of view of the wholesaler what is the extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status:
a Good working Relations;
b. Working Relationships that convey competitive advantage; and
c. Recognition of the buyer as a customer of choice?

3. What are the similarities and differences between the distributors' and wholesalers' perceived extent of the effect of negotiation behaviors on the distributor's decision-making process?

4. What are the negotiation behaviors that the wholesaler can adopt in order to obtain customer-preferred status?

METHODOLOGY

A. Research Design

A descriptive approach was employed in this qualitative study. The descriptive design analysed interviewees' perceptions or experiences related to negotiation behavior that can affect the decision-making process for granting customer-preferred status to the wholesaler. To find the effects of negotiation behaviors, the researcher conducted interviews with the distributors and selected wholesalers (who have customer-preferred status). The semi-structured interview consists of 5 questions specifically focusing on the 13 negotiation behaviors and how each negotiation behavior affects the decision-making process of the distributor in granting preferred customer status. Descriptive studies yield rich data that leads to important recommendations, which is the goal of this study.

This study aimed to provide an understanding of the negotiation process between selected beverage distributors and wholesalers. It is important to note that the findings of this study cannot be generalized to other industries or regions without taking into account their unique characteristics. The data collected in this study is based on the perspective of beverage distributors and wholesalers and may be subject to potential sources of bias. These biases include a common scale used in measuring responses, data collected from a single source, and social desirability responses. Although every effort has been made to mitigate method and response biases in the data collection process, it is impossible to completely eliminate them. The study findings were expected to provide valuable insights into the negotiation behavior in the decision-making process for distributors and wholesalers and could be used to inform future research in this area.

B. Locale of the Study

Batangas, specifically its northern section, was chosen as the study's focus point due to its prominence as a thriving industrial powerhouse in Calabarzon. Batangas stands out

as a dynamic location ideal for exploration, thanks to its thriving economy, which is characterized by the presence of several economic zones and a robust population of micro, small, and medium-sized firms. The province's rapid urbanization, which is evident from its excellent average annual growth rate of 2.13%, emphasizes its significance as a significant economic hub in the Philippines (City Government of Batangas, 2023).

Batangas, with its significant presence of distributors and wholesalers, is an ideal location for analysing negotiating dynamics and preferred client arrangements. The province's thriving beverage industry, accounting for 2.5% of the Philippine GDP according to Philippine Statistics Authority's (PSA), it is a key contributor to economic growth. The study focuses on the northern region of Batangas to capitalize on the area's rapid urbanization and economic dynamism, providing a more nuanced understanding of negotiation behaviors and preferred customer dynamics in distributor-wholesaler relationships. This strategic choice aligns with the research aims, allowing a thorough examination of negotiating dynamics in a dynamic corporate context.

C. Respondents of the Study

In this study, respondent selection is crucial for generating valuable insights into negotiating dynamics and desired customer arrangements in Batangas' beverage distribution sector. To gain a thorough understanding of the subject, the researcher conducted interviews with a carefully selected group of respondents, including 10 wholesalers and 10 beverage distributors.

The 10 recognized wholesalers represent a varied cross-section of the sector, with varying sizes, specialties, and business methods. These wholesalers were chosen because they are preferred customers, and they provide distinct insights on the issues that influenced their selection as well as the benefits of their privileged status. The study's in-depth interviews provided vital insights on the criteria utilized by distributors to grant preferred customer status, as well as the impact of this designation on wholesalers' operations and relationships with distributors.

Similarly, the 10 beverage distributors chosen for interviews reflect important stakeholders in the distribution network, particularly those with substantial experience negotiating deals in the beverage industry. These individuals provide executive-level insights on the issues that come with operating in a highly competitive market, including comprehensive evaluations of the internal impediments they confront and the techniques they use to overcome them. By diving into their experiences and perspectives, the study hoped to shed light on the intricacies of awarding preferred customer status to wholesalers, as well as the ramifications for distributor-wholesale relationships.

The study sought to collect a plethora of qualitative data through these interviews, which led to a better understanding of bargaining behaviors, decision-making processes, and the dynamics of preferred customer arrangements in Batangas' beverage distribution sector. By collaborating with experienced individuals from both sides of the distribution network, the study hoped to shed light on the complexities of distributor-wholesaler

relationships and provide ideas for optimizing the preferred customer status program for mutual gain.

D. Sampling Design

The study utilized a purposive sampling strategy. Purposive sampling is a class of non-probability sampling procedures in which units are chosen because they possess traits that are required in the sample. In other words, units are chosen "on purpose" in purposive sampling (Nikolopoulou, 2022). This was used to choose participants who might provide important insights into bargaining practices and the awarding of preferred customer status in Batangas' beverage distribution sector.

A sample size of 20 respondents is sufficient due to the study's emphasis on depth over breadth. Due to the study's qualitative nature, in-depth analysis of each respondent's thoughts is possible thanks to a variety of data collection techniques like interviews and observations. By putting the depth and saturation of data ahead of statistical representativeness, the study can effectively unearth subtle insights and achieve its goals within the established scope and limits. The major goal is to get feedback from distributors and wholesalers who are actively participating in negotiation procedures, notably in the beverage distribution niche.

Criteria for selection:

The first criterion for selection includes persons who have been directly involved in negotiating procedures for at least two years, primarily in the beverage distribution sector. This criterion ensures that participants have appropriate expertise and insights into the complexities of negotiation dynamics that exist in the sector.

The second criterion focuses on beverage distributors operating in the Batangas region. These wholesalers negotiate with distributors on a regular basis, making them well-positioned to provide insights into negotiation processes and the dynamics of preferred customer agreements.

RESULTS

The study used qualitative research methods to investigate the extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. Interviews with sales supervisors, proprietors, and personnel were conducted, and their responses were analyzed using IBM SPSS Text Analytics Software. The results provide valuable insights for distributors and wholesalers, helping them understand market trends, consumer preferences, and supply chain dynamics. This information can optimize operations, improve product offerings, and enhance customer satisfaction. The

findings can also help identify new market opportunities, develop effective marketing strategies, and enhance competitive advantage in the industry.

Negotiation in general.

Negotiation success requires equal authority and understanding of different levels of authority within an organization(David, 2006). Sales technique involves positioning a product to reach more customers, using strategies like route planning and pricing. Negotiation focuses on settling disagreements and reaching agreements, focusing on communication skills, account knowledge, timeliness, and relationship-building. Building a positive rapport with potential clients, identifying customer wants, and tailoring products to specific requirements is crucial for successful negotiations.

Preferred Customer Status

Wholesalers with preferred customer status gain more benefits from their distributors, including access to innovations, discounts, and faster supplies. This enhances competitiveness and access to technological innovations, as highlighted by a study by Ellis et al. (2012).

The study explores preferred customer status in the beverage distribution industry, focusing on factors like credibility, character, financial capability, loyalty, and adherence to standards. It highlights the influence of wholesaler behavior on eligibility and the importance of loyalty and support in building preferred customer connections. Benefits include increased credit limits, discounts, and priority delivery.

According to Ellis et al. (2012), a wholesaler can demonstrate its reliability by consistently and predictably fulfilling its commitments. This, in turn, assures distributors that the wholesaler will not let them down and will keep its promises. Furthermore, Huttinger et al. (2012) found that customer loyalty is a crucial factor in determining customer attractiveness. This aligns with the study by Schiele et al. (2015), which suggests that customer attractiveness is a vital component in achieving preferred customer status.

Distributors assess wholesaler desirability based on factors such as character, confidence, purchasing ability, accessible resources, and information sharing. They prioritize payment timeliness and transaction manner, with some prioritizing timely payments and others focusing on convenience and efficiency. Relationship building is crucial for effective wholesaler-distributor partnerships, with wholesalers' attitudes serving as a reference for future deals.

Satisfaction with wholesaler organizations is measured by metrics like order recurrence, continuous commercial interactions, on-time payment, productivity, and meeting supplier needs. Suppliers can upgrade satisfied customers to preferred statuses, while maintaining regular statuses for those who provide adequate satisfaction.

Customer satisfaction is dynamic and relative, influenced by emotional responses, perceptions of quality, and equity. Distributors emphasize the importance of developing long-term connections with wholesalers that value mutual pleasure and contribute to

commercial success. Positive negotiation tactics, such as cooperation and understanding, lead to higher satisfaction levels, while bad behavior can reduce satisfaction and strain the relationship. Effective communication and ease of engagement during negotiations promote productive discussions and increase wholesaler satisfaction.

Competitive negotiation behaviors

The study explores the impact of competitive negotiation on the beverage distribution industry, focusing on the importance of honesty, professionalism, and business relationships. Over half of the respondents admitted to intentionally misinterpreting factual information during the negotiation process, highlighting the complex interplay between ethical considerations, professionalism, and business relationships. Misinformation can erode trust and harm relationships with wholesalers in the long run, potentially damaging a distributor's reputation and resulting in a loss of business.

Traditional competitive bargaining is also discussed, with respondents emphasizing the value of gathering competitor information for various goals, but acknowledging the ethical implications of these techniques. Competitive advantage is emphasized, with D-9 highlighting the significance of remaining competitive in terms of price and products, while D-10 emphasizes negotiation capability enhancement. Respondents differ on whether competitive conduct affects the likelihood of receiving preferred customer status, with D-1, D-2, D-4, D-7, and D-8 recognizing the value of competitive conduct in learning about competitors' plans and movements, while D-7 and D-8 emphasize the importance of honesty and integrity in business operations.

Bluffing is a technique used by companies to gain a competitive advantage and seize business opportunities, but it can also be detrimental in negotiations due to concerns about honesty and integrity. The study highlights the importance of ethical negotiation practices in achieving success. Respondents prioritize professionalism and moral conduct in competitive bargaining, avoiding unethical tactics like breaking into opponents' networks. They focus on direct competition, valuing positive relationships with suppliers and trust, and preferring to obtain data through legal means rather than deceptive methods.

Inappropriate information gathering is also discussed, with some respondents using paid colleagues or contacts to gain a competitive advantage and increase revenue by learning about an opponent's viewpoint. Ethical considerations and company policies are also acknowledged, as are resource restrictions and financial limitations as reasons for not using unethical information-gathering strategies.

Integrative negotiation behaviors

Integrative negotiation behavior is a transparent and honest exchange of information and a willingness to work collaboratively towards a mutually beneficial outcome (Saorín-Iborra, 2008). It has been found to be positively related to customer satisfaction, as it creates a cooperative atmosphere that facilitates the creation of trust and commitment between the negotiating parties. Trust is a crucial factor in the development of long-term

relationships between organizations, making integrative negotiation behavior even more valuable as it fosters an environment of trust and cooperation, leading to better business relationships and outcomes.

Active listening is essential for understanding counterparts' needs during discussions and building trust among the parties involved. Maintaining positive relationships with wholesalers is crucial for generating sales and facilitating successful transactions. Trust and loyalty are essential for building credibility and fostering mutually beneficial partnerships. Collaborative partnerships benefit both sides, leading to higher revenue and profitability.

Obtaining positive results in negotiations is crucial for building strong relationships with wholesalers, achieving mutual understanding, and generating sales. Cooperation facilitates the resolution of issues and challenges, allowing for efficient problem-solving and driving business growth. Mutual satisfaction is emphasized as a key factor in driving corporate success, with satisfied wholesalers contributing to a healthy business ecosystem, long-term profitability, and sustainability.

Free flow of information is essential for building trust and relationships among distributors, promoting mutual understanding and agreements. Respondents D-1 and D-5 limit information flow to generate sales, prioritizing strategic use without disclosing unnecessary information. Respondents D-6 and D-9 prioritize mutual gain and trust, while sincerity and transparency in communication techniques are essential.

Minimizing differences in business to increase sales, establish a positive partnership, and achieve common goals aligns with wholesalers' preferred customer status. Trust is also emphasized as a key factor in building positive relationships with distributors, fostering loyalty, and ensuring information reliability.

Inclusive decision-making is crucial for promoting mutual understanding and addressing all issues in discussions. However, there is a divided opinion on whether it influences distributors' willingness to give preferred customer status. Factors like dependability and consistency can also influence the granting of preferred customer status.

Measurable items of the decision-making process

Good working relations

The quality of working relationships with wholesalers is directly linked to the distributor's choice to offer preferred customer status. Stronger ties result in improved sales, mutual satisfaction, and smoother transactions. Research emphasizes the importance of rapport and collaboration in supplier-buyer interactions. Proactive efforts include understanding customer demands, resolving difficulties efficiently, and adapting actions to promote satisfaction. Customer satisfaction motivates efforts to improve relationships and potentially gain preferred customer status.

The study reveals that negotiation behaviors have minimal impact on gaining information about an opponent, seeking mutual satisfaction, and maintaining a productive personal

relationship. Cooperation, open communication, trusting other negotiators, and involving all parties in decision-making are key to positive results. Intentional fabrication and information obtaining through networks have the lowest impact. Perceptions of customer status.

Majority of the respondents said the integrative behavior has a great extent on the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said that Ensuring a positive and productive personal relationship and Cooperating to obtain positive results from the parties has a very great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 90% of the respondents said that Ensuring understanding of the counterpart's needs Seeking mutual satisfaction has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 80% of the respondents said that Minimizing differences among the parties, Trusting the position and information of other negotiators, Allowing participation of all parties in the decision-making process has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Table 1. From the point of view of the distributors, what is extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status:

Negotiation Behaviors	Good working relations		Working relationships that convey competitive advantage.		Recognition of the buyer as a customer of choice	
	Mean	Interpretation	Mean	Interpretation	Mean	Interpretation
Intentionally misrepresenting factual information to the opponent	1.20	to a very little or no extent	1.20	to a very little or no extent	1.30	not at all
Gaining information about an opponent by using the opponent's network	1.40	to a very little or no extent	1.40	to a very little or no extent	1.40	not at all
Bluffing that it can get its goods somewhere else	1.00	to a very little or no extent	1.00	to a very little or no extent	1.00	not at all
Gaining information about a party by paying its contacts	1.00	to a very little or no extent	1.00	to a very little or no extent	1.00	not at all

Manipulating the other party by talking to people this party accounts to	1.00	to a very little or no extent	1.00	to a very little or no extent	1.00	not at all
Ensuring understanding of the counterpart's needs	4.60	to a very great extent.	4.60	to a very great extent	6.40	great
Seeking mutual satisfaction	3.80	to a great extent	3.80	to a great extent	5.20	considerable
Ensuring a positive and productive personal relationship	5.00	to a very great extent.	5.00	to a very great extent	7.00	very great
Cooperating to obtain positive results from the parties	5.00	to a very great extent	5.00	to a very great extent	7.00	very great
Ensuring a free flow of information among negotiators	4.80	to a very great extent	4.80	to a very great extent	7.00	very great
Minimizing differences among the parties	4.70	to a very great extent	4.70	to a very great extent	6.60	very great
Trusting the position and information of other negotiators	4.40	to a great extent	4.50	to a very great extent	6.20	great
Allowing participation of all parties in the decision-making process	4.60	to a very great extent	4.60	to a very great extent	6.50	very great

Legend: (Good working relations and Working relationships that convey competitive advantage). 1-1.4 to a very little or no extent, 1.5-2.4 to a little extent; 2.5-3.4 to some extent, 3.5-4.4 to a great extent, 4.5- to a very great extent.(Recognition of the buyer as a customer of choice) 1-1.4 = not at all, 1.5-2.4 = very little, 2.5-3.4 = somewhat, 3.5-4.4 = moderate, 4.5-5.4 = considerable, 5.5-6.4 = great, and 6.4-7 = very great.

Majority of the respondents said the competitive behavior has no extent of effect of negotiation behaviors in the decision-making process when granting preferred customer status. 90% of the respondents said that intentionally misrepresenting factual information to the opponent has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 80% of the respondents said gaining information about an opponent by using the opponent's network has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred

customer status. 100% of the respondents said that Bluffing that it can get its goods somewhere else, gaining information about a party by paying its contacts and Manipulating the other party by talking to people this party accounts to has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Majority of the respondents said the integrative behavior has a great extent on the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said that Ensuring a positive and productive personal relationship and Cooperating to obtain positive results from the parties has a very great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 90% of the respondents said that Ensuring understanding of the counterpart's needs Seeking mutual satisfaction has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 80% of the respondents said that Minimizing differences among the parties, Trusting the position and information of other negotiators, Allowing participation of all parties in the decision-making process has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Working relationships that convey competitive advantage.

The wholesaler-distributor relationship is crucial for distributors to gain preferred customer status. Strong relationships lead to increased sales and effective coordination. Techniques for improving relationships include planning, active listening, training, and marketing strategies. Professionalism is essential. Trust, collaboration, and open communication are key factors for a competitive advantage. Minimizing gaps and trusting negotiators' positions are also important.

Majority of the respondents said the competitive behavior has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 90% of the respondents said that intentionally misrepresenting factual information to the opponent has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 80% of the respondents said gaining information about an opponent by using the opponent's network has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said that Bluffing that it can get its goods somewhere else, gaining information about a party by paying its contacts and Manipulating the other party by talking to people this party accounts to has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Majority of the respondents said the integrative behavior has a great extent on the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said that Ensuring a positive and productive personal relationship and Cooperating to obtain positive results from the parties has a very great extent of the effect of negotiation behaviors in the decision-making process

when granting preferred customer status. 90% of the respondents said that Ensuring understanding of the counterpart's needs and Ensuring a free flow of information among negotiators has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 80% of the respondents said that Minimizing differences among the parties, and Allowing participation of all parties in the decision-making process has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 70% of the respondents said that Seeking mutual satisfaction, and Trusting the position and information of other negotiators has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Recognition of the buyer as a customer of choice

Wholesaler negotiating approach significantly influences distributors' willingness to offer preferred customer status, offering superior treatment and better product quality. Strategies include presenting advantages, analyzing wholesaler needs, providing promotions, ensuring product availability, and following marketing trends. A customer-centric strategy prioritizes addressing wholesaler needs and building trust through personalized communication. Seeking mutual satisfaction, fostering positive interactions, and cooperating effectively are key to establishing a preferred customer status. However, intentional falsification and information acquisition through competitors' networks have negative impacts.

Majority of the respondents said the competitive behavior has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 90% of the respondents said that intentionally misrepresenting factual information to the opponent has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 80% of the respondents said gaining information about an opponent by using the opponent's network has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said that Bluffing that it can get its goods somewhere else, gaining information about a party by paying its contacts and Manipulating the other party by talking to people this party accounts to has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Majority of the respondents said the integrative behavior has a great extent on the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said that Ensuring a positive and productive personal relationship and Cooperating to obtain positive results from the parties has a very great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 90% of the respondents said that Ensuring understanding of the counterpart's needs and Ensuring a free flow of information among negotiators has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 80% of the respondents said that Minimizing differences among the parties, and Allowing participation of all parties in the decision-making process has great extent of the effect of negotiation behaviors in the

decision-making process when granting preferred customer status. 70% of the respondents said that Seeking mutual satisfaction, and Trusting the position and information of other negotiators has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Wholesaler point of view

Negotiation in general

Wholesalers emphasize the importance of kindness, respect, and professionalism in their interactions with salespeople and distributors. They use courteous language and express concern for their needs, fostering a positive environment for discussions. They also focus on building positive business relationships by respectfully communicating, understanding product releases, and demonstrating professionalism. They prioritize direct communication with distribution stakeholders while maintaining a respectful tone. They also prioritize volume and capacity in commercial dealings while maintaining a low-profile image. Humility and consideration are also crucial, as wholesalers strive to minimize boastfulness while actively seeking out distribution staff's needs and offering support.

Preferred Customer Status

Wholesalers' attractiveness is influenced by their kindness, respect, and professionalism, which fosters positive business relationships and loyalty. Distributors' satisfaction is influenced by higher discounts, credit limitations, and meeting sales targets. Trust and honesty are crucial for maintaining a stable business climate. Preferred customer status is a classification for wholesalers who receive better deals, discounts, promotions, and incentives from their distributors. This status is determined by volume of orders and includes priority delivery, unique discounts, and customized assistance. Wholesalers with large orders and support for their distributor's business objectives are more likely to be given preferred status.

Competitive negotiation behaviors

The interview highlights the importance of honesty and integrity in negotiations, avoiding misleading tactics to build trust and maintain long-term business partnerships. It also emphasizes the negative effects of misinformation on a wholesaler's reputation and business prospects. Traditional competitive bargaining involves understanding competitors' bargaining stances and techniques, staying current with industry developments, and obtaining information from competitors' networks. Bluffing, while used for sales generation, can destroy trust and credibility. Ethical sales strategies and avoiding misleading tactics are suggested. The text also discusses the potential benefits of manipulating an opponent's network, emphasizing a positive work environment and ethical norms. Respondents strongly support ethical business practices, rejecting unethical practices like paying associates for information about opponents' opinions. They

believe integrity and fairness are crucial in commercial relationships and worry about the negative impact on supplier relationships.

Integrative negotiation behaviors

Active listening is essential in negotiations to understand counterparts' needs, gain critical information, and ensure clear communication. Building positive relationships with distributors is crucial for long-lasting and profitable business relationships, leading to improved prospects and supplier credibility. Collaboration, mutual satisfaction, and transparency are key to achieving preferred customer status. Mutual satisfaction can strengthen supplier relationships, leading to increased promotions and incentives.

Transparency and trust are crucial in negotiations, as they foster productive collaboration and successful business relationships. Open communication and information sharing are strategic values in achieving preferred customer status.

Adapting to distributors' needs and demonstrating a pragmatic approach to bargaining are essential for successful transactions. Trust in distributor information is based on perceived value and control over inventory. Respecting contractual agreements and information provided by distributors is critical for establishing a positive connection and influencing the likelihood of attaining preferred status.

Involving all parties in decision-making processes ensures diverse viewpoints and considers ideas, benefiting collaboration and creativity. However, caution is needed in evaluating information sources during negotiations.

Measurable items of the decision-making process

Good working relations. The study found that negotiation behaviors significantly influence positive working relationships. High scores were given to understanding counterparts' demands, seeking mutual satisfaction, maintaining healthy relationships, collaborating, and ensuring information flow. Trusting other negotiators' stances and knowledge was also highly rated. Involving parties in decision-making was also highly rated. However, unethical behavior, bluffing, and influencing others were deemed low. The study also found that payment for knowledge had a low score, indicating its no impact on relationships.

Majority of the respondents said the competitive behavior has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said Intentionally misrepresenting factual information to the opponent, gaining information about an opponent by using the opponent’s network, Bluffing that it can get its goods somewhere else gaining information about a party by paying its contacts has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Table 2. From the point of view of the wholesaler what is the extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status:

Negotiation Behaviors	Good working relations		Working relationships that convey competitive advantage.		Recognition of the buyer as a customer of choice	
	Mean	Interpretation	Mean	Interpretation	Mean	Interpretation
Intentionally misrepresenting factual information to the opponent	1.00	to a very little or no extent	1.00	to a very little or no extent	1.00	not at all
Gaining information about an opponent by using the opponent's network	1.00	to a very little or no extent	1.00	to a very little or no extent	1.00	not at all
Bluffing that it can get its goods somewhere else	1.00	to a very little or no extent	1.00	to a very little or no extent	1.00	not at all
Gaining information about a party by paying its contacts	1.00	to a very little or no extent	1.00	to a very little or no extent	1.00	not at all
Manipulating the other party by talking to people this party accounts to	1.00	to a very little or no extent	1.00	to a very little or no extent	1.00	not at all
Ensuring understanding of the counterpart's needs	4.90	to a very great extent.	5.00	to a very great extent.	6.90	very great
Seeking mutual satisfaction	4.90	to a very great extent.	4.90	to a very great extent.	5.20	considerable
Ensuring a positive and productive personal relationship	5.00	to a very great extent.	5.00	to a very great extent.	6.90	very great
Cooperating to obtain positive results from the parties	4.90	to a very great extent.	4.90	to a very great extent.	7.00	very great
Ensuring a free flow of information among negotiators	4.90	to a very great extent.	5.00	to a very great extent.	6.90	very great

Minimizing differences among the parties	5.00	to a very great extent.	5.00	to a very great extent.	6.80	very great
Trusting the position and information of other negotiators	4.90	to a very great extent.	4.90	to a very great extent.	6.90	very great
Allowing participation of all parties in the decision-making process	4.40	to a great extent	4.50	to a very great extent.	6.10	great

Legend: (Good working relations and Working relationships that convey competitive advantage). 1-1.4 to a very little or no extent, 1.5-2.4 to a little extent; 2.5-3.4 to some extent, 3.5-4.4 to a great extent, 4.5- to a very great extent.(Recognition of the buyer as a customer of choice) 1-1.4 = not at all, 1.5-2.4 = very little, 2.5-3.4 = somewhat, 3.5-4.4 = moderate, 4.5-5.4 = considerable, 5.5-6.4 = great, and 6.4-7 = very great.

Majority of the respondents said the integrative behavior has a great extent on the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said that Ensuring a positive and productive personal relationship and Cooperating to obtain positive results from the parties has a very great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 90% of the respondents said that Ensuring understanding of the counterpart's needs and Seeking mutual satisfaction, Cooperating to obtain positive results from the parties and Trusting the position and information of other negotiators has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 60% of the respondents said that Allowing participation of all parties in the decision-making process has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Working relationships that convey competitive advantage. The result emphasizes the importance of kindness, support, collaboration, adaptability, and trustworthiness in relationships between wholesalers and distributors. It highlights the need for mutual growth, effective marketing techniques, and fostering a positive working environment. Negotiation behaviors, such as understanding counterpart demands, maintaining healthy relationships, and ensuring information flow, significantly influence competitive advantages.

Majority of the respondents said the competitive behavior has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said Intentionally misrepresenting factual information to the opponent, gaining information about an opponent by using the opponent's network, Bluffing that it can get its goods somewhere else gaining information about a party by

paying its contacts has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Majority of the respondents said the integrative behavior has a great extent on the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said that Ensuring understanding of the counterpart's needs, Ensuring a positive and productive personal relationship, Ensuring a free flow of information among negotiators and Minimizing differences among the partieshas a very great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 90% of the respondents said that Seeking mutual satisfaction, Trusting the position and information of other negotiators and Seeking mutual satisfaction, Cooperating to obtain positive results from the parties and Trusting the position and information of other negotiators has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 70% of the respondents said that Allowing participation of all parties in the decision-making process has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Recognition of the buyer as a customer of choice. The text emphasizes the importance of treating distributors with respect and building positive relationships, as well as adapting to their preferences and adopting a customer-centric approach. It also highlights the need for sales volume and performance to achieve preferred customer status. Factors such as open communication, trust in other negotiators, and inclusive decision-making procedures contribute to a wholesaler's perception of being a preferred client. Factors like being aware of counterparts' demands, seeking mutual satisfaction, maintaining healthy personal relationships, and ensuring a free flow of information significantly impact positive working relationships.

Majority of the respondents said the competitive behavior has no extent on the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said Intentionally misrepresenting factual information to the opponent, gaining information about an opponent by using the opponent's network, Bluffing that it can get its goods somewhere else gaining information about a party by paying its contacts has no extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Majority of the respondents said the integrative behavior has a great extent on the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 100% of the respondents said that Cooperating to obtain positive results from the parties has a very great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status. 90% of the respondents said that Ensuring understanding of the counterpart's needs, Ensuring a positive and productive personal relationship, Ensuring a free flow of information among negotiators.

Minimizing differences among the parties and Trusting the position and information of other negotiators has great extent of the effect of negotiation behaviors in the decision-

making process when granting preferred customer status. 60% of the respondents said that Allowing participation of all parties in the decision-making process has great extent of the effect of negotiation behaviors in the decision-making process when granting preferred customer status.

Distributors View

Batangas distributors prioritize communication skills, account knowledge, timeliness, and relationship-building strategies in customer negotiations. They value preferred customer status based on factors like character, payment regularity, and loyalty. Some use deception tactics, such as bluffing and manipulation, to increase sales, raising ethical concerns. Active listening and understanding demands are critical for establishing trust and strengthening corporate partnerships. Inclusive decision-making methods are appreciated for considering multiple perspectives and generating mutually beneficial outcomes. Minimizing disagreements and establishing trust are essential components of effective negotiations. Respondents ranked cooperation, open communication, and trusting the stance of other negotiators as bad. They supported participation in decision-making and emphasized the importance of inclusivity and collaboration. Intentional information fabrication and gaining information through opponents' networks were deemed the most impactful, reflecting differing views on the efficacy and ethical consequences of competing strategies.

Wholesalers View

Wholesalers in Batangas prioritize compassion, professionalism, and honesty in negotiation to build strong relationships with distributors and secure preferred customer status. They believe in effective communication, humility, and respect for each other's needs. They seek preferred customer status by fostering positive connections, making communication easy, and demonstrating dependability in delivering orders and payments. They value meeting quotas, demonstrating respect, and remaining professional in all interactions with distributors.

Wholesalers are aware of the risks of competitive negotiation behaviors like deception, bluffing, and network manipulation. Honesty, transparency, and ethical business practices are emphasized to foster trust and sustain economic integrity. To attain preferred customer status, wholesalers focus on techniques that encourage collaboration and mutual support with distributors through integrative negotiation behaviors.

Respondents generally agreed that factors such as being aware of the counterpart's demands, seeking mutual satisfaction, maintaining healthy personal relationships, collaborating for positive results, and ensuring a free flow of information had little to no impact on positive working relationships. However, behaviors such as limiting gaps between parties, trusting other negotiators' perspectives, allowing participation in decision-making, and employing deceptive tactics were highly regarded for generating competitive advantages.

*Description is based on the interpretation comparison between distributors 'and wholesalers'

Good working relationship. Both distributors and wholesalers in Batangas have similar negotiation behaviors used to have good working relationships. Both of them emphasize the importance of connection-building, satisfaction, ethical conduct, and integrative negotiation behaviors in negotiations. They believe that trust, collaboration, and mutual satisfaction are crucial for securing preferred customer status and achieving long-term partnerships. Both parties improve business outcomes. They also emphasize the importance of fair and transparent processes, fostering a favorable negotiation climate. This alignment demonstrates a shared understanding of cooperative and mutually beneficial negotiation techniques.

Working relationships that convey competitive advantage. Both distributors and wholesalers in Batangas have similar negotiation behaviors used to have working relationships that convey competitive advantage. Both of them focus on excellent communication, relationship-building tactics, and ethical behavior in their negotiation practices. They appreciate the value of understanding customer needs, demonstrating product knowledge, and cultivating great relationships in order to increase wholesaler loyalty and attain preferred customer status. Despite differences in attitudes regarding competitive negotiation strategies, distributors consistently underline the importance of active listening, trust-building, and participatory decision-making in developing corporate partnerships and driving successful outcomes. There is agreement on the negative impact of unethical behaviors on relationships and preferred customer status, despite the fact that some negotiation techniques garnered mixed reviews.

*Description is based on the interpretation comparison between distributors 'and wholesalers'

Recognition of the buyer as a customer of choice. Both distributors and wholesalers in Batangas have similar negotiation behaviors used to have recognition of the buyer as a customer of choice They place a premium on professionalism, and honesty in their negotiation behaviors in order to build great connections with distributors and secure preferred customer status. They prioritize good communication, humility, and dependability in their contacts, recognizing the importance of trust and prioritizing the well-being of distribution people. Wholesalers recognize the hazards associated with competitive negotiation behaviors and highlight the need for honesty, transparency, and ethical standards in building trust and maintaining business relationships. Furthermore, wholesalers prioritize integrative negotiation methods, such as active listening and collaboration, to better understand distributor demands and build trust, which influences their chances of reaching preferred customer status.

Both distributors and wholesalers in Batangas have similar negotiation behaviors and decision-making processes. They understand the value of connection-building, contentment, ethical behavior, and collaboration in achieving success and retaining preferred customer status. While there may be differences in opinions and attitudes toward specific negotiation tactics, the overall purpose remains the same: to establish excellent working relationships, increase mutual satisfaction, and facilitate long-term partnerships that benefit both parties.

Conclusions

Distributors View

Batangas distributors prioritize communication skills, account knowledge, timeliness, and relationship-building strategies in customer negotiations. They value preferred customer status based on factors like character, payment regularity, and loyalty. Some use deception tactics, such as bluffing and manipulation, to increase sales, raising ethical concerns. Active listening and understanding demands are critical for establishing trust and strengthening corporate partnerships. Inclusive decision-making methods are appreciated for considering multiple perspectives and generating mutually beneficial

outcomes. Minimizing disagreements and establishing trust are essential components of effective negotiations.

Respondents ranked cooperation, open communication, and trusting the stance of other negotiators as bad. They supported participation in decision-making and emphasized the importance of inclusivity and collaboration. Intentional information fabrication and gaining information through opponents' networks were deemed the most impactful, reflecting differing views on the efficacy and ethical consequences of competing strategies.

Wholesalers View

Wholesalers in Batangas prioritize compassion, professionalism, and honesty in negotiation to build strong relationships with distributors and secure preferred customer status. They believe in effective communication, humility, and respect for each other's needs. They seek preferred customer status by fostering positive connections, making communication easy, and demonstrating respect, and remaining professional in all interactions with distributors.

Wholesalers prioritize honesty, transparency, and ethical business practices to maintain trust and economic integrity. They focus on integrative negotiation behaviors to gain preferred customer status. Factors like understanding counterparts' demands, satisfaction, and personal relationships have minimal impact on positive working relationships. However, limiting gaps, trusting perspectives, and employing deceptive tactics generate competitive advantages.

Both distributors and wholesalers in Batangas have similar negotiation behaviors and decision-making processes. They understand the value of connection-building, contentment, ethical behavior, and collaboration in achieving success and retaining preferred customer status. While there may be differences in opinions and attitudes toward specific negotiation tactics, the overall purpose remains the same: to establish excellent working relationships, increase mutual satisfaction, and facilitate long-term partnerships that benefit both parties.

Recommendations

Based on the findings from distributors and wholesalers in Batangas, numerous recommendations may be given for wholesalers to follow in order to achieve customer-preferred status:

1. Prioritize Communication Excellence: Wholesalers may invest in improving their communication skills, such as active listening and clear concept expression. Regular and transparent contact with distributors builds trust and displays a desire to maintain great relationships.

2. Emphasize Relationship Building: Wholesalers may prioritize developing true, long-term relationships with distributors founded on trust, respect, and mutual understanding. This means dedicating time and effort to getting to know distributors personally,

understanding their needs, and proactively addressing any complaints or challenges that may occur.

3. Demonstrate Ethical Behavior: Wholesalers are expected to maintain high ethical standards throughout their relationships with distributors. This comprises honesty, transparency, and integrity in the negotiation process, as well as a dedication to fair and ethical commercial practices. Avoiding dishonest techniques and focusing on ethical behavior fosters trust and credibility with distributors, increasing the likelihood of earning preferred customer status.

4. Encourage collaboration and inclusivity: Wholesalers may actively involve distributors in decision-making processes and solicit their feedback on critical business choices. Collaborative decision-making fosters a sense of ownership and partnership, resulting in increased distributor satisfaction and loyalty. Furthermore, wholesalers should be receptive to comments and suggestions from distributors, exhibiting a desire to adapt and collaborate for mutual gain.

5. Active Listening: To excel in handling distributor needs, it is crucial to exhibit active listening skills and pay close attention to their issues and feedback. By doing so, we can effectively understand their concerns and provide satisfactory solutions to ensure their utmost satisfaction.

Compliance with Ethical Standards

Researchers have an ethical obligation to conduct research ethically, prioritizing knowledge while respecting the rights and well-being of participants and society. Balancing potential benefits with potential costs is crucial, and researchers must ensure voluntary participation, inform respondents of the right to withdraw, and provide clarity on the study's purpose and procedures. Participants should have the right to ask questions, access results, and maintain privacy and confidentiality.

