Explore the vast realm of human knowledge and innovation through the pages of Ignatian International Journal for Multidisciplinary Research (IIJMR).

Established in 2023, IIJMR aims to provide a venue for the researchers across the globe to get their articles published for network and further study purposes.

This journal is a collection of research articles that transcends the boundaries of individual disciplines to present a harmonious symphony of ideas, insights, and discoveries. It opens exchange of ideas with experts across various fields coming together to unravel the mysteries of our world.

Published monthly, IIJMR bridges the gap between disciplines, fostering a deeper understanding of the complex tapestry of human existence.

Hence, discover the future of research, where collaboration is boundless, networking is borderless, and innovation is limitless.

EDITORIAL BOARD

MARK POL M. CASTRO, CLSSBB
Chairman

Mr. Castro is the Managing Director of Ignatian Center for Continuing Education (ICCE) which oversees the Ignatian International Journal for Multidisciplinary Research (IIJMR). He is a Certified Lean Six Sigma Black Belt whose 12-year leadership & management experience extends from operation, marketing to product development.

ROXAN T. BAYAN, EdD
Vice Chairman

Dr. Bayan is an Associate Professor and currently the Dean of the College of Education of Isabela State University - Jones Campus.

She obtained her post graduate diploma, Doctor of Education in Language Education Major in English at the Isabela State University where her dissertation "Prospective ESL Teachers' International Certification: Input to Language Teacher Education Curriculum" was awarded as Best Research & Best Dissertation.

Her solid 22 years of teaching experience which includes coaching & training Campus Journalists and giving lectures on Basic English to Technical Writing to Research to Basic Grammar even to law students paved the way for her becoming an accreditor under the Accrediting Agency of Chartered Colleges and Universities of the Philippines (AACCUP).

Dr. Bayan's extensive contribution in the academe specifically in the English language teaching stemmed from her being an outstanding student back in her college days at the Philippine Normal University - Northern Luzon Campus where she graduated Cum Laude. Her prowess in writing and speaking can be traced to her multiple awards in Campus Journalism & Extemporaneous Speaking.

FREDERICK EDWARD T. FABELLA, Phd
Editor-in-Chief

Dr. Fabella is the Research Director of Ignatian Center for Continuing Education, Editorial Board of Novelty Journals based in India, and Peer Reviewer of Science PG based in New York, USA,

Being published in 46 studies internationally and in 11 journals made him chosen by the Philippine Outstanding Delegates as the Most Promising International Social Scientist of 2023.

https://doi.org/10.5281/zenodo.13373364

ABSTRACT

This study was geared to unmask the views of senior high school students towards proper waste management in a private institution in Pampanga, Philippines. The researchers interviewed 30 senior high school students who voluntarily participated by responding to an open-ended questionnaire. The findings of the open-ended questionnaire deciphered the views of the senior high school students towards proper waste management. This study utilized Braun and Clarke's Thematic analysis. The study revealed five emerging themes that described the views of the senior high school students towards proper waste management, namely: (1) Trash Breaks: Applying Intervals to Classroom Cleanup. (2) Inconsistent Commitment to Continuous Workplace Cleanliness. (3) Disciplinary Measures and Academic Consequences of Inadequate Trash Disposal. (4) Promoting responsible waste management and environmental initiatives (5) Educational Engagement and Behavior Adjustment About Proper Waste Management. The findings offer actionable insights for private institutions, recommending the initiation of eco-friendly programs and educational workshops to improve waste management practices.

Keywords: *3Rs, Senior High School Student, Waste management, School*

INTRODUCTION

Proper waste management presents a significant challenge globally, especially within educational institutions, where fostering responsible citizenship is a priority. The world generates over 2 billion tons of municipal solid waste annually, with a substantial portion ending up in landfills, incinerators, or polluting oceans and natural habitats. As populations grow, so does waste production due to increased consumption, packaging, and use of disposable items. In countries like the Philippines, inadequate waste management persists despite regulations lacking infrastructure, limited resources, and enforcement challenges, resulting in environmental degradation and health risks. Effective waste management is essential for a clean, healthy, and sustainable environment, particularly within educational settings, where students play a pivotal role in shaping sustainable behaviors. The World Bank's (2018) projection of global waste nearly doubling by 2050 underscores the urgent need for effective waste management practices. Students' perspectives on waste management in educational institutions are crucial for understanding and promoting sustainable behaviors, according to Reno (2015). However, despite efforts such as the "CLAYGO" policies, students still struggle with proper waste disposal, as noted by Owojori (2022). Current research lacks a comprehensive study of the impacts of allocating specific break times for teachers, during which students are given dedicated opportunities to properly dispose of their trash and waste materials.

Moreso, interventions are needed to address these challenges, focusing on shaping students' attitudes and perceptions toward waste management, as Owojori (2022) emphasized. Amasuomo and Baird (2015) highlights the importance of education in promoting proper waste disposal practices and increasing awareness. Addressing the gaps in waste management studies, particularly in basic education, is crucial, as highlighted by Bashir (2020). This study aims to fill these gaps by directly investigating student perspectives in private institutions. It seeks to understand student attitudes and behaviors towards the 3Rs (Reduce, Reuse, Recycle) and the factors influencing their participation through surveys and interviews. Additionally, the study aims to identify challenges and barriers hindering student participation, potentially revealing discrepancies between school policies and student practices. By involving the community and fostering a sense of shared responsibility, the researchers aim to contribute to building a sustainable future. To enhance waste management practices in schools, disciplinary measures for improper waste disposal among students are recommended. Allowing sufficient time for waste disposal in appropriate bins and organizing eco-friendly initiatives regularly can promote the principles of the 3Rs. Educating both schools and the public on the value of waste and its impact on the environment is also crucial, as suggested by Kumar et al (2017) implementing these measures can significantly improve waste management practices in educational institutions, contributing positively to the environment. The findings of this research paper aim to add insights to the existing literature on waste management and encourage students to take an active role in sustainability.

Research Questions

The purpose of this study is to unmask students' views towards proper waste management. Specifically, it seeks answers to the following questions:

1. What are the perceptions of students regarding proper waste management practices, including their understanding, attitudes, and behaviors toward waste disposal and recycling?
2. What challenges or barriers do senior high school students face in adopting and practicing the 3Rs (Reduce, Reuse, and Recycle) principles consistently throughout the school day?
3. How satisfied are students with the current waste management practices at the private institution located at San Fernando, Pampanga?

METHODOLOGY

This study utilized a qualitative research design to investigate the depth, richness, and complexity inherent in students' perceptions, opinions, and attitudes toward waste management practices. By employing qualitative methods, the researchers aim to capture the nuanced and multifaceted views of senior high school students regarding waste management, including reducing, reusing, and recycling practices. Previous research underscores the importance of understanding student perspectives on environmental initiatives within educational settings (Brown, 2020). Brown's (2020) study highlights that students' attitudes and behaviors toward waste management can significantly influence the success of such initiatives. To comprehend how students experience waste management in their schools, this study employed a phenomenological approach. This method, as described by Team (2023), prioritizes capturing the unique perspectives, beliefs, and feelings of students. It aims to go beyond data collection, seeking to grasp the subjective meaning students attach to waste management practices.

Meanwhile, the participants for this study were 30 senior high school students from a specific private institution, purposively selected based on specific criteria relevant to the research question. The focus was on students aged 15 to 18 years old, typically in Grades 11th and 12th, within this institution. Senior high school students represent a critical stage in developing environmental consciousness and personal responsibility (DeJonckheere, 2019). Participants of this study were chosen using purposive sampling technique. Purposive sampling, as described by Arikunto (2014), involves selecting samples based on specific objectives rather than random selection. With purposive sampling, the researcher selected participants based on the needs and goals of the study. The use of purposive sampling in this study is appropriate because it allows the researcher to establish specific criteria for selecting potential participants. For this study, semi-structured interviews were conducted with senior high school students to explore their views on proper waste management. This method balances flexibility and structure, allowing for in-depth exploration of predetermined themes while permitting participants to

express their perspectives freely. Before each interview, the researchers ensure informed consent and schedule sessions in private settings to create a comfortable environment. Using open-ended questions, the researchers discussed students' perceptions, experiences, challenges, and suggestions regarding waste management practices within their school environment (Nandan, 2017). The information obtained from the participants' feedback was systematically collected, transcribed, arranged, scrutinized, and interpreted to draw meaningful insights, employing Braun and Clarke's (2006) thematic analysis approach. According to Braun and Clarke (2006), this method is frequently used in qualitative research because it provides insightful and comprehensive findings. These key steps include “familiarization, coding the data, generating initial themes, reviewing the themes, naming and defining the themes, and writing up the report.”

RESULTS AND DISCUSSION

Theme 1: Trash Breaks: Applying Intervals to Classroom Cleanup.

In the bustling atmosphere of classrooms, where curiosity fuels learning and collaboration, the importance of cleanliness often fades into the background amid ongoing discussions. However, it's vital to acknowledge that implementing "trash breaks" is essential. Cluttered spaces can impede collaborative learning, while disorganization and a lack of hygiene can cause discomfort and stress, disrupting student focus and motivation. Neglected classrooms may even suggest an indifference toward the learning environment, shaping students' perceptions of school and their educational journey. Therefore, integrating "Trash Breaks" emerges as a practical solution to effectively address these challenges. Mian et al. (2017) highlights that the physical condition of both home and school environments reflects students' attitudes towards their surroundings. A cleaning rota, particularly beneficial for primary school students, as proposed by the Fidelis Group, assigns each student a day to tidy the classroom, fostering a sense of responsibility for maintaining a conducive learning space. Moreover, the authority of the teacher within the classroom is paramount in initiating such initiatives. Debrah (2020) emphasizes that teachers' knowledge and awareness play a crucial role in promoting sustainable education and environmental sustainability goals. Sacrificing just five minutes of class time for a trash break, led by the teacher, can significantly contribute to maintaining a clean and organized learning environment, while also instilling in students the importance of environmental responsibility.

Subtheme 1.1: Empowering Teachers as Environmental Stewards

Within the classroom environment, teachers wield significant influence not only in imparting knowledge but also in shaping students' attitudes toward their surroundings. By taking proactive steps such as initiating "Trash Breaks," teachers can actively foster environmental stewardship among students. According to Joshi and Ahmed (2016), teachers play a pivotal role in shaping the lives of their students, influencing not only their

academic development but also their personal growth and character formation. Beyond the classroom, teachers often serve as mentors, guides, and role models, leaving an indelible impact that extends far beyond the curriculum.

Theme 2: Inconsistent Commitment to Continuous Workplace Cleanliness

Adhering to the "clay-go" or "clean as you go" policy should be a universal standard expected of everyone in any environment, not just schools. This simple principle of properly disposing of one's waste and leaving a space clean after using it is a fundamental aspect of environmental stewardship and personal accountability. However, in schools, many students blatantly disregard this policy, leaving classrooms, hallways, and common areas littered with trash and debris. Discarded food wrappers, drink containers, and other refuse litter surfaces, quickly undoing custodial efforts to maintain cleanliness. This pervasive lack of personal responsibility severely undermines schools' ability to achieve continuous cleanliness standards. Cultivating a culture where the clay-go policy is universally accepted as the baseline expectation and holding individuals accountable is crucial, as failing to implement even this basic tenet findings in unsightly, unsanitary conditions between cleaning cycles. Moreover, research studies have shed light on the alarming disregard for proper waste disposal practices among students in educational settings. According to Okoye (2015), undergraduate students frequently engage in the illicit and improper disposal of waste materials within their institutions, heedless of the potential ramifications for human health and the environment. This behavior demonstrates a lack of environmental consciousness and a disregard for cleanliness standards. Furthermore, Alberto et al. (2020) emphasizes that the principle of "clean as you go," which involves properly disposing of one's waste and leaving spaces tidy after use, should be a universally upheld practice, transcending specific environments. However, many students fail to adhere to this fundamental tenet, contributing to the cycle of uncleanliness that custodial staff must continually address. These research findings underscore the need to cultivate a culture of personal accountability and environmental stewardship among the student body to uphold basic cleanliness protocols.

Subtheme 2.1 Cultivating Environmental Stewardship and Accountability in Students

A lack of environmental awareness and personal accountability plagues many students, leading them to disregard proper waste disposal protocols like the "clean as you go" policy. This finding is based on littered campuses and unsanitary conditions. Research highlights the importance of addressing this issue holistically. Syah & Edinov (2019) found student discipline to be a key factor influencing clean behavior and adherence to waste management guidelines. Additionally, Gusti (2016) revealed a relationship between students' knowledge levels and their attitudes towards sustainable waste management practices. To cultivate a culture of environmental stewardship, schools must integrate environmental education across curricula, implement incentive systems for positive behaviors, promote student-led cleanliness initiatives, and encourage collaborative solutions developed by students, faculty, and staff. Tackling both disciplinary aspects and knowledge gaps can foster a generation of environmentally conscious individuals who

take personal responsibility for maintaining clean surroundings.

Theme 3 Disciplinary Measure and Academic Consequences of Inadequate Trash Disposal

In educational settings, maintaining a clean and hygienic environment is essential for fostering a conducive learning environment. However, inadequate trash disposal practices among students pose significant challenges to this endeavor. By examining disciplinary actions taken by educators in response to improper waste management, the researchers aim to understand the implications for student behavior and academic performance. This does not only emphasize the importance of promoting responsible waste management habits among students but also draws attention to the possible consequences for educational institutions. A study by Gouge (2019) found that improper waste management in schools impacts students' concentration and academic performance. Moreover, the study revealed a correlation between the cleanliness of school environments and students' sense of pride and responsibility, highlighting the need for effective waste management strategies to promote positive behavior among students.

Subtheme 3.1 Student Accountability and Responsibility.

This sub-theme focuses on exploring the extent to which students are held accountable for their trash disposal habits and the influence of this accountability on their behavior and academic performance. According to Utami, (2020), they found that students who perceived themselves as accountable for maintaining a clean environment were more likely to adhere to waste management guidelines and engage in responsible disposal practices. Furthermore, the study revealed a positive correlation between students' sense of accountability and their academic performance, suggesting that responsible behavior extends beyond environmental stewardship to encompass broader aspects of student conduct and achievement. In a related study, Mayjaro (2018), investigated the effectiveness of disciplinary measures in promoting accountability among students with regard to waste management. Additionally, educators emphasized the importance of fostering a sense of responsibility among students through positive reinforcement and proactive communication about the consequences of improper waste disposal.

Theme 4: Promoting Responsible Waste Management and Environmental Initiatives

Waste segregation, or the separation of different types of waste at the source, plays a crucial role in responsible waste management and environmental initiatives, particularly in school settings. Proper waste segregation ensures that recyclables, organic waste, and non-recyclables are handled appropriately. Within schools, effective waste segregation practices can have far-reaching impacts on reducing overall waste volume, cultivating environmental awareness, enabling recycling and composting efforts, and influencing the broader community's waste management approach. The potential benefits of improving waste segregation in schools are significant. Schools play a pivotal role in promoting responsible waste management through effective segregation practices. Dedicated bins

for separating recyclables, organic waste, and non-recyclables must be placed strategically across campus.

Moreover, educational initiatives like workshops and activities foster understanding among students about proper segregation and its environmental impact. Involving student-led environmental clubs cultivates ownership and peer learning. Partnering with local waste management stakeholders ensures streamlined collection and processing of segregated waste streams. Regular assessments identify areas for improvement, enabling continuous program optimization. By addressing these key aspects, schools can ingrain sustainable waste segregation habits from an early age. Implementing effective waste segregation in schools involves several key components supported by recent research. Providing proper infrastructure like clearly labeled bins for separating recyclables, organics, and non-recyclables across campus is essential (Kaza et al. 2018). Educational initiatives through workshops and activities raise awareness of segregation's importance. Crucially, "student-led initiatives and peer education are effective in promoting waste segregation practices and instilling a sense of environmental responsibility". Involving student clubs and green teams cultivates ownership and drives engagement. Collaborating with local waste authorities streamlines segregated waste handling. Regular monitoring evaluates program efficacy for continual improvement. By combining infrastructure, education, student leadership, partnerships, and monitoring mechanisms, schools can successfully institutionalize comprehensive waste segregation, as demonstrated by the latest studies.

Subtheme 4.1 Empowering Youth for Sustainable Waste Management

The involvement of young people is crucial in preserving and sustainably managing natural resources. According to Bundhoo, (2018) empowering the youth to embrace responsible waste management and environmental stewardship is essential. By instilling environmental consciousness, knowledge, and individual responsibility, we can nurture a generation committed to safeguarding our planet. Ardoin et al. (2022) emphasize that environmental education goes beyond simply imparting information; it involves enhancing environmental attitudes, awareness, knowledge, and skills to inspire proactive environmental engagement.

Theme 5: Educational Engagement and Behaviors Adjustment About Proper Waste Management

Waste management is a major problem that impacts the environment, human health, and the next generation. The purpose of this research study is to Senior high school students about appropriate waste management techniques. In this study, participants will gain knowledge about the advantages of proper waste handling as well as the consequences of incorrect disposal through engaging in workshops, educational seminars, putting more trash bins, and practical exercises. The goal is to encourage a change in wasteful attitudes and actions. The aim is to make student’s future cleaner, greener, and more sustainable. Throughout the educational activity, students will be exposed to a myriad of learning opportunities aimed at broadening their perspectives on waste management.

According to Monegro (2024), Effective recycling is not merely a matter of collecting waste; it also requires meticulous categorization to maximize the potential for reusing material and minimizing waste sent to landfills. Workshops will offer hands-on experiences, allowing students to actively engage with waste sorting, recycling processes, and composting methods. Educational seminars will delve into the environmental and health impacts of improper waste disposal, shedding light on the urgency of adopting sustainable waste management practices. Practical exercises will provide students with the chance to apply their newfound knowledge in real-world scenarios, reinforcing the importance of responsible waste handling.

Subtheme 5.1 Awareness and Knowledge of the 3R's Among the Senior High School Students

Awareness and knowledge of the 3Rs (reduce, reuse, and recycle) among the senior high school students. This sub-theme explores the effects of integrating senior high school student perceptions and attitudes in terms of the 3Rs (reduce, reuse, recycle) and waste segregation education for senior high school students. And examines how the teacher affects the student waste segregation practices and the significant impact on adding senior high school students' drive and motivation towards learning because, according to Ike et al. (2018), educating people through information dissemination on how to handle produced solid waste has become essential.

Conclusions

Based on the study's findings the following conclusions were formulated:

1. This study reveals diverse student attitudes toward waste management. Many students understand its importance and support recycling, but challenges include a need for more awareness and limited recycling facilities. Improving education and accessibility and fostering responsibility can enhance sustainable behaviors on campus.
2. Infrequent breaks for trash disposal hinder senior high school students' consistent practice of the 3Rs (Reduce, Reuse, Recycle) during the school day. Providing structured breaks or designated times for waste disposal could improve adherence to sustainable practices and foster a more environmentally conscious school culture. Addressing these practical challenges is crucial to promoting sustainable behaviors among students.
3. Based on the findings, the researchers conclude that student's express dissatisfaction with the current waste management practices. They observe inconsistencies in trash segregation by waste custodians and note similar issues in the cafeteria. Additionally, students advocate for the introduction of classroom

trash bins and urge teachers to take a more active role in waste management initiatives.

Recommendations

The findings and discussions of this study offer practical and theoretical suggestions for (a) educational practices and (b) forthcoming research endeavors in the field of effective waste management.

1. Students can organize and participate in awareness campaigns within their schools to promote proper waste segregation practices. These campaigns can include informative sessions, posters, and interactive activities to educate their peers about the importance of separating recyclable materials from non-recyclables. Students can take the initiative to establish and maintain recycling programs within their school premises. They can collaborate with school administrators to set up recycling bins in strategic locations and coordinate regular collections. Additionally, students can organize recycling drives to collect recyclable materials from their classmates and ensure they are properly processed for reuse or recycling.
2. Environmental advocates should actively collaborate with educational institutions to develop and implement comprehensive environmental education and awareness programs. These programs should be tailored to address the specific needs and challenges identified in the study, such as enhancing students' knowledge of proper waste management practices, promoting the 3Rs (Reduce, Reuse, and Recycle), and fostering a culture of responsibility towards environmental stewardship. Environmental advocates can leverage their expertise and resources to create engaging and informative educational materials, organize workshops, and provide training for educators. Additionally, they should encourage and support the involvement of student organizations in environmental initiatives, fostering a sense of ownership and empowerment among the student community.
3. Waste custodians can actively demonstrate responsible waste management practices by consistently segregating their trash properly and using designated recycling bins. By being visible proponents of waste segregation, they can also encourage others to adopt similar behaviors through positive reinforcement and by highlighting the environmental benefits of waste segregation.
4. Educational institutions bear a significant responsibility in promoting sustainable waste management practices among there. They should prioritize the implementation of structured break times or designated periods during the school day, allowing students ample opportunity to dispose of their trash properly. This measure directly addresses the identified barrier hindering students' consistent adoption of sustainable practices. Furthermore, institutions should provide adequate and accessible recycling facilities on campus, ensuring that students have convenient options for recycling various materials.
5. Clear labeling and guidance on recycling procedures should be provided to encourage
   active participation. Institutions should also review and enhance their overall waste

management strategies, addressing concerns raised by students regarding inconsistencies in trash segregation and the lack of classroom trash bins. Regular training and monitoring of janitorial staff, as well as the installation of appropriate waste receptacles in classrooms, could help address these issues

6. Future researchers concentrate on informing school premises about the significance of trash reduction, segregation, and recycling. Additionally, future researchers should collaborate with local businesses to implement sustainable practices and encourage students to participate in community clean-up initiatives, fostering a culture of environmental responsibility both within and beyond the school walls. Future researchers examine the viewpoints of different school community stakeholders, such as students, instructors, administrators, and janitors, in order to learn about their experiences, worries, and recommendations for waste management procedures. In addition to developing methods for sustainable resource management and conservation, research may concentrate on comprehending the effects of environmental degradation on ecosystems and human beings.

Compliance with Ethical Standards

This research strictly adheres to the ethical standards set by the institution and the body of knowledge. All information and data coming from the respondents are solely for academic purposes only. In line also with the Data Privacy Act of 2012, the researchers strictly preserved the anonymity and confidentiality of the respondents.

Acknowledgments

We extend our sincere appreciation to the individuals and organizations whose steadfast support and encouragement have been the cornerstone of this paper. Their unwavering commitment and invaluable assistance in various capacities have been pivotal in bringing this action research to fruition. To Mr. John Louise Marcaida, our esteemed subject teacher, whose guidance has made the research process to second nature, we are profoundly grateful. Your dedication to teaching and your passion for research have been a source of inspiration and admiration. To Mr. Jefferson Andaya, we extend our heartfelt gratitude for your invaluable support in approving our letter to conduct this study. Without your endorsement, this paper would not have come to fruition, and we are deeply appreciative of your assistance. We would also like to express our sincere gratitude to the participants of the study. Their invaluable cooperation and assistance were integral to the successful completion of the paper. Lastly, we wish to convey our heartfelt appreciation to our families and friends, whose unwavering support has been our source of strength throughout this endeavor. Their moral, physical, and financial support have

been our pillars of strength, and we are profoundly grateful for their unwavering encouragement.

AUTOMATED ENERGY CUTOFF SYSTEM FOR AUDITORIUM SUSTAINABILITY USING IOT

Margarita Giner, Joel B. Garcera, Mariano Lañada, Rowena Donaire Galzote, Ian Ragodon

University of San Agustin, Iloilo City, Philippines

https://doi.org/10.5281/zenodo.13192707

ABSTRACT

University auditoria are known for significant energy waste due to lights and equipment left on post-events. Traditional management methods, which rely on manual shut-off, result in inconsistent energy savings and inefficiencies. To address this issue, our research introduces an Automated Energy Cutoff System for Auditorium Sustainability Using IoT. This system leverages Internet of Things (IoT) technology, with an ESP32 microcontroller serving as the central hub. The ESP32 controls a servo motor that physically cuts power according to pre-programmed schedules or manual commands, providing a reliable and consistent approach to energy management. Users can access the AECS via a web interface on their smartphones or laptops, enabling them to set schedules and control the system remotely. This dual functionality of automated scheduling and manual override ensures both efficiency and flexibility in power management. The AECS not only promotes efficient energy use but also significantly reduces operational costs, supporting the university's sustainability goals. By automating power management and offering remote control capabilities, our system sets a new standard for energy efficiency in educational institutions. This research underscores the importance of integrating IoT solutions to foster responsible energy consumption, thereby contributing to broader sustainability efforts. The AECS project exemplifies how innovative technology can be harnessed to achieve substantial energy savings and operational efficiency in university settings.

Keywords: *Energy Efficiency, Energy Management, Internet of Things (IoT), Auditoriums, Sustainability, Automation*

INTRODUCTION

University auditoriums serve as vibrant centers for learning, cultural exchange, and fostering community engagement. However, their advanced lighting systems and equipment contribute significantly to the university's energy footprint. Traditional practices rely on manual shut-off procedures, which are susceptible to human error and often lead to lights and equipment being left operational even during unoccupied periods. This persistent energy waste translates to substantial financial burdens for the university.

The Internet of Things, or IoT, is a system of interconnected (networked) devices that can communicate with each other, sharing information. It can include sensors, cameras, robots, and user interfaces such as mobile phones. This integrated system of devices can either be local or global. (Arduino.cc, 2024)

This study presents the design and implementation of an Automated Energy Cutoff System (AECS) specifically tailored for university auditoriums. Leveraging the power of Internet of Things (IoT) technology, the AECS addresses the challenge of unchecked energy consumption. The system employs a network of ESP32 microcontrollers, servo motors and intelligent devices to meticulously monitor auditorium usage patterns and automatically regulate power consumption based on occupancy. This automation not only drastically curtails energy waste and translates to cost savings, but also eliminates the need for manual shutdowns, streamlining operational efficiency. Furthermore, users can effortlessly schedule power-off times with a simple click on their mobile devices.

Sets of various smart sensors allow schools to save money on power consumption, for example, by automatically switching lights off if no one is around. IoT sensors also guarantee safety from fire, short circuits, and other accidents by instantly identifying them and sounding the alarm to swiftly correct the situation. (Cogniteq, 2024)

The AECS transcends mere financial benefits. It aligns seamlessly with the university's unwavering commitment to sustainability. By implementing a responsible energy management system within its auditoriums, the university aspires to serve as a beacon of inspiration for the broader educational sector, advocating for the adoption of similar practices. Embracing IoT technology for energy optimization is a pivotal step towards establishing a more sustainable and resource-efficient campus environment.

METHODOLOGY

This project aims to optimize energy consumption in university auditoriums by implementing an IoT-based Automated Energy Control System (AECS). By reducing

energy usage, we expect to lower costs and minimize environmental impact. This system will demonstrate the potential of IoT technology in achieving sustainability goals within campus facilities.

A dedicated mobile application empowers users with real-time access to sensor data and remote control over connected devices, promoting active engagement in energy-saving practices. The system effectively addresses phantom power consumption by powering down electrical sockets during non-working hours, resulting in substantial energy savings (Nageya et al, 2023).

To accomplish this, we developed an IoT system utilizing an ESP32 microcontroller to control a switch via a servo motor. The system includes a web-based user interface that can be accessed through a dedicated access point or an existing network. Users can manually operate the switch or set automated schedules using a Real-Time Clock. For added convenience, a physical button also controls the switch, but the web interface remains crucial for system configuration and management.

A. System Architecture and Design

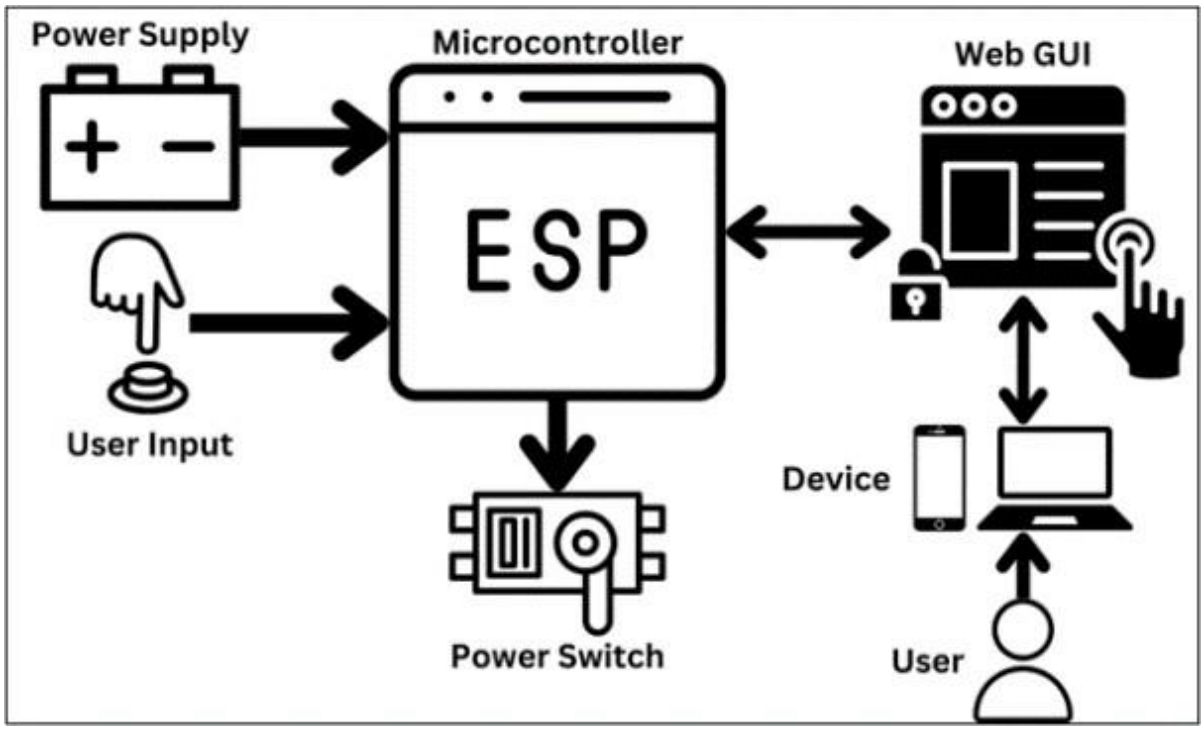

Fig. 1. System Architecture of Automated Energy Cutoff System for Auditorium Sustainability Using IoT

The ESP32 is a popular family of wireless microcontroller chips developed by the Chinese chip maker Espressif. It's a very affordable solution for use in commercial products

especially considering its high level of performance and extensive features. The Espressif ESP WiFi family of microcontrollers started with the original ESP8266 which embedded a single-core microcontroller with a WiFi radio. (Teel, 2024)

The automated power system architecture consists of several key components working together to provide scheduled and manual control of the power supply. The ESP32 microcontroller, powered by its dedicated power supply, serves as the central controller, managing the overall system. A push button allows for manual switching of the power supply, while a servo motor physically switches the power on and off based on commands from the ESP32. The ESP32 also functions as an access point, enabling users to connect their devices, such as phones or laptops, to a Web GUI where they can schedule power on/off times and control the system remotely. This setup allows users to easily manage their power supply, ensuring efficient energy usage with both automated scheduling and manual override options.

Hardware

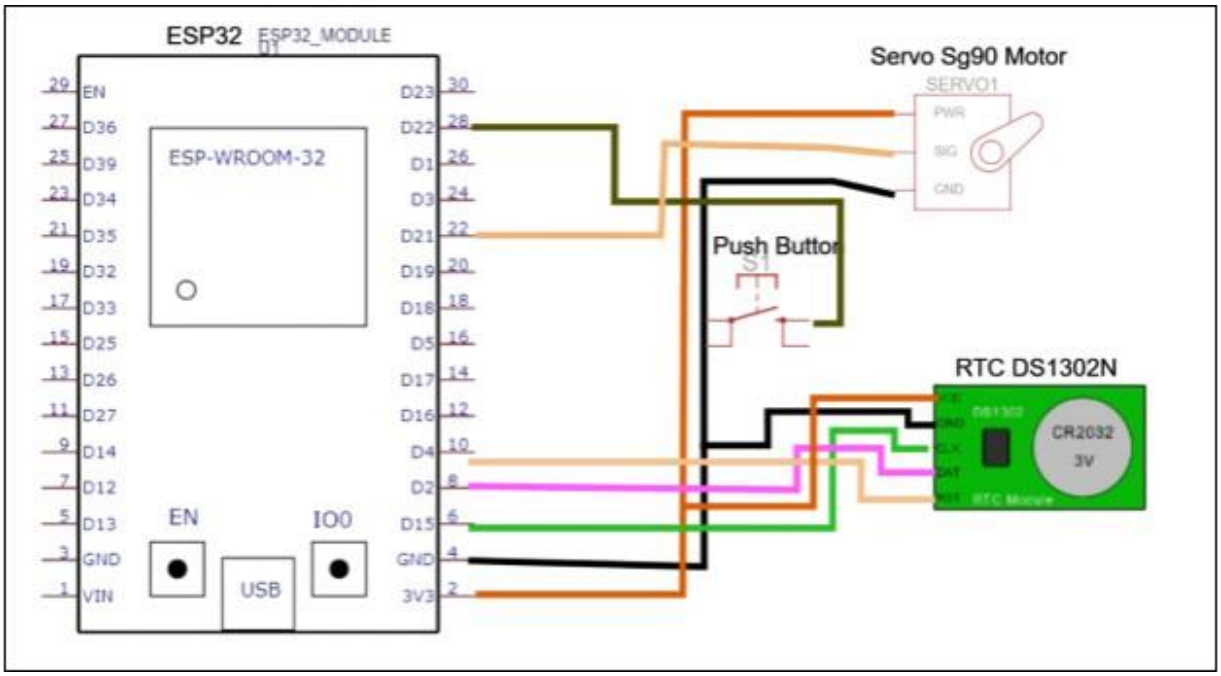

Fig.2. System Schematic Diagram Power System

Workflow

Upon initialization, the ESP32 activates the RTC module, servo motor, and push button components. An initial schedule for power on/off times is loaded into the ESP32's memory. Subsequently, the RTC continuously provides the current time to the

microcontroller. The ESP32 then compares this real-time data to the stored schedule. If a match is found, a signal is transmitted to the servo motor to control the power supply accordingly. Alternatively, users can manually override the automated schedule by pressing the push button. The ESP32 detects this input and either adjusts the programmed schedule or directly commands the servo motor to modify the power supply state.

RTCs are used in a variety of applications where they play a critical role in keeping accurate track of the current time while also providing alarms, timers, and interrupt functions and helping to reduce power consumption. (ECS INC International, 2023)

Servo motors are geared DC motors that have an integrated servomechanism with a feedback loop to allow precise positioning of the motor shaft. A high gear ratio allows a small servo to have an impressive torque rating. (Workshop, 2023)

Use Case

- Scheduled Power Management: The system ensures that power is supplied or cut off at specific times of the day, optimizing energy usage.
- Manual Override: Users can manually control the power supply if needed, providing flexibility and convenience

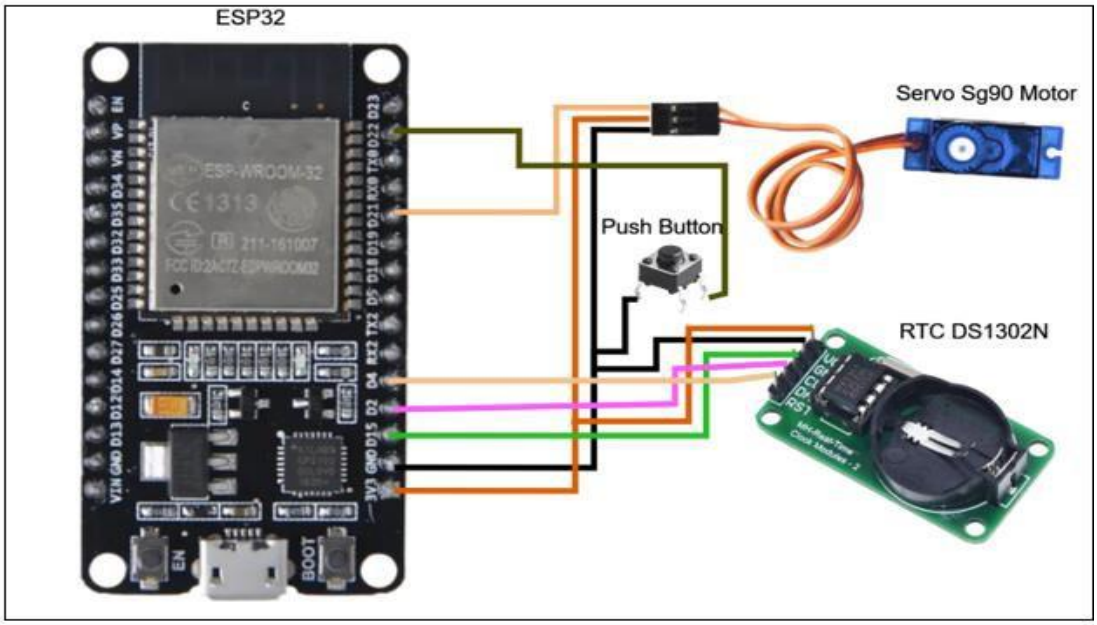

Fig.3. System Connection Power System

The ESP32 microcontroller, following its program, reads the accurate time from the RTC module, controls the servo motor's movement, and responds to commands you give through the push button.

Components:

This system is built around the ESP32 microcontroller, which acts as the brain, coordinating all the other components. The RTC module (DS1302N) keeps accurate time, while the servo motor responds to instructions from the ESP32 by moving to specific positions. Finally, the push button allows the user to provide input to the ESP32, enabling interaction with the system.

The DS1302 trickle-charge timekeeping chip contains a real-time clock/calendar and 31 bytes of static RAM. It communicates with a microprocessor via a simple serial interface. The real-time clock/calendar provides seconds, minutes, hours, day, date, month, and year information. (DS1302 Datasheet and Product Info | Analog Devices, 2015)

Connection:

The ESP32 acts as the brain and central connection point. The RTC module (DS1302N) communicates with the ESP32 using pins D15, D2, and D4. Both the RTC module and the servo motor receive power from the ESP32's dedicated 3.3V supply pin, while also being connected to a common ground (GND) for a complete circuit. The user interacts with the system through the push button, which is wired to a specific pin (D22) on the ESP32 and grounded (GND) to complete the circuit and register a button press.

The ESP32 chip comes with 48 pins with multiple functions. Not all pins are exposed in all ESP32 development boards, and some pins cannot be used. (Santos & Santos, 2024)

Software

```cpp
#include <WiFi.h>
#include <ArduinoJson.h>
#include <ESP32Servo.h>
#include <Ds1302.h>
#include "index.hpp"
//#include <vector>
//using namespace std;

// Server
WiFiServer server(80);
Servo motor;
Ds1302 rtc(4,15,2);
Ds1302::DateTime now;
int offset[3] = {1, -5, 37};
int wait = 1000;

// Data
StaticJsonDocument<200> schedule;
char *time(){
    char *out = new char[6];
    rtc.getDateTime(&now);
    snprintf(out, 6, "%02d:%02d", (now.hour+offset[0]+(now.minute+offset[1])/60+(now.second+offset[2])/3600)%24
    return out;
}

// Setup
bool state = false;
void setup() {
    WiFi.softAP("IOT Switch", "12345678"); // Create Network
    //WiFi.begin("Jasouza 2G", "Entangled23Kat"); // Join Network

    rtc.init();
    if (rtc.isHalted()) {
        Ds1302::DateTime dt = {
            .year = 24,
```

Fig. 4. C++ programming language Beginning code for Automated Energy Cutoff System for Auditorium Sustainability Using IoT

The system uses C++ programming language to code for an Automated Energy Cutoff System for Auditorium Sustainability Using IoT. It utilizes an ESP32 microcontroller to interact with various components to manage power based on a schedule and real-time occupancy detection.

C++ (or “C-plus-plus”) is a generic programming language for building software. It’s an object-oriented language. In other words, it emphasizes using data fields with unique attributes (a.k.a. objects) rather than logic or functions. (Staff, 2023)

Libraries:

ArduinoJson.h and WiFi.h are likely used for establishing communication with a Wi-Fi network and managing data in JSON format, which is a common way of structuring data for exchange between devices. Ds1302.h and ESP32Servo.h libraries are likely specific to the real-time clock (RTC) module (DS1302) and the servo motor used in the system.

ArduinoJson is a JSON library for Arduino, IoT, and any embedded C++ project. It supports JSON serialization, JSON deserialization, and MessagePack. (BenoitBlanchon, n.d.)

Timekeeping (#include <Ds1302.h>... }):

The code includes functions to interact with the RTC module (Ds1302), which keeps accurate time. It defines an offset (offset[3]) that might be used to adjust the RTC time for a specific time zone or daylight saving time.
A function time() is included to format the current time from the RTC.

Setup (void setup() { ... }):

The ESP32 creates a Wi-Fi access point named "IOT Switch" with the password "12345678". This allows the ESP32 to be configured initially through a Wi-Fi connection on a laptop or phone. (Comment //WiFi.begin("Jasouza 2G", "Entangled23Kat"); suggests an alternative configuration where the ESP32 connects to an existing Wi-Fi network named "Jasouza 2G" with the password "Entangled23Kat").
The RTC module is initialized (rtc.init()) and its halted state is checked (rtc.isHalted()). If halted, the program sets the current date and time (Ds1302:: DateTime dt)

User Interface

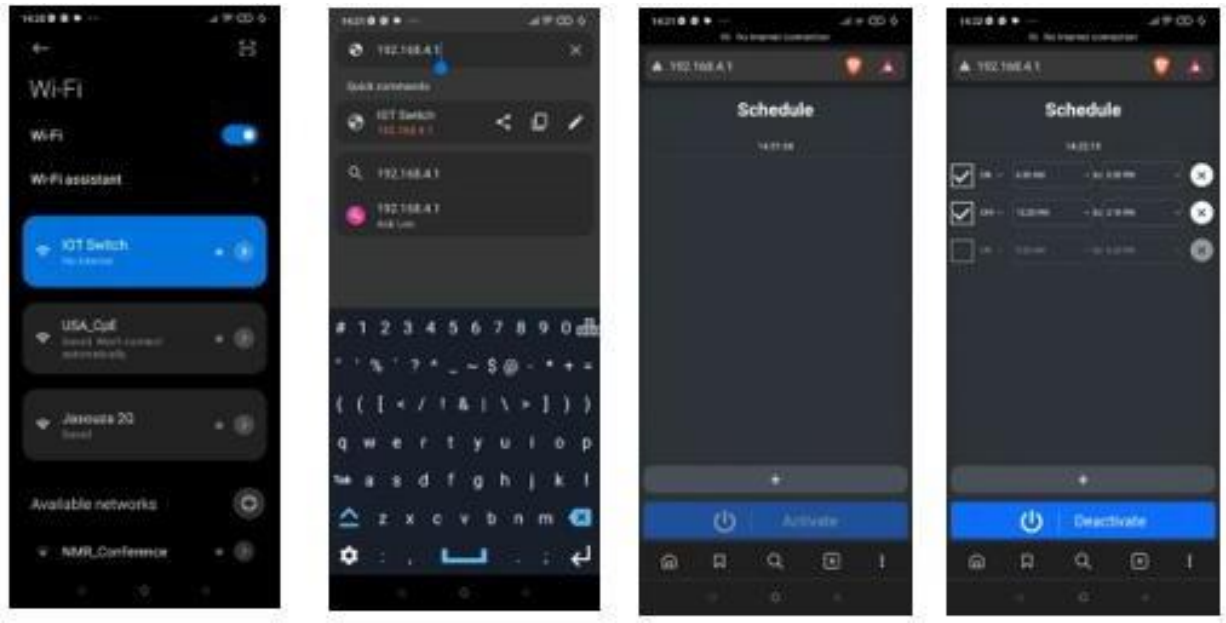

Fig. 5. User Interface of Automated Energy Cutoff System for Auditorium Sustainability Using IoT

The user interface (UI) is the point of human-computer interaction and communication in a device. This can include display screens, keyboards, a mouse and the appearance of a desktop. It is also how a user interacts with an application or a website, using visual and audio elements, such as type fonts, icons, buttons, animations and sounds. (Hashemi-Pour & Churchville, 2024)

The user interface of the Automated Energy Cutoff System (AECS) for Auditorium Sustainability, as illustrated in Figure 5, directs users through the system's setup and activation. Initially, users connect to the Wi-Fi network via the IoT switch and input the designated IP address. Upon successful connection, the home screen appears. To activate the system, users click the "Activate" button and choose the desired shutdown time. Once activated, the AECS functions independently, regardless of Wi-Fi or internet connection. Importantly, the system allows for adjustments to Wi-Fi and IP address settings within the program.

RESULTS

This paper highlights the successful design and implementation of an IoT-based Automated Energy Cutoff System (AECS) specifically tailored for auditoriums. The system was rigorously tested and evaluated to ensure its functionality and efficiency, confirming its readiness for industrial-scale applications. The AECS operates by leveraging interconnected devices and real-time data processing to monitor and manage the energy consumption of various appliances and circuits within an auditorium. When these devices are not in use, the system switches them off, thereby addressing the issue of phantom loads and standby power consumption. This proactive approach to energy management not only reduces waste but also enhances the overall sustainability of the facility.

Moreover, the results of the testing phase reveal that the AECS leads to significant cost savings by effectively minimizing unnecessary energy consumption. The system's capability to seamlessly integrate into existing infrastructure and its scalability make it a practical solution for larger industrial applications. The findings underscore the potential of IoT technology in revolutionizing energy management practices, promoting more sustainable and cost-effective operations. The successful deployment and operation of the AECS in auditoriums pave the way for its adoption in other large-scale settings, emphasizing the system's versatility and the broader impact it can have on energy conservation and financial savings. This research demonstrates a substantial advancement in the field of automated energy management, setting a precedent for future innovations in sustainable technology solutions.

DISCUSSION

The paper "Automated Energy Cutoff System for Auditorium Sustainability Using IoT" introduces an innovative IoT-based Automated Energy Cutoff System (AECS) designed to enhance energy efficiency in auditoriums. This system is tailored to manage energy consumption by detecting and automatically switching off unused appliances and circuits, thus addressing the issue of phantom loads and standby power. Through rigorous testing and evaluation, the system's functionality has been confirmed, showcasing its readiness for its implementations and applications. The AECS leverages interconnected devices and real-time data processing to optimize energy usage, significantly reducing waste and contributing to substantial cost savings.

The research highlights the AECS's potential for broader industrial implementation due to its demonstrated reliability and effectiveness. By focusing on the specific needs of large public venues like auditoriums, the system not only enhances sustainability but also provides a scalable model for other industrial settings. The results underscore the importance of integrating IoT technology into energy management practices, offering a practical solution for reducing energy consumption and operational costs. This advancement represents a significant step towards sustainable energy practices, with the AECS model serving as a blueprint for future developments in the field.

Conclusions

In conclusion, this paper presents a scalable IoT-based Automated Energy Cutoff System (AECS) designed specifically for auditoriums, with potential applications in industrial-scale settings. The system integrates ESP32 microcontroller hardware with scheduling and remote-control software to manage power consumption efficiently through automated time-based control. The user interface of the AECS guides users through the setup and activation process. Initially, users connect to the system via a Wi-Fi network using the IoT switch and input the designated IP address. Upon successful connection, the home screen appears, allowing users to activate the system by clicking the "Activate" button and selecting the desired shutdown time. Once activated, the AECS operates independently of Wi-Fi or internet connectivity, ensuring continuous energy management. Additionally, the system allows for adjustments to Wi-Fi and IP address settings within the program, providing flexibility and ease of use.

The successful deployment of a prototype at the University of San Agustin auditorium validates the AECS's potential for large-scale industrial implementation. Rigorous testing and evaluation have confirmed the system's functionality and readiness, demonstrating significant reductions in energy consumption by automatically switching off unused appliances and circuits. This reduction in phantom loads and standby power leads to substantial cost savings, highlighting the system's economic viability. The AECS represents a significant advancement in automated energy management, offering a

practical solution for enhancing sustainability in large public venues and industrial settings. This research sets a precedent for future innovations in sustainable technology, emphasizing the importance of integrating IoT solutions into energy management practices to promote cost-effective and environmentally responsible operations.

Recommendations

Based on the successful implementation and proven effectiveness of the Automated Energy Cutoff System (AECS) at the University of San Agustin auditorium, it is recommended that this system be deployed more widely in similar venues such as theaters, conference halls, and sports gymnasium. These large public spaces can significantly benefit from the automated energy management provided by the AECS, leading to substantial cost savings and enhanced sustainability. Additionally, customizing the AECS for diverse industrial applications should be explored to cater to the unique energy consumption patterns of different industries. Integrating the AECS with existing smart building systems can also create a more comprehensive energy management solution, optimizing energy efficiency across entire facilities.

To ensure the smooth adoption and optimal use of the AECS, it is crucial to provide thorough user training and ongoing technical support. Users should be well-versed in the setup, activation, and adjustment processes to fully utilize the system's capabilities. Establishing a continuous monitoring system to track performance and gather user feedback can help identify areas for improvement and ensure the system remains effective and relevant. Future research should explore the integration of advanced AI algorithms to enhance the AECS, providing predictive analytics for energy consumption patterns and automating even more nuanced control of appliances and circuits. Promoting awareness of the AECS and its benefits through industry conferences, publications, and collaborations with sustainability-focused organizations can encourage broader adoption of this innovative energy management solution.

Compliance with Ethical Standards

Compliance with ethical standards is a fundamental aspect of this research and the development of the Automated Energy Cutoff System (AECS). Throughout the project, the researchers adhered to the highest ethical principles to ensure the integrity and transparency of their work. This involved obtaining necessary permissions and approvals for testing the AECS in the University of San Agustin auditorium. The research team was committed to safeguarding the privacy and security of all data collected during the testing phase, ensuring that no personally identifiable information was compromised. Moreover, the development process strictly followed guidelines for the ethical use of IoT technology, ensuring that the system's deployment does not infringe on users' rights or contribute to any form of digital surveillance without consent.

Furthermore, the research team took proactive measures to ensure that the AECS promotes sustainability without causing unintended negative impacts on the environment

or the community. The system was designed to enhance energy efficiency, thereby contributing to the reduction of carbon emissions and overall energy consumption. By focusing on the ethical implications of technology deployment, the researchers aimed to create a solution that aligns with broader societal goals of environmental stewardship and responsible innovation. The commitment to ethical standards throughout this project underscores the researchers' dedication to not only advancing technological capabilities but also fostering a positive and responsible approach to the use of emerging technologies.

Acknowledgments

The research and development of the Automated Energy Cutoff System (AECS) for Auditorium Sustainability were made possible through the collaborative efforts and support of various individuals and departments. First and foremost, we extend our deepest gratitude to the University of San Agustin and to the Center for Information and Communications Support Services for providing the venue and necessary permissions to test the AECS prototype. The administrative and technical staff's assistance was invaluable in ensuring a smooth and successful deployment. We also wish to thank the faculty and students of the university who participated in the testing process, offering critical feedback that helped refine the system's functionality and usability.

We are also grateful to our funding bodies and partners who supported this project financially and logistically. Special thanks to the technology suppliers and IoT experts who provided the essential hardware and software components, as well as technical guidance throughout the development process. Additionally, we acknowledge the contributions of our research team members whose dedication, expertise, and collaborative spirit were instrumental in bringing this project to fruition. Finally, we appreciate the constructive feedback from peer reviewers and advisors, which significantly enhanced the quality and impact of this research. Their insights and suggestions were crucial in refining our approach and ensuring the robustness of our findings.

AWARENESS AMONG THE ELECTIVE OFFICIALS FROM SELECTED BARANGAYS ON THE DEVOLVED FUNCTIONS, SERVICES, AND FACILITIES IN THE PROVINCE OF BATANGAS: BASIS FOR CAPACITY DEVELOPMENT PLAN

Celio C. Francia, RN, EnP, MPA

Department of the Interior and Local Government (DILG) – IVA (CALABARZON), Calamba City, Laguna, Philippines

https://doi.org/10.5281/zenodo.13162659

ABSTRACT

This study focused on determining the level of awareness of the barangay officials and the level of implementation of the barangays on the devolved functions, services, and facilities as stipulated in the Republic Act (R.A.) No. 7160 and by the full devolution as referenced in Executive Order (E.O.) No. 138, series of 2021. In answering the research question, the study employed a research approach with a mix of methods that combined both quantitative and qualitative techniques. It involves the use of descriptive correlational research and thematic analysis. The study results show that the barangay officials were aware of the devolved functions, services, and facilities. At the same time, the barangays attained a high level of implementation of the devolved functions, services, and facilities. Moreover, the study also discovered no significant difference in the level of awareness of barangay officials on the devolved functions, services, and facilities when grouped according to the respondents' profiles. Furthermore, the study also found a strong link between the level of awareness of barangay officials and the level of implementation of devolved functions, services, and facilities. Based on the responses received from the participants, the study confirmed that barangays are currently facing several issues and challenges in fully implementing the devolution, including a lack of or insufficient financial resources, a lack of human resources or staffing, and inadequate support from higher LGUs such as provinces, cities or municipalities, and national government agencies (NGAs).

Keywords: *Full Devolution, Mandanas-Garcia Ruling, Local Government Code of 1991; Barangay Officials, Devolved functions, services, and facilities*

INTRODUCTION

Every state or nation has its ultimate goal, which is to enhance the overall well-being of its citizens. Within the Philippine context, the local government units (LGUs) are obliged to fulfill this mandate. Using these resources, the LGUs can efficiently and effectively carry out the devolved facilities and services mandated by existing laws. Because of decentralization, they can respond to their community's distinct issues and challenges. As a result, decentralization promoted greater responsiveness and accountability in every LGU.

Devolution has empowered the LGUs by granting them power and resources. It enables them to continually enhance public services provision, participatory governance at the local levels, and needed policies that promote socio-economic growth and development. Additionally, devolution is vital to addressing differences between rural and urban communities by promoting equity and inclusivity. Lastly, it provides equal access to essential services, infrastructure development, and economic opportunities by serving as a link to address the gaps in sustainability.

The Philippines' decentralization effort began with the Local Government Code (LGC) of 1991, also known as the Republic Act (R.A.) No. 7160. The statute empowered local governments to manage their resources to benefit their inhabitants. Each LGU shall provide the basic facilities and services concerning national policies, standards, and guidelines that already exist following the Implementing Rules and Regulations (IRR) of LGC of 1991. As a result of decentralization, some functions, services, and facilities (FSFs) have been devolved to different levels of LGUs, like the barangays from the national government.

Internal Revenue Allotments (IRAs), a crucial element of financial decentralization, have been given to LGUs to ensure they can execute their mandated roles and responsibilities. According to Article X, Section 6 of the Philippine Constitution, LGUs are eligible for an equal share of national tax collections. However, as mandated by the Constitution, the Mandanas-Garcia Ruling raised the share of national taxes received by LGUs, significantly changing the decentralized picture. (G.R. Nos. 199802 and 208488, Mandanas et al. v. Executive Secretary, et al.)

Beginning Fiscal Year (F.Y.) 2022, the LGUs' IRA shares will increase based on the tax collected by the national government. It is brought about by the execution of the Mandanas-Garcia Ruling and per Section 284 of LGC of 1991, in which the LGUs' fair share from taxes collected by the national government is based on the third previous year of the present F.Y. Therefore, it is expected that starting in F.Y. 2022, the LGUs' overall shares of national taxes will rise considerably. This significant increase in the LGUs' portion of shares from national taxes will allow them to better serve their residents by providing basic services and facilities and assist them in carrying out other responsibilities assigned to them under Section 17 of R.A. No. 7160.

Executive Order (E.O.) No. 138 series of 2021, "Full Devolution of Certain Functions of the Executive Branch to Local Governments, Creation of Committee on

Devolution, and for Other Purposes," was signed into law on the first day of July 2021 by President Rodrigo R. Duterte. As mentioned above, the E.O. aims to aid in and direct the shift toward full devolution to successfully execute the Supreme Court's decision in the Madanas-Garcia Cases beginning in Fiscal Year 2022.

The barangay, regarded as the fundamental political or administrative unit, is crucial in advancing the well-being of all its inhabitants. Additionally, according to Section 384 of the LGC, the barangay coordinates and executes all government policies, plans, programs, activities, and projects within the community. Following the Mandanas-Garcia Ruling (G.R. Nos. 199802/ 208488), which brought about full devolution, the national government ensured that decentralization improves all citizens' welfare and keeps LGUs operating more efficiently. Furthermore, the national government must guarantee that the LGUs, especially the barangays, receive an equal share of the national government tax collections.

During the guidelines' implementation on full devolution in 2021, the researcher noted that the barangay officials raised several issues, including a lack of funding, staff, and technical capacity to carry out the devolved FSFs. As a result, the problems and challenges the LGUs face in implementing full devolution should be fully understood, particularly from the viewpoint of the barangay's grassroots level. In this way, the researcher can formulate a necessary intervention plan will be crafted to address the barangays' identified issues and challenges.

The study’s results will help the national government agencies and higher LGUs to develop a priority capacity development intervention that will enhance and strengthen the capacities of the barangay officials and the barangays in implementing their devolved FSFs. In the long run, these capacity development interventions will improve the performance and service delivery of barangays geared towards enhancing every individual's life in the community.

Research Questions

This study assesses the significant relationship between the barangay officials' awareness level and the barangays' implementation level on the devolved functions, services, and facilities outlined in Section 17 of LGC of 1991. Moreover, the study also determined the issues and challenges concerning implementing full devolution to serve as the basis for identifying capacity development interventions.

Specifically, this study intended to answer the following:

1. What is the profile of the respondents in terms of:
    1.1. age;
    1.2. sex;
    1.3. educational attainment;
    1.4. Years of service as barangay officials?
2. What is the profile of the respondent’s barangay in terms of:

2.1. classification;
2.2. Internal Revenue Allotment (IRA) shares;
2.3. type of LGU where the barangay is located;
2.4. income class?

3. What is the level of awareness of barangay officials on the devolved functions, services, and facilities in terms of:
   3.1. agricultural support services;
   3.2. health and social services;
   3.3. services and facilities related to general hygiene and sanitation, beautification, and solid waste collection;
   3.4. maintenance of Katarungang Pambarangay;
   3.5. maintenance of barangay roads and bridges;
   3.6. maintenance of the water supply system;
   3.7. infrastructure facilities;
   3.8. Information and Reading Center;
   3.9. satellite or public market?
4. What is the current level of implementation of the devolved functions, services, and facilities of the barangays in terms of:
   4.1. agricultural support services;
   4.2. health and social services;
   4.3. services and facilities related to general hygiene and sanitation, beautification, and solid waste collection;
   4.4. maintenance of Katarungang Pambarangay;
   4.5. maintenance of barangay roads and bridges;
   4.6. maintenance of the water supply system;
   4.7. infrastructure facilities;
   4.8. Information and Reading Center;
   4.9. satellite or public market?
5. Is there a significant difference in the barangay officials' level of awareness of the devolved functions, services, and facilities when grouped according to the respondents' profiles?
6. Is there a significant relationship between the level of awareness of the barangay officials and the level of implementation of barangays on the devolved functions, services, and facilities?
7. What issues and challenges do the barangays face in implementing the full devolution?
8. What capacity development interventions are needed by the barangays to implement the full devolution?

METHODOLOGY

Research Design

In responding to the research problems, this study employed a design combining methods incorporating qualitative and quantitative aspects. The researcher used quantitative method in this study to gather the respondents' profile, like years of service

as barangay officials, educational attainment, age and sex; barangays' profile of each respondent, such as classification, income class, type of LGU where the barangay is located, and average IRA shares; the barangay officials' awareness level on the devolved FSFs outlined in Section 17 of RA 7160 as well as the barangays' level of implementation of such devolved functions.

Additionally, this study employed a descriptive correlational study approach. The descriptive study methodology was successful and suitable in assessing the respondents' demographics, such as years of service as barangay officials, educational attainment, age, and sex, including the profile of their respective barangays in terms of classification, type of LGU where the barangay is located, income class, and average IRA shares. It was additionally utilized to investigate the level of understanding among barangay officials and the implementation of devolved services and facilities.

Further, the researcher employed a theme-based approach to arrange and evaluate the qualitative information. A codebook thematic analysis was used in this study to determine the issues and challenges that barangays confront while trying to implement full devolution.

Population and Sampling Technique

The study's participants were Punong Barangays from several cities and municipalities in Batangas Province. Furthermore, the study's population comprises 1,078 barangays.

The research sample was chosen using a method of probability sampling, specifically stratified random sampling processes. The stratified selection at random will be employed to split the population into similar strata or subgroups according to the cities or municipalities where the barangays are situated.

Respondents of the Study

The study's respondents were 292 Punong Barangays from 1,078 barangays in different cities and municipalities of Batangas Province. Based on the sampling techniques, the respondents will be divided equally per Congressional District.

Research Instrument

The primary data collection instruments in this study were a questionnaire for surveys and a guide to the interview questionnaire, both designed by the researcher. The development of these instruments was based on the research title and informed by existing related studies and literature. The researcher carefully constructed the questionnaires to guarantee that the information collected was relevant and valuable for addressing the study's aims, including pertinent questions and items related to the research problem.

In this study, the researcher crafted a questionnaire about the respondents' profile, the respondent's barangay profile, the barangay officials' awareness level, and the

barangays' implementation level on the devolved FSFs cited in Section 17 of R.A. No. 7160, which is divided into four (4) parts. The statements in the said instrument were formed based on various literates reviewed.

Part I provides the respondents' profiles, including age, sex, educational attainment, and years of service as barangay officials.

Part II contains the respondent's barangay profile, including the classification of barangays, average IRA shares from 2020-2023, the type of LGU where the barangay is located, and the income class classification.

Part III comprises the barangay officials' level of awareness, particularly of punong barangays, on the devolved FSFs cited in Section 17 of R.A. No. 7160, which were rated by the respondents using the four (4)-4-point Likert scale. The Likert scale assigns quantitative values to qualitative data so that the researcher can statistically analyze it. The rating system is as follows:

Numerical Rating	Scale	Verbal Interpretation
4	3.5 – 4.0	Very Aware
3	2.5 – 3.49	Aware
2	1.5 – 2.49	Somewhat Aware
1	1.0 – 1.49	Not Aware

Part IV involves the current level of implementation of the barangays on the devolved FSFs cited in Section 17 of LGC, which were rated by the respondents using the five (5)-point Likert rating scale. It is a means of assigning quantitative values to qualitative data so that the researcher can statistically analyze it. The rating system is as follows:

Numerical Rating	Scale	Verbal Interpretation
5	4.5 - 5.0	Advanced Level of Implementation
4	3.5 – 4.4	High level of Implementation
3	2.5 – 3.4	Medium level of Implementation
2	1.5 – 2.4	Low level of implementation
1	1.00 – 1.4	No implementation at all

Additionally, the researcher crafted an interview guide questionnaire to determine the issues and challenges the barangays face in implementing the devolution.

Data Gathering Procedure

As part of the data gathering, the researcher considered the following procedures:

1. The primary data collection tool, a survey instrument, was discussed with the research adviser for suggestions and input. Three validators with expertise in the field of study validated the instrument's content. In addition, the researcher utilized Cronbach's Alpha dependability to assess its dependability in pilot research with 25 participants.
2. The researcher made necessary revisions to the survey questionnaire based on the input, comments, and suggestions of the adviser, statistician, and validators. After finalizing the survey questionnaire, an online survey form was also created.
3. The researcher wrote a letter to the DILG Provincial Director and Local Chief Executives, requesting authorization to conduct the study, disseminate the survey online, and conduct face-to-face or virtual interviews.
4. For online distribution, the researcher coordinated with the respective C/MLGOO of every city and municipality to send the link to the online survey through an online platform to barangay officials within their area of responsibility. Data was also retrieved using that online platform. For virtual or face-to-face interviews, the researcher also coordinated with the C/MLGOO of the concerned Punong Barangays.
5. Data were collected and carefully organized for tabulation and analysis using Excel. The collected data underwent statistical treatment and analysis using the Predictive Analytic Software (PASW) version 26. On the other hand, data collected from the interview was analyzed by the statistician using thematic analysis.
6. The researcher upheld ethical standards throughout the data collection and prioritized the respondents' confidentiality agreement. The information collected was only utilized for this research study and other relevant academic endeavors, and the anonymity of the data is protected.
7. The researcher duly acknowledged the literature sources used for this study in the discussions and reference section with citations and references. This ensured that ideas were properly attributed, avoided plagiarism, and gave readers access to the referred works for additional research.
8. The data and findings were the basis for the proposed capacity-building interventions, which the researcher will submit to the appropriate agency for possible consideration and implementation.

Statistical Treatment of Data

After being collected from respondents, the researcher processed and evaluated the data using various statistical methods to present, analyze, and interpret the results. To address the research problem and assess the collected data, the researcher employed the subsequent statistical instruments:

1. Frequency count and percentage were used to answer Problem No. 1, the respondents' profile, and Problem No. 2, the respondents' barangay profile.
2. Standard Deviation Weighted Mean was applied to examine Problem No. 3, which concerned barangay officials' awareness of devolved services and facilities, and Problem No. 4, which examined the level of implementation of these devolved services and facilities among the barangays.

3. The researcher utilized the Kruskal Wallis H and Mann-Whitney U tests to identify a significant variance in barangays' awareness level of the devolved FSFs when classified by profile.
4. This study employed Spearman's Rank Correlation Coefficient (Spearman's rho) to determine the significant link between barangay officials' awareness and barangays' implementation of devolved FSFs.

RESULTS AND DISCUSSION

1. Profile of the Respondents

Table 1.1: Profile of the Respondents as to Age

Age	Frequency	Percentage %
18-24 years old	4	1.4
25-34 years old	21	7.2
35-44 years old	51	17.5
45-54 years old	99	33.9
55-64 years old	82	28.1
65 years old and above	35	12.0
Total	**292**	**100**

Table 1.1 affirms the respondents' age profile. The most significant proportion (33.9%) are between 45 and 45 years old, and 28.1% are between 55 and 64 years old, accounting for more than 60% of the sample. The youngest age group (18 – 24) is minimally represented at 1.4%.

This indicates that a significant portion of the surveyed Punong Barangays are between 45 and 54 and 55 and 64. The data also reflects a generation gap in local governance, with older individuals more likely to hold traditional leadership positions. According to Floranza (2021), this age group is often seen as combining youthful enthusiasm with extensive experience, which is crucial for effective barangay leadership. Moreover, middle-aged leaders frequently bring vitality and seasoned judgment to their responsibilities.

Table 1.2: Profile of the Respondents as to Sex

Sex	Frequency	Percentage %
Male	173	59.2
Female	119	40.8
Total	**292**	**100**

Table 1.2 depicts the respondents' sex profiles. Males represent more respondents (59.2%) than females (40.8%).

The findings show that men hold more leadership roles in barangays than women. However, women's participation in local governance has been increasing. As cited in the study spearheaded by the Asian Development Bank (2023), although men have traditionally dominated local governance, there is a growing trend towards gender inclusivity, with more women assuming local leadership roles. This change can be attributed to gender empowerment initiatives and the increasing recognition of the effectiveness of female leaders in community development.

Table 1.3: Profile of the Respondents as to Educational Attainment

Educational Attainment	Frequency	Percentage %
Elementary Undergraduate	1	0.3
Elementary Graduate	5	1.7
High School Undergraduate	7	2.4
High School Graduate	56	19.2
College Undergraduate	62	21.2
College Graduate	157	53.8
Post Baccalaureate Undergraduate	2	0.7
Post Baccalaureate Graduate	2	0.7
Graduate School	1	0.3
Total	**292**	**100**

Table 1.3 displays the educational attainment profile of the respondents. A large percentage (53.8%) had completed college, indicating a relatively high academic attainment. A significant portion has at least some college education (21.2% college undergraduate). Only some respondents have education levels below high school graduation.

The findings suggest that a sizable proportion of respondents are college graduates, indicating an upward trend in educational attainment among community leaders. Dumlao's (2021) study found a substantial association between educational attainment and Punong Barangay performance. Additionally, Nur's (2019) research reveals that the performance levels of female Punong Barangays are greatly influenced by their educational attainment, with those possessing higher educational qualifications demonstrating better performance.

Table 1.4: Profile of the Respondents as to Years of Service as Barangay Officials

Years in Service	Frequency	Percentage %
1-3 years	87	29.8
4-6 years	72	24.7
7-9 years	28	9.6
10 years and above	105	36.0
Total	**292**	**100**

Table 1.4 illustrates the respondents' profile regarding years of service as barangay officials. Most respondents have significant experience, with 36.0% having ten years or more in service. Those with less than four years of service constitute a substantial segment (29.8%). On the other hand, the least number of respondents had 7 – 9 years of experience, which was 9.6%.

This suggests that most respondents are serving their third term in office, reflecting a trend of long-term leadership among barangay officials. Such long terms in government have significant implications for the local government and the growth of communities. Leadership with over ten years of service tend to have a solid local governance background. Walker and Andrews (2020) claim that leaders with more years in office generally offer better governance outcomes because of their acquired knowledge and stronger community relationships. Similarly, Malemane and Nel-Sanders (2021) note that more extended periods in government positions frequently result in improved organizational expertise and knowledge, leading to enhanced governance. Seasoned officials can deal with bureaucratic procedures while carrying out regulations efficiently.

2. Profile of the Respondents' Barangay

Table 2.1 displays the respondent's classification-based barangay profile. The data shows that 61% of the barangays are rural, while 39% are urban.

The findings show that almost all barangays can be categorized as rural. The above breakdown suggests that most barangays are situated away from towns or urban centers, typically in areas with low population density. The population's size is a significant variable in determining the IRA or NATA share for barangays, as stated in Section 285 of R.A. No. 7160.

Table 2.1: Profile of the Respondent's Barangay as to Classification

Classification	Frequency	Percentage %
Urban	114	39.0
Rural	178	61.0
Total	**292**	**100**

Problems in devolved FSFs are experienced at the grassroots level, especially in rural barangays (Dabalos & Diamante, 2020). The Asian Development Bank's 2019 study indicates significant variations in access to services and economic opportunities between rural and urban locations. It emphasizes the significance of focused actions for rural development and balanced regional growth.

Table 2.2: Profile of the Respondent's Barangay as to Average Internal Revenue Allotment (IRA) Shares from 2020-2023 (in Pesos)

Average Internal Revenue Allotment (IRA) Shares	Frequency	Percentage %
1 – 999,999	16	5.5
1,000,000 – 4,999,999	200	68.5
5,000,000 – 9,999,999	47	16.1
10,000,000 – 14,999,999	18	6.2
15,000,000 and above	11	3.8
1 – 999,999	16	5.5
Total	**292**	**100**

Table 2.2 presents the respondent's barangay profile as to average Internal Revenue (IRA) Shares from 2020 – 2023. Most barangays' average IRA shares range from 1,000,000 – 4,999,999, with 68.5%, while the least barangays received 1 – 999,999 average IRA shares with 5.5%.

The findings indicate that most respondents' barangays receive IRA shares between 1,000,000 and 4,999,999 annually. The barangays utilize these funds to carry out the devolved FSFs cited in Section 17 R.A. No. 7160. However, the significant discrepancy in IRA shares reveals that many barangays need more funding, which may limit their capacity to deliver essential services and infrastructure improvements. According to Gulane and Viray (2023), unequal IRA distribution might lead to differences in access to facilities and services among residents of different barangays, thereby worsening inequality.

Table 2.3: Profile of the Respondent's Barangay as to Type of LGU where the Barangay is Located

Type of LGU where the Barangay is Located	Frequency	Percentage %
City	75	25.7
Municipality	217	74.3
Total	**292**	**100**

Table 2.3 exhibits the profile of the respondent's barangay and the type of LGU where the barangay is located. Most of the respondents' barangays are located in the municipality, with 74.3% in the city and 25.7% in the municipality.

The findings indicate that most respondents' barangays are located within municipalities. This can be attributed to the country's more significant number of municipalities than cities. Additionally, the type of LGU where the barangay is located is a determining factor in the distribution of IRA shares, as outlined in Section 285 of R.A. No. 7160.

In 2022, the study conducted by the Bureau of Local Government Finance (BLGF) underscored significant differences in governance and resource allocation between municipalities and cities. Municipalities face challenges such as lower funding and fewer infrastructures than cities, which impact their ability to deliver services and implement development projects effectively.

Table 2.4 shows the income class of the respondent's barangay. According to the data, most of the respondents' barangays are in the first-income class (61%), with the lowest being in the fifth-income class (6.2%).

Table 2.4: Profile of the Respondent's Barangay as to Income Class

Type of LGU where the Barangay is Located	Frequency	Percentage %
1st Class	178	61.0
2nd Class	28	9.6
3rd Class	40	13.7
4th Class	28	9.6
5th Class	18	6.2
6th Class	0	0
TOTAL	**292**	**100**

The data indicate that most respondents' barangays fall into the first income class. This breakdown highlights many significant characteristics of local governments' economic standing and financial capabilities. Higher-income class classifications generally imply a greater income-generating perspective, which can lead to improved access to resources, infrastructure, and government services within the barangays. This economic standing is frequently linked with better growth prospects and a higher quality of life for citizens. Based on Diokno-Sicat (2019), higher-income barangays gain from increased economic stability, allowing them to support local development projects more effectively. Lower-income barangays need more finances, impacting administration and the delivery of services.

3. Level of Awareness of Barangay Officials on the Devolved Functions, Services, and Facilities

Table 3: Level of Awareness of Barangay Officials of the Devolved Functions, Services, and Facilities

Indicators	Weighted Mean	SD	Verbal Interpretation
1. Agricultural support services	2.77	1.04	Aware
2. Health and social services	3.62	0.68	Very Aware
3. Services and facilities related to general hygiene and sanitation, beautification, and solid waste collection	3.51	0.73	Very Aware
4. Maintenance of Katarungang Pambarangay	3.55	0.69	Very Aware
5. Maintenance of barangay roads and bridges	3.36	0.83	Aware
6. Maintenance of the water supply system	3.21	0.89	Aware
7. Infrastructure facilities	3.43	0.79	Aware
8. Information and Reading Center	2.88	1.03	Aware
9. Satellite or public market	2.62	1.15	Aware
Composite Mean	**3.21**		**Aware**

Legend: 3.50 – 4.00 = Very Aware; 2.50 – 3.49 = Aware; 1.50 – 2.49 = Somewhat Aware; 1.00 - 1.49 = Not Aware

Table 3 presents the awareness level among barangay officials regarding devolved functions, services, and facilities. The overall mean of 3.21 implies that most respondents are generally aware. It means that barangay officials are knowledgeable and can somewhat explain the devolved functions, services, and facilities. Among the items cited, health and social services had the highest mean score of 3.62 with an SD of 0.68 and was interpreted as very aware. This is the highest-ranked indicator, suggesting that barangay officials are knowledgeable and can explain the devolved services well. This high level of awareness is due to the crucial role of social and healthcare services in community welfare and public health.

It was preceded by the maintenance of Katarungang Pambarangay with a weighted mean of 3.55 and SD of 0.69 and services and facilities related to general hygiene and sanitation, beautification, and solid waste collection with a weighted mean of 03.51 and SD of 0.71. Both have verbal interpretations of being very aware.

Meanwhile, other items were assessed as aware only, such as infrastructure facilities (3.43), maintenance of barangay roads and bridges (3.36), maintenance of the water supply system (3.21), agricultural support services (2.99), satellite or public market (2.62) and agricultural support services (2.54). This is the lowest-ranked indicator, suggesting that specific aspects of agricultural support services must be more well-known and prioritized among barangay officials.

As affirmed by the study conducted by Francia (2022), most of the punong barangays are highly aware of the devolved FSF except for agricultural support services, information and reading centers, and satellite or public markets, which are only aware. On the other hand, the Gallanosa and De Castro (2023) study shows that respondents are partially aware of devolution and its functions.

4. Level of Implementation of the Devolved Functions, Services, and Facilities of Barangays

Table 4 displays the current implementation level of the barangays' devolved functions, services, and facilities. In general, the overall mean of 3.69 indicates that the barangays have a high level of implementation. This suggests that the barangays are implementing the devolved functions, services, and facilities using their budget with some assistance from NGAs and higher LGUs. Among the items cited, the indicator "health and social services" has the highest mean of 4.09 with an SD of 0.92 and is interpreted as a "high level of implementation." In contrast, "agricultural support services" and "satellite or public market" have the lowest mean of 3.16 with SD of 1.14 and 1.27, respectively, and are interpreted as "medium level of implementation."

On the other hand, the barangays have a high level of implementation on services and facilities related to general hygiene and sanitation, beautification, and solid waste collection (4.03); maintenance of Katarungang Pambarangay (4.03); maintenance of barangay roads and bridges (3.87); maintenance of the water supply system (3.75); and, infrastructure Facilities (3.87). For the information and reading center (3.39), the barangays have a medium level of implementation. They implemented the service using some of their budget but with assistance from NGAs and higher LGUs.

The study of Francia (2022) affirms that most of the devolved functions, services, and facilities were fully implemented by the barangays except for agricultural support services and information and reading centers, which are partially implemented, while satellite or public markets are yet to be implemented. On the other hand, the study by Flores (2019) shows that the barangays in Makati implemented social and health services, barangay justice systems, infrastructure facilities, and solid waste management. However, the barangays should have given more attention to agricultural support services and the satellite market because they were not feasible. Moreover, Orcena's (2019) study also shows that barangays are compliant in providing health and social services and solid waste management. However, the barangay needs an information reading center and agricultural support services to be implemented because the barangay is situated in the metropolis.

Table 4: Current Level of Implementation of the Devolved Functions, Services, and Facilities of Barangays

Indicators	Weighted Mean	SD	Verbal Interpretation
1. Agricultural support services	3.16	1.14	Medium level of implementation

2. Health and social services	4.09	0.92	High Level of Implementation
3. Services and facilities related to general hygiene and sanitation, beautification, and solid waste collection	4.03	0.87	High Level of Implementation
4. Maintenance of Katarungang Pambarangay	4.03	0.93	High Level of Implementation
5. Maintenance of barangay roads and bridges	3.87	0.97	High Level of Implementation
6. Maintenance of the water supply system	3.75	1.07	High Level of Implementation
7. Infrastructure facilities	3.87	1.03	High Level of Implementation
8. Information and Reading Center	3.39	1.22	Medium level of implementation
9. Satellite or public market	3.16	1.27	Medium level of implementation
Composite Mean	**3.69**		**High Level of Implementation**

Legend: 4.50 -5.00 = Advance level of Implementation; 3.50 – 4.49 = High level of Implementation; 2.50 – 3.49 = Medium level of Implementation; 1.50 – 2.49 = Low level of implementation; 1.00 - 1.49 = No implementation at all

5. Significant Difference in the Level of Awareness of the Barangay Officials on the Devolved Functions, Services, and Facilities when Grouped According to the Respondent's Profile

Table 5 shows the barangay officials' awareness of devolved functions, services, and facilities according to their profile. The findings reveal no significant differences between groups, as the p-values were higher than the alpha level. This indicates that the responses are statistically similar, reflecting a uniform awareness across profiles.

Table 5: Difference of Responses on Level of Awareness of Barangays Officials on Devolved Functions, Services, and Facilities When Grouped According to Respondents' Profile

Profile Variables	λ^2_c / U	p-value	Interpretation
Age	8.156	0.148	Not Significant
Sex	9370	0.191	Not Significant
Educational Attainment	7.696	0.360	Not Significant
Years in Service as Barangay Officials	3.732	0.292	Not Significant

Legend: Significant at p-value < 0.05

Based on the previously mentioned study results, it is clear that barangay officials' awareness of devolved functions, services, and facilities is not influenced by their sex, age, educational attainment, or years of service.

A University of the Philippines backed the argument - Diliman study, which discovered that officials' knowledge about devolved services, such as health, agriculture, and social services, is consistent across demographics and professional backgrounds, suggesting no significant disparity in awareness levels (UPSaHalalan, 2019). Contrary to this, Floranza's (2021) research discovered that barangay officials' socio-demographic characteristics, such as years of service, educational attainment, age, and sex, affect their governance and awareness of devolved functions, services, and facilities. Those with higher education degrees and greater years of service exhibited more awareness and expertise in governance. Younger officials, or those who had yet to go to school, showed less awareness.

6. Relationship between the Level of Awareness of the Barangay Officials and the Level of Implementation of the Barangays on the Devolved Functions, Services, and Facilities

Table 6 indicates the relationship between barangay officials' awareness of devolved functions, services, and facilities and their level of implementation. The calculated rho-value of 0.532 suggests a moderate direct correlation, and the consequent p-value of 0.000 is below the alpha significance threshold of 0.01. This indicates a significant connection, indicating that higher awareness is related to a higher level of implementation of devolved functions, services, and infrastructure.

Table 6: Relationship Between Level of Awareness of Barangays Officials on Devolved Functions, Services and Facilities and Level of Implementation of devolved functions, services and facilities

	rho-value	p-value	Interpretation
Level of Awareness vs. Level of Implementation	0.532**	0.000	Highly Significant

Legend: Significant at p-value < 0.01

A 2022 study by the PIDS revealed that, while financial capacity and planning are essential, understanding among local government units (LGUs) about their devolved responsibilities significantly affects the delivery of services efficiency. The study points out the need for effective management of human resources along with capacity building to ensure that barangay officials are adequately prepared to execute devolved tasks effectively. Furthermore, the HKPH Public Opinion and Research Center's study, which was carried out in collaboration with the Asia Research Center, highlighted the crucial role of barangay officials in local governance. As stated in the study, increased awareness

and knowledge among barangay officials results in better service and function implementation (Manila Standard, 2023).

7. **Issues and Challenges that the Barangays are Facing in the Implementation of the Full Devolution**

The researcher interviewed nine (9) punong barangays in various cities and municipalities in Batangas. The participants are either in their second or third term as Punong barangays and have experience implementing full devolution. Participants' viewpoints are based on their knowledge of fully implementing devolution. The issues and challenges that the punong barangays face are divided into three (3) themes: lack or insufficient financial resources, lack of human resources/staffing, and lack of support from higher LGUs and NGAs.

Theme 1: Lack or insufficient financial resources

The IRA, now known as NTA, is a share that barangays automatically receive from national tax collections, as outlined in Section 17 of LGC of 1991. This funding supports the implementation of devolved FSFs. However, the IRA amount received by barangays often needs to align with the scale of programs and projects they must implement, leading to a need for more resources for effective full devolution.

Theme 2: Lack of human resources/staffing

Implementing devolved functions, services, and facilities requires adequate human resources and technical skills. However, insufficient financial resources often prevent barangays from hiring the additional personnel needed. With a sufficient budget, barangays can recruit the necessary staff to carry out programs and projects at the local level effectively. As a result, barangays encounter significant challenges and issues due to a need for more human resources to implement devolution fully.

Theme 3: Lack or inadequate support from higher LGUs and NGAs

Section 17 of the LGC of 1991 cites the specific devolved FSFs assigned to various levels of LGUs. It outlines each LGU's responsibilities and limitations in executing these devolved services. Higher LGUs and NGAs should coordinate their programs and projects with those of the barangays to ensure integrated development efforts. However, barangays frequently need more support from higher-level LGUs and NGAs while adopting full devolution, notably regarding financial or technical assistance.

Conclusions

Based on the study's findings, the following conclusions were reached:

1. Most of the respondents are 45-55 years old, male, college graduates, and have more than ten years of service as barangay officials.

2. Respondent's barangays are mainly classified as rural and located in municipalities with first income class and average IRA shares of PhP1,000,000 – 4,999,999.
3. Barangay officials are very aware of the maintenance of Katarungang Pambarangay and services and facilities related to general hygiene and sanitation, beautification, solid waste collection, health, and social services, and other devolved functions, services and facilities.
4. Currently, barangays have a high level of implementation for most devolved functions, services, and facilities, except for the satellite or public markets, information and reading centers, and agricultural support services, which have a medium level of implementation.
5. The barangay officials' awareness of the devolved functions, services, and facilities is similar when grouped according to the respondent's profile.
6. There is a significant relationship between the level of awareness of the barangay officials and the level of implementation of barangays on the devolved functions, services, and facilities.
7. The barangays are currently facing issues and challenges in implementing full devolution, which include a lack of or insufficient financial resources, a lack of human resources/staffing, and a lack of or inadequate support from higher LGUs and NGAs.
8. The barangays need the following capacity development interventions that will enhance their competencies as barangay officials and capabilities of their respective barangays in carrying out the devolved services in facilities which include the following: strengthening the barangays' innovative revenue-raising capacities to generate local sources of revenue through fees and clearances; ensuring efficient and effective use of financial resources; prioritizing projects and programs for implementation; seeking financial and technical assistance from higher LGUs and national NGAs; and establishing partnerships with civil society organizations (CSOs) within the barangays for program and project implementation.

Recommendations

Based on the conclusions acquired from the information provided, the following recommendations can be made:

1. Conduct re-orientation or training programs for barangay officials to enhance their skills and knowledge of the devolved functions, services, and facilities. Focus on areas with lower awareness levels, such as satellite or public markets, agricultural support services, and information and reading centers.
2. Create strategies to improve resource allocation and management, both financial and human, to ensure efficient utilization of available resources. This can include planning, budgeting, financial management, and human resource development training.
3. Strengthen partnership, coordination, and collaboration with higher LGUs and NGAS in implementing programs and projects to ensure all efforts are aligned and

complemented. This involves regular coordination meetings, joint projects, and technical assistance provisions to address the issues and challenges of financial and human resources shortages. This will also help the barangays to implement devolved functions, services, and facilities with low implementation levels.

4. Encourage barangays to explore innovative revenue-raising activities as part of their taxing power, as cited in the provision on LGC of 1991, which can help increase their income. Activities related to revenue-raising include using barangay assets to generate income, updating their revenue code, improving fee collection systems, and establishing local economic enterprises.
5. Ensure the barangays focus on improving facilities and services currently underperforming, such as agricultural support services and public markets, by investing in constructing and maintaining essential infrastructure. Additionally, barangays can forge a private-public partnership to implement such infrastructure projects.
6. Create a local project monitoring committee to implement monitoring and evaluation activities regarding the devolved FSF implementation in the barangays. The committee will assist in identifying gaps, evaluating progress, and making adjustments needed to improve the implementation of full devolution.
7. As part of participatory governance, the CSOs can participate in the barangays' decision-making and planning process. This can be accomplished through regular community meetings, feedback channels, and joint planning sessions.
8. Organize information and education campaigns on the devolved functions, services, and facilities to ensure that barangay officials and their constituents understand its importance. This is meant to encourage the community's support and participation in various projects in the barangays.
9. Develop a capacity development plan to improve the competencies and capabilities of barangay officials in fully implementing devolution.

Compliance with Ethical Standards

To ensure no harm occurred in this study, the researcher confirmed that all respondents voluntarily agreed to participate. Permission was obtained through informed consent, using the university's official letterhead outlining the study's purpose and data collection methods.

The researcher guaranteed that respondents' names and information were used solely for research purposes and maintained complete confidentiality. Additionally, the researcher prioritized the respondents' safety, and they could withdraw at any time.

Acknowledgements

The researcher would like to convey his sincere gratitude and profound acknowledgment to all individuals for their remarkable support and encouragement throughout this research journey. Their contributions have been invaluable; this endeavor would not have been possible without their assistance.

ABSTRACT

To strengthen and develop the PUVM, the study attempts to ascertain the views and opinions of jeepney drivers regarding public utility vehicle modernization. This qualitative-phenomenological study included a complete list of the responses of Jeepney drivers in the Bulaon-San Fernando Jeep Terminal who voluntarily participated in this qualitative research (30) by responding to a semi-structured questionnaire. This open-ended and closed-ended questionnaire analyses the perceptions of the jeepney drivers and the challenges of the PUVM to the jeepney drivers. The study employed manual coding to carry out Braun and Clarke's thematic analysis approach. Three themes emerged from the research that shed light on the attitudes and views of jeepney drivers regarding PUVM and its impact on them: (1) preserving cultural heritage and economic resilience: The Jeepney Industry's Struggle Against Modernization; (2) fare adjustments and passenger competition in Jeepney Modernization; and (3) daily impacts: the Effect of PUVM on Jeepney Drivers Daily Lives. The findings of this study may wake people up, especially the higher-ups, to what is happening to the jeepney drivers towards the PUVM. In addition, it may enhance the PUVM to improve and be a better program for everyone, and it may also raise social awareness among the people.

Keywords: *jeepney modernization program, public transportation system, public utility vehicle modernization, jeepney drivers, social awareness*

INTRODUCTION

Conventional jeepneys are a big part of our everyday transportation. After World War II, US Forces abandoned their military jeeps, the Filipinos combined spare components from repurposed machines to build a maximum commuter car that could hold six people. Meanwhile, in 2017 the Department of Transportation began implementing the jeepney refurbishment plans. The widespread use of conventional transportation is to be replaced by safer, more contemporary vehicles that will have a smaller negative impact on the environment. The program's objective is to solve the issues including outdated technology, safety concerns, and environmental effects by incorporating elements such as emission compliance and upgraded safety measures.

The Philippine government is pursuing sustainable growth solutions in response to growing environmental concerns. As stated by Atos et al. (2021), "the suggestion to update the nation's iconic symbol, the jeepney." Incorporating input from commuters, operators, and drivers had a major impact on modernizing the fleet of jeepneys. The Jeepney Modernization Program has encountered various obstacles. As mentioned by Clavecillas (2017), these replacements, the plan was for jeepneys to replace the 15 years or older, which has an impact on operators and drivers who have spent the most time working in the field. Correspondingly, Manuel (2020) stated that the quantity of the nation's jeepney fleet and its expensive operators and the replacement will be covered by the drivers. However, the implementation of the program was delayed. According to Biona et al. (2023) By 2020, the Public Utility Vehicle Modernization Program (PUVMP) was supposed to be finished. However, due to the COVID-19 outbreak and the protests by Philippine transport groups in March 2023, the government decided to postpone the franchise consolidation date to December 31, 2023. The biggest worry for these roadmasters is their source of income because they fear that the replacement of jeepneys' high cost will force them with nothing but debt and a diminished standard of living, adding to their already challenging lives.

Knowledge is the main benefit of raising awareness. As stated by Zagzebski (2017), knowledge is a highly respected state that entails cognitive engagement with reality. The researchers can help people acknowledge and hear the voices and perceptions of beloved jeepney drivers who've been there since the start and have become a part of our culture toward jeepney modernization. A special focus on socialization will be placed on this study because the goal is to observe, explore, and assess the viewpoints of jeepney drivers regarding the modernization project. Social awareness helps people understand, as they grow older, how they fit into and contribute to society and the environment, as well as how we get the things we need from them. As stated by Kaiser (2022), to create vibrant, healthy relationships and make moral decisions, people must develop social awareness, also known as socialization. Since social awareness is a crucial ability for enhancing interpersonal interactions and communication, it can help us deal with problems and challenges like how drivers view the modernization of the jeepney. The researchers conducted this study to educate people on a wider scale about the reality of what their nation is experiencing regarding modernizing jeepneys. This study's findings,

aims to promote greater awareness and understanding of the challenges and needs faced by jeepney drivers, which would eventually result in more productive discussions and decisions regarding transportation regulations.

Modernized Jeepneys and the Transformation of Commuting Experiences

In an era marked by rapid technological advances, modernized jeepneys are not just transforming the way we commute but also contributing to broader and more efficient public transportation. According to the Department of Science and Technology (DOST), the new jeepney's features, which include digital route signs, CCTV cameras, dash cams, PUV stop buttons, rear emergency doors, cashless payment systems, and public speaker systems, are all designed with the safety and comfort of its passengers in mind. With better safety features and more comfort for passengers, these modernized jeepneys are reshaping the commuting experience. Moreover, the focus on making transportation accessible ensures that everyone, including those with disabilities, can easily use public transit systems. Through working together, using technology, and making designs that work for everyone, the objective is to create a connected, accessible, and safer experience for all. The Land Transportation Franchising and Regulatory Board (LTFRB) mentioned that the program seeks to enhance the quality of life for all citizens in the Philippines by offering a safer, more efficient, reliable, convenient, cost-effective, eco-friendly, and sustainable transportation system nationwide.

Exploring the Influence of Jeepney Vehicles impact on Filipino Culture

The jeepney vehicle in the Philippines has been a trademark for Filipinos. They use this vehicle for daily transportation. For those who budget their money on transportation, riding a jeepney saves them a lot of money, especially students, senior citizens, and PWDs, because of the discounts. As mentioned by Savilla et al. (2023), jeepneys are iconic images of the Philippines that represent the people's inventiveness. The development of these vibrant public transportation options began in the 1950s. After World War II, the American troops departed the Philippines, leaving behind many vehicles. The Philippines has been known for its colorful, eye-catching, and creative jeepneys, which became one of their cultures. From the jeepney itself to the hardworking drivers, driving a jeepney helps them find a good job and serve people. Every jeepney vehicle can help other people show their creativity by designing, enhancing, and detailing their vehicles.

As of today, these jeepneys are being phased out and modified to an e-jeep. According to Estipular (2020), “The Public Utility Vehicle Modernization Program (PUVMP)" was put into effect and unveiled in 2017 to completely change the Philippines' public transportation system. The primary means of transportation for Filipinos is jeepneys. To preserve Philippine culture or tradition, modernized jeepneys should be designed like the modern ones. As said by Zulueta et al. (2024), "It is advised to maintain cultural distinctiveness by designing modern jeepneys to resemble traditional jeepneys to attract commuters from the Philippines.” The higher-ups should also consider preserving the culture of the Philippines before phasing out the traditional jeepneys because, as said by Landayan et al. (2024), "the jeepney is a painting that captures the essence of Filipino culture, not just

a means of transportation. Locals quickly transformed the public utility cars into movable artworks. Artists began painting vivid murals, elaborate patterns, and even ironic sayings on jeepneys, transforming them into moving works of art."

Alterations of Public Transport from Traditional to Modern

In the Philippines, the iconic jeepney reigns supreme as the quintessential mode of public transportation, catering to the daily commuting needs of a significant portion of the population Baluyot et al. (2017). However, recognizing the pressing need for a shift towards sustainability and efficiency in the transport sector, the government has embarked on a transformative journey with the launch of the Public Utility Vehicle (PUV) Modernization Program. As stated by Castro (2019), This initiative places a spotlight on the introduction of updated diesel and electric jeepneys, commonly referred to as e-jeepneys, signalling a pivotal step towards fostering a greener and more sustainable public transportation landscape.

However, despite the undeniable potential for positive change, the implementation of the PUVM modernization program encounters substantial resistance from various stakeholders within the transportation sector. Foremost among these dissenting voices are transportation associations, whose opposition is primarily fuelled by apprehensions surrounding investment risks and financial burdens associated with the transition. According to Baracao et al. (2023), these concerns highlight the inherent challenges and complexities involved in effecting a comprehensive overhaul of the existing transportation infrastructure.

Research Questions

The general objective of this study is to uncover the perception of jeepney drivers toward the Jeepney Modernization Program. Specifically, it seeks to answer the following:

1. What is the perspective of jeepney drivers in the Jeepney Modernization Program?
2. How does the jeepney modernization program affect the transportation system?
3. How are the jeepney drivers going to handle this upgrading program for jeepney

METHODOLOGY

This study utilized qualitative research to present the framework and to discern and perceive the perceptions of jeepney drivers to PUVM. Also, to provide an in-depth analysis and understanding of the perception of jeepney drivers in Bulaon-San Fernando Terminal about the PUVM. Hennink et al. (2020) stated that qualitative research is a methodology that enables the detailed examination of people's experiences using a particular set of research techniques, including life histories or biographies, in-depth interviews, focus groups, observation, content analysis, and visual aids. Additionally, phenomenological methods apply wherein this approach investigates the everyday

experiences of human beings while suspending the researchers' preconceived assumptions about the phenomenon. In the lens of Quinney et al. (2016), understanding and exploring the substance of a human experience, as well as starting a conversation with the subject, are the main goals of phenomenological research. In terms of participants in this study. The study focused on regular jeepney drivers at the San Fernando Jeep terminal in Bulaon, with thirty drivers participating voluntarily. The researcher used purposive sampling, a method where participants are selected based on specific criteria, as defined by Obilor (2023), to ensure relevance and practicality. This approach was chosen to capture detailed and nuanced insights from drivers directly at the terminal. Researchers intentionally selected individuals using purposive sampling. Using this method and its practicality in select individuals, researchers identified their targeted jeepney driver participants directly at their designated terminal.

In collecting data from participants. The researchers utilized a semi-structured interview following the study objective. The semi-structured interview was conducted via face-to-face interaction. In the collection of data, the researchers respectfully addressed the participants, asking for permission to conduct interviews and outlining the goal of the study. To promote comfort, they utilized the participants' preferred language and thoughtfully selected phrases. To ensure correct documentation, permission was also sought to record responses. All information gathered for this study will be kept private and confidentiality by the Data Privacy Act of 2012. The data generated from the participant replies was methodologically collected, transcribed, structured, analysed, and appraised using the Thematic Analysis Method of Braun and Clarke (2006), yielding insightful results. According to Braun and Clarke (2006), this method is frequently used in qualitative research because it provides insightful and comprehensive results.

RESULTS AND DISCUSSION

The methods described by Braun and Clarke (2006) are used in this study to present a thorough thematic interpretation of the results obtained from theme analysis. To completely comprehend the idea of the study, an intensive and meticulous explanation was also provided to give the derived themes and subthemes their underlying qualities and meanings.

Theme 1: Preserving Cultural Heritage and Economic Resilience: The Jeepney Industry's Struggle Against Modernization

The Jeepney Industry's Struggle Against Modernization encapsulates a poignant narrative at the intersection of tradition and progress. Jeepneys, iconic symbols deeply embedded in the country's cultural fabric, emerged from surplus military jeeps post-World War II, evolving into colorful manifestations of Filipino resourcefulness and resilience. However, as modernization efforts seek to enhance safety, reduce emissions, and improve efficiency, the very essence of the jeepney industry and the livelihoods it sustains

face unprecedented challenges. As stated by Mateo-Babiano (2020), this theme delves into the complex dialogue surrounding the preservation of cultural heritage amidst rapid technological advancement, raising pivotal questions about inclusivity, governmental support, and the imperative of finding innovative solutions that honor tradition while embracing progress. In addition, Andalecio (2020) notes that in many Philippine cities, jeepneys—paratransit vehicles—account for most urban transportation. 90% of the approximately 179,000 jeepneys in use are fifteen years of age or older. But there are a lot more problems along the way. To address this, the government unveiled a historic bill creating the Public Utility Vehicle Modernization Program (PUVMP), a ground-breaking, expansive initiative focused mostly on land-based public transit, the majority of which is jeepneys.

Subtheme 1.1 Financial Strain and Resistance to Modernization in the Jeepney Industry.

This sub-theme emerges as the result of the perspective of jeepney drivers towards the execution of the jeepney modernization program. According to Andelancio et al (2020), Jeepney drivers face financial challenges during the jeepney modernization program, The implementation of the program involves phasing out old regular jeepneys and replacing them with modernized jeepneys, which requires drivers to invest in new vehicles. However, the cost of acquiring modernized jeepneys poses a significant financial burden for drivers, as they may not have the necessary funds to purchase these vehicles. In addition, Dimalanta et al (2019) stated Jeepney drivers typically earn around 500 pesos per day in gross revenue. Meanwhile, jeepney operators see a driver typically earning between P2,500 and P3,000. The high cost of modern jeepneys far surpasses the financial capacity of both drivers and operators, creating a significant financial burden. The Public Utility Vehicle Modernization Program (PUVMP) of the government offers finance packages through the Development Bank of the Philippines (DBP) and Land Bank of the Philippines (Landbank) to ease the transition to new jeepneys. However, given the high cost of modern jeepneys and the financial limitations of many drivers and operators, the program's current funding might be insufficient. Increasing the available funds or exploring alternative financing options could help bridge this gap. These financial difficulties may make it more difficult for the jeepney modernization initiative to be implemented successfully and may necessitate government intervention to support and aid drivers.

Subtheme 1.2 Preserving Cultural Heritage and Unique Identity

This sub-theme comes out as an outcome of jeepney drivers' deep attachment to the traditional jeepney as a symbol of Filipino identity. Cerio (2017) mentioned that as the "moving icon of Philippine culture," the jeepney has not only become a common sight on the country's streets but has also become ingrained in Filipino identity, culture, and values. The jeepney represents the ingenuity, originality, talent, and business acumen of the Filipino people. Furthermore, the jeepney is more than just a means of transit; it contains history, artistry, and community. As stated by Solina (2023), the Philippine transportation system is known for its jeepneys. The jeepney, which has been a means

of transportation for the Filipino people since the mid-1900s, is well-known for its vibrant, imaginative, and locally inspired patterns.

Additionally, according to Gatarin (2024), preserving traditional jeepneys is essential for safeguarding the unique character and cultural heritage of the Philippines. Having provided transportation for the public since the end of World War II, these public utility vehicles (PUVs) are now recognized as significant cultural symbols on Filipino streets. Ranis et al. (2021) mentioned that, as the "Kings of the Road," jeepneys are the main form of transportation used by most Filipinos daily. Across cities throughout the Philippines, public transit, facilitated by jeepneys, provides crucial access to employment opportunities, essential resources, healthcare services, and recreational activities. Due to the lowest fare, it helps commuters as well as those who own a vehicle. Jeepneys are significant in Filipino cultures as both a means of transportation and an iconic object. These recognizable vehicles represent the culture and heritage of Filipino communities and are more than just a means of transportation.

Subtheme 1.3 The Voices of Jeepney Drivers Against Modernization

This sub-theme emerged because of the jeepney driver's perceptions against jeepney modernization. As stated by Mendoza (2021), the government's modernization project for jeepneys has two main "blindsides," according to information gathered from drivers and operators as well as data: the high cost of each new jeepney and the potential ripple effect of raising jeepney fares to offset the cost of buying new jeepney units. Jeepney drivers fear that the modernization initiative would risk their means of support. Many are concerned that newer, more expensive modernized jeepneys would displace them or make them less relevant because they have dedicated their life to this line of work. According to Atos et al. (2021), the country's historical symbol, the jeepney, was one of the programs that was modernized. Cabin operators, drivers, and commuters were all impacted by the jeepney's upgrades. In addition, according to Savilla et al. (2024). In general, drivers disagreed with the program's implementation and opposed its execution. Some drivers feel left out by government policies that prioritize modernization without properly taking seriously the opinions of drivers or listening to their concerns.

Theme 2: The Impact of Jeepney Modernization on Fare, Affordability, Job Security, and Route Adjustments

The modernization of jeepneys in the Philippines has had a significant influence on both drivers and commuters. As the government pushes for the transition to more modern and environmentally friendly vehicles, drivers are faced with affordability issues and potential debt accumulation. According to Manuel (2019), the jeepney phase-out will impose a significant financial strain on drivers and operators. The government is set to require them to invest in new electric jeepneys, demanding substantial down payments running into hundreds of thousands. The cost of upgrading to modern jeepneys poses a financial challenge for many drivers, leading to concerns about their livelihoods and financial stability. This shift towards modernization also raises job insecurity among drivers, as the transition may result in reduced demand for traditional jeepneys, potentially leading to job losses and uncertainty in the industry. Furthermore, the modernization of jeepneys could

bring about changes in routes that may impact passenger pickups and drop-offs, as well as potential fare increases. With the introduction of modernized jeepneys and potential adjustments to existing routes, commuters may experience disruptions in their daily commute patterns. Changes in routes could affect the accessibility of certain areas and the convenience of transportation for passengers.

Subtheme 2.1: Implications and Effects of the Fare Increase on Jeepney Drivers and Commuters.

This sub-theme comes up as a major problem in fare adjustment with public transit and commuting. The daily lives of commuters are affected by the hike in passenger and jeepney fares, especially those who depend on these forms of transportation for their daily commute. According to Piquero (2024), “Regular commuters will have a much harder time finding their monthly expenses since, should the Public Utility Vehicle Modernization (PUVM) initiative be completely executed, jeepney drivers will likely demand higher minimum fares—which could rise by as much as P25.” As stated by Agpaoa (2024), “Leaders in the transport sector have cautioned that the minimum ticket, which is currently P15, will increase to P40 if the Public Utility Vehicle Modernization Program (PUVMP) is completely implemented.” In addition, according to Yu (2024), commuters may suffer because of the government's modernization effort, as minimum tariffs could rise from the current P15 to as much as P40. Due to the high cost of modern jeepneys, experts and manufacturers are concerned that fares may need to be increased. This is especially true since some operators are already having trouble affording the monthly amortization of their new cars.

Subtheme 2.2: Affordability Issues for Drivers and Potential Debt Accumulation.

The financial challenges that jeepney drivers face, especially considering the ongoing modernization initiatives, have the potential to lead to the accumulation of significant levels of debt, creating a pressing financial burden for those individuals working in the jeepney industry. According to Fernandez (2019), current e-jeepney costs at least PHP 1.2 million (about USD 23,400), therefore switching to one requires a significant upfront expense. Operators must comply with a regulatory mandate of owning at least 10 units, further increasing the financial strain. This significant initial expense has raised significant worries among operators and drivers.

Operators and drivers in the jeepney industry are raising concerns about the substantial upfront costs associated with purchasing modern jeepneys. The shift towards these advanced and eco-friendly vehicles has notably heightened the financial burden on individuals within the sector, making it more challenging for them to adapt to the changing dynamics of public transportation. Bautista & Moya (2023) stated that on average, a jeepney operator generates a daily gross income ranging from P2,500 to P3,000. But due to costs like fuel, maintenance, and compensation to the jeepney driver (typically about P500), this income is drastically decreased. The cost of a modern jeepney far surpasses that of a traditional one, posing a substantial financial challenge for jeepney drivers and operators. The increased costs of transitioning to modern jeepneys in comparison to traditional ones create a notable financial obstacle for jeepney drivers and operators. This

significant difference in expenses highlights the financial constraints faced by those in the industry, adding complexity to their ability to adjust to the changing dynamics of public transportation.

Subtheme 2.3: Competition Among Traditional and Modern Jeepneys for Passengers Based on Comfort Preferences.

The transition to modern jeepneys poses a formidable challenge regarding job insecurity for traditional jeepney drivers. The transition to modern jeepneys has the potential to decrease the demand for traditional jeepneys, leading to potential job losses and industry instability. Drivers are confronted with the imminent risk of losing their primary source of income. As stated by Malasique et al. (2022), the Public Utility Vehicle Modernization Program (PUVMP) influences PUV drivers' employment because it creates new job opportunities while also removing their existing sources of income. The shift from traditional jeepneys to modernized ones and the requirement to obtain valid franchises present financial hurdles that not all PUV drivers can overcome. The problem is made worse by difficulties in merging with firms or cooperatives, which has a big impact on PUV drivers' employment in the Philippines. In addition, Manuel (2019) expressed concerns about the potential phase-out of jeepneys and its implications for drivers and operators. These individuals rely on driving jeepneys for their livelihood, supporting their families and children's education. The disappearance of jeepneys would create uncertainty and financial difficulties in meeting daily needs, significantly impacting their lives and livelihoods.

Subtheme 2.4: Potential Changes in Routes Affecting Passenger Pickups.

This sub-theme surfaced as a possible investigation of how route changes affect passenger pickups. According to Mercurio (2021), the Passenger Forum (TPF), a consumer advocacy group, claims that there is still work to be done on the issue of how different transportation options and routes are connected. As mentioned by About Philippines (2023), “The restricted seating capacity, absence of marked stops, and unregulated rates of traditional jeepneys are frequent points of contention. It is suggested that transportation efficiency and convenience can be greatly increased by introducing larger-capacity, standardized vehicles and creating regular routes. By reducing travel times and relieving traffic congestion, these modifications may improve commuters’ general quality of life and productivity.” In addition, Yu (2024) stated before the revised deadline of April 30, that almost 1,900 UV Express and jeepney routes ran the risk of disappearing nationally by February 1. A memo circular issued by the Land Transportation Franchising and Regulation Board (LTFRB) states that jeepneys operating on specific routes—including those with low consolidation rates—had until January 31 to resume operations if they were unable to consolidate by the deadline of December 31, 2023. However, there were other routes where no cooperative or company was created by any of the UV Express units or jeepneys operating on them. Under the LTFRB data, 108 UV Express routes and 395 jeepney routes in Metro Manila do not have consolidated organizations. There are 1,948 PUV routes without consolidated organizations throughout the entire country.

Theme 3: Daily Impacts: Effect of PUVM on Jeepney Drivers Daily Lives

There are several negative effects that the Public Utility Vehicle Modernization (PUVM) adoption has on drivers' daily lives. The jeepney drivers face financial difficulties with the necessity to surrender their jobs, and primarily their leaders and the higher-ups because they no longer realize that their freedom to choose is acquired little by little. One of the negative impacts is their financial difficulties. Gumasing et al. (2024) stated that “Jeepney operators and drivers don't make a lot of money because their pay is based on several variables, including passenger traffic, seating capacity, and route profitability.” Second, they rely their decisions on the higher-ups because they don’t have a choice if the government is the one who implements them. Their freedom to choose is acquired little by little by the higher-ups. Third, the number of jeepney drivers will decrease because some of them will just quit their jobs and others will find another job to be able to support their families. Furthermore, the shortage of jeepney drivers would affect more than just the drivers themselves. According to Recio (2020), “Since low-income jeepney drivers are unable to purchase new cars, the government ought to investigate the initiative. The jeepney drivers would suffer and lose their jobs because of this.” In conclusion, the challenge that jeepney drivers face captures the intricate relationship between autonomy and job security in the face of economic upheaval. As stated by Tiglao et al. (2023), disadvantaged locations are densely populated metropolitan environments that are less responsive to changes in transportation networks and physical distance needs, in addition to having a higher number of jobs with lower skill levels. When low-wage workers use public transportation less frequently, they run the risk of being ostracized.

Subtheme 3.1 Freedom of Choice: The Jeepney Driver's Compliance is to Follow the Lead of Higher-Ups.

This sub-theme occurred as the outcome after the interview with the jeepney drivers. Some of them utter that they’re just going to follow what the government wants since they can’t do anything about it, especially if the government is the one who will implement that program. As stated by Sunio et al (2019) the Department of Transportation is the primary government organization in the Philippines entrusted with developing policies and implementing plans, programs, and projects about transportation. Some of the drivers stated that the jeepney modernization was hard for them but if that government wants it then they don’t have a choice but to follow.

In addition, Malasique et al (2022) mention that “Since updating public fleets was the program's primary goal, the government put in place regulations that drivers and public utility operators must abide by". As time passed by, jeepney drivers continuously fought for their rights that’s why According to Lu (2024) the licenses allowing independent operators to operate traditional jeepneys came to an end on December 31, 2023. However, this was extended by one month, or until January 31, 2024. This was an extension, the first of which concluded on June 30, 2023. Due to the one-month extension, we expect that traditional jeepneys will no longer run on our routes. Unless that is, the government chooses to prolong the period by which drivers and operators of jeepneys can amalgamate once more.

Subtheme 3.2: Giving Up the Wheel or Seeking a New Path of Journey.

This sub-theme emerges because of the negative impacts of the PUVM on the jeepney drivers. Many jeepney drivers are losing their fate in their jobs because they are scared to lose their franchise and won't be able to drive a jeep again also due to the high price of modernized jeeps. As a result of that they are planning to find a more secure job that can afford their daily expenses. As mentioned by Gatarin (2024), because of the sudden loss of their vital jeepney and source of income, the Public Utility Vehicle Modernization Program (PUVMP) is a sensitive and divisive matter in this case.

In addition, according to Guno et al. (2021), Jeepney drivers are forced to live in a city that is created by the capitalist corporate class and the public transportation system because of the "tyranny of the market," which eliminates the human aspect of essential improvements in the jeepney sector through a technofix approach. Because of the jeepney drivers leaving and their jobs being stolen from them because of removing their franchise, it could be the result of a domino effect where not only jeepney drivers will experience it but also commuters and the economy of the country. As stated by Malasique & Rosete (2022), "When transportation networks are not reliable or have insufficient capacity, it can lead to lost or reduced quality of life and lost opportunity."

Subtheme 3.3: Financial Struggles of Owning a Modernized Jeepney.

This sub-theme emerged because of interviewing the jeepney drivers. Many of them are scared that they cannot pay for the modernized jeep until their old age because of their lack of money to buy and maintain the modernized jeep. According to Guno et al. (2021), the abrupt price increases for the already expensive jeepneys are closely related to worries regarding the contemporary model. A 2018 only cost between PHP 1.4 and 1.6 million upon launch. In 2020, this expense is expected to increase to 2.5–2.6 million PHP. But some of the jeepney drivers will allow the jeepney modernization program if the government will help them and loan for them, but when the monthly payment is so high that they cannot afford it, they will be against the PUVM.

In addition, as mentioned by Andalecio et al. (2020), "the chairwoman asserted that drivers of jeepneys who could not afford to buy the updated jeepney received financial assistance from the government in the form of loans." Moreover, Guno et al. (2021) mentioned that high interest rates will compound the high annual payments resulting from high unit prices. At six percent interest, annual amortization costs rise by 25 percent. That's why, according to Andalecio et al. (2020), half of the jeepney drivers said this initiative was presented at the appropriate time and cost, and the other half said the Philippines is not prepared for jeepney modernization.

Conclusions

From the findings of the study, the following conclusions were derived:

1. Concerns regarding the government's modernization measures are voiced by Filipino jeepney drivers, who worry about potential effects on their livelihoods, job loss, affordability, and the cultural value of traditional jeepneys.
2. Jeepney drivers in the Philippines express worries about the strict financial restrictions imposed on modernization, including the high cost of replacing traditional jeepneys and the potential impact on passengers, as well as concerns about route modifications and passenger changes.
3. Jeepney drivers' express resignation and fear of losing their source of income if the modernization program is fully implemented. They fear job loss and future work opportunities, while the affordability of modern jeepneys is a major concern.

Recommendations

1. Drivers may consider investigating other financial options or obtaining assistance from applicable government programs targeted at easing the transition to modernized vehicles, they should engage in advocacy activities to ensure that the government gives enough aid to individuals experiencing financial barriers to adopting newer automobiles, drivers should also be abreast of any update in-vehicle modernization policies and participate in conversations and decision-making processes that affect their livelihoods.
2. Commuters should consider launching public campaigns, utilizing social media platforms effectively and actively engaging with local communities to raise awareness, support jeepney drivers and ensure that their voices are heard, conduct surveys, organize public forums, and establish feedback mechanisms. Commuters should advocate fair treatment of jeepney drivers and commuters alike.
3. Policymakers should acknowledge the perceptions of jeepney drivers when formulating policies towards the jeepney modernization program, policymakers, drivers, commuters and relevant stakeholders should collaborate to develop policies and regulations to consider the welfare of both jeepney drivers and commuters balancing the safety, affordability, and sustainability of both parties and ensure that the regulations are fair and equitable for all the stakeholders involved.
4. Transportation agencies should make use of strategies including frequent meetings, consultations, and easily available avenues for feedback to foster open communication, address driver issues, obtain insightful advice, actively monitor the execution of the modernization program, and conduct thorough evaluations of its effect on both jeepney drivers and the commuting public, to recognize the difficulties of the jeepney drivers with the jeepney modernization program.
5. Future Researchers should use this as a guide and as a reference for their academic pursuits, to pinpoint any gaps in existing research and delve deeper into areas that demand further investigation concerning the viewpoints of jeepney drivers on the modernization initiative and have a deep understanding about the perceptions of the participants and hear their voices about the modernization program.

Compliance with Ethical Standards

This research strictly adheres to the ethical standards set by the institution and the body of knowledge. All information and data coming from the respondents are solely for

academic purposes only. In line also with the Data Privacy Act of 2012, the researchers strictly preserved the anonymity and confidentiality of the respondents.

Acknowledgments

The researchers sincerely thank the Almighty God, who bestowed on them knowledge, strength, and wisdom, along with his divine guidance and love. As well as for being the ultimate source of knowledge, strength, wisdom, guidance, and love. Without their benevolence and grace, the researchers could not have finished the study. Without the following people and organizations' complete permission and support—who openly offered to help in any way they could and promised to see this through to completion—this report and its preparation would not have been possible. To Mr. John Louise M. Marcaida, subject adviser and mentor teacher, thank you for your guidance and mentorship in shaping the Researchers to be responsible researchers, students, and citizens of the school and country. His remarkable teaching, insights, and professionalism have been instrumental in the researcher's success in their research study. The researchers would like to extend their heartfelt gratitude to Mr. Khyle M. Rivera for his invaluable support and guidance throughout their study. The direction the researchers took with their research project was greatly influenced by his openness to share his knowledge and provide helpful criticism. The researchers intend to express gratitude to the Bulaon-San Fernando Jeepney Drivers who participated in a research study and welcomed the researchers with open arms. The Researchers are incredibly grateful for their support and kindness, as the study would not have been possible without their participation. Finally, thanks to the researchers' loving and passionate families and friends for providing a haven and constant moral, physical, and emotional support, which enabled them to complete this study.

BEST PRACTICES OF MOTHER TONGUE BASED-MULTILINGUAL EDUCATION IN SAN ANTONIO DISTRICT

Melvin Paul Aunzo-Sinay

Dappat Integrated School, City of Ilagan, Isabela, Philippines

https://doi.org/10.5281/zenodo.13329159

ABSTRACT

The main objective of this study is to identify the best practices of teachers and administrators in the implementation of the Mother Tongue-Based Multilingual Education in San Antonio District, City of Ilagan, Isabela. The study used descriptive method of research this method is appropriate to the study since it tried to describe the best practices of the respondents on the implementation of the MTB-MLE in San Antonio District, San Antonio, City of Ilagan, Isabela. The respondents of the study are (7) seven School Heads and 74 teachers of Kindergarten, Grades I, II, and III. The results perceived by the respondents as best practices in MTB-MLE implementation are (a). The language and education practices of MTB-MLE have clear directions on the program; (b). MTB-MLE curriculum is aligned with the level and experience of the learners; (c). The learner's mother tongue is used as medium of instruction in school; (d). The respondents usually use real object to demonstrate concepts; and (e). School authorities impress on the learner's importance of learning the mother tongue.

Keywords: *Best Practices, Mother Tongue-Based Multilingual Education, Implementation*

INTRODUCTION

A child's sense of identity is said to be rooted from his or her mother tongue, but sometimes children in the Philippine schools are punished for not speaking English, which led a child to eventually view English as language of success and consequently makes

their mother tongue irrelevant. This is both psychologically and culturally damaging. Students think that they do not need to pass their mother tongue to the next generation, which would mean a significant cultural loss. However, there is nothing permanent as change. Last 2012, the format of Philippine school dramatically changed. Two major components of the K to 12 Bill that were pushed in the congress are the two-year extension in the secondary school and the implementation of Mother Tongue Based, Multilingual Education (MTB-MLE). The legislation was implemented immediately of which many concerns emerged. Educators, unprepared of the dramatic change, felt so uncomfortable and some were rattled. Furthermore, parents were shocked with the fact that there is now 13 years of schooling (including kindergarten). In many cases, parents were not oriented or there was no immediate awareness-raising and mobilization. This made parents unaware of educational change such as the MTB-MLE. In addition to these, some schools, especially those in the far-flung areas lack learning modules, tools and other facilities.

The researcher being an elementary teacher in a public school has observed both positive and negative effects of the implementation of MTB-MLE on learners, teachers, and the teaching-learning process. Positively, it has been evident in the school where the researcher teaches that pupils from Kinder I to Grade III have the advantage of expressing their thoughts, opinions, and understanding in MTB-MLE with so much ease and confidence since it is their first language and at the same time the medium of instruction. It is also said that these children are learning one of the most important part of their cultural identity while studying that is the value of their mother tongue. On the other hand, as one of the teachers who teaches MTB-MLE, the researcher together with teachers in their school, personally experiences and observes that teaching in the Kinder I to Grade III is challenging because learning modules, materials, tools, and facilities are insufficient which make the teaching and learning process difficult. Also, after Grade III, pupils have a hard time in the transition period because as they reach Grade IV mother tongue is no longer the medium of instruction, but it will be the English language which is a new and completely a foreign language to them. This transition makes pupils hesitant to participate in the discussion because in their last years in school, they use their mother tongue.

There are indeed many concerns and questions from the teachers and parents with regard the implementation of the MTB-MLE in the country. Because of the many concerns and questions the goodness in the MTB-MLE implemented is not seen and appreciated by the stakeholders. In this connection therefore, this study on the best practices of Mother Tongue Based-Multilingual Education is undertaken, with the ultimate purpose of highlighting the MTB-MLE programs and activities that are good. When a best practice in the implementation of MTB-MLE is seen, stakeholders would better appreciate the program and would surely support its implementation, making it more successful.

Research Questions

The study aimed to find out the best practices of teachers and administrators in the implementation of the Mother Tongue-Based Multilingual Education in San Antonio District, City of Ilagan, Isabela. Specifically, it tried to the answer to the following questions:

1. What is the profile of the respondents in terms of:
    a. Educational attainment
    b. Position
    c. Length of service
    d. Dialect used at Home
2. What are best practices in the MTB–MLE implementation as perceived by teachers and administrator?
3. Is there a significant difference in the perception of teachers on the best practices of the MTB – MLE when grouped according to their profile?
4. Is there a significant difference in the perception of teachers and administrator on the best practice of MTB-MLE?

METHODOLOGY

Research Design

The study made use of the descriptive method of research. According Sevilla (2006) the descriptive method is the collection, presentation, and description of data in order to test hypotheses or to answer questions concerning the current status of the subject of the study. Thus, this method is appropriate to the study since it tried to describe the best practices of the respondents on the implementation of the MTB-MLE in San Antonio District, San Antonio, City of Ilagan, Isabela.

Locale of the Study

The study was conducted at San Antonio District, City of Ilagan, Isabela. This district is one of the many districts in the City Division of Ilagan. Thus, the study involves the 18 elementary schools in the district of San Antonio.

Selection and Description of the Respondents

The respondents of the study are seven School Heads and the 74 teachers of Kindergarten, Grades I, II, and III in San Antonio District, SY 2016-2017.

Data Gathering Instrument

Primarily, this study made of a questionnaire adopted by the researcher from the study of Williams, Metila, Pradilla and Dido (2014). Likewise, it also made use of informal interviews and observations so as to get the general descriptions of the real observations/perceptions of teachers and administrators.

Data Gathering Procedure

The researcher asked permission, in writing, from to the Schools Division Superintendent (thru channel) for the conduct of the study. Upon approval, the study was conducted in various elementary schools under San Antonio District. The researcher floated the questionnaires personally and conducted informal interviews to the teachers and administrators whom he met in the schools he went to.

Statistical Treatment and Data Analysis Procedure

To address the research questions outlined in Chapter I, various treatments were used. To answer the first question on the profile of the respondents, the frequency count was used. As to the best practices of the respondent's frequency count was also used. For problems 3 and 4 chi-square was used. This looked into the difference in the perceptions of the respondents as to the best practices they have in MTB-MLE implementation.

RESULTS and DISCUSSION

1. What is the profile of the respondents in terms of:

a. Educational attainment

Table 1
Frequency and Percentage Distribution of the Respondents
in Terms of Their Educational Attainment

Educational Attainment	Administrators		Teachers	
	f	%	*f*	%
Doctoral Graduate	0	0	0	0
With Doctoral Units	0	0	0	0
Masteral Graduate	1	14	8	11
With Masteral Units	6	86	56	76
College Graduate	0	0	10	13
Total	7	100	74	100

The table 1 gives the frequency and percentage distribution of the respondents in terms of their educational attainment. It shows in the table that 86 percent of administrators and 76 percent of teachers are master's unit holder while only 14 percent of administrators and 11 percent of teachers are master's graduate. None has doctoral units or doctoral degree. The data above implies that many of the respondents have gone further in their studies. There looking deeper units the table, it can be decided that all the administrators meant for further studies as compared to the teachers for are only 13 percent of teachers who did not yet enroll into further studies or masteral course. Thus, they only hold the bachelor's degree.

b. Position

Table 2
Frequency and Percentage Distribution of the Respondents
in Terms of Position

Position	Administrators		Teachers	
	f	%	*f*	%
Principal II	1	14	0	0
Principal I	1	14	0	0
Head Teacher III	2	29	0	0
Head Teacher I	3	43	0	0
Master Teacher II	0	0	1	1
Master Teacher I	0	0	1	1
Teacher III	0	0	30	42
Teacher II	0	0	3	4
Teacher I	0	0	37	50
Substitute Teacher	0	0	1	1
LSB Teacher	0	0	1	1
Total	7	100	74	100

The table 2 provides the frequency and percentage distribution of the respondents when grouped according to position.

It shows that out of 81 respondents, 50 percent hold Teacher I position, followed by 42 percent having Teacher III position. Moreover, there are three Head Teacher I and two Head Teacher II. Also, there is one Substitute Teacher and one LSB Teacher. The table further gives a picture that in San Antonio District, most teachers hold Teacher I and Teacher III items awhile head teachers are mostly Head Teacher I item since many of them are not yet finished with their master's degree they cannot yet move to master teacher position.

c. Length of Service

Table 3
Frequency and Percentage Distribution of the Respondents
in Terms of Length of Service

Length of Service	Administrators		Teachers	
	f	%	*f*	%
31-40 Years	3	43	0	0
21-30 Years	3	43	0	0
11-20 Years	1	14	21	28
6-10 Years	0	0	19	26
0-5 Years	0	0	34	46
Total	7	100	74	100

Table 3 elucidates the frequency and percentage distribution of the respondents according to the time they serve in the Department of Education.

It shows that the 34 or 46 percent are in service for 0-5 years and 19 or 26 percent are serving the DepEd for 6-10 years. For the administrators, one or 14 percent is 11-20 years in service and three or 43 percent are 21-30 years in service.

This implies that the most of the teacher respondents are novice's teacher since they are five years and below in DepEd while administrators are quite long already in the service.

d. Dialect at Home

Table 4
Frequency and Percentage Distribution of the Respondents
in Terms of Their Dialect at Home

Dialect Used at Home	Administrators		Teachers	
	f	%	*f*	%
Tagalog	0	0	4	5
Ilocano	6	86	65	88
Ibanag	1	14	5	7
Total	7	100	74	100

Table 4 reveals the frequency and percentage distribution of the respondents when grouped according to the dialect used at home.

The table shows that 86 percent of the administrator's respondent and 88 percent of the teacher respondents are Ilocano speaking. This tells that majority of the teachers and administrators are adept with the Ilocano dialect and are able to use well the Ilocano dialect as their mother tongue in school because many all of them use it at home. This finding confirms the DepEd policy that the teachers who are to teach mother tongue need to know the mother tongue by heart. The administrators likewise can supervise the teachers in their mother tongue-based instruction because they are also familiar with the language.

2. What are best practices in the MTB–MLE implementation as perceived by teachers and administrator in terms of:

a. Programs

Table 5
Frequency and Rank Distribution of the MTB-MLE
Best Practices in Terms of Programs

On Programs	Frequency	Rank
The language and education practices of MTB-MLE have clear directions.	58	1
Trainings are given to build the professional capacities of teachers.	55	2
Monitoring, evaluation and documentation are used to assess learners' progress.	53	3
Studies for the language of the community are acceptable to mother tongue/ native speakers.	51	4
A preliminary research provided information about the language of the community.	32	5
Awareness-raising / mobilization were done to generate support for the program.	24	6

The table 5 exhibits the frequency and rank distribution of the best practices of the respondents in line with MTB-MLE.

The table tells that 58 percent of the respondents perceive that the “language and education practice of the MTB-MLE have clear directions.” This is followed by “trainings are given to build the professional capacities of the teachers with 55 teachers. However not many of the respondents perceive a “preliminary research provided information about the language of the community and an “awareness-raising/mobilization were done to generate support for the program” as a best practice in the district.

b. Instruction

Table 6
Frequency and Rank Distribution of MTB-MLE
Best Practices in Terms of Instruction

On Instruction	Frequency	Rank
MTB-MLE curriculum is aligned with the level and experience of the learners.	61	1
The local community teaches the children the dialect and culture of the place.	53	2.5
Teachers are oriented on the framework and objectives of MTB-MLE.	53	2.5
Lesson plan are provided to guide teachers.	49	4
The learner’s first exposure to reading is in mother tongue.	42	5
Teachers use list of learning outcome and indicators of learners’ experience.	38	6

Table 6 present the frequency and rank distribution of the MTB-MLE best practices in San Antonio District, City of Ilagan, Isabela in terms of instruction.

The table bares that 61 of the teachers and administrators of San Antonio District perceive that the MTB-MLE curriculum is aligned with the level and experience of the learners. On the contrary, only 38 or less than 50 percent of the respondents see the usage of list of learning outcomes and indicators of learners’ experience as practiced in their schools. Likewise, only 42 said that “the learners’ first language exposure to reading is in their mother tongue.” There are therefore perceived as not much observed in the district. This finding is similar with Walter and Trammell’s (2010) study on the effectiveness of MTB-MLE which revealed that through there was an improvement in the academic performance of the learners taught in mother tongue, still the full effect of this program on the school success of the students is emphasized as yet to be seen. Though Dekker’s Kom Experimental Mother Tongue Education Project of Cameroon, Dumatog, and

Dugiang on the Lubuangan Project in Kailanga, Philippines showed that using mother tongue contributes to the performance pupils, however, the significant gains of this MTB-MLE program will still be proved since it is still very new to the education department.

c. Language Use

Table 7
Frequency and Rank Distribution of the Respondents' MTB-MLE Best Practices in Terms of Language Use

On Language	Frequency	Rank
Learners' mother tongue is used as medium of instruction in school.	66	1
The learners understand and can use confidently their mother tongue.	59	2
English is slowly introduced and reinforced while continuing the use of mother tongue.	51	3
Learners are proud of their mother tongue and culture and respect the mother tongue and cultures of others.	50	4
At the end of the MTB-MLE program learners have mastered and loved their mother tongue and are ready for second language learning.	46	5
The learners' proficiency in math and science improved when mother tongue is used as medium of instruction.	41	6

Table 7 reveals the frequency and rank distribution of the respondents' MTB-MLE best practices as to the language use.

The table illustrates that 66 teachers out of 74 practice the "learners' mother tongue is used as medium of instruction in school" and it ranked 1. This is followed by "the learners understand and can use confidently their mother tongue." However, among the practices given, the item on "the learners' proficiency in science and math improved when mother tongue is used as medium of instruction" ranked last. This means that many of the respondents did not see the effect of the usage of mother tongue in the science and math proficiency of their students. It is true the pupils are able to express themselves using their mother tongue but, its effect to their math and science is not very much felt. This is maybe because most of the terms use is science and math do not have equivalent or

translation in the dialect (e.g. square root, perimeter). This finding is contradicted to the study of Toquero (2010) that using the mother tongue (Ilokano) to teach the basic concepts of numbers and operations helps build a strong foundation for the understanding and learning of higher mathematics. This approach is effective not only in getting the interest of students in the lesson but as a springboard in teaching new mathematical concepts and principles and in deepening student understanding on why mathematical operations or processes work.

d. Teaching Materials

Table 8
Frequency and Rank Distribution of the Respondents' MTB-MLE Best Practices in Terms of Teaching Materials

On Teaching Materials	Frequency	Rank
Real objects are used to demonstrate concepts.	65	1
Picture cards are used to facilitate classroom discussion.	63	2
MTB-Materials are appropriate to the language, culture and context of the learners.	49	3
Materials are aligned with the capacities of the learners.	45	4
There are reading materials in the mother tongue.	44	5
Teaching materials/resources in the mother tongue are available/provided.	41	6

Table 8 points out the frequency and rank distribution of the respondents' MTB-MLE best practices in terms of teaching materials.

The table shows that item number 5 "real objects are used to demonstrate concepts" which ranked 1 with 65 teachers practicing it and "pictures are used to facilitate classroom discussion" ranked 2. Moreover, only 41 of the 74 teachers said that teaching materials or resources in mother tongue are provided or available. Thus, not all of the teachers therefore were given teaching materials in the teaching of mother tongue. This finding can be the reason why Wa-Mbaleka's (2014) study on the perceptions of teachers on the mother tongue-based education result shows that teachers' perception "could not reveal with certainty whether or not they believe an impact of MTBMLE exists on learning in general" because as stated here, not all teachers are given and provided materials in

teaching of the mother tongue-based education which is necessary in its effective implementation. The findings in the study Mother Tongue-Based Multilingual Education: The Case of Cervantes District (Sanchez, Tomas, and Pe 2023) show that some of the teachers are improvising and contextualizing instructional materials to make their instruction more meaningful and more engaging, thereby improving the performance of the learners. The teacher's perception of contextualization goes with some works of literature. For instance, Reyes et al. (2019) testified contextualization is one of the keys to engaging the students in the teaching-learning process because they can relate their situations to their lesson. In fact, several studies claimed that contextualization significantly increases the learning of students (e.g., Chen et al., 2019; Perin, 2011; Moghaddas, 2013; Ning et al., 2017; Wang et al., 2021).

e. Stakeholders Support

Table 9
Frequency and Rank Distribution of the Respondent' MTB-MLE
Best Practices in Terms of Stakeholders Support

On Stakeholders Support	Frequency	Rank
School authorities impress on the learners the importance of learning the mother tongue.	62	1
Parents encourage their children to learn their mother tongue.	57	2
Local and national authorities/ officials support the mother tongue program.	43	3
Local communities assist the learners in learning the mother tongue.	40	4
Local and national agencies (DOLE, DSWD…) cooperate for the implementation of the MTB-MLE.	31	5

Table 9 gives the frequency and rank distribution of the respondents' MTB-MLE practices in terms of stakeholders' support.

The table shows that item on 3 "School authorities impress on the learners the importance of learning the mother tongue" ranked 1 and "Parents encourage their children to learn their mother tongue" ranked 2. However, "the local and national agencies cooperate in the implementation of MTB-MLE" ranked last. This implies that this practice is not much perceived by the teachers and administrators. This finding can be attributed to the fact that though the program is pushed to be implemented and although the information dissemination is not widespread. This finding is associated with Wa-Mbaleka (2014) study that enough trainings does not seen to have occurred to allow successful implementation

as perceived by teachers of mother tongue-based education in the Philippines. Thus, parents and other stakeholders need to be included in the information drive or campaign thereby promoting the mother-tongue based multi-lingual education. Through this, schools, parents and other stakeholders can have a wider and clearer vision about the aims, goals, and objectives of MTB-MLE and that their understanding can lead them to have a complete support towards its success. As the old African proverb goes," It takes a whole village to raise a child" give backbone to the support that this program needs. Informative drives are not necessary for parents and the community, but also to teachers alike.

3. Is there a significant difference in the perception of teachers on the best practices of the MTB – MLE when grouped according to their profile?

a. Educational Attainment

Table 10
Results of Significant Difference in the Perceptions of Teachers as to the Best Practices in MTB-MLE When Grouped According to Their Educational Attainment

Educational attainment of teachers and their perceptions as to the best practices in MTB-MLE	Computed Value of	Tabular Value of	Analysis	Decision	Remarks
Program	21.71	21.03	>	Reject	Significant
Instruction	28.33	18.31	>	Reject	Significant
Language	28.00	18.31	>	Reject	Significant
Material	27.51	21.01	>	Reject	Significant
Support	16.00	15.51	>	Reject	Significant

Table 10 exhibits the results of significant difference in the perceptions of teachers as to the best practices in MTB-MLE when grouped according to their educational attainment.

It is evident from the results that the computed Chi-square values are greater than the respective Chi-square tabular values. Hence, the null hypothesis is rejected at 0.05 level of significance. Thus, there is significant difference in the perceptions of the teachers as to be the best practices in MTB-MLE when grouped according to their educational attainment. It implies that the teachers regardless of their educational qualifications perceive differently their best practices in MTB-MLE in terms of the program, instruction, language, materials and support. It can be further stated based from the findings that those teachers with master's units have more varied best practices in MTB-MLE than the other groups of teachers.

b. Position

Table 11
Test of Significant Difference in the Perception of Teachers as to the Best Practices in MTB-MLE When Grouped According to Their Position

Perceptions of teachers as to the best practices in MTB-MLE when grouped according to position	Computed Value of	Tabular Value of	Analysis	Decision	Remarks
Program	50.51	43.77	>	Reject	Significant
Instruction	47.93	37.65	>	Reject	Significant
Language	43.43	37.65	>	Reject	Significant
Material	48.92	43.77	>	Reject	Significant
Support	32.14	31.41	>	Reject	Significant

The test of significant difference in the perception of teachers as to the best practices in MTB-MLE when grouped according to their position is presented in table 11.

It is reflected from the test that the computed values of Chi-square are greater than their corresponding Chi-square tabular values. This signifies the rejection of the null hypothesis at 0.05 level of significance. Therefore, significant difference exists in the perceptions of teachers as to the best practices in MTB-MLE when grouped according to their position. It means that the teachers differ from each other in their perceptions as to the best practices in MTB-MLE in terms of program, instruction, language, materials, and support. In particular, Teacher I have more varied best practices in MTB-MLE than the rest of the teachers.

c. Length of Service

Table 12
Test of Significant Difference in the Perceptions of Teachers as to the Best Practices in MTB-MLE When Grouped According to Their Length of Service

Perceptions of teachers as to the best practices in MTB-MLE when grouped according to length of service	Computed Value of	Tabular Value of	Analysis	Decision	Remarks

Program	45.43	36.42	>	Reject	Significant
Instruction	32.00	31.41	>	Reject	Significant
Language	35.80	31.41	>	Reject	Significant
Material	48.29	36.42	>	Reject	Significant
Support	26.32	26.30	>	Reject	Significant

The table 12 shows the test of significant difference in the perceptions of teachers as to the best practices in MTB-MLE when grouped according to their length of services.

The test reveals that the Chi-square computed values are greater than the respective Chi-square tabular values. For this reason, the researcher rejects the null hypothesis at 0.05 level of significance. Thus, there is significant difference in the perceptions of teachers as to the best practices in MTB-MLE when grouped according to their length of service. It manifests that the best practices in MTB-MLE in terms of program, instruction, language, materials, and support are perceived differently by the teachers when they are grouped according to the numbers of years of service. In particular, the teachers with 0-5 years of services have varied best practices in MTB-MLE that the rest of the teachers. This finding confirms the previous table that Teacher I (usually those new in service or 0-5 years) use more of the practices mentioned that the rest of the teachers.

d. Dialect at Home

Table 13
Test of Significant Difference in the Perceptions of Teachers as to the Best Practices in MTB-MLE When Grouped According to their Dialect Spoken at Home

Perceptions of teachers as to the best practices in MTB-MLE when grouped according to dialect spoken	Computed Value of	Tabular Value of	Analysis	Decision	Remarks
Program	23.14	21.03	>	Reject	Significant
Instruction	18.83	18.31	>	Reject	Significant
Language	24.83	18.31	>	Reject	Significant
Material	21.86	21.03	>	Reject	Significant
Support	20.00	15.51	>	Reject	Significant

The best of significant difference in the perceptions of teachers as to the best practices in MTB-MLE when grouped according to their dialect spoken at home is exhibited in Table 13.

It is evident from the test that the computed values of Chi-square are greater than the corresponding Chi-square tabular values. Hence, the null hypothesis is rejected at 0.05 level of significance. Thus, significant difference exists in the perceptions of teachers as to the best practices in MTB-MLE when grouped according to their dialect spoken at home. It implies that the teachers who use different dialect at home perceive the MTB-MLE best practices of San Antonio District, differently. The Ilocanos identified some with the best practices maybe because the MTB-MLE used in San Antonio District is Ilocano. It implies that the teachers with Ilocano as their dialect at home perceive differently their best practices in MTB-MLE in terms of program, instruction, language, materials, and support than those who speak Ibanag and Tagalog in the home. This finding can be attributed to the fact that Ilocano is the mother tongue taught in school.

4. Is there a significant difference in the perception of teachers and administrator on the best practice of MTB-MLE?

Table 14
Results of Significant Difference in the Perceptions of the Teachers and Administrators as to the Best Practices in MTB-MLE

Perceptions of teachers and administrators as to the best practices in MTB-MLE	Computed Value of	Tabular Value of	Analysis	Decision	Remarks
Program	22.71	12.59	>	Reject	Significant
Instruction	14.14	12.59	>	Reject	Significant
Language	12.67	11.07	>	Reject	Significant
Material	12.71	12.59	>	Reject	Significant
Support	12.80	9.49	>	Reject	Significant

Table 14 presents the results of significant difference in the perceptions of the teachers and administrators as to the best practices in MTB-MLE. It is revealed from the results that the computed values of Chi-square, are greater than the respective Chi-square tabular values. Hence, the null hypothesis is rejected at 0.05 level of significance. Thus, there is significant difference in the perceptions of the teachers and administrators as to the best practices in MTB-MLE. It implies that the teachers have different perceptions as

to the best practices in MTB-MLE along program, instruction, language, materials and support from those of the administrators. Based from the findings, the teachers apply more of the best practices in MTB-MLE than the administrators. Also, this finding can be well attributed to the result of the study of Mbaleka (2014) where it was stated that "it is not conclusive to state with certainty whether or not the Philippines is well prepared for the implementation of MTBMLE" which can explain why teachers have different perceptions as to the best practices in the program.

Conclusions

Based on the findings of the study the following conclusions are given:

Since most of the teachers are in the DepEd for 0-5 years, they are still novice teachers. Some of the teachers have not yet gone to further studies as evidenced by the 13 percent teacher respondents without master's units. On the other hand, all administrators have gone further in their studies with 86 percent having masters unit and 14 percent master's graduate and 43 percent of the administrator hold Head Teacher I item and many have been in the service for 21-40 years. Moreover, San Antonio is an Ilocano region, thus,

Ilocano is used as their mother tongue and majority of the teachers and administrators are proficient in the Ilocano dialect.
As to the difference in the perception of the teachers whom grouped according to their profile, it can be said that their perception significantly differs.

Likewise, the teachers and administrators MTB-MLE practices significantly differ.

Recommendations

In the light of the findings and conclusion, the researcher proposes the following:

1. Since there is a different best practice of the teachers in the implementation of the MTB-MLE, it is recommended that DepEd officials' re-orient teachers as to the MTB-MLE program.
2. Since administrators have no formal training on MTB-MLE, DepEd needs to require them to attend one so that they would be able to guide their teachers in the implementation of the program.
3. In terms of instruction of MTB-MLE best practices the teachers and administrator use list of learning outcome and indicators of learners' experience.
4. The DepEd should supports and provides the teachers in terms of teaching materials/resources in the mother tongue so that the implementers of MTB-MLE are fully equipped and to give best outcome of the program.

Compliance with Ethical Standards

This research is an original study and was conducted as a basis in recommending for an appropriate and effective mode of delivery. Authors of books, journals, publications, as well as websites from the internet which were used as references in the conduct of this study are properly acknowledged and cited. Schools Division Superintendent, School Heads and Teachers consent was adopted before the conduct of this study. Further, confidentiality of the data/documents generated from the respondents' performance is highly ensured. All the data collected will solely be used for the purpose of this study.

Acknowledgments

This study is a product of great hard work and diligence of the researcher and wonderful people who contributed so much for its completion.

The researcher wishes to extend his profound gratitude to the following people who have rendered so much love and effort to accomplish this study for without them, this will not be significant and successful:

Dr. Precilo L. Buslig, Dean of the Graduate School for his help and encouragement to finish this study.

Dr. Charina G. Alejo, his adviser, for her patience, support, and word of encouragement.

Mrs. Benedicta Uy, his statistician, for the untiring guidance and effort to examine the statistical treatment and data analysis of this study.

The member of panel: Dr. Salome S. Carino, Dr. Vilma C. Cabrera, Dr. Violeta S. Directo for the significant comments and suggestions for the betterment of this study.

Mrs. Benelyn P. Jamora, Secretary of the Graduate School for the patience, support, and continuous motivation to finish this study.

Dr. Denizon P. Domingo, Schools Disision Superintendent of the Division of the City of Ilagan, for approving the letters needed in floating the questionnaire.

The Kinder to Grade 3 teachers of San Antonio District for cooperating and giving their honest and reliable response.

To his beloved parents, Melchor U. Sinay and Robelina A. Sinay, whom the researcher will always be indebted for their love and untiring support. To this siblings, Melchor A. Sinay Jr., Rey Mark A. Sinay, Ruby Mhelle A. Sinay, and his nephew, Rven Jeius A. Sinay for extending their time and love. To his sister-in-law, Venus A. Sinay, for the words of wisdom and pieces of advice. And to his relatives, who in other way have rendered their strength and time. To his love one, Mr. Bryan John V. Daluddung, who always pushing him to pursue this dream.

Lastly, to Almighty God for sustaining the researcher with needed strength and wisdom for him to accomplish this study. Without His presence this will all ho in vain.

BOOKLET ON LANGUAGE LEARNING ARTICULATION DEVELOPMENT (BOOKLLAD): ENHANCING READING SKILLS

Claire D. Cadiao[1]
Marie Candy L. Celeste, Ph.D.[2]

[1]Maila Paderes Aritalla National High School, Schools Division of Passi City, Iloilo, Philippines
[2]West Visayas State University Calinog Campus, Calinog, Iloilo, Philippines

https://doi.org/10.5281/zenodo.13292126

ABSTRACT

Reading proficiency is crucial for academic success, yet many early secondary students struggle with key components like phonics, vocabulary, comprehension, and fluency, hindering their progress and future opportunities. To address this, the Booklet on Language Learning Articulation Development (BOOKLLAD) was designed as an intervention to improve reading skills among Grade 7 learners. This study employed a pretest-posttest experimental design to evaluate BOOKLLAD's effectiveness at Maila Paderes Aritalla National High School in Jaguimitan, Passi City, Iloilo, during the 2023-2024 school year. Twenty-six students participated in a 20-day intervention, with a researcher-developed test assessing phonics, vocabulary, comprehension, and fluency. The instrument's reliability was validated through Cronbach's Alpha and expert review. Data analysis using SPSS included frequency counts, means, standard deviations, and the Wilcoxon Signed Rank Test.The findings revealed significant improvements, with average pre-intervention scores rising to above-average post-intervention. The statistically significant differences between pretest and posttest scores confirm BOOKLLAD's effectiveness in enhancing reading skills. The results align with theories like Schema Theory, Cognitive Load Theory, and the Zone of Proximal Development, highlighting the impact of structured, scaffolded, and personalized learning activities on reading comprehension and retention. The study emphasizes the importance of active engagement, scaffolded support, and customized learning in reading instruction and recommends that the Department of Education develop targeted programs to encourage

innovative teaching approaches. BOOKLLAD demonstrates significant potential as a tool for improving reading skills in Grade 7 students.

Keywords: *BOOKLLAD, Reading skills, Grade 7 learners, Language learning*

INTRODUCTION

Reading proficiency is a crucial component of academic success, and schools must address this foundational skill to ensure that learners can effectively engage with the broader curriculum. Students who lack the necessary reading skills often struggle to comprehend other subjects, leading to a cycle of poor performance that can negatively impact their overall well-being. This issue has been exacerbated by the recent shift to distance learning during the COVID-19 pandemic, where restrictions on face-to-face classes necessitated the use of printed modules. While essential during this period, these modules did not fully address the learning gaps, particularly among struggling readers. In Junior High School, these gaps have manifested as significant difficulties in reading and comprehension, persisting even as in-person classes resumed.

In 2023, oral reading assessments conducted by teacher advisers revealed that many students, especially in Grades 7 through 10, were reading at levels significantly below their grade. These students faced challenges in letter and word recognition, articulation, vocabulary, comprehension, and fluency. Additional assessments showed that 96% of Grade 7 students and 78% of students from Grades 7-10 were at a frustration level in reading comprehension. Despite the introduction of various reading programs and interventions mandated by the Department of Education (DepEd), these challenges persisted, highlighting the need for more effective and targeted solutions.

To address these gaps, the "Booklet on Language Learning Articulation Development (BOOKLLAD): Enhancing Reading Skills" was developed as an innovative intervention. BOOKLLAD aims to provide learners with a structured and engaging framework for improving reading skills, specifically focusing on articulation, vocabulary, comprehension, and fluency. Unlike video-based interventions, which have been shown to enhance reading comprehension through multimedia engagement (Gabor and Celeste, 2024), BOOKLLAD leverages the traditional yet effective medium of print. The booklet format is designed to provide a tangible, accessible, and self-paced learning resource that can be easily integrated into daily classroom activities or used independently by students. While video-based materials engage learners through visual and auditory stimuli, BOOKLLAD emphasizes the hands-on, interactive nature of print, which allows students to engage with the material at their own pace, fostering deep comprehension and retention.

The Department of Education has identified deficiencies in reading comprehension as a critical factor contributing to low achievement levels in core subjects like English, Math, and Science (DepEd, 2023). In this context, the BOOKLLAD program was

implemented at Maila Paderes Aritalla National High School to improve the reading proficiency of Grade 7 learners. The program aligns with Republic Act No. 9155, the Governance of Basic Education Act of 2001, which encourages educators to develop school-based projects that enhance the teaching-learning process (Republic Act No. 9155, 2001).

BOOKLLAD draws on theories of language acquisition, literacy development, and educational psychology, adopting a holistic approach to language learning. It recognizes the interconnectedness of articulation and reading, guiding learners through targeted activities to develop clear pronunciation alongside reading fluency, comprehension, and vocabulary. By examining the effectiveness of BOOKLLAD in enhancing reading skills, this study contributes to the existing literature on literacy education and provides practical insights for educators, curriculum developers, and policymakers. Ultimately, the goal is to empower learners with the linguistic competencies necessary for academic success and to thrive in a diverse and multilingual world.

Research Questions

This study aimed to determine the effect of Booklet on Language Learning Articulation Development (BOOKLLAD) in teaching Grade 7 learners at Maila Paderes Aritalla National High School year 2023-2024.

Specifically, it aimed to answer the following questions:

1. What is the Pretest performance of the respondents?
2. What is the Posttest performance of the respondents?
3. Is there a significant difference in the Pretest and Posttest reading performance of the respondents?

METHODOLOGY

Locale of the Study and Respondents

This research was conducted in a public secondary school in Passi City, Iloilo, during the 2023-2024 academic year. The study focused on Grade 7 learners, who were selected using a purposive sampling method based on their reading proficiency levels. A total of 26 students participated in the study, all of whom were identified as needing improvement in key reading areas, including phonics, vocabulary, comprehension, and fluency. The demographic details of the respondents, such as age and gender, were consistent with typical Grade 7 students in the Philippines, generally ranging from 12 to 13 years old.

Data Gathering Procedure

The research utilized a pretest-posttest experimental design, which is well-suited for measuring changes resulting from an intervention. The study began with securing

necessary permissions from relevant authorities and obtaining consent from the participants. The procedure was as follows:

Pretest: A baseline assessment was conducted to gauge the initial reading skills of the participants using a researcher-made reading assessment tool.

Intervention: The 20-day BOOKLLAD intervention was administered. This intervention included a series of structured activities focused on improving phonics, vocabulary, comprehension, and fluency. The intervention was designed to be engaging and scaffolded, with each activity building on the previous one to reinforce learning and improve articulation.

Posttest: After the intervention, a posttest was conducted using the same assessment tool to measure any changes in the students' reading skills.

Research Instruments

The primary instrument used in this study was a researcher-developed reading assessment tool. This tool was designed to measure key components of reading proficiency, including phonics/sound recognition, vocabulary, comprehension, and fluency. The instrument consisted of multiple items, each targeting different aspects of reading skills. It was validated by experts in the field of education and literacy, and a pilot test was conducted to ensure its reliability. The instrument achieved a Cronbach's Alpha coefficient of 0.890, indicating a high level of internal consistency.

Data Analysis

Data were analyzed using both descriptive and inferential statistics. Descriptive statistics, such as frequency counts, percentages, means, and standard deviations, were used to summarize the data and provide an overview of the respondents' reading skills. For the inferential analysis, the paired samples Wilcoxon Signed Rank Test was employed. This non-parametric test is appropriate for comparing related samples, particularly when the data do not necessarily follow a normal distribution. The test compared the pretest and posttest scores to determine the statistical significance of the changes observed.

Scope and Limitations

This study was limited to a small sample size of 26 students from a single public secondary school, which may limit the generalizability of the findings to other populations. The intervention period was relatively short, spanning only 20 days, which may also affect the long-term retention of the reading skills gained. Additionally, while the study focused on key components of reading proficiency, it did not account for other factors that might influence reading development, such as socio-economic background or home literacy environment. Despite these limitations, the study provides valuable insights into the

effectiveness of structured reading interventions like BOOKLLAD in improving specific reading skills among early secondary students.

RESULTS

Pretest Performance of Grade 7 Learners.

The average pretest score of 27.69 suggested that, initially, Grade 7 learners at Maila Paderes Aritalla National High School had a moderate level of proficiency in language learning and articulation development.

Table 1

The Pretest Performance of the Respondents

Category	Mean	SD	Description
Pretest	27.69	9.21	Average

Note: The scores were described using the following scale and description: (48.01 – 60.00) Excellent, (36.01 – 48.00) Above Average, (24.01 – 36.00) Average, (12.01 – 24.00) Below Average, (0.00 – 12.00) Poor

Posttest Performance of the Grade 7 Learners

The posttest results of the study revealed that the mean score of the respondents was 40.38 with a standard deviation of 7.46, categorizing their performance as “Above Average” according to the scoring scale used.

Table 2

The Posttest Performance of the Respondents

Category	Mean	SD	Description
Post Test	40.38	7.46	Above Average

Note: The scores were described using the following scale and description: (48.01 – 60.00) Excellent, (36.01 – 48.00) Above Average, (24.01 – 36.00) Average, (12.01 – 24.00) Below Average, (0.00 – 12.00) Poor

The Differences in the Pre-test and Post-test Performances of the Respondents

The Wilcoxon Signed Rank Test results indicated a significant improvement ($p = 0.000$) in the performances of Grade 7 learners from the pre-test to the post-test phase, as shown in Table 3.

Table 3

The Wilcoxon-Signed Rank Tests for the Significance of the Differences in the Pre-test and Post-test Performances of the respondents

Compared Variables	N	Mean Rank	Sum of Ranks	Z	Sig.
Group (Experimental Pretest and Posttest)				4.439***	.000
Negative Ranks	1	1.00	1.00		
Positive Ranks	25	14.00	350.00		
Ties	0				
Total	26				

p***<0.001

DISCUSSION

The Wilcoxon Signed Rank Test results indicated a significant improvement (p = 0.000) in the performances of Grade 7 learners from the pretest to the posttest phase, as shown in Table 3. This statistical finding supported the rejection of the null hypothesis, suggesting that there was indeed a meaningful difference in the students' reading comprehension abilities following the implementation of the Booklet on Language Learning Articulation Development (BOOKLLAD) intervention. The observed improvement underscored the effectiveness of structured interventions like BOOKLLAD in enhancing students' language learning and articulation skills (Sadiku, 2015). Such interventions were crucial in addressing the challenges highlighted in previous studies, including the impact of global school closures on educational outcomes (de Vera, 2022) and the persistent issues in reading proficiency among Filipino students (San Juan, 2019; UNICEF). Moreover, the significant difference in pretest and posttest performances aligned with research emphasizing the complex nature of reading comprehension and its essential role in academic success (Helardez, 2021; Tomas et al., 2021). These findings highlighted the importance of targeted strategies in improving reading proficiency, thereby supporting overall student development and academic achievement (Block & Israel, 2005; McKown & Barnett, 2007; Alghonaim, 2020). Furthermore, the positive outcomes of the BOOKLLAD intervention reflected the effectiveness of structured language learning approaches and the importance of teacher facilitation in enhancing student comprehension (Singhal, 2001; Alyousef, 2006). By addressing specific reading comprehension challenges identified in previous studies (Vertucio, 2019; Albdour, 2015), interventions like BOOKLLAD contributed significantly to bridging educational gaps and fostering comprehensive student learning experiences.

Future studies could further investigate the specific impact of BOOKLLAD on different aspects of language learning, including speaking, reading, and writing skills.

Longitudinal studies could also track the progress of students over time to assess the sustainability and effectiveness of such interventions beyond immediate improvements observed in pretest and posttest comparisons.

Conclusions

The conclusions drawn from this study highlight the significant impact of the Booklet on Language Learning Articulation Development (BOOKLLAD) on improving the reading skills of Grade 7 students at Maila Paderes Aritalla National High School. Initially, the pretest results categorized the students' reading abilities as average, indicating a basic proficiency in fundamental skills such as decoding, comprehension, and vocabulary. However, this average performance also revealed notable gaps in more advanced reading strategies, critical analysis, and deeper textual understanding, underscoring the need for targeted intervention.

The introduction of BOOKLLAD as an instructional tool proved to be highly effective, as evidenced by the substantial improvement in the students' posttest performance. The students advanced from an average to an above-average level in their reading skills, demonstrating the program's ability to address both foundational and advanced literacy needs. This outcome not only validates the program's approach but also highlights its potential to serve as a key component in educational strategies aimed at enhancing reading proficiency.

The study's findings provide compelling evidence of BOOKLLAD's success in fostering significant gains in literacy among early secondary students. The statistically significant differences between the pretest and posttest scores confirm the program's efficacy and suggest that such interventions can play a crucial role in overcoming literacy challenges. As such, the continued implementation and expansion of BOOKLLAD could further enhance students' reading abilities, leading to improved academic performance across subject areas and contributing to their overall educational development.

Recommendations

Based on the findings of the study, several recommendations can be made for different stakeholders:

Department of Education (DepEd) Officials. The findings of this study offered valuable insights that can guide DepEd officials in developing targeted programs and training initiatives within the English curriculum. By integrating the effective teaching strategies identified in this research, DepEd can enhance professional development opportunities for teachers, focusing on areas such as active engagement techniques and scaffolded support. Furthermore, the study highlighted the importance of tailored interventions to address specific learning needs, promoting a more inclusive and impactful educational environment across schools nationwide.

Teachers. For educators, the results of this study served as a catalyst for innovation and professional growth. Armed with evidence-based practices from the BOOKLLAD intervention, teachers can refine their instructional approaches to foster deeper engagement and comprehension among students. Incorporating structured reading activities and personalized learning experiences can enhance teaching effectiveness, ultimately creating more enriching classroom experiences that cater to diverse learning styles and abilities.

English Teachers. This study presented an opportunity for English teachers to explore and implement novel methodologies aimed at improving language learning outcomes. By leveraging the findings, English teachers can integrate innovative teaching strategies into their lessons, such as schema theory-based activities and cognitive load management techniques. This approach not only enhanced students' language proficiency but also cultivated critical thinking and analytical skills necessary for academic success in English.

Researchers. For researchers in the field of education, this study offered a practical application of theoretical frameworks and research methodologies. Engaging with the BOOKLLAD intervention provided researchers with hands-on experience in educational intervention studies, contributing to the advancement of knowledge in effective teaching practices. Moreover, the study equipped researchers with insights into the practical implications of their theoretical knowledge, supporting future studies and academic contributions in educational research.

Learners. Students benefited directly from the outcomes of this study through enhanced educational practices and tailored learning experiences. By integrating evidence-based strategies into the curriculum, learners receive targeted support that fosters their academic growth and development. The findings informed educators and policymakers on effective approaches to teaching reading skills, ensuring that students receive a quality education that prepares them for lifelong learning and future endeavors.

Future Researchers. This study served as a foundational resource for future researchers interested in exploring similar topics or expanding upon the findings presented. By documenting the effectiveness of the BOOKLLAD intervention, this research provided a reference point for further investigation into educational interventions and their impact on student outcomes. Future researchers can build upon these insights, contributing to ongoing inquiry and innovation in educational practices, thereby advancing the field and improving educational outcomes globally.

Compliance with Ethical Standards

In conducting this study, the researchers maintained strict adherence to ethical standards throughout the entire research process. Informed consent was obtained from all respondents prior to their participation, ensuring that they were fully aware of the study's purpose and procedures. Participants were explicitly informed of their right to withdraw from the study at any time without any negative repercussions. Anonymity was

rigorously upheld, with all personal identifiers removed to protect the identities of the participants.

The researchers always safeguarded the well-being of the respondents, ensuring that their participation did not cause any harm or distress. There were no conflicts of interest influencing the conduct of the study, and the researchers ensured that all findings were presented objectively and without bias. Plagiarism was strictly avoided, with all sources and references appropriately cited.

The results of the study were utilized solely for academic and research purposes, contributing to the understanding of the effectiveness of the Booklet on Language Learning Articulation Development (BOOKLLAD) in enhancing reading skills among Grade 7 learners. Through these measures, the researchers ensured the highest standards of ethical integrity in the study.

Acknowledgments

Foremost, the researcher would like to express her sincere gratitude and appreciation to the following people who helped her to finish this study:

Dr. Rosario Clarabel C. Contreras, Campus Administrator, whose unwavering commitment and invaluable support have significantly aided the researcher in successfully conducting the study;

Dr. Liela C. Buenviaje, Dean of College of Education, for her commendable support and motivation towards the improvement of this study;

Dr. Marie Candy L. Celeste, thesis adviser, whose encouragement from the conceptualization stage of this thesis greatly motivated the researcher and provided essential guidance and corrections;

Recel T. Cabral, panel member, for imparting her knowledge and essential recommendations for more comprehensive interpretation to the results of the study;

Dane Marie L. Parreño, panel member, for her invaluable support and guidance for completing the content of the research study;

Reynes L. Sumaylo, panel member, for her patience and suggestions for the improvement of this study;

Joahna F. Tibus, statistician, for her expert assistance in the statistical analysis and interpretation of the data for this research;

Miguel L. Palmares III, College Instructor, Passi City College, for his invaluable guidance and insights during the conceptualization of this research study;

Dr. Ma. Roselyn J. Palcat, CESO VI, Schools Division Superintendent of Passi City, Iloilo for her invaluable support and consent in conducting the research study;

Dr. Nelson P. Palma, Principal IV, Passi National High School for allowing and facilitating the pilot testing phase of this research;

Dr. Mary Faith M. Lidawan, Dr. Lorelie C. Altamia, Dr. Roda B. Seduco and Maryful Grace C. Pabiona as validators, for the insightful comments and corrections for the improvement of the Booklet and the research instrument.

Mary Jo P. Aliento, Head Teacher III, Maila Paderes Aritalla National High School, for her invaluable support and thoughtful considerations that greatly help in conducting the research study;

Classmates and friends in the master's program of West Visayas State University Calinog-Campus, for the stimulating discussions and especially to all the fun shared in the last three years in the campus;

Her family: Marvin B. Cadiao, her husband, parents and siblings for their support throughout this study;

Above all, to the Almighty God, for the knowledge and guidance that He gave to accomplish this scholarly endeavor.

ABSTRACT

This study deeply explores the capability, opportunity and motivation level of students in table tennis teaching, aiming to provide a basis for improving the learning effect of students using the club mode teaching approach. Research questions revolve around students' physical and mental abilities, social and psychological opportunities, and intrinsic and extrinsic motivations. This study also focuses on whether there are significant differences in these aspects among students of different ages, genders and majors. Key findings revealed that table tennis athletes possessed high level of physical and psychological capabilities. Athletes demonstrated high social and psychological opportunities, and high intrinsic and extrinsic motivation. No significant difference in capabilities, opportunities, and Motivation when grouped as to age. No significant difference in opportunities and motivation in terms of sex, while there was a significant difference in the capability in terms of sex. Significant difference was revealed on capabilities, opportunities, and Motivation when grouped as to majors. Based on the research results, it is recommended to evaluate students' learning progress and develop targeted teaching strategies to improve students' mastery of table tennis and enhance their competitive level. Overall, this study will provide useful reference for table tennis club mode teaching approach and promote students' learning effect and competitive performance. For administrators to allocate resources for facilities and provide support for teacher training.

***Keywords*:** *Capability, club mode teaching, opportunity, motivation level, table tennis*

INTRODUCTION

Teacher-Coach plays a vital role in promoting physical and mental well-being of the learners and players. They feel responsible to promote wellness and well-being of students especially in the current information age where a significant proportion of the population has adopted a sedentary lifestyle. Student actions that facilitate effective learning and constructive interaction within the community, as articulated by Wang (2020) states that behaviors are cultivated within and beyond the school environment, including activities within the Table Tennis Club. Understanding and managing student behavior is crucial for developing emotional intelligence, fostering positive relationships, and instilling vital life skills such as responsible decision-making. Students have the flexibility to select courses at any point during the week or attend classes with any teacher offering the same course (Club) at any time slot throughout the week. Enabling them to select courses that align with their abilities and interests, and stimulate their subjective initiative of active learning and seeking desires, as well as maximize students' learning outcomes (Tian, 2019). The course selection mechanism of the school leads to physical education so that every teacher will have a high sense of responsibility for his work and a sense of urgency to improve his ability; It breaks the traditional unit teaching system, makes the goal of college physical education more suitable for the development of students' personality, and combines it with the long-term goal of cultivating lifelong healthy qualified talents.

Table tennis is an example of an open skill sport, which rapidly raises levels of tension and negative thinking and is difficult to manage the emotions of the players. As a result, table tennis is one of the most difficult sports for an athlete to continually sustain top performance (Bai Ning and Magalona, 2024). Interventions in applied sport psychology are typically implemented using the psychological skills training model, which refers to the "systematic and consistent practice of mental or psychological skills for the purpose of improving performance, increasing enjoyment, or achieving greater sport and physical activity satisfaction" (Weinberg, 2019).

Student or athlete’s behaviors refer to acquired actions that facilitate effective learning and constructive interaction within the community, as articulated by Wang (2020). Through club mode teaching, table tennis students basically master the position, posture, footwork, serve, forehand fast attack, backhand push (dial ball) and other technology; table tennis teachers use various forms of teaching methods, make technical action learning from easy to difficult, different, step by step, gradually improve, and pay attention to ideological and political leading role, cultivate students’ lifelong sports thought. Furthermore, Bai Ning and Magalona (2024) stressed that coaches in tennis demonstrated a very high level of confidence, social skills and decision-making abilities which influence the athlete’s performance.

To be able to investigate the table tennis club mode teaching using Capability, Opportunity, and Motivation, Behavior Analysis a COM-B framework (Michie, et al., 2014) was used. It is a procedure of investigation that is highly used in humanities field for behavioral analysis. This study will attempt to employ this framework in Physical

Education. It identifies three factors that need to be present for any behavior to occur: capability, opportunity, and motivation.

This study intends to analyze the behavior of the club members in Table Tennis as this may provide insights into the current ability of club mode teaching, specifically in Table Tennis. Michie et al. (2011) suggest that individuals require capability (C), opportunity (O), and motivation (M) to engage in a behavior (B). They introduced the COM-B model to facilitate the comprehension of behavior within a given context and to identify behavioral targets, forming the foundation for designing effective interventions.

Research Questions

To give light to the problem, the researchers sought to answer the capability, opportunity and motivation levels of Table Tennis athletes.

1. What is the capability level of the students in table tennis in terms of:
   1.1 Physical Abilities
   1.2 Selected Psychological Instruct
2. What is the opportunity level of the students in table tennis in terms of:
   2.1 Social Opportunities
   2.2 Psychological Opportunities
3. What is the motivation level of the students in table tennis in terms of:
   3.1 Intrinsic Motivation
   3.2 Extrinsic Motivation
4. Is there a significant difference in the capability level, opportunity level, and motivation level of the students in table tennis under the club mode teaching when grouped in terms of:
   4.1 Age
   4.2 Sex
   4.3 Major

Hypotheses:

1. There is no significant difference in the capability level, opportunity level, and motivation level of the students in table tennis under the club mode teaching when grouped in terms of:
   1.1 Age
   1.2 Sex
   1.3 Major

METHODOLOGY

Research Design

The study utilized quantitative research approach, focusing on collecting, processing, testing, and analyzing information to derive meaningful conclusions. The primary objective is to evaluate the capability level of student-respondents, gauge the motivation levels among students in the context of table tennis, and assess the opportunity level, defined as the perceived satisfaction derived from the environment by the students. Descriptive research is a sort of research that aims to characterize a condition, problem, or occurrence in a methodical, factual, accurate, and objective manner. It tries to put into words what is. Adams & Lawrence (2019) mentioned that descriptive research collected information about the overall distribution characteristics and provides information about the overall structure, phenomena, etc. Descriptive statistics used a strict random sampling method to select the study population for statistical processing of the information obtained. The COM-B Model developed by Susan Michie, et.al 2011, Barker, et. al. (2016) was used.

Research Locale and Participants

This study was conducted in 5 universities in Anhui province, China. A total number of 300 respondents who were enrolled in Table Tennis Physical Education classes through club Mode Teaching.

Research Instrument

A researcher-made survey questionnaire was used. To ensure the quality of the instrument, the researcher-made questionnaire underwent validation by five professors who are experts in the field of Table Tennis and coaching. In crafting the instrument, careful consideration was given to the requirements for designing a strong data collection tool. These experts were provided with the instrument for critiquing, reviewing, and evaluating its content. The primary objective at this stage was to ascertain the validity of the questionnaire items. A mean score of 4.42 which was very high validity was used for pilot test involving 20 participants who are not part of the actual respondents but had been granted permission to participate in the pilot testing phase

Data Gathering Procedure

Data was collected using structured questionnaires and assessments designed to measure capability, opportunity, and motivation. The instrument assessed for validity and reliability using Cronbach Alpha. After an excellent result was obtained the necessary permission from the university president to conduct the study to the actual participants. Descriptive statistics such as mean, standard deviation, and frequency distribution was employed to characterize the research variables. The researcher, personally administering the questionnaire, took care to ensure the comfort of the participants during

the process. Data collection and processing procedures were carefully planned to ensure the accuracy and reliability of the data. Subsequently, quantitative data analyses were conducted.

Data Analysis

The study follows the ethical standard of research. After gathering all the data, the researchers used the Weighted Mean, Standard Deviation, independent t test and ANOVA.

RESULTS

This part includes the discussion of results.

Table 1*The Capability Level of The Students in Table Tennis in Terms of Physical Abilities and selected Psychological Instruct*

Indicators	M	SD	VI
Physical Abilities	**2.91**	**0.74**	**High**
Selected Psychological Instruct	**3.14**	**0.64**	**High**

Scale: 1.00-1.75 Very low; 1.76-2.50 Low; 2.51-3.25 High; 3.26-4.00 Very high

DISCUSSION

Table 1 presents the statistical results on the Capability Level of Students in Table Tennis in Terms of Physical Abilities which refers to the extent of their physical proficiency, encompassing strength, speed, agility, coordination, endurance, and flexibility. This level is crucial in executing table tennis techniques and movements effectively. Understanding this capability level provides a foundation for assessing students' readiness, identifying training needs, and designing targeted interventions to enhance their performance. Furthermore, the outcomes of the evaluation of students' capability levels in table tennis, specifically focusing on Physical Abilities with a mean 2.91 and an SD of .74 which is high. The findings suggest potential areas for improvement, emphasizing the importance of refining aspects related to strength and adaptability to emerging trends. Moreover, the analysis of physical capabilities in table tennis among students under club mode teaching reveals commendable strengths in various dimensions. Petersons et al. (2019), they revealed that university students are both highly active and highly sedentary. The

curriculum demonstrates efficacy in cultivating key aspects of physical capability. However, the nuanced findings highlight specific areas that warrant attention for further refinement and enhancement, emphasizing the iterative nature of educational practices in sports. The results align with previous research by Fawver et al., (2019), who emphasized the importance of a comprehensive curriculum in Table Tennis teaching, covering technical skills, tactical concepts, and age-appropriate physical exercises. Additionally, their study corroborates the need for teachers to employ modern teaching methods in tennis courses, reflecting the broader applicability of these conclusions. Manubag et al., (2023) stressed that the multifaceted nature of capability development is further unraveled as these studies collectively reveal the symbiotic relationship between training methods and skill enhancement

On the capability level of students in table tennis, as measured by Selected Psychological Instruct, the indicators presented in Table 1 provide valuable insights into various psychological factors that contribute to success in table tennis. The overall result, with a mean score of 3.14, reinforces the high psychological capability of the students in table tennis. This assessment aligns with the scale provided, categorizing the psychological capability as "High." This analysis provides a solid foundation for further investigations and the development of targeted interventions to enhance psychological aspects crucial for success in the sport. The integration of club mode teaching can be tailored to capitalize on these strengths and address specific areas for improvement in the psychological profile of table tennis players. The findings resonate with existing literature on the importance of psychological factors in sports performance (Wang et al., 2023). Psychological skills such as concentration, resilience, and motivation have been recognized as key contributors to success in sports, including table tennis. While our study indicates high capabilities in table tennis through club mode teaching, diverse perspectives from (Zhang et al., 2019) underscores the need for nuanced considerations in assessing and enhancing student skills.

Table 2 shows the opportunity level of students in table tennis, as assessed in terms of social opportunities, plays a pivotal role in shaping their overall experience and performance in the sport. The mean score of 3.14, categorizes the social opportunity level as "High." This aligns with the scale provided, highlighting the generally positive social environment within the context of table tennis clubs. Moreover, the analysis of social opportunities in table tennis emphasizes the importance of effective communication, community building, and diverse competitive experiences. While the overall social opportunity level is high, targeted improvements in competition variety may further enhance the holistic development of table tennis players within club settings. These findings provide a foundation for refining club mode teaching strategies and establishing an evaluation framework that addresses both psychological and social dimensions for comprehensive player development. Deelen et al., (2019) study's focus on effective communication and community building in table tennis aligns with supports the need for enhanced competition variety, reinforcing our findings. Additionally, endorse the broader social benefits identified, enriching the understanding of social opportunities and supporting the development of targeted club mode teaching strategies.

The opportunity Level of Students in Table Tennis in Terms of Psychological Opportunities refers to the availability of psychological resources and support that enable students to develop and maintain positive psychological states for optimal performance. This includes having access to mental training, counseling, and other psychological interventions that help them manage stress, enhance concentration, maintain motivation, and cope with setbacks. These psychological opportunities are crucial for fostering a resilient and confident mindset in table tennis players. Table 2 discloses the findings of an evaluation exploring the opportunity level of students in table tennis, specifically delving into Psychological Opportunities. The highest mean scores spotlight strengths within the psychological dimension, revealing positive aspects. Concurrently, the lowest mean scores draw attention to potential areas for improvement, providing valuable insights into the psychological opportunities influencing students engaged in table tennis through club mode teaching.

The mean score of 3.22, categorizes the psychological opportunity level as "High." This aligns with the scale provided, indicating that students in table tennis clubs have access to a rich array of psychological opportunities for development. Moreover, the analysis of psychological opportunities in table tennis through club mode teaching highlights the positive impact on students' mental skills and well-being. The consistently high scores across indicators indicate a robust psychological support system within the club setting. These findings provide a foundation for the development of targeted interventions and the formulation of an evaluation framework to enhance psychological aspects of player development in table tennis. The focus on mental skills training and positive psychological attributes in table tennis, as reflected in the indicators. The broader psychological benefits identified in Indicators 6 to 10 align with the findings of Deelen et al., (2019), emphasizing the positive impact of sports participation on resilience, self-confidence, goal-setting, and emotional regulation. The psychological dimension is essential for enhancing concentration, resilience, and intrinsic motivation, all contributing to optimal performance (Xu & Tang, 2022).

Table 3 presents the Motivation Level of Students in Table Tennis in Terms of Intrinsic Motivation refers to the internal drive and desire that students have to engage in and excel at table tennis. This motivation is fueled by their enjoyment of the sport, a sense of accomplishment, and the personal satisfaction derived from skill development and achievement. It is a critical aspect of their overall motivation and crucial for sustained engagement and progress in table tennis. It highlights the findings of an evaluation probing into the motivation levels of students in table tennis, specifically examining Intrinsic Motivation. The highest mean scores spotlight the strengths within this motivational dimension, elucidating positive aspects. Meanwhile, the lowest mean scores draw attention to potential areas for enhancement, providing a nuanced understanding of the intrinsic motivational factors influencing students engaged in table tennis through club mode teaching.

Additionally, it provides insights into the intrinsic motivation level of students in table tennis within the context of club mode teaching. Intrinsic motivation, characterized

by a genuine love for the sport and an internal drive to engage in table tennis, plays a crucial role in shaping a student's commitment and enjoyment of the game. The analysis of the indicators reveals a generally high level of intrinsic motivation among the students, as reflected by the mean scores and standard deviations. It highlights the students' enjoyment, positive affective responses, and the acknowledgment of personal development as key components of intrinsic motivation. This aligns with existing literature emphasizing the importance of enjoyment and personal growth in sustaining intrinsic motivation (Weinberg & Gould, 2023). The mean score of 3.15, categorizes the intrinsic motivation level as "High." This aligns with the scale provided, indicating that students participating in table tennis through club mode teaching are intrinsically motivated, driven by the inherent satisfaction derived from the sport. The emphasis on enjoyment, positive affective responses, and personal development in fostering intrinsic motivation in table tennis aligns with the perspectives. The findings related to deep passion, goal-setting, and sustained commitment are consistent with the principles of self-determination theory.

The motivation level of students in table tennis in terms of extrinsic motivation refers to the external factors that influence their desire to participate in and perform well in the sport. This includes rewards, recognition, praise, competition, and other external incentives that drive their motivation. Extrinsic motivation can be important in motivating students initially, but it is typically less sustainable in the long run compared to intrinsic motivation, which is rooted in personal enjoyment and satisfaction. Table 3 illuminates the outcomes of an evaluation probing into the motivation levels of students in table tennis, specifically exploring Extrinsic Motivation. The highest mean scores underscore areas of strength within this facet of motivation, shedding light on positive aspects. Chelladurai & Kim (2022) have examined the social dynamics in table tennis clubs, emphasizing the importance of a supportive community in bolstering motivation and commitment among players. Meanwhile, the lowest mean scores draw attention to potential areas for improvement, offering crucial insights into the extrinsic motivational factors influencing students engaged in table tennis through club mode teaching.

A mean score of 2.75, categorizes the extrinsic motivation level as "High." This reflects the influence of various external factors such as awards, recognition, and competition on students' motivation to participate in table tennis. Moreover, the analysis of extrinsic motivation in table tennis reveals a complex interplay of factors. While certain external rewards and recognition contribute to a high extrinsic motivation level, there is variability in responses, and some aspects of extrinsic motivation exhibit lower levels. These findings underscore the importance of understanding the nuanced relationship between intrinsic and extrinsic motivations in the context of table tennis club teaching. The observation of a mixed profile in extrinsic motivation within table tennis aligns with the findings of Akelaitis and Malinauskas (2019), who emphasize the limited effectiveness of certain external rewards in sustaining engagement. The recognition of variability in responses and lower levels in specific aspects resonates with their perspective. While the overall categorization as "High" in extrinsic motivation aligns with the multifaceted nature of external factors, acknowledging the nuanced relationship between intrinsic and extrinsic motivations, as highlighted by additional research, enriches the understanding

of the motivational dynamics in table tennis clubs. The recognition of intrinsic motivation's role in sustaining long-term commitment in sports, aligns with the findings of the current study. Additionally, Lim emphasize the significance of extrinsic motivation in providing additional incentives and rewards, support the conclusion that both intrinsic and extrinsic factors contribute to the overall high motivation level within club mode teaching. These readings reinforce the success of the teaching approach in creating a balanced motivational climate, addressing diverse student needs, and contributing to sustained engagement and performance in table tennis.

Table 4.1 shows the significant difference on the capability of students under club mode teaching in terms of sex and their majors but no significant difference in terms of age. The data signifies that club mode teaching may distinctly impact certain aspects of capability, emphasizing the need for targeted instructional strategies. The mean differences, standard errors, and confidence intervals further substantiate these findings. While some capabilities benefit significantly, others remain consistent across majors. This analysis contributes valuable insights for tailoring teaching approaches in table tennis across diverse skill domains, forming the groundwork for a specialized evaluation framework. The detailed data-driven approach underscores the multifaceted impact of club mode teaching on students' capabilities, providing a comprehensive understanding for educators and practitioners in the field.

Table 4.2 shows the significant difference in the opportunity level in table tennis under club mode teaching in terms of major. While no significant difference on age and sex when categorized as male and female. Hatzipanagos et al. (2020) as cited by Chen (2024) stressed evaluation enables teachers to provide feedback and guidance to students based on their actual performance on real-world tasks and problems. Gould & Weinberg (2014) stressed that psychological quality includes concentration, self-confidence, willpower, and so on. Research has shown that good psychological quality can improve individual performance and technical ability in competition.

The importance of socializing, and the development of connections are crucial to an individual's well-being and mental health. Human needs and social relation an opportunity to develop connections that can satisfy an individual's emotional needs and enhance self-esteem and a sense of belongingness. Holt-Lunstad, et al (2010) analyzed multiple studies and found a significant association between social connections and mortality risk. Lack of social connections increases an individual's risk of death, while positive social connections can extend life.

Table 4.3 shows significant differences in motivation levels among students learning table tennis through club mode teaching based major. The results indicate that both Age, and sex, being male and female data shows there are no significant differences in motivation levels regarding technology-related aspects, positive affective responses to the sport experience, inner drives to play for enjoyment, and deep passion and genuine love for table tennis. These findings suggest that teachers should consider the different motivations behind students' participation, particularly regarding majors to create more

inclusive and tailored teaching approaches that cater to the diverse needs and motivations of their students. Myers et al. (2020) showed that maintaining positive competitive relationships and respect helps to increase athletes' motivation to play, making them more competitive and confident in defeating their opponents.

The hypothesis for capabilities, opportunities, and motivation when grouped as to age was accepted. Capabilities in terms of sex and when grouped as to male and females was rejected. Moreover, opportunities and motivation in terms of sex and when grouped as to male and female was accepted. While capabilities, opportunities, and motivation in terms majors was rejected.

Conclusions

Based on the study's findings, the researcher came up with the following conclusions.

The evaluation of students in table tennis reveals a high overall capability level in both physical and psychological dimensions through club mode teaching. This underscores the effectiveness of the integrated approach in cultivating well-rounded skills and highlights the success of the teaching methodology in enhancing student capabilities.

The evaluation of students in table tennis highlights a high overall opportunity level, considering both social and psychological dimensions through club mode teaching. This underscores the effectiveness of the integrated approach in providing diverse opportunities for community engagement, skill development, and overall well-being. The findings support the importance of a holistic approach in enhancing students' experiences and opportunities in the sport.

In conclusion, the evaluation of students in table tennis reveals a high overall motivation level through club mode teaching. The balanced integration of intrinsic and extrinsic motivation fosters a supportive environment where students engage in the sport for both enjoyment and external incentives. This comprehensive approach aligns with research emphasizing the importance of addressing diverse motivational factors for sustained engagement and performance in table tennis.

Therefore, in the capability level of the students in table tennis under the club mode teaching in terms of sex was rejected. The capability level, opportunity level, and motivation level of the students in table tennis under the club mode teaching when grouped in terms of Majors was rejected. The capability level, opportunity level, and motivation level of the students in table tennis under the club mode teaching when grouped in terms of age was accepted. The opportunity level and motivation level of the students in table tennis under the club mode teaching when grouped in terms of sex and when grouped as to male and female was accepted. Results provides an important indication for a thorough study on planning the club mode teaching.

Recommendations

Based on the findings and conclusions drawn from the study, the following recommendations are given:

School Administrators. Encourage the adoption of club mode teaching in table tennis programs within the school. Allocate resources for facilities and provide support for teacher training in this methodology. Facilitate collaboration between teachers and external clubs to enrich the overall table tennis learning experience.

Coaches/Teachers. Embrace club mode teaching strategies in table tennis lessons, tailoring approaches to meet the diverse needs of students based on age, gender, and major. Actively engage students in the table tennis community, fostering inclusivity and a sense of belonging.

Table Tennis Students. Take an active role in leveraging the opportunities provided by club mode teaching. Participate enthusiastically in training, competitions, and community-building activities to enhance your skills and contribute to the vibrant table tennis community.

Future Researchers. Build on the current study as a foundation for future research on table tennis education. Explore additional factors influencing capability, opportunity, and motivation levels, contributing to the development of a robust evaluation framework. Consider longitudinal studies to track the long-term impact of club mode teaching.

Compliance with Ethical Standards

The authors declare compliance in ethical standards. After getting the approval from the university administrators/heads, getting the permission from the teachers/trainers' and students to conduct the questionnaire. The researchers guaranteed that all the data gathered from the respondents remained confidential. Proper citations of related literature and studies are maintained. Moreover, there is no bias or prejudice in the findings and results of the study.

Acknowledgments

The authors are very grateful to our creator for the wisdom, strength and good health to accomplish this investigation. Immeasurable appreciation to all participants involved, administrators, professors involved, validators, family members, friends, editors and to all who contributed to the completion of this study. CARING FOR CANCER PATIENTS AND THEIR FAMILIES: THE LIVED EXPERIENCES OF NURSING STUDENTS

Alexie Rose P. Depacaquivo, Nica Bettina A. Ruaya
Christian Emmanuel Enriquez RN, MAN, DPS-TM

Nursing Department, University of San Carlos, Cebu City, Philippines

https://doi.org/10.5281/zenodo.13291979

ABSTRACT

This qualitative study examines the experiences of nursing students providing care for cancer patients and their families. The study uses thematic analysis to identify themes and patterns in the experiences of sixteen students through in-depth interviews. The results reveal a complex environment with strong emotional bonds, career advancement, and the importance of support networks. Nursing students reported various emotions, including nervous anticipation, empathy, and resilience, as they navigated the complexities of cancer care. Challenges such as lack of professional experience and perceived limitations were mitigated by guidance and support from mentors and peers. The study underscores the importance of comprehensive education and support systems to prepare nursing students for the emotional and practical demands of oncology nursing.

Keywords: *Cancer care, nursing students, lived experiences, qualitative research, thematic analysis, emotional challenges, support systems.*

INTRODUCTION

Nursing education is a complex process that combines classroom learning with practical clinical experiences. Understanding nursing students' perceptions of these experiences is crucial for assessing the effectiveness of clinical education in preparing future nurses. Clinical experiences significantly influence students' confidence, competence, and professional identity. A study focusing on nursing students' experiences caring for cancer

patients and their families is essential for nursing education practices. Duchscher (2008). By identifying potential gaps in education and training, curricula can be tailored to better prepare students for complex and critically ill patients.

The stress, grief, and moral dilemmas they encounter in these situations can be overwhelming (Hoover et al., 2010). The emotional and psychological toll of caring for cancer patients and their families can be overwhelming, leading to the development of support mechanisms and interventions that enhance students' resilience, coping strategies, and emotional well-being. The relationships between nursing students, cancer patients, and their families are central to holistic, patient-centered care, which can improve communication and patient-family interaction, leading to enhanced patient outcomes and satisfaction.

Understanding these dynamics can contribute to improved communication and patient-family interaction, leading to enhanced patient outcomes and satisfaction (Babore et al., 2018).

In conclusion, a study examining the lived experiences of nursing students in caring for cancer patients and their families can improve nursing education, enhance student support systems, and ultimately benefit patient care quality. By addressing the emotional, psychological, and educational aspects of these experiences, this research can contribute to a more compassionate and competent nursing workforce and improved patient outcomes.

The research study utilizes Albert Bandura's Social Cognitive Theory, George Engel's Biopsychosocial Model, and Jean Watson's Theory of Human Caring to understand the complex nature of caring for cancer patients and their families. Bandura's theory emphasizes the importance of modeling, imitation, and observational learning in developing new behaviors and abilities, making it relevant to nursing students. Engel's biopsychosocial model considers social, psychological, and biological aspects of cancer treatment, emphasizing the connections between health and well-being. Watson's Theory of Human Caring emphasizes the importance of caring as a universal human experience, transcending cultural barriers, and provides guidance for researchers studying the complex interactions between emotions, relationships, and the human spirit in healthcare settings.

Research Questions

This qualitative study investigates the challenges faced by student nurses in providing comprehensive care for cancer patients and their families, highlighting the potential for stress, burnout, and discontent, as a result of their limited knowledge and abilities.

1. What are the experiences of the nursing students during oncology placement in the hospital?
2. What are the triumphs and challenges of student nurses when taking care of a cancer patient?

3. What did the nursing students feel during the oncology placement in the hospital?

Assumptions

Nursing students' experiences in caring for cancer patients and their families are significantly shaped by the emotional and psychological challenges they encounter, as well as the support and guidance they receive from mentors and the healthcare team.

METHODOLOGY

This chapter details the research design, setting, instruments, respondents, data procedure, and ethical considerations for the study "Caring for cancer patients and their families: The lived experiences of nursing students." The study aims to improve coping strategies for future nursing students.

The study analyzed the experiences of third-year nursing students at the University of San Carlos in caring for cancer patients during their oncology placement. Using a descriptive phenomenological research design, the researchers conducted one-on-one interviews with respondents to understand the challenges and aspects of their care. The study included male and female third-year nursing students who had experienced duty rotations at the Cebu Cancer Institute Hospital. The participants were chosen based on their mental health and experience in caring for sick patients. The study excluded individuals who were not enrolled in the nursing department, Level 3 students, had not had a duty rotation, or had a cognitive-affecting condition. The research aimed to identify common themes and patterns in the experiences of nursing students caring for cancer patients.

The study utilized the interview guide method, a structured qualitative research method that uses open-ended questions to facilitate in-depth conversations between researchers and participants. This method aims to gather nuanced insights into an individual's experiences, perspectives, or opinions on a specific topic, ensuring consistency across interviews and flexibility to explore emergent themes.

The researchers certified interview questions with an oncology clinical nurse, aiming to elicit thoughtful answers about the practical, psychological, and emotional aspects of providing treatment in cancer settings. The questions aimed to elicit reflections from participants about their experiences, obstacles, and tactics for empathetic care, promoting open discourse and discussing their lived experiences.

1. Could you tell us how you feel about your oncology placement in the hospital?
    - 1.1 How do you feel when you are working with cancer patients?
    - 1.2 How many hours are you exposed in your oncology placement?
    - 1.3 Do you feel worried, stressed, depressed, or alright during your oncology placement?

2. What are the problems and challenges encountered during your oncology placement?
    2.1 Can you describe these difficulties?
    2.2 Why do you think you are having these difficulties?

3. How did you overcome the problems you had when working with cancer patients?
    3.1 What do you do to maintain a sense of emotional and mental control during your oncology placement?
    3.2 What are your suggestions for minimizing the impact of facing the challenges of taking care of a cancer patient?

The University approved and reviewed and approved the research paper prior to the study's implementation. The researchers conducted face-to-face interviews with third year nursing students, adhering to the Data Privacy Act of 2012, which requires the anonymization of respondent names and the separation of personally identifiable information from research results. This act protects the privacy rights and dignity of participants in sensitive studies involving healthcare experiences.

The study adhered to strict confidentiality guidelines, respecting the privacy rights of participants, and fostering confidence between participants and researchers. The data was discarded after usage, and participants provided 15 minutes to answer questions without compensation. Data analysis was handled by researchers using industry-standard encryption algorithms to secure sensitive data. The encrypted files were stored on password-protected devices, accessible only to authorized researchers and advisers. Regular audits and monitoring procedures were implemented to trace access and identify illegal attempts to compromise the system. Hard copies of confidential documents were retained in an expanded plastic envelope, ensuring the integrity and confidentiality of the data for the duration of the study.

The study employed Braun and Clarke's thematic analysis, which involves familiarizing oneself with the data through transcription, reading, and re-reading. Initial codes are generated by identifying relevant segments, and codes are collated into potential themes. Data is gathered for each theme, including respondent verbatim and related studies. Themes are named and accurately represent the data, and the final output is related to the research questions and related literature.

The study focuses on the reliability and quality of qualitative research, as proposed by Lincoln and Guba in their 1985 book "Naturalistic Inquiry." The researchers used the phenomenological theory to ensure a systematic and well-structured approach to understanding nursing students' experiences. They obtained ethical approvals, confidentiality, and informed consent from participants before conducting the study. The findings were shared with participants to ensure accurate representation.

Transferability was achieved through direct participant quotes and examples from the interview, with member checking as a validation strategy. The study's transferability is

discussed in the scope and limitations, and practical recommendations are provided based on the findings.

Dependability was achieved through a descriptive phenomenological research design and the interview method, which aligns with the research questions. Regular consultation sessions with knowledgeable instructors were conducted to identify potential biases or gaps. Consistency in the data collection process was observed to reduce variability. Findings were presented to participants for feedback and alignment with their lived experiences.

Confirmability was achieved through open-ended questions for interviews, participant statements, and transparent documentation of modifications and progress through a Gantt chart. These elements of methodological rigor are essential for assessing the rigor and quality of qualitative research.

RESULTS AND DISCUSSION

Theme 1. Professional Inexperience

Albert Bandura's social cognitive theory emphasizes the importance of guided learning and practical experience in clinical placements. These placements allow students to apply theoretical knowledge in real-life situations, witness best practices, and receive feedback. However, students often lack knowledge and experience in cancer care, leading to difficulties in providing quality care. A 2018 study by Kapucu & Bulut found students feeling inadequate and powerless in providing quality care and struggling to adjust to the fast-paced environment and workload due to the disproportionate ratio of patients to nurses.

Skill Deficit. Many students felt that their clinical skills were insufficient for the demands of cancer care.

Respondent 1: “There are many unfamiliar drugs. Also, the work there was very fast that we didn’t know what to do in the facility” (2:59-3:06)
Respondent 13: “Due to the greater ratio of patients, we, the student nurses along with the nurses, had to work double time just to cater to everyone’s treatment and care.” (2:02-2:12)

Lack of Knowledge. There is insufficient knowledge and information prior to the rotation.

Respondent 4: “In a general sense, it’s a new ward, so thereby it’s a new topic and thereby it’s a whole lot of new things” (1:08 - 1:17)
Respondent 12: “Maybe because you are new to the place, you have recently been put in the area, in that rotation. It was your 1st time to encounter… that situation.” (3:50 - 4:15)

Theme 2. Nervous Anticipation

Student nurses often experience nervous anticipation before starting clinical rotations in oncology. This anxiety is a major subject, combining anxiety, doubt, and excitement. A study from Turkey by Kapucu & Bulut in 2018 found that students experienced extreme anxiety during their first clinical experience in an oncology service. Social cognitive theory suggests modelling and observational learning can help reduce anxiety related to anticipation. Students can develop coping mechanisms by observing experienced nurses handle difficult situations. The biopsychosocial model explains that physiologic stress responses, psychological fear, and social pressures contribute to anxiety. Resolving these issues can help reduce anxiety.

Fear of the Unknown. The anticipation of encountering new and challenging situations was a common source of nervousness.

Respondent 1: “At first, I was nervous because I didn’t have any idea in taking care of these types of patients.” (1:45 - 1:50)
Respondent 5: “It was a mix of fear and, of course, excitement for the exposure.” (0:05 - 0:10)
Anxiety. Respondents expressed uncertainty about their ability to handle the emotional demands of caring for cancer patients.
Respondent 6: “From when I first heard that we were going to have our oncology replacement during our hospital, for our clinical duties, I think I was a bit anxious in finding out that we were going to be handling patients of all kinds of prognosis.” (1:46 - 2:05)
Respondent 8: “So, at first I was anxious because it's my first time being assigned there and… yeah mostly anxious” (0:08 - 0:25)

Theme 3. Reflective Engagement

Reflective engagement in nursing involves examining events through biology, psychology, and society, promoting lifelong learning and professional development. This approach helps nursing students identify strengths and areas for growth. Examining emotional experiences, such as empathy and anxiety, can improve preclinical training and patient care. (Kapucu, 2017) Oncology placements significantly impact nursing students' emotional well-being and professional growth, highlighting the importance of reflective engagement.

Self-Reflection. Regular self-reflection helped students understand their experiences and improve their practice.

Respondent 4: “I am the nurse. I am a student nurse and, of course, I am trying to learn, but at the same time, I’m still giving you my quality care.” (5:07 - 5:16)
Respondent 16: “In having these difficulties, keep a clear mind, reflect, or rationalize your interventions, and most importantly, understand them.” (3:37 - 4:00)
Professional Growth. Reflection contributed to their professional development and preparedness for future challenges.

Respondent 4: “If you want to foresee, you want to understand what you want to foresee, of course, you need to learn, and learning takes a long process. And as we know, everyone grows at different paces, and everyone learns at different paces. Sometimes, students learn for two weeks, sometimes a student can learn it in a day, so it’s a matter of creating a more inclusive period for all students to learn the topic, so much so that it’s sufficient enough for them to understand, thereby anticipate and foresee on how they would administer their quality nursing care.” (11:34 - 12:15)
Respondent 5: “The difficulties were a challenge I was really willing to pick up on.” (2:40 - 2:45)

Theme 4. Guidance and Support

Peers who provide support and guidance are crucial in nursing education, as they offer opportunities for modelling, constructive conduct, and self-efficacy development. Mentors can also aid in resilience and confidence building. A supportive atmosphere with mentorship, psychological stress management skills, and sufficient therapeutic resources is essential. The study by Moghimian et al’s (2018) highlights that collaboration with peers allows nursing students to share experiences, exchange knowledge, and provide mutual encouragement, fostering a supportive learning environment. Providing guidance and support improves confidence, nursing knowledge, skills, psychosocial well-being, self-development, and insights needed for end-of-life care. (Kent et al., 2012).

Mentorship. The presence of supportive instructors and staff helped students navigate their clinical placements.

Respondent 1: “Maybe with the help of the CCI nurses and also our CI, I think we managed working with cancer patients” (3:29 - 3:37)
Respondent 3: “What I did, was to ask for help, ask for guidance, especially to the nurses in the facilities, to be able for them to help me and my challenges.” (4:57 - 5:10)
Peer Support. Sharing experiences and challenges with fellow students provided a sense of solidarity.
Respondent 9: “I tried to talk to my other groupmates, or other student nurses, about my feelings, so that my feelings will not be bottled up” (4:47 - 4:55)
Respondent 14: “By helping each other as a team like sharing learnings, cooperating with each other when there are necessary times to be handled, was also the reason that brought us to a meaningful exposure” (2:41 - 2:55)

Theme 5. Perceived Limitations

The biopsychosocial model suggests that nursing students may feel limited in their capacity to provide care due to deficiencies in three domains: psychological unpreparedness, lack of biological information, and social difficulties. In an oncology placement, students face limitations in providing quality care to cancer patients due to knowledge gaps and skills gaps. (Sanford et.al., 2011. A 2012 study from Komprood found that limited information given to students before the rotation affected their service,

and the curricula's narrow focus on cancer nursing further limited their exposure and knowledge.
Knowledge Gaps. Students expressed concerns about their lack of comprehensive medical knowledge.

Respondent 2: “For me, it was due to not enough information or I wasn’t able to retain the information or knowledge that I get through books. I wasn’t able to apply them properly.” (4:45 - 5:08).
Respondent 6: “Really, because we're student nurses where there are limitations of what we can, of what we can do, of what we can do as student nurses. We can't insert IVs, we can't do this, we can't do that.” (6:45 - 7:00)
Emotional Boundaries. Many students struggled to maintain emotional boundaries, feeling deeply affected by their patients’ conditions.
Respondent 6: “It's really hard to see them being in that state knowing that they could have had their whole lives ahead of them, but instead you know like that.” (4:46 - 4:55)
Respondent 10: “So apart from that the challenges would be….. separating your, your emotions for the best intervention available.” (5:00 - 5:15)

Theme 6. Resilience

Resilience in nursing students can be developed through observing and imitating others' actions, developing psychological coping mechanisms, enhancing confidence through practical experience, and receiving social support from peers and mentors. The biopsychosocial model emphasizes resilience as a multifaceted concept, demonstrating it through staying focused, seeking support from peers and mentors, and finding meaning in their work despite personal challenges. This helps nursing students deliver quality care to the best of their capabilities. (Moghimian et al, 2019).
Adaptability. Students learned to adapt quickly to the challenging conditions.

Respondent 9: “I overcame the problems I had in working with cancer patient by adapting to the environment” (3:47 - 3:54).
Respondent 14: “However, a few days have passed, and we were able to adapt to our RLE exposure.” (1:15 - 1:21)

Emotional Strength. Developing emotional strength was essential for coping with the stressors of the role.

Respondent 4: “During that time, it’s a matter of, again, willpower. Understanding that, okay, they [the patients] are pitiful, but at the same time, you have the responsibility over them, so you have to power through again.” (9:00 - 9:14).
Respondent 7: “I guess the biggest way I overcame those challenges was through, as cheesy as it may sound, determination and remembering your purpose” (8:06 - 8:18)

Conclusions

The study reveals the emotional and practical challenges faced by third-year nursing students during their oncology placement at the University of San Carlos. The students experienced anxiety and excitement, reflecting their response to a new environment. Initially, they felt inadequacy and perceived limitations, but overcame these through strategic support systems and reflective practices. The students experienced a range of emotions, from fear and stress to a growing sense of confidence and accomplishment. The study emphasizes the importance of structured support and mentorship in helping nursing students manage the complexities of cancer care, enhancing their ability to provide compassionate care while maintaining their psychological well-being. The students' resilience, support, and reflective practices contributed to a positive overall outcome, with a sense of accomplishment and professional growth. The overall experience was not predominantly negative, highlighting the importance of structured support and mentorship in nursing education.

Recommendations

The nursing curriculum should include more comprehensive oncology care modules to equip students with the necessary knowledge and skills to provide quality treatment to cancer patients and their families. Resources should be allocated for training sessions focusing on psychological support, palliative care, and empathic communication. Mentorship programs should also be established.

Nursing instructors should employ experiential learning techniques like role-plays, simulations, and case studies to enhance students' understanding of the psychosocial aspects of cancer treatment. They should encourage empathy and self-awareness by encouraging reflection on their experiences. Clinical instructors should provide comprehensive orientations to students about their roles and responsibilities during their oncology placement.

Nursing students can enhance their understanding of cancer patients' psychological and emotional needs through programs that emphasize empathy and self-care. They can avoid burnout and compassion fatigue by scheduling regular debriefing meetings with mentors or peers and receiving group or individual feedback from clinical instructors to develop future coping strategies.

Cancer patients and their families can effectively communicate their choices, concerns, and needs to healthcare providers. They can also utilize resources from community organizations or medical facilities like support groups and counselling programs. Patients can actively participate in their care by asking questions, researching treatments, and sharing their beliefs and choices.

Researchers are exploring the impact of cultural, socioeconomic, and regional characteristics on nursing students' experiences caring for cancer patients and their families. They aim to evaluate the impact of nursing education and training on the

standard of care, enhancing the nursing curriculum and clinical practice. They also explore new approaches to address the psychological needs of cancer patients and their families.

Compliance with Ethical Standards

Minimizing the risk of harm

The study aims to minimize the risk of harm by providing participants with a low level of risk during the interview process. Participants may reveal personal information, making them feel uncomfortable, but the researchers expect a low level of risk. They can withdraw their participation at any time without penalty or loss of benefits. A debriefing session is provided to ensure participants are well and safe after the interview.

The study involved an interview intervention, participant selection, and data preservation. Participants were informed about the purpose, procedure, benefits, and duration of the interview. Researchers ensured data safety and confidentiality by keeping each participant's unique number assigned and data linked to it. Participants were not given information outside the research team, and transcripts and data were destroyed after use. Participants were informed they could decline participation or withdraw at any time, and no adverse consequences would be expected if they refused or withdrawn. Researchers obtained separate consent for participation and interview recording, and participants could contact the researchers with any questions about the research or their rights. The study aimed to maintain anonymity and confidentiality.

ABSTRACT

This study evaluated the effectiveness of a chatbot application in enhancing Grade 8 learners' performance in Physics at San Agustin National High School, Sagbayan District, Bohol, for the school year 2022-2023. A quasi-experimental design was employed, with the experimental group using the chatbot application and the control group receiving traditional instruction. Pre-tests and post-tests assessed performance improvements. The results revealed that while the traditional method showed modest improvements—shifting learners from the "developing" category to "approaching proficient" and "proficient"—the chatbot intervention led to substantial gains. The experimental group demonstrated significant progress, achieving higher categories such as "advanced" and "proficient." Statistical analysis confirmed a significant difference favoring the chatbot group in post-test performance and mean gain scores. These findings suggest that the chatbot application effectively enhanced learners' performance in Physics compared to traditional methods. The study underscores the potential of integrating educational chatbots to address learning challenges and improve academic outcomes.

Keywords: *Chatbot, Educational Technology, Learning Outcomes, Physics Instruction, Technology Integration*

INTRODUCTION

Educational technology encompasses various emerging tools designed to enhance teaching and learning processes. Chatbot applications represent a promising

yet underutilized technology in academic contexts. A chatbot is a programmed application embedded within platforms like messaging services or web applications, designed to automate responses to user inquiries by sending predefined messages. Accessible via mobile phones or other devices, chatbots offer a free, convenient way for users to interact with educational content, provided they are not Globe or TM subscribers, as the messaging services are free for Smart, TalknTxt, and Sun subscribers.

Educational chatbots are specifically designed to leverage this technology to improve academic outcomes. While the integration of chatbots in commercial settings has gained traction due to their effectiveness in customer interactions—Luo et al. (2019) found that chatbots are four times more effective than inexperienced workers in driving customer purchases—its potential in education remains relatively unexplored. Kumar (2021) highlighted that educational chatbots could enhance learning performance and teamwork, suggesting significant benefits for their application in educational settings.

Recent educational performance metrics underscore the need for such technological advancements. The 2018 Programme for International Student Assessment (PISA) reported that the Philippines scored 357 in science, below the average of participating OECD countries as cited (Parojenog & Pabalan, 2024). Furthermore, the Philippines' position dropped to 51st out of 132 countries in the Global Innovation Index, a decline from its improving trajectory since 2014 (Arayata, 2021). This decline is reflected in the struggles faced in science education, including Physics, which remains a concern for many schools (Nava & Camarao, 2017) and is exacerbated by limited instructional materials (Orleans, 2007).

To address these challenges, the present study aims to evaluate the effectiveness of a chatbot application in improving academic performance in Physics. The chatbot, delivered through a messenger application, seeks to provide high-quality, accessible learning materials anytime and anywhere. By integrating chatbot technology into Physics instruction, this study hopes to offer a modern solution to the issues of accessibility and engagement in learning.

The research is grounded in several theoretical frameworks. The Technology Acceptance Model (TAM), proposed by Davis (1989), emphasizes that the perceived usefulness (PU) and perceived ease of use (PEU) of a technology are crucial for its acceptance and utilization. The chatbot intervention aims to enhance physics learning by being useful, user-friendly, and accessible via widely used mobile platforms. The Technological Pedagogical Content Knowledge (TPACK) framework (Mishra & Koehler, 2006) further supports this approach by underscoring the need for integrating technological, pedagogical, and content knowledge in educational technology applications.

The SMAR model (Puentedura, 2014) also provides a structured approach to technology integration, encompassing Substitution, Augmentation, Modification, and Redefinition. This model suggests that technology should replace existing practices, enhance and modify activities, and redefine learning experiences. The chatbot

application aligns with these phases by substituting traditional learning materials, augmenting accessibility, modifying traditional activities with interactive features, and redefining student-teacher interactions.

The International Union of Pure and Applied Physics (IUPAP, 1999) and Ellermeijer & Tran (2019) highlight the importance of leveraging technology in education. They stress the role of Physics in driving technological advancement and the potential of technology to make learning more relevant and engaging. Studies by Corpuz (2017) and Delos Santos et al. (2020) emphasize the need for innovative solutions to address learning challenges and engage students.

In conclusion, this study seeks to explore the effectiveness of chatbot technology in enhancing Physics education using a framework grounded in TAM, TPACK, and the SMAR model. By providing students with accessible and engaging learning resources, this research aims to contribute to improving educational outcomes and addressing the challenges faced in Physics instruction.

Research Questions

This study aimed to determine the effectiveness of using a chatbot application via messenger in enhancing the performance of Grade 8 learners in Physics at San Agustin National High School, Sagbayan District, Bohol, for the school year 2022-2023.

Specifically, this seeks to answer the following questions:

1. What is the performance of the control group using the traditional method of delivering instruction in the:
   . 1.1. Pretest; and
   1.2. Posttest?
2. What is the performance of the Experimental Group using the chatbot application in delivering instruction in the:
   2.1. Pretest; and
   2.2. Posttest?
3. Is there a significant difference between the pretest and posttest of the Control group and the Experimental Group?
4. Is there a mean gain performance in the posttest between the control and experimental groups?

METHODOLOGY

This succeeding discussion deals with the research design, subjects of this investigation, research environment, data gathering procedure, the instrument used, and the statistical technique employed in testing the data.

Research Design

This study employed a quasi-experimental research design. The researcher used a researcher-made test to evaluate the performance of two groups of respondents through pre-tests and post-tests. Purposive sampling was utilized to select respondents for the experimental group based on the minimum requirement of having access to gadgets that could use messenger applications. The same sampling method was applied to the control group to ensure that the mental capabilities of both groups were comparable. Data collected were analyzed using a t-test and mean to determine the effectiveness of the intervention in enhancing the learners' performance in Physics.

Research Environment

The research locale for this study was the learners from two selected Grade 8 sections at San Agustin National High School in San Agustin, Sagbayan, Bohol. Sagbayan, located in the interior part of Bohol, is 2.4 km from the municipality center. The largest school in the municipality had an enrollment of 1,758 students, with 55 teaching staff and 6 non-teaching staff for the 2022-2023 school year. San Agustin National High School was chosen due to its large student population, which allowed the appropriate respondents to be selected for the study.

Research Participants

The study's respondents were Grade 8 learners from San Agustin National High School, divided into two groups. Grade 8 learners were selected due to their enrollment in a Physics curriculum relevant to the study's topic. Group A, the control group, consisted of 48 learners, while Group B, the experimental group, had the same number. These sections were chosen because their average performance on a diagnostic test conducted during the first week of Quarter 1 for the 2022-2023 school year was nearly identical. Group A had an average score of 84.43, and Group B had an average score of 84.12. Group B was selected as the experimental group due to its slightly lower average performance and because all learners in this group had Android phones, meeting the minimum requirement for implementing the intervention.

Research Instrument

To gather the necessary information, the researcher used a researcher-made test. Three different San Agustin National High School science teachers reviewed and validated this test. Additionally, to ensure quality, the test was pilot tested with 30 random Grade 8 students at the school who were not part of the study’s direct respondents.

Data Gathering Procedure

Gathering of Data. The researcher sought and obtained permission from the district supervisor of Sagbayan and the principal of San Agustin National High School to conduct the research, distribute the researcher-made test, and implement the

intervention. Upon receiving approval, the researcher first contextualized common Physics topics for inclusion in the chatbot intervention. The final draft of these contextualized learning materials was then developed into a chatbot application. After creating the chatbot intervention, the researcher conducted an orientation for the study's participants.

Table 1. Implementation Activities.

DAYS	CONTROL GROUP	EXPERIMENTAL GROUP
Week 1	• Orientation of the direct participants of the study • Distribution of parents' consent	• Orientation of the direct participants of the study • Distribution of parents' consent
Week 2	• Retrieval of parents' consent Conduct of Pre-Test	• Retrieval of parents' consent Conduct of Pre-Tests
Week 3	• Distribution of contextualized printed learning materials	• Orientation & demonstration on how to access and use the Chatbot Intervention • Distribution of available links to the Chatbot Application
Week 4 - 11	• Follow-up and monitoring of the participants	• Follow-up and monitoring of the participants
Week 12	• Conduct Post-Test	• Conduct Post-Tests

Table 1 outlines the overall activities conducted during the implementation of the study. In the first week, the researcher held an orientation for both groups to explain the study's purpose and the respondents' rights and welfare. During this orientation, informed consent forms were distributed. Due to the pandemic, health protocols were followed, with only 20 students allowed per classroom. The orientation was conducted in two sessions for each group to ensure adherence to safety measures. Respondents were informed that their participation was voluntary, their privacy would be protected, and all data would be destroyed after the study.

In the second week, the researcher collected informed consent from parents and administered a pre-test to both groups. The following week, contextualized learning materials were distributed to the control group. The experimental group received an orientation and demonstration on accessing and using the chatbot application. After confirming that participants understood how to use the chatbot, links to the application were sent to the experimental group. The content provided through the chatbot was the same as the printed materials given to the control group, differing only in the method of access—digital for the experimental group and printed for the control group.

Classes were conducted for both groups from the fourth to the eleventh week, with the researcher ensuring that the same topics were covered simultaneously. In the experimental group, the researcher monitored the use of the chatbot application, while in the control group, the use of printed materials was overseen. The researcher addressed technical issues for the experimental group and ensured that all control group participants received their printed materials.

After all topics were covered, the researcher administered a post-test to assess the performance of both groups. To ensure validity, the test items were re-shuffled. Data were collected immediately after the post-test, and responses were tallied, collated, tabulated, and analyzed according to the study's objectives.

Data Analysis

To identify the performance of the two groups of respondents, the percentage was used:

$$\% = \frac{f}{N} \times 100$$

Where: % = Percent
f = Frequency
N = Number of cas

The computed percentage will be interpreted using the following grading scale:

Grading Scale	Description
36 and above	Advance
34 - 35	Proficient
32 - 33	Approaching Proficient
30 - 31	Developing
and below	Beginning

29

To determine the level of interest of the experimental group in learning physics using a chatbot, the weighted mean of the responses to the survey questionnaire will be used.

$$W = \frac{\sum fw}{\sum f}$$

Where:

Wm = weighted mean
$\sum$ = Summation
f = frequency of the respondents who responded on the given scale
w = weight of the category specified in the scale

To identify the significant difference between the pre-test and post-test of the control and experimental groups, the paired t-test was used:

Paired t-test formula:

$$t = \frac{\sum D}{\sqrt{[N(\sum D^2) - (\sum D)^2] / (N-1)}}$$

Where:

t = t-value
D = difference between the two samples (A-B)
N = sample size

RESULTS

This chapter presents, analyzes, and interprets the study's data. It is divided into four sections: the first section details the performance of the control group, which used the traditional method; the second section covers the performance of the experimental group, which used the chatbot intervention; the third section compares the performance between the control and experimental groups; and the fourth section examines the differences in mean gain between the two groups.

Table 2. Performance of the control group using the traditional method.

Category	Score		Pretest		Posttest	
			f	%	f	%
Advanced	36 - 40		-	-	-	-
Proficient	34 - 35		-	-	12	25
Approaching Proficient	32 - 33		8	17	6	12.5
Developing	30 - 31		35	73	18	37.5
Beginning	< 30		5	10	12	25
	Total		48	100	48	100

Table 2 shows the pretest and posttest performance of the control group using the traditional instruction method. In the pretest, 35 respondents, or 73%, scored between 30 and 31, placing them in the developing category, while 5 respondents, or 10%, were in the beginning category. This result indicated that many respondents were still at the developing stage of learning Physics before the study was implemented, and in the post-test, 18 respondents, or 37.5%, remained in the developing category. In contrast, another 37.5% moved to the approaching proficient and proficient categories. This slight increase in performance suggests that the traditional method of instruction effectively improved the learners' performance in Physics.

Table 3. Performance of the experimental group using the chatbot intervention.

Category	Score	Pretest		Posttest	
		f	%	f	%
Advanced	36 - 40	-	-	5	11
Proficient	34 - 35	-	-	15	31
Approaching Proficient	32 - 33	10	21	25	52
Developing	30 - 31	29	60	3	6
Beginning	< 30	9	19	-	-
	Total	48	100	48	100

Table 3 shows the experimental group's performance exposed to the chatbot application. In the pre-test, 29 respondents, or 60%, scored between 30 and 31, placing them in the developing category, while 10 respondents, or 21%, were in the approaching proficient category. Similar to the control group, the pre-test results in the experimental group were low.

In the post-test, the experimental group's performance improved significantly. The results showed 11% in the advanced category, 31% in the proficient category, and 52% in the approaching proficient category. This improvement indicates that exposure to the chatbot intervention enhanced the experimental group's performance in Physics.

The findings suggest that the chatbot intervention was effective in increasing the learners' scores. This supports Tumaneng's (2012) assertion that ICT integration should focus on learning with ICT tools rather than just the technology itself. The ease of using the chatbot and learners' familiarity with mobile phones contributed to this improvement. Additionally, as noted by Habibi (2014), students lacking resources often lose interest and motivation. The chatbot intervention addressed issues related to the availability of learning materials, helping students achieve better performance in Physics.

Table 4. The significant difference between the pretest and posttest of the Control group and the Experimental group.

Variables	Mean ± SD	Computed t-value	P-value	Interpretation

Pretest between Control & Experimental Group	12.6±3.6 13.0±4.2	-0.64	0.52	Not Significant
Posttest between Control & Experimental Group	15.83±8.3 23.6±5.7	-5.94	0.0000032	Significant
Pre & posttest Control Group	12.6±3.6 15.8±8.3	-3.08	0.003	Significant
Pre & Posttest Experimental Group	13.0±4.2 23.6±5.7	-12.01	0.000016	Significant

Table 4 summarizes the differences between the pre-test and post-test results of the control and experimental groups. The t-test results indicated that the pre-test t-value of -0.64 was less than the p-value of 0.52, showing no statistically significant difference between the pre-test performances of the control and experimental groups. In contrast, the post-test results revealed a p-value of 0.0000032, indicating a statistically significant difference between the two groups.

These findings suggest that the two groups' performance was similar before the intervention, confirming their appropriateness for the study. However, the significant difference in post-test results indicates that the experimental group performed better after using the chatbot application. This suggests that the chatbot intervention effectively improved the respondents' performance in Physics.

Table 5. Mean gain performance of the control and experimental groups.

Variables	Mean of pretest	Mean of posttest	Mean gain
Control Group	12.58	15.83	3.25
Experimental Group	12.87	23.53	10.66

Table 5 presents the respondents' mean performance gains after the intervention. The control group had a mean gain of 3.25, while the experimental group achieved a mean gain of 10.66. This result indicates that the experimental group, which used the chatbot intervention, outperformed the control group, which used the traditional teaching method. Overall, the findings suggest that the chatbot intervention was more effective in enhancing learners' performance in Physics than the traditional method.

Higgins (2003) emphasized that the goal of integrating ICT into education is to improve teaching effectiveness and student learning. The results of this study support the notion that using chatbot technology significantly enhances learning outcomes in Physics, demonstrating the benefits of ICT integration in education.

DISCUSSION

Findings

The analysis of the data yielded the following findings:

1. In the Control group using the traditional method of delivering instruction**,** the pre-test result disclosed that prior to the study's implementation, 73% of the learners scored in the *developing category,* while after the observation period, the post-test showed that the learners scored in the *approaching proficient (25%) and proficient (12.5%)* categories. It can be inferred that the traditional method of delivering instruction can slightly increase the learners' performance in Physics.

2. In the experimental group using the Chatbot application in delivering instruction, the pre-test showed that 60% scored at *developing* and 21% at *approaching proficient* categories. In the post-test, the experimental group improved to higher categories: 11% in the *advanced* category, 31% in the *proficient,* and 52% in the *approaching proficient* categories. The result revealed that a significant number of respondents attained the performance of "approaching proficient" after implementing the chatbot intervention. It can be inferred that the chatbot intervention enhances the performance of the learners of the experimental group in learning Physics.

3. There was no significant difference in the pre-test results between the control and experimental groups; however, a significant difference was observed in the post-tests. This implies that after the study was implemented, the performance of the control and experimental groups differed in favor of the group treated with the Chatbot intervention.

4. The study's results revealed that each group of respondents performed well on mean gain. However, the mean gain score of the experimental group was much higher than that of the control group. This can be inferred from the fact that the experimental group performed better on learning physics using the chatbot application than the control group using the traditional method of delivering instruction.

Conclusions

The findings indicate that while the traditional method of instruction led to a slight improvement in Physics performance, the Chatbot intervention significantly enhanced learner outcomes. The control group showed some progress, with a shift from "developing" to "approaching proficient" and "proficient" categories. In contrast, the experimental group demonstrated substantial gains, with notable improvements in higher performance categories such as "advanced" and "proficient" after using the Chatbot. The significant difference in post-test results and the higher mean gain of the experimental group confirm that the Chatbot application was more effective in improving Physics performance than the traditional method.

Recommendations

Based on the findings and conclusion derived from the study, the researcher presents the following recommendations:

1. Expand Use of Chatbot Technology

Schools should consider incorporating chatbot applications into their teaching strategies, especially for subjects like Physics. The effectiveness of the chatbot intervention in this study suggests that it can significantly enhance learners' understanding and performance. Expanding the use of this technology could provide similar benefits across various subjects.

2. Provide Training for Teachers

To maximize the benefits of digital tools like chatbots, teachers should receive training on integrating such technologies into their curricula. Professional development programs can equip educators with the skills to effectively use and manage chatbot applications, ensuring they can support and enhance student learning.

3. Conduct Further Research

Additional studies should be conducted to explore the effectiveness of chatbots in different educational contexts and subjects. Research could also investigate the long-term impact of chatbot interventions on student learning and engagement, as well as their potential to address diverse learning needs.

4. Enhance Technical Support

Schools should ensure that adequate technical support is available for both students and teachers when implementing chatbot interventions. Addressing technical issues promptly can help maintain the effectiveness of the tool and ensure a smooth learning experience for students.

5. Incorporate Student Feedback

Collect and analyze feedback from students using chatbot applications to continually improve the intervention. Understanding students' experiences and challenges with the technology can provide valuable insights for refining and optimizing its use in future educational settings.

Compliance with Ethical Standards

This study adhered to ethical standards by obtaining informed consent from all participants, ensuring confidentiality, and maintaining voluntary participation without coercion. No harm came to participants, and the study received ethics committee approval. Researchers declared no conflicts of interest and reported findings transparently and honestly. Cultural sensitivity was respected throughout the research process.

CORE BEHAVIORAL COMPETENCIES AND TEACHERS' JOB SATISFACTION: BASIS FOR TEACHER COMPETENCY DEVELOPMENT PLAN

Rosalie W. Ambasa, Gina F. Labitad

PHINMA Cagayan de Oro College, Philippines

https://doi.org/10.5281/zenodo.13346977

ABSTRACT

The role of teachers' core behavioral competencies is fundamental in their performance, satisfaction and overall effectiveness in the workplace. The study described the level of core behavioral competencies in terms of self-management, professionalism and ethics, results focus, teamwork, service orientation and innovation; the level of teachers' job satisfaction in terms of work and workplace, supervisor and management, benefits and rewards, recognition, communication and coworker relationship; and determined the relationship between the teacher's core behavioral competencies and job satisfaction. Using the descriptive correlational method, and an adopted and modified questionnaire, 510 secondary teachers of Valencia City were surveyed. The study used the mean, standard deviation, and Pearson-r correlation in analyzing the data. Findings of the study revealed that teachers in the Division of Valencia were consistently demonstrating their core behavioral competencies. Additionally, teachers were satisfied with their jobs in terms of the variables. The correlation analysis showed a positive significant correlation between the teachers' core behavioral competencies, particularly in self-management and job satisfaction. The study proposed a teacher competency development plan to develop and improve the respondents' competencies in terms of professionalism and ethics and their job satisfaction in terms of coworker relationships. Therefore, the significant relationship observed between core behavioral competencies and teachers' job satisfaction emphasized the vital part of a high level of core competence in enhancing the teacher's job fulfillment. The study recommends investing in strategies to reinforce the development of competencies that contribute to promoting a joyful and satisfied teaching force.

Keywords: *core behavioral competencies, job satisfaction*

INTRODUCTION

Education at all levels dwells on effective teaching and learning. They are keys towards creating students who have commendable academic, socio-emotional, and behavioral well-being. Also, they are indicators of quality teachers and quality teaching performance which are relevant factors that make up a well-designed education system. Generally, teachers are considered as the most significant resources in the educational arena and their competencies impact the performance of their students. Research suggests that teachers' competencies, which are a combination of knowledge, skills, attitude and behavior, and personal characteristics, contribute to an improved quality of learning. These competencies, which include classroom management, instructional delivery, assessment, personal and behavioral, are believed to have positive impact in students' learning. Moreover, behavioral competencies of teachers are considered as one of the most important factors that influence students' performance (Soriano, 2019).

Within the Philippine context, the Department of Education (DepEd 2019) is dedicated to offering its members chances to connect their accomplishments and contribute significantly to the realization of the institution's vision and mission; to foster individual and team development, involvement and dedication professionally (DepEd, 2019). Based on this idea, DepEd uses Results-Based Performance Management System (RPMS) open communication about responsibilities, goals, and key results areas—as well as how they connect to the department's overarching objectives—are made possible through the supervisor and employee's collaborative efforts. The platform that the department offers centers on the agreement upon performance and behavior standards that can lead to improvements in teachers' competencies. The teacher's effectiveness is determined by how well and consistently they demonstrate actions that are relevant to the skills, as well as by how they use their various talents to complete tasks and deliver superior performance. The DepEd's Results Based Performance Management System–Philippine Professional Standard for Teachers (RPMS-PPST) lists the following core behavioral competencies, which should be the foundation for creating a professional development plan: self-management competence, professionalism and ethics competence, results focus competence, teamwork, service orientation, and innovation(DepEdRPMS-PPST,2021).

However, all the efforts of the government regarding training of teachers are all in vain if they choose to leave their jobs. In an article by Malipot (2022), it was reported that over 100 teachers in Cebu City resigned from service and are processing their clearances as they prepare to leave the country to work abroad. In that article, Rudy Bernardo of the Alliance of Concerned Teachers (ACT) pointed out that it is heartbreaking how teachers who started teaching full of good intentions to mentor the youth eventually got demoralized upon experiencing first-hand the system of the teaching profession in the country. Teacher job satisfaction (TJS) can be defined as the emotional reactions of teachers to their jobs or teaching roles. Ozkan (2022) cited that the job satisfaction of teachers is influenced by various elements such as school and teacher-specific attributes,

demographic shifts, and external and internal influences.

The Department of Education (DepEd) acknowledges the relevance of enhancing and equipping teachers' with skills and knowledge necessary to be able to deliver the goods to their students. However, teachers who are not satisfied with their job could not be at their best in terms of commitment and productivity. Teachers have been placed in different struggling situations which caused complains regarding too much paper works, power tripping by their superiors, students-teacher ratio, and lower salaries compared to other professionals along with loan sharks, unjustifiable monetary contributions and politics in the workplace. Hence, as a general observation, public school teachers are dissatisfied with their profession.

Further, the goal of this study was to create a Teachers Competency Development Plan (TCDP) fitted to the needs of secondary teachers of the Division of Valencia City. Such TCDP was to be anchored on their core behavioral competencies as well as their job satisfaction levels in terms of work and workplace, supervisor and management, benefits and rewards, recognition, communication and relationship with colleagues. With the help of this study, the Division Office Personnel can map ways to help develop the core behavioral competencies of the teachers as well as their level of satisfaction. Further, these contributed to the fulfillment of DepEd's long-term goal of providing inclusive and equitable quality of education and promoting lifelong learning.

Research Questions

The study aimed to determine the level of teachers' core behavioral competencies and job satisfaction in District 6 of the Division of Valencia City for the School Year 2024-2025. The results of the study served as bases for crafting the Teachers' Competency Development Plan.

Specifically, the study aimed to answer the following questions:

1. What is the level of core behavioral competencies as perceived by the respondents in terms of self-management, professionalism and ethics, results focus, teamwork, service orientation and innovation?

2. What is the respondents' level of job satisfaction in terms of work and workplace, supervisor and management, benefits and rewards, recognition, communication and coworker relationship?

3. Is there a significant relationship between the teachers' perceived level of core behavioral competency and their job satisfaction?

4. Based on the findings of the study, what Teacher Competency Development Plan can be designed?

Research Hypothesis

Research questions 1, 2 and 4 were hypotheses – free. On the basis of research question 3, the null hypothesis was tested at a 0.05 level of significance.

Ho: There is no significant relationship between the core behavioral competencies of the teachers and their job satisfaction in terms of work and workplace, supervisor and management, benefits and rewards, recognition, communication and coworker relationship.

METHODOLOGY

Research Design

This research employed a descriptive correlational methods research which utilized a descriptive design to gather data and information about the core behavioral competencies of teachers as well as their job satisfaction as basis for crafting a teacher competency development plan. The study was also correlational in nature as it identified and determined the relationship between the teachers' core behavioral competencies and their job satisfaction which served as the basis for the crafting of a Teacher Competency Development Plan. Consequently, the researcher used research tools including research questionnaires alongside an interview for triangulation in order to gather data and elaborate the responses provided by the respondents. The qualitative data gathered through the interview were utilized to substantiate the quantitative responses of the respondents.

Study Setting

The research was conducted in the Division of Valencia City, Bukidnon. Valencia City is considered the most populous landlocked city in Mindanao which served as the center for trade and commerce in the province of Bukidnon. It is classified as second-class component city and has thirty- one (31) component barangays. Almost every barangay has a public primary school providing the basic education needs of its residents; the largest of which is Valencia City Central School. Secondary education has also been made accessible to all students by legislating integrated schools almost in every barangay. Educational institutions within the city are a combination of public and private schools. Presently, Division of Valencia City serves the community with thirty-four (34) Elementary Schools, twenty-six (26) Integrated School and seven (7) National High Schools.

Research Respondents

The respondents of the study were the five hundred ten (510) secondary school teachers of the Division of Valencia City for the school year 2023-2024.

Sampling Technique

The research utilized purposive sampling in identifying the Integrated Schools to be considered as respondents of the study since there were integrated schools with only a few teachers. On the other hand, the respondents from Valencia National High School, a mega school, were identified using the Slovin's formula.

Research Instruments

In the first part, the research used DepEd's Results-Based Performance Management System–Philippine Professional Standard for Teachers (RPMS-PPST) list of behavioral competencies, which includes self-management competence, professionalism and ethics competence, results focus competence, teamwork, service orientation, and innovation(DepEd RPMS-PPST,2021) in order to identify and determine the level of teachers' competencies. It is a standardized tool that uses a Likert Scale starting with 1 being the scale, which means that the teacher respondent is hardly demonstrating the said competency up to five which signifies that the teacher is considered a role model in terms of demonstrating the competencies.

Part 2 is a tool patterned from the study of Troeger (2021) used to determine the teachers' perceived level of job satisfaction in terms of work and workplace, supervision and management, benefits and rewards, recognition, communication and relationships with co-teachers. It uses a 5-point Likert Scale with one (1) signifying a high level of dissatisfaction and five embodying a high level of satisfaction. An Interview was carried out to support, enhance and substantiate the responses of the teachers. Part 3 consists of six (6) questions, which triangulated the data in the other parts. It served as the part that yielded the qualitative responses from the respondents that substantiated the results.

The third part of the questionnaire consists of 6 open-ended questions to substantiate the numerical responses of the respondents.

Validity and Reliability

In this study, Part 1 of the questionnaire is a standardized instrument based on the DepEd Order 2, s. 2015, the National Adoption and Implementation of the Philippine Professional Standards provides the standard for the questionnaire. Therefore, there was no need for a test of validity and reliability. However, in Part 2, the teacher-made questionnaire underwent a validity test and pilot testing to determine its reliability. The questionnaire was validated by experts with a score of 4.86, which signified that the questionnaire demonstrates very high validity, ensuring the provision of unbiased data for the investigation.

To test its reliability, the questionnaire was pilot-tested to schools not part of those considered as respondents but having the same characteristics as them. The instrument was tested last June 4, 2024, at Banlag Integrated School and Lumbo Integrated School. It was good to note the teachers who answered the instrument for pilot-testing understood the statements and did not have any queries as to the meaning of the statements

provided. The reliability analysis of the instrument yielded the Cronbach's Alpha value of 0.980 which indicated that the items have high level of consistency.

Additionally, the respondents answered open-ended questions to substantiate the numerical responses. After gathering all the responses, the results were subjected to a reliability test where the Cronbach's Alpha was measured and interpreted using SPSS.

Data Gathering Procedure

Upon the approval of the proposal by the Dean of Graduate Studies of PHINMA Cagayan de Oro College, the researcher asked permission from the Schools Division Superintendent of the Division of Valencia City where the study will be conducted with the approved letter. In the gathering of data, the researcher administered the questionnaires in the pre-identified schools in the above-mentioned division. The researcher followed the protocol of asking permission from each school's principal and school head before requesting the teachers to answer the questionnaires. The researcher made sure that she was available should there be queries from the respondents about how they answered the questions. After the questionnaires were collected, responses were tallied and recorded accurately. The data gathered underwent the necessary and corresponding statistical procedures. Additionally, researcher conducted a methodological triangulation to validate the responses and substantiate the results. Qualitative answers of the responses were recorded and used to substantiate the numerical responses. All information obtained from the questionnaire and interviews were considered confidential.

System of Scoring

This study utilized the following scoring system that allowed an objective assessment of the answers of the respondents. Additionally, the scoring procedure provided a quantitative measure for evaluating the level of core behavioral competencies and the job satisfaction of the respondents.

PART I. Core Behavioral Competencies

Scale	Range	Description	Interpretation
5	4.50 – 5.00	Always	Role Model
4	3.50 – 4.49	Very Often	Consistently Demonstrates
3	2.50 – 3.49	Sometimes	Occasionally Demonstrates
2	1.50- 2.49	Rarely	Inconsistently Demonstrates
1	below 1.49	Never	Hardly Demonstrates

PART II. Teachers' Job Satisfaction

Scale	Range	Description	Interpretation
5	4.50 – 5.00	Strongly Agree	Very Satisfied
4	3.50 – 4.49	Agree	Satisfied
3	2.50 – 3.49	Neutral	Undecided
2	1.50 - 2.49	Disagree	Dissatisfied
1	below 1.49	Strongly Disagree	Very Dissatisfied

Statistical Treatment of Data

To answer the problems stated in this study, the researcher employed statistical procedures. Descriptive Statistics was used in finding the level of core behavioral competencies of the respondents in terms of the variables. Here, the mean, as the preferred measure of central tendency, was used to describe the responses based on the scale. Standard Deviation was also identified in order to describe how dispersed were the responses of the participants. Additionally, to find the relationship between the core behavioral competencies and teachers' job satisfaction, the research employed the Pearson r Coefficient.

Scope and Limitation

This study limited its scope in assessing the perceived level of core behavioral competencies in terms of the following specific sub-variables such as self-management, professionalism and ethics, results-focus, teamwork, service orientation and innovation. Other factors and variables not included thereof are beyond the scope of this study. This study is also constrained only to secondary teachers within the Division of Valencia City for the School Year 2024-2025.

Furthermore, the study delimited itself to the perceived level of teachers' job satisfaction in terms of work and workplace, supervisor and management, benefits and rewards, recognition, communication and coworker relationship. Moreover, this research endeavor aimed to propose a Teacher Competency Development Plan (TCDP) which will help in equipping teachers of the necessary core behavioral competencies.

The research involved the five hundred six (506) respondents of in-service basic education teachers of the Division of Valencia City. These respondents came from pre-selected Integrated Schools and all the National High Schools within the Division. To ensure a comprehensive and reliable representation, it exclusively involved teachers from public schools.

RESULTS

Research Question 1. What is the level of core behavioral competencies as perceived by the respondents in terms of self-management, professionalism and ethics, results focus, teamwork, service orientation and innovation?

This research recognized the various competencies of educators in the field to provide quality education among learners. It focuses on determining the level of core behavioral competencies of the respondents in terms of self-management, professionalism and ethics, results focus, teamwork, service orientation and innovation.

By understanding the level of the respondents' core behavioral competencies, researchers can identify patterns and trends with respect to the competencies possessed by the respondents as well as those competencies they need to improve on. This information can inform directed interventions and support mechanisms to address the developmental needs of teachers.

Table 1 Distribution of Respondents' Level of Core Behavioral Competencies in terms of Self-Management

Indicators	Mean	Standard Deviation	Description
Sets personal goals and directions, needs and development.	3.44	0.66	Sometimes
Undertakes personal actions and behaviour that are clear and purposive and takes into account personal goals and values congruent to that of the organization.	3.78	0.58	Very Often
Displays emotional maturity and enthusiasm for and is challenged by higher goals.	3.87	0.69	Very Often
Prioritizes work tasks and schedules (through Gantt charts, checklists, etc.) to achieve goals.	3.70	0.63	Very Often
Sets high quality, challenging, realistic goals for self and others.	3.74	0.51	Very Often
Overall	***3.69***	**0.39**	**Very Often**

Legend:

4.50 – 5.00	*Always/Role Model*	*1.50- 2.49*	*Rarely/Inconsistently Demonstrates*
3.50 – 4.49	*Very Often/Consistently Demonstrates*	*1.49 below*	*Never/Hardly Demonstrates*
2.50 – 3.49	*Sometimes/Occasionally Demonstrates*		

Table 1 presents the respondents' core behavioral competencies in terms of self-management with an overall mean of 3.69 (SD=0.39), described as Very Often and interpreted as Consistently Demonstrates. These results highlight the ability of the respondents to manage their own emotions, behaviors, work, and time. Teachers'

emotional intelligence is crucial for creating a positive learning environment as well as support students' emotional development. When teachers are able to regulate their emotions and behavior, they can better respond to challenging situations, build strong relationships and model healthy emotional expression. Results validated the study of Smith (2022) when he opined that teachers with high self-management are better able to manage their own emotions, effectively implement strategies to address difficulties both personally and professionally and practice self-care.

However, teaching can be emotionally and mentally demanding, and teachers often experience a range of extreme emotions. Unmanaged negative emotions like anger or stress can disrupt teacher-students relationship, impair teaching effectiveness and lead to burn out.

Additionally, the highest-rated indicator, display emotional maturity and enthusiasm for and is challenged by higher goals, got a mean of 3.87 (SD=0.69), described as Sometimes and interpreted as Occasionally Demonstrates. These marks focus on the importance of modeling emotional regulation and coping skills, creating a healthy and conducive workplace and being open to continuous learning. Emotionally mature teachers are better able to respond constructively to challenging situations and build strong and supportive relationships with students. Moreover, enthusiastic teachers demonstrate excitement and energy about the subject matter use varied strategies to capture students' interests and inspire students to be more curious and motivated to learn. This is supported by the study of Bieg (2022), which emphasized that enthusiasm has a direct impact on students' emotions and engagement in educational settings.

Conversely, the indicator set personal goals and directions, needs and development got the lowest mean of 3.44 (SD=0.66), described as Sometimes and interpreted as Occasionally Demonstrates. This means that teachers' are making sure their goals are reached as advocated by their leaders.

As a result, they tend to set relatively low goals and avoid those that are challenging and difficult. Teachers may be hesitant to set overly ambitious or difficult goals because of fear of failure. To them, challenging goals carry a higher risk of not being met, which can be demotivating for both teachers and students. Also, teachers already have a heavy workload, and adding very difficult goals can feel like an unmanageable burden. They may prioritize maintaining a sustainable pace over striving for stretch goals.

Another culprit to teachers setting low goals in the lack of resources that could sustain the accomplishment of the goals. Achieving ambitious goals often requires additional time, training, or materials that teachers may not have access to. The perceived lack of support can discourage setting such goals. Likewise, in terms of teaching and learning, teachers avoid setting the bars too high for students because this could undermine their confidence if they struggle to meet such goals. Hence, teachers may opt for more modest and achievable targets.

This finding negates the study of Odindo (2020), which said that Filipino teachers' strategies were above average indicating a strong ability to set high goals. Accordingly,

Filipino teachers are highly motivated to set high goals by intrinsic factors like commitment to the profession, belief in the divine providence and a desire to bring about positive change and transform the lives of their students. Emphasis on goal setting among Filipino teachers reflects a broader commitment to personal growth, effective teaching practices and the empowerment of students.

Table 2 Distribution of Respondents' Level of Core Behavioral Competencies in terms of Professionalism and Ethics

Indicators	Mean	SD	Description
Demonstrates the values and behaviour enshrined in the Norms and Conduct and Ethical Standards for public officials and employees (RA 6713).	3.75	0.53	Very Often
Practices ethical and professional behaviour and conduct taking into account the impact of his/her actions and decisions.	3.70	0.58	Very Often
Maintains a professional image: being trustworthy, regularity of attendance and punctuality, good grooming and communication.	3.61	0.57	Very Often
Makes personal sacrifices to meet the organization's needs.	3.64	0.60	Very Often
Act with a sense of urgency and responsibility to meet the organization's needs, improve system and help others improve their effectiveness.	3.67	0.51	Very Often
Overall	**3.67**	**0.42**	**Very Often**

Legend:

4.50 – 5.00	*Always/Role Model*	*1.50- 2.49*	*Rarely/Inconsistently Demonstrates*
3.50 – 4.49	*Very Often/Consistently Demonstrates*	*1.49 below*	*Never/Hardly Demonstrates*
2.50 – 3.49	*Sometimes/Occasionally Demonstrates*		

Table 2 shows the distribution of respondents' level of core behavioral competencies terms professionalism and ethics with an overall mean score of 3.67 (SD=0.42), described as Very Often and interpreted as Consistently Demonstrates. This means that teachers actively manifest the attributes mentioned above, as evidenced by the consistently high mean scores and low standard deviations.

These results display the obligation of the teachers to the teaching profession. They exhibit a strong commitment driven by intrinsic motivations like their belief in their role as trustees of the nation's cultural and educational heritage and their desire to elevate national morality, promote pride and instill allegiance to the constitution. Also, they are focused and dedicated to prepare students for life and transforming lives through education. This relates to the study of Dahl (2020) which emphasized that professionalism is demonstrated by practitioners taking charge of their work because they are the best ones who comprehend its objectives, procedures, and results.

The indicator, demonstrate the values and behavior enshrined in the Norms and Conduct and Ethical Standards for public officials and employees (RA 6713), obtained

the highest mean score of 3.75 (SD=0.53), described as Very Often and interpreted as Consistently Demonstrates. This means that teachers within the locale are well informed of the expected attitude and behavior from the teachers based on professional and ethical standards. The key elements included in these standards emphasize that public officials should maintain physical, mental and moral fitness, demonstrate full commitment and devotion to duty, refrain from engaging in political, religious or partisan interests, behave with honor and dignity and continually improve one's competence through professional development.

Fernandes (2023) pointed out that maintaining a professional demeanor and upholding the highest standards of conduct is crucial for teachers to serve as effective role models for their students and the community. However, Gumahad (2023), in his study on teachers' compliance with RA6713, perceived that some teachers may prioritize benefits and privileges over their duties which negatively impact their professionalism and adherence to ethical standards.

On the other hand, maintain a professional image: being trustworthy, regularity of attendance and punctuality, good grooming and communication obtained the lowest , with a mean score of 3.61 (SD=0.57), described as Very Often and interpreted as Consistently Demonstrates. Being punctual demonstrates respect for clients, colleagues, superiors and the whole school community. In the locale, the office of the ASDS served an instruction to closely monitor the attendance and punctuality of the teachers. This is done by authorizing the school heads to report the frequency of teachers' tardiness and absences. This action was caused by the alarming number of teachers who were found to have incurred frequent tardiness and absences. In a study by Johnsons (2023), she opined that punctuality sets the tone for a productive and organized working environment. Additionally, it is the key aspect of professionalism that helps teachers in modeling responsible behavior for their students.

Additionally, professionalism, as described by Kramer (2023), is when a teacher must focus on the critical elements of attitude, behavior and communication. Assumptions that K to 12 teacher candidates will simply become professionals as a result of completing the teacher education program and that professional dispositions will be automatically acquired through field experiences are common in the field of teacher education. One of the things that have historically distinguished professionals is their different professional expertise (Choroszewicz & Adams, 2019). It comes after that preliminary instruction and ongoing professional development.

Table 3 Distribution of Respondents' Level of Core Behavioral Competencies in terms of Results Focus

Indicators	Mean	Standard Deviation	Description
Achieves results with optimal use of time and resources most of the time.	4.15	0.52	Very Often

Avoids rework, mistakes and wastage through effective work methods by placing organizational needs before personal needs.	3.82	0.67	Very Often
Delivers error-free outputs most of the time by conforming to standard operating procedures correctly and consistently. Able to produce very satisfactory quality work in terms of usefulness/acceptability and completeness with no supervision required.	3.95	0 .63	Very Often
Expresses a desire to do better and may express frustration at waste or inefficiency. May focus on new or more precise ways of meeting goals set.	3.92	0.72	Very Often
Makes specific changes in the system or in own work methods to improve performance. Examples may include doing something better, faster, at a lower cost, more efficiently, or improving quality, customer satisfaction, morale, without setting any specific goal.	3.99	0.43	Very Often
Overall	**3.97**	**0.41**	**Very Often**

Legend:

4.50 – 5.00	*Always/Role Model*	*1.50- 2.49*	*Rarely/Inconsistently Demonstrates*
3.50 – 4.49	*Very Often/Consistently Demonstrates*	*1.49 below*	*Never/Hardly Demonstrates*
2.50 – 3.49	*Sometimes/Occasionally Demonstrates*		

Table 3 shows the teacher respondents' level of behavioral display competence in terms of results focus with an overall mean 3.97 (SD=0.41) described as Very Often and interpreted as Consistently Demonstrates. A teacher who possesses this competency makes sure that every student reaches his/her full potential through methodical lesson delivery, constant monitoring and evaluation of students' achievements. In the context of the respondents' locale, timeliness in terms of submission of reports, and the like is being recognized. It has already been a practice that those schools with is being recognized. It has already been a practice that those schools with prompt submissions are given awards and recognition. These reports are coming from dedicated teachers. Hence, respondents are considered competent in terms of being results-focused. In a study by Alyami et al. (2021), they mentioned Filipino Teachers' timeliness to impact student performance. Effective time management by teachers is crucial for ensuring that students receive adequate instruction and support, which in turn enhances their academic achievement.

The indicator achieves results with optimal use of time and resources most of the time got the highest mean of 4.15 (SD=0.52), described as Very Often and interpreted as Consistently Demonstrates. It means that the teachers consistently demonstrate core behavioral competencies in terms of results focus. It suggests that teacher respondents in the locale indeed maximize their time and resources in achieving their goals. For instance, strict implementation of classroom program as well as teachers' individual schedule is closely monitored by district supervisors to ensure contact time with students is maximized. However, as observed, teachers are often overworked-spending additional hours outside paid working hours. This excessive workload takes a toll on their personal lives, well-being and ability to provide quality education.

Additionally, many teachers lack the necessary resources and support to be effective in the classroom. These struggles caused teachers to be exacerbated by their heavy workloads and limited resources. Despite the struggles, teachers are trying their best to find ways to optimize their time and resources by leveraging technology for efficiency. They believe that technology helps them to save time, personalize instructions and foster students' engagement more effectively. Results conform to the article by Cuballa (2023), which says that although teachers are faced with struggles on limited resources and facilities, majority of them are still fueled by their passion to educate young minds.

Conversely, the indicator avoids rework, mistakes and wastage through effective work methods by placing organizational needs before personal needs got the lowest with a mean of 3.82 (SD=0.67), described as Very Often and interpreted as Consistently Demonstrates. Although it is the lowest among the indicators, still it means that the respondents consistently demonstrate the results focus. Results suggest that teachers demonstrate a high ability to compartmentalize their personal problems and emotions. They are able to set aside their own issues and display professional dispositions when interacting with students in the classroom. This compartmentalization skill allows them to prioritize their teaching responsibilities and organizational needs over their personal needs. However, since teachers in the locale are closely monitored in terms of time on tasks, whenever they are required to submit documents, they tend to do it the fastest way they can somehow compromising the correctness of the said document. This confirms the finding of Earp (2022), which was stated in an article that highlights that an overwhelming majority of teachers don't get enough time to prepare for effective teaching practices or high-quality planning of lessons.

Table 4 Distribution of Respondents' Level of Core Behavioral Competencies in terms of Teamwork

Indicators	Mean	Standard Deviation	Description
Willingly does his/her share of responsibility.	4.00	0.44	Very Often
Promotes collaboration and removes barrier to teamwork and goal accomplishment across the organization.	3.80	0.70	Very Often
Applies negotiation principles in arriving at win-win agreements.	4.21	0.62	Very Often
Drives consensus and team ownership of decisions.	4.01	0.74	Very Often
Works constructively and collaboratively with others and across organizations to accomplish organization goals and objectives.	3.81	0.40	Very Often
Overall	***3.97***	**0.39**	**Very Often**

Legend:

4.50 – 5.00	*Always/Role Model*	*1.50- 2.49*	*Rarely/Inconsistently Demonstrates*
3.50 – 4.49	*Very Often/Consistently Demonstrates*	*1.49 below*	*Never/Hardly Demonstrates*
2.50 – 3.49	*Sometimes/Occasionally Demonstrates*		

Table 4 overall shows the respondents' core behavioral competencies in terms of teamwork with an overall mean of 3.97 (SD=0.39), described as Very Often and interpreted as Consistently Demonstrates. This means that teachers in the locale collaborate with each other allowing them to pool their knowledge and find innovative solutions to common challenges. Moreover, the role of teacher collaboration in improving instructional effectiveness is crucial because when teachers work together, they are able to share resources and teaching strategies, engage in collective problem-solving and foster a culture of continuous improvement and shared responsibility.

The results of this study is supported by the study of Polega,et.al (2019) which concluded that almost all of the principals rated teamwork as highly important in the workplace, with only 1.1% attributing low importance to it. Additionally, in the same study, it was highlighted that principals considered teamwork important for school culture and success, student achievement, and teachers' pedagogical practices and personal growth.

The indicator, applies negotiation principles in arriving at win-win agreements obtained the highest a mean score of 4.21 (SD=0.62), described as Very Often and interpreted as Consistently Demonstrates. It means that the respondents consistently demonstrate core behavioral competencies in terms of teamwork. This suggests that majority of the respondents do their best to maintain harmony and peace in the workplace. Moreover, in the locale, this ability to arrive at win-win agreements is further strengthened by the revitalization of the School Learning Action Cell (SLAC) sessions. Although it is focused on students' improvement, it has become an avenue for teachers to bond, reconcile and resolve issues within their small groups, preventing more conflicts within the entire school. Results conformed to the study of Binauhan (2019), which enumerated the benefits of SLAC in enhancing the performance of the teachers. According to her, the benefits include improvement of teachers' practices, enhancement of professional development, increased teacher support and improved teachers' relationship with colleagues.

However, the indicator, promoting collaboration and removing barrier to teamwork and goal accomplishment across the organization, got the lowest mean of 3.80 (SD=0.70), described as Very Often and interpreted as Consistently Demonstrates. This suggests that teachers in the locale are having difficulties in barriers means that teachers have to promote trust and open communication amongst them, align everyone towards a common and shared vision for collaboration and provide structured opportunities for their colleagues to work together. When teachers feel psychologically safe and have a clear sense of purpose, they are more likely to engage in productive teamwork.

The results of this study confirmed the study of Bishnoi (2023) which concluded that teachers are the foundation of our schools' success; they are the greatest resource for each other. Strong schools are built through effective teacher collaboration. The same study emphasized that time constraints and relationship concerns are common barriers to teamwork among teachers. It is essential for schools to allocate sufficient time for teachers to collaborate and share ideas.

Additionally, Bishnoi (2023) suggested in his study that directly training teachers on essential teamwork competencies can help them overcome common barriers. This includes effective communication and active listening, conflict resolution, goal-setting and task coordination, and providing and receiving constructive feedback.

Table 5 Distribution of Respondents' Level of Core Behavioral Competencies in terms of Service Orientation

Indicators	Mean	SD	Description
Can explain and articulate organizational directions, issues and problems.	3.99	0.44	Very Often
Takes personal responsibility for dealing with and/or correcting customer service issues and concerns.	3.97	0.69	Very Often
Initiates activities that promote advocacy for men and women empowerment.	3.79	0.61	Very Often
in updating office vision, mission, mandates and strategies based on DEPED strategies and directions.	3.81	0.73	Very Often
Develops and adopts service improvement program through simplified procedures that will further enhance service delivery.	4.25	0.39	Very Often
Overall	***3.96***	**0.38**	**Very Often**

Legend:

4.50 – 5.00	*Always/Role Model*	*1.50- 2.49*	*Rarely/Inconsistently Demonstrates*
3.50 – 4.49	*Very Often/Consistently Demonstrates*	*1.49 below*	*Never/Hardly Demonstrates*
2.50 – 3.49	*Sometimes/Occasionally Demonstrates*		

Table 5 shows the respondents' core behavioral competencies in terms of service orientation with an overall mean score of 3.96 (SD=0.38), described as Very Often and interpreted as Consistently Demonstrates. This means that teachers exhibit quality in the majority of the assessed areas, as evidenced by the consistently high mean scores and low standard deviations. In the locale of the study, Teachers' Induction Program (TIP) has been conducted prior to the deployment of newly-hired teachers. In this program, they are totally informed of everything that they need to know especially when they are already in the field. More importantly, they aim to prepare teachers and make sure that their commitment is all out before they will be immersed in the real world of teaching and learning. The results of this study confirmed the findings of Agustin (2022) which demonstrates that Filipino teachers exhibit strong pedagogical competence, subject matter knowledge, and dedication to professional development which are also key indicators of service orientation.

The indicator develop and adopt service improvement program through simplified procedures that will further enhance service delivery obtained the highest mean score of 4.25 (SD=0.39), described as Very Often, and interpreted as Consistently Demonstrates. This means that most of the teachers in the locale are into developing schemes that will make service delivery more efficient and effective. In this aspect, the role of educational

technology in helping teachers streamline administrative tasks and focus more on the students is being highlighted. Contextually, the use of electronic class records is one of the examples of schemes that make tasks easier and faster to accomplish. This innovation of the department has made positive impacts in the educational arena and has given the teachers additional time for teacher-student interaction. According to Keshavdas (2023), the ability focus on the essentials and simplify processes will unlock significant benefits across the organization.

On the other hand, the indicator initiate activities that promote advocacy for men and women empowerment, obtained the lowest mean score of 3.79 (SD=0.61), described as Very Often and interpreted as Consistently Demonstrates. Indeed respondents in the locale have limited opportunities in terms of initiating programs to promote men and women empowerment. This may be attributed to the fact that when it comes to empowering teachers, they are taken as one and not based on gender. However, respondents acknowledge that through this, a more inclusive and sustainable approach to gender equality, ultimately leading to greater economic empowerment development for women will be created. This is supported by the study Perines (2020) which focused on designing a teacher training program to raise awareness about gender and social issues in academic settings and society.

Table 6 Distribution of Respondents' Level of Core Behavioral Competencies in terms of Innovation

Indicators	Mean	Standard Deviation	Description
Examines the root cause of problems and suggests effective solutions. Foster new ideas, processes and suggests better ways to do things (cost and/ or operational efficiency).	3.98	0.39	Very Often
Demonstrates an ability to think "beyond the box". Continuously focuses on improving personal productivity to create higher value and results.	3.58	0.67	Very Often
Promotes a creative climate and inspires co-workers to develop original ideas or solutions.	4.42	0.53	Very Often
Translates creative thinking into tangible changes and solutions that improve the work unit and organization.	3.90	0.57	Very Often
Uses ingenious methods to accomplish responsibilities. Demonstrates resourcefulness and the ability to succeed with minimal resources.	3.81	0.39	Very Often
Overall	**3.94**	**0.26**	**Very Often**

Legend:

4.50 – 5.00	*Always/Role Model*	*1.50- 2.49*	*Rarely/Inconsistently Demonstrates*
3.50 – 4.49	*Very Often/Consistently Demonstrates*	*1.49 below*	*Never/Hardly Demonstrates*
2.50 – 3.49	*Sometimes/Occasionally Demonstrates*		

Table 6 presents the respondents' core behavioral competencies in terms of innovation with an overall mean score of 3.94 (SD=0.26), described as Very Often and interpreted as Consistently Demonstrates. This means that respondents extensively demonstrate innovative skills in their teaching job. The locale of the study is a strong advocate for new pedagogies and teaching strategies that are products of action researches and innovations. In fact, SDO-CID annually initiates a research and innovations

congress where teachers are able to share the results of their research endeavors. These activities motivate teachers to conduct more researches so as to address the problems at hand. This is supported by the study of Ortile (2023) where he opined that Filipino teachers have implemented various innovative teaching strategies such as using online game, memes, and social media to engage students and enhance learning outcomes.

Among the indicators, promote a creative climate and inspire co-workers to develop original ideas or solutions, obtained the highest mean of 4.42 (SD=0.53), described as Very Often and interpreted as Consistently Demonstrates. This means that a great number of the teacher respondents are into inspiring their colleagues to authentic and be divergent thinkers. When teachers receive structured opportunities to work together, they are more likely to experiment with new teaching methods, engage in continuous improvement and inspire each other to push the boundaries of their practice. The results of this study are supported by the paper of Froehlich (2021) who emphasized that divergent thinking helps teachers overcome the tendency to work within the confines of fixed mindsets. Hence, it fosters the creativity and problem-solving skills of the teachers.

On the other hand, the indicator, demonstrating an ability to think "beyond the box" and continuously focusing on improving personal productivity to create higher value and results, obtained the lowest mean of 3.58 (SD=.673), described as Very Often and interpreted as Consistently Demonstrates. This suggests that teachers who think outside the box are able to challenge the status quo and traditional paradigms in education. They are not afraid to try alternative approaches that may integrate language with skills, content with language, and old with new methodologies. These teachers recognize that progress often comes from invading other fields and disciplines beyond just education. Thinking outside the box requires teachers to develop confidence in their own decision-making abilities and expertise. It involves taking risks, being creative, and not being limited by the constraints of the institution or profession. Teachers who are bored with the current state of education or need to adjust to imposed changes are often motivated to think outside the box

Conversely, there are respondents who also think traditionally which is alarming because educators are expected to be strong advocates for continuous learning. Results confirmed the study of Bautista (2023) when she said that Filipino teachers have been slow in shifting from traditional to divergent thinking. They struggle to adopt progressive teaching methods, such as student-centered approaches, personalized learning and diverse assessments which are more effective in developing critical thinking.

Table 7 Summary of the Respondents' Level of Core Behavioral Competencies

Variables	Mean	SD	Interpretation
Self-Management	3.69	0.40	Consistently Demonstrates
Professionalism and Ethics	3.67	0.42	Consistently Demonstrates
Results-focus	3.97	0.41	Consistently Demonstrates
	3.97	0.39	

Teamwork			Consistently Demonstrates
Service Orientation	3.96	0.38	Consistently Demonstrates
Innovation	3.94	0.26	Consistently Demonstrates
Overall	**3.78**	**0.38**	**Consistently Demonstrates**

Legend:

4.50 – 5.00	*Always/Role Model*	*1.50- 2.49*	*Rarely/Inconsistently Demonstrates*
3.50 – 4.49	*Very Often/Consistently Demonstrates*	*1.49 below*	*Never/Hardly Demonstrates*
2.50 – 3.49	*Sometimes/Occasionally Demonstrates*		

Table 7 reflects the summary of the respondents' level of core behavioral competencies with an overall mean of 3.78 (SD=0.38), interpreted as Consistently Demonstrates. This means that the teachers with high levels of core behavioral competencies, particularly tend to exhibit stronger teaching performance and more positive work attitudes. Cultivating these behavioral competencies appears to be a key lever for improving overall teacher effectiveness.

As detailed in the table, results focus had the highest mean score of 3.97 (SD=0.41), interpreted as Consistently Demonstrates. Being results-focused is a skill necessary for teachers to thrive in the workplace. Results-focused teachers understand that by prioritizing student mastery, engagement and growth, the desired academic outcomes will follow. They are driven by a commitment to helping each student reach their full potential, maintain a positive, enthusiastic classroom environment that motivates students to take ownership of their learning and reflect regularly on the effectiveness of their teaching seeking out opportunities for professional growth and development.

Moreover, teachers with a strong results focus are able to consistently set and achieve ambitious goals for their students. They are proactive, persistent, and motivated in pursuing their objectives to maximize student learning and performance. These teachers direct their efforts toward accomplishing desired outcomes and are not deterred by obstacles or challenges. This finding is in accordance with the findings reported by Rabotan (2019) who said that a teacher that is results-focused is dedicated to making sure that each student learns as much as they can and realizes their maximum potential. They use a methodical approach to lesson design and delivery, emphasizing the clear explanation of learning objectives, giving students practical chances and feedback, and routinely assessing their techniques to raise student accomplishment.

Furthermore, teamwork also is the highest–rated variable with a mean score of 3.97 (SD=0.39), interpreted as Consistently Demonstrates. Highly competent teachers who work in a team are able to foster a sense of shared responsibility and accountability among their colleagues. They encourage open communication, mutual trust, and a commitment to the team's collective success. Effective teamwork allows teachers to leverage each other's strengths, improve problem-solving, and enhance overall productivity. Teachers who demonstrate strong teamwork abilities can collaborate effectively with colleagues, communicate openly, and contribute positively to the school community. They establish professional learning communities to work together towards shared goals.

Teamwork is an essential strategy for teachers to tackle complex challenges. By sharing their knowledge and perspectives, teachers can better identify early warning signs of student-related problems and intervene more effectively. In the interview conducted by the researcher, the respondents emphasized that relationship with colleagues is crucial to the well-being of teachers and it has a huge impact on how teachers manage their jobs. This result is in conformity with the study of Cruszos (2022) which stated that teachers consistently showed satisfactory level of competencies in areas such as self-management, teamwork and service orientation.

Furthermore, it can also be seen in the table that professionalism and ethics had the lowest mean score of 3.67 (SD=0.42), interpreted as Consistently Demonstrate .In the locale, although there are already a lot of seasoned teachers already, still there is a need for them to be reminded as to the level of professionalism and ethics that they need to display. Consequently, in response, the division office has been doing its best to educate and encourage the teaching personnel to be informed and as much as possible, find the initiative to review the standard by revisiting the legal bases such as the DepEd orders.

Professionalism and strong ethical standards are considered essential for teachers to be effective in their roles. They serve as the foundation for all other teaching competencies. When teachers demonstrate integrity, respect, and service to others, they reinforce these values in their students. When teachers model these qualities, it promotes equality, non-discrimination, and a spirit of teamwork among all staff. Thus, it is crucial to maintain a high ethical standards helps preserve the reputation and integrity of the teaching profession and the school as a whole.

In a study by Keshmiri et al. (2023), it was clearly stated that professionalism and ethics are important in the teaching profession because teachers are expected to adhere to professional ethics which include commitment to students'' success, maintaining ethical standards, and being role models for their students and colleagues. Moreover, according to the same author, teachers should engage in continuous professional development to improve their skills and maintain their professional standards.

Research Question 2. What is the respondents' level of job satisfaction in terms of work and workplace, supervisor and management, benefits and rewards, recognition, communication and coworker relationship?

Teachers are essential to the success of the education system, so it is vital that they are satisfied with their working conditions in order to perform well and deliver quality education to students. Job satisfaction is closely related to teacher retention, as well as the overall well-being of teachers and their students, school cohesion, and the status of the teaching profession.

Table 8 Distribution of Teachers' Level of Job Satisfaction in terms of Work and Workplace

Indicators	Mean	SD	Description
Doing my work is pleasurable.	4.24	0.72	Agree
Working conditions in my school are comfortable.	4.25	0.68	Agree
Teaching provides me the chance to develop new methods by being part of trainings, webinars, meetings and outreach activities.	4.24	0.74	Agree
The information, tools and resources I need to do my job effectively, have been provided for me.	4.19	0.73	Agree
What is expected of me at work was discussed to me prior to every given task.	4.32	0.72	Agree
Making decisions to solve problems for my clients is encouraged in my workplace	4.22	0.70	Agree
I know how to measure the quality of my work	4.27	0.70	Agree
My workplace is safe and secured.	4.31	0.74	Agree
I would not consider leaving my job for another with greater opportunities for advancement.	4.21	0.77	Agree
My job has high value to the community.	4.40	0.68	Agree
Overall	**4.26**	**0.72**	Agree

Legend:

4.50 – 5.00	Strongly Agree/Very Satisfied	1.50 - 2.49	Disagree/Dissatisfied
3.50 – 4.49	Agree/Satisfied	1.49 below	Strongly Disagree/ Very Dissatisfied
2.50 – 3.49	Neutral/Undecided		

Table 8 shows the distribution of teachers' level of job satisfaction in terms of work and workplace with an overall mean score of 4.26 (SD=0.72) described as Agree and interpreted as Satisfied. When teachers are satisfied in their work and workplace, they are more emotionally adaptive, motivated and successful in their roles. Satisfied teachers are better able to thrive and deliver quality instruction that helps students succeed academically. Also, teachers who are happy in their work and workplace are most likely to go to work every day feeling motivated eventually being productive for the day.

These results confirmed with the study of Hoque (2023), in which workplace was highlighted as more strongly associated with teacher satisfaction compared to background factors, gender, years of experience, and school characteristics. Gomez (2023) also emphasized the substantial impact of workplace conditions on teacher satisfaction, highlighting factors such as administrative support, leadership, student behavior, school atmosphere, and teacher autonomy as crucial determinants of job contentment.

The indicator, the job has a high value to the community, obtained a highest mean score of 4.40 (SD=0.68), described as Agree and interpreted as Satisfied. In the interview part of this study, a good number of teachers narrated that they are happy with the amount of respect they receive from the community. However, there were also other who said that the amount of respect that teachers receive nowadays is way lesser than that years ago. This agrees with the study Fabella (2022), where she opined that Filipino teachers

face significant challenges in terms of social status, professional image and community respect.

Furthermore, the results of this study abide by Spence (2022) when he said that the value of the teaching job in the community is crucial for their role in the society. This value is demonstrated in the teachers' community development, role modeling, holistic and professional development. Results also relates to the study conducted by SEAMEO Innotech (2021) which found that teachers decided to stay to help students and contribute to society. Their passion lies in teaching, and they are proud that teachers are highly respected in their communities.

However, the indicator The information, tools and resources that teachers need to do their jobs effectively, have been provided for them, got the lowest mean score of 4.19 (SD=0.73), described as Agree and interpreted as Satisfied. This suggests that they are still contented despite the disparity of this indicator's mean compared to the rest of the indicators. When teachers are provided with the right mix of curriculum resources, classroom tools, professional development, and financial support, they are empowered to do their jobs more effectively and efficiently. This ultimately leads to higher teacher satisfaction, retention and student outcomes. However, in the study of Baluyos et al. (2019), it was found out that those Filipino teachers face significant challenges in terms of resources, infrastructures and support systems which can impact their ability to effectively teach and contribute to the education system.

Alibang (2023), opined that Filipino teachers, who play an important role in shaping the brains of the country's future, are frequently at the forefront of these daunting challenges. From low salaries to a shortage of resources, these dedicated instructors face a complex web of obstacles that affect not just their teaching methods but also the quality of education for countless children.

Table 9 Distribution of Teachers' Level of Job Satisfaction in terms of Supervisor and Management

Indicators	Mean	SD	Description
The organization where I am in has the right people and skills to do its work.	4.25	0.67	Agree
The organization practices high standards and ethics.	4.26	0.65	Agree
My superior is competent in doing his/her job.	4.31	0.66	Agree
My superior shows interest in my feelings and acknowledge my concerns.	4.21	0.68	Agree
My superior acknowledges my achievements and contribution in the organization.	4.59	0.65	Strongly Agree
My superior shows empathy whenever I have struggles both personally and professionally.	4.29	0.65	Agree

My superior holds me and colleagues accountable for our performance.	4.30	0.64	Agree
My superior is reliable.	4.32	0.70	Agree
The administration in my school communicates its policies well.	4.28	0.72	Agree
There is access to the management whenever the superior does not listen.	3.38	0.67	Neutral
Overall	**4.22**	**0.67**	**Agree**

Legend:

4.50 – 5.00	Strongly Agree/Very Satisfied	1.50 - 2.49	Disagree/Dissatisfied
3.50 – 4.49	Agree/Satisfied	1.49 below	Strongly Disagree/
2.50 – 3.49	Neutral/Undecided		Very Dissatisfied

Table 9 shows the distribution of teachers' level of job satisfaction in terms of supervisor and management with an overall mean of 4.22 (SD=0.67) described as Agree and interpreted as Satisfied. Teachers who feel supported, empowered and respected by their administrators tend to be more satisfied and engaged in their work. When teachers feel their administrators are competent, fair and supportive, it enhances their job satisfaction, motivation and commitment to the school's mission. This in turn leads to higher teacher retention, instructional quality, and ultimately improved student outcomes. This result is supported by the study of Gomez (2023) which said that Filipino teachers in the public schools agree that they are satisfied with the organization's leadership. Moreover, in the study of Fabella, (2022) he found out that the school administrator's leadership behavior was significantly related to the job satisfaction of teachers.

The indicator, My superior acknowledges my achievements and contribution in the organization obtained the highest mean score of 4.59 (SD=0.65), described as Strongly Agree and interpreted as Very Satisfied. This means that the respondents are pleased with the amount of acknowledgment they receive from their immediate superiors. Principals and administrators play a critical role in boosting teacher job satisfaction through their leadership and recognition practices. In the interview part of this study, respondents honestly answered that they feel that the support from school leaders is very minimal and very hard to get. This implies that there are school administrators who are very hard to please. Results are supported by the study of Bona (2022) when she concluded that teachers value recognition from their superiors as a significant factor in job satisfaction. This includes acknowledgment of their work, achievements and contributions to the school.

Moreover, the indicator, access to the management whenever the superior does not listen got the lowest mean of 3.38 (SD=0.67, described as Neutral and interpreted as Undecided. This means that respondents neither agree nor disagree that they have access to the management. The results suggest that clear communication of roles and access protocols, as well as a culture of shared leadership, could help mitigate any uncertainty. However, what usually happens is that teachers have no direct access to the higher-ups, especially when the school principal is influential. Instead of attending to the problem, teachers are often given an implied concept to just keep quiet and let it go or worse, they are told the statement "wait till you become" as a response to their complaints. This is quite alarming because, according to the study of Fabella (2022), school

administrators' leadership behavior was significantly related to the job satisfaction of teachers. This suggests that effective leadership and supervision can positively impact teacher job satisfaction.

In addition, Spence (2022), said that the value of the teaching job in the community is crucial for their role in society. This value is demonstrated in the teachers' community development, role modeling, and holistic and professional development. Research emphasizes the substantial impact of workplace conditions on teacher satisfaction, highlighting factors such as administrative support, leadership, student behavior, school atmosphere, and teacher autonomy as crucial determinants of job contentment. These findings underscore the importance of creating supportive and positive work environments that foster teacher satisfaction and overall well-being. The research findings of Gomez (2023) revealed that teachers' work environments, particularly role clarity, teamwork, and socio-emotional support, are consistently observed.

Table 10 Distribution of Teachers' Level of Job Satisfaction in terms of Benefits and Rewards

Indicators	Mean	SD	Description
There is fair amount of pay for the work I do.	4.11	0.68	Agree
The benefits I receive are satisfying.	4.16	0.68	Agree
Teaching provides me with financial security.	4.20	0.66	Agree
Rewards are given for those who give exemplary work within the organization.	4.12	0.68	Agree
The benefits and rewards offered by my department are competitive compared to other agencies.	4.11	0.72	Agree
The department values and appreciates my contributions as a teacher in terms of benefits and rewards.	4.17	0.65	Agree
The benefits offered by my department adequately meet my needs and expectations.	4.18	0.64	Agree
I am satisfied with the work-life balance that my benefits and rewards allow you to maintain.	4.18	0.69	Agree
I feel satisfied with the retirement and pension plans offered by my department.	4.51	0.69	Strongly Agree
I am satisfied with the health insurance provided by the department.	4.17	0.70	Agree
Overall	**4.19**	**0.68**	**Agree**

Legend:

4.50 – 5.00	Strongly Agree/Very Satisfied	1.50 - 2.49	Disagree/Dissatisfied
3.50 – 4.49	Agree/Satisfied	1.49 below	Strongly Disagree/ Very Dissatisfied
2.50 – 3.49	Neutral/Undecided		

Table 10 shows the distribution of teachers' level of job satisfaction in terms of Benefits and Rewards with an overall mean of 4.19 (SD=0.68) described as Agree and interpreted as Satisfied. This means that rewards and benefits play a significant role in teacher job satisfaction. When teachers feel that their efforts are recognized and rewarded appropriately, it enhances their overall satisfaction and commitment to the profession. Extrinsic rewards like competitive salaries, performance-based bonuses, and benefits like healthcare and retirement plans are important for attracting and retaining

teachers. These tangible rewards provide financial security and stability. However, intrinsic rewards like seeing student growth, making a difference, and opportunities for professional development tend to have a greater impact on long-term teacher satisfaction and motivation.

This result is in conformity with the study of Baluyos et al. (2019), which said and emphasized that job satisfaction is essential for wok performance and found that teachers were highly satisfied with their pay, which contributed to their overall job satisfaction.

As observed in the results, the indicator I feel satisfied with the retirement and pension plans offered by my department got the highest mean of 4.51 (SD=0.69), described as Strongly Agree and interpreted as Very Satisfied. This means that teachers agreed on this statement are highly fulfilled with the retirement benefits offered by the Department of Education. Most public school teachers in the Philippines participate in defined benefit retirement plans provided by the Government Service Insurance System (GSIS), which bases benefits on years of service and final salary. According to Gumiran (2022), teachers are confident in their retirement plans and the retirement benefits that they are offered within the department of education. However, teachers may face financial challenges in retirement, but with proper education about financial planning and utilization of available retirement benefits, they can achieve financial stability and enjoy their retirement.

Additionally, the indicator there is fair amount of pay for the work they do got the lowest mean of 4.11 (SD=0.68) described as Agree and interpreted as Satisfied. This means that the respondents get and receive equitable compensation relative to the effort, skill and time invested in their work. According to Rokeman (2023), when teachers receive benefits and rewards tailored to their individual needs and performance, it can enhance their overall job satisfaction and motivation to excel in their roles.

The indicator, the benefits and rewards offered by the department are competitive compared to other agencies, got the same lowest mean of 4.11 (SD=0.72), described as Agree and interpreted as Satisfied. This means that many teachers feel they are underpaid and under compensated for the amount of work they do. For instance, teachers often work far more hours than they are paid for, with some working 70+ hours per week, similar to investment bankers, but at much lower pay rates. There is a growing wage gap between teachers and other college-educated professionals, with teachers now making 17% less on average. Teachers often have to take on additional part-time jobs to make ends meet, which can lead to burnout and lower commitment to teaching. These results are supported by the study of Viray (2022), which indicates that many teachers firmly disagree with the notion that they are fairly paid, citing factors like long work hours, growing wage gaps, and inadequate compensation structures. This dissatisfaction with pay levels is a major source of frustration and a key driver of teacher shortages and turnover.

Table 11Distribution of Teachers' Level of Job Satisfaction in terms of Recognition

Indicators	Mean	SD	Description
The work I do is appreciated.	4.59	0.73	Strongly Agree
My evaluation provides me with meaningful information about my performance.	4.31	0.72	Agree
The department values and acknowledges professional growth and development.	4.53	0.68	Strongly Agree
The feedback and praise I receive from my colleagues and superiors are satisfying.	4.33	0.68	Agree
The opportunities for public recognition, such as awards or honors, provided by our department are satisfying.	4.52	0.68	Strongly Agree
The department provides adequate opportunities for me to showcase my skills and expertise.	4.27	0.70	Agree
The level of support and encouragement I receive from the department in terms of recognition is satisfying.	4.32	0.68	Agree
I receive fair amount of recognition for the work I do.	4.32	0.69	Agree
The department promotes a culture of recognition and appreciation among its staff members	4.39	0.75	Agree
I am satisfied with the overall recognition and appreciation I receive for my work as a teacher.	4.69	0.64	Strongly Agree
Overall	**4.43**	**0.70**	**Agree**

Legend:

4.50 – 5.00	Strongly Agree/Very Satisfied	1.50 - 2.49	Disagree/Dissatisfied
3.50 – 4.49	Agree/Satisfied	1.49 below	Strongly Disagree/ Very Dissatisfied
2.50 – 3.49	Neutral/Undecided		

Table 11 shows the distribution of teachers' level of job satisfaction in terms of Recognition with an overall mean score of 4.43 (SD=0.70),described as Agree and interpreted as Satisfied. This means that the respondents have positive responses regarding this aspect. In the interview, a good number of respondents revealed that they are satisfied with their teaching job in terms of responsibility, advancement and recognition for a job well done. When teachers feel their efforts are valued and recognized, it boosts their self-esteem, renews their confidence in their teaching abilities, and validates their ideas and expertise. This is related to the study of Movsessian (2019) which illustrated recognition programs can boost a teacher's morale and validate their perceptions among students, parents, and colleagues. It can also renew confidence in teaching and give teachers a sense of pride and satisfaction in their work.

In the same table, the indicator I am satisfied with the overall recognition and appreciation I receive for my work as a teacher got a mean of 4.69 (SD=0.64), described as Strongly Agree and interpreted as Very Satisfied. Also, it means that the respondents are highly satisfied in this aspect. In the locale of this study, teachers who are performing extraordinarily in whatever aspect of their teaching jobs are being rewarded and recognized during the Gabi ng Parangal which is a division-wide recognition program. Results confirmed the study of Andrews (2021), which indicated the significance of recognition in boosting teacher morale, motivation and satisfaction. Moreover, teachers responded in the interview part that they are satisfied with the recognition they receive for

a job well done and that recognition can have a profound impact on teachers, making them feel valued and appreciated.

However, the indicator, The department provides adequate opportunities for me to showcase my skills and expertise, obtained the lowest mean score of 4.27 (SD=0.70), described as Agree and interpreted as Satisfied. This indicator is about the limited opportunities offered to teachers for them to showcase their skills. In the locale of the study, there are indeed very limited avenues for teachers to showcase their skills especially in schools with many teachers. In large schools, it is very difficult to ensure that you will be chosen to represent the institution in contests or even train or coach students to join contests. Likewise, in a large school, it is difficult for teachers to have their voices heard and receive personalized feedback on their progress. In addition, the overcrowding of facilities and resources in larger schools can also constrain teachers' ability to utilize specialized spaces like ICT labs for enrichment. This result is similar to the study of Garcia (2019) which highlighted how limited opportunities for collaboration, influence over curriculum and professional development can hinder teachers' ability to share their expertise and shape their own growth.

Furthermore, recognition plays a crucial role in boosting employee morale, increasing loyalty, and fostering a sense of connection to the organization. When employees feel valued and appreciated for their contributions, they are more likely to be engaged, motivated, and committed to their work, leading to higher levels of job satisfaction and performance. Movsessian (2019) also illustrated recognition programs can boost a teacher's morale and validate their perceptions among students, parents, and colleagues. It can also renew confidence in teaching and give teachers a sense of pride and satisfaction in their work.

Table 12 Distribution of Teachers' Level of Job Satisfaction in terms of Communication

Indicators	Mean	SD	Description
The level of communication is good within the organization.	3.32	0.65	Neutral
As it plans for the future, my department asks for my ideas.	4.27	0.68	Agree
I have opportunity to give input on decisions affecting my work.	4.27	0.69	Agree
I know how my department measures its success.	4.28	0.65	Agree
The department values and prioritizes effective communication as an essential aspect of teaching and learning.	4.29	0.65	Agree
I am satisfied with the effectiveness of communication tools and technologies used in our organization.	4.27	0.65	Agree
The organization encourages open and transparent communication among all stakeholders.	4.52	0.62	Strongly Agree
I am satisfied with the frequency and quality of communication between me and my students' parents or guardians.	4.29	0.65	Agree
My department provides adequate channels for me to express our opinions and concern.	4.20	0.68	Agree
I often receive timely and relevant information from our department regarding important updates or changes.	4.27	0.66	Agree

Overall	**4.20**	**0.66**	**Agree**

Legend:

4.50 – 5.00	Strongly Agree/Very Satisfied	1.50 - 2.49	Disagree/Dissatisfied
3.50 – 4.49	Agree/Satisfied	1.49 below	Strongly Disagree/
2.50 – 3.49	Neutral/Undecided		Very Dissatisfied

Table 12 shows the distribution of teachers' level of job satisfaction in terms of Communication with an overall mean of 4.20 (SD=0.66) described as Agree and interpreted as Satisfied. This means that the respondents acknowledged the importance of open communication within the organization in order to achieve teachers' satisfaction. Open and effective communication is widely recognized as critical for the success of educational institutions and the satisfaction of teachers. When communication channels are clear and transparent, it enables teachers to better understand the school's vision, goals, and expectations.

Moreover, open communication fosters a sense of trust, collaboration, and shared ownership over the school's direction. Teacher respondents also recognize that open, transparent, and collaborative communication is essential for creating a positive, productive work environment where they can thrive. Strong communication enables teachers to be more effective, engaged, and committed to their schools. This confirmed the results of the study of Nadeem (2020) which reiterated that effective communication within the school organization can lead to a healthy environment and healthy relations between principals and teachers.

It is clearly evident that the indicator The organization encourages open and transparent communication among all stakeholders obtained the highest mean score of 4.52 (SD=0.62), described as Strongly Agree and interpreted as Satisfied. This means that in terms of being open and transparent in communicating with all stakeholders, the respondents agree and are satisfied with how it is done. This can be related to the strengthening of a School-Based Management system that allows all stakeholders to get involved in the whereabouts of the school. The results of this study conformed with the study of Chiloane (2023). He opined that regular and open communication fosters a culture of accountability by keeping stakeholders informed of progress, achievements, and challenges, promoting a sense of responsibility among team members and stakeholders.

Moreover, the indicator the level of communication is good within the organization described as neutral got the lowest mean of 3.32 (SD=0.65), described as Neutral and interpreted as Undecided. Contextually, there are workplaces that have factions between the members of the teaching staff which might be one of the factors of a not-so-good level of communication within the organization. Accordingly, these factions have become common already in organizations due to individual differences. Divisions or factions among teachers can undermine positive conditions. When teachers are not aligned or working together effectively, it can lead to frustration, resentment, and a dysfunctional work environment.

Indeed, disunity and lack of collaboration among teachers can have significant downsides for schools. Effective leadership and professional supports are keys to promoting a cohesive, productive teaching staff. These results related with the study of Kheswa (2020), which emphasized that when there is a lack of effective communication, it contributes to a deterioration of the culture of learning and teaching because educators feel deprived of opportunities to voice their opinions and concerns. This leads to low morale, conflicts, and job dissatisfaction among teachers.

Similarly, miscommunication is preventing the appropriate flow of information across departments, forcing teachers to repeat their work due to misinformation and work unpaid overtime. As a result, instructors wind up undertaking jobs unrelated to their profession; some of them end up doing more work than others, thus battling with the long working hours connected with this circumstance, and are left in states of loss, hurting their trust in the leadership team (Tannous, 2021).

Table 13 Distribution of Teachers' Level of Job Satisfaction in terms of Coworker Relationship

Indicators	Mean	SD	Description
There is an open, honest and respectful communication between co-workers.	4.07	0.69	Agree
Teachers in my school collaborate, share ideas, and support each other's work and projects.	4.04	0.62	Agree
There is effective teamwork and cooperation for a common goal in our school.	4.15	0.70	Agree
I ensure a mutual trust and confidence in each other's abilities and intentions.	4.03	0.66	Agree
There is respect for each other's opinions, contributions and boundaries.	4.10	0.65	Agree
There is understanding and empathy towards colleagues' perspectives, feelings, and challenges.	4.10	0.61	Agree
I help addressing conflicts, disagreements and find mutually acceptable solutions.	4.10	0.62	Agree
I acknowledge and appreciate and appreciate each other's efforts and contributions.	4.15	0.69	Agree
There are positive and friendly interactions, both in professional and informal settings in our school.	4.14	0.70	Agree
I offer and receive support during challenging times, both personally and professionally	4.21	0.66	Agree
Overall	**4.11**	**0.66**	**Agree**

Legend:

4.50 – 5.00	Strongly Agree/Very Satisfied	1.50 - 2.49	Disagree/Dissatisfied
3.50 – 4.49	Agree/Satisfied	1.49 below	Strongly Disagree/ Very Dissatisfied
2.50 – 3.49	Neutral/Undecided		

Table 1 shows the distribution of teachers' level of job satisfaction in terms of Coworker Relationship with an overall mean of 4.11 (SD=.66), described as Agree

and interpreted as Satisfied. This means that the respondents are usually contented and happy with the level of their relationship with their colleagues. Teachers who experience these positive collegial relationships are more likely to feel engaged, motivated, and able to cope with stress. It reduces feelings of isolation and burnout. Collaborative practices like peer mentoring, joint lesson planning, and sharing best practices allow teachers to learn from and support each other, further boosting satisfaction. This is supported by the study of Ares (2022) on the relationship between colleagues and job satisfaction among Filipino teachers, where she found that teachers who have a high level of relationship with colleagues are more likely to be satisfied with their jobs.

As seen in the table, the indicator I offer and receive support during challenging times, both personally and professionally, got the highest mean of 4.21 (SD=0.66), described as Agree and interpreted as Satisfied. This means that respondents agree and that they are content with how they give and receive support from their colleagues. In the interview portion, the researcher found out that teachers' relationship and support with their colleagues influence their job satisfaction levels. This support is a resource for teachers and has a positive influence on their performance. This result is supported by the study of Buonomo (2022). In his study, he concluded that teachers' perceived stress is affected by frequent cooperative activities with colleagues, which can lead to more giving and receiving of support at the workplace.

However, the indicator, I ensure a mutual trust and confidence in each other's abilities and intentions, got the lowest mean of 4.03 (SD=0.66), described as Agree and interpreted as Satisfied. This means that respondents somehow agree to have trust and confidence with their colleagues and that they are satisfied with how they interact with their coworkers on this aspect. Open and transparent communication is essential for building trust between teachers. They need to feel comfortable sharing ideas, concerns, and feedback without fear of judgment. Acknowledging each other's strengths, celebrating successes, and providing constructive feedback help teachers develop confidence in their colleagues' abilities.

Further, teachers need to believe their colleagues have the best interests of students and the school at heart. Demonstrating a shared commitment to the school's mission and values is key. Also, avoiding gossip, undermining behaviors, and protecting each other's reputations nurtures an environment of mutual trust and respect. Research suggests that teachers trust each other more than they trust experts. Within the school, transparent decision-making processes and equitable distribution of workloads can reassure teachers that the school is operating with fairness and integrity. Results confirmed the study of Childress (2019) which said that teachers trust for each other is attributed to the fact that teachers have no choice but to rely on each other due to the lack of support from schools and districts in providing necessary curriculum resources.

Table 14 Summary of Teachers' Level of Job Satisfaction

Variables	Mean	SD	Interpretation
Work and Workplace	4.26	0.72	Satisfied
Supervisor and Management	4.22	0.67	Satisfied
Benefits and Rewards	4.19	0.68	Satisfied
Recognition	4.43	0.70	Satisfied
Communication	4.20	0.66	Satisfied
Co-worker Relationship	4.11	0.66	Satisfied
Overall	**4.24**	**0.68**	**Satisfied**

Legend:

4.50 – 5.00	Strongly Agree/Very Satisfied	1.50 - 2.49	Disagree/Dissatisfied
3.50 – 4.49	Agree/Satisfied	1.49 below	Strongly Disagree/
2.50 – 3.49	Neutral/Undecided		Very Dissatisfied

Table 14 displays the summary of teachers' level of job satisfaction with an overall mean of 4.24 (SD=0.68), interpreted as Satisfied. Improving overall teacher job satisfaction has been shown to lead to better student outcomes, higher teacher retention rates, and a more positive school environment. It is a key priority for education systems globally. Ensuring high levels of overall job satisfaction among teachers is essential for attracting, developing and retaining talented educators who can deliver quality instruction and support student achievement. Addressing the key drivers of teacher satisfaction should be a top priority. Results contradicted the survey conducted by Merrimack College and the EdWeek Research Center (2022) ,revealed that only 12% of teachers reported feeling very satisfied with their jobs, marking a significant decline from previous years. Factors contributing to this dissatisfaction include overwork, low pay, lack of respect, and challenging working conditions, leading to a sense of disillusionment among teachers.

Meanwhile, the highest-rated aspect of job satisfaction is recognition with a mean score of 4. 43 (SD=0.70), interpreted as Satisfied .This means that there is show of recognition in schools. It includes providing positive feedback on their teaching performance, celebrating teachers' successes and milestones publicly, nominating teachers for awards and honors, empowering teachers to take on leadership roles and fostering a culture of appreciation and respect in the school community. In addition, the respondents opined in the interview that they receive high level of respect and recognition from the general public which boosts their self-esteem thus leading to positive results in terms of teaching and learning.

In a study by Hodges (2024), results show that recognition needs to be individualized and authentic. Ideally, administrators should create what we call a "recognition-rich environment" with praise coming from all directions not just during teachers' day. In addition, consistent recognition for doing good work has a direct influence on the key performance measures that we use to evaluate our schools.

Teachers who receive regular recognition and praise are more productive, engaged at work, and more likely to stay with their school.

On the contrary, the lowest-rated variable of job satisfaction is coworker relationship with a mean score of 4.11 (SD=0.66), interpreted as Satisfied. In this aspect, there is a need to increase this level given the importance of having good relationship among teachers in an institution. By consistently practicing relationship-building behaviors, teachers can strengthen their bonds with coworkers, enhance their overall job satisfaction, and create a more positive, collaborative school environment. These behaviors include fostering open and clear communication, building trust and respect, developing collaborative problem-solving skills, cultivating a spirit of camaraderie and kindness and seeking opportunities to be helpful and forgiving. Strong coworker relationships are a key foundation for teacher well-being and effectiveness. As mentioned in the study of Candra (2023), relationship with colleagues improve mental health by reducing depression, increase job satisfaction essential for encouraging retention, and increase engagement and teamwork.

Research Question 3. Is there a significant relationship between the teachers' perceived level of core behavioral competency and their job satisfaction?

This research explores the significant relationship between the level of core behavioral competencies and teachers' job satisfaction. Developing core behavioral competencies like results focus, teamwork, and service orientation leads to better job performance and outcomes. When teachers consistently demonstrate these competencies, they are able to set and achieve ambitious goals, collaborate effectively with colleagues, and provide high-quality support to students. By analyzing the impact of these competencies on job satisfaction, the study seeks to determine how effectively these competencies can help in improving the level of fulfillment of the teachers while they are doing their jobs, leading to better retention and lower turnover.

Table 15 Results of the Test on Relationship between the Core Behavioral Competencies and Teachers' Job Satisfaction

Core Behavioral Competencies	**Teachers' Job Satisfaction**						
	Work and Workplace	Supervisor and Management	Benefits and Rewards	Recognition	Communication	Co-worker Relationship	Overall

Legend: S- Significant NS-Not Significant

r-values	Description
0.00-.09	No Linear Relationship (NLR)
0.50-0.69	Moderately Positive Relationship (MPR)
1.00	Perfect Linear Relationship (PLR)

r-values	Description
0.10-0.49	Weak Positive Relationship (WPR)
0.70-0.99	Strong Positive Relationship (SPR)

Table 15 shows the results of the test of relationships among the variables of core behavioral competencies, which revealed that self-management has a significant relationship with job satisfaction. Despite the fact that it has a weak positive relationship with an r-value of 0.281, such is enough to display significance as seen in

its p-value which is .032($p<.05$). This result suggests that this relationship is relevant and meaningful. Self-management skills could potentially enable teachers to better navigate their workload, collaborate effectively, and take advantage of growth opportunities, eventually leading to job satisfaction. This is supported by the results of the study conducted by Raebum (2023) which details the positive significant relationship between self-management and job satisfaction among their employees. The study also highlighted that self-management indicators such as adaptability, initiative and achievement orientation were strongly correlated with job satisfaction.

In self-management, only coworker relationship is not statistically associated with an r-value of .067 (p=.135). It is possible that self-management is more closely linked to individual performance and productivity rather than the relational aspects of the workplace. Strong self-management may enable teachers to be effective but not necessarily drive stronger coworker bonds. Professionalism and Ethics, on the other hand, is associated with work and workplace (r=.490; p=.024), supervisor and management (r=.238;p=.031), recognition (r=.316; p=.025) and coworker relationship (r=.422; p=.028). Additionally, Results-focus is statistically correlated with superior and management (r=.380; p=.041), recognition (r=.122; p=.001) and communication (r=.374; p=.037). Teamwork is also linked with work and workplace (r=.229;p=.022), recognition (r=.306;p=.040), communication (r=.237; p=.012), and co-worker relationship (r=.461; p=.023). In terms of service orientation, it has a significant positive relationship with work and workplace (r=.269; p=.020), superior and management (r=.396; p=.030), benefits and rewards (r=.330; p=.007), and recognition (r=.407; p=.080). Finally for innovation, it only has an interconnection with recognition with an r-value of .312 and p-value of .009.

Further, these findings have important implications for teacher retention. They highlight the need to develop the core behavioral competencies of the teachers to ensure that they are fulfilled in their jobs. Feeling empowered, supported by colleagues, and making a positive impact on students all contribute to higher job satisfaction. This in turn leads to better retention and lower turnover.

The r-values of the variables such as recognition and the variables of core behavioral competencies indicate a positive correlation suggesting that recognizing teachers' efforts can help in improving core behavioral competencies. The r-value which is 0.281 (p=0.02) indicates that this correlation is statistically significant, which means that the probability that this result is due to chance is nearly zero. Therefore, the data intensely propose that in general, the level of core behavioral competencies of teachers is associated with job satisfaction level.

The result confirms the same relationship established by previous researchers (Rataj, 2022) on the positive relationship between core behavioral competencies and teachers' job satisfaction. Additionally, Baluyos (2019) suggests that behavioral competencies are strong predictors of job satisfaction. Employees who possess certain behavioral competencies are more likely to be satisfied with their jobs. Hence, in order to ensure that the job satisfaction of the teachers is high, their core behavioral competencies should be considered.