Researchers should outline individual benefits, secure agreement through signatures, obtain permission for site access, commit to unbiased language, and avoid fraudulent practices. Proactive consideration of the study's impact and prevention of result misuse are essential. Acting ethically requires a balance between advancing knowledge and noninterference in others' lives, with absolute rights for participants or researchers posing challenges. Legal and ethical prohibitions include avoiding unnecessary harm, securing voluntary consent, and respecting participants. Participants should be informed about the study's purpose, procedures, duration, associated risks, confidentiality measures, researcher identification, and avenues for information or questions.

Acknowledgments

I am greatly indebted to thank and deep appreciation to my professor Shiela M. Maloles, PhD., for guiding me in selecting a topic, supervising the work, expert advice and the sincere help throughout the course of the research.

I am indebted to present my grateful acknowledgement to Nora M. Sarmiento, PhD., my Thesis Adviser for suggesting the point, supervising the work and sincere help in critical reading of my manuscript.

My deep appreciation to J-One Marketing Personnels, San Miguel Corporation Personnels and United Sales Calapan Corporation Personnels for sharing their expertise and knowledge during my data gathering.

I am grateful to all those who have supported me in this research. This study would not have been possible without their contribution and encouragement.

ABSTRACT

This study investigates the role of school leaders in enhancing digital literacy among teachers and students at Central Balili Wesleyan Academy. It explores how leadership initiatives influence the integration of digital tools in teaching practices and the subsequent impact on student engagement and learning outcomes. Using a qualitative approach, data were collected through interviews, observations, and policy document analysis. The findings reveal that school leaders play a pivotal role in fostering a conducive environment for professional growth and innovation, providing continuous mentorship, and facilitating collaborative learning communities. Teachers reported increased confidence and proficiency in using digital tools, while students demonstrated enhanced engagement, critical thinking, and problem-solving skills through the use of technology. The study underscores the importance of strategic leadership in driving digital literacy initiatives and highlights the transformative impact of such initiatives on educational practices. Recommendations for further improvement include enhancing leadership training, expanding resources, promoting collaboration, and integrating digital citizenship education. This research contributes to the understanding of effective leadership practices in the digital age and provides insights for educational institutions aiming to enhance digital literacy.

Keywords: *digital literacy, school leadership, professional development, teacher confidence, student engagement, educational technology*

INTRODUCTION

The background of the study explores the critical role of school leaders in enhancing digital literacy among teachers and students. It highlights the increasing importance of digital literacy in education, driven by the rapid advancement of technology and its integration into everyday life (Johnson, 2022). School leaders are recognized as key figures in promoting digital literacy, providing the necessary vision, resources, and support for effective technology integration in the classroom (Smith & Doe, 2021).

The review of related literature emphasizes the impact of leadership on professional development, with studies showing that continuous mentorship and coaching improve teachers' confidence and ability to use digital tools (Brown & Green, 2023). Collaborative learning communities and personalized support from school leaders further enhance instructional practices, leading to better student engagement and learning outcomes (Lee et al., 2020).

Despite the positive strides, gaps remain in understanding the specific strategies school leaders employ and the direct impact of these initiatives on both teachers and students (White, 2022). This study aims to address these gaps by examining the perceptions and experiences of educators and students at Central Balili Wesleyan Academy, providing insights into effective leadership practices in fostering digital literacy (Jones & Martin, 2023). The significance of this research lies in its potential to inform educational policies and practices, ultimately contributing to the development of a digitally literate learning community (Adams, 2024).

Research Questions

This study aimed to determine the role of school leaders in enhancing digital literacy. Specifically, the study sought to answer the following questions:

1. How do school leaders perceive their role in fostering digital literacy among teachers, and what strategies do they employ to support professional development in this area?
2. What are teachers' and students' experiences and perceptions of the impact of school leaders' initiatives and support in enhancing digital literacy within the school community?

METHODOLOGY

The study employed a qualitative research design to investigate the role of school leaders in enhancing digital literacy among teachers and students at Central Balili Wesleyan Academy (Brown, 2021). Key informants included the school head, teachers, and selected students (Smith & Lee, 2020). Data were collected through semi-structured interviews, observations, and document analysis (Johnson & White, 2022). The interviews provided in-depth insights into participants' experiences and perceptions, while

observations offered a real-time understanding of how digital literacy initiatives were implemented (Green, 2023). School policy documents were also reviewed to examine the institutional support for digital literacy (Adams, 2021).

The data collection procedure involved scheduling interviews with key informants, conducting observations during digital literacy training sessions and classroom activities, and reviewing relevant school policy documents (Doe et al., 2024). The collected data were then transcribed, coded, and analyzed thematically to identify common patterns and themes (Lee, 2022). This comprehensive approach ensured a robust understanding of the impact of leadership initiatives on digital literacy, grounded in the experiences and perspectives of the educators and students directly involved in the process (Martin & Jones, 2023).

RESULTS

The study's results indicated that school leaders at Central Balili Wesleyan Academy played a crucial role in enhancing digital literacy among teachers and students. Teachers reported significant improvements in their confidence and proficiency with digital tools, attributing these gains to the continuous mentorship and professional development opportunities provided by school leaders. Observations and interviews revealed that school leaders fostered a supportive environment, encouraging innovation and collaboration through peer learning communities and personalized coaching.

Students also expressed positive experiences, noting that the integration of digital technologies facilitated by school leaders enhanced their engagement and interactive learning. They highlighted the importance of digital tools in supporting collaborative projects, research activities, and multimedia presentations, which improved their critical thinking and problem-solving skills. Both teachers and students acknowledged that leadership initiatives were instrumental in creating a conducive atmosphere for professional growth and effective technology integration.

Generally, the study found a positive correlation between leadership initiatives in digital literacy and improved learning outcomes, demonstrating that strategic leadership is vital for driving digital literacy efforts and fostering an environment where both educators and students can thrive with digital innovation.

DISCUSSION

Perceptions of School Leaders in Fostering Digital Literacy among Teachers

The study found that school leaders perceive their role as crucial in fostering digital literacy. They view themselves not only as administrators but also as visionary leaders responsible for integrating technology into the educational environment (Smith & Brown, 2021). Leaders emphasized creating a supportive atmosphere where teachers felt

empowered to explore and adopt innovative teaching practices (Jones, 2022). Strategies employed included organizing regular professional development workshops, providing continuous mentorship and coaching, and promoting peer learning communities (Adams & White, 2023). These initiatives were aimed at enhancing teachers' confidence and competence in using digital tools, thus improving instructional effectiveness (Lee et al., 2020).

Experiences of Teachers and Students in Enhancing Digital Literacy

Teachers reported positive experiences with leadership support, highlighting significant improvements in their ability to integrate digital tools into their teaching (Green & Martin, 2023). They appreciated the personalized support and the collaborative culture fostered by school leaders, which helped them adapt instructional strategies to meet diverse learning needs (Doe, 2022). Students, on the other hand, expressed increased engagement and enthusiasm for learning through digital platforms. They noted that the use of technology facilitated collaborative projects, research activities, and multimedia presentations, enhancing their critical thinking and problem-solving skills (Johnson & Lee, 2024). Both teachers and students acknowledged the transformative impact of digital literacy initiatives driven by school leadership (Adams & Jones, 2023).

Conclusions

Based on the findings of the study, the following conclusions were drawn:

1. At Central Balili Wesleyan Academy, administrators believe that developing digital literacy among instructors is essential to improving instruction and getting pupils ready for the digital age. To help teachers incorporate digital tools into their lessons, they use strategic initiatives like mentorship programs, professional development workshops, and resource distribution. This proactive approach fosters a culture of innovation and continual improvement within the school community by enhancing teachers' confidence and skill in using technology.
2. Teachers and students at Central Balili Wesleyan Academy reported positive experiences with school leaders' initiatives in digital literacy. Teachers noted increased professional growth and collaborative learning opportunities supported by leadership-driven professional development and resource allocation. Students expressed enthusiasm for interactive and enriched learning experiences facilitated by digital tools, which enhanced engagement and prepared them for future challenges. Overall, the study underscores the transformative impact of leadership support in advancing digital literacy and preparing students for success in a digitally connected world.

Recommendations

Based on the conclusions of the study, the following recommendations were drawn:

1. Provide ongoing professional development focused on digital literacy leadership for school leaders to better support teachers in integrating technology.

2. Prioritize student-centered approaches to technology integration, focusing on interactive and enriched learning experiences.
3. Strengthen partnerships with parents, community organizations, and industry stakeholders to support digital literacy initiatives and enrich student learning experiences.

Compliance with Ethical Standards

Before conducting the proposed study, the researcher undertook the following procedures to ensure ethical considerations in the conduct of a research. The researcher first secured written permission to float the researcher instruments from the school authorities of the intended informants of the study; A letter accompanied the survey/research instrument that was given to the target respondents/informants/subjects indicating among others; to wit: 1) the participants identity would not be divulged in the current study in compliance to the provisions of the Data Privacy Law; 2) all information and data from the participants/respondents/subjects of the current study would be held in strict confidentiality; 3) when the respondents/subjects answered the survey questionnaire/instrument, that means they agree to participate in the study as respondents; 4) the responses in the questionnaire/instrument is presented in aggregate and not as individual perceptions; and 5) the research conducted is primarily for academic requirement only. The researcher declares that all materials/findings borrowed from other sources and included in his/her thesis/dissertation are properly cited and acknowledged.

THE TEACHING-LEARNING ENVIRONMENT OF SENIOR HIGH SCHOOL IN THE CITY DIVISION OF ILAGAN: ITS EFFECT ON THE LEVEL OF MOTIVATION AND PERFORMANCE OF STUDENTS AND TEACHERS

Bonabel B. Dacquil, LPT, PhD

Manaring Integrated School, City of Ilagan, Isabela, Philippines

https://doi.org/10.5281/zenodo.13335453

ABSTRACT

This study examined the impact of the teaching-learning environment on the motivation and performance of Senior High School (SHS) teachers and students in the City Division of Ilagan during the 2022-2023 school year. Using a descriptive research design, data were gathered from 209 teachers and 372 students across 15 public SHS schools through questionnaires, informal interviews, and documentary analysis. Findings revealed that both groups had positive perceptions of the teaching-learning environment, with teachers rating support and resources higher, while students favored facilities. Intrinsic motivation was high among both teachers and students, though extrinsic motivation significantly influenced teacher performance. The study concluded that the teaching-learning environment, motivation, and performance are interconnected but vary according to school size, classification, and location. Recommendations include enhancing resources, feedback mechanisms, and monitoring to improve the SHS teaching-learning environment in Ilagan.

Keywords: *Teaching-learning environment, Motivation, Performance, Senior High School, City Division of Ilagan*

INTRODUCTION

Education is not a one-size-fits-all endeavor, rather, it is a complex interplay of various factors that shape the learning experience. Among these factors, the teaching-

learning environment emerges as a crucial element that can significantly influence the motivation and performance of both students and teachers.

The teaching-learning environment encompasses the physical, social, and instructional conditions in which education takes place. It is the overall context in which teachers facilitate learning and students engage in the educational process. The quality of the teaching-learning environment can have a significant impact on the motivation and performance of both students and teachers. A positive, engaging, and supportive environment can enhance student's motivation, learning outcomes, and overall well-being, while a negative or ineffective environment can have the opposite effect. For teachers, it can influence their job satisfaction, teaching effectiveness, and professional development.

Creating an effective teaching-learning environment involves various factors, including facilities, resources, support, environment, and technology. Each of these elements plays a crucial role in influencing the motivation and performance of both teachers and students. A well-designed teaching-learning environment fosters motivation by creating a positive and engaging atmosphere. Adequate resources and support empower teachers to deliver effective instruction, leading to improved student performance. Access to technology can enhance students' interest and engagement in learning, making the educational experience more enjoyable and relevant and positive interpersonal relationships. A supportive environment contributes to a sense of belonging, motivating both teachers and students to excel. Thus, a holistic approach to the teaching-learning environment that considers facilities, resources, support, environment, and technology can create an environment conducive to motivation and high performance for both teachers and students. Continuous efforts to adapt and improve these elements will contribute to the overall success of an educational institution.

In the Philippines, the teaching-learning environment particularly in public secondary education faced various challenges including resource limitations, poor classroom conditions, teacher quality and training, etc. Many schools, especially in remote areas, still face resource limitations such as inadequate classroom facilities, a lack of textbooks and learning materials, and limited access to technology and the Internet. In some areas, classrooms may not meet safety and sanitation standards due to overcrowded which can negatively impact the learning environment.

According to a government survey, many public schools need repair; school buildings need serious renovation or replacement and some schools still lack the needed facilities. Navarro (2022)**,** reveals that there are insufficient classrooms in some schools due to an increased number of enrolments. Moreover, classrooms in other areas do not meet quality and safety standards and deteriorate due to calamities. Regarding water sanitation and hygiene (WASH) facilities, the Philippines lags behind other countries in providing WASH facilities to schools. Concerning electricity access to schools, the Philippines still struggles to complete the electrification of schools. In addition, rates of computer and Internet access in schools are low compared with neighboring countries that have already achieved universal computer and Internet access for their schools.

Brilliantes et.al (2019) likewise found out that the facilities in some schools such as restrooms, clinics, canteen, and laboratories are not available or not functional, if present. Also, the delivery of tools and equipment is not yet complete and there have been instances that the tools or equipment being delivered has incorrect specifications or incorrect delivery of items like incorrect textbooks, laboratory chairs, and tables delivered for regular classrooms. This shows that there are still gaps in the teaching and learning environment of the schools which could affect the motivation and performance of teachers and students, the quality of education, and the overall effectiveness of the education system.

The City of Ilagan, particularly where this study was conducted, also encountered various gaps and challenges in the teaching-learning environment, particularly on inadequacy of school facilities and resources. As a teacher in one of these schools, the researcher personally encountered deficiencies in school facilities, encompassing inadequacies in laboratories, computer rooms, classrooms, and other essential resources which she believes affect the motivation and performance of the teachers and the students and the overall effectiveness of the education system. Consequently, she felt the need to reconcile these problems through communicating the result of the study to the relevant stakeholders to make positive changes in the teaching-learning environment. This situation prompted the researcher to conduct this study to further determine the effect of the teaching-learning environment on teachers and on students' level of motivation and performance with the end goal of enhancing their motivation and performance by improving the teaching-learning environment of the schools.

Conceptual Framework

Given that this study explores the impact of the teaching-learning environment on the motivation and performance of Senior High School (SHS) teachers and students, it draws upon several key concepts related to the educational environment and its influence on both groups. These concepts provide a foundation for understanding how various elements of the teaching-learning environment—such as physical infrastructure, instructional resources, social dynamics, and technological tools—affect the intrinsic and extrinsic motivation, as well as the overall performance, of both students and teachers. By examining these factors, the study seeks to uncover how a well-designed, supportive, and resource-rich educational environment can foster higher motivation levels and enhance academic and professional outcomes within the school setting.

The teaching-learning environment, often referred to as the "learning environment" or "educational environment," encompasses the physical, psychological, social, and instructional conditions and factors that influence and shape the teaching and learning process. It is the context in which education takes place and includes various elements and characteristics that can either enhance or hinder the effectiveness of education. This environment impacts both teachers and students and plays a significant role in determining the quality of education. Havidz and Mujakiah (2023) define the term as the premise and all facilities for daily learning activities. The learning environment is part of the learning process to achieve learning objectives, and the environment affects the

teaching and learning activities of the school. The learning environment is the environment, both physical and social, that affects the learning process.

According to Balog (2018), the learning environment comprises some components that influence the student's learning curve including people; teaching materials, technical tools, and learning resources; curriculum, training, and instruction, and physical environment/learning space. The people are the individuals that affect the student directly or indirectly through connection or relationship which can contribute to students' growth and success in their career aspect. The teaching materials, technical tools, and learning resources are the teaching materials, highly advanced tools, or other instructional resources that are aligned with the curriculum as a part of student learning support. The curriculum, training, and instruction are the core foundations of the learning process; they influence one another and play vital roles in facilitating the flow of knowledge and delivery of instructional content/curriculum. The physical environment/learning space refers to the physical setting of the learner's environment which should evoke positive responses and hold the interests of those who inhabit it. In addition to this, technology was also found as one component of the teaching and learning environment that increases student motivation and joy of learning if used in the classroom (Wieking, 2016).

Based on the components given by Balog, the researcher identified key components that play a significant role in influencing the motivation and performance of both teachers and students. These components include facilities, support, environment, resources, and technology.

Facilities encompass various aspects such as classrooms, laboratories, and libraries, essential for educational activities. Well-designed and equipped classrooms contribute to a positive learning environment, with comfortable seating, proper lighting, and effective use of space. Access to specialized spaces like laboratories and a well-organized library enhances the overall quality of education.

Support is another crucial component, involving assistance, resources, and services provided to teachers and students. Adequate administrative support, efficient logistics, and communication systems enable teachers to focus on teaching, leading to improved student performance. Training and professional development opportunities for teachers also contribute to their motivation and ability to provide high-quality education.

The environment, as a component, influences motivation by fostering diversity and inclusivity. A diverse and inclusive environment creates a sense of belonging, positively impacting the motivation and performance of both teachers and students.

Resources, including up-to-date textbooks and supplementary materials, are essential for effective teaching and learning. The availability and effective use of classroom resources contribute to a dynamic and engaging educational experience, positively influencing motivation and performance.

Lastly, technology plays a pivotal role in the digital age. Its effective integration into educational practices enhances engagement, facilitates interactive learning, and broadens access to information. The proper use of technology positively impacts the motivation and performance of both teachers and students in the educational process.

Indeed, a well-designed teaching-learning environment with adequate facilities, resources, support, a positive atmosphere, and appropriate technology can contribute to the motivation and performance of both teachers and students. When these elements are effectively combined, they create a dynamic and inspiring educational setting that positively influences the motivation and performance of both teachers and students.

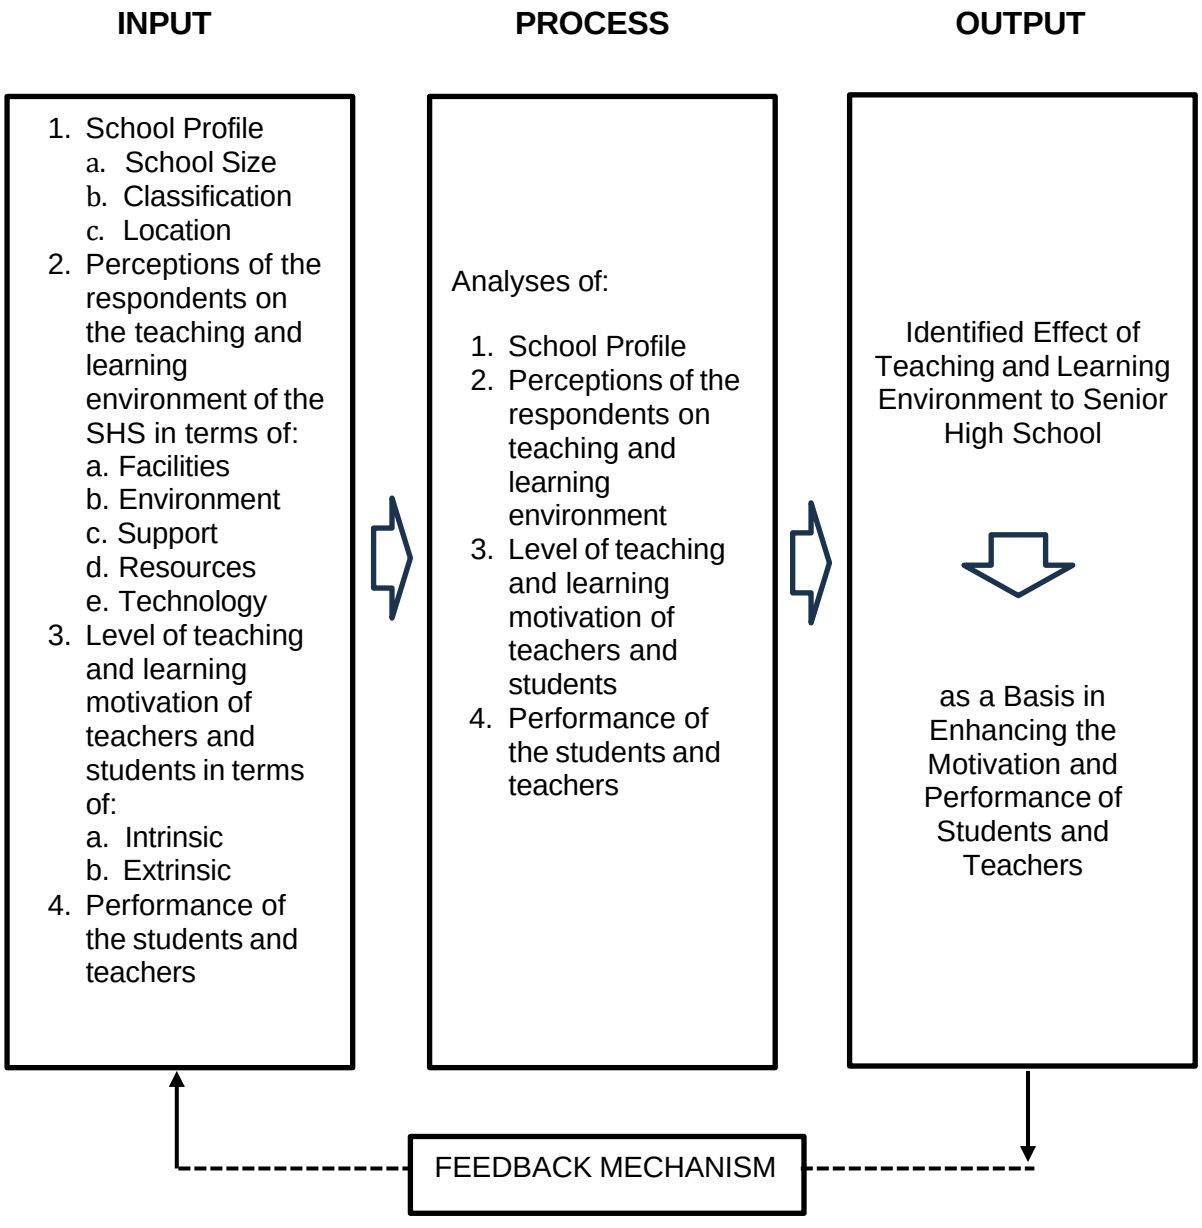

Figure 1. The Input-Process-Output Model of the Study

With the end goal of determining the effect of the teaching and learning environment on teachers' and students' levels of motivation and performance, this study was guided by the research paradigm.

The input frame of the study consists of the profile of the school which includes school size, classification, and location. These data formed part of the study for it has a great impact on the teaching and learning environment. The data on the perceptions of the respondents on the teaching and learning environment of the SHS in terms of facilities, environment, support, resources, and technology also formed part of this study for the researcher to assess the schools' teaching and learning environment. The core of the study is the data gathered on the perceived level of intrinsic and extrinsic motivation as well as the performance of the respondents.

The process indicates the steps and employment of statistical tools to analyze and interpret the data gathered. The output of this study indicates the main purpose of this study which is the enhancement of students' and teachers' motivation and performance which the researcher believes can help to further improve the quality of education, particularly in the Senior High School.

Research Questions

This study aimed to determine the effect of the learning environment on Senior High School teachers' and students' level of motivation and performance in the City Division of Ilagan for the school year 2022-2023.

Specifically, this study sought to answer the following questions:

1. What is the profile of the SHS in the City of Ilagan in terms of:
    a. School Size
    b. School Classification
    c. School Location
2. How do the respondents perceive the teaching and learning environment of the SHS in terms of:
    a. Facilities
    b. Environment
    c. Support
    d. Resources
    e. Technology
3. Is there a significant difference in the perception of the two groups of respondents on the teaching-learning environment in terms of:
    a. Facilities
    b. Environment
    c. Support
    d. Resources
    e. Technology
4. Is there a significant difference in the perception of the respondents when grouped according to profile?

5. What is the level of teaching and learning motivation of teachers and students in terms of:
    a. intrinsic
    b. extrinsic
6. Is there a significant difference in the level of motivation of the respondents in terms of:
    a. intrinsic
    b. extrinsic
7. Is there a significant difference in the level of motivation of the respondents when grouped according to profile?
8. What is the performance of the students and teachers?
9. Is there a significant relationship between and among the perceived teaching and learning environment, level of motivation, and performance of the respondents?

METHODOLOGY

Research Design

The researcher used the descriptive method of research in completing the study. According to Calderon and Gonzales (1993), this method of research is proper for a fact-finding study with adequate and accurate interpretation of the findings. It describes with emphasis what exists such as conditions, practices, situations, or any phenomena.

This method is considered appropriate for this study since it aims to describe the effect of the teaching-learning environment on SHS teachers' and students' levels of motivation and performance.

Research Locale

The research was conducted in public schools offering the SHS Program in the City Division of Ilagan. The schools coming from urban areas include Isabela National High School and Isabela School of Arts and Trades. The schools coming from rural areas include Sta. Isabel National High School, Isabela School of Arts and Trades-Annex, Gayong-Gayong Integrated School, Rang-Ayan National High School, San Lorenzo Integrated School, Managing Integrated School, Lupigue Integrated School, San Rafael National High, San Antonio National Agro-Industrial and Vocational High School, Dappat Integrated School, Ilagan West National High School, Sindun Bayabo Integrated School and San Pedro Integrated School.

Selection and Description of the Respondents

The respondents of this study were the public teachers and students of the 15 schools implementing the SHS Program in the City Division of Ilagan for the school year 2022-2023. The teacher respondents include full-time and part-time SHS teachers

teaching grades 11 and 12 students. The student respondents were the selected grades 11 and 12 students enrolled at public SHS in the City Division of Ilagan. The student respondents were selected using Slovin's formula. For the students to have an equal chance of becoming respondents, the researcher divided the sample into two meanings, 50% grade 11 and 50% grade 12. Then draw lots were done. Table 1 presents the distribution of the respondents by school.

Table 1. Respondents of the Study

School	Teachers	Students	
		Enrolment	Sample
1. Isabela National High School	65	2500	172
2. Isabela School of Arts and Trade- Main	44	1100	76
3. Rang-Ayan National High School	10	323	22
4. Sta. Isabel National High School	11	206	14
5. San Rafael National Vocational High School	7	178	12
6. San Antonio National Agro- Industrial and Vocational High School	7	186	13
7. Ilagan West National High School	8	117	8
8. ISAT Cabannungan Annex	6	112	8
9. Manaring Integrated School	8	165	11
10. San Lorenzo Integrated School	9	172	12
11. Lupigue Integrated School	7	86	6
12. Dappat Integrated School	7	94	7
13. Gayong-Gayong Integrated School	7	78	5
14. Sindun Bayabo Integrated School	6	48	3
15. San Pedro Integrated School	7	45	3
TOTAL	209	5410	372

Data Gathering Instruments

The following tools were used to gather the needed data for the study.

Questionnaire. The questionnaire was the main data-gathering instrument. It is a researcher-made questionnaire that was validated through pilot testing. It is divided into three parts. The first part of the questionnaire deals with the school profile which includes school size, classification, and location. The second part is composed of statements that assess the perceptions of the respondents on the school teaching-learning environment in terms of facilities, resources, technology, environment, and support. The last part is composed of statements that determine the respondents' level of teaching and learning motivation.

Informal Interview. This was also conducted by the researcher to validate the responses of the respondents in the questionnaire. This method assisted the respondents by clarifying some ambiguous parts that may defeat the real purpose of the study.

Documentary Analysis. This was used by the researcher to gather the data on the school profile, the general average of the students which was taken from their form 138 (Learner's Report Card), and the performance of the teachers which was taken from their IPCRF rating for the school year 2022-2023.

Data Gathering Procedure

To ensure that valid data were gathered in the conduct of the study, the researcher followed sets of procedures, and observing protocols, especially in floating the questionnaire.

The researcher sought the approval of the Schools Division Superintendent for the conduct of this study. The approval of the superintendent served as the passport of the researcher in gathering pertinent data by administering the questionnaire to the respondents in the different schools implementing the Senior High School Program in the City Division of Ilagan. The researcher personally administered the questionnaire through a scheduled meeting with the respondents.

The questionnaires were retrieved immediately after the respondents have answered completely and accurately the needed data. Data were tabulated and analyzed to realize the purpose of this study.

RESULTS AND DISCUSSION

1. Profile of Schools

a. School Size

Table 2. Frequency and Percentage Distribution of the Schools in Terms of School Size

School Size	Population	Frequency	Percentage
Small	Less than 440	13	86.67
Medium	441-840	0	0
Large	841-1,240	1	6.67
Very Large	1,240 and above	1	6.67
Total		15	100

Table 2 presents the frequency and percentage distribution of schools in terms of school size. The majority of the schools, 13 or 86.67 percent have enrolment populations of less than 440. These include Rang-Ayan National High School, Sta. Isabel National High School, San Rafael National Vocational High School, San Antonio National Agro-Industrial and Vocational High School, Ilagan West National High School, ISAT Cabannungan Annex, Manaring Integrated School, San Lorenzo Integrated School, Lupigue Integrated School, Dappat Integrated School, Gayong-Gayong Integrated School, Sindun Bayabo Integrated School, and San Pedro Integrated School; one or 6.67 percent has a population of 841- 1,240 which is Isabela School of Arts and Trade- Main, and another one or 6.67 percent is in the bracket of 1,240 and above enrolment population namely, Isabela National High School.

The data implies that most of the school respondents in the City Division of Ilagan belong to small-sized of population based on the classification set as per DepEd Order no. 19 series of 2016 where schools with a population of less than 440 are considered small schools, those with a 441-840 enrolment population are considered medium schools, those with an 841-1240 population are categorized as large schools and those with a 1,240 and above population are categorized as a very large schools.

b. School Classification

Table 3. Frequency and Percentage Distribution of the Schools in Terms of School Classification

School Classification	Frequency	Percentage
National	6	40
Integrated	9	60

Stand- Alone	0	0
Total	15	100

Table 3 shows the frequency and percentage distribution of schools in terms of school classification. Of the 15 respondent schools, there are nine or 60 percent are classified 'Integrated' including Manaring Integrated School, San Lorenzo Integrated School, Lupigue Integrated School, Dappat Integrated School, San Pedro Integrated School, Isabela School of Arts and Trade- Main, ISAT Cabannungan Annex, Gayong-Gayong Integrated School, and Sindun Bayabo Integrated School; while six or 45 percent belong to the 'National' school classification, namely, Isabela National High School, Rang-Ayan National High School, Sta. Isabel National High School, San Rafael National Vocational High School, San Antonio National Agro-Industrial and Vocational High School, and Ilagan West National High School.

Data reveals that the majority of the schools in the City of Ilagan are under the Integrated school classification. This further means that the schools offering the SHS Program also offer kindergarten, elementary, and junior high school and share the same school head and other resources.

The said finding was supported by a substitute bill entitled "An Act Ensuring Access to Free Secondary Education by Converting the Public Elementary Schools into Integrated Schools" which seeks to ensure access of elementary graduates to quality public high school education through the establishment of integrated schools providing complete basic education. This act could be the main reason why a majority of SHS schools in the City of Ilagan belong to the Integrated School Classification.

c. School Location

Table 4. Frequency and Percentage Distribution of the Schools in Terms of School Location

School Location	Frequency	Percentage
Urban	2	13.33
Rural	13	86.67
Total	15	100

Table 4 reveals the frequency and percentage distribution of schools in terms of school location. There 13 or 86.67 percent of schools are located in rural areas including Manaring Integrated School, San Lorenzo Integrated School, Lupigue Integrated School, Dappat Integrated School, San Pedro Integrated School, ISAT Cabannungan Annex, Gayong-Gayong Integrated School, Sindun Bayabo Integrated School, Rang-Ayan National High School, Sta. Isabel National High School, San Rafael National Vocational High School, San Antonio National Agro-Industrial and Vocational High School, and Ilagan West National High School; while only 2 or 13.33 percent are located in urban areas namely, Isabela National High School and Isabela School of Arts and Trade.

It can be seen in the table that the majority of the school respondents are in rural areas. This is because of the effort of the government to make education accessible to all, especially to the rural communities to reduce the number of out-of-school youths in the country through “The Integrated Public Schools Act of 2016” which seeks to ensure access to elementary graduates to quality public high school education through the establishment of integrated schools providing complete basic education. According to Rep. Vilma Santos-Recto, the creation of integrated schools will allow elementary graduates, especially from rural communities, to continue their education at a lesser cost, especially on travel expenditures. This will also result in savings for the government as facilities of existing elementary schools may be utilized for the use of incoming high school students with only repairs and a few additional classrooms to be constructed, rather than constructing a separate high school in the area.

The Teaching and Learning Environment of the Senior High Schools in the City Division of Ilagan as perceived by the respondents

a. Facilities

Table 5. The Teaching and Learning Environment of the Senior High Schools in the City Division of Ilagan as Perceived by the Respondents in Terms of Facilities

Facilities	Teachers		Students	
	Weighted Mean	Qualitative Description	Weighted Mean	Qualitative Description
1. The school has available classrooms/Laboratories/Shops and other learning facilities.	3.09	Agree	3.16	Agree
2. Classrooms are equipped with electric fans.	3.45	Strongly Agree	3.28	Strongly Agree
3. The school has TVL and non-TVL tools and equipment.	2.89	Agree	3.16	Agree
4. The school has adequate water, health and sanitation facilities	3.30	Strongly Agree	3.26	Strongly Agree
5. The school has a functional library.	2.79	Agree	3.21	Agree
6. The school has a functional clinic.	3.32	Strongly Agree	3.38	Strongly Agree
7. The school has a sports facility with required equipment.	2.62	Agree	3.10	Agree
8. The classroom has enough seats and desks for every student.	3.21	Agree	3.15	Agree
9. The school has available buildable space for the construction of SHS buildings.	3.16	Agree	3.15	Agree
10. Gender Sensitive comfort rooms are available.	3.08	Agree	2.99	Agree
11. A school- managed canteen is operational.	3.19	Agree	3.22	Agree

12. The school has safe facilities in place to address hazard threats (e.g. fire exits, fire extinguishers, appropriate electrical wirings).	3.38	Strongly Agree	3.34	Strongly Agree
Average Weighted Mean	3.12	Agree	3.20	Agree

Table 5 provides data on the teaching and learning environment of the Senior High Schools in the City Division of Ilagan as perceived by the respondents in terms of facilities.

As gleaned from the table, the teacher and student respondents presented the same level of assessment on the teaching-learning environment of the Senior High Schools in terms of facilities. The two groups of respondents rated it ‘Agree’ with an average mean of 3.12 and 3.20 respectively.

The items on the availability of classrooms/Laboratories/Shops, TVL and Non-TVL tools and equipment, functional library, sports facility with the required equipment, seats and desks for every student, buildable space for the construction of SHS buildings, gender sensitive comfort rooms, and the canteen was rated by both teacher and student respondents ‘Agree’; while the availability of classrooms with equipped electric fans, water, health and sanitation facilities, functional clinic and safe facilities in place to address hazard threats (e.g. fire exits, fire extinguishers, appropriate electrical wirings) have been rated ‘Strongly Agree’.

It is also noted that items on availability of sports facility with required equipment have been rated at the lowest mean by the teachers and availability of Gender Sensitive comfort rooms by the students. This means that there are schools that still lack the required facilities which is believed to be a crucial component of a conducive teaching and learning environment.