In conclusion, the data from Table 15 provide valuable insights into the relationship between core behavioral competencies and the variables of teachers' job satisfaction. The significant correlations observed in the self-management and job satisfaction variables such as work and workplace, supervisor and management, benefits and rewards, recognition and communication indicate that these aspects of teachers' job satisfaction are strongly influenced the way teachers manage themselves. Specifically, professionalism and ethics positively impact educators' satisfaction in terms of work and workplace, supervisor and management, recognition and co-worker relationships. It is also noticeable that core behavioral competencies have a positive influence on job satisfaction in terms of recognition. These findings suggest that investing in targeted development initiatives on behavioral competencies can lead to tangible improvements in these areas, ultimately enhancing the overall quality of job satisfaction. However, the lack of significant correlations in the innovation component underscores the need for further investigation focused on this area.

Research Question 4. Based on the findings of the study, what Teacher Competency Development Plan can be designed?

Enhancing teachers' core behavioral competencies is critical for improving job performance, satisfaction, school culture, and student outcomes. It requires a multi-pronged approach of training, support, and creating an environment that enables teachers to thrive. Prioritizing teacher competencies should be a key focus for school leaders and districts. To guarantee fulfillment and satisfaction, effective competency development program with combined techniques and activities is needed. In the end, this program supports the development of a culture of a strong school culture and better student outcomes.

A THREE-YEAR TEACHER COMPETENCY DEVELOPMENT PLAN ON CORE BEHAVIORAL SKILLS AND JOB SATISFACTION

Introduction

A three-year teacher competency development plan focusing on core behavioral competencies and job satisfaction is crucial for teacher retention. This plan offers structured and sustained opportunities for teachers to enhance their behavioral skills to achieve job fulfillment. Through targeted core competency development and job satisfaction programs, faculty members can refine their skills in professionalism and, ethics and co-worker relationships.

Throughout this three-year plan, it is crucial to secure support from school administrators, allocate sufficient resources for professional development, continuously monitor progress and adjust the plan as needed and celebrate successes and share best practices across the school community. By grounding the plan's content in the latest education research, providing engaging learning opportunities, and implementing feedback loops for continuous improvement, the plan can effectively address the diverse needs of teachers and enhance their job satisfaction levels. Ultimately, investing in the development of core competencies of educators and prioritizing their well-being and fulfillment through a

comprehensive faculty development plan can foster a culture of innovation, collaboration, and lifelong learning within educational institution.

Rationale

The Teacher Competency Development Plan is crafted in order to address the issues of teacher retention due to job dissatisfaction. Understanding the factors that contribute to teachers' job satisfaction, the plan aims to elevate and advance the teachers' skills and competencies in professionalism and ethics and co-worker relationships.

General Objectives

This teacher competency development plan enables the teachers to:

1. equipped with the knowledge, skills, and dispositions that display professionalism and ethics;
2. develop the ability to cultivate collaborative, supportive relationships with colleagues; and
3. cultivate a positive, supportive work environment that empowers teachers, promotes their well-being, and fosters job satisfaction and retention.

School head, teachers, administrator and resource speakers	MOOE PTA Fund	₱20,000.00	*Establishment Teacher Resource Group *Crafted Program Matrix for the conduct of annual relationship assessment and recognition.

DISCUSSION

Research question 1 highlights the respondents' core behavioral competencies in terms of self-management, professionalism and ethics, results-focus, teamwork, service orientation and innovation. The results reveal that the respondents consistently demonstrate their self-management skills in their teaching jobs specifically in setting personal goals and directions, needs and development. Also, a noteworthy commitment to teaching is evident, with the majority of teachers demonstrating the values and behavior enshrined in the Norms and Conduct and Ethical Standards for public officials and employees (R.A.6713). Moreover, the teaching workforce is found to achieve results with optimal use of time and resources most of the time. Furthermore, in terms of teamwork, the teachers were found to have applied negotiation principles in arriving at win-win agreements, ensuring peace and harmony in the workplace. Also, teachers develop and adopt service improvement programs through simplified procedures that will further enhance service delivery as part of their service orientation. Finally, the majority of teachers express positive responses in promoting a creative climate and inspiring co-workers to develop original ideas or solutions.

Generally, research question 2 outlines the findings on teachers' job satisfaction in areas such as work and workplace, supervisor and management, benefits and rewards, recognition, communication and co-worker relationship. Teachers are contented in their work and workplace, with mean scores ranging from 4.19 to 4.40, all categorized as "Satisfied." In supervisor and management, they feel satisfied in their superior who acknowledges their achievements and contribution in the organization. In benefits and rewards, they feel satisfied with the retirement and pension plans offered by the department. Teachers are also satisfied with the overall recognition and appreciation they receive for their work as a teacher. In communication, teachers are highly satisfied when the organization encourages open and transparent communication among all of its stakeholders. Finally, in terms of co-worker relationships, they are satisfied whenever they offer and receive support during challenging times, both personally and professionally.

Further, in research question 3, the significant relationship between core behavioral competencies and teachers' job satisfaction is tested at 0.01 level. The results highlight that a significant and weak positive relationship exists between core behavioral competencies and teachers' job satisfaction, with an r-value of .281 and a p-value of .032. This indicates that as the self-management improves, there is a corresponding improvement in teachers' job satisfaction. The statistically significant p-value suggests that this relationship is highly unlikely to be due to chance. Therefore, the data strongly support the concept that higher core behavioral competencies would yield a better job satisfaction level.

Conclusions

From the findings and discussions outlined, the following conclusions are drawn:

The core behavioral competencies of teachers within the Division of Valencia City demonstrate commendable goal-setting skills, consistently showcasing the values and behavior based on standards, constantly achieving results efficiently, and guaranteeing the use of negotiation principles in whatever circumstances. Moreover, teachers yield to simplifying procedures to enhance service delivery, promote a creative climate and inspire co-workers to develop original ideas or solutions.

The assessment of teachers' job satisfaction reveals a consistent satisfied response across various areas, which could significantly contribute to elevating teacher retention in the field and fostering a culture of working with fulfillment within educational institutions. However, while they excel in some areas, there is a room to improve the satisfaction levels of teachers in other parts by continuously studying the different factors that warrant a higher level of fulfillment.

The significant relationship observed between core behavioral competencies and teachers' job satisfaction emphasizes the vital part of a high level of core competence in enhancing the teacher's level of fulfillment in his/her job. Therefore, investing in strategies

to reinforce the development of these core behavioral competencies can be contribute in promoting a joyful, contented and fulfilled teaching force whose influence transcends not only inside the classroom but to the whole community.

Recommendations

Based on the relevant findings and conclusions drawn, this study proposed the following recommendations:

1. The Department of Education may implement programs to revisit the standards of professionalism and ethics. Additionally, they could plan support mechanisms and schemes to focus on requiring aspiring teachers to demonstrate proficiency in the professional standards before earning certification as well as providing mentoring and induction support for new teachers to help them develop as professionals.
2. The teachers could grab opportunities to enhance coworker relationships such as fostering open and clear communication, building trust and respect, cultivate a sense of camaraderie and kindness and seek opportunities to be a mentor to a colleague. These could be achieved through active participation in team building activates and other collaborative endeavors.
3. The Division of Valencia may facilitate a supportive environment not only for teachers' professional growth but also for teachers' well-being. They may initiate development programs that aim to develop core behavioral skills to promote job fulfillment and eventually address issues on teacher retention.
4. The schools in the Division of Valencia City may opt to adopt the teacher competency development plan designed in this study in order to ensure that teachers are satisfied across areas of their teaching job. They may use this comprehensive approach to develop the core behavioral competencies that are essential for their job satisfaction, effectiveness, and the overall success of the school.

Compliance with Ethical Standards

Before starting the study, the researcher submitted the manuscript for ethics review and earned clearance from the office of the Graduate Studies spearheaded by the research coordinator. After which a permit letter to conduct the study signed by the dean was given to the researcher. The proposal was then submitted to the Office of the Schools Division of Valencia City for approval. It was important to emphasize that selected participants and those who chose to participate for any reason participated voluntarily, without any coercion or intimidation. Respondents reserve the right to refrain from answering any questions if they feel uncomfortable.

All respondents received an information letter explaining the purpose, procedures, risks, and benefits of the study and providing the details necessary to make an informed decision to participate. These communications explicitly stated that all information

collected during the study was treated strictly anonymously and no individual names be mentioned. Additionally, respondents were asked to sign a consent form confirming their voluntary participation.

After the study was completed, all respondents had access to the study results. All completed questionnaires were stored securely and access to the data was restricted to researchers and their advisors only. It was very important to emphasize that no physical, emotional, or mental harm can caused to the participants throughout the research process.

The researcher worked with integrity, which included accurately reporting data and results, avoiding fabrication or falsification, and being transparent about methods and findings.

Acknowledgments

Heartfelt gratitude is extended to the following individuals and institutions who have contributed to the development and successful completion of the research proposal.

Dr. Braziel L. Ongcachuy, the Dean of the School of Graduate and Professional Studies, for her unswerving responsiveness and unceasing encouragement;

Dr. Gina F. Labitad, the dissertation adviser, for her consistent support, invaluable suggestions, and steadfast professional guidance and motivation especially during those times when the researcher is on the verge of giving up already. Her dedication to guiding the researcher was the driving force that kept her on track;

Dr. Gerlinda G. Corpuz, together with the rest of the panel members, for their intensive evaluation, constructive opinions, and insightful suggestions which contributed to the formation of a relevant research endeavor;

The School of Graduate and Professional Studies staff, with a special mention to Mr. Verge Samson, is recognized for their ongoing support and assistance; and

To God Almighty for providing everything needed for the success of this endeavor.

CULTIVATING CLIMATE CHANGE CONSCIOUSNESS: ASSESSING TEACHERS' AWARENESS AND MITIGATION PRACTICES IN ADDRESSING CLIMATE CHANGE

Sherylene S. Reyes, Bryan DC. Gabriel, PhD

Graduate School Department, Bulacan Agricultural State College,
San Ildefonso, Bulacan, Philippines

https://doi.org/10.5281/zenodo.13329221

ABSTRACT

The purpose of this study was to analyze the awareness level of middle school (JHS) and high school (SHS) teachers on climate change and climate change mitigation using descriptive and purposive sampling methods. A 5-point Likert scale was used to collect data. The survey revealed that there are more female than male and more Junior High School Teachers than Senior High School Teachers that are respondents of this study. It showed that respondents are aware on the causes of climate change like greenhouse gases, fossil fuels, and activities that is related to industrial field, but they are not familiar with wind energy and dairy products as contributor to the climate change. The different ways to reduce climate change are walking, cycling, and reducing food waste, while taking the trains instead of flying was not common to the respondents. But as class type is concerned, Junior High School Teachers and Senior High School Teachers does not show a significant difference on the awareness of respondents about climate change. The findings highlight the importance of professional development programs, climate change integration on curriculum, and collaboration activities that will promote climate change education and development of climate change strategies that teachers can be used in their teaching.

Keywords: *Climate change, Awareness, Mitigation, Sequential-explanatory, Earth and life Science*

INTRODUCTION

Climate change has been a big challenge for most of the countries especially for the Philippines. Based on the World Risk Report in 2017, the Philippines place as the third most vulnerable country to climate change. It causes massive problem such as GDP annual losses, continuous changes in rainfall patterns and distribution, droughts, threats to biodiversity and food security, rise of sea level, risks in public heath, and risks on vulnerable groups such as women and indigenous people (NICCDIES, 2024).

Climate change can cause the GDP loss of the Philippines up to 6% by 2100. According to the Asian Development Bank on the economics about climate change, the country's GDP can lose 6% annually if climate change will be disregarded. Aside from the GDP loss, major rainfall patterns and distributions changes can affect the country. On the report of Philippine Atmospheric Geophysical and Astronomical Services (PAGASA) last 2011, the rainfall in the country may decrease in the year 2020 except from Luzon. While in terms of heavy rainfall, the number of days is expected to be much higher with the global warming by the year 2020 and 2050 (NICCDIES, 2024).

On the Executive Brief No. 2018-01, in line with the ecosystem of the Philippines, climate change has a big impact on the grassland and coral reefs. It is estimated that 1 million hectares of grassland can be highly affected by the changes in the future. These grasslands are prone to fires especially during dryness and less rainfall during summer months. 98% of the coral reefs are nearly extinct and may die by 2050, based on the 2016 Low Carbon Monitor Report. This will continue if the global warming trends will not be ended. The fish catch may also be affected that can cause a decrease by almost 50% compared to the levels on the year 2001-2010. It just shows that climate change has a big impact on the ecosystem. Addition to this, food supply is also affected by the climate change. A decrease of 10% for each 1 degree Celsius in growing-season minimum temperature in the dry season.

Based on the Climate Change Commission (2010), the National Framework Strategy on Climate Change for the year 2010-2022 is crafted to ensure and strengthen the adaptation of the natural environment and human communities to the changes in climate. It highlighted the critical aspect of adaptation meant to be translated to all governments. The Philippine Climate Change Scenarios for year 2020 and 2050 is also projected in this framework, the annual mean temperature, annual mean rainfall, and sea level rise are discussed that shows the possible extreme events that might happen.

What are the findings that might help in understanding this climate change? As discussed on the 5th Intergovernmental Panel on Climate Change (IPCC), there are three findings on climate change; "*1.) Human influence on the climate system is clear; 2.)anthropogenic emission of greenhouses are the highest in history; and 3.)recent climate changes have impact on human and natural system".* The Philippines is among the most top country that is affected by the climate change, that aside from the natural causes, human-work activities also contributed to climate change according to Dr. Alcala of Siliman University.

The use of fossil fuels, deforestations, and increase productivity of greenhouse gases such as burning of oil, gas, and coal are all human-made.

To lessen the contribution of the humans in climate change, there are still responses that needs action by individuals and communities such as changes in behavior, actions through the initiatives of local governments, national government agencies through national policies and programs (Alcala, n.d.).

The purpose of this study is to assess the level of awareness and mitigation practices of the Junior High School (JHS) and Senior High School teachers that helps them in relaying this knowledge to their students that might help in contributing to the solution on reducing the human-made cause of climate change.

Research Questions

This study aims to assess the level of awareness and mitigation practices of Junior High School Teachers and Senior High School Teachers on climate change.

Specifically, this sought to answer the following questions:

1. How can the profile of the respondents of the teachers be described in terms of:
    a. Sex; and
    b. Class type?
2. What is the level of awareness among Junior High School and Senior High School Science Teachers regarding climate change?
3. To what extent are Junior High School and Senior High School Science Teachers knowledgeable about various mitigation practices for climate change?
4. Is there a significant difference in the level of awareness regarding climate change when groups are categorized by sex?
5. Is there a significant difference in knowledge on mitigation practices for climate change when groups are categorized by sex?
6. Is there a significant difference in the level of awareness regarding climate change when groups are categorized by class type?
7. Is there a significant difference in knowledge on mitigation practices for climate change when groups are categorized by class type?

METHODOLOGY

The respondents of this study will be coming from the Junior High School and Senior High School level of Partida National High School located at Partida, San Miguel, Bulacan. Purposive sampling method, also known as selective sampling, a non-probability sampling method. This type of sampling method is better for matching sample to the aims and objectives of the research, hence improving the accuracy of the study and the reliability of the data and the results. The use of purposive sampling is one way to select

respondents who are believed to provide appropriate and useful information (Campbell et.al., 2020). Furthermore, based on Crossman (2020), a purposive sampling is a non-probability sample that is selected based on characteristics of a population and the objective of the study. The total respondents of the study are forty-seven (47) teachers that are currently teaching in Partida National High School at Partida, San Miguel, Bulacan.

The data gathering procedure encompasses different steps to ensure that the collection of data will be accurate and reliable. This procedure involved three main stages: the preparation of the questionnaire, the pilot testing, and the administration of the questionnaire. The first procedure involved the reviewing of the original questionnaire to ensure that the content is relevant and clear for the current research study. This should be aligned to the demographic and specific objectives of the research. Afterwards, before the administration of the questionnaire, pilot testing for the adapted questionnaire should be done with small group of participants or ten (10) non-participating individuals who are engaged in the topic of climate change. This step will ensure that unnecessary data will be identified, and adjustments can be made based on the feedback, it will ensure that the questions will effectively measure the intended objectives. Finally, the instrument will be distributed to the target respondents, ensuring proper systematic procedures and ensured the collection of high-quality and dependable data for subsequent analysis and interpretation. The administration of the questionnaire involved several steps that needs to be taken to ensure the validity and reliability of data. The respondents should be informed about the covered topics, purpose of the study, data collection process, and the handling of information. Data security, storage, transfer, and destruction should be discussed to ensure the data will be kept confidential and secure. Finally, the questionnaire can be distributed. This questionnaire should be completed by the respondents. They should be given enough time to complete it, and the researcher must be available in time of queries and clarifications on the questionnaire.

This survey questionnaire will act as instrument for the collection of data. The research instrument that will be utilized is adapted from the study of Ratinen (2021) with the title “Students’ Knowledge of Climate Change, Mitigation and Adaptation in the Context of Constructive Hope”. This questionnaire aims to know the students’ understanding of climate change, their knowledge about mitigation and adaptation strategies, and their whole sense of hope about climate action. The instrument uses two (2) parts; the part one tackled the “climate change knowledge”, and the second part is the “climate change mitigation knowledge. These two parts of the instrument uses a 5-point Likert scale with the alternative answers: Strongly disagree-1, Disagree-2, Neither disagree nor agree- 3, Agree- 4, and Strongly Agree- 5. The first part of the instrument is composed of fourteen (14) questions that tackles the climate change knowledge of the respondents. These questions were validated with the use of Cronbach’s Alpha with a result of 0.86. Second part that talks about the climate change mitigation knowledge is composed of ten (10) questions that uses the same alternative answers. The Cronbach’s alpha for these items is 0.78. Analysis of data will be performed with the use of appropriate statistical tool after gathering the data. With the use of pretest, posttest, and retention test, the researcher will employ statistical analysis to examine the quantitative data. Both descriptive and

inferential statistic will be utilized to check and confirm the hypothesis of the study. To provide a clear summary of data characteristics for the variables such as sex and class type, frequency and percentage will be used to identify and interpret the profile of the respondents. While weighted mean will be used to measure the level of awareness of the teachers in understanding climate change. For the inferential statistics, to analyze the differences between the independent and dependent variables, Independent Sample T-test will be utilized. Using this tool, the differences in implementation practices based on sex and class type will be identified.

RESULTS

This study assesses the level of awareness and mitigation practices of Junior High School Teachers and Senior High School Teachers on climate change. The instrument uses two (2) parts; the part one tackled the “climate change knowledge”, and the second part is the “climate change mitigation knowledge. These two parts of the instrument uses a 5-point likert scale with the alternative answers: Strongly disagree-1, Disagree-2, Neither disagree nor agree- 3, Agree- 4, and Strongly Agree- 5.

Table 2.

Description of Demographic Profile of the Respondents in terms of Sex

Sex	Number of Respondents	Percentage (%)
Female	34	77.27%
Male	10	22.73%
TOTAL	44	100.00%

Table 2 presents the demographic profile of the respondents in terms of sex. It can be seen from the table that majority or 77.27% of the respondents are females and the remaining 10 or 22.73% are males.

Results of the analysis imply that respondents (Junior High School and Senior High School Teachers) are dominated by females.

Table 3.

Description of Demographic Profile of the Respondents in terms of Class Type

Class Type	Number of Respondents	Percentage (%)
Junior High School	35	79.55 %
Senior High School	9	20.45 %
TOTAL	44	100.00%

The data in table 3 indicates that a significant majority of the respondents, 35 out of 44, or 79.55%, are Junior High School teachers. In contrast, only 9 out of 44 respondents, or 20.45%, are Senior High School teachers.

The analysis suggests that the teaching population sampled in this study is heavily skewed towards Junior High School educators. This imbalance may reflect the larger number of Junior High School positions available compared to the Senior High School.

Table 4.

Respondents' Level of Climate Change Awareness

Item Statement Climate change increases because…	Weighted Mean	Interpretation
There is too much greenhouse gas (GHG)	4.68	Strongly Agree
Too much IR radiation stays on the Earth	4.55	Strongly Agree
We use fossil fuels such as oil and coal	4.59	Strongly Agree
Purchased products generate GHGs	4.50	Strongly Agree
Nitrogen oxides are released from fertilizers	4.34	Strongly Agree
Landfills produce methane	4.25	Strongly Agree
There is intensive forest logging	4.66	Strongly Agree
We are using nuclear power	4.05	Agree
We are using wind power	3.32	Neither Agree nor Disagree
There is too much consumption of milk and dairy products	3.41	Agree
The Earth has an ozone hole	4.39	Strongly Agree
Emitted IR radiation is absorbed by GHGs	4.16	Agree
Factories and cars increase temperature	4.59	Strongly Agree
Standard Deviation		0.89
Grand Mean	4.27	Strongly Agree

Legend:
4.21 - 5.00 – Strongly Agree
3.41 - 4.20 - Agree
2.61 - 3.40 – Neither Agree nor Disagree
1.81 - 2.60 – Disagree
1.00 - 1.80 – Strongly Disagree

The highest level of awareness, denoted by "strongly agree," is related to statements such as "There is too much greenhouse gas (GHG)" and "We use fossil fuels such as oil and coal," which had weighted averages of 4.68 and 4.59, respectively. Statements such as *"We are using wind power" and "There is too much consumption of milk and dairy products"* received lower means of 3.32 and 3.41, respectively, indicating that respondents are less aware or convinced of the impact of these issues. The standard deviation of 0.89 represents moderate response variability, while the grand mean of 4.27 indicates that, on average, respondents "strongly agree" with the listed causes' considerable impact on climate change.

The findings show that respondents are well-aware of the key causes of climate change, such as greenhouse gas emissions, fossil fuels, and industrial activities, and they are generally in agreement about their responsibilities. The lack of awareness about wind power and the impact of dairy products suggests that education should be used in this area. Overall, the findings suggest that, while the major climate change issues are well-known, increasing knowledge about lesser-known ones may improve understanding and support for comprehensive climate action.

While validating this data, Agboola and Emmanuel (2016) found that students are familiar with the concepts of climate change. Access to information and personal experiences as well as public markets and education have a profound impact on their thinking. The study also found that there was no gender difference in climate change and sustainable development awareness (t=0.733 > 0.05). The perception of the teachers on climate change differs significantly (t= 0.013).

Table 5.

Respondents' Level of Knowledge about Various Mitigation Practices

Item Statement If the climate is to change as little as possible, we need to…	Weighted Mean	Interpretation
use public transport more	3.66	Agree
walk and bicycle more	4.52	Strongly Agree
avoid food waste	4.52	Strongly Agree
eat local food	4.14	Agree
reducing dairy products	3.75	Agree
favour a vegetarian diet	4.02	Agree
purchase less goods	3.89	Agree
by lowering room temperature	3.82	Agree
travel inland	3.70	Agree
use trains not planes	3.57	Agree
Standard Deviation		0.97
Grand Mean	3.96	Agree

Legend:
4.21 - 5.00 – Strongly Agree
3.41 - 4.20 - Agree
2.61 - 3.40 – Neither Agree nor Disagree
1.81 - 2.60 – Disagree
1.00 - 1.80 – Strongly Disagree

The table shows the weighted means and interpretations for various climate change mitigation practices as perceived by the respondents. The highest levels of agreement,

categorized as "Strongly Agree," are associated with the statements "walk and bicycle more" and "avoid food waste," both receiving a weighted mean of 4.52.

In contrast, the “use of train, nor plane” option received a low mean of 3.57 indicating a low level of agreement. A deviation of 0.97 indicates significant difference in results, while a weighted average of 3.96 indicates an overall “Agree” sentiment and a slight tendency towards reduced dairy products. The results indicate that respondents strongly support and agree on actions such as increasing cycling and avoiding food waste as effective measures to combat climate change. While there is general agreement on several activities, such as consuming local foods and reducing dairy products, low levels of on actions such as using trains instead of flying, it suggests that some measures need to reduce consumption. The survey result strengthens and educate action in reducing climate change.

Abbass et al. (2022), discussed climate change as long-term change in global climate that represents a major problem at different levels of the world. The results showed that participants strongly agreed that activities such as encouraging cycling and preventing food waste are effective measures to combat climate change. While there is general agreement on many measures such as eating local food and reducing dairy products, disagreements on measures such as the use of train instead of flying suggest that some measures reduce emissions may not be prioritized, or even possible. The agricultural sector is particularly affected as climate change threatens the production of food and raw materials, thereby threating global food security. It does not threatens food availability, but also accelerates ecosystem loss by altering ecosystems and pushing and may species beyond their desired temperature.

Table 6.

Test of Significant Difference on Level of Climate Change Awareness of the Respondents based on their Sex

	Mean	t-value	p-value	Decision	Interpretation
Male	4.34	0.94	0.3453	Accept H_o	Not Significant
Female	4.25				

Legend: <0.05 = significant

The figure compares climate change awareness scores between male and female respondents. The average score for men is 4.34 and for women in 4.25, p value is 0.3453. considering that the p-value exceeds the normal significance level of 0.05, the null hypothesis is accepted. This shows that there is no significant difference between male and female participants in terms of climate change perception. The results mean that gender does not play a significant role in the perception of climate change among participants. As the non-significant p-value indicates, both male and female participants show the same level of awareness. These finding suggest that climate change

perceptions are evenly distributed in this sample and that some other factors may plan an important role in determining the level of campaigns.

In contrast, according to World Health Organization (WHO), (2014), women and men have different roles, behaviors, and attitudes towards addressing climate change. Surveys demonstrate that in many nations, men utilize more energy. Women typically make more domestic purchasing decisions, such as food, water, and energy, than men, especially for private transportation. Gender inequalities exist when it comes to the health and safety hazards associated with emerging technology for reducing greenhouse gases. Such data could aid in more targeted more effective efforts to implement healthy and environmentally sustainable policies.

Table 7.

Test of Significant Difference on Level of Knowledge on Mitigation Practices for Climate Change of the Respondents based on their Sex

	Mean	t-value	p-value	Decision	Interpretation
Male	4.01	0.78	0.4355	Accept H_o	Not Significant
Female	3.94				

Legend: <0.05 = significant

The data compares the mean scores for knowledge of climate change mitigation practices between male and female respondents. The mean score for males is 4.01, while for females it is 3.94. The t-value is 0.78 with a p-value of 0.4355. Since the p-value is higher than the typical significance level of 0.05, the null hypothesis is accepted. This indicates that there is no significant difference in the level of knowledge about climate change mitigation practices between male and female respondents.

The results imply that sex does not have a significant effect on the level of knowledge regarding climate change mitigation practices among respondents. Both male and female respondents have similar levels of knowledge, as demonstrated by the non-significant p-value. This finding suggests that the understanding of mitigation practices is consistent across genders in this sample, and other factor may need to be explored to identify variations in knowledge levels.

McCright (2010), used 8 years of Gallup data on climate change awareness and concern in the US general public, this study puts theoretical claims regarding gender differences in scientific knowledge and environmental concern to the test. Contrary to expectations from scientific literacy research, women convey a higher-rated scientific understanding of climate change than men do. According to much existing sociology and science research, women underestimate their understanding of ecological change more than men do. Furthermore, women are slightly more concerned about climate change than men, and

this gender gap is not explained by differences in important values and beliefs or by the social roles that men and women play in society.

Table 8.

Test of Significant Difference on Level of Climate Change Awareness of the Respondents based on their Class Type

	Mean	t-value	p-value	Decision	Interpretation
Junior High School	4.26	-0.31	0.7566	Accept H_o	Not Significant
Senior High School	4.30				

Legend: <0.05 = significant

This table shows the statistical comparison of climate change awareness scores among junior and senior high school level participants. The average score for high school teachers is 4.26, while senior high school teachers rate is slightly higher at 4.30. the p-value is 0.1. Considering that the 31st value exceeds the normal level of 0.05 with a p-value of 0.7566, the null hypothesis is accepted. This shows that there is no significant difference in the level of attitude towards climate change according to class level.

The results mean that type class (junior high school vs. senior high school) does not significantly change the level of climate change awareness among the participants. As the non-significant p-value indicates, both groups show the same level of awareness. These findings suggest that climate change awareness is heterogeneous phenomenon and other variables may be important in determining the differences in awareness.

Table 9.

Test of Significant Difference on Level of Knowledge on Mitigation Practices for Climate Change of the Respondents based on their Class Type

	Mean	t-value	p-value	Decision	Interpretation
Junior High School	3.86	-4.33	0.001	Reject H_o	Significant
Senior High School	4.38				

Legend: <0.05 = significant

The data compares the average knowledge scores of respondents on climate change mitigation with high school. The average score for junior high school respondents is 3.86, while the average score for senior high school respondents is higher at 4.38. the t-value is 4.33 with a p-value of 0.001. Since the p-value is below the normal level of 0.05, the null hypothesis is rejected. This shows that there are significant differences in the level of knowledge about mitigation to climate change based on class type.

The mean of the class type (junior high school vs. senior high school) has a significant effect on the level of knowledge about climate change. As indicated by the significant p-value, senior high school have higher knowledge that junior high school respondents. This study shows that junior high school respondents may be more exposed to reciprocity education and suggests the need to revise and develop information programs for high school teachers to increase understanding in educational institutions.

According to the results of the online poll (Likert scale), youngsters have low confidence in how well their education has prepared them for climate change and mitigation efforts. However, the majority (88%) believe that their activities and lifestyle choices can help reduce CC. Knowledge of the relative efficacy of GGE-reducing actions was generally poor (Wilcoxon signed rank tests and open-ended responses), with recycling overestimated and having one fewer child underestimated, implying that youth lack the necessary knowledge to maximize CC mitigation through personal choices. Our findings have implications for high school curricula, community college education, and policy in general (Pickering et al., 2020)

Conclusions

Based on the findings, the researcher had drawn the following conclusions:

1. The most numbers of the Junior High School Teachers and Senior High School Teachers are female, while the least number of teachers from JHS and SHS level and male.
2. Junior High School Teachers has the greatest number of respondents compared to the number of Senior High School Teachers.
3. Majority of the respondents shows a high level of awareness about the major contributors to climate change such as the greenhouse gases, fossil fuels, and industrial activities. Though there are low levels of awareness on the benefits and impact of wind power and dairy consumption.
4. The study found that walking and bicycling, and avoiding food wastes are the most effective mitigation practices that are most used by the respondents. General level of usage on eating local food and reducing dairy products as mitigation practices. While there is a low level of prioritization on using trains instead of planes.
5. There were no significant correlations between the level of climate change awareness among the male and female respondents which significantly means that both sex exhibit similar levels of awareness on climate change.
6. The study shows that there were no significant different on the level of knowledge on climate change and their mitigation practices. Both sex shows that there is a similar level of knowledge on climate change, and mitigation practices understanding is consistent on both male and female.
7. The class type of the respondents has no significant influence on the level of climate change awareness. It shows that there is a uniform awareness of climate change across different class types.
8. There is a significant correlation between the level of knowledge regarding climate change and the respondent's mitigation practices. Senior High School teachers'

respondents have a higher level of knowledge compared to Junior High School teachers.

Recommendations

Based on the conclusions, the researcher had drawn the following recommendations:

1. Teachers from Junior and Senior High School should enhance their professional development. Workshops and seminar should be organized to develop and enhance teaching practices, resources, and strategies.
2. Integrate comprehensive climate change education in the current curriculum. This should include information about benefits of renewable energy, such as wind power at environmental impacts of dietary choices.
3. Awareness campaign should be organized to share knowledge and understand the broader impacts of climate change.
4. Community involvement should be incorporated to provide real-world context and support to the teachers, students, and community. This might help the wider community to address climate change.

Compliance with Ethical Standards

The assent forms should be distributed to treat the data with high confidentiality and utmost consideration of the Data Privacy Act of 2012 and DepEd Regional Memorandum No. 228, s. 2020 entitled "*Policy Guidelines on the Adherence to Ethical Research Principles and Responsibilities in Studies involving Teaching, Teaching Related, Non-Teaching Personnel and Learners".*

Acknowledgments

The researcher would like to that Almighty God for His enduring grace, guidance, and protection that He has bestowed upon conducting this research.
The researcher would like to express the sincerest gratitude to their principal, Joel G. Cayetano, PhD for her continuous support in the research, for his patience, motivation and immense knowledge. His guidance helped me throughout their research and writing. To their parent, who have continually supported them to accomplish this student, for their guidance, encouragement, and inspiration, a warmest greetings of gratitude.
Also, thanking her fellow classmates and friends, Mr. Carlo Rico B. Reyes, Ms. Arabelle R. Concepcion, Mr. George DC. Francisco, for stimulating discussions, for the sleepless nights and rants that they had helped the researchers to beat the deadlines, and for the encouragement.
The researcher would like to express her appreciation to the professor, Bryan DC. Gabriel, PhD for his trust, advice, support, patience and guidance for the start until this day.

DESIGN, DEVELOPMENT, VALIDATION AND ASSESSMENT OF PROPOSED COMPETENCY-BASED CURRICULUM FOR BUTTERFLY PRODUCTION LEVEL II

Laurito J. Morales, EdD, Liza Marie M. Pacia, PhD

Marinduque State University, Tanza, Boac, Marinduque, Philippines

https://doi.org/10.5281/zenodo.13346458

ABSTRACT

Curriculum development is a comprehensive process undertaken by educators and institutions to craft effective learning experiences for students. It begins with a thorough needs assessment to identify educational goals and address specific needs within the community or academic setting. This study delves into the design, development, validation, and assessment of a competency-based curriculum for Butterfly Production Level II. Employing a mixed-methods design, it identifies key competencies in butterfly biology, breeding, farming, harvesting, product handling and handcrafting butterfly deadstock. The curriculum design emphasizes planning, sustainability, and practical skills. Validation results indicate the curriculum meets or exceeds competency standards with high compliance and validity. Testing affirms the course's effectiveness, lauded for its well-structured design and impact on participants. However, a significant difference in opinions regarding assessment and evaluation suggests an area for potential refinement. The study concludes by underscoring the curriculum's importance, aligning with industry standards and participant needs. The identified gap in perceptions around assessment provides a crucial opportunity for improvement. Overall, this research offers valuable insights for advancing Butterfly Production Level II training programs, ensuring their relevance and impact in the dynamic realm of butterfly production.

Keywords: *Butterfly, Butterfly Farming, Butterfly Production, Competency-based Curriculum*

INTRODUCTION

In the ever-changing landscape of education and skill development, the demand for proficient professionals transcends borders. Globalization highlights the necessity for a curriculum that not only imparts knowledge but also nurtures practical skills and adaptability (Clotilda, 2022). Competency-based curricula (CBC) have emerged to strategically align education with the skills sought in both local and international job markets, tailoring educational and skills training to meet the specific needs of learners, industries, and the broader socio-economic context (Catacutan et al., 2023).

Adopting competency-based approaches at the national level yields significant advantages. Recent research underscores that countries embracing these curricula experience increased workforce productivity and enhanced economic competitiveness. For example, Al Mamun et al. (2023) found that such curricula foster innovation and adaptability, while Wang et al. (2022) reported improved employee engagement and performance. Moreover, competency-based education addresses critical challenges like skills gaps and talent acquisition, as highlighted by OECD (2021), and offers sector-specific applications and benefits, as demonstrated by Zhang et al. (2022). These findings underscore the transformative potential of competency-based education on a global scale.

In the Philippines, where the economy is shifting towards knowledge-intensive industries, a Competency-based Curriculum plays a crucial role in equipping individuals with the skills demanded by the local job market. As part of ASEAN, the Philippines requires a curriculum that aligns with regional standards while addressing unique national challenges. Recent studies emphasize the importance of industry collaboration in curriculum development in the Philippines, showing that partnerships between educational institutions and industries enhance the relevance of training programs (Mallilin et al., 2021). Efforts to integrate entrepreneurship and innovation within the curriculum reflect the evolving needs of the Philippine economy (Quesea & Elisa, 2020). The adoption of outcome-based education models and continuous feedback mechanisms represents recent developments aimed at ensuring the relevance and effectiveness of competency-based curricula (Catacutan et al., 2023).

A pivotal government agency overseeing competency-based curriculum development is the Technical Education and Skills Development Authority (TESDA). Since its inception in 1994, TESDA has been instrumental in formulating policies, developing competency standards, accrediting institutions and programs, and certifying individuals in various occupations. Through collaborations with industries and initiatives like scholarship programs, TESDA ensures the quality and relevance of technical vocational education and training (TVET) in the Philippines (TESDA, n.d.). TESDA's efforts are aimed at bridging the gap between education and industry, ensuring that graduates possess the competencies necessary for success in the workforce. By overseeing accreditation, certification, and industry engagement, TESDA plays a crucial role in enhancing technical education and skills training nationwide. Its multifaceted

functions contribute significantly to the development and improvement of technical education in the Philippines, particularly in sectors like butterfly breeding and production in provinces such as Marinduque.

In Marinduque, butterfly breeding and production have a rich history dating back to the industry's inception in 1965. Recognizing its potential, local stakeholders, including TESDA-Marinduque, aim to develop a Competency-based Curriculum for Level/NCII certification in butterfly breeding and production. This initiative not only aligns with the province's historical significance in the butterfly industry but also addresses current local, national, and global demands. By integrating local knowledge and practices, collaborating with industry leaders, and leveraging existing educational frameworks, TESDA-Marinduque seeks to elevate the province's status as the "Butterfly Capital" of the Philippines through a robust and globally competitive training program.

TESDA's Role in Technical Education

TESDA, established by Republic Act 7796 in 1994, is the main agency overseeing technical education and skills development in the Philippines (UNESCO, n.d.). Its mission is to create a skilled, globally competitive workforce through various programs, ranging from short courses to diplomas, in fields like automotive, IT, healthcare, and agriculture (TESDA Website, 2024a; TESDA Website, 2024b). TESDA emphasizes accessibility and inclusivity, offering scholarships and special programs for marginalized communities. It collaborates with industries to ensure its programs meet market needs, using a Dual Training System (DTS) that combines theoretical and practical training. Competency-Based Training (CBT) is a key feature, providing assessments and National Certificates that recognize skills and enhance employability. TESDA’s efforts significantly contribute to national economic development by fostering a skilled workforce (TESDA Website, 2024a; TESDA Website, 2024b).

Competency-Based Curriculum (CBC)

Competency-based learning, highlighted by Neendoor (2023), focuses on students demonstrating specific skills, knowledge, and attitudes. This approach allows students to progress at their own pace, ensuring they meet industry standards. Suk (2023) emphasizes multifaceted learning outcomes in CBC. Historical roots of CBC date back to the 1960s, with educational pioneers like Benjamin Bloom and Robert Mager challenging traditional subject-centered curricula (Nikolov et al., 2014). CBC prioritizes quality over quantity in education and integrates learning activities with competencies, promoting holistic development (Ghezir et al., 2021). Sturgis (2011) and Levine and Patrick (2019) underscore the role of CBC in focusing on student mastery, relevant assessments, and the development of transferable skills. The Aurora Institute outlines seven essential components of CBC, adaptable to evolving workforce demands (New Zealand Skills Consulting Group Limited, 2021). Recent studies show CBC's positive impact on workforce productivity and economic competitiveness (Al Mamun et al., 2023; Wang et al., 2022; OECD, 2021; Zhang et al., 2022; Williams, 2022).

TESDA and CBC

TESDA integrates CBC in its programs to align with its mission of developing a skilled workforce (TESDA, 2017). It emphasizes accessibility through various training centers and partnerships, and inclusivity through scholarships and special programs like the Training for Work Scholarship Program (TWSP) and Special Training for Employment Program (STEP). The Dual Training System and CBT approach enhance practical skills and provide certification, contributing to economic development. TESDA's strategic plans aim to involve various sectors in enhancing human resources (TESDA Website, 2024c).

Curriculum Design for Butterfly Production

The study also focuses on creating a competency-based curriculum for butterfly farming, breeding, and production. It aims to outline the necessary skills and knowledge for this field, ensuring the curriculum meets industry standards and includes appropriate training materials and assessment tools.

Historical Development of Butterfly Industry in Marinduque

The butterfly industry in Marinduque has historical roots dating back to post-Renaissance Europe. Key developments include the rise of butterfly farming in Europe, butterfly gardening, and the establishment of agencies for rearing butterflies (Boppré & Vane-Wright, 2012). Marinduque's butterfly industry began in the 1960s with the efforts of Romeo Lumawig and the Layron family. They transitioned from collecting specimens to breeding and exporting butterflies, significantly contributing to the local economy (Labay, 2005). Collaborations with international entomologists and traders helped establish Marinduque as a significant player in the butterfly trade. The industry's evolution included the development of new breeding techniques and the establishment of government guidelines and support. Today, the butterfly industry in Marinduque continues to thrive, with the involvement of new generations and ongoing research and development efforts.

Understanding the historical development of an industry is crucial for designing effective training curricula. According to Smith and Jones (2020), historical context provides insight into the industry's evolution, origins, and early challenges, which are essential for curriculum developers to grasp. For instance, in the Marinduque butterfly industry, tracing its development from a hobby to a sustainable livelihood offers valuable insights (Garcia et al., 2018). These insights help in designing training programs that resonate with the industry's historical context, ensuring relevance and depth. By analyzing historical trends and patterns, such as the role of families like the Layrons in industry growth (Dela Cruz, 2017), curriculum developers can predict future developments and tailor programs accordingly. Learning from historical challenges and successes guides the curriculum towards addressing current industry issues and fostering resilience in learners (Bautista, 2019). Moreover, understanding cultural and regional influences ensures that the curriculum is inclusive and effective. This historical perspective not only aligns training programs with industry standards and expectations

but also engages learners by connecting theoretical knowledge with practical, historical narratives (Magno, 2020). Thus, integrating historical development into curriculum design prepares learners for the complexities and opportunities within specific fields.

This highlights TESDA's role in advancing technical education, the principles of competency-based learning, TESDA's integration of CBC, the development of a curriculum for butterfly production, and the historical development of Marinduque's butterfly industry.

Butterfly Farming

Rogers (2013) introduces butterfly farming as a practical endeavor accessible to enthusiasts with minimal investment, emphasizing hands-on involvement and gradual growth. The article covers essential aspects such as butterfly lifecycle stages, environmental requirements for successful farming, and practical considerations for starting and expanding operations. Key points include the importance of understanding butterfly species, providing suitable host plants, and developing a robust business plan for sustainability. Rogers also stresses compliance with legal regulations and the logistical considerations of shipping butterflies. Overall, the article advocates for informed planning and dedication to foster a thriving butterfly farming enterprise.

Matthew (2006), on the other hand, explores butterfly farming in Kerala, India, focusing on its integration with biodiversity conservation and sustainable practices. His study emphasizes site suitability, ecological landscaping, and the daily operational routines critical for maintaining butterfly health and reproduction. Matthew highlights environmental conditions like temperature, humidity, and food plant availability crucial for various butterfly species. He discusses the lifecycle stages from oviposition to adult feeding, underscoring the importance of habitat development and dietary diversity. The article concludes with insights on breeding practices, including artificial diets and ethical considerations for maintaining butterfly populations in captivity.

Butterfly farming involves a meticulous approach to breeding and rearing butterflies, encompassing several key components for success. Beginning with the selection of healthy breeding stock ensures a strong foundation, while providing optimal conditions such as controlled environments with suitable temperatures, humidity levels, and food sources supports reproductive success across successive generations. Managing resources and implementing measures against predators and pathogens are crucial to maintaining butterfly health and preventing population decline. Continuous monitoring and adaptation of breeding practices help sustain population resilience amid environmental changes, while balancing population size with genetic diversity ensures long-term viability. Challenges such as managing predators and pathogens, avoiding inbreeding, and balancing supply with sustainability underscore the complexity of butterfly farming. Educational initiatives, exemplified by programs like those developed by Trujillo (2012) and Driscoll (2020), integrate butterfly biology, ecology, and conservation into curricula, preparing individuals through competency-based approaches that combine scientific knowledge, technical skills, and practical applications. Ultimately, butterfly

farming not only offers economic opportunities but also contributes to biodiversity conservation and fosters environmental education, highlighting its multifaceted role in sustainable agriculture and conservation efforts.

Butterfly farming encompasses a multifaceted approach integrating scientific knowledge, technical skills, and creative strategies. Fundamental to this practice is a comprehensive understanding of butterflies' life cycles and ecological parameters, spanning from egg to larva, pupa, and adult stages (Labay & Sapungan, 2018; Williams, 2015; Rogers, 2013; Matthew, 2006; Boppré & Vane-Wright, 2012). Conservation strategies are pivotal, requiring farmers to balance farming practices with preserving butterfly habitats and biodiversity. Taxonomic and genetic insights play critical roles in selecting appropriate breeding stock and understanding environmental responses and breeding outcomes (Williams, 2015; Boppré & Vane-Wright, 2012). Successful farming involves meticulous attention to larvae and adult behavior, ensuring the quality and longevity of butterfly products through careful post-handling care (Association for Butterflies, n.d.; Trujillo, 2012). Handcrafting of butterfly products adds aesthetic value, aligning with market trends and consumer preferences (Driscoll, 2020). A holistic approach, incorporating business planning, marketing, education, and conservation, is essential for sustainable butterfly farming, contributing to economic gains and environmental conservation.

Contextual Learning Matrix (CLM) in the Curriculum Development Process

The Contextual Learning Matrix (CLM) is a crucial tool in the curriculum development process, as mandated by the Training Regulations framework (TESDA, 2014). It serves as an analytical aid for curriculum developers, trainers, assessors, administrators, and supervisors involved in Technical Vocational Education and Training (TVET). The CLM must align with published Competency Standards or Training Regulations (TR) and involves industry experts to ensure comprehensive coverage. Its development includes selecting specific units of competency, identifying relevant content and learning activities, and integrating essential elements not covered by performance criteria. This structured approach ensures that competency-based learning resources and institutional assessments are effectively designed and aligned with industry needs, facilitating both educational quality and workforce readiness.

Competency Standards

Competencies are essential qualities and skills required for effective job performance. These encompass information, skills, talents, experience, and behaviors crucial for individual task success. Assessments and training enhance these competencies (Klomim & Kuayngern, 2023). In Germany, competence is defined as the ability and willingness to apply knowledge, skills, personal, social, and methodical capabilities and to behave thoughtfully and responsibly. The BIBB (2014) categorizes competence into "professional competence" and "personal competence," each further divided into subcategories such as "knowledge" and "skills" in professional competence and "social competence" and "independence" in personal competence. The German

training law, also known as "national curricula," in some countries, sets the standards for each occupation. It outlines the occupation's designation, training duration (typically two to three years), essential skills and knowledge, framework training curriculum, and test criteria. Businesses can also add extra subjects to the training, providing apprentices with additional credentials.

In the Philippines, national training regulations (TR) are established by the TESDA Board and consist of competency standards, training standards, and evaluation procedures. These TRs are the foundation for developing curricula, evaluating competency, and delivering TVET programs. Competency standards define middle-level skilled workers' abilities and qualifications, categorized into competency units and qualifications associated with key industry sectors.

The European Qualifications Framework (EQF) is a standardized reference framework across Europe, promoting the transparency and comprehension of qualifications obtained through diverse education and training systems. The EQF's main objectives are to facilitate lifelong learning and promote citizen mobility between countries and industries. It comprises eight reference levels defined by learning outcomes, focusing on knowledge, skills, and competence (Nicolov et al., 2014). In this context, learning outcomes capture what a learner knows, understands, and can do after completing a learning process, emphasizing results over methods. Learning outcomes encompass theoretical knowledge, practical and technical abilities, and crucial social competencies, including practical collaboration skills.

To ensure a common understanding, key terminology within the European Qualification Framework is defined: "Qualification" refers to the formal outcome of an assessment and validation process. "Learning Outcomes" describes what an individual knows, comprehends, and can execute. "Knowledge" pertains to facts, principles, theories, and practices. "Skills" represent the ability to apply knowledge. "Competence" involves the application of knowledge, skills, personal, social, and methodological skills, emphasizing responsibility and independence. These frameworks and definitions are vital for creating efficient educational and training systems that equip individuals with the skills and knowledge they need for their careers. They also contribute to standardizing and recognizing qualifications on both national and international levels. These frameworks support education and training system harmonization, enhance transparency, facilitate lifelong learning, and bolster employability in a rapidly evolving global labor market, ultimately creating a more flexible and adaptable workforce.

Overall, developing a Competency-based Curriculum for butterfly breeding and production in Marinduque reflects a strategic alignment with both economic opportunities and environmental conservation imperatives. This initiative aims to empower local communities, enhance industry standards, and position Marinduque as a leader in sustainable butterfly farming practices nationally and internationally.

Research Questions

Due to the research studies conducted and the training programs for butterfly production provided by Marinduque State College to the communities of the province, and most importantly, in response to the strong request from the provincial governor to implement it province-wide, as well as the residents of Marinduque advocating for its establishment as a regular industry, TESDA-Marinduque was tasked with developing it into a Level/NC II training program.

Thus, this study was about developing a Competency-based Curriculum for Butterfly Production Level II Course in Marinduque as a collaborative effort that involved local expertise, national standards (TESDA), and potential global recognition. By considering the historical significance of Marinduque's butterfly industry, aligning with national competency standards, and incorporating global best practices, the curriculum could empower local butterfly breeders and contribute to the industry's sustainable development in the province.

Integrating a competency-based curriculum within TESDA's framework ensured that the training program was designed, developed, validated, and tested to be relevant and responsive to the demands of the job market. As such, this study had the following research questions:

1. What core competencies should be included in designing the Butterfly Production Level II Course's competency-based curriculum based on the following aspects?

    1.1 Basics of Butterfly Biology, Ecology, and Related Legal Issues
    1.2 Butterfly Larval and Nectar Food Plants
    1.3 Butterfly Breeding and Farming Techniques
    1.4 Harvesting and Safe Handling of Butterfly Products
    1.5 Handcrafting of Butterfly Deadstock

2. How is the Competency-based Curriculum for Butterfly Production Level II Course validated regarding the following standards?
    2.1 Compliance with Competency Standard
    2.2 TESDA Competency-Based Curriculum Exemplar
3. How is the Competency-based Curriculum for Butterfly Production Level II Course tested in terms of the following?
    3.1 Effectiveness of Nominal Duration
    3.2 Effectiveness of Learning Activities
    3.3 Effectiveness of Assessment and Evaluation
4. Is there a significant difference in the testing results made between the trainers and trainees in terms of the following?
    4.1 Effectiveness of Nominal Duration
    4.1 Effectiveness of Learning Activities
    4.2 Effectiveness of Assessment and Evaluation

5. What other suggestions and recommendations from the trainers and trainees could be sought to improve the Competency-based Curriculum further?

METHODOLOGY

This study employed a mixed-method research design, specifically adopting an exploratory-sequential approach for developing, validating, and testing a Competency-Based Curriculum (CBC) for Butterfly Production Level II. The exploratory phase involved literature review and stakeholder consultations to identify key competencies and industry standards. Subsequently, the sequential phase employed both quantitative and qualitative methods to collect and analyze data systematically. Quantitative measures included performance assessments using a 5-point Likert scale questionnaire, while qualitative methods involved in-depth interviews and focus group discussions. The research was conducted in Marinduque province, focusing on municipalities central to the butterfly farming industry. Participants included TVET trainers, butterfly breeders, technical experts, and trainees, selected from TESDA-administered and accredited institutions. Ethical considerations ensured participant confidentiality and voluntary consent. Statistical tools such as frequency distribution, measures of central tendency, and thematic analysis were applied to analyze data comprehensively. This rigorous approach aimed to develop a curriculum aligned with industry needs and educational standards, contributing to the enhancement of butterfly breeding practices in the region.

RESULTS

Results for Research Question 1

The Needed Competencies for Butterfly Production

Producing butterflies involves breeding and caring for them for study, teaching, entertainment, and conservation. Key competencies include understanding butterfly biology, life cycles, and traits, as well as their ecological roles as pollinators and environmental indicators. Adhering to legal requirements ensures ethical practices. Practical skills in husbandry and educational abilities are essential for day-to-day care and public awareness. These competencies ensure responsible butterfly production, contributing to scientific knowledge, environmental health, and conservation efforts.

Table 1

Basics of Butterfly Biology, Ecology, and Related Legal Issues

Needed CORE Competencies	Mean Rating	Interpretation
Understanding the classification, geographical distribution, and population trends of butterflies.	**4.25**	Highly Recommended for Inclusion

Gaining insights into the taxonomy of butterflies.	**4.00**	Strongly Recommended for Inclusion
Acquiring ecological knowledge related to butterflies.	**4.75**	Highly Recommended for Inclusion
Learning about the specific butterflies you intend to breed and market.	**4.75**	Highly Recommended for Inclusion
Obtaining the necessary permits for shipping butterflies.	**4.75**	Highly Recommended for Inclusion
Dealing with butterflies and environment.	**5.00**	Highly Recommended for Inclusion
Selecting healthy butterflies for breeding purposes.	**4.75**	Highly Recommended for Inclusion
Maintaining a balance between population size and genetic diversity in butterfly breeding.	**4.50**	Highly Recommended for Inclusion
Understanding the basic biological principles of butterflies.	**4.50**	Highly Recommended for Inclusion
Learning about the life cycle stages of butterflies.	**5.00**	Highly Recommended for Inclusion
Studying the natural habitats of butterflies.	**5.00**	Highly Recommended for Inclusion
Exploring the adaptations of butterflies to their environments.	**5.00**	Highly Recommended for Inclusion
Exploring biodiversity.	**4.25**	Highly Recommended for Inclusion
Examining the anatomical structure of butterflies.	**4.75**	Highly Recommended for Inclusion
Understanding the role of butterflies in pollination and conservation efforts.	**4.75**	Highly Recommended for Inclusion
Total Weighted Mean	**4.67**	Highly Recommended for Inclusion

Legend:

Highly Recommended for Inclusion	***4.21-5.0***	*Slightly Recommended for Inclusion*	***1.81 – 2.60***
Strongly Recommended for Inclusion	***3.41-4.20***	*Not recommended for Inclusion*	***1.01 – 1.80***
Moderately Recommended for Inclusion	***2.61 – 3.40***		

The competencies related to butterfly biology, ecology, and legal issues are highly recommended for inclusion, with a total weighted mean score of 4.67. This indicates a strong consensus on their importance in the curriculum.

The Butterfly Food Plants

Plants that produce nectar and larval food are vital to the breeding and production of butterflies because they offer the food and environment required for the many stages of the butterfly life cycle. Nectar food plants are the blooming plants from which adult butterflies drink nectar, while larval food plants are the host plants that caterpillars eat.

Table 1.1

Butterfly Larval and Nectar Food Plants

Needed CORE Competencies	Mean Rating	Interpretation
Understanding the specific plants that provide larval and nectar food for butterflies and the associated ant species.	**4.75**	Highly Recommended for Inclusion
Exploring the specificity of food plants and their interactions with insects.	**4.75**	Highly Recommended for Inclusion
Gaining knowledge on how to raise specific plants for butterfly nourishment.	**5.00**	Highly Recommended for Inclusion
Ensuring a steady supply of food and nutrients required for butterfly development.	**4.75**	Highly Recommended for Inclusion
Providing essential resources, including plants and nutrients, for butterflies.	**4.50**	Highly Recommended for Inclusion
Farming and propagating host plants to support butterfly populations.	**4.75**	Highly Recommended for Inclusion
Total Weighted Mean	**4.75**	Highly Recommended for Inclusion

Legend:

Highly Recommended for Inclusion	***4.21-5.0***	*Slightly Recommended for Inclusion*	***1.81 – 2.60***
Strongly Recommended for Inclusion	***3.41-4.20***	*Not recommended for Inclusion*	***1.01 – 1.80***
Moderately Recommended for Inclusion	***2.61 – 3.40***		

The competencies focused on butterfly larval and nectar food plants are highly recommended, with a total weighted mean score of 4.75, highlighting their crucial role in the curriculum.

The Breeding Techniques in Butterfly Production

Butterfly breeding and cultivation entail raising butterflies in captivity for diverse purposes, including education, conservation, research, or entertainment. The process encompasses choosing an appropriate species, creating a suitable environment, tending to the eggs, caterpillars, pupae, and adults, and eventually selling or releasing the butterflies.

Table 1.2

Butterfly Rearing, Breeding and Farming Techniques

Needed CORE Competencies	Mean Rating	Interpretation
Learning about local farmers' techniques for farming and breeding.	**5.00**	Highly Recommended for Inclusion
Understanding the chemical interactions between butterflies, plants, and parasites.	**4.75**	Highly Recommended for Inclusion
Acquiring techniques for rearing and breeding butterflies.	**4.75**	Highly Recommended for Inclusion
Gaining genetic insights through butterfly breeding.	**4.75**	Highly Recommended for Inclusion
Managing indoor spaces for rearing, room, and storage.	**4.50**	Highly Recommended for Inclusion
Utilizing a greenhouse or enclosed outdoor growing area.	**4.75**	Highly Recommended for Inclusion
Evaluating site suitability for butterfly farming, considering ecological factors, landscaping, and infrastructure.	**5.00**	Highly Recommended for Inclusion
Understanding the butterfly breeding process.	**5.00**	Highly Recommended for Inclusion
Learning about oviposition, larval rearing, pupation, and adult feeding.	**4.75**	Highly Recommended for Inclusion
Maintaining a controlled environment for successive generations of butterflies.	**4.75**	Highly Recommended for Inclusion
Protecting butterflies against predators and pathogens.	**5.00**	Highly Recommended for Inclusion
Raising butterfly larvae effectively.	**5.00**	Highly Recommended for Inclusion
Managing infestations and diseases in butterfly populations.	**5.00**	Highly Recommended for Inclusion
Gaining hands-on experience in growing butterflies.	**5.00**	Highly Recommended for Inclusion
Total Weighted Mean	**4.86**	**Highly Recommended for Inclusion**

Competencies related to butterfly rearing, breeding, and farming techniques are highly recommended, with a total weighted mean score of 4.86, indicating their critical importance in the curriculum.

Harvesting Operations and Handling Techniques

Harvesting and handling are crucial aspects of butterfly breeding, impacting the butterflies' quality, quantity, and survival. Harvesting involves; collecting pupae from rearing containers, inspecting them for damage or disease, sorting them by species and size, and packing them carefully for emergence, storage, or shipment.

Handling techniques include gently removing live butterflies from emergence cages, checking for defects or injuries, and transferring them to suitable containers. Careful handling is essential, as well as avoiding contact with wings or antennae and using soft materials like tissue paper. Proper harvesting and handling are vital for butterflies' health, appearance, and longevity. Carelessness can lead to stress, injury, or death, reducing their value, while proper practices enhance their quality and attractiveness.

Table 1.3

Harvesting, and Safe Handling of Butterfly Products

Needed CORE Competencies	Mean Rating	Interpretation
Understanding the predation and parasitism affecting butterflies.	**5.00**	Highly Recommended for Inclusion
Managing indoor spaces for rearing butterflies, including room setup and proper storage.	**5.00**	Highly Recommended for Inclusion
Addressing the operational and logistic aspects of butterfly farming.	**5.00**	Highly Recommended for Inclusion
Implementing post-harvest care for butterfly products.	**4.75**	Highly Recommended for Inclusion
Providing proper care for the pupae and larvae life stages of butterflies.	**4.50**	Highly Recommended for Inclusion
Total Weighted Mean	**4.85**	**Highly Recommended for Inclusion**

The competencies for harvesting and handling butterfly products are highly recommended, with a total weighted mean score of 4.85, underscoring their significance in the curriculum.

Butterfly Products

Butterfly products encompass a range of beautiful and colorful items inspired by or featuring butterflies. These include butterfly-themed home decor items like pillows, throws, wall stickers, and framed butterflies. Additionally, accessories such as hair clips, jewelry, and key chains are adorned with butterfly motifs. For those looking to add a touch of nature to cakes, butterfly cake decorations like toppers, stickers, and cardboard inserts are available. Another creative avenue is engaging in butterfly handicrafts, which may involve activities like butterfly farming, crossbreeding, and handcrafting. These products are popular among nature enthusiasts, collectors, and hobbyists. Moreover, they serve as delightful additions to special occasions like weddings, birthdays, and parties, adding a touch of natural beauty to the celebrations.

Table 1.4

Handcrafting of Butterfly Dead stock

Needed CORE Competencies	Mean Rating	Interpretation
· Handcrafting of Dead stock into Novelty Items for Gifts and Decorations	**4.50**	Highly Recommended for Inclusion
· Handcrafting & Creative Expression	**4.50**	Highly Recommended for Inclusion
Total Weighted Mean	**4.50**	**Highly Recommended for Inclusion**

Legend:

Highly Recommended for Inclusion	***4.21-5.0***	*Slightly Recommended for Inclusion*	***1.81 – 2.60***
Strongly Recommended for Inclusion	***3.41-4.20***	*Not recommended for Inclusion*	***1.01 – 1.80***
Moderately Recommended for Inclusion	***2.61 – 3.40***		

Competencies related to the handcrafting of butterfly dead stock are highly recommended, with a total weighted mean score of 4.50, emphasizing the value of creative skills in the curriculum.

Result for Research Question 2

Table 2.

Compliance of CBC for Butterfly Production Level II as to Competency Standard

Compliance of the Butterfly Production Level II Curriculum **Competency Standard**	Mean	Interpretation
1. Is the Course Title /Description sufficient to describe the Qualification intended to be achieved by the learners?	**4.50**	Highly Valid
2. Are all the units of competencies listed in the TR/ CS have corresponding modules?	**4.50**	Highly Valid
3. Are the modules arranged in a logical sequence for an effective training delivery of the course?	**4.75**	Highly Valid
4. Is the Course Title relevant to the job title used in the company/industry related to this qualification?	**4.50**	Highly Valid
5. Is the Training Duration of the Course sufficient to achieve all the competencies of this qualification?	**4.50**	Highly Valid
6. Are the Trainee Entry Requirements of the Course appropriate without conflict with existing rules/regulations?	**5.00**	Highly Valid
7. Are the resources (e.g. tools, equipment, materials) sufficient for the effective implementation of the Course?	**5.00**	Highly Valid
8. Is the identified training modality appropriate for the course? / Does the modality allow for flexible learning?	**5.00**	Highly Valid
9. Are the Trainer's Qualifications sufficient for an effective implementation of the course?	**5.00**	Highly Valid
Total Weighted Mean	**4.75**	**Highly Valid**

Legend:	*Highly Valid*	***4.21-5.0***	*Slightly Valid*	***1.81 – 2.60***
	Strongly Valid	***3.41-4.20***	*Not Valid*	***1.01 – 1.80***
	Moderately Valid	***2.61 – 3.40***		

The Butterfly Production Level II Curriculum shows a strong alignment with the competency standards, achieving an overall mean score of 4.75, indicating "Highly Valid." Each evaluated criterion received high marks, demonstrating the curriculum's thoroughness and effectiveness in various aspects such as course title relevance, logical module arrangement, sufficient training duration, appropriate trainee entry requirements, and adequate resources and trainer qualifications.

Table 2.1

Compliance of CBC for Butterfly Production Level II as to CBC Exemplar

Compliance of the Butterfly Production Level II Curriculum **CBC Exemplar**	**Mean**	**Interpretation**
1. Are the Module Title/s stated in an action statement and related to the unit of Competency/ies specified in the Training Regulation/Competency Standard?	**5.00**	Highly Valid
2. Does the Module description clearly define the knowledge and skills requirements and the coverage of the module?	**5.00**	Highly Valid
3. Is the Module structured corresponding to a single unit of competency?	**5.00**	Highly Valid
4. Are the Modules containing Learning Outcomes (LO) ranging from 2-6?	**5.00**	Highly Valid
5. Are the titles of the Learning Outcomes (LOs) written in an action statement? (begins with a verb followed by the object of the action)	**5.00**	Highly Valid
6. Do the Learning Outcomes cover the (cognitive, psychomotor, and affective domains) that are observable and measurable performance, resulting in part/whole product, or services that are relevant to the workplace?	**5.00**	Highly Valid
7. Are the Assessment Criteria for each Learning Outcome sufficient to ensure that the learners achieve the required knowledge, skills, and attitude?	**5.00**	Highly Valid
8. Are the Knowledge components (contents) sufficient to address the Assessment Criteria of each Learning Outcome?	**5.00**	Highly Valid
9. Are the Knowledge components (contents) containing information sufficient to perform the activities competently?	**5.00**	Highly Valid
10. Does the Knowledge components (contents) contain information related to energy/materials/environmental conservation?	**5.00**	Highly Valid
11. Do the Knowledge components (contents) include concepts/ideas related to science/numeracy/relevant technology and engineering processes?	**5.00**	Highly Valid
12. Does the Contents address overall the required knowledge of the unit of competency?	**5.00**	Highly Valid
13. Are the resources (condition) consistent/sufficient to support the activities in each Learning Outcome?	**5.00**	Highly Valid
14. Do the Teaching strategies (methodologies) provide opportunities for the active participation of learners in the learning process?	**5.00**	Highly Valid
15. Are the Teaching strategies (methodologies/pedagogy) providing opportunities for learners to develop STEM skills; (critical thinking/problem solving/innovation/collaboration/system thinking/computational thinking/decision making/ethical thinking), applicable to the learning process?	**5.00**	Highly Valid

Table 2.1 *(Continuation)*

Compliance of the Butterfly Production Level II Curriculum	Mean	Interpretation
16. Are the Teaching strategies (methodologies) appropriate to the learning activities/process?	**5.00**	Highly Valid
17. Are the Teaching strategies (methodologies) sufficient to support mastery of three domains (knowledge, skills, and attitude)?	**5.00**	Highly Valid
18. Are the Assessment strategies (methodologies) appropriate for the activities?	**5.00**	Highly Valid
19. Are the Assessment strategies (methodologies) consistent with the principles of collecting evidence?	**5.00**	Highly Valid
20. Is the Contextual Learning Matrix (CLM) available for the course?	**5.00**	Highly Valid
21. Is the Contextual Learning Matrix (CLM) complete for all modules of core competencies of the course?	**5.00**	Highly Valid
22. Is the Curriculum Plan about the STEM approach available for the course?	**5.00**	Highly Valid
23. Does the Curriculum Plan address all modules of core competencies of the course?	**5.00**	Highly Valid
Total Weighted Mean	**5.00**	**Highly Valid**

The Butterfly Production Level II Curriculum's compliance with CBC Exemplars is exemplary, achieving a perfect overall mean score of 5.00, indicating "Highly Valid." All evaluated aspects, from module titles and descriptions to teaching strategies and assessment methodologies, received perfect scores. This comprehensive evaluation highlights the curriculum's robustness and effectiveness in delivering a well-rounded, competency-based education.

Effectiveness of Butterfly Production Level II

When how well a program works is assessed, understanding its impact on those it is meant for is a journey taken. This involves looking at how it is designed and implemented and whether it achieves its goals. Evaluating a program is not just about measuring it – it is about realizing how it can positively change individuals, communities, or organizations. We will explore the success indicators, improvements, and broader effects a program can have. We aim to uncover what makes a program effective, recognizing its diverse impact and how it leaves a lasting mark on the people it serves and the larger community it influences.

Result for Research Question 3

Table 3.

Effectiveness of Butterfly Production Level II according to the Trainers and Trainees

Effectiveness of Butterfly Production Level II Course	Trainers		Trainees	
	Mean	Interpretation	Mean	Interpretation
Nominal Duration				
1. Is the program objective clear? (Malinaw ba ang adhikain ng programa o training?)	**5.00**	**Highly Effective**	**4.60**	**Highly Effective**
2. Are the course activities organized? (Maayos ba ang pagkakasunod-sunod ng mga gawain?)	**4.67**	**Highly Effective**	**4.10**	**Strongly Effective**
3. Is the scheduling of activities and time allotment correct? (Tama ba ang inilaang oras sa bawat gawain?)	**4.33**	**Highly Effective**	**4.00**	**Strongly Effective**
4. Were the program objectives achieved? (Naisagawa ba ang mga adhikain ng programa?)	**4.67**	**Highly Effective**	**4.50**	**Highly Effective**
5. Does the course content align with the program objectives? (Naayon ba ang nilalaman ng programa sa layunin o adhikain ng programa?)	**4.67**	**Highly Effective**	**4.40**	**Highly Effective**
Learning Activities				
6. Is the sequencing of the course contents appropriate? (Maayos ba ang pagkasunod-sunod ng mga gawain?)	**4.67**	**Highly Effective**	**4.20**	**Strongly Effective**
7. Is there sufficient information provided? (Sapat ba ang mga ibinigay na impormasyon?)	**4.33**	**Highly Effective**	**4.70**	**Highly Effective**
8. Is the course content relevant to the needs? (Magkatugma ba ang ibinigay na mga gawain?)	**4.67**	**Highly Effective**	**4.50**	**Highly Effective**
9. Is the selected method effective? (Mabisa ba ang paraan ng pagtuturo?)	**4.67**	**Highly Effective**	**4.30**	**Highly Effective**
10. Are the activities appropriate to the course? (Naayon ba sa programa ang aktibidades?)	**4.67**	**Highly Effective**	**4.50**	**Highly Effective**

Table 3 *(Continuation)*

Effectiveness of Butterfly Production Level II Course	Trainers		Trainees	
	Mean	Interpretation	Mean	Interpretation
Assessment and Evaluation				
11. Are the provided supplies and materials adequate? (Sapat ba ang mga gamit at supplies?)	**5.00**	**Highly Effective**	**3.80**	**Strongly Effective**
12. Are the course activities appropriate to the program? (Naayon ba sa programa ang aktibidades?)	**5.00**	**Highly Effective**	**4.10**	**Strongly Effective**
13. Are the supplies and materials provided in a timely manner? (Sapat ba ang mga gamit at supplies na ibinigay sa tamang oras?)	**5.00**	**Highly Effective**	**3.50**	**Strongly Effective**
14. Is the physical layout of the venue appropriate to the program's needs? (Naayon ba sa pangangailangan ng programa ang lugar na pinagdausan?)	**5.00**	**Highly Effective**	**4.20**	**Strongly Effective**
15. What is your assessment of the overall impact of the program? (Ano ang masasabi mo sa kabuuan ng programa?)	**5.00**	**Highly Effective**	**4.30**	**Highly Effective**
Total Weighted Mean	**4.76**	**Highly Effective**	**4.25**	**Highly Effective**

The Butterfly Production Level II Course is deemed "Highly Effective" by both trainers (mean score: 4.76) and trainees (mean score: 4.25). Trainers and trainees both recognize the clarity and achievement of program objectives and the alignment of course content with these objectives. Both groups also rate the relevance and effectiveness of the course content, teaching methods, and activities highly.

However, trainees report slightly lower effectiveness regarding the organization and scheduling of activities compared to trainers. Additionally, a notable discrepancy exists in the ratings for the adequacy and timely provision of supplies and materials, with trainers rating this aspect much higher than trainees. This suggests that while trainers find the materials and layout adequate, trainees experience issues that could be addressed to improve their overall satisfaction. The physical layout of the venue and the overall impact of the program are highly rated by both groups, indicating the course's overall success. To enhance effectiveness, attention should be given to improving material provision and refining activity scheduling.

Malik and Singh (2022) discuss the significance of clear program objectives and their alignment with course content in enhancing training effectiveness. Their research

highlights the role of organized course activities and appropriate scheduling in achieving training goals (Journal of Vocational Education, 30, 56(3), 289-304).

Fernandez (2021**)** emphasizes the importance of timely provision of materials and effective teaching methods in maximizing training impact. The study suggests that discrepancies in material adequacy can significantly affect trainees' perceptions and overall program success (International Journal of Training and Development, 25, 14(2), 98-110).

Nguyen and Le (2023) highlight the role of physical venue layout and overall program impact in determining the success of vocational training programs. Their findings underscore the need for alignment between program needs and venue suitability (Vocational Education Review, 40, 12(4), 221-235).

Result for Research Question 4

Table 4.

Effectiveness of Nominal Duration, Learning Activities and Assessment and Evaluation of Butterfly Production Level II as perceived by Trainers and Trainees

Independent Samples Test

		Levene's Test for Equality of Variances		t-test for Equality of Means							
						Significance				95% Confidence Interval of the Difference	
		F	Sig.	t	df	One-Sided p	Two-Sided p	Mean Difference	Std. Error Difference	Lower	Upper
Effectiveness of Butterfly Production Level II as to Nominal Duration	Equal variances assumed	1.589	.234	-.723	11	.242	.485	-.30667	.42433	-1.24061	.62728
	Equal variances not assumed			-.948	5.729	.191	.382	-.30667	.32359	-1.10764	.49430
Effectiveness of Butterfly Production Level II as to Learning Activities	Equal variances assumed	.178	.681	-.195	11	.424	.849	-.08000	.40946	-.98122	.82122
	Equal variances not assumed			-.218	3.976	.419	.838	-.08000	.36661	-1.10028	.94028
Effectiveness of Butterfly Production Level II as to Assessment Evaluation	Equal variances assumed	6.602	.026	-2.065	11	.032	.063	-.86000	.41652	-1.77676	.05676
	Equal variances not assumed			-3.888	9.000	.002	.004	-.86000	.22121	-1.36041	-.35959

The analysis in Table 4 indicates that there is no significant difference in ratings between trainers and trainees for Nominal Duration and Learning Activities, with p-values of 0.485 and 0.849, respectively. This suggests that both groups have similar perceptions regarding these aspects. However, for Assessment and Evaluation, a significant difference is observed (p = 0.004), with trainees rating it lower than trainers. This discrepancy suggests that trainees may have concerns about the adequacy and timeliness of supplies and materials.

Result for Research Question 5

Table 5.

Suggestions and Recommendations of Butterfly Production Level II trainers and trainees

AREAS FOR IMPROVEMENT	Suggestions and Recommendations
Challenges or Shortcomings of the Current Curriculum	- Some contents are redundant, particularly in Potting media in UC 1 and UC2.
Competencies Needing Emphasis or Improvement	- Plan and prepare to raise butterfly species, UC 6, considering modern technologies in the production process. - Complete and validate contents of Competency-based Learning Materials (CBLM) for all UCs.
Additional Resources, Tools, or Technologies	- Consider the integration of resin technology. - Include specific books, documentary videos, and compilation of files relevant to production up to handcrafts.
Refining or Expanding Assessment Methods	- Suggests the inclusion of project-based assessment.
Supporting Trainers in Adapting to Industry Changes	- Proposes industry immersion and provision of necessary teaching materials like laptops, projectors, printers, and speakers.
Enhancing Overall Quality of the Curriculum	- Recommends making butterfly product curation an elective subject.
Challenges Encountered in Following the Curriculum	- Difficulty in caring for caterpillars and deciding whether a caterpillar or pupa is viable, as well as identifying various butterfly species and their diets.
Competencies Needing More Focus or Improvement	- Stresses the importance of learning about rejected pupas, efficient food production for butterfly care, spread dry butterfly techniques, feeding butterflies, and butterfly farming.
Lacking Learning Materials or Resources in the Curriculum	- Highlights a perceived shortage of essential materials, such as copies of learning modules, lacking 'sigpaw,' and insufficient seeds for growing food for the butterflies.
Making the Curriculum More Engaging and Interactive	- Recommends making the curriculum accessible to every barangay, extending study hours, and ensuring clarity in decision-making.
Changes or Additions to Assessment Methods	- Suggests using butterfly care tools as a basis for assessment, including grafting/budding for “bila-bila” food, and inspecting the number of eggs during specific months.

Enhancing Learning Experience with the Curriculum	- Advocates for modernizing training in creating souvenir items.

DISCUSSION

Competency Evaluation

The evaluation of the Butterfly Production Level II Curriculum highlights several key areas of strength and areas needing improvement. High ratings were given for competencies related to butterfly classification, distribution, population trends, and taxonomy, underscoring their importance in the curriculum (Labay & Sapungan, 2018). Essential competencies include understanding environmental factors, selecting healthy butterflies for breeding, and comprehending biological principles, all of which are crucial for effective butterfly production (Rogers, 2013).

The significance of butterfly larval and nectar food plants was also emphasized, with high ratings for competencies such as understanding plant specificity and raising plants to support butterfly nourishment (Driscoll, 2020; Boppré & Vane-Wright, 2012). Competencies related to butterfly rearing, breeding, and farming techniques were equally well-regarded, highlighting the need for comprehensive training in these areas (Trujillo, 2018; Association for Butterflies, n.d.). Effective management of rearing environments, pest control, and hands-on experience were deemed essential components of the curriculum.

The curriculum's focus on harvesting and handling butterfly products, as well as the handcrafting of butterfly dead stock, was also positively received (Matthew, 2006; Williams, 2015). The integration of creative skills and practical techniques for product handling is a critical element in enhancing the curriculum's effectiveness.

Compliance with Competency Standards

The curriculum's overall validation is high, with an average mean score of 4.75, indicating strong alignment with competency standards (Table 2). The course title, description, and module sequencing all received high scores, reflecting effective curriculum organization and relevance to industry standards. The training duration and entry requirements were rated favorably, indicating that they are appropriate for achieving the curriculum's objectives.

The curriculum's compliance with CBC Exemplars was particularly outstanding, with perfect scores for all evaluated aspects. This includes action-oriented module titles, well-defined Learning Outcomes (LOs), comprehensive assessment criteria, and effective teaching strategies (Table 2.1). The integration of a STEM approach and a complete Contextual Learning Matrix further supports the curriculum's strength.

Effectiveness of Program Delivery

The evaluation of the Butterfly Production Level II course reveals a generally positive reception from both trainers and trainees. Both groups agreed on the clarity and alignment of the program's objectives and content, although trainees rated these aspects slightly lower (Malik & Singh, 2022). Trainers rated the organization and scheduling of activities highly, but trainees reported some challenges, indicating areas where improvements could be made (Fernandez, 2021). Both trainers and trainees found the learning activities and methods effective, consistent with the importance of well-structured activities (Nguyen & Le, 2023). However, while trainers rated the assessment and evaluation aspects highly, trainees expressed concerns about material adequacy and timeliness, highlighting a need for improvement in this area (Fernandez, 2021). The venue and overall impact of the program were rated positively by both groups, suggesting that the learning environment effectively supports the program's objectives (Nguyen & Le, 2023). Key areas for improvement include enhancing material provision and refining scheduling to boost trainee satisfaction and overall program effectiveness.

In terms of curriculum challenges and recommendations, redundancies in content, particularly in Potting Media, need to be addressed to avoid inefficiencies and confusion. Emphasizing modern technologies and completing Competency-Based Learning Materials (CBLM) for all Units of Competency (UCs) will help keep the curriculum current and comprehensive (Darling-Hammond & Bransford, 2015). Adding resources such as resin technology, books, and videos will enrich the educational experience and provide essential tools for success. Incorporating project-based assessments aligns with best practices in competency-based education, offering a more thorough evaluation of learners' skills (Guskey, 2015). Supporting trainers with industry immersion and necessary teaching materials, like laptops and projectors, will aid in adapting to evolving industry standards (Guskey, 2015). Improving the curriculum’s quality can also be achieved by making butterfly product curation an elective and modernizing training methods. Addressing practical application difficulties, such as caterpillar care and stage identification, will enhance hands-on training. Finally, increasing curriculum accessibility, extending study hours, and clarifying decision-making processes will boost engagement and effectiveness.

Findings

Needed Core Competencies

Most competencies related to the basics of butterfly biology, ecology, and legal issues are strongly recommended for inclusion in the curriculum. Skills involving butterfly larval and nectar food plants are also highly recommended. Additionally, competencies in butterfly breeding and farming have strong support for inclusion. The skills in harvesting and safely handling butterfly products are endorsed, as are the handcrafting skills of butterfly dead stock.

Effectiveness of the Butterfly Production Level II Course

The course is deemed highly effective by trainers, showcasing a well-structured and impactful design that meets participant needs and program objectives. Trainees also perceive the course as well-structured, aligned with objectives, and impactful, affirming its effectiveness as a training experience. The evaluation shows no significant differences between trainers and trainees regarding Nominal Duration and Learning Activities, although there is a significant difference in their opinions on Assessment and Evaluation.

Differences in Perception

Independent Samples Test results indicate no significant differences between trainers and trainees regarding Nominal Duration and Learning Activities, suggesting agreement on these aspects. However, a significant difference was found in the Assessment and Evaluation domain, where trainees rated it lower, pointing to concerns about the adequacy and timeliness of resources provided.

Suggestions for Improvement

To improve the Butterfly Production Level II, several key areas need to be addressed. Curriculum Content should be updated to eliminate redundancies, particularly in Potting Media, and should be streamlined to focus on modern technologies and complete Competency-Based Learning Materials (CBLM). Resources and Tools should be enhanced by integrating resin technology and providing additional learning resources and tools. Assessment Methods can be improved by incorporating project-based assessments and utilizing practical tools for evaluation. Support for Trainers should include industry immersion opportunities and the provision of essential teaching materials, such as laptops and projectors. Finally, to enhance overall quality, making butterfly product curation an elective subject and modernizing training methods will help increase engagement and relevance.

Challenges Identified

Practical challenges include difficulties in caring for caterpillars, identifying viable stages, and addressing perceived shortages of essential materials. Recommendations for more engaging and interactive methods are provided, such as making the curriculum accessible to more locations and extending study hours.

Conclusions

The Butterfly Production Level II course demonstrates overall effectiveness, receiving high ratings across most aspects from both trainers and trainees. Despite this positive evaluation, there are areas requiring attention to further enhance the program's effectiveness. Key improvements include addressing issues related to material provision and timeliness, refining activity scheduling, and resolving curriculum redundancies.

These enhancements are essential for better meeting stakeholder needs and ensuring the program's continued success and sustainability.

The study also underscores the importance of aligning perceptions between trainers and trainees, particularly in the areas of Assessment and Evaluation. By integrating modern technologies, improving curriculum content, and refining assessment methods, the course can achieve greater relevance and effectiveness. Implementing these recommendations will address discrepancies and contribute significantly to the overall improvement and impact of the Butterfly Production Level II course.

Recommendations

To enhance the effectiveness of the Butterfly Production Level II course, several key areas require attention. First, the curriculum should be streamlined to eliminate redundancies and incorporate modern technologies. It's essential to ensure that Competency-Based Learning Materials (CBLM) are complete and validated for all Units of Competency (UC). Enhancing resources and tools is also crucial; integrating advanced technologies like resin technology and providing additional learning resources such as books, documentary videos, and relevant files will support this goal.

Assessment methods should be refined by introducing project-based assessments, which offer a more comprehensive evaluation of learners' practical skills. Practical tools related to butterfly care should be utilized in these assessments to ensure relevance and effectiveness. Supporting trainers is equally important; facilitating industry immersion and providing necessary teaching materials like laptops, projectors, and other equipment will significantly enhance their teaching capabilities.

To improve curriculum engagement, consider extending study hours and ensuring clarity in decision-making processes. Making butterfly product curation an elective subject could also increase engagement. Addressing practical challenges is essential by providing additional training and resources for caterpillar care and stage identification, ensuring the availability of essential materials, and incorporating feedback from trainers and trainees. Implementing these recommendations will address the identified challenges, enhance the curriculum's effectiveness, and better meet the needs of both trainers and trainees.

Compliance with Ethical Standards

The undersigned is conducting research entitled "Design, Development, Validation and Testing of Proposed Competency-based Curriculum for Butterfly Production Level II Course." As part of this study, researchers are expanding our investigation to explore the effectiveness and impact of Competency-based Curriculum in Butterfly Production Level II within the Technical and Vocational Education and Training (TVET) context.

The research aims to understand the experiences and perspectives of TVET trainers, butterfly breeders, technical experts, and trainees involved in the program to enhance butterfly industry. Your participation in this extended study is entirely voluntary, and you retain the right to withdraw at any time without any consequence. The information collected will be used exclusively for research purposes and will be handled with the utmost confidentiality. Strict measures will be implemented to ensure the privacy of participants.

If you have any concerns or questions about the extended data collection process, please feel free to contact the researcher at lautzojam@gmail.com or 09687191434. I sincerely appreciate your time and consideration in participating in our research, and your invaluable contribution is crucial to the success of our efforts.

Acknowledgments

I wish to acknowledge the divine guidance and grace that have been a constant presence throughout this research journey. To God above all, I am profoundly grateful for the wisdom, strength, and inspiration bestowed upon me during the course of this study. Your unwavering support has been my source of comfort and resilience.

I extend my heartfelt gratitude to the following individuals and institutions for their invaluable contributions to the completion of this research:

Marinduque State College: I am grateful for the resources and facilities provided by Marinduque State College, which greatly facilitated the research process.

Dr. Liza Marie M. Pacia: My research adviser, whose guidance, expertise, and unwavering support have been instrumental in shaping and refining this study. Your mentorship has been a source of inspiration throughout the research process.

Research Panel: Prof. Panchito M. Labay, Dr. Diosdado P. Zulueta, Dr. Leodegario M. Jalos Jr., Dr. Joy S. Montejo. The insightful feedback and constructive criticisms from the research panel significantly enhanced the quality and depth of this study.

TESDA Provincial Office-Marinduque, PD. Zoraida V. Amper, PhD.: The support and cooperation from the TESDA Provincial Office, under the leadership of PD. Zoraida V. Amper, were crucial in the successful execution of this research.

Provincial Training Center-Marinduque, PTC Boys, Torrijos Poblacion School of Arts and Trade, Buyabod School of Arts and Trades, and other TESDA Accredited Institutions: I extend my appreciation to these institutions for their collaboration and willingness to share their expertise, which significantly contributed to the depth and comprehensiveness of this study.

Technical Working Group (TWG) of Butterfly Production, Butterfly Breeders, and Experts: My sincere thanks to the members of the Technical Working Group, Butterfly Breeders, and Experts for their valuable insights and contributions to the research on butterfly production.

Trainers and Trainees of Butterfly Production: The cooperation and enthusiasm of the trainers and trainees in the field of butterfly production were crucial in gathering practical insights and real-world perspectives.

Colleagues and Peers: I am grateful to my colleagues and peers for their constructive feedback and stimulating discussions during various stages of the research.

Your input was instrumental in refining the ideas and shaping the overall direction of the study.

My Family: Finally, I want to express my deepest appreciation to my family for their unwavering support and understanding. Your encouragement and patience sustained me throughout the challenging moments of this research journey.

I extend my heartfelt thanks to all the individuals and institutions mentioned earlier, recognizing that their roles and contributions are a reflection of the blessings and opportunities provided by the divine. Each of you has left an indelible mark on this project, and I am truly thankful for the collaborative spirit that made this research possible.

DEVELOPMENT AND ACCEPTABILITY OF HYDROPONIC GARDEN

Maria Virginia S. Hugo, LPT, MAIE

Patul National High School, Santiago City, Isabela, Philippines

https://doi.org/10.5281/zenodo.13311468

ABSTRACT

This research explores the development and acceptability of hydroponic gardens as a viable alternative to traditional soil-based gardening, focusing on both circulating and non-circulating systems. Utilizing locally sourced materials, two hydroponic designs were created: one using PVC pipes and a submersible pump for nutrient circulation, and the other employing polyethylene and styrofoam for a non-circulating setup. Pechay seedlings were cultivated without soil, highlighting hydroponics' adaptability in urban settings with limited space. Evaluation by 20 faculty members, 10 hobbyists, 15 agriculture students, and 5 agriculturists confirmed the designs' functionality, economy, and instructional value. A Likert scale was used to assess the acceptability, showing high approval for both systems. The study concludes that hydroponics is an effective, innovative gardening method, particularly suitable for educational purposes and areas with space constraints. Further research is recommended to enhance the hydroponic designs, with a preference for non-circulating systems in educational settings.

INTRODUCTION

Agriculture is the backbone of the Philippine economy, playing a critical role in food security, poverty alleviation, and rural development. It contributes significantly to employment-led economic growth through its various linkages and multiplier effects (Balisacan & Fuwa, 2004). However, the agricultural sector faces numerous challenges.

The population of the Philippines has been steadily increasing over the past decades, placing immense pressure on the agricultural resource base and necessitating a substantial increase in food production (Philippine Statistics Authority, 2020).

One of the critical issues facing agriculture in the Philippines is the fluctuation in vegetable prices, commonly referred to as "seasonal" changes, which are influenced by the economics of demand and supply. Inflation, driven by factors such as high oil prices, exacerbates this issue by increasing shipping costs, thereby raising the prices of vegetables over time (Briones & Dela Peña, 2014). Climate change also adversely affects vegetable production, leading to further volatility in prices (Lasco et al., 2016).

Data from the Philippine Statistics Authority (2020) revealed that in August of that year, the average prices of vegetables sold nationwide were 19.2% higher than the average prices from the previous year. This significant increase highlights the urgent need for sustainable and innovative solutions to address food security challenges.

In response to these challenges, the development and adoption of new agricultural technologies are imperative. The greatest challenge is to increase food production while maintaining ecosystem stability and rehabilitating the environment (Foley et al., 2011). The goal is to ensure that everyone is adequately and nutritiously fed without over-exploiting natural resources (Pretty et al., 2010).

The *"Gulayan sa Paaralan"* program, initiated by the Department of Education (DepEd) and aligned with the Department of Agriculture's goals, aims to enhance students' knowledge of the importance of growing plants and vegetables (Department of Education, 2018). This program emphasizes organic gardening technologies and the production of vegetables and fruits rich in proteins, vitamins, and minerals to improve children's nutrition (Francisco, 2017).

However, Patul National High School faces a significant challenge in implementing the *"Gulayan sa Paaralan"* program due to limited gardening space. The once fertile areas of soil on the campus are now covered with concrete, leaving little room for traditional gardening methods. Therefore, there is a pressing need to design and develop a hydroponic garden as a viable alternative.

Hydroponics offers a valuable means of growing fresh vegetables, fruits, and flowers, particularly in urban areas with shrinking land and water resources (Resh, 2012). It is defined as the cultivation of plants in a water and nutrient solution, eliminating the need for soil (Jensen, 1999). This method of soilless agriculture presents a high-tech solution for growing plants efficiently and sustainably.

Hydroponics provides several advantages, including the ability to control nutrient levels precisely, reuse water, and eliminate soil-borne pests and diseases (Savvas & Gruda, 2018). It is also environmentally friendly, as it reduces the release of pollutants into the environment (Barbosa et al., 2015). The potential to grow food in small spaces

and under various environmental conditions makes hydroponics an attractive option for urban farming (Despommier, 2010).

Moreover, hydroponic systems often utilize organic nutrients, aligning with the principles of organic farming (Owen, 2016). Urban farmers increasingly adopt hydroponics to grow food sustainably, recognizing the detrimental effects of excessive chemical fertilizers on soil fertility and groundwater (Foley et al., 2011).

Hydroponic gardening is particularly beneficial for areas with limited space, such as Patul National High School. It offers a reliable method of cultivation that results in high yields and reduces the risk of pests and diseases (Sharma et al., 2018). By integrating hydroponic systems into existing agricultural projects, schools and communities can produce sustainable food and enhance food security (Gruda, 2009).

This study aims to develop a hydroponic garden at Patul National High School to address the lack of soil space for the *"Gulayan sa Paaralan"* program. The research will explore the development and acceptability of hydroponic gardening as a sustainable solution to the challenges faced by schools and similar institutions.

Research Questions

This study aimed to develop and determine the acceptability of a hydroponic garden at Patul National High School, Santiago City, Philippines

Specifically, it sought to answer the following questions:

1. How are hydroponic gardens developed?
2. What is the level of acceptability of the two hydroponic gardens in terms of:
    a. functionality
    b. economy
    c. workability
    d. durability
    e. safety
    f. instructional capability
3. Is there a significant difference in the acceptability of hydroponic gardens as evaluated by:
    a. faculty
    b. hobbyist
    c. students
    d. agriculturist
4. Is there a significant difference in the acceptability of a circulating hydroponic garden and a non-circulating hydroponic garden?

METHODOLOGY

Project Design

The Hydroponic designs presented in this study had undergone steps of development. The project was developed and fabricated out of locally available parts and materials. One design for circulating hydroponics using GI pipes, PVC, and a submersible motor pump. Another design is for non-circulating hydroponics using recyclable materials. Both were used by the students and teachers in propagating *pechay* without the use of soil. The safety and comfort of the user were given emphasis.

A. Design of Circulating Hydroponics

PVC pipes with a 3-inch diameter were used, and a 25-watt submersible pump was connected to the PVC pipes using a rubber hose. The PVC pipes were drilled with ten holes in each pipe, connecting the PVC ends and couplings.

The water container, which had a capacity of 60 liters, was drilled, and the submersible pump was placed inside and connected to the hose. This setup allowed the water to flow up to the six PVC pipes and back into the water container. The water, combined with the SNAP solution, supplied the pechay seedlings with their needed nutrients and minerals.

Figure 1. Circulating Hydroponics with Submersible Motor Pump

B. Design of Non-Circulating Hydroponics

A styrobox of imported grapes and a polyethylene plastic bag (20”x30”, 0.003mm thick) made of clear plastic were used in the non-circulating hydroponics design. Eight holes were made on the lid or cover of the box using a cutter. The plastic bag was used as a liner for the bottom half of the box to hold the nutrient solution. Packaging tape was used to close all the open slits of the lid or cover to prevent the entry of mosquitoes. The styrocup with slits was placed in the hole.

Figure 2. Non-Circulating Hydroponics

Project Development

The following are the materials and procedures in the fabrication of Circulating and Non-Circulating Hydroponics

A. Circulating Hydroponics

The circulating hydroponic used PVC pipes with a diameter of 3 inches, plastic cups (8oz), and 25 watts submersible pump for continuously applying the water with nutrients to the pipes. The use of 3” diameter PVC pipes made water efficiently flow thoroughly and made the pechay roots grow widely in the pipes.

Materials:

Equipment/Materials:

- 6 straight pipes of PVC (3 in diameter)
- 12 PVC ends with a 90* curve

- 15 PVC Coupling
- PVC glue (Solvent)
- Big tub
- Submersible water feature pump (25 TO 3OW)
- 6 feet length of hose pipe
- Galvanized Iron pipe
- Vulcaseal
- Angle Bar
- plastic cups

Procedure:

To assemble the frame for your project, start by cutting the PVC pipes to the required lengths. Once the pipes are cut, glue the parts together securely. Afterward, drill the necessary plant holes into the PVC pipes, ensuring they are evenly spaced and properly aligned. Proceed to assemble the table-type frame by welding the steel parts together for added stability. Once the frame is sturdy, attach the PVC pipes to it. Next, connect the plastic hose to the PVC pipes using vulcaseal to ensure a watertight seal. Finally, paint both the pipes and the steel frame to protect them from the elements and enhance their appearance.

For the water container assembly, begin by drilling holes into the container as needed for the connections. Install the 25-watt submersible motor pump inside the container, making sure it is properly positioned and secured. Connect the water hose from the motor pump to the PVC pipes, ensuring a tight connection to facilitate smooth water flow through the system. With these steps completed, the assembly is ready for use.

B. Non-Circulating Hydroponics

The non-circulating hydroponic garden was made from polyethylene plastics, styrofoam boxes, and styrofoam cups. The use of polyethylene plastics with a thickness of 0.003mm made the project moss-free. The moss can absorb the nutrients from the water and there will be a competition in nutrients between pechay plants and moss.

Equipment /Materials needed:

- Styrofoam Box (boxes of imported grapes)
- Styrofoam cups (8 oz)
- 10 liters of water
- 25 ml of Nutrient Solution (SNAP Solution)
- Polyethylene plastic bag (20” x 30”, 0.003mm thick)

Procedure:

To prepare your growing system, begin by making eight holes on the lid or cover of the box using a cutter. This will allow for the placement of your plants. Next, line the bottom half of the box with a plastic bag to ensure it can hold the nutrient solution without

leaking. Use packaging tape to seal all the open slits on the lid or cover to prevent mosquitoes from entering.

Place the styrofoam cups with slits into the holes you've cut on the lid. Then, position the boxes in a location where they can receive morning sunlight, making sure they are placed under a roof awning or transparent shed to prevent rainwater from entering the system. Arrange the growing boxes linearly on level ground or a bench, with the covers removed.

Fill each box with approximately 10 liters of tap water, and then add 25 ml of the nutrient solution to each box. Carefully place the seedling plugs into the holes on the lid or cover, ensuring that all cups are securely plugged into the holes. Finally, examine the boxes for any leaks and perform necessary troubleshooting to ensure the system is functioning properly.

Establishing the Seedlings

Materials Needed:

- Sowing/Seedling Tray
- Growing Media (Coco coir/peat)
- Pechay seeds
- Nutrient solution (SNAP Solution)

Procedure:

To begin the seedling process for pechay, start by filling a sowing or seedling tray with a layer of growing media, such as coco peat or coir, about an inch thick. Level the media to create an even surface. Scatter the pechay seeds uniformly and thinly across the media to ensure even germination. Water the seeds liberally every day, as you can expect germination to occur within 2 to 5 days.

Once the seeds have germinated, grow the seedlings under the sun for 7 to 14 days. This period allows the seedlings to strengthen and develop before transferring them to individual growing cups. When ready to transplant, dig a hole in the middle of the growing media in each cup and carefully place the pechay seedlings into the holes, ensuring they are securely positioned for optimal growth.

Testing Procedure

After constructing all the major components in their respective places, the project was subjected to a rigid test to determine its functionality.

1. **Durability Test**
   - Breakage of Styrofoam
   - Water capacity
   - Structural design of steel frame

2. **Functionality Test**
   - Pump is functional
   - Safety from electrical shock

Table 1. Cost of Development

Item No.	QTY.		Unit	Specifications	Unit Price	Total Price
1	1		Assy.	Submersible motor pump	800	800
2	6		pc.	PVC Pipe 3”in diameter	150	900
3	4		pc.	G.I. Pipe (1x1 inch)	280	1,120
4	3		pc.	Angle Bar (1x1 inch.)	170	510
5	12		Pcs.	PVC Coupling	10	120
6	15		Pcs.	PVC Ends	15	225
7	1		pc	Solvent	150	150
8	1		set	Nutrient Solution	250	250
9	5		kilos	Coco Coir/Coco Peat	50	250
10	1		set	Po;ythylene 20”x30” plastic	150	150
11	1		Pc.	Water container (60 liters)	280	280
12	5		m.	Rubber hose	35	175
13	1		Pc.	Vulcaseal	180	180
14	1		pc	Pechay seed	70	70
15	1		pc	Packaging Tape	25	25
16	80		Pcs.	Styrocups	1	80
17	60		Pcs.	Plastic Cups 8oz	1	60
	Total Price					**P5,345.00**

The cost of supplies and materials in the development of (1) one unit of non-circulating hydroponics was Php. 125.00 while (1) one unit of Circulating hydroponics cost Php.4,710.00.

The cost of labor was estimated at 35% of the total cost of supplies and materials including the necessary procedures done in the production.

Table 2. Time consumed in the development of Circulating Hydroponics Design

Activities	Man Hours

3.2. Submersible Motor Pump System Assembly	5 Hrs.

4. Initial Testing	2 Hrs.
TOTAL	133 Hrs.

Table 3. Time Consumed in the Development of Non-Circulating Hydroponics Design

Activities	Man Hours
1. Conceptualization	4 Hrs.
2. Preparation of Tools, Materials, and Parts	48 Hrs.
3. Fabrication of Parts 3.1 Cutting 3.2. Assembling of plastics and styrocups	 12 Hrs. 5 Hrs.
4. Initial Testing	2 Hrs.
TOTAL	71 Hrs.

Evaluation Procedure

The evaluation was conducted through a survey, using the qualitative analysis method to determine the acceptability of the device. In the process, a survey on the functionality, economy, workability, durability, safety, and instructional applicability of the hydroponics design was solicited based on the format of the evaluation criteria for the hydroponics system. However, the study did not make use of all the criteria. Instead, it only used the ones related to the prototype to be used to keep a more concrete and definite outcome of evaluation. Each criterion is determined by a set of three indicators rated on a scale of 1 to 5 where 1 is the lowest and 5 is the highest.

The evaluation panel was composed of twenty (20) faculty members (Technology and Livelihood Education Teachers); ten (10), hobbyists, fifteen (15) agriculture students, and five (5) Agriculturists. These people were tapped because of their varying levels of expertise and experience in the field of Agriculture.

The results of the testing conducted were shown to the evaluators as evidence of the viability and reliability of hydroponics as a new, economical, and effective tool in gardening.

Demonstration on how the tool was operated was presented to all the members of the panel, thereafter, they were given an evaluation instrument to judge and evaluate the hydroponics system.

Treatment of Data

After the evaluation, the results were tabulated and interpreted. The Likert scale was employed to determine the equivalent descriptive rating of the weighted mean as shown below.

Weighted Mean	Descriptive equivalent
4.51 – 5.00	Highly Acceptable
3.51 – 4.50	Very Acceptable
2.51 – 3.50	Acceptable
1.51 – 2.50	Fairly Acceptable
1.00 – 1.50	Not Acceptable

RESULTS AND DISCUSSION

Project Description

A. Non-Circulating Hydroponics

The developed Non-Circulating hydroponics used Polyethylene plastic bag (20”x30”, 0.003mm thick). Recycled Styrofoam fruit boxes were used as growing or culture pots where the nutrient solution was contained. The bottom part of the box was lined with a polyethylene sheet to prevent the nutrient solution from draining out. The lids of these boxes had prefabricated vents or openings that allowed the passive aeration of the roots.

B. Circulating Hydroponics

It is a hydroponic system where a continuous flow of nutrient solutions runs over the plant's roots. By using a 3” in diameter of PVC pipes the water was able to flow into six pipes vigorously. The system also used a 25-watt submersible pump to make the water with nutrient solution flow up to the rubber hose to the pipes and flow back to the water container.

Harvesting

After 32 days of observations, the growth of pechay in Non-circulating and circulating hydroponics were ready to harvest. In Non-circulating hydroponics harvested about (22) twenty-two kilograms of pechay, while Circulating hydroponics harvested (19) nineteen kilograms of pechay. The harvested pechay after cleaning, measuring, and bundling were sold to teachers, parents, and students. The total amount of the harvested pechay was Php.410.00.

Number of Yields

(Note: Each system contains 60 styrocups with pechay seedlings)

The table shows that the number of yields in non-circulating hydroponics is greater than in circulating hydroponics after 32 days (from germination to transplanting).

Table 4. Number of yields in Circulating and Non-Circulating Gardens after 32 Days

Hydroponics Garden	Number in kilograms
A.Non Circulating Hydrophonics	22 kilograms
B. Circulating Hydrophonics	19 kilograms

Product Evaluation

The Level of Acceptability of Circulating and Non-Circulating Hydroponic Gardens in terms of functionality, economy, workability, durability, safety, and instructional capability is shown in Table 2 below.

Table 5. Level of acceptability of circulating hydroponic garden per criterion

Criteria	Standard Deviation	Mean	Remark
Functionality	0.543	4.75	Highly Acceptable
Economy	0.632	4.60	Highly Acceptable
Workability	0.667	4.63	Highly Acceptable
Durability	0.616	4.68	Highly Acceptable
Safety	0.632	4.60	Highly Acceptable
Instructional Capability	0.362	4.85	Highly Acceptable
Grand Mean	0.575	4.68	Highly Acceptable

Table 5 reflects the level of acceptability of the Circulating Hydroponic Garden according to functionality, economy, workability, durability, safety, and instructional capability. It can be gleaned from the table that the project was rated “Highly Acceptable” by the respondents as to functionality, economy, workability, durability, safety, and instructional capability with means of 4.75, 4.60, 4.63, 4.68, and 4.85, respectively. Overall, the project is highly acceptable with a grand mean of 4.68.

The level of acceptability of circulating hydroponic gardens per criterion was highly acceptable for agriculturists, agriculture students, hobbyists, and Technology and Livelihood Teachers. However, the lowest mean was the economy and safety for circulating hydroponics which was the same as 4.60. Safety refers to the low probability of accident occurrence during operation.

The highest mean was the criteria under the instructional capability which has 4.85 with the same responents. Instructional capability refers to the extent where the project supports the three domains of learning.

Table 6. Level of acceptability of non-circulating hydroponic garden per criterion

Criteria	Standard Deviation	Mean	Remark
Functionality	0.304	4.90	Highly Acceptable
Economy	0.335	4.87	Highly Acceptable
Workability	0.494	4.75	Highly Acceptable
Durability	0.385	4.82	Highly Acceptable
Safety	0.221	4.95	Highly Acceptable
Instructional Capability	0.267	4.93	Highly Acceptable
Grand Mean	0.334	4.87	Highly Acceptable

Table 6 shows the acceptability level of a Non-Circulating Hydroponic Garden in terms of functionality, economy, workability, durability, safety, and instructional capability. The respondents rated the project “Highly Acceptable” according to the criteria whose means are 4.90, 4.87, 4.75, 4.82, 4.95, and 4.93, respectively. The grand mean of 4.87 shows that overall, the project is “Highly Acceptable” among the respondents.

Comparison in the Level of Acceptability of Hydroponic Gardens among Faculty, Hobbyists, Students and Agriculturists

Table 7. Comparison of the level of acceptability of circulating hydroponic garden across varied groups.

	Sum of Squares	df	Mean Square	F	p-value
Between Groups	1.987	3	0.662	3.009	0.043
Within Groups	7.925	36	0.220		
Total	9.913	39			

Table 7 indicates the comparison of the level of general acceptability of non-circulating hydroponic gardens across varied groups. The means of the level of acceptability of the project significantly vary across the four (4) groups (F-test = 3.009, p-value < 0.05). This means that there is a significant difference in the level of acceptability of circulating hydroponic gardens among the varied groups.

Table 8. Multiple comparisons on the level of acceptability of circulating hydroponic gardens across varied groups.

(I) Evaluator	(J) Evaluator	Mean Difference (I-J)	Std. Error	p-value	95% Confidence Interval	
					Lower Bound	Upper Bound
Faculty	Hobbyists	-0.23300	0.25699	0.801	-0.9251	0.4591
	Students	-0.31133	0.24229	0.578	-0.9639	0.3412
	Agriculturists	0.23200	0.25699	0.803	-0.4601	0.9241
Hobbyists	Faculty	0.23300	0.25699	0.801	-0.4591	0.9251
	Students	-0.07833	0.19155	0.977	-0.5942	0.4376
	Agriculturists	0.46500	0.20983	0.138	-0.1001	1.0301
Students	Faculty	0.31133	0.24229	0.578	-0.3412	0.9639
	Hobbyists	0.07833	0.19155	0.977	-0.4376	0.5942
	Agriculturists	0.54333*	0.19155	0.036	0.0274	1.0592
Agriculturists	Faculty	-0.23200	0.25699	0.803	-0.9241	0.4601
	Hobbyists	-0.46500	0.20983	0.138	-1.0301	0.1001
	Students	-0.54333*	0.19155	0.036	-1.0592	-0.0274

** The mean difference is significant at the 0.05 level.*

The table above shows multiple comparisons using Tukey HSD on the level of acceptability of circulating hydroponic gardens to determine where the difference lies among varied groups. It can be gleaned from the table that the level of acceptability of the project differed significantly between agriculturists and students as evidenced by a p-value of 0.036 which is less than the 0.05 level of significance. This suggests that agriculturists perceive the circulating hydroponic garden differently than students because of the former's educational background and expertise in Agriculture.

Table 9. Comparison of the level of acceptability of non-circulating hydroponic garden across varied groups.

	Sum of Squares	Df	Mean Square	F	p-value
Between Groups	0.210	3	0.070	1.143	0.345
Within Groups	2.206	36	0.061		
Total	2.416	39			

Table 9 presents the comparison of the level of acceptability of non-circulating hydroponic gardens across varied groups. It can be gleaned from the table that there is

no significant difference in the level of acceptability of the project among the respondents as shown by an F-test value of 1.143, and a p-value (0.345) greater than the 0.05 level of significance. This means that the level of acceptability of non-circulating gardens is the same among varied groups.

Comparison of the Level of Acceptability of Circulating Hydroponic and Non-Circulating Hydroponic Gardens

Table 10. Comparison of the acceptability level of the two hydroponic gardens

T	Df	p-value	Mean Difference	Std. Error Difference	95% Confidence Interval of the Difference	
					Lower	Upper
2.109	56.944	0.039	0.18750	0.08890	0.00948	0.36552

Table 10 presents the comparison of the General Level of Acceptability of Circulating and Non-Circulating Hydroponic Gardens. With t = 2.109; and a p-value (0.039) less than the 0.05 level of significance, a significant difference in the general acceptability levels of the two projects is established. This means that circulating and non-circulating hydroponic gardens differ significantly in the level of acceptability of the respondents. The circulating hydroponic has a grand mean of 4.68 and the non-circulating hydroponics garnered its grand mean of 4.87 showing that overall, the projects are “Highly Acceptable” among the respondents. With the mean difference of 0.18750, this means that non-circulating hydroponics is more highly acceptable than circulating hydroponics.

Conclusions

In light of the aforementioned findings, the study concludes that circulating and non-circulating hydroponics are highly accepted innovative ways of gardening. The developed hydroponic garden is functional, economical, workable, durable, safe, and has instructional value. It is very suitable in places with very limited area for planting like in highly urbanized areas. Developing a hydroponic garden (circulating and non-circulating) is easy as materials are readily available. Finally, yields or produce from hydroponic gardens are of high quality comparable to those produced from soil (garden).

Recommendations

Based on the above conclusion, the study forwards the following recommendations:

1. Hydroponics can be used as an instructional tool in school for introducing hydroponics gardening to students taking up vegetable production.
2. A hydroponic garden should be made as an alternative to a soil garden where the school has limited space for the *Gulayan sa Paaralan* program.

3. School managers may consider hydroponics as an innovation of gardening for the *Gulayan sa Paaralan* program.
4. Between the two types of hydroponic gardens, non-circulating hydroponics should be preferred for use in school.
5. Researchers can improve the design of circulating hydroponics and non-circulating hydroponics.

Compliance with Ethical Standards

The researcher hereby assures that the study was conducted in strict adherence to research ethical standards, ensuring that participants provided informed consent, had the freedom to withdraw from the study at any time, their anonymity was preserved, their well-being was protected, no conflict of interest influenced the study, plagiarism was rigorously avoided, findings were interpreted without bias, and the results were used exclusively for research purposes.

Acknowledgments

The researcher would like to express her heartfelt gratitude to her esteemed research adviser for her invaluable guidance and support throughout this study. She is deeply thankful to the participants who generously shared their time and insights, making this research possible. She extends also her appreciation to the school heads, colleagues, friends, and family for their unwavering encouragement and understanding. Lastly, she acknowledges the divine guidance of God, without whom this journey would not have been possible.

ABSTRACT

The study aims to develop and evaluate a self-learning module for *Araling Panlipunan 9* to address persistent challenges in teaching Economics and improve the low National Achievement Test (NAT) scores in this subject. Employing descriptive research methods, the study utilizes examinations and surveys alongside Johnson's Instructional Materials Development Approach as its primary framework. Participants included Grade 10 students from Manaring Integrated School and expert Social Studies teachers from the Schools Division of the City of Ilagan. The findings indicate that: (1) the designed and validated self-learning module effectively enhances students' learning experiences in *Araling Panlipunan 9*; (2) the modules are well-designed, aligned with curriculum objectives, and suitable for the student's educational needs; (3) the modules are validated as reliable and appropriate for the learners' assessed levels, needs, and abilities; (4) students can use the modules easily due to their comprehensible design; and (5) incorporating the self-learning module is an effective method to supplement traditional teaching approaches in *Araling Panlipunan*. Therefore, the developed self-learning module is recommended for classroom use in teaching Economics and as a model for creating comprehensive modules for the remaining quarters of the school year.

Keywords: *Araling Panlipunan 9, Economics, Johnson's Instructional Materials Development Approach, National Achievement Test (NAT), Self-Learning Module*

INTRODUCTION

The “No Filipino Child Left Behind Act of 2008” is directed to safeguard and secure the right of every citizen, especially children, to quality education. The said policy also ensures to advance access to such education. In support of the aforementioned, the state shall craft appropriate frameworks and resources for an effective implementation of educational programs, projects, and services; and encourage local initiative for the enhancement of schools and community-based facilities for learning. The policy mandates that children of compulsory school age would be required to attend school and enjoy the benefit of having the opportunity to be educated. It also ensures that schools and other facilities reflect the values of a community by permitting teachers, learning facilitators, and other personnel to be flexible in satisfying the needs of the learners, as well (Cayanan, 2015).

To determine if the schools are effectively implementing the “No Child Left Behind” policy along with other programs geared towards quality education, annualassessment strategies have been implemented to assess the current learning situations across the country – one is a national standardized examination. The National Achievement Test (NAT) is designed to determine each learner’s academic levels, strengths, and weaknesses in five curricular subject areas at the end of the school year; this is in accordance with the Department of Education Order No. 5 s. 2005 on Students’ Assessments at the National and Division Levels of Basic Education.

The Department of Education (DepEd) reported an average of 47.6 percent in the year 2011 and 54.22 percent in the year 2012 in *Araling Panlipunan*. In Region 02, *Araling Panlipunan* secured an average of 59.6 percent for the School Year 2014-2015 in the National Achievement Test. Based on the results of the 2011 and 2012 NAT; there was an increase of six percent in the learners’ mastery level of key concepts and competencies in *Araling Panlipunan* (Social Studies). The increased percentage shows that there is an improvement in the learners’ knowledge of *Araling Panlipunan.* However, there is still a high discrepancy between the reported NAT results and the government’s target criterion level of 75 percent, as directed by the Guidelines on the Assessment and Rating of Learning Outcomes under the K to 12 Basic Education Curriculum (Macarandan, 2014). Hence, the low performance of learners in *Araling Panlipunan* in the National Achievement Test indicates the need to augment the learners’ mastery level of concepts and competencies in the said subject through improved teaching and enhanced curriculum material development.

Aside from the low average performance in the NAT in *Araling Panlipunan*, there are still common and basic problematic situations cited for the low performance in the subject. One common problem teachers encounter inside the classroom is that students tend to have a low attention span during discussions.

According to Balena (2004), social studies could be uninteresting for students, especially when the teacher does not relate topics and concepts to the trends relevant to the subject. Thus, it could be inferred that integrating current trends in discussing social studies will avoid an academic monotone atmosphere in a classroom setting in the

integrative teaching of Social Studies. Other problems teachers face are a lack of textbooks, deficiency of physical facilities conditions, and lone teaching of knowledge-skill-values. In this situation, there is a need to frame and develop textbooks and other materials relevant to the demands of teaching the subject.

On the other hand, teachers are also encountering time constraints in teaching social studies. Teachers are having problems incorporating broad concepts in Social Studies because the Department of Education reduced the number of meetings to 110 days only (Macarandan, 2014). Furthermore, the emergence of trends in teaching Social Studies that have been discussed presents additional concerns. There are negative relationships between the Social Studies area and students' attitudes,experiences, and perspectives. Admittedly, the negative relationship may be caused by different degrees of difficulties in materials, teacher-student relationships, classroom environments, lack of interest, and not recognizing social studies as a way of learning from the past the things that can be applied in the future.

Social Studies is an important academic component of high school but it is usually taken for granted (Sievers, 2005). Further, Social Studies subjects are not encountered with the most positive experiences by the students in school when compared to other subjects such as English, Mathematics, and Science. To address these concerns involving the instruction of Social Studies or Araling Panlipunan in the Basic Education Curriculum, there is a need to further innovate for solutions in the instruction process because Social Studies is very essential in the holistic development of learners (Edar, 2012; Bechayda, 2007).

Fundamentally, the Social Studies program is based on information, skills, and value perceptions. Therefore, the concepts, skills, and values should be understood and acquired using different strategies of instruction. Delivery modes could be class lectures, note-taking, homework assignments, tests, and quizzes. Class activities may also include role-playing, cooperative groups, discussion, film/video presentation, and experiential activities. With this, numerous methods and approaches could be implemented to augment and aid the teaching of Social Studies. Hence, there is a need to develop instructional materials (Ramos, 2004; Agorilla, 2014).

The *Araling Panlipunan* Curriculum under the K to 12 Basic Education Program recognizes the importance of modular instruction in the teaching-learning process in the 21st century and as supplementary materials to cope with extending time to cover the lessons in schools with more than one session (Macarandan, 2014). Research results confirm the effectiveness of modular instruction and reliability in identifying difficulties and concerns in carrying out the new curriculum. The modules motivated the students to participate actively in the learning process because the activities were interesting and moderately difficult (Macarandan, 2009). One thing more, the use of a modular approach as an innovative way of instruction design provides students with an opportunity to achieve meaningful learning (Edar, 2012). It tends to make the teaching-learning environment more active and attractive to learners in terms of information gathering, independent learning, and problem-solving.

Learning modules meet the educational principle of individualized instruction. Modular learning allows students to progress at their own pace and abilities. Notably, to provide quality education, one should recognize the essential role of instructional materials in purposeful and effective instruction (Naval, 2014).

An educational authority stated that the development of the production of textbooks and other instructional materials based on the student's interests, knowledge, understanding, abilities, needs, and experiences is necessary to achieve the objectives of education. Instructional materials have been effective instruments for providing quality education by meeting the needs of students.

To meet the needs of students, the learner-centered curriculum gives priority to developing self-directing and independent lifelong learners who can apply in real life their understanding of the concepts (Cayanan, 2015) as specified in the desired outcomes of the K to 12 Curriculum competencies in the form of content and performance standards in each learning area.

Economics is an integral component of the K-12 Basic Education Curriculum under the *Araling Panlipu*nan Curriculum which is a subject undertaken by Grade 9 students and is focused on the Philippine Economy. It aims to make students deeply understand the economic stability of the nation, and eventually, learners would be able to transfer these concepts to real life by practicing creativity, demonstrating critical thinking,problem-solving, and wise decision-making.

Generally, learning economics has its incentives (Zaide, 2009). First, it tells us about the material influences in daily life as a family, in the community, and as a nation. Second, knowing economics makes a person better at keeping and making money. Third, through economics, an individual learns about how to be a good businessman and perhapsa good public official someday. Fourth, economics teaches about the issues of agriculture and commerce that affect the lives of individuals and the country in general. Lastly, the knowledge of economics is necessary to be able to manage problems brought by modernization and it also helps people to prepare for their future.

The unpredicted occurrence of COVID-19 (Corona Virus Disease-2019)pandemic put the world into a major health disaster. The safety and protection of the people, including school children, are at risk. To protect everybody, schools, teachers, and students are not allowed to go to school for normal activities- classes, programs, and others to avoid contact that may transfer the deadly virus from one person to another. The government has planned and implemented national strategies to cope with the global pandemic.

In the education sector, the Department of Education of the Philippines through its Learning Continuity Plan (LCP) amidst the pandemic strategized and innovated solutions so that schools would not close and education would go on at all levels. Among the coping strategies arrived at and decided upon are the blended learning approach, distance learning, modular learning approach, virtual learning approaches through online platforms, and other means and resources.

Before the pandemic, it can be said that developing and using modules in the classroom was for intervention and enrichment purposes. Teachers prepare modules to help a student cope and master the least mastered competencies and lessons. Now, with the advent of COVID-19, the use of modules is an official alternative mode of learning underthe blended approach. The learning material should be prepared and produced by observing the design prescribed by the DepEd. In the local context, teachers should prepare the modules according to local needs. Thus, module development is a required task for a teacher who desires his students to learn meaningfully, effectively, and productively.

As a response to the need to augment the learning experiences of learners amid a global pandemic, the researcher is encouraged to plan and design an example of a learning continuity modality learning materials such as learning modules to address the learning needs of the students as prescribed on the Learning Continuity Plan of the DepEd.

The researcher believes this study will contribute to the field of *Araling Panlipunan* specifically in providing supplemental activities and learning experiences aside from the central and general provision of learning modules by the Department. The series of learning modules developed are contextualized for real-life applications. The modules are not foreign but supplement the most essential learning competencies that DepEd providesupon the implementation of such learning delivery modes.

Relative to the perennially pressing need for relevant instructional materials to effect quality instruction, and meet the “No Contact Policy”, and the call for “Bayanihan, Heal as One”- a battle cry for unity and cooperation among Filipinos to fight against the ills brought about by COVID 19 pandemic, the present study is an immediate and practical response of the researcher.

Conceptual Framework

Teachers and experts in education are continuously looking for strategies in teaching and learning that can better help students learn more effectively and productively.

Today, the models of the Whole Child Approach, 21st Century Skills, and Project Based Learning are believed to be among the most effective approaches to assist teachers and students achieve the objectives of education. Likewise, the Modular approach promoting independent learning is also proven to be another effective strategy.

Social Studies is a subject area designed to build productive, civic-minded, critical, and informed individuals. The subject consists of diverse areas such as economics, geography, history, civics, government, culture, law, and religion from Kindergarten to Grade 12 up to tertiary level. Grade levels of students determine the curriculum content systematically arranged from simple to complex. The competency components of the Social Studies curriculum include cognitive thinking processes, analytic skills, continuance of participation, and principles/concepts for students and use as an

application of life within today's society. Social Studies is expected to teach the students (Thiveos & Moroz, 2011 cited in Macarandan, 2014) life and career skills, learning and innovation skills, information, media, and technology for them to succeed in the 21st century (P12 Century Skills).

Economics is a field in the social sciences. It is under the curriculum of *Araling Panlipunan*. The phased implementation of the *Araling Panlipunan* Curriculum for Grades 7-9 in School Year 2014-2015 raised concerns among teachers. With the new setsof competencies, gaps in learning standards came up. An example of the issues is the incoming Grade 9 students who can no longer take the subject World History but will immediately take Economics, among others. The issue was addressed by the issuance of DepEd Order No. 20, s. 2014 stipulating policy guidelines on the implementation of grades 7 to 10 of the K to 12 Basic Education Curriculum and clarifying courses of study in *Araling Panlipunan*. Economics, now with improved and more comprehensive learning competencies, remained to be taught in *Araling Panlipunan*. This eventuality raised new concerns regarding books, textbooks, and other materials to use in teaching Economics effectively. Unfortunately, it was found out by educators that most books were somewhat erroneously written, and reconstructing the books would take an author time to finish. However, educators and teachers are given leeway to develop and produce materials that follow the learning competency guidelines and standards.

The books or materials are under prescribed learning competencies dealing with economic problems and issues in the Philippines, advantages and disadvantages of policies adopted as well as the status of current and alternative economic order from the Philippine Journal of Development in 2007. It is predominantly important to know that economic understanding implored at least a basic understanding of operation (Zevin, 2000) because the economic system is an essential part of everyone's education frombirth to death. The economic forces that control the structure of society influence ourvery existence, hence, it is imperative to make Economics an integral part of the entire social science curriculum. Accordingly, it is imperative for teachers with specialization in a chosen area in Social Studies should be equipped with capabilities to organize, design, and develop curriculum materials appropriate to the individual levels of students (Salandanan, 2009).

Vitasa (2006) Modular instruction is beneficial for several reasons: first, the modules help the individual needs in learning different skills and concepts; second, compared to using textbooks, they are more effective and economical in developing knowledge and skill; third, they introduce learning with minimum teacher direction and supervision; fourth, they ensure satisfactory minimum standards; fifth, modules upgrade the content and enhance competencies in grammar; sixth, they integrate theory and practice and provide resources for distance learning; and seventh, they encourage mastery of learning and lastly, they encouraged a changed role of teachers who become facilitators of learning.

The researcher, a teacher of Araling Panlipunan, is beset with the need to develop instructional materials in Araling Panlipunan to meet the needs for remedial and

enrichment activities to further help the students optimally acquire basic skills in Economics. Indeed, the researcher is inspired to develop teaching modules to produce thedesired learning outcome for the educational success of the students. To carry on the project, the researcher anchored her study on Johnson's Model of 1972.

According to De Guia (2016), Johnson's Model characterizes instructional materials from planning to disseminating and evaluating, hence, a very good approach toward developing learning modules in Araling Panlipunan specifically in Economics. This provided the methods of research and procedures for developing and innovating instructional materials appropriate to the design of the researcher's proposed modules. Johnson's (1972) Instructional Materials Development Approach is composed of a design phase, development phase, and dissemination phase.

In the first phase of Johnson's Model, a survey of existing materials accumulated through the years affirms the claim that the design and use of instructional materials that no new materials are completely new. A survey of existing materials enabled material developers to identify aspects of design and use them to serve as a prototype or model. Then, the survey also leads to a definition and justification of the rationale for designing new material. The writing of th e table of specifications comes next. These specifications detailthe instructional materials developed, the format, and the technical materials that had been identified.

The Development Phase is primarily selecting appropriate materials. The next step is writing of learning materials according to the table of specifications. The developed learning materials were validated and assessed by the experts. In this study, the validation and assessment were performed by her research adviser and teachers of Araling Panlipunan.

Further, formative evaluation is followed by conducting a judgmental review or pilot testing in the form of a controlled tryout of the instructional modules. The formative evaluation for suitability was conducted utilizing judgmental review withrepresentative teachers responding as evaluators or judges. An evaluation tool was adopted from the Department of Education and likewise elicited feedback in the form of comments. Based on the information gathered from the evaluation and try-out, writerscan make necessary revisions to the materials before final production. The final production of the materials should be carried out as instructed in the objectives of the materials, the detailed writing specification, and the proposed format.

Lastly, the Dissemination Phase deals with the acceptance and adoption for use of the new instructional materials. This stage refers to the extensive use of the new instructional materials in the final format. In this stage, the instructional material developer and designer should work closely with the students, teachers, and administrators for further feedback on the effectiveness and functionality of the materials.

The functionality of the instructional materials and teaching guides means that teachers could study and use the guides with ease during their classroom instruction because each teaching guide contained pertinent information and featured strategies

that would tickle the playful and imaginative minds and feelings of students (Cayanan, 2015) to achieve the desired objectives.

Developing a material would facilitate a realistic and concrete view of teaching-learning and help the students gain a better understanding of the concepts being taught (Salandanan, 2009; Macarandan, 2014). Therefore, the use of learning modules in teaching *Araling Panlipunan 9* can be an effective strategy for developing a functional learner equipped with the understanding of concepts and principles linked with real-life situations.

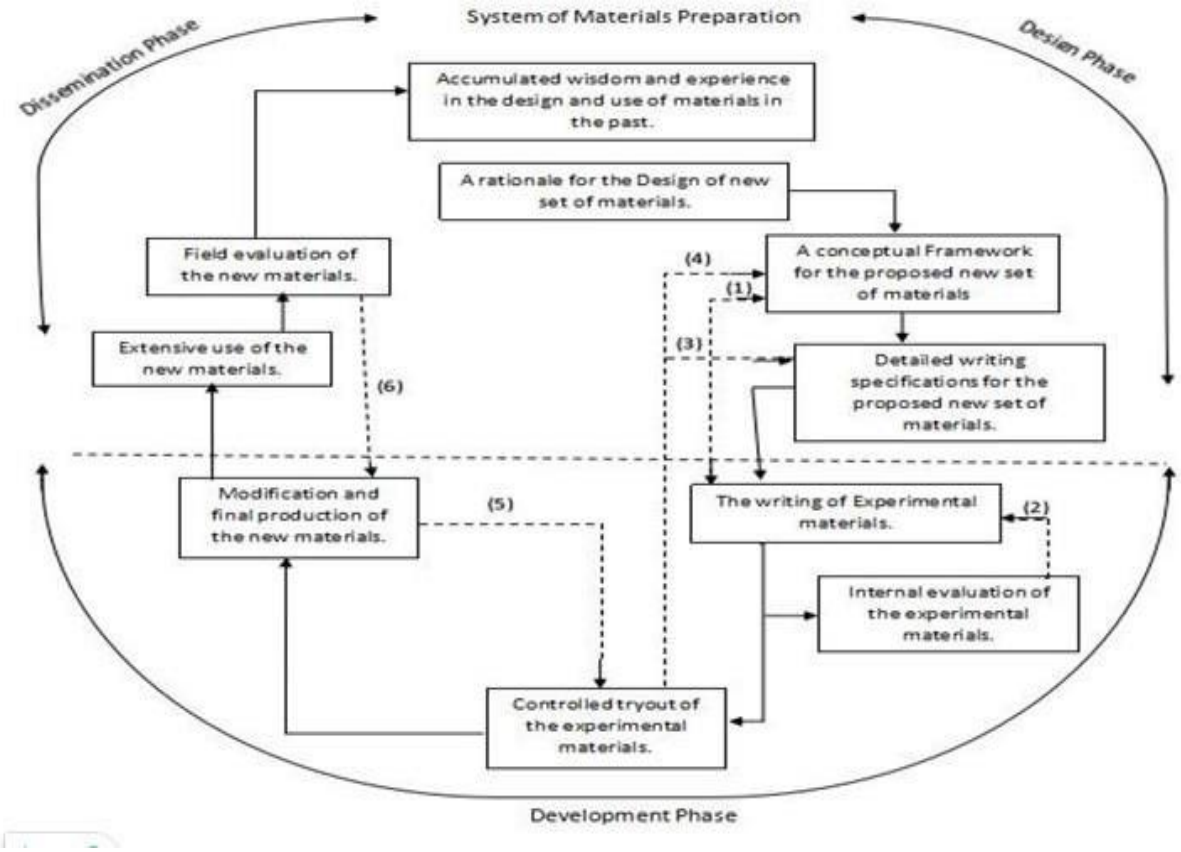

Figure 1. Johnson's Model of Instructional Materials Development

The figure above details Johnson's Model for Instructional Materials Development as one of the main frameworks for the study. This cites the three discussed phases of the model – the design phase, the development phase, and the dissemination phase. The design phase includes activities such as proposing a new set of materials, preparing the table of specifications, and initial writing of the materials. In the development phase, initial evaluation and improvement of the materials are done, while the last phase shows the process of modification, final revision, and extensive use of the materials. Thus, a systematic process and system of preparing and developing materials in a subject area.

The researcher, therefore, developed teaching modules based on Johnson's Model as the main blueprint and framework to produce the desired learning outcome for the educational success of the students. The modules provide the students a unique avenue in the writing process based on the premise of writing in the discipline of Center for Educational Measurement no. 30 s. 2006.

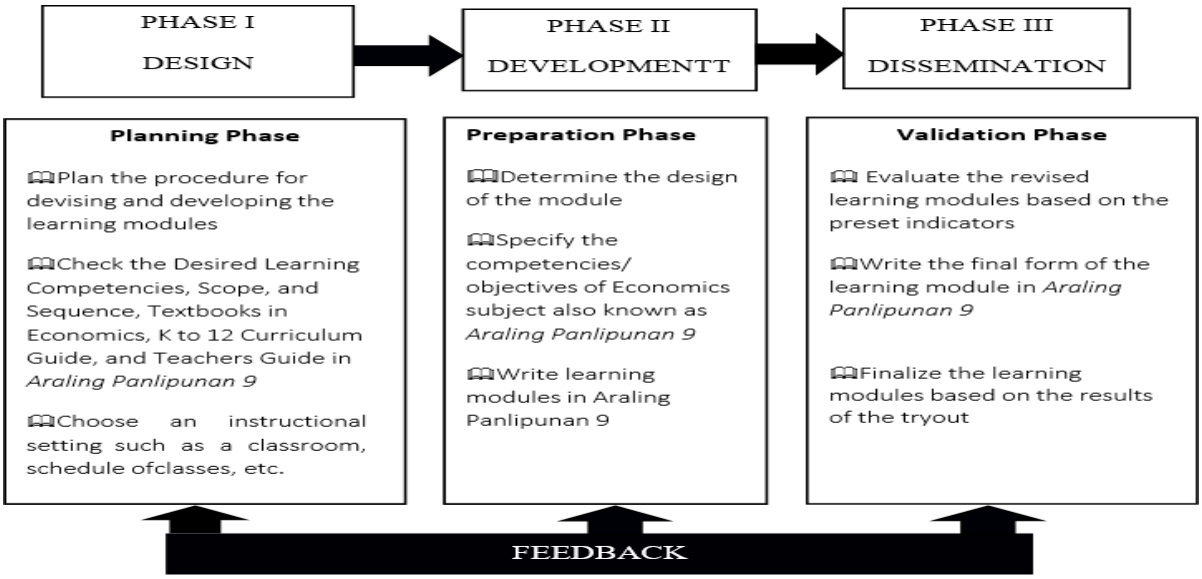

Figure 2. Research Paradigm on the Development and Validation of Learning Materials inTeaching Araling Panlipunan 9

The figure above shows the graphic presentation of the research procedure indicating specific steps undertaken for the first, second, and third phases. As gleaned from the figure, the design establishes the rationale for the study, research focus, andreview of pertinent literature following the review of the conceptual framework.

Research Objectives

This study purported to develop and validate a self-learning module in Araling Panlipunan 9 aligned with the structure of the Enhanced Basic Education K to 12 Curriculum and contribute to the improvement of student performance in the teaching-learning process.

Specifically, this study aimed to:

1. Design a learning module in Araling Panlipunan 9 to be utilized by students in the Grade 10 level.
2. Establish the content validity and reliability of the learning module in terms of face, content, organization, and effectiveness; and
3. Test the effectiveness of the learning modules in teaching Araling Panlipunan 9.

METHODOLOGY

Research Design

The study employed the descriptive method of research. The descriptive type of research is integrative for qualitative and quantitative methods of collecting data. Descriptive surveys as research methods include questionnaires and normative surveys (Gray, 2004). The descriptive type of research was appropriate for gathering information about existing conditions that determine and report the way things are (Emotin, 2003).

Sampling and Participants

The study involved two sections (Aquamarine and Zircon) in the Grade 10 level of Manaring Integrated School. The utilization of the self-learning module was conducted before the implementation of the new curriculum in Araling Panlipunan wherein Grade 10 students take Economics subject which the researcher has been teaching for five years.

In the use of the descriptive method, the self-learning module was subjected to validation using the Expert's Assessment Checklist which was developed based on several theses by Hernandez (1999), Libranda (2004), Salvador (2005), Rivera (2011) and Agorilla (2015). The researcher adopted the criteria set by the writers, which were found to be appropriate. The checklist was used to validate the learning modules based on format and design, content, organization, and presentation. Two (2) teachers of the Schools City Division of Ilagan, and one (1) teacher of the Division of Santiago City were the validators of the learning modules. Of the three, two were Teacher III and one Master Teacher I. Eighteen (18) Araling Panlipunan teachers teaching Araling Panlipunan 9 from the Division of the City of Ilagan and forty-five (45) students from Manaring Integrated School also evaluated the learning module.

The sampling method used was cluster sampling which involves surveying whole clusters of the population selected through a defined random sampling strategy (O'Leary, 2004 cited in Agorilla, 2015). Clusters may include schools, geographic locations, or sections. The clusters are sampled so that individuals within the group can be surveyed or interviewed. It was used as reasonable but relatively diversified groupings which was evident in a statistical population. In this technique, the totalpopulation was divided into two groups, and a simple random sampling of the groups was done. Using the lottery technique, the researcher selected a class from the two sections in the Grade 10 level. The selected classes used the module/instructional materials. The students of the second section (Zircon) were considered for the first pilot testing of the learning modules while the students of the first section were considered for the second pilot testing.

The study was conducted in Manaring Integrated School, a public institution under the Schools Division of the City of Ilagan located specifically at Manaring, City of Ilagan, Isabela. The students came from different barangays of the city including Pasa,

Manaring, Bangag, Capo, Tangcul, San Isidro, San Juan, Rugao, San Andres, San Rodrigo, and Balla.

Instruments

In the gathering and collection of data, the researcher used the following: (1) Experts' Evaluation Checklist of the self-learning Module to gather and collect data on the validation and evaluation of the learning modules in terms of objectives, content, organization, materials and resources, and effectiveness; (2) Pretest and Posttest for each self-learning module to achieve the scores to test the effectiveness of the learning modules; and (3) Students' Evaluation Checklist of the self-learning Module to collect data on students' evaluation on the self-learning module in terms of content and format.

1. Experts' Evaluation Checklist of the Instructional Module

To have a basis for determining the acceptability of the developed instructional modules, the researcher used the Expert's Assessment Checklist which was developed based on Agorilla (2015). Since the Self-Learning Module in Araling Panlipunan 9 was constructed and developed by the researchers, this was validated by theexperts using a standardized assessment checklist. Some modifications to the item format were made to better align them with the purpose of the study. Revisions were validated by the researcher and teacher experts in module writing in AralingPanlipunan.

2. Pretest and Posttest Scores

Pretest and Posttest were used as instruments to achieve the scores that are necessary to test the effectiveness of the self-learning module. In developing the achievement test, the researcher adhered to the standard procedures in developing and validating a test: (a) development of the table of specifications; (b) construction of the test items in congruency with the objectives and content; and (c) testing the validity and reliability of the test.

3. Students' Evaluation Checklist of the Instructional Modules

This instrument is a five-point Likert checklist adapted from the theses of Marasigan (2003) and Torrefranca (2017). Unlike the expert's evaluation form, the checklist for students focused only on the content and format of the developed instructional modules yielding a total of 20 items. The self-learning module content evaluation was composed of the objectives, lessons, scope, competencies, and other essential and relevant elements in the self-learning module. Finally, the evaluation of the self-learning module format centered on the layout of the module, template, font, size, symbols, diagrams, and other relevant technical aspects of the self-learning module.

Data Gathering Procedure

Data collection activities that were undertaken in the study are described as follows:

Material Development and Validation Stages

I. Design Phase

The researcher examined books and related materials in the self-learning module of Araling Panlipunan 9 which are the topics under the fourth quarter. It was suggested by the research panel that the last quarter of the school year was the most efficient for the researcher and the students to conduct and implement the utilization of the self-learning module. The researcher also referred to and checked the desired learning competencies, scope, and sequence prescribed by the DepEd for Grade 10 high school students. The goal of the researcher at this stage was to create a matrix that would show the competencies that must be demonstrated in the self-learning module. Deciding and determining the competencies to be captured in the learning module were accomplished in the second phase.

The content of the self-learning module was guided by t he course description by the DepEd and the prescribed topics under Social Studies. Araling Panlipunan 9 introduces learners to the world of Economics. In this subject, learners are expected to demonstrate the result provided as the basis for determining the coverage of the self-learning module. A table of specifications was prepared to serve as a guide in the preparation of the learning module. The specification includes the module number, the title, and the skills developed in each learning module.

Module No. and Title (Modyul)	Skills/ Competencies(Kasanayan)
Module 1. Konsepto at Palatandaan ng Pambansang Kaunlaran	Matutunan ang tungkol sa konsepto at palatandaan ng pambansang kaunlaran upang maka bahagi sa pagpapabuti ng pamumuhay at masukat ang kaunlaran ng isang bansa.
Module 2. Sektor ng Agrikultura	Matutunan nag kahalagahan ng agrikultura sa pang araw-araw na pamumuhay ng bawat Pilipino upang makibahagi sa matalinong paggamit ng mga likas na yaman at pagsunod sa mga patakarang pang-ekonomiya.
Module 3. Sektor ng Industriya	Matutunan ang papel na ginagampanan ng industriya at ang ugnayan nito sa maayos na pamumuhay ng mga mamamayan upang masiguro ang kapakinabangan sa pagtamo ng kaunlaran.
Module 4. Sektor ng Paglilingkod	Matutunan ang bahaging ginagampanan ng sektor ng industriya sa bansa upang mapabuti ang kakayahan ng mga manggagawang Pilipino at tumaas ang produktibidad.
Module 5. Impormal na Sektor	Matutunan ang kontribusyon ng impormal na sektor sa ekonomiya ng bansa upang mapagtagumpayan ang kahirapan sa buhay.
Module 6. Kalakalang Panlabas	Matutunan ang bahaging ginagampanan ng kalakalang panlabas sa ekonomiya ng ating bansa upang mabigyang linaw ang nagaganap sa pagitan ng Pilipinas at ibang mga bansa sa daigdig.

Figure 3. Talaan ng Inskripsyon

The table of specifications of the self-learning module was considered in the selection of appropriate instructional events. The different learning activities for each self-learning module were identified as well as the role of the teacher and the learner.

To ensure the success of each instructional event, the conditions of learning must be relevant to the expected outcome; hence, the methods of instruction were selected to help the learners achieve the skills.

Identifying Teaching-Learning Strategies, Educational research has proven that teaching strategies that are interactive, multidisciplinary, interdisciplinary, integrated, experiential, varied, and connected to students' daily lives are effective (Rivera, 2012 and Agorilla, 2015) also added that varied and appropriate instructional materials are needed to make instruction more motivating and encouraging.

II. Development Phase

Writing the Self-Learning Module is the major part of the development and validation of the module in Economics. Its writing was anchored on the K to 12 curriculum which was signed into law as Republic Act No. 10533 otherwise known as the Enhanced Basic Education Curriculum on May 15, 2013. The criteria set by the Department of Education Material Council and the UNESCO guidelines in developing instructional materials in terms of the objectives, content, organization, materials and resources, and effectivity in writing of the learning module were carefully considered. Suggestions from the panel members and the advisers during the proposal defense were incorporated into the development of the learning material.

The style adopted for the self-learning module was patterned from the existing English Learning Modules by Soriano (2013) in her thesis “Development and Validation of Self- Self-Instructional Modules in Grammar for Grade 5 Pupils” due to similarities in objectives and purposes.

Writing the first draft of the self-learning module was done using the following components:

A. Overview (Lagom Pananaw). This part of the module outlines what students are about to learn. It gives pieces of information on the different concepts that they encountered throughout the learning tasks.
B. Target (Sapulin). This refers to the objectives that students are expected to know, do,or feel after accomplishing the module.
C. Break In (Tanong Ko, Sagot Mo). This refers to the section that carefully cues the learner on the skills and values to be learned through process questions.
D. Discover (Matuto Ka). This refers to the facts about the lesson to be presented throughsentences or picture analysis.
E. Try This (Kaya Mo Ba ‘To?). This part of the module includes series of initial activities which measure learners’ comprehension and understanding of the lessons and concepts presented.
F. Challenge (Henyo Ka Ba?). It allows the students to do more of the activity to achieve a desired understanding of the concept or skills.
G. Move On (Sagot Pa More). This part of the module is another series of activitiesthat serve as an application of the concepts and lessons for retention.
H. Things to Remember (Pakatandaan). These refer to the concepts that the students needto remember after covering certain parts of the module.
I. Post-Test (Panghuling Gawain). This element is a short summative assessment that willmeasure the students learning based on their scores. Each module consists of 10-item multiple-choice test questions based on the objectives and content of the lesson discussed.
J. References (Sanggunian). The sources of information and relevant data necessary for the series of activities and the discussion.

The objectives for each lesson were taken from the Learning Competencies for Grade 9 Araling Panlipunan. In this stage, the researcher decided to adopt objectives based on the topics included in each module. There were 6 lessons covered by the Self Learning Module. In determining and preparing the instructional activities for each lesson, and in preparing the pre-test and post-test the researcher ensured that the texts were written in clear and appropriate language suitable to the level of the target Grade high school students. The language used in the module is Filipino. This is based on the mandate that Araling Panlipunan or Social Studies in Basic Education must be taught in the Filipino language.

III. Dissemination Phase

This stage highlights the preparation of a self-learning module in terms of face, organization, and content validity. This was undertaken to bring out the prepared self-learning module in terms of face, content validity, and reliability.

Validation by Experts

Content validity is the degree to which a test measures topics and areas that it is intended to measure (Sevilla, 1998). The appropriateness of the learning material to the subjects and congruence to the objectives are determined through the help of the experts.

The self-learning module underwent validation using the Expert's Assessment Checklist. The criteria focused on the clarity, attainability, and measurability of the objectives, specifically in terms of knowledge, processes, understanding, and performance. These criteria align with the focal points of assessment procedures in the K to 12 Curriculum.

For the organization, the criteria include clarity and conciseness of instruction; proper sequencing of the lessons, progression, and depth of knowledge, provisions of adequate questions, and problems, and relevance of the learning module to the objectives. The criteria for the learning module include varied and diverse resources to widen sources for knowledge and to augment learning and students' prior knowledge and skills in using the material.

The effectiveness of the self-learning module focuses on its usefulness in guiding the student, promotion of active learning and practicality of application, and motivation for learning.

The experts used the revised "Experts' Assessment Checklist" (Agorilla, 2015) which is specifically crafted for material evaluation. Experts' ratings were subjected to SPSS Version 19.0 Cronbach Coefficient Alpha and Inter-rater reliability to determine the internal consistency reliability of their responses.

Establishing the Validity of the Self-Learning Module

The development and validation of the self-learning module was anchored on the K to 12 Curriculum in Araling Panlipunan which intends to produce learners who are competent, productive, resourceful, and research-oriented and where teachers are expected to facilitate learning and constantly nurture every learner.

The criteria for establishing the validity of the self-learning module face, organization, reliability, validity, and effectiveness were set by the Department of Educational Material Council.

Assessment by Experts

Three experts were chosen and were asked to rate the individual components of each criterion using a rating scale. The three experts were selected based on their capability as instructional material developers.

One of the experts is a Master Teacher I of the South District, of the City of Ilagan who has been teaching Araling Panlipunan for several years and at the same time a coach of Araling Panlipunan-related academic and non-academic contests at the regional and national levels. He is also noted for delivering his expertise in producing his functional and comprehensive modules that enhance students' knowledge and skill in all aspects of Araling Panlipunan particularly in Economics subject. He is also one of the demonstrators on Strategic Intervention Material (SIM) in the Division of the City of Ilagan, Isabela who motivates teachers to find ways and means to lessen drop-out and failing students in all subject areas.

The second expert is an instructional material developer. She is a faculty member of San Antonio District of the City of Ilagan. She developed lessons using modules to cope with the challenges identified in teaching the subject area.

Finally, the third expert is also an instructional material developer. He had already devised and utilized instructional materials such as modules in teaching Araling Panlipunan which are anchored from the principles of localization and contextualization. He taught for several years and served as the Araling Panlipunan Coordinator and the Supreme Student Government Adviser at the same school. He excels in the field of Social Science.

Validation by the Teachers and Experts

Standard Deviation was used to gauge the evaluation of the experts and teachers on the objectives, content, organization, materials and resources, and effectiveness of the self-learning module as well as the general evaluation of the students on the format and content of the self-learning module. The calculated means were qualitatively describedusing the following guidelines:

Mean Range	*Description (Experts/Teachers)*	*Description (Students)*
1.00-1.49	Needs Improvement	Strongly Disagree
1.50-2.49	Not Satisfactory	Disagree
2.50-3.49	Satisfactory	Moderately Agree
3.50-4.49	Highly Satisfactory	Agree
4.50-5.00	Outstanding	Strongly Agree

The mean rating for each criterion was computed by getting the average of the mean rating of the experts. The grand mean for each criterion were again computed to obtain the mean for each criterion.

For instance, materials were provided to augment the instructional events and skills to be acquired by the learners. It shows that experts fully conceded that the competencies cited in the assessment tool were congruent with the competencies set by the K to 12 Curriculum in Social Studies.

Proofreading, Editing, and Printing of the Self Learning-Module

The instructional materials were subjected to grammar and spelling checks on the computer while encoding. After auto-editing on the computer, the text, graphics, formatting, and layout were carried out for the artistic appearance to make it more student-friendly. The arrangement of various features, elements, and components was checked by the experts to ensure that the learning module is clear, consistent, and correct.

Evaluation of the Materials by the Adviser and Distribution of Evaluation Forms to the Teacher Expert

The developed self-learning module was presented to the thesis adviser for comments and suggestions before the evaluation of experts. Teachers and experts who were subjected to evaluate and validate the learning modules developed in AP for the students were also given evaluation forms and the materials to be evaluated.