The cited finding is supported by Ganaden et. al (2017) who averred that public schools face diverse problems that hinder the delivery of quality education and some of these are inadequacy of facilities like sports facilities that cause students ‘reluctance to sports participation.

Furthermore, as revealed in the interview with some students who belong to the third gender or "non-binary" they feel excluded or uncomfortable using restrooms that are designated for a specific gender. This discomfort can then contribute to a negative school experience and may even impact a student's overall well-being. This is contrary to the provision of DepEd Order no. 32, s. 2017 where schools should ensure that all facilities are safe, functional, adequate, sanitary, gender and culture-sensitive, and accessible to persons with Disabilities (PWDs).

b. Environment

Table 6. The Teaching and Learning Environment of the Senior High Schools in the City Division of Ilagan as Perceived by the Respondents in Terms of Environment

Environment	Teachers		Students	
	Weighted Mean	Qualitative Description	Weighted Mean	Qualitative Description
1. Classrooms have sufficient space and have the convenience for teachers and students to move and work.	3.33	Strongly Agree	3.13	Agree
2. Classrooms have convenient seating arrangements suitable for activity-based learning.	3.37	Strongly Agree	3.18	Agree
3. Classrooms have sufficient light and ventilation.	3.42	Strongly Agree	3.11	Agree
4. The school ensures a teaching learning environment that promotes individual and team health and well-being.	3.56	Strongly Agree	3.25	Strongly Agree
5. The school implements policies and procedures for safe, secure and equitable learning environment.	3.63	Strongly Agree	3.32	Strongly Agree
6. The school promotes inclusive learning environment.	3.63	Strongly Agree	3.26	Strongly Agree
7. The school ensures efficient management of physical and IT- enabled learning structures.	3.44	Strongly Agree	3.19	Agree
8. The school ensures a learning environment that fosters health and well- being of learners and school personnel.	3.55	Strongly Agree	3.16	Agree
9. The school establishes a mechanism for a	3.55	Strongly Agree	3.16	Agree

resilient learning environment.				
10. The school ensures a learning environment that fosters positive discipline.	3.61	Strongly Agree	3.20	Agree
11. The teachers have their own lounge and/or work area.	3.28	Strongly Agree	3.26	Strongly Agree
12. The school practices proper waste disposal.	3.35	Strongly Agree	3.08	Agree
Average Weighted Mean	3.48	Strongly Agree	3.19	Agree

Table 6 presents data on the teaching and learning environment of the Senior High Schools in the City Division of Ilagan as perceived by the respondents in terms of environment.

As shown in the table, the teacher and student respondents differ in their perceptions in terms of environment. The teacher respondents rated it ‘Strongly Agree’ with an average weighted mean of 3. 48; while the student respondents rated it ‘Agree’ with an average weighted mean of 3. 19.

The results indicate that the teacher respondents have a better perception of the teaching-learning in terms of environment compared to the student respondents. Teachers may have highly positive perceptions of their learning environment because they have years of experience in education, which can provide them with a broader perspective on the challenges and successes in the classroom while students’ experience is more limited, and they may not have the same long-term view of the educational process. Moreover, teachers are more aware of the different policies and guidelines set by the Department of Education regarding the teaching and learning environment including classroom size requirements under DO 64, S. 2017 also known as “Establishing the Minimum Performance Standards and Specifications (MPSS) for DepEd School Buildings” that guide the Department and other stakeholders in the preparation of plans—architectural, structural, electrical, fire protection and sanitary— to ensure the comfort and safety of the occupants of the school buildings.

c. Support

Table 7. The Teaching and Learning Environment of the Senior High Schools in the City Division of Ilagan as Perceived by the Respondents in Terms of Support

Support	Teachers		Students	
	Weighted Mean	Qualitative Description	Weighted Mean	Qualitative Description
1. The school has an allotment of SHS MOOE and capital outlay.	3.51	Strongly Agree	3.08	Agree
2. The school has non-teaching staff	3.11	Agree	3.19	Agree
a. Registrar	3.13	Agree	3.16	Agree
b. SHS Administrative Assistant	3.52	Strongly Agree	3.24	Agree
c. Librarian	2.47	Disagree	3.08	Agree
d. SHS Guidance counselor	2.92	Agree	3.27	Strongly Agree
e. ICT Coordinator	3.65	Strongly Agree	3.20	Agree
3. There are enough teachers to teach the SHS students with a ratio of 40:1.	3.00	Agree	3.07	Agree
4. Technical assistance is provided to teachers.	3.49	Strongly Agree	3.19	Agree
5. Classroom observation is regularly conducted.	3.72	Strongly Agree	3.17	Agree
6. There is a provision of school supplies to teachers.	3.39	Strongly Agree	3.17	Agree
7. All teachers are trained on the core learning areas and specialized subjects.	3.37	Strongly Agree	3.27	Strongly Agree
8. Teachers are regularly trained in new and effective teaching-learning strategies.	3.39	Strongly Agree	3.22	Agree
9. The school has available industry, office, and agency partners as work immersion venues.	3.64	Strongly Agree	3.24	Agree
10. The school has available funds for the	3.03	Agree	3.12	Agree

insurance of the SHS learners.				
11. The school has a Parent-Teacher Association (PTA) whose elected leaders meet regularly.	3.62	Strongly Agree	3.26	Strongly Agree
12. The school has organized and capacitated the School Disaster Risk Reduction and Management Committee (SDRRMC)	3.55	Strongly Agree	3.24	Agree
Average Weighted Mean	3.34	Strongly Agree	3.19	Agree

Table 7 reflects the teaching and learning environment of the Senior High Schools in the City Division of Ilagan as perceived by the respondents in terms of Support.

The table shows that the teacher respondents assessed the teaching and learning environment of the Senior High Schools in terms of Support to 'Strongly Agree' on a mean of 3.34 and 3.19 or 'Agree' by the students, respectively. This means that teacher and student respondents perceived differently the teaching-learning environment in terms of support. The teachers have a better perception of the teaching-learning environment in terms of support except for the availability of non-teaching staff, particularly the librarian and guidance counselor. Teachers are more aware that there are indeed no available librarians and guidance counselors in their school compared to students. This is perhaps the reason why their perception rating on the availability of non-teaching staff is lower.

Moreover, the items availability of non-teaching staff particularly librarians, and adequacy of teachers to teach the SHS students with a ratio of 40:1 obtained the lowest weighted means for both teacher and student respondents. The findings indicate that not all schools in the City Division of Ilagan have non-teaching staff which is contrary to the provision of DepEd Order no. 19 s. 2016 where Senior High Schools should have the required staffing pattern. Moreover, some schools do not follow the DepEd's standard student-teacher ratio.

According to the teachers at these schools in a follow-up interview conducted, they were forced to congest their classes due to classroom shortages, inadequate infrastructure, insufficient teaching staff, or a rapid increase in student enrollment.

d. Environment

Table 8. The Teaching and Learning Environment of the Senior High Schools in the City Division of Ilagan as Perceived by the Respondents in Terms of Resources

Resources	Teachers		Students	
	Weighted Mean	Qualitative Description	Weighted Mean	Qualitative Description
1. The school has available books and other reference materials.	3.04	Agree	3.14	Agree
2. The school has available learner's materials in all learning areas.	2.92	Agree	3.09	Agree
3. The school has accessible instructional materials.	3.13	Agree	3.14	Agree
4. The school has available teacher's guides in all learning areas.	3.11	Agree	3.17	Agree
5. The school has available curriculum guides in all learning areas.	3.40	Strongly Agree	3.24	Agree
6. The school provides students access to ADM, ALS, and/or other learning materials for their use during emergencies.	3.28	Strongly Agree	3.09	Agree
7. Each classroom has a chalkboard or whiteboard.	3.63	Strongly Agree	3.30	Strongly Agree
8. Classrooms have adequate chairs and tables for students.	3.25	Strongly Agree	3.25	Strongly Agree
9. The school has adequate teacher's tables and chairs.	3.43	Strongly Agree	3.24	Agree
10. Classrooms have functional CIA boards.	3.39	Strongly Agree	3.28	Strongly Agree
11. All classrooms have adequate emergency/first aid kits that are readily available.	3.22	Agree	3.15	Agree

Average Weighted Mean	3.25	Strongly Agree	3.19	Agree

Table 8 presents the responses of the respondents on the teaching and learning environment of the Senior High Schools in the City Division of Ilagan as perceived by the respondents in terms of resources.

Data revealed, that the teacher respondents have better perceptions of the teaching and learning environment in terms of resources compared to the student-respondents with an average weighted mean of 3. 25 for the teacher- respondents and 3.19 for the student- respondents. Teachers may have a more positive perception of the teaching and learning environment in terms of resources compared to students because they are more familiar with the overall resources and facilities within the school, as they work closely with them daily. They may have access to information about the school's resources and are more attuned to the various tools and materials at their disposal. On the other hand, students might not be as well informed about the full range of resources available in the school. Their perspective may be limited to what they directly encounter in classrooms, and they might not have a comprehensive understanding of the broader array of educational tools and facilities.

Both the teacher and student respondents have the same perceptions on items availability of books and other reference materials, availability of learner's materials in all learning areas, availability of instructional materials, availability of chalkboard or whiteboard, availability of chairs and tables for students, availability of functional CIA board and availability of emergency/first aid kits while they differ in items availability of curriculum guides in all learning areas, availability of ADM, ALS, and/or other learning materials for their use during emergencies and availability of teacher's table and chair.

The item on the availability of learner's materials in all learning areas obtained the lowest weighted mean for both teacher and student respondents with average weighted means of 2.92 and 3.09, respectively.

The cited findings are supported by the study of Combalicer (2016) where one of the most pressing problems encountered by the teachers in the initial implementation of the K to 12 curriculum is the unavailability of modules for the different subject areas, lack of textbooks in the different subject areas, and very few available reading materials for project materials and research work. This problem can have negative effects on both students and teachers, impacting their motivation and performance in the educational setting. According to Maffea (2020), the lack of resources in classrooms cannot only cause extreme distress to the students and teachers, but they are unable to learn to their fullest potential because they are not being given the proper resources.

e. Technology

Table 9. The Teaching and Learning Environment of the Senior High Schools in the City Division of Ilagan as Perceived by the Respondents in Terms of Technology

Technology	Teachers		Students	
	Weighted Mean	Qualitative Description	Weighted Mean	Qualitative Description
1. The school has available ICT equipment.	3.45	Strongly Agree	3.19	Agree
2. Classrooms have multimedia and speakers.	3.05	Agree	3.08	Agree
3. The school has an accessible internet connection.	3.01	Agree	2.82	Agree
4. All classrooms have a television/projector.	3.16	Agree	3.15	Agree
5. Each classroom has a printer and scanner.	2.65	Agree	2.85	Agree
6. The school has a photocopier.	3.29	Strongly Agree	2.95	Agree
7. The school has a sound system.	3.44	Strongly Agree	3.18	Agree
8. The school has musical instruments.	2.35	Agree	2.99	Agree
9. The school has a functional Facebook page for school updates.	3.57	Strongly Agree	3.37	Agree
10. The school has a system to regularly check on the attendance of its pupils and address problems concerning non-attendance.	3.09	Agree	3.28	Strongly Agree
Average Weighted Mean	3.11	Agree	3.09	Agree

Table 9 presents the teaching and learning environment of the Senior High Schools in the City Division of Ilagan as perceived by the respondents in terms of technology. The two groups of respondents rated it ‘Agree’ or 3.11 (teachers) and 3.09 (students) weighted means, respectively.

The data reveal that both the teacher and student respondents have the same level of perception of the teaching-learning environment of the schools in terms of technology in general. However, the items on availability of ICT equipment, availability of photocopier, availability of sound system, and availability of functional school Facebook

page have different perceptions. Teachers have a more positive perception of the said items because they may have access to information about the school's technology infrastructure, including updates, improvements, and any limitations. This insider knowledge allows them to better gauge the overall technological environment within the school.

As shown in the table the items on availability of musical instruments and accessibility of internet connection gained the lowest means. This indicates that some schools in the City Division of Ilagan offering Senior High School Program still experiencing gaps in terms of resources particularly on internet accessibility which can have repercussions on motivation and performance of students and teachers.

Wherein according to Amponsah (2022) access to the Internet improves academic standards among students, as those with Internet access showed more significant progress in their academic performance than those who did not.

Table 10. Summary of the Teaching and Learning Environment of the Senior High Schools in the City Division of Ilagan as Perceived by the Respondents

Teaching and Learning Environment	Teachers		Students	
	Weighted Mean	Qualitative Description	Weighted Mean	Qualitative Description
1. Facilities	3.12	Agree	3.20	Agree
2. Environment	3.48	Strongly Agree	3.19	Agree
3. Support	3.34	Strongly Agree	3.19	Agree
4. Resources	3.25	Strongly Agree	3.19	Strongly Agree
5. Technology	3.11	Agree	3.09	Agree
Average Weighted Mean	3.26	Strongly Agree	3.17	Agree

Table 10 shows the summary of the teaching and learning environment of the Senior High Schools in the City Division of Ilagan as perceived by the two groups of respondents.

The teacher respondents generally rated the teaching-learning environment of the Senior High Schools ‘Strongly Agree’ with a 3.26 average weighted mean while the student respondents generally rated it ‘Agree’ with a 3.17 average weighted mean. This signifies that teachers have a better perception of the teaching-learning environment of the Senior High School compared to the student respondents considering the average weighted means.

Teachers have a more favorable perception of the teaching and learning environment compared to students due to their unique perspectives and professional roles. Teachers are deeply involved in the planning and execution of educational

activities, giving them a firsthand understanding of the facilities, support systems, environment, resources, and technology available. They interact with these elements daily, experiencing both their strengths and limitations. Additionally, teachers are responsible for adapting their teaching methods to cater to diverse student needs, which requires a nuanced understanding of the learning environment. In contrast, students may not be as attuned to the broader institutional considerations, and their perspective is often centered on their individual experiences within the classroom. Teachers, being stakeholders in the educational process, are also more likely to be aware of changes, updates, and challenges in the system, contributing to a more informed perception of the overall teaching and learning environment.

Comparison in the Perception of the Two Groups of Respondents on the Teaching-learning Environment

Table 11. Results of the Test of Significant Difference in the Perception of the Teachers and Students on the Teaching–Learning Environment

Variables	Mean		Probability of t	Remarks
	Teachers	Students		
Facilities	3.12	3.20	0.0467	Significant
Environment	3.48	3.19	0.0001	Significant
Support	3.34	3.19	0.0009	Significant
Resources	3.25	3.19	0.0470	Significant
Technology	3.11	3.09	0.4000	Not Significant

Table 11 presents the results of the test of significant differences in the perception of the teachers and students in the teaching-learning environment.

The results show that the t-probability values are less than 0.05 except for technology. Hence, the null hypothesis is rejected at a 0.05 level of significance. Thus, there is a significant difference in the perception of the teachers and students of the teaching-learning environment in terms of facilities, environment, support, and resources. It implies that the teachers' perception of the said four areas of the teaching-learning environment differs from that of the students. As indicated by the mean in the table, it further infers that the teachers have better perceptions of environment, support, and resources for they obtain the higher mean, while the students perceive better the teaching-learning environment in terms of facilities since they got the higher mean.

However, there is no significant difference in the perception of the teachers and students of the teaching-learning environment in terms of technology. Hence, the null hypothesis is accepted at a 0.05 significance level. It states that the teachers and the students do not differ from each other in their perceptions of technology. It shows that they have similarities in their perceptions of teaching and learning environments in terms of technology. Teachers and students often share similar perceptions regarding the availability and use of technology in the school environment for various reasons. One crucial factor is the establishment of a shared experience where both teachers and

students have consistent access to modern tools and resources. When the school fosters a collaborative learning environment that encourages the integration of technology into teaching and learning practices, it can lead to a collective positive perception.

Comparison in the Perception of the Respondents of the Teaching-learning Environment Grouped by Profile

a. Teachers

1. School Size

Table 12. Results of the Test of Significant Difference in the Perception of the Teachers on the Teaching-Learning Environment when Grouped According to School Size

Variables	Mean			Probability of F	Remarks
	Very Large	Large	Small		
Facilities and School Size	2.91	3.14	3.25	0.0008	Significant
Environment and School Size	3.28	3.52	3.60	0.0006	Significant
Support and School Size	3.36	3.36	3.30	0.0627	Not Significant
Resources and School Size	2.95	3.30	3.43	0.0000	Significant
Technology and School Size	3.00	3.02	3.22	0.0084	Significant

The results of the test of significant difference in the perception of the teachers on the teaching-learning environment, when grouped according to school size, are presented in Table 12.

It is revealed from the results that the probability values of F are less than 0.05 except for support. This signifies the rejection of the null hypothesis at a 0.05 level of significance. Therefore, there is a significant difference in the perception of the teachers of the teaching-learning environment in terms of facilities, environment, resources, and technology when grouped according to school size. It shows that the teachers from very large schools differ in their perceptions of the aforementioned areas from those who come from large and small schools. As evidenced by the mean in the table the teachers who belong to small schools have better perceptions of the teaching-learning environment on facilities, environment, resources, and technology for they obtain the higher mean.

On the other hand, there is no significant difference in the perception of the teachers of the teaching-learning environment in terms of support when grouped according to school size. Hence, the null hypothesis is accepted at a 0.05 significance

level. It implies that the teachers have similarities in their perceptions of support as one category of the teaching-learning environment regardless of the school size they belong.

This finding is supported by DO No. 31, s. 2016 – Implementing Guidelines on the Release and Utilization of Maintenance and Other Operating Expenses (MOOE) Allocations of Senior High Schools which states that the MOOE budget for every year depends upon the number of enrollees. MOOE is the allocated funds for public elementary and secondary schools that can be spent on activities and necessities that support the learning programs and help maintain a safe and healthy environment in schools.

2. School Classification

Table 13. Results of the Test of Significant Difference in the Perception of the Teachers on the Teaching Learning Environment when grouped according to School Classification

Variables	Mean		Probability of F	Remarks
	National	Integrated		
Facilities and School Classification	3.07	3.19	0.0310	Significant
Environment and School Classification	3.38	3.58	0.0206	Significant
Support and School Classification	3.37	3.31	0.0177	Significant
Resources and School Classification	3.17	3.37	0.0009	Significant
Technology and School Classification	3.09	3.12	0.0526	Not Significant

Table 13 displays the results of the test of significant differences in the perception of the teachers on the teaching-learning environment when grouped according to school classification.

The results reflect that the F-probability values are less than 0.05 except for technology. For this reason, the null hypothesis is rejected at a 0.05 level of significance. As a result, there is a significant difference in the perception of teachers on the teaching-learning environment in terms of facilities, environment, support, and resources when grouped according to school classification. It shows that the perception of the teachers who belong to integrated schools differs from those who come from national schools. It further notes as indicated by the mean in the table that the teachers who teach in integrated schools have a better perception of facilities, facilities, environment, and resources for they obtain the higher means. While the teachers of national schools perceive better support since they have the higher mean.

However, there is no significant difference in the perception of the teachers on the teaching-learning environment in terms of technology when grouped according to school

classification. Hence, the null hypothesis is accepted at a 0.05 significance level. It implies that both teachers of national and integrated schools have similarities in their perceptions of technology as one indicator of the teaching-learning environment.

Many schools in the Philippines, regardless of their classification, may face similar challenges when it comes to resources, including technological resources. Issues such as limited access to computers, internet connectivity, and relevant software can be prevalent in both national and integrated schools. This could be one of the reasons why teachers perceived similarly the teaching-learning environment in terms of technology regardless of their school classification. In a report released by the Philippine Star in 2023, the Philippines was among the countries reported to have insufficient computers in schools, leading to more disadvantaged students, especially in rural areas. Moreover, the lack of devices and digital infrastructure also makes it difficult for teachers to integrate technology into their professional tasks, according to the report.

3. School Location

Table 14. Results of the Test of Significant Difference in the Perception of the Teachers on the Teaching Learning Environment when grouped according to School Location

Variables	Mean		Probability of F	Remarks
	Urban	Rural		
Facilities and School Location	3.00	3.26	0.0006	Significant
Environment and School Location	3.37	3.60	0.0010	Significant
Support and School Location	3.36	3.32	0.0178	Significant
Resources and School Location	3.10	3.43	0.0000	Significant
Technology and School Location	3.01	3.21	0.0260	Significant

The results of the test of significant difference in the perception of the teachers on the teaching-learning environment when grouped according to school location are displayed in Table 14. It is evident from the results that the probability values of F are less than 0.05. Hence, the null hypothesis is rejected at a 0.05 level of significance. Thus, there is a significant difference in the perception of the teachers on the teaching-learning when grouped according to school location. It shows that the perception of teachers from urban schools differs from those who are from rural schools. This is evidenced by the mean in the table that the teachers whose schools are mean in the table that the teachers whose schools are located in rural areas have better perceptions of the teaching-learning environment in terms of facilities, environment, resources, and technology for they obtain the higher mean. Whereas the teachers from urban schools have a better perception of support since they got the higher mean. This contradicts the study by Hassan (2018) in which he stated that in urban schools all types of facilities are mostly available like

electricity, furniture, well-equipped classrooms, water, toilets, and teaching staff. But in rural areas these facilities are not available; electricity and furniture are not available.

b. Students

1. School Size

Table 15. Results of the Test of Significant Difference in the Perception of the Students on the Teaching-Learning Environment when grouped according to School Size.

Variables	Mean			Probability of F	Remarks
	Very Large	Large	Small		
Facilities and School Size	3.13	3.25	3.26	0.0111	Significant
Environment and School Size	3.15	3.09	3.30	0.0002	Significant
Support and School Size	3.20	3.20	3.17	0.8318	Not Significant
Resources and School Size	3.15	3.17	3.25	0.0094	Significant
Technology and School Size	3.05	3.12	3.12	0.3268	Not Significant

Table 15 discloses the results of the test of significant differences in the perception of the students on the teaching-learning environment when grouped according to school size.

The results reveal that the F- probability values are less than 0.05 except for support and technology. This signifies the rejection of the null hypothesis at a 0.05 level of significance. Therefore, there is a significant difference in the perception of the students of the teaching-learning environment in terms of facilities, environment, and resources when grouped according to school size. It shows that the students differ from each other in their perceptions of the aforementioned three areas of the teaching-learning environment when classified by school size. As indicated by the mean in the table, the students who belong to small schools have better perceptions of the said three areas for they have the higher mean. Teachers and students in small schools may have better perceptions of the teaching and learning environment since small schools often have smaller class sizes, which allow for more individualized attention from teachers. This can lead to a more supportive and personalized learning experience for students.

According to Blatchford et al. (2009), teachers in small classes are more likely to give individual attention to students, effectively control and manage the classroom, and build better relationships with students. Similarly, students in small classes may be more engaged in the classroom and more likely to interact with teachers and peers.

On the other hand, there is no significant difference in the perceptions of the students on the teaching-learning environment in terms of support and technology when

grouped according to school size. Hence, the null hypothesis is accepted at a 0.05 significance level. It implies that the students have similarities in their perceptions of support and technology regardless of their school size. One of the reasons that support this finding is the allocation of MOOE for public schools. MOOE or Maintenance and Other Operating Expenses, is a budgetary allocation provided by the Department of Education (DepEd) in many countries to support the day-to-day operations of schools. It includes funds for various needs such as utilities, supplies, and other operational expenses. The allocation of MOOE is uniform across schools of different sizes. This ensures that regardless of the school's size, there is an equitable distribution of funds for essential resources, materials, and support services based on the guidelines set as per DepEd Order No. 31, s, 2016.

2. School Classification

Table 16. Results of the Test of Significant Difference in the Perception of the Students on the Teaching-Learning Environment when Grouped according to School Classification

Variables	Mean		Probability of F	Remarks
	National	Integrated		
Facilities and School Classification	3.16	3.26	0.0122	Significant
Environment and School Classification	3.19	3.20	0.4888	Not Significant
Support and School Classification	3.18	3.20	0.3846	Not Significant
Resources and School Classification	3.17	3.23	0.0340	Significant
Technology and School Classification	3.07	3.11	0.0382	Significant

The results of the test of significant differences in the perception of the students on the teaching-learning environment when grouped according to school classification are disclosed in Table 16.

It is evident from the results that the probability values of F are less than 0.05 except for environment and support. For this reason, the null hypothesis is rejected at a five percent significance level. As a result, there is a significant difference in the perception of the students of the teaching-learning environment in terms of facilities, resources, and technology. It states that students from integrated schools differ in their perceptions of the aforesaid areas of the teaching-learning environment from those students at national schools. It is further inferred, as indicated by the mean in the table, that the students from the integrated schools have better perceptions of facilities, resources, and technology for they obtain the higher mean.

However, there is no significant difference in the perceptions of the students on the teaching-learning environment in terms of environment and support when grouped according to school classification. Hence, the null hypothesis is accepted at five percent significance level. It implies that the students have similarities on their perceptions of the teaching-learning environment along the said two areas regardless of their school classification.

3. School Location

Table 17. Results of the Test of Significant Difference in the Perception of the Students on the Teaching-Learning Environment when Grouped according to School Location

Variables	Mean		Probability of F	Remarks
	Urban	Rural		
Facilities and School Location	3.17	3.36	0.0500	Significant
Environment and School Location	3.13	3.30	0.0080	Significant
Support and School Location	3.20	3.17	0.0862	Not Significant
Resources and School Location	3.15	3.25	0.0276	Significant
Technology and School Location	3.07	3.12	0.0221	Significant

Table 17 exhibits the results of the test of significant differences in the perception of the students on the teaching-learning environment when grouped according to school location.

The results reflect that the F- probability values are less than 0.05 except for support. Hence, the null hypothesis is rejected at a five percent level of significance. Thus, there is a significant difference in the perception of the students of the teaching-learning environment in terms of facilities, environment, resources, and technology when grouped according to school location. It shows that the students perceive differently the teaching-learning environment in the aforesaid four areas when clustered by school location. As evidenced by the mean in the table, the students who are from rural schools have better perceptions of the teaching-learning environment along with facilities, environment, resources, and technology for they got the higher mean.

On the other hand, there is no significant difference in the perceptions of the students on the teaching-learning environment in terms of support when grouped according to school classification. Hence, the null hypothesis is accepted at a 0.05 significance level. It states that the students have similarities in their perceptions of support as one of the areas of the teaching-learning environment regardless of their school classification. This is because the schools receive equal support from the DepEd through MOOE which provides the financial resources necessary for the effective and efficient operation of educational institutions.

The Level of Teaching and Learning Motivation of Teachers and Students

a. Intrinsic

Table 18. The Level of Teaching and Learning Motivation of Teachers and students in terms of Intrinsic

Intrinsic	Teachers		Students	
	Weighted Mean	Qualitative Description	Weighted Mean	Qualitative Description
I feel excited going to school every day.	3.39	Highly Motivated	3.25	Highly Motivated
I enjoy the atmosphere in my classroom.	3.39	Highly Motivated	3.12	Motivated
I feel at home in my school. It is my second home.	3.43	Highly Motivated	3.26	Highly Motivated
I feel safe and comfortable in the school.	3.43	Highly Motivated	3.23	Motivated
I feel confident when I am at school.	3.47	Highly Motivated	3.09	Motivated
I am satisfied with the culture of the school.	3.23	Motivated	3.20	Motivated
My school embarks good values necessary for life.	3.40	Highly Motivated	3.36	Highly Motivated
The school where I work/learn contributes to my recognition.	3.42	Highly Motivated	3.32	Highly Motivated
I feel motivated to do my schoolwork.	3.33	Highly Motivated	3.18	Motivated
I perform my best in my daily work/task.	3.50	Highly Motivated	3.21	Motivated
I can use my creativity in the school where I work/study.	3.47	Highly Motivated	3.30	Highly Motivated
My potentials are fully utilized in this school.	3.40	Highly Motivated	3.17	Motivated
I am satisfied with my performance in school.	3.46	Highly Motivated	3.21	Motivated
I have authority to take decisions about my teaching/learning.	3.56	Highly Motivated	3.27	Highly Motivated
I am motivated to assist the school in meeting its objectives/vision and mission.	3.46	Highly Motivated	3.17	Motivated

I am adequately treated/ respected by my teachers/school head.	3.54	Highly Motivated	3.36	Highly Motivated
I have a good relationship with my colleagues, students, and their parents.	3.58	Highly Motivated	3.34	Highly Motivated
My colleagues inspire me, they are the best people to work with.	3.40	Highly Motivated	3.23	Motivated
I appreciate the management/teaching style of my school head/teachers.	3.31	Highly Motivated	3.40	Highly Motivated
My school head/teachers listen to my concerns and support reasonable suggestions.	3.43	Highly Motivated	3.31	Highly Motivated
My school head/teacher clearly communicate job performance expectations.	3.34	Highly Motivated	3.36	Highly Motivated
My school head/teacher has a professional judgement and is fair in his/her rating/grade to me.	3.45	Highly Motivated	3.12	Motivated
I am encouraged by my school head/teachers to perform well.	3.51	Highly Motivated	3.33	Highly Motivated
Average Weighted Mean	3.43	Highly Motivated	3.25	Highly Motivated

Table 18 presents the level of teaching and learning motivation of teachers and students in terms of Intrinsic.

The data reveal that both teacher and student respondents have the same level of teaching and learning motivation in terms of intrinsic. They rated it as “Highly Motivated” with a 3.43 average weighted mean for teacher- respondents and 3.25 for student-respondents. However, on some items such as “I enjoy the atmosphere in my classroom”, “I feel safe and comfortable in the school”, “I feel confident when I am at school”, “I feel motivated to do my schoolwork”, “I perform my best in my daily work/task”, “My potentials are fully utilized in this school”, I” am satisfied with my performance in school”, “I am motivated to assist the school in meeting its objectives/vision and mission”, “My

colleagues inspire me, they are the best people to work with", and "My school head/teacher has a professional judgment and is fair in his/her rating/grade to me" the teacher- respondents displayed a higher level of motivation compared to the student-respondents.

A combination of factors, including a positive learning environment, supportive relationships, recognition of achievements, rewards, clear goals, and growth opportunities, contributes to the high motivation levels observed among both learners and teachers. Schools in the City Division of Ilagan often implement recognition programs to honor outstanding teachers, administrators, and staff members who demonstrate excellence in their roles. This may involve awards ceremonies, certificates of appreciation, or public acknowledgment of their achievements. Similarly, students were also given recognition for their achievements and accomplishments. Thus, by fostering these conditions, schools can create environments where motivation thrives, leading to improved outcomes for both teachers and students.

b. Extrinsic

Table 19. The Level of Teaching and Learning Motivation of Teachers and students in terms of Extrinsic

Extrinsic	Teachers		Students	
	Weighted Mean	Qualitative Description	Weighted Mean	Qualitative Description
I am motivated by the salary, benefits, and allowances I am receiving.	3.23	Motivated		Motivated
I am motivated by the benefits I am receiving in this school.			3.22	
Promotions are properly implemented.	2.96	Motivated		Motivated
The school has a dropout reduction program, 100 percent grade level promotion.			3.05	
I receive sufficient and appropriate performance recognition.	3.32	Highly Motivated	3.20	Motivated
The school provides me opportunities to actively participate in school decisions.	3.27	Highly Motivated	3.25	Highly Motivated
The school provides me opportunities for learning/professional development.	3.34	Highly Motivated	3.30	Highly Motivated

I have appropriate equipment to perform my duties/task effectively.	3.25	Highly Motivated	3.13	Motivated
I have access to teaching/learning materials and resources in my school.	3.38	Highly Motivated	3.16	Motivated
The facilities in my school boost my morale.	3.21	Motivated	3.11	Motivated
WASH facilities provide me comfortable teaching- learning environment.	3.35	Highly Motivated	3.21	Motivated
ICT equipment makes teaching- learning process more fun and interesting.	3.40	Highly Motivated	3.16	Motivated
Well-equipped classrooms provide me favorable settings for teaching/learning.	3.41	Highly Motivated	3.18	Motivated
Laboratory enhances my effectiveness in teaching/learning	3.25	Highly Motivated	3.05	Motivated
School library equipped with books enhance my effectiveness in teaching/learning	2.95	Motivated	3.11	Motivated
Recreational and sporting facilities enhance my effectiveness in teaching/learning	2.98	Motivated	3.10	Motivated
Instructional facilities help me in the effective and efficient delivery of the lesson.	3.32	Highly Motivated		Motivated
Instructional facilities help me to learn effectively and efficiently.			3.21	
Average Weighted Mean	3.24	Motivated	3.16	Motivated

Table 19 provides data on the level of teaching and learning motivation of teachers and students in terms of Extrinsic.

The table shows that both teacher and student respondents have the same level of teaching and learning motivation in terms of extrinsic. They rated it as “Motivated” with

a 3.24 average weighted mean for teacher- respondents and 3.16 for student-respondents. However, items including “I receive sufficient and appropriate performance recognition”, “I have the appropriate equipment to perform my duties/task effectively”, “I have access to teaching materials and resources in my school”, and “WASH facilities provide me comfortable teaching-learning environment”, “ICT equipment makes the teaching-learning process more fun and interesting”, “Well-equipped classrooms provide me favorable settings for teaching/learning”, “Laboratory enhances my effectiveness in teaching/learning”, and “Instructional facilities help me in the effective and efficient delivery of the lesson/ Instructional facilities help me to learn effectively and efficiently” the teacher- respondents got higher weighted means. This means that they have a higher level of extrinsic motivation on the said items compared to the student- respondents.

The item “Promotions are properly implemented” obtained the lowest mean for teachers, while the item “Laboratory enhances my learning” got the lowest mean for the students. The results suggest that teachers are not fully motivated in terms of promotion implementation, and some students are not fully motivated because of the insufficient laboratory facilities in their schools.

Table 20. Summary of the Level of Teaching and Learning Motivation of Teachers and Students

Motivation	Teachers		Students	
	Weighted Mean	Qualitative Description	Weighted Mean	Qualitative Description
1. Intrinsic	3.43	Highly Motivated	3.25	Highly Motivated
2. Extrinsic	3. 24	Motivated	3.16	Motivated
Average Weighted Mean	3.34	Highly Motivated	3.21	Motivated

Table 20 shows the summary of the level of teaching and learning motivation of the respondents.

As shown in the table, both the teacher and student respondents have high levels of intrinsic teaching-learning motivation with a 3.43 weighted mean for teachers and 3.25 for students. In terms of extrinsic motivation, the two groups of respondents rated “Motivated” with a weighted mean of 3.24 for teachers and 3.16 for students. This means that teacher and student respondents have higher levels of intrinsic teaching and learning motivation compared to extrinsic.

Access to appropriate resources and well-maintained facilities can enhance the overall teaching-learning experience and contribute to a positive and motivating environment. However, some teachers and students feel that they lack access to these essential resources and facilities of the school which may lead to decreased motivation among them. In an interview conducted, some of the student- respondents said that their school lacked learning materials, textbooks, technology, or other resources, and had inadequate or poorly maintained facilities, such as laboratories, classrooms, and libraries.

According to a report by the Department of Education, many schools lack adequate classrooms, textbooks, and teaching materials, making it challenging for students to learn effectively. This challenge is not only limited to rural areas but is also present in urban areas. The absence of these tools and materials needed for effective learning could be the reason why they are less motivated.

Comparison between Intrinsic and Extrinsic Levels of Motivation as Perceived by the Two Groups of Respondents

Table 21. Results of the Test of Significant Differences in the Level of Motivation as Perceived by the Teachers and Students in Terms of Intrinsic and Extrinsic

Level of Motivation	Mean		Probability of t	Remarks
	Teachers	Students		
Intrinsic	3.43	3.25	0.0007	Significant
Extrinsic	3.24	3.16	0.0425	Significant

The results of the test of significant difference in the level of motivation as perceived by the teachers and students in terms of intrinsic and extrinsic are exhibited in Table 21.

It is evident from the results that the probability t-values are less than 0.05. This signifies the rejection the rejection of the null hypothesis at five percent level of significance. Therefore, there is a significant difference in the level of motivation as perceived by the teachers and the students in terms of intrinsic and extrinsic. It shows that the teachers' perception of the level of intrinsic and extrinsic motivation differs from that of the students. As indicated by the mean in the table, the teachers have better perceptions of their intrinsic and extrinsic level of motivation for they obtain the higher mean.

The disparity in the perceived intrinsic and extrinsic motivation between teachers and students can be attributed to factors such as professional development, autonomy, varied roles, and life experience. Teachers, through their extensive training and diverse roles, often gain a deeper understanding of their motivation levels compared to students who may be navigating a more structured and externally guided educational journey. Recognizing these differences is essential for fostering effective communication and collaboration between educators and students, ultimately enhancing the learning experience for all parties involved.

Comparison in the Level of Motivation of the Respondents when Grouped by Profile

a. Teachers

1. Intrinsic

Table 22. Results of the Test of Significant Differences in the Level of Motivation of the Teachers in terms of Intrinsic when Grouped by School Profile

Variables	Mean			Probability of F	Remarks
Intrinsic and School Size	Very Large	Large	Small	0.0009	Significant
	3.29	3.37	3.55		
Intrinsic and School Classification	National	Integrated		0.0309	Significant
	3.36	3.50			
Intrinsic and School Location	Urban	Rural		0.0007	Significant
	3.32	3.55			

Table 22 presents the results of significant differences in the level of motivation of the teachers in terms of intrinsic when grouped according to school profile.

The results show that the probability values of F are less than 0.05. For this reason, the null hypothesis is rejected at a 0.05 significance level. As a result, there is a significant difference in the level of motivation of teachers in terms of intrinsic when grouped according to school profile. It indicates that the teachers vary in their level of intrinsic motivation when clustered by school size, school classification, and school location. As evidenced by the mean in the table, the teachers, who belong to small, integrated, and rural schools have better levels of intrinsic motivation for they obtain the higher mean.

The higher level of intrinsic motivation observed among teachers in small, integrated, and rural schools can be attributed to a combination of factors, including a strong sense of community, personalized relationships, autonomy, perceived impact, professional collaboration, reduced bureaucracy, and alignment of values. Thus, understanding these contributing factors provides valuable insights for educators, policymakers, and stakeholders aiming to enhance teacher motivation and, consequently, the overall quality of the teaching-learning environment. Ultimately, fostering a supportive and empowering professional culture is crucial for nurturing the intrinsic motivation that drives educators to excel in their noble pursuit of shaping young minds.

2. Extrinsic

Table 23. Results of the Test of Significant Differences in the Level of Motivation of the Teachers in terms of Extrinsic when Grouped by School Profile

Variables	Mean			Probability of F	Remarks
Extrinsic and School Size	Very Large	Large	Small	0.0005	Significant
	3.16	2.96	3.42		
Extrinsic and School Classification	National	Integrated		0.0582	Not Significant
	3.25	3.23			
Extrinsic and School Location	Urban	Rural		0.0000	Significant
	3.08	3.42			

The results of the test of significant difference in the level of motivation of the teachers in terms of extrinsic, when grouped according to school profile, are presented in Table 23.

It is posted in the table that the F-probability values are less than 0.05 except for school classification. Hence, the null hypothesis is rejected at a 0.05 level of significance. Thus, there is a significant difference in the level of motivation of the teachers in terms of extrinsic when grouped according to school size and location. It shows that the teachers differ from each other in their level of extrinsic motivation when grouped by the said school profiles. As evidenced by the mean in the table, it notes further that the teachers who are from small and rural schools have better levels of extrinsic motivation for they obtain the higher mean.

This contradicts the study of Takupiwa (2013) that teachers in rural areas are more poorly motivated and dissatisfied than their urban counterparts with their living and working conditions. Low wages when compared with urban teachers, lack of promotion opportunities, lack of career advancement opportunities, high teacher-pupil ratio, poor work environment, and inadequate fringe benefits contributed to lower teachers' morale in rural areas.

However, there is no significant difference in the level of motivation of teachers in terms of extrinsic when grouped according to school classification. Hence, the null hypothesis is accepted at a 0.05 significance level. It implies that the teachers have similarities in their level of extrinsic motivation regardless of their school classification.

b. Students

1. Intrinsic

Table 24. Results of the Test of Significant Differences in the Level of Motivation of the Students in terms of Intrinsic when Grouped by School Profile

Variables	Mean			Probability of F	Remarks
Intrinsic and School Size	Very Large	Large	Small	0.0097	Significant
	3.20	3.22	3.35		
Intrinsic and School Classification	National	Integrated		0.0157	Significant
	3.23	3.29			
Intrinsic and School Location	Urban	Rural		0.0095	Significant
	3.21	3.35			

Table 24 displays the results of significant differences in the level of motivation of the students in terms of intrinsic when grouped according to school profile.

The results reveal that the F-probability values are less than 0.05. This signifies the rejection of the null hypothesis at 0.05. This signifies the rejection of the null hypothesis at a 0.05 significance level. Therefore, there is a significant difference in the level of motivation of the students in terms of intrinsic when grouped according to school profile. It states that the students have varied levels of intrinsic motivation when they are clustered by school size, classification, and location. It is further inferred as indicated by the mean in the table, that the students who belong to small, integrated, and rural schools have better levels of intrinsic motivation for they got the higher mean. It was supported by the findings of Grauer (2019) which indicate that students from small schools are more engaged, connected, and intrinsically motivated than students who attend larger schools.

b. Students

2. Extrinsic

Table 25. Results of the Test of Significant Differences in the Level of Motivation of the Students in terms of Extrinsic when Grouped by School Profile

Variables	Mean			Probability of F	Remarks
Extrinsic and School Size	Very Large	Large	Small	0.0096	Significant
	3.16	3.08	3.35		
Extrinsic and School Classification	National	Integrated		0.2560	Not Significant
	3.17	3.15			
	Urban	Rural		0.0004	Significant

Extrinsic and School Location	3.14	3.21		

The results of the test of significant difference in the level of motivation of the students in terms of extrinsic, when grouped according to school profile, are displayed in Table 25.

It is reflected from the results that the probability values of F are less than a five percent significance level except for school classification. For this reason, the null hypothesis is rejected at a 0.05 significance level. As a result, there is a significant difference in the level of motivation of students in terms of extrinsic when grouped according to school size and location. It states that the students have different levels of extrinsic motivation when they are classified by the said two school profiles. As evidenced by the mean in the table, the students from small and rural schools have better levels of extrinsic motivation for they obtain the higher mean.

On the other hand, there is no significant difference in the level of motivation of the students in terms of extrinsic when grouped according to school classification. Hence, the null hypothesis is accepted at a 0.05 significance level. It implies that the students have similarities in their level of extrinsic motivation regardless of their school classification.

Performance of the Students and Teachers

Table 26. Performance of Teachers

Rating	Qualitative Description	Frequency	Percentage
4.500 – 5.000	Outstanding	177	84.69
3.500 – 4.499	Very Satisfactory	32	15.31
2.500 – 3.499	Satisfactory	0	0
1.500 – 2.499	Unsatisfactory	0	0
below 1.499	Poor	0	0
Total		209	100

Table 26 presents the data on the performance of teachers in public Senior High Schools in the City Division for the school year 2022- 2023.

The results show that 177 or 84.69 percent had 4.500- 5000 or Outstanding performance and 32 or 15. 31 percent has 3.500- 4.499 or Very Satisfactory performance. This implies that most of the teacher respondents have outstanding performance based on the guidelines and criteria set as per DepEd Order No. 2, s. of 2015, titled Guidelines on the Establishment and Implementation of the Results-Based Performance Management System (RPMS).

Outstanding performance often stems from a combination of factors, including personal dedication, support from the education system, and a conducive work environment. When these elements align, teachers can thrive and make a significant impact on their students' learning experiences. According to Surya (2004) several factors affect the performance of teachers including reward, safety, interpersonal relationships, working environment conditions, and opportunities for self-development and improvement. Hence if the teachers were provided professional development opportunities, mentoring programs, and classroom resources, they are more likely to excel in their roles. In the Department of Education, teachers were provided adequate trainings to ensure that the learners receive the best education possible. Furthermore, it was also found out that the schools in the City Division offering Senior High School have favorable teaching and learning environment which is also one of the several factors that affect the performance of the teachers. These could be the reasons why the SHS teachers in the City Division of Ilagan have outstanding performance.

Table 27. Performance of Students

Rating	Qualitative Description	Frequency	Percentage
90-100	Outstanding	210	56.45
85-89	Very Satisfactory	118	31.72
80-84	Satisfactory	28	7.53
75-79	Fairly Satisfactory	16	4.30
Below 75	Did Not Meet Expectation	0	0
Total		372	100

Table 27 displays the performance of the student respondents for the school year 2022- 2023.

Among the 372 respondents, 210 or 56. 45 percent had 90- 100 or Outstanding performance, 118 or 31.72 percent had 85-89 or Very Satisfactory performance, 28 or 7.53 percent had 80- 84 or Satisfactory performance, and 16 or 4.30 percent had 75- 79 or Fairly Satisfactory performance. This signifies that the majority of respondents have outstanding performance based on the criteria set as per DepEd Order No. 8, s. of 2015, titled Policy Guidelines on Classroom Assessment for the K to 12 Basic Education Program.

Comparison in the Perceived Teaching and Learning Environment, Level of Motivation, and Performance of the Respondents

a. Teachers

1. Intrinsic Motivation

Table 28. Results of the Test of Significant Relationship between the Perceived Teaching and Learning Environment and the Level of Intrinsic Motivation of the Teachers

Variables	Probability of r	Remarks
Facilities and Intrinsic Motivation	0.0005	Significant
Environment and Intrinsic Motivation	0.0003	Significant
Support and Intrinsic Motivation	0.0007	Significant
Resources and Intrinsic Motivation	0.0001	Significant
Technology and Intrinsic Motivation	0.0009	Significant

Table 28 discloses the results of the test of a significant relationship between the perceived teaching and learning environment and the level of intrinsic motivation of the teacher.

The results show that the probability values of r are less than 0.05. Hence, the null hypothesis is rejected at a five percent level of significance. Thus, there is a significant relationship between the perceived teaching and learning environment and the level of intrinsic motivation of the teachers. It implies that the teachers' perception of the teaching and learning environment in terms of facilities, environment support, resources, and technology significantly affects the intrinsic motivation of the teachers.

Teachers' perception of the teaching and learning environment indeed plays a pivotal role in shaping their intrinsic motivation. When teachers perceive a positive and well-equipped environment, it fosters a sense of efficacy and purpose. Adequate facilities and resources enhance their ability to deliver quality education, while a supportive atmosphere encourages collaboration and professional growth. Technology integration provides tools to innovate teaching methods, making lessons more engaging. Conversely, if teachers perceive deficiencies or lack of support in these areas, it can lead to frustration and demotivation. In essence, a conducive teaching and learning environment empowers teachers, boosting their intrinsic motivation and, consequently, positively impacting the quality of education they provide. Thus, it is stated in the DepEd Educational Facilities Manual that improving school facilities is crucial for creating a positive and effective learning environment, thus, increasing motivation and better performance.

2. Extrinsic Motivation

Table 29. Results of the Test of Significant Relationship between the Perceived Teaching and Learning Environment and the Level of Extrinsic Motivation of the Teachers

Variables	Probability of r	Remarks
Facilities and Extrinsic Motivation	0.0007	Significant
Environment and Extrinsic Motivation	0.0004	Significant
Support and Extrinsic Motivation	0.0009	Significant
Resources and Extrinsic Motivation	0.0005	Significant
Technology and Extrinsic Motivation	0.0008	Significant

The results of the test of a significant relationship between the perceived teaching and learning environment and the level of extrinsic motivation of the teachers are disclosed in Table 29.

It is evident from the results that the probability values of r are less than 0.005. This signifies the rejection of the null hypothesis at a five percent significance level. Therefore, there is a significant relationship between the perceived teaching and learning environment and the level of extrinsic motivation of the teachers. It shows that the teachers' extrinsic motivation is significantly affected by their perceived teaching and learning environment in terms of facilities, environment, support, resources, and technology. Thus, schools should prioritize creating a conducive atmosphere where teachers feel valued, supported, and equipped to excel in their roles, ultimately enhancing their overall motivation to contribute meaningfully to the learning experiences of their students.

3. Performance

Table 30. Results of the Test of Significant Relationship between the Perceived Teaching and Learning Environment and the Level of Motivation to the Performance of the Teachers.

Variables	Probability of X^2	Remarks
Facilities and Performance	0.1563	Not Significant
Environment and Performance	0.1877	Not Significant
Support and Performance	0.1905	Not Significant
Resources and Performance	0.2658	Not Significant
Technology and Performance	0.1894	Not Significant
Intrinsic Motivation and Performance	0.1560	Not Significant
Extrinsic Motivation and Performance	0.0090	Significant

Table 30 exhibits the results of the test of the significant relationship between the perceived teaching and learning environment and the level of motivation to the performance of the teachers.

The results reveal that the probability values of Chi-square (X^2) are greater than 0.05 except for extrinsic motivation and performance. For this reason, the null hypothesis is accepted at a five percent level of significance. As a result, there is no significant relationship between the perceived teaching and learning environment and the level of intrinsic motivation for the performance of the teachers. It implies that the teachers' perception of the teaching and learning environment in terms of facilities, environment, support, resources, and technology had no significant effect on their performance. Likewise, the intrinsic motivation of the teachers does not significantly affect their performance. The cited findings opposed the findings of Abbas et. al (2022) and Octaviani, et.al (2022) that the school's environment influences the performance of teachers.

However, there is a significant relationship between the level of extrinsic motivation of the teachers and their performance. Hence, the null hypothesis is rejected at a 0.05 significance level. It states that the teachers' performance is significantly affected by their extrinsic motivation. The results are relevant to the previous study conducted by Kumari & Kumar (2023) discovered that non-self-determined motivation has a significant relationship with teachers' job performance. It presents that once teachers are externally motivated in terms of job security, rewards and compensation for their performance become high. The findings of this study also complement the findings of Khwaja et al. (2018) that all external factors positively and significantly influence teacher performance. Hence, it is evident that any form of performance is an outcome of encouragement received from the organization, which eventually improves their performance and increases productivity.

b. Students

1. Intrinsic Motivation

Table 31. Results of the Test of Significant Relationship between the Perceived Teaching and Learning Environment and the Level of Intrinsic Motivation of the Students

Variables	Probability of r	Remarks
Facilities and Intrinsic Motivation	0.0004	Significant
Environment and Intrinsic Motivation	0.0001	Significant
Support and Intrinsic Motivation	0.0003	Significant
Resources and Intrinsic Motivation	0.0006	Significant
Technology and Intrinsic Motivation	0.0007	Significant

The results of the test of a significant relationship between the perceived teaching and learning environment and the level of intrinsic motivation of the students are exhibited in Table 31.

It is evident from the results that the r-probability values are less than 0.05. Hence, the null hypothesis is rejected at a 0.05 level of significance. Thus, there is a significant relationship between the perceived teaching and learning environment and the level of

intrinsic motivation of the students. It shows that the students' perception of the teaching and learning environment in terms of facilities, environment, support, resources, and technology had a significant effect on their intrinsic motivation. The study of Hafizoglu et. al (2019) on The Role of Students' Motivation in the Relationship between Perceived Learning Environment and Achievement in Science supports the present study. The results of their study showed that students who perceive their learning environment positively also have a generally high level of motivation.

Similarly, Radovan et. al (2015) also found out that students who perceive their learning environment as a place that fosters autonomy and self-direction and find their education to be useful and relevant are more intrinsically motivated.

2. Extrinsic Motivation

Table 32. Results of the Test of Significant Relationship between the Perceived Teaching and Learning Environment and the Level of Extrinsic Motivation of the Students

Variables	Probability of r	Remarks
Facilities and Extrinsic Motivation	0.0009	Significant
Environment and Extrinsic Motivation	0.0005	Significant
Support and Extrinsic Motivation	0.0002	Significant
Resources and Extrinsic Motivation	0.0006	Significant
Technology and Extrinsic Motivation	0.0007	Significant

Table 32 displays the results of the test of a significant relationship between the perceived teaching and learning environment and the level of extrinsic motivation of the students.

The results reveal that the probability values of r are less than 0.05. This signifies the rejection of the null hypothesis at a 0.05 level of significance. Therefore, there is a significant relationship between the perceived teaching and learning environment and the level of extrinsic motivation of students. It shows that the students' perception of the teaching and learning environment in terms of facilities, environment, support, resources, and technology significantly affects their extrinsic motivation. This finding is supported by the study of Acomolafe and Adesua (2016) and Abellanosa (2019) which showed that there is a significant relationship between physical facilities and students' level of motivation.

3. Performance

Table 33. Results of the Test of Significant Relationship between the Perceived Teaching and Learning Environment and the Level of Motivation to the Performance of the Students

Variables	Probability of x^2	Remarks
Facilities and Performance	0.9464	Not Significant
Environment and Performance	0.0068	Significant

Support and Performance	0.0042	Significant
Resources and Performance	0.0852	Not Significant
Technology and Performance	0.0431	Significant
Intrinsic Motivation and Performance	0.0439	Significant
Extrinsic Motivation and Performance	0.0455	Significant

The results of the test of the significant relationship of the perceived teaching and learning environment and the level of motivation to the performance of the students are disclosed in Table 33.

It is reflected from the results that the Chi-square (X^2) probability values are less than 0.05 except for facilities and resources. For this reason, the null hypothesis is rejected at a 0.05 significance level. As a result, there is a significant relationship between the perceived teaching and learning environment in terms of environment, support, and technology and the level of motivation of the students to the performance of the students. It implies that the teaching and learning environment along the mentioned three areas and the intrinsic and extrinsic motivation have significant effects on the performance of the students. The cited findings are supported by the study of Usman et. al (2019)**,** Havidz, & Mujakiah (2023), Nyoni, et. al (2017), and Acomolafe and Adesua (2016) in which they averred that the learning environment affected the student's motivation, the learning environment affected the student achievement or performance and students' motivation affected student achievement. Thus, the teaching and learning environment plays a crucial role in shaping the motivation and performance of students. Positive, supportive, and well-organized environments tend to increase motivation and foster better learning outcomes.

However, there is no significant relationship between the teaching and learning environment in terms of facilities and resources and the performance of the students. Hence, the null hypothesis is accepted at a 0.05 significance level. It states that these two areas of the teaching and learning environment have no significant effect on the performance of the students. This finding contradicted the study of Ahmed et. al (2020) that the availability and use of physical and instructional classroom environmental facilities prove helpful indicators for improving students' learning outcomes at the secondary level. It was also supported by the study of Duruji et. al (2014), Nambuya (2013), and Nyoni, et. al (2017) in which they stated that adequate learning facilities and resources significantly influence students' academic performance.

Conclusions

Based on the above findings, the study concludes that the teaching and learning environment in the City Division of Ilagan was perceived by the student and teacher respondents positively with slight differences in their perception across various factors such as facilities, environment, support, resources, and technology. Teachers tend to have better perceptions of the environment, support, and resources, while students perceive facilities more positively.

In terms of their level of motivation, both groups of respondents exhibit a high level of intrinsic motivation, indicating a genuine passion for teaching and learning, with average levels of extrinsic motivation. However, there are differences in their motivation levels based on school profiles such as school size, school classification, and school location.

Regarding performance, the majority of the respondents have demonstrated outstanding performance. In terms of the relationship between the perceived teaching-learning environment, motivation levels, and performance of teachers and students, the two groups of respondents exhibit significant differences. For teachers, only extrinsic motivation demonstrated a significant effect on their performance while intrinsic motivation does not appear to have a significant impact which is contrary to several literature and studies suggesting that the teaching and learning environment and intrinsic motivation are influencing the teachers' performance. This suggests that the performance of teachers may be influenced by additional factors beyond the ones considered in the study. Conversely, for students, both intrinsic and extrinsic motivation significantly influence performance, with certain aspects of the teaching-learning environment having varying effects on motivation and performance.

Overall, the findings suggest that the teaching-learning environment, motivation levels, and performance are interconnected but can be influenced by various factors such as school size, school classification, and school location. Understanding these dynamics can help in fostering a more supportive and effective learning environment for both teachers and students.

Recommendations

Based on the conclusions drawn, the researcher therefore recommends the following to enhance the motivation and performance of the students and teachers:

1. A feedback mechanism relative to the effect of the teaching-learning environment on the motivation and performance of SHS teachers and students in the City Division of Ilagan be made functional by the educational authorities or administrators responsible for overseeing the City Division of Ilagan's Senior High School (SHS) system.

2. School heads should allot a considerable percentage of their Maintenance and other Operating Expenses (MOOE) for the procurement of sports equipment, TVL and Non- TVL tools and equipment, musical instruments, and for the reproduction of downloaded materials in the LRMDS portal.

3. School administrators must ensure that the school library is equipped with the latest technology and adequately staffed with a designated librarian to manage its operations effectively.

4. Since it was found out that there is an unavailability of learner's material in the Senior High School in the City Division of Ilagan, it is recommended that the Learning

Resources Management and Development System (LRMDS) be effectively utilized. Senior High School teachers should be encouraged and guided to utilize the LRMDS platform for downloading required instructional materials and other references necessary for senior high school education to ensure access to a comprehensive repository of educational resources, thereby enhancing the quality of teaching and learning experiences in the SHS in the City Division of Ilagan.

5. Educational administrators should evaluate the teaching-learning environment of the schools in the City Division of Ilagan and communicate the result to the stakeholders to encourage support from them.

6. Regular monitoring and evaluation of the school' teaching-learning environment in the City Division of Ilagan should be carried out to address the gaps and improve the learning situation and environment.

7. Since it was found out that there is inadequacy of non-teaching staff particularly librarian and guidance counselor in the schools in the City Division of Ilagan, Division Planning officer and Human Resource Management Officer should provide the needed non- teaching staff in schools.

8. School administrators should provide sports facilities with the required equipment, musical instruments, accessible internet connectivity, and gender-sensitive comfort rooms in schools.

9. Schools in the City Division of Ilagan should establish a quality assurance team for the provision of school facilities and to prevent any shortcomings.

10. Schools in the City Division of Ilagan should implement the 5S Principle (Sort, Set in Order, Shine, Standardize, and Sustain) to create a more organized, efficient, and secure teaching and learning environment.

11. Educational administrators should prioritize allocating resources and designing programs aimed at enhancing the skills and knowledge of teachers to ensure that they remain effective, motivated, and equipped to meet the evolving needs of students in the modern educational landscape.

12. School administrators should establish recognition programs that celebrate teachers who demonstrate exceptional dedication, innovation, and effectiveness in their roles.

13. School administrators in the City of Ilagan should prioritize addressing the identified challenges to create a conducive learning environment, as research has shown that such environments have a positive effect on students' motivation and performance. School administrators should collaborate with teachers, staff, students, parents, and other stakeholders to identify and address barriers to learning.

14. A follow- up study and other studies related to this present work be undertaken by future researchers putting greater emphasis on gaps and missing links found in the present study.

Compliance with Ethical Standards

The researcher affirms her steadfast commitment to upholding ethical research standards throughout the entirety of this study. Informed consent was meticulously obtained from all participants, emphasizing transparency, and honoring their autonomy. Participants were reassured of their right to withdraw from the study at any juncture, and stringent measures were implemented to safeguard their anonymity, preserving confidentiality throughout the research process. Furthermore, protocols were established to prioritize the well-being of participants, ensuring their safety and comfort remained paramount. The researcher maintained an unwavering dedication to integrity, diligently avoiding plagiarism and interpreting findings impartially to mitigate bias. It is underscored that the results obtained are solely intended to contribute to the advancement of knowledge, executed with the utmost adherence to ethical principles for the betterment of research and society as a whole.

Acknowledgments

The researcher would like to extend her deepest appreciation to all those who contributed significantly to the fruition of this research. Special thanks go to the study participants, whose assistance and collaboration were invaluable. The researcher is deeply grateful to her adviser, as well as to her peers and friends, for their continuous support and encouragement. She also cherishes the unwavering love and care of her family. And, above all, she is thankful to the Lord Almighty for His guidance in her research journey.

TRANSITIVITY ANALYSIS IN THE 2021 STATE OF THE COLLEGE ADDRESS (SOCA) OF ASSCAT PRESIDENT, DR. JOY C. CAPISTRANO

Mikeen V. Sawe, Evangeline H. Alvarez, Roxan R. Remorosa, Shiryl T. Ytoc

Graduate School, Agusan del Sur State College of Agriculture and Technology (ASSCAT) Philippines

https://doi.org/10.5281/zenodo.13329049

ABSTRACT

In the lush hills of Agusan, the 2021 State of the College Address (SOCA) by Dr. Joy C. Capistrano, President of Agusan del Sur State College of Agriculture and Technology (ASSCAT), painted a vivid picture of resilience and triumph amidst the shadows of the COVID-19 pandemic. Using M. A. K. Halliday's Transitivity system, we journey through her speech, uncovering the linguistic tools that bring this narrative to life. Dr. Capistrano's address is a tapestry of actions, relationships, emotions, and realities that reveal ASSCAT's steadfast pursuit of its mission. Material processes, comprising 39% of the clauses, dominate the landscape, depicting dynamic actions as ASSCAT rises above challenges with innovative solutions like flexible learning approaches and service upgrades. Relational processes, at 31%, weave the identity and achievements of ASSCAT into the fabric of the address, highlighting its esteemed position in the academic community. Mental processes, representing 13%, offer glimpses into the emotional and cognitive states of both the speaker and the institution, underscoring empathy, and collective resilience. Verbal processes account for 9%, emphasizing the vital role of communication in leadership, while existential processes, at 8%, ground the narrative in the reality of present challenges. Dr. Capistrano's SOCA is more than a speech; it's a compelling story of an institution navigating through a storm, showcasing the strategic use of language to inspire and unite its community. This transitivity analysis reveals how linguistic choices shape the narrative of ASSCAT's progress and fortitude, providing valuable insights for educational leaders seeking to communicate effectively in turbulent times

Keywords: *Joy Capistrano, State of the College Address (SOCA), Transitivity System, Agusan del Sur State College of Agriculture and Technology (ASSCAT)*

INTRODUCTION

The use of language in formal speeches, particularly in an institutional context, is a powerful means of conveying messages, influencing perceptions, and shaping the identity of an organization. The annual State of the College Address (SOCA) is a pivotal event in the academic calendar, where institutional leaders communicate their vision, report achievements, and outline future goals. In 2021, Dr. Joy C. Capistrano, President of Agusan del Sur State College of Agriculture and Technology (ASSCAT), delivered a significant SOCA amidst the ongoing challenges of the COVID-19 pandemic. This study employs M. A. K. Halliday's Transitivity system to perform a detailed clause-by-clause analysis of the address, aiming to uncover how linguistic structures convey the multifaceted narrative of ASSCAT's resilience and progress.

The significance of this analysis lies in its potential to reveal how language functions as a tool for leadership and persuasion in educational contexts. By examining the SOCA through the lens of Halliday's Transitivity system, this study seeks to contribute to the understanding of how educational leaders use linguistic strategies to address their audience, communicate institutional achievements, and foster a sense of community and resilience.

Research Questions

1. How does Dr. Joy C. Capistrano employ different process types in her 2021 State of the College Address to construct a narrative of resilience and progress at ASSCAT?

2. What percentage of material, relational, mental, verbal, and existential processes are used in the SOCA, and how do these processes contribute to the overall rhetorical strategy of the address?

Theoretical Lens

This study employs M. A. K. Halliday's Systemic Functional Linguistics (SFL) and Transitivity Model as its theoretical lens to examine the linguistic choices and their implications in the 2021 State of the College Address (SOCA) by Dr. Joy C. Capistrano. Halliday's SFL framework conceptualizes language as a social semiotic system, emphasizing the interrelation between linguistic form and social function. Central to SFL is the notion that language operates simultaneously on three metafunctions: the ideational, interpersonal, and textual. The ideational metafunction is particularly relevant to this study, as it pertains to how language represents experiences and constructs reality. Within the ideational metafunction, the Transitivity Model serves as a tool to analyze the types of processes—material, mental, relational, behavioral, verbal, and existential—encoded in the text. Material processes are concerned with actions and events, indicating what is happening in the physical world. Mental processes relate to internal experiences, reflecting cognition, emotion, and perception. Relational processes express states of

being and relationships, defining and identifying entities. Behavioral processes denote physiological and psychological behaviors, while verbal processes involve acts of communication. Existential processes state the existence of entities or events.

METHODOLOGY

This study utilized a qualitative research design, described by Creswell (1994) as an unfolding model that occurs in a natural setting, enabling the researcher to develop detailed insights through high involvement in actual experiences (as cited by Eyisi, 2016). The primary data source is the 2021 State of the College Address (SOCA) delivered by Dr. Joy C. Capistrano, President of the Agusan del Sur State College of Agriculture and Technology (ASSCAT). The speech was obtained through a formal request to the Office of the President, approved by the research adviser.

Following the qualitative data analysis framework by Attride-Stirling (2001), this study utilized a three-stage process: reduction of the text, exploration of the text, and integration of the exploration (as cited in Akinyode & Khan, 2018), along with Braun and Clarke's (2006) approach (as cited in Akinyode & Khan, 2018).

RESULTS AND DISCUSSION

Types of Transitivity Process

Material processes dominate the 2021 State of the College Address (SOCA) by Dr. Joy C. Capistrano, comprising 39% of the total clauses.

This high percentage underscores the focus on dynamic actions and tangible achievements of ASSCAT during the challenging period of the COVID-19 pandemic. By highlighting clear actors, actions, goals, and circumstances, the address effectively conveys the institution's proactive measures and accomplishments.

Examples of material processes identified in the SOCA:

Clause 1.1. "*Our alma mater stands...*"

Our alma mater	stands	above the verdant hills of Agusan
Actor	Pro: material	Circumstance

Clause 1.2. *"We implemented flexible learning approaches"*

We	implemented	flexible learning approaches
Actor	Pro: material	Goal

Clause 1.3. *" The college library upgraded their services"*

The college library	implemented	flexible learning approaches
Actor	Pro: material	Goal

Clause 1.4. *" ASSCAT rises above challenges"*

ASSCAT	rises	above challenges
Actor	Pro: material	Circumstance

Clause 1.5. *" We are visiting the Local Government units twice a month"*

We	are visiting	the Local Government units	twice a month
Actor	Pro: material	Goal	Circumstance

Clause 1.6. *"The faculty developed innovative teaching methods"*

The faculty	developed	innovative teaching methods
Actor	Pro: material	Goal

Clause 1.7. *"Students participated in online learning"*

Students	participated	in online learning
Actor	Pro: material	Goal

The frequent use of material processes in the address highlights the institution's focus on action-oriented strategies and tangible outcomes. This emphasis on physical actions and their impacts creates a narrative of a proactive and resilient institution committed to overcoming challenges and achieving progress.

Relational processes constitute 31% of the clauses in the SOCA. These processes play a crucial role in establishing and defining the identity, attributes, and values of ASSCAT. By linking the institution to its achievements, qualities, and esteemed status, relational processes help build a cohesive and positive image.

Examples of relational processes identified in the SOCA:

Clause 2.1. "*The institution remains committed.*"

The institution	remains	committed
Carrier	Pro: relational	Attribute

Clause 2.2. *"ASSCAT has a prestigious position in the academic community"*

ASSCAT	has	a prestigious position in the academic community
Carrier	Pro: relational	Goal

Clause 2.3. *"Our efforts are recognized nationally"*

Our efforts	are	recognized nationally
Carrier	Pro: relational	Attribute

Clause 2.4. *"The faculty are dedicated educators"*

The faculty	are	dedicated educators
Carrier	Pro: relational	Attribute

Relational processes in the address help reinforce the institution's identity and values, establishing a strong sense of pride and commitment to excellence within the ASSCAT community.

Mental processes account for 13% of the clauses, highlighting the cognitive and emotional dimensions of the address. These processes provide insight into the thoughts, perceptions, and emotions of the speaker and the institution, fostering a sense of empathy and shared experience.

Examples of mental processes identified in the SOCA:

Clause 3.1. *"We understand the challenges"*

We	understand	the challenges
Senser	Pro: Mental	Phenomenon

Clause 3.2. *"We understand the importance of flexibility"*

We	understand	the importance of flexibility
Senser	Pro: Mental	Phenomenon

Clause 3.3. *"Students believe in the power of education"*

Students	believe	in the power of education
Senser	Pro: Mental	Phenomenon

Clause 3.4. *"I appreciate the dedication of our staff"*

I	appreciate	the dedication of our staff
Senser	Pro: Mental	Phenomenon

By incorporating mental processes, the address emphasizes the shared emotional and cognitive experiences of the ASSCAT community, promoting a sense of unity and collective resilience.

Verbal processes make up 9% of the clauses, underscoring the importance of communication in leadership and institutional governance. These processes highlight the actions of saying, reporting, and asserting, reflecting the role of dialogue and information exchange in the institution.

Examples of verbal processes identified in the SOCA:

Clause 5.1. *"The faculty communicated their needs"*

The faculty	communicated	their needs
Sayer	Pro: verbal	Verbiage

Clause 5.2. *"The board discussed the challenges"*

The board	discussed	the challenges
Sayer	Pro: verbal	Verbiage

Verbal processes in the address emphasize the role of effective communication in leadership, facilitating transparency, collaboration, and informed decision-making within the institution.

Existential processes account for 8% of the clauses, acknowledging the realities and circumstances faced by ASSCAT. These processes often introduce the existence of particular states, events, or conditions, grounding the narrative in the actual experiences of the institution.

Examples of existential processes identified in the SOCA:

Clause 6.1. *"There are countless changes"*

There	are	countless changes
Pro: existential	Existent	Circumstance

Clause 6.2. *"There is a need for flexibility"*

There	is	a need for flexibility
Pro: existential	Existent	Circumstance

Clause 6.2. *"There is hope for the future"*

There	is	hope for the future
Pro: existential	Existent	Circumstance

Existential processes help to create a realistic and grounded narrative, recognizing the challenges and achievements of ASSCAT and reinforcing the institution's commitment to navigating and overcoming these realities.

Table 1. Occurrences and Percentage of Types of Transitivity Process

No.	Types of Transitivity Process	Occurrences of Processes	Percentage
1	Material	49	**39%**
2	Relational	39	**31%**
3	Mental	16	**13%**
4	Verbal	11	**9%**
5	Existential	10	**8%**
	Total	**125**	**100%**

Table 1 shows that the material process is the most frequently used with 49 occurrences, making up 39% of the total. The second most common is the relational process, with 39 occurrences, accounting for 31%. The mental process follows, with 16 occurrences (13%). Verbal processes appear 11 times (9%), while existential processes occur 10 times (8%).

This distribution highlights the emphasis on actions and dynamic activities (material processes) in the address. It also shows the importance of defining identities and attributes (relational processes) and reflecting cognitive and emotional states (mental processes). The relatively lower frequency of verbal and existential processes indicates less focus on communication and existence within the speech.