Initial Revision of the Self-Learning Module

Comments and suggestions initially given by the adviser were taken and duly noted to revise and modify the learning modules developed for the students in *Araling Panlipunan 9.*

Second Revision of the Self-Learning Module

The self-learning module in *Araling Panlipunan 9* was revised based on theexperts' suggestions and recommendations. Revisions were made to follow the suggestions of the Experts regarding the format of the tasks in the learning module. However, only a few parts were taken down for revision due to the compliments and positive feedback given by the teachers and experts to the modules developed.

Third Revision of the Self-Learning Module

The self-learning module was revised after the pilot testing. The revised module was tested to gather the rating of the performance task outputs from the teachers and individual students were analyzed statistically to determine the inter-rater readability of each performance task output.

Utilization of the Self-Learning Module

The revised self-learning module in Araling Panlipunan was administered to forty-five (45) Grade 10 Aquamarine students of Manaring Integrated School from January 15, 2015 to March 10, 2015. The individual scores of the students from thepretest and posttest from each learning module were subjected to paired sample t-tests to determine the effectiveness of the modules. The ideal p-value obtained from the test should be less than 0.05 to be considered significant and the p-value should be less than 0.01 to be considered highly significant (Valdez, 2014). The last step in the validation of the Learning Module in Araling Panlipunan 9 was problems encountered in the second pilot test and recommendations from the experts, peers, and students were then utilized for further refinement and revision of the materials.

The revised self-learning module in Araling Panlipunan was administered to forty-five (45) Grade 10 Aquamarine students of Manaring Integrated School from January 15, 2015 to March 10, 2015.

In evaluating the developed self-learning module in Araling Panlipunan 9, two sources of information were used by the researcher: (1) feedback from the student- -respondents on the content and format of the instructional modules they used; and (2) results of the comparison of the student-respondents' performance in the pretest administered before the modules were given to them and the posttest conducted after they were done with the modules. Eventually, the instructional modules were finalized based on the inputs from the evaluation stage.

Data Analysis

1. The perception of the students and teacher-evaluators was determined on the effectiveness of the material (in terms of format design, objectives, content, organization, presentation, and usefulness), therefore, frequency and weighted mean statistical tools were used.
2. The Cronbach-Alpha Coefficient was used to determine the internal consistency reliability of the responses from the teachers and experts.
3. The scores taken from the pretest and posttest were treated. To determine if there is significance in the test levels of the students, the T-test for dependent samples was utilized.
4. A Paired Sample t-test was done to compare the ratings indicated by experts and students on the format and content of the modules.

Ethical Considerations

The researcher made sure that before, during, and after the conduct of the study, the following ethical concerns were followed to necessitate safe, anti-fraud, deliberate, and careful undertakings in the study:

1. The researcher, through proper communications, asked permission from the school where she is employed, and other concerned offices to conduct the study.

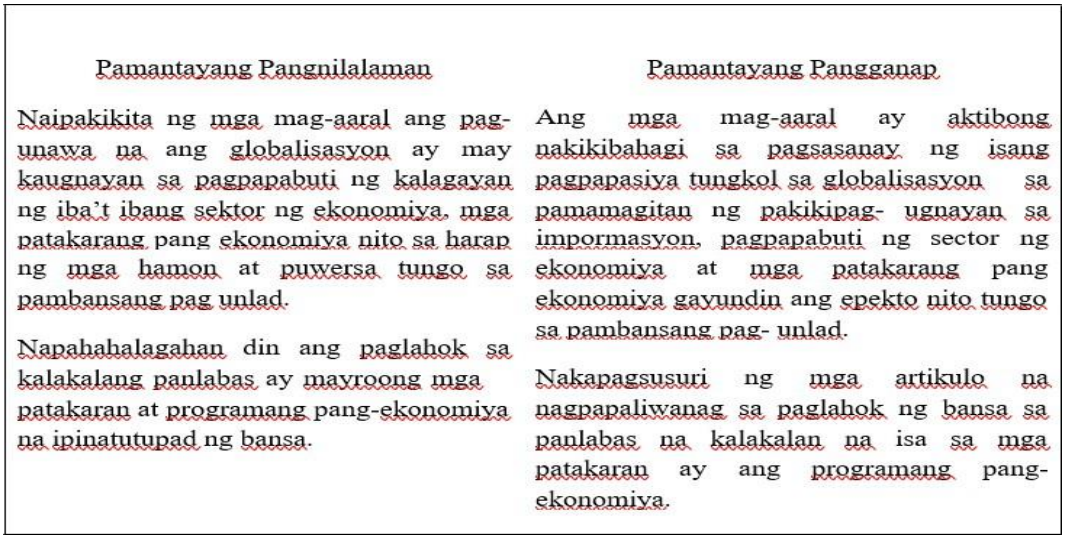
2. The researcher wrote a letter to the respondents and conducted a short orientation on the nature of the study. Data and information gathered were treated with utmost respect and confidentiality.
3. The researcher through a letter of consent sought approval of parents to allow their children to participate in the study.
4. The researcher strictly observed proper citation for authors, books, e-sources or any publications using the 7th Edition of the American Psychological Association (APA).

RESULTS AND DISCUSSION

Development of Self-Learning Module in Araling Panlipunan 9

The self-learning module in Araling Panlipunan 9 was developed by the researcher through the help of her research adviser, suggestions of the experts, and the use of learning materials for K to 12 learners and other resources. After it was developed, the module was used by the Grade 10 students.

The following figures show some parts of the completed self-learning module.



Pamantayang Pangnilalaman

Naipakikita ng mga mag-aaral ang pag-unawa na ang globalisasyon ay may kaugnayan sa pagpapabuti ng kalagayan ng iba't ibang sektor ng ekonomiya, mga patakarang pang ekonomiya nito sa harap ng mga hamon at puwersa tungo sa pambansang pag unlad.

Napahahalagahan din ang paglahok sa kalakalang panlabas ay mayroong mga patakaran at programang pang-ekonomiya na ipinatutupad ng bansa.

Pamantayang Pangganap

Ang mga mag-aaral ay aktibong nakikibahagi sa pagsasanay ng isang pagpapasiya tungkol sa globalisasyon sa pamamagitan ng pakikipag- ugnayan sa impormasyon, pagpapabuti ng sector ng ekonomiya at mga patakarang pang ekonomiya gayundin ang epekto nito tungo sa pambansang pag- unlad.

Nakapagsusuri ng mga artikulo na nagpapaliwanag sa paglahok ng bansa sa panlabas na kalakalan na isa sa mga patakaran ay ang programang pang-ekonomiya.

Figure 4. Pamantayan sa Pagkatuto

Pamantayan sa Pagkatuto (Learning Objectives). The first part of the self-learning module gives a view of the general learning expectations to be developed amongthe learners. These learning expectations include the content objectives on activities and skills to be executed by the learners. These are strategically derived and based it on the three important aspects of learning development–cognitive, affective, and psychomotor learning domains.

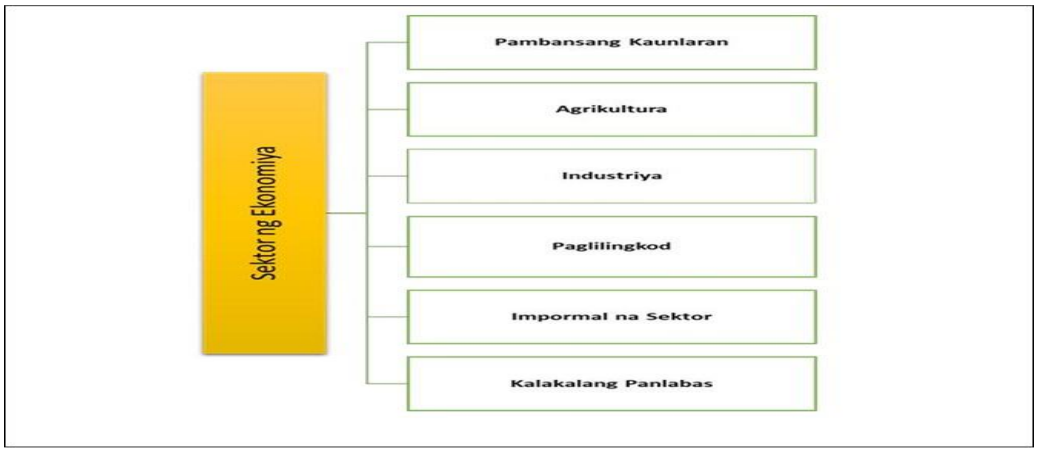


Figure 5. Grapikong Paglalarawan

Grapikong Pantulong sa Paksa (Learning Graphic Guide). This part introduces the graphical presentation of the main point of discussion. This outlines the general and specific topics to be discussed briefly and comprehensively in the succeeding parts.

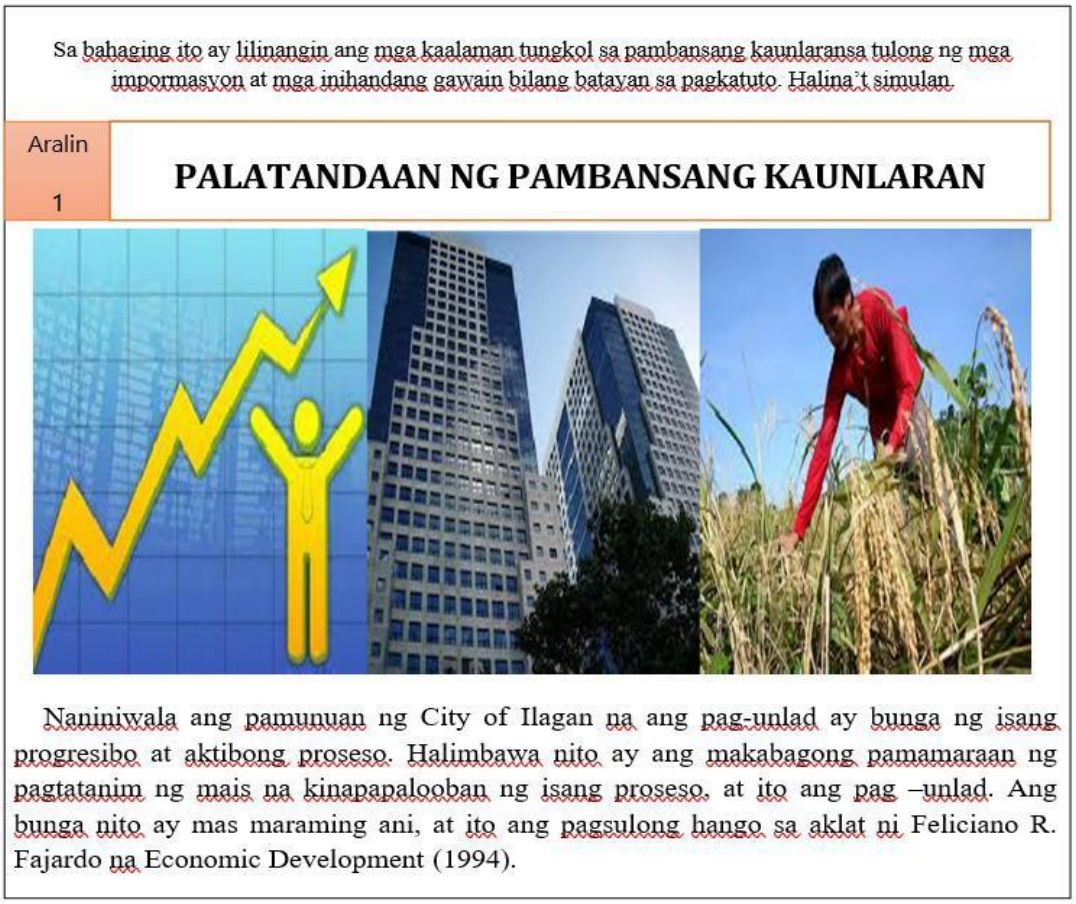

Figure 6. Matuto Ka (Aralin 1)

Matututo Ka (Discover). This refers to the facts about the lesson to be presented through sentences or picture analysis. This part of the module enhances learners' understanding of the concepts specifically of national development.

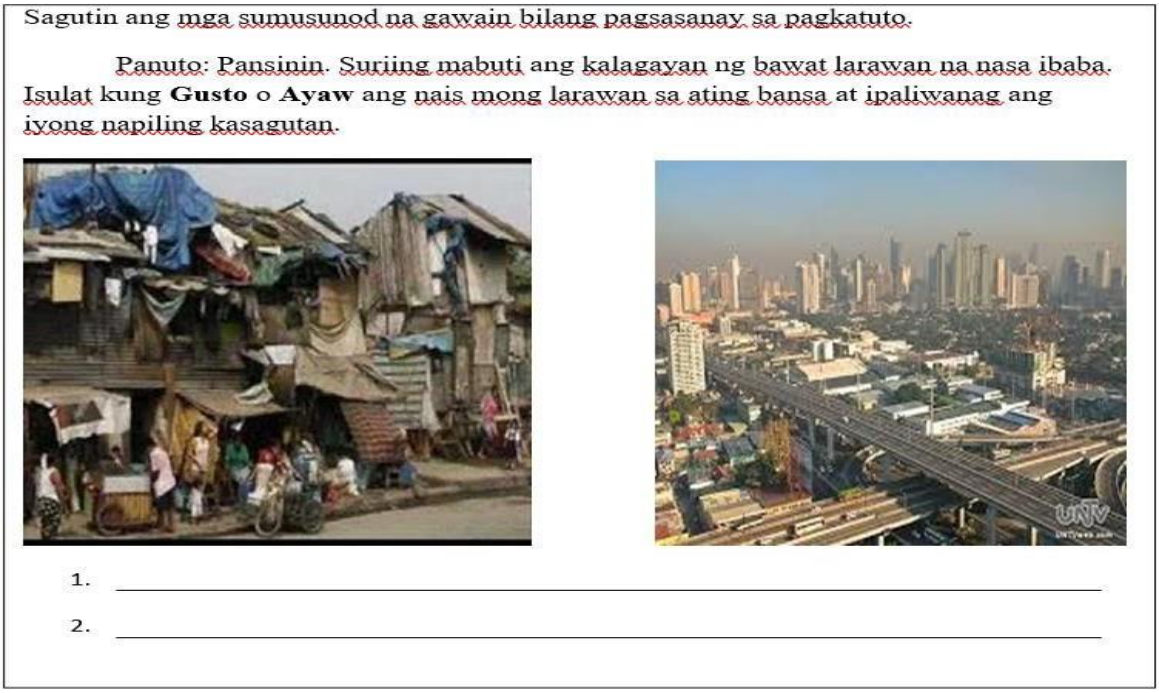

Figure 7. Unang Pagsasanay

Kaya Mo Ba To? (Can You Do This?). This refers to the exercises to be done. From the discussion and highlights of the main concepts, learners shall further do an activity that will challenge their understanding through a series of questions and photos of inquiry

The overview of the self-learning module shows a framework for what students learned and the information on the different concepts they encountered throughout the learning tasks. The learning objectives were also written to provide outcome statements that target the knowledge, skills, and attitudes of the students and be able to exhibit and develop after the lesson. Each lesson starts with a pretest to determine the students' prior knowledge regarding the topics, which the teacher would aid in teaching the lesson.

Various activities highlighting the concepts in Economics were added to check students' understanding and to assess to which extent they could apply the things thatthey have learned. To have actual scores measured, a posttest was given at the end of the module. This determines the student's level of achievement from the targeted learning objectives. Lastly, references were included in the module to cite contributory materials and other sources relevant to the learning activities and concepts in Araling Panlipunan 9.

Reliability of Expert and Teacher ratings

Table 1. Internal Consistency of Expert and Teacher

Material	Cronbach Alpha
Module 1	.93
Module 2	.92
Module 3	.92
Module 4	.95
Module 5	.93
Module 6	.96
Overall	.95

The whole scale internal consistency value of 0.95 poses an excellent score which is above the threshold value of 0.7. This means that there is an overall high level of reliability and consistency in the validation and evaluation of teachers and experts on the developed module. This means a high degree of agreement among the experts.

Evaluation of the Self-Learning Module by Teachers and Experts

Table 2. Overall Expert and Teacher Validation of the Self-Learning Module

		M	*SD*	*M*	*SD*	*M*	*SD*	
All	Objectives	4.82	0.29	4.68	0.47	4.75	0.38	Outstanding
	Content	4.72	0.36	4.69	0.47	4.71	0.42	Outstanding
	Organization	4.75	0.37	4.72	0.46	4.73	0.41	Outstanding
	Materials & Resources	4.80	0.29	4.75	0.43	4.77	0.36	Outstanding
	Effectiveness	4.85	0.22	4.73	0.44	4.79	0.33	Outstanding
	Overall	4.79	0.31	4.71	0.45	4.75	0.38	Outstanding

The table shows the overall results and scores of the evaluation of teachers and experts on the developed modules in teaching Araling Panlipunan 9 in terms of their objectives, content, organization, materials and resources, and effectiveness.

The overall mean and standard deviation scores of the modules obtained were 4.75 and 0.38, respectively. These advantageous and satisfactory scores posit congruency and reliability from the scores obtained by each module. Further, the set criteria, which include the objectives, content, organization, materials and resources, and effectiveness, deliberately tested and posted consistent and manageable results that signify that the modules' phases do not go against the following evaluation determiners and the competencies set forth by the curriculum.

This indicates that the modules utilized were well-designed and constructed based on the necessity assessed for meaningful and successful learning in the said course of study. The result affirms Jaramillo's (2002) statement that teachers should always strive hard to provide a learning environment and maintain the students' high interest.To achieve this, educators should use varied motivation and excellent teaching strategies and materials that include personally crafted modules that are subject to validation and evaluation.

In support of the satisfactory scores and results, the first expert evaluator provided a general comment on the six modules being validated:

"The modules were innovative and meaningful.These were designed following the objectives and competencies set by the curriculum in AP. At first glance,I thought that the first module was deliberately modified from a source, but the contents were adopted and properly cited. Activities were also interesting and very good."

A teacher from the South District further added and complimented the results, however, interestingly, the expert evaluator provided feedback on the criteria provided in the checklist:

"Honestly, I noticed upon checking the criteria on the checklist, that they go together. I reviewed theobjectives in teaching the subject as I have been teachingit for several years in my former and current workplace; the objectives were met because the activities and assessment tools made a triangulation congruency. This means that the objectives were answered in the learning experiences and tests provided." For the materials, sources and authors were properly cited which is nice and accepted. I believe this is effective for students might be very interested and motivated by the activities and series of pictures inserted in the modules."

Finally, the teacher from the other school division in Isabela halted his comments and suggestions on the modules, he stated:

"Module 1 is good and interesting devised. As I checked and validated further the succeeding modules, I thought I was reading a book created by experts. I may use one of them and recommend it to other teachers I know who have been teaching the subject."

These descriptive comments and feedback from the evaluators further strengthen the initial claims from the validated and computed results. This means that the experts believed that the learning materials provided a topic course outline with relevant and significant learning activities and assessment tests. The self-learning module also provided sufficient information and features value-laden learning activities. Hence, the contents, activities, and assessment tools were appropriate considering their learning levels, needs, and learning capacities.

Remarkably, the present self-learning module meets the principles that Richards (2012) cited in Soriano (2013), emphasized. Those materials can be produced tomeet

the student's needs that will reflect the local context, issues, and concerns. It canhelp develop expertise among professionals and provide a greater understanding of the characteristics of effective materials. On the other hand, the learning modules become inclusive to consider learners who are reluctant to attend classes or in cases of tardiness, the learning modules could be utilized to cope with the learning situation. The result also confirms Ramos' (2004) assertion that modules can also be used as a way to help students catch up on the missed lessons. The student will be able to work at his own pace while learning the missed topics, thus giving the student a chance to maximize learning. The use of modules could be seen as a better strategy to handle the situation as opposed to just letting the student copy the missed day's lectures from his/ her classmates without further understanding.

Table 3. Students' Evaluation of Format of the Self-Learning Module

Format	*M*	*SD*	*Description*
1. The layout of the instructional modules is logically and sequentiallyarranged.	4.60	.49	Strongly Agree
2. The instructions in the modules are well-emphasized.	4.84	.37	Strongly Agree
3. The font size and font style of the instructional modules are readable.	4.80	.40	Strongly Agree
4. The mathematical symbols used in the instructional modules are well-defined.	4.75	.43	Strongly Agree
5. The tables/diagrams are well presented and easy to understand.	4.80	.40	Strongly Agree
6. Key points and key concepts are well highlighted to focus attention while reading.	4.82	.44	Strongly Agree
7. Titles and subtitles in the instructional modules are clearly defined.	4.71	.51	Strongly Agree
8. Illustrations, pictures, and captions are properly laid out for easy reference.	4.68	.51	Strongly Agree
9. The steps in the solutions of the given examples and practice tasks arearranged sequentially and easy to follow.	4.75	.43	Strongly Agree
10. The instructional modules are generally formatted in a convenient mannerconsidering the paper size used.	4.73	.54	Strongly Agree
Overall	4.75	.15	Strongly Agree

The evaluation of students on the series of self-learning module provided to them as part of their learning experiences in the said subject. There was a consistent obtained score from the learners' evaluation of the learning modules. The overall mean rating of 4.75 and a standard deviation of 0.15 are described and interpreted as excellently devised and constructed learning modules. The technical aspects of

the learning modules that were evaluated include (a) the layout that is suited to the learning needs and levels of the learners; (b) logical and sequential orders of instructions, directions, contents, and other parts of the learning modules; (c) styles and sizes; (d) tables, diagrams, pictures, titles, and subtitles; and illustrative examples and paper conventions. Feedbacks from a students support the high rating in format.

"I like the module kasi maganda una pa lang pagtingin mo. Then, yung pictures and examples po na andun is very interesting po siya. My attention was to the pictures pona ginamit sa discussion ng mga concepts po and lessons. It is good and very pleasing to the eyes. I hope all my subjects have modules for us to study our lessons to learn."

On a further note, the self-learning module met the criteria mentioned by Ramos (2004). The conventions in writing and devising learning modules as teaching aids must always be strictly considered and followed and there is a psychological effect of good and well-written learning modules in the perception of the students who use learning modules.

This may simply be added to the interest levels and motivation factors among learners in utilizing good modules. Nonetheless, there is no single identified learning module's format and style. As Dahar (2011) opined, the best format for creating learning modules and other learning materials is dependent upon the needs, capacities, and levels of the learners who are to use the learning modules as identified by the teacher or the developer of the self-learning module.

Table 4. Students' Evaluation of Content of the Self-Learning Module

Content	*M*	*SD*	*Description*
1. I easily understood the objectives of each lesson.	4.73	.49	SA
2. I easily understood the instructions in each lesson.	4.77	.42	SA
3. I could work on the lessons at my own pace.	4.91	.48	SA
4. I understood clearly the ideas/concepts in each lesson.	4.80	.40	SA
5. The illustrations guided me easily in following the instructions in the modules.	4.84	.37	SA
6. The learning activities helped me to understand the topic	4.68	.47	SA
7. I appreciated the styles of illustrations and written expressions.	4.71	.46	SA
8. I enjoyed answering the activity task as presented in theform of trivia or puzzles.	4.73	.49	SA
9. I found it easier to study Economics using these learningmodules.	4.77	.42	SA
10. I enjoyed working through the lessons until I finished the whole learning module.	4.77	.42	SA
Overall	4.77	.13	SA

The students strongly agree on the evaluation of the content of the learning materials in the overall mean rating which is 4.77 and 0.13 for the standard deviation. The result reveals that the content competencies centered on the capacity and effectiveness of the self-learning module to aid the learning process on print materials is useful and appropriate. This demonstrates that the contents of the learning modules are very congruent to the learning objectives and competencies in the curriculum of the subject because the researcher strictly observed the principles on the impact and content aspect in writing instructional materials.

Table 5. Experts' and Students' Evaluation of Format of the Self-Learning Module

Format	*Expert*			*Students*		
	M	*SD*	*Des.*	*M*	*SD*	*Des.*
1. The layout of the instructional modules is arranged in a logical and sequential order.	4.67	0.58	SA	4.59	0.50	SA
2. The instructions in the modules are well-emphasized.	4.67	0.58	SA	4.84	0.37	SA
3. The font size and font style of the instructional modules arereadable.	4.33	0.58	A	4.80	0.41	SA
4. The mathematical symbols used in the instructional modulesare well-defined.	4.00	1.00	A	4.75	0.44	SA
5. The tables/diagrams are well presented and easy tounderstand.	4.67	0.58	SA	4.80	0.41	SA
6. Key points and key concepts are well highlighted to focus attention while reading.	5.00	0.00	SA	4.82	0.45	SA
7. Titles and subtitles in the instructional modules are clearlydefined.	4.67	0.58	SA	4.70	0.51	SA
8. Illustrations, pictures, and captions are properly laid out foreasy reference.	4.33	0.58	A	4.68	0.52	SA
9. The steps in the solutions of the given examples and practicetasks are arranged sequentially and easy to follow.	4.00	0.00	A	4.75	0.44	SA
10. The instructional modules are generally formatted in aconvenient manner considering the paper size used.	4.67	0.58	SA	4.73	0.54	SA
Overall	4.50	0.57	SA	4.75	0.46	SA

Based on the set of descriptions and criteria for the evaluation of the self-learning module's overall format, the module obtained a 'strongly agree' remark that brings favorable evaluation to the modules. Specifically, the modules' format had an overall

mean rating of 4.50 from the experts and 4.75 from the learners. Meanwhile, it also obtained a standard deviation of 0.57 and 0.46 from the experts and students, respectively.These data show that both the evaluators (experts and learners) strongly agree that the format, style, and overall face validity of the modules are satisfactory. These factors heighten the interest of anticipation upon reading and browsing the learning modules.

Table 6. Experts' and Students' Evaluation of Content of the Self-Learning Module

	M	*SD*	*Des.*	*M*	*SD*	*Des.*
1. I easily understood the objectives of each lesson.	4.67	0.58	SA	4.73	0.50	SA
2. I easily understood the instructions in each lesson.	4.67	0.58	SA	4.77	0.42	SA
3. I could work on the lessons at my own pace.	4.00	1.00	A	4.91	0.29	SA
4. I understood clearly the ideas/concepts in each lesson.	4.33	0.58	A	4.80	0.41	SA
5. The illustrations/captions guided me easily in following the instructionsin the modules.	4.67	0.58	SA	4.84	0.37	SA
6. The learning activities helped me to understand fully the topic.	5.00	0.00	SA	4.68	0.47	SA
7. I appreciated the styles of illustrations and written expressions.	4.33	0.58	A	4.70	0.46	SA
8. I enjoyed answering the activity task as presented in the form of trivia orpuzzles.	4.67	0.58	SA	4.73	0.50	SA
9. I found it easier to study Economics using these learning modules.	5.00	0.00	SA	4.77	0.42	SA
10. I enjoyed working through the lessons until I finished the wholelearning module.	4.67	0.58	SA	4.77	0.42	SA
Overall	4.60	0.56	SA	4.77	0.43	SA

On one hand, the preceding table further details the combined experts' and learners' evaluation of the content of the self-learning module. Based on the set of descriptions and criteria for the evaluation of the modules' overall content, the module obtained a 'strongly agree' remark that gives a favorable evaluation of the modules. Specifically, the modules' content had an overall mean rating of 4.60 from the experts and 4.77 from the learners. Meanwhile, it also obtained a standard deviation of 0.56 and 0.43 from the experts and students, respectively.

The data reveal a positive evaluation of the modular content by the learners and experts. As mentioned earlier, the content and other relevant inclusions in the modules were anchored from the competencies and objectives set forth by the Curriculum Guide of the Araling Panlipunan in the K – 12 Basic Education Curriculum. This is to ensure a relatively high congruence in learning expectations on the competencies and the experiences of the learners and the teaching expertise of the expert evaluators.

Table 7. Comparison Between Experts' and Students' Evaluation of the Format of the Self-Learning Module

Evaluators	*M*	*N* (items)	*SD*	*t* (9)	*P*	*95CI*
Experts	4.60	10	.31	-1.52^{ns}	.16	[-.08, .42]
Students	4.77	10	.07			
Evaluators	*M*	*N* (items)	*SD*	*t* (9)	*P*	*95CI*
Experts	4.50	10	.33	-2.38*	.042	[.011, .48]
Students	4.74	10	.08			

It displays that despite the overall ratings of experts and students on the format of the self-learning module had the same descriptive rating of "strongly agree" (see Table 4), Paired samples t-test showed that the students (M = 4.74; SD = .075) indicated a significantly higher rating than the experts (M = 4.50; SD = .33), t (9) = - 2.38, p < .05, *95CI* from .011 to .48.

This significantly means that the learners - clientele of the study, responded positively on their utilization of the self-learning module in Araling Panlipunan. Consequently, this expressly implies that the format and style of the learning materials have a strong impact on learners' interest, satisfaction, and overall learning experience toward the subject.

Table 8. Comparison Between Experts' and Students' Evaluation of the Content of the Self-Learning Module

It shows that there was no significant difference between the ratings indicated by experts (M = 4.60; SD = .31) and students (M = 4.77; SD = .07) on the content of the module, t (9) = -1.52, p > .16. This means that the ratings obtained both correlatively agree on the evaluation of the content of the self-learning module.

Table 9. Students' Performance in Araling Panlipunan 9 Before and After using the self-learningmodules

Material	Pretest		Posttest		t (44)	Sig(2-tailed)	Eta Squared
	M	SD	M	SD			
Module 1	2.37	1.64	8.66	1.66	-20.90***	.000	.91
Module 2	2.93	1.60	8.66	.90	-23.40***	.000	.92
Module 3	2.68	1.96	8.66	1.00	-22.89***	.000	.92
Module 4	2.91	1.80	9.11	1.02	-18.54***	.000	.89
Module 5	2.95	1.73	8.71	1.01	-19.62***	.000	.90
Module 6	3.00	1.75	8.62	1.55	-21.72***	.000	.91
Overall	13.57	4.54	34.77	4.31	-24.97***	.000	.93

Note. *** means significant at a .001 level

There was a significant difference between their pretest scores (2.37 < *M* < 3.00)and posttest scores (8.62 < *M* < 9.11) in all the modules, -23.40 < *t* (44) < -18.54, p < .001. Partial eta squared indicated that the effect size of the modules on the students'performance was large ranging from .89 to .93

Generally, there was a large significant difference between their overall pretest score (*M* = 13.57) and posttest score (*M* = 34.77), *t* (44) = -24.97, *p* < .001, *eta squared* = .93. Evidence suggests that the modules have enhanced the students' performance in the subject. The result accepts the finding of Agorilla (2015) thatgenerally validated and evaluated learning materials have a significant impact on the learning development of students. Notably, the learning modules can be utilized as an intervention material since the materials meet one specific determinant on the innovation and design of learning modules as an intervention material.

The results of the pre-test and post-test are the best assessment tools to measure and evaluate the effectiveness of the innovative and designed learning material in teaching Araling Panlipunan 9 among Grade 10 students.

Jaramillo (2002), stated that the utilization of pre-test and post-test assessment

tools is an effective means to test significant changes after an identifiable learning intervention and should always be limited to the objectives of the learning modules or any learning materials necessary for the holistic development of learners. The statistical results and evaluation feedback from students and experts vouch for thevalidity and reliability of the contents, objectives, strategies, and assessment tools, as well as the design, format, and layout.

It can be deduced that the developed instructional modules in teaching Araling Panlipunan 10, specifically Economics, are relevant and effective in meeting the needs, interests, and abilities of students. The modules are ideal for classroom use as enrichment or intervention materials. Most importantly, the modules can lessen the problems with the availability of learning resources, appropriate learning materials, and the non-face-to-face modality.

Conclusions

Based on the findings, it can be concluded that the self-learning module developed for *Araling Panlipunan 9* is valid, reliable, and suitable for the learning levels, needs, and abilities of the students who use it. Teachers, experts, and students evaluated the modules with very high and consistent statistical results, showing unity in their ratings and positive feedback. The learning modules align with relevant guidelines and sources, meeting the study's objectives. These materials are effective in enriching students' knowledge, attitudes, and skills, and are easily comprehensible, allowing for ease of use by students. Additionally, incorporating the self-learning module alongside traditional teaching methods can effectively enhance the teaching of *Araling Panlipunan*, contributing to improved student achievement in the subject. The use of pre-tests and post-tests is the best way to assess the effectiveness of the developed learning materials in teaching *Araling Panlipunan 9*.

Recommendations

Based on the conclusions drawn, the following recommendations are given:

1. The developed and validated self-learning module in Araling Panlipunan 9 be used as developmental, enrichment, and intervention material in teaching Economics.
2. Interested future researchers may use the developed and validated modular format in preparing a complete set of self-learning modules for Araling Panlipunan 9 for the first, second, and third quarters.

Compliance with Ethical Standards

Following ethical standards, this research adheres to principles of integrity, respect, and responsibility towards all participants involved. Before the conduct of the study, the researcher obtained informed consent from the participants, ensuring their understanding of the study's purpose, procedures, and potential risks. Confidentiality and

anonymity were preserved throughout data collection, analysis, and dissemination, safeguarding participants' privacy. Moreover, the researcher made sure that there was no conflict of interest in conducting the study, avoided plagiarism issues, and no bias was made in the interpretation of the results of the study. Finally, she ensured that the findings were used only for the research.

Acknowledgments

The researcher would like to express her deepest gratitude to her adviser, Professor Judith R. Garcia, for her invaluable support, guidance, and encouragement throughout this research. Her expertise and insights have been instrumental in the completion of this study. The researcher is also sincerely thankful to all the participants of this study for their cooperation and willingness to share their experiences, which greatly contributed to the success of this research. Her heartfelt appreciation goes to her family for their unwavering love and moral support, which kept her motivated and inspired. Also, she is grateful to her colleagues and friends for their encouragement and assistance along the way. Lastly, she thanks the Almighty God for granting her the strength, wisdom, and perseverance to complete this research.

ABSTRACT

As artificial intelligence tools (AITs) lead the technological revolution, the education sector and other institutions are doing their best to adapt and accommodate this innovation. AITs can be utilized in many ways and have been proven to provide positive changes and benefits to a student's learning. However, the use of AI may also prove to be detrimental to the scholastic development of a student, which may raise concerns regarding academic integrity and ethical use. Thus, this study aimed to deeply understand how the dependency on AITs can influence students' knowledge acquisition. To do this, the study employed a semi-structured interview to gather the perceptions and opinions of 15 Grade 11 and 15 Grade 12 STEM (Science, Technology, Engineering, and Mathematics) strand students, for a total of 30 participants. After the data gathering procedure, data analysis and interpretation were done using Braun and Clarke's thematic analysis. From the analyzed data, five themes that could describe the influence of AITs on the knowledge acquisition of students in higher educational institutions have emerged, namely: (1) AITs improve a student's scholastic performance; (2) the underlying complexities of AI utilization on students' output; (3) AITs' accessibility and endless possibilities are compelling for usage; (4) the impact of AITs on students; and (5) a vague link between AI utilization and academic dishonesty. The findings of this study may provide a better understanding of the implications of AI utilization in the educational field and the integrity of academia.

Keywords: *Academic dishonesty, Academic integrity, Artificial Intelligence in Education, Generative AI*

INTRODUCTION

The launch of artificial intelligence (AI) technology around the world has brought about astounding yet disruptive technological advancements. This novel technology was defined by Popenici and Kerr (2017) as computing systems capable of exhibiting behaviors and functions that are typically associated with how the human brain operates, such as learning, adapting, integration, self-correction, and data processing for advanced problem-solving. Schwab (2016) portrays AI technology as the synthesis of technologies, one that erases the distinctions in the physical, digital, and biological spheres. Its development has been recorded at an unprecedented exponential rate. Consequently, many aspects are also being reshaped and influenced at a rapid pace, including the education sector. Educational systems, organizations, and institutions in the Philippines, although lagging, have begun to reconceptualize their approaches under "Education 4.0" (Siena et al., 2019). Education 4.0 marks the shift from conventional to a more personalized learning environment, where the integration of AI in education (AIEd) pioneered the structure of Education 4.0 and 5.0 by designing an environment that is responsive and apt for every individual, student, and educator alike (Rane et al., 2023).

The rise of AI technology is prominent and inevitable in this age. Its influence on the world is apparent in many institutions, including the education system, nonetheless. Based on a report, experts expected that AIEd would progress by about 43% in the period 2018–2022 (Educause, 2018). However, it is believed that due to the developments in technology, it will surpass the earlier predictions (Educause, 2019). During the period of COVID-19, there was a significant rise in employing online learning platforms and AI-related tools for education. The Association of Southeast Asian Nations (ASEAN) released a report in 2023 regarding the state of higher educational institutions. The report revealed an increase in the utilization of online platforms to aid in education. At least half of the higher education student population from 7 countries, which included Thailand, Cambodia, Myanmar, Vietnam, Singapore, Brunei, and Malaysia, can access and utilize these technologies (Lim et al., 2023). In the Philippines, de Villa (2024) reported that three in five educators use AI in research and writing. On the other hand, forty-nine percent (49%) of the educators admitted they use technology to prepare their lesson plans. Meanwhile, it was reported that a survey conducted by Instructure revealed that eighty-three percent (83%) of students use generative AI for research and writing, and another fifty-two percent (52%) use it to aid them in exam preparations (Pascual, 2023; Gajete, 2023).

While the use of artificial intelligence tools (AIT) in education provided substantial guidance and contributed to many benefits for the education sector, their utilization is still up for debate. The use of AI in education raised ethical and privacy concerns over plagiarism, academic dishonesty, and data security (Bin-Nashwan et al., 2023).

Moreover, helping educators effectively integrate AI into their instructional strategies requires pertinent assistance and training (Borbajo et al., 2023). In addition, when proper AI strategies are not used by students in a particular learning situation, learning attitudes are negatively impacted. AI can improve educational opportunities, but excessive dependence is a hindrance to students' capacity for critical thought and problem-solving. Students' capacity for independent and creative thought is diminished if they rely too much on AI-driven solutions (Habib et al., 2023). Moreover, numerous studies have been conducted on students using AITs in their education. AITs can significantly reduce the amount of time spent on a task and are dependable (Baskara, 2023). As observed, some research opposes the use of these, arguing that students risk becoming overly dependent on them in the future, which either impaired their learning or lost their interest in learning (Wogu et al., 2018). On the other hand, Ouyang and Jiao (2021) asserted that students ought to utilize the new technology. Because, if it is used correctly, they can learn new things and broaden their knowledge. However, in the Philippines, there is a lack of research that acknowledges the reliance of students, specifically learners in specialized upper secondary education or senior high school (SHS) students, on AIT in their learning. Moreover, there are hardly any discussions on how SHS students, under different strands and tracks, planned to use AI and how well they could understand the concepts that AI produces. A reason why the Philippines lacks any study about AIEd is due to the eminent disadvantages and apparent exploitation of the technology. Subsequently, many educators judge how AIEd obstructed the process of teaching and learning. However, they failed to notice the potential of AIEd. This study will not only focus on the challenges or drawbacks of the usage of AI but also on the positive effects of the usage of AI in education. With that, this research can fill the gaps left by the other researchers.

Owing to the reliance of students on Artificial Intelligence Tools (AIT), this research aimed to understand the potential drawbacks or limitations associated with the use of AIT on the ability of senior high school (SHS) students to learn in higher education institutions in the Philippines. This study sought to identify the factors influencing students' dependency on AI tools by examining both external and internal determination. By concentrating on known aspects, it is feasible to effectively assess the factors that impact students' decisions to utilize AI tools. Moreover, this study was realistic by recognizing the constraints of resources, time, and information. In doing so, this study ensured that the goals set forth were reachable within the goals provided, taking a practical approach to the research process. Furthermore, the study is designed to address current knowledge gaps in the field by providing timely research that contributes to the ongoing discourse surrounding the integration of AIEd, ensuring that the research remains at the forefront of addressing the opportunities and challenges that SHS students may face in the context of the Digital Learning Revolution. This investigation's insights, which were intended to ascertain the factors leading to the application of Artificial Intelligence Tools (AIT) to a student's learning and the potential drawbacks and opportunities AI offered, proved to be favorable and beneficial to the education sector. This research provided significant information on the matter of AI utilization in academia. Additionally, being the subject of the study, the learners, specifically senior high school (SHS) students, would be more knowledgeable regarding the impacts of the use and overdependence of AI on their scholastic performance. Moreover, educators may also find this useful as they guide

learners to responsible, ethical, and fair use of AI tools. Finally, this study may be of assistance to future researchers who wish to pursue a similar topic.

With the rapid emergence of AIT in the contemporary world, it has demonstrated its convenience in various aspects of life. Contrary to this, Adiguzel et al. (2023) questioned how far AIT can contribute to education, further advising additional analysis and research. Even with its favorable contributions, it is possible to say that AI is not working perfectly up to this day, as said by Akgun and Greenhow (2021). Students who rely too much on AIT have issues with creativity, intellect, and a deep mistrust of their abilities (Habib et al., 2023). Solutions to the problems raised about AI contributed to this study by providing a basis for topics and subjects that needed to be focused on. Relatively, Bin-Nashwan et al. (2023) raised many issues about AIT; among them is plagiarism. Solutions that could help with the problem of plagiarism include using a detection tool capable of detecting plagiarism and AI-generated content, educating students on the ethical implications, and encouraging less use of AI tools. A similar problem with the use of ChatGPT is the generation of false references where it references authors or studies that do not exist (Teel et al., 2023). A solution that could help with this is setting guidelines where the authors present the text copy of the referenced work and teach students the importance of citing correctly. Because of the growing presence of AIT in education, it is important to create an environment that develops a student's cognitive abilities. AITs, which specifically help students with their academic tasks, cannot be eliminated from a student's academic experience, particularly if they have already left a positive impression. It is wiser to employ AI as guidance or implement guidelines for responsible and fair utilization rather than letting these AITs do all the work while leaving nothing for the learner. Knowing the ways to solve or lessen the rising issues of AI is beneficial, especially since reliance on AI could be detrimental to not only oneself but to others as well. It is also essential for teachers to guide students in the right direction when using AI to not harm their cognitive thinking but to improve their mental capabilities.

Unveiling the Fourth Industrial Revolution

Because of humanity's constant efforts to raise their standard of living, civilizations, societies, and even individual lifestyles have all undergone tremendous change. Systems have evolved to be efficient because of the technologies that have been invented and implemented. Just imagine: the First Industrial Revolution (IR 1.0) harnessed nature through water and steam to mechanize labor; towards the Second Industrial Revolution (IR 2.0), electrical power was used for mass production; and as the 21st century neared its dawn, the Third Industrial Revolution (IR 3.0) marked the possibility for automated productions utilizing electronics and information technology (IT). In today's age, the world may be entering a new realm, a new world of possibilities, a new era. The technological advancements made during IR 3.0 paved the way for another revolution: the Fourth Industrial Revolution (IR 4.0). The arrival of IR 4.0 overlaps with IR 3.0 as it also utilizes electronics and IT as its foundation. However, IR 4.0 is more prominent as it introduced the world to the future of cyber-physical systems (CPS). CPS is designed to integrate intricate computing networks and technologies into the real, physical world which is further enforced by human interaction (Ashibani & Mahmoud, 2017; Gunes et al., 2014).

As the nouveau technology continues to bring forth innovations, there will be more opportunities ahead as the integration of these cyber-physical systems is further utilized, altering and influencing the fundamentals this world has been built on. The growth of CPS will be accompanied by Artificial Intelligence (AI) (Chao, 2023).

"A gift of intelligence from intelligence." This expression was made as people became aware of AI's capacity to mimic human logic and reasoning (Estrellado & Miranda, 2023). AI can be defined as the pinnacle of conception relating to various computer-related technologies that can operate anthropomorphically. The emergence of AI-fueled the beginning of the Fourth Industrial Revolution. Subsequently, this has pushed diverse fields, sectors, management, and governance to acknowledge and respond appropriately to the effects this modern technology presents. It has also brought many changes to the way of life of mankind. This was a testament to how much AI has impacted human activity and society's inner workings. As profitable and advantageous as it may seem, the Fourth Industrial Revolution was accompanied by many challenges. According to Schwab (2016), the Fourth Industrial Revolution is disruptive because of its aggressive progression and development, unlike any other revolution. In the industrial setting, many manufacturers have opted for the use of AI instead of a human workforce. AI in the digital era poses concerns regarding personal data privacy (Van Rijemenam, 2023). The aforementioned problem is also one that is experienced by governments, wherein they would face criticism from citizens should they overtly exercise excessive authority over people by exploiting surveillance systems and digital infrastructure. Even the education sector frets about whether these technologies may replace educators in imparting knowledge to learners. Such are the worries experienced by different sectors. As these problems remained unsolved, dissatisfaction, uneasiness, and unfairness continued to arise within the populace. The emergence of the Fourth Industrial Revolution, which leverages the Third Industrial Revolution, is inevitable. Thus, these various sectors must be able to cope and implement comprehensive responses befitting the situation. Indeed, it is a difficult task to conserve the interests of people without compromising advocacy for innovation and technological progress. However, this is a crucial step that has to be made.

A Glimpse of Education 4.0

Education helps in developing an individual's character, thoughts, interpersonal, and intrapersonal skills and even equips them with skills that will be usable in the real world (Al-Shuaibi, 2014). As such, education must mirror the environment in which it is preparing its learners (Alda et al., 2020). Mankind is now under the influence of electronics and information technology. A digital era, as one may refer to it, Additionally, due to the never-ending breakthrough in technological advancement, it is also currently facing the emergence of artificial intelligence. Therefore, a sector that has a massive impact on society should be immediate in implementing the necessary means to cope with these shifting conditions. However, it seems that the current educational frameworks are not living up to the expectations of this modern generation. Per this concern, the strategy created by the education sector is the introduction of "Education 4.0." The keynote of this Education 4.0 is its integration with Information and Communication Technologies (ICT). This would help prepare students for navigating the intricacies of the Fourth Industrial

Revolution (Siena et al., 2019). Moreover, Education 4.0 enforced a more adaptive and responsive learning environment for the learners. When compared to Education 3.0, which is a general approach, the proposed model catered to the needs of every student, hence creating an engaging and productive experience in a classroom-based setting (Rane et al., 2023). The implementation of this paradigm is beneficial as it achieves two (2) objectives: to prepare students for the real world and to facilitate a flexible, conducive, and immersive learning atmosphere for students and teachers.

Every single person in this world has the basic right to have an education and to learn. One of the most prominent people in history, Nelson Mandela, believed that education was power, a key to obtaining knowledge and various viewpoints that helped open countless possibilities for many. Mandela (1990) said that *"education is the most powerful weapon which one can use to change the world."* True to their words, education has the potential to change the world as it shapes individuals to be empowered and fosters creativity where which can be expressed towards the improvement of society. It can transform the world as much as it does influence the minds of a person. However, the world is at a rapid pace of development. Thus, the education sector must transform and remodel its approaches to better fit the contemporary world.

Academic Dishonesty: A Threat to the Academe

As AIT's impression rose across the education sector, there is no doubt that everyone has not heard of what it offers. One of which is academic dishonesty, which pertains to actions by students taking part in illicit activities, such as cheating and plagiarism (Désiron & Petko, 2022). ChatGPT, an interactive chatbot capable of creating cohesive and informative human-like responses upon user input (Lo, 2023), is one of the AITS known to have the capabilities to ease a learner's hassle in writing their academic tasks. Contrary to this, entrusting all the work solely to an AIT, without appropriate cross-checking, encourages the act of plagiarism, subsequently placing a student's academic integrity at risk. Following this, plagiarism is an act of forgery, piracy, and fraud that is considered a severe academic crime that is also against copyright laws (Dhammi & Ul Haq, 2016).
Users are oblivious to the fact that AI-generated research is prone to falsifying and fabricating works done by other authors, emphasizing imminent challenges, according to data found by Elali & Rachid (2023). Concerning the fabrication of works, AITs, such as ChatGPT, tend to generate fake or fictitious references even with the presence of a formal citation (Teel et al., 2023). Furthermore, with the constant development of AIT, certain software can be utilized for cheating and lead to issues about bias and student learning outcomes since it makes it difficult to discern between genuine writings produced by students and content created by artificial intelligence (Sarker et al., 2023; Cotton et al., 2023). However, it is conceived that AITs have contributed various benefits when it comes to a student's academe and the academe itself, efficiently saving learners' time and effort. A plethora of issues have surfaced, particularly ones connected with academic dishonesty. Hence, it poses an impending threat to the academic evaluation process, which heavily relies upon the authenticity of student submissions, and the objectives of education, which are to promote student originality and creativity (Ifelebuegu et al., 2023; Sarker et al., 2023). These dishonorable acts of dishonesty called into question the

fundamental purpose of education, which was to foster inventiveness and uniqueness, since AITs, cause multiple discrepancies and errors if left neglected and not cross-checked by teachers and students. Furthermore, the accuracy and relevancy of the lessons taught by the teachers to their students hold great significance to the field of education, for it assures that the information they have been taught is reliable, accurate, and credible (Mhlanga, 2023).

Adversities of Excessive Reliance in AIEd

As learners dove into the vast opportunities that AIT may offer in their academe, there is an underlying tendency that one grows dependent on AIT. Its overpowering convenience urged learners to steer into a path of neglect of interpersonal relationships that exist between students and teachers once AIT becomes the primary source of learning. If these interactions are left ignored, the student's holistic development and critical thinking are hindered. Furthermore, the absence of an educator's guidance negatively impacts a student's emotional state (Abbas et al., 2023). Additionally, leaning on AIT too much results in a diminished social development of a student, which contradicts the objectives of education which are human interaction, socialization, and student-to-student collaboration (Ifelebuegu et al., 2023). Furthermore, aside from social concerns, dependency on AIT posed conspicuous issues on cognitive processes. Since not everyone possesses the ability to think as swiftly as a chatbot, this opened the possibility of obstructing a student's creative thinking, where a student may experience cognitive fixation, or the inability to create diverse ideas than what the AIT had to offer. Regarding this, excessive reliance on AIT only fixated students' thoughts rather than allowing them to grow. Moreover, it jeopardized those who are still enhancing their creative confidence and led to a sense of distrust in one's capabilities (Habib et al., 2023).

Despite an AIT's ability to come up with fresh ideas, its credibility remained questionable for it derived its answers from pre-existing data. Eventually, this rose to ethical challenges and concerns about intellectual property and plagiarism, which critically affected a student's ability to think creatively and maintain their academic integrity (Habib et al, 2023). Even though AIT has the potential to offer tremendous opportunities to a student's academia, it is advised to raise knowledge of its limitations. To further emphasize the act of using ChatGPT in a fair, secure, and considerate manner towards students, teachers are encouraged to assist students in developing an informed and critical opinion on the use of AIT, whether within or outside the classroom. Additionally, the act of questioning the output of ChatGPT when inquired should be fostered as well (Mhlanga, 2023). With regards to this, AIT may have been proven to be beneficial to a certain extent to a student, but none can hide the fact that it portrayed several issues concerning its usage, where one of which is over-dependence. All of which solely led to the stunted development of a student cognitively and socially.

Research Questions

This study strove to comprehend the impact of students' dependency on utilizing artificial intelligence tools on their knowledge acquisition. Specifically, this research aimed to answer the following questions:

1. What are the benefits of using Artificial Intelligence tools in students' education?
2. What are the challenges faced by the students who rely on Artificial Intelligence Tools?
3. What are the factors that influenced students' reliance on Artificial Intelligence tools?
4. How do Artificial Intelligence tools implicate the integrity of education?

METHODOLOGY

The study utilized a qualitative research technique. As stated by Creswell (2014), qualitative research is an investigation technique that is grounded in understanding various research that investigates social or human difficulties. The investigator constructed a comprehensive, multifaceted image, examined precise perspectives of the data, and carried out the investigation in a natural environment. Meanwhile, this study utilized a phenomenological approach to determine the drawbacks, opportunities, and factors that influenced the knowledge acquisition of students concerning their reliance on artificial intelligence (AI). Phenomenology is defined as a philosophical tradition, one that takes curiosity in the lived experiences of an individual through an event (Russell & Field-Springer, 2022). Beyond a method of inquiry, it sheds light on the connections and relations of perceptions to phenomena through interpretation. All this is necessary to comprehend the lived world of mankind at a conscious level (Qutoshi, 2018). The chosen participants in this study are the Grade 11 and 12 Senior High School students from the Science, Technology, Engineering, and Mathematics (STEM) strand. The participants are divided into two groups: mainly, 15 Grade 11 STEM students and 15 Grade 12 STEM students. In total, there were 30 participants selected and interviewed in this study. The participants who are chosen in this study are those who rely on and use AI tools to aid them in their academic outputs. Participants of this study were chosen using purposive sampling. According to Campbell et al. (2020), purposive sampling is the process of better matching the sample to the goals and objectives of the research, strengthening the thoroughness of the research and the accuracy of the data and findings. Purposive sampling is a non-probability sampling method that occurs when elements selected for the sample are chosen through the judgment of the researcher.

In collecting data from the participants, the researchers utilized an interview specifically a semi-structured interview. An interview, as defined by Brinkmann (2014), means to obtain experiences and perspectives from an individual as a means to make sense of a certain phenomenon. To be more specific, a self-made, semi-structured type of interview was the main instrument used to obtain information from the participants. According to Adams (2015), a semi-structured interview uses a combination of close- and open-ended questions to gather information from the interviewee or the participants. It consists of a

comprehensive interview guide that is used when personalized and subjective knowledge is lacking regarding a phenomenon (McIntosh & Morse, 2015). To further identify the influence of AIT dependency on the knowledge acquisition of SHS STEM students, this research primarily concentrated on utilizing the Thematic Analysis method by Braun & Clarke (2006). Thematic analysis is known for examining, finding, and summarizing patterns found within data. It thoroughly defines and minimally arranges the data set. Correspondingly, research ethics was practiced throughout the study process.

RESULTS AND DISCUSSION

Theme 1: AITs improve a student's scholastic performance

Since the release of artificial intelligence (AI) tools in the world, it has influenced students' performance at school. Wherein the use of AITs has benefitted the students from a variety of advantages. These advantages included helping students with their tasks or assignments and encouraging them to complete their work with less difficulty. AI is another kind of thing that not only evaluates performance but also takes proactive measures to make something better (Dhara et al., 2022). Additionally, AI-assisted students' written output, such as essays, research, reflections, etc. Because of its immediate response, it corrects the use of grammar and even gives guidance to the language use of the student. Hence, it benefits students in their academic tasks, performance, and overall education. A case study involving AI stated that the academic study of artificial intelligence can transform many different fields into academic research (Alshater, 2022). Possessing the capacity to evaluate and comprehend vast volumes of material, create scenarios and simulations, and then clearly and concisely convey findings. In this way, artificial intelligence (AI) has greatly improved the efficiency of research.

Subtheme 1.1 The impact of utilization and convenience of GenAI on a student's output.

This subtheme realized that the use of AITs helps the students generate ideas for doing their tasks. As stated by Mhlanga (2023), AI tools can produce logical and contextually appropriate sentences, which helps improve a student's critical and creative thinking. With that justification, the use of AI tools could help students generate ideas and finish their tasks faster. Using AITs made students' tasks easier to do. Research by Chan and Hu (2023) showed the benefits of using GenAI. They found out that it provided convenience, support, and assistance, as well as research and analysis support, to students. Hence, the utilization of AI tools helped students work and achieve their academic tasks more easily.

Subtheme 1.2 AITs as a grammatical assistance provider.

This subtheme focused on one of the benefits that arose from using AITs in education. As stated by O'Neill & Russell (2019), AITs provide students with grammatical assistance due to the automated feedback programs that these applications have. Thus, AI tools like Grammarly, ProWritingAid, and Writing Mentor are becoming well-liked in academic, professional, and social contexts. These applications that provide feedback to users make writing easier and invaluable to many writers and students as they are assisted and receive text generation and sentence completion recommendations that are human-like (Alharbi, 2023).

Theme 2: Underlying complexities of AI utilization on student output

With the rise of technology, AITs have been utilized in education, where they have seen steady development (Pinkwart, 2016). AIEd has brought multiple changes and opportunities for students' learning and development in the overall educational field (Baker et al., 2019). Although this technology came with benefits, it also presented challenges that students may inevitably experience as it becomes more intertwined in their academic journey. Generative AI models like Chat Generative Pre-Trained Transformer (ChatGPT) use a large set of data to generate responses to the users' prompts (Gilson et al., 2023). Because of this, there are common challenges students experience with the responses it gives due to it following a set of patterns or codes. The problems arising among participants are, first, the ambiguous or incorrect responses it generates. Secondly, the recognizable text pattern of responses AITs provide is due to it following the same dataset.

Subtheme 2.1 Inaccurate and incomprehensible results.

This subtheme, which emerged as a problem for students when using artificial intelligence tools, is characterized by the complexities associated with the utilization of AI for students' learning outcomes. These underlying complexities served as a detrimental factor in the acquisition of knowledge by students. In this current era, the use of AI presents challenges to students' learning outputs by helping with research, assignments, and ideas, which may contain unreliable and false information that impacts students' work (Rasul et al., 2023). Moreover, learners are inclined to present non-factual information, perpetuating misconceptions that could mislead students. Further, research into the validity of AI-generated questions for higher education has revealed that, although most students considered AI-generated questions to be relevant, clear, and accurate, there were still concerns regarding the dependability of the AI-generated content (Tweissi et al., 2022). These findings implied that AI can be advantageous in educational settings; however, there are still areas where its accuracy may need improvement, especially in tasks involving student interactions and assessments. While AI can forecast student outcomes and deliver feedback, the absence of explainability and transparency in these models can lead to issues such as trust concerns, difficulty comprehending the system, and anxiety among educators (Hall et al., 2023).

Subtheme 2.2 Data Pattern

This subtheme emerged as one of the common problems students mentioned: the obvious and similar text pattern in the AITs' output. Though the problem seems simple, it raised concerns regarding the reliability and creativity of AI-generated texts to produce responses that have no similarity with other responses it has given. A problem that emerged due to the obvious text pattern is the similarity in answers between students who gave similar prompts. A study conducted by Kim et al. (2024) investigated user dissatisfaction when using ChatGPT, where one of the common problems is 'prompt reusing' and the answers being too generic—a problem not far off from the issues mentioned by participants in this study. Having a generic answer to an input can lead to others receiving similar generic responses from the AIT. Moreover, a study by Borji (2023) stated that AITs like ChatGPT rarely encounter a question it hasn't had before due to exposure to various coding examples, leading to the generation of general responses and a lack of originality. Correspondingly AI-generated texts fall short of human-generated texts by lacking the originality and creativity humans have, instead producing texts that are repetitive and formulaic (Mindner et al., 2023).

Theme 3: AITs accessibility and endless possibilities are compelling for usage

With the adaptive innovations made in AI, it has shown significant impacts on different aspects of the contemporary world. One of which is education, which has had major implications, especially for its students (Chen et al., 2020). Consequently, students who use AITs for their academics have found numerous outcomes that portray positive and negative approaches to learning (Zhai et al., 2021). However, finding the effects that AITs have brought is regarded as significant, as is figuring out the rationales behind a student's usage of AIT. The usefulness of AITs in the education sector, particularly ChatGPT, has a substantial impact on the reasons why students use AIT (Abdaljaleel et al., 2024). Owing to this, students utilize AITs as an academic companion with their capability to produce responses in a short time, and due to their convenience, students employ AITs because they tend towards laziness.

Subtheme 3.1 AITs as an academic companion.

Due to the features provided by AITs, they have given students numerous benefits—and oftentimes challenges—when it comes to their education. Hence, this subtheme has recognized AITs as an "academic companion" according to the supplementary actions it has presented toward the academic career of a student. With its ability to generate instantaneous responses to user inputs and queries, specifically ChatGPT, Gill et al. (2023) noted that it uses AI and Natural Language Processing (NLP) to answer and create realistic answers that are relevant, well-organized, and educational. Thus, students can obtain noteworthy ideas by doing so. In the words of Fitria (2021), AI is said to be a "virtual mentor" due to its ability to adapt information independently to align with the demands and issues encountered by students by recognizing misunderstandings, providing comments and recommendations, and potentially providing answers. Subsequently, this enabled the learners to complete tasks more efficiently, as emphasized by participants in

this study. Additionally, students, especially those with time constraints, use AITs to alleviate the stress of their heavy academic workload. At a certain point, a learner may feel as if they do not have enough time to complete a task. As such, they may look for methods to complete the task at hand before its impending deadline, and consulting an AIT for prompt responses is one such way (Abbas et al., 2024).

Subtheme 3.2 Convenience of AITs as an influence on the inclination of laziness.

The emergence of AITs in education has indeed been relatively recent and has accumulated substantial attention from many educational stakeholders (Cain, 2023), yet their impact has been profound and far-reaching in this facet, most specifically for its students, sparking an influence related to tolerating laziness. Henceforth, this subtheme has surfaced due to AITs being manipulated by students to their benefit because of their inclination to laziness. Findings garnered by Hadi Mogavi et al. (2023) have shown that using AITs, ChatGPT in particular, can only intensify procrastination. Since an AIT can produce timely responses, it is highly probable to instill a sense of control and a belief that the academic task at hand can be accomplished at any time among students, which will only foster the learner to put off the task until the very last minute possible (Abbas et al., 2024). Such acts, where AITs assist in accomplishing academic tasks with the student exerting minimal effort, will simply serve to reinforce habitual tendencies towards sloth.

Theme 4: Impact of AITs to Students

Depending on the type of task assigned to a student, appropriate Artificial Intelligence Tools will be utilized to efficiently help them in their tasks. And based on how they utilize these tools, the results would vary for each of them. Some have seen an improvement in how they did their academic tasks (Chen et al., 2020), while some were left baffled by the results it offered as they deemed it irrelevant or it was too complex for comprehension (Rasul et al., 2023). It is established that AITs can aid, as well as present challenges to a student's outputs. The same can be said about how AITs are affecting how students are learning. The effect of AITs on the knowledge acquisition of students is divided into two: a positive and a negative effect (Farrokhnia et al., 2024).

Subtheme 4.1 Positive Impacts.

The integration of AI Tools in Education is setting a seamless blend with human intellect, perception, and culture. Thus, Artificial Intelligence Tools have revolutionized and innovated much of the educational landscape and will continue to do so in the following years. Analyzing the roles and possible applications of AITs in education from past reports, revealed a role wherein it served as an intelligent tutor, inclined to support the learning of a student by employing a subjective learning system (Hwang, 2020). A commonly used AI technology that has the capability of acting like a tutor is Chatbots (Adiguzel, 2023). Amongst the many Chatbots available on the internet, at least half of the participants responded that they use ChatGPT to aid them in their studies. ChatGPT is capable of a variety of tasks like responding to questions, idea generation, and complex subjects, concepts, or themes explanation. With the use of these AI technology,

participants expressed that they were able to use these AI technologies to help them comprehend a topic, as well as to gain or increase their knowledge regarding a subject matter. Another positive impact of an AIT on students is due to its time-saving feature (Bin-Nashwan et al., 2023). Time is of the essence, especially for a student. Learners must juggle different tasks and outputs, and with limited time they may not be able to accomplish all of these. However, incorporating AITs in their studies would prove to be helpful as they can provide real-time support to students, helping them to manage both their time and tasks. These systems have shown a significant outcome in terms of psychological effect and task efficiency (Li & Jan 2023). Additionally, as the database size and accuracy of a Chatbot increases, the more likely it is to perform better and provide better assistance to students (Adiguzel et al., 2023). AI Tools are continuously being developed to the length of time to aid the people who rely on their services.

Subtheme 4.2 Negative Impacts.

Embracing the use of AITs in higher educational institutions seems commendable as a step for the education sector to adapt and accommodate the rising technological advancements that are influencing it, while also considering the positive impacts it provides to students. However, it is also undeniable that these tools hurt students. When participants were asked about the impacts of AITs on their studies or how they learn, some answered that they are becoming lazy and dependent on AI; some also answered that AI affects their critical thinking. According to Sabharwal et al. (2023), the utilization of AI causes students to become lazy. When a student continuously relies on the assistance of these tools, there is a possibility that they may become passive learners, uninterested in participating in learning processes and learning activities. In their study, they discussed the relationship between artificial intelligence and human laziness, where it was demonstrated that an increase in AI leads to an increase in laziness. Furthermore, this over-dependence on AITs may ultimately lead to decreased critical thinking and decision-making among students. This can be further supported by the findings of Sevnarayan & Potter (2024), explaining that focusing only on the efficiency and ingenuity of such tools would only result in the neglect of technical skills, critical thinking, and creativity.

Theme 5 A vague link between AI Utilization and academic Dishonesty

With the increasing integration and implementation of artificial intelligence tools (AIT) in the academic scene, it has raised concerns in the community. Specifically, employing AITs brought forth ethical issues about how students may use these tools to commit dishonesty (Qadir, 2023). Academic dishonesty is still a prevalent topic in the community. It encompasses all actions a person may take to gain an academic advantage, albeit unfairly (Benson et al., 2019). Pavela's (1997) conceptual framework defined what acts are diametrical in achieving educational goals, namely: (1) cheating, (2) facilitation, (3) fabrication, and (4) plagiarism. It is debatable whether the use of AITs encourages students to commit the aforementioned actions that implicate academic integrity. The availability of AI-powered and AI-assisted platforms that can be used in education, like paraphrasing software and essay mills, has urged students to commit plagiarism as well

as generate supposedly authentic content (Manley, 2021). According to Abd-Elaal et al. (2019), the utilization of AITs such as text-generators is a tool that violates academic and research integrity, leading to serious misconduct as these tools only encourage dishonest work from the authors. However, Yeralan and Lee (2023) both argue that because of the capabilities of generative AI (GenAI), it can supplement ideas, further improving the brainstorming phase and enhancing the overall thinking process. It is also able to suggest alternative proposals and create numerous drafts, which can help with the structure of the final output. Therefore, it is subjective; it depends on the circumstances and the individuals themselves whether the result of using such tools would be “good” or "bad." Perkins (2023) also reiterates that it would not be necessarily viewed as plagiarism if the student offered accountability and transparency with every output. This varying view of the connection between AI usage and academic dishonesty might be because there have been neither guidelines, policies, nor frameworks proposed or devised to address the ethical concerns that are currently being raised by the integration of AITs in education (Holmes et al., 2018). Until some frameworks or guidelines can be followed or consulted to ascertain whether the use of AITs in the scholastic scene falls under academic dishonesty, the link between these two will remain ambiguous for those in the academic community.

Conclusions

Based on the accumulated findings, the researchers concluded the following:

1. Artificial intelligence tools have greatly benefited students with their academic tasks by providing convenient, instant, and logical answers and ideas. They have also provided help with students' written works by aiding with their grammar and sentence structures.
2. Due to AITs following a set of data or codes, they often pose challenges to students by generating general, wrong, or misleading answers to a student's queries. The problem of general answers leads to students having similar answers to others.
3. Providing ideas and answers to students instantaneously, helping them with their tasks, and helping them learn from their mistakes are some of the reasons why

students use AITs. Another reason is the convenience of obtaining answers without effort, oftentimes fueled by the student's laziness.

4. The utilization of AITs doesn't inherently damage academic integrity; it depends solely on the students on how they utilize AITs. While some use it honestly and for simple tasks, others use it in a way that can lead to plagiarism.

Recommendations

The purpose of the following recommendations is to provide observations of the following entities concerning how they implement the use of AITs to appropriately fit their needs. Thus, the following recommendations are hereby presented:

1. Students must exercise caution when relying on AI tools for critical thinking tasks, as over-reliance on these tools may hinder the development of essential skills such as analytical thinking, creativity, and independent problem-solving.
2. Students need to avoid blindly accepting AI-generated outputs without verifying their accuracy and relevance.
3. Students need to strike a balance between leveraging AI tools as helpful aids and cultivating one's cognitive abilities, which is key to achieving academic success.
4. Since the influence of AI tools has been proven, teachers need to equip themselves with digital competencies that align with educational goals and transform teaching methods in school learning environments to support students influenced by AI.
5. To improve students' learning outcomes, it is suggested that teachers assess students' needs and allocate time efficiently when students are impacted by AI, concentrating on immediate behavioral cues and delivering prompt support for optimal results.
6. Curriculum developers should make adjustments to the curriculum in response to the rising use of AITs by students.
7. Curriculum developers should integrate AI literacy by developing modules that (1) introduce AITs and how to use them the right way, (2) highlight the wrong way of

using AI and its possible consequences, and (3) discuss the ethical implications of using AITs and how to use them ethically.

8. Curriculum developers should focus on data literacy in the curriculum, ensuring that the students know how to analyze and interpret the outputs from the AITs.
9. Curriculum developers should promote critical thinking skills, problem-solving skills, and creativity, ensuring that despite the rise of AIEd, students will still possess the necessary skills.
10. Educational institutions should emphasize and promote the ethical use of AITs by developing a curriculum that discusses topics like discrimination and bias in AI, privacy, and transparency.
11. Educational Institutions should create programs that combine AI with other fields like healthcare, engineering, and humanities to provide opportunities and prepare students.
12. Educational Institutions should monitor and regularly assess the impacts of AI on students' learning, engagement, and performance to ensure a safe and healthy environment where students can safely use AITs.
13. A similar study must be conducted to determine whether the same findings are established. To ensure the accuracy and reliability of the results, a comparable research project should be conducted to confirm the validity of the findings.
14. Future researchers in the field of AI must consider potential obstacles, including bias and discrimination. Addressing these issues can be achieved by incorporating diversity and inclusivity concepts to ensure that AI is designed with fairness, trust, and transparency in mind.
15. Furthermore, studying the impact of AI on various aspects of education, such as teaching methods, curriculum design, and student engagement, can offer valuable insights for informing future research. Understanding the different interactions between AI and education, as well as the evolution of AI's role in education over the years, can provide valuable insights for future research.

Compliance with Ethical Standards

This research strictly adheres to the ethical standards set by the institution and the body of knowledge. All information and data coming from the respondents are solely for academic purposes only. In line also with the Data Privacy Act of 2012, the researchers strictly preserved the anonymity and confidentiality of the respondents.

Acknowledgments

The researchers would like to express their heartfelt gratitude and appreciation to the following people who helped them throughout their study, as they would not have finished it without their unending support and efforts. First and foremost, the researchers would like to express their gratitude to God, our Creator, for his unwavering blessing and guidance throughout the process of conducting this study. To John Louise M. Marcaida, LPT, MPES (c), our professor in Practical Research 1. The researchers would like to

thank him for providing constant assistance and patience to the researchers throughout the entire process of composing this paper, which they are grateful for.

To the participants, who provided us with their time and answers during the gathering of our data. The researchers would like to give their acknowledgments to each of the 30 participants from STEM Grades 11 and 12, as they have aided us with their responses, which were substantial in the findings and discussion section of our study. To our teachers and professors, the researchers are eternally grateful for the guidance they provided towards the completion of the paper. And we also acknowledge the wisdom they've given us, which has helped our research improve. Lastly, to our family and friends who supported us in crucial times and who have always been the researchers' sources of support and motivation for this research. The researchers would like to express their warm appreciation for their constant love and support, which gave them the motivation to pursue this study and to see through it until the end.

ABSTRACT

This study aimed to evaluate the durability of an alternative organic paper made from the lakatan (Musa acuminata) pseudostem as a sustainable source for paper production. The research was conducted at Isabela State University, Cauayan Campus. Three treatments were tested: commercial Manila paper made from 8 g, lakatan paper made from 5 g, and lakatan paper made from 3 g of pseudostem. The durability of the paper was assessed by tensile strength, abrasion, and thickness tests. The results revealed significant differences among the treatments. The 5 g lakatan pseudostem paper exhibited the highest tensile strength and abrasion resistance compared to the other treatments. Additionally, the 5 g lakatan pseudostem paper was thicker than the commercial Manila paper. These findings suggest that lakatan (Musa acuminata) pseudostem paper is durable and can be recommended as an alternative source of material for paper production. This study highlights the potential of utilizing banana pseudostem waste as a sustainable alternative to traditional paper production methods, which contributes to deforestation and air pollution. The use of the lakatan pseudostem for paper production could help reduce the environmental impact of the paper industry, while providing valuable use for agricultural waste.

Keywords: *Abrasion, Lakatan, Musa acuminata, Paper Production, Pseudo-stem, Tensile strength*

INTRODUCTION

Paper is one of the biggest contributors to environmental damage as waste comes from; it is a big issue for its negative impacts on the environment, such as increasing the rate of deforestation using up to 90% of global wood in the production of paper, as stated in the study by Kempner (2016). In a study by Ferguson (2017), over 40% of industrial wood traded around the world makes paper and responds to Achlin (2021). Logging for paper and wood products is the second leading cause of deforestation, causing loss of habitat for millions of species, as 80% of the world's land animals and plants live in forests.

The papermaking process has been extensively criticized by environmentalists because it contributes to pollution. Paper production has a negative effect on the environment, as it involves the destruction of trees. Data from the Global Forest Resource Assessment show that approximately 80,000–160,000 trees are felled every day worldwide, with a significant portion being utilized by the paper industry. The primary consequence of ongoing deforestation is the alteration of global climatic patterns. In addition to deforestation, the paper manufacturing sector is responsible for contributing to air pollution. According to Claustro (2015), paper production accounts for approximately 20% of the air pollution in the United States.

The New York Declaration on Forests (NYDF) set up ten goals that aim to stop deforestation, and some of these are to stop natural forest loss by 2030 and to reduce the emission of Carbon Dioxide from deforestation. As Rivera (2021) argues yet, despite the clear agenda that is set, global deforestation continues at the rate of one million hectares per year. According to the Food and Agriculture Organization of the United States, the Philippines has shown significant advances in resolving the loss of forest cover in the past years, and its dedication is exemplified by embarking on large tree planting and reforestation software referred to as the National Greening Program. In addition, the Integrated National Resources Management Program (INREMP) and Forestland Management Program (FMP) are also concerned with this initiative. From functioning as one of the pinnacle ten deforestation international locations, contributing to 17-20 percent of worldwide greenhouse gas (GHG) emissions from worldwide woodland loss in 2000 (FAO, 2006), the U.S.A. has recovered with a modest wooded area cowl boom of 55 000 hectares (ha) consistent with year (FAO, 2010); the 2010 Global Forest Assessment Country Report for Philippines mentioned a boom in wooded area cowl from 6. Fifty million hectare in 1990 to 7 sixty-six million ha in 2010. However, these efforts have been sustained for a long time because the sustainability and capacity of re-greening applications have been questioned. The issues brought about by the production of commercial paper prompted researchers to conduct a study evaluate the durability of an alternative organic paper made from Lakatan *(Musa acuminata)* pseudo-stem.

Research Questions

This study was to evaluate the durability of lakatan (*Musa acuminata*) paper obtained from a pseudo-stem as a sustainable source for paper production. Specifically, it sought to answer the following questions:

1. Is there a significant difference in the tensile strength of the lakatan paper treatments? Treatment 1: Commercial paper (Manila paper) 8 grams Treatment 1: Paper made from 5 grams of lakatan fiber with 15 % NaOH Treatment 2: Paper made from 3 grams of lakatan fiber with 15 % NaOH
2. Is there a significant difference in the abrasion test results of the lakatan paper among the three different treatments?
3. Is there a significant difference in the thickness of the lakatan paper among the three different treatments?
4. Which of the treatments is the most effective among lakatan paper and commercial paper (Manila paper)?

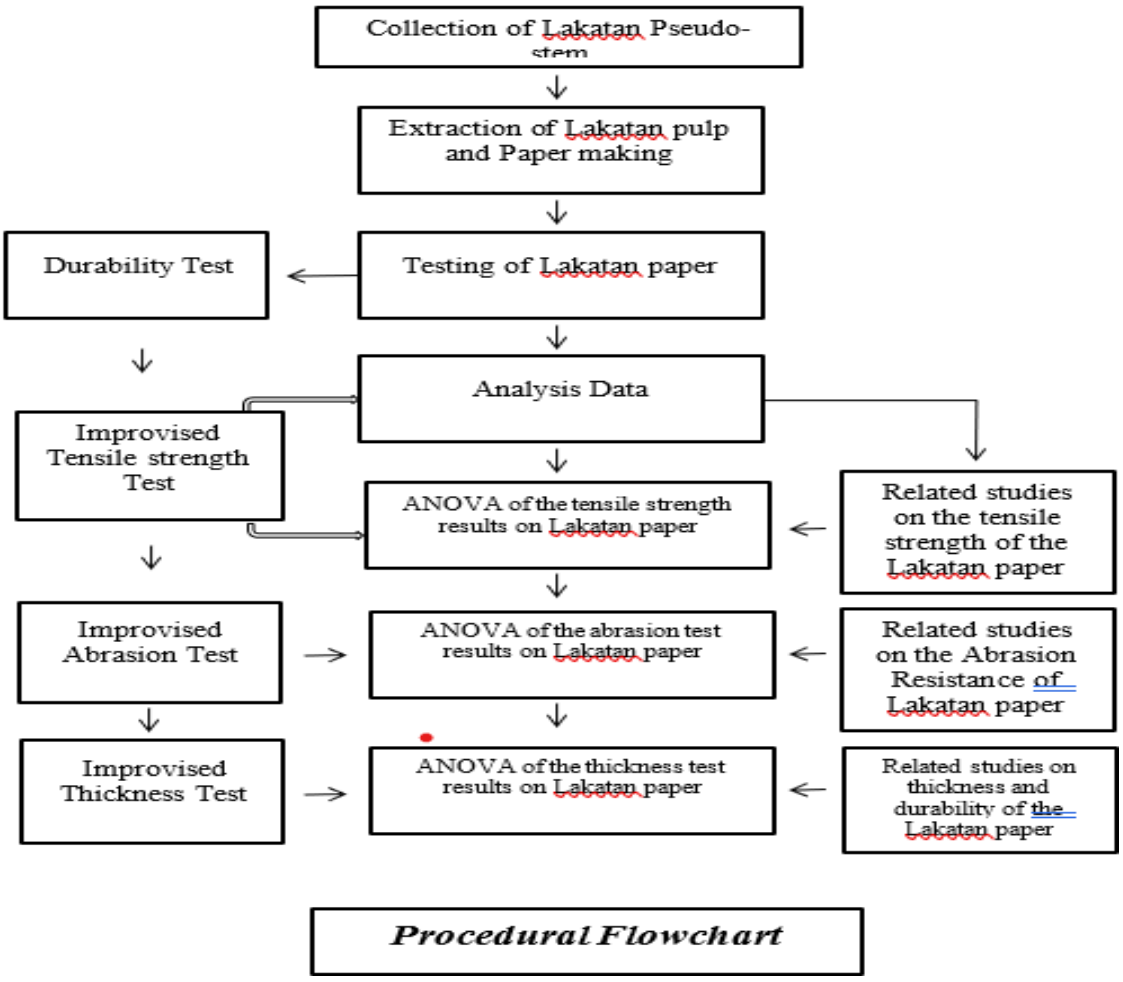
Statement of the Null Hypotheses

1. There were no significant differences in the tensile strengths of the three treatments.
2. There was no significant difference in the abrasion test results between treatments.
3. There were no significant differences in the thicknesses of the three treatments.

METHODOLOGY

A. Collection of Plant Material Lakatan (*Musa acuminata)* Pseudo-stem

Lakatan (*Musa acuminata)* pseudo-stem plants, especially the lakatan variety, were collected in Tandul, Cabatuan, Isabela. The collection method was guaranteed to follow ethical and sustainability principles. Only plants that had previously been picked for their fruits or were about to be harvested were chosen for inclusion in the study. An important ethical aspect was noted, and no lakatan plants were purposely removed for the purpose of extracting fiber from their pseudo-stems. This choice demonstrates a dedication to environmental stewardship and agricultural resource conservation. The study reduced any potential detrimental influence on ecology by focusing solely on plants that were already being picked for their fruits, ensuring that agricultural methods were sustainable. Appendix B includes additional images relevant to the collection procedure for clarity and visual support. The images offered further context and insight into the approach used to collect lakatan pseudo-stems for this study. They are useful resources for understanding the collection processes and state of the pseudo-stems at the time of acquisition.



Procedural Flowchart

RESULTS AND DISCUSSION

Table 1: Kruskal- Wallis Result

Tensile Strength Test						
PS 1	PS 2	PS 3	PS 4	M	H (2)	*P*
Commercial paper (Manila paper 8 grams)	.46	.24	.27	.25	0.305 Kn/m	
Lakatan Paper (5 grams)	.66	.60	.57	.59	0.605 Kn/m	9.85 0.007
Lakatan Paper (3 grams)	.54	.50	.48	.51	0.508 Kn/m	

This table presents the results of the tensile strength tests. The Kruskal- Wallis results for the different treatments, namely a) commercial paper (Manila paper 8 g), b) Lakatan

paper 5 g, and c) Lakatan paper 3 g, reveal that there is a significant difference between the tensile strengths of the three different treatments. Given that the p-value (0.007) is greater than the level of significance (2), the f-value is (9.85). The null hypothesis was dismissed by the researchers, who approved the alternative hypothesis after reviewing the test results in the table. They concluded that there was a notable variation in the tensile strengths of the three treatments. According to a study by Marites S. De Leon at DOST-PTRI in 2014, Lakatan, among six tested banana cultivars including Saba, Lakatan, Bongolan, Pakil, Saksik, and Tordan, exhibited the most promising mean tensile strength, surpassing that of the most common banana variety, Cavendish (Watsons, 2023). The tensile strength is linked to the product toughness. According to a study by Stable Microsystems in 2022, products with higher tensile strengths are more challenging or tougher to stretch. Conversely, products with lower tensile strengths broke more easily.

Table 2: Kruskal- Wallis Result

Abrasion Test						
PS 1	PS 2	PS 3	PS 4	M	H (2, 5.59)	*P*
Commercial paper (Manila paper 8 grams)	.69	.63	.63	.59	2.54	
Lakatan Paper (5 grams)	.57	.60	.59	.61	2.37	1.75
0.257						
Lakatan Paper (3 grams)	.59	.60	.61	.57	2.37	

The table presents the results of the abrasion tests. Based on the Kruskal- Wallis Result of the abrasion test on the different treatments, namely a) commercial paper (Manila paper 8 g), b) Lakatan paper 5 g, and c) Lakatan paper 3 g, there is a significant difference between the abrasion resistance of the treatments. Given that the p-value of (0.257) is greater than the significance level (5.59), The F-value of (1.75) is lower than the critical F-value of (2), leading researchers to reject the null hypothesis and accept the alternative hypothesis. They concluded that there was a significant difference in the abrasion resistance of the treatments, as previously stated (Rubtester, 2018). Abrasion testing is the rubbing of a material to a specific weight and speed to determine the wear point of the material being tested. The tested material confirmed the durability of the product being tested based on its results. Abrasion testing is used to measure resistance and can be used for both flexible and rigid materials, one of which is paper (Costells, 2023).

Table 3: Kruskal- Wallis Result

Thickness Test						
PS 1	PS 2	PS 3	PS 4	M	H (2)	*P*
Commercial paper (Manila paper 8 grams)	.1	.1	.1	.1	.1	

Lakatan Paper (5 grams)	.3	.3	.4	.4	.3	10.7
0.005						
Lakatan Paper (3 grams)	.2	.2	.2	.2	.2	

The table presents the results of the Kruskal-Wallis test. The table of the thickness test results for the different treatments, namely a) commercial paper (Manila paper 8 g), b) Lakatan paper 5 g, and c) Lakatan paper 3 g, reveals that there is a significant difference between the thicknesses of the three treatments. Given a p-value of (0.005), which is lower than the significance level of 2, and an f-value of (10.7), the null hypothesis was rejected. This leads researchers to accept the alternative hypothesis and conclude that there is a significant difference in the thicknesses of the three treatments. Lakobson (2023) states that heavier paper is denser and stronger, while paper with a higher caliper is stiffer and bulkier.

III. a: Table of the post-hoc Comparisons on Improvised Thickness Test Results

W		p			
Commercial paper (Manila paper 8g)	vs	5g	3.53	0.034
Commercial paper (Manila paper 8g)	vs	3g	3.74	0.022
Lakatan paper 5g	vs	3g	-3.53	0.034

The table provides a summary of the study of commercial paper (Manila paper 8 g), lakatan paper made from 5 grams, and lakatan paper made from 3 grams. Using a Pairwise Correction Post-Hoc test, the treatments were compared, and the results revealed that the significance was only within the comparisons on the commercial paper (Manila paper 8 g), 5 g lakatan paper, and 3 g lakatan paper because the p-values (0.022) were less than the calculated level of significance and the comparisons on commercial paper (Manila paper 8 g) and 5 g lakatan had a greater p-value (0.034). Based on the results, the researchers concluded that there is a significant difference in the thickness of the commercial paper (Manila paper 8 g), the 5-gram lakatan paper, and the 3-gram lakatan paper. Banana paper, on the other hand, is manufactured by hand from banana fibers, and is thicker and textured. It emphasizes sustainability and distinctive aesthetics and is ideal for eco-friendly crafts and specialized packaging (Yasin, 2018).

Findings

The study was focused mainly on the making of lakatan (Musa acuminata) paper and testing its durability through a) tensile strength test, b) abrasion test, and c) thickness test. The results showed a notable contrast in the tensile strength and abrasion resistance among the various treatments. This implies that lakatan paper can endure abrasion similar to commercial paper (manila paper).. Lastly, the thickness test revealed that there is a significant difference between the treatments of 5 grams lakatan pseudo-stem paper that is thicker than commercial paper (Manila paper). Therefore, lakatan (Musa acuminata)

pseudo-stem paper is durable and can be recommended as an alternative source of material for paper production.

Conclusions

Based on the test results, the following conclusions can be drawn:

1. Papers made from lakatan (*Musa acuminata*) differ significantly in terms of their tensile strength compared to that of commercial paper (Manila paper).
2. There was a significant difference in the abrasion resistance of the different lakatan (*Musa acuminata*) pseudo-stem papers and commercial paper (Manila paper).
3. There is a significant difference in the thickness of lakatan 5 grams (*Musa acuminata*) pseudo-stem paper and commercial paper (Manila paper)

Recommendations

The following recommendations can be made for this study:

1. Further studies on other banana pseudo-stems are needed.
2. Further research must be conducted to test the durability of the paper, such as its folding endurance, surface strength, and tear strength.
3. Improve the whiteness of the paper as it is an indicator for measuring the quality of a paper and improve the methods of paper making to ensure the equal distribution of its fibers.
4. Other chemical solutions for papermaking should be used to further improve paper quality.

Compliance with Ethical Standards

This study was conducted with the approval of the appropriate ethics committee at Isabela State University, Cauayan Campus. All procedures performed in this research involving human participants, if any, were in accordance with the ethical standards of the institutional research committee and with the 1964 Helsinki Declaration and its later amendments or comparable ethical standards.

Acknowledgments

The completion of this paper "The Durability of Lakatan (Musa acuminata) Pseudo-Stem: A Sustainable Source for Paper Production" was made possible through the generous support, guidance, and encouragement of numerous individuals and institutions. Special thanks are extended to Dr. Liezl Joy L. Quilang, Dean of the College of Education, for her invaluable guidance and inspiration, and to Dr. Lorelei C. Tabago, a Research Professor, for her steadfast support, patience, and profound insights.

EDUCATION AND COVID 19 IN THE LENS OF WORKING STUDENTS OF LANTON HIGH SCHOOL: BASIS FOR PROJECT POSITIVE (PEER OUTREACHING OF WORKING STUDENTS AND SPECIALIZED INTERVAL OF TIME SCHEDULE TO INTENSIFY AND VALIDATE EDUCATION IN THIS NEW NORMAL)

Chiloren Mark Y. Parohinog

Department of Education, Lanton High School, General Santos City, Philippines

https://doi.org/10.5281/zenodo.13371216

ABSTRACT

This Action Research is materialized with the vision to help the working students of Lanton High School. This study aims to elucidate the education process during the COVID 19 pandemic in the lens of the working students of Lanton High School. Specifically, it sought to answer the scope of work of the working students of Lanton High School in terms of their time schedule and nature of work. This action research looked also for the overall experiences of the working students during the new normal especially on the module distribution, passing of answer sheets and accomplishing the SLMs/ SSLMs. The design of the study is phenomenological in nature. There were fifteen (15) working students who were the respondents of the study and were chosen through a purposive and snowball sampling method. Through a thorough analysis, the study revealed that women working students tend to have domestic job with a very flexible time while men working students engaged in hard manual labor having an imposed time to conform. These working students still believed that education is vital in the time of pandemic; that they can still continue studying even they working and teachers and classmates are still part of learning even on distance learning. These were three (3) themes that come out after the interview. The result of this Action Research is the formulation of Project POSITIVE (Peer Outreaching of working students and Specialized Interval of Time schedule to Intensify and Validate Education in this New Normal).

Keywords: *pandemic, module, working students, action research, new normal, Philippines*

INTRODUCTION

When the whole nation was placed into community quarantine, everybody was not prepared for such. Hence, many of us were affected physically, emotionally and even psychologically. Several things have been shifted to things that we are not used to, brought about by this COVID 19 Pandemic. One of the most affected sectors in the society is the educational system of the country. The Department of Education (DepEd) developed a Basic Education Learning Continuity Plan (BE-LCP) through the DepEd Order No. 18, s. 2020 otherwise known as the Policy Guidelines for the Provision of Learning Resources in the Implementation of the Basic Education Learning Continuity Plan. The BE-LCP ensures the delivery of quality, relevant and liberating education for all its learners. Further, this is also in consonance with the 1987 Constitution which states in Article XIV Sections 1 “The state shall protect and promote the right of all citizens to quality education at all levels, and shall take appropriate steps to make such education accessible to all.” And Section 2 (1) “Establish, maintain and support a complete, adequate and integrated system of education relevant to the needs of the people and society” (2) “Establish and maintain a system of free public education in the elementary and high school levels.” With this, different learning modalities were implemented. These modalities are modular distance learning (MDL), radio-based instruction (BRI), TV-based instruction (TVBI), online learning and blended learning.

Lanton High School, as situated outside the city proper, having consolidated the results of the Learner Enrolment and Survey Form (LESF) during the remote enrolment opted to go on printed modular distance learning. Though the process of learning is a new paradigm for the students, majority have managed their learning style well. Processes of distributing of modules and retrieval of answer sheets have been evidently observed in school. Yet, there are still those who cannot cope with the scheduled time for distributing and retrieval processes.

Since that students are not permitted to go to school, there are some who have engaged themselves into jobs in order to assist their parents with financial burden. As a result, they tend to pass their answer sheets late given that they can only accomplish their self-learning modules at night or during their vacant time.

This time of pandemic, where other adults lost their jobs, students may go into a sort of income generating practices. Tsurugano, et al. (2021) noted in their research that the financial instability is severely affecting their academic performance and potentially their health. Students' maximum focus and study productivity are at risk if this issue arises (Chang & Fang, 2020). As to the research conducted by Rotas and Cahapay (2020), students expressed challenges in striking a balance between their home obligations and distance learning, even if living at home may provide comfort. It maintains their time apart. Students also expressed concern about how their schedules for remote learning interfere

with their domestic obligations. This result is consistent with Matswetu et al., (2013), in which Zimbabwean students encountered financial difficulties when enrolled in a remote learning program. Notably, because of an unprecedented economic closure during the outbreak, financial difficulties for low-income families in the Philippines have started to deteriorate (Adle, 2020).

There are significant obstacles in the planning, implementation, and assessment systems of educational institutions, especially in the Philippines. On a more positive side, though, the pandemic gave the nation the chance to modernize its methods of delivering education and focus on cutting-edge technologies (Toquero, 2020).

Given the current circumstances, an intervention intended for students who work for a living must be put into place. Two more essential performance indicators will be covered. The access comes first. Continuing with the pandemic, (a) dropout rates are high in many nations and prolonged disengagement may result in an even higher rate (Gayeta, 2020). Additionally, the quality of their education will increase if this program is appropriately executed for working students during this period when face-to-face instruction is forbidden.

There were 405,644 household members in General Santos City that were at least 15 years old in 2015. Of this total, about three out of every five individuals (57.6%) worked for pay in the twelve months before to the census. Men made up 66.3 percent of those who engaged in gainful activity over the previous 12-month reference period, with women making up the remaining 33.7%. When it came to major occupational groups, workers in elementary occupations made up the greatest percentage (19.6%) of all those engaged in gainful activity. Following in order of percentage, plant and machine operators and assemblers (13.2%) and service and sales workers (17.6%) (Philippine Statistics Authority, 2015 Census of Population, Report No. 2 – Demographic and Socioeconomic Characteristics General Santos City, June 2017)

With the abovementioned data, during the pre-pandemic, it can be noted that there were numerous learners that were engaging in gainful activities. With this pandemic, the Lanton High School Guidance Office in the year 2020 has recorded around 25 learners engaged in gainful activities or as working students. These same students were those who were still engaged in gainful activities for the purpose of aiding their families in financial aspects.

According to the results of the study by Darolia (2014), while understudies take less qualities in school due of work commitments, Filipino students are still able to sustain themselves financially through working despite having financial challenges (Abenoja, et al., 2019).

Basically, this action research will enable a positive transfer of learning for working students. This will benefit them through the program and intervention to be crafted. Finally, having this action research will address the difficulties they face in these trying times.

Research Questions

This study aimed to elucidate the education process during the COVID 19 pandemic in the lens of the working students of Lanton High School.

Specifically, it will seek to answer the following questions:

1. What is the scope of work of the working students of Lanton High School in terms of:
    a. Schedule; and
    b. Nature?
2. How do they view education process in the new normal?
3. What are their experiences in the new normal of education in terms of:
    a. Module distribution;
    b. Passing of answer sheets; and
    c. Accomplishing the SLMs/ SSLMs?
4. What will be the possible intervention for the working students of Lanton High School?

METHODOLOGY

This research was conducted at Lanton High School- a lone high school in Barangay Apopong, General Santos City. It utilized purposive and snowball sampling as the sampling methods. The working students of Lanton High School were purposely chosen as the respondents of this action research having the one criterion- that they must be a working student. This study focused on the working students' experiences and insights during the COVID 19 educational process. The data that were needed in this study were gathered through an interview. A technique called thematic analysis was employed in this action research. It is the process of a thorough inspection of data sources gathered form the live experiences of the respondents since that the research design is qualitative in nature. A technique called thematic analysis was employed in this action research. It is the process of a thorough inspection of data sources gathered form the live experiences of the respondents since that the research design is qualitative in nature.

RESULTS

Themes	Voices of the informants
Education is Still Vital During the New Normal	*"Mas gusto ko pa rin mag-aral dahil ayaw kong sayangin ang aking panahon na walang ginagawa sa oras ng free time ko."*

	I still want to study because I don't want to waste my time.
They Can Still Pursue Their Studies Even They Are Working	*"…para mapadayon nako akong pag-eskwela."* *…so that I can continue my schooling.*
Teachers and Peers Are Part of The Learning Process Even in Distance Learning	*"Mas gusto ko na may mapagtatanungan din ako sa mga katanungan ko about sa mga subects."* I want to have somebody to ask about my queries when it comes to my subjects.

DISCUSSION

The first theme is "Education is Still Vital During the New Normal". The working students of Lanton High still believe that education is as important as living in the midst of the COVID 19 pandemic. According to UNESCO's Dr. Hamed al Hamami, "children and youth are greatly impacting from school closures, to isolation, to a persistent sense of anxiety." Learning should never cease, even in times of hardship. In order to ensure that no learner is left behind, UNESCO is dedicated to assisting the Ministry of Education and Higher Education in creating remote learning solutions and guaranteeing inclusion and equity for all students. This is why, even these working students are still fighting for living, they "want to continue studying because they do not want to waste their time by just staying at home" (Mas gusto ko pa rin mag-aral dahil ayaw kong sayangin ang aking panahon na walang ginagawa sa oras ng free time ko). They believe that even they are working, they can find time to accomplish school activities especially in answering their SLMs/ SSLMs.

Second theme that had surfaced is "They Can Still Pursue Their Studies Even They Are Working." The working students of Lanton High School even during the pandemic were engaged for survival. It is indeed that everyone during the pandemic was fighting to see another day, these working students had also been immersed to different field of work. A Philippine student's account of challenges that he has faced during the pandemic re-emphasizes the urgent need to support the enhancement of education, training, and skills development systems, ensuring young people have a smoother transition from school to work, according to a reference from the International Labor Organization (ILO, 2021). That is why, even these students were working, they really wanted to enroll themselves so that there would be a "continuity of learning" (para mapadayon nako akong pag-eskwela).

Teachers and Peers Are Part of The Learning Process Even in Distance Learning is the third theme. Working students of Lanton High School also believe that in order to have a positive transfer of learning, there must also be a collaboration with everybody. Most of them cited that they needed someone that they can ask about their queries or share some

of their ideas and insights about their subjects. (Mas gusto ko na may mapagtatanungan din ako sa mga katanungan ko about sa mga subects.) Teachers chatted with students on social media sites like Facebook Messenger in turn. According to Sason and Kellerman (2021), students in emergency distance learning have a critical need for interaction with their teachers. The students reported different types of interaction with their teachers during the COVID-19 period. Instructional communication (Q&A) was the most popular mode of communication, mostly through social media profiles. Additionally, they proposed that "one of the biggest factors influencing students' motivation and satisfaction as well as their capacity to complete learning assignments is teacher-student interaction. They could accomplish their SLMs/ SSLMs on time because their teachers monitored them and gave a feedback. Also, they shared their ideas with their classmates through social media platform. (Nakikipagcommunicate ako sa aking guro at pati na rin sa aking mga classmates. Minsan, nagtatanong din ako sa aking mga kaklase.)

Conclusions

The scope of work of the working students of Lanton High School is mostly domestic in nature (sa balay ra man ang akong trabaho maong dili kayo bug-at para sa akoa). Tens of millions of women and girls around the world are employed as domestic workers in private households. They clean, cook, care for children, look after elderly family members, and perform other essential tasks for their employers (Mendivil, 2020). However, some of the working students are into hard manual labor specifically in constructions (whole day gyud among trabaho kay naa man ko sa construction).

In terms of their schedule of work, those who were just staying at home for work have enough time to answer their SLMs/ SSLMs. They have almost the same working schedules. They tend to work mostly at peak hours like in the morning from 5:00 am until 8:00 am; in the afternoon from 11:00 am until 1:00 pm and in the evening from 4:30 pm until 7:00 pm or even late but for certain circumstance only. Since their employers are aware of their circumstances, the work schedule is flexible, which increases the likelihood that younger women will adjust domestic time to job-related conditions (Goldscheider, 1994). For those who were working in the construction, they have a time schedule to follow. A normal time schedule for them is from 8:00 am until 5:00 pm with one (1) hour lunch break in the afternoon. They are therefore under the formal employee of a certain company that is duly recognized by the state. Team (2020) states that no worker in the Philippines is required to put in more than eight hours a day at labor. Without fail, he deserves a one-hour lunch break every day. But an employee is only expected to work from the office for a maximum of eight hours every day.

In general, most of the women working students of Lanton High School were working at home such as domestic in nature while men are into hard manual laborSenior Research Fellows Futoshi Yamauchi and Yanyan Liu of the International Food Policy Research Institute (IFPRI) discovered that, overall, female students benefited from their education and their subsequent participation in the workforce in a new study of a school

improvement program in the Philippines. However, it seemed that the program really disadvantaged male students in their academic pursuits (Gustafson, 2018).

On delving on how the informants view the education process during the new normal, there were three main theme that had come out. These are (1) education is still vital during the new normal, (2) education is still part of life even they are working and (3) teachers and peers are part of the learning process even in distance learning.

In this new normal of education, Lanton High School offers Modular Distance Learning as a modality of learning. The experiences of the informants in the new normal of education in terms of module distribution was as difficult as surviving COVID. Basically, it was the parents of the students who claimed the SLMs/SSLMs of their students. Yet, because of these parents "work outside the vicinity of Lanton, they fail to get their child's SLMs/SSLMs (Lanton High School Faculty & Staff, 2021). Melorin (2021) also mentioned that most parents did not obtain and retrieve the modules according to the scheduled time. So, other students got their SLMs/SSLMs themselves. Based on the document presented by the teachers, most of the working students are on time in getting their SLMs/SSLMs. These working students were those who were just engaged in domestic labor; while those who were engaged in hard manual labor were late or not on time on a specific period of time but still managed to get the SLMs/ SSLMs (makakuha ra man gihapon mi pero late na or dili gyud on time kay may trabaho pud lagi mi.)

On passing of answer sheets, the school has a system that whenever they passed their answer sheets, they could get another batch of SLM/SSLMs. So, these working students needed to pass their answer sheets so that they could afford to get another set of SLMs/SSLMs. In passing the answer sheets, the working students are on time based on the records from the advisers. Though they faced some difficulties, these are all addressed by the concerned teachers through a constant communication. This helped both the teachers and the working students to work together to achieve the target date. However, for some instances that the working students failed to submit their answer sheets (and they could not get another SLMs/SSLMs), teachers reached them out through a phone call. (Naay mga time nga ginatawagan ko ni Ma'am kay wala pa ko nahuman sa akong module tapos naa nay bago nga set sa modules.)

On accomplishing the slms/ sslms, most of the working students can accomplish their SLMs/SSLMs accordingly because they were given time by their employer. (Kasabot ra man si Sir sa akoa maong ginahatagan ko niya ug time sa pag answer sa akong modules.) On the event for those who are working eight (8) hours a day, they could manage to answer it at night. (…sa gabii ra ko muanswer.) However, when they really find difficulty in answering, they would ring up a friend or a classmate. (Mayroon din akong

mga kaklaseng napagtatanungan.) By this manner, they could accomplish and pass their answers.

Recommendations

It is recommended that this research be conducted to a wide range of locale so to verify the answers of the informants. It is also advised that the school should address the problems and plight of the working students in order to give them an avenue for learning.

Compliance with Ethical Standards

The appropriate conduct of the study, secrecy, and anonymity are pertinent ethical challenges in this area of research.

Participation on a voluntary basis. The opportunity to participate was given to the participants without any expectation of consequences or loss of benefits. Consequently, the rights of the participant to contribute to the body of knowledge were carefully considered and anticipated once the goal and advantages of the study were made clear to the participant. The participants in this study were not coerced into taking part in it. Participants were permitted to stop taking part in the study at any time if it made them uncomfortable.

According to the Data Privacy Act of 2012, which safeguards the fundamental human right to privacy, participants' right to privacy could not be infringed upon without their informed agreement. One approach to maintain privacy and confidentiality in this qualitative study is to provide respondents with the choice to omit their name from the survey. Additionally, confidentiality and privacy were maintained by not disclosing the informants' age and address, if applicable, any diseases. For security reasons, their identity was thus kept secret. During the course of the study, even their answers to the survey's questions were kept private and treated as confidential information.

Within the parameters of the study, potential research participants were properly informed about the goals, procedures, and advantages of the study. The respondents' consent was acquired, confirming that their involvement would be requested voluntarily. This was done in writing, outlining all the important information that needed to be shared with the respondents as well as how the survey was carried out. In order to verify that they freely consented to participate in the survey, the respondents were required to sign an inform consent form. Participants understood that their replies would be kept confidential, that their identities would not appear on the survey, and that they could withdraw at any moment.

Acknowledgments

This action research as an avenue for professional and personal growth would not be materialized without the extending hands of different individuals, who in any way had

contributed to the realization of this endeavor. I am forever indebted to these following people for an unwavering support and assistance given to me.

To our Almighty God whose Divine Guidance and Providence for sustaining me throughout this journey;

To my former principal, Dr. Estrelieta A. Tenizo who started to spark my desire in research; for without her pushing me to conduct a research, this would not be put into reality;

To my principal, Dr. Laila L. Jubelag whose keen evaluation of my output had led me to finish this paper and the assistance she afforded me;

To my respondents who willingly made themselves involved in this paper and available during the course of interview even it took their time and effort;

To my co-teachers whose patience is beyond measure in answering my queries and lending me their documents of module distribution and retrieval;

To Mr. Nepomuceno Federizo, SEPS- Planning and Research for his technical assistance.

I dedicate this paper to you and to all working students who passionately seek for education in any circumstance. Your hard work is such an inspiration.

EDUCATORS' MENTAL HEALTH STATE, COPING MECHANISMS AN EDUCATIONAL MILIEU IN THE DISTANCE MODE OF LEARNING

Christian N. Domingo, Ph.D.[1] and Maria Elisa T. Alvaro, Ph.D. [2]

[1]Capellan Elementary School, Department of Education, City of Ilagan, Isabela, Philippines

https://doi.org/10.5281/zenodo.13359091

ABSTRACT

The COVID-19 pandemic has significantly disrupted the Philippine educational system, necessitating a shift from traditional face-to-face learning to alternative teaching modalities such as modular, online, radio-based, and TV-based instruction. This study investigates the mental health state, coping mechanisms, and educational milieu of elementary teachers in Cluster 6 of the City Division of Ilagan during the pandemic. Data were gathered from 87 permanent teachers using questionnaires and unstructured interviews, analyzed through frequency and percentage distribution, weighted arithmetic mean, F-test, and Pearson r. Findings indicate that most teachers do not exhibit significant signs of depression, stress, or anxiety. However, those who do primarily employ problem-focused, emotion-focused, and avoidance strategies to cope. Significant differences in mental health and coping mechanisms were found when grouped by age, civil status, teaching position, and other demographic factors. Additionally, teachers' perceptions of their educational milieu in terms of safety, support, engagement, and connectedness were generally positive, though varied significantly across different profiles. The study concludes that while the majority of teachers maintain a normal mental state, ongoing support and policy review are essential to address the mental health challenges posed by the new educational context. Recommendations include sustained mental health initiatives, continued education on coping mechanisms, and further research on the impact of these mechanisms on teachers' mental well-being.

Keywords: *Mental Health, Educational Milieu, Coping Mechanism, Distance Learning*

INTRODUCTION

The Philippine educational system is facing a challenging scenario brought about by the big change in educational process due to the pandemic. The Department of Education has to address these changes especially in delivery of teaching modalities since the traditional face to face interaction was prohibited resulting to difficulties in extending learning information and instructions affecting the teachers, the learners and the community.

The Bureau of Curriculum Development- Curriculum Standard Division in collaboration with the Assessment Curriculum and Technology Research Centre (ACTRC) has reduced and focused only on the Most Essential Learning Competencies (MELCs). Modified guidelines, policies and technological teaching modalities have been introduced to meet the demand of the new normal way of education. Some teaching modalities used are modular learning, online learning, Radio-Based Instruction and TV-based Instruction considering the synchronous and asynchronous way of learning.

The abrupt adjustment in the teaching delivery mode caused difficulties among the teaching force which affect their health mentally, physically, socially, financially, and psychologically.

Majority of the learners use self-learning modules (SLMs) in print or digital format/electronic copy, whichever is applicable in the context of the learner, and other learning resources activity sheets, study guides and other study materials. Learners can have access to electronic copies of learning materials on USB storage and printed SLMs. The teacher takes the responsibility of monitoring the progress of the learners by checking their work submitted/dropped off at school every end of the week. The learners may ask assistance from the teacher via e-mail, telephone, text message/instant messaging, etc. during teacher's office hours, thus this modality allows the learners to learn in their own pace and in their convenient time. Aside from the modules given by the Regional office, crafting of radio-scripts, designing learning activity sheets and self-paced learning modules to meet the modified most essential learning competencies affects the mental status of the teachers especially in meeting the deadline for quality assurance. After designing and approval of the needed learning materials, these modules will be printed and reproduced hundreds of copies. Sorting the modules comes next followed by delivering the learning package to the learners who preferred modular learning modality. This situation affects the teachers physically.

One study stated that adjustment to new policies, guidelines, strategies or even the practices is a challenge to all the teachers nowadays. In October 2020, the Canadian Teachers' Federation *CTF/FCE* (2022) released the CTF/FCE Canadian Teachers Responding to Coronavirus (COVID-19) – Pandemic Research Study Mental Health Report . This document is an important baseline for understanding the impacts of teaching during a pandemic, and supports needed for teacher mental health as the COVID-19 pandemic unfolds. The CTF/FCE Pandemic Study Phase One Survey was conducted June 1-18, 2020, and had over 15,000 completed teacher responses. From

the results of this initial Survey, CTF/FCE reported on the mental health of students and teachers, and documented concerning mental health trends, as educators navigated emergency remote teaching in June 2020. This report revealed that the mental health of teachers was “severely endangered” by stressors such as: excessive workload, lack of clear directions and planning, increased screen time, and social isolation. The results also demonstrated that teachers were struggling to maintain work-life balance and did not have the time to properly attend to their personal physical well-being.

The challenges in the new normal put the teacher’s mental health really at stake. The teachers in Cluster 6 of the Schools Division of the City Division of Ilagan are not an exempted from experiencing these challenges. The researcher who belongs to the said cluster finds it timely to determine the mental health state of the teachers and how they cope with it. Based on observation and testimonies given, teachers in the grass-root level have to go to their students’ homes to bring the learning materials, spending from their own pocket and some have to cross rivers and climb mountain. Having the health at stake due to COVID, teachers need also to mingle with different kind of people and should maintain their patience when it comes to parent complaints and rants about the educational process. Teachers really need to adjust to meet the “no child left behind” policy of the Department of Education. This kind of educational setting triggers the mental health condition of the teachers especially that there is an immediate change leading them to get out from their teaching comfort zone. These situations disturb the physical, financial, and social aspect of the teachers.

The result of the present study will be a cornerstone of possible interventions which will possibly result in motivated, inspired and committed teachers.

Research Questions

The study investigated the educators’ mental health state, coping mechanisms, and educational milieu during the distance mode of learning in Cluster 6 in the City Division of Ilagan during this pandemic.

Specifically, it sought to answer the following questions:

1. What is the profile of the teachers according to:
    a. Age
    b. Civil status
    c. Place of residence
    d. Position
    e. Grade level handled
    f. Subjects handled
    g. Number of years in teaching
2. What is the mental health state of the respondents?
3. Is there a significant difference in the mental health state of the respondents when grouped according to profile?
4. What coping mechanisms do the teachers employ in terms of:
    a. problem-focused

b. emotion- focused
c. Avoidance

5. Is there a significant difference in the coping mechanism employed by the respondents when grouped according to profile?
6. Is there a significant relationship between the respondents' mental health state and coping mechanism that they employed?
7. What is the educational Milieu in the respondents' place of work as perceived by them in term of:
   a. Safety
   b. Support
   c. Engagement
   d. Connectedness
8. Is there a significant difference in the respondents' perception in educational milieu when group according to profile?
9. Is there a significant relationship between the respondents' perception of educational milieu and mental health state of the respondents?
10. Is there a significant relationship between the perception on educational milieu and coping mechanism employed by them?

METHODOLOGY

Research Design

The descriptive survey method of research was used in the study. The method aids the researcher to describe the nature of a situation on gathered information and conditions. In this support, Good and Scates Carter (1954), stated that descriptive method oftentimes characterized as a survey or nominative approach as it is used to look for insights into factors or conditions that are prevailing or existing. The descriptive survey method was used in this study to gather information and conditions on the mental health state and coping mechanism of teachers and their educational milieu in the distance mode of learning.

Selection and Description of Respondents

The respondents of the study were 87 elementary school teachers who are officially employed with permanent status in Cluster 6, Ilagan North District in the Schools Division of the City of Ilagan, for the school year 2021-2022. The researcher utilized the total population of the cluster 6 teaching workforce.

Table 1
Distribution of Teacher Respondents

School	Frequency	Percentage
Balla Elementary School	5	5.75
Capellan Elementary School	17	19.54

Manaring Integrated School	15	17.24
San Juan- Rugao Elementary School	17	19.54
San Lorenzo Integrated School	9	10.34
San Pablo-Quimalabasa Elementary School	5	5.75
San Rodrigo Elementary School	5	5.75
Tangcul-San Isidro Elementary School	14	16.09
Total	87	100

Data Gathering Instrument

The researcher made use of the questionnaire, the standardized Depression Anxiety and Stress Scale (DASS) and the Coping Orientation to Problems Experienced (COPE) and interview to gather the data needed for the study.

Questionnaire. The questionnaire was used to get data on teachers' profile and their perception on their educational milieu, mental health state, and the coping mechanisms they employ in problems experienced. The questionnaire is composed of four (4) parts.

Part 1 sought to determine the profile of the respondents, specifically their age, sex, civil status, position, and number of years in service.

Part II I intended to find out the mental health state of the respondents using the DASS-21. This is a 21-item checklist with a set of three self-report scales designed to measure the emotional states of depression, anxiety and stress.

Part III sought to find out the Coping Orientation to Problems Experienced (COPE). It has three areas with twenty-eight items to discover the coping mechanisms of the respondents particularly those that are problem-focused, emotion-focused and avoidance strategies.

Part IV has 39 items to determine the educational milieu of the respondents. It is subdivided into four factors which is the safety, support, engagement, and connectedness.

Unstructured Interview. This was used to support the data gathered for deeper analysis.

Data Gathering Procedure

The researcher first sought the permission of the Schools Division Superintendent to conduct the study. After permission was granted the researcher coordinated with the school heads in cluster 6 for the floating of the questionnaire using the Google Form as a platform for gathering data from the respondents who have restrictions due to the

prevailing situation brought by the pandemic. For respondents who do not have restrictions, the researcher personally floated the questionnaire to them. The researcher also conducted interview which was done through phone calls and video calls for respondents who are restricted by the covid-19 virus and a face to face interaction with the respondents who have no restrictions.

Data were retrieved, tabulated, and analyzed.

Statistical Treatment of Data

To analyze the data for each of the questions raised in the study, the following statistics were used:

Frequency and Percentage Count. To analyze the profile of the respondents, the frequency and percentage distribution were used. The standard scoring of the DASS 21 was used to determine the Mental health of the respondents;

Weighted Mean. In assessing the coping mechanisms of the respondents, the weighted average mean was used based on the standardized scoring of Brief- COPE. This was also used to analyze the teachers' perception on the educational milieu.

F-test. This was utilized to find out if there is a significant difference in the mental health condition of the respondents, their perception on the educational milieu and the coping mechanisms they employ when grouped according to their profiles.

Pearson-r. This was used to determine if there is a significant relationship between the mental health condition and the coping mechanisms of the respondents and if there is a significant relationship between the respondents' educational environment and coping mechanisms.

Data Analysis Procedure

To interpret the result of the data gathered the following scoring guide were used:

Mental Health State

Mental Health State	**Depression** Score	**Anxiety Score**	**Stress Score**
Normal	0-9	0-7	0-14
Mild	10-13	8-9	15-18
Moderate	14-20	10-14	19-25
Severe	21-27	15-19	26-33
Extremely Severe	28+	20+	34+

Coping Mechanism

Scale	Qualitative Description
4	I've doing this a lot
3	A medium amount
2	A little bit
1	I haven't been doing this at all

Educational Milieu

Scale	Qualitative Description
3.25 -4.00	Very Much
2.50- 3.24	Much
1.75- 2.49	Not so much
1.00- 1.74	Not at all

RESULTS AND DISCUSSION

1. What is the profile of the teachers according to:

a. Age

Table 1
Frequency and Percentage Distribution of Respondents
According to Age

Age Bracket	Frequency	Percentage
21-25	6	6.90
26-30	20	22.99
31-35	19	21.84
36-40	10	11.49
41-45	14	16.09
46-50	9	10.34
51- 55	7	8.05
56-60	2	2.30
Total	87	100.00

Table 2 shows the frequency and percentage distribution of respondents according to their age profile. It is revealed that there are 20 or 22.99 percent who belongs to age bracket 26-30, 19 or 21.84 percent for 31-35 age bracket, 14 or 16.09 percent under 41-45 bracket, 10 or 11.49 percent are within the ages of 36-40, nine or 10.34 are aged 46-50, seven or 8.05 percent are within the 51-55 age bracket, six or 6.90 percent are 21-25 years old and two or 2.30 percent belong to the 56-60 age bracket.

This implies that almost half of the respondent teachers are in their middle adulthood and a quarter in their late adulthood and more than a fourth are in their early adulthood.

b. Civil Status

Table 2
Frequency and Percentage Distribution of Respondents
According to Civil Status

Civil Status	Frequency	Percentage
Single	20	22.99
Married	65	74.71
Widowed	2	2.30
Total	87	100.00

The frequency and percentage distribution of respondents according to civil status is shown in Table 3. Data shows that 65 or 74.71 percent of the teacher respondents are married, 20 or 22.99 percent are single and two or 2.30 percent are widowed. Based from the table presented, most of the respondents are married.

In a study conducted by Cotten (1999) on marital status and mental health, she noted that marital status is often included as a control variable in mental health studies with two categories: married and unmarried. She further said that "being married are embedded in a network such as spouse, in laws, possibility of children, etc. and that these network members provide a variety of function which influence an individual's sense of self and his or her resulting well-being."

c. Place of Residence

Table 3
Frequency and Percentage Distribution of Respondents
According to Place of Residence

Place of Residence	Frequency	Percentage
Home- based	34	39.08
Not-home based	53	60.92
Total	87	100.00

Based from Table 4 on the frequency and percentage distribution of respondents according to the place of residence, there are 53 or 60.92 percent who are not home-based and 34 or 39.08 percent who are home-based. This shows that the workplace of most of the respondents is outside of the area where they reside.

Teachers who are not homebased experience difficulties in performing their duties and responsibilities as teachers. Based on an interview with the teachers, they claim that they usually wake up early to prepare their things to be in the school before the class starts. Added to these is the dilemma on transportation to include fare hike during this pandemic and traveling also eats their time. Aside from these, traveling also affects their physical and emotional aspects. One of the respondents said "y*un bang haggard na*

*haggard ka na pagdating sa school kasi andami mong bitbit tapos open-air pa, maalikabok. Kaya kahit anong ayos mo, malulukot pa rin ang damit mo at mawawala sa ayos ang buhok mo." (**You look haggard when you reach school because you have a lot of stuff to carry. It is very dusty because the vehicle that you are riding on is open. That is why no matter how tidy you are, your clothes get crumpled, and your hair is messy.)*** Another respondent also stated *''hindi mo rin mapigilan magdasal habang nasa býahe ka kasi hindi naman ikaw ang driver at hindi mo rin alam kung ligtas ka." (You cannot help praying while you are travelling because you are not the driver, and you don't know if you are really safe.)* Chances are, teachers who are into these situations possibly experience disappointments, stress and frustrations. Though most of the respondents attest that they are already accustomed to their daily routine.

d. Position/Rank

Table 4
Frequency and Percentage Distribution of Respondents
According to Position

Position	Frequency	Percentage
Teacher I	15	17.24
Teacher II	6	6.90
Teacher III	52	59.77
Master Teacher I	12	13.79
Master Teacher II	2	2.30
Total	87	100.00

The frequency and percentage distribution of respondents according to position/rank is presented in Table 5. The table reveals that there are 52 or 59.77 percent hold the position of Teacher III, 15 or 17.24 percent have Teacher I position, 12 or 13.79 are Master Teacher I, six or 6.90 o are Teacher II, and two or 2.30 percent are Master Teacher II.

It implies that majority or around 84 percent of the respondents have the rank of Teacher 1 - Teacher III and only about 16 percent have an item of master teacher.

e. Grade Level Handled

Table 5
Frequency and Percentage Distribution of Respondents
According to Grade Level Handled

Grade Level Handled	Frequency	Percentage
Grade 1	16	18.39
Grade II	14	16.09
Grade III	12	13.79

Grade IV	9	10.34
Grade V	12	13.79
Grade VI	9	10.34
Multigrade	6	6.90
Total	87	100.00

Table 6 presents the frequency and percentage distribution of respondents according to the grade level they handle. The data shows that most of the respondents are teaching Grade I with a frequency of 16 or 18.39. There are 14 or 16.09 percent who are teaching Grade II and 12 or 13.79 percent are teaching in Grade III and same number of teachers teaches Grade V. There are nine or 10.34 percent each in Grade level of IV, VI and Kindergarten. Only six or 6.90 percent handle multi-grade classes.

f. Subject Handled

Table 6
Frequency and Percentage Distribution of Respondents
According to Subject Handled

Subjects Handled	Frequency	Percentage
All Subjects	72	82.76
Science, AP, ESP	4	4.60
Math, AP	8	9.20
EPP, MAPEH	3	3.45
Total	87	100.00

The subjects taught by the teacher respondents are reflected in Table 7.

Out of 87 respondents, there are 72 or 82.76 percent who teach all the elementary subjects, eight or 9.20 percent teach Math. and Araling Panlipunan, four or 4.60 percent are teaching Science, Araling Panlipunan, and ESP and three or 3.45 percent are teaching EPP and MAPEH.

g. Years in Teaching

Table 6
Frequency and Percentage Distribution of Respondents
According to Years in Teaching

Number of Years in Teaching	Frequency	Percentage
1-5	25	28.74
6-10	29	33.33
11-15	10	11.49
16-20	10	11.49
21-25	9	10.34
26-30	2	2.30
31-35	0	0

36 above	2	2.30
Total	87	100.00

The frequency and percentage distribution of respondents according to the number of years in teaching is shown in Table 8. There are 29 or 33.33 percent who have 6-10 years of teaching, 25 or 28.74 percent have 1-5 years, 10 or 11.49 percent have 11-15 years and same number have taught for 16-20. There are nine or 10.34 percent who have been in teaching for 21-25 years, and for those with 26-30 and 36 years or more of teaching number to two or 2.30 percent.

2. What is the mental health state of the respondents?

The table below shows the mental health state of the teachers in cluster 6. Data further reveals that 35 or about 40 percent of the respondents are experiencing depression and stress at different degrees as of the time of the study while 52 or 60 percent are in a normal mental health state. Moreover, 60 or 69 percent experience anxiety.

Table 7
Mental Health State of Teachers in Cluster 6

Level	Depression		Anxiety		Stress	
	f	%	*f*	%	*f*	%
Normal	52	59.770	27	31.0345	52	59.770
Mild	18	20.690	8	9.1954	24	27.586
Moderate	12	13.793	28	32.1839	10	11.494
Severe	5	5.747	11	12.6437	1	1.149
Extremely Severe	0	0.000	13	14.9425	0	0.000
Total	87	100	87	100	87	100

The findings of this present study find similarities with a study published online which says that teachers suffer from depression, anxiety, and stress. Of the sample, 50.6 percent of the teachers indicated that they were suffering from stress, with 4.5 percent reporting extremely severe stress and 14.1 percent severe stress. About 49.5 percent of the teachers reported suffering from anxiety, 8.1 percent of which reported extremely severe symptoms and 7.6 percent severe symptoms.

Finally, 32.2 percent of the teachers reported suffering from depression, of which 3.2 percent reported extremely severe symptoms and 4.3 percent severe symptoms. Besser, et.al. (2002) also found out in their study that teachers have also accumulated a high level of stress since the beginning of the health crisis. The authors cited that during lockdown, teachers have suffered stress from having to adapt (in record time) in order to provide online classes. Similarly, Lily, et al (2020) says that not many studies conducted during the pandemic measure the symptoms of stress, anxiety, and depression among

teachers but the studies that have been carried out suggest that they have psychological symptoms and this reinforces the importance of reopening schools and universities. A recent Arab study has indicated that this crisis has caused teachers to suffer problems that are often related to a pandemic situation, such as anxiety, depression, domestic violence, and divorce, all of which restrict their ability to teach properly.

For those experiencing depression in this study, 18 are mildly depressed, 12 are moderately depressed, and five are severely depressed. They claim that sometimes, they find it difficult to work up the initiative to do things. There were those who couldn't seem to experience any positive feeling at all, felt that they had nothing to look forward to, and felt downhearted and blue. A few were unable to become enthusiastic about anything and felt wasn't much as a person and felt that life was meaningless. A meaningless life may mean one is going through an existential crisis and could be borderline depressed. The feeling of emptiness may prevail all other emotions. However, one can be sure that, despite all of these, there's still meaning to one's existence. According to Ho (2021), if one feels that he/she is living a meaningless life, negativity will surround him/her like wildfire. One has to strive to find one's life's meaning to continue to live a life of high motivation

The table also shows that there were those who experienced anxiety where eight are mildly anxious, 28 are in moderate condition, 11 are in severe condition, and 13 are in extremely severe condition. Their anxiety was sometimes manifested by dryness of mouth, worrying about situations in which they panic and make fool of themselves and increase in heart rate or absence of heart beat. There were also those who experienced breathing difficulty, trembling, panic syndrome and worrying without any good reason. According to Oral Surgery of Utah (2020), anxiety and stress can cause dry mouth, and so can the related medications. The body is more prone to acid reflux during periods of intense stress and anxiety, which can negatively impact one's salivary glands and lead to less saliva production. For those experiencing stress, 24 are mildly stressed, 10 are moderately stressed, and one is severely stressed. The teachers who are stressed out sometimes found it difficult to wind down and relax, tend to over react to situations and felt that they were using a lot of nervous energy. There were a few who found themselves getting agitated, intolerant of anything that kept them from getting on with what they were doing, and felt that they were rather touchy.

The data reveals that majority of the respondents were in good state of mental health during the conduct of distance learning mode while there were some who were in a state of depression, anxiety and stress in differing levels.

3. Is there a significant difference in the mental health state of the respondents when grouped according to profile?

a. Depression

Table 8
Results of the Test of Significant Difference in the Depression Experienced by the Respondents When Grouped According to Profile

Respondents' Mental Health in Terms of Depression and the following profile	Probability of F	Decision	Remarks
Age	0.0140	Reject Ho	Significant
Civil Status	0.0062	Reject Ho	Significant
Position	0.0291	Reject Ho	Significant
Number of Years in Teaching	0.0303	Reject Ho	Significant
Place of Residence	0.0735	Accept Ho	Not Significant
Grade Level Handled	0.0189	Reject Ho	Significant
Subjects Handled	0.0413	Reject Ho	Significant

Table 9a presents the results of the test of significant difference in the mental health of the respondents in terms of depression when grouped according to profile.

The results show that the F-probability values are less than 0.05 except for the place of residence. Hence, the null hypothesis is rejected at 0.05 level of significance, meaning, there is significant difference in the mental health of the respondents in terms of depression when grouped according to age, civil status, position, number of years in teaching, grade level handled, and subjects handled. It implies that the teachers' feeling of depression differ from each other depending on their age, civil status, number of years in teaching, grade level and subject handled.

The data further reveals that those teachers who are age 41-45, married, teacher II, have been teaching for 11-15 years, handle multigrade, and teach Math/Filipino are on the normal range compared to the rest of the group.

However, there is no significant difference in the mental health state of the teachers in terms of depression when grouped according to the place of residence. This implies that the teachers have similarities in their depression regardless of their place of residence.

Johnson et al. (2005), in his study also had similar findings with this study. He found out that the pattern of depression among the different types of teachers also varied according to sex. For men, being a secondary education teacher in academic subjects, a secondary education teacher in a vocational subject or a secondary education teacher in an artistic or practical subject, a primary education teacher, a special education

teacher, a teaching professional not elsewhere classified or other teaching associated professional or a preprimary education teacher was associated with a greater risk of being diagnosed with depression compared to being a college, university or higher education.

Similarly according to Ho Hossain et al. (2022), they conducted a study that aimed to explore the prevalence of mental health problems among teachers in Bangladesh and to identify the associated risk factors found out that the prevalence of depression was higher among male and older teachers than among their female and younger colleagues. The findings further showed that place of residence, institution, self-reported health, usage of social and electronic media, and fear of COVID-19 significantly influenced the mental health status of teachers.

b. Anxiety

Table 9
Results of the Test of Significant Difference in the Anxiety Experienced by the Respondents When Grouped According to Profile

Respondents' Mental Health in Terms of Anxiety and the following profile	Probability of F	Decision	Remarks
Age	0.0409	Reject Ho	Significant
Civil Status	0.0009	Reject Ho	Significant
Place of Residence	0.1529	Accept Ho	Not Significant
Grade level Handled	0.0417	Reject Ho	Significant
Position	0.0070	Reject Ho	Significant
Subjects Handled	0.0462	Reject Ho	Significant
Number of Years in Teaching	0.0492	Reject Ho	Significant

The result of the test of significant difference in the mental health of the respondents in terms of anxiety when grouped according to profile is presented in Table 9b.

The result shows that the F-Probability values are less than 0.05 except for the place of residence. This signifies the rejection of null hypothesis at 0.05 level of significance, meaning, there is significant difference in the mental health state of the respondents in terms of anxiety when grouped according to age, civil status, grade level handled, position, subject handled, and number of years in teaching. It shows that the teachers have different level of anxiety when they are clustered by the aforesaid profile. The researcher further notes that the teachers who handle multi-grade and teach Math/AP/ESP, Math/Filipino, English/Filipino, have normal anxiety level than the rest of the groups of teachers. While teachers who are of age 41-45 and widow, have mild anxiety level than the rest of the group of teachers. Whereas, those teachers, who taught for 31-35 years and are Teacher II and Master Teacher II, have severe anxiety level that the other groups of teachers.

On the other hand, there is no significant difference in the anxiety level of teachers when grouped according to place of residence. It implies that the teachers have similarities anxiety regardless of their place of residence.

Being anxious is one of the factors that affect the mental health of teachers nowadays regardless of their place residence and one common reason of their anxiety is COVID-19. The respondents disclosed that whether they are homebased or not, teachers are anxious with all the things that the COVID-19 may bring. In an interview with the teachers, these were some of their fears. *"Alam mo sir, isa lang naman ang kinakatakautan natin ngayon eh, ang makapitan ng COVID na yan, isa pa di mo kasi nakikita kaya doble ingat ang kailangan. Nakakatakot man, pero kailangan naming tatagan at mag-ingat palagi kasi kung sakaling kami ay makakapitan ng virus na yan, di lang naman kami ang magsasuffer kundi maraming madadamay, homebased ka man o hindi yan talaga yung kinakatakutan nating lahat ngayon."* (*There is only one thing that we are afraid of, sir: being infected with COVID. Another problem is that we can't see it. That is why we must exercise caution at all times. We cannot deny that this is extremely frightening. That is why we must always exercise caution, because if we get infected, it will affect more than just ourselves. One possible outcome is that some people will become infected because of our actions. That is what we are afraid of, whether we are home-based teachers or not.)*

A study of Ozamiz-Etxebarria et al (2021) indicates that that gender differences emerged with regard to anxiety [t (1,621) = 4.65, p > 0.001] and stress [t (1,621) = 3.94, p > 0.001] with women showing higher scores on anxiety (M = 4.28) and stress (M = 8.09) versus men's anxiety (M = 3.26).

Agyapong et.al (2022), in their study likewise revealed that anxiety among teachers are correlated with the following demographic variable: sex, age, gender, marital status, years taught/teaching experience, educational level, family economics status and income, work factors/job strain and subjects/level taught.

Furthermore, Arias et al. (2019), in their study cited that teachers working in the earlier stages of pre-school and primary education are those who showed the highest scores on anxiety. This marks a clear difference with previous studies in non-pandemic situation where high school teachers were the most affected by psychological symptoms.

c. Stress

Table 10
Results of the Test of Significant Difference in the Stress Experienced by the Respondents in Term of Stress When Grouped According to Profile

Respondents' Mental Health in Terms of Stress and the following profile	Probability of F	Decision	Remarks
Age	0.0182	Reject Ho	Significant

Civil Status	0.0461	Reject Ho	Significant
Place of Residence	0.2155	Accept Ho	Not Significant
Grade Level Handled	0.0000	Reject Ho	Significant
Position	0.0000	Reject Ho	Significant
Subjects Handled	0.0000	Reject Ho	Significant
Number of Years in Teaching	0.0047	Reject Ho	Significant

Table 9c discloses the results of the test of significant difference in the mental health of the respondents in terms of stress when grouped according to profile.

The results reveal that the probability values of F are less than 0.05 except for place of residence. For this reason, the null hypothesis is rejected at 0.05 level of significance. As a result, there is significant difference in the mental health state of the respondents in terms of stress when grouped according to age, civil status, grade level handled, position, subject handled, and number of years of teaching. The teachers vary in their mental health state in terms of stress when they are classified by the aforementioned demographic profile. It is further revealed that the teachers, who are of age 21-25, married, handling multi-grade level, Teacher III, teaching Math/Filipino and English have been in the service for 11-15 years, have more normal stress level than the rest of the groups of teachers.

However, there is no significant difference of the mental health state of the respondents in terms of stress when grouped according to place of residence. The result further implies that whether one is homebased or not, he/she is not free from the stress because in the education system in the new normal, teachers are adjusting with the modalities, curriculum and instruction that this pandemic has brought. One of the respondents said "*Pareparehas kaming nangangapa ngayon, kasi lahat bago para sa amin. Kailangan naming aralin, kailangan naming matutunan upang maibahagi naming ito ng husto sa aming mga estudyante.*" ***(Everybody is struggling, because everything is new. We need to study it, we need to adopt it in order for us to impart all the important information and lessons to our learners.)***

Lai et.al. (2020) in their study reveal that the higher levels of stress among young people (23–35 years), compared with those aged 36–46 years is in line with the general trend observed in other studies, that is, younger people experience higher levels of stress.

4. What coping mechanisms do the teachers employ?

Table 11
The Coping Mechanisms Employed by the Teachers
(Problem Focused)

Coping Mechanism	Mean	Qualitative Description
Active Coping	3.13	A Medium amount
Use of Informational Support	3.05	A Medium amount
Positive Reframing	3.27	I've doing this a lot
Planning	3.08	A Medium amount
Overall Mean	3.13	A Medium Amount

Table 10 presents the coping mechanism of the respondents in terms of Problem focused. It shows that the respondents do a lot of positive reframing with a mean of 3.27. They are able to cope with their stress, anxiety and depression by trying to see the situation in a different light to make it seem more positive and look for something good in what is happening. According to an Harvard SDLab, positive reframing involves thinking about a negative or challenging situation in a more positive way. This could involve thinking about a benefit or upside to a negative situation considered. Alternatively, it can involve identifying a lesson to be learned from a difficult situation.

The table also shows that active coping (3.13), use of informational support (3.05) and planning (3.08) are also resorted to by the respondents to a medium amount. The respondents actively cope with their depression, anxiety and stress by concentrating their efforts in doing something about the situation they are facing and take action to make the situation better. Other respondents use informational support by getting help and advice from others, about what to do with the situation. Planning is also done by the respondents to cope with their anxiety by coming up with strategy and steps on what to do to deal with the situation. The data reveals that the respondents deal with their anxiety and stress by focusing on the problem.

Table 12
The Coping Mechanisms of the Respondents in Terms of
Emotion Focused

Emotion Focused	Mean	Qualitative Description
Emotional Support	2.73	A Medium amount
Venting	2.37	A little bit
Humor	2.45	A little bit
Acceptance	3.03	A Medium amount
Religion	3.35	I've doing this a lot

Self-Blame	2.12	A little bit
Overall Mean	2.68	A Medium Amount

The emotional focused as a coping mechanism employed by the teachers is presented in Table 11. The table shows that religion as a coping mechanism has a weighted mean of 3.35 with a qualitative description of *"I've been doing this a lot."* Seeking for emotional support and acceptance of the situation are employed to a medium amount by the respondents to cope with their stress, anxiety and depression with a weighted mean of 2.73 and 3,03, respectively. *"A little bit"* of humor (2.45) venting (2.37) and self- blame (2.12) are employed by the teachers. The overall mean of 2.68 reveals that there is a medium amount of focusing on emotion among the teachers to coping with their anxiety and stress.

The data implies that when the teachers are confronted with anxiety, depression or stress, they always find comfort in their Religion by praying and meditating. It further shows that the respondents believe in the Supreme Being and their faith helps them in handling the challenges in life. This confirms the findings of Halili-Jao (2009) in her study entitled "Coping Mechanisms of Pinoys, that spirituality is the most frequently observed coping style; they stay positive that God will never leave them in times of crisis.

In addition, according to Shelley (2016) both religion and spirituality can have a positive impact on one's mental health. Both can help a person tolerate stress by generating peace, purpose, and forgiveness. Religion gives people something to believe in, provides a sense of structure and typically offers a group of people to connect with similar beliefs. These facets can have a large positive impact on mental health- research suggests that religiosity reduces suicide. Likewise, Vann (2015) shared that people who pray often and are active with their faith communities might be making generally healthier decisions, such as taking fewer risks or avoiding smoking and drinking

Table 11 also shows that the respondents cope with their anxiety to a medium amount by accepting the reality of the fact that it has happened and learn to live with it. The teachers also cope with their stress and anxiety by getting comfort and understanding from someone, by making fun of the situation and making joke about it. Additionally, the respondents cope a little bit in learning to live with it with a 2.92, making fun of the situation with a mean of 2.37, saying things to let unpleasant feeling escape with a 2.21 mean and criticizing self with a 2.07 mean.

Findings of this study is supported by the findings of HaliliJao (2009) when she stated that Filipinos turn to religion and accept reality in times of crisis She further said that there are some utterances of *bahala na* or behaviors *like ipinapasa Diyos*. Moreover, Halili also cited that the bayanihan or *pakikipagkapwa* is also a well-obeserved coping behavior by which Filipinos empathize and help each other.

Table 13
The Coping Mechanisms of the Respondents in
Terms of Avoidant Focus

Coping Mechanisms	Mean	Qualitative Description
Self-Distraction	2.84	A Medium amount
Denial	1.99	A little bit
Substance Use	1.30	I haven't been doing this at all
Behavioral Disengagement	1.85	A little bit
Overall Mean	1.99	A Little Bit

Table 12 presents the coping mechanism employed by the respondents when they are anxious, stressed or depressed. The data shows that the teachers employ *a little bit* the avoidant focus coping mechanisms as shown by the general weighted mean of 1.99. One of the avoiding mechanisms they employ is self-distraction where the respondents extend amount in doing something to think about the situation less like going to movies, watching TV, reading, daydreaming, sleeping, or shopping and turning to work or other activities to take mind off things. In addition, the respondents also employ *a little bit* of denial mechanism with a weighted mean of 1.99 such as convincing themselves that the situation isn't real and refusing to believe that it has happened. They also engage in behavioral disengagement like giving up trying to deal with the situation and giving up the attempt to cope. The data also shows that the respondents *haven't been doing* the use of substance to cope with their stress, depression or anxiety like drinking alcohol and other drugs to feel better nor using alcohol and drugs to help them get through the situation.

The findings on the use of self destruction as a coping mechanism affirms Halilijao's (2009) findings that Filipinos lessen their emotional burden by engaging in activities that would relax them, make them happy and feel at easier even if it is just temporary. On one side, the findings of this study on the use of substance runs counter to a study conducted among 781 randomly selected Michigan drinkers. The study mentioned that two motives for alcohol consumption have been emphasized in the etiological and the reasons-for-drinking literature: (a) people drink alcohol to cope with stress, and (b) people drink alcohol because of social influences. This study examined the interactional effects of reasons for drinking alcohol and situational factors on alcohol consumption. Hierarchical multiple regression analyses indicated that gender, friends' alcohol consumption, coping, and social motives for drinking were significant predictors of study participants' alcohol consumption. As predicted, there was a significant interaction between drinking to cope with stress and perceived stress, and there was also a significant interaction between drinking for social reasons and friends' alcohol consumption. Similarly, the findings of the present study contradict Dr. Tan's (2006) statement that people tend to …or drink their problems away.

5. Significant difference in the coping mechanism employed by the respondents when grouped according to their profile?

Table 14
Result of the Test of Significant Difference in the Problem Focused Coping Mechanism of the Respondents when Grouped According to Their Profile

Respondents' Coping Mechanism in terms of Problem Focused and the Following Profile	Probability of F	Decision	Remarks
Age	0.0356	Reject Ho	Significant
Civil Status	0.0029	Reject Ho	Significant
Position	0.0011	Reject Ho	Significant
Number of Years in Teaching	0.0043	Reject Ho	Significant
Place of Residence	0.0294	Reject Ho	Significant
Grade Level Handled	0.0128	Reject Ho	Significant
Subjects Handled	0.0076	Reject Ho	Significant

The result of the test of significant difference in the problem focused coping mechanism of the respondents when grouped according to their profile is represented in Table 13a.

It is reflected from the results that the probability values of F are less 0.05 which signifies the rejection of the null hypothesis at 0.05 significance level. Therefore, there is significant difference in the problem focused coping mechanism of the respondents when grouped according to their profile. It implies that the teachers have different coping mechanisms in terms of problem focused when classified by age, civil status, position, number of years in teaching, place of residence, grade level and subjects handled. As appended, the mean shows that the teachers of age 31-34, widow, MT2, have been teaching for 31-35 years, and who are handling English/AP/ESP are less problem-focused in coping with their mental health. On the other hand, the teachers who are homebased and handling kindergarten are more problem-focused in addressing their mental health.

Teachers who are handling kindergarten used problem focused strategies because they are handling youngsters. Meaning, they need to be alert and face the problem immediately. They tend to do planning on how to handle the situation. Homebased teachers apply the same coping mechanism because they are near school and there is a possibility that they will act as a frontliner in case the service of the teachers will be needed urgently.

According to Buchanan(2024), the COPE manual states that problem focused is characterized by the facets of active coping, use of informational support, planning and positive reframing. Gaining high score in this coping mechanism are indicative of

psychological strength, grit, a practical approach to problem solving and is predicative of positive outcome.

Table 15
Results of the Test of Significant Difference in the Coping Mechanism of the Respondents in Terms of Emotion Focused When Grouped According to Their Profile

Respondents' Coping Mechanism in Terms of Emotion Focused and the Following Profile	Probability of F	Decision	Remarks
Age	0.0409	Reject Ho	Significant
Civil Status	0.0152	Reject Ho	Significant
Position	0.0069	Reject Ho	Significant
Number of Years in Teaching	0.0410	Reject Ho	Significant
Place of Residence	0.0053	Reject Ho	Significant
Grade Level Handled	0.0089	Reject Ho	Significant
Subjects Handled	0.0216	Reject Ho	Significant

Table 13b disclose the result of the test of significant difference in the coping mechanism of the respondents in term of emotion focused when grouped according to their profile.

The results show that the probability values of F are less than 0.05. For this reason, the null hypothesis is rejected at 0.05 level of significance, meaning there is significant difference in the respondents' use of emotion-focused coping strategies when grouped according to age, civil status, position, numbers of years in teaching, place of residence, grade level and subjects handled.

As indicated by the mean in appendix C, the teachers who are 21-25 years old, widow, MT1, 31-33 years in teaching and seldom apply emotion focused mechanisms to cope with their mental health state. Data also shows that the teachers who are homebased apply more the emotion focused as their coping mechanism to help address a crisis whereas, teachers handling English/AP/ESP never apply emotion focused on their coping mechanism to address their mental health state.

Table 16
Results of Test of Significant Difference in the Coping Mechanism of the Respondents in Terms of Avoidance When Grouped According to Their Profile

Respondents' Coping Mechanism in Terms of Avoidance and the Following Profile	Probability of F	Decision	Remarks
Age	0.0070	Reject Ho	Significant
Civil Status	0.0209	Reject Ho	Significant
Position	0.0085	Reject Ho	Significant
Number of Years in Teaching	0.0009	Reject Ho	Significant
Place of Residence	0.0003	Reject Ho	Significant
Grade Level Handled	0.0205	Reject Ho	Significant
Subjects Handled	0.0121	Reject Ho	Significant

The result of the test of significant difference in the coping mechanism of the respondents using avoidance strategies when grouped according to their profile are disclosed in Table 13c.

The results show that the probability values of F are less than 0.05, hence, the null hypothesis is rejected at 0.05 significance level. This implies a significant difference in the coping mechanism of the respondents in terms of avoidance when grouped according to their age, civil status, position, number of years in teaching, place of residence, grade level and subjects handled.

Teachers who belong to the age bracket of 21-25, widowed, are MT2, 31 or more years of service, and handling higher grades less apply avoidance as their coping mechanism in their mental health state. On one side, the teachers who are not homebased apply more the avoidance coping mechanism. Similarly, teachers handling Math/AP/ESP and English/AP/ESP never employ avoidance focused as their coping mechanism in their mental health state.

According to some teachers who are home-based, that as front liners in school, they have no choice if they are being called even they do not want to. Others also informed the researcher that they consider themselves as guards of the school and maintain cleanliness but they never complain. They further said that they understand and they tend to cope up with their emotions.

Results of the present study particularly those of Tables 13-a to Table 13-c have semblance with that of Goel and Verma's which explored the workplace perceptions and stress coping mechanisms used by employees of different age groups. Their study found out that stress coping mechanism s differ significantly with age where the older employees scored higher in the use of coping mechanisms compared to the younger counterparts.

6. Significant Relationship of the Respondents' Mental Health State and Coping Mechanism

Table 17
Results of the Test of Significant Relationship Between the Respondents' Mental Health and Coping Mechanism

Variables		Probability of r	Decision	Remarks
Mental Health State	Coping Mechanism			
Depression	Problem Focused	0.4900	Accept Ho	Not Significant
Depression	Emotion Focused	0.3990	Accept Ho	Not Significant
Depression	Avoidance Focused	0.4602	Accept Ho	Not Significant
Anxiety	Problem Focused	0.3730	Accept Ho	Not Significant
Anxiety	Emotion Focused	0.4221	Accept Ho	Not Significant
Anxiety	Avoidance Focused	0.5144	Accept Ho	Not Significant
Stress	Problem Focused	0.4455	Accept Ho	Not Significant
Stress	Emotion Focused	0.4434	Accept Ho	Not Significant
Stress	Avoidance Focused	0.5188	Accept Ho	Not Significant

The results of the test of significant relationship between the respondents' mental health and coping mechanism are disclosed in table 14.

The results reveal that the probability values are greater than 0.05. Hence, there is no significant relationship between the mental health and coping mechanism of the teacher-respondents. It implies that the teachers' depression, anxiety and stress are not significantly affected by the coping mechanism in terms of problem, emotion and avoidance focused. It means further that the two variables are not significantly related.

The result of the present study negates the findings in Buizza, et.al.'s (2022) study on coping strategies and mental health of a sample of students accessing a university counselling service. The results indicated that the self-blame coping strategy is a major predictor of mental health issues and that interaction between age and area of study aggravated the symptomatology. Buizza also cited that some studies have found a relationship between psychopathology and coping strategies: for example, avoidance, denial and venting are strongly associated with psychopathology, especially with depression anxiety, eating and personality disorders.

Researchers have also observed associations between coping styles and symptom severity. Lew et al. (2019) found that coping strategies such as self-distraction, self-blame and substance use were risk factors for suicidal behaviors in a sample of Chinese college students. In particular, self-blame was a predictor of stress among college female students, and behavioral disengagement among men according to Eisenbarth (2019). On the contrary, a positive attitude (e.g. acceptance, holding, positive reframing) and problem-oriented strategies (e.g. suppression, planning, active coping) serve as protective factors towards psychological distress and support in promoting well-being as cited by Sica, et.al. (2008).