Themes Identified in the State of the College Address (SOCA) of Dr. Joy C. Capistrano

In this section, the linguistic features were identified through transitivity analysis to the interactions that generate the themes reflected in the SOCA. The following theme was found in the address:

Table 2. Commitment and Innovation

Theme	Supporting Clauses
Commitment and Innovation	"We remain committed to our mission" (Clause 4) "Innovative teaching methods were developed" (Clause 5) "The daring and valiant moves of ASSCAT" (Clause 6)

Commitment and innovation are also significant themes in the address. The clause "We remain committed to our mission" illustrates the steadfast dedication of ASSCAT to its core goals. The mention of "innovative teaching methods were developed" highlights the institution's proactive approach to improving education. Additionally, "The daring and valiant moves of ASSCAT" reflects the institution's willingness to take bold steps towards achieving its objectives.

Table 3. Resilience and Progress

Theme	Supporting Clauses
Resilience and Progress	"Our alma mater stands tall" (Clause 1) "We have overcome numerous challenges" (Clause 2) "Our flag is still flying strong" (Clause 3)

Resilience and progress are central themes in the SOCA, highlighted by the institution's ability to withstand and overcome challenges while continuing to move forward. The phrases "Our alma mater stands tall" and "Our flag is still flying strong" symbolize the enduring strength and ongoing progress of ASSCAT. The emphasis on overcoming challenges underscores the resilience of the community.

Table 4. Adaptation and Growth

Theme	Supporting Clauses
Adaptation and Growth	"We will continue to bring societal influence and impact" (Clause 10) "Our enrolment speaks otherwise" (Clause 11) "We reimagined and reinvented strategies" (Clause 12)

Adaptation and growth are significant themes in the address, highlighting the institution's ability to evolve and expand in response to changing circumstances. The clause "We will continue to bring societal influence and impact" reflects ASSCAT's ongoing commitment to societal contributions. The statement "Our enrolment speaks otherwise" signifies the institution's growth despite external challenges, while "We reimagined and reinvented strategies" emphasizes the innovative approaches adopted to ensure continuous improvement.

Table 5. Recognition and Gratitude

Theme	Supporting Clauses
Recognition and Gratitude	"We are grateful for their leading" (Clause 13) "This occasion is a good time to assess the state of the college" (Clause 14) "My salute to all of you" (Clause 15)

Recognition and gratitude are essential themes that permeate the address. The clause "We are grateful for their leading" acknowledges the contributions of past leaders who have shaped the institution. The phrase "This occasion is a good time to assess the state of the college" highlights the significance of reflection and evaluation. Lastly, "My salute to all of you" conveys heartfelt appreciation for the efforts and dedication of the entire ASSCAT community.

Table 6. Community and Collaboration

Theme	Supporting Clauses
Community and Collaboration	"We are grateful for the leadership" (Clause 7) "Our faculty, staff, students, and alumni engaged in community services" (Clause 8) "The collective gains we achieve" (Clause 9)

Community and collaboration are pivotal themes in the SOCA, emphasizing the unity and cooperative efforts within the ASSCAT community. The clauses "We are grateful for the leadership" and "Our faculty, staff, students, and alumni engaged in community services" underscore the collective efforts and mutual support that drive the institution's success. The mention of "The collective gains we achieve" highlights the shared achievements resulting from collaborative endeavors.

DISCUSSION

The analysis reveals a strategic use of different process types to construct a compelling narrative of resilience, progress, and community at ASSCAT. Material processes dominate the address, reflecting the dynamic actions taken by the institution to navigate the challenges posed by the pandemic and to implement innovative solutions, such as flexible learning approaches and service upgrades. Relational processes are equally significant, as they establish the identity and achievements of ASSCAT, reinforcing its esteemed position and continuous pursuit of excellence. These processes help create a strong connection between the institution and its stakeholders, fostering a sense of pride and belonging. Mental processes, though fewer in number, play a crucial role in conveying the emotional and cognitive states of the speaker and the community. By expressing empathy, determination, and resilience, these processes help maintain morale and trust among stakeholders during challenging times. Verbal processes highlight the importance of communication in leadership. The act of preparing and delivering the address is itself a significant communicative event, and the analysis shows how verbal processes are used to articulate the institution's vision and strategies effectively. Existential processes acknowledge the reality of the challenges faced by ASSCAT. By recognizing the existence of various difficulties, the address creates a realistic and grounded narrative that acknowledges the complexities of the current situation.

Conclusions

This transitivity analysis of Dr. Joy C. Capistrano's 2021 SOCA highlights the strategic use of different process types to construct a narrative of resilience, progress, and community at ASSCAT. The findings suggest that the deliberate use of material, relational, mental, verbal, and existential processes enables the institution to effectively communicate its achievements and challenges, fostering a sense of shared purpose and determination among its stakeholders.

Future research could extend this analysis to compare SOCA addresses across different institutions or years, providing a broader understanding of how educational leaders use language to navigate and articulate institutional goals and challenges. Such comparative studies could further elucidate the role of linguistic choices in shaping institutional narratives and influencing stakeholder perceptions.

Acknowledgements

I would like to express my sincere gratitude and deepest appreciation to my co-authors, Dr. Evangeline H. Alvarez, Dr. Roxan Remorosa, and Dr. Shiryl T. Ytoc, for their invaluable contributions to this research. Their expertise, guidance, and unwavering support have been instrumental in the completion of this study.

Recommendations

Future research could expand on this study by analyzing the State of the College Addresses from different years or by various college presidents to identify changes and trends in the use of transitivity processes over time. Comparative studies could also be conducted across different institutions to explore how different educational leaders employ language to convey their messages and objectives. Additionally, incorporating other linguistic frameworks, such as appraisal theory or multimodal discourse analysis, could provide a more comprehensive understanding of the rhetorical strategies used in these speeches. Research could also examine the impact of these speeches on various stakeholders, including faculty, students, and external partners, to assess the effectiveness of the communication strategies employed. Finally, a longitudinal study could investigate the long-term effects of the linguistic choices made in these addresses on institutional identity and stakeholder engagement.

Compliance with Ethical Standards

The authors obtained the informed consent of the respondents and the latter were informed of their freedom to withdraw from the study at any time. Their identities were kept anonymous and the respondents' well-being was safeguarded. There was no conflict of interest in the conduct of the study. Plagiarism was strictly avoided and there was no bias in the interpretation of the findings. The results were used purely for research.

ABSTRACT

In this era, known as the "digital age," technology is viewed as necessary components of daily life. It only makes sense for educational institutions like schools to successfully employ technology like chatbot integration in classroom, given their increasing popularity among the students. This paper investigated the impact of chatbot engagement and class participation on freshmen students' in their academic performance in chemistry at Norzagaray College. Using a quantitative research design, the study involved 88 first-year Bachelor of Secondary Education (BSED) students. Based on the results of the study, it was revealed that there is a high level of chatbot engagement (mean = 3.39) and participation (mean= 3.36) of students in Chemistry. However finding also revealed that although chatbot has high impact to engagement and participation of students there was no significant correlation found between students' science engagement using chatbot ($r = 0.117$; $p = 0.280$) and class participation ($r = 0.041$; $p = 0.705$) in their academic performance. This implies that although chatbot assist student in the learning process, but it is not necessary guarantee them to get a high grades.

Keywords: *chatbot, academic performance, science engagement, AI in education, chemistry education, personalized learning, virtual assistants*

INTRODUCTION

The integration of artificial intelligence (AI) in the field of education has a great impact to our learners just like our life anchored on Science. This AI-powered tools offer us numerous advantages this include personalized learning experiences, basic process skills and develop basic scientific knowledge or concepts. Employing this technological tool to education has a bright future to create a informal learning inside and outside of the classroom. Aside from that there is undeniable fact that more students are spending more time using different technological tool to support their academic endeavors.

A chatbot, also known as a bot, is a type of software program that simulates or imitate human conversation through text and voice interactions over the internet and mobile phone. This chatbot make students lives easier because they can access information through their electronic gadgets. This software has access to an endless amount of data and information since this chatbot can be used as educational assistant offer 24/7 availability. Their ability to understand is very impressive they can respond to human language makes a relevant answer to any various questions, from virtual assistants to online customer support systems. (Pérez et al., 2020).While chatbot development is undeniably very useful in every field it is also have many specialized technical skills like different platforms provided by different companies like Microsoft, Facebook, Google, and LINE have significantly simplified the process (Abdellatif et al., 2020). Effective usage of chatbot may have good effects on efficient work and help them to multitask.

The integration of chatbot technology, especially Chat GPT into educational settings is very useful especially to the learners who have a hard time in their academic performance; this tool can help students a lot due to the widespread adoption of smart phones among learners (Okonkwo & Ade-Ibijola, 2021). Since it is available to everyone, we can all have it on our device. These chatbots can be highly beneficial especially it can offer them a personalized learning, acting as free virtual tutors, and even assisting with their writing and even with their assignments (Hong, 2023). These chatbot can provide benefits such as quick access to information for students, diverse ways of learning, contextual learning control over own learning, support encouragement of learning, increase participation in the course, will to use in the course, and positive meaningful difference in academic achievement. However, like any other tool, there is a potential negative impact especially to the learners. Some experts said that excessive used on chatbots may lead to students' lack of development to their critical thinking and problem-solving skills and also tend to become very dependent to this chatbots. Teacher guidance in integrating this tools for maximizing the benefits while understanding their potential drawbacks and creating a learning environment that suited for building a critical thinking and independent learning (Ali et al., 2023).

In recent years, the growing gap between the increasing number of students to teacher worsened every year by increasing their gap ratio (Essel et al., 2022), it affect our educational system this factor need to he considered why students tend to used chatbot. In some case students' reluctance to ask questions due to shyness and fear of

negative feedback (Oktaria & Soemantri, 2021) in this case students tend to shift towards chatbots for immediate assistance to their queries. This AI tutors, powered by chatbot give them a personalized support and intelligent feedback in subjects like mathematics without fear to get some negative feedback to others, they used it in programming, and even in language learning. Platforms such as Duolingo leverage advanced AI systems to enhance the learning experience (Bicknell et al., 2023), this platform give them independence to learn by their own pace, having a confidence to do some various task, and engagement to some activities. By that students build and developed their critical thinking skills through inquiry and by exploring a diverse perspective.

Using this chatbots are becoming relevant in education, particularly in situations where instructors cannot provide immediate feedback to students. These AI-powered tools can simulate human-like conversations, allowing students to easily access learning resources and immediate receiving assistance particularly for those who reside in rural and remote areas. It also gives engagement in interactive learning experiences. This versatility of chatbots has definitely has a great way for improving students experience and learning.

Additionally, chatbots can also be valuable tools for students who need help in making homework. These AI-powered tools are capable to give assistant and detailed feedback on their assignments. It also can also used as a tool to identify the areas for improvement and suggesting further learning resources by asking them (Celik et al., 2022). For instance, chatbots can act as study companions, they will give you some explanations and even clarify on every various things that you need to know about lesson that we may not fully grasped in the classroom. This tools can assist students with their homework by just simply type the problem and it will provide step-by-step solutions in an instance and guiding students through complex problems (Crawford et al., 2023; Fauziet al., 2023; Lo, 2023; Shidiq, 2023).

However, the potential for chatbots to exacerbate pre-existing biases such as in language and perpetuate societal inequalities is a concern that can be mitigated through appropriate training and monitoring measures. Potential for giving misinformation, by asking them without clear questions. This chatbot also have the potential to disseminate misinformation if their training datasets are biased or inaccurate, or if their programming prioritizes engagement at the expense of accuracy. The potential violation of privacy may occur if chatbots are utilized to gather and scrutinize some sensitive personal data without your consent so always be mindful when we using it. In another study by Kohnke et al. (2023), it is mentioned that chatbots have a risk of causing ethical violations and in some instances it can give misleading answers to their users that lead to confusion of the users. Moderation used should be appropriate with the academic demands for the sake of the learning process.

By understanding how chatbots impact our learning and skill development in many field like science subjects it can give some strategies to improved out technology integration, leading us for more effective and engaging science education. This research is beneficial to educators and first-year college students by helping them to improve

accessibility to learning resources and support by enhancing the learning experience for occasion. This prompted the researchers to conduct this study to investigate the impact of chatbot engagement on first-year college students' academic performance in chemistry, with the objective of determining whether chatbots contribute positively to student learning outcomes during this critical stage. The findings of this study are expected to provide insights into whether the engagement of chatbots helps first-year college students improve their academic performance in chemistry.

Review of Related Literature and Studies

Science classrooms are embracing a new learning companion such as chatbots. These tools can give us interactive and meaningful learning experiences by simply asking questions, getting help with experiments. In this technological tool can give teachers an idea on how they can build a new ways to make their lessons more engaging and personalized by using this chatbots they can help students understand science in a fun and exciting way.

The technology evolved so fast this include as virtual and augmented reality, learning management systems, and artificial intelligence that will lead us to a new pedagogical approaches and give innovative teaching strategies and even in our assessment methods in classroom. These development help teacher and students to develop a modern style of learning with the integration of chatbot. Furthermore, modern learning was a learning style that would develop to set skills of the students with the use of benefits of technology advancement for exploration and preparation to the realities of the modern workplace. These technological innovations are influence our student in every aspect of their life by continuous technological changes and improvement learners also evolved their learning process (Sürmelioğlu & Seferoğlu, 2019).

Besides to the traditional ways of learning where basically teacher centered, there's a new approach called "flexible personalized learning" that uses AI-powered chatbots. This approach use an AI smart tutors that can give students needs by giving them individual guidance and feedback, helping them to understand some difficult topics (Boateng & Tindi, 2022). These chatbots aim to help the students to development new knowledge, just like teacher do (Han & Lee, 2023; Pérez et al., 2020).

According to Boateng and Tindi (2022), to make learning more engaging, students utilized this chatbots often, it can also be found in many messaging platforms like Telegram or We Chat, making it easy for students to interact with this platform. This platform is very accessible, that we all know that all individual nowadays are having mobile phone. These chatbots can be used to adapt any forms of teaching style to fit of what student's needs (Fariani et al., 2023; Kikalishvili, 2023). The two of the most popular AI-powered chatbots are Chat GPT and Google Bard. These two chatbots are designed on a huge amount of text and code, which allows them to generate text, create different types of content, and answer questions, although they might not always be perfectly accurate they are very useful. Since students can use chatbot like Chat GPT anytime anywhere, it makes learning more convenient for them. Researchers have found that

Chat GPT's conversational style can make learning more enjoyable and personalized, increasing student engagement and motivation (Kasneci et al., 2023).

In the study of Chamorro-Atalaya (2023) reviewed that acceptance and effectiveness of chatbots in some university in education adopted a technology in fostering a learning environments. The research highlighted that chatbots can enhance some various learning activities by applying some student interactions during to their learning process. It suggests that using some technological advancement like chatbots provide a positive impact on having a learning outcome.

Along with Almada (2023) it is suggested by developing a proactive chatbot with natural language processing and the k-means clustering algorithm to help students with failing grades. The research focuses on a long-standing problem of early identification and intervention for students experiencing academic difficulties by presenting a model that recognizes and assists students based on their modified academic characteristics. Although the opinions and perceptions of each teacher are frequently taken into consideration when deciding whether to employ technology in the classroom.

Also, a study at Georgia State University found that a chatbot called "Pols Pounce" significantly improved the final grades of students in an American government course (Meyer et al., 2022). This chatbot can helps students to create a personalized message asked this tool to remind them to finish their task and even answers their questions. They concluded that 8% of students who used chatbot are likely to get or higher in the course. Also in their research found that using chatbot can have impact to having a greater improvement and increasing their grade by 11 percentage points. These findings suggest that chatbots can be an important tool to improve the student learning outcomes, but take note it is important to note that chatbots are not a replacement for human instructors.

In contrast, various studies suggest that while chatbot is not necessarily boosting academic performance although chatbot can positively influence student motivation and engagement. Yin et al. (2021) observed that undergraduate students using a chatbot showed increased motivation, even without significant differences in their academic performance. This aligns with Arruda et al. (2019), who found that a chatbot designed for computer science students was a helpful and desirable for future use. Similarly, Kamita et al. (2019) found chatbots used alongside web courses for mental health support to be effective by providing guiding self-learning, boosting student motivation, and reducing stress. Their findings suggest that although chatbots can positively affect the motivation and engagement in the learning process it might not always lead to high grades.

In the K-12 science curriculum, teaching Science across grade levels involves a variation of complex and abstract concepts and ideas that show how students may find science as a challenging subject to grasp on their own. In that case that the student face hindrance to learn the teachers may break down some concepts into easy to understand and with the use of chatbot to help student especially those undergraduate with their

task, activities and academic performance. Through this kind of technique, some of the students are able to do their class works by using different technological support to access with different topics especially with Science related topics. By doing that their knowledge bridges the gap between theory and practice, allowing student to take the challenges more easily to face off.

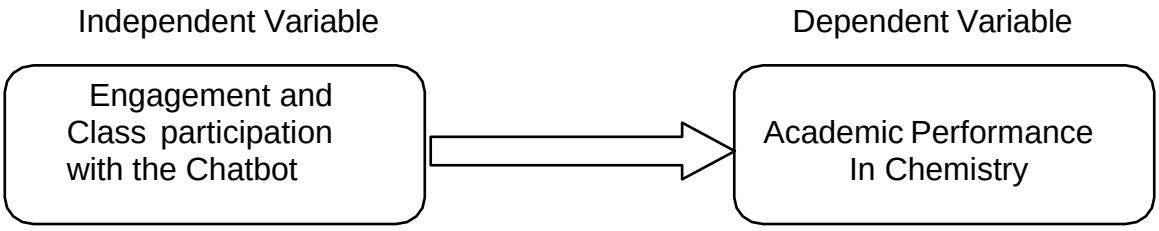
Integrating technology such as chatbot can give better outcome in teaching science by utilizing it as a supplement to enhance the learning experience of the students. This technology tool have potential to significantly change the education of Filipino students by visualizations, and virtual experiments that make learning materials more tangible and 6 engaging for students. It also open door to explore more to achieve learning experiences more fruitful. By leveraging technology in science education, teachers can empower students to explore and understand challenging scientific ideas in a more interactive and in fun way.

Conceptual Framework

The investigation was anchored on the Information Processing Theory which views the mind as a system that receives, processes, stores, and retrieves information, provides a valuable framework for understanding how a chatbot can impact student learning in science.

This theory suggests that a chatbot can act as a tool to support students in processing and accessing information more efficiently. By providing instant answers, explanations, and feedback, a chatbot can help students navigate the stages of information processing, from input and processing to storage and retrieval. This, in turn, can lead to improved understanding, retention, and application of scientific concepts, ultimately enhancing academic performance in science.

Paradigm of the Study



In Figure 1, engagement and class participation with the chatbot is the independent variable, while academic performance is the dependent variable. The arrow indicates that chatbot engagement and participation may influence learners' academic performance in chemistry. The level of engagement and participation with the chatbot is expected to impact the academic performance of learners.

Research Questions

This study aims to investigate the use of chatbots as a predictor of academic performance among undergraduate students in chemistry.
Specifically, the study sought to answer the following questions:

1. How may the students' science engagement in using chatbot be described?
2. How may the students' class participation in Chemistry be described?
3. How may the academic performance of student in Chemistry be described?
4. Do students' science engagements in using chatbot and class participation significantly predict their academic performance in Chemistry?
5. What program can be developed based on the result of the study?

Hypothesis

The study was guided and tested by the hypothesis below: Engagement and Class participation with the Chatbot Academic Performance in Chemistry 7 Students' science engagement in using chatbot and class participation do not predict their academic performance in Chemistry.

Significance of the Study

The purpose of the study was to investigate the use of chatbots as a predictor of academic performance among undergraduate students in chemistry. The research findings may help students to understand on how using chatbots can potentially improve their academic performance. This leads to give them a better study strategies and a better understanding of their progress. Teachers can also benefit from this research by learning how to use chatbots in their classes to improve student learning. By connecting technology with learning objectives so that chatbot use will have an educational purpose and applications, because although students use their devices on their own, they would benefit more if their instructors found deliberate uses for these powerful tool to meet the specific needs of their students. Moreover, this study will also serve as a guide to future researchers by offering an idea for how to evaluate the impact of chatbot engagement on academic performance and providing a basis for further exploration in the field of technology-enhanced in chemistry education.

METHODOLOGY

Research Design

This research utilized a quantitative research design with a descriptive evaluation and descriptive correlation to investigate the relationship of chatbot as predictor to engagement and class participation on academic performance in chemistry among first-year BSED students. The study employed a descriptive approach by analyzing existing

data on student performance in chemistry, specifically focusing on the correlation between chatbot engagement and participation to their academic outcomes.

Respondents and Sampling

The study involved all 88 first-year BSED students from Norzagaray College as respondents. The selection of participants utilized the total population, ensuring representation from both BSED 1A (population of 40) and BSED 1B (population of 48). This approach will provide a comprehensive understanding of the use of chatbots among the entire first-year BSED student population at Norzagaray College.

Instrumentation

The researchers investigate undergraduate students' engagement using chatbots as a predictor of their academic performance in chemistry.

Science Engagement and Class Participation Using Chatbot

To assess engagement and class participation using a chatbot, the researchers utilized a modified Likert scale instrument adapted from Riggs (2024) containing 20 items that is divided into two parts: 10 items for student engagement and 10 items for class participation. Each item will be answered by (1) Strongly Disagree; (2) Disagree; (3) Agree; (4) Strongly Agree. The reliability of the scale was measured through Cronbach's alpha, resulting in a reliability range from 0.78 to 0.93; this range is considered acceptable.

Academic Performance

To assess the academic performance, the researchers utilized existing and reliable data from the class records maintained by the chemistry teacher. This approach ensured the use of comprehensive data that reflected students' overall performance in the chemistry course. The class record data provided a comprehensive measure of academic performance, encompassing various assessments and assignments throughout the semester.

Data Gathering Procedure

Before initiating the research on investigating the impact of chatbot engagement on academic performance in chemistry among first-year BSED students at Norzagaray College, the researchers obtained permission from the President of the school and to the Dean of the College of Education. Adhering to Regional Memo No. 228, s. 2020, ethical guidelines were followed to ensure confidentiality, informed consent, and participant briefing on the study's objectives, duration, and potential risks and benefits. Data handling procedures included strict confidentiality measures and secure storage. The study involved 88 first-year BSED students.

Upon receiving approval from the School's Academic Office, the data-gathering procedure for the participating first-year undergraduate BSED students began. The researchers administered the questionnaires using Google Form to the respondents through Facebook Messenger Group Chats, and consent and assent letter were used, with clear instructions provided before administering the actual questionnaire. The gathered responses were checked to ensure they satisfied the required number of samples.

The data gathered from research competencies and perceived difficulties in thesis writing were tabulated in Jamovi, statistical spreadsheet software. Data analysis involved the use of Pearson's r correlation coefficient to analyze the quantitative data collected. The mean were utilized to describe the science engagement, students' class participation and academic performance in Chemistry in using chatbot. Pearson's r correlation was used to determine if there are significant relationship between students' science engagement in using chatbot and class participation to predict their academic performance in Chemistry.

RESULTS

Table1. Demographic Profile in terms of Sex

Sex	Frequency	percentage
Male	18	20.5%
Female	70	79.5%
Total	88	100%

Table 2. Demographic Profile in terms of Age

Age	Frequency	percentage
18-21	75	85.2%
22-24	13	14.8%
Total	88	100%

Table 3. Science Engagement in Using Chatbot.

No.	Item Statement	Mean	Verbal Interpretation
1	I want to ask my science teacher or classmates personally or through social media if I have a trouble understanding a lesson	3.52	Strongly Agree
2	My science lessons and performance tasks are realistic and contextualized in the Chatbot.	3.59	Strongly Agree
3	I am inspired to learn new things in science class through Chatbot.	3.34	Strongly Agree

4	My science lessons and task in Chatbot stimulate my curiosity.	3.30	Strongly Agree
5	I feel encouraged and interested to work on something in science class with the integration of Chatbot.	3.34	Strongly Agree
6	My science lessons and tasks in the Chatbot are interesting and meaningful.	3.27	Strongly Agree
7	I appreciate the nature of scientific method or process.	3.41	Strongly Agree
8	I am inspired and prepared to come to science class every day with the integration of Chatbot	3.31	Strongly Agree
9	I always pay attention to my teacher and classmates who communicate during science class.	3.48	Strongly Agree
10	I follow the instructions closely in doing my science work with the integration of Chatbot.	3.30	Strongly Agree
Overall		3.39	Strongly Agree

**Scale: 1.00 – 1.75=Strongly Disagree; 1.76 – 2.50 =Disagree; 2.51 – 3.25 =Agree; 3.26 – 4.00 = Strongly Agree*

Table 4. Students Class Participation in Science

No.	Item Statement	Mean	Verbal Interpretation
1	I raise my hand to participate in science class discussions.	3.36	Strongly Agree
2	I do and finish my science tasks on time.	3.45	Strongly Agree
3	I participate and interact during small-group discussions in Science.	3.39	Strongly Agree
4	I prepare thoroughly before the test to be conducted in Chatbot.	3.17	Agree
5	I am having fun during collaborative learning activities in science with the integration of Chatbot	3.39	Strongly Agree
6	My science lessons and performance tasks are important and relevant to my life.	3.39	Strongly Agree
7	I want to investigate and understand the societal and environmental impacts and implications from Science and technology.	3.27	Strongly Agree
8	I consult and share my views and knowledge to my classmates and Science teacher	3.30	Strongly Agree

9	I read and review my modules, class notes, handouts, and textbook between classes to make sure that I learn from these Science learning materials.	3.41	Strongly Agree
10	I give maximum effort to my science class	3.51	Strongly Agree
Overall		3.36	Strongly Agree

**Scale: 1.00 – 1.75=Strongly Disagree; 1.76 – 2.50 =Disagree; 2.51 – 3.25 =Agree; 3.26 – 4.00 = Strongly Agree*

Table 5. Total mean of Academic Performance

	Mean	Verbal Interpretation
Academic Performance	88.3	Good

**Scale:100-96.5=Excellent; 96.4-93.4=Superior; 93.4-90.5=VeryGood; 90.4-87.5=Good 87.4-84.5=VerySatisfactory; 84.4-81.5=HighAverage; 81.4-78.5=Average; 78.4-75.5=Fair 75.4-74.5= Pass*

Table 6. Pearson's r Correlation Matrix

Academic Performance	Pearson's r	p-value	Interpretation	Decision
Science engagement in using Chabot.	0.117	0.280	Not Significant	Do not Reject the null hypothesis
Academic Class Participation	0.041	0.7.5	Not Significant	Do not Reject the null hypothesis

*Note.*p< .05,**p<.01,***p<.001*

DISCUSSION

Table 1. Shows that the demographic profile in terms of sex indicates a sample size of 88 individuals, with 18 males representing 20.5% and 70 females accounting for 79.5% of the total. The data reveals a higher proportion of females in the sample population, highlighting a gender imbalance with females being the majority.

Table 2. Shows that the demographic profile in terms of age comprises a total sample size of 88 individuals, with 75 individuals (85.2%) falling in the 18-21 age group and 13 individuals (14.8%) in the 22-24 age group. The data indicates a significant majority of individuals in the18-21 age range, suggesting that the sample is primarily composed of young adults.

Table 3. Shows a high level of undergraduate students' engagement in using a Chatbot reveals a strong impact to their learning process. The overall mean engagement score is 3.39, indicating a high level of agreement among students, indicating that using chatbot boosts their eagerness to learn more. This suggests that the Chatbot is generally contributed to student engagement positively to the learning experience. This finding supports the study of Chamorro-Atalaya (2023) and Kasneci et al. (2023), who found that chatbots can enhance students learning activities by fostering student interactions, increasing engagement, and providing personalized feedback to their work, and suggesting that technological advancements like chatbots can positively impact their learning engagement.

Table 4. Shows that the undergraduate students' participation in science reveals a strong commitment to learning. The overall mean participation score of 3.36 indicates a high level of agreement among students regarding their participation, indicating a positive attitude towards their involvement in science-related activities. This finding aligns with research suggesting that interactive learning tools can enhance student engagement and motivation to participate. Studies like Kamita et al. (2019) and Topal et al. (2021) suggest that chatbots can be used in self guided learning, enhance motivation, and even improve mental health of the students to be more active in the classroom. These findings suggest that incorporating chatbots into science education could contribute to a more engaging and supportive learning environment, potentially leading to increased student participation in science-related activities.

Table 5. Shows that the mean of academic performance of 88.3 suggests that students have demonstrated a good level of understanding and mastery of the Science related activities, but may need some additional support or practice to reach their full potential. The fact that most students grade between 87.4 and 90.5 indicates that there may be a "ceiling" effect, where students have reached a certain level of proficiency but are not yet achieving at an exceptional level. This observation aligns with research suggesting that while chatbots may not always lead to significant improvements in academic achievement, they can positively impact student motivation. Yin et al. (2021) found no significant difference in learning achievements between students who used a chatbot and those who did not. However, the study reported higher levels of motivation among students who interacted with the chatbot. This suggests that while chatbots might not directly improve test scores, they can be very helpful in keeping engagement and encouraging students to continue learning.

Table 6. Shows that the Pearson's r correlation calculated for science chatbot engagement and students participation has no significant correlation found between students' science engagement using chatbot ($r = 0.117$; $p = 0.280$) which is greater than the alpha value of 0.05. In class participation ($r = 0.041$; $p = 0.705$) which also greater

than the alpha value of 0.05 so both null hypotheses are not rejected. Therefore, it was found that although chatbot may used to support the learning process of the students engagement and participation in Science they are not guaranteed that using chatbot will lead them to high grades. The result of the findings contrasts to Meyer et al. (2022), which conclude that using chatbot can improve academic performance. They found that 8% of the students were more likely to get a B or higher in the course, with their grades increasing by 11 percentage points.

These findings suggest that chatbots can be a important tool to improved the student learning outcomes. In the study of Boonmoh et al. (2021) mentioned that the knowledge of students when it comes to technology and using different technological tools also has an impact on the effectiveness of technology integration in school. So therefore, it is not about how often you use the chatbot, but rather about how you utilized and apply it to enhance your own understanding. Chatbot can be used to come up with a program to improve chemistry students' academic performance.

The program being proposed by the researchers will help to design and utilize a chatbot-assisted learning system for college level students in chemistry which will assist them in improving their academic achievement and other outcomes related to their studies, This program aims to improve the BSED students learning outcomes in Chemistry by giving them immediate assistance and easy access to the information, we hope to increase their motivation, engagement, participation together with their academic performance.

Propose program	Timeline	Resources
***** Integrate Chatbot into the curriculum for example create a chatbot platform exclusive for chemistry related studies, encourage use of chatbot as a supplement for traditional teaching.	*1-2 months for chatbot integration and platform.	*Development team for chatbot platform.
*****Training and support for Chemistry teachers on how to effectively integrate Chabot in their teaching practice, and provide technical support to the students who needs assistance.	*1-2 months Training and support for chemistry instructors.	*Instructors for training and support staff.
*Regular evaluation of students learning outcomes to their academic performance such as quizzes and exams.	*1wholesemester evaluation and polishing of the program.	*Evaluation tools and other materials.

Conclusions

This study revealed that although chatbots can encourage students to be more engaged and actively participate in the classroom. Finding also revealed that chatbot can't necessary guarantee them to improved their academic performance. Furthermore, in terms of support chatbot can help students to become more independent learners, more confident to their abilities and better solver to their problem. Moreover, chatbot can enhance students learning experience by learning more accessible regardless on time or location. However, despite of positive engagement and participation level of participants in this research, there is still a need of improvement to reach higher level of proficiency. Therefore, this indicates that while chatbots can help students to enhance their motivation and engagement, they do not necessarily rely on chatbots to improve their academic performance.

Recommendations

The researchers formulate some recommendations based on the findings of the study, to improve the academic performance of the students as well as their engagement experience.

1. Enhance Chatbot Functionality. To address the needs of students and learning gaps, chatbot may incorporate features that will offer more personalized feedback and adaptive learning paths. Additionally, to maintain the interest of students and to deepen their understanding, chatbot might also consider adding more interactive and engaging elements like quizzes, simulations, and gamification.
2. Combine Chatbot with Other Teaching Methods. Complement chatbot engagement with traditional teaching methods and friendly learning activities that will create a holistic learning exposure.
3. Provide More Support and Resources. Offering extra activities like tutoring and support workshops will help students, especially those who are in needs to reach their academic goals.
4. Examine and Evaluate Chatbot Effectiveness. Continuously assessing and conducting regular evaluations will help identify the impact of chatbot towards the students' engagement, participation and academic performance
5. Encourage Equal Learning Tactic. By promoting the use of combined digital and traditional learning tools will enhance student's learning habits. Fostering a learning environment that merit engagement and academic performance, giving an emphasis in the crucial role of sustaining effort and practice.

Compliance with Ethical Standards

The participants of the study were provided detailed information about the research before they were allowed to participate. Those who chose to participate were given consent and assent form adhering to the provisions outlined in the Data Privacy Act of 2012, also known as RA 10173, all responses provided by respondents will be kept private and utilized exclusively for academic purposes. Ensuring the confidentiality of participants' identities and privacy. Additionally, the study strictly followed the

recommended procedures of Memorandum No. 9, s. 2022 for data collection, security of collected data, storage, transfer, and destruction procedures. The participants' identities and other identifying information were not disclosed without their explicit consent. Proper citation and credit were given to the authors mentioned in the study. The researchers upheld the integrity of the data avoiding data fabrication and data falsification, as outlined in the ethical practices. The actual benefit of the study, meeting the needs of the respondents, and encouraging positive change in the classroom will be prioritized. Furthermore, the researchers ensured that after the specific purpose for which the data were gathered and used, the data were no longer retained and were subjected to disposal. To ensure data security and participant privacy, the researcher implemented a comprehensive data disposal protocol. After fulfilling the research objectives, all data were permanently deleted, 9 leaving no possibility of recovery. This involved digital deletion from the Google Form used for data collection, effectively erasing all entries and submissions.

Acknowledgments

The researchers of this study acknowledge the guidance and blessings of the Lord. The researchers would like to thank Bryan DC. Gabriel, PhD, their research adviser, for his invaluable insight, expertise, and encouragement. The researchers extend their gratitude to the 88 first-year BSED students from Norzagaray College as respondents who generously shared their time, experiences, and perspectives. The researchers also express their thanks to the Norzagaray School President and the Dean of the College of Education, without them, the research will not be 15 accomplished. Sincere gratitude is extended to all individuals and organizations that have provided support, guidance, and assistance throughout the completion of this study.

UTILIZATION OF SUBSTITUTION, AUGMENTATION, MODIFICATION, AND REDEFINITION MODEL FOR BACHELOR OF SCIENCE IN TOURISM MANAGEMENT STUDENTS' SPEAKING AND WRITING SKILLS

Ryan Marquez Hilario

Laguna State Polytechnic University-Los Baños Campus
Brgy. Malinta, Los Baños, Laguna, Philippines

https://doi.org/10.5281/zenodo.13335881

ABSTRACT

The primary purpose of this study was to determine if the SAMR model could assist the students in improving their English proficiency, organization, grammar, fluency, and word choice in terms of speaking and writing skills. This was carried out in a state university at Sta. Cruz, Laguna. The theories of Experiential, Dual Code, and Language acquisition served as the framework for this study. Quasi-experimental research methodology was adopted in this work. Simple random sampling was used to identify Tourism Management students with certain criteria as study respondents. The Cambridge English Proficiency Test, on the other hand, was chosen as the research instrument. The T-test was also utilized in this investigation for independent samples at the.05 level of significance. The pretest and posttest data were statistically analyzed to see whether learners exposed to the SAMR model fared better than those who were not. The posttest revealed that there was a substantial difference in student performance between the control and experimental groups. Moreover, the study produced an action plan titled "WRITE2SPEAK" or Project on Improving Writing and Speaking Skills in the English Language. Project WRITE2SPEAK has included enrichment exercises to help students cope with areas where they were struggling, including organization, grammar, fluency, and word choice

Keywords: *utilization, SAMR model, "WRITE2SPEAK", writing, speaking, English proficiency*

INTRODUCTION

The English language is often considered as an active universal, the world's language. People who learn the English language view it as personal competence. As a result, many people today, particularly students can speak English. Mastering the English language is a vital skill for students to have. Students who master the language improve both their academic and life skills. Once students understand it, they will be well-accepted by society. English is the world's most extensively used language for communication. It is an international language throughout the world. English is one of the foreign languages spoken in the Philippines. It is the most widely taught foreign language, with instruction ranging from elementary school to tertiary level. By learning English, students are expected to absorb and keep up with scientific, technological, and artistic developments. The teaching of English focuses on learners' capacity to master the four macro skills, which pertain to hearing, speaking, reading, and writing.

As it is, the Philippines is recognized as one of the most populous English-speaking nations. After the Philippine-American War concluded in 1902, the American colonial authority established English as the primary language of government, business, and education. English is currently listed in the Philippines' constitution as one of its official languages. It is the principal medium of instruction in schools and the language of commerce, science, technology, government, and international communication. With two-thirds of the population fluent in English, according to Mariñas (2021), the Philippines was also one of the leading ESL destinations. Even though the majority of the Philippine population speaks English fluently, the EF English Proficiency Index (an annual ranking by English level) has shown a progressive decline in recent years. The Philippines was delegated to the group known as TOEIC. Rex Wallen Tan, general manager of Hopkins International Partners, explained that this was concerning given that taxi drivers in Dubai, United Arab Emirates, were expected to have a TOEIC proficiency score of 650 and business process outsourcing agents should have a score of 850 in the metric, while the average English proficiency score of a Philippine college graduate was only 631.4, according to the Test of English for International Communication metrics the overall average score of Filipino IELTS takers was disappointing because many of them were supposedly "educated." This implies that English standards in the Philippines are declining, according to IPD Education's 2021 outcomes.

The Filipino culture eventually assimilated the English language. Despite persistent disagreements about the preferred medium of instruction, the nation has established language regulations. Following bilingualism, President Gloria Macapagal Arroyo established the Executive Order 210. It is intended to increase the use of English as a teaching tool inside the school system. At the tertiary level, terminology is frequently consistent with that found in course descriptions. Due to this, most of the courses are taught by teachers in English. Due to the linguistic switch from Filipino to English to Filipino and English again, students frequently switch between codes. The relevance of language competence in the workplace is emphasized in community and education.

Retnaningsih (2020) stated that online learning, also known as e-learning, is the only means to give education during the COVID-19 pandemic. This includes university-level coursework. Therefore, it seems sensible to conclude that e-learning should be used. To overcome these obstacles, lecturers must adjust to suitable e-learning implementation strategies. To create technology-based learning, the SAMR model was utilized as a guideline. Izza and Rusydiyah (2020) claimed that internet usage encouraged students to learn. Images, movies, and music are used in conjunction with the teachings to raise students' intellectual awareness and foster the development of their thinking skills. Students who access English-related applications on their phones are another advantage. According to Speck (2022), English language learners benefit from the use of technology. Technology is used in various ways, particularly in education. People knew something near them in the past. However, everyone's thinking has been altered by technology. Students may now instantly use cell phones to interact with their friends, family, and teachers.

Tourism is one of the government's considered sources of revenue. Every country in the world plans how to welcome domestic and international visitors, which necessitates enough human resources. A variety of educational institutions have been established around the world to develop skilled labor. In this regard, language was an essential tourist media tool. Tourism students must have strong speaking and writing skills that they can utilize in the workplace. However, students continue to confront a variety of issues when expressing their communication abilities.

In line with this, the researcher determined students' speaking and writing abilities by incorporating technology. The SAMR Model uses computer software to help teachers and students during the teaching-learning process, particularly in speaking and writing activities. The goal of this study was to see if the SAMR model could improve students' speaking and writing abilities. If this suggested technology integration into students' speaking and writing activities are both successful, it would serve as a launchpad for new creative instruction.

Research Questions

1. What is the pretest result of Tourism students in speaking and writing in the control group in English language proficiency in terms of:
    - 1.1 Organization,
    - 1.2 Grammar,
    - 1.3 Fluency, and
    - 1.4 Word Choice?
2. What is the pretest result of Tourism students in speaking and writing in the experimental group in English language proficiency in terms of:
    - 2.1 Organization,
    - 2.2 Grammar,
    - 2.3 Fluency, and
    - 2.4 Word Choice?

3. Is there a significant difference between the pretest results of the control and experimental groups?
4. What is the posttest result of Tourism students in speaking and writing in the control group in English language proficiency in terms of:
    4.1 Organization
    4.2 Grammar,
    4.3 Fluency, and
    4.4 Word Choice?
5. What is the posttest result of Tourism students in speaking and writing in the experimental group in English language proficiency in terms of:
    5.1 Organization,
    5.2 Grammar,
    5.3 Fluency, and
    5.4 Word Choice?
6. Is there a significant difference between the posttest results of the control and experimental groups?
7. What action plan may be proposed based on the results of the study?

METHODOLOGY

Research Design

The study utilized the quasi-experimental method, which sought to establish a cause-and-effect relationship between an independent and dependent variable, was deemed to be the most appropriate research design for this study (Thomas, 2020). The researcher thus collected the learners' raw pretest and posttest data. A pair of groups served as the research subjects in this quasi-experimental investigation. The experimental group and learner-respondent control groups received a pretest and a posttest, respectively. After applying the SAMR model technique, the control group was given conventional teaching-learning procedures, or what the learners performed regularly, to see whether there was a substantial change in the experimental group's English ability.

Research Locale

The study was carried out in one of the state universities in Laguna Province. This university provided both senior high school and college education. One of the programs provided by this university was the College of Hospitality Management and Tourism. Due to the large student body of this college, the researcher felt that many students might

benefit from the study. The study was curious to observe if the experiment had any influence on the student's English skills before and after the experiment.

Research Participants

The population was the first-year students at Laguna State Polytechnic University in Sta. Cruz, Laguna, who enrolled in the Bachelor of Science in Tourism Management program during the first semester of the 2023-2024 academic year. The BSTM was divided into four (4) sections, with a total of one hundred fifty-five (155) students

Research Instrument

The instrument used in this study was a validated English Proficiency Test from Cambridge. The speaking test was separated into three (3) sections. The first test involved speaking about a visual presentation. The second test involved them expressing their experiences, while the third involved them giving an argumentative statement. The writing test was composed of two (2) sets of questions. The first part pertained to summarizing a particular article and the second part was essay writing.

Data Gathering Procedure

The required data, hypotheses, and related literary works and concentrates all came from books that were borrowed mainly from the library of Laguna College of Business and Arts (LCBA). The study made use of the internet to strengthen the resources through the utilization of Mendeley, Academia, ScienceDirect, and Google Scholar. After validating the questionnaire, the following steps were utilized.

Initially, a formal letter was sent to the Dean of the College of Hospitality Management and Tourism requesting their approval that the tourism students might be the subject of this research. The significance of the study, its goals, how to complete the survey, and when to obtain the results were all discussed by the researcher.

Subsequently, a consent letter and a pretest questionnaire were distributed to all BSTM students to determine their English language proficiency. This questionnaire was to measure the level of speaking and writing skills of the students before applying the SAMR model. The survey questionnaire was self-administered by the students. The results were then compared using the ratings from each section. There was no discernible difference between the experimental and control groups' outcomes.

Afterward, the researcher used the SAMR model in the course design, activities, evaluation, and other areas, according to the instructions given to the experimental group in the classroom. The researcher taught and exposed the students to online resources and gave them hands-on training in navigating the Internet, making Google accounts, encoding, uploading, commenting, and sharing documents using Google Docs.

Furthermore, students were instructed to look for grammar checker sites online that would assist them in detecting and rectifying their errors when composing their output.

The following were the steps of intervention using the SAMR model for the experimental group. In writing skills, at the substitution level, the students composed their written outputs through the use of Google Docs. In augmentation, the students shared their output with their partners through the platform for corrections, feedback, or suggestions using its comment feature. In the modification, the students revised their output and then shared the document with their instructor for comments and suggestions. In redefinition, the class created a Facebook page in which they were able to upload their output so that the other classmates or instructors were able to comment if there were things to be improved or changed. In the aspect of speaking, at the substitute level, the researcher provided an activity regarding how to create a vlog using a sample video and PowerPoint presentation. In augmentation, the students used Google Docs to write down their lines or scripts with the use of available online dictionaries and grammar checkers. The students also used Google Drive for multimedia content and shared it with their groupmates and instructors for comments and suggestions. In the modification, the student enhanced their vlog using online platforms that helped to develop the output. In redefinition, the class created a YouTube channel in which they were able to upload their vlog so that the other classmates or instructors could interact through the comment feature.

The control group followed the course syllabus and carried on as usual in the classroom without receiving any treatment or assistance. After using the SAMR model and conventional way of teaching, the two groups took a posttest. This was also the type of test given in their first test.

Finally, the information was gathered online, documented, and tabulated. The statistician was given all of the collected data and conducted statistical analysis on it. To check if there were any differences, their scores were gathered and reassessed.

RESULTS AND DISCUSSIONS

Table 1.1. A. Pretest Result of the Tourism Students in the Control Group in English Language Proficiency (Speaking) in terms of Organization

Indicators	Grade	F	%
Advanced	90 – 100	2	6.67%
Proficient	85 – 89	1	3.33%
Approaching Proficient	80 – 84	5	16.67%
Developing	75 – 79	8	26.67%
Beginning	74 and below	14	46.67%
Total		**30**	**100%**

General Assessment	**75.47**	**Developing**

It shows that the learners lack sufficient knowledge in arranging concepts. This scenario suggests that the students have not yet been conversant with or skilled in terms of organizing ideas.

That result was nearly identical to the analysis of Asio and Quijano (2023) in their study on English Proficiency and Academic Performance of College Students. With 250 or 99.6%, nearly all of the respondents were in the low level. There was only one or 4% within the average level. No one achieved a high level. The study found that learners' ability to arrange thoughts needed to be developed further.

In addition, Waluyo and Bucol (2021) argued that among the speaking skills included in the exam namely: vocabulary, organization, and grammar. The most challenging aspect to manage is organization. Individuals could not communicate effectively unless they organized their ideas or information in the context.

Table 1.1. B. Pretest Result of the Tourism Students in the Control Group in English Language Proficiency (Writing) in terms of Organization

Indicators	**Grade**	**F**	**%**
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	3	10.00%

Beginning	74 and below	23	76.67%
Total		**30**	**100%**
General Assessment	**70.80**	**Beginning**	

The results show that learners in the control group struggle to write in English. This implies that the students are unable to articulate their thoughts properly. This occurs initially when the learners have not yet been introduced to the concepts.

To back up this claim of Toba and Norr (2019) in their study on current issues of Indonesian EFL students' writing skills: ability, problem, and reason in writing comparison and contrast essays. The content problem was related to challenges in investigating and developing relevant concepts, including object comparison; as a result, the idea of their essay was sometimes unknown. In terms of organization, errors were found in the sentence organization, lack of transition words, inconsistently composed whole-to-whole, similarities-to-differences, and point-by-point structures, the unstated topic sentence for each body paragraph, undeveloped assisting ideas, and repetition idea/words in the concluding paragraph of the essay.

Table 1.2. A Pretest Result of the Tourism Students in the Control Group in English Language Proficiency (Speaking) in terms of Grammar

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	2	6.67%
Approaching Proficient	80 – 84	3	10.00%
Developing	75 – 79	4	13.33%
Beginning	74 and below	21	70.00%
Total		**30**	**100%**
General Assessment	**72.00**	**Beginning**	

The findings above suggest that learners in the control group struggle with writing. This shows that these students are unable to convey their concepts. It is also possible to conclude that some students' written expression skills require further growth and polish.

In similar study by Betoni and Ulfaika (2020), it was stated that students who received low grammatical scores on their writing tests could be attributed to one factor which was a lack of students' vocabulary, it was easier for them to write anything they wanted to write. However, students who lacked vocabulary struggled to write even when they had ideas.

Table 1.2. B. Pretest Result of the Tourism Students in the Control Group in English Language Proficiency (Writing) in terms of Grammar

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	4	13.33%
Developing	75 – 79	6	20.00%
Beginning	74 and below	20	66.67%
Total		**30**	**100%**
General Assessment	**72.07**	**Beginning**	

The college students in the control group have lower levels of proficiency in grammar. This suggests that their knowledge of grammar is inadequate and that they are not familiar with the structure of language manifested in their performance in writing.

Puspitaloka (2019) found out that grammar proficiency was vital in helping a learner understand the meaning of a sentence throughout the writing process. Having a set of grammar skills did not imply that someone can produce descriptive text automatically. Critical thinking must be increased so that she/he can jot down the descriptive text as well. Even if the influence of critical thinking is not as strong as grammatical mastery, it was an inner modality for a learner to take an advanced activity to write properly.

Table 1.3. A Pretest Result of the Tourism Students in the Control Group in English Language Proficiency (Speaking) in terms of Fluency

Indicators	**Grade**	**F**	**%**
Advanced	90 – 100	1	3.33%
Proficient	85 – 89	1	3.33%

Developing	75 – 79	0	0
Beginning	74 and below	22	73.33%
Total		**30**	**100%**
General Assessment	**72.33**	**Beginning**	

The factors causing speaking problems are lack of general knowledge, lack of speaking practice, fear of making mistakes, lack of word usage and grammar practice, poor motivation, low involvement, reading laziness, shyness, less dictionary usage, anxiousness, fear of criticism, and unfamiliar word pronunciation are all contributing factors to speaking difficulties.

Based on the study, the aspects of fluency across assessed levels of speaking proficiency by Tavakoli et al. (2020). Students still felt guilt and anxiety during dialogues. This was a critical component in encouraging students to refrain from speaking in public. This was due to a lack of self-confidence, and learners' vocabulary was relatively low. Therefore, they preferred quiet over talking or having a discourse.

Table 1.3. B. Pretest Result of the Tourism Students in the Control Group in English Language Proficiency (Writing) in terms of Fluency

Beginning	74 and below	23	76.67%
Total		30	100%

General Assessment	69.47	Beginning

Learners have difficulties when it comes to writing. These problems can be caused by a variety of factors like lack of practice, insufficient time, a lack of enthusiasm, feedback from the instructor, and the nature of the writing process.

To back up this, The Role of Handwriting Instruction in Education by Limpo and Graham (2020) found that good and fluent handwriting was required for efficient and effective writing development, which could be promoted by explicit and systematic training.

Table 1.4. A. Pretest Result of the Tourism Students in the Control Group in English Language Proficiency (Speaking) in terms of Word Choice

Indicators	Grade	F	%
Advanced	90 – 100	2	6.67%
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	3	10.00%
Developing	75 – 79	7	23.33%
Beginning	74 and below	18	60.00%
Total		30	100%
General Assessment	73.80	Beginning	

Communication challenges arise when the learner encounters a word. They do not comprehend, use a word they are unfamiliar with, or are unable to articulate their intended meaning. Other issues that students face when speaking include a lack of self-confidence and anxiousness. They may experience sentiments such as insecurity, shyness, anxiety, nervousness, and worry that interfere with their speaking abilities. If the learners themselves do not believe that they can speak, it has become a major issue for them.

Aziz and Kashinathan (2021) found that few difficulties with communication were reported among college students. The students believed they could not compose English sentences because of their restricted terminology. Furthermore, learners took far too long to produce English phrases. They began with words and strived to organize the complete language into sentences and phrases before conversing. They also employed erroneous phrase structure and pronunciation frequently.

Table 1.4. B. Pretest Result of the Tourism Students in the Control Group in English Language Proficiency (Writing) in terms of Word Choice

General Assessment	71.60	Beginning	

Many of the students who do not read much or come across a diverse range of vocabulary in their daily life may have a restricted word bank to draw on. This makes it tough to choose the most exact and striking phrases to explain their ideas.

According to Derakhshan and Karimian Shirejini (2020), punctuation, the use of prepositions, weak expressions, exceptional structure, consistency, and the use of irregular verbs, all played important roles in making writing difficult. This could be considered an intrinsic aspect of the English learning process; therefore, understanding the learners' academic writing challenges and their attitudes about such problematic regions was critical in the educational context. Students were faced with developing logical writing in addition to correct sentence construction and paragraph development.

Table 2.1. A. Pretest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Speaking) in terms of Organization

Approaching Proficient	80 – 84	11	36.67%
Developing	75 – 79	7	23.33%
Beginning	74 and below	12	40.00%
Total		30	100%
General Assessment	76.40	Developing	

The experimental group experienced problems in speaking skills regarding organization, based on their overall score. It simply indicates that the students are unable to arrange the ideas in a particular context.

According to Islam and Stapa (2021), learners were also hampered by a lack of previous knowledge on a variety of topics. They appeared to struggle to retrieve material from their long-term memory when they attempted to speak on a topic. Having appropriate topical knowledge enabled speakers to connect to the context, and with this connection, they might continue a conversation or build a speech. It was believed that learners' speaking performance was substantially influenced by how much knowledge and thoughts they had about the issue at hand.

Table 2.1. B. Pretest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Writing) in terms of Organization

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	2	6.67%
Developing	75 – 79	4	13.33%
Beginning	74 and below	24	80.00%
Total		30	100%
General Assessment	69.67	Beginning	

College students show deficiency when it comes to establishing ideas and information in writing activities despite having a series of tests, training, and learning from the past.

To support this, Siddiqui (2020) found that writing in English is extremely important all around the world, especially for academic and professional success. Despite having studied English for years, tertiary students, like other foreign language students, struggled with writing. One of the primary challenges in their writing was unable to express or organize their thoughts in a paragraph to convey the proper sense.

Table 2.2. A. Pretest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Speaking) in terms of Grammar

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	5	16.67%

Beginning	74 and below	19	63.33%
Total		30	100%
General Assessment	73.00	Beginning	

The Tourism students in the experimental group perform poorly in grammar. This suggests a lack of grammatical competence and a lack of familiarity with a grammar structure.

According to Wahyuningsih and Afandi (2020), the analysis results showed that the problems encountered by students in the English language education department in speaking English included a lack of appropriate vocabulary, a lack of grammar mastery,

a lack of correct pronunciation, a lack of English input outside of the classroom, a lack of confidence, and a lack of English-speaking curriculum development.

Table 2.2. B. Pretest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Writing) in terms of Grammar

Beginning	74 and below	21	70.00%
Total		30	100%
General Assessment	70.53	Beginning	

The findings indicate that learners' grammar competency in writing is low. This occurs when a learner does not understand what he or she is reading and does not have a strong command of the vocabulary.

According to Omar (2019), many English language learners have been facing difficulties when writing an academic paper in English due to a lack of grammar. Most foreign colleges required passing international tests at a high level, which most international students have failed to do. The cause was attributed to a lack of fundamental knowledge about grammar in writing.

Table 2.3. A. Pretest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Speaking) in terms of Fluency

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	2	6.67%

Beginning	74 and below	18	60.00%
Total		30	100%
General Assessment	72.67	Beginning	

This only connotes that the students have poor communication skills, this happens when learners are not encouraged to express their ideas, thoughts, and feelings inside or outside of the classrooms. As a result, the students become more unwilling and experience stage fright or lack of self-confidence in using English as a language.

Some may have attributed this shortcoming to a lack of time for oral practice both in and out of the classroom (Su, 2021). As a result, students lacked confidence and were unwilling to speak English. They were nervous when they used English to express themselves verbally, had debates, or communicated with teachers or classmates. Furthermore, the bulk of these pupils were not at ease speaking English and were hence not fluent. Some students performed well in English lessons but struggled to communicate in real-life settings.

Additionally, Masuram and Sripada (2020) stated that college students' speaking ability and oral fluency must be evaluated. The majority of learners were having difficulty continuing a discussion with minimal hesitations and unnecessary pauses. There could be a variety of explanations for such occurrences. There could be pedagogical reasons to blame for students' weak public speaking skills.

Table 2.3. B. Pretest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Writing) in terms of Fluency

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	1	3.33%
Developing	75 – 79	6	20.00%
Beginning	74 and below	23	76.67%
Total		30	100%
General Assessment	68.80	Beginning	

The findings show that the learners are terrified of making mistakes while writing. When they find it difficult to express themselves in English, they choose to use their own words instead. Limited vocabulary hinders learners' ability to communicate effectively in English.

Ramamuthie and Aziz (2022) stated that English could be difficult for English language learners, especially if they were not exposed to the language well. The most common issue for learners was a lack of confidence in the English language. Participation of students in writing activities necessitated a certain level of interest on their behalf. In general, intrinsic and extrinsic elements that developed the yearning and energy in students to be continually engaged and dedicated to studying and engaging in English activities were characterized as intrinsic and extrinsic components.

Table 2.4. A. Pretest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Speaking) in terms of Word Choice

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	8	26.67%
Developing	75 – 79	6	20.00%
Beginning	74 and below	16	53.33%
Total		30	100%
General Assessment	74.87	Developing	

The findings show that students demonstrate fear during speaking activities resulting in their struggle in performance. Providing learners with a comfortable setting and a series of activities for them to be exposed to the language was vital for their success. Some learners may struggle to communicate in the language due to their shy type nature or personality.

Syafiq et al. (2021) stated that learners with limited vocabulary and practice might struggle to communicate effectively in English. Lack of material could cause anxiety and impair communication skills. In the event the learners might be fearful of making mistakes or being ridiculed by their peers, preventing them from sharing their thoughts.

Table 2.4. B. Pretest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Writing) in terms of Word Choice

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	1	3.33%
Developing	75 – 79	2	6.67%
Beginning	74 and below	27	90.00%
Total		30	100%
General Assessment	69.07	Beginning	

There are still fundamental problems in student's writing-related language use, such as organization, tense, quantity, word fragments, deletion, and meaning confusion or ambiguity.

To support this, Mandasari (2019) discovered that the inaccuracies written by students caused confusion and misconception among readers. One hundred-eighty (180) pieces of writing were collected and evaluated from 24 students enrolled in the Business

Correspondence course. The results suggested that word choice was one of the most committed errors, accounting for 9.1% of all errors.

Table 3.1. Test of Significant Difference between the English Language Proficiency Pretest Scores in Speaking of Tourism Students in Control and the Experimental Group

	Paired Differences					
Pretest	Mean	SD	T	P value	Remarks	Decision
Organization	-.09333	1.02619	-.498	.622	Not Significant	Accept Ho
Grammar	-.1000	.99343	-.551	.586	Not Significant	Accept Ho
Fluency	-.0333	.83721	-.218	.829	Not Significant	Accept Ho
Word Choice	-.10667	.90931	-.643	.526	Not Significant	Accept Ho

It signifies that the control and experimental groups performed equally at the start of the investigation. Their pretest results are identical. The pretest results show no statistically significant differences between the experimental and control groups, indicating that they were all at or near the same level of English language competence before the study's creation and implementation.

In this sense, students were frequently given a pretest at the start of a course. According to Papageorgiou et al. (2021), this was to determine their baseline understanding of the measurements specified in the learning objectives. It was given before a course to establish a baseline of knowledge.

Table 3.2. Test of Significant Difference between the English Language Proficiency Pretest Scores in Speaking of Tourism Students in Control and the Experimental Group

	Paired Differences					
Pretest	Mean	SD	T	P value	Remarks	Decision
Organization	.11333	.82493	.752	.458	Not Significant	Accept Ho
Grammar	.15333	.84801	.990	.330	Not Significant	Accept Ho
Fluency	.06667	.72841	.501	.620	Not Significant	Accept Ho
Word Choice	.2533	.5655	2.454	.020	Significant	Reject Ho

It means that both the control and experimental groups started the study with the same performance. Their pre-test findings show no differences except in word choice. The pretest findings for the experimental and control groups revealed no statistically significant differences in terms of organization, grammar, and fluency. In contrast, there is a significant difference in terms of word choice.

Zohrabi and Tahmasebi (2020) stated that in his study the result of pretest in both was no statistically significant difference between the experimental and control group regarding grammar, and vocabulary scores. It indicated that both groups have nearly the same competencies before the experiment.

Table 4.1. A. Posttest Result of the Tourism Students in the Control Group in English Language Proficiency (Speaking) in terms of Organization

Indicators	Grade	F	%
Advanced	90 – 100	2	6.67%
Proficient	85 – 89	1	3.33%
Approaching Proficient	80 – 84	7	23.33%
Developing	75 – 79	9	30.00%
Beginning	74 and below	11	36.67%
Total		30	100%
General Assessment	78.07	Developing	

This table shows that speaking in English in terms of organization can be tough, especially if they do not have good training on how to use the language properly.

Another difficulty that learners confront when learning to speak English is interruption from their mother tongue. According to Budiharto (2019), the students' interlingual errors were classified into four types: grammar errors (words or sentences that are relative to tense, subject-verb agreement, singular/plural markers, articles, and prepositions), lexico-semantic errors (errors associated with incorrect vocabulary meaning), mechanical errors (spelling errors), and word order errors.

Table 4.1. B. Posttest Result of the Tourism Students in the Control Group in English Language Proficiency (Writing) in terms of Organization

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	1	3.33%
Approaching Proficient	80 – 84	3	10.00%
Developing	75 – 79	5	16.67%

Beginning	74 and below	21	70.00%
Total		30	100%
General Assessment	74.40	Beginning	

The results show that the students do not have a proper guide on how to construct a concise and well-constructed paragraph from their point of view.

To support this, according to Farhan et al. (2019), writing was effective when the message was easy to follow and grasp due to its structure and organization. Language learners must use all paragraph criteria for producing a good paragraph while writing a paragraph to guarantee the message was apparent to the readers. A paragraph was a collection of sentences connected in a succession to build an idea. These ideas were made explicit in paragraphs by descriptions that clearly explained the point of view.

Table 4.2. A. Posttest Result of the Tourism Students in the Control Group in English Language Proficiency (Speaking) in terms of Grammar

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	3	10.00%
Approaching Proficient	80 – 84	5	16.67%
Developing	75 – 79	8	26.67%
Beginning	74 and below	14	46.67%
Total		30	100%
General Assessment	76.20	Developing	

In terms of grammar, the learners in the control group showed a bit of improvement in their performance on the pretest and posttest. On the other hand, it indicates that the learners have not yet acquired or become acquainted with the grammar structure. This means that the teacher will still need to devise a strategy to improve the performance of their students.

As evidenced by Eisenberg (2020) the primary goal of all grammatical interventions should be to assist students in developing greater facility with syntax and morphology, narration, exposition, and other textual genres in both written and oral modalities. As a result, considering that no additional procedure or intervention was used in the control group, as opposed to the experimental group, it was plausible to conclude that the increase in posttest score in the control group was not significant.

Table 4.1. B. Posttest Result of the Tourism Students in the Control Group in English Language Proficiency (Writing) in terms of Grammar

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	6	20.00%
Developing	75 – 79	9	30.00%
Beginning	74 and below	15	50.00%
Total		30	100%
General Assessment	75.40	Developing	

The result indicates that there is a bit of improvement in their performance in writing in terms of grammar. It implies that learners who belonged to the control group are still struggling with written expression. They still cannot articulate cohesive thoughts.

According to Fitria (2021) grammar websites enable students to teach themselves by providing different representations of an idea. Many prominent grammar software products included grammar check online, free grammar checker, online editor, Grammarly, and so on. As for how to check English grammar utilizing the following tools, an internet connection was required, and some of these online grammar check services provided customers with two service options: free or premium features.

Table 4.3. A. Posttest Result of the Tourism Students in the Control Group in English Language Proficiency (Speaking) in terms of Fluency

Indicators	Grade	F	%
Advanced	90 – 100	2	6.67%
Proficient	85 – 89	1	3.33%
Approaching Proficient	80 – 84	6	20.00%
Developing	75 – 79	6	20.00%
Beginning	74 and below	15	50.00%
Total		30	100%
General Assessment	76.60	Developing	

The result indicates that there is a bit of improvement in their performance in speaking in terms of fluency. Task-based teaching should be emphasized to promote an engaging activity to enhance their skills in speaking.

Namaziandost, Homayouni, & Rahmani (2020) indicated that improving learners' oral proficiency necessitates primarily overcoming personal obstacles. As a result, teachers must equip learners with a means for increasing their opportunities to utilize

language. Organizing the lesson in groups was one of the best strategies to give learners comprehensive oral production and conversation.

Table 4.3. B. Posttest Result of the Tourism Students in the Control Group in English Language Proficiency (Writing) in terms of Fluency

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0

Developing	75 – 79	4	13.33%
Beginning	74 and below	19	63.33%
Total		30	100%
General Assessment	74.80	Developing	

To enhance student's fluency in writing, collaborative or cooperative learning should be utilized. It is usually regarded as an important exercise for tertiary students.

To back this up, Pham (2021) found that collaborative writing had a significant impact on students' writing fluency in both cooperatively and separately produced papers. In addition, the study developed an effective framework for collaborative writing activities.

Table 4.4. A. Posttest Result of the Tourism Students in the Control Group in English Language Proficiency (Speaking) in terms of Word Choice

Indicators	Grade	F	%
Advanced	90 – 100	1	3.33%
Proficient	85 – 89	2	6.67%
Approaching Proficient	80 – 84	6	20.00%

Beginning	74 and below	17	56.67%
Total		30	100%
General Assessment	76.20	Developing	

As a result, some students may be unable to communicate effectively. As a result, the data strongly suggests that learners require a considerable amount of reading material to improve their speaking skills in terms of pronunciation, vocabulary, and word choice.

In support of this, according to Ambarwati and Mandasari (2020), in terms of pronunciation mastery and vocabulary enrichment, dictionaries had an impact on student

pronunciation and vocabulary. It was proposed that the use of the online Cambridge dictionary as an alternative solution to the pronunciation and word choice.

Table 4.4. B. Posttest Result of the Tourism Students in the Control Group in English Language Proficiency (Writing) in terms of Word Choice

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	0	0
Approaching Proficient	80 – 84	4	13.33%

Beginning	74 and below	19	63.33%
Total		30	100%
General Assessment	74.40	Beginning	

It shows that instructors should strengthen writing practices in the classroom to improve their students' writing skills. Writing is incredibly useful, even if the writing process remains challenging.

In this regard, the findings of Mantra, Handayani, and Widiastuti's (2021) study revealed that a substantial number of students were still unable to write descriptive paragraphs. Students should, therefore, attend intense writing workshops to strengthen their writing skills.

Table 5.1. A. Posttest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Speaking) in terms of Organization

Indicators	Grade	F	%
Advanced	90 – 100	15	50.00%
Proficient	85 – 89	7	23.33%
Approaching Proficient	80 – 84	7	23.33%
Developing	75 – 79	1	3.33%
Beginning	74 and below	0	0
Total		30	100%
General Assessment	88.06	Proficient	

As for the outcomes, this means that the students show growth in their speaking activities in terms of organization, they also find ways to engage in classroom activities and become more fun in utilizing technology. They know how to manage conflicts or challenges that they meet in their courses.

Based on the study of Mandasari and Aminatun (2020), it was possible to conclude that video blogging was useful in developing students' speaking abilities. There were several stages that students took when utilizing Vlog in English study. Throughout those stages, students discovered that Vlog provided some benefits for students studying English. Furthermore, students broadened their understanding of the structure of their ideas.

Table 5.1. B. Posttest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Writing) in terms of Organization

Indicators	Grade	F	%
Advanced	90 – 100	8	26.67%
Proficient	85 – 89	10	33.33%
Approaching Proficient	80 – 84	12	40.00%
Developing	75 – 79	0	0
Beginning	74 and below	0	0
Total		30	100%
General Assessment	86.07	Proficient	

The results show that the writing performance of the students has improved in terms of organization. It may be determined that the learners in this group are no longer struggling to organize their ideas in a specific context and can already explain cohesive thoughts. It means that the SAMR model used by the teacher in class aided the pupils in enhancing their writing skills.

According to Williams and Beam (2019), technology-mediated writing instruction yielded improvements in students' composing processes and writing skills as well as their knowledge and use of new literacies. Students designed, produced and presented a variety of multimodal and digital texts that represented their knowledge and understanding of literary material and contemporary social justice issues.

Table 5.2. A. Posttest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Speaking) in terms of Grammar

Indicators	Grade	F	%
Advanced	90 – 100	14	46.67%

Developing	75 – 79	0	0
Beginning	74 and below	0	0
Total		30	100%
General Assessment	89.00	Proficient	

The learners in this group's performance can be considered adequate knowledge of grammatical rules. Furthermore, they have become acquainted with the grammar structure covered in the test. It can be concluded that the learners' grammar competency has improved because of the SAMR model.

To support this claim, Sosas (2021), cited that the internet, podcasts, video conferencing, videos, and some of the best instruments for training speaking skills include speech recognition software, TELL, and blogging. It claimed that technology was used for instructional speech rather than in trades and economic activities. It became the way of communication for instructors and students nowadays, which meant that technology was required to enter the modernized world. Technology became an additional tool for teachers to improve the student's speaking abilities.

Table 5.2. B. Posttest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Writing) in terms of Grammar

Indicators	Grade	F	%
Advanced	90 – 100	8	26.67%

Beginning	74 and below	0	0
Total		30	100%
General Assessment	86.07	Proficient	

The use of technology or gamification is critical in providing language learners with a quality learning experience. The results show how this approach affects the writing skills of the students in terms of grammar.

Tran and Nguyen (2021) claimed that digital games were useful to improve learners´ grammar in aspects concerning the use of modals, gerunds, and infinitives; also, students showed an improvement in their vocabulary knowledge, especially in topics related to jobs and education.

Table 5.3. A. Posttest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Speaking) in terms of Fluency

Indicators	Grade	F	%
Advanced	90 – 100	13	43.33%
Proficient	85 – 89	5	16.67%
Approaching Proficient	80 – 84	12	40.00%
Developing	75 – 79	0	0

Beginning	74 and below	0	0
Total		30	100%
General Assessment	87.07	Proficient	

This means that the students are well-directed to complete learning tasks for them to develop as effective participants they gain self-confidence and competency in the use of the English language, resulting in good communication skills. They are encouraged to use new technology platforms to share their ideas and opinions.

In addition, Mahdi (2022) claimed that the effect of digital news on spoken language skills and the development of content knowledge to the 15 students who used Voice Thread, an interactive media tool had a good impact on student's speaking skill development. The strategy empowered the learners and resulted in improved communication among them. It also improved students' speaking fluency.

Table 5.3. B. Posttest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Writing) in terms of Fluency

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	3	10.00%
Approaching Proficient	80 – 84	24	80.00%
Developing	75 – 79	3	10.00%
Beginning	74 and below	0	0
Total		30	100%
General Assessment	81.93	Approaching Proficient	

This simply implies that the students are correctly guided to complete the writing tasks for them to develop as fluent writers. They gain self-confidence and proficiency in the use of the English language, resulting in good communication skills. They are encouraged to use new technological platforms such as digital portfolios to focus on art, pronunciation, and fluency.

According to Cabrera-Solano (2020), the results demonstrated that the digital portfolios were beneficial in improving students' pronunciation and fluency. It was also confirmed that using Google Drive to create digital portfolios could boost students' motivation to improve speaking skills in the target language.