7. Educational Milieu of the Respondents

Table 18
The Educational Milieu of Respondents in Terms of Safety

Safety in the Educational Milieu	WAM	Verbal Description
How safe is your school environment…		
a. From intruders	2.98	Much
b. From thieves/Robbers	2.80	Much
c. From stray animals	2.61	Much
d. From possible harm/accident	2.86	Much
e. From possible contamination/infection of the COVID virus	2.83	Much
f. In protecting your privacy as teachers	3.31	Very Much
g. In protecting school records	3.47	Very Much
h. In protecting your rights as an individual and as a teacher	3.47	Very Much
Total	3.04	Much

The table above presents the educational milieu of the respondents in terms of safety in school. Based from the table, the teachers perceive their school environment as *very much* safe in protecting school records with a mean of 3.47, protecting their rights as an individual and teacher with a mean3.47 and protecting their privacy as teachers with a mean of 3.31. According to the teachers, their school is *much* safe from intruders, thieves, possible harm and possible contamination/ infection of the COVID virus. As a whole, they consider their school environment to be *much* safe.

In connection to this finding, the Department of Education's (DepEd) mandate to protect and promote the right to and access to quality basic education, DepEd collects various data and information, including personal information, from various subjects using different systems. In the processing of these data and information, DepEd is committed to ensure the free flow of information as required under the *Freedom of Information Act* (Executive Order No. 2, s. 2016) and to protect and respect the confidentiality and privacy of these data and information as required under the *Data Privacy Act of*

2012 (Republic Act No. 10173). Request for data and information, unless access is denied when such data and information fall under any of the exceptions enshrined in the. Department Order No. 72, s. 2016 provides that only authorized DepEd personnel have access to personal information collected, the exchange of which will be facilitated through email and web applications which are stored in a database in accordance with government policies, rules, regulations, and guidelines.

Table 19
The Educational Milieu of Respondents in
Terms of Support

How much support do you get from:	WAM	Verbal Description
a. Your school administrator in terms of:		
1) a.1 materials needed for instruction	3.09	Much
2) a.2 moral support/motivation	3.23	Much
3) a.3 health needs	3.06	Much
4) a.4 instructional supervision/mentoring	3.36	Very Much
5) a.5 delivery of instruction	3.28	Very Much
Total	3.20	Much
b. Your co-teachers/employees in terms of:		
1) b.1 moral support/motivation	3.29	Very Much
2) b. 2 delivery of instruction	3.57	Very Much
3) b. 3 coaching neophyte teachers and those needing help	3.17	Much
Total	3.34	Very Much
Overall Mean	3.25	Very Much

Table 16 presents the educational milieu of the teachers in terms of the school's administrators and co-teachers' support. Though the administrators' overall support is considered *much*, respondents get very *much* support in the delivery of instruction with a mean of 3.28 and instructional supervision and mentoring with a mean of 3.26. As to the support given them in terms of materials needed for instruction with a mean of 3.09, health needs with a mean of 3.06 and moral support, the teachers consider them as *much.*

With regard the support they get from co-teachers, the respondents revealed that they are very much supported by their fellow teachers in terms of the delivery of instruction with a mean of 3.57 and the moral support given them with a mean of 3.29. They get much support in terms of coaching extended by their co-teachers.

Overall, the respondents are *very much* supported by the administrators and their colleagues as revealed by the general weighted mean of 3.25.

The administration and the teachers are focused on the ongoing changes in the educational environment. One of the key elements that has been highlighted is the need of administrative assistance in addressing the teachers' needs to develop both personally and professionally.

The findings of this study is similar to that of a study of Compasivo & Falcunaya (2020) in Tanauan City, Batangas that evaluated the administrative support and job satisfaction of private school primary teachers. The study's findings show that school administrators support teachers' attendance at seminars, conferences, and training by paying for their registration, housing, and meals. They also help teachers improve their classroom teaching methods and foster positive connections with one another. The survey also showed that school officials allocated funds for the improvement of academic credentials, provided helpful input following classroom observations, and praising the accomplishments of educators. The findings also indicated a substantial link between administrative support and teachers' job satisfaction.

Table 20
The Educational Milieu of Respondents in Terms of Engagement

How engaged are the ADMINISTRATORS in the school affairs in …	WAM	Verbal Description
1. implementing DepEd/school policies and guidelines?	3.44	Very Much
2. monitoring and evaluation of teachers & student performance?	3.32	Very Much
3. in addressing teachers/employees' concerns?	3.37	Very Much
4. establishing linkage with the community & other stakeholders?	3.34	Very Much
5. in implementing & observing minimum health protocols in school?	3.39	Very Much
Average Mean	3.37	Very Much
How engaged are the TEACHERS in the school affairs in …		
1. in implementing DepEd/school policies and guidelines?	3.38	Very Much
2. monitoring and evaluation of student performance?	3.34	Very Much
3. in addressing parents/students' concerns?	3.39	Very Much
4. in strictly following minimum health protocols?	3.36	Very Much
Average Mean	3.37	Very Much
How engaged are the STUDENTS in the school affairs in …		

1. in accomplishing their learning tasks?	3.08	Much
2. in submitting their outputs?	3.15	Much
3. attending online classes/sessions?	2.90	Much
Average Mean	3.04	Much
How engaged are the PARENTS in the school affairs in …		
1. in assisting their children in their studies?	2.89	Much
2. in giving feedback to the teachers about their children?	2.91	Much
3. in addressing teachers' concerns about their children?	2.79	Much
4. in following school policies on distance learning?	2.93	Much
Average Mean	2.88	Much
General Average Mean	3.17	Much

The educational milieu of the respondents in terms of Engagement is seen in Table 17. The table shows how the teachers perceived how the four groups are engaged in the school activities. The administrators are very much engaged in implementing DepEd/school policies and guidelines with a mean of 3.44, monitoring and evaluation of teachers & student performance with a mean of 3.32, in addressing teachers/employees' concerns with a mean of 3.37, establishing linkage with the community & other stakeholders with a mean of 3.34 and in implementing and observing minimum health protocols in school with a mean of 3.39. The overall weighted average mean of 3.37 implies that the school administrators are *very much* engaged in the affairs of the school which is expected of a school head.

On the part of the teachers, they perceive themselves to be *very much* engaged in implementing DepEd/school policies and guidelines with a mean of 3.38, monitoring and evaluation of student performance with a mean of 3.34 and in strictly following minimum health protocols with a mean of 3.36. In general, the teachers are *very much* engaged in school activities like their administrators.

With regard to students' engagement, the respondents revealed that they are much satisfied on how students submit their outputs with 3.15, accomplish their learning tasks with a mean of 3.08 and attend online class with a mean of 2.90 gaining a total weighted average mean of 3.04.

The parents are also *much* engaged in some school activities like assisting their children in their studies with a mean 2.89, giving feedback to the teachers about their children with a mean 2.91, addressing teachers' concerns about their children with a mean of 2.79, and following school policies on distance learning with a mean of 2.93. Parents' engagement in the educational affairs of their children is *much* as shown in the total weighted average mean of 2.88.

Table 21
Educational Milieu of Cluster 6 Elementary Teachers
In Terms of Connectedness

Connectedness	WAM	Verbal Description
a. Do the teachers show respect for fellow teachers?	3.15	Much
b. Do teachers show respect for the school administrator?	3.13	Much
c. Does the school administrator respect the teachers?	3.43	Very Much
d. Do teachers respect their students?	3.43	Very Much
e. Do teachers show respect for parents?	3.45	Very Much
f. Do parents show respect for teachers in school?	3.52	Very Much
g. Are you welcome and valued as part of the organization?	3.47	Very Much
Average	3.37	Very Much

The teachers of Cluster 6 are *very much* connected with each other in terms of the respect they show for each other and with the school administrators and parents as shown by total weighted average mean of 3.37. Based from the table, parents show respect to teachers with a mean of 3.52, teachers are welcomed and valued as part of the organization with a weighted average mean of 3.47, teachers show respect for parents with a mean of 3.45, both the items teachers respect to students, and administrators respect the teachers gained 3.43 mean respectively. The teachers also show respect for fellow teachers with a mean of 3.15 and teachers show respect to school administrators with a mean of 3.13 or much.

To create effective education systems and effective learning environments, Alomes posits that all stakeholders need to come together in a meaningful way, through collaboration and therefore connection. And successful collaboration between all stakeholders means deep listening as well as active doing. Open, transparent dialogue results in all parties feeling seen, heard and valued, and in the end it's the connection and compassion formed through those healthy relationships that creates successful teaching and learning outcomes. U.S. Department of Education says that when *schools*, districts, parents and community groups *collaborate* and align *their* efforts around student achievement, more students will succeed.

8. Is there a significant difference in the teachers' perception of their educational milieu when grouped according to their profile?

Table 22
Result of the Test of Significant Difference in Teachers' Perception on the Safety of Their Educational Milieu When Grouped According to their Profile

Respondents' Perception on Educational Milieu in terms of Safety and their Profile	Probability of F	Decision	Remarks
Age	0.0008	Reject Ho	Significant
Civil Status	0.1547	Accept Ho	Not Significant
Position	0.0367	Reject Ho	Significant
Number of Years in Teaching	0.0194	Reject Ho	Significant
Place of Residence	0.0331	Reject Ho	Significant
Grade Level Handled	0.0265	Reject Ho	Significant
Subjects Handled	0.0134	Reject Ho	Significant

The results of the test of significant difference in the educational milieu of the respondents in terms of safety when grouped according to their profile are exhibited in Table 19a.

It is evident from the results that the probability values of F are less than 0.05 except for civil status. For this reason, the null hypothesis is rejected at 0.05 significance level. As a result, the teachers differ in their perception on the safety of their educational milieu in terms when grouped according to their age, position, number of years in teaching, place of residence, grade level and subjects handled. As evidenced by the mean values, teachers who are 46-50 years old and who handle Grade VI are *very much* satisfied of the safety of their educational milieu while MT2 teachers and 31-36 and above are *not much* satisfied along safety, and those who are homebased and handle Math/ESP/MAPEH are *much* satisfied of the safety of their educational milieu.

The findings also show that there is no significant difference in the teachers' perception of the safety in their educational milieu when grouped by civil status. In connection to this, teachers during an interview said: *"Ano man estado mo sa buhay, single may asawa o balo, ang safety naman sa workplace ang importante ngayon, napakahalaga ng kaligtasan sa lahat ng aspeto ngayon. Dobleng pag-iingat ang kailangan!." (The safety of your workplace is now more crucial than anything else in your life, whether you are single, married, or widowed. The most crucial factors we must take into account are security and safety. Always exercising caution is necessary.)*

Table 23
Result of the Test of Significant Difference in Teachers' Perception on the Support in Their Educational Milieu When Grouped According to Their Profile

Respondents' Educational Milieu in terms of Support and the Following Profile	Probability of F	Decision	Remarks
Age	0.0009	Reject Ho	Significant
Civil Status	0.0015	Reject Ho	Significant
Position	0.0057	Reject Ho	Significant
Number of Years in Teaching	0.0184	Reject Ho	Significant
Place of Residence	0.0203	Reject Ho	Significant
Grade Level Handled	0.0236	Reject Ho	Significant
Subjects Handled	0.0009	Reject Ho	Significant

Table 19b reflects the results of the test of significant difference in the respondents' perception on the support of their educational milieu when grouped according to their profile.

The results show that the probability values of F are less than 0.05. Hence, the null hypothesis is rejected at five percent level of significance. Thus, there is significant difference in the respondents' perception on the support of their educational milieu when grouped according to their age, civil status, position, number of years in teaching, place of residence, grade level and subject handled. As appended, the mean values show that teachers who are 36-40 years old, married, Teacher II, 36 and above in service, homebased, handle kindergarten, teach Filipino/ESP are *very much* satisfied of the support in their educational milieu.

The findings imply that the respondents are contented of the support they get from administrators, colleagues, parents and their learners. Working with support brings happiness and motivation. There is a Chinese saying that goes: "If you want happiness for an hour, take a nap. If you want happiness for a day, go fishing. If you want happiness for a year, inherit a fortune. If you want happiness for a lifetime, help somebody." For centuries, the greatest thinkers have suggested the same thing: Happiness is found in helping others according to Santi (2016). Social support is an important factor that can affect mental health. In recent decades, many studies have been done on the impact of social support on mental health. Studies of Harandi et al. (2017), investigated the effect size of the relationship between social support and mental health. People with more positive ethnical social relations and higher social support enjoy more efficient communication skills, which directs them away from depression and other mental problems according to Ghasemipoor & Jahanbakhsh Ganjeh (2010). Moreover, Cobb (1976) introduces the social support as a protector against stress in a way that it largely affects social health and performance. Cobb explains that social support gives people the feeling of being loved, cared, respected, and belonging to a network of communication

Table 24
Result of the Test of Significant Difference in Teachers' Perception on the Engagement of Stakeholders in Their Educational Milieu When Grouped According to Their Profile

Respondents' Educational Milieu in terms of Engagement and the Following Profile	Probability of F	Decision	Remarks
Age	0.0007	Reject Ho	Significant
Civil Status	0.0120	Reject Ho	Significant
Position	0.0013	Reject Ho	Significant
Number of Years in Teaching	0.0386	Reject Ho	Significant
Place of Residence	0.0399	Reject Ho	Significant
Grade Level Handled	0.0073	Reject Ho	Significant
Subjects Handled	0.0442	Reject Ho	Significant

The results of the test of significant difference in the teachers' perception on the engagement of stakeholders in their educational milieu when grouped according to their profile are reflected in Table 19c.

It is evident from the results that the probability values of F are less than 0.05 which this signifies the rejection of the null hypothesis at 0.05 significance level. Thus, there is significant difference in the teachers' perception on the engagement of stakeholders in their educational milieu when grouped according to their profile. It shows that the teachers significantly differ in their perception on the stakeholders' engagement in their educational milieu when they are grouped by age, civil status, position, number of years in teaching, place of residence, grade level and subject handled. As indicated by the mean values, teachers who belong to age bracket 36-40, married, with MT1 position, 21-25 years in service, home-based, handle kindergarten, and teach EPP/MAPEH, and Filipino/ESP are *very much* satisfied of the stakeholders' engagement in their educational milieu.

The teachers who are in their early adulthood felt that it is very much satisfying if someone monitors them and at the same time they monitor others, too. They see their administrators as someone who they can get some hints to become independent in their own decisions. According to Libretexts (2023),many of the developmental tasks of early adulthood involve becoming part of the adult world and gaining independence. Young adults sometimes complain that they are not treated with respect-especially if they are put in positions of authority over older workers. Consequently, young adults may emphasize their age to gain credibility from those who are even slightly younger.

Master teachers who have been in the service for more than two decades said that they are very much satisfied in engaging themselves towards supervision and monitoring as revealed by this statement: "*I already know what I am doing because my stay in the service allowed me experience everything, from traditional to modern way of teaching. I can say that being monitored and supervised by my supervisor is necessary*

for my growth. I would like to admit that I also monitor strictly my pupils and even asked parents to at least be involve in the learning process of their children."

Kindergarten and EPP, ESP and MAPEH teachers mentioned that there is a need for proper monitoring whether they understand the lesson or module. Kindergarten is the known as foundation age. It is a must that the teacher should engage themselves in the learning process. This is also true to EPP, ESP and MAPEH teachers. These subjects call for a valuing and reflective sessions aside from psycho motor performances. Proper monitoring, supervision and instruction are needed to handle properly the development of the pupils.

Table 25
Result of the Test of Significant Difference in Teachers' Perception on the Connectedness of Stakeholders in their Educational Milieu When Grouped According to Their Profile

Respondents' Educational Milieu in terms of Connectedness and the Following Profile	Probability of F	Decision	Remarks
Age	0.0128	Reject Ho	Significant
Civil Status	0.0117	Reject Ho	Significant
Position	0.0003	Reject Ho	Significant
Number of Years in Teaching	0.0236	Reject Ho	Significant
Place of Residence	0.0071	Reject Ho	Significant
Grade Level Handled	0.0236	Reject Ho	Significant
Subjects Handled	0.0072	Reject Ho	Significant

Table 19d presents the results of the test of significant difference in the in teachers' perception on the connectedness of stakeholders in their educational milieu when grouped according to their profile. The results reveal that the probability values of F are less than 0.05 and for this reason, the null hypothesis is rejected at 0.05 level of significance. As a result, there is significant difference in the teachers' perception on the connectedness of stakeholders in their educational milieu when grouped according to age, civil status, position, number of years in teaching, place of residence grade level and subjects handled. As appended, the mean shows that teachers who are 21-25 years old, MT2, and with 36 years or more in the service are very much satisfied in their educational milieu in terms of connectedness. Whereas, teachers who are married, homebased, handle Grade VI, teach Math/ESP/MAPEH,EPP/ESP, English/AP/ESP, Filipino/ESP are much satisfied.

The group of respondents who are very much satisfied in their connectedness are in their early adulthood stage. According to an Digital Wellness Lab, during this stage of life, young adults further develop their critical thinking skills, form relationships based on shared values and belief systems, modify their risk taking behaviors and make decisions based on future consequences. As mature adolescents move towards adulthood, these

developmental themes emerge. It means that the respondents are very much engage in their social environment which in turn will bring good interpersonal relationship in their working place.

Being a Master Teacher and with 36 years or more in the service are factors for good engaging endeavor. This is true since Master teachers can really handle smooth sailing relationship because of their professionalism. It counts that they will serve as a good model to young teachers. Thus, they set an example for them to be imitated by people under them. Aside from this, even those who rendered service for almost two decades tend to stay for that long because they already established themselves and considered to be accepted by the working environment.

9. Significant relationship between the educational milieu and mental health state of the respondents?

Table 26
Results of the Test of Significant Relationship Between the Respondents' Perception on the Educational Milieu and their Mental Health State

Variables		Probability of r	Decision	Remarks
Mental health	Aspects Educational Milieu			
Depression	Safety	0.2725	Accept Ho	Not Significant
Depression	Support	0.1722	Accept Ho	Not Significant
Depression	Engagement	0.2761	Accept Ho	Not Significant
Depression	Connectedness	0.3393	Accept Ho	Not Significant
Anxiety	Safety	0.3129	Accept Ho	Not Significant
Anxiety	Support	0.3704	Accept Ho	Not Significant
Anxiety	Engagement	0.3337	Accept Ho	Not Significant
Anxiety	Connectedness	0.2817	Accept Ho	Not Significant
Stress	Safety	0.0604	Accept Ho	Not Significant
Stress	Support	0.2542	Accept Ho	Not Significant
Stress	Engagement	0.1573	Accept Ho	Not Significant

Stress	Connectedness	0.3938	Accept Ho	Not Significant

Table 20 exhibits the result of the test of significant relationship between the respondents' perception on their educational milieu and their mental health state.

The results show that the r- probability values are greater than 0.05. this signifies the acceptance of the null hypothesis at 0.05 level of significance. Therefore, there is no significant relationship between the respondents' perception on their educational milieu and their mental health state. It implies that the teachers' mental health state are not significantly affected by educational milieu in terms of safety, support, engagement, and connectedness. It means further that the teachers' mental health state and educational milieu are independent from each other.

This study shows that the mental health of the teachers are not affected by their educational milieu. However, the importance of social connectedness in supporting public mental health is well established based on the study made by Saeri et.al (2017). Thus, the reverse causal pathway (that psychological ill-health leads to reduced social connectedness) remains a dominant perspective among mental health practitioners. They aimed to provide a rigorous test of the directionality of this relationship. Results of his study further demonstrate how the psychological resources conferred by social connectedness can act as a 'social cure' for psychological ill-health, and provide the strongest evidence to date for the direction of this relationship in the general community.

10. Is there a significant relationship between the educational milieu and coping mechanism of the respondents?

Table 27
Result of Test Significant Relationship Between Educational Milieu and Coping Mechanism Employed by the Respondents

Variables		Probability of r	Decision	Remarks
Coping Mechanism	Educational Milieu			
Problem Focused	Safety	0.2802	Accept Ho	Not Significant
Emotion Focused	Safety	0.1959	Accept Ho	Not Significant
Avoidance	Safety	0.2946	Accept Ho	Not Significant
Problem Focused	Support	0.0857	Accept Ho	Not Significant
Emotion Focused	Support	0.2900	Accept Ho	Not Significant

Avoidance	Support	0.5424	Accept Ho	Not Significant
Problem Focused	Engagement	0.5468	Accept Ho	Not Significant
Emotion Focused	Engagement	0.5470	Accept Ho	Not Significant
Avoidance	Engagement	0.3810	Accept Ho	Not Significant
Problem Focused	Connectedness	0.4563	Accept Ho	Not Significant
Emotion Focused	Connectedness	0.3952	Accept Ho	Not Significant
Avoidance	Connectedness	0.0254	Reject Ho	Significant

Table 21 discloses the result of test of significant relationship between the educational milieu and coping mechanism employed by the respondents.

The results reveal that the probability values of r are greater than 0,05 except for avoidance and connectedness. This signifies the acceptance of the null hypothesis at 0.05 level of significance. Therefore, the educational milieu of the teachers are not significantly affected by their coping mechanism except for avoidance and connectedness.

However, there is significant relationship between the avoidance coping mechanism of the teachers and heir connectedness in their educational milieu. Hence, the null hypothesis is rejected at 0.05 significance level. It implies that the teachers' connectedness in their educational milieu is affected by their avoidance coping mechanism.

The connectedness in educational milieu focuses on respect, acceptance and sense of belongingness while the avoidance coping mechanism centers on disengaging from stressors. The findings revealed that the respondents apply avoidance coping mechanism especially if the word respect arises. With this, the respondents tend to keep or not giving attention to how they feel if they are not being accepted by the group.

As per interview, the respondents stated that at times they are not being respected especially if they are talked behind. They even specified that at times they can feel that they are not existing. What is even more hurting is if they are being bullied by people whom they respect much. Asked if they talked already to the bullies, they answered that it is improper since avoiding the issue will save them and even stand as an act of professionalism. So, what they put in their mind for them to get along with the bullies is for them to believe in themselves and the bullies are the one having problems. Seunagal (2021) stated that narcissists bullies are those who choose to bully other adults because they lack empathy or fear of adverse repercussions. Furthermore, they generally struggle with self-esteem issues, hence their compulsion to constantly

denigrate other people. People who truly love themselves don't have to tear others down to feel superior. Narcissists will try to prove how secure they are although their mistreatment of others speaks volumes every time.

In addition, the sense of belongingness is a part of human needs. We need to be with others and our journey of life will evolve because of others. Human behavior is derived by the desire of emotional relations or interpersonal relations at this level. It is a well-known fact that a human is a social animal and he/she likes to be as part of the society and shares common values and belief system with other individuals. It develops a sense of belonging in one or another way. People look for commonality that encourages them to be part of social networks, communities, informal groups, and other social areas. A strong desire for close relations and bonding make friends. According to Maslow as stated in StudiousGuy (2024), humans exchange love, affection and belonging to overcome loneliness, anxiety, depression, etc. One can fulfill these needs through friendship, social activities, family relations, social communities, workplace groups, etc.

The only thing respondents want to experience is for them to be given a room for belongingness for them to properly be motivated to work with respect and happiness within their hearts.

Conclusions

The following conclusions were reached in light of the findings:

The teachers in cluster 6 generally are in a normal mental state showing no signs and symptoms of depression, anxiety and stress except for isolated cases showing mild, moderate and extreme symptoms of stress, anxiety and depression.

The respondents experiencing some depression, stress and anxiety employ strategies that are either problem- focused which is indicative of psychological strength, practical approach to problem solving. Others employ emotional-focused techniques that aim to regulate emotions associated with stressful situation; some makes use of avoidance strategies like disengaging from the stressor.

A positive social and educational environment that gives teachers a feeling of belongingness, being protected, and supported tends to create a relaxed mind, resulting to a positive working environment and productive outputs.

Teachers differ in their mental health state, the coping strategies they employ, and their perception of their educational milieu hen grouped according to their profile.

Recommendations

In the light of the findings and conclusions formulated, the following recommendations are offered:

1. Administration must review policies and procedures affecting the mental health of the teachers.
2. There should be a continuing education and actions regarding mental health awareness with the teaching, non-teaching staff and the stakeholders such as trainings/forum regarding prevention of mental health issues and promotion of mental health-care strategies and coping mechanisms.
3. The initiatives, projects, and programs that deal with teachers' mental health, such as holding Learning Action Cell (LAC) Sessions with a mental health theme should be sustained.
4. Research should be conducted on the areas of how coping mechanisms plays in teachers' coping with stress, depression, and anxiety.

Ethical Considerations

The researcher made sure that during the conduct of the study, the following ethical concerns were followed to necessitate safe, anti-fraud, deliberate, and careful undertakings in the study:

1. The researcher, through proper communications, asked permission from the Division Office, and other concerned offices for the study;
2. The researcher also acknowledged the Department of Education and the Schools Division of the City of Ilagan for allowing her to conduct the study;
3. The researcher informed the respondents of the study through letters and a short orientation to the study. Data and information gathered were treated with utmost respect and confidentiality;
4. The researcher, properly cited gathered information and other relevant studies from authors, books, or any publications through proper citation.

Acknowledgements

The author wishes to convey his heartfelt gratitude and appreciation to the following, whose encouragement, guidance, and support contributed to the realization of this study:

Dr. Charina G. Alejo, Dean of the Graduate School, for her valuable guidance;

Dr. Maria Elisa T. Alvaro, her adviser, for her unending support to the writer in the completion of this study;

Mrs. Benedicta M. Uy, for her statistical expertise;

Dr. Kathreen C. Joson, Chairman of the Panel, Dr. Salome S. Cario, Dr. Demetrio P. Anduyan Jr., Dr. Gilbert N. Tong, and Dr. Vilma C. Cabrera, members of the Panel, for their constructive criticism, comments, and suggestions that enrich this study;

Sir Marvin S. Palattao and to the whole teaching force of Capellan Elementary School, for their consideration they have extended to the writer;

Engr. Joemar R. Gonzalez and Ma'am Cely D. Gonzales and family for their unparalleled support that they give to the writer;

Special thanks likewise, afforded to his parents, relatives friends and churchmates for their faith and prayers, trust confidence and support for the completion of this study;

Above all, to the Almighty God, for his bountiful blessings and for keeping his promise.

ENHANCING TEACHER PRODUCTIVITY THROUGH SCHOOL SUPPORTS

Cerisa M. Bautista

Benliw Elementary School, Benliw, Ubay, Bohol, Philippines

https://doi.org/10.5281/zenodo.13576492

ABSTRACT

This study investigates the extent of instruction-related support provided to teachers in selected schools in Trinidad, Bohol, during the School Year 2022-2023, with the aim of informing a strategic plan to enhance teacher productivity. The research explores various demographic and professional factors among teachers and administrators, including age, gender, educational attainment, years of service, performance, and participation in relevant leadership training and seminars. Additionally, it examines the perceived level of support received by teachers in areas such as administrative assistance, peer collaboration, the learning environment, professional development opportunities, productivity recognition, and rewards. The findings reveal a significant gender imbalance, with female teachers and administrators predominantly outnumbering their male counterparts. Performance evaluations indicate consistent "Very Satisfactory" ratings across the board, although teachers report lower levels of productivity recognition compared to administrators. Both groups perceive the learning environment and professional development opportunities positively, although teachers express only moderate satisfaction with school culture. A key finding is the significant relationship between the extent of instruction-related support and teacher performance, underscoring the importance of targeted support mechanisms in enhancing educational outcomes. Based on these insights, the study recommends actions to address gender diversity, improve equity in productivity recognition, and strengthen institutional support and school culture. These recommendations aim to foster a more inclusive, supportive, and effective educational environment that enhances teacher satisfaction and productivity, ultimately benefiting both educators and students.

Keywords: *Educational Environment, Gender Diversity, Instructional Support, Professional Development, and Teacher Productivity*

INTRODUCTION

Teachers are the backbone of any educational system, playing a crucial role in shaping the minds of future generations. Their productivity directly influences student learning outcomes and, by extension, the broader societal future (Constantinou & Wijnen, 2022). Parojenog (2020) emphasizes that teachers are versatile, equipped with the skills and knowledge needed to handle diverse learners. Each day, they rise to the challenge of meeting the unique needs of every student.

However, teacher productivity is not solely a reflection of their abilities and dedication. It is also significantly influenced by the support they receive from the school system (Jourdan et al., 2021). In this context, 'school support' is a multifaceted concept that includes administrative backing, peer collaboration, the quality of the learning environment, parental involvement, and opportunities for professional development (Bektas et al., 2022).

Effective school support is essential for enhancing teacher productivity. Adequate administrative support ensures that teachers' concerns are addressed, and necessary resources are provided. Peer support fosters a collaborative working environment that encourages the sharing of experiences and resources (Chan et al., 2021). A conducive learning environment, equipped with adequate facilities and resources, can significantly reduce non-instructional stressors for teachers, allowing them to focus on teaching. Active parental involvement reinforces teaching initiatives at home, while professional development opportunities help teachers continually improve their skills and adapt to evolving educational demands (Mahoney et al., 2021; Haug & Mork, 2021).

Conversely, a lack of school support can have detrimental effects on teachers' job satisfaction, motivation, and overall productivity (Baroudi et al., 2022). Teachers who do not receive adequate support are more likely to experience stress and burnout, leading to higher turnover rates and instability within the school system. This instability can disrupt student learning and ultimately lower the quality of education (Sahito & Vaisanen, 2020).

In the Philippines, where educational challenges are compounded by diverse geographical and socio-economic conditions, teacher productivity is particularly critical. The effectiveness of Filipino teachers is not only a product of their individual competencies but is also significantly influenced by the level of support they receive within their school system (Baylan, 2018). Supportive school environments can empower teachers to deliver high-quality instruction and maintain a nurturing atmosphere for learning. Administrative support in addressing teacher concerns, strong peer networks fostering collaboration, a stress-reducing learning environment, active parental involvement, and continuous professional development are all crucial components of an effective support system (Abolucion et al., 2020).

Despite the recognized importance of school support in enhancing teacher productivity, there remains a gap in the literature, particularly in the context of the Philippines. While existing studies have explored individual aspects of school support, a comprehensive, multidimensional analysis of how these supports collectively impact teacher productivity is lacking. This study aims to address this gap by examining the various dimensions of school support and their collective influence on teacher productivity in the Philippine setting.

Understanding the impacts of school support on teacher productivity is vital for identifying areas where school systems can improve. The findings from this research will have significant implications for school administrators, policymakers, teachers, and parents, contributing to the overall improvement of education quality and student outcomes in the Philippines.

Research Questions

This research determines the extent of instruction related support in the identified schools in Trinidad, Bohol during the School Year 2022-2023 as Basis for Strategic Plan.

Specifically, this answers the following questions,

1. What relevant information can be derived from the teachers and administrators:
    - 1.1. age and gender,
    - 1.2. highest educational attainment,
    - 1.3. years of service,
    - 1.4. performance,
    - 1.5. relevant leadership training and seminars,
2. As perceived by the respondent groups, what is the extent of instruction related support received by the teachers in terms of the following aspects:
    - 2.1. administrative,
    - 2.2. peer,
    - 2.3. learning environment, and
    - 2.4. professional development
    - 2.5. productivity recognition
    - 2.6. rewards?
3. What is the teacher's performance based on the classroom observation as to:
    - 3.1. teaching/learning activities,
    - 3.2. delivery of content,
    - 3.3. utilization of technology,
4. Is there significant relationship between teachers' performance and the extent of instruction related support received by the teachers?
5. What are the issues and concerns relating to teachers' instruction related support?
6. Based on the findings, what strategic plan can be crafted?

METHODOLOGY

Research Design

The descriptive method of research was employed in this study, which described data and the characteristics of the population under study. This method answered the questions of who, what, where, when, and how. Specifically, the study focused on the present conditions of the respondents concerning the level of teacher support and the perceived issues and concerns by the teachers. The data were described and analyzed based on the information gathered using the research instrument.

This research utilized the INPUT-PROCESS-OUTPUT approach. The INPUT included the demographic profiles of the respondent groups, such as age, gender, highest educational attainment, years of service, and relevant training and seminars attended by teachers and administrators. It also covered the level of teacher support, encompassing constructs such as administrative support, peer support, learning environment, and professional development. Additionally, the research included an analysis of the significant differences between the respondent groups' perceptions of the level of teacher support received and the issues and concerns related to that support.

The PROCESS involved the administration of questionnaires, data consolidation, presentation, analysis, and interpretation using statistical software. The OUTPUT of the study was the proposed strategic plan.

Research Environment

This study was conducted at six elementary schools in Trinidad, Bohol: Banlasan Elementary School, Hinlayagan Ilaya Elementary School, Hinlayagan Ilaud Elementary School (Trinidad Central II Elementary School), Kinan-oan Elementary School, M. Roxas Elementary School, and Maonglinis Elementary School.

Research Participants

The respondents of the study were the teachers and administrators. The respondents were taken for random sampling.

Table 1
Distribution of Respondents

Schools	Administrators	Teachers	Frequency
Banlasan Elementary School	1	30	20
Hinlayagan Ilaya Elementary School	1	30	20
Hinlayagan Ilaud Elementary School	1	30	20
Kinan-oan Elementary School	1	30	20
M. Roxas Elementary School	1	30	20
Maonglinis Elementary School	1	30	20

Total	6	180	120

Research Instrument

Two different sets of research instruments were utilized in this study to determine the extent of teacher engagement. The Demographic Profile aimed to gather data on the teachers' respective demographic profiles. This checklist collected information such as age, gender, highest educational attainment, years in service, and relevant training and seminars attended.

Administrative Support was adapted from the study by Leithwood, K., Louis, K. S., Anderson, S., & Wahlstrom, K. (2004). These data were analyzed and interpreted to arrive at more conclusive statements and implications. The findings of the study served as a basis for formulating an action plan.

Data Gathering Procedure

A transmittal letter was prepared and addressed to the office of the district superintendent, requesting permission to conduct the study. Once the request was approved, the researcher began distributing questionnaires to the teachers and administrators. The questionnaires were retrieved, and the data were collated. Data and information related to the study were treated with utmost confidence.

Data Analysis

The data gathered using the research instrument were analyzed with the aid of statistical software, employing the following statistical tools:

1. Percentage: This tool was used to show the proportion of a certain variable obtained from the respondents.
2. Weighted Mean: The weighted mean was used to determine the extent of support received by the teachers.
3. T-Test: This test was used to assess significant differences.

Scoring Procedure

A 5-point Likert scale was used to determine the extent of the teacher's support received from the school. The scale was as follows:

Scale	Numerical Rating	Descriptive Rating	Verbal Interpretation
5	4.21-5.00	Strongly Agree	The respondents strongly agreed with the statement.
4	3.41-4.20	Agree	The respondents agreed with the statement.
3	2.61-3.40	Moderately Agree	The respondents moderately agreed with the statement.
2	1.81-2.60	Disagree	The respondents disagreed with the statement.
1	1.00-1.80	Strongly Disagree	The respondents strongly disagreed with the statement.

RESULTS

This chapter presents the quantitative results related to the following research questions: What are the demographic and professional characteristics of teachers and administrators, including age, gender, highest educational attainment, years of service, relevant leadership training, seminars attended, and performance ratings? It also examines the aspects of instructional support received from administrative channels, peers, and the learning environment. Additionally, it analyzes the professional development opportunities available and the rewards and recognition for productivity. The perceptions of different respondent groups are contrasted to provide a comprehensive view of the state of instructional support in the identified schools in Trinidad, Bohol.

The chapter further evaluates teachers' performance based on DepEd's classroom observation tools, focusing on practical aspects such as teaching and learning activities, content delivery, technology use, language proficiency, and classroom management skills.

The final section investigates the correlations between teachers' performance and the extent of instructional support received. This analysis explores the relationship between support mechanisms and teaching effectiveness, offering insights for guiding future interventions.

Table 2
Age and Gender

	Teachers				Administrators			
	Gender		Total		Gender		Total	
Age	M	F	f	%	M	F	f	%
50 above	0	8	8	4.44	0	0	0	0
46-50	0	10	10	5.56	0	2	1	50
41-45	6	45	51	28.33	0	3	0	50
36-40	7	5	12	6.67	0	0	0	0
31-35	12	23	35	19.44	0	0	0	0
26-30	8	56	64	35.56	0	0	0	0
Total	33	147	180	100	0	5	1	100

Table 2 provides a summary of the age and gender demographics of teachers and administrators. Among the 180 teachers, there were 33 males and 147 females. The largest age group was 26-30, representing 35.56% of teachers, predominantly female. The second largest group was 41-45, comprising 28.33% of teachers, also mostly female. Age groups 31-35 and 46-50 similarly showed more female teachers than males, while the 36-40 group was more balanced. All 8 teachers aged 50 and above were female. The administrator group consisted of 5 females, with 2 in the 46-50 age range and 3 in the 41-45 range. The data highlights a notable gender imbalance, with females significantly outnumbering males in both groups, and indicates that most teachers are under 45, while the administrative group is also predominantly younger.

Table 3
Highest Educational Attainment

Highest Educational Attainment	Teachers		Administrator	
	f	(%)	f	%
Doctor Degree	24	13.33	4	67
Doctor with units	18	10.00	2	33
Master Degree	23	12.78	0	0
Master with units	77	42.78	0	0
Bachelor Degree	38	21.11	0	0
Total	180	100	6	100

Table 3 presents the highest educational attainment levels of teachers and administrators. Among the 180 teachers, the majority (42.78%) held a Master's Degree with additional units, followed by 21.11% with a Bachelor's Degree. Twelve percent had a Master's Degree without additional units, 13.33% had a Doctorate, and 10% had additional units beyond the Doctorate. Among the 6 administrators, 67% held a Doctoral Degree, and 33% had earned additional units beyond the Doctorate. This indicates that administrators generally have higher educational qualifications compared to teachers, who have a broader range of educational backgrounds.

Table 4
Years of Service

Years of Service	Teachers		Administrator	
	f	%	f	%
26-30	7	3.89	1	16.67
21 -25	9	5.00	1	16.67
16-20	13	7.22	3	50.00
11-15	62	34.44	1	16.67
6-10	38	21.11	0	0
1-5	51	28.33	0	0
Total	180	100	6	100

Table 4 details the years of service among teachers and administrators. For the 180 teachers, the majority (34.44%) had 11-15 years of service, followed by 28.33% with 1-5 years and 21.11% with 6-10 years. Fewer teachers were in the 16-20 years (7.22%), 21-25 years (5.00%), and 26-30 years (3.89%) categories. Among the 6 administrators, 50% had 16-20 years of service, while 16.67% had 21-25 years and 26-30 years each. The remaining 16.67% had 11-15 years of service. This indicates that teachers have a broader distribution of service years, whereas administrators generally have more years of experience. No individuals in either group had more than 30 years of service.

Table 5
Teachers' Performance

Performance	Teachers		Administrator	
	f	%	f	%
Outstanding	0	0	0	0
Very Satisfactory	180	100	6	100
Satisfactory	0	0	0	0
Total	180	100	6	100

Table 5 displays the performance evaluations of teachers and administrators. All 180 teachers were rated as 'Very Satisfactory,' representing 100% of the group. Similarly, all 6 administrators also received a 'Very Satisfactory' rating, accounting for 100% of their group. There were no individuals rated as 'Outstanding' or 'Satisfactory' in either group. This indicates a consistent performance evaluation across both teachers and administrators, with all rated 'Very Satisfactory.'

Table 6
Training and Seminar

Training and Seminars	**Frequency, f**
Effective Classroom Management	156
Instructional Technology Integration	120
Teaching Strategies for Diverse Learners	87
Building Emotional Intelligence in the Classroom	167
Student-Centered Learning	123

Table 6 presents the frequency of participation in various training sessions and seminars. The 'Building Emotional Intelligence in the Classroom' seminar had the highest attendance, with 167 participants. This was followed by 'Effective Classroom Management' with 156 participants and 'Student-Centered Learning' with 123 participants. 'Instructional Technology Integration' had 120 participants, while 'Teaching Strategies for Diverse Learners' had the lowest attendance, with 87 participants. This data indicates that seminars on emotional intelligence and classroom management were the most popular, suggesting high interest or need in these areas. Conversely, the lower attendance for 'Teaching Strategies for Diverse Learners' may reflect reduced perceived importance or other barriers to participation.

Table 7
Administrative Support

Administrative Support	Administrator		Teachers	
	Mean	VD	Mean	VD
The school administration actively addresses my concerns and problems.	4.33	SA	3.85	A
The school administration provides me with the necessary resources to do my job effectively.	3.67	A	3.20	A
The school administration encourages and facilitates professional development opportunities.	4.17	A	3.80	A

The school administration effectively communicates school policies and changes.	4.00	A	3.70	A
The school administration provides adequate non-instructional time (for planning, grading, etc).	3.67	A	3.60	A
Grand Mean	3.96	A	3.63	A

Table 7 summarizes the perceived level of administrative support from both administrators and teachers. Administrators reported a higher overall level of support with a grand mean of 3.96, categorized as 'Agree.' They strongly agreed that the administration addresses their concerns (mean score of 4.33) and encourages professional development (mean score of 4.17). Effective communication of policies and adequate non-instructional time also received positive ratings, though slightly lower (means of 4.00 and 3.67, respectively).

Teachers reported a slightly lower overall support level with a grand mean of 3.63, also in the 'Agree' category. They felt most supported regarding the administration's response to concerns (mean score of 3.85). Professional development opportunities and communication of policies were rated positively as well (means of 3.80 and 3.70). However, teachers rated the provision of necessary resources (mean score of 3.20) and non-instructional time (mean score of 3.60) lower compared to administrators.

This data indicates that while both groups generally feel supported, there are areas—particularly regarding resources and non-instructional time for teachers—that could benefit from improvement.

Table 8
Peer Support

Peer Support	Administrator		Teachers	
	Mean	VD	Mean	VD
My colleagues are willing to share teaching materials and experiences.	4.00	A	3.70	A
I feel supported by my fellow teachers in handling classroom challenges.	4.17	A	3.60	A
There is a strong sense of community among the staff at my school.	3.67	A	3.40	A
There are opportunities for collaboration and team teaching in my school.	4.17	A	3.50	A
Peer mentoring programs are available and effective in my school.	4.00	A	3.60	A
Grand Mean	4.00	A	3.56	A

Table 8 evaluates peer support perceptions among administrators and teachers. Administrators reported high peer support with a grand mean of 4.00, categorized as 'Agree'. They particularly valued colleagues' willingness to share materials (mean score of 4.00) and support in handling classroom challenges (mean score of 4.17). Opportunities for collaboration and the effectiveness of peer mentoring programs also received high ratings (means of 4.17 and 4.00, respectively). The sense of community among staff scored slightly lower at 3.67 but still within the 'Agree' category.

Teachers also perceived positive peer support with a grand mean of 3.56. They felt supported by colleagues in sharing materials (mean score of 3.70) and in handling classroom challenges (mean score of 3.60). However, opportunities for collaboration (mean score of 3.50) and the sense of community (mean score of 3.40) received slightly lower ratings. Peer mentoring programs were rated at 3.60. Overall, both administrators and teachers perceive good peer support, but improvements could be made in enhancing the sense of community and increasing collaborative opportunities.

Table 9
Learning Environment

Learning Environment	Administrator		Teachers	
	Mean	VD	Mean	VD
The physical environment of the school (e.g., classrooms, facilities) supports effective teaching.	4.00	A	3.50	A
There is adequate technology available for instruction.	4.00	A	3.90	A
Classroom size allows for effective teaching and learning.	4.00	A	3.55	A
The school culture is conducive to teaching and learning.	4.17	A	3.20	MA
The school provides effective tools for remote/distance learning	4.17	A	3.60	A
Grand Mean	4.07	A	3.55	A

Table 9 assesses perceptions of the learning environment. Administrators rated their learning environment positively with a grand mean of 4.07, falling in the 'Agree' category. They agreed that the physical environment (mean score of 4.00), technology availability (mean score of 4.00), and classroom size (mean score of 4.00) support effective teaching. The school culture and remote learning tools were rated slightly higher at 4.17.

Teachers reported a lower grand mean score of 3.55, also within the 'Agree' category. They agreed that technology (mean score of 3.90) and the physical environment (mean score of 3.50) support teaching but rated the school culture (mean score of 3.20) as only 'Moderate Agreement'. Classroom size and tools for remote learning were rated at 3.55 and 3.60, respectively. Both groups generally find the learning environment supportive, though there is room for improvement in school culture and possibly physical resources and classroom sizes.

Table 10
Professional Development

Professional Development	Administrator		Teachers	
	Mean	VD	Mean	VD
The school provides ongoing professional development opportunities.	4.00	A	3.45	A
Professional development activities are relevant to my teaching context.	4.17	A	3.40	A
There are opportunities to learn from and share best practices with other teachers.	4.00	A	3.65	A
The school supports my growth as a professional educator.	4.17	A	3.60	A

Grand Mean	4.09	A	3.52	A

Table 10 details perceptions of professional development. Administrators expressed high satisfaction with a grand mean score of 4.09, indicating 'Agree'. They felt that development activities are relevant (mean score of 4.17) and that the school supports their growth (mean score of 4.17). They also agreed that there are ongoing opportunities (mean score of 4.00) and chances to share best practices (mean score of 4.00).

Teachers also had positive views, though with a lower grand mean score of 3.52. They particularly appreciated opportunities to share best practices (mean score of 3.65) and felt supported in their professional growth (mean score of 3.60). The relevance of development activities (mean score of 3.40) and ongoing opportunities (mean score of 3.45) received slightly lower ratings. Both administrators and teachers view professional development positively, but there is potential for improvement in the relevance and continuity of these opportunities.

Table 11
Productivity Recognition

Productivity Recognition	Administrator		Teachers	
	Mean	VD	Mean	VD
My institution frequently recognizes my productivity in instruction-related tasks.	4.17	A	3.20	MA
There is a system in place that consistently recognizes high productivity among teachers.	4.17	A	3.20	MA
I feel valued and appreciated for my productivity in my role as a teacher.	3.33	MA	3.25	A
My institution's recognition of my productivity motivates me to maintain or improve my performance.	3.83	A	3.45	A
There is a clear and transparent process to evaluate and recognize productivity in my institution.	4.17	A	3.20	MA
Grand Mean	3.93	A	3.26	MA

Table 11 outlines the perceptions of administrators and teachers regarding productivity recognition within their institution. Administrators reported a high level of satisfaction with productivity recognition, reflected in a grand mean score of 3.93, categorized as 'Agree'. They felt that their productivity in instruction-related tasks was frequently recognized (mean score of 4.17), that there is a system in place for recognizing high productivity (mean score of 4.17), and that there is a clear and transparent evaluation process (mean score of 4.17). They also felt that recognition motivates them to improve performance (mean score of 3.83). However, administrators felt less strongly about being valued and appreciated for their productivity (mean score of 3.33), which falls into the 'Moderate Agreement' category.

Teachers perceived productivity recognition at a slightly lower level, with a grand mean score of 3.26, categorized as 'Moderate Agreement'. They felt most positively about the motivation provided by recognition (mean score of 3.45) and that they feel valued for

their productivity (mean score of 3.25). However, the frequency of recognition, the system for high productivity, and the transparency of the evaluation process all received lower scores (mean scores of 3.20), indicating 'Moderate Agreement'. This suggests a need for improvement in how teachers feel recognized and appreciated for their contributions, as well as in enhancing the clarity and frequency of productivity recognition.

Table 12
Rewards

Rewards	Administrator		Teachers	
	Mean	VD	Mean	VD
My institution provides adequate rewards for instruction-related accomplishments.	4.17	A	3.60	A
Tangible rewards (e.g., bonuses, promotions) are regularly provided to teachers for their instruction-related achievements.	4.00	A	3.45	A
The reward system for instruction-related achievements in my institution is fair and just.	4.17	A	3.40	A
Rewards for instruction-related work significantly enhance my job satisfaction.	4.00	A	3.65	A
The rewards I receive are proportionate to the effort I invest in instruction-related tasks.	3.67	A	3.60	A
Grand Mean	4.00	A	3.54	A

Table 12 evaluates the perceptions of administrators and teachers regarding rewards for instruction-related accomplishments. Administrators expressed high satisfaction with the rewards provided, with a grand mean score of 4.00, falling in the 'Agree' category. They agreed that their institution provides adequate rewards (mean score of 4.17), that the reward system is fair and just (mean score of 4.17), and that tangible rewards are regularly provided (mean score of 4.00). They also felt that rewards significantly enhance job satisfaction (mean score of 4.00) and that the rewards are proportional to their efforts (mean score of 3.67).

Teachers also had a positive view of the rewards system, with a grand mean score of 3.54, still within the 'Agree' category. They agreed that the institution provides adequate rewards (mean score of 3.60) and that the rewards are proportional to their efforts (mean score of 3.60). They also felt that rewards significantly enhance job satisfaction (mean score of 3.65). However, they rated the regular provision of tangible rewards and the fairness of the reward system slightly lower (mean scores of 3.45 and 3.40, respectively), though these still fall within the 'Agree' category. Overall, both administrators and teachers find the rewards for instruction-related accomplishments satisfactory, but there is room for improvement, especially in enhancing the fairness and regularity of tangible rewards as perceived by teachers.

Table 13
Teaching/Learning Activities

Indicators	Rating	Performance
The teacher effectively uses a variety of teaching strategies appropriate to the lesson.	90	VS
The teacher promotes active learning and engages all students in learning activities.	91	VS
The teacher differentiates instruction to accommodate diverse learners.	88	VS
The teacher facilitates group work and collaborative learning effectively.	90	VS
The teacher consistently integrates formative assessment strategies during the lesson.	89	VS
Grand Mean	89.6	VS

Table 13 evaluates a teacher's performance in Teaching/Learning Activities, with an overall "Very Satisfactory" rating and a grand mean of 89.6. The teacher excelled in promoting active learning and engaging students, achieving a high rating of 91. Other notable areas include the effective use of diverse teaching strategies and facilitating group work, each rated at 90. The teacher was also rated "Very Satisfactory" in differentiating instruction (88) and integrating formative assessments (89), demonstrating strong performance across all indicators.

Table 14
Delivery of Content

Indicators	Rating	Performance
The teacher presents content accurately and clearly.	89	VS
The teacher connects the content to students' prior knowledge and experiences.	90	VS
The teacher provides clear and concise instructions and explanations.	90	VS
The teacher uses relevant and relatable examples to explain concepts.	89	VS
The teacher encourages students to ask questions and express their thoughts about the content.	89	VS
The teacher presents content accurately and clearly.	89	VS
Grand Mean	89	VS

Table 14 assesses the Delivery of Content, where the teacher received a grand mean rating of 89, indicating "Very Satisfactory" performance. The teacher's highest ratings were for connecting content to students' prior knowledge and providing clear instructions, both scoring 90. Other areas such as presenting content accurately, using relevant examples, and encouraging student questions all received a rating of 89, reflecting the teacher's effective communication and engagement strategies.

Table 15
Utilization of Technology

Indicators	Rating	Performance
The teacher integrates technology into lessons effectively when applicable.	90	VS
The teacher demonstrates confidence and proficiency in using technology.	90	VS
The teacher uses technology to promote interactive and engaging learning.	89	VS
The teacher uses technology to differentiate and personalize instruction.	89	VS
The teacher uses technology to provide feedback and assess student learning.	90	VS
Grand Mean	89.6	VS

Table 15 evaluates the Utilization of Technology, with a grand mean rating of 89.6, also marking "Very Satisfactory" performance. The teacher scored 90 in integrating technology into lessons and demonstrating proficiency, while technology's use in promoting interactive learning and differentiation received ratings of 89. These scores suggest a strong capability in leveraging technology to enhance teaching, although the teacher's integration of technology may be associated with slightly lower scores in some support areas.

Table 16
Significant Relationship Between Teaching/learning Activities and Instruction Related Support

	Teaching/Learning Activities	*Administrative*	*Peer*	*learning environment*	*professional development*	*productivity recognition*
Teaching/Learning Activities	1					
Administrative	-0.62685	1				
Peer	0.615385	-0.16095	1			
learning environment	0.263117	-0.72438	0.263117	1		
professional development	-0.79112	0.5986	-0.85492	-0.64499	1	
productivity recognition	0.040456	0.231663	-0.46524	-0.80721	0.565946	1
rewards	0.262962	0.302944	0.46524	-0.64577	-0.06263	0.43617

Table 16 examines the relationship between Teaching/Learning Activities and various forms of instruction-related support. The data reveals a negative correlation between teaching/learning activities and administrative support (-0.62685), but a positive correlation with peer support (0.615385). The teacher's performance in teaching activities is less strongly related to professional development and productivity recognition, highlighting areas where support may impact effectiveness differently.

Table 17
Significant Relationship Between Delivery of Content and Instruction Related Support

	Delivery of Content	*Administrative*	*Peer*	*learning environment*	*professional development*	*productivity recognition*
Delivery of Content	1					
Administrative	-0.45847	1				
Peer	-0.48038	-0.16095	1			
learning environment	0.63901	-0.72438	0.263117	1		
professional development	0.008854	0.5986	-0.85492	-0.64499	1	
productivity recognition	-0.29475	0.231663	-0.46524	-0.80721	0.565946	1
rewards	-0.96847	0.302944	0.46524	-0.64577	-0.06263	0.43617

Table 17 explores the relationship between Delivery of Content and instruction-related support. It shows a positive correlation with the learning environment (0.63901) but negative correlations with administrative support (-0.45847) and peer support (-0.48038). These findings suggest that while effective content delivery is associated with a positive learning environment, it may come at the expense of other support areas.

Table 18
Significant Relationship Between Utilization of Technology and Instruction Related Support

	utilization of technology	*Administrative*	*Peer*	*learning environment*	*professional development*	*productivity recognition*
utilization of technology	1					
Administrative	-0.42321	1				
Peer	0.880705	-0.16095	1			
learning environment	0.63901	-0.72438	0.263117	1		
professional development	-0.89426	0.5986	-0.85492	-0.64499	1	
productivity recognition	-0.75794	0.231663	-0.46524	-0.80721	0.565946	1
rewards	0.126323	0.302944	0.46524	-0.64577	-0.06263	0.43617

Table 18 details the relationships between Utilization of Technology and instruction-related support. It highlights a strong positive correlation with peer support (0.880705) and a moderate correlation with the learning environment (0.63901). However, it also shows negative correlations with administrative support (-0.42321), professional development (-0.89426), and productivity recognition (-0.75794), indicating potential trade-offs in balancing technology use with other support factors.

Table 19
Perceived Issues and Concerns

Indicator	Rank
Assessment and accountability pressures	1
Insufficient peer support	2
Limited autonomy in decision-making	3
Inadequate support for technology integration	4
Challenging learning environment	5
Lack of recognition and rewards	6
Limited access to learning resources:	7

Table 19 identifies key issues and concerns related to instruction support, ranked by importance. The top concern is "Assessment and accountability pressures," reflecting significant stress related to high-stakes testing. "Insufficient peer support" follows, emphasizing the need for better collaboration among teachers. Other concerns include "Limited autonomy in decision-making," "Inadequate support for technology integration," "Challenging learning environment," "Lack of recognition and rewards," and "Limited access to learning resources," all highlighting various areas where improvements could enhance instructional effectiveness and teacher satisfaction.

DISCUSSION

Findings

The highlights of the findings of this study are the following:

1. The research data reveals several key findings across various dimensions of the educational environment. Firstly, there is a significant gender imbalance among teachers, with females overwhelmingly outnumbering males, particularly in the younger age groups, while all administrators are female and mostly aged between 41-50 years. Educational attainment among teachers varies, with a majority holding a Master's Degree with additional units, whereas most administrators possess a Doctoral Degree. In terms of service years, teachers are broadly distributed across different experience levels, with the majority having 11-15 years of service, while administrators generally have more experience, with most having 16-20 years of service.

2. Performance evaluations indicate a uniform 'Very Satisfactory' rating for all teachers and administrators, showing consistent performance across both groups. Participation in training and seminars is highest in areas like emotional intelligence and classroom management, suggesting these are areas of particular focus or need. The level of administrative and peer support is perceived positively by both teachers and administrators, though administrators report slightly higher satisfaction, especially in addressing concerns and facilitating professional development.

3. Regarding the learning environment, both groups agree that the physical environment, technology, and classroom size are supportive, though teachers express moderate agreement with the school's culture. Professional development opportunities

are generally seen as beneficial, with administrators expressing higher satisfaction, particularly in relevance and support for growth. Finally, recognition of productivity is viewed more positively by administrators, while teachers feel less recognized, indicating a potential area for improvement in recognizing and motivating teaching staff. Overall, while the data indicates a generally supportive and satisfactory educational environment, it also highlights areas such as gender balance, resource provision, and productivity recognition that could benefit from targeted improvements.

Conclusions

In conclusion, the study provides a comprehensive overview of the educational environment, highlighting several critical insights. The gender imbalance among teachers, particularly in younger age groups, alongside the predominance of female administrators, underscores the need for more gender diversity in educational leadership and teaching roles. The varying levels of educational attainment and years of service between teachers and administrators reflect a diverse workforce, but also suggest opportunities for further professional development, particularly among teachers seeking higher qualifications.

The uniform 'Very Satisfactory' performance ratings suggest a consistently high standard of work among both teachers and administrators, although the disparity in recognition of productivity between these groups indicates a need for more equitable acknowledgment of efforts across the board. The positive perception of administrative and peer support, as well as the physical and technological learning environment, demonstrates a solid foundation for educational success. However, the moderate satisfaction with school culture among teachers and their lower levels of recognition point to areas where institutional support could be enhanced.

Overall, the findings suggest that while the educational environment is largely effective and supportive, targeted improvements in gender diversity, professional recognition, and cultural inclusivity could further enhance the experience and effectiveness of both teachers and administrators. Addressing these areas would not only contribute to the personal and professional growth of educators but also support the continued development of a positive and productive learning environment for students.

Recommendations

The main goal of this study is to gain knowledge on the level of the extent of instruction related support in the identified schools in Trinidad, Bohol during the School Year 2022-2023 as Basis for Strategic Plan. It is recommended that the proposed Strategic Plan crafted shall be considered for implementation.

OUTPUT OF THE STUDY

This section contains Strategic Activities in based on the findings of the study entitled “**ENHANCING TEACHER PRODUCTIVITY THROUGH SCHOOL SUPPORTS**”. It serves as a proposal to the department of Education and local government units

Rationale

The proposal to the Department of Education and local government units for implementing strategic activities based on the findings of the study titled "Enhancing Teacher Productivity through School Supports" is grounded in the need to improve teacher productivity and create a supportive educational environment. The study's findings have shed light on crucial factors influencing teacher effectiveness, including administrative support, peer support, learning environment, professional development, recognition and rewards, and technology integration. Implementing strategic activities, we aim to address the identified issues, capitalize on the positive aspects, and foster a culture of continuous improvement within the educational system.

Firstly, addressing the identified issues, such as assessment pressures, limited peer support, and inadequate technology integration, is essential for improving teacher productivity. These strategic activities will provide targeted solutions, such as developing support systems to alleviate assessment pressures, implementing peer mentoring programs to enhance collaboration, and investing in technology resources and training to support effective integration.

Secondly, capitalizing on the positive aspects identified in the study, such as favorable ratings for administrative support, peer support, and the learning environment, is crucial for sustaining and enhancing teacher productivity. The proposed activities will focus on strengthening these areas further, ensuring that administrative support systems are responsive, fostering a strong sense of community and collaboration among teachers, and creating an optimal learning environment with adequate resources and technology infrastructure.

Thirdly, supporting teachers' professional development is vital for their continuous growth and increased productivity. The proposed activities include providing ongoing professional development opportunities that are relevant to teachers' needs, facilitating the sharing of best practices among teachers, and creating a supportive culture that values and supports teachers' growth as professionals. Additionally, recognizing and rewarding teachers' productivity is crucial for their motivation and job satisfaction. The proposed activities will establish transparent systems for evaluating and recognizing productivity, ensure fairness in the reward system, and develop mechanisms for regularly acknowledging teachers' accomplishments.

Ultimately, the rationale behind these strategic activities is to foster a supportive and empowering environment for teachers, as they play a critical role in delivering quality education to students. By addressing the identified issues, capitalizing on positive aspects, and providing necessary support and resources, we can enhance teacher

productivity and create a sustainable educational system that benefits both educators and learners. The collaboration between the Department of Education, local government units, teachers, and other stakeholders is essential for the successful implementation of these activities and the continuous improvement of the educational system.

Objectives

- Enhance Administrative Support
- Foster Peer Support and Collaboration
- Optimize the Learning Environment
- Enhance Professional Development Opportunities
- Improve Recognition and Rewards

Scheme of Implementation

The output of this study will be addressed to the department of education and identified schools for deliberation and possible implementation.

STRATEGIC PLAN

Objective 1: Enhance Administrative Support

Establish regular communication channels

Implement a system for open and transparent communication between teachers and administrators, such as regular staff meetings, suggestion boxes, and online platforms, to address concerns and provide timely feedback.

Develop a resource allocation plan

Ensure that administrators allocate necessary resources, such as instructional materials, technology equipment, and classroom supplies, in a fair and equitable manner to support teachers' job effectiveness.

Provide mentoring and coaching

Assign experienced administrators or senior teachers as mentors to provide guidance and support to new teachers, helping them navigate challenges and maximize their effectiveness in the classroom.

Conduct professional development for administrators

Offer training programs and workshops specifically designed for administrators to enhance their leadership and management skills, enabling them to better support and understand the needs of teachers.

Establish a teacher feedback system

Implement a structured feedback mechanism where teachers can provide input and suggestions to administrators regarding school policies, procedures, and support systems, ensuring their voices are heard and taken into consideration.

Objective 2: Foster Peer Support and Collaboration

Encourage collaborative planning and sharing of resources

Facilitate regular meetings and workshops that promote collaborative lesson planning, resource sharing, and the exchange of teaching strategies among teachers to enhance peer support.

Implement a buddy system

Pair new or less experienced teachers with experienced mentors who can provide guidance, advice, and support, fostering a strong sense of camaraderie and collaboration within the teaching community.

Establish professional learning communities

Create dedicated groups or communities within the school where teachers with common interests or specialties can come together to share experiences, discuss challenges, and collaborate on projects.

Organize peer observation and feedback sessions

Set up a structured system for teachers to observe each other's classes and provide constructive feedback, encouraging professional growth and the exchange of best practices.

Encourage joint professional development opportunities

Arrange workshops, seminars, or conferences where teachers can attend together, facilitating networking, collaboration, and shared learning experiences.

Objective 3: Optimize the Learning Environment

Invest in technology infrastructure: Ensure that the school has a robust and reliable technology infrastructure, including high-speed internet, up-to-date hardware and software, and interactive learning tools, to support effective instruction and student engagement.

Provide professional development on technology integration

Offer training and workshops for teachers to enhance their skills in utilizing technology effectively for instruction, including online platforms, multimedia resources, and digital assessment tools.

Create flexible learning spaces

Design classrooms and other learning areas that can be easily reconfigured to accommodate different instructional strategies and foster student-centered learning, allowing for collaboration and active participation.

Improve access to learning resources

Develop a comprehensive system for teachers to access a wide range of learning resources, including libraries, digital databases, and online platforms, ensuring they have the necessary materials to support their teaching.

Foster a positive and inclusive school culture

Promote a welcoming and inclusive environment where diversity is celebrated, bullying is not tolerated, and students feel safe and supported, creating a conducive atmosphere for teaching and learning.

Objective 4: Enhance Professional Development Opportunities

Conduct needs assessment surveys

Regularly assess the professional development needs and preferences of teachers to design targeted and relevant training programs that address their specific requirements.

Offer a variety of professional development formats

Provide a mix of in-person workshops, online courses, webinars, conferences, and collaborative learning opportunities to accommodate different learning styles and preferences.

Establish partnerships with educational institutions and experts

Collaborate with universities, education experts, and professional organizations to bring in external expertise, offer specialized training programs, and tap into a broader network of resources.

Encourage action research and reflective practice

Promote a culture of continuous learning by encouraging teachers to engage in action research projects and reflective practice, allowing them to evaluate and improve their instructional strategies.

Support teacher-led professional development

Provide opportunities for teachers to lead and facilitate professional development sessions, allowing them to share their expertise, showcase innovative practices, and contribute to the professional growth of their colleagues.

Objective 5: Improve Recognition and Rewards

Establish a recognition program

Create a formal system for acknowledging and celebrating teachers' achievements and contributions, such as "Teacher of the Month" awards, certificates of recognition, or public appreciation events.

Implement a performance-based evaluation process

Develop a transparent and fair performance evaluation system that recognizes and rewards teachers based on their instructional effectiveness, student outcomes, and professional growth.

Provide professional growth incentives

Offer financial incentives, such as salary increments or bonuses, to teachers who actively pursue professional development opportunities, earn additional qualifications, or demonstrate exceptional teaching practices.

Showcase teachers' success stories

Share success stories and exemplary practices of teachers through newsletters, school websites, or social media platforms, highlighting their achievements and inspiring others.

Involve teachers in decision-making processes

Ensure that teachers have a voice in decision-making processes that affect their work and professional growth, allowing them to contribute ideas and perspectives on recognition and reward systems.

Compliance with Ethical Standards

Any ethical concerns that could have risen throughout the study were resolved by securing necessary permits. Also, the researcher personally handed the research tools to the schools, with the assistance of the administrators, which included the informed consent form and questionnaires. Before data collection began, all research terms and conditions were fully disclosed to maintain transparency. Despite receiving clearance from the school principals and administrators, the researcher obtained informed consent from participants by individually requesting them to participate and providing thorough information about the study, including potential risks and benefits, as well as privacy safeguards. Each participant was asked to review and sign the informed consent form, indicating their comprehension and willingness to be involved in the study. It was optional to provide the participants' names, which were coded to preserve their identity. To safeguard data, further confidentiality measures were put in place, such as limiting access to physical and electronic resources. The study closely followed data privacy and research ethics guidelines, and participants were made aware of their freedom to withdraw from the study at any moment without facing consequences.

EVALUATION OF THE ONE SAFE FUTURE (1SF) PROGRAM OR OPLAN LIKAS IN CAMARIN RESIDENCES 1, CALOOCAN CITY: A BASIS FOR THE DEVELOPMENT OF AN ACTION PLAN

Engr. Lea V. Evangelista, Dr. Raul Roland R. Sebastian

Polytechnic University of the Philippines, Manila, Philippines

https://doi.org/10.5281/zenodo.13207897

ABSTRACT

The study evaluated if the government's One Safe Future Program achieved its objective – providing safe, secure, affordable, and decent resettlement housing with basic services, facilities, and infrastructures to Informal Settler Families (ISFs) in Camarin Residences1, Caloocan City. It determined the extent of ISF's participation in the program's pre-, actual, and post-relocation phases and the relocatees' satisfaction levels in socioeconomic, environmental, institutional, and infrastructure aspects. The study gathered the issues encountered by the respondents and recommendations to improve their situation. The theoretical underpinning is "A Ladder of Citizen Participation" by Sherry R. Arnstein (1969), and New Public Management Theory by Osborne and Gaebler (1992). The concurrent triangulation design mixed methodology was employed. The instruments used were a researcher-made survey questionnaire and a focus group discussion with the implementers and beneficiaries. The results revealed that the extent of participation using the lens of Arnstein (1969) is in the 4th level or Consultation. Per Arnstein (1969), Consultation if not combined with other modes of participation, offers no assurance that citizen concerns and ideas will be considered. Since the relocation in 2015, there were still several lacking services and facilities on the site and the relocatees still face several problems. The action plan developed based on the results could be considered as a refinement to the set of strategies, policies, and programs of the government that would directly address the needs of the people and the problem of urban housing in Metro Manila to achieve inclusive growth, improved human development, and total community improvement.

Keywords: *Informal Settler, Citizen participation, Relocation, Resettlement Site, Urban Housing*

INTRODUCTION

Interrelated factors, including rapid population growth, rural-to-urban migration, inadequate affordable housing for the urban poor, weak governance, economic vulnerability, discrimination, marginalization, and displacement resulting from conflict, natural disasters, and climate change, present significant challenges to urban development and human settlements. These issues contribute to the proliferation of informal settlements (UN-Habitat, 2009, 2011, 2013). According to Williams, Costa, Sutherland, Celliers, and Scheffran (2019), uncontrolled urbanization is a key driver of these informal settlements. This phenomenon exacerbates the vulnerability of the urban poor, who are often situated in high-risk areas with substandard infrastructure and poor housing quality, making them particularly susceptible to the impacts of natural disasters (John R., 2020).

Informal settlers are individuals who lack security of tenure and face significant challenges in accessing basic services such as electricity, potable water, communication, transportation, and income-generating opportunities (Simiyu, Cairncross, & Swilling, 2019; Mensah, 2022). Additionally, they often have limited access to healthcare services (Palacios et al., 2022) and experience poor conditions in schools and health centers (Zulch, Musefuwa, & Yacim, 2019). Their housing is typically of low quality (Somvanshi, 2015) and is frequently located in geographically and environmentally hazardous areas (UN-Habitat, 2015), such as reclaimed landfills with polluted water (Somvanshi, 2015; Palacios et al., 2022) or near high-voltage towers. These conditions exacerbate the vulnerability of the urban poor, who are often situated in high-risk areas with substandard infrastructure and poor housing quality, making them particularly susceptible to the impacts of natural disasters (John R., 2020).

As the primary duty bearer and central actor in human development, the government is responsible for addressing the housing and shelter needs of its citizens, who are the rights holders. This entails ensuring that adequate, affordable, and secure housing is available, aligning with the fundamental rights and needs of the population.

In 2010, after the onslaught of Tropical Storm Ondoy in 2009, then-President Benigno S. Aquino III directed the creation of the Informal Settler Families-National Technical Working Group (ISF-NTWG) led by the Department of the Interior and Local Government (DILG) to ensure safe and flood-resilient permanent housing solutions for ISFs living in danger areas in the National Capital Region (NCR).

In 2011, the One Safe Future (1SF) Program also known as the Oplan LIKAS (Lumikas para Iwas Kalamidad at Sakit) was launched to relocate ISFs living in high-risk areas and along major waterways in Metro Manila. This initiative was implemented for five (5) years from 2011 to 2016 with a fifty billion (PhP 50B) fund to address the

requirements of ISFs living in danger areas to safe settlements. The 1SF Program included the provision of housing units, community facilities, and socio-economic, community support programs encompassing on-site, in-city, near-city, and off-city resettlement projects.

The study assessed the extent of participation of the affected ISFs and stakeholders throughout various phases of the Oplan LIKAS Program. This included the pre-relocation phase (initiation and planning), the actual relocation phase (implementation and monitoring), and the post-relocation phase (evaluation). These phases represent the core components of the project development cycle.

The study also evaluated the level of satisfaction among affected families regarding the implementation of the Oplan LIKAS Program, focusing on socioeconomic, environmental, institutional, and infrastructure aspects. To measure satisfaction, a researcher-developed survey questionnaire was administered, and Focus Group Discussions (FGDs) were conducted with key implementers and beneficiaries. These methods were employed to assess respondents' satisfaction with the program, identify areas of concern encountered by relocatees at resettlement sites, and gather suggestions and recommendations for improving their conditions.

Research Questions

1. What is the extent of participation of the affected ISFs in the pre-, actual, and post-relocation phases of the 1SF Program?
2. What is the level of satisfaction of the ISFs with the program's implementation in terms of the following variables:
    2.1 Socioeconomic Aspect;
    2.2 Environmental Aspect;
    2.3 Institutional Aspect; and
    2.4 Infrastructure Aspect?
3. What are the areas of concern that the respondents encountered at the resettlement site in terms of the following variables:
    3.1 Socioeconomic Aspect;
    3.2 Environmental Aspect;
    3.3 Institutional Aspect; and
    3.4 Infrastructure Aspect?
4. What are the recommendations of the respondents to address the issues and concerns they encountered at the resettlement site?
5. Based on the study's findings, what are the programs of action for the Enhanced Program on Relocation?

METHODOLOGY

The study utilized a mixed-methods approach, which integrates both quantitative and qualitative methodologies within a single research framework. This approach involves the collection and analysis of numerical data (quantitative) and narrative data (qualitative)

to provide a more comprehensive understanding of the research problem. By combining these methods, the study aims to capture the context and subjective experiences of participants while also allowing for broader generalization of the findings to a larger population (researchmethod.net).

In the study, data were analyzed using a concurrent triangulation design. Both quantitative and qualitative data were collected simultaneously and then compared to identify areas of agreement and discrepancy. This integration of findings aimed to provide a more holistic understanding of the research problem.

Quantitative data were collected using a researcher-designed survey questionnaire, while qualitative data were gathered through Focus Group Discussions (FGDs) with the program's key implementers and beneficiaries. To ensure the accuracy of the findings, the results were presented to the respondents for validation. Additionally, a document review was conducted to supplement the data collection process.

In the study, the researcher transcribed the FGDs with the key implementers and beneficiaries and applied a narrative analysis technique to distill interviews into a set of core narratives. In the first step, the narrative blocks of the transcribed data were inductively coded. The second step involved grouping the narratives with the same codes and noting their similarities and differences. The third step involved creating and nesting the codes according to the story structure framework. The fourth step involved delving into the story structures and collating them with each life event code. The similarities and differences were coded to further enrich the analysis. In the fifth step, the narrative blocks were broken into story structures, switched and read between the narrative blocks as a whole without losing sight of the overarching narrative, and dove into each story structure code and paid attention to how these relate across a life event. In the last step, the life-event structures were analyzed to come up with the core narratives.

The quantitative data were organized and categorized according to the phases of the relocation process, facilitating a more detailed analysis and presentation. The data were then presented in relation to the study's key variables: socioeconomic, environmental, infrastructure, and institutional aspects.

Population, Sample Size, and Sampling Technique

The study's total population comprised 883 families resettled in Camarin Residences 1 (CamRes 1), Barangay 175, Caloocan City. These families had previously lived along the Tullahan River, Estero de Maypajo, and other waterway tributaries, including the Caloocan-Navotas River, Casili, and Maligaya Creek. Using Slovin's Formula, 276 families from the CamRes1 resettlement site were selected as respondents.

Description of the Respondents

The respondents for this study included household heads, who are either male or female and typically serve as the primary income earners for their families. These

individuals are beneficiaries or awardees of the housing units provided through the resettlement program.

For the FGD, the participants included key members of the Caloocan City Inter-Agency Committee composed of the District Manager of the National Housing Authority (NHA), Bagong Silang, officials from Barangay 175, the Officer-in-Charge of the Housing and Resettlement Office (HARO)-formerly known as the Urban Poor and Affairs Office (UPAO), the Officer-in-Charge of the City Planning and Development Department (CPDD), the Action Officer of the City Social Welfare and Development Department (CSWDD), and representatives from the offices of the City Administrator and City Engineering.

Additionally, FGDs with beneficiaries included the Homeowners' Association (HOA) President from Buildings A to J of CamRes 1.

Instrumentation

The researcher utilized the following instruments in data collection: (1) a researcher-made survey questionnaire; (2) FGD with the program implementers; and (3) FGD with the beneficiaries.

With the assistance of the Homeowners' Association (HOA) officers, the researcher distributed the survey questionnaires to respondents from each building.

The survey questionnaire comprised four sections: (1) The first section examined the extent of affected families' participation in the pre-, actual, and post-relocation phases of the 1SF Program; (2) The second section assessed the level of satisfaction of the affected families with the program focusing on socioeconomic, environmental, institutional, and infrastructure aspects. It evaluated their level of satisfaction with the community facilities, social infrastructure, and basic services at the resettlement site; (3) The third section identified the challenges faced by relocatees at the resettlement site, specifically regarding socioeconomic, environmental, institutional, and infrastructure aspects. Respondents selected the most relevant answers from the provided options; and (4) the final part gathered the respondents' suggestions and recommendations for improving the program and addressing their concerns, directed at the government and other stakeholders involved in the 1SF Program.

RESULTS AND DISCUSSION

1. The extent of Participation of the Affected ISFs in the Pre-relocation, Actual relocation, and Post-relocation Phases of the 1SF Program

The survey results indicated that informal settler families (ISFs) and affected families attended the general assemblies organized by the Local Inter-Agency Committee (LIAC). All implementers confirmed that the ISFs actively participated in meetings where the

program and relocation processes were discussed. Additionally, it was reported that the National Housing Authority (NHA) facilitated field trips to various resettlement sites, including those in Cavite, Trece Martires, Pandi, and Norzagaray. Ultimately, the ISFs had the opportunity to select their preferred resettlement site.

Sherry R. Arnstein's (1969) Ladder of Citizen Participation categorizes activities such as consultation dialogues, meetings, and information dissemination using various platforms as forms of non-participation or Level 1 Manipulation, a course some use to substitute genuine participation. At this level, the government collects information and builds public relations, and rapport with the people to establish their participation in the program. Respondents recommended that the government should engage affected families in all stages of the program, with particular emphasis on their involvement during the planning process.

In accordance with Part I.1 of the ISF-NTWG Joint Memorandum Circular No. 01 Series of 2013, the relocation of informal settler families (ISFs) is to be carried out on-site, near-city, or in-city, in line with the People's Plan and ensuring adequate and genuine consultation with the families. In 2015, the LIAC conducted a three-day Relocation and Resettlement Action Plan (RRAP) formulation for ISFs living in structures within the three-meter easement and other legally defined danger areas of the city. During the RRAP formulation, the Civil Society Organizations (CSO) representatives presented their People's Plans for consideration and potential mainstreaming in the city's RRAP, provided they complied with city ordinances and policies.

According to Arnstein (1969), meetings or workshops often involve a select group of individuals who are deemed suitable to provide input on the plans. While these sessions allow some level of contribution from less privileged participants, the ultimate authority to evaluate and make final decisions remains with the powerholders. Arnstein (2019) further argues that consultation alone, without integrating other forms of participation, cannot ensure that citizen concerns and ideas are genuinely considered. When powerholders restrict input solely to this level, participation becomes a mere formality rather than a substantive process.

***Cooperative Arrangement and Collaborative Undertaking*.** In the implementation of the 1SF, or Oplan LIKAS Program, the LIAC, composed of the officials of the City of Caloocan, the officials of the barangay, and other functionaries, NGAs, and CSOs, collaborated and coordinated in pursuit of a successful implementation of the program.

***Engagements in Various Undertakings*.** The NHA facilitated house-tripping to several resettlement sites including Trece Martirez, Norzagaray, Pandi Bulacan, and CamRes1 allowing the people the opportunity to select their preferred location. Key implementers stated that they organized *Kumustahan* dialogue and general assemblies with the relocated families to assess their conditions at the resettlement site. These assemblies were conducted regularly and continue to be held to ensure ongoing support and address any emerging issues.

2. Level of Satisfaction with the Implementation of the 1SF Program in terms of Socioeconomic, Environmental, Institutional, and Infrastructure Aspects

The socioeconomic assessment of the relocatees in CamRes 1 yielded a weighted mean score of 2.71, reflecting a Satisfactory rating. This assessment revealed that 12 out of 18 essential services and facilities were available and accessible at the site. This included electricity, an elementary school, a high school, a police station, a barangay hall, a university, a hospital, a church, a health center, and a fire station. Additionally, the presence of roving police officers and barangay enforcers contributed to the overall assessment.

The environmental assessment of the relocatees in CamRes 1 resulted in a total weighted mean score of 2.47, which is categorized as Unsatisfactory. The data revealed that the respondents were unsatisfied with the Sewerage Treatment Plant (STP) in CamRes 1. Respondents shared that the STP's treatment of wastewater and sewage emitted a foul odor in the vicinity. Respondents reported that the STP's wastewater and sewage treatment processes emitted a persistent foul odor, which was perceived as a potential health hazard due to continuous exposure. Additionally, issues with garbage collection were noted: while each building is equipped with a garbage bin, its limited capacity leads to frequent overflow. The lack of waste segregation exacerbates the problem, causing further complaints from residents about unpleasant smells.

In terms of the Institutional aspect, the respondents stated that although they were organized and officially recognized within their building, the HOA lacked autonomy in decision-making. All decisions concerning the site shall be coursed through and coordinated with the LGU and/or the NHA. One of the principles of New Public Management (NPM) according to Osborne and Gaebler (1992) is decentralization, which localizes government power and grants more freedom to organizations or sectors. The aforementioned scenario maintains a hierarchical structure, commonly referred to as a bureaucratic version of conventional administration. This is in contrast to the concept of NPM, which focuses on the decentralization of power from rigid, hierarchical bureaucratic systems to flexible and dynamic managerial support systems. According to Gaebler and Osborne (1992), the NPM also restructures government organizations, dividing their sectors into smaller units and assigning responsibilities to those sectors.

In terms of Infrastructure Aspect, the gathered data resulted in a weighted mean of 2.31 indicating an Unsatisfactory rating. The respondents were satisfied with nine (9) out of 16 facilities present in the resettlement site including roads, streetlights, jeepneys, parking area, telephone lines, internet, basketball court, tricycle, and multipurpose hall. On the other hand, there were seven (7) out of 16 facilities that the respondents were dissatisfied with, specifically the evacuation center, the size of the unit, worn-out or broken fire hydrants, fire extinguishers, hoses within the building, inadequate lighting in the hallway, and the absence of the playground. According to Oplan LIKAS Operational Guidelines No. 1, Series of 2014, resettlement sites are required to include essential community facilities and social infrastructure. These include a church, playgrounds, a

multipurpose hall, adequate parking, access to the main road network, and an evacuation center.

The data indicated that on the day of the relocatees' transfer to the resettlement site, several essential facilities aimed at promoting the general welfare of the people were still lacking. All respondents reported the absence of the playground, and electricity in the covered court, chapel, and market at the site.

The primary aim of implementing the NPM is to secure better services for citizens. However, based on the results of the survey, several essential services and facilities were still missing when the affected families initially moved to the resettlement site. The relocatees felt that they were situated in a place far from their jobs, employment, and business, which brought additional burdens.

The relocatees' overall assessment of the services and facilities in CamRes1, covering socioeconomic, environmental, institutional, and infrastructure aspects, resulted in a weighted mean score of 2.46, or Unsatisfactory. According to the respondents, the displacement adversely affected their families and disrupted their previous way of life. To achieve sustainable development, it is crucial to ensure that people experience equitable and decent living conditions.

Based on the qualitative data collected from the FGD, the following analysis highlights the level of satisfaction of the respondents with the implementation of the 1SF program:

***Contentment*.** The key implementers emphasized that the families were uncontented with the government's ISF program. Mabilin (2014) stated that urban poor communities often resist relocation due to several factors, including limited employment opportunities, insufficient access to water and electricity, distance from educational institutions, and deficiencies in housing quality;

***Frustrations*.** During the general assemblies held two (2) years before the actual relocation, the LGU and NHA provided information to the informal settlers and affected families regarding the monthly amortization and the available services and facilities, including water and electricity. However, according to the respondents, the facilities discussed during the general assembly, such as the market, were not present at the time of relocation;

***Freedom of Choice*.** When asked to compare and given the opportunity to choose, the relocatees still preferred their previous dwellings despite their location in danger areas. Respondents indicated that life was more manageable there due to the availability of various livelihood opportunities and convenient access to essential services; and

***Appreciation*.** Conversely, some respondents expressed gratitude for their relocation. They noted that the move was beneficial as they had previously experienced frequent flooding in their former residences. Additionally, others appreciated the

relocation because it provided them with housing when they previously did not own a home.

3. Areas of Concern that the Respondents Encountered in the Resettlement Site in terms of Socioeconomic, Environmental, Institutional, and Infrastructure Aspect

Based on the gathered data on the concerns of the relocatees at the new site, the LGU and NHA stated that the focus of the Oplan LIKAS is to relocate families immediately from the waterways and danger areas to ensure their safety during disasters and calamities. The implementers, using the allocated funds and budget from the 50B fund, made a concerted effort to comply with the guidelines' provisions, especially those related to the post-relocation programs. The program set specific goals for the LIAC, including government agencies, NGOs, and People's Organizations (POs), to transfer all the targeted families to the new site. The transfer of the relocatees pushed successfully achieving 100 percent of the scheduled ISFs being relocated. The immediate goal was the relocation itself, followed by subsequent site improvements. According to the New Public Management principles outlined by Osborne and Gaebler (1992), the government is required to ensure that citizens have access to essential services and support facilities, thereby enhancing overall service quality and effectiveness.

Based on the qualitative data gathered from the FGD with implementers and beneficiaries, the following analysis outlines the areas and concerns related to the implementation of the 1SF program:

***Growing Population*.** The implementer stated that the transfer of families in the barangay resulted in a growing population which in turn increased the demand for services and facilities;

***Unaffordability and incapacity to pay the amortization*.** The beneficiaries have expressed that the amortization rates for the housing units are unaffordable. According to all FGD respondents, poverty and unemployment significantly hinder most relocatees from meeting the amortization payments. The respondents recommended recalculating the overdue amounts and considering rubbing it back to zero, as many residents with arrears face the risk of having their units cancelled. As noted by Simbolon, Aulia, and Fachrudin (2021), subsidized housing should align with the targets and needs of low-income individuals.;

***Community Support and Development*.** Based on the FGD with the implementer and the beneficiaries, there were several assistances provided to the relocatees in the form of financial and educational: scholarship and school supplies, manpower support, employment, livelihood, capital seeds, seminars, and skills training, processing of ISF documents, and the creation and organization of HOA; and

***Unsustainability*.** When inquired about the status of livelihood assistance, all respondents stated that it is no longer available, and they did not pursue a business or

find employment aligned with the skills they had acquired from livelihood training sessions and seminars. The pandemic in 2019 depleted their financial and livelihood support from the Department of Trade and Industry (DTI), Department of Labor and Employment (DOLE), and DILG, leaving them without the necessary budget to purchase essential ingredients or materials. Respondents expressed a desire for another opportunity to restart. This suggests that the families still lack empowerment. They have not developed a strong sense of ownership or self-reliance. Despite receiving start-up funds and skills training intended to facilitate income growth, they were unable to effectively manage and utilize these resources. According to Osborne and Gaebler (1992), New Public Management (NPM) seeks to empower citizens to become self-sufficient and improve their living conditions.

4. Recommendations of the Respondents to Address the Issues and Concerns they Encountered at the Resettlement Site

Based on the gathered data, the relocatees recommended the establishment of the following five (5) services and facilities at the CamRes1 resettlement site: 1) an individual water meter; 2) a lower amortization rate; 3) a safe sewerage treatment; 4) a market; and 5) functional CCTVs. These facilities received the most responses because relocatees consider it the most important to have or be improved at the resettlement site.

Osborne and Gaebler (1992) stated that in applying the NPM, the government shall adopt a private-sector style of management and forge partnerships with various stakeholders. This approach aims to facilitate the development and enhancement of resettlement sites, including the establishment of essential facilities.

Regarding livelihood and training programs recommended by the relocatees, the top preference is haircutting. This program is favored due to its minimal requirement for space and equipment; with basic tools such as scissors and a comb, relocatees can offer home services and earn a living. Massage or physical therapy ranks as the second-most popular livelihood program. Manicure/pedicure is the third-most recommended program, while soap-making and tailoring are fourth and fifth, respectively. Additionally, relocatees requested capital seed funding or initial support to start a business. They also requested an additional livelihood opportunity from the government.

Proposed Action Plan for the Enhanced Program on Relocation

Activities	Expected Output	Time frame	Target Participants	Resource	Sustainability Measures	Office Responsible
PRE-RELOCATION						
Workshop on the Formulation of Policy Guidelines on Relocation 1. Preparation of draft policy guidelines. 2. Identification of project goals and objectives through brainstorming and concept mapping	Policy Guidelines on Relocation	6 months	National Government Agencies (NGAs), Local Government Units (LGUs),	Logistics Manpower	Conduct quarterly meetings to monitor the status of the implementation of the program. Quarterly monitoring of the CSOs and	Department of the Interior and Local Government (DILG) Local Government Units (LGUs)

3. Preparation of project outline from start to finish 4. Presentation of the draft policy guidelines for comment and feedback from various stakeholders 5. Finalization and approval of the policy guidelines 6. Presentation of the final Policy Guidelines on Relocation			Civil Society Organizations (CSOs), Non-Government Organizations (NGOs), People's Organizations (PO), Informal Settler Families (ISFs)		ISFs in the implementation of the program as planned	
Creation of a Local Inter-Agency Committee (LIAC) composed of NGAs, LGUs, CSOs, NGOs, People's Organizations, and Informal Settler Families	Executive Order on the Creation of the LIAC	1 month	National Government Agencies (NGAs), Local Government Units (LGUs), Civil Society Organizations (CSOs), Informal Settler Families (ISFs)	Legislative Measure	Conduct of quarterly meeting Updating of the legal issuance, as necessary	Local Government Unit (LGU)
Identification of target and priority areas for relocation Tagging and Mapping of Structures	List of priority areas	3 months	National Government Agencies (NGAs), Local Government Units (LGUs)	Logistics Manpower	Regular updating of the list of priority areas Regular conduct of on-site inspection	Department of Environment and Natural Resources (DENR), Metro Manila Development Authority (MMDA)
Conduct of Situational Analysis	Situational Analysis Report	6 months	National Government Agencies, Local Government Units, Civil Society Organizations (CSOs), Non-Government Organizations (NGOs), People's Organizations (PO),	Logistics Manpower	Regular updating of the list of priority areas Regular conduct of on-site inspection Updating of LGU Data	Housing and Resettlement Office (HARO), City Social Welfare and Development Office (CSWDO)

			Informal Settler Families (ISFs)			
Conduct of Census of ISFs • Interview with the ISFs (Household Heads) • Occupancy Verification • Pre-qualification of families • Master Listing of Households • Submission and completion of documents/requirements of the beneficiaries	Master list of ISFs	6 months	Informal Settler Families (ISFs)	Logistics Manpower	Regular conduct of on-site inspection Preparation of Quarterly Report on the Status of the ISFs Updating of LGU Data	National Housing Authority (NHA), Housing and Resettlement Office (HARO)
Conduct of Consultation Dialogue with the affected ISFs for the identification of resettlement sites, housing options, financing scheme, and terms of payment	List of Households	3 months	Informal Settler Families (ISFs)	Logistics Manpower	Regular conduct of consultation dialogue	Housing and Resettlement Office (HARO), City Social Welfare and Development Office (CSWDO)

Conclusions

Based on the findings of the study, the following conclusions were drawn:

Citizen participation, or citizen control, refers to the maximum feasible involvement of the citizens in a program and is the categorical term of citizen power. This study evaluated the extent of the affected families' participation in the three stages of relocation under the 1SF Program, or Oplan LIKAS. According to Sherry R. Arnstein's typology from "A Ladder of Citizen Participation" (1969), which outlines eight levels of participation, the affected families' involvement in implementing Oplan LIKAS can be categorized at the fourth level: Consultation. This level signifies a degree of tokenism, where powerholders allow the underprivileged to voice their opinions but retain the ultimate decision-making authority, as described by Arnstein (1969).

Tokenism is a "participatory" strategy that is best described as a token gesture or a meaningless attempt at involving citizens. According to Arnstein (1969), tokenism can take the form of information-only procedures or consultation processes that have minimal or no impact on changing the status quo. In Arnstein's typology of the Eight Ladders of Citizen

Participation, consultation is identified as the fourth level. The study indicates that consultation alone does not ensure that citizen concerns and ideas are genuinely considered. When powerholders restrict participation to this level, it can become a mere ceremonial act with little real influence.

The RRAP formulation invited the CSOs to participate in the potential mainstreaming of the People's Plan, involving a select group of individuals or LIAC members. Although the people were involved in the program's implementation, they lacked the authority to ensure that the LGU would consider their opinions, as the ultimate decision-making authority remained with the powerholders. According to Arnstein (1969), this level of participation does not guarantee that the power holders will take into account the citizens' concerns.

The methods employed by the government, such as information dissemination through news media, flyers, pamphlets, posters, consultation meetings, general assemblies, and Kumustahan dialogues, were just one-way communication or vehicles from the officials to the citizens. According to Arnstein (1969), restricting participation to this level results in no follow-through, which in turn prevents any change in the status quo. Consequently, the plan remains merely a blueprint, and its implementation may or may not occur. People held the belief that they had already gained power and were actively involved, yet those who perceived themselves as part of the process merely engaged in participation, serving as the program's driving force.

Arnstein (1969) noted that informing citizens about their rights, responsibilities, and options is a crucial step toward genuine citizen participation. The government provided information at the late stage of planning when it had already determined and laid down all the steps and procedures to undertake, leaving little room for negotiation. Implementing planning instruments is crucial for efficient resource allocation and maintaining environmental balance for sustainable urban development. (Nisa, Umilia, Rahmawati, and Samsura, 2023)

Upon measuring the level of satisfaction with the implementation of the 1SF Program since the relocation of the families to CamRes1 in 2015, the researcher found that while some of the plans and programs outlined in Operational Guidelines No. 01 S. 2014, also known as Guidelines in the Transfer of ISF from Danger Areas in the NCR, were successfully implemented, the majority were not.

However, despite the passage of almost a decade, the government still needed to establish other essential basic services and facilities. The findings indicate that the relocatees expressed dissatisfaction with their relocation site, citing various issues and concerns that the government needs to tackle.

The objective of the 1SF Program is to achieve inclusive growth, improved human development, and total community development; however, based on the results and findings of the research, it may be concluded that these aspects were not met. Generally, the families in CamRes1 continue to live below the poverty line, eagerly awaiting

government assistance. Still, the families are requesting assistance to meet their basic needs. According to Maslow's Hierarchy of Needs, if the basic needs remain unmet, we cannot meet the next hierarchy of needs.

Moreover, although for others, the housing units were affordable, some scholars relate affordability to income, where affordability is the relationship between relative price and income. These scholars include Stone (1994), Robinson, Scobie, and Hallinan (2006), and Ndubueze, Gan, and Hill (2009). In general, due to the loss of jobs, income, and inadequate jobs near the site, the majority of the family members were either jobless or unemployed. Consequently, they were unable to pay the amortization, as they had already budgeted their money for their subsistence.

This is one of the reasons why others leased or sold their units and went to Metro Manila with business centers, where they had a chance of finding jobs. According to Cadavid (2010), poverty recycling occurs when impoverished slum dwellers are unable to maintain their new living conditions, leading them to sell or rent their dwellings and return to the slums.

The results showed that although the relocatees are now living in a safer place than their previous dwellings in waterways and dangerous areas, the relocation had negative effects on the people's lives, including loss of income, displacement, changing schools, changing places of work, and alienation. The study concludes that the government should ensure the availability and completeness of all basic services and facilities at the resettlement site before relocating the ISF. This action will guarantee the fulfillment of the families' needs.

Recommendations

Based on the results of the conducted survey and focus group discussions with key implementers and beneficiaries, here are the recommendations.

The government is constantly advocating and promoting participatory governance, citizen engagement, and the whole-of-nation approach in all programs, projects, and activities, affirming that the citizens will be involved in the process, particularly the target beneficiaries or affected populace. However, the government missed the mark by not realizing the real definition and essence of participatory governance through other lenses.

Activities such as information dissemination campaigns, consultation dialogues, and meetings only provide a general understanding of the program's concept and façade, often using technical jargon that is difficult for ordinary people to comprehend. This is also a contributing factor to the government's inability to meet the objectives and expected output of certain programs, which often end in failure and ultimately result in a waste of government resources.

Multi-stakeholders, primarily the beneficiaries and affected populace, should participate in all stages of the development process, including planning, implementation,

monitoring, and evaluation. Participants should actively participate in the process, not just show up. The participants must produce a valuable output to integrate into the government's plan.

In the project development, it is recommended that the government engage the stakeholders, particularly the target beneficiaries and affected families, in identifying the goals and objectives, the expected outcome of the program, and the likelihood that it will be successful.

Most importantly, stakeholders will be involved in planning or preparing the project's outline from start to finish, concept mapping, brainstorming, and drawing the bigger picture of the project.

In the LGUs, accredited CSOs are operating in the locality, which could help in providing ideas, concepts, and designs. These groups could lay the groundwork for developing a more appropriate intervention that directly addresses the issues, concerns, and needs of the community.

The decision-makers should also base the policy guidelines and development plan on the situation reports and the evidence gathered during the situation analysis and evaluation process. The decision-makers could use it as a first tool for formulating policies and plans, methods and approaches, allocating resources, and drafting legislation.

The study highlights the need to formulate a resettlement program through in-depth research, strategic planning, institutional building, active participation from both sending and receiving communities, detailed preparation, execution in accordance with established policies and guidelines, and monitoring and evaluation of the program's output and impact.

The key players could use expectation mapping to determine the people's and government's perspectives on the project and the expected result. When thoughts and ideas align, they can see a unified big picture.

Subsequently, the group may also map the concerns to understand the risks that might arise during the program. This will ensure the fulfillment of the people's needs and desires. Resettlement planning should be comprehensive to achieve the goals and objectives. It is recommended to include both sending and receiving LGUs in the planning workshop to balance both parties' expectations. This approach ensures that the formulated plan benefits both groups, preventing discrimination and resource competition.

The data recommends using a grassroots, bottom-up approach to actively engage the target beneficiaries in all phases of project development. The 1SF, or Oplan LIKAS Program, utilized a top-down approach, involving community participation solely at the informing stage, as per Arnstein's (1969) ladder of citizen participation. The policy

guidelines, which form the foundation of every program, did not incorporate community participation.

In the implementation of the ISF Program, the main consideration is the prompt completion of the relocation based on the regulations and set standards. The number of relocated ISFs and the number of units provided became the measure of the program's success, rather than the fulfillment of the people's needs and their participation in the undertaking. In the execution of the plan, the stakeholders should play a vital role, not just as mere observers but as active partners. During the actual relocation process, community leaders may volunteer to assist their fellow relocatees.

To determine the program's impact, the government should continue to monitor and evaluate the relocatees situation. The government can utilize this information to establish a comparison between the living conditions of the relocated individuals before and after the move. This will help the decision-makers and powerholders take the necessary legislative actions and provide immediate interventions to address the issues and concerns of the people.

They can use results-based monitoring and evaluation (RBME) to analyze and evaluate the PPAs' outputs, outcomes, and impact. Apply this at all program stages to track performance and assess the project's long-term outcomes, not just its short-term ones. The result will serve as the basis for identifying areas for improvement to further enhance the government's future developmental projects, taking into account all sectoral aspects and stakeholders.

Additionally, the people will engage in monitoring the project and evaluate the integration of the agreements made during the initiation and planning phases. The CSOs, NGOs, POs, and beneficiaries shall keep track of whether the government’s projects achieve the intended purpose.

Further, to achieve inclusive growth, the beneficiaries shall be considered active partners in the development process. They should not be considered an audience where their signatures on the attendance sheets measure the success of the programs in attaining their purpose and objectives.

In general, before the national or local government proceeds with the relocation, they have to ensure that the basic services and facilities necessary for the promotion of the general welfare of the people are present, complete, and functional, and they shall continuously expand and modernize the facilities in the resettlement sites.

The government shall continuously expand and modernize the resettlement sites through e-governance by using information and communications technology in the resettlement programs. It will promote transparency, accountability, efficiency, and effectiveness in service delivery. The government should create a database to monitor and evaluate the condition of relocated families. The database could include information on the site's infrastructure, including its functional status, the number and demographics

of the relocated families, the availability of basic services and facilities in the community, the livelihoods of the people, and the provision of capacity-building programs. The NGA and the concerned LGU will be responsible for its management. Other stakeholders, such as NGOs, CSOs, and POs, may view the system to identify their entry points where they could help the government and the people. This would allow the government to prepare a comparative analysis of the panel of data to assess the people's living conditions.

The government may also develop a website as a platform for people to voice their concerns about the resettlement site, their conditions, and the necessary interventions to address these concerns. The government may use it to continuously track and monitor the status of the relocatees.

Compliance with Ethical Standards

For ethical considerations, the researchers obtained the informed consent of the respondents of the study, assured the strict confidentiality of the information, and that the identity would be protected. No conflict of interest exists in the conduct of the study, plagiarism was avoided, there was no bias in the interpretation of the findings and the results were used purely for research.

Acknowledgments

The study would not have been possible without the full support of the following:

To my family, I am deeply grateful, particularly to my husband, Teodoro T. Evangelista Jr., for his unwavering support, which has boosted my eagerness to finish my studies and assisted me during the field data collection;

To my sons, Timothy Louis and Tom Lawrence, who serve as my inspiration and were incredibly understanding when I was very busy studying;

To my adviser, Dr. Raul Roland R. Sebastian, for his unwavering support and for mentoring and coaching me on my research study;

To the officials of the City of Caloocan, LIAC members, officials of Barangay 175, and other participants during the conduct of the FGD with the Key Implementer;

To the HOA Officers for their participation in the conduct of FGD and for assisting me in the distribution and collection of the survey questionnaires and to the cooperative residents of CamRes1.

Most above all, I thank the Lord Almighty for giving me the wisdom and courage to finish my studies for my personal growth and the service of the Filipino people.

EXPLORING THE ENTREPRENEURIAL ACUMEN OF YOUNG WOMEN START-UP ENTREPRENEURS IN CALAMBA CITY, LAGUNA

Frances Nicole O. Sanchez, Dr. Marie Joy Q. Elomina

Colegio de San Juan de Letran-Calamba, Philippines

https://doi.org/10.5281/zenodo.13157301

ABSTRACT

This study explored the experiences of young women managing startups in Calamba City, Laguna. It sought to understand their backgrounds, the challenges they face, the opportunities they see, and the specific training they need. Ultimately, the goal is to develop a customized training program that empowers their entrepreneurial ventures. The researcher explored this phenomenon through a qualitative research method. The target population for this study was composed of young women entrepreneurs. The study sample consisted of eight (8) participants between the ages of 18 and 35. The key instrument of data collection in the study was semi-structured interviews. The researcher subsequently analyzed the collected data though thematic analysis. The findings reveal a common thread of innovativeness and resilience among these women. Despite facing hurdles like limited access to capital, difficulty adapting to the market, competition, operational challenges, and societal biases, many startups demonstrate promising performance and significant growth potential. The study also identified opportunities such as expanding market reach and room for substantial business expansion. The young women entrepreneurs expressed a strong desire for training programs tailored to their needs. They emphasized the importance of hands-on learning methods like workshops, group discussions, case studies, and individual mentorship to support their development. This research led to the creation of a comprehensive training plan that addresses the identified skill gaps. To further support the participants, the program will be complemented by a mentorship initiative. This comprehensive approach aims to equip young women entrepreneurs with the knowledge and skills they need to navigate the complexities of entrepreneurship, ultimately contributing to the growth and sustainability of their businesses in the competitive landscape.

Keywords: *young women entrepreneurs, start-up businesses, Calamba City, Laguna, opportunities and challenges, tailored training plan*

INTRODUCTION

Nature and Scope of the Problem Investigated

Many Filipinos are drawn to starting their own businesses, especially those who come from ordinary backgrounds and want to succeed despite challenges. These stories inspire countless others to become entrepreneurs for financial freedom. For many Filipinos, becoming an entrepreneur is a way to be independent, create new things, and prosper. A recent survey showed a strong entrepreneurial spirit among Filipinos, with 78% wanting to start their own businesses for financial reasons and to support themselves (Monzon, 2023).

Starting a business in the Philippines is not easy. There can be many challenges, from money problems to personal difficulties (Velasco et al., 2016). While many Filipinos believe they can be entrepreneurs, many don't have formal training. This highlights the need for programs to help and develop entrepreneurial skills (Velasco et al., 2016). Younger Filipinos, particularly Generation Z, are entering the entrepreneurial space with a fresh perspective. Their digital fluency, openness to new ideas, and comfort with risk-taking are fueling a new wave of business ventures (MoneySense, 2023). Women are increasingly taking the leap into entrepreneurship, demonstrating confidence in their abilities to launch and run successful businesses (Velasco et al., 2016).

In Calamba City, Laguna, young women entrepreneurs have exhibited remarkable resilience and adaptability, leveraging their entrepreneurial acumen to capitalize on emerging trends and meet evolving consumer demands. Supported by collaborative networks offering mentorship and funding avenues, these entrepreneurs have thrived in the face of adversity. The study of young women entrepreneurs holds a profound fascination for me, driven by a deep sense of admiration for their achievements. Their success stories evoke within me a desire to emulate their path in the future.

Young women entrepreneurs are making a big difference in the society. Their innovative ideas, business ventures, and unwavering dedication hold the potential to drive economic growth, spur technological advancements, and foster social progress. Moreover, the positive ripple effects of their entrepreneurial endeavors extend beyond economic realms, touching the lives of individuals within their communities. Motivated by the growing presence of young women in start-up entrepreneurship and a commitment to promoting diversity in the entrepreneurial landscape, the study embarked on a journey to explore the experiences of a select group of young women entrepreneurs in Calamba City, Laguna.

Research Objectives

Given the increasing number of young women in start-up entrepreneurship, the central aim of this study was to answer this question: What are the perspectives of these young women on managing start-up businesses?

The study sought to answer the following:

1. To determine the profile of start-up entrepreneurs in terms of:
    a. Entrepreneurial traits
    b. Existing operations management practices
    c. Current business performance
2. To describe the opportunities and challenges encountered by selected start-ups owned by young women in Calamba City, Laguna;
3. To identify specific training needs that are relevant to young women entrepreneurs, especially those in the early stage of sustaining their businesses; and
4. To develop a training plan that addresses the challenges and opportunities faced by young women entrepreneurs in Calamba City, Laguna.

Framework Of the Study

Theoretical Perspectives

The study was anchored on the following theories: Entrepreneurial Trait Theory, Resource-Based Theory, and Opportunity-Based Theory. These theories offer valuable insights into understanding oneself, identifying growth strategies, and improving business performance. The conceptual framework for this study incorporates various variables reflecting the objectives and theoretical foundations.

Firstly, the **Entrepreneurial Trait Theory** guides the examination of entrepreneurial traits such as risk-taking propensity, innovation, proactiveness, and resilience among start-up entrepreneurs in Calamba City, Laguna. These traits are crucial in shaping individuals' propensity to engage in entrepreneurial activities and influence their approach to business management.

Secondly, the **Resource-Based Theory** is reflected in the consideration of existing operations management practices, including production planning, inventory management, quality control, and logistics. This theory emphasizes the significance of internal resources and capabilities in gaining competitive advantage, highlighting the importance of operational efficiencies in start-up success.

Thirdly, the **Opportunity-Based Theory** informs the exploration of opportunities and challenges encountered by young women-owned start-ups in the area. Opportunities such as market gaps, emerging trends, and external environmental factors are examined alongside challenges such as barriers, obstacles, and risks, reflecting the dynamic interplay between external factors and entrepreneurial actions.

By integrating these theoretical foundations into the conceptual framework, the study provided a comprehensive understanding of the entrepreneurial landscape in Calamba City, Laguna, and identified specific training needs relevant to young women entrepreneurs in the early stages of sustaining their businesses to achieve growth.

The assessment of entrepreneurial learning among young women start-up entrepreneurs essentially serves as the bridge between understanding the current knowledge and skills possessed by these entrepreneurs to be able to design a targeted training program that can enhance their capabilities further. This strategic approach ensures that the training program directly addresses their learning gaps and equips them with practical tools and knowledge essential for success in their entrepreneurial endeavors.

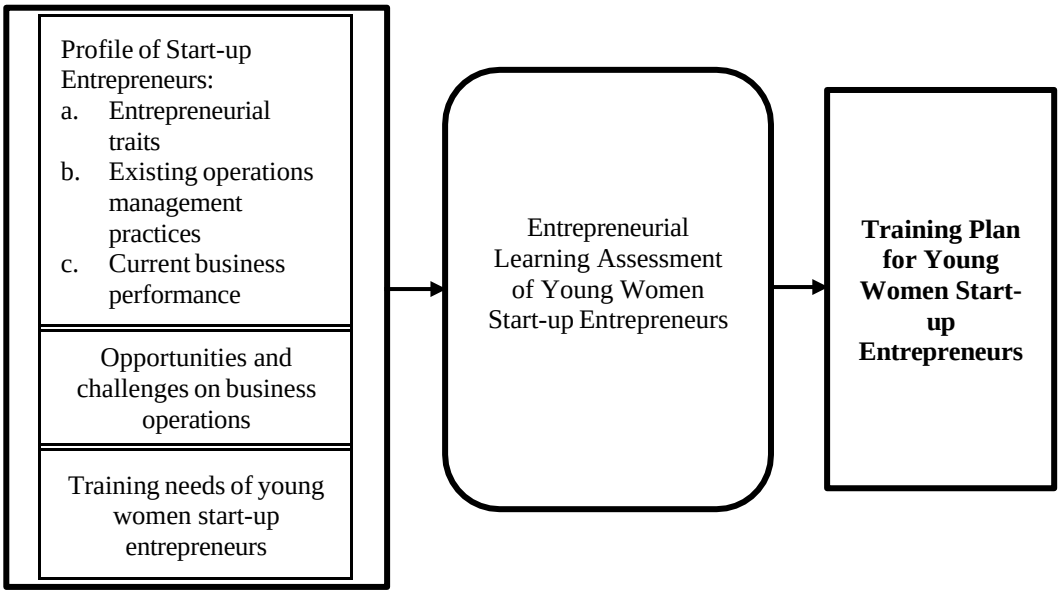

Figure 1. Research Paradigm

Philosophical Lens

Interpretivism asserts that reality is subjective, varied, and socially constructed, emphasizing that understanding someone's reality requires examining their unique experiences, shaped by historical and social perspectives. In studying start-up entrepreneurs, interpretive techniques are employed to characterize participants' profiles, focusing on their lived experiences, perceptions, and interpretations rather than solely on quantifiable data or objective realities. This approach is vital in exploring the complexities of entrepreneurial behavior, decision-making, and responses to challenges and opportunities, recognizing that these actions are influenced by individual perceptions and motivations.

For example, in a study of young women entrepreneurs in Calamba City, Laguna,

interpretivism would enable researchers to delve into how these entrepreneurs perceive and navigate the start-up landscape, uncovering insights into their traits, practices, and the contextual factors impacting their businesses. By embracing interpretivism's qualitative nature, using methods such as interviews and document analysis, researchers can capture the depth and intricacies of entrepreneurial experiences, offering valuable insights for both theory and practical support in fostering start-up success.

Scope and Limitations

The study focused on exploring the experiences of young women entrepreneurs in Calamba City, Laguna through a qualitative research method such as interviews. While the qualitative approach provided rich insights into the challenges and opportunities faced by these entrepreneurs, the sample size was limited to eight participants aged between 18 and 35. This narrow focus may restrict the generalizability of the findings to a broader population of young entrepreneurs in the area.

Additionally, the study aimed to provide in-depth insights rather than statistical generalizations, emphasizing the need for further research to encompass a more diverse range of perspectives and experiences. Despite these limitations, the study offers valuable insights and a foundation for future exploration and support for women entrepreneurs in Calamba City, Laguna.

Operational Definition of Terms

Start-up Entrepreneurship. As used in the study, it refers to business ventures which just opened and established with the goal of expansion and growth in Calamba City.
Start-up Entrepreneurs. They refer to those individuals who just established a business in Calamba City and are on the process of knowledge acquisition and orientation as far as business enterprise is concerned.
Training Program. This refers to the designed output that addresses training needs of start-up entrepreneurs in their business operations.
Women Entrepreneurship. This encompasses the activities that women entrepreneurs in Calamba City undertake from conceptualizing the business, establishing and coordinating its operations, mobilizing and managing resources, assuming risks, and navigating the economic uncertainties inherent in its operation.
Young Entrepreneurs. These are young adults in Calamba City, Laguna whose age ranges from 18-35 years old who initiated start-up businesses.

METHODOLOGY

Research Design

This qualitative study utilized a phenomenological design to explore the

experiences of eight young women entrepreneurs in Calamba City, Laguna. The aim was to gain insights into their entrepreneurial profiles, challenges, and training needs.

Research Setting

The study was conducted in Calamba City, Laguna, known for its growing start-up ecosystem and industrial presence within the CALABARZON region.

Participants

Purposive sampling was employed to select eight young women entrepreneurs aged 18 to 35, operating start-up businesses in Calamba City.

Instrumentation

Semi-structured interviews were conducted using an interview guide to collect data on entrepreneurial traits, operational challenges, and training needs.

Data Construction and Analysis

During the interviews, key terms were clarified to ensure participant understanding. Thematic analysis was then applied to the collected data to identify recurring patterns and themes related to the research objectives.

RESULTS AND DISCUSSION

Profile of Start-Up Entrepreneurs

Entrepreneurial Traits

The entrepreneurial traits and skills identified by the participants highlight key factors that contribute to entrepreneurial success in various industries. Their insights resonate with established concepts in entrepreneurship literature and reflect broader trends observed in entrepreneurial studies. Based on the themes that surfaced, the participants exhibited **innovativeness** and **resilience**. They mentioned words and phrases like **everything is unique**, **creative**, and **we always find ways to improve them**. Their focus on innovation and customer connection aligns with findings by Baron and Tang (2011), which highlight creativity as a critical factor for entrepreneurial success, particularly in consumer-centric industries. Many highlighted their ability to persevere through challenges and pivot their business strategies in response to changing circumstances. The words and phrases they frequently used were **flexible**, **adaptable**, **ability to adapt and persevere**, and **I don't know when to give up**. This is a critical attribute in entrepreneurship, as indicated by Bullough et al. (2014), who discuss the importance of resilience in navigating business challenges. Their emphasis on adaptability and perseverance is key to sustaining and growing a business in a

competitive market. The emphasis on not giving up and facing challenges head-on is indicative of the grit and resilience necessary for long-term success in entrepreneurship.

Operational Practices

The operational practices of the start-up ventures varied, but common strategies included leveraging digital platforms for marketing and sales, fostering customer relationships through personalized experiences, and implementing agile decision-making processes. In exploring the operational practices of various entrepreneurs, it becomes evident that customer service is foundational to their business strategies which stemmed to the key theme **establishing rapport with the customers**. The phrases used were **I talk to people**, **I take care of them**, **they become our friends**, **we get closer**, and **I listen to them**. Key Informant 5 even highlighted focusing on active listening and accepting feedback as key components of exceptional customer service. She believes that understanding and responding to customer needs are paramount for long-term success, echoing the principles of customer relationship management. She states, *"Yes... accepting feedback, I think. That's a skill that an owner should have."* This aligns with the customer-oriented strategy in business, which underscores the importance of understanding and responding to customer needs, a concept widely explored in customer relationship management literature (Payne and Frow, 2013).

Business Performance

Despite facing initial hurdles, the majority of participants reported positive business performance indicators, such as revenue growth, customer acquisition, and brand recognition. The common theme that surfaced among the participants was **rapid capital recovery**. They uttered phrases such as **we're doing well**, **quick return on investment**, **exponential growth**, **very good performance**, **above expectations**, **huge returns**, **fast recoup of investment**, **it's going well**, and **exceeded my expectations**. These businesses were established during the pandemic and such growth trajectory in the post-pandemic market is a testament to the businesses' ability to adapt and meet evolving customer needs. The participants' aspiration to continue this adaptive approach aligns with the strategic agility concept, which is essential for businesses to thrive in dynamic environments, as discussed by Doz and Kosonen (2010). The current business performance and future aspirations of these entrepreneurs reflect a dynamic and forward-looking approach in their respective fields. Each entrepreneur exhibits a unique perspective on business growth, operational efficiency, and customer engagement, which are fundamental components of successful business strategies. These statements indicate that the businesses mentioned are thriving, exceeding expectations, and maintaining financial stability, reflecting positive outcomes and achievements in their operations.

Opportunities and Challenges Encountered by Young Women Start-Up Entrepreneurs

Opportunities

The biggest opportunities identified by these entrepreneurs in the Calamba City market reflect their understanding of market trends, customer preferences, and the importance of strategic expansion and innovation. Based on the themes that surfaced, the participants identified opportunities such as **expanding market reach** and **business expansion**. They mentioned phrases like **to expand and reach more audiences**, **audience extension**, and **to reach a wider audience**. Most participants highlighted leveraging social media to reach a wider audience. This approach reflects the increasing importance of digital marketing and e-commerce in modern business strategies (Kotler & Keller, 2016). Moreover, Key Informant 2 underscored the importance of an online presence for business expansion. This reflects the strategic importance of digital platforms in expanding market reach and enhancing customer engagement (Chaffey & Ellis-Chadwick, 2019). They often used words and phrases such as **branch out to new locations**, **to be able to franchise**, and **franchising**. Franchising emerged as a prominent code, with several key informants recognizing it as a viable strategy for business growth. Franchising provides a structured way of expanding while mitigating risks, a strategy well-regarded in entrepreneurial literature (Segreto, 2022).

Challenges

The main challenges faced by these young women entrepreneurs in Calamba City, along with societal and cultural factors impacting their experiences, reflect a blend of external market conditions and internal business dynamics. Based on the accounts of the participants, the emerging themes were **dealing with business competitors** and **handling common business scams**. These challenges underscore the importance of market understanding, adaptability, and effective business management in the entrepreneurial landscape. The codes generated were **understanding customers**, **identifying customer preferences**, **imitative strategy**, **affordable pricing**, **e-commerce fraudsters**, and **advance-fee fraud**. Key Informant 3 highlights the challenge of introducing a unique cuisine to a market that may be unfamiliar with it. She focuses on expanding her restaurant by opening more branches, intending to blend Vietnamese and Filipino tastes. However, her goal highlights the challenge of maintaining authenticity while adapting to local tastes, a concept supported by the localization strategy in international business (Kotler & Keller, 2016). Additionally, the quote: *"So far, there are those who want to imitate us. Because even our logo has been copied."* suggests a cultural factor where copying successful businesses is seen as a viable strategy. This can be discouraging for young entrepreneurs who invest in creating unique brands and menus. Key Informant 4 addresses the challenges of stiff competition and managing fluctuating customer tastes. This reflects the dynamic nature of the marketplace and the need for continuous innovation and adaptability. Lastly, Key Informant 7 shared a clear encounter with unreliable suppliers which underscores the operational challenges many entrepreneurs face, resonating with the operational risk management strategies

discussed by Brigham and Ehrhardt (2013). Her proactive strategy of switching suppliers and maintaining a positive outlook exemplifies the resilience and adaptive problem-solving skills essential for entrepreneurs, as discussed by Bullough et al. (2014).

Training Needs That Are Relevant to Young Women Start-Up Entrepreneurs

Based on participants' feedback, key support methods identified were **business support groups**, **awareness campaigns for startups**, **workshops**, and **mentorship**. These entrepreneurs seek tailored training programs focusing on crucial areas like financial management, marketing, and networking. Mentorship and funding access were highlighted as critical resources for business growth and sustainability. Key Informant 5 emphasized the value of collaborative marketing efforts within women's groups to enhance business influence. The importance of experiential learning through workshops and mentorship programs was underscored by Key Informant 1 and Key Informant 3, emphasizing practical knowledge and continuous support for skill development and company expansion.

Research supports the effectiveness of experiential learning methods like workshops and mentorship in fostering entrepreneurial competencies and venture success, enhancing problem-solving skills, creativity, and adaptability, and fostering a sense of community among entrepreneurs. Integrating these methods into training programs can enhance support initiatives for women entrepreneurs.

Table 1. Training Plan for Young Women Entrepreneurs

Training Module	Objectives	Content	Methodology	Duration
1. Entrepreneurial Mindset and Resilience	Develop a growth mindset, resilience, and adaptability to overcome challenges in the entrepreneurial journey	• Understanding the importance of a growth mindset and resilience • Identifying personal strengths and areas for improvement • Developing strategies for coping with challenges and setbacks	• Interactive workshops • Group discussions • Personal reflection exercises	4 hours

Training Module	Objectives	Content	Methodology	Duration
2. Market Research and Analysis	Conduct market research, analyze market trends, and identify opportunities for business growth	• Understanding the importance of market research • Learning techniques for conducting market research and analysis • Identifying market opportunities and threats	• Lectures • Case studies • Group projects	6 hours
3. Financial Management for Entrepreneurs	Manage finances, budgeting, and financial planning for business success	• Understanding financial statements and reports • Developing a financial plan • Managing cash flow and budgeting	• Lectures • Group discussions • Practical exercises	6 hours
4. Marketing and Branding Strategies	Develop marketing and branding strategies to reach a wider audience and increase business visibility	• Understanding the importance of branding and marketing • Developing a marketing plan • Utilizing social media and online platforms for marketing	• Lectures • Group discussions • Practical exercises	6 hours
5. Business Strategy and Planning	Learn how to develop a strategic plan for business growth and expansion	• Understanding the importance of strategic planning • Developing a strategic plan for business growth • Identifying key performance indicators and monitoring progress	• Lectures • Group discussions • Practical exercises	6 hours
6. Daily Business Operations	Learn how to manage daily business operations, including administrative tasks, customer service, and HR	• Understanding the importance of daily business operations • Learning techniques for managing administrative tasks, customer service, and HR	• Lectures • Group discussions • Practical exercises	6 hours

Training Module	Objectives	Content	Methodology	Duration
		• Utilizing technology and tools for efficient business operations		
7. Passion and Personal Interest in Business	Explore how to leverage passion and personal interests in business to drive motivation and success	• Identifying personal passions and interests • Aligning business ideas with personal interests • Harnessing passion for business growth and sustainability	• Self-assessment exercises • Case studies • Group discussions	4 hours
8. Mentorship Program	Provide mentorship opportunities for young women entrepreneurs to receive personalized guidance and support from experienced entrepreneurs	• Pairing young women entrepreneurs with experienced mentors • Providing regular check-ins and feedback sessions • Giving practical guidance and support	• One-on-one mentorship • Group discussions • Practical exercises	12 hours (over 3 months)

The training plan is designed to provide young women entrepreneurs with the skills, knowledge, and support they need to succeed in their entrepreneurial journey. The training modules are based on the themes and codes identified from the key informants' statements. The training plan is designed to be flexible and adaptable, allowing for individualized learning and growth. The training modules can be customized to meet the specific needs and goals of each young woman entrepreneur, ensuring that they receive the support and guidance they need to thrive in their business ventures.

Summary of Findings

1. **Profile of Start-up Entrepreneurs:** Young women entrepreneurs in Calamba City exhibited traits of innovativeness and resilience, showcasing their ability to navigate challenges and capitalize on opportunities in the entrepreneurial landscape. Their diverse operational practices reflected a blend of traditional methods and technological advancements, highlighting their adaptability and strategic approach to business management.

2. **Opportunities and Challenges Encountered by Start-ups:** The entrepreneurs identified opportunities such as expanding market reach, leveraging social media for audience engagement, and exploring franchising as a growth strategy. Challenges included competition, business scams, and societal biases, emphasizing the importance of market understanding, adaptability, and effective business management in their entrepreneurial journey.

3. **Training Needs of Young Women Entrepreneurs:** The study underscored the training needs of young women entrepreneurs, emphasizing the necessity for tailored programs in financial management, marketing strategies, networking skills, mentorship, and funding access. Participants highlighted the value of hands-on learning methods like workshops, group discussions, case studies, and individual mentorship to enhance their entrepreneurial capabilities and support their business development.

4. **Development of a Training Plan:** A comprehensive training plan has been created for young women entrepreneurs in Calamba City, addressing their specific needs through modules on financial management, marketing, and personal interests. The program utilizes diverse methodologies to maximize effectiveness, considering time constraints and aiming to equip participants with the knowledge and skills for entrepreneurial success.

Conclusions

1. Young women entrepreneurs in Calamba City exhibit innovativeness and resilience indicating a promising entrepreneurial landscape in the region. Many start-ups have expanded successfully, demonstrating their growth potential despite operational management differences.

2. Young women entrepreneurs confront hurdles such as limited financial access, market adaptability, competitiveness, operational issues, and societal biases, despite opportunities like market demand for distinctive products/services and growth potential. Creating a helpful entrepreneurial environment requires addressing these difficulties.

3. The demand for customized training programs highlights the need to address skill gaps in financial management, marketing, networking, mentorship, and funding for young women entrepreneurs. They enjoy hands-on learning through workshops, group discussions, case studies, and mentorship, which can help them navigate entrepreneurship.

4. A customized training strategy for young women entrepreneurs in Calamba City is crucial for bridging skill shortages and promoting growth and sustainability. The training program includes modules on entrepreneurial mindset, market research, financial management, marketing strategies, business planning, daily operations, and leveraging personal interests, as well as a mentorship program. Multiple

methods accommodate diverse learning styles and time restrictions for optimal effectiveness and relevance.

Recommendations

This study provides valuable insights into young women entrepreneurs in Calamba City, but there's an opportunity to delve deeper and address these identified gaps through the following recommendations: **continuous learning opportunities**, **networking and collaboration**, **feedback and evaluation mechanisms**, **long-term career development plans**, and **future research**. The enhancement of women's entrepreneurship in Calamba City, Laguna requires a multifaceted approach involving education, practical support, research, and policy changes. By addressing these recommendations, there is potential to not only support women entrepreneurs but also to contribute to economic development and gender equality.

Compliance with Ethical Standards

High ethical standards were maintained throughout the duration of the study. To ensure strict adherence to ethical considerations, the following measures were implemented:

- Informed consent and assent were obtained from the respondents by clearly presenting to them their role in participating and allowing them to voluntarily sign the informed consent and assent form;
- The risk of harm to respondents was minimized by strictly adhering to safety protocols against the transmission of COVID-19 and other viruses;
- The confidentiality and anonymity of the respondents were safeguarded by preventing unauthorized access to their personal information and the collected responses. Therefore, real names were not revealed for security and privacy of the companies used;
- The research was conducted truthfully and honestly with the sole objective of doing research and without intending to deceive any respondents; and
- The respondents were afforded the right and freedom to withdraw from participating in the study if they feel uncomfortable or unwilling to continue.

FORMULATION OF CALAMANSI (*Microcarpa*) SOAP ENHANCED WITH BLUE TERNATE FLOWER (*Clitoria ternatea*)

Rebecca Ruiz-Apoy, LPT, MAIE

Cabatuan National High School, Isabela, Philippines

https://doi.org/10.5281/zenodo.13575132

ABSTRACT

This study explored the formulation and development of Calamansi *(Microcarpa)* Bath Soap enhanced with Blue Ternate Flower *(Clitoria ternatea)* extracts, utilizing three different treatments. An experimental design was employed, complemented by descriptive methods to evaluate consumer satisfaction. The study involved sensory evaluation by 30 participants across various age groups, assessing key attributes such as hardness, cleansing, lathering, conditioning, fragrance, and color. Results indicated that Treatment 1 was highly acceptable, particularly among teenagers, and demonstrated strong potential for commercial production. The soap was confirmed safe for use, showing no significant microbial presence, including Staphylococcus aureus and Escherichia coli. Based on these findings, recommendations were made to optimize product formulation, tailor marketing strategies, and conduct further research to enhance product appeal across different consumer segments. This research underscores the soap's market viability and highlights the importance of consumer-centered product development.

Keywords: *Calamansi Bath Soap, Blue Ternate Flower, Experimental Design, Consumer Satisfaction, Product Development*

INTRODUCTION

The increasing demand for natural and eco-friendly personal care products has led to the exploration of novel ingredients and formulations in the cosmetic industry. This

research investigates the development of calamansi soap enhanced with blue ternate flower extracts, aiming to harness the potential benefits of these botanical ingredients in soap production. Soap is a vital personal care product, essential for cleansing and maintaining the skin's hydrolipidic film, which is crucial for moisturizing and protecting the skin (Draelos, 2012). Mild soaps, in particular, are beneficial for dry and sensitive skin, as they clean without stripping away natural oils, leaving the skin feeling refreshed and soothed (Ananthapadmanabhan et al., 2004).

Bath soaps, available in both bar and liquid forms, are indispensable household necessities used daily by consumers (Ildefonso, 2018). They not only cleanse but also help in managing skin problems and maintaining hygiene by eradicating germs (Hodgson, 2015). Traditional soaps, however, often have a high pH level of 9 to 10, which can disrupt the skin's natural pH of 4 to 5, potentially leading to issues like acne and dryness (Ehlers et al., 2001). Thus, there is a growing interest in soaps made from fruits and vegetables, which offer additional benefits such as vitamins and antioxidants that rejuvenate, whiten, and moisturize the skin (Brinkman et al., 2021).

Calamansi, scientifically known as *Citrus microcarpa*, is a small citrus fruit native to Southeast Asia, renowned for its high vitamin C content and antioxidant properties (Algas Alker, 2022; Cheong et al., 2012). Calamansi juice is believed to have various health benefits, including soothing acidity, promoting collagen production, aiding in weight loss, and improving skin health by offering an ascorbic acid burst necessary for tissue development and repair (Tammisetti, 2019). Its chemical composition includes citric acid, which imparts its sour flavor, essential oils that provide aromatic qualities, and flavonoids known for their antioxidant capabilities (Cheong et al., 2012). Additionally, calamansi contains polyphenols with anti-inflammatory properties and moderate levels of tannins, which contribute to its slightly bitter taste (Shahidi & Ambigaipalan, 2015).

The blue ternate flower, *Clitoria ternatea*, is a vibrant flower found in tropical regions, recognized for its rich anthocyanin content, which provides a deep blue hue and potent antioxidant properties (Jain et al., 2013). Traditionally used in Southeast Asian cuisine to color and flavor dishes, the blue ternate flower is also known for its medicinal applications, including diuretic, antibacterial, anti-inflammatory, and antioxidant effects (Mukherjee et al., 2008). It contains bioactive compounds such as flavonoids, alkaloids, and triterpenoids, which contribute to its potential health benefits, including improved blood circulation, enhanced vision, and revitalized skin and hair (Dizon, 2014).

This study seeks to develop a "Blue-Mansi" bath soap, combining the beneficial properties of calamansi and blue ternate flower extracts. The abundance of calamansi in the Municipality of Aurora and its neighboring town of Cabatuan Isabela provides a sustainable source for this endeavor. The oversupply of calamansi often leads to wastage, making this initiative economically and environmentally viable (Bayani, 2020). Meanwhile, the blue ternate flower, though often overlooked, offers numerous health benefits and the potential for broader use in personal care products (Lim, 2016).

By incorporating these natural extracts into soap, the resulting product is anticipated to exhibit enhanced antioxidant, anti-inflammatory, and skin-nourishing

properties. This study also aims to assess the feasibility of the developed soap through sensory evaluation by potential consumers and laboratory testing for its antimicrobial properties, conducted by a government regulatory agency. The innovative Blue-Mansi bath soap represents a competitive alternative to high-priced commercial soaps, offering natural skincare benefits suitable for personal, commercial, and industrial use (Kumar & Bhardwaj, 2018).

Research Questions

This study aimed to develop calamansi bath soap enhanced with blue ternate flower extracts. Specifically, it sought to answer the following questions:

1. What are the processes involved in formulating Blue-Mansi bath soap in terms of the following treatments:
   a. Treatment 1: Using 20 ml calamansi extract, 20 ml blue ternate flower, 59 grams of caustic soda, 150 ml water, and 330 ml coconut oil.
   b. Treatment 2: Using 15 ml calamansi extract, 15 ml blue ternate flower, 59 grams of caustic soda, 150 ml water, and 330 ml coconut oil.
   c. Treatment 3: Using 10 ml calamansi extract, 10 ml blue ternate flower, 59 grams of caustic soda, 150 ml water, and 330 ml coconut oil.
2. What is the degree of consumer acceptability of calamansi bath soap enhanced with blue ternate flower extracts in three treatments in terms of:
   (a) hardness, (b) cleansing, (c) lathing, (d) conditioning, (e) fragrance, and (f) color?
3. Is there a significant difference in the general level of acceptability of the three treatments of calamansi bath soap enhanced with blue ternate flower extracts as perceived by the following group of respondents (a) teenagers, (b) adults, and (c) experts?
4. What is the antibacterial analysis of the calamansi bath soap enhanced with blue ternate flower extracts?

METHODOLOGY

Method of Research Used

The study used an experimental design. The experimental method is a systematic and scientific approach to research in which the researcher manipulates one or more variables, and controls and measures any change in other variables. Moreover, the descriptive method was also used since the respondents completed a survey questionnaire to find out the level of their satisfaction with the developed products.

Materials

The following tools, equipment, and ingredients shall be used during the conduct of the study. Preparatory tools, measuring tools, mixing tools, weighing tools, and curing tools and equipment are used during the conduct of the study as shown in the table below.

Table 1. Tools and equipment used in the development of calamansi bath soap enhanced with blue ternate flower extract

Description				
Preparatory Tools	Measuring Tools	Mixing Tools	Weighing Tools	Curing Tools
Pale	Measuring spoon	Wire whisk	Weighing scale	Curing Rack
Mixing Bowl	Measuring cup	Mixing bowls		Wax paper
Molder				
Hand gloves				

Ingredients

The table below shows the ingredients used in the making of Calamansi bath soap enhanced with blue ternate flower extracts.

Table 2. Ingredients used in developing blue-Mansi bath soap with three treatments

Ingredients	Measurement		
	Treatment 1	Treatment 2	Treatment 3
Caustic Soda	59 grams	59 grams	59 grams
Water	150 ml	150 ml	150 ml
Coconut Oil	330 ml	330 ml	330 ml
Calamansi Extract	20 ml	15 ml	10 ml
Blue Ternate Flower Extract	20 ml	15 ml	10 ml

Data Gathering Instruments

The instrument for data gathering was a score sheet using a quantitative analysis method to determine the acceptability of the products. The responses as to the level of acceptability of the calamansi bath soap enhanced with blue ternate flower extract in terms of *hardness, cleansing, lathing, conditioning, fragrance*, and *color* were determined with the use of a Five-point Likert scale as follows:

Table 3. Scale and Numerical Rating on the acceptability of the Blue-Mansi bath soap

Scale	Numerical Rating	Descriptive Rating
5	4.20 - 5.00	Highly Acceptable
4	3.40 – 4.19	Moderately Acceptable
3	2.60 – 3.39	Acceptable
2	1.80 – 2.59	Slightly Acceptable
1	1.00 – 1.79	Not Acceptable

Data Gathering Procedure

In compliance with research ethics, the researcher prepared a letter addressed to the Teacher III and the Senior High School Focal Person of Cabatuan National High School, Isabelo L. Visaya Jr., Head to seek permission for the conduct of the study as well as to float the evaluation/score sheet particularly designed for the study.

Samples were brought to the Department of Science and Technology (DOST) RO2, Tuguegarao City for microbial analysis.

Upon approval, the Research Aide personally distributed the soaps accordingly. The RA systematically grouped them and visited them for skin effects weekly regarding the experiences/feedback of the respondents. Results were all recorded in the score sheets

From the accomplished score sheets, the scores were tallied, classified, organized, and presented in a tabular form to facilitate in-depth analysis and interpretation of data.

Sensory Evaluation

The finished products were subjected to sensory evaluation. Thirty (30) evaluators from various age groups were selected and properly oriented on what and how to evaluate the products using a score code. The samples were given to the chosen evaluators for evaluation purposes.

Consequently, the evaluators tried the samples from each treatment. Data on the *hardness, cleansing, lathing, conditioning*, *fragrance*, and *color* of each developed product were collected and coded for statistical analysis.

The evaluations and comments were recorded into a designed scorecard. Visitations were done weekly (Monday morning) to record the skin effects and it was done in three weeks. It was suggested that the soap be used daily to ensure fair and just evaluation.

Data Gathering Analysis and Statistical Tools Used

All data were gathered through questionnaires and evaluation forms were administered to the evaluators. The variables were analyzed and interpreted through the Statistical Package for Social Science (SPSS).

RESULTS AND DISCUSSION

Product Development

The soap-making procedure used by Ildefonso (2018) was adapted in the formulation of Blue-Mansi soap. Measurements of caustic soda and coconut oil were same in her study “Development of Calamansi-based Bath Soap” to produce 6 at 100 grams bar. Modifications were made to the weighs to extracts as the researcher saw potentials of Blue Ternate flower in making bath soap. The procedure is listed below step by step.

Procedure

To create the soap, begin by dissolving 59 grams of caustic soda flakes in 147 grams of water, stirring continuously until the mixture is completely dissolved and has cooled. Next, add calamansi and blue ternate flower extract separately, continuing to stir the solution for 20 minutes. Once mixed, gradually incorporate 350ml of oil, ensuring to stir in a single direction for 45 minutes. After thorough mixing, pour the solution into molds and allow it to cool and harden for 24 hours. Following the solidification, remove the soap from the molds and let it age for 20 days to eliminate any potential irritation effects from the caustic soda. Once the aging process is complete, the soaps are ready for laboratory testing, distribution, and evaluation.

Through these stages of development, careful observation and analysis were done to come up with the Blue-Mansi Soap.

The following are the processes, procedures, and methods performed during the formulation of the product:

A. Lye Preparation

1. Measure Caustic Soda and Water
2. Dissolve Caustic Soda to Water
3. Leave Lye to cool within 24 hours

B. Blue Ternate Flower Preparation

1. Harvesting of fresh Blue Ternate Flowers in the morning

2. Wash thoroughly the Blue Ternate Flowers before extracting
3. Use a blender to extract the Blue Ternate Flowers

C. Calamansi Fruit Preparation

1. Harvesting Matured Calamansi
2. Wash thoroughly the harvested Matured Calamansi Fruit
3. Slicing the calamansi into halves.
4. Squeeze the calamansi fruit to extract, be sure to wash your hands before extracting.

D. Blue-Mansi Soap Preparation

1. Mix calamansi extract blue ternate flower extract and coconut oil in a mixing bowl.
2. Mix the solution for 5 minutes.
3. Pour the 206 grams of cooled lye then mix until dense or thickened, it could only be achieved by stirring continuously for 45 minutes.
4. When the mixture of blue-Mansi soap is already dense, pour it into the soap molder, then harden for 24 hours.
5. After 24 hours, remove it from the soap molder by unmolding it.
6. Cure for 20-30 days. The process will remove the irritation effects of caustic soda.

Consumer's Acceptability of Calamansi Bath Soap Enhanced with Blue Ternate Flower Extracts

Table 4. Degree of consumer's acceptability of calamansi bath soap enhanced with blue ternate flower extracts in three treatments (Treatment 1)

Respondents						
Evaluation Criteria	Teenagers	Description	Adult	Description	Expert	Description
Hardness	5.00	Highly Acceptable	4.70	Highly Acceptable	5.00	Highly Acceptable
Cleansing	5.00	Highly Acceptable	5.00	Highly Acceptable	4.60	Highly Acceptable
Lathing	4.90	Highly Acceptable	4.30	Moderately Acceptable	4.50	Highly Acceptable
Conditioning	5.00	Highly Acceptable	4.50	Highly Acceptable	4.70	Highly Acceptable
Fragrance	4.70	Highly Acceptable	3.90	Moderately Acceptable	4.00	Moderately Acceptable
Color	4.60	Highly Acceptable	4.60	Highly Acceptable	4.70	Highly Acceptable
Overall Mean	4.867	Highly Acceptable	4.5	Highly Acceptable	4.583	Highly Acceptable

As can be gleaned from the table, data suggests that the Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts in Treatment 1 was *highly acceptable* to the target consumer groups: teenagers, adults, and experts with an overall mean of 4.65.

In terms of hardness, the soap's hardness received an overall mean of 4.90 and was *highly acceptable* to all three groups, indicating that consumers find the soap's texture to be satisfactory.

With regard to cleansing, the soap's cleansing ability was *highly acceptable* to all three groups with a general mean of 4.87, implying that it effectively cleans the skin according to consumer expectations.

In the matter of lathering, while teenagers with a mean of 4.90 and experts with a mean of 4.50 found the lathering ability *highly acceptable*, adults rated it *moderately acceptable*. This suggests that the soap's lathering might be more preferred by younger users and experts, while adults have a slightly lower preference for this aspect.

As to conditioning, the soap's conditioning properties were *highly acceptable* to all three groups as shown by the overall mean of 4.73, indicating that it provides satisfactory moisturization and softness to the skin.

Regarding the fragrance, with a mean of 4.70, teenagers found the fragrance *highly acceptable*, while adults and experts rated it *moderately acceptable* with a mean of 4.5 and 4.583, respectively. This indicates that the scent of the soap may be more appealing to younger users compared to adults and experts.

In terms of color, with an overall mean of 4.63, the soap's color received *highly acceptable* ratings from all three groups, suggesting that consumers find the visual appearance of the soap appealing.

Overall, the Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts in Treatment 1 was well-received across various aspects by the target consumer groups. It demonstrates *high acceptability* in terms of hardness, cleansing, conditioning, color, and overall mean rating. However, there is a slight variation in preferences for lathering and fragrance among the different groups, with teenagers generally showing higher satisfaction in these areas compared to adults and experts. This information can be valuable for further product development and marketing strategies, considering the target audience's preferences and expectations.

Table 5. Degree of consumer's acceptability of calamansi bath soap enhanced with blue ternate flower extracts in three treatments (Treatment 2)

Respondents						
Evaluation Criteria	Teenagers	Description	Adult	Description	Expert	Description
Hardness	4.90	Highly Acceptable	4.30	Moderately Acceptable	4.80	Highly Acceptable
Cleansing	4.90	Highly Acceptable	4.50	Highly Acceptable	4.60	Highly Acceptable
Lathing	4.80	Highly Acceptable	3.90	Moderately Acceptable	4.30	Moderately Acceptable
Conditioning	5.00	Highly Acceptable	4.10	Moderately Acceptable	4.30	Moderately Acceptable
Fragrance	4.70	Highly Acceptable	3.80	Moderately Acceptable	4.20	Moderately Acceptable
Color	4.70	Highly Acceptable	4.00	Moderately Acceptable	4.30	Moderately Acceptable
Overall Mean	4.833	Highly Acceptable	4.1	Moderately Acceptable	4.17	Moderately Acceptable

As can be seen in the table, data for Treatment 2 suggests that the degree of consumer acceptability of Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts varies among different groups. With a general mean of 4.37, the product is *moderately.*

With regard to hardness, the soap's hardness was *highly acceptable* to teenagers and experts with a mean of 4.90 and 4.80, respectively. However, adults rated 4.30, thus, for them, it is *moderately acceptable.* This indicates that teenagers and experts find the soap's texture satisfactory, while adults have a slightly lower preference in terms of hardness.

As to cleansing, the soap's cleansing ability received *highly acceptable* ratings from all three groups as evidenced by a general mean of 4.67, suggesting that it effectively cleans the skin according to consumer expectations.

In terms of lathering, teenagers with a mean of 4.80 found the soap's lathering ability *highly acceptable*, while adults rated 3.90 and experts rated 4.30 showing that it is *moderately acceptable* for them. This implies that younger users and experts generally prefer the soap's lathering, while adults have a slightly lower preference in this aspect.

With reference to conditioning, the soap's conditioning properties were *highly acceptable* to teenagers as indicated by a mean of 5.00. However, having a mean of 4.10 and 4.30, respectively, adults and experts rated it *moderately acceptable*. This suggests that the soap provides satisfactory moisturization and softness to the skin according to teenagers and experts, but adults have a slightly lower preference in this regard.

Concerning fragrance, teenagers rated the soap's fragrance *highly acceptable* as shown by a mean of 4.70, while adults with a mean of 3.80, and experts with a mean of 4.20 rated it *moderately acceptable*. This indicates that the scent of the soap is more appealing to teenagers compared to adults and experts.

In respect to color, the soap's color received *highly acceptable* ratings from teenagers with a mean of 4.70, while adults and experts both having a mean of 4.30 rated it *moderately acceptable*. This suggests that teenagers and experts find the visual appearance of the soap appealing, while adults have a slightly lower preference in terms of color.

In general, the Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts in Treatment 2 is *highly acceptable* to teenagers, receiving high ratings across all evaluation criteria as exhibited by a mean of 4.833. However, adults and experts find the soap to be *moderately acceptable*. The soap performs well in terms of hardness, cleansing, lathering, conditioning, fragrance, color, and the overall mean rating according to teenagers. Adults and experts, on the other hand, have slightly lower ratings in several aspects, particularly in lathering, fragrance, and conditioning. This indicates that the soap may not fully meet the preferences and expectations of adults and experts compared to teenagers.

Table 6. Degree of consumer's acceptability of calamansi Bath Soap Enhanced with Blue Ternate Flower Extracts in Three Treatments (Treatment 3)

Respondents						
Evaluation Criteria	Teenagers	Description	Adult	Description	Expert	Description
Hardness	4.90	Highly Acceptable	4.00	Moderately Acceptable	4.60	Highly Acceptable
Cleansing	4.70	Highly Acceptable	4.10	Moderately Acceptable	4.50	Highly Acceptable
Lathering	4.60	Highly Acceptable	3.70	Moderately Acceptable	4.00	Moderately Acceptable
Conditioning	4.90	Highly Acceptable	3.70	Moderately Acceptable	4.40	Moderately Acceptable
Fragrance	4.80	Highly Acceptable	3.40	Moderately Acceptable	4.20	Moderately Acceptable
Color	4.70	Highly Acceptable	3.50	Moderately Acceptable	4.50	Highly Acceptable
Overall Mean	4.767	Highly Acceptable	3.733	Moderately Acceptable	4.367	Moderately Acceptable

The data for Treatment 3 suggests that the degree of consumer acceptability of Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts varies among different groups. With these, for the respondents, the product using Treatment 3 is *moderately acceptable* with a grand mean of 4.289.

As to its hardness, the soap was *highly acceptable* to teenagers with a mean of 4.90, and experts with a mean of 4.60. However, adults rated it *moderately acceptable* with a mean of 4.00. This indicates that teenagers and experts find the soap's texture satisfactory, while adults have a slightly lower preference in terms of hardness.

In terms of the soap's cleansing ability, it received *highly acceptable* ratings from teenagers having a mean of 4.70, and experts having a mean of 4.50. However, adults with a mean of 4.10 perceived it as *moderately acceptable*. This suggests that the soap effectively cleans the skin according to the expectations of teenagers and experts, but adults have a slightly lower satisfaction level in this aspect.

With regard to the soap's lathing, teenagers rated the soap's lathering ability with a mean of 4.60 which is *highly acceptable*, while adults and experts rated it moderately acceptable. This implies that younger users generally prefer the soap's lathering, while adults and experts have a slightly lower preference in this regard.

In terms of conditioning, the soap's conditioning properties were *highly acceptable* to teenagers as substantiated by a mean of 4.90, moderately acceptable to experts, and *moderately acceptable* to adults as showed by the means of 3.70 and 4.40, respectively. This suggests that the soap provides satisfactory moisturization and softness to the skin according to teenagers, but experts and adults have a slightly lower satisfaction level in this aspect.

As to fragrance, with a mean of 4.80, the soap's fragrance received *highly acceptable* ratings from teenagers, but it was rated *moderately acceptable* as shown by the means of 3.40 and 4.20, respectively by adults and experts. This indicates that the scent of the soap is more appealing to teenagers compared to adults and experts.

In terms of color, with a mean of 4.70, the soap's color received *highly acceptable* ratings from teenagers and experts with a mean of 4.50, but it was rated *moderately acceptable* by adults as shown by a mean of 3.50. This suggests that teenagers and experts find the visual appearance of the soap appealing, while adults have a slightly lower preference in terms of color.