Table 5.4. A. Posttest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Speaking) in terms of Word Choice

Indicators	Grade	F	%
Advanced	90 – 100	14	46.67%
Proficient	85 – 89	13	43.33%
Approaching Proficient	80 – 84	3	10.00%
Developing	75 – 79	0	0
Beginning	74 and below	0	0
Total		30	100%
General Assessment	89.27	Proficient	

The result simply means that the students have enhanced their vocabulary. The results also indicated that the student's ability to select the appropriate term in each topic had improved. Learners can benefit from technology-mediated learning, such as video conferencing, to improve their vocabulary through collaborative learning.

Lenkaitis (2020) revealed that technology-mediated learning occurred because participants were collaborative learners who communicated with other members of the group. Video conferencing like Zoom enhanced the improvement of conversation skills by allowing learners to contribute individually to the conversation to 'build confidence... with a safe setting in which to practice and assess themselves.

Table 5.4. B. Posttest Result of the Tourism Students in the Experimental Group in English Language Proficiency (Writing) in terms of Word Choice

Indicators	Grade	F	%
Advanced	90 – 100	0	0
Proficient	85 – 89	5	16.67%
Approaching Proficient	80 – 84	24	80.00%
Developing	75 – 79	1	3.33%
Beginning	74 and below	0	0
Total		30	100%
General Assessment	82.80	Approaching Proficient	

The results show that their written expression performance has improved. It is possible to conclude that the students in this group no longer have difficulty with word choice in the written and can already explain cohesive concepts. It means that the teacher's use of the interactive tool "Grammarly" in class aided students in enhancing their written expression.

In support of this, according to the study by Koltovskaia (2020), Grammarly was recommended for students with low levels of English competence for them to receive sufficient direction and training on how to effectively engage in writing with the assistance of Grammarly feedback.

Table 6.1. Test of Significant Difference between the English Language Proficiency Posttest Scores in Speaking of Tourism Students in Control and the Experimental Group

Pretest	Paired Differences				Remarks	Decision
	Mean	SD	T	P value		
Organization	-1.05333	.78597	-7.340	.000	Significant	Reject Ho
Grammar	-1.28000	.69798	-10.045	.000	Significant	Reject Ho
Fluency	-1.04667	.62958	-9.106	.000	Significant	Reject Ho
Word Choice	-1.30667	.66795	-10.715	.000	Significant	Reject Ho

This suggests that the experimental and control groups obtained different outcomes. Another implication is that after exposing the Experimental group to the SAMR model during their session, they display near mastery.

Wahyuni et al. (2020) concluded that the usage of technology may broaden student's knowledge and skills in the language. Furthermore, incorporating technology may help learners to be more creative and self-directed learners.

Table 6.2. Test of Significant Difference between the English Language Proficiency Posttest Scores in Writing of Tourism Students in Control and the Experimental Group

Pretest	Paired Differences				Remarks	Decision
	Mean	SD	T	P value		
Organization	-1.16667	.52806	-12.101	.000	Significant	Reject Ho
Grammar	-.81333	.40999	-10.866	.000	Significant	Reject Ho
Fluency	-.71333	.39543	-9.881	.000	Significant	Reject Ho
Word Choice	-.84000	.27493	-16.735	.000	Significant	Reject Ho

It signifies that the experimental and control groups got different results. Another result is that after exposing the Experimental group to the SAMR paradigm during their online course, they displayed nearly mastery level.

Indonesia's (2019) findings were validated in the study The Use of Integrated Technology of Substitution, Augmentation, Modification and Redefinition in Increasing

English Skill at Stik Siti Khadijah Palembang. Using information technology made learning English more enjoyable, SAMR models could boost students' capacity to learn English, particularly writing abilities, and the usage of SAMR models in learning makes English courses more fascinating. The use of SAMR models could promote student creativity in the use of information technology, making learning English more genuine, and students feel the benefits of adopting the SAMR model. Students preferred to learn English independently through online media, with 96.7% stating that they preferred to learn English with online facilities.

Conclusions

Based on the abovementioned findings of the study, the following conclusions have been obtained:

1. That Tourism students in the control group do not know enough about grammatical rules and are unfamiliar with their structure during their pretest. On the other side, the students have difficulties in writing and speaking in English and cannot explain cohesive thoughts. Furthermore, the students are reported to be inadequate in terms of organization. They are unable to understand the content and lack language of proficiency.

2. That during their pretest for speaking and writing competencies, students in the experimental group performed poorly in grammar. The pupils are unable to express coherent ideas and do not know enough grammar rules. Still, there is room for improvement in the learner's organizing skills for both competencies. Conversely, the students have trouble with word choice and fluency. Their poor language skills prevent them from understanding what they are reading.

3. That as the results of their pretests are nearly identical, the control and experimental groups perform similarly at the start of the research. The pretest results for both speaking and writing skills do not reveal any statistically significant differences between the experimental and control groups, indicating that previous to the design and implementation of the study, all groups were at or near identical levels of English language competency.

4. That the Tourism students in the control group are unfamiliar with the structure of grammar throughout their posttest in terms of speaking and writing skills. Similarly, there is a bit of improvement in their written expression performance. Furthermore, the student's fluency skills are poor.

5. That the Tourism students in the experimental group demonstrated a sufficient grasp of grammatical rules throughout their posttest. Furthermore, they are now familiar with the grammatical structure that will be tested. One may claim that the instructor's use of

SAMR in the classroom improved the students' grammar proficiency. Similarly, their ability in organization and fluency has improved.

6. That the control and experimental groups perform differently after the posttest because their posttest results differ. The posttest findings of the experimental and control groups demonstrate a substantial difference. Based on the implementation and deployment of the SAMR model to the experimental, one may deduce that performance changes.

7. As a result of this study, "WRITE2SPEAK“ an action plan was proposed to help the learners deal with the areas in which they are having difficulty, like organization, grammar, fluency, and word choice.

Recommendations

The following recommendations are strongly encouraged considering the findings and conclusions:

1. The learners may be given the most relevant instructions in subject-verb agreement and basic essay writing to assist them in becoming more adept in grammar as quickly as possible. Additionally, learners may broaden their vocabulary range, avoid recurrent errors in word choice, and avoid confusing words that are irrelevant to the topic. This set of students, on the other hand, requires a more significant amount of reading resources to be better equipped in terms of organizing and gathering ideas.

2. The learners may be introduced to fundamental sentence construction and grammar standards. To help with the expression of cogent ideas, they may also increase the scope of their vocabulary. Yet, the learner's speaking and writing abilities still need to be developed and improved. In addition to these topics, they may learn about capitalization, punctuation, spelling, pronunciation, articulation, handwriting, vocabulary, word usage, sentence structure, and paragraph organization. On the other hand, learners need more appropriate reading materials to enhance their language understanding.

3. Before the design and implementation of the study, the control and experimental groups have the same degree of English language competency for both competencies since they performed similarly at the beginning of the investigation and showed almost no variations in their pretest scores. Therefore, students can enhance their organization, grammar, fluency, and word choice by following the first two criteria mentioned above.

4. Instructors may use the SAMR model in their instruction to help students become more proficient in speaking and writing English by considering the posttest results of the tourism students in the control group.

5. Teachers can keep using the SAMR approach in their instruction to help students practice and get better at speaking and writing English, considering the posttest outcomes of the tourism students in the experimental group.

6. It is suggested to continue using this strategy in teaching because there is a substantial difference in the outcome of the control and experimental groups following the execution and implementation of the SAMR model in the experimental group.

7. This study's suggested outcome, an action plan called "WRITE2SPEAK," is currently advised for approval. It can be used to help students deal with areas where they are having difficulty, like organization, grammar, fluency, and word choice.

8. The results of this study may be used by future researchers in their work helping all learners improve their speaking and writing proficiency in the English language. They would refer to and use pertinent studies and literature as a resource.

Compliance with Ethical Standards

This research study followed ethical guidelines. Since these ethical problems were explored throughout this work, the study adhered to the ethical guidelines outlined in the research manual published by the institution. To ensure that the participants understood that their remarks and opinions would be kept private and that this study would not hurt them, the researcher wrote a consent letter outlining the guidelines and goal of the study. The research study was kept confidential the entire time, and in the research content letter, the researcher would use the proper name of the study. For the public to trust and support the study, the researcher adhered to ethical standards. The expert ensured that the respondents' data was protected. Additionally, the purpose of the questionnaire was to collect only the data required for this study; respondents were not asked any private or sensitive questions, and the names of the students were not published in the report in response to the Data Privacy Act of the Philippines 2012, also known as Republic Act No. 10173.

Acknowledgments

To begin, the researcher wishes to express his gratitude to his thesis adviser, Dr. Vivien E. Untalan, for being always available to assist him anytime he encounters a problem or query regarding his research.

Furthermore, the researcher wishes to express gratitude to the following:

A heartfelt thanks to Dr. Ma. Lorena Tagala, the Research Director of LCBA, for her tireless efforts. Without her guidance, this study would not have been possible;

Moreover, the researcher would like to acknowledge Dr. Peejay G. Gecolea and Dean Alfredo G. Perez Jr. of the School of Graduate Studies. The researcher wants to extend his gratitude for their insightful comments on this thesis. Additionally, the researcher

wishes to thank the very approachable Dr. Melchor Villapando, for serving as the study's statistician;

The researcher would like to express his heartfelt appreciation to his Papa Remy and Mama Rose for their unwavering support and encouragement during his years of study and the process of researching and writing this thesis. Without them, this feat would not have been possible, and to his beloved Ms. Joella Nolasco for her unending support and love;

Finally, Thanks to our Lord Jesus Christ, to Him be glory forever!

WORK ENGAGEMENT, ORGANIZATIONAL COMMITMENT, AND EMPLOYEE DEVELOPMENT PROGRAMS OF RESEARCH AND DEVELOPMENT COMPANIES IN METRO MANILA: BASIS FOR EMPLOYEE RETENTION FRAMEWORK

Edward Jan Paul E. Ebreo

Lyceum of the Philippines University - Batangas, Batangas City, Batangas, Philippines

https://doi.org/10.5281/zenodo.13581580

ABSTRACT

By employing both descriptive and correlational methodologies, the study aimed to provide a comprehensive understanding of the research and development companies specifically from three pharmaceutical companies in Metro Manila. The descriptive research design focused on systematically collecting data to describe the situation and three host pharmaceutical institutions engaged in research and development. Supplementing the descriptive approach, the correlational research design aimed to quantify the relationships between variables or sets of scores. This involved identifying variables of work engagement, organizational commitment and employee development programs, and their interrelationships to ascertain potential significant correlations. Results revealed that there was strong evidence for both work engagement and organizational commitment while moderate evidence for employee development programs. These variables have significant connections with each other. Based from the findings, the proposed employee retention framework may be used to improve the employee retention at research and development companies especially within the pharmaceutical industry. Future researchers may use other variables that could have similar effects on the work engagement of research and development companies especially within the pharmaceutical industry.

Keywords: *Work Engagement, Organizational Commitment, Employee Development Programs, Employee Retention Framework*

INTRODUCTION

Employee retention within an organization is intricately linked to various factors (Chaudhary, 2023). In the context of an organization, job characteristics, and individual attributes collectively influence the inclination of employees to remain with their current organization. Factors within the organization encompass elements such as the organizational culture, leadership style, opportunities for advancement, compensation and benefits, work-life balance initiatives, and overall organizational climate (Andrianto & Alsada, 2019). Similarly, job-related factors incorporate the nature of the work, amount of work, autonomy, task variety, prospects for skill utilization, and inherent rewards.

Behavioral intentions and inclinations of the employee precede how an employee acts in their organization posited by the Theory of Reasoned Action (Fishbein & Ajzen, 1975). Individual employee attributes which comprise attitudes, values, motivations, and career objectives exercise significant influence on employees' decisions regarding retention within an organization. It also becomes evident that employees' intentions to remain with their current organization are critical to determining their subsequent actions. Thus, when individuals observe a coherence between their personal goals, work characteristics, and work environment, they are more inclined to show actions and behaviors indicative of their intention to stay with their organization (Silva, et al., 2023).

In essence, employees are more likely to commit when they believe that their values align with those of the organization, when they feel a supportive work culture, and when they perceive a sense of autonomy and control over their work environment (Nguyen, et al., 2020). This alignment nurtures a sense of belonging and fulfillment, enhancing employees' commitment and reducing turnover rates. Moreover, when employees feel that their professional aspirations are acknowledged and supported by the organization, they are more likely to invest in their long-term growth within the company, further solidifying their intention to stay.

Additionally, an organization’s efforts to enhance job fulfilment, provide opportunities for skill development, and create a positive work culture can significantly contribute to reinforcing employees' intentions to remain with the organization (Fishbein & Ajzen, 1975). Therefore, understanding and addressing individual attributes and aligning them with organizational objectives are crucial strategies for promoting employee retention and fostering a committed and engaged workforce. Thus, employee retention emerges as a dynamic process influenced by the interplay of organizational, job-related, and personal-related factors, wherein employees' intentions serve as a precursor to their retention-related actions (Rasdi & Chen, 2018).

Employee retention and effective people management are essential factors in maintaining a competitive edge and sustaining economic growth in the Philippines (Malinao & Agustin, 2022). In a dynamic and competitive job market like the Philippines, where the economy is rapidly expanding, retaining talented employees has become more

critical than ever for businesses striving to thrive amidst fierce competition. Businesses need to recognize that their workforce is one of their most valuable assets, and losing skilled employees can significantly impact productivity, innovation, and overall success. Therefore, investing in strategies to attract, engage, and retain top talent is crucial. This includes offering competitive compensation and benefits packages, providing opportunities for career development and advancement, fostering a positive work culture that values diversity and inclusivity, and implementing effective performance management and employee recognition programs. By prioritizing employee retention and people management initiatives, businesses in the Philippines can not only reduce turnover costs but also create a sympathetic and conducive environment where employees feel valued, motivated, and committed to achieving organizational goals, ultimately driving success and sustainability in the research and development sector.

Research and development (R&D) play a multifaceted and essential role in an economy's growth, innovation, and competitiveness. The economic research in the field of econometrics consistently demonstrates that, irrespective of the diverse methods used it is typically observed that a substantial and statistically meaningful enhancement in productivity and economic expansion is seen as a result of increased investment in research and development (OECD, 2015). R&D endeavors yield novel technologies, goods, and procedures. By increasing the productivity, efficiency, and competitiveness of industries, these innovations can promote economic growth. The Philippine business companies have been severely affected by the COVID-19 pandemic hence, there is a need to strengthen employee retention within the organizations in the country (Caredo, et al., 2022). There are also a few studies specific to the research and development industry of the country, a sector that can help in the economic growth of the Philippines. Employee retention within this sector has been a point of contention among employees and organizations for several reasons and this point of contention has to be addressed.

The R&D sector in the Philippines, specifically the pharmaceutical industry, is significant as it is one of the sectors that provides hope to alleviate health and well-being of the people, not only in the country, but in a more global scale. Employee retention within this sector is vital as it aids in keeping the goals of the organization (Andrianto & Alsada, 2019). The implications of the study are imperative within the three host institutions/organizations within the sector in the Philippines. However, these implications maybe applicable to other organizations in a global scale.

The outcomes of R&D initiatives ripple through the economic landscape, fostering a climate ripe for growth and ingenuity. This is accentuated by strong empirical evidence within the field of econometrics, consistently underscoring the tangible benefits of increased R&D investments within an economy of a country (Olaoye, 2021). The infusion of resources into research and development not only fosters novel technologies but also births groundbreaking goods and refined processes. These advancements act as pivotal agents which amplifies productivity and competitiveness across various sectors (Szarowská, 2018). Consequently, the resultant surge in economic growth becomes a

testament to the indispensable role that R&D plays in steering the course of a thriving and dynamic economy.

In an interconnected and technologically evolving world, each of the countries recognize the crucial role of R&D in maintaining a competitive edge and achieving sustainable economic growth. Investments are strengthened in the R&D sector to promote innovation, improve productivity, and advance various sectors, including healthcare, technology, and manufacturing (Soltanisehat, et al., 2022). The economic benefits of R&D are not restricted to amplified production; they extend to job creation, higher living standards, and long-term economic growth. The transformative impact of R&D reverberates through different industries; redefining norms of the economic landscapes.

Entrenched within the canons of econometrics exhibits a resounding affirmation of the correlation between intensified investment in research and development and positive economic advancement (Szarowská, 2018). The outcomes are made apparent in various forms of revolutionary technologies, pioneering products, and streamlined methodologies. These advancements become the foundation for increased productivity, improved efficiency, and heightened competitiveness within sectors, shaping a conducive environment for sustained economic growth and laying the groundwork for continued innovation and advancement.

The emphasis on R&D is not limited to economic growth; it also extends to addressing pressing challenges in various sectors. R&D plays a critical role in finding solutions to complex problems, from healthcare to environmental sustainability. By investing in R&D, the government aims to stimulate innovation, drive economic growth, and enhance the quality of life for its citizens. It is a strategic investment in the future, a commitment to finding solutions to the most intricate challenges that transcend national borders. R&D serves as a beacon of hope, a testament to human ingenuity, and a testament to the unwavering dedication to a better, more sustainable, and healthier world.

This sector is one of the priorities of the Philippine government as this is highlighted in the Philippine Development Plan 2023-2028. R&D sector is seen as a vital pillar of economic progress and a clear sector to build up in the country (NEDA, 2023). The R&D sector in the Philippines is a dynamic and growing part of the country's economy and academic landscape. It encompasses a wide range of activities, organizations and industries focused on scientific and technological advancement. As a result, the country has seen an exponential growth in research initiatives and academic collaborations.

In the medical and pharmaceutical context, R&D companies contribute to the development of various new drugs, devices and solutions aimed to address medical quandaries (Shabani, et al., 2022). This is essential to address medical challenges, advance public health and entice investment into the health sector. The transition from R&D to the pharmaceutical industry is a crucial driver that delivers development of life-

saving procedure, equipment, and drugs. The combination of scientific discovery, clinical development and regulatory approval is a complex path that promises to improve human health and countries' economies (Varntanian, 2018). As research continues to advance and new breakthroughs emerge, synergy between R&D and the pharmaceutical industry will remain essential to solving healthcare challenges and driving innovation.

The Philippine pharmaceutical industry includes a wide range of companies, both local and multinational. Local companies such as United Laboratories (Unilab), Pascual Laboratories and others operate alongside global pharmaceutical giants such as Pfizer, GlaxoSmithKline (GSK), Sanofi-Aventis, and others (Reyes & Taguba, 2020). These companies are involved with developing, manufacturing, distribution and marketing of pharmaceutical products, including prescription and over-the-counter drugs, medical devices and various healthcare-related products. The Philippines is one of the major pharmaceutical markets in the ASEAN region only trailing to Indonesia and Thailand (BOI, 2017). Roughly 4.4% of the top 500 Non-Individual Taxpayers in the Philippines are pharmaceutical companies according to the Bureau of Internal Revenue (BIR) contributing P15.7 Billion in taxes in 2011 alone (NTRC, 2014).

Research on employee retention in pharmaceutical companies engaged in R&D is of particular importance due to the unique and important nature of this field. It is true that employee retention is a key challenge in any sector; it creates a challenging situation in balancing an organization's ability financial and knowledge resources (Patriota, 2009). The pharmaceutical R&D sector is marked by its inherent complexity, the importance of innovation and its significant dependence on qualified experts. There are only a very small number of studies on the profile of the Philippine pharmaceutical industry; the majority of works deal with market research, association reports, and drug prices (Reyes & Taguba, 2020). Employee retention extends beyond the conventional realms of human resource management. It is inherently tied to the industry's ability to innovate, remain competitive, and respond to evolving healthcare hurdles (Alkafafy & Siddiqui, 2022). Moreover, the loss of specialized experts on respective fields can ultimately undermine the pharmaceutical industry's ability to bring innovative resolutions.

Research Questions

The purpose of this to study is to assess the work engagement, organizational commitment and employee development programs of research and development companies in Metro Manila as basis for an employee retention framework. Specifically, the study aims to:

1. assess work engagement their employees in terms of vigor (physical), absorption (cognitive), and dedication (emotional) engagement;
2. determine their organizational commitment as affective, normative and continuance commitment;

3. evaluate the employee development and training programs of the Pharmaceutical companies in terms knowledge /skills retention, significance of programs, and employees' appreciation / satisfaction;
4. test the correlation among work engagement, organizational commitment, and employee development programs; and
5. lastly, develop an employee retention framework.

METHODOLOGY

The participants of the study were employees from the three (3) host pharmaceutical companies engaged in in research and development in Metro Manila. They were from different positions and roles in different pharmaceutical companies. Samples were randomly obtained across the three pharmaceutical companies and the survey participants of the study totaled four hundred twenty-eight (428). Participants also had a diverse range of age salaries, educational attainment and years of service. As per the confidentiality agreement, the number of participants from each host institutions was not revealed.

As there were no current data on the number of employees in pharmaceutical companies in Metro Manila at the time of writing, the researcher used the latest available data from the Philippine Competition Commission's Issue Paper published in 2020. The number of employees totaled one thousand four hundred two (1,402). The number of pharmaceutical companies totaled twenty (20) based on the official published account of the country in 2020.

The study used four sets of questionnaires (first would be the profile of the respondents) as the primary instrument in collecting the necessary data from the respondents. Items in the instrument were presented as descriptive statements, and respondents were given the frequency with which each of the descriptive statement applies on a four-point Likert scale with an interpretation of 3.50 – 4.00 scale means strongly agree, 2.50 – 3.49 rate means agree, 1.50 – 2.49 scale means disagree and, 1.00 – 1.49 rating means strongly disagree.

The questionnaire was composed of two parts. The first part contained the profile of the respondents from the pharmaceutical companies. The second part, on the other hand, contained the assessment of work engagement, organizational commitment and employee development programs of their host institution. Work engagement is a three-factor model consisting of physical engagement (5 items) with Cronbach alpha of 0.830, cognitive (5 items) with Cronbach alpha of 0.808, and emotional engagement (5 items) with Cronbach alpha of 0.798. For this variable, questions totaled 15 items.

Measuring organizational commitment was materialized and tabulated through the instrument adopted to the study of Kassaw & Golga (2019) which standardized it. This

study applies a four-point Likert scale. It was a 15-item questionnaire with three factors; affective commitment (5 items) with Cronbach alpha reading of 0.854, continuance commitment (5 items) with alpha reading of 0.823 and normative commitment (5 items) with Cronbach alpha reading of 0.823.

Lastly, in assessing parts of employee development programs, the questionnaire was adopted from a previous study that proposed a (Hajjar & Alkhanaizi, 2018). It applied a four-point likert scale with verbal interpretation of 3.50 – 4.00 scale means strongly agree (with great evidence), 2.50 – 3.49 rate means agree (with moderate evidence), 1.50 – 2.49 scale means disagree (with little evidence) and, 1.00 – 1.49 rating means strongly disagree (without evidence). It was a 15-item questionnaire with three factors; knowledge/skills retention with a Cronbach alpha reading of 0.826, significance of programs with an alpha reading of 0.791, and employees' appreciation/satisfaction with an alpha reading of 0.785.

Cronbach's alpha was used by the authors to test the reliability of the adopted instrument. This statistical method provides a coefficient that quantifies the degree to which items within a test consistently measure the same underlying construct (Jugessur, 2022). It was used under the assumption the researcher has multiple items measuring the same fundamental concept to guarantee the reliability and consistency of their measurement instruments, thereby fortifying the credibility of their study outcomes. A strong Cronbach's alpha value, typically falling within the 0 to 1 range which signals an internal consistency, signifying a high correlation among variables and a reliable measurement of the targeted concept (Taber, 2018). The researcher of this study used the published theses and dissertations as sources for the gathering and collection of data. In addition to these, books, articles and peer-reviewed journals that are reliable for the study were used where relevant data and related information will be collected. Additional and relevant information on the pharmaceutical companies were collected through informal interviews.

Before gathering of the data, it was reiterated to the host institutions that the purpose of the survey to be conducted will be used for academic purposes and that all information collected will be kept confidential. Upon the approval of the respective heads of departments of the research and development companies, specifically from the pharmaceutical industry, and approval of the adopted questionnaires by the adviser, the researcher started by distributing questionnaires to the staff of the three (3) selected pharmaceutical companies in Metro Manila engaged in research and development.

The schedule for the date of distribution and retrieval of the questionnaire was discussed and set on a mutually agreed date with the pharmaceutical companies. The questionnaires were administered by using google forms as per the request of the host institutions. To ensure the accuracy and confidentiality of the results, limited people handled the survey results.

Weighted mean and rank were used to assess work engagement their employees in terms of vigor (physical), absorption (cognitive), and dedication (emotional) engagement; to determine their organizational commitment as affective commitment, normative commitment, and continuance; and to evaluate the employee development and training programs of the Pharmaceutical companies in terms Knowledge/skills retention, significance of programs, and employees' appreciation/satisfaction. The result of Shapiro-Wilk Test showed that p-values of all variables were less than 0.05 which means that the data set was not normally distributed. Therefore, Spearman rho was used as part of the non-parametric tests to determine the significant relationship. All analyses were performed using SPSS version 28.

RESULTS

Table 1
Work Engagement in terms of Physical Engagement

Indicators	WM	VI	Rank
1. I recognize the importance of reporting for work	3.66	Strongly Agree	1
2. I am willing to participate in the activities at work	2.65	Agree	4
3. I keep active in my workplace	3.39	Agree	2
4. I am enthusiastic about work and doing my duties	2.61	Agree	5
5. I put a lot of effort when it comes to achieving my tasks at work	2.96	Agree	3
Composite Mean	**3.05**	**Agree**

Table 13
Relationship Between Work Engagement and Organizational Commitment

Variables	rho	p-value	Interpretation
Physical Engagement			
Affective Commitment	0.862**	<.001	Highly Significant
Normative Commitment	0.407**	<.001	Highly Significant
Continuance	0.462**	<.001	Highly Significant
Cognitive Engagement			
Affective Commitment	0.833**	<.001	Highly Significant
Normative Commitment	0.462**	<.001	Highly Significant
Continuance	0.584**	<.001	Highly Significant
Emotional Engagement			
Affective Commitment	0.456**	<.001	Highly Significant
Normative Commitment	0.709**	<.001	Highly Significant
Continuance	0.920**	<.001	Highly Significant

**. Correlation is significant at the 0.01 level

As seen in the table, the computed rho-values ranging from 0.407 to 0.920 indicate a moderate to very strong direct relationship among the sub variables of work engagement and organizational

commitment. There was a statistically significant relationship between work engagement and organizational commitment because the obtained p-values were less than 0.01.

Table 14
Relationship Between Work Engagement and Employee's Development Programs

Variables	rho	p-value	Interpretation
Physical Engagement			
Knowledge and Skills Retention	0.673**	<.001	Highly Significant
Significance of Programs	0.638**	<.001	Highly Significant
Employees' Appreciation	0.647**	<.001	Highly Significant
Cognitive Engagement			
Knowledge and Skills Retention	0.690**	<.001	Highly Significant
Significance of Programs	0.693**	<.001	Highly Significant
Employees' Appreciation	0.685**	<.001	Highly Significant
Emotional Engagement			
Knowledge and Skills Retention	0.556**	<.001	Highly Significant
Significance of Programs	0.418**	<.001	Highly Significant
Employees' Appreciation	0.474**	<.001	Highly Significant

**. Correlation is significant at the 0.01 level

As seen in the table, the computed rho-values ranging from 0.418 to 0.693 indicate a moderate to strong direct relationship among the sub variables of work engagement and employee's development programs. There was a statistically significant relationship between work engagement and employee's development programs because the obtained p-values were less than 0.01.

Table 15
Relationship Between Organizational Commitment and Employee's Development Programs

Variables	rho	p-value	Interpretation
Affective Commitment			
Knowledge and Skills Retention	0.689**	<.001	Highly Significant
Significance of Programs	0.658**	<.001	Highly Significant
Employees' Appreciation	0.710**	<.001	Highly Significant
Normative Commitment			
Knowledge and Skills Retention	0.621**	<.001	Highly Significant
Significance of Programs	0.481**	<.001	Highly Significant
Employees' Appreciation	0.501**	<.001	Highly Significant
Continuance			
Knowledge and Skills Retention	0.538**	<.001	Highly Significant

Significance of Programs	0.456**	<.001	Highly Significant
Employees' Appreciation	0.461**	<.001	Highly Significant

**. Correlation is significant at the 0.01 level

As seen in the table, the computed rho-values ranging from 0.456 to 0.710 indicate a moderate to strong direct relationship among the sub variables of organizational commitment and employee's development programs. There was a statistically significant relationship between organizational commitment and employee's development programs because the obtained p-values were less than 0.01.

DISCUSSION

Table 1 delivers a thorough investigation of work engagement, specifically focusing on physical engagement. The respondents' perspectives are measured across five distinct indicators, each assigned a weighted mean (WM) score. The overall composite mean for all five indicators records at 3.05, positioning it within the "Agree" range. This implies a collective consensus among respondents concerning their physical engagement in the workplace. The weighted mean score reflects a positive evaluation of employees' involvement in physical aspects of their work. The "Agree" categorization suggests a shared acknowledgment of active participation, indicating a positive alignment between the workforce and their physical engagement at work. This comprehensive overview serves as a valuable insight into the employees' perceptions, highlighting a generally favorable assessment of their physical involvement in the work environment.

It is important to note that the highest-ranking indicator, with a WM of 3.66, is "I recognize the importance of reporting for work," and the respondents expressed a "Strongly Agree" sentiment towards this aspect of Physical Work Engagement. This signifies that there is a high level of acknowledgment among the respondents regarding the significance of punctuality and attendance (Sijabat, 2023). This indicator also can be considered as the "Task Completion" indicator of this facet of Work Engagement. The strong agreement expressed by the respondents in recognizing the importance of reporting for work suggests a communal understanding of the connection between punctuality and overall work engagement. This resonates with the concept of work engagement, a term popularized by Kahn in 1990, which posits that employees invest not only their physical but also their mental efforts in the execution of their tasks at work.

The indicator "Maintaining an active presence in my workplace" secures the second position with a WM of 3.39. This signifies a unanimous agreement among respondents with this aspect of Physical Engagement. The obtained result indicates a prevalent inclination among respondents to actively engage in workplace activities, underscoring a significant inclination for Work Engagement. The consensus observed among the surveyed individuals implies a highly favorable disposition towards their professional involvement. This unanimous agreement across the employee spectrum not only underscores a positive work environment but also signifies that employees are

consistently and energetically executing their duties and responsibilities. Such active participation contributes significantly to fostering a collective sense of engagement within the organizational framework (Abdulrahman, et al., 2022).The widespread commitment to workplace involvement suggests that individuals are not merely fulfilling their roles but are also actively contributing to the overall productivity and success of the team or organization.

However, it is notable that while the majority of indicators fall within the "Agree" range, there is variation in the degree of agreement among respondents. For instance, the indicators "I am enthusiastic about work and doing my duties" and “I am willing to participate in the activities at work” have lower weighted means of 2.61 and 2.65, respectively. These places the two indicators in the "Agree" range but towards the lower end of the spectrum. This submits that there is somewhat tempered enthusiasm among respondents when it comes to their duties. This, therefore indicates a potential area for improvement in fostering greater enthusiasm and work engagement within the three host organizations.

The majority of indicators for Physical Engagement reflect a positive work engagement, particularly in terms of recognizing the importance of reporting for work and staying active in the workplace. However, the nuanced disparities in agreement levels across different the five indicators highlight specific areas that may warrant further improvement. Elevating and refining Physical Engagement can cultivate a more engaged workforce and better work culture (Abidin, et al., 2021).

Table 2 shows that positive Cognitive Work Engagement is evident in the composite mean within the "Agree" range. This highlights laudable aspects of task completion efficiency and decision-making autonomy within the organizations of the respondents. These aspects can be considered as strengths that underscore a well-functioning and proactive work environment (Huang, et al., 2022). The efficiency in task completion signifies that the employees are capable of meeting objectives on time, while decision-making independence shows a level of empowerment and responsibility among employees within the pharmaceutical companies. The Composite Mean also reiterates that positive Cognitive Work Engagement enhances job performance, motivation, adaptability, job satisfaction, and overall organizational pursuits. (Amrollahifar, et al., 2023).

The assessment of work engagement, specifically focusing on cognitive engagement, reveals valuable perceptions into various facets of the total employee experience in an (Huang, et al., 2022). Based on the results from respondents, the competence in task accomplishment is deemed creditable. The majority of the respondents of the pharmaceutical companies expressed strong agreement that they consistently finish assigned tasks in a timely manner. This is reflected on indicator leading to the top rank in this Cognitive Engagement. This overwhelming consensus suggests a

positive trend in meeting work deadlines and underscores a communal commitment to the prompt delivery of responsibilities.

The high level of agreement among participants further strengthens the reliability and effectiveness of the team or individuals in question (Dawson, et al., 2019). The acknowledgement of this efficiency bodes well for the overall productivity and success of the tasks at hand. The emphasis on timely task completion not only highlights a disciplined work ethic and engagement but also signals a dedication to fulfilling professional obligations on a timely manner. This positive assessment indicates that the surveyed group exhibits a commendable level of time management and organizational skills, underwriting significantly to the overall effectiveness of the employees' work (Huang, et al., 2022). The strong majority's confirmation of timely task completion reflects a positive work culture and commitment to achieving goals.

On a positive note, employees feel empowered in their decision-making processes, with a substantial number strongly agreeing that they can decide on the best course of action to complete their assigned at work. This autonomy in decision-making is a notable asset contributing to overall work engagement within the organizational (Kim, et al., 2020). The challenge of detaching from the job is recognized by the respondents. The majority of the respondents agree that it is difficult to distance themselves from their work. While dedication to one's job is commendable, addressing this difficulty in detachment plays a crucial role in preventing potential burnout and promoting a healthier work-life balance.

Table 3 shows the assessment of work engagement focusing on emotional engagement. The Composite mean of Emotional Engagement is 3.22 which falls under the "Agree" range. This reflects a positive emotional work engagement among the respondents within their organizations. However, there are areas of improvement that can be addressed to enhance the efficiency of the organizations. Consistent feedback and strategic interventions grounded on these insights can further nurture a thriving and emotionally connected and engaged employees within the workplace. It reveals a generally positive sentiment among employees. Notably, the indicator which displays employees expresses a strong sense of personal accomplishment ranks the highest. Employees who are expressing a strong sense of personal accomplishment in organizations suggest high satisfaction and pride in their work at their organizations (Metz , 2018). In this light, Emotional Work Engagement can attribute to the overall success of completing tasks, achieving goals, and contributing meaningfully to the organization by the employee. This is reinforced by the second highest indicator: satisfaction with their current work or job. Acknowledgment, challenging work, goal attainment, autonomy, continuous learning, alignment with values, a encouraging work environment, and a vigorous work-life balance are key factors affecting this type of engagement (Selvi & Aiswarya, 2023). This creates a positive impact on both employees and the organization as a whole.

Employees perceive opportunities for professional growth and career development is placed third among the indicators. The mean score indicates that there is room for improvement in this area, signaling a potential gap between employee expectations and the current offerings. Enhancing initiatives for career advancement and skill development could contribute to even higher levels of engagement (Bai & Liu, 2018). Additionally, the indicator concerning working relationships with co-workers which ranked fourth implies a positive but not exceptional dynamic. This suggests that employees generally experience a good and harmonious working relationship with their colleagues, but it does not foster in the ideal level. The greater Emotional Work Engagement helps foster in an encouraging and constructive work culture, dynamics, and environment (Tharika, et al., 2022), Positive relationships among employees tender a positive emotional engagement at work. When employees have good relationships among their fellow coworkers, it fosters a holistic and collaborative work environment (Abdulrahman, et al., 2022). Employees who feel a sense of belonging and understanding with their coworkers are more likely to be emotionally engaged in their work. This emotional engagement can lead to increased job satisfaction, productivity, and overall well-being. It creates a workplace that fosters in a feeling of being valued, heard, and motivated which ultimately contributes to a positive work environment. Strong interpersonal relationships lay the foundation for a healthy emotional link which enhances the overall employee experience within the organization (Muda & Chan, 2020).