Overall, the Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts in Treatment 3 is *highly acceptable* to teenagers, with high ratings across most evaluation criteria. However, adults and experts have lower ratings, indicating a *moderate level of acceptability* for these groups. The soap performs well in terms of hardness, cleansing, fragrance, and color according to teenagers. However, adults and experts have slightly lower ratings in several aspects, including hardness, cleansing, lathering, conditioning, fragrance, color, and the overall mean rating. This suggests that the soap may not fully meet the preferences and expectations of adults and experts compared to teenagers.

General Level of Acceptability of the Three Treatments of Calamansi Bath Soap Enhanced with Blue Ternate Flower Extracts as Perceived by Respondents

Table 7. Comparison in the general level of acceptability of the three treatments of calamansi bath soap enhanced with blue ternate flower extracts as perceived by the respondents

Treatment	F-Value	ρ-Value	Decision	Remarks
Treatment 1	2.3722	0.1273	Accept H_0	Not Significant
Treatment 2	17.8606	0.0001	Reject H_0	Significant
Treatment 3	34.9084	0.0000	Reject H_0	Significant

The table displays the comparison between Treatment 1 and the other treatments. Based on the data, it was found that there is no significant difference in the general level of acceptability. The p-value is greater than the significance level (usually 0.05), indicating that the difference is not statistically significant. In addition, the comparison between Treatment 2 and the other treatments shows that there is a significant difference in the general level of acceptability. The p-value is less than the significance level, indicating that the difference is statistically significant. Also, the comparison between Treatment 3 and the other treatments shows that there is a significant difference in the general level of acceptability. The p-value is less than the significance level, indicating that the difference is statistically significant.

The analysis shows that there is no significant difference in the general level of acceptability between Treatment 1 and the other treatments. This means that Treatment 1, which may represent the control or standard formulation of the soap, is perceived to have a similar level of acceptability as the other treatments.

Also, the analysis reveals a significant difference in the general level of acceptability between Treatment 2 and the other treatments. The lower p-value (less than the significance level) indicates that Treatment 2 has a distinct impact on the overall acceptability of the soap compared to Treatment 1 and Treatment 3. This suggests that Treatment 2, which likely involves specific enhancements or modifications to the soap, results in significantly different consumer perceptions and acceptability.

Similar to Treatment 2, the analysis demonstrates a significant difference in the general level of acceptability between Treatment 3 and the other treatments. The very low p-value indicates that Treatment 3 has a substantial impact on the overall acceptability of the soap compared to both Treatment 1 and Treatment 2. Treatment 3

likely introduces unique enhancements or changes that significantly affect how consumers perceive and accept the product.

Overall, the statistical analysis indicates that there is no significant difference in the general level of acceptability between Treatment 1 and the other treatments. However, there are significant differences in the general level of acceptability between Treatment 2 and Treatment 1, as well as between Treatment 3 and Treatment 1. This suggests that Treatment 2 and Treatment 3 have an impact on the overall acceptability of the Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts, while Treatment 1 does not significantly differ from the others. These findings suggest that specific modifications made in Treatment 2 and Treatment 3 result in distinct consumer perceptions and preferences, making them stand out from the control treatment (Treatment 1). Further investigation or analysis would be beneficial to identify the specific aspects or enhancements in Treatment 2 and Treatment 3 that contribute to their significant differences in acceptability.

Antibacterial Analysis of the Calamansi Bath Soap Enhanced with Blue Ternate Flower Extracts

The antibacterial analysis of Blue-Mansi soap is presented in Table 5. The data was obtained from reports analysis made by the Department of Science and Technology (DOST) Regional Office No.2 based in Tuguegarao City, Cagayan.

Table 8. Antimicrobial analysis of the calamansi bath soap enhanced with blue ternate flower extracts

Sample Code	Sample Description	ZONE INHIBITION (mm)	
		STAPHYLOCOCCUS AUREUS	ESCHERICHIA COLI
MIC-0645	Blue Ternate soap	10	7
NEGATIVE CONTROL: Distilled Water		6	6

Based on the report analysis, the test/calibration requested by the researcher is the antimicrobial susceptibility test with the following test methods namely; Staphylococcus Aureus and Escherichia Coli. According to the report analysis, the Blue Ternate soap is partially active in terms of Staphylococcus Aureus at 10 mm while Escherichia Coli is inactive at 7mm. This means that the Blue-Mansi soap is safe to use in terms of staphylococcus while it is inactive in *E.Coli*.

Conclusions

Based on the research findings, it can be concluded that Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts, across various treatments, shows strong potential for development and commercial production. The soap was generally well-received by evaluators across different age groups, exhibiting high levels of acceptability in critical aspects such as hardness, cleansing, lathering, conditioning, fragrance, and color. Treatment 1, in particular, stood out with the highest ratings, indicating its suitability for a broad consumer base. Additionally, the soap was confirmed to be safe for human use, as it showed no significant microbial presence, including *Staphylococcus aureus* and *Escherichia coli*. These findings underscore the product's viability in the market and its potential to meet consumer needs effectively while ensuring safety.

Recommendations

In light of the aforementioned conclusions, the study recommends the following:

1. Capitalize on the positive reception of the Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts in Treatment 1. Focus on maintaining high acceptability in terms of hardness, cleansing, conditioning, color, and overall mean rating. Consider conducting further research and development to optimize the soap's lathering and fragrance, taking into account the slight variation in preferences among different groups.

2. Recognize the variation in preferences among different target consumer groups. Tailor marketing strategies to highlight the aspects that resonate most with each group. For teenagers, emphasize the soap's lathering ability and fragrance, as they showed higher satisfaction in these areas. For adults and experts, emphasize the soap's overall effectiveness, conditioning properties, and natural ingredients.

3. Develop informative materials that communicate the unique benefits of the Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts to the target consumer groups. Highlight the natural ingredients, their skincare benefits, and the soap's ability to cleanse and condition the skin effectively. Address any concerns or questions consumers may have about the soap's lathering or fragrance to build trust and increase adoption.

4. Design packaging that appeals to the target consumer groups while communicating the soap's key attributes and benefits. Consider incorporating elements that convey a fresh and appealing scent for the teenage group. For adults and experts, emphasize the soap's natural and high-quality ingredients. Leverage the positive aspects highlighted in the findings, such as hardness, cleansing, conditioning, and color, in the packaging and branding materials.

5. Conduct additional investigation or analysis to identify the specific aspects or enhancements in Treatment 2 and Treatment 3 that contribute to their significant

differences in acceptability. This could involve conducting surveys, focus groups, or interviews to gather qualitative feedback from consumers. Understanding the specific modifications that made Treatment 2 and Treatment 3 stand out from Treatment 1 will provide valuable insights for product refinement and future development.

6. Based on the findings, consider incorporating the modifications or enhancements present in Treatment 2 and Treatment 3 into the overall formulation of the Calamansi Bath Soap enhanced with Blue Ternate Flower Extracts. This could help improve the overall acceptability of the soap and meet the preferences of the target consumer groups.

7. Leverage the significant differences in acceptability between Treatment 2 and Treatment 1, as well as between Treatment 3 and Treatment 1, in your marketing strategy. Highlight the specific aspects or enhancements that differentiate Treatment 2 and Treatment 3, emphasizing how they contribute to an enhanced user experience. Use this information to position Treatment 2 and Treatment 3 as unique and superior options compared to Treatment 1.

8. Based on the significant differences in acceptability between treatments, consider segmenting the target consumer groups to align with their preferences. Tailor marketing messages and product positioning to each segment, highlighting the treatment option that aligns with their preferences and expectations. This will allow you to better address the diverse needs and preferences of different consumer groups.

9. Keep track of consumer feedback and market trends to ensure ongoing product improvement and innovation. Regularly assess consumer perceptions and preferences through surveys, reviews, and other feedback channels. This will help you stay responsive to changing consumer demands and maintain a competitive edge in the market.

Compliance with Ethical Standards

The researcher adhered to ethical standards throughout the study, maintaining integrity, transparency, and respect for the participants' rights. Informed consent was obtained from all participants before the study, with measures in place to protect their well-being. There were no conflicts of interest, and plagiarism was strictly avoided. The findings were interpreted without bias, and the results were used exclusively for the study.

Acknowledgments

The researcher extends her deepest gratitude to all those who played a crucial role in the successful completion of her research. She is particularly thankful to the participants for their assistance, support, and collaboration. She also acknowledges the

invaluable guidance of her research adviser, the unwavering support of her colleagues at Cabatuan National High School, and the encouragement of her friends. Additionally, she is profoundly grateful for the love and care of her family. Lastly, she expresses her eternal gratitude to the Divine Creator for the gift of life and wisdom.

HAMON NG MAG-AARAL KAUGNAY SA PAGKATUTO AT PAGPAPAHALAGA NG PANITIKAN SA FILIPINO

Irish B. Espinosa, MAEd-Fil[1], Cristina P. Calisang, EdD[2]

[1]Mabato Provincial Community High School, Ayungon, Negros Oriental, Philippines
[2]Metro Dumaguete College, Dumaguete City, Negros Oriental, Philippines

https://doi.org/10.5281/zenodo.13310653

BUOD

Ang pananaliksik na ito ay naglalayong tuklasin ang mga hamong naranasan ng mga estudyante kaugnay sa pagkatuto at pagpapahalaga ng panitikan sa Filipino. Ginamit ang *stratified sampling technique* ng mananaliksik upang matukoy ang respondente na nagmula sa mga sekondaryang paaralan ng Una at Pangalawang Distrito ng Ayungon. May kabuoang 283 na respondente mula Baitang 9. *Validated* sarbey-kwestyoneyr ang instrumentong ginamit sa pangangalap ng mga datos. Para sa estadistikang tritment ng mga datos, ginamit ng mananaliksik ang *weighted mean, mean,* at *spearman's rank-order correlation.* Mula sa nakalap na datos, lumabas: (1) parehong "mataas" ang antas ng hamong nararanasan ng mga mag-aaral sa pagkatuto at pagpapahalaga ng panitikan sa Filipino; (2) "napakababa" at di-umabot sa inaasahan ang kabuoang markang nakuha ng mga mag-aaral sa ginawang pagsusuri sa maikling kuwento; (3) may signifikant na ugnayan ang baryabol kaugnay sa mataas na antas na naranasang hamon ng mag-aaral sa pagkatuto ng panitikan at ang antas na naranasang hamon ng mga estudyante kaugnay sa pagpapahalaga sa panitikan; (4) walang signifikant na ugnayan naman ang hamong nararanasan ng mga estudyante sa pagkatuto ng panitikan at ang performans ng mga estudyante sa pagsusuri ng maikling kuwento; (5) may signifikant at *inverse* na ugnayan sa pagitan ng mga hamong naranasan sa pagpapahalaga ng panitikan at ng performans ng estudyante sa pagsusuri ng maikling kuwento.

Keywords: *Pagkatuto, Pagpapahalaga, Performans, Panitikan*

INTRODUKSYON

Isa sa mga mahalagang pundasyon sa paglinang ng kaalaman ng isang estudyante ay ang pagkaroon ng sapat na kawilihang matuto sa anumang larang ng disiplina—ito man ay may kaugnayan sa Siyensya, Matematika, Kasaysayan, Wika, Panitikan, at iba pa. Sa nakaraang apat na taon ay sinubok ng pandemya ang sanlibutan at apektado nito ang edukasyon, na ilan sa mga dahilan ng naitalang *learning gap* ng mga estudyante. Bukod pa rito, nananatili rin ang Pilipinas sa may pinakamababang antas ng pagkatuto sa bahaging *East Asia* at *Pacific*, tinatayang nasa siyam (9) sa sampung (10) mga Pilipino ang hindi makabasa at makaunawa kahit sa mga payak na teksto at mga babasahing angkop sa edad sampu, ito ay ayon sa *World Bank* (WB) tungkol sa kalidad ng edukasyon sa buong mundo (Domingo, 2023). Kalakip sa ulat na ito, sa loob ng dalawampu't dalawang bansa, napag-alamang kadalasan sa mga nakaranas ng mababang antas ng pagkatuto sa mundo ay napapabilang sa mga rehiyong naninirahan sa rural kumpara sa mga rehiyong nasa urban o mas progresibong lugar.

Sa inilathalang artikulo ni De Vera (2022) na *Epekto ng Lockdown: Binanggit ng UNICEF ang mahinang kasanayan sa pagbasa ng mga estudyanteng Pilipino na isinagawa ng United Nations Children's Fund sa Pilipinas, Vietnam, Laos, Myanmar, at Malaysia, ang agwat sa pagkatuto* o *learning gap* sa Baitang 5 ay nagdagdag ng problema sa pagtuntong nila sa sekondarya dahil karamihan sa kanila ay nahihirapan sa pagbabasa, pagsusulat, at Matematika. Sa pagbalik sigla ng harapang klase, ilan sa problema ng guro ang ipaunawa sa estudyante ang nilalaman ng teksto lalo na sa larang ng pagtuturo ng wika at literatura. Sa pananaliksik nina Totto at Ramos (2021), napag-alamang may mababang performans ang mga estudyante sa pagbasa at pagsulat. Ang mga ito ay indikasyon na dapat may matatag na pundasyon ang mga mag-aaral pagdating sa literasi sa pagbasa at pagsulat. Batay sa layunin ng Departamento ng Edukasyon na makapagprodus ng estudyante na hindi lamang taglay ang kakayahang panlokal kung hindi pati na rin ang pandaigdigang kompetens (DepEd, 2019). Kaakibat dito ang pagpapatupad sa kurikulum na binigyang-tuon ang literaturang hango sa mga babasahing lokal, rehiyunal, pambansa at pandaigdigang panitikan. Ayon kay Delfin (2021), ang pagtuturo ng panitikan ay iilan sa mainam na pamamaraan upang yakapin ng estudyante ang wika, kultura at paniniwala. Kaakibat nito ay dapat maunawaang mabuti ng estudyante ang mga nakatagong kaisipan sa bawat literatura, ito man ay maikling kuwento, alamat, mga kuwentong bayan, mga tula at marami pang iba.

Ayon kay Badayos (mula kay Delfin, 2021), kailangang buhayin ang panitikan upang lubusang makapag-ugnay ang estudyante sa kaniyang kapaligiran. Hindi lamang simpleng matuto ang estudyante batay sa nilalaman ng panitikan, dapat ay humantong sa natatanging pagpapahalaga nito at pagsasabuhay. Sa pagkatuto at pagpapahalaga ng panitikan, binubuksan nito ang pagkakataon para sa estudyante na tumuklas nang malinang ang kanilang kakayahan sa pagbasa at pagsulat. Bagaman may mga pananaliksik na sumuri sa mga hamon na kinakaharap ng estudyante ukol sa akademik performans sa *Filipino*, subalit nakita ng mananaliksik na hindi ito nakatuon sa mga *learning gap.* Ang kasalukuyang pag-aaral ay nakasentro sa kakulangan (*gap*) kaugnay sa lawak ng pagkatuto at ng pagpapahalaga ng estudyante sa pagbasa at pagsulat ng

panitikan. Ito ang pinakamahalagang dahilan na sinaliksik ang suliraning ito dahil nakita ng mananaliksik sa kaniyang mga estudyante na pahapyaw na lamang ang kanilang pagpapahalaga sa mga panitikan.

Dagdag pa, ang mananaliksik, bilang guro ng wika at panitikan ay naglayong tuklasin ang mga suliranin ng mga estudyante kaugnay sa pagkatuto at pagpapahalaga sa panitikan. Nais din ng mananaliksik na matuklasan ang relasyon sa pagitan ng pagkatuto at pagpapahalaga sa performans ng estudyante sa pagsulat ng sariling maikling kuwento. Ang pagkatuto mula sa pagsusuri na ito ay magiging makabuluhan sa mga estudyante at mga guro bilang tagapaglinang at tagapagproseso ng kalidad na edukasyon.

PAGBANGGIT NG MGA SULIRANIN

Ang pag-aaral na ito ay isinagawa upang malaman ang hamon ng mga estudyante kaugnay sa lawak ng pagkatuto at pagpapahalaga ng panitikan sa Filipino.

Nilalayon din nitong sagutin ang mga sumusunod na katanungan:

1. Ano ang antas ng hamon ng mga estudyante kaugnay sa lawak ng pagkatuto sa panitikan sa Filipino batay sa mga sumusunod:
   1.1. Interes sa pagbasa;
   1.2. Pag-unawa sa binasang panitikan;
   1.3 Dulog na ginamit ng guro sa pagtuturo?
2. Ano ang antas ng hamon ng mga estudyante kaugnay sa lawak ng pagpapahalaga sa panitikan sa Filipino batay sa mga sumusunod:
   2.1. Interes sa malawak ng pagbabasa;
   2.2 Interes sa pagsulat;
   2.3 Sariling-kusa sa kritikal na pag-iisip;
   2.4 Pagpapahalaga sa panitikan;
   2.5 Kagustuhan sa pagpapahayag ng sarili?
3. Ano ang performans ng mga estudyante kaugnay sa pagsusuri ng maikling kuwento?
4. May signifikant na ugnayan ba sa pagitan ng hamon ng mga estudyante kaugnay sa pagkatuto at pagpapahalaga ng panitikan sa Filipino?
5. May signifikant na ugnayan ba sa pagitan ng performans ng mga estudyante sa pagsusuri ng maikling kuwento at ng hamon ng mga estudyante sa pagkatuto at pagpapahalaga ng panitikan sa Filipino?

METODOLOHIYA

Disenyo ng Pananaliksik

Ang pananaliksik na ito ay gumamit ng deskripitib-korelasyonal na pamamaraan. Ito ay deskriptib dahil inilalarawan dito ang mga hamon ng mga estudyante kaugnay sa

pagkatuto at pagpapahalaga ng panitikan sa Filipino. Korelasyonal naman ito dahil ang mga baryabol na kumatawan sa pag-aaral na ito ay inilarawan ang signifikant na ugnayan sa isa't isa.

Ang batayan sa pangangalap ng impormasyon ay isinagawa sa pamamagitan ng sarbey-kwestyoneyr. Ito ay maingat na ginawan ng pagsusuri nang sa ganoon ay matukoy ang lawak ng hamon ng estudyante kaugnay sa pagkatuto ng panitikan. Sinuri rin ang lawak ng hamon kaugnay ng pagpapahalaga ng mga estudyante sa panitikan at ang kanilang performans sa pagsulat ng sariling maikling kuwento.

Ang mga datos na nalikom ay ginawan ng interpretasyon batay sa mga hamon na kadalasang naranasan ng mga estudyante sa pagbabasa ng panitikan.

Respondente ng Pananaliksik

Ang mga respondente ng pananaliksik na ito ay ang mga piling estudyante sa Baitang 9 na pinili sa pamamagitan ng *stratified sampling technique* mula sa kabuoang populasyon. Kung saan inasahang nasa dalawang-katlo sa populasyon ng bawat paaralan ang magiging respondente sa pag-aaral na ito. Gamit ang *Slovin's formula*, ipinakita sa ibaba ang distribusyon ng bilang ng mga estudyante sa bawat paaralan:

Paaralan	Populasyon	Sampol
Ayungon National High School	309	113
Ayungon National High School-Carol-an Extension	50	18
Ayungon Science High School	17	10
Mabato Provincial Community High School	110	40
Tambo National High School	280	102
Kabuoan	**766**	**283**

Instrumento ng Pananaliksik

Ang mananaliksik ay gumamit ng sarbey-kwestyoneyr sa pagkalap ng mahalagang datos sa pag-aaral.

Sa unang bahagi, inilahad ng mananaliksik ang paksa at layunin sa pag-aaral sa pamamagitan ng pagpapahayag ng pahintulot. Ipinaliwanag nang malinaw ng mananaliksik na ang impormasyong nakuha ay mananatiling konfidensyal.

Ang mananaliksik ay sumangguni sa kaniyang tagapayo at ipinakita sa tatlong *external experts* na mga masterado sa larangan ng Filipino, upang masiguro ang baliditi ng nilalaman ng instrumento. Tiningnan ng *validators* ang mga *indicators* na nakasaad sa sarbey-kwestyoneyr. Ang mga puna at mungkahi ay isinaalang-alang ng mananaliksik upang mapabuti ang kabuoang nilalaman ng kwestyonyer.

Isinagawa rin ang *dry-run* para masiguro ang *reliability* ng instrumentong ginamit sa 30 na estudyante mula sa Baitang 9. Sinuri ang mga aytem gamit ang *Cronbach's*

Alpha Test. Ang naging resulta sa *Cronbach's Alpha Test* ay ang mga sumusunod batay sa iba't ibang aspekto: interes sa pagbasa=0.700; pag-unawa sa binasa=0.890; dulog na ginamit ng guro sa pagtuturo ng panitikan=0.745; interes sa malawakang pagbabasa=0.732; interes sa pagsulat=0.701; sariling kusa sa kritikal na pag-iisip=0.700; pagpapahalaga sa panitikan=0.711; kagustuhang ipahayag ang sarili=0.724. Batay sa resulta, lumabas na relayabol ang lahat ng aytem na isinama sa sarbey-kwestyoneyr.

Pamamaraan ng Pananaliksik

Pagkatapos ng paunang pagdepensa, isinialang-alang ng mananaliksik ang mga mungkahi ng mga miyembro ng panel. Sumulat ng liham ang mananaliksik upang humingi ng permiso mula sa superbisor ng Dibisyon ng Negros Oriental. Ang *endorsement* mula sa dibisyon ay ipinakita sa mga punong-guro ng mga paaralan at mga estudyante sa Baitang 9. Naging kaakibat ng mananaliksik ang ilang guro sa Filipino sa panahong isinagawa na ang sarbey. Nagtipon ang lahat ng estudyante na lumahok sa pagsagot sa sarbey-kwestyoneyr. Ang mga kwestyoneyr ay kinuha pagkatapos sagutin ng mga estudyante. Sa huli, ang nakalap na impormasyon ay ginawan ng *tally* ng mananaliksik gamit ang *MS Excel* at pagkatapos ay ginawan ng analisis at interpretasyon ang resulta.

RESULTA

Ipinakikita sa Talaan 1.1 na "mataas" ang antas ng hamong nararanasan ng mga estudyante pagdating sa kanilang interes sa pagbabasa.

Talaan 1.1

Antas ng Hamon ng mga Estudyante Kaugnay sa Lawak ng Pagkatuto sa Panitikan sa Filipino Batay sa Interes sa Pagbasa (n = 283)

Aytem	$w\bar{x}$	Berbal na Deskripsyon	Antas ng Hamon
1. Malalalim ang mga salitang ginamit sa akda kaya nangangailangan ng sapat na panahon at tamang pag-iisip.	3.98	Sumasang-ayon	Mataas
2. Pag-uugnay sa mga pangyayari sa binasang panitikan batay sa sariling karanasan at nakikita sa paligid.	3.86	Sumasang-ayon	Mataas
3. Masyadong mahahaba ang akdang kailangang basahin.	3.56	Sumasang-ayon	Mataas
4. Hindi ako masyadong pamilyar sa pagkakaiba sa mga uri ng panitikan at mga elemento nito.	3.23	Nag-aalinlangan	Katamtaman
Komposit	3.66	Sumasang-ayon	Mataas

DISKUSYON

Antas ng Hamon ng mga Estudyante Kaugnay sa Lawak ng Pagkatuto sa Panitikan sa Filipino Batay sa Interes sa Pagbasa

Ipinakikita sa Talaan 1.1 na “mataas” ang antas ng hamong nararanasan ng mga estudyante pagdating sa kanilang interes sa pagbabasa. Nangunguna sa hamon ng mga estudyante ang pagpapakahulugan sa malalim na salitang ginamit sa akda.

Nagpapahiwatig ito na ang mababang kaalaman sa bokabolaryo ay higit na nakaiimpluwensiya sa interes mayroon ang estudyante sa pagbabasa. Naaapektuhan rin nito ang kaniyang pamilyaridad sa akdang binabasa at ang kakayahang iugnay ang mga

pangyayari sa akda sa totoong pangyayari sa buhay. Resulta nito ang pagbaba ng tiwala sa sarili ng estudyante na magbasa.

Pinatunayan naman ito sa pananaliksik nina Gedik at Akyol (2022), kung matutugunan ang mga hamon sa pagbasa gaya ng motibasyon, pag-unawa, at bokabularyo ay uunlad ang kasanayan ng mga estudyante kung matatamo nila ang katatasan sa pagbasa.

Ayon naman pananaliksik ni Diwan (2020), ang kawalan ng interes sa pagbasa ay maituturing na hadlang sa akademikong pagganap ng isang estudyante sa loob ng klase. Nilimitahan nito ang kakayahan sa kritikal na pag-iisip at pag-unlad sa katatasan sa paggamit ng wika. Ito ay maaaring humantong sa hindi matagumpay na pagkamit ng mga estudyante sa antas sekondarya. Pinatunayan lamang ng resultang ito na mababa ang antas ng kawilihan sa pagbasa ng mga estudyante.

Ang Antas ng Hamon ng mga Estudyante Kaugnay sa Lawak ng Pagkatuto sa Panitikan sa Filipino Batay sa ng Pag-unawa sa Binasa

Ipinakikita sa Talaan 1.2 na “mataas” ang antas ng hamong nararanasan ng mga estudyante pagdating sa pag-unawa sa binasa. Ang kahalagahan ng kaalamang panwika ay nakatutulong upang may lubos na pag-unawa sa tekstong babasahin. Kaakibat nito ang pagbibigay ng makabuluhang kahulugan at interpretasyon sa mga pangyayari, kultura at paniniwalang nakapaloob sa teksto. Kung mababa ang antas ng hamon mayroon ang estudyante sa pag-unawa, tataas ang kanilang kumpiyansa sa sariling makilahok sa anumang gawaing ibibigay ng guro sa klase.

Sa pananaliksik nina Abdulrahman at Abu-Ayyash (2019), maituturing na pagsubok sa gamit ng pangalawang wika ang pagpapaunlad sa kakayahang linggwistika, komunikatibo at kakayahang makipag-ugnayan. Kung hindi bihasa sa gamit ng wika ang estudyante ay magdudulot ito nang hindi pag-unawa sa kabuoang nilalaman ng tekstong binasa.

Ang pagkatuto at pag-unawa sa binasang akda ay hindi lamang nalilimitahan sa pagsusuri, pagbibigay-hinuha, at pagpakahulugan sa mga malalalim na salita at talinghaga, kung hindi kinakailangan na angkin din ng estudyante ang kultural na kamalayan upang makaugnay siya sa mga pangyayaring nakapaloob sa akda. Ayon kina Delos Santos et al. (2024), natuklasan na ang kakulangan sa pag-aaral (*study habits*), mababang antas sa pag-unawa, at limitadong bokabularyo ang tatlong pangunahing salik na nakaaapekto sa pag-unawa ng mga estudyante.

Sa kabilang dako, nakaaapekto rin sa antas ng pag-unawa ng estudyante ang panloob na motibasyon ng mag-aaaral. Kabilang dito ang istilo ng pagbasa, sariling saloobin sa pagbasa at pisikal na kondisyon (Labrigas, 2022). Kung mababa ang antas ng motibasyon mayroon ang estudyante, resulta nito ang hindi aktibong pakikilahok sa mga gawaing ibibigay ng guro. Dagdag naman ni Rojas (2022), hindi lamang ang motibasyon ang salik na nakaaapekto sa pag-unawa, pati na rin ang kognitibong salik na

taglay ng estudyante. Lumalabas sa kaniyang pagsusuri na ang bokabularyo, tahanang kinalakihan at ang kultural na kaalaman ng estudyante ay direktang nakaaapekto sa antas ng pag-unawa ng estudyante. Kung kulang ang kultural na kaalaman ng estudyante, mahihirapan siyang iugnay ang mga pangyayari sa akdang babasahin.

Ang Antas ng Hamon ng mga Estudyante Kaugnay sa Lawak ng Pagkatuto sa Panitikan sa Filipino Batay sa Dulog na Ginamit ng Guro

Ipinapakita sa Talaan 1.3 na “mataas” ang antas ng hamon ng mga estudyante kaugnay sa dulog na ginamit ng guro sa pagtuturo. Nangunguna ang paggamit ng pagkukwento sa talakayan at panghuli ang paggamit ng *graphic organizer*. Mahihinuhang nahihirapan ang mga estudyante na matutuhan ang panitikan kung pagkukuwento ang gagamitin ng guro. Malaki ang papel na ginagampanan ng guro sa paggamit ng pagkukuwento bilang dulog sa pagtuturo. Dito nakasalalay ang pag-unawa ng mga estudyante sa akdang tatalakayin.

Sa pagsusuring ginawa nina Fikray at Habil (2022), lumalabas na kadalasan sa mga dulog na ginagamit ng mga guro sa pagtuturo ng ay ang *language model approach* at *cultural model.* Ito ay nakatuon sa mga saligang kaalamang pangwika at pampanitikang nararapat matutuhan ng isang estudyante. Ang *personal growth model* ay nakatuon sa gamit ng wika sa loob ng isang tiyak na konteksto ng kultura. Maiuugnay ang *language model approach* sa mga dulog na nabanggit gaya ng pagkukuwento, pagsasadula, *simulation*, at dugtungang pagkukwento habang ang paggamit ng *video presentation* at *graphic organizers* ay napabibilang sa *cultural model.*

Sa pagkatuto ng panitikan hindi lamang pag-unawa sa akda ang kasanayang nililinang ng guro, kasali na rin dito ang kasanayan sa pagsasalita. Kabaligtaran naman ito sa pag-aaral nina Khaerana at Nurdin (2018), ipinapahiwatig naman na ang pagkukuwento ay nakatutulong na pataasin ang kawastuhan at katatasan ng estudyante sa pagsasalita gamit ang wika.

Ang pagkukuwento, pagsasadula, panonood ng *video,* dugtungang pagkukuwento at ang paggamit ng *graphic organizers* ay nagbibigay-daan sa mga estudyante na iugnay at tumugon sa panitikang binasa kaugnay sa kanilang totoong karansan sa buhay.

Ang Antas ng Hamon ng mga Estudyante Kaugnay sa Lawak ng Pagpapahalaga sa Panitikan sa Filipino Batay sa Interes sa Malawakang Pagbasa

Ang Talaan 2.1 ay ipinakikita na “mataas” ang antas ng hamong nararanasan ng mga estudyante. Nangunguna sa mga hamong ito ang pagbasa nang may katatasan sa paggamit ng wikang Filipino($w\bar{x}$=3.92) habang may pinakamababang *weighted mean* na 3.51 naman ang hamon pagdating sa haba ng babasahing teksto. Ang kakulangan sa kaalamang pangwika ay nagpapababa sa pagnanais ng estudyante sa pagbabasa. Magdudulot ito ng kawalang-gana na unawain ang akdang babasahin, dagdag pa ang hamon pagdating sa pagpapagana ng imahinasyon.

Pinatunayan ito sa pagsusuring ginawa nina Zur et al. (2022), kung saan ilang salik na nakaapekto sa pagnanais ng estudyante na magbasa ay may mataas na antas sa sariling pagsisikap sa pagbabasa, panloob na motibasyon at ang pagpapalagay tungkol sa pagbabasa. Ilan sa mga dahilan na binanggit na nakapagpatataas ng motibasyon sa pagbabasa ay ang kagustuhang tumuklas ng panibagong kaalaman.

Dagdag pa nina Torppa et al. (2019), ang mga mabagal magbasa (*slow readers*) ay may mababang antas sa motibasyon pagdating sa pagbabasa. Habang ang mga nahihirapang magbasa (*struggling readers*) at umunawa ay lumalabas na may mababa antas ng interes sa pagkatuto. Kadalasan din sa kanila ay nakitaan ng mataas na antas ng pagka-*burnout*. Ito ay humahantong sa mababang kasiyahan sa pagbabasa kaysa mga karaniwang mambabasa (*typical readers*).

Sa kabuoan, marapat lamang na paunlarin ang kaalamang pangwika ng mga estudyante, nang sa ganoon ay tumaas ang antas ng kanilang panloob na motibasyon. Kung tataas ang kanilang motibasyon, tataas din ang antas ng kanilang interes sa pagbabasa.

Ang Antas ng Hamon ng mga Estudyante Kaugnay sa Lawak ng Pagpapahalaga sa Panitikan sa Filipino Batay sa Interes sa Pagsulat

Inilalarawan sa Talaan 2.2 ang “mataas” na antas ng hamong kinakaharap ng mga estudyante. Batay sa datos, nangunguna sa mga hamon ang kahandaan sa pagsulat *(w$\bar{x}$=3.86),* sinundan ng pagpapahayag sa sariling pananaw, paggamit ng tamang bantas, at wastong baybay ng mga salita. Ang kakulangan sa kahandaan sa pagsulat ay nagiging hadlang sa mga estudyante na ipahayag ang sariling saloobin o pananaw sa pagsulat. Magiging hamon sa mga estudyante ang wastong gamit ng mga salita at bantas, organisasyon at nilalaman ng tekstong kanilang isusulat.

Sinang-ayunan ito sa pag-aaral nina Toba et al. (2019), na kadalasan sa mga estudyante na nakararanas ng hamon sa pagsulat ay sa mga aspekto ng nilalaman, organisasyon, bokabularyo, gramatika at semantika. Idagdag pa ang mga personal na dahilan gaya ng kakulangan sa pagsasanay sa pagsulat, ang pagkabahala, pagkakaroon ng negatibong pananaw sa pagsulat at ang mababang motibasyon sa pagsulat.

Ayon naman kina Endah et al. (2018), lumalabas sa pagsusuri na ang interes sa pagbasa at pag-unawa sa mga kuwentong pantasya ay may positibong epekto sa kasanayan ng mga estudyante na makapagsulat ng mga kuwentong pantasya. Ibig sabihin, ang batayang kaalaman sa mga elementong nangingibabaw sa uri ng panitikan kaakibat ang pag-unawa ay nakatutulong upang tumaas ang interes ng estudyante na sumulat. Samakatuwid, ang antas ng interes ng estudyante sa pagsulat ay nakadepende sa matatag ang pundasyon ng kaalaman ng estudyante pagdating sa mga simulain sa pagsulat

Ang Antas ng Hamon ng mga Estudyante Kaugnay sa Lawak ng Pagpapahalaga sa Panitikan sa Filipino Batay sa Sariling Kusa sa Kritikal na Pag-iisip

Ipinakikita sa Talaan 2.3 ang “mataas” na antas ng hamon ng estudyante kaugnay sa lawak ng pagpapahalaga ng panitikan batay sa sariling kusa sa kritikal na pag-iisip. Nangunguna sa mga hamon ang pagsusuri ng nilalaman ng panitikan, kasunod ang paglikha ng desisyon, paggawa ng interpretasyon, at panghuli ang pag-uugnay sa dating karanasan.

Malaking hamon sa mga estudyante na paganahin ang kanilang kritikal na pag-iisip sa pagsusuri ng akdang binasa, na nag-apahiwatig ng kakulangan sa kasanayan. Sa pag-aaral nina Velayati et al. (2017), ang mababang kasanayan sa wika, pagpapakahulugan, at bokabularyo ay nagiging hadlang para paganahin ang kasanayan sa kritikal na pag-iisip ng mga estudyante. Nangangahulugan na ang batayang kaalaman sa wika ay susi upang ganap na masuri ang nilalaman ng teksto.

Sa pagsusuri ni Saleh (2019), kadalasan sa mga hamong nauugnay sa mga estudyante pagdating sa kritikal na pag-iisip ay ang kakulangan sa kaalaman ukol sa kritikal na pag-iisip, kakulangan sa sapat na oras, kakulangan sa mabisang komunikasyon at kasanayan sa paglutas ng problema (*problem-solving skills*). Dagdag pa ang salik mula sa tahanan na hindi nakatutulong sa paglikha ng malikhaing kaisipan kaakibat ang motibasyong nakukuha mula sa paligid. Sa kabuoan, kung mababa ang antas ng estudyante sa kasanayan sa kritikal na pag-iisip mataas din ang lawak ng hamong nararanasan ng estudyante.

Ang Antas ng Hamon ng mga Estudyante Kaugnay sa Lawak ng Pagpapahalaga sa Panitikan sa Filipino Batay sa Kabuoang Pagpapahalaga

Ang Talaan 2.4 ay nagpapakita sa “mataas” na antas ng hamong nararanasan ng mga estudyante kaugnay sa pagpapahalaga. Ipinahihiwatig ng resultang ito na ang pagtuklas ng panibagong kaalaman ay nakaiimpluwensiya sa pansariling interes ng estudyante sa pagpapahalaga.

Sa pag-aaral nina Tajoloso et al. (2023), inihayag sa datos na halos 55% ng estudyante sa Baitang 7 ang naiulat na paminsan-minsan lamang ang interes sa pagbabasa; 55% din ang naiulat na nasa 30 minuto hanggang isang oras lamang ang ginugugol sa pagbabasa dahil karamihan ng mga estudyante ay mas babad sa *Facebook, Tiktok* at pakikipag-*tex*t o pakikipag-*chat* araw-araw. Nabanggit din ang ilang hamong nakaaapekto sa interes sa pagbabasa ay mga gawaing-bahay, paglalaro ng mga *online games*, at panonood ng mga serye sa telebisyo o pelikula. Hindi maikakailang sa panahon ngayon, kadalasan sa mga inaatupag ng mga estudyante ay ang *gadget*. Hindi man napalitan ang tradisyunal na aklat bilang pangunahing kagamitan sa pagkatuto, subalit hindi rin maitatanggi ang impluwensiya ng makabagong teknolohiya sa kabuoang gawi ng mga estudyante.

Lumalabas sa isang pananaliksik na ang mga estudyante na nagbabasa ng mas mahirap na aklat ay hindi gaanong nagaganyak na basahin ang mga ito. Dagdag pa, ang pagsusuri sa pagitan ng isahang pagbabasa ng aklat ay direktang may ugnayan sa panloob na motibasyon ng mambabasa (Locher et al., 2019). Samakatuwid, kung ang estudyante ay may motibasyong magbasa para sa personal na pag-unlad at kasiyahan, mapapahalagahan niya ang alinmang akdang babasahin.

Mula sa datos, makikita na ang lahat ng hamong nararanasan ng mga estudyante kaugnay sa kabuoang pagpapahalaga ay may kinalaman pa rin sa salik ng interes sa pagbabasa. Kung malaking hamon sa mga estudyante na tumuklas ng panibagong kaalaman, bababa rin ang kanilang interes sa pagbabasa.

Ang Antas ng Hamon ng mga Estudyante Kaugnay sa Lawak ng Pagpapahalaga sa Panitikan sa Filipino Batay sa Kagustuhang Magpahayag ng Sarili

Ipinakikita sa Talaan 2.5 na “mataas” ang antas ng hamong nararanasan ng mga estudyante kaugnay sa kanilang kagustuhang ipahayag ang sarili. Naging hamon sa mga estudyante na magbigay ng sariling paglalahad, paglalarawan, pagsusuri, pagbibigay interpretasyon at pag-iisa-isa sa mga kultura at paniniwala sa tekstong babasahin. Ang mga ito ay nagiging hadlang sa kabuoang pagganap ng estudyante na ipahayag ang sarili sa klase, sa pasulat o pasalitang pamamaraan. Maaaring magdulot ito ng negatibong saloobin sa pagpapahayag, tulad ng di-pakikilahok sa mga gawain, mababa ang tiwala sa sarili, takot na magkamali, at ang pagkahiya.

Masasalamin ang pagpapahalaga sa panitikan sa pamamagitan ng pagsusuri sa nilalaman ng akda. Pinatunayan ni Alvandi (2019), na kinakailangang gamitin ang iba’t ibang teoryang pampanitikan sa pagsusuri ng panitikan. Sa kaniyang panayam sa apat na guro, nakikita ng mga guro ang pangangailangan sa paggamit teoryang pampanitikan kasabay ang literatura na kapwa benipisyal sa pag-unawa ng estudyante at sa kanilang paligid.

Sa pag-aaral nina Fakhroo at Bulaila (2021), ang integrasyon ng akdang pampanitikan ay nagpapabuti sa pagganap ng mga estudyante sa kanilang akademikong pagsulat. Nakitaan din ng positibong saloobin ang mga estudyante sa pagsulat. Subalit may mga hamong nararanasan ang estudyante sa pagsulat, kabilang na rito ang pagsulat ng introduksyon, katawan, kongklusyon sa mga akademikong gawain, paggamit ng mga kaugnay na salita, organisasyon ng ideya, at ang tamang gamit ng wika.

Ayon naman kina Mekonnen et al. (2022), inilalarawan sa kanilang pagsusuri na dapat bigyang-pansin ang kaangkupan ng akdang panitikang ibibigay sa mga estudyante. Kailangang isaalang-alang ang karanasang pampanitikan ng estudyante. kultural na kaalaman, kakayahan sa wika, at ang antas ng pag-unawa.

Ang paggabay ng guro sa proseso ng paggawa ng pagsusuri, pagsulat at ang paggamit ng angkop na akdang susuriin ay nakatutulong upang matagumpay na

maipahayag ng estudyante ang kanilang ideya. Dagdag pa ang mga serye ng pagsasanay sa pagsulat.

Performans ng mga Estudyante Kaugnay sa Pagsusuri ng Maikling Kuwento

Ang kabuoang performans ng mga estudyante ay nasa 70.54% o di-umabot sa inaasahan. May *standard deviation* itong 6.68. Ito ay katumbas sa mababa at di-umabot sa inaasahan kahit bumalik na sa harapang klase sa kasalukuyan. Sinasalamin pa rin nito ang puwang (*learning gap*) na umusbong kahit sa panahon na ng *new normal*. Sa pagsusuri sa mga kasagutan, hanggang sa pagkilala lamang ng tagpuan, tauhan at tunggaliang nangingibabaw sa akda ang kalimitang nasagutan. Nakaligtaan ng mga estudyante ang pagpapalalim ng kanilang interpretasyon, pagpapaliwanag at pagbibigay-hinuha batay sa nabasang maikling kuwento lalo na pagdating sa kabisaan ng panitikan sa isipan, damdamin at asal. Dagdag pa ang mababang antas ng katatasan ng estudyante sa gamit ng wika. Iilan lamang sa mga estudyante ang gumamit ng purong Filipino sa pagpapaliwanag.

Pinatotohanan ito ng resulta na inilabas ng *Programme for International Student Assessment* (2023), kung saan ang Pilipinas ay nakakuha ng humigit kumulang 120 puntos na mas mababa kaysa karaniwang marka sa pagtatayang ginawa noong 2022. Kung saan nasa 347 na puntos lamang ang nakuha ng Pilipinas para sa pagbabasa, kompara sa 476 *average* na puntos na nakuha ng mga bansang napapabilang sa *Organization for Economic Cooperation and Development* (OECD).

Ayon kina Ranque et al. (2024), inihayag na ang kahusayan ng mga estudyante sa paggamit ng wikang Filipino sa akademikong komunikasyon ay mataas. Sa pagtataya naman sa pagsulat at pagsasalita ay makikitaan lamang ng madalas na pagkilala sa *performance-based* na pagtataya lalo sa teknikal at akademikong pagsulat.

Dagdag pa nina Clinton et al. (2020), mas mataas ang markang nakuha ng mga estudyante sa pagbibigay-hinuha sa mga tekstong pasalaysay kaysa sa tekstong ekspositori o imformatib. Ipinapakita lamang nito na ang kakayahan ng estudyante sa pagsusuri ng alinmang teksto ay kinakailangan ng malalim na pag-unawa bago pa man magbigay ng kaukulang hinuha at interpretasyon. Sa ganitong paraan maiuugnay ng estudyante ang mga idea sa isang akda sa totoong nangyayari sa buhay.

Ugnayan sa Pagitan ng Hamon ng mga Estudyante kaugnay sa Pagkatuto at Pagpapahalaga ng Panitikan sa Filipino

Ipinakikita sa Talaan 4 ang *bivariate analysis* ukol sa kaugnayan ng hamon ng mga estudyante kaugnay sa pagkatuto at pagpapahalaga ng panitikan sa Filipino. Gamit ang *Spearman's Rank Order Correlation*, inilalahad na ang *p-values* ng lahat ng kapares na baryabol ay mas mababa sa *level of significance* (0.05).

Ang resultang ito ang nagpapahintulot sa pagtanggi sa *null hypothesis* na nagpapahiwatig na may signifikant na ugnayan sa pagitan ng mga baryabol na iniuugnay sa isa't isa. Ibig sabihin na ang mga estudyante na nakararanas ng "mataas" na antas ng hamon sa pagkatuto ng panitikan ay nakararanas din ng "mataas" na antas ng hamon sa

pagpapahalaga ng panitikan sa Filipino. Nagpapahiwatig lamang ito na apektado ang antas pagpapahalaga ng panitikan sa Filipino kung hindi rin ganoon katatag ang pundasyon ng kanilang pagkatuto. Ipinapakita nito ang ugnayan sa pagitan ng proseso ng pagkatuto at pagpapahalaga.

Natuklasan sa isang pagsusuri na may direktang ugnayan ang antas ng kawilihan sa pagbabasa at ang antas ng kawilihan sa pagkatuto ng estudyante sa pag-unawa sa pagbasa ng teksto (Lustyantie & Aprilia, 2020). Ang interes sa pagbasa at sariling pagganyak (*motivation*) ay nakaimpluwensiya sa tagumpay ng antas ng pag-unawa. Kung mataas ang kanilang interes, mas mahusay at matagumpay rin ang pag-unawa na mayroon ang estudyante.

Pinatotohanan naman ito sa pananaliksik nina Kurniati et al. (2023), na may positibong ugnayan sa pagitan ng interes sa pagbabasa at pag-unawa. Kung mababa ang interes ng estudyante sa pagbabasa, apektado nito ang kakayahan ng estudyante na unawain ang alinmang tekstong babasahin. Sa pananaliksik nina Hughes et al. (2021) lumalabas na ang tahasang pagtuturo ng pagbabasa at pagsulat ay nagpapahusay sa kakayahang sa pag-unawa sa pagbabasa ng mga estudyante. Maaaring pagsabayin ang paghasa sa kasanayan sa pagsulat at pagbasa nang hindi nalilimitahan ang paglinang ng literasi sa dalawang kasanayan. Sa pag-aaral naman ni Hafeez (2021), nadagdagan ang interes ng mga estudyante na makilahok sa klase pagkatapos lumahok ng mga guro sa palihan tungkol sa makabagong estratehiya sa pagtuturo. Nagpapahiwatig lamang ito na ang mga pagsasanay ng mga guro ay nakatutulong upang pumili ng mahusay at angkop na pamamaraan sa pagtuturo.

Sa kabuoan, magkabuhol ang pagkatuto at pagpapahalaga sa isa't isa. Marapat lamang matugunan ang mga hamong nararanasan ng mga estudyante sa pagakatuto nang sa ganoon ay tumaas ang antas ng kanilang pagpapahalaga.

Ugnayan sa Pagitan ng Performans ng mga Estudyante sa Pagsusuri ng Maikling Kuwento at ng Hamon ng mga Estudyante sa Pagkatuto ng Panitikan sa Filipino

Ipinakikita sa Talaan 5.1 ang pagkilala sa ugnayan sa pagitan ng hamon kaugnay sa pagkatuto ng panitikan sa Filipino at performans ng mga estudyante sa pagsusuri ng maikling kuwento. Lahat ng *p-values* ay mataas sa antas ng kahalagahan (0.05). Ipinakikita rin sa talaan na sa mga sumusunod na aspekto, walang signifikant na ugnayan sa pagitan ng performans ng mga estudyante sa pagsusuri ng maikling kuwento at hamon kaugnay sa pagkatuto ng panitikan sa Filipino ang: interes sa pagbasa ng panitikan ($p = 0.052 > \alpha = 0.050$); pag-unawa sa binasang panitikan ($p = 0.124 > \alpha = 0.050$) at; dulog na ginamit ng guro sa pagtuturo ng panitikan($p = 0.965 > \alpha = 0.050$). Sumasalamin ito na sa kabila ng mga hamong nararanasan ng mga estudyante sa pagkatuto ng panitikan sa Filipino ay hindi ito direktang maiuugnay sa performans ng mga estudyante sa pagsusuri ng maikling kuwento.

Iminumungkahi ng resultang ito na ang ibang salik gaya ng mga pamamaraan o metodo sa pagtuturo ng panitikan at pansariling interes ng mga estudyante sa panitikan ay maaaring mas mahalagang papel sa kanilang performans pagdating sa panitikan. Batay sa pag-aaral nina Adamma et al. (2018), ang pangganyak ay nakatutulong na

mapabuti ang akademikong performans ng mga estudyante at ang motibasyon na ito ay may pagkakaiba depende sa kasarian at akademikong pagganap ng estudyante.

Ugnayan sa Pagitan ng Performans ng mga Estudyante sa Pagsusuri ng Maikling Kuwento at ng Hamon ng mga Estudyante sa Pagpapahalaga ng Panitikan sa Filipino

Inilalarawan sa Talaan 5.2 na may signifikant na ugnayan sa pagitan ng pagpapahalaga ng panitikan sa Filipino at ang performans ng mga estudyante sa pagsusuri ng maikling kuwento. Lahat ng *p-values* ay mas mababa sa *level of significance* (0.05) at lahat ng *rs-values* ay negatibo. Nagpapakita ito na may signifikant at *inverse* na ugnayan sa pagitan ng limang hamon kaugnay sa antas ng pagpapahalaga ng panitikan sa Filipino at ang performans ng mga estudyante sa pagsusuri ng maikling kuwento. Nagpapahiwatig ito na kung nakararanas ng “mataas” na antas ng hamon sa pagpapahalaga ang mga estudyante, “mababa” rin ang kanilang performan sa pagsusuri.

Sa pananaliksik nina Aclinen at Olesio (2023), pagdating sa kasanayan sa pagbabasa, kadalasan sa hamong kinakaharap ng mga guro ay parehong mababa ang antas ng kasanayan sa pagbasa at pag-unawa mayroon ang mga estudyante. Iminungkahi naman ng mananaliksik na magaganyak ang estudyante sa pagbabasa sa pamamagitan ng estratehiyang sama-samang pagkatuto *(collaborative learning).* Lumalabas naman sa pagsusuri ni Nguyen (2022), na ang integratibong pagtuturo ng pagbasa at pagsulat sa mga aralin tungkol sa pagsulat ay mayroong positibong epekto sa bahagi ng mga estudyante patungkol sa wika, oragnisasyon, nilalaman, matagumpay na komunikasyon at pagsusuri. Sa ganitong paraan mas tataas ang interes ng estudyante sa pagsusulat, hindi lamang para maipasa ang alinmang gawain ng guro kung hindi bilang pagpapahalaga na rin sa bisa ng panitikan.

Sa kabuoang pagpapahalaga at ang kagustuhan sa pagpapahayag sa sarili sa pamamagitan ng pagsusuri, ipinapakita mula sa datos na may signifikant na ugnayan ito sa performans ng mga estudyante sa pagsusuri. Pinatotohanan ito sa resulta sa pagsusuri ni Magulod (2018), kung saan may katamtamang antas ang kabuoang pagpapahalaga sa pampanitikan ng mga estudyante. Ngunit salungat naman ito sa antas ng kasanayan sa pagpapahalagang pampanitikan gaya lamang pagkilala sa mga umiiral na pananaw, kakayahang magbigay ng sariling hatol batay sa teksto, pagkilala sa mga pilosipiya lutang sa teksto, at kakayahang igunay ang akda sa totoong pangyayari sa buhay.

Kongklusyon

Malinaw na ang mga estudyante ay nahaharap sa malalaking hamon sa pagkatuto at pagpapahalaga ng panitikan sa Filipino, na nagdudulot ng negatibong epekto sa kanilang performans, partikular na sa pagsusuri ng maikling kuwento. Ang mababang marka ng karamihan sa mga estudyante, na di-umabot sa inaasahang antas, ay nagpapakita ng kakulangan sa kasanayan sa kritikal na pag-iisip na inaasahan sa Baitang 9. Ang mga hamong ito ay may kaugnayan sa kanilang interes, kasanayan sa pagbasa at pagsulat, at kakayahan sa pagproseso ng impormasyon. Upang mapabuti ang kanilang pagganap, mahalagang tugunan ang mga hamong ito sa pamamagitan ng mga angkop

na estratehiya sa pagtuturo. Sa ganitong paraan, mapapataas ang antas ng interes at positibong saloobin ng mga estudyante sa pagkatuto at pagpapahalaga ng panitikang Filipino, na magreresulta sa mas mataas na antas ng kasanayan at pag-unawa.

Rekomendasyon

Batay sa mga natuklasan ng pag-aaral na ito, inirerekomenda ng mananaliksik para sa mga mag-aaral, guro, punong-guro at superbisor ng Filipino, at sa susunod na mananaliksik ang mga sumusunod:

1. **Para sa mga Mag-aaral**. Paunlarin ang kasanayan sa pagbasa, pagsulat, kritikal na pag-iisip at maging aktibo sa pakikilahok sa iba't ibang gawain sa paaralan.

2. **Para sa mga Guro.** Lumahok sa *seminar*, *workshop* at iba pang gawain na magpalalawak ng kaalaman sa konteksto ng mga akdang pampanitikan at mga epektibong estratehiya sa pagtuturo**.**

3. **Para sa mga Punong-guro at mga Superbisor ng Filipino**. Siguraduhing may regular na suporta ang mga guro na lumahok sa mga palihan alinsunod sa kanilang sabjek na itinuturo.

4. **Para sa Susunod na Mananaliksik.** Magsagawa ng pananaliksik at ikumpara ang mga resulta ng pag-aaral sa iba't ibang antas ng edukasyon (elementarya, sekondarya, at tersyarya) upang makita ang mga pagbabago sa antas ng pagpapahalaga at pagkatuto ng panitikan sa bawat yugto ng edukasyon.

Etikal na Konsiderasyon

Ipinakita ng mananaliksik ang mga kailangang etikal na konsiderasyon sa pagsagawa ng pag-aaral. Tiniyak ng mananaliksik na mananatiling konfidensyal ang mga kasagutan ng mga respondente. Ang pagsasaalang-alang sa dignidad at pribadong punto ng mga respondente ay pinahalagahan ng mananaliksik.

Ang mananaliksik ay sumunod din sa mga protokol ayon sa mga etikang itinakda ng *Ethics Committee* ng Foundation University. Isang malawakang konsultasyon ang isinagawa sa pagpili sa paksa para sa pananaliksik. Ang pagpili nito ay batay sa mga *research* agendang isunusulong hindi lamang ng institusyon pati na rin ang mga itinakda ng Departamento ng Edukasyon. Humingi rin ng pahintulot ang mananaliksik mula sa tagapangasiwa ng Dibisyon ng Negros Oriental, tagamasid ng distrito, punong-guro at mga guro ng kinauukulang paaralan.

Pasasalamat

Taos-pusong pinasasalamatan ng mananaliksik ang mga indibiduwal na tumulong, sumuporta at naging bahagi upang matagumpay na maisakatuparan ang pananaliksik na ito. Mainit na pasasalamat ang ipinaparating ng mananaliksik sa sumusunod:

Unang-una, sa Poong Maykapal, para sa lakas at kapanatagang-loob para sa pagtagumpay ng pananaliksik na ito.

Dr. Cristina P. Calisang, propesor sa Filipino sa Graduwadong Paaralan ng Unibersidad ng Foundation at tagapayo ng mananaliksik, sa walang sawang paggabay at pagsuporta, paggugol ng panahon sa pagrebisa ng manuskrito para sa pagtagumpay ng pag-aaral na ito.

Dr. Maria Chona Z. Futalan, *statistician* ng mananaliksik, sa pagwawasto, pag-aanalisa at pagsisiyasat sa mga nakalap na datos at pagbabahagi na kaalamang istadistika.

Dr. Romario P. Ybañez, Dekano ng paaralang Graduwado,sa pagbigay-pahintulot sa mananaliksik na isagawa ang pag-aaral na ito at bilang isa sa mga panelista.

Sa lupon ng mga panelista: Dr. Erlinda N. Calumpang, *Program Chairperson*, G. Shem Don C. Fabila, *Content Specialist-External*, Dr. Felipe B. Sullera Jr., *Content Specialist-Internal,* sa pagbahagi ng kanilang komento at mungkahi para mas mapabuti ang pananaliksik na ito.

G. Shem Don C. Fabila, G. Kendrick Kitane at Bb. Ritchel Elnar, mga *validator* ng mananaliksik, sa kanilang mga mungkahi upang i-*validate* ang sarbey-kwestyoneyr na ginamit sa pananaliksik na ito.

Dr. Neri C. Ojastro, CESO V, *Schools Division Superintendent ng* Dibisyon ng Negros Oriental; Gng. Monica B. Maxino, MAEd, *Public School District Supervisor* ng Bindoy 2 District; Gng. Zenaida D. Tulabing, Punong-guro ng Demetrio L. Alviola National High School, kasama si Gng. Riza Vailoces, isa sa mga tagapayo ng Baitang 9-Seksyon Yakal. Taos-pusong nagpapasalamat ang mananaliksik sa kanilang pagpahintulot na isagawa ang *dry-run.*

Dr. Adela P. Araula, *Public School District Supervisor* ng Ayungon 1 District; G. Besmark R. Babor, *School Teacher-In-Charge* ng Mabato Provincial Community High School; G. Reynaldo D. Pastor, Punong-guro ng Ayungon National High School, kasama ang ilang guro sa Filipino na sina Bb. Odette A. Faburada at G. Larry Faburada; Gng. Agnes T. Taub, Punong-guro ng Ayungon Science High School, kasama si Gng. Mary Jane E. Eluna, guro sa Filipino 9; Dr. Hazel E. Argoncillo, *Public School District Supervisor* ng Ayungon 2 District; Gng. Chastine R. Carale, Punong-guro ng Tambo National High School; Gng. Jocelyn B. Guardario, *Head Teacher* ng Ayungon National High School-Carol-an Extension, sa kanilang pagbigay pahintulot na isagawa ang pangangalap ng datos sa pag-aaral na ito sa mga piling mag-aaral mula sa Baitang 9.

Gng. Gay Buhat at Gng. Patrea B. Montesor, salamat sa inyong tulong mula sa simula hanggang sa mapagtagumpayan ng mananaliksik ang tesis na ito.

Sa mga respondente, sa paglalaan ng oras sa pagsagot sa isinagawang pag-aaral.

Iniaalay ng mananaliksik ang tesis na ito sa kaniyang mga magulang na sina Roselyn B. Espinosa at sa yumao niyang ama na si Alberto A. Espinosa; sa kaniyang mga kapatid na sina Aris B. Espinosa at Kent Russel B. Espinosa; at kay Joemar A. Manojo.

HUMAN RESOURCE PROGRAM IMPLEMENTATION, MOTIVATING STRATEGIES, AND EMPLOYEE PERFORMANCE IN THE GOLDENHIGH-GARMENTS MANUFACTURING CORPORATION: BASIS FOR ENHANCED PROGRAM

Stephen Paulo T. Recinto, MBA

Laguna College of Business and Arts, Calamba City, Laguna, Philippines

https://doi.org/10.5281/zenodo.13292553

ABSTRACT

The study assessed the HR program implementation of The Goldenhigh-Garments Manufacturing Corporation and its relationship to the utilization of moderating strategies and employee performance to develop an enhanced program. Surveys were conducted to collect quantitative data from the employees, focusing on HR program implementation dimensions such as ability, motivation, and opportunity, as well as motivating strategies including intrinsic and extrinsic motivators. Additionally, the survey also focused on performance dimensions such as productivity and quality output. The data were statistically processed using weighted mean, Likert-scale, and Pearson Product Moment Correlation Coefficient to quantify the impact. This study used the quantitative descriptive-correlational method approach. The respondents were the employees of The Goldenhigh-Garments Manufacturing Corporation. The findings revealed that the HR program implementation of the company in terms of ability, motivation, and opportunity was fully implemented with a general assessment of 3.81, 3.84, and 3.88 respectively. Moreover, there was no significant difference in the assessment of the heads and staff as to the level of HR program implementation with an obtained probability values of 0.860, 0.361, and 0.656. Additionally, the employees were highly performing in terms of productivity and output quality with a general assessment of 3.89 and 3.94 respectively, and the former determined that the amount of extrinsic motivators in the program was extremely motivating. Based on these findings, an enhanced program was proposed encompassing overall employee development strategies, skill-performance-centric program, capacity planning, and workflow management. The implementation of the enhanced program in the future was expected to optimize employee performance. Overall, this study provided valuable insights into enhancing the HR program with the ultimate goal of improving the employee performance of the company.

Keywords: *Human resource program implementation, Employee performance, Motivating strategies*

INTRODUCTION

Organizations not only focus on economic gain but also dwell on their internal corporate social responsibility toward their employees. As Akther et al. (2020) reiterated, employees were viewed as strategic resources that gave businesses a competitive edge. The majority of companies encountered people problems, which involved problems with productivity, efficiency, performance, and relationships of their employees. This was caused by poor implementation of Human Resource Management Programs. Effective implementation of these programs was substantially vital for any organization. Having poor programs impeded the fulfillment of the organization's objectives and goals. Moreover, it affected its overall financial position and competitive advantage.

As such, Djurovic (2020) stated that approximately 13,600 employees from 34 countries were surveyed and the results show that India tops the list with 89% satisfied employees. This high number of satisfied employees translated into the growing economy of India. India has transpired as one of the fastest-growing economies in the world and was anticipated to be part of the top economy after 10 years.

Additionally, India's GDP stood at US$ 694.93 billion and was continuously increasing. Furthermore, according to McKinsey Global Institute, as cited by India Brand Equity Foundation (2021), the government of India increased its employment growth and created a more sustainable job setting to be highly competitive. While Lloyd and Thoman (2019) mentioned that it was a fact that an engaged workforce performing well and satisfied employees would lead to increased revenue for the company. These positive effects on the organization consequently benefited the economy of the whole country.

On the contrary, in the Philippines, there has been an increasing number of Filipinos leaving the country and looking for work abroad. According to the Philippine Statistics Authority (2020), as of 2019, there were an estimated 2.2 million OFWs, and this was increasing yearly. CNN (2020) reiterated that the main reason why Filipinos want to work abroad is because of better career opportunities. This was the reason why Philippine companies made sure to give importance to their employees. Azeez (2019) mentioned that good salaries and wages, proper benefits, job security, and career opportunities must be considered in its business operations. Satisfying the needs of the local workforce decreased the possibility of the workers leaving the country. Furthermore, Donthu (2022) mentioned that employees who were committed to the company and were happy with their jobs were unlikely to exhibit poor performance and were often very productive.

This study focused on a clothing manufacturing company located in the Province of Batangas. The GoldenHigh-Garments Manufacturing Corporation has been in the industry for 45 years. It started its operations in 1977 as E&E Needlecrafts employing

approximately 1000 employees up to the year 2001. In 2004, it changed its name to Gee Line Garments International Corporation which employed approximately 600 employees. The decrease in the number of employees was attributed to the increasing number of competitors. Currently, the business changed its name to The GoldenHigh-Garments Manufacturing Corporation due to the transition to second-generation family owners. Presently, the company has 101 employees. The drastic decline in the workforce was attributed to the decline in the garments manufacturing industry of the country.

In addition, the researcher is currently the Chief Operating Officer of the company. The management of the company was passed on to him from the first generation and it is his obligation to strengthen the position of the company in the industry. The former decided to focus the study on the company's human resource aspect as he finds it a vital factor for the success of the business. The remaining employees of the company were the loyal ones who had been in the company for more than 20 years. The business is labor-intensive, and this is the reason why the company must ensure the proper treatment of employees to stay competitive in the industry. The study looked into the company's Human Resource Programs and practices to see if they were effective in promoting job satisfaction and increased job performance. Increased job satisfaction and performance can lead to job loyalty and commitment. This loyalty and commitment can be the main factor that would slow down the decrease in the number of employees in the organization.

Moreover, the employees are valuable assets of any organization. They are the heart of the company. Without them, the company would not function. Therefore, efforts to improve human resource management programs should be made. When the management manages its employees properly, it will positively cultivate an individual's attitude, mindset, contentment, engagement, and commitment to the organization. Which in turn can increase productivity and organizational effectiveness. According to Inayat and Khan (2021), satisfied employees had higher effectiveness and efficiency compared to dissatisfied ones, consequently increasing the organization's competitive advantage. In today's fast-moving and highly competitive world, enhanced efficiency and effectiveness are keys to surviving and competing. This is where effective implementation of Human Resource Management Programs and practices comes in because these employee work engagements, value orientations, and associations greatly affect the productivity of any organization.

The review of the literature and studies that are pertinent to the suggested research study are presented in this chapter. Since the scope of the study centered on the satisfaction of The Goldenhigh-Garments Manufacturing Corporation employees, the researcher pushed for the study promoting the Human Resource Programs of the company. However, the researcher searched and discovered that good studies have consistently been done on employee satisfaction and human resource programs by different individuals and institutions.

Implementation of Human Resource Programs

Several pertinent studies were developed to define and explain the significance of the effective and efficient implementation of Human Resource Programs in companies. The researchers initiated these studies since they saw a substantial link between Human Resource Programs and overall employee satisfaction. The impact of the programs on the employees was the decision criteria if the implementation was effective.

Correspondingly, Akther et al. (2020) reiterated that Human Resource Management literature was created as a result of the extensive research interest in the workplace and employees. Employees were perceived as strategic resources that gave businesses a competitive edge. The recent explosion in Human Resource Management study suggested that it had become a topic of interest to academics, researchers, and business professionals. One conference paper on people training in the field marked the beginning of the human resource management journey in 1981, but as of February 2020, a total of 1802 papers had been published and were indexed in the Scopus database.

In addition, Olasoji (2019) stated the concept of Human Resources Management developed as an independent concept in the middle of the 80s as a reasonable continuation of personnel management. Human resources were a vital aspect of progress, according to many authors. The ability to grow, move, and manage other elements was controlled by Human Resources Management. The difficulties in organizational performance in Human Resource Management emerged from a very varied range of businesses and industries. Due to the business environment's fast transformation, there were different issues in managing the human resources of any company. Numerous obstacles or changes were happening quickly that influenced Human Resource Management toward organizational efficiency in a wide-ranging variation of concerns due to the shifting economy as well as local and worldwide developments. Moreover, there were external factors that existed that hindered the overall efficiency and effectiveness of any company. Other issues that Human Resource Management faced were industrial and employee relations, workplace diversity, retention and succession plan, recruitment process, and accessibility of skilled workers and technology.

In the same way, Liu et al. (2020**)** claimed that the primary roles of Human Resource Management in an organization were to attract talents and meet their staffing needs to ensure smooth business flow. The HR function's sole responsibility in a traditional business is to maintain the workforce to satisfy output targets. This changed to one that is employee-focused as the business operations continue to evolve. Current businesses consider their employees as assets of the company. Consequently, Human Resource Management has focused on creating and sustaining an engaged, informed, progressive, and career-oriented workforce. Organizations in the modern era had realized how important staff development was to the overall success of the business. Employees were strategically developed into business assets through effective human resource programs. It concentrated on high-performance work structures that fostered employee competence, fidelity, and efficiency to provide a competitive edge. The

organization was better able to compete and flourish in the cutthroat business world by having devoted personnel.

Similarly, Al-Jedaiah and Albdareen (2020) mentioned that the foundation that defined how successful a company was was its human resources. The degree to which these resources were able to effectively exercise control over the various activities was determined by the depth and strength of the Human Resource Management. The needs of the business were identified through strategic planning for human resources, which also linked the HR strategy to the overarching organizational strategy. To achieve the company's aim in the markets, the strategy implemented identified the needs of the organization and advanced hand in hand with the organizational strategy. Additionally, the HR strategy outlined additional organizational requirements that aid in managing HR, such as the necessary experiences and training to enhance organizational skills. The success of the human resource strategy was beneficial to the overall organizational performance.

Additionally, Asis-Castro and Edralin (2020) emphasized that the most vital part of any company is its employees. They were essential in attaining the company's goals, vision, and mission. Human Resource Management needed to enforce Human Resource Programs that increased employee satisfaction and retention. These programs encapsulated recruitment, training, salary, reward, health and safety, and work-life balance. Moreover, the organization's Human Resource Programs displayed how much it values its people. Companies saw the intrinsic value of each employee and incorporated humanistic sustainability programs in dealing with them. By doing this, it guaranteed the welfare of every employee, and it created meaningful work for them. Additionally, this brought out a positive impact on the employees like happiness, trust, respect, recognition, emotional and mental stability, and overall well-being.

Furthermore, Fenech et al. (2019) reiterated that the performance of the organization was the primary concern of Human Resource Management. It was also emphasized that the purpose of Human Resource Programs was a solution for business problems concerning workforce effectiveness. Managing human resources was a strategic advantage for businesses that helped to increase the company's competitive edge. The senior management continued to view human resources as a drain on the business's budget until Human Resource Management reformed to administer the human resource department effectively. Human Resource Management in the digital era was more diversified and people-oriented, with the obligation of forming interesting, demanding positions to keep the young workforce involved in their work. The conventional methods that human resource responsibilities were handled in organizations were called into question by digital transformation. The digital revolution had further consequences for the purpose, capabilities, and competencies of Human Resource Programs. Therefore, digitization had an impact on Human Resource Management beyond simply making everyday administrative responsibilities simpler. The Human Resource Programs, which include planning, recruiting and selection, performance management, and incentive management, were made easier by the use of technology. However, these factors also increased the responsibilities placed on the human resource function, which

made sure that the organization's human capital was in connection with the strategic needs of the digital era.

Moreover, Bua and Margherita (2021) explained that Human Resource Management faces different challenges in the manufacturing industry. Nowadays, manufacturing organizations have adopted Industry 4.0 technologies – robots, the internet, and big data. This adaption to change strategies was beneficial to the company since it increased production, lessened manufacturing costs, and created new products to be offered in the market. But these changes also had an impact on the workforce. With this technological adoption, the human workforce was being obliged to have a human-machine interaction. The function of Human Resource Management was to provide Human Resource Programs to establish an advantageous condition for employee development. The Human Resource Programs included practices that helped the workforce manage the new technologies. Moreover, these programs aimed to provide a higher level of technological knowledge, competencies, and capabilities, enjoyable working conditions, and greater self-development for increased job efficiency.

Therefore, Koster (2019) mentioned that innovative Human Resource Programs are very relevant in today's increasing global competition. This changing business environment entailed that the employees must continuously improve their skills, knowledge, and ability to perform effectively and efficiently. Innovative Human Resource Programs included equal treatment of employees, human capital investment, sustainable employability, incentive system, monetary incentives, decentralization, and autonomy. These programs contributed to organizational performance as they increased the performance, satisfaction, and loyalty of the workforce. Moreover, the programs adapted to different trends. These trends included social, technological, economic, political, environmental, and demographic trends. If human resource programs were conceptualized under these trends, then the employees would be directed toward the organizational goals. This strategy was well shown by 2003 research by Agarwala. 14 distinct Human Resource program domains were identified, including ones related to hiring processes, compensation schemes, and career growth. The basic theoretical tenet in this body of work was that, if Human Resources Policies and Programs were combined into bundles or systems, they improved business performance by raising employee engagement, performance, and commitment.

Specifically, Dvorakova (2020) deduced that sustainable Human Resource Management was the contemporary approach to managing employees. The Human Resource Practices and Programs not only focused on short-term employee development, restoration, and renewal. Having sustainable Human Resource Programs developed a maintainable working environment and in the long run, attained sustainable organizational goals. Moreover, to be sustainable, Human Resource Programs incorporated and correlated social and environmental concerns in their programs. This means that the management not only took into consideration their economic gain, but most importantly they promoted a balance between profit, environment, relationship with the community, and relationship with the whole company workforce. It was important that companies not negate the possible negative effects of their programs on the environment

and community. It was the moral obligation of organizations to operate ethically and to have a positive impact on all stakeholders.

In addition, Ramaraju (2019) noted that the foundation of Human Resource Programs was the definition of philosophical orientation, which aided in the focus of an organization's long-term, visionary concept. Management's outlooks and assumptions about people, which included their character, needs, worth, and work style, were at the central point of human resource philosophy. The treatment of individuals and the management's conception of its Human Resource Programs were thus determined by these ideas and presumptions. The programs were designed to handle individuals using one of three approaches: the humanistic approach, the machine approach, or the commodity approach. In the commodity approach, people were viewed as a good that could be bought or traded for a price, just like it was in the old slave practice. A human was regarded as an element or part of the machine that may be fitted like any other part of the machine. Both of these methods viewed persons as physiologically evident human beings. An individual was viewed as a human being with physiological characteristics in a humanistic approach.

Importantly, Ujma et al. (2019) cited that the foundations of the Ability, Motivation, and Opportunity (AMO) Theory were first found in Vroom's writings, where he asserted that both ability and motivation influenced performance. This method, however, ignored the impact of the outside world and concentrated entirely on individual traits. The opportunity factor, which reflected the working environment, equipment, supplies, leader behaviors, procedures, and time, was added by Blumberg and Pringle to this model. Individual performance, according to these writers, was a function of capacity (C, or abilities), willingness (W, or motivation), and opportunity (O). Suppose that P = f(O x C x W), then performance (P) requires the presence of all three factors. A low level of any of these characteristics also had a significant negative impact on how well each individual performed.

Moreover, the Ability, Motivation, and Opportunity (AMO) theory has focused on assisting with the selection of Human Resource Programs that promote employee and organizational performance. Appropriate program selection was crucial for the deliberate modeling of employee abilities (i.e., selection, hiring, and training), motivations (i.e., performance-related pay), and opportunities to act (i.e., highlighting teamwork, or suggestion practices).

Furthermore, the three categories of Human Resource Programs were skill, motivation, and empowerment strengthening programs. The first goal of skill-enhancement programs was to raise knowledge, aptitude, and skill levels among employees so they could do their jobs effectively. Second, techniques that increased motivation were developed to guide employee behavior toward organizational goals by employing the right combination of inducements. Among these techniques were those related to performance management, pay, incentives, and rewards. Lastly, developing employee autonomy, participation in decision-making, raising employee accountability,

and providing feedback mechanisms were the main focuses of empowerment-enhancing techniques.

Motivating Strategies

People were primarily interested in motivation, or the ability to persuade oneself or others to do action. Managers face challenges in inspiring the employees, and employees themselves find it difficult to muster the willpower to persevere through life's and work's obligations. External factors like reward systems, grades, evaluations, or the opinions they think others may have of them frequently influence people. However, people were also often driven from within by innate passions, curiosities, deep-seated beliefs, or caring feelings. These internal drives fueled passions, creativity, and persistent work even when they were not always acknowledged or encouraged by others.

Hence, Salikhova (2020) cited that according to the Self-Determination Theory (SDT), both intrinsic and extrinsic motivators change and influence employees' performance. This theory proposed three basic psychological needs—autonomy, competence, and relatedness—as intrinsic motivators. Employees worked because they found them to be fascinating, entertaining, significant, or valuable. First, autonomy was the idea that one had free will and was voluntarily approving their action. Second, competence was the state of having mastered a task and being successful in it. Third, the urge to feel related to and a part of a group was referred to as relatedness. Furthermore, extrinsic motivators included the employee's social nature. Employees worked to get a reward or avoid punishment. It is also cited that numerous studies had demonstrated that both intrinsic motivators and the more self-determined types of extrinsic motivators contributed to both engagement and optimal job performance of the employees.

Supporting this, Rosli et al. (2022) asserted that the Self-Determination Theory led to the initial identification of the three fundamental needs of autonomy, competence, and relatedness based on their usefulness in integrating empirical research on the influence of interpersonal contexts and environmental occurrences on intrinsic motivation and the internalization of extrinsic motivation. These demands were critical for optimum motivation and general wellbeing, according to a later study. Vitality and need satisfaction were tightly associated, whereas motivational tiredness and need frustration were opposites. Depending on their performance, employees frequently responded to how much autonomy, competence, and relatedness they experience at work. More studies have shown that when basic needs aren't addressed, employees respond in predictable ways. Others made an effort to make up for what was lacking, as seen in their motivations for pursuing wealth, power, addictive diversions, or hostility as a result of need-frustrating. Others attempted to fill the void, as seen by their pursuit of riches, power, addictive vices, or anger as a result of need-frustrating.

Employee Performance

How well a person performed the tasks and obligations of their position was considered employee performance. For every organization, having vastly productive employees was important since they aided the organization reach its full potential. On the other hand, a business' success may be hindered and suffer if its employees perform poorly. Employee performance has generated significant attention and discussion in recent studies as a result of its expanding significance.

Due to this, Bashir et al. (2020) noted that an individual's degree of effectiveness in fulfilling their duties and capacity to achieve their goals served as an example of their overall job performance. The efficiency of the workforce was judged by how successfully a person carried out their responsibilities and other work-related tasks. The performance of a job was measured by the outcomes or effects of a certain work function or group of activities over a predetermined time frame. Since it was thought that these variables impacted organizational behavior or human resources practices rather than serving as a cause or determinant, employee performance was frequently the dependent variable in any empirical study.

To emphasize, Oyibo (2020) explained that employees were the company's most important asset and played a key role in performing organizational tasks and accomplishing organizational goals. How to maximize employee performance, though, was a dilemma for any organization. "The level of success of employees in performing their duties and responsibilities" was the definition of employee performance. Because employee performance was critical to evaluating whether organizational objectives were met, businesses searched for strategies to motivate their staff to perform at the top of their game.

Additionally, Inayat and Khan (2021) presented a research study that focused on the effect of job satisfaction on employees' job performance in different organizations in Peshawar, Pakistan. They concluded that satisfied employees had higher effectiveness and efficiency compared to dissatisfied ones, consequently increasing the organization's competitive advantage. Additionally, the study showed a positive relationship between work quality and job satisfaction. Most of the satisfied employees were relatively more competent, skillful, and committed at work. Because of the positive effect of employee satisfaction, the company gave the employees opportunities for personal advancement such as good salaries and wages, participation in decision-making, and increasing organizational participation. Moreover, the company focused on the employees' interpersonal relationships, workplace safety, incentives and rewards, and job security. Due to the economic and political stability in the region, it was the important role of the company to keep their employees motivated and satisfied in the current business setting.

Specifically, Ramos-Villagrasa et al. (2019) claimed that the most important factor in Human Resource Management was job performance. Its evaluation and analysis were crucial for many organizational procedures like hiring, paying, rewarding, or training

employees. Job performance was a paradigm that involved actions that employees may influence and that supported organizational goals. Task performance, contextual performance, and unproductive work behavior were the three essential areas of job performance. Together, these elements offered a comparatively systematic and economical process for evaluating total work performance. The first one was task performance, which was defined as "actions that influence the production of a good or service," followed by contextual performance, which was "actions that influence the goals of the company by aiding its social and psychological environment," and thirdly, counterproductive to work behavior, which was defined as "voluntary actions that harm the wellbeing of the company."

Moreover, according to Nuryanti et al. (2020), the crisis in employee performance was one of the most significant problems facing the management of any organization. The low intensity and unachievable work targets were caused by the subpar performance of human resources. Each worker performed in a way that accurately represented their role within the company. Employee creativity was limited, and as a result of subpar performance, work was completed in an inadequate amount and quality.

Supporting this claim, Aslan et al. (2021) reiterated that the conformity to carry out a duty within the terms of a contract between an employer and an employee was known as task performance. It was possible to define task performance as a person’s capacity to efficiently do his or her tasks and obligations of the relevant function as outlined in the job description. In other words, it concerned how properly and successfully employees carried out their duties. Therefore, how well a person does his or her duties affects all aspects of the organization, including production, efficiency, and productivity. Task performance, in the eyes of the employee, was defined as behavior that was "expected, evaluated, and rewarded."

Correspondingly, Ertikin (2020) claimed that to thrive against changing environments, emerging technologies, and escalating competition, companies must be robust and adaptable. Employees were therefore immediately impacted by these processes that firms must deal with. To put it another way, maintaining standards was necessary for firms to prosper in the current competitive business climate. The best performance of employees within the standards was crucial to achieving high productivity in businesses. The term "performance" meant a notion that following a planned action was acquired and decided the outcome either statistically or qualitatively. Another definition of performance is that it is the specification of the quantity and quality of the planned goal that the individual or group conducting the activity can obtain.

With this in mind, Nugroho et al. (2021) explained that businesses and organizations need competent staff to advance. Employee output has revealed a person's capacity for work. When an employee had done high-caliber work that helped achieve every leader's task, this was referred to as performing well. The ability of an employee to complete their work by the deadline was another sign of their performance. Employee performance stems from the quality and quantity attained by an employee in carrying out his or her activities following the responsibilities assigned and it could reach

any aim set out by the firm. Each company had a high expectation of employee performance since the success of an organization cannot be divorced from the effectiveness of its workforce.

Moreover, Bienkowska and Tworek (2020) explained that the nature of today's jobs and the workplace are dynamic as a result of the changing and dynamic environment in which modern companies operate. Given that modern workers were the primary organizational resource defining the potential for sustainable development, it was necessary to reevaluate expectations for them. It was clear that employee intellectual capital enhanced organizational sustainability. Employees concentrated on making changes to be able to use their dynamic capacities to contribute to the organization's sustainable development. Therefore, contemporary firms viewed their workforce as a collection of fixed resources and developed the new competencies that were required for their effective performance of duties at a specific position. One of the essential elements required for attaining sustainable development in any modern business was the capacity of workers to adapt flexibly to changes in the environment, especially those that influence job performance. This combination of resources and flexibility was created as a result. To function effectively in today's dynamic and diverse world, "workers need to be increasingly adaptable, versatile, and tolerant of uncertainty."

In addition, Baskaran et al. (2020) stated that very little study had been done on how the use of technology in a company affected employee job performance and created job insecurity. Some researchers, however, discovered a connection between these features. Organizational policies and programs were altered as an effect of the adoption of new technologies. In the majority of organizations, the difficulties they encountered were brought on by modern technology, industry competitiveness, increased staff productivity, and new management and leadership. Numerous studies have demonstrated that improving staff attitudes and behaviors improves company performance.

Subsequently, Ong et al. (20202) explained that in many nations throughout the world, job satisfaction has been a well-sought topic. A person's degree of job satisfaction often determines how well they perform at work. A high degree of employee job satisfaction improved organizational performance. Researchers tended to be more motivated and eager to put in more effort when performing their jobs if they were happy with their present work. Employee attitude, loyalty, support, and devotion to the company may all be influenced by job satisfaction.

Correlation Studies between Human Resource Programs, Motivating Strategies, and Employee Performance

The function of effective implementation of Human Resource Programs was to positively cultivate and realize the potential of the employees – to increase their performance and consequently help aid the organization reach its goals. Therefore, it involved the formation of a people-centric Human Resource Program to improve employees' skills and quality and increase employee motivation and satisfaction.

To explain, Al-Tit (2020) showed that human resource programs had a favorable impact on the various facets of employee performance as a result of the creation of positive job satisfaction. This was supported by empirical evidence about the trilateral relationships between human resource programs, working environment, and job performance. The numerous facets of employee performance were tied to human resource programs. It specifically used the Ability, Motivation, and Opportunity framework. The idea that the use of human resource programs was meant to boost employee performance may be viewed as a composition of three elements, including programs that boost opportunities, motivation, and skill development. Analysts further argued, drawing on the social exchange concept, that when companies engage in various HR programs, which were likely to be seen by employees as a show of the company's commitment to them, employees responded in ways that supported business goals. Workers saw corporate initiatives like skill-, motivation-, and opportunity-enhancing programs as proof of the organization's commitment or support. Employees reciprocated by demonstrating a good attitude and improved performance that aided in the accomplishment of corporate objectives.

To expound, Tansel (2022) explained that while improved employee performance necessitated even more work, improved organizational performance indicated that attempts were being made to attain goals. Employee performance was one of the key factors that significantly influenced organizational success. Organizations have a significant impact on improving employee performance by offering efficient and effective human resource programs. In addition, management standards for assessing job performance were essential for improving employee performance since they demonstrated how actual performance relates to standards. The productivity of workers was impacted by both their internal and external work satisfaction. If the workforce were satisfied with both their occupations and their employer, they would be more strongly motivated to work hard to achieve the company's objectives.

Additionally, Tunio (2021) mentioned that people weighed their efforts to complete a job against the benefits related to the task assigned to them. They picked the tasks that satisfied the equation or those that offered more advantages or rewards. Therefore, the company's Human Resource Programs involved offering incentives following a person's expectations who was exerting a great deal of effort to complete a certain work. They were aware that their company appreciated the work they put in. Employees who were aware of potential connections between confident task outcomes would promote an individual’s future attitudes and improve overall job performance.

Moreover, Donthu (2022) stated that many companies were struggling greatly in the current global environment to increase employee work satisfaction and, as a result, to strengthen their organizational commitment to obtain a competitive edge and maintain retention of their employees. The potential advantages for both people and organizations spurred a great deal of interest in organizational concepts that relate to attitude and behavior, such as organizational commitment, work satisfaction, and job performance. Employees who were committed to the company and were happy with their jobs were unlikely to exhibit poor performance and were often very productive. Companies

that achieved industry success were aware of how crucial employee retention was to maintaining market leadership and expanding their customer base. Employee satisfaction generally increased because they believed they were being compensated appropriately for the task they had completed. To achieve this, companies ensured that rewards given to employees were both true contributions to the business and consistent with the Human Resource Programs. Higher job satisfaction made employees more valuable because they felt that the company valued them in the long run and rewarded them for their hard work. As a result, they were more committed to the company, had greater retention rates, and were efficient with their overall job performance.

To support this, Andri et al. (2021) reiterated that any organization needs experienced, talented, and highly devoted staff for business operations to function smoothly. Due to competition, every business tries to retain as much of its workforce as possible. Employee performance determines whether an organization succeeds or fails since the employees are a company's most valuable asset. Therefore, a key component of human resource management was guaranteeing employee happiness and overall job satisfaction. When creating its programs, the management took into account elements like leadership, rewards, pay, skill development, career growth, and recognition. The inclusion of these elements in human resource programs led to longer-term employee retention and higher levels of employee satisfaction.

In addition, Thirusanku and Singh (2021) reiterated that organizational culture is the collection of common values, viewpoints, and beliefs that all employees share. The company's workplace culture was considered solid when the vast majority of its employees decided to adhere to the same principles. In conclusion, a robust and successful culture that aligned the company's aims with those of every individual worker would probably be able to attract workers who would collaborate to achieve organizational objectives.

However, Dumaguing (2022) restated the fact that a significant amount of research on employee performance has been done by academics from all around the world. Disengagement was discovered to be connected with characteristics that were both personal and professional. If workers felt they had adequate time for their personal lives, they were more likely to be satisfied with their occupations. They consequently developed greater motivation, engagement, and dedication to their work, which eventually increased output.

Importantly, Nor and Abdullah (2020) stated that the ability-enhancing practices, motivation-enhancing practices, and opportunity-enhancing practices (AMO) model of the human resource management of companies had been connected to the overall employee performance. The study showed that enhancing an employee's capacity, motivating them to produce high-quality work, and expanding their opportunities to interact with management produce favorable results for comprehending their preferences and helping them to reach the organizational goals in the workplace.

Synthesis

The literature reviews mentioned showed a great causal relationship between Human Resource Programs and employee job performance. As specified in the study of Akther et al. (2020) and Asis-Castro and Edralin (2020), employees are the strategic resources and assets of any organization. Without them, the organization would not function. They also mentioned that the employees were one of the factors that gave businesses a competitive advantage. Because of these claims, other scholars and business professionals have supported the belief that organizations must focus on the total human development of their employees as discussed by Liu et al. (2020), Al-Jedaiah and Albdareen (2020), Fenech et al. (2019), Bua and Margherita (2021), and Koster (2019).

Some studies about the importance of Human Resource Programs were pointed out by Andri et al. (2021). Moreover, Dvorakova (2020), Ramaraju (2019), Al-Tit (2020), Oyibo (2020), Ong et al. (2020), and Tansel (2022) revealed that Human Resource Programs were tools to motivate and help holistically develop employees. They also mentioned that motivated employees were more likely to be satisfied at work and contribute to their overall performance. To add to this, studies by Donthu (2022), Aslan et al. (2021), Ertikin (2020). Nuryanti et al. (2020), Dumaguing (2022), and Tunio (2021) stated that employees work and do the tasks that satisfied them or those that offered more advantages or rewards. Additionally, Bashir et al. (2020) noted that an individual's degree of effectiveness in fulfilling their duties served as an example of their job performance in the organization. To support this, Salikhova (2020) and Rosli et al. (2022) pointed out that numerous studies have demonstrated that both intrinsic motivators and the more self-determined types of extrinsic motivators contributed to both engagement and optimal job performance of the employees. In addition, Thirusanku and Singh (2021) reiterated that the company's organizational culture was considered solid when the vast majority of its employees decided to adhere to the same principles. However, there were also challenges that businesses faced with their human resources. Olasoji (2019), Bienkowska and Tworek (2020), and Baskaran et al. (2020) discussed that businesses need to be strong and flexible due to shifting circumstances, new technology, and intensifying competition. These procedures that businesses must cope with thus had an immediate effect on their employees. To put it another way, upholding standards was essential for businesses to thrive in the present business environment.

To conclude, according to Inayat and Khan (2021), Ramos-Villagrasa et al. (2019), Nor and Abdullah (2020), and Nugroho et al. (2021), there was a significant relationship between the level of implementation of Human Resource Programs and level of employee performance in businesses. Additionally, according to Ujma et al. (2019), appropriate program selection was crucial for the deliberate shaping of employee abilities. Ability, Motivation, and Opportunity (AMO) helped the selection of Human Resource Programs that promoted employee and organizational performance. It was challenging for any business to craft an effective and people-centric Human Resource Programs. However, for their business to grow and compete in the industry, the management must focus on the total human development of their employees through its Human Resource Programs.

The study on the “Implementation of the Human Resource Program, Utilization of the Motivating Strategies of The Goldenhigh-Garments Manufacturing Corporation and Employees Performance” contributes to the literature by offering detailed insights, characterizing influential factors, posing practical recommendations, addressing gaps, and potentially progressing research methodologies. It adds depth to the understanding of employee performance in a specific context, informing the development of an enhanced human resource program. The study’s findings had rational implications for improving and expanding human resource programs and stimulating further research in this area.

The study effectively addressed key gaps in the existing literature on the implementation of human resource programs, utilization of motivating strategies, and employee performance. Through a thorough review of relevant research, the study made significant contributions by bridging the following gaps. Firstly, the study provided a comprehensive understanding of human resource program implementation by synthesizing diverse perspectives from the literature. It explored various factors affecting the proper implementation of human resource programs, including ability, motivation, and opportunity that the latter offered. By examining these factors, the study enhanced our knowledge of how to improve the human resource program of The Goldenhigh-Garments Manufacturing Corporation.

Secondly, the study filled a gap in our understanding of the utilization of motivating strategies by reviewing and analyzing a range of studies. It identified the dimensions of extrinsic motivators and intrinsic motivators as vital contributors to motivating strategies. This exploration shed light on the specific factors that influence the company’s motivating strategies it has offered its employees.

Lastly, the study offered a thorough understanding of employee performance by synthesizing diverse perspectives from the literature. It explored key performance indicators that measured employee performance effectively, including productivity and output quality. This evaluation, sheds light on the specific indicators that influence employee performance, deepening our understanding of performance in this context.

In summary, the study’s comprehensive review of the literature and empirical research successfully filled important gaps in the understanding of human resource program implementation, motivating strategies utilization, and employee performance. By bridging these gaps, the study offers valuable insights into improving human resource program implementation and employee performance within The Goldenhigh-Garments Manufacturing Corporation and similar businesses in the industry.

Research Questions

The primary goal of the study was to identify how the Human Resource Programs of The Goldenhigh-Garments Manufacturing Corporation were implemented and how the employees responded through their job performance. To achieve a high level of employee performance, the company determined the important factors that were crucial in

effectively increasing job performance. This research specifically answered the following questions:

1. What is the implementation level of the human resource program of The GoldenHigh-Garments Manufacturing Corporation as assessed by its employees in terms of:
    1.1 Ability,
    1.2 Motivation, and
    1.3 Opportunity?

2. Is there a significant difference between the assessment of the heads and employees as to the level of human resource program implementation of The GoldenHigh-Garments Manufacturing Corporation?

3. What is the performance level of the employees of The GoldenHigh-Garments Manufacturing Corporation in terms of:
    3.1 Productivity, and
    3.2 Output Quality?

4. What is the utilization level of the motivating strategies of the human resource program of The GoldenHigh-Garments Manufacturing Corporation in terms of:
    4.1 Intrinsic Motivators, and
    4.2 Extrinsic Motivators?

5. Is there a significant relationship between the level of implementation of the human resource program and the level of performance of the employees of The GoldenHigh-Garments Manufacturing Corporation?

6. Is there a significant relationship between the level of implementation of the human resource program and the level of utilization of the motivating strategies of The GoldenHigh-Garments Manufacturing Corporation?

7. Based on the findings of the study, what enhanced program may be proposed?

METHODOLOGY

Research Design

This study used a quantitative method with an emphasis on the descriptive-correlational method of research in defining the correlation between the implementation of Human Resource Programs of The Goldenhigh-Garments Manufacturing Corporation as the independent variable and the level of employee performance as the dependent variable. The descriptive analysis was used as the study described, showed, and summarized the current level and standing of the variables. Moreover, correlational

analysis was also used as the study investigated and measured the causal relationships between the two variables using statistical data and tools.

According to Asenahabi (2019), the characteristic of the descriptive-correlational research method was to depict what was acquired in the data gathered via questionnaires and statistical treatment. It was likewise utilized to define profiles, frequency distribution, attributes of individuals, situations, experiences, and the causal relationships between variables.

Research Locale

The research was conducted at The Goldenhigh-Garments Manufacturing Corporation in Barangay Poblacion, Padre Garcia, Batangas. Since the researcher works for The Goldenhigh-Garments Manufacturing Corporation, the company was chosen as the locale of the study.

Population and Sampling

In this research, the stratified random sampling method was used in choosing the paralleling number of respondents. Nguyen et al. (2019) stated that the SRS, or stratified random sampling, was most effective when the population was divided into "strata" or smaller subgroups. A per-stratum sample was selected utilizing uniform random sampling from each stratum. The stratified random sample was made by conjoining all per-stratum samples. The population of The Goldenhigh-Garments Manufacturing Corporation was divided into three groups – supervisors, quality controllers, and production operators. Therefore, the stratified random sampling was the most appropriate sampling technique to be used.

The sampling was established with a margin of error of 0.05, and a confidence level of 0.95, determined through the experienced knowledge of the researcher's statistician using the G*Power. Of the 101 population of The Goldenhigh-Garments Manufacturing Corporation, a total of 96 (95% of their total employees) were chosen as respondents of this study.

Respondents of the Study

The respondents of the study were the employees of The Goldenhigh-Garments Manufacturing Corporation for the fiscal year 2023.

Table A

Respondents of the Study

TYPE OF RESPONDENTS	FREQUENCY	PERCENTAGE
Supervisor	5	5.21%

Production Operators	91	94.79%
Total	96	100.00%

The group of respondents consisted of five (5) supervisors, which was 5.21% of the total respondents, and seventy-three (91) production operators, which was 94.79% of the total respondents with a total of ninety-six (96) respondents.

Instrument

A researcher-made questionnaire was the instrument utilized in acquiring the primary data from each of the respondents. The questionnaire consisted of three (3) parts including multiple questions for each variable. The first section evaluated the implementation of the Human Resource Programs of The Goldenhigh-Garments Manufacturing Corporation in terms of ability, motivation, and opportunity. The second evaluated the level of motivating strategies of The Goldenhigh-Garments Manufacturing Corporation to their employees in terms of intrinsic motivators and extrinsic motivators. The third established the level of employee performance in terms of Productivity and Output Quality.

Mean-score Interval and Verbal Interpretation on the Level of Implementation of the Human Resource Program of The GoldenHigh-Garments Manufacturing Corporation

Ranges of Mean	Rating	Categorical Response	Verbal Interpretation
3.25 – 4.00	4	Very Satisfied	Fully Implemented
2.50 – 3.24	3	Satisfied	Implemented
1.75 – 2.49	2	Dissatisfied	Partially Implemented
1.00 – 1.74	1	Very Dissatisfied	Not Implemented

Mean-score Interval and Verbal Interpretation on the Level of Employee Performance of The GoldenHigh-Garments Manufacturing Corporation

Ranges of Mean	Rating	Categorical Response	Verbal Interpretation
3.25 – 4.00	4	Very Satisfied	Very Good
2.50 – 3.24	3	Satisfied	Good
1.75 – 2.49	2	Dissatisfied	Fair
1.00 – 1.74	1	Very Dissatisfied	Poor

Mean-score Interval and Verbal Interpretation on the Level of Motivating Strategies of the Human Resource Program of The GoldenHigh-Garments Manufacturing Corporation

Ranges of Mean	Rating	Categorical Response	Verbal Interpretation
3.25 – 4.00	4	Very Satisfied	Fully Utilized
2.50 – 3.24	3	Satisfied	Utilized
1.75 – 2.49	2	Dissatisfied	Partially Utilized
1.00 – 1.74	1	Very Dissatisfied	Not Utilized

To formulate precise answers and assess the quantitative value of the variable being assessed, a four-point Likert scale was utilized. The researcher's perspective and the following interpretation below were used to better clarify how the Likert scale was used in the study.

Validation of the Instrument

The instruments were initially tested on 10 employees not counted in the group of respondents. Validity was presumably the most crucial element in the design of any instrument used to assess research outcomes. Validating the instrument, the researcher consulted the instruments related to the study with the statistician for the researcher, Dean, Research Director, and professors of LCBA. They committed their time and efforts to take into account all the important problems that needed to be discussed and clarified during the research process. The computation determined that Lawshe's Content Validity Ratio attained the desirable standard of 1.0 based on percentage relevance. As a result, the scale's content validity has been well attained.

Furthermore, the reliability and consistency of the instrument's internal data were evaluated using Cronbach's Alpha Coefficient. The Cronbach's Alpha Coefficient indicates the extent to which items within scale or subscale are interrelated.

Data Gathering Procedure

The data gathering was conducted mainly on the survey questionnaire fulfilled and answered by the respondents. This survey questionnaire functioned as the research instrument and primary source of data for the study. To test the accuracy, validity, and reliability of the instrument used it is approved and validated by the Dean, Research Director, adviser, statistician, and professors. After the approval and validation of the instrument, the researcher mailed a letter directed to the Vice President of Human Resources requesting consent to collect data, through electronic mail, from the target respondents. Afterward, the data gathered from the instrument were then checked, tabulated, and submitted to the researcher's statistician. The former's assistance and guidance were utilized while the data were analyzed and interpreted to arrive at answers to the study's problem statement and hypothesis.

Scope and Delimitation

The scope of the study focused on evaluating the implementation of the human resource program of The Goldenhigh-Garments Manufacturing Corporation in terms of ability, motivation, and opportunity. Moreover, it also examined the utilization of the motivating strategies the company provided its employees in terms of intrinsic motivators and extrinsic motivators. Additionally, it also assessed the performance level of the employees in terms of productivity and output quality.

The research design of the study was a descriptive correlational approach using a quantitative design. Furthermore, the data-gathering processes were restricted

essentially to the primary data that was collected from the respondents of the study and the related literature. There were limited studies evaluating the implementation of the human resource program of The Goldenhigh-Garments Manufacturing Corporation. Hence, the resources of information were projected to be inadequate.

The respondents of the study were also limited to the heads and staff of The Goldenhigh-Garments Manufacturing Corporation. The study was conducted during the 1st and 2nd semesters of the academic year 2023-2024.

RESULTS

Research Question 1: What is the implementation level of the human resource management program of The GoldenHigh-Garments Manufacturing Corporation as assessed by its employees?

1.1 Ability

Table 1.1

Level of Implementation of Human Resource Management Program of The GoldenHigh-Garments Manufacturing in terms of Ability

Indicators	Heads		Staff		Composite	
The company programs	$\bar{X}$	VI	$\bar{X}$	VI	$\bar{X}$	VI
1. promote workplace diversity and against workplace discrimination. (Ang mga programa ay nagtataguyod ng pagkakaiba-iba at laban sa diskriminasyon sa trabaho.)	3.80	FI	3.77	FI	3.79	FI

Research Question 7: Based on the findings of the study, what enhanced program may be proposed?

Table 7

The Proposed Enhanced Plan

KEY AREAS	OBJECTIVES	STRATEGIES/ ACTIVITIES	TIME FRAME	PERSONS INVOLVED	SUCCESS INDICATRS
Implementation of human resource program in terms of Ability	Enhance ability aspect of the human resource program	Job-Skills matching of employees	Ongoing	Human Resource Department	Increased employee application rate
Implementation of human resource program in terms of Motivation	Enhance the motivation aspect of the human resource program	Offering performance based rewards	Ongoing	Human Resource Department	Increased scores in performance evaluation
Implementation of human resource program in terms of Opportunity	Enhance the opportunity aspect of the human resource program	Performance based promotion program	Ongoing	Human Resource Department	Increased employee retention rate
Motivating strategies in terms of Intrinsic Motivators	Enhance the intrinsic motivator aspect of the motivating strategies	Offering non-monetary benefits	Ongoing	Human Resource Department	Increased employee satisfaction feedback
Motivating strategies in terms of Extrinsic Motivators	Enhance the extrinsic motivator aspect of the motivating strategies	“Choose your own” rewards program	Ongoing	Human Resource Department	Increased employee satisfaction feedback
Employee performance in terms of Productivity	Improve employee productivity	Hire an Industrial Engineer to streamline workflow processes	3 Months	Heads, Operations Department	Increased production output and Decreased overtime

Employee performance in terms of Output Quality	Improve employee output quality	Quality assurance training and development	Ongoing	Heads, Quality Controllers	Decreased defect rate

DISCUSSION

Research Question 1: What is the implementation level of the human resource management program of The GoldenHigh-Garments Manufacturing Corporation as assessed by its employees?

1.1 Ability

Table 1.1
Level of Implementation of Human Resource Management Program of The GoldenHigh-Garments Manufacturing in terms of Ability

Indicators	Heads		Staff		Composite	
The company programs	$\overline{X}$	VI	$\overline{X}$	VI	$\overline{X}$	VI
1. promote workplace diversity and against workplace discrimination. (Ang mga programa ay nagtataguyod ng pagkakaiba-iba at laban sa diskriminasyon sa trabaho.)	3.80	FI	3.77	FI	3.79	FI
2. make sure that the job assignment is at the level of the abilities of the employees. (Tinitiyak ng mga programa na ang pagtatalaga ng trabaho ay nasa antas ng kakayahan ng mga empleyado.)	3.60	FI	3.80	FI	3.70	FI
3. respect the competence of each employee. (Iginagalang ng mga programa ang kakayahan ng bawat empleyado.)	4.00	FI	3.89	FI	3.95	FI
General Assessment	3.80	FI	3.82	FI	3.81	FI

Legend: 3.25-4.00 Fully Implemented (FI) 2.50-3.24 Implemented (I)
1.75-2.49 Partially Implemented (PI) 1.00-1.74 Not Implemented (NI)

Ability was **Fully Implemented (3.81)** as to the level of the implementation of the human resource program of The GoldenHigh-Garments Manufacturing Corporation. “The company programs respect the competence of each employee” had the highest mean which was **3.95** and was interpreted as **Fully Implemented**. On the other hand, “The company programs make sure that the job assignment is at the level of the abilities of the employees” received the lowest mean score of responses with 3.70 and was interpreted as **Fully Implemented**.

This implies that the GoldenHigh-Garments Manufacturing Corporation employees were very satisfied with the company’s human resource program in terms of Ability. The company’s policies were specific, relevant, and well-known by the employees, and played a major role in ensuring the employees were mindful of their capabilities and skills in helping achieve operational goals and objectives. The GoldenHigh-Garments

Manufacturing Corporation is continually developing tactics to make sure that the employees are well-informed about the skills, knowledge, and abilities needed to perform their jobs efficiently. By doing this, the employees are a step in attaining a good job performance to help the company achieve operational efficiency.

To support the study, Importantly, Nor and Abdullah (2020) cited that the ability-enhancing practices of the human resource management of companies had been connected to overall employee performance. The study showed that enhancing an employee's capacity produces favorable results for comprehending their preferences and helping them to reach the organizational goals in the workplace.

Furthermore, Ujma et al. (2019) asserted that the ability of employees influenced performance. The first goal of skill-enhancement programs was to raise knowledge, aptitude, and skill levels among employees so they could do their jobs effectively. If the skills of the employees were monitored and enhanced, then the company would benefit. The former helped the latter by reaching organizational effectiveness and by helping compete in the industry.

1.2 Motivation

Table 1.2

Level of Implementation of Human Resource Management Program of The GoldenHigh-Garments Manufacturing in terms of Motivation

Indicators	Heads		Staff		Composite	
The company programs	$\bar{X}$	VI	$\bar{X}$	VI	$\bar{X}$	VI
1. provide higher salaries compared to the industry average. (Ang mga programa ay nagbibigay ng mas mataas na suweldo kumpara sa ibang kumpanya.)	3.60	FI	3.77	FI	3.69	FI
2. provide better company-initiated benefits compared to other industry players. (Ang mga programa ay nagbibigay ng mas mahusay na mga benepisyo na pinasimulan ng kumpanya kumpara sa iba pang mga kumpanya.)	3.80	FI	3.79	FI	3.80	FI
3. give importance to the mental, emotional, and physical wellbeing of the employees. (Ang mga programa ay nagbibigay ng kahalagahan sa mental, emosyonal, at pisikal na kagalingan ng mga empleyado.)	3.80	FI	3.91	FI	3.86	FI
4. give rewards to employees who excels in their job performance. (Ang mga programa ay nagbibigay ng mga gantimpala sa mga empleyado na mahusay sa kanilang pagganap sa trabaho.)	3.80	FI	3.89	FI	3.85	FI
5. give punishment to employees with poor job performance. (Ang mga programa ay nagbibigay ng parusa sa mga empleyadong may mahinang pagganap sa trabaho.)	3.80	FI	3.90	FI	3.85	FI

6. include performance evaluation of employees. (Kasama sa mga programa ang pagsusuri sa pagtratrabaho ng mga empleyado.)	4.00	FI	4.00	FI	4.00	FI
General Assessment	3.80	FI	3.88	FI	3.84	FI

Legend: 3.25-4.00 Fully Implemented (FI) 2.50-3.24 Implemented (I)
1.75-2.49 Partially Implemented (PI) 1.00-1.74 Not Implemented (NI)

Motivation was **Fully Implemented (3.84)** as to the level of implementation of the human resource program of The GoldenHigh-Garments Manufacturing Corporation. The indicator "The company programs include performance evaluation of employees" had the highest mean which was **4.00** and was interpreted as **Fully Implemented**. On the contrary, "The company programs provide higher salaries compared to the industry average" had the lowest mean which was **3.69,** and was interpreted as **Fully Implemented**.

This indicates that the employees observed the motivation aspect of the human resource program of The GoldenHigh-Garments Manufacturing Corporation because the former identified it as a vital indicator of a company's work towards ensuring the efficient work of employees. Companies are paying close attention to employee engagement these days and with good reason—high levels of employee engagement are inextricably related to high levels of employee motivation. The human resource program of The GoldenHigh-Garments Manufacturing Corporation makes sure that their employees are motivated by doing performance evaluations regularly, following legal compensation-benefits programs, providing competitive compensation-benefits programs, focusing on the mental well-being of the employees, and giving rewards and punishment for job performance. With the findings, the indicators showed that the human resource program of the company motivates its employees. The indicator that yielded the highest mean – "The company programs include performance evaluation of employees", serves as the company's essential communication tool. It helped the employees align with the objectives set for the company and close the gap between expected and actual results. Employee performance reviews have provided insightful criticism for areas where performance is deficient, track development, and acknowledge good work.

To support this, Inayat and Khan (2021) conducted a research study that focused on the effect of job satisfaction on employees' job performance in different organizations. They concluded that motivated employees had higher effectiveness and efficiency compared to unmotivated ones, consequently increasing the organization's competitive advantage. Additionally, the study showed a positive correlation between work quality and job satisfaction. Most of the satisfied employees were relatively more competent, skillful, and committed at work. Moreover, they reiterated that companies focused on programs that motivated the employees. The former focused on the employees' compensation, incentives and rewards, and job security.

Furthermore, Asis-Castro and Edralin (2020) emphasized that the most vital part of any company was its employees. They were vital in attaining the company's goals and objectives. The human resource program of any company was needed to increase employee satisfaction. These programs encompassed recruitment, training, salary,

reward, health and safety, and work-life balance. In addition, companies saw the intrinsic value of each employee and included humanistic sustainability programs in dealing with them. By doing this, it guaranteed the welfare of every employee, and it created meaningful work for them. Additionally, this brought out a positive impact on the employees like happiness, trust, respect, recognition, emotional and mental stability, and overall well-being. This proved that the human resource program of The GoldenHigh-Garments Manufacturing Corporation in the aspect of motivation ensured that the employees maintain a high level of satisfaction. Consequently, this level of motivation and satisfaction resulted in higher efficiency and productivity of the employees.

1.3 Opportunity

Table 1.3

Level of Implementation of Human Resource Management Program of The GoldenHigh-Garments Manufacturing in terms of Opportunity

Indicators	Heads		Staff		Composite	
The company programs	$\bar{X}$	VI	$\bar{X}$	VI	$\bar{X}$	VI
1. provide the opportunity to improve the employee's skills and knowledge in the course of his or her work. (Ang mga programa ay nagbibigay ng pagkakataon na mapabuti ang mga kasanayan at kaalaman ng empleyado sa kurso ng kanyang trabaho.)	3.80	FI	3.91	FI	3.86	FI
2. provide an opportunity for the employee to advance his or her career. (Ang mga programa ay nagbibigay ng pagkakataon para sa empleyado na isulong ang kanyang karera.)	3.60	FI	3.85	FI	3.73	FI
3. give the employees to undergo training programs for their knowledge and skills advancement. (Ang mga programa ay nagbibigay sa mga empleyado na sumailalim sa mga programa sa pagsasanay para sa maisulong ang kanilang kaalaman at kasanayan.)	4.00	FI	4.00	FI	4.00	FI
4. promote autonomy to the employees. (Ang mga programa ay nagtataguyod ng awtonomiya sa mga empleyado.)	4.00	FI	3.89	FI	3.95	FI
5. promote teamwork and workplace camaraderie. (Ang mga programa ay nagtataguyod ng pagtutulungan at pakikipagkaibigan sa trabaho.)	4.00	FI	3.96	FI	3.98	FI
6. promote employee feedback and constructive criticisms. (Ang mga programa ay nagtataguyod ng feedback ng empleyado at magandang pagtanggap sa kritisismo.)	3.80	FI	3.97	FI	3.89	FI
7. provide an opportunity to increase knowledge through educational assistance. (Ang mga programa ay nagbibigay ng pagkakataon upang madagdagan ang kaalaman sa pamamagitan ng tulong na pang-edukasyon.)	3.80	FI	3.78	FI	3.79	FI
General Assessment	3.86	FI	3.91	FI	3.88	FI

Legend: 3.25-4.00 Fully Implemented (FI) 2.50-3.24 Implemented (I)
1.75-2.49 Partially Implemented (PI) 1.00-1.74 Not Implemented (NI)

Opportunity was **Fully Implemented (3.88)** as to the level of implementation of the human resource program of The GoldenHigh-Garments Manufacturing Corporation. The indicator "The company programs give the employees to undergo training programs for their knowledge and skills advancement" had the highest mean which was **4.00** verbally interpreted as **Fully Implemented**. Meanwhile, the indicator "The company programs provide an opportunity for the employee to advance his or her career" had the lowest mean which was **3.73** verbally interpreted as **Fully Implemented**.

This reveals that The GoldenHigh-Garments Manufacturing Corporation employees were very satisfied with the company's human resource program in terms of opportunity because the indicators showed that the employees felt personal and career growth in the company. Since the human resource program of the company focused on knowledge and skills training and development, the employees felt an opportunity to advance their careers.

To support this claim, Koster (2019) mentioned that innovative human resource programs were very relevant in today's increasing global competition. This changing business environment entailed that the employees must continuously improve their skills, knowledge, and ability to perform effectively and efficiently. These programs contributed to organizational performance as they increased the performance, satisfaction, and loyalty of the workforce.

Moreover, Bua and Margherita (2021) stated that the function of Human Resource Management was to provide human resource programs to establish an advantageous condition for employee development. These programs included practices that helped the workforce manage new technologies. Additionally, these programs aimed to provide a higher level of technological knowledge, competencies, and capabilities, enjoyable working conditions, and greater self-development for increased job efficiency and performance.

Research Question 2: Is there a significant difference between the assessment of the heads and employees as to the level of human resource program implementation of The GoldenHigh-Garments Manufacturing Corporation?

Table 2

Test of Significant Difference Between the Assessment of the Heads and Staff as to the Level of Human Resource Program Implementation of The Golden High-Garments Manufacturing Corporation

Variables	T test	P value	Remarks	Decision
Ability	.177	.860	Not Significant	Accept Ho
Motivation	.919	.361	Not Significant	Accept Ho
Opportunity	.961	.656	Not Significant	Accept Ho

There was no significant difference in the assessment of the heads and staff as to the level of human resource program implementation of The GoldenHigh-Garments Manufacturing Corporation. The probability values of 0.860, 0.361, and 0.656 respectively were greater than the level of significance at 0.05, thus rejecting the null hypothesis.

The findings in the assessment of the heads and employees can be attributed to the fact that the heads and employees both have the same point of view of the human resource program implementation of The GoldenHigh-Garments Manufacturing Corporation. Both the heads and employees benefit equally from the implementation of the human resource program of the company.

Moreover, the heads and employees of the company share the same values and beliefs thus having an effective organizational culture. Having the same beliefs and values could also be the reason why there was no significant difference between the assessment of the heads and staff as to the level of human resource program implementation of The GoldenHigh-Garments Manufacturing Corporation.

To support this claim, Thirusanku and Singh (2021) reiterated that organizational culture was the set of shared values, opinions, and beliefs held by all members of the workforce. When the majority of employees chose to uphold the same values within the company, that workplace culture was said to be strong. In summary, a strong and effective culture that matched the objectives of the company with those of each employee was likely to be able to draw in employees who would work hand in hand in attaining organizational goals.

Research Question 3: What is the performance level of the employees of The GoldenHigh-Garments Manufacturing Corporation?

3.1 Productivity

Productivity was **Very Good (3.89)** as to the performance level of the employees of the Goldenhigh-Garments Manufacturing. The indicator “The employees reach the hourly production output assigned to them” had the highest mean of **3.92** verbally interpreted as **Very Good** while the indicator “The employees are required to have overtime to finish the required output of the day” had the lowest mean of **3.80** verbally interpreted as **Very Good**.

Table 3.1

Performance Level of the Employees of The GoldenHigh-Garments Manufacturing in terms of Productivity

Indicators	Heads		Staff		Composite	
The employees	**X**	**VI**	**X**	**VI**	**X**	**VI**
1. reach the hourly production output assigned to them. (Naabot ng mga empleyado ang oras-oras na produksyon na output na itinalaga sa kanila.)	4.00	VG	3.84	VG	3.92	VG
2. have a low absenteeism rate. (Ang mga empleyado ay may mababang antas ng pagliban.)	4.00	VG	3.82	VG	3.91	VG
3. reach the required cycle time to finish an operation of the of the production process. (Naabot ng mga empleyado ang kinakailangang bilis upang matapos ang isang operasyon ng proseso ng produksyon.)	4.00	VG	3.79	VG	3.90	VG
4. exceed the required hourly production assigned to them. (Nalalampasan ng mga empleyado ang oras-oras na produksuon na output na itinilaga sa kanila.)	4.00	VG	3.80	VG	3.90	VG
5. are required to have an overtime to finish the required output for the day. (Ang mga empleyado ay kinakailangang magkaroon ng overtime upang matapos ang output na itinalaga sa kanila.)	3.80	VG	3.80	VG	3.80	VG
General Assessment	3.96	VG	3.81	VG	3.89	VG

Legend: 3.25-4.00 Very Good (VG) 2.50-3.24 Good (G) 1.75-2.49 Fair (F) 1.00-1.74 Poor (P)

This implies that the employees of The GoldenHigh-Garments Manufacturing Corporation are always performing highly in terms of productivity. The employees generally reach the hourly production output assigned to them, reach the required cycle time to finish an operation of the production process, exceed the required hourly production assigned to them, and have a low absenteeism rate. These indicate that the employees of the company are generally efficient and productive in doing the job assignments.

Nugroho et al. (2021) explained that employee output revealed a person's capacity for work. When an employee had done exceptional work that was useful in accomplishing every leader's task, this was referred to as performing well. The capacity of an employee to accomplish their work by the deadline was another measure of their performance. As noted, employee performance arose from the quality and quantity reached by an employee in performing his or her duties in line with the duties assigned and it can reach any target set out by the company. Every business had high standards of employee performance because the success of a business cannot be detached from the efficiency of its employees.

3.2 Output Quality

Table 3.2
Performance Level of the Employees of The GoldenHigh-Garments Manufacturing in terms of Output Quality

Indicators	Heads		Staff		Composite	
The employees	**X**	**VI**	**X**	**VI**	**X**	**VI**
1. in-line inspection defect rate is within company standards. (Ang antas ng depekto ng in-line na inspeksyon ng mga empleyado ay nasa mga pamantayan ng kumpanya.)	4.00	VG	3.80	VG	3.90	VG
2. final inspection output defect rate is within company standards. (Ang antas ng depekto ng final na inspeksyon ng mga empleyado ay nasa mga pamantayan ng kumpanya.)	4.00	VG	3.93	VG	3.97	VG
3. Right First Time rate is within company standards. (Ang antas ng Right First Time ng mga empleyado ay nasa loob ng pamantayan ng kumpanya.)	4.00	VG	3.89	VG	3.95	VG
General Assessment	4.00	VG	3.87	VG	3.94	VG

Legend: 3.25-4.00 Very Good (VG) 2.50-3.24 Good (G) 1.75-2.49 Fair (F) 1.00-1.74 Poor (P)

Output Quality was **Very Good (3.97)** as to the performance level of the employees of the Goldenhigh-Garments Manufacturing. The indicator “The employees’ final inspection output defect rate is within company standards and buyer inspection output defect rate is within standards” had the highest mean of **3.97** verbally interpreted as **Very Good** while the indicator “The employees’ in-line inspection defect rate is within company standards” had the lowest mean with **3.90** verbally interpreted as **Very Good**.

The tables indicate that the employees of The GoldenHigh-Garments Manufacturing Corporation are always performing highly in terms of quality output. The employees’ in-line inspection rate, final inspection output defect rate, buyer inspection output defect rate, Right First Time rate, and overall quality output rate are within standards. This indicates that the work output of employees of the company is of high quality. This means that the job performance of the employees of the company is of high standard since the output of their work is of high quality.

To support this claim, Nuryanti et al. (2020) explained that one of the most important issues faced by any company's management was the crisis in employee performance. The poor performance of human resources was the cause of the low intensity and inaccessibility of work targets. Every employee's performance was a genuine behavior that reflected their function inside the organization. Employee inventiveness was low and work was done in an unsatisfactory quantity and quality as a result of poor performance.

Research Question 4: What is the level of utilization of motivating strategies of the human resource program of The GoldenHigh-Garments Manufacturing Corporation?

4.1 Intrinsic Motivators

Intrinsic Motivators was **Fully Utilized (3.86)** as to the utilization level of motivating strategies of the human resource program of the GoldenHigh-Garments Manufacturing. The indicator “The employees feel accountable with the job they do” had the highest mean of **3.94** verbally interpreted as **Fully Utilized** while the indicator “The employees do not feel stagnant in the company” had the lowest mean of **3.80** verbally interpreted as **Fully Utilized**.

Table 4.1
Utilization Level of Motivating Strategies of the Human Resource Program of The GoldenHigh-Garments Manufacturing in terms of Intrinsic Motivators

Indicators	Heads		Staff		Composite	
The employees	$\bar{X}$	VI	$\bar{X}$	VI	$\bar{X}$	VI
1. are committed and loyal to the company. (Ang mga empleyado ay nakatuon at tapat sa kumpanya.)	4.00	FU	3.86	FU	3.93	FU
2. feel accountable with the job they do. (Pakiramdam ng mga empleyado ay may pananagutan sila sa trabahong kanilang ginagawa.)	4.00	FU	3.88	FU	3.94	FU
3. enjoy doing the job assigned to them. (Ang mga empleyado ay nasisiyahan sa paggawa ng trabahong itinalaga sa kanila.)	3.80	FU	3.81	FU	3.81	FU
4. are not burnout with their responsibilities. (Ang mga empleyado ay hindi burnout sa kanilang mga responsibilidad.)	3.80	FU	3.81	FU	3.81	FU
5. do not feel stagnant in the company. (Ang mga empleyado ay hindi nakakaramdam ng walang pag-unlad sa kumpanya.)	3.80	FU	3.80	FU	3.80	FU
General Assessment	3.88	FU	3.83	FU	3.86	FU

Legend: 3.25-4.00 Fully Utilized (FU) 2.50-3.24 Utilized (U)
1.75-2.49 Moderately Utilized (MU) 1.00-1.74 Not Utilized (NU)

This implies that using intrinsic motivators as a motivating strategy is effective in crafting the human resource program of The GoldenHigh-Garments Manufacturing Corporation. This type of motivator enables the employees to perform a task for its own sake if it aligns with their interests, passions, and personal values. This would lead to higher job performance and increased dedication and loyalty to the company.

To support this, Salikhova (2020) cited that according to the Self-Determination Theory, intrinsic motivators influence employees' performance. This theory proposed three basic psychological needs—autonomy, competence, and relatedness—as intrinsic motivators. Employees work because they find them to be fascinating, entertaining, significant, or valuable. Employees who felt valuable in the workplace stayed

in the company longer. They were effective in helping reach organizational goals and objectives. Employees have gone above and beyond to ensure that their job is of the highest caliber when they genuinely believe in it. They took the initiative on new prospects and finished them by the deadline since they were more focused and detail-oriented. Moreover, an employee felt more comfortable and motivated if their employer supported their values and goals. This resulted in an increased level of dedication from the employees towards the company.

4.2 Extrinsic Motivators

Table 4.2

Utilization Level of Motivating Strategies of the Human Resource Program of The GoldenHigh-Garments Manufacturing in terms of Extrinsic Motivators

Indicators	Heads		Staff		Composite	
The employees	**X**	**VI**	**X**	**VI**	**X**	**VI**
1. seek further knowledge and skills to go up the corporate ladder. (Ang mga empleyado ay naghahanap ng karagdagang kaalaman at kasanayan upang mapataas ang posisiyon sa kumpanya.)	3.80	FU	3.89	FU	3.85	FU
2. seek to receive rewards for their job to keep them motivated to work. (Ang mga empleyado ay naghahangad na makatanggap ng mga gantimpala upang mapanatili silang masigla magtrabaho.)	4.00	FU	3.98	FU	3.99	FU
3. receive punishment for their poor job performance to let them push themselves to be better. (Ang mga empleyado ay tumatanggap ng parusa para sa kanilang mahinang pagganap sa trabaho upang itulak nila ang kanilang sarili na maging mas mahusay.)	4.00	FU	3.94	FU	3.97	FU
General Assessment	3.93	FU	3.93	FU	3.93	FU

Legend: 3.25-4.00 Fully Utilized (FU) 2.50-3.24 Utilized (U)
1.75-2.49 Moderately Utilized (MU) 1.00-1.74 Not Utilized (NU)

Extrinsic Motivators was **Fully Utilized (3.93)** as to the utilization level of motivating strategies of the human resource program of the GoldenHigh-Garments Manufacturing. The indicator “The employees seek to receive rewards for their job to keep them motivated to work” had the highest mean of **3.99** verbally interpreted as **Fully Utilized.** On the other hand, the indicator “The employees seek further knowledge and skills to go up the corporate ladder” had the lowest mean with **3.85** verbally interpreted as **Fully Utilized**.

This implies that, in addition in using intrinsic motivators as a motivating strategy, extrinsic motivators is also effective in crafting the human resource program of The GoldenHigh-Garments Manufacturing Corporation. Extrinsic motivator is a potent tool for shaping behavior and rewarding employees for their hard work, devotion, and excellent work. This type of motivator enables the employees to increase productivity, promote camaraderie in the workplace, maintain motivation, and improve job satisfaction.

Supporting this, Rosli et al. (2022) asserted that one kind of behavior modification known as operant conditioning was an extrinsic motivator. It made use of incentives and penalties to make certain actions more or less likely to occur again. Extrinsic motivators

helped support certain employees in maintaining their resolve and productivity in the face of obstacles at work, as it was generally most effective when motivating people to do difficult or uninteresting activities.

Research Question 5: Is there a significant relationship between the level of implementation of the human resource program and the level of performance of the employees of The GoldenHigh-Garments Manufacturing Corporation?

Table 5

Test of Significant Relationship between the Level of Implementation of Human Resource Program and the Level of Performance of the Employees of The GoldenHigh-Garments Manufacturing Corporation

Sales performance	Job Satisfaction of self-employed	r value	p value	Remarks	Decision
Ability	Productivity	.004	.970	Not Significant	Accept ho
	Output Quality	.190	.064	Not Significant	Accept ho
Motivation	Productivity	.173	.091	Not Significant	Accept ho
	Output Quality	.052	.616	Not Significant	Accept ho
Opportunity	Productivity	.040	.698	Not Significant	Accept ho
	Output Quality	.172	.094	Not Significant	Accept ho

There was no significant relationship between the level of implementation of the human resource program and the level of performance of the employees of the GoldenHigh-Garments Manufacturing Corporation. As shown in the probability values **0.970**, **0.064**, **0.091**, **0.616**, **0.698**, and **0.094** which were greater than the level of significance at .05 and r values **0.004**, **0.190**, **0.173**, **0.052**, **0.040**, and **0.172**. **Thus accept the null hypothesis**.

In conclusion, the level of implementation of the human resource program does not connect or associate with the level of performance of the employees of the GoldenHigh-Garments Manufacturing Corporation indicates that there are other factors that cam associate with the performance of the employees of GoldenHigh-Garments Manufacturing Corporation.

Another crucial component of employee performance is emotional intelligence. The ability to identify and control one's own emotions as well as those of others is referred to as emotional intelligence. People who work for companies are subject to human emotions. Sometimes workers become emotionally entangled in family matters, which prevents them from giving their jobs their whole attention. Moreover, employee performance may be positively or negatively impacted by work-life balance. The amount

of time and energy that an employee may commit to both their personal and professional lives is referred to as work-life balance. Given that the company provides sufficient support to the employees for optimum performance, factors such as emotional intelligence and work-life balance should also be considered in evaluating employee performance.

To support this claim, Dumaguing (2022) reiterated that scholars from throughout the world have conducted a great deal of research on employees' performance. They found that disengagement was correlated with both personal and professional traits. Employees were more likely to be contented with their jobs if they believed they had enough time for their personal life. As a result, they became more motivated, engaged, and dedicated to their work, which ultimately boosted their work output.

Research Question 6: Is there a significant relationship between the level of implementation of the human resource program and the utilization level of the motivating strategies of The GoldenHigh-Garments Manufacturing Corporation?

There was a significant relationship between the level of implementation of the human resource program and motivating strategies particularly the Implementation of Motivation and Extrinsic Motivating Strategies, significant relationship between Human Resource Program Opportunity and Motivating strategies such as Intrinsic and Extrinsic Motivating Strategies. As shown in the probability values of **0.003**, **0.000,** and **0.005** which were less than the level of significance at 0.05 and with r values of **0.302**, **0.398**, and **0.284**. Thus, the hypothesis was rejected.

Table 6

Test of Significant Relationship between the Level of Implementation of Human Resource Program and Utilization Level of the Motivating Strategies of The GoldenHigh-Garments Manufacturing Corporation

Human resource program	Motivating Strategies	r value	p value	Remarks	Decision
Ability Motivation	Intrinsic	.147	.152	Not Significant	Accept ho
	Extrinsic	.187	.068	Not Significant	Accept ho
Opportunity	Intrinsic	.111	.281	Not Significant	Accept ho
	Extrinsic	.302**	.003	Significant	Reject ho
	Intrinsic	.398**	.000	Significant	Reject ho
	Extrinsic	.284**	.005	Significant	Reject ho

On the other hand, there was no significant relationship between the other variables of implementation of the human resource program and motivating strategies such as Ability and Motivating strategies, motivation, and intrinsic motivating strategies.

As shown in the probability values of **0.152**, **0.068,** and **0.281** which was more than the level of significance at 0.05 and with r values of **0.147**, **0.187**, and **0.111**. Thus, the hypothesis was accepted.

The human resource program of The GoldenHigh-Garments Manufacturing Corporation in terms of motivation is in line with the company's motivating strategies. Additionally, the motivating strategies are also in line with the company's human resource program in terms of opportunity. It is seen in the human resource program that the company motivates its employees, where the latter are motivated to work because their psychological needs for autonomy, relatedness, and competence are being met. Moreover, the employees are also motivated to work since they are getting external rewards from the company.

In human resource management, motivation is one of the most crucial strategies that companies invest in. The typical refrain in the majority of companies is that a certain individual lacks motivation, which has caused his or her performance to suffer. For this reason, businesses shell out enormous sums of money to plan training sessions and rewards that will inspire employees. Motivation can be defined as an individual's desire or drive to complete tasks and reach organizational goals.

Furthermore, when the setting fosters growth, employees will consistently give their best effort. One of the biggest motivators is the possibility of advancement. Employees worked with far greater zeal during periods when organizational doors were open and growth chances were plentiful than during periods when opportunities were rare or postponed for several reasons. Employees who are motivated to work show positive job performance, which in turn helps the company reach its objectives and goals.

To support this, Al-Tit (2020) suggested that using human resource programs to improve employee performance was seen as a combination of three things: skill development, incentive, and opportunity enhancement. Using the social exchange theory as support, analysts went on to say that when businesses implement HR initiatives, which workers were likely to view as a demonstration of the company's commitment to them, workers react in ways that advance corporate objectives. Employees viewed company activities such as programs aimed at improving skills, motivation, and opportunities as evidence of the company's support or dedication. In return, workers showed a positive attitude and enhanced output that contributed to the achievement of organizational goals.

Research Question 7: Based on the findings of the study, what enhanced program may be proposed?

Based on the findings of the study, several enhanced programs can be proposed to address the identified issues and improve the human resource program implementation and the employee performance of The Goldenhigh-Garments Manufacturing Corporation.

Firstly, The GoldenHigh-Garments Manufacturing Corporation can incorporate extra methods to enhance the company's human resource program in terms of ability,

motivation, and opportunity to maintain and improve productive employee performance. A comprehensive approach that would encompass the potential, drive, and aptitude of the staff members is creating a Human Capital Development Program. Employees would benefit from an entire human growth that would satisfy Maslow's Hierarchy of Needs, allow for a work-life balance, and advance their careers.

Secondly, it is noteworthy that the company offers its employees the same perks under the human resource program. But to have a better retention rate, the business needs to provide its workers with benefits that are based on talent and performance. The focus of the HR program ought to be on skill and performance. Benefits and awards ought to be given out following how well employees do their jobs overall. It should also take into account the employee's contribution to the company's accomplishment of its objectives.

Table 7

The Proposed Enhanced Plan

KEY AREAS	OBJECTIVES	STRATEGIES/ ACTIVITIES	TIME FRAME	PERSONS INVOLVED	SUCCESS INDICATRS
Implementation of human resource program in terms of Ability	Enhance ability aspect of the human resource program	Job-Skills matching of employees	Ongoing	Human Resource Department	Increased employee application rate
Implementation of human resource program in terms of Motivation	Enhance the motivation aspect of the human resource program	Offering performance based rewards	Ongoing	Human Resource Department	Increased scores in performance evaluation
Implementation of human resource program in terms of Opportunity	Enhance the opportunity aspect of the human resource program	Performance based promotion program	Ongoing	Human Resource Department	Increased employee retention rate
Motivating strategies in terms of Intrinsic Motivators	Enhance the intrinsic motivator aspect of the motivating strategies	Offering non-monetary benefits	Ongoing	Human Resource Department	Increased employee satisfaction feedback
Motivating strategies in terms of Extrinsic Motivators	Enhance the extrinsic motivator aspect of the motivating strategies	“Choose your own” rewards program	Ongoing	Human Resource Department	Increased employee satisfaction feedback
Employee performance in terms of Productivity	Improve employee productivity	Hire an Industrial Engineer to streamline workflow processes	3 Months	Heads, Operations Department	Increased production output and Decreased overtime
Employee performance in terms of Output Quality	Improve employee output quality	Quality assurance training and development	Ongoing	Heads, Quality Controllers	Decreased defect rate

Thirdly, the employees' responses indicate that they have to work overtime to complete the day's needed output. The employees' ability to combine their professional and personal lives will suffer as a result. As a result, the business needs to give a production output that can be achieved. An industrial engineer could be hired by the business to assist the management with capacity planning, layout planning, work design, and workflow management. As a result, the business would have a productive and successful operations system. Additionally, there would be no need for overtime because the staff could produce the necessary amount.

Furthermore, to maintain the company's successful incentive programs. Non-monetary rewards or perks must be part of the HR program. Cash awards are not the only way to recognize and thank employees. By providing non-cash awards, the organization can sustain the engagement, motivation, and excitement of its staff. Time for personal projects, flexibility in the workplace, extra time off, experiential rewards, and public recognition are a few examples. These would be very economical and increase worker engagement.

Apart from the aforementioned suggestion, the company might allow employees to select their awards. Giving workers the option to select their reward encouraged engagement and a driven workplace environment. Allowing workers to select their rewards improves the relationship between the organization and its workers and fosters a culture of trust and respect. It also makes workers feel appreciated. Thus, it may be possible to promote employee engagement and a positive work atmosphere.

Conclusions

After presenting the summary of the findings of the study, the following conclusions were drawn:

1. That The GoldenHigh-Garments Manufacturing Corporation considers its employees to be valuable assets of any organization. Therefore, the company continuously improves its human resource management program. With this being said, the employees are really satisfied with the opportunity they have while working in the company. They have the opportunity to advance their skills and knowledge with the job that they do, which consequently helps with self-development and achievement of organizational goals. The statistics indicate that the employees of The GoldenHigh-Garments Manufacturing Corporation are relatively satisfied with the human resource program of the company in terms of ability because the company respects the competence of each employee. Moreover, employees have several reasons to be satisfied with the human resource program of the company in terms of motivation. Employees are motivated by doing performance evaluations regularly, following legal compensation-benefits programs, providing competitive compensation-benefits programs, focusing on the mental well-being of the employees, and giving rewards and punishment for job performance.

2. That the heads and employees both receive the same treatment from the management of The GoldenHigh-Garments Manufacturing Corporation. Both the heads and employees benefit equally from the implementation of the human resource program of the company.

3. That the employees reach the hourly production output assigned to them and attain the required cycle time to finish an operation of the production process. Moreover, the employees exceed the required hourly production output assigned and they have a low absenteeism rate. These are important indicators and factors in the operations management of the company. Due to this positive performance of the employees, The GoldenHigh-Garments Manufacturing Corporation reaches its operational goal of delivering the client's orders on time. In addition, the results also concluded that the performance of the employees in terms of Quality Output was rated Very High. The employees' final inspection output defect rate and in-line inspection defect rate are within company standards. Furthermore, the employees' Right First Time, which is a management strategy that estimates the percentage of usable products at the start of the production process, is within company standards. These indicators are vital for the company as they determine the reorder rate of the company's clients.

4. That extrinsic motivators are useful when creating the company's human resource program in addition to using internal motivators as a motivating method. An effective technique for modifying behavior and rewarding staff for their dedication, hard effort, and superior performance is the extrinsic motivator. With the help of this kind of motivator, workers can boost output, foster teamwork, stay motivated, and experience more job satisfaction. Some employees found that support from their external motivators helped them stay determined and productive even when faced with challenges at work.

5. That there are additional variables associated with The GoldenHigh-Garments Manufacturing Corporation employees' performance. When assessing employee performance, aspects like emotional intelligence and work-life balance are also taken into account, provided that the organization offers enough support to its staff to enable them to perform at their best. The emotional intelligence of employees is another essential element of their performance. Emotional intelligence is the capacity to recognize and manage one's feelings as well as those of others. Employees of businesses are human beings with feelings. Workers occasionally become emotionally involved in family issues, which keeps them from focusing entirely on their work. Furthermore, work-life balance may have a favorable or unfavorable effect on employee performance. Work-life balance is the quantity of time and effort that an employee can devote to both their personal and professional lives.

6. That the motivating strategies are being applied in the opportunity aspect of the human resource program of The Goldenhigh-Garments Manufacturing Corporation. When the work environment is supportive of growth, employees consistently give their best work. The opportunity aspect is seen as an effective motivating strategy used in the human resource program of the company. Employees work with far greater vigor during periods when organizational doors are open and growth opportunities are available.

7. That the proposed Enhanced Program is of great importance in addressing the identified findings in the human resource program of The Goldenhigh-Garments Manufacturing Corporation. The Enhanced Program serves as a complete framework for implementing directed interventions and driving improvement. Eventually, the Enhanced Program guides improvement efforts, enhancing the human resource program, motivating strategies, and employee performance.

Recommendations

The following recommendations have been formulated based on the summarized findings and derived conclusions:

1. To sustain and enhance productive employee performance, The GoldenHigh-Garments Manufacturing Corporation may implement additional strategies for the company's human resource program in terms of ability, motivation, and opportunity. One overall strategy that would encapsulate the ability, motivation, and opportunity of the employees is establishing a Human Capital Development Program. This would give the employees overall human development in terms of work-life balance, career development, and meeting Maslow's Hierarchy of Needs.

2. The company may offer skill-performance-based benefits to its employees. The human resource program must be skill-performance-centric. It may give rewards and benefits based on the overall job performance of the employees. Moreover, it may consider the contribution of the employee to the company's achievement of organizational goals.

3. The company may provide an achievable required production output. The former must take into consideration the output capacity of the employees. Moreover, the company should evaluate the production line performance. The manufacturing company's production line is its fundamental component. By carefully examining each manufacturing facility and its daily capacity, the management can map how the production lines are performing. Hence, an efficient and achievable production output can be given to the employees.

4. The company may hire an industrial engineer who would help the management with its capacity planning, layout planning, work design, and workflow management. Hence, the company would have an effective and efficient operations system. Moreover, the employees would be able to meet their required output without needing overtime.

5. The human resource program may include non-monetary incentives or benefits. Employee rewards don't have to be in the form of cash. The company may maintain its employees' enthusiasm, motivation, and engagement by offering non-monetary rewards. Examples are 1) time to work on their projects, 2) flexible working, 3) additional time off, 4) experiential rewards, and 5) public recognition. These would provide great value for money and help engage employees more.

6. The company may let their employees choose their rewards. Offering employees the chance to choose their reward helps create a sense of engagement that promotes a motivated company culture. Giving employees the freedom to choose their rewards strengthens the bond between the company and employees and creates a climate of mutual respect and trust. It also helps employees feel valued. Thus, a positive work environment and employee motivation may be fostered.

7. The company may utilize the proposed Enhanced Program. This comprehensive plan includes strategies for effective human resource program implementation, motivating strategies utilization, and promoting a culture of continuous improvement. By prioritizing these initiatives, the employees of The Goldenhigh-Garments Manufacturing Corporation can increase their job performance. Moreover, management support and sufficient financial resources are vital to effectively implement the enhanced program. Furthermore, regular evaluation of the enhanced program may be done to assess its effectiveness. By following the proposed enhanced program, the company can strive towards its goals of improvement and increased employee performance.

8. To deepen understanding and contribute to the field of human resource management in the garment manufacturing industry, the results of this study can be expanded upon in several ways for further research. Three (3) fields can be recommended, 1) conducting employee-centered research, 2) doing a qualitative approach in future research with the purpose of better understanding the employees' experiences, and 3) evaluating the effectiveness of the proposed enhanced program of the study. The Goldenhigh-Garments Manufacturing Corporation will have a great opportunity to do all necessary analysis about the implementation of the human resource program, utilization of motivating strategies, and employee performance as a result of this initiative.

Compliance with Ethical Standards

Some ethical concerns were addressed since this study needed respondents, specifically employees of a company, to participate. To protect the participants' privacy and safety, it was essential to take these ethical considerations into account. Consent and confidentiality are two important ethical considerations that were taken into account throughout the research process. The researcher communicated all significant information about the study, including its goal and objective, to obtain the consensus of the chosen participants. The importance of the respondent's role in the completion of the research was made clear to them by elaborating on these crucial facts. The respondents were also notified that they could pull out their involvement in the study at any time. As a result, participants were not compelled to take part in the study. The participants' privacy was further protected by the researcher by not using their names or other identifying information. Only information that was pertinent to resolving the research questions was provided.

Acknowledgements

The researcher would like to first of all thank and praise the Heavenly Father for His guidance in helping him to understand and embrace that anything is possible. Moreover, for giving him the strength to strive to obtain this academic milestone.

The researcher would like to express his sincere gratitude to the following with all of his heart and is blessed to have a superb dissertation committee:

His adviser, Dr. Marilou C. Urbina, for accepting him as thesis advisee during the proposal and final defense. A sincere thank you for the excellent counsel, encouragement, and patience, as well as for always believing that the study will be successful;

His statistician, Dr. Eulalia M. Javier, for stepping in and lending her expertise to uphold the validity and credibility of the study;

The members of the panel, Dr. Diosmar O. Fernandez, Dean Alfredo G. Perez, and Dr. Ma. Lorena Tagala, for their extraordinary and valuable insights, comments, suggestions, and recommendations to improve and bring the study to perfection;

The top management of The Goldenhigh-Garments Manufacturing Corporation, Mr. Efren Recto, Mrs. Edna Recto, Mr. Mario Recinto, and Mrs. Eden Recinto, for giving their consent and allowing the researcher to do a study about the company;

Most especially his family, for always being the ardent supporters, for all their prayers, encouragement, motivation, and help during this difficult time of balancing work and studies, this would not be possible without their assistance;

The researcher would also like to acknowledge all of The Goldenhigh-Garments Manufacturing Corporation's employees and participants in the study. They deserve heartfelt gratitude for freely giving their time and effort to data collection throughout this research.

ABSTRACT

This study aimed to determine the impact of student interest and multimedia instruction on academic performance in mathematics in a college in Gingoog City, Philippines. Using a descriptive correlational research design, the study analyzed the effects of student interest and multimedia instruction on academic performance. A proportionate stratified random sampling method was used to select 120 participants from five different programs at the college, with 112 students responding. The research instruments, adapted from other studies, were modified and pilot tested for validity and reliability before distribution via Google Forms. Quantitative statistical methods, including mean, standard deviation, and Pearson's correlation, were employed to analyze the data. The findings indicate that while students consistently show interest in the subject, this enthusiasm does not significantly correlate with their academic performance. Similarly, multimedia instruction is perceived as moderately effective in enhancing learning experiences, yet it also does not significantly correlate with academic performance. Nonetheless, the majority of students achieved very good academic results by the end of the semester. These results suggest that while student interest and multimedia tools are important in education, their direct influence on academic performance may be affected by additional, unexplored factors.

Keywords: *student interest, multimedia instruction, academic performance*

INTRODUCTION

Poor Academic performance in mathematics remains a significant concern. In terms of country means, the Philippines placed second to last in mathematics in the local context, as revealed by the 2018 Programme for International Student Assessment (PISA) scores (Department of Education, 2019). Specifically, 18.5% of students attained the PISA 2018 minimum standard, which is level 2 or higher; 26.9% of students demonstrated level 1 proficiency; and 54.6% of Filipino students who took part received a score below the lowest level 1 proficiency (Department of Education, 2019). Furthermore, in the study of Capuno et al. (2019), it states that there is a need for development in the mathematical proficiency of Filipino students. As shown in the 2016–2017 Global Competitiveness Report, the Philippines ranked 79th out of the 138 countries in terms of the quality of science and math education.

According to a research study by Remo (2019), students' academic performance in Mathematics in the Modern World (MMW) at Bukidnon State University in the Philippines was deemed fairly satisfactory, suggesting the need for improvement. Similarly, it was also found by Roman and Villanueva (2019) that students from the other selected state universities in the Philippines performed satisfactorily in the same subject; however, they had trouble with several areas.

Mathematics, being abstract in nature, often leads many students to lose interest, resulting in low achievement (Yeh et al., 2019). Beyond the inherent abstractness of mathematics, anxiety about learning the subject also plays a significant role in students' disinterest (Summer, 2020). Hence, interest is a crucial factor affecting students' achievement in mathematics (Yeh et al., 2019). Moreover, students who lack interest in mathematics are less likely to pay attention to the topic, and students who struggle to achieve good results in mathematics tests often exhibit weaknesses in fundamental mathematical skills (Minarni et al., 2016). Students who repeatedly score poorly in mathematics may eventually lose interest (Yeh et al., 2019). On the other hand, Yu and Singh's (2016) study's findings indicated that the relationship between interest and mathematics performance was insignificant. They further explained that interest might not be a direct predictor of mathematics performance.

The integration of multimedia technologies in classrooms has significantly revolutionized education. Multimedia instruction has great intentions in terms of enhancing learning across diverse student populations and educational levels. In addition, according to Tayirova (2023), the integration of multimedia tools in learning brings about positive effects on students, boosting their interest in learning, as well as students' development of self-confidence and motivation for self-improvement in learning. In the study of Widiasanti (2023), it was also stated that multimedia offers effective learning tools and fosters creativity and innovation in the learning environment, leading to improved learning quality and a more positive educational experience for students. An important advantage of using multimedia in mathematics is the increased interaction between students and concepts, along with the practical application of the skills they learn (Orlando & Attard, 2016).

In a learning setting with increased technology, Wong and Wong (2019), discovered that although children usually demonstrated interest in mathematics, there was no significant correlation between interest in mathematics and overall performance on a mathematics test administered to 40 students and the Mathematics Interest Inventory.

In the modern world, this study aims to uncover the profound impact of student interest and multimedia instruction on academic performance in mathematics. Through exploring these relationships, the study endeavors to address pertinent questions, such as the level of student interest, the role of multimedia tools in facilitating understanding, and their correlation with academic performance among participants who completed the Mathematics in the Modern World subject.

Research Questions

This study endeavors to ascertain the impact of student interest and multimedia instruction on academic performance in mathematics in the modern world school year 2023-2024.

More specifically, this research aims to address the following questions:

1. What is the level of student's interest in second semester Mathematics in the Modern World classes?
2. How do students perceive the effectiveness of multimedia instruction in enhancing their understanding of mathematical concepts in Mathematics in the Modern World classes?
3. What is the average academic performance of students in second semester Mathematics in the Modern World classes?
4. Is there a significant relationship between student interest and academic performance in Mathematics in the Modern World?
5. Is there a significant relationship between multimedia instruction and academic performance in Mathematics in the Modern World?

METHODOLOGY

The methodology of the study is presented in this section. It discusses the research design, study location, subjects and participants, data collection procedure, including research instrument and validity and reliability testing, data processing system, analytical schemes, and statistical tools.

Locale and Sampling

The study was conducted in one of the Higher Education Institution in Gingoog City. It employed a descriptive correlational research design and utilized a proportionate stratified random sampling method to ensure a representative sample from the population. The sample is comprised of 120 first-year and second-year students from the

different academic programs offered mathematics in the modern world in a college in Gingoog City, Philippines. These programs include Bachelor of Science in Nursing (BSN), Bachelor of Science in Accountancy (BSA), Bachelor of Secondary Education major in English (BSEd-English), Bachelor of Science in Hospitality Management (BSHM), and Bachelor of Science in Business Administration (BSBA). A total of 112 participants participated in the study out of the target sample size of 120 participants.

Specific Data Gathering Procedure

After confirming the questionnaire's validity and reliability, the researcher obtained formal approval from the Research Adviser and the Dean of the target college by submitting a request letter. Upon receiving the necessary permissions, the researcher established a schedule for data collection. The research questionnaires were then distributed online via Google Forms, with the official consent of the Dean. Throughout the study, the researcher provided a detailed explanation of the research objectives and personally administered the questionnaires to respondents.

The respondents were assured that their data would be kept strictly confidential, as outlined in the questionnaire. Finally, the collected data was analyzed using Microsoft Excel and SPSS.

Research Instrument

This study utilized adapted and revised questionnaires from the Mathematics Interest Inventory (MII) developed by Flaga (2021) and the Multimedia Instruction Inventory by Wao (2016) consisting of 20 items respectively. These instruments were subjected to a validation process and underwent pilot testing with a sample of 20 third-year BSEd-English and BEED students at a private college in Gingoog City who had taken the Mathematics in the Modern World subject. To establish internal consistency, Cronbach's alpha coefficient was computed, resulting in values of 0.904 and 0.957, indicating excellent reliability.

Data Analysis

To gain a thorough grasp of the data, the following statistical tools were employed:

For problems number 1, 2, and 3, descriptive statistics such as mean and the standard deviation were used in order to determine the respondent’s level of interest, perceive effectiveness of multimedia instruction, and academic performance in Mathematics in the Modern World.

For problems 4 and 5, the Pearson correlation coefficient was utilized to determine whether there was a significant relationship between the respondents' level of interest in Mathematics in the Modern World and academic performance, and between respondents’ perceived effectiveness of multimedia instruction in Mathematics in the Modern World and academic performance. This analysis helped in identifying the strength and direction of these relationships.

Scope and Limitations

The study utilized a quantitative descriptive-correlational research design to measure the level of interest, perceived effectiveness of multimedia instruction, and academic performance in mathematics in the modern world of college students during the second semester of the school year 2023–2024 in a college in Gingoog City, Philippines. One hundred twenty first-year and second-year students are sampled from the population; hence, there are only one hundred twelve respondents who responded to the research survey since researchers do not have control over respondents who choose not to participate during data collection. An adapted research instrument was employed to gather all the necessary data, which the study respondents provided by completing a survey questionnaire. SPSS was used to analyze the data, which included frequency count, percentage, mean, standard deviation, and Pearson correlation coefficient.

RESULTS

Table 1.

Mean and Standard Deviation, Distribution of student's interest in Mathematics in the Modern World classes.

	Indicators	Mean	SD	Description	Interpretation
1	I like to answer questions in Mathematics in the Modern World.	3.06	.701	Agree	Manifested and exhibited most of the time
2	I am interested in Mathematics in the Modern World.	3.05	.708	Agree	Manifested and exhibited most of the time
3	Knowing a lot about Mathematics in the Modern World is helpful.	3.36	.656	Strongly Agree	Exhibited and manifested at all times.
4	I feel happy when it comes to working on Math problems.	2.88	.807	Agree	Manifested and exhibited most of the time
5	I am excited when a new Math topic is introduced.	2.92	.807	Agree	Manifested and exhibited most of the time
6	I work hard in my Mathematics in the Modern World Class.	3.19	.665	Agree	Manifested and exhibited most of the time
7	I want to learn more about Mathematics.	3.20	.695	Agree	Manifested and exhibited most of the time
8	I believe I can get better and better at Math each day.	3.15	.674	Agree	Manifested and exhibited most of the time

9	I complete all my Math assignments outside of class.	3.21	.646	Agree	Manifested and exhibited most of the time
10	I like doing mathematics activities.	2.90	.771	Agree	Manifested and exhibited most of the time
11	I think I have done well in mathematics during the second semester.	3.05	.708	Agree	Manifested and exhibited most of the time
12	Math can be a lot of fun.	3.12	.720	Agree	Manifested and exhibited most of the time
13	Discussing different solutions is a good way of learning math.	3.29	.663	Strongly Agree	Exhibited and manifested at all times.
14	I ask questions when I am unsure of a problem.	3.25	.717	Agree	Manifested and exhibited most of the time
15	I'm certain I can figure out how to solve difficult math problems.	2.88	.803	Agree	Manifested and exhibited most of the time
16	Time spent learning why a solution works is time well spent.	3.13	.651	Agree	Manifested and exhibited most of the time
17	I give math assignments my best effort.	3.26	.720	Strongly Agree	Manifested and exhibited most of the time
18	Even if the concepts in math class are hard, I can learn them.	3.13	.673	Agree	Manifested and exhibited most of the time
19	It's important for me to do really well in math.	3.21	.621	Agree	Manifested and exhibited most of the time
20	I work on Mathematics in my spare time.	2.87	.753	Agree	Manifested and exhibited most of the time
	Overall Mean	**3.23**	**.644**	**Agree**	**Manifested and exhibited most of the time**

Table 2.

Mean and Standard Deviation, Distribution of how students perceive the effectiveness of multimedia instruction in Mathematics in the Modern World classes.

	Indicators	Mean	SD	Description	Interpretation
1	I can easily understand the topic of Mathematics in the Modern World with the integration of multimedia technology.	3.05	.642	Agree	Moderately effective
2	Multimedia instruction caught my interest in the class.	3.04	.629	Agree	Moderately effective
3	I don't need to copy some notes when multimedia is used.	2.79	.843	Agree	Moderately effective
4	Through multimedia instruction, it is easy for me to remember the details.	3.01	.678	Agree	Moderately effective
5	I feel sleepy and bored when it uses unattractive multimedia technology lessons.	2.81	.742	Agree	Moderately effective
6	I can easily acquire more information accurately and briefly when it uses multimedia teaching.	3.08	.617	Agree	Moderately effective
7	I am attentive when presentation is well-done.	3.29	.653	Strongly Agree	Highly effective
8	With multimedia instruction, I retain information for a longer period of time.	3.02	.629	Agree	Moderately effective
9	Multimedia stimulates my attention in class.	3.09	.578	Agree	Moderately effective
10	I don't want to pay attention when multimedia technology is not understandable.	2.88	.803	Agree	Moderately effective
11	I compare and contrast things easily with the aid of multimedia technology.	3.04	.576	Agree	Moderately effective
12	I acquire broader knowledge about the topic when multimedia technology is properly used.	3.12	.581	Agree	Moderately effective
13	I will not be satisfied if the multimedia presentation lacks follow up discussion.	3.01	.651	Agree	Moderately effective

14	Multimedia technology helps develop my mathematical skills.	3.15	.603	Agree	Moderately effective
15	I understand the lesson thoroughly and systematically through integration of multimedia technology.	3.15	.557	Agree	Moderately effective
16	I participate with the use of multimedia technology during discussion especially if it employs animation, sound, motion, or graphs.	3.04	.606	Agree	Moderately effective
17	Using multimedia technology inspires me to participate in class.	3.04	.629	Agree	Moderately effective
18	Instructional Materials like laptop and television excites me.	3.07	.667	Agree	Moderately effective
19	I feel enlighten when multiple multimedia instructional tools are used.	3.12	.611	Agree	Moderately effective
20	It encourages me to share my own thoughts and additional information if there is multimedia technology during the discussion.	2.96	.643	Agree	Moderately effective
	Overall Mean	**3.21**	**.505**	**Agree**	**Moderately effective**

Table 3.

Frequency, Percentage, Mean Distribution, and Standard Deviation of the average academic performance of students in mathematics in the modern world classes

Grade Point Equivalence	Equivalence	Interpretation	Frequency	Percentage %
1.00-1.50	90% - 100%	Excellent	35	31.3
1.60-2.00	85% - 89%	Very Good	37	33.0
2.10-2.50	80% - 84%	Good	39	34.8
2.60-3.00	75% - 79%	Passed	1	.9
3.10-5.00	Below 75%	Failed	0	0
	Total		112	100

Mean: 1.82

Interpretation: Very Good

Standard Deviation: .403

Table 4.

Pearson Correlation Analysis of the significant relationship between student interest and academic performance in Mathematics in the Modern World.

Variable	Academic Performance	
Student Interest	Pearson Correlation (r)	-.066
	Sig. (2-tailed)	.487
	Interpretation	Not significant

Table 5.

Pearson Correlation Analysis of the significant relationship between multimedia instruction and academic performance in Mathematics in the Modern World.

Variable	Academic Performance	
Multimedia	Pearson Correlation (r)	-.049
Instruction	Sig. (2-tailed)	.607
	Interpretation	Not significant

DISCUSSION

1. What is the level of student's interest in second semester Mathematics in the Modern World classes?

Table 1 presents the mean and standard deviation distribution of students' interest levels in Mathematics in the Modern World. The overall mean of 3.2 indicates that students generally "agree" with statements regarding their interest, suggesting their interest is exhibited most of the time. Researchers observed that most students are engaged with the subject matter, demonstrating a generally positive interest. However, this level of interest does not represent the highest possible engagement, indicating room for improvement through innovative teaching methods or more engaging materials. Maass et al. (2019) note that boosting interest and performance in mathematics through such innovations is challenging and requires significant teacher commitment and motivation. Similarly, Mazana et al. (2019) found that an enjoyable learning environment significantly impacts students' interest in mathematics and enhances their performance.

The indicator with the highest mean (M = 3.36, SD = 0.656) was "Knowing a lot about Mathematics in the Modern World is helpful," showing that respondents strongly agree with its importance. Sharma's (2021) study supports this, as 82% of participants felt that knowledge of mathematics is beneficial in daily life. Mathematics fosters logical, critical, and creative thinking, and enhances problem-solving abilities, abstract and spatial

reasoning, and communication skills. It is essential in professional settings and provides financial opportunities, making it invaluable in our evolving world. Moreover, the statement "Discussing various solutions is a good way of learning math" had the second-highest mean (M = 3.29, SD = 0.663), indicating strong belief in the effectiveness of discussing multiple solutions. Stupel and Ben-Chaim's (2017) study supports this, showing that diverse approaches improve mathematical creativity and comprehension. Teachers should encourage and request multiple solutions in tests and classroom activities.

The indicator with the lowest mean (M = 2.87, SD = 0.753) was "I work on mathematics in my spare time," suggesting that respondents rarely engage with mathematics during leisure time. This trend may be due to factors such as lack of interest, math anxiety, or competing priorities. Ramirez et al. (2016) found that math anxiety significantly reduces students' willingness to engage with math outside of the classroom. Zimmerman et al. (2017) highlight the importance of self-regulation and motivation in influencing students' engagement with academic subjects beyond formal education. In addition, the indicators such as "I like to answer questions in Mathematics in the Modern World," "I am interested in Mathematics in the Modern World," "I feel happy when it comes to working on Math problems," and others, reflect students' emotions, self-efficacy, and mindset towards mathematics. A student's interest in their studies is influenced by various factors, including feelings, self-efficacy, and sense of community (Kahu et al., 2017). These indicators suggest that respondents are generally interested in the subject.

2. How do students perceive the effectiveness of multimedia instruction in enhancing their understanding of mathematical concepts in Mathematics in the Modern World classes?

Table 2 presents the mean and standard deviation distribution of students' perceptions of the effectiveness of multimedia instruction in enhancing their understanding of mathematical concepts in Mathematics in the Modern World classes. With an overall mean of 3.2054, or approximately 3.2, the respondents "agree" that multimedia instruction is moderately effective. The researchers observed that most students agree that multimedia instruction enhances their understanding of mathematical concepts. A strong foundation in basic mathematical concepts is a fundamental skill every student should possess. The correct and effective implementation of multimedia instruction can help students achieve a thorough understanding of concepts and excel in mathematics. This highlights the importance of continuous curriculum development and the integration of information and communications technology in education.

The specific indicator with the highest mean (M = 3.29, SD = 0.653) was "I am attentive when the presentation is well-done." This suggests that respondents strongly agree that a well-done presentation enhances their attentiveness. Yaftian and Barghamadi (2022) found that new teaching media improve student learning through intuitive observation and understanding, leading to greater involvement and responsiveness in the classroom, increased enthusiasm, and reduced anxiety about mathematical concepts. Multimedia instruction makes students more interested in learning mathematics. Moreover, the indicators "Multimedia technology helps develop my

mathematical skills" (M = 3.15, SD = 0.603) and "I understand the lesson thoroughly and systematically through the integration of multimedia technology" (M = 3.15, SD = 0.557) had the second highest means. Participants agree that multimedia instruction enhances their mathematical skills and deepens their understanding comprehensively and systematically. Biffi et al. (2019) found that interactive multimedia modules improved material transfer by 20%, knowledge retention by 8%, and satisfaction rates with course preparation significantly.

The indicator with the lowest mean (M = 2.79, SD = 0.843) was "I don't need to copy some notes when multimedia is used." This suggests that participants agree that note-taking is less necessary when multimedia is integrated into instruction. Akinoso (2020) found that using multimedia improves mathematics learning more than traditional instruction, allowing students to focus on learning rather than copying notes. In addition, the indicator "I feel sleepy and bored when it uses unattractive multimedia technology lessons" (M = 2.81, SD = 0.742) had the second lowest mean, indicating that unappealing multimedia technology makes participants feel disengaged. Heidig et al. (2016) found that the design of multimedia learning material affects learners' emotional states, impacting their intrinsic motivation to stay attentive and awake during lessons.

Overall, the results indicate that interactive multimedia instruction is effective in improving respondents' understanding of mathematical concepts. It provides flexibility and convenience for students, helping them engage in classroom activities and participate actively in their learning.

3. What is the average academic performance of students in second semester Mathematics in the Modern World classes?

Table 3 presents the frequency and percentage distribution of participants' average academic performance in Mathematics in the Modern World. The overall mean for the second semester of the 2023-2024 school year is 1.8, with a standard deviation of 0.403, indicating that the participants' academic performance in this subject is "very good." Most students had a grade point equivalence range of 2.10 to 2.50, corresponding to 80% to 84%, and a percentage of 34.8%, classifying them as "good" in Mathematics in the Modern World (MMW). Bangalan and Hipona (2022) found that students in this course exhibited a favorable disposition, recognizing its importance in both personal and societal contexts, and thrived in an environment that promoted curiosity, creative thinking, cooperation, love, and respect.

The school's grading system was used to measure students' academic performance in Mathematics in the Modern World. Out of the 112 participants, none failed the subject, and only one student had a grade range of 2.60–3.00, equivalent to 75%–79%, representing 0.9% of the sample. Students who excelled with a grade point equivalence of 1.00–1.50, equivalent to 90%–100%, had a frequency of 35, representing 31.3%. Although the majority of respondents performed well, the data suggest there is room for improvement in their academic performance.

4. Is there a significant relationship between student interest and academic performance in Mathematics in the Modern World?

Table 4 displays the Pearson correlation coefficient (r) and the associated p-value (sig.) at the 0.05 significance level. The computed r value of -0.066 indicates a weak negative correlation between student interest and academic performance. The p-value of 0.487 exceeds the conventional significance level of 0.05, suggesting that this correlation is not statistically significant. Consequently, there is insufficient evidence to reject the null hypothesis, which posits that there is no significant correlation between student interest and academic performance. This finding aligns with the studies of Wong and Wong (2019) and Yu and Singh (2016), both of which reported no substantial correlation between students' interest in mathematics and their academic performance.

Wong and Wong (2019) argue that students who excel in mathematics often do so due to external influences rather than intrinsic interest. These students may approach their studies with disciplined study habits and a strong grasp of foundational concepts. Their academic success in mathematics may not necessarily depend on their level of interest in the subject; rather, it could be attributed to effective study strategies and a methodical approach to learning.

5. Is there a significant relationship between multimedia instruction and academic performance in Mathematics in the Modern World?

Table 5 displays the Pearson correlation coefficient (r) and its associated p-value at the 0.05 significance level. The calculated r value of -0.049 suggests a very weak negative correlation between academic performance and multimedia instruction. The p-value of 0.607, which is higher than the conventional significance level of 0.05, indicates that this correlation is not statistically significant. Consequently, we fail to reject the null hypothesis, implying that there is no significant evidence to suggest that multimedia instruction has a meaningful impact on academic performance.

This finding is consistent with Akinoso's (2018) experimental study, which found that while multimedia use can somewhat improve students' learning and achievement in mathematics, these improvements were not statistically significant. This result contrasts with Khan et al.'s (2020) study, which reported that multimedia instruction significantly enhances academic performance among secondary and higher secondary school students.

Conclusions

The study aimed to determine the impact of student interest and multimedia instruction on academic performance in Mathematics in the Modern World. Based on this premise, the following conclusions were drawn:

This study, conducted with 112 college students, investigated the impact of student interest and multimedia instruction on their academic performance in Mathematics in the Modern World for the 2023-2024 school year. The findings reveal that while students

consistently express interest in the subject, this enthusiasm does not significantly correlate with their academic performance. Similarly, although multimedia instruction is perceived as moderately effective in enhancing learning experiences, it also shows no significant correlation with academic outcomes. Despite these observations, the majority of students achieved very good academic results by the end of the semester. This suggests that while student interest and multimedia tools play roles in education, their impact on actual academic performance may be influenced by additional factors not explored in this study. Other variables, such as individual learning styles, teaching strategies, and external factors, may also significantly affect students' academic achievements.

The results indicate a baseline level of proficiency among students, despite varying levels of perceived interest and instructional effectiveness. This highlights the need for further investigation into how different instructional strategies and personalized approaches can better align with students' diverse learning needs and preferences. The use of a descriptive correlational research design, supported by careful data collection and analysis methods, strengthens the reliability and validity of the study's conclusions. However, the study acknowledges limitations such as its specific context and the potential challenges of generalizing findings across different educational settings.

Recommendations

Based on the findings and the conclusions of the study, the researchers arrived at the following recommendations to the following entities:

1. to the math teachers that they may:

1.1 integrate different types of instructional methods with integration of digital application in their math classes;

1.2 use new and accessible digital materials in their math classes that may give dedication to students to strive more;

1.3 utilize multimedia learning materials that are comprehensible and student-friendly

2. to the students that they may:

2.1 read materials and engage themselves more to mathematics;

2.2 be motivated enough to do the tasks given and continue doing better; and

2.3 give some time to yourself and reflect on the things you want to achieve in life in order to be determined in doing any activities

3. to the school administration that they may:

3.1 provide more digital and traditional materials to the teacher and students and

3.2 conduct mathematics related activities to foster mathematics engagement and positive mindset of students.

4. to the future researchers that they may:

4.1 carry out improvements in line with the current study;

4.2 explore other factors in enhancing educational practices and outcomes in mathematics education.

Compliance with Ethical Standards

This study was conducted in accordance with ethical standards to ensure the safety and well-being of all respondents. The research minimized the risk of harm by guaranteeing the confidentiality and anonymity of respondents' responses throughout and beyond the research process. Free, prior informed consent was obtained from all participants at the outset, with assurances provided regarding their right to withdraw from the study at any point. Adherence to protocols ensured voluntary respondents, maintaining the anonymity and confidentiality of responses, thereby protecting participants from any potential harm.

Acknowledgments

The researchers wish to extend their heartfelt gratitude and appreciation to the individuals whose contributions were instrumental in the completion and success of this study.

We would like to express our sincere thanks to our dedicated Research Adviser, Mr. Paul B. John Panganiban, whose profound knowledge provided invaluable guidance and support throughout the research process, as well as his patience during the crafting of this paper.

We are also grateful to the Panel of Examiners for their constructive suggestions, feedback, and invaluable guidance, which greatly contributed to the quality of this study.

Special thanks are extended to Dr. Carmelita C. Labadan, for granting us permission to conduct our study at Christ the King College, Gingoog City.

Our deepest appreciation goes to our Families, whose unwavering love and support, both financial and moral, strengthened us through challenges encountered along the way.

To our Friends, we are thankful for their unwavering support and encouragement throughout this journey.

We extend our gratitude to the Respondents who generously dedicated their time to complete the questionnaires, without whom this study would not have been possible.

We also acknowledge our Significant Others for their unwavering support and encouragement throughout the research process. Their presence served as constant inspiration and motivation to give our best and complete this study.

Above all, we offer our profound gratitude to the Almighty God for granting us wisdom, strength, knowledge, and good health throughout the research process. We are thankful for His divine guidance and presence, which provided hope and steadfast companionship in every aspect of this study. It is with humility and dedication that we dedicate the findings of this study to His glory.

IMPLEMENTATION OF TECHNOLOGY AND LIVELIHOOD EDUCATION (TLE) PROGRAM IN TACURONG CITY DIVISION: ITS IMPACT ON THE HIGH SCHOOL STUDENTS' CAREER PREPAREDNESS

Cherubim C. Cerdana, MAEd[1]
Jaime Boy U. Ngag, Jr., PhD[2]

[1]Upper Katungal National High School, Schools Division Office of Tacurong City Tacurong City, Sultan Kudarat, Philippines
[2]South Cotabato State College, Dajay, Surallah, South Cotabato, Philippines

https://doi.org/10.5281/zenodo.13292709

ABSTRACT

The study examined the implementation of the Technology and Livelihood Education (TLE) program in the Tacurong City Division and its impact on high school students' career preparedness. The TLE program aims to equip students with practical skills and knowledge, preparing them for both immediate employment and further education. The primary objective of this study is to evaluate the effectiveness of the TLE program in enhancing students' readiness for their future careers. A descriptive-correlation method was employed using a quantitative surveys interview. The survey, conducted with 50 high school students from various schools within the Tacurong City Division, assessed their perceptions of the TLE program and its influence on their career preparedness. In-depth interviews with 25 TLE teachers and school administrators provided additional insights into the program's implementation and challenges. Findings indicate that students generally perceive the TLE program as beneficial for developing practical skills and boosting their confidence in pursuing career opportunities. However, there are significant variations in program effectiveness due to differences in resource availability, teacher expertise, and industry partnerships across schools. Students from well-resourced schools reported higher levels of career preparedness compared to those from under-resourced institutions. The study concludes that while the TLE program has a positive impact on students' career preparedness, its effectiveness is hindered by disparities in resource allocation and implementation consistency. Recommendations include increasing funding for TLE resources, enhancing teacher training, and fostering

stronger collaborations with local industries to ensure a more uniform and impactful delivery of the program.

Keywords: *Career Preparedness, Technology and Livelihood Education, High School Students, Program Implementation, Tacurong City Division*

INTRODUCTION

In recent decades, the global landscape has witnessed an increasing emphasis on preparing students for the dynamic challenges of the workforce through comprehensive educational programs. One such initiative is the Technology and Livelihood Education (TLE) program, designed to equip students with practical skills, technological knowledge, and entrepreneurial acumen. Originating from international educational frameworks that recognize the evolving demands of the job market, TLE has become a cornerstone in secondary education, aiming to bridge the gap between academic learning and real-world applications.

Internationally, educational systems have acknowledged the significance of TLE in nurturing a workforce that is not only academically competent but also proficient in practical, hands-on skills. Nations such as Singapore and South Korea have successfully integrated TLE into their secondary education systems, aligning curricula with industry needs and fostering a generation of skilled professionals with a competitive edge in the global job market (Choy, 2017; Kim, 2019).

In the Philippine context, the implementation of the K to 12 programs in 2013 marked a significant shift in the country's educational landscape, introducing reforms to enhance the quality of education and align it with international standards. As part of this initiative, the TLE program was integrated into the curriculum to address the need for holistic development among high school students, preparing them for both college and career pathways (DepEd, 2013).

In South Central Mindanao, specifically in Sultan Kudarat, the findings of the study Dolutan and Ngag (2024) revealed that Centennial teachers in DepEd Bagumbayan District perceive educational modernization as a paradigm shift towards integrating advanced technologies and innovative pedagogical methods into teaching TLE and other subjects requiring ICT. They describe their experiences of incorporating modern technological tools and pedagogical approaches as initially challenging yet ultimately transformative. They encounter challenges such as inadequate infrastructure, resistance to change among stakeholders, and the need for continuous training and support.

While international studies highlight the positive impact of TLE programs, there is a dearth of research examining how these initiatives translate to localized contexts such as Tacurong City Division. Understanding the specific challenges and successes within this setting is crucial for optimizing the TLE curriculum to cater to the unique needs of the community. Previous research often emphasizes the importance of aligning TLE

programs with industry requirements (Choy, 2017). However, there is a research gap in understanding how well the TLE program in Tacurong City Division is aligned with the needs of local industries, and whether it adequately prepares students for the job market.

While TLE aims to enhance career preparedness, there is a lack of research exploring high school students' perceptions of the program in Tacurong City Division. Investigating students' attitudes, aspirations, and motivations regarding TLE can provide valuable insights into the program's impact on their career choices. Limited research delves into the perspectives and challenges faced by educators in implementing TLE in Tacurong City Division. Understanding teachers' experiences can shed light on the factors that facilitate or hinder effective TLE delivery, contributing to the refinement of instructional strategies.

However, despite the apparent global acknowledgment of the importance of TLE, there is a notable gap in the literature concerning its localized impact, specifically in regions such as Tacurong City Division. The effectiveness of TLE in enhancing high school students' practical skills and career preparedness in this setting remains underexplored. Thus, there is a critical need for research that examines the local nuances of TLE implementation, considering the unique challenges and opportunities within the Tacurong City Division.

By addressing these research gaps, this study seeks to provide a comprehensive understanding of the implementation of the TLE program in Tacurong City Division and its impact on the practical skills and career preparedness of high school students.

Research Questions

Generally, this study aimed to determine the relationship between the Implementation of Technology and Livelihood Education (TLE) Program and High School Students' Career Preparedness in Tacurong City Division, Tacurong, Sultan Kudarat for the school year 2023-2024.

Specifically, this sought to answer the following key-questions:

1. What is the extent of the Implementation of Technology and Livelihood Education (TLE) Program, in terms of:
    1.1. Curriculum Alignment;
    1.2. Teacher Training and Competence;
    1.3. Resource Availability; and
    1.4. Community Engagement?

2. What is the level of High School Students' Career Preparedness in terms of:
    2.1. Practical Skills Acquisition;
    2.2. Career Awareness and Aspirations;
    2.3. Job Market Readiness; and
    2.4. Educational and Career Guidance?

3. Is there a significant relationship between the extent of the Implementation of Technology and Livelihood Education (TLE) Program, and the level of High School Students' Career Preparedness?

METHODOLOGY

Research Design

The study is quantitative in nature, namely a descriptive-correlational to determine the relationship between the Implementation of Technology and Livelihood Education (TLE) Program and High School Students' Career Preparedness in Tacurong City Division, Tacurong, Sultan Kudarat for the school year 2022-2023.

According to Bhandari (2021), A correlational research design investigates relationships between variables without the researcher controlling or manipulating any of them. Further, a correlation reflects the strength and/or direction of the relationship between two (or more) variables. The direction of a correlation can be either positive or negative. Correlational research is ideal for gathering data quickly from natural settings. That helps you generalize your findings to real-life situations in an externally valid way.

Respondents of the Study

This study's respondents were Junior High School students, and TLE teachers among selected secondary schools in Tacurong City Division, Sultan Kudarat, during the school year 2023-2024.

Respondents	Population	Sample	Total
Students	500	50	50
TLE Teachers	25	25	25

Sampling Technique

This study's respondents were selected using various sampling techniques:

First, Total Enumeration Sampling Technique was used for the selection of all the TLE teachers among selected secondary schools in Tacurong City Division, Sultan Kudarat, during the school year 2023-2024. As stressed in the study of Ngag (2023), the

use of Total Enumeration Sampling Technique is tailored fit when the population is homogenous.

Furthermore, Simple Random Sampling technique was used to select the students among selected secondary schools in Tacurong City Division, Sultan Kudarat, during the school year 2023-2024. According Creswell (2012: 143), in simple random sampling, the researcher selects participants (or units, such as schools) for the sample so that any individual has an equal 36 probabilities of being selected from the population.

Research Instruments

An approved survey questionnaire was used in this investigation. In this study, a five-point Likert scale was also employed to evaluate the respondents' survey questionnaire responses. The survey questionnaire data were reviewed and interpreted using the rating scales.

To assess extent of the Implementation of Technology and Livelihood Education (TLE) Program, the scale on the next page was used:

RATING	RANGE OF MEANS	DESCRIPTIVE RATING	INTERPRETATION
5	4.20-5.00	Agree	Highly Implemented
4	3.40-4.19	Fairly Agree	Implemented
3	2.60-3.39	Neutral	Moderately Implemented
2	1.80-2.59	Fairly Disagree	Fairly Implemented
1	1.00-1.79	Disagree	Not Implemented

Another rating scale designed was used to evaluate the level of High School Students' Career Preparedness:

RATING	RANGE OF MEANS	DESCRIPTIVE
5	4.20-5.00	Agree
4	3.40-4.19	Fairly Agree
3	2.60-3.39	Neutral
2	1.80-2.59	Fairly Disagre
1	1.00-1.79	Disagree

Data Gathering Procedure

To ensure reliable and authentic findings, the researcher adhered to a methodology that aligns with the objectives of their inquiry.

Initially, the study's implementation has required the endorsement of the DepEd-Division Superintendent and the CGS Dean through the affixation of their respective signatures on a formal document.

An additional letter of authorization was dispatched to the school principals, and to the department head of TLE. To ensure the accuracy of the data collected for this study, a survey questionnaire was utilized, developed, and assessed. The researcher intends to employ a random sampling technique by utilizing self-generated random number tables to select participants for the study.

Prior to the conduct of the study, the research proposal underwent ethical considerations. The researcher sought the approved clearance to conduct the study from the office of the EWMCI Research Ethics Committee (EREC).

When the health protocol was adhered, the investigator initiated the dissemination of the Survey Questionnaire via face-to-face manner. Ultimately, the outcomes derived from the distributed survey questionnaire were compiled, assessed, and analyzed.

Statistical Treatment

Upon the culmination of the study, the collected data was systematically arranged, presented in tabular form, subjected to rigorous analysis, and subsequently interpreted. Consequently, the statistical techniques outlined in Chapter I were utilized to address the issues.

Initially, the Mean statistical measure was employed to calculate the extent of the Implementation of Technology and Livelihood Education (TLE) Program, and the level of High School Students' Career Preparedness.

On the other hand, Pearson r Correlation was also employed to calculate the significant relationship between the extent of the Implementation of Technology and Livelihood Education (TLE) Program, and the level of High School Students' Career Preparedness.

Scope and Limitations

The study focused specifically on Tacurong City Division, providing insights into the implementation of the Technology and Livelihood Education (TLE) program within this educational jurisdiction. It involved high school students enrolled in the TLE program within Tacurong City Division during the specified school year. The research examined various aspects of the TLE program, including its curriculum, teaching methodologies, resources, and facilities available to students.

The said study assessed the impact of the TLE program on high school students' career preparedness, encompassing their knowledge, skills, attitudes, and readiness for future employment or further education. It focuses on the academic year 2023-2024,

providing a snapshot of the TLE program's implementation and its effects on students' career readiness during this period.

The study was delimited to the academic year 2023-2024, meaning that it does not extend beyond this specific timeframe. Any changes or developments in the TLE program or students' career preparedness occurring after this period are not included in the analysis.

RESULTS AND DISCUSSION

Extent of TLE Program Implementation

The Technology and Livelihood Education (TLE) program in DepEd Tacurong City Division was highly implemented, with indicators such as curriculum alignment and teacher training and competence both receiving a mean rating of 4.6, corresponding to "Strongly Agree." This suggests that these aspects were perceived as highly implemented by the respondents. Resource availability, with a mean rating of 4 ("Agree"), was also considered adequately implemented, although not as strongly as the other indicators. Community engagement, however, received a lower mean rating of 3.6 ("Merely Agree"), indicating that it was only moderately implemented. The overall mean rating for the TLE program's implementation was 4.2 ("Agree"), suggesting a generally positive perception of its implementation.

Level of High School Students' Career Preparedness

The level of high school students' career preparedness showed varied results across different indicators. Practical skills acquisition received a mean rating of 3 ("Merely Agree"), indicating that students felt only somewhat prepared in this area. In contrast, career awareness and aspirations, job market readiness, and educational and career guidance all received mean ratings of 4 ("Agree"), indicating that students felt adequately prepared in these aspects. The overall mean rating for career preparedness was 3.75 ("Agree"), suggesting that, on average, students felt prepared for their future careers. Taking into consideration the global environment, people view education not only a way of developing peoples' skills but also a way of preparing the students to be globally competitive (Albarico et al. 2014).

Correlation Between TLE Implementation and Career Preparedness

The correlation analysis revealed significant relationships between certain aspects of TLE program implementation and students' career preparedness. Teacher training and competence had a strong positive correlation with career preparedness ($r = .668$, $p = .002$), as did resource availability ($r = .665$, $p = .003$). The overall implementation of the TLE program also showed a very strong positive correlation with career preparedness ($r = .747$, $p = .000$). However, curriculum alignment did not show a significant correlation ($r = .431$, $p = .074$). These findings underscore the importance of teacher training, resource availability, and comprehensive program implementation in enhancing students' career

preparedness. As mentioned by Bantillo and Ngag (2024), modernized approaches, integrating technology and collaborative tools, were viewed favorably for enhancing engagement and comprehension, particularly among audio-visual learners. Also Teachers' preferences for teaching methods were influenced by the learning environment, instructional materials, and personal styles.

Conclusions

The following conclusions were made considering this study's findings:

The extent of the implementation of the Technology and Livelihood Education (TLE) Program is high, with indicators such as curriculum alignment and teacher training and competence being rated as "highly implemented," while resource availability and community engagement are "implemented" and "moderately implemented," respectively.

The level of high school students' career preparedness is generally positive, with students being "prepared" in areas like career awareness, job market readiness, and educational guidance, though only "merely prepared" in practical skills acquisition.

There is a significant relationship between the extent of the implementation of the TLE Program and the level of high school students' career preparedness. Teacher training and competence, and resource availability show significant correlations, while overall TLE implementation strongly correlates with higher career preparedness levels.

Recommendations

The following recommendations were made considering this study's findings:

1. Given the lower mean in Community Engagement (3.6, indicating "Moderately Implemented"), DepEd may prioritize strengthening partnerships with local communities, industries, and stakeholders. This can be achieved through establishing mentorship programs, internships, and industry partnerships that provide real-world experiences and practical skills to students. By fostering stronger community ties, DepEd can enrich the TLE program's relevance and impact on students' career readiness.

2. With a mean of 3 ("Merely Agree"), TLE Coordinators should emphasize hands-on learning experiences and practical skills development within the curriculum. Introduce project-based learning initiatives, workshops, and simulations that mirror real-world scenarios to enhance students' technical proficiency and application skills. Allocating resources for specialized equipment and facilities can further support this goal.

3. Despite a relatively high mean (4, indicating "Agree"), TLE Teachers may continue to prioritize individualized educational and career guidance for students. This includes conducting regular career counseling sessions, organizing guest speaker series, and integrating career exploration modules into the curriculum. Providing personalized

support and mentorship can help students make informed decisions about their future career paths.

4. Future researchers may explore the impact of enhanced community engagement on students' career preparedness within TLE programs. Conduct qualitative studies to delve deeper into how community partnerships influence student motivation, skill development, and career aspirations. This research can provide empirical evidence to support the importance of community involvement in vocational education and inform policy recommendations for integrating community engagement strategies into educational frameworks.

Compliance with Ethical Standards

In preparation for implementation, all the plans and recommendations were presented to East-West Mindanao Colleges Inc to ensure compliance with prescribed procedures and protocols. This ethical protocol is patterned after the study of Ngag (2023). Within the context of the research focused on examining the relationship between the Implementation of Technology and Livelihood Education (TLE) Program and High School Students' Career Preparedness in Tacurong City Division, Tacurong, Sultan Kudarat for the school year 2023-2024, it was imperative to emphasize the paramount importance of ethical considerations. Prior to commencing this study, the following ethical principles were highlighted:

Informed Consent

Before participation, explicit and informed consent was diligently obtained from all school heads involved in the study. It was imperative that they possessed a comprehensive understanding of the study's objectives, methodologies, potential risks, and benefits. Furthermore, participation remained entirely voluntary, affording participants the autonomy to withdraw from the study at any juncture without encountering any adverse consequences.

Anonymity and Confidentiality

To safeguard the identities and responses of the students, Ronquillo, & Ngag, (2024) emphasized the rigorous measures to ensure anonymity and confidentiality. Rather than using actual names, pseudonyms or codes were employed in this study, upholding the privacy of the participants. The collected data was securely stored with access restricted solely to the research team.

Avoiding Harm

Delicate subjects, such as the challenges inherent in their roles, were discussed with meticulous consideration for the potential emotional and psychological impact on the participants. Strategies were in place to minimize distress, and a support system was readily available to assist participants should the need arise.

Researcher-Participant Relationship

The researcher maintained a professional and respectful rapport when engaging with the school heads. Any actions that may exploit or cause harm to the participants were scrupulously avoided, ensuring their utmost dignity and respect throughout the research process.

Data Protection

Adherence to data protection regulations and laws was unwaveringly followed to safeguard the personal information of the participants. Stringent measures were employed to ensure the secure storage and transmission of data.

Voluntary Participation

Participants were assured that their involvement in the study was wholly voluntary, devoid of any form of coercion or external pressure.

Researcher Bias

The researcher remained vigilant regarding potential biases that might influence data collection and analysis, upholding objectivity and transparency throughout the research endeavor.

Institutional Approval

Before initiating the study, the researcher diligently sought ethical clearance from the pertinent institutional review boards or ethics committees.

Honesty and Integrity

The research findings were reported truthfully and accurately, devoid of any manipulation or distortion to align with preconceived notions or biases.

Beneficence

The potential benefits of the research to educational practices and policies were thoughtfully considered, ensuring that the study positively contributed to the enhancement of the education system.

Cultural Sensitivity

The researcher displayed cultural sensitivity by respecting local customs, beliefs, and practices within the research setting, refraining from imposing external values on the participants.

Inclusion and Diversity

The study's structure prioritized inclusivity and diversity, encompassing a wide spectrum of students and attitudes towards learning in the 21st century. By meticulously adhering to these ethical considerations, the research was conducted responsibly and respectfully, prioritizing the rights and well-being of the participating students. Simultaneously, it contributed valuable insights to the field of education within the specific context of DepEd Tacurong City Division.

Acknowledgments

The researcher would like to express his profound and heartfelt gratitude to the persons who unselfishly extended their craft and invaluable support to make this study a success:

PATRICEA I. SANDIGAN, MAEd, East West Mindanao Colleges, Inc. President, for inspiring the researcher to keep on with his dreams despite life's challenges.

EMILIA M. LOTILLA, PhD, Dean, Graduate School, for being approachable and whose pieces of advice mean a lot to the researcher;

JULIET P. TAMBUNGALAN, MAEd. Academic Chairperson, for the encouragement as well as the all-out support in the preparation of this manuscript;

JAIME BOY U. NGAG JR., PhD, his adviser, for the guidance and inspiration that motivated the researcher to finish this paper;

AMILUDIN G. MASABPI, PhD, and LEODIE D. MONES, PhD for their valuable contributions in the realization of this manuscript.

GILDO G. MOSQUEDA, CEO VI, Schools Division Superintendent of Tacurong City for generously allowing the conduct of this study manifesting his leadership commitment towards research-based decision-making;

RIZA P. VELASCO, OIC-Principal of Upper Katungal National High School, for the continued push to finish this study and for ensuring that the researcher gathered the necessary data from the respondent schools;

SCHOOL HEADS of the respondent schools from Tacurong Public Secondary Schools, for the warm welcome during the conduct of survey in their respective schools;

TEACHERS OF UPPER KATUNGAL NATIONAL HIGH SCHOOL, the researcher's esteemed colleagues, for the love and unconditional support that enabled the researcher to take things with joy and inspiration despite the challenging demands of work.

His siblings: VIVIAN C. PORTAJE, and ELVIE C. PALIMILLO. Their love and moral support are undeniably inspiring to the researcher; His brother-in-law CHARLIE J. PALOMILLO and his nephews, CHAREL C. PALOMILLO, PAUL IVAN C. PORTAJE, BENEDICT C. PORTAJE, CHARLES C. PALOMILLO and niece, CHRISTELA C. PALOMILLO, for the significant help extended;

His parents: VICENTE P. CERDANA and ANGELA C. CERDANA with his Parent-in-law: MR. EDDIE HERMO and ERLITA HERMO. Their unceasing encouragement, love, support financially, spiritually and emotionally.

DAISY JOY H. CERDANA, the researcher's spouse. She has been his pillar from the start to the finish of all this endeavor. She is truly a God-sent to the researcher.

Above all, the researcher humbly acknowledges the ALMIGHTY GOD, who provides everything and Who sets perfectly according to His will. He is the lone source of life, strength, knowledge, and wisdom. In Him, the researcher brings back all the glory and honor.

IMPORTANCE-PERFORMANCE ANALYSIS OF A RESTAURANT MOBILE BOOKING AND RESERVATION APPLICATION

Franz Joseph I. Clemente, Gail Bien Aubrey S. Diño, Nelson S. Gonzales Jr., Raven Jewell Rodilas, Michelle T. Rojas, Dr. John Paul G. Buenaventura

College of Tourism and Hospitality Management, National University, Sampaloc Manila, Philippines

https://doi.org/10.5281/zenodo.13208030

ABSTRACT

This study examined issues with performance and ongoing user dissatisfaction in the OpenTable application, a well-known restaurant booking and reservation platform in the Philippines. Researchers use the Importance-Performance Analysis (IPA) model to assess OpenTable's importance and performance. Researchers also use Gummesson's 4Q-Quality Model to improve the analysis structure. Researchers gathered comprehensive data by distributing a structured survey questionnaire to 120 individuals who use OpenTable. Ethical considerations guide researchers' investigation at every step. The researchers showed their commitment to methodological and ethical standards by thoroughly outlining the research's design, sampling approach, data gathering methods, and interpretation approaches. A Likert scale was used in the survey questionnaire for performance analysis and importance assessment, and it has been validated through a methodical approach, the findings revealed that: The most significant discrepancy between performance and importance can be observed in the product and service quality (0.70), followed by Designed Quality, Relational Quality (0.59), and Outcome Quality (0.56). For the greatest influence on consumer/users' satisfaction, this proposes putting efforts to make improvements in product and service quality, relational quality, and designed quality. OpenTable is recommended to focus on enhancing communication channels, brand identity, and user experience. Management should place a high priority on resource allocation and transparent communication, and feedback is encouraged. It's recommended that features like responsive reservation updates and live chat assistance be included.

Keywords: *Restaurant Mobile Booking and Reservation Application, Importance Performance Analysis, Gummesson 4Q- Quality Model, OpenTable, Designed Quality, Product and Service Quality, Relational Quality, Outcome Quality*

INTRODUCTION

The restaurant sector had been continuously changing to satisfy the demands of a client base that was becoming more tech-savvy and convenience-oriented in an era of fast technology innovation and shifting consumer tastes. Recent studies about service innovation in the service and hospitality industries mainly focused on technology-related innovation. (Helkkula et al., 2018) pointed out that the hospitality industry was relatively strongly focused on innovations in assortment and technology, leaving non-technological innovation largely unobserved. A new era in restaurant access and engagement has been brought about by the widespread use of smartphones and mobile applications. This study aims to investigate how well the OpenTable application performs from the perspective consumers and the importance of a mobile application for restaurant reservations. Considering that the mobile booking app is becoming an essential component of today's modern dining experience.

With a few taps on their smartphones, patrons could then book tables at their preferred restaurants. The days of making reservations over the phone or standing in huge lines were long gone (Buhalis & Law, 2018). Many believed that online reservations represented one of the largest and fastest-growing segments of B2C e-commerce. Planning and obtaining a table with ease had become possible with mobile booking, which frequently provided real-time availability information and prompt confirmation. In addition to helping customers, this ease enabled restaurants to manage seating arrangements more effectively, which raised customer satisfaction.

The growth of mobile applications for restaurants has improved the dining experience even further. These apps offer a variety of services, such as digital menus, personalized suggestions, loyalty programs, and even mobile payment alternatives, in addition to reservation booking. Jiang (2020) informed that since agent-based models allow us to explore user behavior at the micro-level, we build a simulation model to describe individual decision-making and complex interaction between users of mobile applications in social networks.

The decision to focus this investigation on OpenTable had been supported by evidence that pointed to performance problems and persistently poor user experiences in the Philippines. Critical feedback from consumers of OpenTable, a popular restaurant booking, and reservation application, had been posted on websites including Google Maps and Google Search. Consumers had regularly voiced concerns about a number of issues, such as the cost of restaurants, customer service, rating systems, food quality, and service. One specific TripAdvisor review had highlighted the difficulties that OpenTable customers had; it had expressed both high expectations and a deep sense of frustration regarding the length of wait times for meals, which had resulted in a negative

rating for OpenTable. To reduce these issues and enhance OpenTable's standing in the Philippines, several practical recommendations had been made. In the beginning, it had been essential to conduct a comprehensive study specifically designed for OpenTable's Filipino customer base.

According to a study by Gioseff (2019), there are a number of benefits to studying the OpenTable app. The study indicates a need to comprehend user concerns and enhance the overall experience by revealing user unhappiness and performance issues with the app in the Philippines. OpenTable may be able to grow its customer base and improve its reputation by taking care of these problems. As more people install restaurant reservations on their smartphones, the survey also highlights the significance of mobile optimization. Using Gummesson's 4Q-Quality Model and Importance-Performance Analysis (IPA), the study offers a methodical way to assess the app's effectiveness and identify areas that require development.

To outline the purpose and relevance of conducting an Importance- Performance Analysis (IPA) for a mobile application that allows consumers to book and reserve restaurants. To improve the entire customer experience, this analysis attempts to assess the application's efficacy and user satisfaction while pinpointing areas that require improvement.

Research Questions

Specifically, it sought to answer the following questions:

1. What is the assessment of the respondents on the level of importance of the OpenTable booking app in terms of:
   1.1. Design Quality
   1.2. Product and Service Quality
   1.3. Relational Quality
   1.4. Outcome Quality

2. What is the assessment of the respondents on the level of performance of the OpenTable booking app in terms of:
   1.1. Design Quality
   1.2. Product and Service Quality
   1.3. Relational Quality
   1.4. Outcome Quality

3. How does the OpenTable mobile app have been assessed using the IPA model?

METHODOLOGY

This study assesses restaurant mobile booking and reservation applications employing survey questionnaires as the primary data collection method and descriptive

data. Descriptive research was regarded as an exploration of existing phenomena through the formulation of inquiries. This approach involved comprehending the meanings attributed to people or objects and was applicable in both quantitative and qualitative research contexts, as articulated by McCombes (2019). It aims to understand demographic profiles and perceptions of quality and services. By bridging the gap between theoretical importance and actual performance, the research aims to identify key features that customers value and provides suggestions for enhancing mobile applications.

The target respondents for this study are consumers of the OpenTable application residing in the Philippines, with a sample size of 120 respondents determined through methods outlined by Sarstedt, Ringle, & Hair, (2022). Utilizing purposive sampling, the researchers ensured the inclusion of individuals who met specific criteria, such as legal age, residence in the Philippines, and with history of using the OpenTable app for restaurant bookings.

Table 2.1 Respondents as to Age

Age	Frequency	Percentage (%)
18-26 years old	48	40.00
27-42 years old	44	36.70
43-58 years old	28	23.30
59 years old and above	0	0
TOTAL	**120**	**100.00**

The table illustrates that the age range among the majority of responders is 18–26, with (40.00%), 27–42 (36.70%), and 43–58 (23.30%). The least represented age group consists of those over 59.

Table 2.2 Respondents as to Gender

Gender	Frequency	Percentage (%)
Male	61	51.80
Female	59	49.20
TOTAL	**120**	**100.00**

The table indicates that 51.80%, or 61, of the participants are men. However, 59, or 49.20%, of the remaining are female. In summary, 61 or 51.80% of respondents as a whole is male, and only 59 or 45.60% are female.

Table 2.3 Respondents as users of the OpenTable Restaurant Mobile Application

OpenTable	Frequency	Percentage (%)
Yes	120	100.00
No	0	0
TOTAL	**120**	**100.00**

As shown in the table, majority of participants utilize the OpenTable restaurant mobile booking application. This suggested that a large portion of the studied population relied heavily on OpenTable as their platform of choice for making restaurant reservations.

A structured process was followed for data collection process, involving four phases: creating and developing research tools, validating these tools, distributing research instruments, and analyzing the collected data. They developed survey questionnaires, which were divided into three parts: Personal Profile, Assessment of Importance of mobile food ordering application services, and Performance of mobile food ordering application services. The researchers sought permission to conduct the study and provided participants with a formal letter stating the purpose, objectives, and potential benefits. Researchers conducted face-to-face surveys in Okada Manila, targeting respondents who use the OpenTable mobile booking and reservation application. The collected data was then analyzed by a professional statistician, providing insights to enhance the functionality and user experience of the application.

The survey questionnaire served as the primary instrument for data gathering, designed to capture relevant insights aligned with the study's objectives. The researchers conducted a descriptive study using a survey questionnaire to gather data on the importance and performance of a restaurant mobile booking and reservation application. The questionnaire was designed to gather demographic data and personal experiences from participants. The study assessed the importance of mobile application systems using a 5-point Likert scale and assessed the performance of mobile food ordering application services. The Gummesson 4Q model was applied to the OpenTable app, focusing on four key aspects of service quality: design quality, product quality, relational quality, and result quality.

The data gathered from the survey questions will be tallied, recorded, and evaluated by the researchers. To accurately understand the results of the data analysis and how they will contribute to the study's primary objective, the frequency and percentage will be calculated, along with overall results and final rankings of the criteria included in the survey questionnaires.

Weighted Mean - The objective is to add up several scores. It is the average that was determined by giving several individual variables a different amount of weight.

Formula: $WM = \frac{\sum (W1f1 + W2f2 \ldots + wnfn)}{n}$

Where:

WM	=	weighted mean
f1	=	frequency of first cell
w1	=	weight of first cell
f2	=	frequency of second cell
w2	=	weight of second cell
n	=	number of cases

Percentage - To determine the relationships of a portion to a whole in the respondents' profile.

Formula: $P = \frac{F \times 100}{N}$

Where:

P	=	percentage

F	=	frequency of each category
N	=	total number of respondents
100	=	constant multiplier

Likert Scale -The five (5) Linkert Scale Method was employed as the criterion for the interpretation of the data.

Likert Scale Interpretation for Importance

Range of Mean	Description Level	Initials
5.00-4.20	Extremely Important	EI
4.19-3.40	Very Important	VI
3.39-2.60	Moderately Important	MI
2.59-1.80	Slightly Important	SI
1.79-1.00	Not At All Important	NI

Likert Scale Interpretation for Performance

Range of Mean	Description Level	Initials
5.00-4.20	Far Above Standards	FAS
4.19-3.40	Above Standards	AS
3.39-2.60	Meets Standards	MS
2.59-1.80	Below Standards	BS
1.79-1.00	Far Below Standards	FBS

Cronbach's Alpha - is a metric used to assess a test or survey's internal consistency. It indicates how closely connected all the questions on a questionnaire relate to one another and quantifies the measure's dependability. Greater consistency and reliability are indicated by higher values, which range from 0 to 1.

Formula:

$$\alpha = \frac{k}{k-1}\left(1 - \frac{\sum V_i}{V_t}\right)$$

Where:

α	=	alpha
k	=	number of items in the survey
ΣVi	=	summation of variance
Vt	=	variance of the total score (sum of all item scores)

RESULTS AND DISCUSSION

Sub problem No. 1 On the assessment of the respondents on the level of importance of the OpenTable booking app in terms of

Table 1 Assessment of the Respondents on the Level of Importance of the OpenTable Booking App in terms of Designed Quality

Designed Quality	Mean	Interpretation	Rank
1. The interface of the app is visually appealing and easy to use.	4.32	Extremely Important	2
2. The app is easy to use and understand	4.38	Extremely Important	1
3. The application offers simple and easy-to-follow usage guidelines of all its features.	4.08	Very Important	4

4. The app has an eye-catching design and keeps the restaurant its serves' brand identity.	4.10	Very Important	5
5. The application is responsive and works nicely on variety of screens and gadgets.	4.23	Extremely Important	3
General Weighted Mean	**4.22**	**Extremely Important**	

| 5.00-4.20 – Extremely Important | 4.19-3.40 – Very Important | 3.39-2.60 – Moderately Important | 2.59-1.80 – Slightly Important | 1.79-1.00 – Not at All Important |

Table 1 presents the assessment of the respondents on the level of importance of the OpenTable booking app in terms of designed quality. It can be noticed that the indicator which states, "The app is easy to use and understand." ranked first with a mean of 4.38. It was followed by "The interface of the app is visually appealing and easy to use." with a mean of 4.32. Next to it were the indicators "The application is responsive and works nicely on a variety of screens and gadgets." and "The App has an eye-catching design and keeps the restaurant its serves' brand identity." with means of 4.23 and 4.10, respectively. Lastly, the indicator states, "The application offers Simple and Easy-to-follow usage guidelines of all its features." with a mean of 4.08. The respondents agreed that all these indicators were extremely important in terms of the OpenTable booking app's designed quality.

In general, the level of importance of the OpenTable booking app in terms of designed quality by the respondents was Extremely Important, with a general weighted mean of 4.22.

Relative to the findings of Shahzadi & Riaz (2018), who mentioned that restaurant table reservation systems should provide users with tools to manage and organize their restaurant bookings; to enhance the efficiency and convenience of table reservations in restaurants, it is imperative for the reservation system to possess comprehensive visibility effectively and efficiently. Therefore, it is essential that restaurants should designed a mobile application that is eye catching, visually appealing, and easy to use, a well-designed restaurant food mobile application is crucial for maintaining the brand identity of the restaurant it serves. The design quality plays a significant role in creating a first impression on potential customers. It can also help in building trust and loyalty towards the restaurant's brand or image. In addition, good design will make an app more user friendly, thus improving customer satisfaction and increasing the likelihood of repeat business and a well-designed app will reflect positively on the restaurant and can contribute to the success in the competitive food service industry.

This indicates that the respondents placed significant importance on the design quality of the OpenTable app, suggesting that they value features such as user interface, ease of navigation, visual appeal, and overall user experience provided by the application.

Table 2 Assessment of the Respondents on the Level of Importance of the OpenTable Booking App in terms of Product and Service Quality

Product and Service Quality	Mean	Interpretation	Rank
1. Through the app, users can quickly look up and find restaurants according to their interests	4.31	Extremely Important	1
2. The app offers exact up-to-date information, wait times, and restaurant availability	4.30	Extremely Important	2
3. Users of app can easily book, change, or cancel reservations without any difficulty at all	4.28	Extremely Important	3
4. The application makes sure that transactions are secure and provides a wide variety of payment choices.	4.28	Extremely Important	3
5. The app transmits reservation confirmations, updates, and adjustments in an informative and timely manner.	4.28	Extremely Important	3
General Weighted Mean	**4.29**	**Extremely Important**	

| 5.00-4.20 – Extremely Important | 4.19-3.40 – Very Important | 3.39-2.60 – Moderately Important | 2.59-1.80 – Slightly Important | 1.79-1.00 – Not at All Important |

Table 2 presents the assessment of the respondents on the level of importance of the OpenTable booking app in terms of product and service quality. It can be noticed that the indicators that state, “Through the app, users can quickly look up and find restaurants according to their interests.” ranked first with a mean of 4.31 each. It was followed by “The app offers exact up-to-date information, wait times, and restaurant availability.” with a mean of 4.30. Next to it was the indicator “Users of app can easily book, change, or cancel reservations without any difficulty at all.”, “The application makes sure that transactions

are secure and provides a wide variety of payment choices.", and "The app transmits reservation confirmations, updates, and adjustments in an informative and timely manner." with a mean of 4.28 each. The respondents agreed upon all these indicators as extremely important on the level of importance of the OpenTable booking app in terms of product and service quality.

In general, the level of importance of the OpenTable booking app in terms of product and service quality by the respondents was Extremely Important, with a general weighted mean of 4.29.

Relative to the findings of Vinaik, Goel, Sahai, & Garg, (2019), who mentioned that mobile food apps have tie-ups with many restaurants and act as a link between restaurants and people, there are many factors that lead to an increase in sales, such as convenience, easy payment methods, variety of food and restaurants, delivery time, customer service, etc. With its unparalleled convenience, consumers can easily browse restaurant menus and place orders using their cellphones. Easy and secure payment choices further improve the user experience, and the variety of food options accommodates a wide range of tastes and preferences. Therefore, when it comes to the ease with which customers may plan, modify, or cancel meals, good products and services in a mobile restaurant application are mostly beneficial to customers. Easy-to-use interfaces encourage loyalty in addition to increasing client satisfaction. Because reservation management is so simple with this software, it stands out in a crowded market and enhances brand perception. Effective operations, informative data, and flexibility all emphasize how important it is to have a simple and rapid reservation process. All things considered, an appealing and functional app guarantees that users will remain interested and creates a strong and long-lasting relationship between patrons and the business.

The respondents placed significant importance on the quality of products and services offered by the OpenTable app, suggesting that they value aspects such as the accuracy of restaurant information, reliability of the reservation system, responsiveness of customer support, and overall satisfaction with the booking process facilitated by the application.

Table 3 Assessment of the Respondents on the Level of Importance of the OpenTable Booking App in terms of Relational Quality

Relational Quality	Mean	Interpretation	Rank
1. In the case of any problems or question, the app offers prompt and friendly customer care	4.08	Very Important	3
2. The application constantly updates and enhance its features in	3.97	Very Important	4

response to comments and recommendations from users.			
3. The application protects user privacy and make sure that private data is managed safely	4.36	Extremely Important	1
4. By providing features like reviews, ratings and suggestions, the app helps user feel more connected to one another.	3.96	Very Important	5
5. Through personalized offers, unique incentives, and loyalty programs, the app expresses gratitude to its users.	4.17	Very Important	2
General Weighted Mean	**4.11**	**Very Important**	

| 5.00-4.20 – Extremely Important | 4.19-3.40 – Very Important | 3.39-2.60 – Moderately Important | 2.59-1.80 – Slightly Important | 1.79-1.00 – Not at All Important |

Table 3 presents the assessment of the respondents on the level of importance of the OpenTable booking app in terms of relational quality. It can be noticed that the indicator that states, “The application protects user privacy and make sure that private data is managed safely.” ranked first with a mean of 4.36. It was followed by “Through personalized offers, unique incentives, and loyalty programs, the app expresses gratitude to its users.” with a mean of 4.17. Next to it were the indicators “In the case of any problems or question, the app offers prompt and friendly customer care.” and “The application constantly updates and enhance its features in response to comments and recommendations from users.” with a mean of 4.08 and 3.97 respectively. Lastly was the indicator that states, “By providing features like reviews, ratings and suggestions, the app helps user feel more connected to one another.” with a mean of 3.96. All these indicators were agreed upon by the respondents as very important on the level of importance of the OpenTable booking app in terms of relational quality.

In general, the level of importance of the OpenTable booking app in terms of relational quality by the respondents was Very Important, with a general weighted mean of 4.11.

Relative to the findings (Cho, Bonn, & Li, et al., 2018), who mentioned that with benefits like customized suggestions, reward programs, and contactless ordering as just a few of what users can take advantage of, these applications are a popular choice for consumers wishing to simplify their eating experiences. Reviews, ratings, and ideas are

some of the most important aspects of a restaurant food mobile app that help users feel connected to one another and as a community. These components enable users to contribute their dining experiences, tastes, and suggestions, generating an active forum for conversations on food. Building trust between customers and restaurants is another benefit of being able to read and write reviews, in addition to helping with educated decision-making. Furthermore, customers feel understood and appreciated when they receive tailored recommendations based on their behavior, which improves the entire experience. Along with strengthening the bond between the user and the app, this social interaction creates a lively community of food enthusiasts who may bond over common interests and experiences.

With a weighted average of 4.11 across the board, respondents said the OpenTable app was essential in relationship quality. This shows that factors like communication effectiveness, reliability, responsiveness to feedback, and general satisfaction with the interactions and engagement made possible by the application were highly valued by the respondents when it came to their relationship with the OpenTable platform.

Table 4 Assessment of the Respondents on the Level of Importance of the OpenTable Booking App in terms of Outcome Quality

Outcome Quality	Mean	Interpretation	Rank
1. Making restaurant bookings using the app saves the user time and effort	4.42	Extremely Important	1
2. The application lessens the possibility of long queues and waiting times at dining establishments	4.30	Extremely Important	2
3. The app makes dining more enjoyable by simplifying easy reservations and guaranteeing a seamless arrival procedure.	4.24	Extremely Important	3
4. The application increases the possibility of repeat customers and helps user feel more satisfied with the dining establishment	4.18	Very Important	5
5. The application promotes a positive image of the brand and	4.21	Extremely Important	4

engagement of restaurants that make use of it		
General Weighted Mean	**4.27**	**Extremely Important**

| 5.00-4.20 – Extremely Important | 4.19-3.40 – Very Important | 3.39-2.60 – Moderately Important | 2.59-1.80 – Slightly Important | 1.79-1.00 – Not at All Important |

Table 4 presents the assessment of the respondents on the level of importance of the OpenTable booking app in terms of outcome quality. It can be noticed that the indicator that states, “Making restaurant bookings using the app saves the user time and effort.” ranked first with a mean of 4.42. It was followed by “The application lessens the possibility of long queues and waiting times at dining establishments.” with a mean of 4.30. Next to it were the indicators “The app makes dining more enjoyable by simplifying easy reservations and guaranteeing a seamless arrival procedure.” and “The application promotes a positive image of the brand and engagement of restaurants that make use of it.” with a mean of 4.24 and 4.21 respectively. Lastly was the indicator that states “The application increases the possibility of repeat customers and helps user feel more satisfied with the dining establishment” with a mean of 4.18. The respondents agreed upon all these indicators as extremely important on the level of importance of the OpenTable booking app in terms of outcome quality.

In general, the level of importance of the OpenTable booking app in terms of outcome quality by the respondents was Extremely Important, with a general weighted mean of 4.27.

Relative to the findings of Al-Smadi (2022), mobile commerce has emerged as a vital tool for many firms as smartphones continue to evolve and gain popularity. It offers customers accessibility, enabling them to purchase products or services at any time and from anywhere. Therefore, through the promotion of a good and user-friendly experience, the application plays a critical role in improving the restaurant brand image. Customers are left with a lasting impression of a mobile app that is both professionally designed and practical, reflecting the expertise of the restaurant. It functions as a potent marketing tool that enables restaurants to successfully engage customers, emphasize distinctive aspects, and exhibit their offers. Customer satisfaction and loyalty are raised by positive app experiences like simple navigation, speedy order placement, and tailored recommendations.

This suggests that the respondents gave the results of using the OpenTable app a high priority. These results included making reservations successfully, receiving accurate restaurant recommendations, having a positive overall dining experience, and being satisfied with the results the app helped to achieve.

Sub Problem No. 2 On the assessment of the respondents on the level of performance of the OpenTable booking app in terms of

Table 5 Assessment of the Respondents on the Level of Performance of the OpenTable Booking App in terms of Designed Quality

Design Quality	Mean	Interpretation	Rank
1. The Interface of the app is visually appealing and easy to use.	3.78	Above Standards	1.5
2. The app is Easy to use and understand	3.78	Above Standards	1.5
3. The application offers Simple and Easy-to-follow usage guidelines of all its features.	3.42	Above Standards	5
4. The App has an eye-catching design and keeps the restaurant its serves' brand identity.	3.56	Above Standards	4
5. The application is responsive and works nicely on variety of screens and gadgets.	3.63	Above Standards	3
General Weighted Mean	**3.63**	**Above Standards**	

| 5.00-4.20 – Far Above Standards | 4.19-3.40 –Above Standards | 3.39-2.60 –Meets Standards | 2.59-1.80 – Below Standards | 1.79-1.00 –Far Below Standards |

Table 5 presents the assessment of the respondents on the level of performance of the OpenTable booking app in terms of designed quality. It can be noticed that the indicators that state, "The Interface of the app is visually appealing and easy to use." and "The app is Easy to use and understand" ranked 1.5 with a mean of 3.78 each. It was followed by "The application is responsive and works nicely on variety of screens and gadgets." with a mean of 3.63. Next to it was the indicator "The App has an eye-catching design and keeps the restaurant its serves' brand identity." with a mean of 3.56. It was followed by the indicator "The application offers Simple and Easy-to-follow usage guidelines of all its features." with a mean of 3.42. All these indicators were agreed upon by the respondents as above standards on the level of performance of the OpenTable booking app in terms of designed quality.

In general, the level of performance of the OpenTable booking app in terms of design quality by the respondents was Above Standards, with a general weighted mean of 3.63.

This coincides with Shahzadi & Riaz (2018), who mentioned that restaurant table reservation systems should provide users with tools to manage and organize their restaurant bookings. To enhance the efficiency and convenience of table reservations in restaurants, it is imperative for the reservation system to possess comprehensive visibility effectively and efficiently. Giving users of a restaurant food mobile app clear and simple instructions for all tasks has two main goals: it improves user experience and increases customer satisfaction. With the aid of simple and clear instructions, users can easily run the application, ensuring a seamless ordering experience. The app's simplicity and complexity reduction make it more approachable for a wider audience, including less tech-savvy people. This tactic or strategy increases overall convenience and enjoyment of dining, which benefits the restaurant's brand in addition to increasing customer loyalty. To put it simply, ensuring user involvement and ease of use of the app.

This implies that the responders considered the design elements of the program, including the user interface, usability, aesthetic appeal, and overall user experience. According to the evaluation, even though respondents value design quality, there might be some areas where enhancements could be made to further increase user satisfaction.

Table 6 Assessment of the Respondents on the Level of Performance of the OpenTable Booking App in terms of Product and Service Quality

Product and Service Quality	Mean	Interpretation	Rank
1. Through the app, users can quickly look up and find restaurants according to their interests	3.56	Above Standards	5
2. The app offers exact up-to-date information, wait times, and restaurant availability	3.58	Above Standards	3
3. Users of app can easily book, change, or cancel reservations without any difficulty at all	3.64	Above Standards	1
4. The application makes sure that transactions are secure and provides a wide variety of payment choices.	3.58	Above Standards	3

5. The app transmits reservation confirmations, updates, and adjustments in an informative and timely manner.	3.58	Above Standards	3
General Weighted Mean	**3.59**	**Above Standards**	

| 5.00-4.20 – Far Above Standards | 4.19-3.40 –Above Standards | 3.39-2.60 –Meets Standards | 2.59-1.80 – Below Standards | 1.79-1.00 –Far Below Standards |

Table 6 presents the assessment of the respondents on the level of performance of the OpenTable booking app in terms of product and service quality. It can be noticed that the indicator that states, “Users of app can easily book, change, or cancel reservations without any difficulty at all.” ranked first with a mean of 3.64. It was followed by “The app offers exact up-to-date information, wait times, and restaurant availability.”, “The application makes sure that transactions are secure and provides a wide variety of payment choices.” and “The app transmits reservation confirmations, updates, and adjustments in an informative and timely manner.” with a mean of 3.58 each. Lastly, the indicator states, “Through the app, users can quickly look up and find restaurants according to their interests.” with a mean of 3.56. All these indicators were agreed upon by the respondents as above standards on the level of performance of the OpenTable booking app in terms of product and service quality.

In general, the level of performance of the OpenTable booking app in terms of product and service quality by the respondents was Above Standards, with a general weighted mean of 3.59.

This coincides with Vinaik, Goel, Sahai, & Garg, (2019), who mentioned that mobile food apps have tie-ups with many restaurants and act as a link between restaurants and people, there are many factors that lead to an increase in sales, such as convenience, easy payment methods, variety of food and restaurants, delivery time, customer service, etc. With its unparalleled convenience, consumers can easily browse restaurant menus and place orders using their cellphones. Easy and secure payment choices further improve the user experience, and the variety of food options accommodates a wide range of tastes and preferences. Therefore, the timely and informative distribution of reservation confirmations, revisions, and alterations inside a restaurant mobile app is essential to a smooth and satisfying client experience. Notifying patrons or customers about their reservations helps manage expectations and reduces the chance of misunderstandings in the fast-paced restaurant industry, where schedules are subject to last-minute modifications. Good communication through the app fosters professionalism and dependability, which raises customer satisfaction and confide.

This suggests that while product and service quality are considered important by the respondents, they may not be as highly prioritized as other aspects of the app's performance. This rating indicates that there may be areas where improvements could

be made to enhance the quality of products and services offered by the OpenTable app to better meet the users' expectations.

Table 7 Assessment of the Respondents on the Level of Performance of the OpenTable Booking App in terms of Relational Quality

Relational Quality	Mean	Interpretation	Rank
1. In the case of any problems or question, the app offers prompt and friendly customer care	3.35	Meets Standards	5
2. The application constantly updates and enhance its features in response to comments and recommendations from users.	3.41	Above Standards	4
3. The application protects user privacy and make sure that private data is managed safely	3.71	Above Standards	1
4. By providing features like reviews, ratings and suggestions, the app helps user feel more connected to one another.	3.58	Above Standards	2
5. By providing features like reviews, ratings and suggestions, the app helps user feel more connected to one another.	3.54	Above Standards	3
General Weighted Mean	**3.52**	**Above Standards**	

| 5.00-4.20 – Far Above Standards | 4.19-3.40 –Above Standards | 3.39-2.60 –Meets Standards | 2.59-1.80 – Below Standards | 1.79-1.00 –Far Below Standards |

Table 7 presents the assessment of the respondents on the level of performance of the OpenTable booking app in terms of relational quality. It can be noticed that the indicator that states, “The application protects user privacy and make sure that private data is managed safely.” ranked first with a mean of 3.71. It was followed by the indicators “By providing features like reviews, ratings and suggestions, the app helps user feel more connected to one another.” and “By providing features like reviews, ratings and suggestions, the app helps user feel more connected to one another.” with a mean of 3.58 and 3.54 respectively. Next to these was “The application constantly updates and

enhance its features in response to comments and recommendations from users." With a mean of 3.41. These indicators were agreed upon by the respondents as Above Standards on the level of performance of the OpenTable booking app in terms of relational quality. Lastly was the indicator that states, "In the case of any problems or question, the app offers prompt and friendly customer care." with a mean of 3.35. These indicators were agreed upon by the respondents as Meets Standards on the level of performance of the OpenTable booking app in terms of relational quality.

In general, the level of performance of the OpenTable booking app in terms of relational quality by the respondents was Above Standards, with a general weighted mean of 3.52.

This coincides with Relative to the findings (Cho, Bonn, & Li, et al., 2018), who mentioned that with benefits like customized suggestions, reward programs, and contactless ordering as just a few of what users can take advantage of, these applications are a popular choice for consumers wishing to simplify their eating experiences. Reviews, ratings, and ideas are some of the most important aspects of a restaurant food mobile app that help users feel connected to one another and as a community. Quick and friendly customer service is essential for a mobile application that provides restaurant-quality food. Reactive customer service becomes an essential lifesaver for anyone with questions or concerns. A quick and friendly resolution not only fixes problems efficiently but also enhances user experience overall and boosts customer loyalty. This kind of support is crucial for maintaining app users' confidence and satisfaction since it shows a commitment to their needs and concerns. Furthermore, it strengthens the app's reputation by demonstrating that it is a trustworthy and customer-focused meal ordering platform, which eventually increases customer confidence and encourages repeat business.

This suggests that while relational quality, such as communication effectiveness, trustworthiness, and responsiveness to feedback, is considered important by the respondents, it may not be as highly prioritized as other aspects of the app's performance. This rating indicates that there may be room for improvement in enhancing the relational aspects of the OpenTable app to better meet users' expectations.

Table 8 Assessment of the Respondents on the Level of Performance of the OpenTable Booking App in terms of Outcome Quality

Outcome Quality	Mean	Interpretation	Rank
1. Making restaurant bookings using the app saves the user time and effort	3.73	Above Standards	2.5
2. The application lessens the possibility of long queues and	3.75	Above Standards	1

waiting times at dining establishments			
3. The app makes dining more enjoyable by simplifying easy reservations and guaranteeing a seamless arrival procedure.	3.62	Above Standards	5
4. The application increases the possibility of repeat customers and helps user feel more satisfied with the dining establishment	3.72	Above Standards	4
5. The application promotes a positive image of the brand and engagement of restaurants that make use of it	3.73	Above Standards	2.5
General Weighted Mean	**3.71**	**Above Standards**	

| 5.00-4.20 – Far Above Standards | 4.19-3.40 –Above Standards | 3.39-2.60 –Meets Standards | 2.59-1.80 – Below Standards | 1.79-1.00 –Far Below Standards |

Table 8 presents the assessment of the respondents on the level of performance of the OpenTable booking app in terms of outcome quality. It can be noticed that the indicator that states, “The application lessens the possibility of long queues and waiting times at dining establishments” ranked first with a mean of 3.75. It was followed by the indicators “Making restaurant bookings using the app saves the user time and effort.” and “The application promotes a positive image of the brand and engagement of restaurants that make use of it” with a mean of 3.73 each. Next to these was “The application increases the possibility of repeat customers and helps user feel more satisfied with the dining establishment” with a mean of 3.72. Lastly was the indicator that states, “The app makes dining more enjoyable by simplifying easy reservations and guaranteeing a seamless arrival procedure.” with a mean of 3.62. All these indicators were agreed upon by the respondents as above standards on the level of performance of the OpenTable booking app in terms of outcome quality.

In general, the level of performance of the OpenTable booking app in terms of outcome quality by the respondents was Above Standards with a general weighted mean of 3.71.

This coincides with Al-Smadi (2022), who mentioned that mobile commerce has emerged as a vital tool for many firms as smartphones continue to evolve and gain popularity. It offers customers accessibility, enabling them to purchase products or services at any time and from anywhere. The food mobile app for a restaurant is essential

since it may enhance the entire dining experience by simplifying reservations and ensuring a seamless arrival process. Using the app, which streamlines the booking process and provides an intuitive reservation management interface, customers may save time and effort. A more enjoyable dining experience is also achieved by guaranteeing a seamless arrival process, maybe with the aid of computerized check-ins or designated waiting areas. This efficiency not only makes the restaurant more convenient for patrons, but it also conveys the image of a professional business that puts patron satisfaction first., Finally the app's capacity to expedite reservations and improve the arrival process significantly increases customers' enjoyment of their dining experience.

It appears from this that the respondents gave great weight to the results of using the OpenTable app, including successful reservation bookings, the precision of restaurant recommendations, overall dining experiences, and satisfaction with the results made possible by the app.

Sub Problem No. 3 On the OpenTable mobile application assessment using the Importance-Performance Analysis model

Table 9 Importance – Performance Model of OpenTable Booking App

	OpenTable Booking App	
	Importance	**Performance**
Designed Quality	4.22	3.63
Product Quality & Service Quality	4.29	3.59
Relational Quality	4.11	3.52
Outcome Quality	4.27	3.71

| 5.00-4.20 – Extremely Important | 4.19-3.40 – Very Important | 3.39-2.60 – Moderately Important | 2.59-1.80 – Slightly Important | 1.79-1.00 – Not at All Important |

| 5.00-4.20 – Far Above Standards | 4.19-3.40 –Above Standards | 3.39-2.60 –Meets Standards | 2.59-1.80 – Below Standards | 1.79-1.00 –Far Below Standards |

Table 9 shows the importance – performance model of OpenTable booking app. It can be noticed that the respondents assessed the designed quality in importance at 4.22 and performance of 3.63. In product and service quality, respondents assessed the importance of 4.29 and performance of 3.59. Respondents assessed the importance of 4.11 and performance of 3.52 in relational quality. Lastly, the outcome quality, the respondents assessed the importance of 4.27 and performance of 3.71.

The most significant discrepancy between performance and importance can be observed in the product and service quality (0.70), followed by Designed Quality, Relational Quality (0.59), and Outcome Quality (0.56). For the greatest influence on

consumer/users' satisfaction, this proposes putting efforts to make improvements in product and service quality, relational quality, and designed quality.

The data provides insightful information on how users evaluate the OpenTable application in terms of product and service quality. This performance is rated as "somewhat satisfied" on average, with a weighted mean of 3.59 (above standard), however certain areas need more work. Participants highlight the security aspects, timely communication, and convenience of handling reservations as strengths in their core functionalities. Personalized recommendations or further search customization could be beneficial in the area of restaurant discovery based on interest, which received a bit of a lower rating. Research by Adomavicius et al., (2005) suggested that personalization in recommender systems led to increased user satisfaction and loyalty. OpenTable could leverage user data such as past reservations and dietary preferences to suggest relevant restaurants, creating a more engaging experience. While studies by Zhang et al., (2018) demonstrated that well-designed search filters could significantly improve decision-making processes. By offering filters based on cuisine, ambiance, price range, and accessibility, OpenTable could empower users to find the perfect dining experience. Adomavicius et al., (2005) found that personalization increased user satisfaction. By implementing personalization features, OpenTable could address user feedback and improve satisfaction. It is possible to put user feedback into practice by looking into enhancements like individualized recommendations or better search filters. Zhang et al., (2018) showed that well-designed search filters improve decision-making. Advanced search filters on OpenTable can empower users to make informed choices, leading to a better overall experience. Furthermore, feedback from consumers is required to make sure that improvements properly solve issues found and improve the restaurant finding experience. OpenTable can maintain its position as a leader in restaurant reservations by taking care of these issues.

According to the data, respondents have a favorable opinion of OpenTable's design quality, giving it an overall performance rating of 3.63 (above standard). This suggests that most participants believe the app is easy to use, aesthetically pleasing, and responsive on various devices. The "somewhat satisfied" rating for OpenTable's design indicates that users are generally happy with it. But there's still area for development, especially when it comes to offering simple, understandable instructions on how to use the application. Nielsen (1994) emphasizes the importance of user-centered design principles, which state that clear instructions are essential for a positive user experience. Ambiguous instructions can cause user frustration and prevent task completion. Nielsen (1994) advocated for clear instructions, which can significantly improve the user experience by reducing confusion and frustration. Users can more easily navigate the app and use all of its features. Simple instructions can improve accessibility for users with varying levels of technical knowledge. This is consistent with the core principles of inclusive design, ensuring that everyone can easily use the app. By examining user feedback, specific areas that require clarification in terms of instructions or functionalities may be identified, and graphical elements can be made simpler. Instructions and guidelines should be generated and made available within the app to improve the user experience and enable users to make the most of all the features. By taking care of these

issues, OpenTable can continue providing a visually appealing and useful app while guaranteeing a user-friendly interface that accommodates users with different levels of technical expertise.

OpenTable's initiatives to establish and maintain positive relationships with its users are seen positively by the participants based on the data. With an overall performance rating of 3.52 (above standard), consumers clearly appreciate the app's attention to user connection, data protection, and feedback responsiveness. Still, there are certain areas that could be used better. The fact that OpenTable customers give the app a "somewhat satisfied" in relational quality. Consumers appreciate data privacy policies, which shows that they have faith in the platform. They also recognize that the app makes an attempt to connect users by offering features like recommendations and reviews. Users also value OpenTable's ability to promptly update features in response to their comments. The lowest ranking went to customer service, indicating that there is a need for improvement in terms of interaction, response times, and efficacy in resolving issues. Research by Reichheld (2003) on Net Promoter Score (NPS) demonstrates the critical role of customer service in building loyalty and advocacy. When customers feel valued and their issues are resolved promptly and efficiently, they are more likely to become loyal brand promoters OpenTable can transform satisfied users into brand advocates who recommend the app to others by effectively resolving customer issues (Reichheld, 2003). By taking into consideration these issues, OpenTable can strengthen its bonds with customers, encouraging loyalty and delivering an experience that is more impressive.

Lasty, with an overall performance rating of 3.71 (above standard), the data indicates ideal customer satisfaction with OpenTable's ability to deliver favorable results. Given that it can shorten wait times, save users' time and effort, and improve restaurants' reputations, the app is highly appreciated. Users also like that the app making reservations easier and guarantees a seamless arrival experience, which promotes repeat patronage and increases satisfaction among users. This can involve finding out about user perspectives on managing wait times, communicating about reservations, and how the app can enhance the dining experience in ways other than just simplifying reservations and arrival. Research by McLean et al., (2017) highlights the importance of a holistic dining experience. While reservation ease is crucial, factors like wait times and interpersonal interaction also significantly impact customer satisfaction. OpenTable can explore ways its app can go beyond reservations to elevate the overall dining experience (McLean et al., 2017). This could involve features facilitating pre-ordering, dietary preference communication, or personalized recommendations. OpenTable can utilize these findings to better understand how to work with restaurants to enhance wait times and interpersonal interaction, while also keeping an eye on how the app can make dining experiences more enjoyable for customers.

Through the use of the Importance-Performance Analysis model (IPA), the mobile application for restaurant booking and reservations meets user expectations and increases consumer satisfaction. In this analysis, the effectiveness of the application in

providing various features and functionalities is assessed by the level at which users value those features and functionalities.

Developers and managers can enhance customer satisfaction by pinpointing areas of high importance but low performance, enabling them to prioritize improvements effectively. Identifying features that customers find important, like an easy-to-use interface, a quick reservation process, real-time updates, and smooth arrival procedures is crucial for mobile apps that make restaurant reservations. When this strategy is applied effectively, it helps to match user expectations with app development and enhancement activities, which guarantees a satisfying dining experience for customers and optimizes the app's usefulness for enterprises.

Conclusions

1. **On the assessment of the respondents on the level of importance of the OpenTable booking app in terms of:**

This study looked into how users felt about the quality of the OpenTable booking app. There was an apparent agreement among users who gave the app top ratings in every variable. With a grand mean of 4.22, it was determined that designed quality, which includes aspects like user interface and simplicity of use was important. Similar to functionality, service reliability, and product quality, these factors were rated as extremely important with a grand mean of 4.29. Although the grand mean of relational quality indicated little discrepancies in importance among particular features, it was nevertheless rated extremely important, indicating that users place a high value on their interactions with the application. In addition, outcome quality which emphasizes favorable results like bookings and a seamless dining experience was given the highest rating with a grand mean of 4.27, suggesting that users place a high value on it. All things considered; this investigation focuses on the importance of every quality level in the OpenTable app.

2. **On the assessment of the respondents on the level of performance of the OpenTable booking app in terms of:**

The respondents assessed the OpenTable booking app's performance in terms of design quality in Table 4.5. Notably, performance was marginally lower for indicators including responsiveness, visual appeal, and ease of use, despite their high importance. Table 4.6 presents the respondents' evaluation of the quality of the products and services. They viewed factors like secure transactions and convenience of booking to be extremely important, but their performance did not meet their expectations entirely. Table 4.7 focuses on relational quality and emphasizes the value of privacy protection, whereas factors like timely customer service and regular updates performed a bit lower. Table 4.8 concludes the discussion of outcome quality and highlights the importance of features such as timesaving and satisfaction enhancement, despite slight differences in performance ratings.

3. **On the OpenTable mobile application assessment using the Importance-Performance Analysis model:**

The OpenTable mobile application's Importance-Performance Analysis (IPA) provided a clear image of the critical areas that still require improvement, even if users found the program to be generally functioning averaging "somewhat satisfied" scores.

The analysis found important weaknesses. First, customers were not satisfied with the quality of the products and services. In particular, people long for more advanced search options with personalized suggestions to speed up the process of finding restaurants that suit their unique tastes. Second, relational quality needs to be addressed. Customer service contacts need to be improved in terms of performance, response times, and general user interaction, even though people value data security and responsiveness to feedback. Lastly, there is a way to improve designed quality. Clearer in-app instructions would greatly improve the experience, especially for people who are less proficient with technology, even though users found the app to be generally user-friendly.

These are the areas that OpenTable should focus on improving in order to maintain its dominant position in the market. To further accommodate user preferences, personalization mechanisms and smart search filters should be implemented. Enhancing response times and means of interaction and resolving issues in customer service will improve user satisfaction. Creating compact and comprehensible in-app instruction and user manuals will also greatly improve the user experience, especially for users with different technical ability levels. While keeping the key features of the app and its value for users and restaurants, OpenTable can guarantee a user-friendly and delightful experience for a wide range of consumers by focusing on these areas.

Recommendations

In the light of the findings and conclusions, the following are the recommendations of the study.

For Technology Developers of Mobile Booking and Reservation Applications:

1. Based on the study's findings, it is recommended that OpenTable prioritize enhancing the visual appeal of the app to better reflect the unique brand identities of the restaurants it serves. Graphic designers and branding experts can collaborate to revamp the app's interface and incorporate elements that reflect the distinctive attributes of each restaurant's brand. This could include using restaurant-specific colors, logos, and imagery throughout the app to create a consistent and immersive brand experience for users.

2. To address the challenge of navigation complexity highlighted in the study, it is recommended to work towards simplifying the user experience and providing clearer usage recommendations. The user interface should be simple to use, clear, and intuitive for booking, changing, and canceling reservations. Provide in-app

instruction that walks users through the app's main functions, particularly for new users and when they encounter new features. To accommodate different learning styles, use a combination of text, interactive walkthroughs, and quick video tutorials and provide easy access to these tutorials within the app, for example, by creating a special "Help" area, and decreasing the number of steps involved in making a reservation.

3. Permit users to visually verify their information and grant modifications within a fair amount of time. This entails making use of recognizable design indicators, concise labeling, compact content, and orderly layouts. Customers should have no trouble making reservations and finding what they're looking for promptly. Also, regularly test the software to reduce bugs and issues, and provide timely updates to address any issues that arise. Lastly, provides features like the ability to edit booking details, manage waitlists, and manage existing reservations to improve the customer experience.

4. Use automated notifications through email, call, or SMS alerts to keep users informed about their reservations, table availability, cancellations, changes, and confirmations to ensure prompt and transparent communication. Provide immediate notice through email regarding wait times, modifications to reservations, or unforeseen circumstances. Investigate "virtual queuing" options that let users check in from a distance and get notifications when their tables are ready. By focusing on these areas, OpenTable can improve user satisfaction, increase engagement, and foster loyalty among its user base. Additionally, personalized emails will be generated to users with recommendations for new restaurants to try based on their past dining history.

5. Enhancing customer care services by establish safe in-app messaging to facilitate direct user-restaurant contact. This enables users to ask inquiries regarding the menu, get information about wait times, and clarify things. Also, provide a range of support channels such as phone, email, and extensive FAQ, and make sure your agents are kind, knowledgeable, and quick to resolve problems. Additionally, implementing community forum where users can share recommendations and engage with each other can further enhance customer satisfaction. This enables continuous improvement and promptly addresses user needs. Regularly reviewing and acting on feedback demonstrates a commitment to enhancing functionality and meeting user expectations.

6. Install strong safety measures to protect user data and financial information. When a user appears to make a payment, apply secure payment gateways, and always display security identification. Offer a range of payment methods, including trendy e-wallets and multiple banks, and indicate authorized options while a reservation is being made. Have a transparent and easily readable privacy policy that describes how data is collected, used, and shared (if relevant) to keep users' trust. Give users the power to control their settings, access information, and ask for the

erasure of data when they so want, and update the Privacy Policy often to consider any modifications.

7. Use responsive design concepts to ensure the application adjusts to various screen sizes and resolutions on PCs, tablets, and smartphones without any problems. This gets rid of annoyances and discrepancies from the user's gadget. Adjust the button sizes, text legibility, and general arrangement to perfection for every type of gadget.

8. Improve the search algorithm, refine filter options, and implement features such as predictive search to streamline the process and provide a variety of filtering choices according to pricing, cuisine, and even dietary requirements.

For Restaurant owners:

1. Collaborate with OpenTable application to provide special offers or promotions that can be customized to the tastes of the user. Incorporate online menus to help customers make more informed choices and use partnerships with local publications or food critics to curate restaurant suggestions.

2. Restaurants should collaborate with the OpenTable app to help users discover new dining options and make reservations more efficiently.
3. Restaurants can use the app to directly ease reservation adjustments and provide customized notifications with projected wait times or delays.

For Marketing and Sales Teams:

1. To promote OpenTable, collaborate with renowned chefs or food vlogger influencers to create content promoting the app's impact on restaurant branding and engagement. Target potential new users by using their audience reach to raise knowledge of the features and advantages of the app.

2. Make use of social media sites such as Twitter, Facebook, Instagram, YouTube and TikTok. By producing brief advertisements or content, social media sites provide the OpenTable app more chances to gain popularity.

For Consumers:

1. Give OpenTable constructive criticism by being open and honest about your impressions of the app to further improve the application. Please report any problems you run into, make suggestions for enhancements, and give concrete examples of how you would like the program to work better for you. Your input can directly impact future advancements. Additionally, consider connecting OpenTable with loyalty programs to maximize benefits and earn rewards for reservations.

2. Examine how OpenTable and loyalty programs can work together. A lot of restaurants have connectors available. To fully utilize the advantages of both platforms, think about connecting your accounts in order to accrue points or rewards for your reservations.

For Future Researchers:

1. Study the effects of user demographics by dividing performance measures, such as geographical location, age, and dining preferences, based on user feedback. This may highlight differences in consumer wants and expectations, guiding the development of additions or changes that have been tailored to the demands of various user groups.

2. Conduct qualitative research to discover how OpenTable affects users' feelings before, during, and after their meal. This can reveal chances to improve user happiness beyond the app's functional characteristics or psychological distress spots.

3. Assess OpenTable's effectiveness in relation to competing applications for booking restaurants. This can reveal new trends, sector best practices, and possible differentiation points for OpenTable.

4. Conduct research to find out how users decide which restaurants to book. This may include researching variables such as user preferences, restaurant details, internet reviews, and OpenTable's impact on such choices.

Compliance with Ethical Standards

The conduct of the research will be strongly focused on adhering to a set of ethical criteria and resolving any potential issues that might come up throughout the duration of the research in the future. The research tools to be used in this study will be carefully evaluated and authorized by the researcher's adviser, who is an expert in the subject, to ensure the highest level of ethical consistency. The study will receive permission from advisors and will adhere to strict ethical standards. Informed and willing participants will sign a permission form outlining the study's objectives and commitment to confidentiality as proof of their consent. Data integrity, privacy, and participant rights will all be upheld through the implementation of strict data protection regulations.

Acknowledgements

The Researchers would like to recognize and sincerely thank everyone who supported, inspired, and helped them complete their research paper.

The researchers want to express their sincere appreciation for Dr. John Paul G. Buenaventura, their research adviser; and Dr. Aldrin Agrasen, their research teacher, and Ms. Manilyn A. Canino, Mr. Vicente S. Leanza, and Mrs. Margie N. Roma, their beloved

panelist, for their precious time, advice, generosity, and unwavering support throughout the completion of the research paper. Their tireless efforts and support have been much appreciated and have helped the researchers develop their research by fostering their growth and helping them overcome difficulties. The researchers will always appreciate and be grateful to them for their compassion.

The researchers would like to express their sincere gratitude to all the Families and Friends for their unwavering support, which includes material support as well as emotional and psychological help. The foundation of their determination and motivation throughout the research process has been the emotional support given by their loved ones. The researchers' sense that their work would not have been possible without this continuous support.

Furthermore, the researchers want to thank themselves for their important contributions to their research. Throughout their shared journey, they have overcome challenges, rejoiced in the glory of their accomplishments, and see the transformation, not only in their research study but also in each other as individuals. Researchers celebrate their resiliency and determination while managing academic responsibilities and other commitments. The researchers unwavering commitment and enthusiasm for teamwork have fostered an atmosphere where innovation and excellence may flourish.

We sincerely appreciate the opportunity provided by the National University of Manila's College of Tourism and Hospitality Management. We became better versions of ourselves because of our experience, which broadened our knowledge and encourage personal development. As researchers, we will always appreciate the ongoing assistance that made it possible for us to design our research. In our academic path, the institution's mentorship and resources were crucial. We were able to broaden our horizons and foster our development thanks to the College's doors. It has been an honor to be a part of this institution, and we will carry its wisdom and experiences with us into the future. We owe an acknowledgment of gratitude to the College and its teachers for their constant support and promise to maintain the principles and values we have learned there while also positively impacting the tourism and hospitality industries.

Lastly, we give the Heavenly Creator our most sincere gratitude. We thank God for providing us with his guidance, wisdom, love, knowledge, and strength during this journey. Without these divine graces that lighted our way, completing this research paper successfully would not have been achievable.

Additionally, we would like to thank everyone who helped with this initiative. We acknowledge and value their combined efforts and assistance, realizing that this research project would be impossible without them.

ABSTRACT

This study aimed to explore the relationship between service quality dimensions and Customer Delight in Casual Dining Restaurants. A descriptive correlation research design was used, utilizing statistical tools such as mean, standard deviation, and multiple regression analysis. The study investigated two hundred twenty (220) customers from various identified casual dining restaurants in Valencia City Bukidnon. A survey type of research questionnaire- checklist was administered to gather the data needed. The finding of the study indicates a significant association between customer's assessment of dining service and their customer delight exhibiting a high overall multiple correlation (R=17.475). This implies that when the customers' satisfaction with the service quality increases customer delight also increases. Furthermore, empathy is also identified as another predictor of customer delight. Suggesting that restaurants that demonstrated empathy towards their customers and guests are more likely to elicit customer delight having the multiple correlation of (R=6.059). Additionally, tangibility was also included as a predictor of customer delight implying that the restaurant's attention to tangible aspects added to the total experience of the 0customers in the restaurant having the multiple correlation of (R= 3.032) which means that when customer exceeded their expectation in the tangible aspect of the restaurant there is an increase also with the customer delight. These results emphasize the importance of focusing on service quality dimensions such as satisfaction, empathy and tangibility to enhance customer delight. The higher the satisfaction of participants regards service quality, the greater their tendency to be delighted.

Keywords: *Casual Dining Restaurant, Customer delight, Dineserve, Satisfaction, Empathy, Tangibility*

INTRODUCTION

The food service sector is one of the fastest-growing industries in the current era, and competition has always been fierce. This industry continues to grow every year and is never left behind to keep on innovating and producing a product to cater to the changing food preferences of the customers. The food service industry is an establishment that prepares food, or meals not on the premises of our home (Cousins, et.al 2014). This industry consists of a restaurant, school, and hospital cafeterias, food stalls, and food parks. Their operations continue to enjoy remarkable development and progress together with considerable advances in quality. In this highly competitive industry, restaurant owners and management must find a better way to make their products and services stand out from others. The researcher believes that restaurateurs must know the diverse preferences of the customers.

According to Kukanja and Planinc (2019), the organization must understand the vital role of service quality. They must cater to the needs and wants of each one who visits the restaurant especially when the organization plans to build a better customer relation. In line with this, establishments should ensure that customer satisfaction will exceed the customer's expectations. With the decade-long study of customer satisfaction, it is suggested that satisfaction is not enough to assess the customer experience.

The latest study conducted by Kristiawan et.al (2020), asserted that customer needs and satisfaction can be considered at the center of every successful business. Customer delight is the maximum level of engagement experienced by the guest. This manifests a higher state of emotional arousal and excitement toward the restaurant's customer satisfaction. This statement is supported by the study of Schneider and Bowen (1999) as cited by Torres and Ronzoni (2020) assert that customer delight is created by meeting customers' higher-order wants, specifically self-esteem, as suggested by Maslow's Hierarchy of needs such as recognition.

The researcher believed that the organization needs to be particularly concerned with how customers' views of the service offering change over time. With aggressive competition between all types of food establishments, customers are the best assets. The researcher finds it imperative to determine the link between dining service in restaurants to customer delight. This postulation is supported by the study of Baluyot and Pampolina (2021), who argued that customer contentment on the service provided by the restaurant is essential however it may not be enough to continuously grow sales and beat the competitors. The managers and restaurant owners need to realize that customer delight is an important factor for repeat purchases of the customer and can generate loyalty and greater loyalty-driven profit.

The researcher sees the necessity for the restaurant's management to increase their understanding that not all satisfied customers can devote their loyalty to the establishment. Therefore, it is essential to have a deep understanding of customer delight through the use of dining service dimensions. The researcher believed that to help aspiring and starters entrepreneurs in the restaurant business, they must know the importance of customer delight. A customer who has exceeded satisfaction with the service and product may return to the establishment and become a loyal customers. Based on the study of Torres and Ronzoni (2020), it was mentioned that future research must examine the relationship between satisfaction surveys to delight. Casual Dining Restaurant has a varied customer base from all walks of life. This type of restaurant is serving lesser-priced food with a good ambiance yet providing a very affordable dining experience, thus focusing, on the quality of food to be served. The researcher believed that in order to improve the service of all newly operated casual dining restaurants in Valencia City, the owner, and management needed to understand the level of customer delight that customers experienced during their visit.

There are many newly operated restaurants in Valencia City Bukidnon over the past few years. The researcher believed that to compete with the existing restaurants, the newly opened ones should strengthen their service through exceeded satisfaction that may lead to delight and will be able to gain loyal customers and compete with the fast-growing industry. Moreover, there were no related studies conducted in the restaurant service in Valencia City, thus, the researcher believes the significance of this study for the development and improvement of customer delight in the dining service dimension.

Furthermore, it is assumed that the findings of this study would not only contribute significantly to the improvement of dining service in the food and beverage industry in the said locality but also would add to the body of knowledge about the dining service dimension, thus, this will study greatly help the newly opened establishment to come up with very strong and different strategies to boost the satisfaction of the customer.

Research Questions

This study aimed to determine the influence of dining service on customer delight among restaurant guests in Casual Dining Restaurants in Bukidnon. Specifically, the study required to answer the following:

1. How are the participants characterized in terms of age and sex?
2. What is the customers' assessment of the restaurant service in terms of:
    - 2.1 tangibles;
    - 2.2 reliability;
    - 2.3 responsiveness;
    - 2.4 assurance;
    - 2.5 empathy;
    - 2.6 price; and
    - 2.7 Satisfaction.
3. What is the level of customer delight among the guests of restaurants in Valencia City?

4. Does customer delight vary when grouped according to their demographics?
5. Do the participants' quality service assessment significantly influence Customer delight?

METHODOLOGY

This study applied the technique of quantitative method approach specifically the descriptive correlational research design which is appropriate to determine the influence of dining service on customer delight among restaurants in Valencia City Bukidnon.

A random sampling method was used in choosing the participants of the study. The participants of the study were the 220 customers of casual dining restaurants in Valencia City, Bukidnon as recommended by the Raosoft Sample Size Calculator with a 5% margin of error, and a 95% confidence level drawn from the customers of different newly operated casual dining restaurant in the city with a total of 500 people who visited these restaurant aged 15 yrs. old up to 60 yrs. old and above with a 50% response distribution.

The researcher adapted and modified the DINESERV instrument developed by Markovic et al (2010) and divided the survey instrument into two parts. The first part was a 32-item scale that constituted seven dimensions: tangibles, reliability, responsiveness, assurance, empathy, price, and satisfaction. The following items comprising the said dimensions are as follows 1-5 are for Tangibility, items 6-10 for Reliability; items 10-13 for Responsiveness; items 14-18 for Assurance, items 19-23 for Empathy; items 24-28 for Price, items 29-33 for Satisfaction. The second part is the adapted survey questionnaire developed by Torres et al., (2017) to measure customer delight.

Certain protocols were observed in gathering the data. First, the researcher addressed a letter to the City Mayor's Office of Valencia City, Bukidnon, requesting permission and statistics on how many new establishments were launched in 2022 and early 2023. When the permission and data were provided the researcher established contact with the owner and asked permission to conduct the survey and at the same time explain the benefits of joining the study. The owners of the restaurant voluntarily participated in the study and the questionnaire was subsequently distributed to the customers of the said casual dining restaurants. The researcher assured the restaurant owners of the confidentiality of the data.

Impacts were assessed using a five-point Likert scale with values of "Strongly Agree," "Agree," "Slightly Agree," "Disagree," and "Strongly Disagree." To organize the data, the following statistical tools were utilized: Descriptive statistics such as frequency, percentage, mean, and standard deviation were employed to determine the assessment of the participants as regards the dimensions of dining service and customer delight. The correlation analysis was used to determine the association between dining service and customer delight. To find out the significant relationship between various dimensions of

dining service and customer delight, ANOVA was utilized. To determine the customer delight of customer, regression was used.

RESULTS

Table 1 presents the frequency and percentage distribution of the participants in terms of gender. The table reveals that the majority (60%) of the participants are females compared to their male counterparts which is only (40%). This implies that most of the customers patronizing the service in casual dining restaurants are females.

Table 1. Frequency and Percentage Distribution of Participants (Sex)

Gender	F	%
Male	87	40
Female	133	60
Total	220	100.00

Table 2 shows the frequency and percentage distribution of the participants in terms of age. This table presents the majority (65%) of the participants belonging to young adulthood with ages ranging from 20 – 39 years.

DISCUSSION

The demographic profile of the respondents as observed by the researcher during data gathering showed that the number of female participants who visited the establishments was greater than males. Atulkar and Kesari (2018), stated that gender can control the buying characteristics of a consumer resulting in impulse buying which highly supported the result showing that most of the customers patronizing the service for casual dining restaurants are females. In addition, Ahn, (2020), espoused that, males and females choose to purchase or buy products however majority of members in the loyalty program were females.

In terms of age, the finding reveals that most of these young adults patronize casual dining restaurants. Surucu et. al, (2020), posited that young adults prefer to purchase the product and services they trust to avoid risk associated with purchasing unknow products. This is followed by those who belonged to the teenage group with ages ranging from 13-19 years old. However, it is interesting to mention that among the group, the older adults had less frequency of visiting casual dining restaurant service. This is not surprising since this type of customer with ages ranging 60 years old and above are generally conscious of their diet; hence, they most likely prefer to dine in fine dining restaurants or at home where their diet requirements can be satisfied. Ahn (2020) stated that age and income were significantly related to the buying preferences of the customers. The data show that the majority of the participants are young professionals who have the capacity to visit and dine in casual dining restaurants.

In regards with the participants assessment of dining service dimension specifically tangibility. The table shows that the customers are generally satisfied with the restaurants as indicated in the overall mean of 3.80 interpreted as high. This means that customers are satisfied with the restaurant's physical factors of the restaurant such as the dining area, décor, rest room including the physical appearance of the staff. The researcher observed that participants pay attention to how the restaurants look as a whole. It is also noticed that the décor of the restaurants adheres to the restaurants' theme; even the staff were professionally dressed and groomed. In the result presented in Table 3, it can be gleaned that the staff members who are clean, neat, and appropriately dressed received the highest assessment rate with a mean of 4.06 interpreted as "high". This implies that customers are not only considering the interior and appearance of the restaurant but also the physical aspect of the staff. In the same vein, visually attractive parking areas and building exteriors received the lowest rate with a mean of 3.18 interpreted as moderate. This means that the customer's expectation for the parking lot is below the level of their criterion since the majority of the restaurants do not provide a wide parking space to accommodate customers. These findings confirm the study presented by Suciptawati et.al (2019), which posited tangible dimensions related to services such as building

interior and exterior, furniture, the appearance of the restaurants, and well-dressed employees as a factor for the satisfaction of the customer.

In reference to the preceding table, the researcher believed that since the majority of the customers are from the working class, they were exposed to tangible things through their experience with restaurants. The result is also in accordance with the study of Pakurar et.al (2019) which postulated that the restaurants' interiors, exteriors, appearance, and uniform of the staff are tangible aspects of the restaurant used in order to provide the needed service.

Moreover, in Table 4, the findings reveal that the customers rated the restaurant staff with an overall mean of 4.00 interpreted as high. This means that the staff's way of providing and serving the order surpassed customer expectations. This result is in accordance with the study of Ramya, et. Al (2019) states that reliability is the capacity to provide the promised service consistently and precisely. Serving food and beverages exactly as ordered received the highest mean score of 4.16 interpreted as "high". This means that the staff was able to meet the expectation of the customer to receive their order exactly as they ordered. This result conforms with the study of Zygiaris et.al (2022) stated that accountability and quality are factors that contribute to reliability. The researcher observed that the service provided and delivery of food to the customers were exactly delivered as ordered. It is also noticed that the staff were able to serve and deliver the food ahead of the given time.

In the same vein, they rated the restaurant as dependable and consistent which got the lowest rate with a mean of M=3.87 also interpreted as "high". This means that the customers were satisfied with the services offered by the casual dining restaurants should be consistent.

Furthermore, table 5 shows that the customers rated the staff high as indicated in the overall mean of 3.81. This means that customers were satisfied with the way the wait staff provided the services. When the restaurant is very busy, the staff was able to maintain the quality of service given to the customer as observed by the researcher, hence this area had the highest assessment from the customer as indicated with the overall mean of 3.93 interpreted as" High". The foregoing finding is supported by the study of Wijoyo et.al (2022) which stated that responsiveness is the willingness to provide immediate and appropriate quality service. In the same vein, giving extra effort to handle special requests received the lowest assessment with a mean of 3.75 but still interpreted as "high". This means that the customers were satisfied with the effort of the staff to handle special requests therefore the expectation of the customer for a good service meet.

As for the dimension of assurance, it is presented in the table that the customers rated the staff with an overall mean of 3.94 interpreted as "high" which means that the customers are satisfied with how the staff assured them of their safety in dining in their restaurants. The researcher observed that the staff is willing to answer every inquiry of the customer even without assurance that the customer will dine in their establishment. The staff can give exact information on what the customer needs to know about the menu.

This act is supported by Anwar and Abdulla (2021) who pointed out that assurance is the ability of the staff to be courteous, build rapport, render trust, and confidence, and be knowledgeable. It is imperative for the restaurant staff to prove that visiting their establishment and availing of the products and services is trustworthy and worth the money they are paying.

In this current study, making customers feel personally safe got the highest mean of (4.05) interpreted as “high”. This means that the staff was able to let the customers feel that they were safe in their establishment by means of giving correct information about the menu and the ingredients of the food and that the customers were generally satisfied with the way the wait staff handled the queries from the customer. This finding is supported by Ali et.al (2021) who posited that assurance is the ability of the staff to inspire the customer with confidence and trust. Furthermore, no matter what type of customer visits the restaurant, the staff should create a trustable environment. Customer trust and confidence in the establishment, service, and products may lead to an increase in the profitability of the restaurant.

Dimension of empathy was rated high by the customer as shown in the overall mean of 3.75. This means that the customer was satisfied with the service provided and the way the staff appreciated each customer. The researcher observed that the restaurant was able to hire staff who were sensitive to the needs and wants of the customer. This gesture is supported by the study of Umasuthan et al., (2017) which asserts that empathy is a moral emotion. This dimension, making customers feel special stood out having the highest mean of 3.80 interpreted as “high”. This means that the customers feel that they are well-valued and that their presence is important in the establishment. In the same vein, anticipating customers’ needs and wants had the lowest mean of (3.62) yet is still interpreted as “high” which means that the customers' expectations in terms of staff’s anticipation of their needs and wants were met by the staff.

For the price dimension, the data reveal that the customers rated the price an overall mean of 3.99 interpreted as “high”. This means that the customers were satisfied with the price of the food. The quality of food and service compensates with the amount of money they are paying. The researcher observed that the menu price was affordable which is commensurate to the quantity of food being served. The findings were supported by the study of Feinberg, B., and Wooton, I., (2020) stating that price determines whether customers will patronize the product and services again. In this dimension, the menu items offered are reasonably priced and got the highest mean of (M=4.06) described as high. This indicates that the clients were pleased with the quantity of food on the menu. In the same vein, the food that has a good value for the money given received the lowest rate with a mean of 3.86 described as “high”. This finding is supported by the study of Dyatmika & Firdaus, (2021) espoused that price plays a vital role in customer preferences.

Lastly on dining service dimension is satisfaction. The customer rated this dimension with an overall mean of 3.73 described as “high”. This means that the customers were satisfied with the overall service of the restaurant and the staff. The researcher also saw the quality of service provided by the staff which contributed to the

customers' satisfaction. In this dimension, customers' overall satisfaction with the dining experience received the highest rate with a mean of 3.82 described as "high" this indicates that the consumer is satisfied with their dining experience and is willing to suggest the establishment to others. This finding is supported by Aburayya et al., (2020) who defined satisfaction as the reason that customers may lead to long-term retention and recommending the service to others. Moreover, the customers are also satisfied with the quality of food and beverages which received the lowest assessment as indicated by the mean of 3.66 interpreted as "high". This means that even customers are generally satisfied with the quality of food and beverages, but this is an area that needs to be examined further by the restaurant management.

In regard to the assessment of customer delight, the customers rated this area as high as indicated in the overall mean of 3.53. This means that the customers are delighted with the overall services that the establishment offers. The researcher observed that the staff is very accommodating; the customer feels that they are welcome, valued, and special to the establishment. These findings are supported by Parasuraman (2020), who postulated that customer delight is the emotional imprint left on the customers' attributes; it is the positive and memorable feelings that happen to the customers. The result further shows that the staff was friendly and received the highest rate with a mean of 3.85 or interpreted as high. This means that the effort of the staff to have a positive effect and try to build a rapport by being friendly to the guest in the most truthful way is very effective. This notion is supported by Barnes, et al (2016) who posited that employee effort, affect, and skill are producing factors of delight.

As for the participants' assessment of customer delight in terms of sex, it shows that customer delight has no significant difference (t= 1.243, p= 0.217) considering their sex, therefore the null hypothesis cannot be rejected. This means that whether they are males or females the customers' delight is almost similar, which further implies that their sex is not a source of variation of their customer delight. The result is supported by the study of Torres et.al, (2014), who stated that the service experience of men and women that led them to feel delighted is almost the same.

The assessment of customer delight in terms of age shows that customer delight does not significantly differ considering their age (F= .644, p= 0.667). Therefore, the null hypothesis cannot be rejected. This means that the age of the participants is not a source of variation in their assessment of customer delight. This conclusion is corroborated by the researcher's observations made during data collection. The majority of the customers were in the same bracket of age. The perception and expectation of young adults were almost the same in terms of service quality in a restaurant.

Examining the specific dimensions of dining service, satisfaction stands as the highest predictor of customer delight, (B=.665, t= 17. 475). Table results that the model is significant at the .01 level (F= 164.929, p= 000) with a high multiple correlation (R=.834), thus, the null hypothesis can be rejected. Furthermore, 69.1 percent of the variability in customer delight is accounted for by a combination of the dimensions of dining service. 17.475, p=.000) indicating that for every unit of increase in their satisfaction, there is a corresponding .665 increase in their customer delight. It is, thus,

inferred that satisfaction precedes customer delight implying that customer satisfaction has to be met first before customer delight occurs. The finding is in consonance with the study of Afthanorhan et al., (2019) which posited that satisfaction is achieved when the expectation of the customer is met. As a result, of this satisfaction, the customer would feel delighted.

Further, empathy (Beta .363) is another predictor of customer delight which means that for every unit with an increase in their empathy, there is a corresponding .363 increase in their customer delight (B=.363, t=6.059, p=000). This further means that the higher the demonstration of staff's empathy the more customers are delighted. This notion is supported by the study of Setiono & Hidayat (2022) asserts that knowing the customer by name, including their preferences, needs, and wants is an example of how to empathize with the customer, thus delighting the customers.

Moreover, tangibility places the last predictor of customer delight (Beta .181) indicating that for every unit increase of tangibility, there is a corresponding .181 increase in the customer delight (B= .181, t=3.032, p=0.003). This means that the more comfortable the servicescape the more guests and customers will be delighted. This conception is supported by the study of Kukanja et.al (2019) posited that tangibility is vital for guest satisfaction in the restaurant therefore the higher the satisfaction rate the more customers and guests feel delighted.

Conclusions

Based on the results of the study, it was therefore concluded that there was a significant relationship between dining service and customer delight. The quality of dining service dimensions especially satisfaction, empathy and tangibility serve as antecedents of customer delight. These three dimensions play a vital role as predictors of delight in a restaurant. Satisfaction is the foundation of customer delight having the highest B=.665 which only means that customers felt satisfied with the service they received and were more likely to have a positive perception of the restaurant's services and offerings. This satisfaction comes from various aspects such as the quality of food, excellent quality service, accuracy of orders, and the overall ambiance of the restaurant. By consistently exceeding customer expectations the restaurant can build a strong foundation of customer delight. Furthermore, empathy also plays a significant role in enhancing customer delight having a B=.363 which only means that the restaurant provides empathetic service such as being sensitive to the needs and wants of the customer, making them feel special, and keeping the customer's best interest at heart. Empathy helps to adopt a positive and memorable dining experience which likely increases customer delight. Lastly, tangibility also plays an important role in achieving overall customer delight having B=.181, which only means that the overall aesthetic of the restaurant such as the building interior and exterior, dining area, product price range, and uniform the staff contributed to the exceeding satisfaction of the customer which contributed to customer delight.

Moreover, the result of the study reinforces the researcher's arguments that dining service satisfaction is indeed linked to customer delight. Customers who are able to

exceed satisfaction have greater tendencies to be delighted with the services of the establishment and can build a loyal customer base, generate word-of-mouth, and ultimately thrive in a highly competitive industry.

Recommendations

It is recommended that this study consider expanding and identifying other components of customer delight in the hospitality industry in order to gain more insights into the said components, explore other instruments that would best capture the customers' assessment of the dimension, and increase the number of sample size of the participants and the participating casual dining restaurants to strengthen the generalization of the findings of the study.

Compliance with Ethical Standards

To observe the confidentiality nature of the survey and to adhere to the Data Privacy Act, the participants of this study were informed and assured of the confidentiality of the data gathered which will be used only for research purposes and will not disclose any particular details of the participants. After the tabulation of data, all questionnaires

were kept safe by the researcher and subject for shredding or burying on the ground after 5 years.

Acknowledgments

The author acknowledges the assistance of Dr. Cyril C. Chavez to finish this study.

IMPROVING THE READING LEVEL OF GRADE VI GRAPPLING READERS THROUGH PROJECT SEL-P (Strategic Enhancement Learning-Package)

Juvy M. Bataliran, Loida M. Villasin, Dr. Joy SB Gaza

Graduate Studies, University of Nueva Caceres, Naga City, Philippines

https://doi.org/10.5281/zenodo.13584277

ABSTRACT

The main objective of this study is to help build the reading level of the Grade 6 Grappling readers of Maximino S. Lazaro Integrated School through Project SEL-P (Strategic Enhancement Learning-Package), a contextualized reading material crafted by the proponents themselves. The research addressed the following questions: the reading level of the Grade 6 learners before and after the implementation of the intervention, the effectiveness of Project SEL-P in improving the reading level of Grade 6 Grappling readers and the insights gained of the parents and Grade 6 learners on Project SEL-P. Using pre-experimental one group pretest-posttest design, 9 out of 35 learners assessed during the pretest (who scored 0-10 of reading words or Level 1) were selected. Data was collected using the Quick RAP tool developed by the Curriculum Implementation Division (CID) of Masbate Province. Using paired sample T-Test, with 95% confidence level, result shows that there is a significant difference between the pretest scores and posttest scores. Posttest results show that 9 out of 9 learners under the Grappling Level showed significant improvement in their reading level. Seven (7) learners are on Advancing which means that their reading level is on Level 4 while two (2) learners belong to Establishing and/or the reading level is on Level 3. The pupils reading level improve from Level 1 to Level 3 and Level 4 with a descriptive level of Establishing and Advancing. It indicates that learners reading level had improved after the reading intervention. Based on this finding, it is recommended that this study be widely implemented among schools with struggling readers. Embracing this method can lessen non-readers in school. Teachers are advised to benchmark, adopt and adapt this method in reinforcing learner's reading level as it has demonstrated effectiveness in facilitating meaningful reading experience.

Keywords: *Reading Level, Grappling Readers and Strategic Learning Enhancement Package*

INTRODUCTION

Reading plays a vital role in the learning process. It is one of the macro skills of communication that can be correlated to the academic performance of the students. Before the pandemic, it is a common struggle for teachers on how to uplift the reading performance of the pupils. It is indeed taxing for public school teachers to deliver quality education in a new normal setting. These readers require remedial training in skills that they were lacking in earlier grades. For many years, the pupils have been given assignments that are far too tough for them to satisfactorily complete alone. It is no surprise then, that they are scared. Thus, they avoid reading for the most part and have developed maladaptive coping techniques when presented with scholastic responsibilities.

Literature and studies pertaining to the challenges faced by grappling readers in Grade VI illuminate the multifaceted nature of reading difficulties within this demographic. Research indicates that factors such as insufficient vocabulary knowledge, limited fluency, inadequate comprehension strategies, and socio-emotional barriers contribute to the reading struggles experienced by these students (Guthrie et al., 2012; National Center for Education Statistics, 2020). Moreover, the transition to middle school often exacerbates these challenges, as students confront increasingly complex texts and academic expectations (Kamil et al., 2008).

Concurrently, literature exploring the intersection of literacy instruction and Social and Emotional Learning provides compelling evidence for the efficacy of integrated approaches in addressing the needs of struggling readers (Durlak et al., 2011; Elias et al., 1997). SEL frameworks, characterized by their emphasis on self-awareness, self-management, social awareness, relationship skills, and responsible decision-making, offer a holistic lens through which to scaffold literacy development (CASEL, 2020).

By nurturing students' socio-emotional competencies alongside targeted reading instruction, interventions like SEL-P possess the potential to engender enduring improvements in both academic performance and socio-emotional well-being. Lastly, Bonganciso (2016) found out that Contextualized Teaching and Learning's effects on the reading comprehension performance of thirty-three Bachelor of Science in Information Technology students were investigated. The pupils' reading comprehension performance improved significantly from the pretest to the posttest. As a result, when reading activities are contextualized, positive benefits on learners' reading comprehension ability can be seen.

To address literacy issues, reading programs are essentials. Designing a high-quality primary grade reading programs is essentials to ensuring a pipeline of learners who remain in school, achieve educational success, and contribute to economic growth.

As stated in DO 14, s. 2018, the Department of Education (DepEd) supports Every Child a Reader Program, which aims to make every Filipino child a reader and a writer at his/her grade level. Thus, the DepEd through the Bureau of Learning Delivery-Teaching and Learning Division (BLD-TLD) shall continue to administer reading programs in public schools.

Reading success is crucial to academic success. Reading difficulties on the other hand hamper every aspect of a child's academic accomplishment. Thus, early reading is critical. Early reading instruction helps children develop superior reading skills and achieve greater academic success. When children fall behind in reading, they will struggle in other subjects and with schooling. They feel frustrated, lose motivation, and fall further behind, creating a downward spiral (Quimbo, 2021).

The Schools Division Office of Masbate Province launched and implemented different interventions to help improved the reading performance of the learners. Brigada PAGBASA (BP) was one of its intervention as a form of Brigada Eskwela, an after-school reading program in response to Hamon: Bawat Bata ay Bumabasa or DepEd 3B Initiative issued under DM 173, s. 2019. The Brigada Pagbasa program aimed to make every learner a reader by engaging partners and stakeholders to promote the culture of reading. All BE implementers are encouraged to conduct this partnership initiative for reading which serves as a platform to synergize education- related endeavors that immediately addresses literacy and numeracy learning gaps. This reading advocacy served as an avenue for all stakeholders to contribute possible solutions to improve the country's education system, especially in equipping the learners with 21st century skills. This program was religiously done in our school to cater the needs and to lessen the problem of our struggling readers.

Project SAGWAN (Shelve Achievement Gaps thru Wider Academic Networking) was also implemented in the SDO Masbate Province. It is a flagship program of the Curriculum Implementation Division (CID) that aimed to address the existing achievement gaps in literacy and numeracy. SAGWAN in English, PADDLE symbolizes the continued collaborative efforts of the SDO Masbate top management, supervisors, school heads and teachers in sailing with synergy towards the desired performance "port of destination".

Also with the BriGADA BASA (Bridging Generated Assistance from dedicated Advocates for Books Appreciation towards Students' Advancement), it is SDO Masbate reading program that provided various activities for the learners to read and learn while in the comfort of their homes. Parents and stakeholders are empowered to expand support to schools by extending assistance in cash, in-kind and workforce.

Every child deserves a STAR (Support Towards Advancement in Reading) is a program under the umbrella of BriGADA BASA with the following objectives: first is to augment needed intervention of K to 3 learners along reading, second is to address the learning and reading gaps caused by pandemic, third is to help learners of K to 3 meet grade level standards and last is to acknowledge and appreciate the effort of the school reading team and the stakeholders thru proper and recognizable forum.

In every intervention comes with a good result. For us to know the result, SDO Masbate Province implemented the Comprehensive Rapid Literacy Assessment (CRLA) with the partnership of the DepEd Central Office. It was initially conceived as a 5-minute start-up reading assessment designed to help teachers quickly determine the reading profiles of their G1-G3 learners and develop appropriate reading instructional strategies. The main goal of CRLA is to identify children who need additional support for learning.

Also the ABC+ Project was implemented in close collaboration with DepEd and focused on improving outcomes in early literacy, numeracy and socio-emotional learning in the country. USAID, through the ABC+ Project, has been supporting DepEd in implementing innovative approaches to ensure access to a quality education with interventions focusing on improving early reading, math and social and emotional skills for early grade children (kindergarten to grade 3 or K-3) in the Philippines. The said partnership is still on going as of today which as of now, USAID trained teachers on Early Grade Instructional for Multilingual Classrooms.

Based on the Division Memorandum No. 280, s. 2022, all schools in Masbate Province are mandated to utilize and administer the **Q**uick **RAP** (**R**eading **A**ssessment **P**ackage) for Grades 4-6 learners upon the opening of In-person classes for School Year 2022-2023. Quick RAP is an instrument used to assess the reading ability of grades four (4) to grade six (6) in all schools of Masbate Province Division.

This tool is crafted to quickly wrap up the reading aptitude of the learner within a 5-minute duration. The objective of this tool are (1) to determine the reading ability of the learners in grades 4-6 respectively, (2) to measure the learners' reading levels, abilities, disabilities, (3) to bridge the reading and comprehension gaps of the learners, (4) to support the learners' growth in the acquisition of the English language and (5) to utilize the sample remediation and intervention activities provided in the package.

Reading fluency is fundamental for academic development more broadly, the researchers said, because problems with this skill can interfere with students' ability to learn other subjects as they make their way through later grades. Maximino S. Lazaro Integrated School of San Pascual South District conducts regular reading assessment to determine the reading fluency of the learners and provide them with the necessary interventions.

However, the results of Schools Program Implementation Review and Performance Assessment (PIRPA) in terms of Quality of the School Key Performance Indicators indicates that there are non-readers in the intermediate classes and teachers shared sentiments with regards to the reading fluency of their learners. The results provide evidence about the pandemic's impact on learning especially among learners receiving less contact time with the reading teachers and/or subject teachers.

In Maximino S. Lazaro Integrated School, specifically in Grade 6, the learners' literacy rate in English is alarming based on the result of the Beginning of the School Year Administration of the Quick RAP. Quick RAP Administration categorized four reading profiles: LEVEL 1 **Grappling** (If WORDS' score is 0 to 10), LEVEL 2 **Coping** (If WORDS'

score is 11 to 20) LEVEL 3 **Establishing** (If the PHRASES score is 0 to 5) and LEVEL 4 **Advancing** (If PHRASES' score is 6 to 10).

Given the situation of the Grade 6 Grappling Readers in Maximino S. Lazaro Integrated School on literacy, this project aimed to help build the reading level of the grappling readers using the Project **SEL-P** (**Strategic Enhancement Learning-Package**). This project provided reading activities using contextualized reading materials crafted by the proponents themselves.

Research Questions:

This study aims to improve the reading level of the Grade VI Grappling Readers of Maximino S. Lazaro Integrated School, Pinamandayan, San Pascual Masbate Province, School Year 2022-2023.

Specifically, it seeks to answer the following questions:

1. What is the reading level of the Grade VI learners before and after the implementation of the intervention?
2. How effective is Project SEL-P in improving the reading level of Grade VI Grappling Readers of Maximino S. Lazaro Integrated School?
3. What are the insights gained by the Grade VI learners on Project SEL-P?

METHODOLOGY

This section presents the research design, the respondents, the procedure of investigation, the tools used in data gathering, and the statistical tools applied in evaluating effectiveness of contextualized reading package to the reading level of grade 6 learners.

Methods Used

The proponents implemented the Project SEL-P (Strategic Enhancement Learning Package) in Improving Reading level of Grade VI Grappling Readers a contextualized tool kit to help build the reading level of struggling readers. The 9 Grade 6 Grappling readers of Maximino S. Lazaro Integrated School had a 30-minute session from 4:00 to 4:30 for 12 weeks. It started from February 5, 2024 up to April 29, 2024. They have been taught phonemic awareness, alphabet knowledge and decoding through the use of the Contextualized SEL-P. The proponents met with the parents of the identified participants and explained about the research study. The proponent provided the checklist and monitoring tool to see if they were able to keep track of their children (please refer under gathering methods). They met every Friday and in the absence of the proponents, the parents continued their weekly monitoring.

The proponents used the 3 methods for teaching reading by Dr. Orton and Dr. Gillingham, namely:

The Phonics Method

This concerned with helping pupils how to break words down into sounds, translate sounds into letters and combined letters to forms new words. In the beginning, progress maybe slow and reading out loud halting, but eventually the cognitive processes involved in translating between letters and sounds are automatized and become more fluent. The primary focus of phonics instruction is to help readers understand how letters are linked to sounds (or phonemes) to: (1) form letter-sound correspondences and spelling patterns and (2) help them learn how to apply this knowledge to their reading. Phonics instruction may be provided systematically or incidentally. This will be done by the proponents individually or with partners. In this part, the proponents will give the pupils the SEL-P tool for the first 1-3 weeks and allow the child to read on his own. The pupils can bring the provided SEL-P tool to his/her home to read and re-read with the help of guardian.

The Whole-word Method

This teaches reading at the word level. Because it skips the decoding process, pupils were not sounding out words but rather learning to say the word by recognizing its written form. Context was important and providing images can help. Familiar words here may initially be presented on their own, then in short sentences and eventually in longer sentences. In reality, 70-80% of content comprehension is based on knowing the meaning of words (Pressley, M. 2002). The proponents checked and monitored if their vocabulary increases or grow weekly for 3 weeks, because in this part, pupils begun to extract rules and patterns that they can use to read new words. This was strictly monitored by the proponents for 4-8 weeks to check the development of the Grappling readers using the contextualized SEL-P tool.

The Language Experience Method

Fluency is defined as the capacity to read quickly, accurately, and with suitable expression. In this part, pupils were able to read fluently, whether aloud or silently, in order to comprehend what they read. They were monitored by the proponents to determine if there is a significant improvement on the level of reading of the pupils using the contextualized SEL-P tool.

Fluent readers read in sentences and use appropriate intonation while reading aloud. Their delivery was fluid and expressive. Pupils who cannot read fluently have a choppy and unnatural tone to their voice. The remaining 4 weeks was done in this method. Those pupils may struggle with phonetic skills or just need additional practice with reading speed and smoothness. Fluency becomes increasingly critical as readers progress through the grades, as the amount of reading required increases considerably.

The table below showed the week number, reading materials to be read and methods of reading to be done. Reading materials were quality assured by the School

Quality Assurance Team, School Head as the chairman, 1 Master Teacher II as the Vice-Chairman, LR coordinator and reading teacher as the members.

During the validation of the contextualized SEL-P tool, the validators suggested that the contextualized materials should be done considering the context or level of the learners, that's why we used the method of Dr. Orton and Dr. Gillingham which started in the phonics method.

Spiral progression was reinforced in crafting the intervention tools.

Week Number	Reading Materials	Methods of Reading
Week 1	Word Family List	The Phonics Method
Week 2	Word Family List	The Phonics Method
Week 3	Basic Sight Words	The Phonics Method
Week 4	Basic Sight Words	The Whole-word Method
Week 5	Phrases	The Whole-word Method
Week 6	Phrases	The Whole-word Method
Week 7	Sentences	The Whole-word Method
Week 8	Sentences	The Whole-word Method
Week 9	Short Stories	The Language Experience Method
Week 10	Short Stories	The Language Experience Method
Week 11	Short Stories with Comprehension	The Language Experience Method
Week 12	Short Stories with Comprehension	The Language Experience Method

For Quantitative part, the literacy level of the respondents who fall under the Level 1 Profile (Grappling) in terms of Quick RAP reading profile was identified by utilizing the pretest and posttest Quick RAP Tools using the Division automated Class Record and Class Summary Scoresheets.

The proponents analyzed the significant improvement of both the Quick RAP result and Fluency test result by the end of the completion of the intervention by using the T-test which compare the means of two groups.

The T-test was used to determine whether there is a substantial difference between the pupils' pre-test and post-test results. This statistical test also was used to determine whether a process or treatment which is the Innovative Project SELP had effect on the reading fluency of the respondents.

For the Qualitative part, to analyze the data from the interviews during the FGD, transcriptions were used. This involved close observation of data through repeated careful listening (and/or watching). This assisted the proponents in identifying emerging themes. This familiarity with data and attention to what is actually there rather than what is expected can facilitate realizations or ideas which emerge during analysis.

To be able to effectively implement Project SEL-P, close monitoring was done through FGD's and the use of Monitoring Tool for parents. Every Friday during the Focus Group Discussion, the proponents collected the monitoring tool given to the parents ahead of time and each parent was asked of their experience in that particular week. Responses on whether the respondents finish the task for the day and the problems encountered during the session were noted.

Respondents of the Study

The participants of this study who received the 12-week intervention are the nine (9) Grade 6 pupils who belong to the Level 1 (Grappling) in English during the administration of Quick RAP of Maximino S. Lazaro Integrated School, Pinamandayan, San Pascual, Masbate Province, School Year 2022-2023. Purposive sampling was used to identify the respondents. Table 1 shows the frequency distribution and percentage of the participants.

Table 1
Distribution of Participants

Reading Level	Frequency	Percentage
Grappling	9	100%
Total	**9**	**100%**

There were 9 participants identified as grappling level during the pretest of QUICKRAP among grade 6 learners. They are the pupils who had difficulty in decoding words and reading phrases and needs assistance for them to build their reading fluency. Purposive sampling was used to identify the respondents. Table 1 shows the frequency distribution and percentage of the participants.

Data Gathering Tools

The proponents used the pre- experimental one group pretest-posttest design. The dependent variable is measured once before the intervention is implemented and once after the it is implemented.

Before the implementation of the Project SEL-P, the respondent underwent pretest first, after the 12 weeks' implementation, the proponent will conduct posttest to measure if the treatment is really helpful in improving the reading level of the identified respondent.

In gathering data to solve the problem, the proponents used the reading assessment tools such as the Quick RAP (CID, Masbate Province Division) and the Fluency Rubric (modified from Tim Rasinski-Creating Fluent Readers). The proponents utilized the Quick RAP pretest and posttest which will be answered by the respondents before and after the implementation of the Project SEL-P.

The results of the Quick RAP Administration were used to determine if there is a significant improvement on word accuracy and reading aptitude because it was only given a 5-minute duration. The Fluency rubric will also be used to monitor the progress of the fluency of the respondent especially once they have completed the intervention.

After the data were gathered, the proponents used the Quick RAP Class Record and Quick Rap class summary for tabulation and analysis provided by the CID, Masbate Province as data analyzing tool to determine the outcomes of the study.

The proponents gave a *Modified Study Lesson Monitoring Tool for Parents* to provide the parents a checklist to see if they were able to keep track of their children. This also determined whether they able to assist their children with the execution of the intervention. The proponents watched the respondents closely as they attempt to emulate the intervention study guide.

Table 2
Sample Monitoring Tool for Parents

WEEK & SESSION	Did the pupils finish the task for today? Yes or No, if not please leave a comment.	What problem or problems encountered during the session?
Week 1 Session 1 or W1 S1	*No!* *My child has to do his/her assignment in other subject.*	*Time management*

Every Friday, with the presence of the proponents and the parents of the respondents had the Focus Group Discussion**.** Parents' comments on intervention implementation, as well as research difficulties and concerns, were gathered. This is important because the proponents selected whether or not to depart from the intervention study guide that has been created.

After twelve weeks, a posttest along with phonological awareness, alphabet knowledge, decoding, word recognition, reading fluency were conducted to the learners.

Procedure of Investigation

The following were the processes that were observed by the researchers in order to realize the goals of the study.

Conceptualization of the Research Problem. The researcher identified why a study on a particular topic is needed. Since ideas generated were still broad and vague, the researcher had to redefine them. This process included identification and definition of the variables to be studied, development of the theoretical and conceptual framework of the study, formulation of the major and specific problems to be investigated and the formulation of hypothesis.

Approval of PROBE Research Title. Conceptualized study was then presented to the adviser for checking and for further corrections before it was presented to learning supervisor for its approval.

Securing Permit to Conduct the Study. After the approval of the paper, a letter securing permit and MOA from the school head of Maximino A. Lazaro Integrated School was made.

Preparation of the Instrument and Contextualized Reading Material. After the permit was approved, the researcher immediately prepared the data gathering tool based of
the specific problems of the study. And create a contextualized reading material to be used in this research.

Administering and Retrieval of Questionnaires. The tool Quick RAP (CID, Masbate Province Division) and the Fluency Rubric (modified from Tim Rasinski-Creating Fluent Readers) used on the conduct of pretest and posttest. This were distributed personally to the respondents. Also, the monitoring tool for parents were also administered. This facilitated the researchers to answer and clarify questions needing further explanations. Besides, it was an opportunity to interview them. After they were accomplished, they were also collected personally. Hence, the questionnaires were retrieved, coded, tallied, and tabulated in order for appropriate statistical treatment can be applied.

Processing of the Data Gathered. The data were treated using appropriate statistical tools to ensure that correct analysis and interpretation of data be made. Analysis of the Result. The quantified results were placed in tabular form to facilitate

analysis and discussion. The analysis and interpretation were made to answer the specific problems raised in this study.

Writing and Submission of the Manuscript. After completing the data analysis and interpretation, the researcher prepared the manuscript and was submitted to the Learning Supervisor for approval and publication.

Statistical Tools

There were two statistical tools used to treat the data gathered for analysis and interpretation. A statistical software available in the internet was used.

Percentage. This tool was used to determine reading level of the respondents.

Paired sample T-Test. This was used to determine the significant difference between the pretest scores and posttest scores.

RESULTS AND DISCUSSION

This section is a discussion of the results of the study. Data were placed in tabular form to facilitate analysis and discussion.

To address literacy issues, reading programs are essentials. Designing a high-quality primary grade reading programs is essentials to ensuring a pipeline of learners who remain in school, achieve educational success, and contribute to economic growth. As stated in DO 14, s. 2018, the Department of Education (DepEd) supports Every Child a Reader Program, which aims to make every Filipino child a reader and a writer at his/her grade level. Thus, with reference to the said memorandum, a reading intervention was implemented.

A. Reading Level of Grade 6 Learners Before and After the Implementation of Project SEL-P

Several reading interventions were implemented in Maximino S. Lazaro Integrated School but still the existence of struggling readers is evident. For this reason, the proponents implemented the Project SEL-P (**Strategic Enhancement Learning Package**) in Improving Reading Level of 9 Grade 6 Grappling Readers using a contextualized reading learning package to improve English reading fluency of Grade 6 learners.

This study is in line with researches conducted by Bonganciso (2016) who found out that Contextualized Teaching and Learning's effects on the reading comprehension performance of thirty-three Bachelor of Science in Information Technology students were investigated. The pupils' reading comprehension performance improved significantly from the pretest to the posttest.

As a result, when reading activities are contextualized, positive benefits on learners' reading comprehension ability can be seen. Krause et al. (2016) stated that the three principles that support the use of content contextualization: prior knowledge, fostering conceptual change, and boosting metacognition, according to the author.

The table below shows the result before and after the implementation of the project.

Table 3

Reading Level of Learners Before and After the Implementation of the Intervention through Project SEL-P

Learners	**Pretest Score**			**Reading Level**	**Posttest Score**			**Reading Level**
	Words 20	Phrases 10	Sentences 17		Words 20	Phrases 10	Sentences 17	
A	3	2	1	Level 1	20	9	14	Level 4
B	2	3	1	Level 1	20	9	13	Level 4
C	1	3	2	Level 1	20	10	17	Level 4
D	1	2	1	Level 1	20	7	13	Level 4
E	0	2	0	Level 1	19	10	14	Level 4
F	0	1	0	Level 1	19	4	4	Level 3
G	0	2	0	Level 1	20	9	17	Level 4
H	0	1	0	Level 1	18	5	6	Level 3

I	1	2	1	Level 1	20	6	12	Level 4

Table 4
Reading Profile of Learners Before and After the Implementation of the Intervention through Project SEL-P

Learners	Pretest Score (TOTAL SCORE 47)	Reading Profile	Posttest Score (TOTAL SCORE 47)	Reading Profile
A	6	Grappling	43	Advancing
B	6	Grappling	42	Advancing
C	6	Grappling	47	Advancing
D	4	Grappling	40	Advancing
E	2	Grappling	43	Advancing
F	1	Grappling	27	Establishing
G	2	Grappling	46	Advancing
H	1	Grappling	29	Establishing
I	3	Grappling	38	Advancing

The posttest results showed that out of 9 respondents who fall under Grappling or Level 1 during the pre-test, 7 or 77.78% were able to move to Level 4 or Advancing and 2 or 22.44 were able to move to Level 3 or Establishing. These results suggest the effectiveness of the implementation of Project SEL-P in improving the reading level of learners in any grade level and can also be used by other teachers.

As to the pretest result of the Quick RAP Administration for the Academic Year 2022-2023 of Maximino S. Lazaro Integrated School Grade 6 learners, out of 35 learners assessed, 25.71% or 9 are under Grappling; 2.86% or 1 is Coping; 34.29% or 12 are Establishing; and 48.57% or 17 are Advancing.

It was also observed by the teacher during the administration of Quick RAP that learners who fall under Grappling have word recognition problems and discovered that they had problems with consonant blends and consonant digraphs.

They maybe small in number but the results are quite alarming. Quimbo (2021) findings that when children fall behind in reading, they will struggle in other subjects and with schooling. They feel frustrated, lose motivation, and fall further behind, creating a downward spiral. Thus, it is important to assist the learners to improve their reading level.

For this reason, the proponents implemented the Project SEL-P (**Strategic Enhancement Learning-Package**) in Improving Reading Level of 9 Grade 6 Grappling Readers using a contextualized reading learning package to improve English reading fluency of Grade 6 learners. This project is in line with researches conducted by

Bonganciso (2016) who found out that Contextualized Teaching and Learning's effects on the reading comprehension performance of thirty-three Bachelor of Science in Information Technology students were investigated.

The pupils' reading comprehension performance improved significantly from the pretest to the posttest.

As a result, when reading activities are contextualized, positive benefits on learners' reading comprehension ability can be seen. Krause et al. (2016) stated that the three principles that support the use of content contextualization: prior knowledge, fostering conceptual change, and boosting metacognition, according to the author.

For starters, contextualized content training helps learners to use their past knowledge and solve problems more effectively. If topics can be tied to their daily lives, students will remember more knowledge. Second, when content contextualization exercises are participatory and engaging, students are motivated by the concept's relevance, which results in improved learning.

Finally, content contextualization allows students to reflect on their learning by connecting ideas from a familiar tangible context of an abstract thought, allowing them to distinguish their own personal associations with these ideas.

B. Effectiveness of Project SEL-P in Improving the Reading Level of Grade 6 Grappling Readers

Reading tools can be highly effective in improving the reading levels of grappling readers when tailored to their specific needs and implemented in a supportive context or it is within the context of the reader.

The effectiveness of this contextualized SEL-P (Strategic Enhancement Learning-Package) tool was very evident after the 12-weeks of implementation. This helped the grappling readers improved their literacy skills because the package was in accordance with the level of each learner.

During the implementation of this research, identified grappling readers showed progress every week and it was religiously monitored with the use of the monitoring tool and evaluated during the weekly Focus Group Discussion (FGD).

Blasoto and Manzanero (2019) observed the effectiveness of worksheets from tool kits in improving the reading comprehension of pupils. The Group Screening Test (GST) and the Philippine Informal Reading Inventory (PHIL-IRI) show that students' reading performance in Filipino has improved.

Figure 1 below shows the result using paired sample T-test.

Figure 1: Paired Sample T-test Result

```
T-TEST PAIRS=Pre WITH Post (PAIRED)
  /CRITERIA=CI(.9500)
  /MISSING=ANALYSIS.
```

T-Test

```
[DataSet0]
```

Paired Samples Statistics

		Mean	N	Std. Deviation	Std. Error Mean
Pair 1	Pretest Score	3.44	9	2.128	.709
	Posttest Score	39.56	9	7.038	2.346

Paired Samples Correlations

		N	Correlation	Sig.
Pair 1	Pretest Score & Posttest Score	9	.641	.063

Paired Samples Test

		Paired Differences					t	df	Sig. (2-tailed)
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference Lower	Upper			
Pair 1	Pretest Score - Posttest Score	-36.111	5.904	1.968	-40.650	-31.573	-18.348	8	.000

In this study, the posttest results show that out of 9 learners under the Grappling Level showed significant improvement in their reading level. Seven (7) learners are on Advancing which means that their reading level is on Level 4 while two (2) learners belong to Establishing and/or the reading level is on Level 3. The pupils' reading level improved from Level 1 to Level 3 and Level 4 with a descriptive level of Establishing and Advancing.

It indicates that learners reading level had improved after the reading intervention. If on the pretest they can hardly recognize sounds, in the posttest, they can now read sentences with comprehension through the use of Phonics Methods, Whole- word Method and Language Experience Method.

Using paired sample T-Test, with 95% confidence level, result shows that there is a significant difference between the pretest scores and posttest scores.

The result is supported by the study of Snowling and Hulme (2015) cited in Brooks (2016) proposed that it is possible to help struggling learners' oral language skills through strategies that focus on listening, vocabulary, and narrative skills. Higgins et al, (2017) recommend purposeful speaking and listening activity tools and strategies like giving them; books to read out loud and discussing them, activities to improve and broaden expressive and receptive language skills; collaborative learning where children can share thought processes; and students talking through their writing ideas, before beginning to

write. And Javed et al., (2015) commented that to increase students' comprehension skills, educators must use educational practices that foster critical thinking and pre-reading. Oral language is a crucial component of literacy development at every stage of a child's development. A focus on oral language abilities in early children, particularly those from impoverished families, can help both reading and writing (Educational Endowment Foundation, 2016 & 2017).

The result of this project offers a compelling evidence in favor of three methods of teaching reading by Orton and Dr. Gilllingham technique significantly improve the Grappling Readers of 9 grade 6 learners. The findings unequivocally showed that Grade 6 reading level significantly improved as a direct result of the intervention. Orton and Dr. Gilllingham methods of teaching reading shows to be successful method in promoting reading level, reading comprehension and facilitating meaningful learning experience especially that it had paired with the contextualized learning materials that is within the context of the learners.

After the conduct of interview with the parents as shown on their Monitoring Tool, it was discovered that the parent's collaboration and assistance in teaching listening, repeated, oral and pair reading as their children read the words, phrases and sentences contributed to the increased of reading level of the learners. Snowling and Hulme (2015) cited in Brooks (2016) proposed that it is possible to help struggling learners' oral language skills through strategies that focus on listening, vocabulary, and narrative skills. Higgins et al, (2017) recommend purposeful speaking and listening activity tools and strategies like giving them; books to read out loud and discussing them, activities to improve and broaden expressive and receptive language skills; collaborative learning where children can share thought processes; and students talking through their writing ideas, before beginning to write.

Conclusions

From the foregoing findings, the following conclusions were drawn:

1. It is concluded that teachers and parents' collaboration is important on improving the learners reading level. As DepEd 2021 reiterated teachers, parents, and other reading professional's collaboration foster and measure learners' reading skills.

2. Reading intervention strategies are crucial for supporting struggling readers and helping them improve their literacy skills. As proponents of this intervention, it is essential to reflect on the effectiveness of these strategies in order to make informed decisions about which interventions to implement and how-to best support learners.

3. This project with the support of the parents and school head, resulting in noticeable improvements in their reading level and fluency. From a word reader, they become phrase readers and later became sentence and paragraph readers. The proponents, reading teachers and parents work hand and hand for the successful implementation of Project SEL-P. It is therefore

concluded in this reflection that commitment, passion and perseverance are the most important things to accomplish a task like this.

Recommendations

Based on the conclusions, the following recommendations are offered:

1. It is highly recommended that teachers can adopt the three method of teaching reading by Orton and Dr. Gilllingham coupled with the contextualized learning package as their preferred reading intervention to the struggling learners. By integrating this method to their reading intervention, it can help to effectively uplift the literacy rate and learning loss.

2. School and district-wide can use of this method as part of their reading intervention to improve the reading level of the struggling learners is advocated. Embracing this method can lessen non-readers in school. Teachers are advised to benchmark, adopt and adapt this method in reinforcing learner's reading level as it has demonstrated effectiveness in facilitating meaningful reading experience. The effectiveness of this study was very evident. During the conduct of District Reading Assessment which was done after the last week of the implementation of this research, the assessment resulted that there is no identified non-reader in the Grade 6 class.

3. The perception of reading intervention implementation can vary depending on factors like effectiveness, accessibility and adaptability to individual needs. This intervention greatly helped the grappling readers to improve their reading skills which helped them to move to the next grade level. This greatly implies that the effectiveness of this intervention is evident. Teachers are advised to adopt this intervention to help lessen the struggling readers in the class. However, in contextualizing or crafting reading materials, teachers should consider the level of learners or their materials should be within the context of the learners. Overall, this project helped addressing reading difficulties and improving literacy skills among grappling readers.

4. To ensure their children's success in the intervention, parents must commit themselves to play their roles in the implementation of reading program. Thus, it is recommended to establish teacher-parent partnership to develop their children's love for reading and helped developed their reading skills.

Compliance with Ethical Standards

Prior to the implementation of the intervention, proponents secured parent consent to the child-participants. The proponents informed the beneficiary of the intervention as well as the adviser. Parents were informed of the status of their children in the literacy level that is why they immediately signed the parent consent considering that their

children will benefit the intervention. They fully entrusted the welfare of their children to the proponents provided that due care and precaution will be observed to ensure their safety.

Acknowledgments

This has been a chance of a lifetime experience, and we truly believe that people come into your life for a reason. There are no words to express the “thanks” that we owe to all of you who truly made the learnings and experience we gained a worthwhile.

Our utmost gratitude to our Learning Supervisor Dr. Joy SB Gaza to the technical assistance given to us starting the conceptualization of the PROBE Proposal up to its implementation. She had kept us enlighten throughout our entire endeavor.