On the other hand, the indicator related to inspiration from work which ranks the last among the indicators reveals a slightly lower score which suggests that employees find room for development in feeling inspired by their tasks within their organization. Encouraging a more inspiring work culture and recognizing contributions of the employees could positively impact employees' motivation within the organization (Amrollahifar, et al., 2023). Creating an environment that values innovation and recognizes individual efforts by the employees cultivates a sense of purpose and achievement. This drives employees to excel in their work and improving overall workplace fulfilment and efficiency.

Table 4 provides an overview of work engagement across three key result in different aspects: Physical Engagement, Cognitive Engagement, and Emotional Engagement. Grand Composite Mean, with an overall average of 3.15, indicates an overall agreeable level of work engagement across all key areas within the organizations. This collective score proposes that employees within the three host organizations exhibit positive engagement in their work, encompassing the three aspects: physical, cognitive, and emotional. The balanced nature of this mean shows a rounded and satisfactory work environment where employees are likely to feel connected, mentally stimulated, and emotionally invested in their roles. The analysis highlights a generally positive work engagement across the organization. However, it also reveals specific areas for improvement, particularly in Physical and Cognitive Engagement aspect aspects.

Emotional Engagement, having the highest mean score of 3.22, underscores a strong agreement among employees, highlighting a profound connection and

commitment to the host organizations on an emotional level. The strong alignment emotionally suggests that employees feel a deep sense of belonging and investment in the three host organizations missions and values (Abdulrahman, et al., 2022). Recognizing and fostering this aspect becomes critical for organizations aiming to enhance employee satisfaction and productivity. Programs fostering a positive company culture, providing possible avenues for employee recognition, and ensuring effective communication channels within the workplace can further strengthen emotional engagement (Selvi & Aiswarya, 2023). This creates an environment where individuals are professionally committed and emotionally engaged in contributing to their organization's overall success.

Cognitive Engagement, marked by a mean score of 3.19, shows a better level of agreement compared to Physical Engagement within the organizations. Employees within the organization appear to have a positively engaged inclination towards tasks demanding mental effort. This indicates a strong placement with the cognitive aspects of their work (Li & Bunchapattanasakda, 2019). It being the second ranked indicator implies that while the overall engagement has a promising outlook, there may be specific areas for enhancement or opportunities to introduce further intellectual challenges. The three host organizations could explore development programs for skill enhancement, advanced training programs, or projects that stimulate employees' intellectual curiosity. Recognizing the issues and looking for ways to address them can enhance cognitive engagement and also contribute to a more active and intellectually stimulating work environment, enabling continuous growth and development among the employees of the organizations (Huang, et al., 2022).

The Physical Engagement aspect, with a mean score of 3.05, displays a largely agreeable but not outstanding level of engagement among the employees within their respective organizations. While there is a positive outlook towards physical engagement aspects of work, being the lowest ranked indicator implies that there is room for improvement. The organizations should strategically address this by implementing initiatives to enhance physical engagement. This could include encouraging a healthier work environment, regular breaks, and providing tailored solutions to ensure that the employees are comfortable and supported in their work within the organization (Chigeda, et al., 2022). By prioritizing addressing the issues, these organizations can positively impact employee well-being, satisfaction, and overall productivity. This leads to creating a workplace that improves the physical aspects of engagement for a more rounded and beneficial work environment for the employees (Kim, et al., 2020).

Table 5 shows an inclusive assessment of organizational commitment, specifically focusing on the affective commitment aspect. With a Composite Mean of 3.19, there is an overall agreement among the respondents which indicates a positive organizational commitment level. The individual indicators offer nuanced insights into specific facets of affective commitment. This guides potential organizational strategies and programs to further deepen the commitment of the employees.

The indicator "I feel this organization makes me feel like I am part of a family" is ranked highest with a WM of 3.70. This high score highlights a vigorous emotional connection among employees within the host organizations which transcends the conventional workplace dynamic and environment (Chigeda, et al., 2022). This accentuates a constructive organizational culture that dynamically nurtures a genuine sense of belonging. The cohesive and supportive environment, seen in employees' strong agreement in this indicator, goes beyond the conventional workplace dynamics within the organizations (Adewoyin, et al., 2020). As an alternative, it suggests that employees perceive the organization as more than just a place where they work but the organizations are seen as an extended family. This observation confirms a commendable commitment by the organizations to fostering meaningful connections among its employees which contributes to an organizational culture that prioritizes emotional connection and a sense of community (Khan, et al., 2021).

"I would be very happy to spend the rest of my career in this organization," has a WM of 3.42, claiming the second-ranking position among the indicators. This score emphasizes a notable inclination among employees to commit to long-term careers within their respective organizations. This reveals a positive disposition toward continuous dedication of the employees (Alrowwad, et al., 2019). This also signifies a significant alignment with the three host organizations' values and vision, indicating that the employees are generally contented within the organizations. The optimistic connection between the employees' individual career objectives and organizational values contributes to a positive work environment which fosters a sense of fulfillment among the employees (Fako, et al., 2018) This is also reflected in the third ranking indicator "I really feel as if this organization's problems are my own," which has a WM of 2.97. The result WM highlights a shared sense of responsibility among employees. This shows a collective commitment to addressing organizational challenges met by their respective organizations. This suggests a positive organizational attitude wherein the organizations' employees feel they are personally invested in overcoming problems, fostering a collaborative approach to problem-solving within their work environment (Kassaw & Golga, 2019).

The lowest ranked indicators are tied between "I feel that I am 'emotionally attached' to this organization" and "I have a strong sense of belonging in my organization" sharing the same WM of 2.93 revealing a moderate level of agreement. Both of these indicators address emotional attachment and a sense of belonging of the organizations' employees. While the verbal interpretation "Agree" still indicates positivity, these indicators suggest areas where the organization could enhance emotional ties and strengthen the sense of belonging among employees. Emotional connection and attachment cultivate devotion, commitment, and a sense of reason among the employees of the organization (Khan, et al., 2021). The host organizations should consider targeted interventions and development programs to distinguish and reinforce each of this aspect to further nurture their employees' connection to the workplace.

Table 6 provides an inclusive overview of organizational commitment measured through its normative commitment aspect. The composite mean of all indicators is 3.39 which places it within the “Agree” range. This shows a generally optimistic normative commitment among the employees of the host institution, with robust sense of agreement on the difficulty of leaving, perceived inadequate alternatives, and acknowledgment of personal costs in leaving. This overall agreement within the employees reinforces the notion that employees, on average, feel a substantial normative commitment to the organization (Nguyen, et al., 2020).

This aspect of organizational commitment refers to an employee's sense of obligation to remain with the organization due to a perceived necessity or desire (Kalitanyi, 2022). The indicators shed light on employees' sentiments regarding the exertion needed if they leave their current job, the impact on various life facets if they do, their certainty in the necessity and desire to stay, the seeming lack of alternative opportunities, and the acknowledgment of the employees’ personal sacrifices associated with leaving the organization.

The indicator, "I believe I have not enough options to consider leaving this organization," has the highest WM of 3.99 which is within the “Strongly Agree” range. This indicates a robust consensus among employees that they perceive limited alternatives if they leave their current organization. This can possibly be attributed to factors such as the employee’s specialized skills, job market conditions, or an optimistic outlook of the employee’s current work environment (Nitafan, 2020). Positive work cultures, effective leadership, and a supportive organizational climate contribute to employees viewing their current engagement optimistically. When employees have a positive experience in their current work, they may be less motivated to explore other opportunities (Adewoyin, et al., 2020).

"It would be very hard for me to leave my job at this organization right now even if I wanted to," has a weighted mean (WM) of 3.60, indicating a robust level of agreement and is ranked second among the indicators. This suggests that a substantial percentage of employees feels a strong attachment to their organization, making it difficult for them to consider the idea of voluntarily leaving. This could be indicative of a positive organizational culture, strong leadership, or fulfilling work experiences (Kuhal, et al., 2020). This idea is also highlighted by the indicator, "Leaving this organization would require a considerable personal sacrifice from me is one of the reasons why I continue to work here." This indicator has a WM of 3.23, falling into the Agree range. This suggests that employees recognize the personal disadvantages associated with leaving the organization which ultimately contributes to their decision to stay (Candelario, et al., 2020).

The second lowest and lowest ranked indicators are "I believe that staying with this organization is a matter of necessity and desire," and "Different aspects of my life would be affected if I left this organization," respectively. They have a WM of 3.19 and

2.93, respectively, which puts them together in the Agree range. While the agreement of the employees with the indicator is present, it is not as pronounced as the other indicators. This implies that employees recognize the effect of leaving but may not perceive it as strongly as the difficulty of leaving the organization (Kalitanyi, 2022). Employees that show a sense of obligation and desire to stay, suggests a combination of both intrinsic motivation and external issues inducing their commitment to the organization.

Table 7 presents a nuanced analysis of organizational commitment through the continuance commitment aspect. The composite mean of all indicators is 3.26 which places it within the “Agree” range. This reveals a strong sense of continuance commitment among the employees within the host institutions with a mostly high agreement on the sense of obligation as an important factor in their decision to stay in their organization. The presence of ethical considerations, emotional ties, and perceptions of organizational worthiness adds depth to the understanding of employees' commitment (Colquitt, et al., 2021).

This is the aspect of the organizational commitment wherein employees may feel compelled to stay with their organization due to perceived costs or their sense of obligation (Kassaw & Golga, 2019). The indicators for this aspect highlight the employees' sentiments regarding the perceived properness of leaving, feelings of guilt linked with leaving the organizations, the commendable nature of the organizations’ loyalty, the sense of responsibility to stay, and the indebtedness employees’ impression towards their organization.

The indicator, "I would not leave my organization right now because of my sense of obligation to it," has the highest WM of 3.51 which falls into the “Strongly Agree” range. This indicates a definitive consensus among employees that their sense of obligation is a significant factor in their decision to stay. This line up with the fundamental notion of continuance commitment wherein employees feel they are bound to the organization due to perceived costs, such as the time, effort, or resources invested (Kasogela, 2019). This idea is complemented by the second and third ranking indicator; both falling into the “Agree” range. The indicator "I would have a feeling of guilt if I left this organization now" has a WM of 3.40. The presence of guilt as an aspect in the choice to leave by an employee shows a strong emotional tie to their organization (Colquitt, et al., 2021). This emotional tie contributes to the continuance commitment, as employees have a sense of fear for negative sentiments associated with abandoning their current roles in their organization. The third ranking indicator, "I do not feel it would be right to leave even if leaving would be better for me," has WM of 3.38. This suggests that employees recognize a struggle between what may be personally advantageous and what is perceived as ethically right (Abellanosa, et al., 2020). This inner struggle of an employee can create a sense of moral responsibility to continue which indicates a form of continuance commitment.

Lowest ranking indicators are “I owe a great deal to this organization," which has a WM of 3.08, and “This organization deserves my loyalty," which has a WM of 2.94. Both of the categories within the mid “Agree” range. While the agreement is present, the lower mean suggests a more nuanced standpoint among employees regarding the organizations’ right for the loyalty of their employees (Al-Jabri & Ghazzawi, 2019). The first indicator probes into the perception of the organization's actions, policies, or values that warrant employees' commitment. The second indicator suggests that employees recognize a debt to the organization, possibly stemming from the opportunities, support, or growth they have experienced (Chidega, et al., 2022). Recognizing and addressing this personal obligation an employee has to the organization can further reinforce the sense of continuance commitment.

Table 8 presents a wide-ranging summary of the different aspects of organizational commitment. The Grand Composite Mean of the Organizational Commitment is 3.28 which still falls under the “Agree” range. Organizational commitment is a vital aspect of an employee's connection and loyalty to the organization they are part of (Candelario, et al., 2020). The table comprises three key dimensions of commitment: Affective Commitment, Normative Commitment, and Continuance. Additionally, it makes available the Grand Composite Mean which offers an overall perspective on the level of agreement within the employees regarding organizational commitment.

Normative Commitment emerges as the highest-ranked dimension with a Composite Mean of 3.39 which signals a stronger agreement within the workforce. Normative Commitment is associated with a sense of obligation or moral responsibility of an employee towards his or her organization (Kalitanyi, 2022). The Composite Mean is within the “Agree” range. This higher level of commitment may be indicative of the employees’ feeling of moral obligation to stay with the organization; possibly owing to shared values, positive organizational culture, or a sense of duty (Mezeh, 2021). The employees, driven by a shared understanding of principles, an optimistic organizational culture, or a sincere sense of responsibility, demonstrate a commitment that exceeds the contractual or transactional dimension of employment.

Continuance, with a Composite Mean of 3.26 (putting it in the “Agree” range) and the second ranking dimension, demonstrates a commendable level of agreement among the respondents. This dimension of commitment is concerned about the perceived costs of employees associated with leaving the organization (Kalitanyi, 2022). The recognition of value and benefits made available from staying with the organization likely contributes immensely to the observed commitment within the employees. They may perceive tangible and intangible compensations, such as career growth opportunities, financial stability, or a constructive work environment, which influence their overall commitment level to the organization. This realistic perspective on commitment proposes that employees are making a rational assessment of the costs and benefits associated with their organizational tenure (Chidega, et al., 2022).

Affective Commitment, with a Composite Mean of 3.19, emphasizes a generally positive and favorable sentiment among employees towards their respective organizations. This dimension digs into the emotional attachment and identification that employees feel for their workplace (Adewoyin, et al. 2020). Despite its mean being slightly lower compared to the other aspects of commitment dimensions, it resides within the “Agree” which signifies a notable level of positive emotional connection and commitment. Furthermore, Affective commitment comprises the employees' notion of loyalty, affection, and belongingness to their organizations (Chidega, et al., 2022). The emotional connection within the three host organizations may stem from various foundations such as a supportive work environment, positive relationships with coworkers, or a strong connection with the organization's values and mission.

Table 9 presents the analysis of Employee Development Programs with a specific focus on Knowledge and Skills Retention dimension. The Composite Mean of 3.00, which falls within the “Agree” range, provides an aggregated view of employees' sentiments regarding the Employee Development Programs' effectiveness in terms of Knowledge and Skills Retention. This shows a collective agreement that the organizations’ programs contribute positively to employees' professional growth (Al-Rawahi, 2022). It mirrors a consensus that the initiatives executed by these organizations contribute meaningfully to enhancing the skills, knowledge, and overall growth of their workforce. The table includes five key indicators offering valuable insights about the employees’ notion on the effectiveness and impact of the organization's developmental initiatives towards them.

"I learned new skills from programs instituted by my organization" indicator boasts the highest WM of 3.37 among the indicators of this dimension. This indicates a strong consensus among employees of the three host organizations that they have learned new skills through the programs instituted by their respective organizations. Its WM falling under the “Agree” range aligns with its high score; reflecting the success of the organizations in fostering skill development programs. The indicator being ranked as the highest accentuates the effectiveness of these programs in imparting valuable skills to the employees. By aligning closely with the developing demands of their industry, the organizations cater to the dynamic needs of employees: ensuring technical proficiency and honing of crucial soft skills (Mishra, 2023). This position underscores a commitment by the organizations to create a supportive environment. This also compliments the second highest indicator; "I value the knowledge and skills I gain from my organization's programs." This indicator has a WM of 3.24 which falls under the “Agree” range. This indicator underscores that employees gives importance on the knowledge and skills acquired through the organization's programs. This emphasizes the positive perception of the overall influence of these developmental programs on the professional growth and competence of the employees (Mishra, 2023).

"I apply things I learn from the programs of my institution" is the third highest and has WM of 2.81 which falls under the “Agree” range. Employees confirm their application of knowledge and skills gained from their respective organizations’ programs. While there

is a level of agreement on the practical application of the acquired knowledge, there may be variations in the extent to which the employees implement these learnings in their daily roles (Bhanudas, 2021). The differences in the extent of implementation shows the complexity of translating learning into action in diverse professional contexts within the organizations.

The alignment between the skills acquired and the actual requirements of the job and this can be seen in the indicator "I find the learnings from previous programs still applicable today." With a WM of 2.79 and falling under the “Agree” range, employees of the host organizations generally recognize the continuing relevance of learnings from past programs. However, the fourth rank suggests that there is room for improvement in ensuring the sustained applicability of these acquired knowledge and skills over time. This indicator highlights the need of the organizations to focus on improving the enduring value of the knowledge imparted through the organizations’ developmental programs (Yedama, et al., 2020). This is also highlighted by the lowest ranking indicator; "I still use skills I've learned from previous programs." While employees generally agree (WM of 2.77) that they continue to use skills and knowledge acquired from previous developmental programs, the lowest rank suggests a potential challenge in retaining and applying these skills over time. This indicator provokes a deeper investigation into the factors prompting the sustainability of skills gained through developmental programs (Mishra, 2023).

Table 10 provides an in-depth examination of Employee Development Programs, focusing on the aspect of Significance of Programs. This aspect Composite Mean of 3.08 falls within the “Agree” range which provides an overall assessment of employees' sentiments regarding the Significance of Employee Development Programs. This is indicative of a collective understanding that the host organizations’ programs are largely perceived as relevant, utilizable, and address needs to enhance efficiency and productivity (Al-Rawahi, 2022). This shared perspective highlights a cohesive statement regarding the relevance and utility of the organization's endeavors, fostering a positive environment where programs are not only acknowledged but positively accepted for the programs’ role in improving performance and meeting organizational needs. The table includes five key indicators emphasizing valuable insights into how employees perceive the relevance and impact of the organization's developmental programs on their specialized roles and expectations.

"The programs in my organization aid me while doing tasks at work" has the highest WM of 3.35 in this aspect. This indicator stands out as one that is particularly impactful. Employees categorically agree that the programs initiated by the organizations help them in performing their tasks at work; emphasizing the practical value of these programs in improving job performance (Oluwaseun, 2018). The acknowledgment that these programs dynamically aid in task execution reflects their tangible and positive effect on job performance. This notion is reiterated by the "The programs in my organization address my needs and that of others to be more efficient and effective at performing my tasks" indicator which has the second highest WM of 3.24. This indicator underscores

that employees see the programs as relevant in addressing their needs and contributing to enhancing efficiency and effectiveness in their task performance (De Jesus & Fajardo, 2022).

The third ranking indicator, "I find the programs in my organization are utilizable even outside my work," has a WM of 3.12 which emphasizes that employees see the training and developmental programs as not only relevant to their work but also applicable outside their professional roles. It gestures a cohesive bond between organizational training goals and the broader aspirations and needs of employees within the organization (Oluwaseun, 2018). This fosters a culture of learning that extends well beyond the confines of the organizations

"I find the programs in my organization highly relevant to my work" with a WM of 2.87 is the second lowest ranked indicator. This is startling given that the association of this indicator to the highest ranked indicator. However, this indicator still imposes that employees generally see the significance of programs to their work (Bilderback & Miller, 2023). However, its ranking suggests that there may be aspects where improvements could be made to improve the perceived relevance of these programs. This is reiterated by the lowest ranking indicator: "The programs in my organization align my expectations to that of my organization." While employees mostly agree (WM of 2.82) that the programs imposed by the organizations align their expectations with those of the organization, there is room for improvement in this aspect. Employees may not completely perceive a continuous and cohesive integration between their expectations and the goals of the organizational programs (Bhatt, 2020).

Table 11 provides an evaluation of Employee Development Programs in terms of Employees' Appreciation. The Composite Mean of 3.07 directs a generally optimistic consensus among employees regarding the impact of the programs by the organizations. This suggests that, on average, employees see the developmental programs initiated by the organizations as beneficial, contributing to various aspects of their professional growth and employment satisfaction (Al-Rawahi, 2022). This score is indicative of a positive alignment between the organizations' objectives and employees' experiences.

"The programs of my organization make me feel like I am part of the future of my organization as they prepare me for other tasks," stands out as an exceedingly impactful aspect of the employee development programs as the highest-ranking indicator. The WM of 3.23 emphasizes the host organizations programs' effectiveness in addressing current requirements of the workplace and fostering a sense of community and future readiness in the organizations. This result signifies that employees not only acknowledge the current utility of the programs and recognize their role in preparing employees for future challenges and tasks within the (Chidega, et al., 2022). "I am confident with performing my tasks after attending the programs of my organization," indicator reiterates the top indicator's notion. This indicator has a WM of 3.17 which falls within the "Agree" range. This indicator highlights the positive impact of the programs on employees' confidence

levels by emphasizing their perceived efficiency in improving the employees' work performance. This suggests that the programs implemented by the organization are not merely theoretical but are seen as practical, instilling a sense of assurance and confidence in employees as they execute their work (De Jesus & Fajardo, 2022).

"The programs of my organization help decide into staying with my organization," secures a WM of 3.08 as the third ranking indicator. This further affirms the overall agreement among employees on the programs' influence on employees' decision to stay with their respective organizations. This suggests that the developmental programs contribute a prominent role in shaping employees' commitment to staying with the organization (Magaji, et al., 2021). This alignment is essential as it highlights the programs not only as vehicles for skill enhancement but also as integral components in building a positive employee experience and organizational culture that contribute to an employee's long-term organizational commitment. Organizational commitment can be seen through the programs initiated by the organizations through the "I am satisfied with the work I am doing, and I feel like I am growing professionally when I attend the programs of my organization," indicator. This is the fourth-ranking indicator with a WM of 3.06. Although falling within the "Agree" range, its ranking suggests that there may be opportunities for enhancement to improve satisfaction and perceived professional growth by the employees. Ensuring that employees perceive tangible benefits from their engagement in the developmental programs is essential to further organizational commitment (Dachner, et al., 2019). Lastly, the indicator "I feel empowered after attending the employee development programs of my organization," obtains a Weighted Mean of 2.81 and is the lowest ranked indicator. This signals an agreement among the employees with the notion but with a slightly lower impact compared to other indicators. The result also reiterates the need for improving the programs to address overall satisfaction and appreciation of the employees with the training and developmental programs initiated by the organization.

Table 12 serves as a comprehensive summary of Employee Development Programs, encapsulating its three dimensions; significance of the programs, and overall employee appreciation. This overarching measure provides a consolidated view of the programs' effectiveness across the different dimensions. The Grand Composite Mean, stands at 3.05 which places it within the "Agree" range. The positive interpretation reflects a general acceptance among employees regarding the value and impact of the Employee Development Programs in their work environment. The high Composite Mean for the Significance of Programs shows its strategic importance, while the Employees' Appreciation dimension confirms the positive impact of these programs. The nuanced insights provided by the Knowledge and Skills Retention dimension point to opportunities for enhancement and refinement.

Significance of Programs has the highest Composite Mean of 3.08 which indicates a strong collective affirmation among employees regarding the importance and impact of the developmental programs by their respective organizations. This highlights the

strategic value of these programs which emphasizes their perceived significance in contributing to individual and overall organizational growth (De Jesus & Fajardo, 2022). It submits that these programs are seen as an instrumental part in shaping the collective mindset of the employees. This means aligning employees with the organization's vision and mission, and fostering a culture of continuous learning and adaptability. The significance of the programs in adding to individual and organizational growth has broader implications. It indicates that employees view these programs as more than just requirements of training sessions; instead, employees see them as transformative programs that contribute to their professional advancement and, by extension, the overall success of their respective organizations (Mishra, 2023).

Employees' Appreciation has Composite Mean of 3.07 which falls under the "Agree" range. This suggests an optimistic sentiment among employees within the organizations regarding the value and impact of the initiated programs. This positive sentiment goes beyond the mere acknowledgment of the programs' existence but rather, it implies that employees actively appreciate and value the programs as vital parts of their professional development (Tharanya, et al., 2020). Employees are not only participants but they are dynamic contributors to the positive account surrounding the impact of these programs on their overall professional satisfaction and growth.

Knowledge and Skills Retention dimension has the Composite Mean of 3.00 which falls within the "Agree" range. Being the lowest-ranking dimension, this suggests a moderate consensus among employees regarding the effectiveness of the programs in retaining knowledge and skills. While the "Agree" interpretation is positive, the organization may benefit from a nuanced examination of specific program components to enhance knowledge retention further. This recognition becomes a critical pivotal point for the leaders of the organization aiming to refine and optimize the impact of developmental programs on knowledge and skills retention (Yedama, et al., 2021). This insight underscores the organization's commitment to ensuring that developmental programs not only meet the current needs of employees but also evolve to align with changing expectations and advancements in knowledge acquisition.

Table 13 presents the Relationship Between Work Engagement and Organizational Commitment, exploring the correlation (rho) and associated p-values for various subvariables or dimensions. The computed rho-values, ranging from 0.407 to 0.920, indicate a moderate to very strong direct correlation among the subvariables of work engagement and organizational commitment. The significance level, as seen with the p-values (<.001), posits that there is a statistically substantial relationship between work engagement and organizational commitment.

Physical Engagement has high correlation coefficients indicating strong and statistically significant relationships with Affective Commitment (rho = 0.862, $p < .001$), Normative Commitment (rho = 0.407, $p < .001$), and Continuance (rho = 0.462, $p < .001$). This suggests that employees who are further physically engaged in their work also

exhibit higher levels of affective, normative, and continuance commitment to the organization. This means that physical engagement nurtures a sense of connection between employees and the organization; employees feel more dedicated, integrated, and valued (Colquitt, et al., 2021). It enhances their motivation and energy, leading to increased job satisfaction and a stronger identification with organizational goals. This emotional bond reduces nonattendance and turnover rates which in turn, contributes to a more stable and productive work environment (Abidin, et al., 2021).

For Cognitive Engagement, a similar design appears with remarkably high correlation coefficients for Affective Commitment (rho = 0.833, $p < .001$), Normative Commitment (rho = 0.462, $p < .001$), and Continuance (rho = 0.584, $p < .001$). This infers that employees who are mentally devoted in their work, displaying cognitive engagement, also establish stronger affective, normative, and continuance commitments. The consistency of highly significant correlations across all three dimensions of both work engagement and organizational commitment is noteworthy. This consistency reinforces the strength of the observed relationships and this highlights the interrelated nature of work Engagement and organizational Commitment. The strongest correlation between dimensions is observed between Emotional Engagement and Continuance Commitment (rho = 0.920). This highlights a particularly compelling link between deep emotional connection to work and the perceived costs of leaving the organization. When employees exhibit a strong sense of emotionally engagement and continuance commitment, turnover rates are likely lower due to the employees staying with the organization for both emotional and practical reasons (Abellanosa, et al., 2020). The employees shows a multifaceted sense of loyalty.

This correlation analysis also implies that developing work engagement in its different dimensions can significantly contribute to enhancing organizational commitment (Rani, et al., 2020). The real-world implications of this analysis are substantially beneficial for organizational leaders. The findings of this analysis emphasize that engaged employees are more likely to exhibit higher levels of organizational commitment. Organizations aiming to nurture dedicated employees should consider strategies or programs that promote physically and cognitive engagement, and programs that foster emotional connections to their work or affective commitment (Nabhan & Munajat, 2023).

Table 14 explores the relationship between work engagement and employee development programs. The table shows summarizing the overall findings, stating that the computed rho-values ranging from 0.418 to 0.693 indicate a moderate to strong direct relationship among the sub-variables or dimensions of work engagement and employee's development programs. There is a statistically significant relationship between these two variables as seen on the obtained p-values being less than 0.01. This value confirms a strong correlation between work engagement and employee development programs.

For physical engagement, the rho-values with the employee development programs variables of range from 0.638 to 0.673 and have all p-values less than 0.001.

This indicates an exceedingly noteworthy relationship implying a strong positive correlation between physical engagement and employee development programs. Moving to cognitive engagement, similar variables are considered. The rho-values range from 0.685 to 0.693, again with p-values less than 0.001. This suggests an exceedingly significant relationship; indicating a strong positive correlation between cognitive engagement and employee development programs.

Emotional engagement's strong correlations with knowledge and skills retention, significance of programs, and employees' appreciation is evident with rho-values ranging from 0.418 to 0.556 and p-values less than 0.001. This reinforces the conclusion of a highly substantial correlation between emotional engagement and employee development programs. Emotionally engaged employees are seen to have deeply connected to their learning experiences in the organization; leading to better retention of the knowledge and skills imposed by the program (Hajjar & Alkhanaizi, 2018). The enthusiasm and commitment of the employees instigates them to actively participate and learn in training and development programs. Emotionally engaged employees are seen to be more motivated to be updated and proficient in their roles (Wassem, et al., 2019).

Employees who perceive that the organization is committed to their long-term career growth and development are likely to reciprocate with higher levels of work engagement (Mrunali & Pathak, 2021). This commitment nurtures a positive work environment and establishes a mutual relationship wherein engaged employees contribute meaningfully to the organization's success. This entails that employee development programs align with individual employee career goals; employees are more likely to be engaged in their work (Dawson, Knight, & Patterson, 2019).

Table 15 presents the findings related to the relationship between organizational commitment and employee development programs. The analysis result suggests that there is a positive and substantial connection between organizational commitment and participation in employee development programs. The computed rho-values ranging from 0.456 to 0.710 show a moderate to strong direct connection among the sub-variables of organizational commitment and employee's development programs. The statistically significant relationships seen through its p-values being less than 0.01, confirming a strong connection between organizational commitment and employee development programs. This reiterates that employee development programs are a crucial component in fostering commitment and sense of loyalty with an organization's employees (Jehanzeb & Mohanty, 2018). This implies that when organizations invest in the personal and professional growth of their employees, the message that they value and support their staff is clear.

For affective commitment, the dimensions considered are knowledge and skills retention, significance of programs, and employees' appreciation with their rho-values range from 0.658 to 0.710 and with all p-values less than 0.001. This suggests a highly significant connection. Employees who are emotionally attached to their organization are

more likely to participate in and appreciate the organization's programs. Employees with a strong sense of affective commitment are seen to be more invested in their learning programs and retention of knowledge and skills (Bai & Liu, 2018). The employees'' emotional commitment to the organization propels them to actively participate with development programs and apply new skills proficiently.

In the case of normative commitment, similar dimensions are examined. The rho-values range from 0.481 to 0.621 with p-values less than 0.001 which signifies a highly significant relationship. This suggests a positive correlation between normative commitment and employee development programs. Lastly, Continuance commitment shows strong correlations with knowledge and skills retention, significance of programs, and employees' appreciation, with the rho-values ranging from 0.456 to 0.538 and p-values less than 0.001. This suggests that employees who perceive high costs associated with leaving the organization are more likely to partake in the development programs of the organization. Employee development programs can foster in job satisfaction with the employees in an organization (Mrunali & Pathak, 2021). As employees obtain new skills and knowledge, they may experience increased job satisfaction and a perception of growth. This can lead to higher levels of affective commitment. Investing in employee development shows that the organization values its employees and is willing to support their professional advancement (Yedama, et al., 2021).

Organizations that prioritize employee development are seen to have higher retention rates. Employees who perceive that their organization is actively investing in their growth are more likely to stay with the organization longer. This nurtures continuance commitment, where employees remain with the organization because of the perceived costs associated with leaving (Bhanudas, 2021).

Conclusions

Based on the findings of the study, the researcher came up with the following conclusions:

1. There is strong evidence on the organizations work engagement in terms of physical, emotional, and cognitive aspects.
2. The employees manifested strong organizational commitment in terms of affective, normative, and continuance aspects.
3. The employee development programs are seen to have moderate evidence on its effect considering employee retention programs in terms of Knowledge and Skills Retention, Significance, and Employees' Appreciation.
4. The is a significant relationship among work engagement, organizational commitment, and employee development programs.
5. An employee retention framework was developed for Research and Development Companies. There is a strong positive correlation among each variable which contributes to a positive work environment. The amalgamation of dynamic engagement, robust commitment, and continuous development opportunities

creates a workplace where employees are motivated to stay, reducing employee turnover.

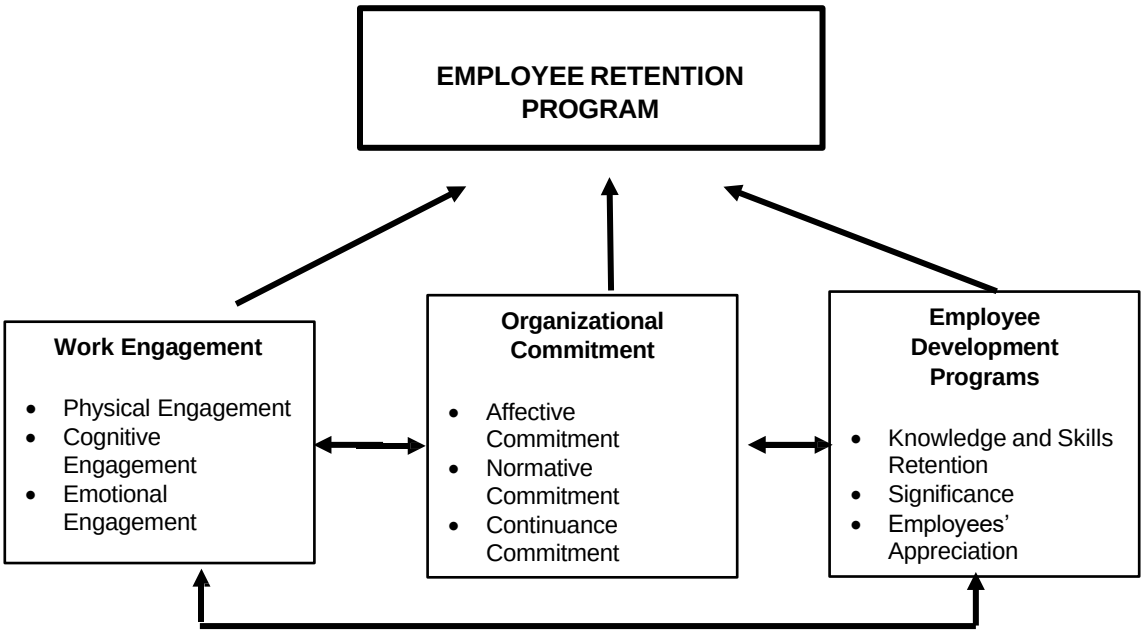

Figure 1. Proposed Framework for an Effective Employee Retention Program for Research and Development Companies specifically Pharmaceutical Companies engaged in the field

Based on the conclusions of the study, the researcher came up with the following recommendations:

1. The pharmaceutical companies through their Research and Development Departments may strengthen the rewards and recognition system of the organizations to encourage their employees to perform their duties in a more enthusiastic manner.
2. The companies may implement programs that promote a sense of community and connection within the organization.
3. Policymakers and leaders may continue to encourage their employees to participate in planning and decision-making in pertinent processes that affect the employees' work within the organization to foster in inclusivity.
4. The Human Resource department may improve the programs and institute amore future proof programs addressing the needs of the employees.
5. The organizations' human resource departments or organization leaders may use the proposed employee retention framework to improve the employee retention at research and development companies especially within the pharmaceutical industry

6. Future researchers may use other variables that could have similar effects on the work engagement, organizational commitment, and employee development and training programs of research and development companies especially within the pharmaceutical industry.

Compliance with Ethical Standards

Permissions from the three host institutions were requested before initiating this study. Ethical considerations were observed during the conduct of the research work to ensure that all information that were collected were used for research purposes only to maintain the quality and integrity of the research. At the request of the three host institutions, they were not named through this study to protect their privacy.

The researcher properly cited the adopted questionnaires. The researcher ensured the confidentiality and anonymity of the respondents by not seeking their names, when they answer the questionnaires.