Maximino S. Lazaro Integrated School Teaching Staff spearheaded by Sir Pablo S. Reveral for the support and partnership towards the accomplishment of the PROBE Research. He gave us the confidence to believe that we can accomplish our goals.

Ma’am Fina O. Nobleza who undoubtedly extend guidance and serve as our ears and eyes when we can’t attend to class due to internet connection and school’s intervening activities.

To our families for the love and support to our school’s undertakings. They had provided us the inspiration and care for us to accomplish this feat. We couldn’t have done it without them.

Mostly, the one and above all, the omnipresent God, this PROBE Research has been a long but worthwhile journey. We couldn’t realize this without His guidance.

To all of you, a heartfelt and very genuine words, “Thank You!”

IN-SERVICE TRAINING PROGRAM AND ACADEMIC QUALITY: BASIS FOR TEACHER DEVELOPMENT PLAN

Marivic B. Priolo, Gina F. Labitad, Ph.D.

PHINMA-Cagayan De Oro College, Philippines

https://doi.org/10.5281/zenodo.13150021

ABSTRACT

Academic quality and in-service training are crucial in ensuring effective teaching and learning processes. This study is conducted to determine the teacher's level of in-service training program and academic quality as a basis for the teacher development plan. It aimed to examine the respondents' characteristics, assess the perception of in-service training and academic quality levels, explore the significant relationship between the effect of the in-service training program on the teachers and their observance of academic quality, and determine the significant difference between academic quality and in-service training program. The respondents were the three hundred forty (340) public elementary teachers where the study was conducted. The methods used were descriptive correlational, universal sampling, and the questionnaire was researcher-made. Descriptive statistics such as frequency, percentage, mean and standard deviation were used. Pearson r was used to determine the significant relationship between the teachers' in-service training program and the academic quality. T-test was utilized to test the significant difference in the academic quality when grouped according to their characteristics. Findings reveal that the highest mean score for the in-service training program is associated with values and practices in the professional dimension. On the other hand, the highest mean in academic quality is observed in professional development. Notably, a significant relationship exists between in-service training programs and academic quality. The study also identified significant differences in in-service training programs and academic quality based on teaching position, highest educational attainment, and related training/ seminars attended. It is concluded that this research has highlighted the significant impact of in-service training programs on the enhancement of academic quality, particularly in technological integration and

professional development. It is recommended that teachers should utilize the development plan to improve the academic quality within educational institutions.

Keywords: *in-service training program, academic quality*

INTRODUCTION

Ensuring the effectiveness of teaching and learning processes in an educational system depends on the quality of academic programs and in-service training. It's crucial to create training programs that meet educators' immediate professional demands and promote lifelong learning and ongoing development within the teaching community. Understanding the effects of in-service training on academic excellence is vital for developing a teacher development plan. Scholarly investigations highlight the significance of ongoing professional development for educators in maintaining benchmarks and enhancing instruction quality. Studies indicate that in-service teacher preparation programs correlate positively with student achievement and that factors like professional development, pedagogical techniques, technology integration, academic quality standards, assessment strategies, and learning opportunities impact teacher quality and student outcomes (Siu-Cheung Kong et al., 2022).

In-service training and academic quality are fundamental to providing quality education. Republic Act 10533 mandates globally competitive academic quality based on a sound curriculum. However, the 2018 PISA results show poor performance among Filipino pupils in key literacy domains, implying the need for urgent action to raise academic standards. DepEd Order No. 8, s. 2017, emphasizes the necessity of top-notch teacher education programs to support new teachers in becoming skilled educators. Teacher performance significantly influences the quality of education, impacting student motivation, engagement, and learning outcomes.

DepEd Order No. 32, s. 2011, established guidelines for training and development activities, aiming to set clear expectations for employees and emphasizing the importance of high-quality teacher education programs. Teachers' performance is a key determinant of academic quality, directly affecting student learning outcomes. The Department of Education is actively working on strategies to enhance education quality, as seen in DepEd Order No. 21, s. 2019. The K to 12 program's implementation enhanced academic quality through technological integration, equipping students with critical thinking, communication, and technological abilities.

Improving academic quality requires a multifaceted approach, focusing on academic performance and other factors affecting learning outcomes. Initiatives like in-service training (Ashraf et al., 2023) are essential for academic success. This is a primary goal of the Division of Bukidnon and crucial for the teacher development plan. DepEd Order No. 42, s. 2017, highlights the importance of professional standards in teachers' advancement and ongoing development. Creating a teacher development plan is essential to raise

academic standards, provide quality education for Filipino children, help them compete globally, and equip them with lifelong learning skills.

This study investigates the effects of in-service training programs on academic quality in the Schools Division of Bukidnon, specifically in the Pangantucan Districts. By identifying teachers' diverse needs and aligning them with established educational standards and best practices, the research aims to enhance education quality in the district.

Research Questions

1. How are the respondents' characterized in terms of age, sex, position, highest educational attainment, related trainings/ seminars attended?
2. What is the level of the teachers' in-service training program considering professionalism dimensions: knowledge, skills, values and practices; and pedagogical components: competence and needs assessment, designing, resources delivery and learning evaluation?
3. What is the level of teachers' academic quality with regard to standards, assessment strategies, technological integration, pedagogical techniques
and professional development?
4. Is there a significant relationship between the teachers' in-service training program and the academic quality?
5. Is there a significant difference in the teachers' academic quality when grouped according to their characteristics?
6. Based on the findings of the study, what teacher's development plan on teacher in-service training program can be designed?

METHODOLOGY

Research Design

This research employed a descriptive survey research method, utilizing a descriptive design to gather data and information about current situations and conditions, which is suitable for teachers' training for academic quality and is the basis for the teacher development plan. This method demands data gathering, tabulating, and computation and involves the analysis and interpretation of the gathered data (Fluet, 2020). Furthermore, this research was descriptive since it attempts to find whether the independent variables, such as the in-service training and its academic quality.

Study Setting

This study was conducted in the Pangantucan District, which is well-known for its commitment to BASA Pangantucan implementation in the Division of Bukidnon. An annual celebration is organized to promote academic quality among the schools, which is essential for the holistic development of every learner, aligning with the broader goal of

enhancing educational quality in the division as well as the teaching performance of the teachers.

The Division of Bukidnon in the Province of Bukidnon, Philippines, serves as the research setting for teachers' training in academic quality. This diverse educational division houses a variety of schools and students and is a microcosm of the broader Philippine education system. The research aims to assess and improve academic quality through teachers' training. This research is important, as its findings have the potential to not only enhance the quality of education in every school but also inform education policies and practices at the national level.

The Division of Bukidnon offers a unique backdrop for teachers' training in academic quality and teaching performance. The outcomes of this research can positively impact the local educational landscape, contribute to the improvement of the broader Philippine education system, and highlight the contributions of effective teachers and school heads, leading to professional recognition and career advancement opportunities.

In this study, public schools in the district of Pangantucan, from elementary schools, were included in the research. This comprehensive sampling strategy ensured that data would be gathered from every public school within the specified district, providing a representative and inclusive sample.

Research Respondents

The respondents were the three hundred forty (340) elementary school teachers from Pangantucan District, Pangantucan North, Pangantucan South, and Pangantucan West, for the School Year 2023-2024.

The researcher adhered to the proper protocol by obtaining a recommendation letter from the Dean of the School of Graduates and Professional Studies at PHINMA-Cagayan De Oro College. Subsequently, a letter co-signed by the researcher and her adviser requesting permission to distribute the questionnaire within the Division of Bukidnon was forwarded to the Schools Division Superintendent, for approval. Upon receiving approval, the researcher submitted a formal request to the School Heads, seeking permission for the teachers of their respective schools to participate in the study. The researcher emphasized voluntary participation and assured respondents of the confidentiality of their responses. Data collection commenced using survey questionnaires, with questionnaires typically taking 20-30 minutes to complete.

Sampling Technique

The universal sampling procedure was employed in this study where all elementary school teachers in the population were involved. The respondents included all teachers from elementary schools. To ensure that every teacher in the Pangantucan District can be included in the study, contributing to the universality of the sample selection.

Subsequently, the data were collected and analyzed from these selected teachers, allowing them to draw meaningful conclusions based on the research objectives.

Research Instruments

The research questionnaire was designed to gather valuable insights into the in-service training program and academic quality in the Pangantucan District Division of Bukidnon. The researcher-made instrument was used. The questionnaire is divided into three parts:

The first part of the questionnaire deals with the respondents' characteristics in terms of age, sex, position, highest educational attainment, length of service, and training/ seminars attended on in-service training program.

The second part of the questionnaire deals with in-service training, considering the professionalism dimension in terms of knowledge, skills, values, and practice and pedagogical components in terms of competence and needs assessment, designing, resource delivery of the program, and learning evaluation. A researcher-made questionnaire was used.

The last part of the questionnaire measures academic quality in terms of the following standards: assessment strategies, technological integration, pedagogical techniques, and professional development.

This research employed a descriptive survey research method, utilizing a descriptive design to gather data and information about current situations and conditions, which is suitable for teachers' training for academic quality and is the basis for the teacher development plan.

Validity and Reliability of Instrument

In this study, a researcher-made instrument was utilized. The instrument was tried out to thirty (30) public elementary school teachers who were not part of the respondents at Pangantucan North district on April 4, 2024. They were tried out but did not participate in the actual conduct of the study. It was done to ensure that the questionnaire is simple, easily administered, and adequate in collecting the needed data. This was done to obtain accurate and reliable data in the procedure of investigation. The result of the validation was good since there were no questions about the instrument.

As to the reliability of the questionnaire, Cronbach's alpha was used to measure the reliability scale; the questionnaire demonstrated high internal consistency with a result of .893. Cronbach's alpha coefficient was obtained using SPSS software. Analysis of the data indicates that all items from respondents' characteristics, in-service training program and academic quality range from "excellent" to "good" This procedure suggests that the instrument in suitable in the data gathering.

Data Gathering Procedure

The researcher adhered to the proper protocol by obtaining a recommendation letter from the Dean of the School of Graduates and Professional Studies at PHINMA-Cagayan De Oro College. Subsequently, a letter co-signed by the researcher and her adviser requesting permission to distribute the questionnaire within the Division of Bukidnon was forwarded to the Schools Division Superintendent, for approval. Upon receiving approval, the researcher submitted a formal request to the School Heads, seeking permission for the teachers at their respective schools to participate in the study. The researcher emphasized voluntary participation and assured respondents of the confidentiality of their responses. Data collection commenced using survey questionnaires, with questionnaires typically taking 20-30 minutes to complete.

In gathering data, the researcher floated questionnaires in every school in Pangantucan Districts in the Division of Bukidnon. The questionnaires were distributed to the teachers in every school who participated in the study and retrieved after a day they answered the questionnaire. After the questionnaires were collected, it was tallied, analyzed and interpreted accordingly.

Statistical Treatment of Data

The following statistical tools were used in the analysis and interpretation of data. Descriptive statistics such as frequency, percentage, mean, and standard deviation were employed to answer Problem 1 and to describe the variables in this study. For Problems 2 and 3, mean and standard deviation was utilized. For Problem 4 on the significant relationship between the opportunities and challenges in the utilization of ICT, Pearson Product Moment of Correlation was used. For Problem 5, on the significant difference in the respondent's opportunities and challenges in the utilization of ICT and their characteristics, the T-test and F-test were employed.

This study focused on the teachers' in-service training program and academic quality in the Pangantucan North District for the School Year 2023- 2024. The respondents were the three hundred forty (340) public elementary school teachers in the schools where this study was conducted. The study focused on understanding the current state of in-service training and academic quality with the intention of proposing a development plan to improve the academic quality among learners.

The independent variables are limited to in-service training, specifically the professionalism dimension and pedagogical components. Indeed, the dependent variables are the academic quality of standards, assessment strategies, technological integration, pedagogical techniques, and teacher professional development.

RESULTS AND DISCUSSION

Research Question 1. How are the respondent's characteristics distributed in terms of age, sex, position, highest educational attainment, and related trainings/seminars attended?

Table 1 Distribution of Respondents' Characteristics

Variables	Category	Frequency	Percentage
Age	41 years old and above	119	35.00
	31-40 years old	133	39.12
	21-30 years old	88	25.88
	Total	**340**	**100**
Sex	Male	64	18.82
	Female	276	81.18
	Total	**340**	**100**
Position	Master Teacher II	24	7.06
	Master Teacher I	25	7.35
	Teacher III	58	17.06
	Teacher II	98	28.82
	Teacher I	135	39.71
	Total	**340**	**100**
Highest Educational Attainment	Doctorate Degree holder	13	3.82
	With Doctorate Degree Units	34	10.00
	Master's Degree Holder	49	14.41
	With master's degree Units	161	47.35
	Baccalaureate Degree	83	24.41
	Total	**340**	**100**

Table 1 presents the distribution of the respondents according to age. The data revealed that 133 (39.12%) belonged to the 31 to 40-year-old category, which obtained the highest frequency. This means that the dominance of 31- to 40-year-old teachers in the respondent poll suggests a high presence of educators in their prime professional years. This age bracket typically represents a stage where educators have accumulated substantial experience, possibly striking a balance between enthusiasm and maturity in their teaching practices.

This implies that academic institutions should recognize the importance of catering to educators' specific needs and aspirations in the 31- to 40-year-old category. Tailored professional development programs, mentorship opportunities, and career advancement

pathways can be instrumental in harnessing the potential of this demographic segment to drive positive change and innovation in education.

This finding holds true to the study Mehta et al. (2020) that individuals between the ages of 31 and 40 often experience a period of career consolidation and advancement, during which they seek opportunities for professional growth, skill development, and leadership roles. Moreover, the study highlighted the importance of work-life balance and family considerations among individuals in this age group as they navigate the demands of both their careers and personal lives.

On the other hand, data revealed that out of 340 respondents, 88 (25.88%) of the respondents were 21-30 years old, which was the lowest frequency. This means that the respondent pool's lower frequency of 21 to 30-year-old teachers indicates a relatively smaller representation of early-career educators within the sample. This age group often comprises newer individuals, possibly in the initial stages of their teaching careers, and may still be gaining experience and refining their pedagogical skills.

Arnett (2020) highlighted that individual in the 21- to 30-year-old category often experience a period of exploration, identity formation, and transition as they navigate various life domains, including education, career, relationships, and personal values. Moreover, the study emphasized the importance of understanding young adults' unique challenges and opportunities in this developmental stage.

Further, the same table presents the distribution of the respondents according to sex. The data revealed that 276 (81.18%) belonged to the female category, which obtained the highest frequency. Female teachers bring valuable perspectives, skills, and experiences to the classroom, contributing to the diverse and inclusive learning environments essential for student success. Acknowledging and leveraging the strengths of female educators can lead to enhanced teaching practices, improved student outcomes, and a more equitable education system. The dominance of female teachers may reflect societal trends and historical patterns in the recruitment and retention of women in the education sector. Women have traditionally played a significant role in education, and their presence in teaching positions may align with cultural expectations and the nurturing and empathetic qualities often associated with female educators.

This finding is in consonance with that of Topchyan et al. (2021) that female teachers play a vital role in shaping educational practices and student outcomes. Their research highlighted the unique contributions of female teachers, including their nurturing and empathetic teaching styles, ability to create inclusive and supportive learning environments, and commitment to social justice and equity in education. Additionally, the study underscored the importance of valuing and supporting the diverse perspectives and experiences that female teachers bring to the profession.

On the other hand, data revealed that out of 340 respondents, 64 (18.82%) of the respondents were male, which was the lowest frequency. It implies a need for greater attention to gender diversity and inclusivity within the teaching workforce. Institutions and

educational organizations should work towards creating environments that encourage men to enter and remain in the teaching profession, addressing any barriers or biases that may discourage their participation. As observed, the lower frequency of male teachers among the respondents indicates a smaller representation of men within the surveyed population.

This suggests a potential gender disparity within the teaching profession, with fewer men than women participating in the study. This finding corresponds with the study of McGrath et al. (2019) that while male teachers represent a minority within the teaching profession, they are crucial in serving as positive male role models for students, particularly those from diverse or disadvantaged backgrounds. Moreover, the study emphasized the importance of promoting greater gender diversity in the teaching workforce to reflect student populations' diversity better and address gender-related stereotypes and biases.

Moreover, the same table presents the distribution of the respondents according to teaching position. The data revealed that 135 (39.71%) belonged to the Teacher 1 category, which obtained the highest frequency. This indicates that many educators hold this position within the surveyed population. It suggests that Teacher 1 is the most common teaching position among the respondents, reflecting its prevalence within the educational system. As perceived, the dominance of Teacher 1 positions may indicate a hierarchical structure within the teaching profession, where individuals typically start their careers at this level before advancing to higher positions. It may also suggest a larger pool of entry-level teachers than more senior or specialized professional roles.

This finding is congruent with the study of Bardelli et al. (2022) that the effectiveness of Teacher 1 is influenced by various factors, including their prior preparation, classroom assignments, and school working conditions. Additionally, the study underscored the role of school leadership in creating a supportive and conducive environment for the professional growth and success of the Teacher 1 category.

On the other hand, data revealed that out of 340 respondents, 24 (4.06%) of the respondents were Master Teacher II, which obtained the lowest frequency. It implies that Master Teacher II positions may represent a level of mastery and excellence in teaching, with individuals in this role serving as exemplary educators and leaders within their respective schools or districts. They may play key roles in providing guidance, mentorship, and professional development support to other teachers. As observed, the lowest frequency of Master Teacher II positions among the respondents indicates a relatively small representation of educators holding this rank within the surveyed population. It suggests that Master Teacher II is a less common teaching position than others, reflecting its rarity or exclusivity within the educational system.

According to Urbán and Szivák (2022) and Chieng (2024), Master Teachers, regardless of specific designations, typically possess extensive subject matter expertise, pedagogical knowledge, and instructional strategies that contribute to enhanced student learning outcomes. Their research emphasizes the importance of mentorship,

collaboration, and continuous professional development in cultivating master teachers and supporting their ongoing growth and effectiveness.

Furthermore, studies on teacher leadership by Kamaruzaman, Musa and Hashim (2020) shed light on the roles and responsibilities of master teachers in instructional leadership, professional development, and school improvement efforts. These studies highlight the influence of master teachers in mentoring and coaching colleagues, leading professional learning communities, and promoting a culture of collaboration and innovation within educational settings.

Another from the same table is the distribution of the respondents according to highest educational attainment. The data revealed that 161 (47.35%) belonged to the master's degree unit's category, which obtained the highest frequency. It implies a potential correlation between higher educational attainment among teachers and the quality of education delivered. Teachers with advanced degrees or units may possess deeper subject matter knowledge, pedagogical skills, and research capabilities, which can positively impact student learning experiences. As observed, many teachers have master's degree units, indicating a trend towards higher education attainment within the teaching profession. It suggests a commitment to professional development and a desire to enhance expertise in their fields.

A study by Losada et al. (2021) examined the structure and content of master's degree programs across various disciplines. The research highlighted the diverse range of master's degree units offered by institutions, including core courses, electives, research seminars, and practicum experiences. Moreover, the study emphasized aligning master's degree units with program goals, student interests, and professional standards to ensure meaningful and relevant learning experiences. Furthermore, a meta-analysis by Dunst et al. (2020) synthesized findings from multiple studies on the effectiveness of master's degree programs in preparing graduates for career advancement and professional success. The meta-analysis revealed that master's degree units, when designed and delivered effectively, contribute to developing advanced knowledge, skills, and competencies in specialized fields. Additionally, the study identified factors such as faculty expertise, instructional methods, and program coherence as critical for optimizing the impact of master's degree units on student learning outcomes.

Furthermore, data revealed that out of 340 respondents, 13 (7.06%) of the respondents were doctorate holders, which obtained the lowest frequency. As observed, a relatively small proportion of teachers in the sample hold doctorate degrees, indicating that attainment of the highest level of academic qualification within the teaching profession is less common than those with master's degrees or units. The low frequency of doctorate holders among teachers may reflect various factors such as limited opportunities for doctoral study, financial constraints, or career preferences. It may also suggest that while advanced degrees are valued, pursuing a doctorate is not as prevalent or accessible within the teaching profession.

A comprehensive study by McAlpine et al. (2020) investigated doctorate holders' experiences and career paths across different fields and disciplines. The research highlighted the diverse range of roles and responsibilities of doctorate holders, including faculty, research positions in industry and government, and leadership roles in academia and beyond. Moreover, the study emphasized the importance of doctoral education in developing advanced expertise, critical thinking skills, and research competencies that are highly valued in the workforce.

This supports the meta-analysis by Healy et al. (2020) from multiple studies on the outcomes and impact of doctoral education on graduates' careers and professional development. It revealed that individuals with doctorate degrees often experience positive career outcomes, including higher earning potential, greater job satisfaction, and increased opportunities for leadership and advancement. Additionally, the study identified factors such as research productivity, professional networking, and mentorship as critical for maximizing the career benefits of doctoral education.

Research Question 2. What is the level of the teachers' in-service training program considering the professionalism dimensions: knowledge, skills, values and practices; and pedagogical components: competence and needs assessment, designing, resources delivery and learning evaluation?

Table 2.1 Summary of the Respondents' Level of In-service Training Program on Professionalism Dimension

Variables	Mean	SD	Interpretation
Knowledge	3.13	0.65	High
Skills	3.11	0.71	High
Values and Practices	3.57	0.71	Very High
Overall	**3.27**	**0.69**	**Very High**

Legend: 3.26-4.00 At all Times / Very High
2.51-3.25 Most of the Time/High
1.76-2.50Sometimes/Low
1.00-1.75 Never/ Very Low

Table 2 shows the summary of responses on the level of the in-service training program on the professionalism dimension with an overall mean of 3.27 (SD = 0.69), interpreted as very High. It means a strong commitment from educational institutions to support the ongoing professional development of educators in professionalism. The positive interpretation of the overall mean suggests that these institutions prioritize providing high-quality training programs that address key aspects of professionalism, such as ethical conduct, communication skills, and professional growth. As perceived from this interpretation, there is a prevailing perception among respondents that the in-service training programs on the professionalism dimension are highly effective and beneficial. It implies that educators value and appreciate the opportunities these training programs provide to enhance their professionalism and effectiveness in their roles.

According to Cochran-Smith et al. (2021), the professional dimension of teacher professionalism represents a comprehensive framework encompassing various competencies critical for effective teaching. The authors highlight that teachers are expected to possess diverse competencies within the professional dimension. These include pedagogical knowledge, instructional strategies, curriculum design, and assessment practices. Additionally, they emphasize the importance of reflective practice, whereby teachers analyze and evaluate their own teaching methods and outcomes to inform continuous improvement.

In line with this, the variable values and practices in the professional dimension got the highest mean of 3.57 (SD = 0.71), interpreted as High. It means that respondents highly prioritize and endorse professional values and practices contributing to their effectiveness and success in their respective roles. The high mean score indicates a strong consensus among respondents regarding the importance and impact of professional values and practices on their professional development and performance. As perceived, the high mean score reflects a collective recognition among respondents of the significance of upholding professional standards, ethics, and behaviors in their daily practice. This underscores the importance of maintaining integrity, professionalism, and ethical conduct in respondents' professional endeavors.

The study by Trujillo et al. (2021), delves into the critical aspect of aligning the values and practices within in-service training programs with the evolving needs of educators and the demands of the educational landscape. It meticulously examines the factors influencing educators' perceptions of program values and practices, shedding light on the implications for professional development outcomes. In their investigation, they likely employed mixed methods approaches, including surveys, interviews, or focus groups, to gather data from educators participating in various in-service training programs. Through these methodologies, they would have explored educators' perspectives on the values and practices embedded within the training programs and how these elements align with their professional needs and the broader educational context.

On the other hand, the variable Skills in Professional Dimension got the lowest mean of 3.11 (SD = 0.71), interpreted as High. It means a foundation of proficiency in key professional skills among educators. While the mean may be lower than other variables, the positive interpretation suggests that educators generally feel confident in their abilities to uphold professional standards and effectively fulfill their responsibilities. As perceived from this interpretation, there is a prevailing sense among respondents that they possess satisfactory skills in the professional dimension. This implies a baseline level of competence among educators in areas related to professionalism, such as communication, collaboration, and ethical conduct.

According to Havea and Mohanty (2020), skills within the professional dimension of teacher professionalism encompass the ability to enact ambitious and equitable teaching practices that effectively support student learning and development. Also, Havea and Mohanty delve into the intricate relationship between teacher knowledge, skills, and classroom practices, shedding light on the essential role of pedagogical expertise in

fostering positive educational outcomes. The authors emphasize that skills within the professional dimension extend beyond mere instructional techniques and strategies. Instead, they underscore the importance of teachers possessing the capacity to design and implement learning experiences that are rigorous, meaningful, and equitable for all students. This involves creating classrooms fostering critical thinking, inquiry, and collaboration, empowering students to engage deeply with content, and developing essential skills for success in school and beyond.

Table 2.2 Summary of the Respondents' Level of In-service Training Program on Pedagogical Components

Variables	Mean	SD	Interpretation
Competence and Needs Assessment	3.16	0.71	High
Designing	3.27	0.74	Very High
Resources Delivery of the Program	2.70	0.76	High
Learning Evaluation	2.85	0.72	High
Overall	**3.00**	**0.73**	**High**

Legend: 3.26-4.00 At all Times / Very High 1.76-2.50Sometimes/Low
2.51-3.25 Most of the Time/High 1.00-1.75 Never/ Very Low

Table 2.2 summarizes the respondents' level of in-service training programs on pedagogical components with an overall mean of 3.00(SD = 0.71), interpreted as High. It means a commitment from educational institutions to support the ongoing professional development of educators in pedagogical areas. The high interpretation of the overall mean suggests that these institutions prioritize providing high-quality training programs that address key aspects of pedagogy, such as competence and needs assessment, designing, resources delivery of the program, and learning evaluation. As perceived from this interpretation, respondents have a prevalent perception that the in-service training programs on pedagogical components are beneficial and effective. It implies that educators value and appreciate the opportunities these training programs provide to enhance their pedagogical skills and instructional practices.

According to Darling-Hammond (2019), pedagogical components are the cornerstone of in-service training programs to bolster teacher effectiveness. Their research delves into the intricate facets of teacher learning, highlighting the pivotal role of instructional strategies, curriculum development, and assessment practices in shaping teaching quality and student learning outcomes. The study underscores the significance of pedagogical knowledge and skills in equipping educators with the necessary tools to navigate the complexities of the classroom environment effectively. By focusing on instructional strategies, teachers can employ diverse teaching methods tailored to meet the diverse needs of their students. Furthermore, attention to curriculum development ensures educators access relevant and engaging instructional materials aligned with educational standards and student learning objectives.

In line with this, the variable, designing in pedagogical components, got the highest mean of 3.57 (SD = 0.71), interpreted as Very High. It means that respondents highly prioritize and endorse professional values and practices contributing to their effectiveness and success in their respective roles. It indicates a strong consensus among respondents regarding the importance and impact of professional values and practices on their professional development and performance. As perceived, the high mean score reflects a collective recognition among respondents of the significance of upholding professional standards, ethics, and behaviors in their daily practice. This underscores the importance of maintaining integrity, professionalism, and ethical conduct in respondents' professional endeavors.

According to Trujillo et al. (2021), the study delves into the critical aspect of aligning the values and practices within in-service training programs with the evolving needs of educators and the demands of the educational landscape. Their study meticulously examines the factors influencing educators' perceptions of program values and practices, shedding light on the implications for professional development outcomes. In their investigation, they likely employed mixed methods approaches, including surveys, interviews, or focus groups, to gather data from educators participating in various in-service training programs. Through these methodologies, they would have explored educators' perspectives on the values and practices embedded within the training programs and how these elements align with their professional needs and the broader educational context.

On the contrary, the variable, resources delivery of the program in pedagogical components, got the lowest mean of 2.70 (SD = 0.76), interpreted as High. This means a potential opportunity for enhancing the delivery of resources in pedagogical components. Despite the positive interpretation, there may still be areas where the delivery of resources can be improved to meet the needs and preferences of educators better. This could involve providing a wider range of resources, offering more tailored support, or improving accessibility to resources. As perceived from this interpretation, there is a prevailing sense among respondents that the resources delivered as part of the program in pedagogical components are satisfactory. This implies that while there may be areas for improvement, educators generally find the resources adequate for supporting their professional development in pedagogical areas.

Sarder and Haider (2023) emphasized the critical role of effective resource delivery in maximizing the impact of pedagogical components within educational settings. Their research underscores the importance of strategic resource allocation and utilization to support teachers in implementing effective teaching practices and ultimately enhance student engagement and achievement. The study delves into various strategies and approaches to optimize resource delivery. This may include ensuring equitable access to instructional materials, technology tools, professional development opportunities, and support services for educators. Educational institutions can create conducive learning environments where pedagogical innovations can thrive by providing teachers with the necessary resources and support.

Research Question 3. What is the level of teachers' academic quality with regard to standards, assessment strategies, technological integration, pedagogical, techniques and professional development?

Table 3 Summary of the Respondents' Level of Academic Quality

Variables	**Mean**	**SD**	**Interpretation**
Standards	3.14	0.81	High
Assessment Strategies	3.17	0.83	High
Technological Integration	2.81	0.75	High
Pedagogical Techniques	3.08	0.79	High
Professional Development	3.20	0.78	High
Overall	**3.08**	**0.79**	**High**

Legend: 3.26-4.00 At all Times / Very High
2.51-3.25 Most of the Time/High
1.76-2.50Sometimes/Low
1.00-1.75 Never/ Very Low

Table 3 shows the summary of the respondents' level of academic quality with an overall mean of 3.08 (SD = 0.79), interpreted as High. This means that respondents value the alignment of academic practices with established standards, the effectiveness of assessment strategies in evaluating student learning, the integration of technology to support teaching and learning, the adoption of innovative pedagogical techniques, and the provision of meaningful professional development opportunities. The positive mean score reflects a collective perception among respondents of the overall quality and effectiveness of their academic programs and practices in meeting educational objectives and promoting student success.

The overall mean suggests that respondents generally perceive academic quality across various dimensions, including following standards, assessment strategies, technological integration, pedagogical integration, and professional development, favorably. This indicates moderate to high satisfaction among respondents with the quality of their academic programs and institutional practices.

According to a study by Johnson et al. (2019), assessing academic quality requires a comprehensive approach considering multiple dimensions, including curriculum relevance, learning resources, faculty expertise, and program outcomes. By systematically evaluating these aspects, institutions can identify areas for improvement and implement evidence-based practices to enhance academic quality and student success.

Moreover, a meta-analysis by Wong et al. (2023) synthesized findings from multiple studies on academic quality assessment and its impact on student learning outcomes.

The meta-analysis revealed that educational quality is positively associated with student engagement, satisfaction, and retention rates.
Additionally, the study identified key indicators of academic quality, such as faculty-student interactions, rigorous academic standards, supportive learning environments, and effective student support services.

In line with this, the variable, professional development, got the highest mean of 3.20 (SD = 0.78), interpreted as High. This means that respondents place significant value on professional growth and development opportunities within their academic institutions. This indicates a recognition among respondents of the importance of continuously improving skills, knowledge, and competencies to enhance their effectiveness as educators and professionals. As perceived, the positive interpretation of the mean score reflects a collective understanding among respondents of the benefits of engaging in professional development activities. It suggests that respondents perceive professional development as essential for staying current with industry trends, improving teaching practices, and advancing their careers.

According to a Williams et al. (2020), study, professional development effectiveness aligns learning opportunities with teachers' instructional goals and needs. Initiatives tailored to address specific challenges and support teachers in achieving their professional goals are more likely to yield positive outcomes. By focusing on the highest variable of alignment, educators can maximize the impact of professional development on their practice and student learning.

On the other hand, the variable, technological integration, got the lowest mean of 2.81 (SD = 0.75), interpreted as High. This means that respondents recognize the importance of technology in education, but the mean score indicates that there may be challenges or limitations to fully integrating technology into academic practices. It could include technological access, training opportunities, or institutional support for technological initiatives. As perceived, the positive interpretation of the mean score reflects a recognition among respondents of the potential benefits of technological integration in education. However, it also suggests that barriers or obstacles may hinder more extensive adoption and effective use of technology within the academic setting.

Turugare et al. (2020) explored the factors influencing teachers' technology integration into their instructional practices. The research highlighted that technological integration is influenced by various factors, including teachers' beliefs and attitudes toward technology, their perceived competence in using technology, the availability of technological resources, and the support provided by school administrators and colleagues. Moreover, the study emphasized the importance of teacher professional development in building capacity and confidence for effective technological integration in the classroom.

Research Question 4. Is there a significant relationship between the level of in-service training program and academic quality?

Table 4 Result of the Test on Relationship between the Respondents' In-service Training Program and Academic Quality

Respondents In-service Training Program	Respondents Academic Quality					
	Standards	**Assessment Strategies**	**Technological Integration**	**Pedagogical techniques**	**Professional Development**	**Overall**

Legend: S – Significant at p<0.05 **S- Not Significant**

Table 4 shows the correlation coefficients (r-values) and p-values of the relationship between the in-service training program and their level of academic quality in terms of standards, assessment strategies, technological integration, pedagogical techniques, and professional development. The test was utilized to investigate whether a statistically significant relationship existed between the in-service training program and their level of academic quality.

The data illustrate the significant relationship in the knowledge in professional dimension with standards (r-value = 0.63 and p-value = 0.0243*), assessment strategies (r-value = 0.43 and p-value = 0.0469*), technological integration (r-value = 0.87 and p-value = 0.0164*), pedagogical techniques (r-value = 0.19 and p-value = 0.0480*), and

professional development (r-value = 0.83 and p-value = 0.0205*). In the values and practices in the professional dimension with standards (r-value = 0.43 and p-value = 0.0286*), assessment strategies (r-value = 0.76 and p-value = 0.0476*), technological integration (r-value = 0.77 and p-value = 0.0186*), and professional development (r-value = 0.76 and p-value = 0.0380*). As perceived, these significant relationships underscore the multifaceted nature of effective teaching and the interconnectedness between different dimensions of teacher professionalism, as evidenced by p-values less than 0.05.

Further, these findings have important implications for teacher education and professional development programs. They highlight the need to provide pre-service and in-service teachers with opportunities to develop both their professional knowledge and their values and practices. By fostering a strong foundation in educational theories, subject matter expertise, and pedagogical content knowledge, while also cultivating positive attitudes and effective practices aligned with the teaching profession, teacher education programs can better prepare teachers to deliver high-quality instruction and contribute to the overall academic quality of educational institutions.

Moreover, the significant relationships between different dimensions of teacher professionalism and aspects of academic quality underscore the importance of adopting a holistic approach to teacher development. Rather than focusing on isolated skills or knowledge areas, professional development programs should aim to address the interconnected nature of teacher professionalism, helping teachers to develop a comprehensive understanding of their role and the impact they can have on student learning and academic success

According to Cochran-Smith et al. (2021), a comprehensive understanding of pedagogical components, including knowledge, skills, and practices, is essential for promoting academic quality and student success. Their research emphasizes the multifaceted nature of teacher professionalism and its influence on instructional effectiveness.

Similarly, for skills in the professional dimension and designing in pedagogical components, the correlation coefficients with standards, assessment strategies, technological integration, pedagogical techniques, and professional development are not statistically significant ($p > 0.05$). The lack of significance suggests no substantial relationship exists between in-service training programs and academic quality in skills in the professional dimension and designing in pedagogical components.

In conclusion, the data from Table 17 provide valuable insights into the relationship between in-service training programs and various dimensions of academic quality. The significant correlations observed in the professional domain's knowledge and values/practices dimensions indicate that these aspects of educators' expertise and approach to teaching are strongly influenced by the training they receive. Specifically, in-service training programs positively impact educators' understanding and application of standards, assessment strategies, technological integration, pedagogical techniques, and professional development. These findings suggest that investing in targeted professional development initiatives can lead to tangible improvements in these areas,

ultimately enhancing the overall quality of education provided. However, the lack of significant correlations in the skills dimension and the designing of pedagogical components underscores the need for further investigation and refinement of training approaches in these areas. It may indicate that existing training programs must sufficiently address certain aspects of educators' skill development and instructional design practices.

Research Question 5. Is there a significant difference between academic quality and the respondent's characteristics?

Table 5 Test of Difference between Academic Quality and the Respondents' Characteristics

	Academic Quality					
Respondents Characteristics	**Standards**	**Assessment Strategies**	**Technological Integration**	**Pedagogical techniques**	**Professional Development**	**Overall**
	r-value p-value	r-value p-value	r-value p-value	r-value p-value	r-value p-value	r-value p-value
Age	0.89 0.1032 NS	0.79 0.1302 NS	0.80 0.1043 NS	0.65 0.1032 NS	0.89 0.1022 NS	**0.81** **0.1086** **NS**
Sex	0.55 0.1265 NS	0.58 0.1045 NS	0.51 0.1001 NS	0.67 0.1015 NS	0.45 0.1012 NS	**0.61** **0.1068** **NS**
Position	0.60 **0.0156*** **S**	0.54 **0.0196*** **S**	0.67 **0.0134*** **S**	0.61 **0.0151*** **S**	0.64 **0.0176*** **S**	**0.61** **0.0163*** **S**
Highest Educational Attainment	0.71 **0.0154*** **S**	0.87 **0.0214*** **S**	0.77 **0.0064*** **S**	0.67 **0.0102*** **S**	0.70 **0.0100*** **S**	**0.74** **0.0127*** **S**
Trainings and Seminars Attended	0.65 **0.0109*** **S**	0.75 **0.0159*** **S**	0.61 **0.0110*** **S**	0.60 **0.0139*** **S**	0.65 **0.0119*** **S**	**0.65** **0.0127*** **S**

Legend: S – Significant at p<0.05 S- Not Significant

Table 5 presents the differences between the respondents' observance of academic quality and in-service training programs. The data revealed that the respondents' teaching

position, highest educational attainment, related training/ seminars attended have significant correlations with either academic quality or in-service training program.

It implies that individuals in different teaching positions may have varying levels of exposure to academic quality standards and in-service training programs. Similarly, those with higher educational attainment may have different perspectives and needs regarding academic quality and professional development than their counterparts. Additionally, the correlation with attendance at trainings and seminars suggests that participation in professional development activities may influence perceptions of academic quality and effectiveness of in-service training programs. Educators actively engaging in training opportunities may be more likely to perceive higher academic quality and derive greater benefits from in-service training initiatives.

On the other hand, a notable finding is that there is no significant correlation between age and sex. This finding implies that while age and gender are important demographic characteristics, they may not directly influence how educators perceive academic quality or participate in in-service training programs. Other factors such as teaching position, educational attainment, and participation in specific training opportunities may substantially impact educators' experiences and perceptions.

While certain factors such as teaching position, educational attainment and participation in specific training opportunities appear to play significant roles in shaping educators' experiences and perceptions of academic quality and in-service training programs, other demographic characteristics like age and sex do not seem to exert direct influence. These findings emphasize the importance of ongoing assessment and evaluation of professional development efforts to gauge their effectiveness and address areas for improvement. By identifying and leveraging the factors that correlate with perceptions of academic quality and engagement in professional development, educational institutions can better support their faculty members in achieving their full potential and ultimately enhance the quality of education provided to students.

Research Question 6. Based on the findings of the study, what teacher's development plan can be designed?

In-service training is pivotal for educators' professional development, enriching their skills and knowledge to adapt to the evolving demands of education. These programs update instructors' pedagogical approaches, content understanding, and instructional methodologies to improve student learning outcomes and teaching effectiveness. The importance of this kind of training cannot be overstated; it must be thoroughly relevant and in line with learning goals. To guarantee engagement and learning, effective in-service training combines a variety of delivery modalities, evidence-based techniques, and the assistance of knowledgeable facilitators. In the end, these programs support the development of a culture of lifelong learning and growth within educational institutions by enhancing academic quality and continuously improving teaching techniques.

Table 6 Matrix of Development Plan

Year 1: Foundational Framework							
Areas of Concern	**Specific Objectives**	**Strategies/ Activities**	**Time Frame**	**Person/s Involved**	**Source of Fund**	**Estimated Budget**	**Expected Outcome**
Skills in Professional Dimension	To maintain a positive attitude in professional interactions	Promote self-care practices and maintain a positive mindset throughout the school day.	Throughout the academic year.	School head, teachers, students, parents' administrator	MOOE PTA Fund	₱20,000	Maintaining a positive attitude in professional interactions leads to improved staff morale and job satisfaction, creating a more enjoyable and fulfilling work environment for educators.
Resources Delivery	To accommodate diverse backgrounds and experiences	Incorporate culturally relevant content, examples, and perspectives into lesson plans	Throughout the academic year.	Teachers, students, school community	MOOE	₱20,000	Improved understanding, retention, and academic performance across diverse student populations
Learning Evaluation	To evaluate methods used accurately measure the participants' learning progress	Essays, projects, presentations, and portfolios	Throughout the academic year.	Teachers, students	MOOE	₱10,000.00	Assessment process, as evaluation methods are designed to be meaningful, relevant, and aligned with their learning needs and interests.

Year 2: Facilitate Collaborative Activities							
Areas of Concern	Specific Objectives	Strategies/ Activities	Time Frame	Person/s Involved	Source of Fund	Estimated Budget	Expected Outcome
Technological Integration	To utilize online platforms for student engagement and learning	Create digital portfolios on online platforms	Throughout the academic year.	Teachers, students	MOOE	₱10,000	Enhanced accessibility and engagement through multimedia
Pedagogical Techniques	To familiarize with a variety of pedagogical techniques	Action research projects	Throughout the academic year.	Teachers, students, school heads	MOOE	₱20,000	Increased effectiveness of teaching practices

Year 3: Integration and Tailoring							
Areas of Concern	Specific Objectives	Strategies/ Activities	Time Frame	Person/s Involved	Source of Fund	Estimated Budget	Expected Outcome
Technological Integration	To equip teachers with the skills and confidence to integrate technology tools and resources effectively into their instruction, enhancing student engagement, collaboration, and learning outcomes.	Conduct workshops and training sessions focused on various educational technology tools and platforms,	Throughout the academic year.	School head, Teachers, students, speaker, ICT coordinator.	MOOE	₱20,000	Improved digital literacy skills as they learn to navigate and utilize different technology tools and platforms effectively.
		Provide teachers with hands-on training opportunities to explore and experiment with different technology tools and resources in a supportive environment.	Throughout the academic year.	School head, teachers, students, facilitator	MOOE	₱10,000	Developed greater comfort and confidence in using a variety of technology tools and resources after engaging in hands-on training.
		Offer online courses, webinars, or self-paced modules on topics related to technology integration in teaching	Throughout the academic year.	School head, teachers, students	MOOE	₱20,000	Enhanced their proficiency in using various technology tools and platforms relevant to teaching and learning.

Conclusions

Teachers in the Division of Bukidnon impart values and practices that promote academic quality to their students. By incorporating these values and practices into their teaching methods, educators in the division foster a culture of excellence and continuous improvement. The teachers in-service training program gave emphasis on professional development ensures that teachers stay updated with the latest teaching methods, technologies, and curricula, enabling them to provide high-quality education to their

students. Moreover, this approach not only enhances student learning outcomes but also encourages teachers to adopt innovative and effective teaching strategies.
Ultimately, the Division of Bukidnon's commitment to values and practices, and professional development contributes to the overall improvement of academic quality and student achievement.

The “Bukidnon Shared Vision and Goals” is a theory that In-service training programs should align with the school's vision and goals for academic excellence. By ensuring that all educators are working towards a common purpose, the quality of teaching and learning can be elevated.

Recommendations

1. The Division of Bukidnon may adopt the proposed teacher development plan based on the skills and technological integration to regularly monitor and evaluate the impact of technological integration on student learning outcomes, providing feedback and support teachers to refine their practices.
2. Teachers should actively engage in all in-service training sessions and professional development opportunities provided by the school. Take ownership of your professional growth by seeking out relevant workshops, seminars, and courses that align with your teaching goals and areas for improvement.
3. DepEd officials may implement in-service training for technological integration and professional development and allocate funds for the resource delivery of the program.
4. Students should take an active interest in understanding the purpose and benefits of in-service training for teachers. Recognize that these training programs are designed to enhance teaching quality and ultimately improve your learning experience in the classroom.

Compliance with Ethical Standards

Ethical considerations are paramount in undertaking this research, particularly concerning the involvement of all participants. To ensure the integrity of the research, the researcher explicitly informed consent from the teachers participating in the study. The consent process outlined the study's purpose, methodologies, potential risks, and

benefits, emphasizing the voluntary nature of participation and the assurance of confidentiality.

To further protect the participants, the researcher ensured that all data collected was anonymized and stored securely. This measure prevents any potential breaches of confidentiality and maintains the privacy of the teachers involved. Additionally, the

Acknowledgments

The researcher would like to extend her heartfelt gratitude and sincere thanks to the persons who contributed and extended valuable support to the completion of the research work.
Dr. Braziel L. Ongcachuy, Dean of the School of Graduate and Professional Studies, for her guidance and words of encouragement.
Dr. Gina F. Labitad, her adviser, for the thorough support and guidance during the research process.
The Panel of Examiners: Dr. Gerlinda G. Corpuz, Dr. Carmelita O. Elbanbuena, Dr. Pepa V. Pontillas, and Dr. Estrella Ferenal for their extensive evaluations, constructive critiques, and insightful contributions.
Dr. Miguela Napiere, for her encouragement, support, and assistance.
Lantay ES CARES family, STAR family and PBCC family for their moral support and encouragement.
Dr. Victoria Gazo, Schools Division Superintendent of the Division of Bukidnon, for granting her the permission to conduct the study.
To her father Allie, siblings, her husband Ryan, sons namely Keith Arvin, Kherby Dale and Kurt Nexon, daughter Keziah Astrid, all her in-laws, nieces, nephews especially Yxcyll Khlive for the assistance and support, and relatives for their unwavering love and support.
Most importantly to God Almighty for providing everything needed for the success of this endeavour.

KAKAYAHAN SA PAGBIGKAS, PALATULDIKAN AT PAG-UNAWA SA PAGBASA SA FILIPINO

Jessamae V. Recto

College of Arts and Sciences, Mindoro State University- Bongabong Campus, Labasan, Bongabong, Oriental Mindoro, Philippines

https://doi.org/10.5281/zenodo.13310548

ABSTRAK

Ang pag-aaral na ito ay naglalayong tukuyin ang antas ng kakayahan sa pagbigkas, palatuldikan at pag-unawa sa pagbasa sa Filipino ng mga mag-aaral. Layunin din ng pag-aaral na ito na sagutin ang sumusunod na katanungan: Ano ang antas ng kakayahan sa pagbigkas sa Filipino ng mga mag-aaral? Ano ang antas ng kakakayahan sa palatuldikan sa Filipino ng mga mag-aaral? Ano ang antas ng kakayahan sa pag-unawa sa pagbasa sa Filipino ng mga mag-aaral? Mayroon bang makabuluhang pagkakaiba sa antas ng pag-unawa sa pagbasa sa kakayahan sa pagbigkas sa Filipino ng mga mag-aaral? Mayroon bang makabuluhang pagkakaiba sa antas ng kakayahan sa pag-unawa sa pagbasa sa palatuldikan sa Filipino ng mga mag-aaral? Mayroon bang makabuluhang kaugnayan sa antas ng kakayahan sa pagbigkas, sa palatuldikan at pag-unawa sa pagbasa sa Filipino ng mga mag-aaral? Ang pag-aaral na ito ay gumamit ng survey correlational na pamamaraan ng pananaliksik. Ang survey correlational na pamamaraan ay naglalarawan at nagbibigay kahulugan sa mga pangyayari. Ito ay may kinalaman sa mga kalagayan/kaugnayan ng talagang nangyayari. Ang kagamitang pang istadistika na ginamit sa pagsusuri ng palarawang datos ay ang frequency count, percentage, mean, standard deviation, Pearson'r at ang kabuluhang pagkakaiba nito ay itinakda sa 0.05. Ang mga kalahok sa pag-aaral na ito ay mga mag-aaral sa Grado 8 ng Mataas na Paaralang Nasyonal ng Manocmanoc, Malay, Aklan. Sila ay binubuo dalawang daan tatlumpu't siyam (239) na mag-aaral sa Grado 8 na nakapagtala sa Taong Panuruan 2018-2019. Sila ay pinili sa pamamagitan ng quota purposive sampling gamit ang lottery teknik. Pumili lamang ng tig sa sampu (10) sa bawat seksyon ng Jade, Ruby, Tourmaline, Turquoise, at Beryl. Ang mga kagamitang ginamit sa pananaliksik ay dalawampu't limang (25) pangungusap na may pares na salita para sa pagsusulit sa

pagbigkas, dalawampu't isang pangungusap na pares na salita na sinalungguhitan para sa (21) palatuldikan at dalawampung (20) pagsusulit mula sa tulang binasa ng mga mag-aaral upang masukat ang kanilang pag-unawa sa pagbasa. Kalakip nito ang mga katanungan kaugnay sa personal na katangian ng mga mag-aaral. Sa kabuuan, ang antas ng kakayahan sa pagbigkas sa Filipino ng mga mag-aaral ay "napakahusay". Ang antas ng kakayahan sa palatuldikan sa Filipino ng mga mag-aaral ay "katamtaman". Ang antas ng kakayahan sa pag-unawa sa pagbasa sa Filipino ng mga mag-aaral ay "mahusay". Ang resulta ng Pearson'r ay nagpapakita ng "walang makabuluhang kaugnayan" ang antas ng kakayahan sa pagbigkas at palatuldikan, kakayahan sa pagbigkas at pag-unawa sa pagbasa sa Filipino gayundin ang kakayahan sa palatuldikan at pag-unawa sa pagbasa sa Filipino.

Keywords: *kakayahan sa pagbigkas, mag-aaral sa grado 8, palatuldikan, pag-unawa sa pagbasa, Paaralan Nasyonal ng Manocmanoc, Malay, Aklan*

PANIMULA NG PAG-AARAL

Isa sa nakitang dahilan sa kahirapan sa pag-unawa sa pagbasa ay hindi lamang nakatuon sa bokabularyo kundi sa proseso ng pagbigkas sa mga salita dahil sa Filipino maraming salita na pareho ang baybay subalit magkaiba ang bigkas at kahulugan gaya ng hamon (ham), hamon (challenged), Hapon (Japanese), hapon (afternoon), bukas (tomorrow) at bukas (open).

Ang pagbigkas o pasalitang pakikipagtalastasan ay isang sining. Nilalayon nito na magpahayag ng damdamin na maaaring malungkot o nakatutuwa, kaisipan, opinyon, mensahe o kaalaman, saloobin, paninindigan o paniniwala, hinggil sa isang paksang pinag-uusapan. Ang pagbigkas o pagpapahayag ay mahalaga sa dahilang nais na ipaunawa sa nakikinig ang naisin o layunin ng nagsasalita. Sa tuwing tayo ay nakikipag-usap, nakikisalamuha at nakikipagpalitan ng kurukuro ng ating sariling kaisipan o tinatawag na aspetong sosyal. Sa araw-araw patuloy tayong nakikisalamuha, nakikisama o nakiki-ugnay sa tao at sa ating paligid. Maaaring sa loob ng ating tahanan ay nagkakaroon ng sariling pagtatanong, pagpapaliwanag o paglilinaw kaya minsan nama'y naggigiit tayo ng katuwiran o nagbibigay ng halimbawa sa silid aralan o opisina. Isa pang makahulugang tunog sa pagbigkas ng tula ay ang ponema. Ang tulang Filipino ay may sadya at natatanging kanyang palatunugan at palabigkasan lamang. Maaaring magkatulad ang baybay ng salita subalit sa impit sa dulo ng ponemang patinig ay naiiba ang kahulugan. Halimbawa: aso(dog) aso (smoke), ako (I), pito (whistle) pito (seven). Isa pang dapat isaalang-alang ang intonasyon, ang pagbaba o pagtaas ng tinig. Ang makasining na paraan ng pagbigkas ay magbibigay ng wastong pagpapahayag sa diwa ng tula o ng pahayag. Mendoza, (2009)

May mga salita sa Filipino na iisa ang baybay ngunit may isa o dalawa ang kahulugan. Ang suliraning ito ay malulunasan sa pamamagitan ng paggamit ng tuldik dahil sa tuldik ay nabibigkas nang maayos ang isang salita at natitiyak ng bumabasa ang kahulugan nito. Hindi natin malalaman ang tiyak na kahulugan ng salitang baga,

halimbawa, kung hindi ito tutuldikan lalo na kung ito'y nag-iisa at hindi bahagi ng pangungusap. Ngunit kung ito'y tutuldikan, kahit hindi gagamitin sa pangungusap ay malalaman natin ang wastong bigkas at kahulugan, gaya ng makikita sa sumusunod: bagà (lungs) malumi, bagâ (tumor) maragsa, baga (live ember) malumay, bagà (ibang anyo ng katagang ba) mabilis.

Bagama't hindi na kailangang tuldikang lahat ang salita sa isang pangungusap, may pagkakataon na ang isang salita ay kailangan pa ring tuldikan kung hindi nagiging malinaw ang kahulugan nito. Sa pangungusap na, "Nasalubong nina Susan ang mama". Hindi na kailangang tuldikan pa ang mga salitang nasalubong, nina Susan at ang. Ngunit ang mama ay kailangang tuldikan upang matiyak kung ang ibig sabihin ng sumulat ay mama (mother) o mamà (male mature person). Samakatuwid, upang makapagtipid at upang hindi maging lubhang mahirapan ang mga palimbagan dahil sa dami ng kakailanganing tipo ng mga patinig na may tuldik, ang isang salita ay tutuldikan lamang kung magkakaroon na higit sa isang kahulugan ang salita sa pangungusap. Kung nag-iisa ang salita, tulad sa diksyunaryo ang pagtutuldik ay kailangang-kailangan. Ang isa pang dahilan kung bakit hindi praktikal na tuldikan lahat ang mga salita sa isang pangungusap ay ito: Ang glottal na pasara na inirerepresenta ng tuldik na paiwa sa posisyong pinal ng salita ay isang ponemang masasabing hindi matatag na tulad ng ibang ponema sa Filipino. Dito natin makikita na magaganda ang ginawa ni Lope K. Santos "Ama ng Balarilang Tagalog/Filipino". Naisama sa palatuldikan ang ponemang ito sa halip na bigyan ng kaukulang letra sa palabaybayan.

Isa pa sa mga kakayahan na dapat taglayin ng isang mag-aaral ay ang kakayahan sa pag-unawa sa pagbasa sa Filipino sapagkat ito ang magiging daan niya upang maging mulat ang isipan sa mga nangyayari sa lipunan at upang maging matagumpay sa hinaharap. Ang lubos ng pagkatuto ng mag-aaral ay nakasalalay sa kakayahang ito.

Gaya ng tinuran ni Tumangan Sr.et al, na binanggit ni Llaban, (2009) na ayon sa mga dalubhasa," wala raw pagbabasa kapag walang pag-unawa."

Ayon kay Goodman na binanggit ni Austero et al. (2009) na kung lubos ang pag-unawa sa pagbasa ay isang saykolinggwistiks na paghinuha (guessing game) kung saan ang nagbabasa ay bumuong muli ng isang mensahe o kaisipang hango sa tekstong binasa. Naniniwala siya na ang pagbabasa ay kinapapalooban ng interaksyon sa pagitan ng wika at kaisipan at ang mga proseso ng pagbabasa ay ang pag-ikot ng paghahalimbawa, paghihinuha, pagsubok at pagkilatis sa katotohanan.

Isang komplikado at masalimuot na proseso ang pagbasa sapagkat maraming kakayahan ang nalilinang at kailangang malinang dito upang maging epektibo ang pagbabasa. Isa kang mahusay at epektibong mambabasa kung natutukoy mo ang layunin ng iyong binabasa, nagagamit ang mga estratehiya at teknik sa pagbasa, nakabubuo ng hinuha sa susunod na pangyayari at iniuugnay ang dating kaalaman at karanasan upang maunawaan ang kahulugan ng binabasang teksto. Ang pagbasa kung gayon ay napakahalaga sa isang indibidwal sapagkat ito ang tutugon sa kanyang pagkatuto tungo sa mas malawak na kaalaman sa kanyang kapaligiran, sa bansa at

marami pang iba na huhubog sa kanyang pagkatao. (thesilentlearner2014,blogspot.com) 08.25.17

Ayon sa pag-aaral ni Perfetti et. Al (2020), ay gumagamit ng neuroimaging upang suriin kung paano pinoproseso ng utak ang pag-unawa sa pagbasa. Natuklasan nila na ang iba't ibang bahagi ng utak ay aktibo sa iba't ibang aspeto ng pagbasa, tulad ng decoding at comprehension.

Napakahalagang kakayahan na dapat matutuhan ng mga mag-aaral ang isang matibay na pag-unawa sa proseso ng pagbasa. Ang pag-aaral na ito ay ibinatay sa teoryang "inside-out model, concept-driven at whole to part". Ayon kay kina Goodman at Smith, ang teoryang ibaba-pataas ay pananaw ng pagbasa na naniniwalang ang pag-unawa sa teksto ay batay sa napupunta sa itaas, sa utak ng mambabasa matapos maproseso sa tulong ng mata at utak. Ang kaisipang ito ay batay sa teoryang behaviorist at paniniwalang ang utak ay isang blankong papel o tabula raza. Ayon pa kay Smith, ang impormasyon ay hindi nagmumula sa mambabasa kundi sa teksto. Ang teoryang ito ay tinatawag ding data-driven model o part to whole model. Ibig sabihin, higit na umaasa ang mambabasa sa mga impormasyon nasa teksto. Ang teoryang interaktibo ay ang kombinasyon ng teoryang (bottom- up at top-down) sapagkat ang proseso ng komprehensyon ay may dalawang direksyon sa paggamit ng dalawang paraan (bottom-up at top-down), nagaganap ang interaksyon sa pagitan ng teksto at ng mambabasa. Ito ay nabubuo mula sa kaalaman at ideya na dala ng mambabasa sa pag-unawa sa pagbasa sa Filipino. Magracia et al., na binanggit ni Aguil, (2018)

Pinag-aralan ng mananaliksik ito upang matukoy ang kakayahan nila sa pagbigkas, palatuldikan at pag-unawa sa pagbasa sa Filipino dahil ang pagbigkas ng mag-aaral sa isang salita o teksto ay nakaapekto kung paano nila ito tutuldikan at kung paano nila maunawaan ang isang akda gayundin ang paglalagay ng tuldik ay nakabatay kung paano nila binigkas ang isang salita na makakaapekto rin sa kanilang pag-unawa sa pagbasa.

Ang malayang baryabol sa pag-aaral na ito ay kakayahan sa pagbigkas at palatuldikan sa Filipino. Samantala, ang di malayang baryabol sa pag-aaral na ito ay ang kakayahan sa pag-unawa sa pagbasa sa Filipino ng mga mag-aaral.

METODO

Ang mga kalahok sa pag-aaral na ito ay ang mga mag-aaral sa grado 8 ng Mataas na Paaralang Nasyonal ng Manocmanoc. Sa kabuuan ay may dalawandaan at tatlumpu't siyam (239) na mag-aaral sa grado 8. Ang mananaliksik ay kukuha lamang ng limampu (50) sa pamamagitan ng quota purposive sampling. Sa Jade ay may limampung (50) mag-aaral ngunit kumuha lamang ng sampung (10) mag-aaral. Sa Ruby ay may limampung (50) mag-aaral ngunit kumuha lamang ng sampung (10) mag-aaral. Sa Tourmaline ay may apatnapu't siyam na (49) mag-aaral ngunit kumuha lamang ng sampung (10) mag-aaral. Sa Torquoise ay may apatnapu't isang (41) mag-aaral ngunit

kumuha lamang ng sampung (10) mag-aaral. Sa Beryl ay may apatnapu't siyam na (49) mag-aaral ngunit kumuha lamang ng sampung (10) mag-aaral.

Mga Kagamitan sa Pananaliksik

Profayl ng mga Kalahok. Ang unang bahagi ay profayl ng mga kalahok. Ito ay binubuo ng apat na bahagi: edad, kasarian, edukasyong natamo ng magulang at hanapbuhay ng magulang.

Pagsusulit sa Kakayahan sa Pagbigkas- Ito ay binubuo ng dalawampu't limang (25) aytem na pagsusulit sa pagbigkas ng mga pares na salita na pareho ang baybay ngunit magkaiba ang bigkas at kahulugan. Ang mga pares ng salitang ito ay ginamit sa pangungusap at binigkas ng mga mag-aaral ayon sa kahulugan nito sa harap ng guro. Ang mga salitang kabilang sa pag-aaral na ito ay hinalaw sa pag-aaral ni Tupaz (2016). Sila ay minarkahan ng napakahusay, mahusay, katamtaman, kasiya-siya at kailangang paunlarin.

Iskala	Deskripsyon
20.01- 25.00	Napakahusay
15.01- 20.00	Mahusay
10.01- 15.00	Katamtaman
5.01- 10.00	Kasiya-siya
0.00- 5.00	Kailangang Paunlarin

Pagsusulit sa Kakayahan sa Palatuldikan- Ito ay binubuo ng dalawampu't isang (21) aytem na pagsusulit sa palatuldikan. Nilagyan ng mga mag-aaral nang angkop na tuldik ang mga salitang nakasalungguhit sa pangungusap na inihanda ng mananaliksik. Ang mga salitang inilakip sa pag-aaral na ito ay hinalaw sa aklat ni Bernales, et. al. (2014). Sila ay minarkahan ng napakahusay, mahusay, katamtaman, kasiya-siya, at kailangang paunlarin.

Iskala	Deskripsyon
16.01- 21.00	Napakahusay
12.01- 16.00	Mahusay
8.01 - 12.00	Katamtaman
4.01 - 8.00	Kasiya-siya
0.00 - 4.00	Kailangang Paunlarin

Ang resulta computer processed statistic ng pilot testing ng pagsukat at pagkapani-paniwala at pagkabalido ng pagsusulit sa palatuldikan ay nagpakita na mula sa dalawampu't limang (25) na pagsusulit ay iwinaksi ang apat na aytem (4) at dalawampu't isa (21) lamang ang natira o kapani-paniwala at balido upang ibigay sa mga kalahok sa pag-aaral na ito.

Pagsusulit sa Kakayahan sa Pag-unawa sa Pagbasa - Ang mananaliksik ay nagpabasa ng isang tula na orihinal na ginawa ng mananaliksik. Pagkatapos basahin ang

tula ay nagbigay siya ng dalawampung (20) aytem na mga katanungan na sinagutan ng mga mag-aaral upang masukat ang kakayahan ng mga mag-aaral sa pag-unawa. Ang mga test aytem na kabilang sa pag-aaral na ito ay personal na ginawa ng mananaliksik. Ito ay ipinaylot test sa mga mag-aaral na hindi kabilang sa pag-aaral na ito upang masukat ang pagkapani-paniwala at pagkabalido ng pagsusulit. Sila ay minarkahan ng napakahusay, mahusay, katamtaman, kasiya-siya at kailangang paunlarin.

Iskala	Deskripsyon
16.01- 20.00	Napakahusay
12.01- 16.00	Mahusay
8.01 - 12.00	Katamtaman
4.01 - 8.00	Kasiya-siya
0.00 - 4.00	Kalangang Paunlarin

Ang resulta computer processed statistic ng pilot testing ng pagsukat at pagkapani-paniwala at pagkabalido ng pagsusulit sa pag-unawa sa pagbasa sa Filipino ay nagpakita na mula sa tatlumpu't limang (35) pagsusulit ay iwinaksi ang labing limang aytem (15) at dalawampu (20) lamang ang natira o kapani-paniwala at balido upang ibigay sa mga kalahok sa pag-aaral na ito.

MGA KINALABASAN AT PAGTALAKAY

Ang kabanatang ito ay nahahati sa dalawang bahagi: (1) Palarawang Pagsusuri ng mga Datos at (2) Inferensyal na Paglalahad ng mga Datos.

Unang Bahagi, Palarawang Pagsusuri ng mga Datos, naglalahad ng mga kalikasan at katangian ng mga natuklasang mga datos sa pananaliksik na ito. Ang mga datos sa survey correlational na pananaliksik ay natamo sa pamamagitan ng kakayahan sa pagbigkas, palatuldikan at pag-unawa sa pagbasa sa Filipino ng mga mag-aaral sa Grado 8. Isinama sa instrumentong ginamit sa pananaliksik ang personal na katangian ng mga kalahok.

Ikalawang Bahagi, Inferensyal na Pagsusuri ng mga Datos, naglalahad ng mga natuklasang mga datos sa pananaliksik gamit ang mga sumusunod na kagamitang pang-istadistika sa computer processed statistics katulad ng frequency count, percentage mean, standard deviation, One-way Analysis of Variance at ang Pearson'r. Ang 0.05 alpha level ng kahalagahan ang siyang ginamit na krayteryon sa pagtanggap o di pagtanggap ng mga ipotesis.

Palarawang Pagsusuri ng mga Datos

Kakayahan sa Pagbigkas sa Filipino
ng mga mag-aaral sa Grado 8

Ang mga datos sa Talahanayan 1 ay nagpapakita na ang kakayahan sa pagbigkas sa Filipino ng mga mag-aaral sa kabuuan ay may “napakahusay” na may (M=20.66, SD 2.83).

Talahanayan 1
Mean at Standard Deviation ng Kakayahan sa Pagbigkas

Baryabol	Mean	Deskripsyon	SD
Kakayahan sa Pagbigkas	20.66	Napakahusay	2.83

Iskala	Deskripsyon
16.01-21.00	Napakahusay
12.01-16.00	Mahusay
8.01 -12.00	Katamtaman
4.01 -8.00	Kasiya-siya
0.00 -4.00	Kailangang Paunlarin

Nangangahulugan lamang ito na napakahusay ng mga mag-aaral sa pagbigkas dahil ang mga pares na salita na binigkas nila ay ginamit sa mga pangungusap. Malamang madali nilang maibigkas dahil ginamit ito sa pangungusap at alam nila ang kahulugan ng mga bawat pares na salita. Gayundin pamilyar sa kanila ang mga ito dahil ginagamit nila sa pang-araw-araw na pakikipagtalastasan o sa kanilang pakikipag-usap sa ibang tao at dadalawang pares lamang ng salita ang kanilang binigkas gaya ng malumay, malumi, mabilis at maragsa kaya hindi mahirap para sa kanila ang pagbigkas ng mga salitang ito. Malamang lagi nila itong naririnig sa kanilang pakikipagtalastasan at inoobserbahan nila ang pagbuka ng bibig ng guro nila at ng kanilang kausap. Isa pang dahilan nito lagi silang nanonood ng mga programa sa telebisyon kung kaya madali nila itong nagagaya lalo na ang paggamit at pagbigkas ng mga pares na salita. Dagdag pa rito ang lugar ng mga mag-aaral ay dinadayo ng mga turismo kaya ang ginagamit nilang salita ay wikang Filipino upang magkaunawaan lahat ng tao at dahil iba-iba ang dumadayo sa kanilang lugar ay nasanay silang magsalita ng wikang ito upang madali silang magkaunawaan.

Ang resulta ng pag-aaral na ito ay sang-ayon sa resulta ng pag-aaral ni Tupaz (2016), na ang antas ng kakayahan o artikulasyon ng mga mag-aaral sa elementarya ay “napakahusay” kapag sila pinangkat sa baitang edad, kasarian, grado sa Filipino, edukasyon ng ama’t ina at hanapbuhay ng ama’t ina.

Taliwas naman sa pag-aaral ni Poli na binanggit sa pananaliksik ni Tupaz (2016) na ang kahusayan sa oral na pagbasa sa Filipino ay “katamtaman”. Ang mga mag-aaral na nasa ikalawa, ikatlo at ikaapat na antas sa sekundarya at ang may lubhang napakagaling, kasiya-siya, katamtaman at pagbutihin ang grado sa unang markahan; ang

mga batang mataas, katamtaman at mababang antas ng sosyo-ekonomiko at ang may sapat at mas sapat na kahantaran sa mass media ay “katamtaman” ang kahusayan sa oral na pagbasa sa Filipino.

Kakayahan sa Palatuldikan
ng mga Mag-aaral sa Filipino

Ang mga datos sa Talahanayan 2 ay nagpapakita na ang performans ng mga mag-aaral sa Filipino sa kabuuan ay “Katamtaman” na may (M= 12.20, SD= 2.88).

Talahanayan 2
Mean at Standard Deviation ng Kakayahan sa Palatuldikan

Baryabol	Mean	Deskripsyon	SD
Kakayahan sa Palatuldikan	12.20	Katamtaman	2.88

Iskala	Deskripsyon
20.01-25.00	Napakahusay
15.01-20.00	Mahusay
10.01-15.00	Katamtaman
5.01 -10.00	Kasiya-siya
0.00 -5.00	Kailangang Paunlarin

Nangangahulugan lamang ito na ang kakayahan nila sa palatuldikan ay katamtaman malamang hindi sila gaanong magaling sa paglalagay ng tuldik dahil hindi sila masyadong pamilyar sa kahulugan ng bawat pares na salita at hindi nila masyadong natutukoy kung ang bawat salita ay malumi, malumay, mabilis at maragsa dahil ginamit ito sa pangungusap. Hindi nila masyadong nakilala ang mga salitang dapat lagyan ng angkop na tuldik kahit ang mga salitang nilagyan nila ng tuldik ay payak lamang na mga salita. Kahit ang pagsusulit na binigay sa palatuldikan ay pareho rin sa pagsusulit na binigay sa pagbigkas ay hindi masyadong pamilyar sa kanila ang mga salitang dapat na tutuldikan.

Ayon kay Santiago na binanggit ni Gener (2017). Napakahalaga ng tuldik lalong-lalo na sa asignaturang Filipino sapagkat maraming salita sa Filipino na pareho ang baybay subalit magkaiba ang kahulugan. Napakahalagang malaman din kung paano gamitin ang mga tuldik at kung paano ito bibigkasin. May apat na pangunahing pangkat ng salita sa Filipino ayon sa diin. Ang pangalang ibinigay sa matandang balarila sa bawat pangkat ay magandang modelo o halimbawa sa pagbigkas sa mga salita kasama sa bawat pangkat: malumay, malumi, mabilis at maragsa. Ang diing malumay ay hindi tinutuldikan samantala ang diing mabili ay ginagamitan ng tuldik na pahilis (/), ang diing malumi ay ginagamitan ng tuldik na paiwa (\) at ang diing maragsa ay ginagamitan ng tuldik na pakopya (ˆ).

Kakayahan sa Pag-unawa sa
Pagbasa sa Filipino ng mga mag-aaral

Ang mga datos sa Talahanayan 3 ay nagpapakita na ang performans ng mga mag-aaral sa Filipino sa kabuuan ay “Mahusay” na may (M= 14.82, SD= 2.47).

Talahanayan 3

Mean at Standard Deviation ng Kakayahan sa Pag-unawa sa Pagbasa sa Filipino

Baryabol	Mean	Deskripsyon	SD
Kakayahan sa Pag-unawa sa Pagbasa sa Filipino	14.82	Mahusay	2.47

Iskala	Deskripsyon
16.01-20.00	Napakahusay
12.01-16.00	Mahusay
8.01 -12.00	Katamtaman
4.01 -8.00	Kasiya-siya
0.00 -4.00	Kailangang Paunlarin

Nangangahulugan lamang ito na ang kakayahan nila sa pag-unawa sa pagbasa sa Filipino ay “mahusay” dahil ang mga salitang ginamit sa tula ay payak lamang at ang bawat pares na salita ay hinalaw din sa pagsusulit sa palabigkasan at palatuldikan kung kaya mas madali nilang maunawaan ang ibig sabihin ng mga salitang ito gayundin ang binasang tula. Ang tula ay hindi ginamitan ng mga tayutay at idyomatikong pagpapahayag kaya mas madali nilang maunawaan ang tula sapagkat wala itong malalalim na mga kahulugan o di kaya’y nakatagong pahayag. Sapat din ang oras na nakalaan sa kanilang pagbabasa kung kaya binasa nila itong may pag-unawa at dagdag pa rito ay pinalalahanan sila agad bago magsimula sa pagbabasa na may sasagutan silang mga tanong pagkatapos nito. Gayundin malinaw ang pagpapaliwanag ng panuto ng guro kaya madali nila itong naunawaan.

Ang resulta ng pag-aaral na ito ay sang-ayon sa resulta ng pag-aaral ni Legarda (2017), marahil ang antas ng komprehensiyon ay nagpapakita na sa kabuuan ay “mahusay”. Nangangahulugan lamang ito na mahusay ang istilo ng guro sa klase binibigyan niya ng atensyon ang komprehensyon ng mga mag-aaral tulad sa pagbibigay ng iba’t ibang babasahin gaya ng mga aklat, nobela, maikling kuwento,tula at sanaysay na pinababasa nang may sapat na oras upang madaling maunawaan ng mga mag-aaral pinupukusan naman nila ito ng atensyon at inuunawa nang mabuti ang seleksyon o materyal na ibinigay sa kanila ng guro upang may isasagot sila sa mga katanungan kapag may talakayan sa klase. Marahil madaling maintindihan ng mga mag-aaral ang kanilang binabasa dahil gumagawa sila ng mga talaang salita para madali nilang maintindihan ang mahirap na salitang Filipino o di kaya’y sumasangguni sila sa diksyunaryo upang lubusan nilang maunawaan ang kanilang binabasa.

Malamang mayaman din ang kanilang talasalitaan, binibigyan nila nang halaga ang itinakda ng guro sa bahay kaya lubos nilang nauunawaan ang kanilang binabasa. Ang mga salita, pangungusap at seleksyon ay payak kaya madaling intindihin. Malinaw ang pagpapaliwanag ng guro sa aralin at mahusay ang estratehiyang ginamit sa oras ng talakayan kaya madaling maunawaan ng mga mag-aaral.

Nagpapakita lamang ito na ang mga mag-aaral ay may mahusay na komprehensyon sa wikang Filipino. Malamang ang mga mag-aaral ay nagbabasa nang may pag-unawa. Gayundin, sila ay may librong Filipino, diksyunaro sa kanilang tahanan at gumagamit sila ng wikang Filipino sa kanilang komunikasyon.

Taliwas naman sa pag-aaral ni Almendralejo na binanggit sa pananaliksik ni Legarda (2017) na natuklasan sa pag-aaral na ito na ang lebel ng komprehensyon ay hindi umabot sa mataas na antas na pagkatuto na siyang pinakamahalagang salik sa pag-unawa at pagbabago ng pananaw sa bawat mambabasa sa kanyang sarili at sa lipunang kanyang ginagalawan.

Ayon naman sa pag-aaral kina Ymas at Acas na binanggit sa pananaliksik ni Legarda (2017) ang pagbasang may komprehensyon ay ang pagbuo ng mambabasa ng mga tulay na mag-uugnay sa kanyang dating kaalaman at karanasan sa bagong impormasyong kanyang makukuha mula sa tekstong binasa. Ang pagbasa ay hindi pangmata o pagtingin lamang sa nakaimprentang simbolo, kundi isang pagtuklas sa mga kahulugang nakapaloob dito. Sinasabing kung walang pag-unawa ay wala ring pagbasang nagaganap. Ipaalam sa mga estudyante na ang komprehensyon o pag-unawa ay isang kakayahan sa pagkuha ng mensahe o kahulugan sa akdang binasa. Nakabatay ito sa kakayahan sa pagkilala ng gamit ng mga salita at pagkaka-ugnay ng mga ito sa mga iba pang mga salita sa teksto (context clues). Halimbawa, ang salitang pula “pula” ay may iba’t ibang gamit at kahulugan depende sa konteksto nito: “Pula ang kulay ng kanyang lipstik.” (kulay red) “Pinupulaan siya dahil sa kanyang masamang ugali.” (puna, kritika) Isa siyang pulahang manunulat.” (makakaliwa, komunista) “Mapula ang lupa sa aming probinsya kaya’t maalwan magtanim ng halaman” (kulay brown, mabunga) Nauunawaan ng mambabasa kung ano ang kahulugan ng salitang “pula” sa iba’t ibang pangungusap sa itaas sapagkat naiuugnay niya ito sa iba pang salita sa detalyeng di-lantad o yaong ipinahayag sa paraang patalinghaga.

Inferensyal sa Pagsusuri sa mga Datos

T-test sa Pagitan ng Kakayahan sa
Pag-unawa sa Pagbasa sa Filipino at Pagbigkas
ng mga Mag-aaral sa Filipino

Talahanayan 4

Sources of Variation	T	df	Sig
Kakayahan sa Pag-unawa sa Pagbasa sa Filipino - Kakayahan sa Pagbigkas	(-)10.23*	49	.000

* p<0.05 significant @ 5% alpha level
ns p>0.05 bot significant @ 5% alpha level

Ang resulta ng T-test sa kakayahan sa pag-unawa sa pagbasa sa Filipino at pagbigkas sa Talahanayan 4 ay nagpapakita na may “makabuluhang pagkakaiba” pabor sa pagbigkas na mas mataas ang kakayahan nila sapagkat mas madalas silang makapagsalita kaysa sa pagbabasa sa madaling salita mas nahubog ang kanilang kakayahan sa pagbigkas kaya mas madali sa kanila na bigkasin ang mga pares na salita. Dagdag pa rito ang lugar ng mga kalahok ay maraming mga dayuhan kaya mas nalinang sa kanila ang pakikipag-usap o pakikipagtalastasan sa kapwa upang mahikayat na dayuhin ang lugar at mas tangkilikin pa lalo ito. Sanay din sila gumamit ng wikang Filipino sa pasalitang anyo dahil ang wikang Filipino ay wikang panlahat kaya mas gamitin nila ang wikang ito upang magkaintindihan ang lahat ng tao. Gayundin dalawang pares lamang na salita ang kanilang binigkas at ang mga salitang ito ay mga payak.

Sa pag-unawa sa pagbasa sa Filipino ay iilan sa kanila ay hindi matandaan ang bahagi ng pangyayari ng tula dahil ito ay binubuo ng apat na saknong. Malamang nalito rin sila sa mga pagpipiliang sagot at nakatuon lamang sila sa mga pares na salita at hindi sa diwa ng tula.

Taliwas sa pag-aaral ni Tupaz (2016) ang resulta ng t-test sa antas ng kasanayan sa artikulasyon o pagbigkas ng mga mag-aaral sa Filipino. Ipinakita sa resulta ng pag-aaral na “walang makabuluhang pagkakaiba” kapag sila ay pinangkat ayon sa kasarian. Lalaki man o babae ay pareho lamang ang kasanayan sa artikulasyon. Nangangahulugan lamang ito na may napakahusay na antas ang lalaki at babaeng mag-aaral sa palabigkasan.

Ang ipotesis ay nagsasaad ng walang makabuluhang pagkakaiba ang kakayahan sa pagitan ng pag-unawang pagbasa at pagbigkas ay iwaksi.

Talahanayan 5
T-test sa Pagitan ng Kakayahan sa
Pag-unawa sa Pagbasa sa Filipino at Palatuldikan
ng mga Mag-aaral sa Filipino

Sources of Variation	t	df	Sig
Kakayahan sa Pag-unawa sa Pagbasa sa Filipino - Kakayahan sa Palatuldikan	5.38*	49	.000

* p<0.05 significant @ 5% alpha level
ns p>0.05 bot significant @ 5% alpha level

Lumabas sa pag-aaral na ito na may makabuluhang pagkakaiba sa pagitan ng kakayahan pag-unawa sa pagbasa sa palatuldikan. Nangangahulugan ito na kailangan nilang intindihing mabuti ang diwa o kahulugan ng bawat taludtod, saknong at ang buong tula samantala ang palatuldikan ay nakatuon lamang sa pares na salita na lalagyan

lamang nilang ng tuldik. Malamang ang dalawang kakayahang pangwikang ito ay magkaiba. May mga mag-aaral na magaling sa palatuldikan ngunit mahina sa pag-unawa sa pagbasa. Mayroon ding mahina sa palatuldikan ngunit mahusay sa pag-unawa sa pagbasa.

Taliwas sa pag-aaral ni Tupaz (2016) na ang resulta ng t-test sa antas ng kasanayan sa komprehensyon ng mga mag-aaral kapag pinangkat sa kasarian. Ipinakita sa resulta ng t-test na may makabuluhang pagkakaiba pabor sa mga babae na may napakahusay na komprehensyon sa Filipino ngunit ang lalaki na may mahusay lamang.

Ang ipotesis ay nagsasaad ng walang makabuluhang kaugnayan sa pagitan ng pag-unawang pagbasa at paglatuldikan ay iwaksi.

Pearson'r sa Pagitan ng
Pagbigkas, Palatuldikan
at Pag-unawa sa Pagbasa
sa Filipino ng mga mag-aaral

Talahanayan 6

Baryabol	R	Sig
Kakayahan sa Pagbigkas at Palatuldikan	(-)0.250^{ns}	.080
Kakayahan sa Pagbigkas at Pag-unawa sa Pagbasa sa Filipino	(-)0.158^{ns}	.273
Kakayahan sa Palatuldikan at Pag-unawa sa Pagbasa sa Filipino	0.177^{ns}	.218

* p<0.05 significant @ 5% alpha level
ns p>0.05 not significant @ 5% alpha level

Ang kakayahan sa pagbigkas ay walang makabuluhang kaugnayan sa palatuldikan. Kung mahusay man sila sa palabigkasan ay walang kinalaman ito sa kanilang palatuldikan. Malamang ang dalawang baryabol na ito ay walang koneksyon sa kadahilanan ang pagbigkas ay pa oral o pagbigkas, malamang maganda ang boses niya, ang artikulasyon niya, enunciation, ang haba, ang hinto ay ginagamit sa pagbigkas ng mga pares na salita at kung magaling sila sa pagbigkas maaari hindi sila magaling sa palatuldikan. May mga mag-aaral na mahusay sa pa oral o pagbigkas ngunit mahina pagdating palatuldikan o di kaya'y magaling sa palatuldikan ngunit mahina sa pa oral o pagbigkas.

Lumabas sa pag-aaral na walang makabuluhang kaugnayan sa pagitan ng pag-unawa sa pagbasa sa pagbigkas. Malamang may mga mag-aaral na magaling sa pagbigkas ngunit mahina sa pag-unawa sa pagbasa sa Filipino. Malamang ang pag-unawa ay nakatuon sa diwa ng tula samantala ang pagbigkas ay nakatuon lamang sa pagbigkas sa pares na salita at ito ay madaling bigkasin. Nagpapatunay lamang dito na

ang pag-unawa at pagbigkas ay dalawang magkaibang kasanayang o kakayahang pangwika.

Nangangahulugan lamang ito na ang kakayahan ng isang tao sa palatuldikan ay walang kinalaman sa pag-unawa sa isang pahayag o teksto. Malamang kung mahusay siya sa palatuldikan walang kinalaman ito sa pag-unawa sa mga teksto na kanyang nabasa. Hindi man siya magaling sa palatuldikan hindi naman apektado ang kanyang pag-unawa. Malamang ang pagsusulit sa pag-unawa ay tula at diwa ang binigyang kahulugan samantala ang sa palatuldikan ay pangungusap ang ginamit at dadalawang salita lamang ang tutuldikan kaya walang makabuluhang kaugnayan.

Ayon kina Constantino at Atienza na binanggit ni Fayo (2015), kung lubos ang pagkaunawa ng isang tao sa mga wikang kanyang ginagamit, nangangahulugan lamang na mas madali niyang matutunan ang iba pang kaalaman sa mundo na nasusulat sa wikang nauunawaan niya.

Ang pag-aaral na ito ay sumasang-ayon sa pag-aaral ni Faeldonea (2018) na walang makabuluhang kaugnayan ang kasanayan sa pagsasalin sa artikulasyon. Nangangahulugan lamang ito na mahusay man sila sa kasanayan sa pagsasalin, ay walang makabuluhang kaugnayan sa artikulasyon nila. Walang kaugnayan ang kahusayan nila sa pagsasalin sa artikulasyon dahil hindi maaapektuhan ng pagsasalin ang pagbibigkas. Gaanuman kahusay o napakahusay ng artikulasyon nila, walang makabuluhang kaugnayan sa kanilang pagsasalin dahil ito ay pasulat. Ang pagsasalin ay talagang naiiba sa artikulasyon. Gayundin, ang kasanayan sa pagsasalin ay walang makabuluhang kaugnayan sa komprehensyon. Mahusay man sila sa pagsasalin, walang makabuluhang kaugnayan ito sa kanilang komprehensyon. Mahusay man sila sa komprehensyon, walang makabuluhang kaugnayan ito sa kanilang kahusayan sa pagsasalin. Gayundin, napakahusay man nila sa artikulasyon, walang makabuluhang kaugnayan ito sa kanilang kahusayan sa komprehensyon.

Ang ipotesis ay nagsasaad ng walang makabuluhang kaugnayan ang kakayahan sa pagbigkas at palatuldikan, kakayahan sa pagbigkas at pag-unawa sa pagbasa at kakayahan sa palatuldikan at pag-unawa sa pagbasa sa Filipino ay tanggapin.

MGA KONKLUSYON

1. Lumabas sa pag-aaral na ito na ang antas ng kakayahan sa pagbigkas sa Filipino ng mga mag-aaral ay “napakahusay”.Bunga nito kaya niyang ipahayag ang kanyang naiisip o nais sabihin sa kanyang kapwa kamag-aral at magiging aktibo siyang mag-aaral dahil kaya niyang makilahok sa klase na may tiwala sa sarili. Magiging mahusay siyang tagapagpaliwanag sa kanilang grupo at magaling siyang tagapagsalita, lider, taga-ulat at maaari siyang sumali sa talumpati at maging kalahok sa debate. Dahil din dito maaari silang maging isang magaling na “tour guide” lalong-lalo na ang lugar na kung saan sila nakatira ay kilala sa buong mundo, maaaring dumami pa ang mga turista dahil sa angking galing nilang ito. Gayundin magiging magaling sila na ispeker sa iba’t

ibang pagkakataon at okasyon. Kaya nilang makikipagsabayan sa mga magagaling na ispeker sa buong bansa kapag nakapagtapos sila ng pag-aaral. Maaari silang kumuha ng kursong Edukasyon dahil sa kahusayan nila palabigkasan sa Filipino. Ibig sabihin magiging magaling sila na guro sa Filipino dahil sa kahusayan nila sa palabigkasang Filipino. Ang kahusayan nila sa pagbigkas ay isang kalamangan para sa isang mag-aaral. Malamang magaling din siya mananalumpati sa iba't ibang pagkakataon at okasyon. Maaari silang magtrabaho bilang "sales representative" ng isang produkto pagkatapos nila ng kurso dahil sa kahusayan nila sa pagbigkas sa Filipino lalo na kahit sila ay ganap ng propesyunal.

2. Lumabas sa pag-aaral na ito na ang kakayahan sa palatuldikan sa Filipino ng mga mag-aaral ay "katamtaman". Dahil dito wala sila masyadong sapat na kaalaman na matukoy ang kahulugan ng mga salita at kung paano ito gamitin sa pangungusap at dahil may kunti silang kaalaman sa paglalagay ng tuldik hindi sila masyadong magiging mahusay na tagapagsalita sapagkat hindi sila gaanong marunong kumilala at bumigkas ng mga salitang malumi, mabilis, maragsa at malumay. Maaaring mahahalata silang taga probinsiya kung pupunta sila ng Maynila dahil hindi nila kayang makipagsabayan sa mga taong taga roon ayon sa kung paano sila bumigkas na naaayon sa tono. Gayundin hindi nila madaling maunawaan ang teksto, akda o mga sulatin na kanilang babasahin dahil wala silang sapat na kaalaman kung paano bigkasin ang mga salita batay sa tuldik nito.

3. Lumabas sa pag-aaral na ito na ang antas ng kakayahan sa pag-unawa sa pagbasa sa Filipino ng mga mag-aaral ay "mahusay". Bunga nito madali nilang maunawaan ang nilalaman o diwa ng akda o teksto na kanilang binabasa kaya tataas ang marka na makukuha nila sa bawat pagsusulit at dahil din dito maraming impormasyon o kaalaman ang matutunan nila sa paaralan at kaya nilang makisali sa mga timpalak na may malaking premyo dahil ganap na maunlad ang kaalaman nila sa wikang Filipino lalo na sa talakayan sa klase. Kaya rin nilang makipagpalitan ng kaalaman sa mga matatalino sa klase dahil sa mahusay ang komprehensyon nila. Magiging mataas ang resulta ng kanilang pagsusulit, ang kanilang grado sa Filipino. Naisasagawa din nila ang kanilang takdang aralin nang tama. Hindi mahihirapan ang guro sa pagpapaunawa ng aralin dahil mahusay ng kanilang komprehensyon sa Filipino at gayundin sila ay makakakuha ng karangalan sa pagtatapos ng klase. Maaari rin silang sumali sa mga dagliang talumpati dahil madali nilang maunawaan ang mga tanong na ibibigay sa kanila at mas mapapabilis ang talakayan sa loob ng silid aralan sapagkat ang mga mag-aaral ay mabilis na makaunawa.

4. Lumabas sa pag-aaral na "may makabuluhang pagkakaiba" sa pagitan ng kakayahan sa pag-unawa sa pagbasa sa Filipino sa kakayahan sa pagbigkas. Kung magkagayon tataas din ang kanilang pag-unawa dahil sa kahusayan nila sa pagbigkas ng mga salita at nakakatulong nang malaki ang kakayahan nila sa pagbigkas sa pag-unawa sa teksto o babasahin. Ang matutunan nila sa palagbigkasan ay maaaring magagamit nila sa pag-unawa ng mga tekstong babasahin nila.

5. Lumabas sa pag-aaral na "may makabuluhang pagkakaiba" sa pagitan ng kakayahan sa pag-unawa sa pagbasa sa Filipino sa kakayahan sa palatuldikan. Bunga

nito ang kahusayan nila sa palatuldikan ay maaari nilang magamit sa tekstong kanilang babasahin. Bunga rin nito madaming impormasyon ang matutunan dahil sa kahusayan nila sa palatuldikan kaya kung magkagayon tataas ang grado nila sa pag-aaral ng Filipino.

6. Lumabas sa pag-aaral na “walang makabuluhang” kaugnayan sa kakayahan sa pagbigkas at palatuldikan, kakayahan sa pagbigkas at pag-unawa sa pagbasa sa Filipino gayundin ang kakayahan sa palatuldikan at pag-unawa sa pagbasa sa Filipino. Bunga nito tataas man ang marka nila sa pag-unawa ay walang kinalaman o kaugnayan sa kanilang pagbigkas o palatuldikan. Samakatuwid maaaring matutunan muna ng mag-aaral ang pagbigkas saka magpakadalubhasa sila sa pag-unawa. Sa pag-unawa sa pagbasa dadami ang impormasyon at kaalaman ang matutunan nila. Sa panig naman ng pagbigkas, ganap na malinang ang gawaing ito sa mga mag-aaral. Pwede silang maging isang magaling na ispeker, taga-ulat, mamimigkas, tagapagpapaliwanag, kalahok sa debate, newscasting, broadcasting at sabayang pagbigkas.

REKOMENDASYON

Ayon sa kinalabasan at kongklusyon na nabuo sa pananaliksik na ito, iminumungkahi ang mga sumusunod na rekomendasyon:

1. Lumabas sa pag-aaral na ito na ang antas ng kakayahan sa pagbigkas sa Filipino ng mga mag-aaral ay “napakahusay”. Para sa mga mag-aaral ay kailangang gagawa ng paraan upang mapanatili ang kahusayan nila sa artikulasyon o pagbigkas. Araw-araw na magbasa ng mga akdang pampanitikan sa paraang pagbigkas nang sa gayun ay mapanatili na napakahusay ang kakayahan sa pagbigkas ng mga salita. Magsanay sila sa pagbigkas ng mga tongue twisters, tula, bugtong, diyalogo, at iba pa para mapanatiling maunlad ang pagbibigkas nila ng mga salita. Iminumungkahi rin sa kanila na sumali sa mga gawaing pasalita upang lalong uunlad ang pagbigkas nila. Sumali sa mga patimpalak gaya ng spoken poetry, broadcasting, sabayang pagbigkas, tulaan, sining ng pagkukwento, dulaan at iba pa.

Iminumungkahi rin sa mga guro na bigyang pagsasanay ang mga mag-aaral sa wastong pagbigkas ng mga salita, parirala o pangungusap sa Filipino bago magsimula ang talakayan nang sa gayun maaaring mapanatili nilang napakahusay ang antas ng kakayahan sa pagbigkas. Magdaos ng paligsahan sa pagsagot, diyalogo na may kinalaman sa paksang aralin, magpaawit bago magsimula ang klase o magpasaulo ng bugtong para lalo pang mapahusay ang kakayahan sa artikulasyon. Magbigay ng mga pampadulas dila (tongue twister) upang lalong mahasa ang kahusayan ng mga mag-aaral sa pagbigkas ng mga salita sa Filipino lalo na yaong mga pares na salita.

Para naman sa mga magulang paglaanan ng oras ang mga anak sa bahay na turuan ng tamang pagbigkas ng mga salita, parirala, pangungusap o sanaysay upang mahasa ang kanilang dila sa tamang pagbigkas. Sanayin din na magsalita ng wikang

Filipino sa loob ng bahay upang masanay ang mga anak sa tamang diin at tono ng mga salitang Filipino.

Para sa mga namumuno ng DepEd upang mapanatili ang kahusayan ng mga mag-aaral sa pagbigkas ay maaaring magpatayo ng speech laboratory upang sa gayon ay mapakinggan ng mga mag-aaral kung ano ang tamang tono, diin, hinto, intonasyon at pagpapangkat-pangkat ng mga salita sa pagbigkas ng talata, tula at iba pang babasahin.

2. Lumabas sa pag-aaral na ito na ang kakayahan sa palatuldikan sa Filipino ng mga mag-aaral ay “Katamtaman”. Sa mga mag-aaral upang maging napakahusay ang kakayahan sa palatuldikan ay maaaring magkaroon ng diksyunaryo sa Filipino upang magkaroon ng sanggunian sa mga salitang hindi nauunawaan kung ano ang wastong tuldik nito at kung paano ito bibigkasin. Lalo pang magsanay sa paglalagay ng tuldik sa mga salitang mabilis, malumi, malumay at maragsa upang maging napakahusay ang kakayahan sa palatuldikan.

Para naman sa guro ay magbigay ng mga pagsusulit na huhubog sa kakayahan ng mga mag-aaral sa palatuldikan katulad ng pagtutuldik ng mga salita o di kaya’y mga laro na kung saan madaling matandaan ng mga mag-aaral ang tamang tuldik ng mga salita, maaring mag-uunahan sila sa pagbigay ng mga salitang tinutuldikan gamit ang diksyunaryo.

Para naman sa mga magulang para maging napakahusay ang kanilang kakayahan sa palatuldikan ay magkaroon ng laro na kung saan magbibigay sila ng mga salitang malumi, maragsa, malumay at mabilis. Maaari ring magbigay ng mga pares na mga salita na lalagyan nila ng tamang tuldik upang magkaroon ng retensyon ang inyong mga anak.

3. Lumabas sa pag-aaral na ito na ang antas ng kakayahan sa pag-unawa sa pagbasa sa Filipino ng mga mag-aaral ay “mahusay”. Sa mga mag-aaral iminumungkahi sa kanila na magbasa ng iba’t ibang babasahin upang lalong mahasa ang kakahayan sa pag-unawa sa pagbasa. Magsanay sila upang maging napakahusay ang komprehensyon nila sa Filipino. Ugaliing magbasa ng mga aklat upang mas mapahusay pa ang komprehensyon lalong-lalo na sa asignaturang Filipino. Maglaan ng oras sa pagbabasa sa mga bakanteng oras upang mas mahasa ang kakayahan sa komprehensyon.

Iminumungkahi rin sa mga guro na bigyan ang mga mag-aaral ng iba’t ibang seleksyon o babasahin at ang guro ay laging may nakahanda na katanungan upang lalong mapataas ang antas ng kakayahan ng mga mag-aaral sa pag-unawang pagbasa. Bigyan sila ng pagsasanay sa mga talasalitaan at wastong pagbabaybay ng mga salita nang sa gayon ay lalawak at uunlad ang talasalitaan ng mga mag-aaral, gayundin magagamit nila ito sa ikadadali ng gawaing komprehensyon. Magbigay ng mga pangungusap na maiikli at ipabigay sa kanila ang kahulugan nito. Magparinig o magpabasa ng isang maikling seleksyon at magtanong tungkol dito upang mahasa ang kakayahan nila sa pag-unawa.

Iminumungkahi rin sa mga magulang na maglaan ng maraming aklat o mga babasahin na maaaring mabasa ng mga mag-aaral kapag sila ay nasa bahay at maghanda rin ng mga tanong na magpapaulad ng kanilang komprehensyon.

Para sa mga namumuno ng DepEd, maglaan ng sapat na pondo sa pagbili ng mga aklat, ensayklopedya, magasin, pahayagan, mga aklat na nauukol sa mga kwento at iba pang materyales na maaaring magamit ng mga mag-aaral sa pag-aaral nang sa gayon, lalong uunlad ang komprehensyon nila.

4. Lumabas sa pag-aaral na “may makabuluhang” pagkakaiba sa pagitan ng kakayahan sa pag-unawa sa pagbasa sa Filipino sa kakayahan sa pagbigkas.

Iminungkahi sa mga mag-aaral na palaging magsanay sa pagbigkas ng mga salita upang mapanatili na napakahusay at laging magbasa ng mga aklat o iba’t ibang uri ng babasahin upang mas lalong mapaunlad ang kakayahan nila sa pagbigkas lalo na sa mga salitang pareho ang baybay ngunit magkaiba ng kahulugan. Gayundin sumali sa mga gawaing pampadulas ng dila- Paunlarin ang kakayahan sa pagbigkas sa tulong ng pagbasang paoral/pabigkas para lalong makapagsanay at maging napakahusay ang kakayahan sa pagbigkas.

5. Lumabas sa pag-aaral na “may makabuluhang pagkakaiba sa pagitan ng kakayahan sa pag-unawa sa pagbasa sa Filipino sa kakayahan sa palatuldikan. Iminumungkahi para sa mga mag-aaral na lalo pang magsanay sa paglalagay ng tuldik sa mga salitang malumi, maragsa, malumay at mabilis upang lalong mapahusay ang kakayahan sa paltuldikan. Magkaroon din ng diksyunaryo sa Filipino upang magkaroon ng sanggunian sa mga salitang hindi maunawaan kung ano ang wastong tuldik nito at kung paano ito bibigkasin.

Para naman sa guro ay magbigay ng mga pagsusulit na huhubog sa kakayahan ng mga mag-aaral sa palatuldikan katulad ng pagtutuldik ng mga salita o di kaya’y mga laro na kung saan madaling matandaan ng mga mag-aaral ang tamang tuldik ng mga salita, maaaring mag-uunahan sila sa pagbigay ng mga salitang tinutuldikan gamit ang diksyunaryo.

6. Lumabas sa pag-aaral na “walang makabuluhang” kaugnayan sa kakayahan sa pagbigkas at palatuldikan, kakayahan sa pagbigkas at pag-unawa sa pagbasa sa Filipino gayundin ang kakayahan sa palatuldikan at pag-unawa sa pagbasa sa Filipino. Para sa mga mag-aaral kailangang paunlarin nila ang pag-unawa sa pagbasa sa pamamagitan ng pagbasa ng iba’t ibang teksto sa Filipino upang lalong umunlad ang kakayahan sa pag-unawa. Kailangang paunlarin ang talasalitaan upang ganap na maunawaan ang mga binasang teksto. Di kaya’y magsanay sa paglalagay ng mga tuldik nang sa gayon maaari itong magamit sa pag-unawa sa mga tekstong nabasa. Sa tuwing nagbabasa ng mga teksto ay ugaliing magbasa na paoral o pabigkas upang marinig ng guro kung tama ang salitang iyong binibigkas upang kagyat na maituwid ito kung mali ang pagbigkas ng mga salita.

Para sa mga guro, maglaan nang maraming mga pagsasanay tungkol sa pagtutuldik upang madagdagan ang bokabularyo o talasalitaan na maaaring magagamit sa pag-unawa ng mga mag-aaral sa teksto at matukoy din nila ang tamang pagbigkas ng mga pares na salita. Gayundin bigyan ang mga mag-aaral ng mga babasahin at ipabasa ito nang malakas upang matukoy kung wasto ang mga salitang kanilang binabasa o binibigkas.

ETIKAL NA PAMANTAYAN

Ang pananaliksik na ito ay naglalahad ng mga hakbang at pamantayan na sinusunod upang matiyak na ang pananaliksik ay sumusunod sa mga etikal na pamantayan. Ito ay alinsunod sa mga patakaran at regulasyon ng aming institusyon at mga internasyonal na pamantayan. Ang pananaliksik na ito ay sinuri at inaprubahan ng Filamer Christian University at bago simulan ang pananaliksik, lahat ng kalahok ay binigyan ng detalyadong impormasyon tungkol sa layunin ng pag-aaral, mga pamamaraan, posibleng benepisyon. Ang lahat ng datos na nakolekta mula sa mga kalahok ay ituturing na kumpidensyal. Ang mananaliksik ay nainindigan sa pagiging tapat at transparent sa buong proseso ng pananaliksik. Ang disenyo ng pag-aaral, mga pamamaraan ng pagkolekta at pagsusuri ng datos, at mga resulta ay ipapahayag nang malinaw at buo. Ang anumang salungatan ng interes ay ihahayag din. Ang mananaliksik ay mahigpit na sumusunod sa mga patakaran laban sa plagiarism. Ang lahat ng ideya, datos, at imporamsyon na hiniram mula sa iba ay wastong binanggit at tinukoy.

PASASALAMAT

Isang dakila at taus-pusong pasasalamat ang nais ihandog ng mga mananaliksik bilang pagkilala at pagtanaw ng utang na loob sa lahat ng mga taong walang pag-aalinlangang tumulong at sumuporta upang mapagyari at maging matagumpay ang pananaliksik na ito.

Unang-una sa lahat sa Poong Maykapal**,** na nagbigay patnubay, liwanag, ibayong-lakas, tatag at talas ng kaisipan upang maisakatuparan ang pananaliksik na ito. Sa kalakasan, karunungan at pagmamahal na maluwalhating natapos ang pag-aaral na ito sa itinakdang panahon.

Kay Gng. Melody J. Blance, na siyang aking naging tagapayo sa pananaliksik na ito, sa matiyagang pagsubaybay, paglaan ng kaniyang oras at panahon, sa pag-unawa, pagbibigay ng mga makabuluhang mungkahi at positibong puna. Higit sa lahat, sa pagbabahagi ng kanyang mga ideya at ekspertis sa tamang hakbangin at mga pamamaraan hinggil sa paggawa ng pag-aaral na ito;

Kay Dr. Felimon A. Pimentel Jr., Dekano, Paaralang Gradwado ng Filamer Christian Univesity sa kanyang propesyunal na pamatnubay, pagbibigay ng ideya at pagsusuri ng pang-istadistikang kagamitan upang mabuo ang pananaliksik na ito;

Sa lupon ng Tagasuri: Gng. Maribel N. Buenavides, Gng. Cheryl Rose D. Alipongan at Dr. Felimon A. Pimentel Jr. sa pagbibigay ng magagandang ideya upang

mas lalong mapaganda ang pananaliksik, at pagbibigay ng mga mungkahi na makakatulong nang malaki sa pag-aaral na ito;

Kay Gina L. Iglesias, sa paglaan ng kaniyang oras upang maging hurado at walang humpay na pagsubaybay sa mga mag-aaral upang maging maganda ang kalalabasan ng pag-aaral na ito. Gayundin sa kanyang bukas-loob na pagtanggap at pahintulot na magamit ang kanyang mga mag-aaral sa Ikawalong Taong, bilang mga respondente o mga kalahok sa nasabing pananaliksik;

Kina Cynthia S. Buque at Maria Baby Gina Valcoba, na naglaan ng kani-kanilang makabuluhang oras at panahon sa pagbibigay-payo, motibasyon at pagbahagi ng kanilang mga kaalaman at ekspertis sa larangan ng pananaliksik upang maging mabisa, organisado at komprehensibo ang pananaliksik na ito.

Sa mga mag-aaral ng Ikawalong Taon, ng Mataas na Paaralang Nasyonal ng Manocmanoc, na naging kalahok at sumuporta upang mapagyari ang pananaliksik na ito;

Kay G. Val T. Casimero, Ulong guro ng Mataas na Paaralang Nasyonal ng Manocmanoc, sa pag-unawa at pahintulot na makapagbigay ng pagsusulit ang mananaliksik sa mga mag-aaral;

Sa mga awtor, editor, tagasalin, at mananaliksik ng mga akdang pinaghanguan ng mahahalagang impormasyon na nagamit sa pag-aaral kaugnay sa pagbuo ng ikalawang kabanata ng pananaliksik na ito, ang mga kaugnay na pag-aaral at literatura.

Sa aking mga pamilya lalo na sa aking mga una at pangalawang magulang, na silang nagbigay inspirasyon at lakas ng loob upang ipagpatuloy ang hamon ng buhay lalo na sa pananaliksik na ito, gayundin sa tulong pinansyal at oras na kanilang ibinigay na higit na nakatulong upang maisakatuparan ang pananaliksik na ito.

LEVEL OF AWARENESS OF THE RESIDENTS IN THE IMPLEMENTATION OF DISASTER RISK REDUCTION AND MANAGEMENT PROGRAMS IN POBLACION 1, MABINI, BOHOL, PHILIPPINES

Ily Mae M. Bernales

Bohol Island State University- Main Campus, Tagbilaran City, Bohol, Philippines

https://doi.org/10.5281/zenodo.13270579

ABSTRACT

The study aimed to assess the Level of Awareness of the Residents in the Implementation of Disaster Risk Reduction and Management Programs in Poblacion 1, Mabini, Bohol, Philippines in terms of Policy and Plans, Human Resource, Programs and Activities, Structural Resilience, Risk Assessment and Vulnerability, and Disaster Preparedness and Response. 80 residents of Poblacion 1, Mabini, Bohol in different Puroks were assessed according to their knowledge and awareness level. The researcher used the descriptive survey method of research and use a survey questionnaire to gather the necessary data among respondents of the study. The result of the study on the Level of Awareness of the Residents in the Implementation of Disaster Risk Reduction and Management Programs in Poblacion 1, Mabini, Bohol in terms of Policy and Plans, Human Resource, Programs and Activities, Structural Resilience, Risk Assessment and Vulnerability, and Disaster Preparedness and Response was found to be Aware with a total of 3.07 as the computed mean among all variables.

Keywords: *Disaster Risk Reduction Management, Program, Activities, Residents, Poblacion 1, Mabini, Bohol, Philippines*

INTRODUCTION

In terms of disaster risk, Philippines ranked third among all of the countries with the highest risks worldwide according to the World Risk Report 2018, with index value of 25.14% (World Economic Forum, 2018). Considering the location and geographical context of the Philippines as the risk involving coastal hazards such as typhoons, storm surges, earthquakes and floods. Disaster Risk is the likelihood of loss of life, injury or destruction, and damage from a disaster in a given period (UNDRR Assessment Report, 2015).

Philippines has established risk reduction and management to mitigate the effects of disaster. Under Republic Act 10121, also known as "Philippine Disaster Risk Reduction and Management Act of 2010", which implies “An act strengthening the Philippine disaster risk reduction and management system, providing for the national disaster risk reduction and management framework and institutionalizing the national disaster risk reduction and management plan, appropriating funds therefor and for other purposes”. Under this law, it states to “Recognize and strengthen the capacities of LGUs and communities in mitigating and preparing for, responding to, and recovering from the impact of disasters”. Increasing public awareness about disaster preparedness is very important (Hargono, 2023).

Talplacido et. al (2022) also reveals in his study entitled “The Level of Disaster Awareness and Preparedness of Families in the Flood-Prone Barangays of San Leonardo, Nueva Ecija” that their level of disaster awareness and preparedness can be fully achieved through acquiring relevant technical activities and programs. Thus, reducing the negative impact of disasters on their families and the community. Exposure to newspapers and television was shown to be substantially associated to the level of disaster risk reduction knowledge (Perez, 2021).

Adhering to this, the NDRRMC forwarded four domains, wherein Barangay LGU of Poblacion 1, Mabini, Bohol is encouraged to enhance their disaster risk reduction and management activities. These are policy and plans, capability/capacity; emergency preparedness and response; and partner or stakeholder agreement.

Thus, this study outlines the level of awareness of the residents in the implementation of disaster risk reduction and management programs in Poblacion 1, Mabini, Bohol, Philippines.

Research Questions

The general objective of this study is to determine the Level of Awareness of the residents on the Implementation of Disaster Risk Reduction and Management Programs Poblacion 1, Mabini Bohol.

Specifically, it sought to answer the following question:

1. What is the level of awareness of the respondents on disaster risk reduction and management in terms of:
    1.1 policy and plans;
    1.2 human resource;
    1.3 programs and activities;
    1.4 structural resilience;
    1.5 risk assessment and vulnerability; and
    1.6 emergency preparedness and response

METHODOLOGY

The study used a quantitative approach and the research method was descriptive survey method to know the level of awareness of the residents in the implementation of disaster risk reduction and management programs in Poblacion 1, Mabini, Bohol.

A standardized questionnaire was used in gathering data. The questionnaire presented the profile characteristics and the level of awareness on DRRM of Poblacion 1, Mabini, Bohol residents in terms of policy and plans, human resource, programs and activities, structural resilience, risk assessment and vulnerability, and emergency preparedness and response.

The sampling process used was stratified random sampling wherein the respondents came from the 5 Puroks of Barangay Poblacion 1 which were Purok Upper Kulo, Purok Lower Kulo, Purok Kamansi, Purok Kaimito and Purok Mangga. The total number of respondents are 80 respondents ranges from 15 years- 60 years old as they were the ones who are fully matured and aware with the barangay activities.

.

RESULTS

The result of the Policy and Plans shows that the total mean is 3.11 interpreted as Aware. The result of the Human Resource shows that the total mean is 3.06 interpreted as Aware. On the Programs and Activities, the total mean is 3.01 interpreted as Aware. On the Structural Resilience, it shows the total mean is 3.06 interpreted as Aware. On the Risk Assessment and Vulnerability, it shows the total mean is 3.03 interpreted as Aware. And lastly, on the Emergency Preparedness and Response, the total mean is 3.13 interpreted as Aware.

DISCUSSION

On the Level of Awareness of the Residents in the Implementation of Disaster Risk Reduction and Management Programs in Poblacion 1, Mabini, Bohol

According to UNESCO (2010), preparedness plans are dynamic ventures that need to be reviewed, modified, updated, and tested regularly. Active disaster preparedness includes developing comprehensive response plans, monitoring hazards and threats, training emergency personnel, and training members of the communities at risk "to ensure the timely appropriate and effective delivery of relief"**.**

Table 1. Summary table extent is the implementation of Disaster Risk Reduction and Management (DRRM)

Variables	Mean	Interpretation
Policy and Plans	3.11	Aware
Human Resource	3.06	Aware
Programs and Activities	3.01	Aware
Structural Resilience	3.06	Aware
Risk Assessment and Vulnerability	3.03	Aware
Emergency Preparedness and Response	3.13	Aware
Overall Mean	**3.07**	**Aware**

The tables exhibit the level of awareness of the residents in the implementation of disaster risk reduction and management programs in Poblacion 1, Mabini, Bohol. Interestingly, all variables were interpreted as "Aware" with a computed overall mean of 3.07.

In particular, Emergency Preparedness and Response got the highest mean of 3.13 which is interpreted as "Aware", followed by Policy and Plans which got a computed mean of 3.11 which is interpreted as "Aware", meanwhile Programs and Activities got the lowest computed mean of 3.01 and Risk Assessment and Vulnerability with a computed mean of 3.03 but it was interpreted as "Aware". Additionally, Human Resource and Structural Resilience got an equal computed mean which is 3.06 and both were implemented as "Aware".

The results of the study conform with the study of Bayugo et. al (2016) that the residents in the Municipality of Rosario, Cavite is aware of the disaster risk reduction management (DRRM) programs of the locality. This means that the LGU 's programs related to disaster risk reduction and management are effective.

Moreover, this also aligns with the results of the study of Dignadice (2024) wherein the implementation of disaster risk reduction management (DRRM) programs is highly evident. With that, specific aspects were also found as highly evident such as knowledge building, awareness raising, and etc.

In addition, there is a need to assess and strengthen the awareness of the residents regarding disaster preparedness. Brochures and leaflets may be given to the residents for them to be more oriented and educated of the importance of being prepared during emergencies and disaster occurrences (Maminta, 2015).

Conclusions

The following conclusions are drawn based on the findings of the study.

The result of the study on the level of awareness of the residents in the implementation of disaster risk reduction and management programs in terms of Policy and Plans, Human Resource, Programs and Activities, Structural Resilience, Risk Assessment and Vulnerability, and Emergency Preparedness and Response was found to be Aware in all variables among the residents of Poblacion 1, Mabini, Bohol.

Recommendations

From the findings and conclusion of this study, the following are the recommendations:

The barangay LGU of Poblacion 1, Mabini, Bohol may continue to implement the Disaster Risk Reduction Activities. The barangay LGU may strengthen the DRRM through various programs for better preparation and protection to natural calamities. The barangay LGU may encourage the residents of Poblacion 1, Mabini, Bohol to be more aware and encouraged to participate in various activities.

Compliance with Ethical Standards

This study has a single author and written in her own words following the ethical standards. The author ensured that informed consent was obtained, participants had the freedom to withdraw at any time, their anonymity was preserved, their well-being was protected, there were no conflicts of interest in conducting the study, plagiarism was rigorously avoided, there was no bias in interpreting the results, and the findings were used solely for research purposes.

Acknowledgments

The researcher acknowledged the respondents for their time and contribution and Ms. Hazel Mae V. Eroy for the assistance in completing the research. Their cooperation contributed for the analysis of this study.

LEVEL OF COMPETENCE AND PERFORMANCE OF NON-TEACHING PERSONNEL IN THE CITY DIVISION OF ILAGAN: A BASIS FOR AN UPSKILLING PROGRAM

Ruby B. Guerrero, LPT, MPA, PhD

San Ignacio Elementary School, Schools Division Office of the City of Ilagan, Philippines

https://doi.org/10.5281/zenodo.13371291

ABSTRACT

This study assessed the competence and performance of non-teaching personnel in the Schools Division of the City of Ilagan as a basis for developing an upskilling program. The research employed a descriptive-inferential design, surveying 104 administrative employees. The study examined respondents' profiles, including sex, age, position, and educational attainment, and measured their competence in areas such as self-management, professionalism, ethics, and teamwork. Performance was evaluated based on Key Result Areas (KRAs) from their Individual Performance Commitment Review Forms. Findings revealed that the non-teaching personnel were highly competent and performed outstandingly, with some variation based on profile variables. The study identified a significant relationship between competence and performance, emphasizing the need for a sustainable upskilling program to maintain and enhance employee competence and performance. Recommendations include developing an appraisal system, increasing training opportunities, and implementing a tailored upskilling program.

Keywords: *Non-Teaching Personnel, Competence, Performance, Upskilling Program, Schools Division of the City of Ilagan*

INTRODUCTION

In the realm of public service and continuous improvement, non-teaching personnel have been involved in the mandate of quality, standard, and sustainable service for every Filipino. In the Department of Education, public service is attributed to the alignment of its mandate to educational goals and objectives. In lieu of this, administrative employees make huge contributions in the attainment of its lifetime goals.

As immersed in this field, the growing demands for continuous educational and professional growth and development ignited the spirit to alleviate conventional approaches in the service which are no longer applicable in the modern and changing times. Instead, an upskilling program that would cater to the needs, skills, competencies, and performance of every non-teaching employee is necessary to effectuate improved and innovative delivery of public service. This demand has led towards improvements in the education sector and school organizations where services are provided, and employees are trained to effectively deliver quality public services.

Including non-teaching staff members in the upskilling strategy may have the potential for improving school culture by galvanizing shared beliefs, attitudes, and practices amongst staff members, increasing employee engagement by communicating clear expectations and purpose in job responsibilities, promoting quality in the work environment through a cohesive organizational structure.

The non-teaching staff includes those individuals who are not immediate part-takes in a classroom for teaching but still play crucial roles in supporting the school system and its various functions. Their responsibilities range from administration and finance to maintenance and student support. According to Department of Education Memorandum No. 007 s. 2023, non-teaching position refers to a position whose primary duties and responsibilities contribute to the delivery of basic education services and achievement of agency outcomes, but do not involve nor directly support the actual conduct of teaching or delivery of instruction.

As Wanjiku (2021) mentioned that upskilling program represents a carefully designed plan to guide the actions and relationships of organizational members to achieve shared goals. In education, strategy affects policies, procedures, and the roles of every stakeholder, to have a positive impact on organizational achievement. Hence, demands for higher standards in education in recent decades have led to upskilling programs aimed at increasing accountability for administrators and non-teaching personnel to aid the current situations of organizational and institutional development. The Department of Education adopts mechanisms and programs to include non-teaching personnel through its mandate to elevate standards in the delivery of services.

Despite the importance and incorporation of staff development in basic education, there is limited research on the availability and use of learning opportunities for non-teaching personnel in the form of professional development. Without professional

development, upskilling programs, and engagement opportunities, non-teaching personnel lack visibility, disengage, and ultimately may separate from institutions of basic education. Deliberate organizational efforts to provide access to new learning opportunities and promote personal growth among non-teaching personnel is the development and institutionalization of centers for professional development, also called staff development centers, and staff training and professional development centers including upskilling programs.

In the study by Franks (2017), non-teaching personnel are integral to student success and educational development. Some non-teaching personnel help the schools' direction through administration and capability building towards an effective public institution and organization towards dispensing of public duties. Goot (2017), reinforced the importance of how non-teaching personnel influence an agency's overall development. In addition to serving as development navigators and helping the trajectory of most educational organizations, non-teaching personnel maintain campus operations so students can focus on learning, and teachers can focus on teaching. Thus, their engagement, professional development, and personal growth are instrumental to the functioning of higher education.

Initially, professional development aimed to improve employee performance deficiencies as mentioned by Rebore (2019). However, professional development has become a significant factor in connecting employees to their workplace and promoting group cohesiveness and a sense of community. Employee well-being, high employee engagement, and professional development are connected and correlate with organizational social capital. Hence, there is a need to navigate through the competencies of non-teaching personnel by providing an upskilling program to explore and catapult the road for educational development as drivers of leadership, administration, and internal and external processes. Organizational development is the key factor toward the effective delivery of services and duties and responsibilities toward the public good. Most organizations implement organizational and systemic mechanisms for the development of their employees in terms of personal and professional aspects and the improvement of the organization or agency.

Despite the number of research investigating the impact of training and upskilling on the performance of employees and in identifying the competencies of non-teaching personnel, few studies have tackled the issue at educational institutions involving non-teaching personnel, which are specific governmental agencies and organizations. In the Schools Division of the City of Ilagan, training development of teaching and non-teaching personnel has been an upward trend to navigate its employees' personal and professional efficacy. However, the question of the impact of training on the personal and professional development of non-teaching personnel has undeniably placed administrative improvement upon the extent of training improvement. The transformation of training into productivity and organizational development leads to numerous concerns about its alignment with the relevance and significance of such training.

Therefore, it is vital to understand the role of professional development and upskilling programs in shaping professional development experiences and employee engagement among non-teaching personnel. As immersed in the administrative works, the researcher is imbued with great fidelity to the thrusts and principles of this study as it manifestly implores work experiences and duties prescribed by the Department. In lieu of this, the role of non-teaching personnel is further enhanced upon technical assistance and other improvements provided by the Schools Division Office of the City of Ilagan. Hence, the necessity augments for a developmental and innovative upskilling program to address such work demands arising from the workplace.

This study examined the role of a specific type of non-teaching staff for a school's division and school organization, intending to promote and establish an improved upskilling program for the role of these valuable employees. This study aimed to identify and improve the competencies of non-teaching employees of elementary schools, secondary schools, and offices in the Schools Division of the City of Ilagan towards devising an upskilling program.

Conceptual Framework

The determination of the competencies of non-teaching personnel is an integral process of educational organizations' development as well as with the internal and external administrative processes of a school's division office. This study was anchored from the Strategic Performance Management System of the Civil Service Commission of the Philippines.

The Strategic Performance Management System (SPMS) is a mechanism that links employee performance with organizational performance to enhance the performance orientation of the compensation system. It ensures that the employee achieves the objectives set by the organization and the organization, on the other hand, achieves the objectives that it has set as its strategic plan.

The SPMS Objectives are: (a) to concretize the linkage of organizational performance with the Philippine Development Plan, Agency Strategic Plan, and Organizational Performance Indicator Framework OPIF; (b) to ensure organizational and individual effectiveness by cascading institutional accountabilities to the various levels of the organization; and (c) to link performance management with other HR systems.

The SPMS has the following basic elements: a) Goals that are aligned to agency mandate and organizational priorities; b) System that is outputs/outcomes-oriented; c) A team approach to performance management; d) Forms that are user-friendly and shows alignment of individual and organizational goals; e) Information systems that support monitoring and evaluation; and f) A Communication plan.

More importantly, the SPMS complements the Results-Based Performance Management System that is implemented by the Office of the President and that links organizational performance to societal goals. Just like the teaching personnel, non-

teaching personnel also have competencies that are anchored from the job descriptions according to their positions and described by their Key Result Areas or KRAs. The RPMS was designed with the intent of improving teacher quality. It aims to align performance targets and accomplishments with the PPST. In RPMS, teachers are provided with Key Result Areas (KRA), which are the general outputs or outcomes that are expected of them.

The past performance evaluation and appraisal systems that CSC implemented over the years have largely focused only on individual appraisals, which were used for personnel actions such as incentives, promotion, and separation. However, they have not shown how employee performance has contributed to or hindered organizational effectiveness. To address the gaps and weaknesses found in previous evaluation systems, the CSC recently introduced the Strategic Performance Management System (SPMS) after its pilot test in 2011. The SPMS incorporates the positive features of past initiatives. Like its predecessor, PMS-OPES, the SPMS seeks to link individual performance with the agency's organizational vision, mission, and strategic goals. With some adjustments, it also makes use of existing performance evaluation and management systems and links performance management with other human resource (HR) systems.

The study made use of the Input-Process-Output type. The input box in Figure 1 consists of the non-teaching personnel's profile including sex, age, position/designation, type of school/office assignment, highest educational attainment, and relevant trainings attended for the last three years. The input box also includes the Level of Competence of Non-Teaching Personnel in terms of Self-Management; Professionalism and Ethics; Result Focus, Teamwork; Service Orientation; and Innovation. Finally, it also includes the Level of Performance of Non-Teaching Personnel based on the Key Result Areas of their Individual/Office Performance Commitment Review Form.

The process box reflects the process phase which includes the analyses of the variables including respondents' profiles, the level of competence of non-teaching personnel, and the level of performance of non-teaching personnel based on the Key Result Areas. Finally, the output box contains the Level of Competence and Level of Performance of Non-Teaching Personnel as a basis for an upskilling program.

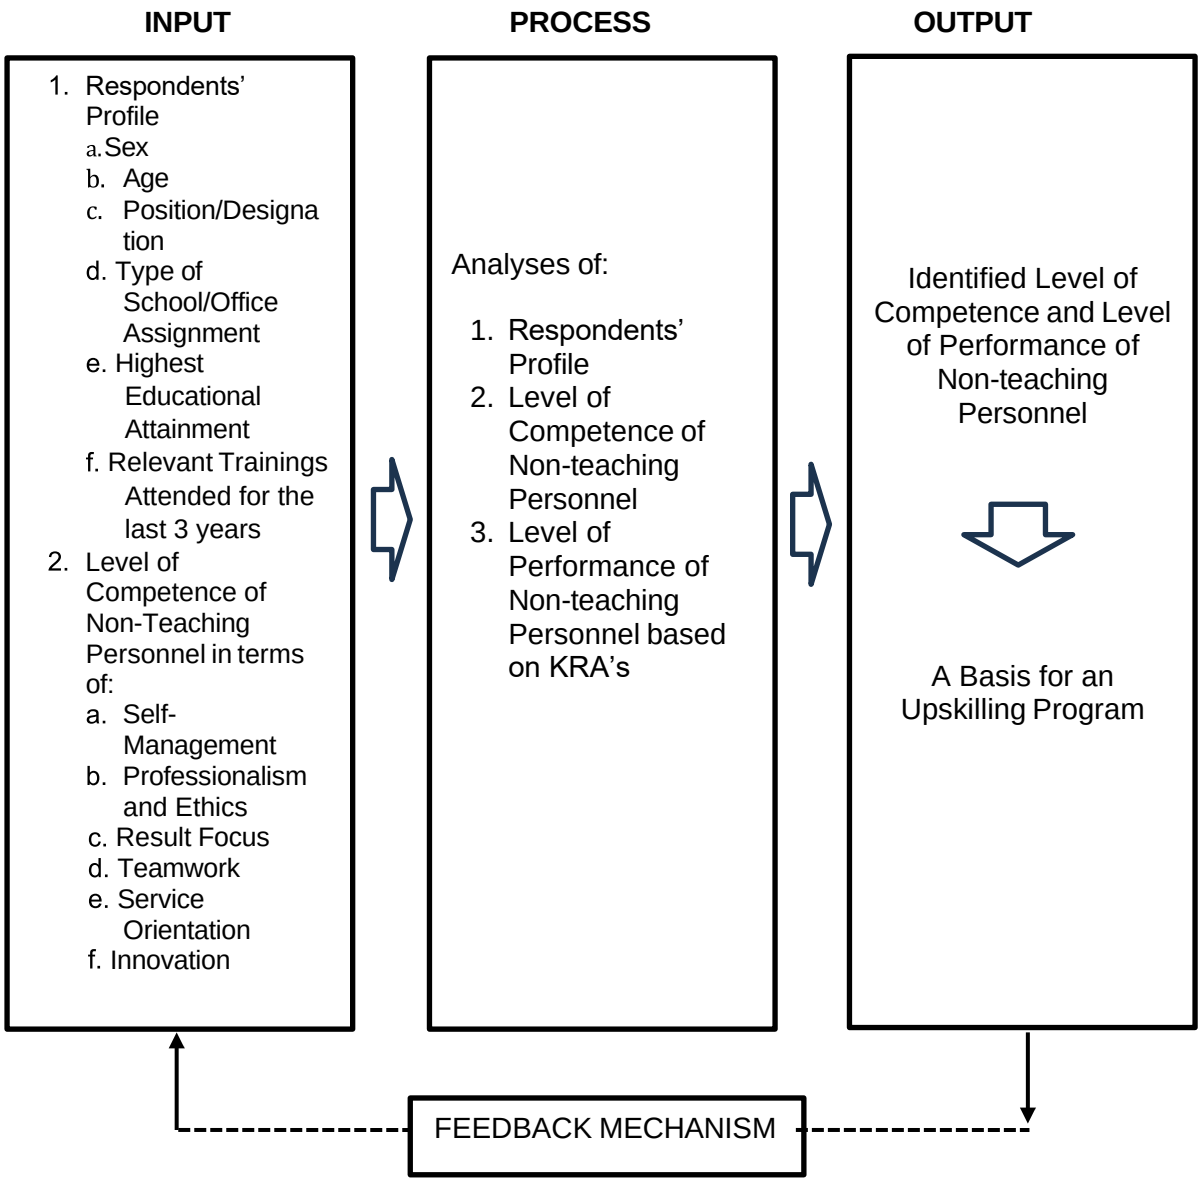

Figure 1. The Input-Process-Output Model of the Study

Research Questions

The study aimed to identify and determine the competencies of non-teaching personnel in the City Division of Ilagan as a basis for an upskilling program. Specifically, the study sought to answer the following questions:

1. What is the profile of the respondents in terms of the following:
    a. Sex;
    b. Age;
    c. Position/Designation;
    d. Type of School/Office Assignment;

e. Highest Educational Attainment; and
f. Relevant Trainings Attended (for last three years)

2. How competent are the Non-Teaching Personnel in the City Division of Ilagan in terms of the following:
   a. Self-Management;
   b. Professionalism and Ethics;
   c. Result Focus
   d. Teamwork;
   e. Service Orientation;
   f. Innovation.
3. Is there a significant difference in the level of competence of the respondents when grouped according to their profile?
4. What is the level of performance of Non-Teaching Personnel based on the Key Result Areas (KRAs)?
5. Is there a significant difference in the level of Performance of Non-Teaching Personnel in terms of Key Result Areas (KRAs) when grouped according to profile?
6. Is there a significant relationship between the level of competencies and the level of performance of the Non-Teaching Personnel?

METHODOLOGY

Research Design

The study utilized a descriptive inferential research design. This provides an accurate and valid presentation of the factors or variables that pertain to research questions. This study described the competencies of non-teaching personnel in the Schools Division of the City of Ilagan and its impact on the personal and professional skills development and efficacy of non-teaching personnel as a basis for an upskilling program, thus the descriptive method is appropriate for this research since this method is used for gathering current conditions.

The correlational approach was further utilized to gauge relationships between the described and identified research variables. In this study, the correlational approach was used to test the relationship between the level of competencies and the level of performance of the Non-Teaching Personnel. Moreover, a significant difference was tested between and among variables including the profile of the respondents, competencies, and performance of the respondents using their performance rating from the Key Result Areas in their Individual Performance Commitment Review Form.

Locale of the Study

This research work was conducted in the public elementary and secondary schools including the non-teaching personnel of the Schools Division of the City of Ilagan. The City of Ilagan is mainly composed of rural areas interconnected by rivers as the main body

of water in the city. The rural areas compose the most parts of the city including the elementary schools, integrated schools, and secondary schools where the non-teaching personnel are deployed. On the other hand, the urban areas are home to the biggest secondary and elementary schools in the Division, the Schools Division of the City of Ilagan is also located adjacent to the biggest secondary school in the City of Ilagan – the Isabela National High School. Some schools in the urban areas also compose most of the employees and non-teaching personnel in the Schools Division of the City of Ilagan. The maps presented below are the geographical classifications of the rural and urban areas of the City of Ilagan.

Selection and Description of the Respondents

The study included the entire population of non-teaching personnel in the Schools Division of the City of Ilagan as respondents in the study.

The respondents were composed of Administrative Officers, Administrative Assistants, Administrative Aides, Accountants, and Budget Officers employed in the Schools Division of the City of Ilagan and deployed in different schools and the offices of the Schools Division of the City of Ilagan. Table 1 presents the distribution of the respondents by school and administrative offices in the Schools Division of the City of Ilagan.

Table 1. Description of Respondents in the Study

TYPE OF SCHOOL/ OFFICE	DESCRIPTION OF RESPONDENTS IN THE STUDY												
	AA IV	AA VI	ADAS I	ADAS II	ADAS III	AO I	AO II	AO IV	AO V	ACCT. I	ACCT. III	B.O. I	TOTAL
Elementary				7	9		26						42
Secondary	7	1		11		1	1			1			22
Senior High School				1	5		1						7
Division Office	1	2	3	3	6		11	4	1		1	1	33
TOTAL	8	3	3	22	20	1	39	4	1	1	1	1	104

Data Gathering Instruments

Survey-Questionnaire. This research employed a survey questionnaire as the main type of research instrument. The questionnaire elicited the competence of non-teaching personnel in the Schools Division of the City of Ilagan as a basis for an upskilling program. The survey questionnaire was adapted from the Core Behavioral Competencies of the Individual/Office Performance Commitment Review Form of the respondents. In

addition, the performance level part of the questionnaire was derived from their Individual/Office Performance Commitment Review Form.

The first part of the survey questionnaire composes the profile of the respondents including sex, age, position/designation, type of school/ office assignment, highest educational attainment, and relevant trainings attended in the last three years.

The second part of the questionnaire includes the following areas of competence of non-teaching personnel: Self-Management, Professionalism and Ethics, Result Focus, Teamwork, Service Orientation & Innovation. The items of competencies were derived from the Core Behavioral Competencies of the Individual/Office Performance Commitment Review Form – Result-Based Performance Management System of Non-Teaching Personnel of the Department of Education. This part is scored through a four-point Likert Scale.

Finally, the third part of the survey questionnaire elicits the respondents' performance based on KRAs (Key Result Areas). This data was gathered through the face-to-face method of data gathering. Further, the respondents' performance was based on documentary analysis and interviews.

Interview Guide. The interview procedure was conducted along with the floating of the questionnaire to the respondents. Aside from the survey questionnaire, respondents were interviewed using a non-structured interview guide.

Documentary Analysis. Documentary analysis was also conducted in the determination of common and specific responses of the respondents in their performance ratings. This was done by looking at and assessing their personal and individual files (IPCRF/OPCRF) to match the data needed for the whole conduct of the study.

Data Gathering Procedure

To conduct the research study, a letter of permission was sought from the office of the City Schools Division Superintendent. The researcher did the floating of the questionnaire through personal delivery to the respective schools or workplace assignments of the respondents. To ensure 100 percent retrieval of the questionnaire, the researcher carefully supervised the data collection.

In compliance with the Data Privacy Act, the researcher first sought the approval of the respondents and was constantly informed that the data and information to be gathered from the respondents were treated with utmost confidentiality. The gathered data were recorded, organized, analyzed, and interpreted accordingly.

Finally, the researcher also sought and requested the copies of respondents' Individual or Office Performance Commitment Review Form from the Human Resources Development Office for validation and verification purposes.

Statistical Treatment of Data

The statistical tools utilized in treating data to be gathered included the following:

1. For the first profile of the respondents, descriptive statistics such as frequency count and percentage were used to treat the variables;
2. In identifying the levels of competence and performance of the respondents based on their KRAs, the weighted mean was utilized;
3. Inferential statistics including the One-Way ANOVA were used to test the significant difference between and among the identified variables in the study; and
4. Pearson- r was further used to identify the relationship between and among the variables.

Data Analysis Procedure

To determine the level of competence of non-teaching personnel from the subparts of the survey questionnaire, the following was used:
Interpretation of the Level of Competence

Point	Scale	Qualitative Description
4	3.25 – 4.00	Highly Competent
3	2.50 – 3.24	Competent
2	1.75 – 2.49	Fairly Competent
1	1.00 – 1.74	Not Competent

To determine the level of performance of non-teaching personnel, the following interpretation of the 5-point scale was utilized:
Interpretation of the Level of Performance

Point	Scale	Qualitative Description
5	4.50 – 5.00	Outstanding
4	3.50 – 4.49	Very Satisfactory
3	2.50 – 3.49	Satisfactory
2	1.50 – 2.49	Unsatisfactory
1	below – 1.49	Poor

RESULTS AND DISCUSSION

Profile of the Respondents

Table 2. Frequency and Percentage Distribution of the Respondents According to Sex

Sex	Frequency	Percentage
Male	33	31.73
Female	71	68.27

Total	104	100.0

Table 2 presents the frequency and percentage distribution of the respondents according to their sex. From the data presented, it could be gleaned that most of the respondents are female with 71 or 68.27 percent while only 33 or 31.73 percent male respondents.

This means that there are more female administrative and non-teaching employees in the Schools Division Office of the City of Ilagan than male employees. This is evident in the distribution of respondents in schools and offices and departments of the Schools Division Office. As affirmed in the study of Jeremiah, et. al (2014), there are more women in the administrative field than men who dominate other fields such as engineering and sciences. Here, as concluded by Franks (2017) administrative duties and responsibilities are often disposed of and deployed to women employees who correspond to the requirements, qualifications, and other educational requisites of the specific administrative jobs. Hence, institutions with huge and established administrative offices hire more women applicants who satisfy the required competencies.

Table 3. Frequency and Percentage Distribution of the Respondents According to Age

Age	Frequency	Percentage
20 – 25 Years Old	3	2.88
26 – 30 Years Old	31	29.81
31 – 35 Years Old	30	28.85
36 – 40 Years Old	14	13.46
41 – onwards	26	25.00
Total	104	100.0

Table 3 shows the distribution of frequency and percentage of the respondents in terms of their age range. From the data presented, it reveals that most of the respondents with 31 or 29.81 percent responses belong to the age group between 26 to 30 years old. Moreover, there are 30 or 28.85 percent of respondents belong to the age group between 31 – 35 years old, 14 or 13.46 percent of respondents who belong to the 36 – 40 years old age group, and 26 or 25 percent of respondents who are categorized under 41 years old and above.

Meanwhile, there are only three 2.88 percent of respondents who belong to the age group from 20 to 25 years old. This means that there are only a few fresh graduates who belong to the latter age group who are employed in administrative positions and designations in schools and offices of the Schools Division Office of the City of Ilagan. As emphasized by Mercado (2023), this age group characterizes a large volume of younger employees who seek to establish themselves in the administrative workplace.

Table 4. Frequency and Percentage Distribution of the Respondents According to Position/Designation

Position/Designation	Frequency	Percentage
Administrative Aide IV	8	7.69
Administrative Aide VI	3	2.88
Administrative Assistant I	3	2.88
Administrative Assistant II	22	21.15
Administrative Assistant III	20	19.23
Administrative Officer I	1	0.96
Administrative Officer II	39	37.5
Administrative Officer III	0	0.00
Administrative Officer IV	4	3.85
Administrative Officer V	1	0.96
Accountant I	1	0.96
Accountant II	0	0.00
Accountant III	1	0.96
Budget Officer III	1	0.96
Total	104	100.0

The table above enshrines the distribution of frequency and percentage of the respondent's position or designation as non-teaching personnel in the Schools Division of the City of Ilagan.

Of all the respondents, most of them hold the position of Administrative Officer II with 39 or 37.5 percent. There are 22 or 21.15 percent of the respondents hold the position of Administrative Assistant II. Twenty or 19.23 percent of the respondents are employed as Administrative Assistant III. There are eight or 7.69 percent of the respondents hold the position of Administrative Aide IV, and 4 or 3.85 respondents are employed as Administrative Officer IV Three or 2.88 percent of the respondents hold the position of Administrative Aide VI.

In the position of Administrative Assistants, there are only 3 or 2.88 percent of respondents who are employed as Administrative Assistant I. For the Administrative Officer position, Administrative Officer I is reserved for only one or 0.96 percent of respondents the same as Administrative Officer V, Accountant I, Accountant III, Budget Officer III.

Finally, there are only three employees who are employed in the accounting department of the Schools Division of the City of Ilagan who hold the positions of Accountant I, Accountant III, and Budget Officer III. As per DepEd Memorandum Order No. 35 s. 2017, these positions are tasked to manage and supervise the finances, accounting, and other related management schemes of the Schools Division Office relative to their job descriptions.

Table 5. Frequency and Percentage Distribution of the Respondents According to the Type of School/Office Assignment

Type of School/Office Assignment	Frequency	Percentage
Small School	30	28.85
Medium School	21	20.19
Large School	29	27.88
Division Office	24	23.08
Total	104	100.0

The table above shows the frequency and percentage distribution of the respondents according to the type of school or assignment. It is revealed that 30 or 28.85 percent of respondents are deployed in small schools. These schools are mainly elementary schools which are distributed in almost every barangay of the City of Ilagan. Twenty-nine or 27.88 percent of non-teaching personnel who are deployed in the large school category. These schools are composed of national high schools, central schools, and large integrated schools that cater to the complete basic education system. In medium schools which are some of the elementary schools and integrated schools in the City Division of Ilagan, there are 21 or 20.19 percent non-teaching personnel deployed in these schools.

On the other hand, there are 24 or 23.08 percent non-teaching personnel deployed in the Schools Division Office. As per DepEd Memorandum Order No. 35 s. 2017, these non-teaching personnel are delegated to the offices and departments of the Schools Division Office which include the Human Resources Office, Accounting Office, and other administrative departments.

Table 6. Frequency and Percentage Distribution of the Respondents According to Highest Educational Attainment

Highest Educational Attainment	Frequency	Percentage
College Graduate	67	64.42
Master's Degree	35	33.65
Doctor's Degree	2	1.92
Total	104	100.0

Table 6 represents the frequency and percentage distribution of the respondents in terms of their highest educational attainment. The data reveals that 67 or 64.42 percent of respondents are college graduates, while 35 or 33.65 percent of respondents have master's degrees. However, only 2 or 1.92 percent of respondents are doctorate holders.

The data implies that most respondents only attended bachelor's education as their highest educational attainment which signifies that no other further continuing professional education or degree was finished. This further signifies that there is a need for further educational development programs for non-teaching personnel to cope with the demands of educational requirements for further or higher administrative positions with accompanied tasks, duties, and responsibilities.

As discussed under the Civil Service Commission – Competency-Based Recruitment and Qualifications Standards, employees of the government with the main duties of governmental and public service in nature are required to uphold the requirements set forth by the commission which includes the combination and cumulative possession of eligibility, education, training, experience, and competencies. In the education requirement, employees must possess the minimum educational qualifications relative to the position or office to be taken. Further, the higher the public office sought, the higher the educational qualification required.

Table 7. Frequency and Rank Distribution of the Respondents According to Relevant Trainings Attended in the Last 3 Years

Relevant Trainings Attended in the Last 3 Years	Frequency	Rank
Finance Management and Budget Related	75	1
Administrative and Technical Support	54	2
Accounting and Auditing Services	41	3
Human Resources and Personnel Management	40	4
Property and Resources Custodianship	28	5
Records and Files Management	32	6
Coordination, Communication, and	18	7
Organizational Support	15	8

The table above reflects the frequency and ranking of the relevant training courses for the last three years attended by the non-teaching personnel of the Schools Division of the City of Ilagan.

From the data presented, it can be gleaned that the field of Finance Management and Budget Related is the most attended training course attended by the respondents with 75 respondents who are engaged in the said training course. This field is not limited to training in financial management, budget allocation and appropriation, school financial status, and other rules and promulgations relevant to financial management.

The second most attended training course is Administrative and Technical Support with 54 respondents who are engaged in the said course. This training course offers several aspects including the provision of aid and information, civil service procedures, requirements, qualifications for hiring and promotion, and other administrative and technical support for papers and procedures. The third most attended training course is Accounting and Auditing Services with 41 respondents. This is mostly common to accountants and administrative officers and assistants with similar duties and responsibilities in school and office accounting and auditing.

Meanwhile, 40 respondents attended course trainings in the field of Human Resources and Personnel Management. This is usually attended by administrative officers and administrative assistants. 32 respondents are engaged in attending training courses relating to Records and Files Management which are fundamentally one of the

main duties and responsibilities of administrative officers, administrative aides, and administrative assistants.

Moreover, the last three training courses that the respondents attended for the last years are training courses in Property and Resources Custodianship with 28 respondents, Coordination and Communication with 18 respondents, and Organizational Support with 15 respondents.

The training of non-teaching staff in experiential higher education institutions makes it possible to act with a certain meaning in certain situations. This allows for greater direct contact, strengthens the relationship between the individual and the object, and supports reflection and recall of experiences as provided by the Civil Service Commission. Further, as emphasized by Bilhim (2019), it is in this context that the exchange of experiences and comparisons of methods and results becomes relevant, creating space for collective work. It is a return to experience that enables transformation into formal knowledge, where the presence of partners translates into social interventions, essential for experiential knowledge to grow. The development of Human Resource Management, seen as a strategic factor, is the phase where we see changes in human resource management developed through administrative techniques, where there is a department of people to maintain only a predetermined order, for management based on the competitive advantage that is achieved by the factors people in the company.

Further, these descriptions for further training are enhanced and sought to be established by the PRIME-HRM of the Civil Service Commission. The Program to Institutionalize Meritocracy and Excellence in Human Resource Management (PRIME-HRM) integrates and enhances the Personnel Management Assessment and Assistance Program (PMAAP) and the CSC Agency Accreditation Program (CSCAAP). It is a mechanism that empowers government agencies by developing their human resource management competencies, systems, and practices toward HR excellence. PRIME-HRM entails greater engagement not just of the human resource management officer (HRMO) but also of the officials and the rank-and-file employees of the agency.

Level of Competence of the Non-Teaching Personnel in the Schools Division of the City of Ilagan

Table 8. Level of Competence of the Non-Teaching Personnel in the Schools Division of the City of Ilagan in Terms of Self-Management

Indicators	Weighted Mean	Qualitative Description
1. Set personal goals and direction, needs and development.	3.58	Highly Competent
2. Undertake personal actions and behaviors that are clear and purposive and take into account personal goals and values congruent to those of the organization.	3.53	Highly Competent
3. Display emotional maturity and enthusiasm for and is challenged by higher goals.	3.52	Highly Competent

4. Prioritize work tasks and schedules (through Gantt charts, checklists, etc.) to achieve goals.	3.57	Highly Competent
5. Set high-quality, challenging, realistic goals for self and others.	3.54	Highly Competent
Average Weighted Mean	3.55	Highly Competent

Table 8 shows the level of competence of the non-teaching personnel in the Schools Division of the City of Ilagan in terms of Self-Management.

As presented above, respondents under this indicator of competence obtained an average weighted mean of 3.55 which means that the non-teaching personnel of the Schools Division of the City of Ilagan are highly competent. Further, this implies that employees possess features and administrative prowess that qualify them to exhibit a sense of self-organization and self-management. Self-management allows employees to control and handle emotions and other personal circumstances that enable them to produce quality and standard results in their workstations.

In this indicator, Item 1 had the highest weighted mean of 3.58 which categorically implies that respondents set personal goals and direction, needs and development. This aspect manifests respondents' ability to zeal personal and professional goals and direction for further growth and development as members of an organizational institution. Item 3, on the other hand, obtained a weighted mean of 3.52 which means that the respondents are still highly competent in displaying emotional maturity and enthusiasm for and are challenged by higher goals.

As affirmed by Bakker (2017), competence goes higher when employees share their values and personal goals in an organization. When shared values become embedded within an organization, they form the foundation of the organizational culture. When engaged, employees feel compelled to strive towards a challenging goal. Engaged employees become absorbed in their work, experiencing a flaw in which they lose track of time and diminish their response to distractions.

Table 9. Level of Competence of Non-Teaching Personnel in the Schools Division of the City of Ilagan in Terms of Professionalism and Ethics

Indicators	Weighted Mean	Qualitative Description
1. Demonstrate the values and behavior enshrined in the Norms of Conduct and Ethical Standards for public officials and employees (RA 6713).	3.62	Highly Competent
2. Practice ethical and professional behavior and conduct taking into account the impact of his/her actions and decisions.	3.64	Highly Competent
3. Maintain a professional image: being trustworthy, regularity of attendance and	3.63	Highly Competent

punctuality, good grooming and communication.		
4. Make personal sacrifices to meet the organization's needs.	3.58	Highly Competent
5. Act with a sense of urgency and responsibility to meet the organization's needs, improve systems, and help others improve their effectiveness.	3.60	Highly Competent
Average Weighted Mean	3.61	Highly Competent

Table 9 indicates the level of competence of the non-teaching personnel in the Schools Division of the City of Ilagan in terms of Professionalism and Ethics.

It can be gleaned from the table shown above that the non-teaching personnel of the Schools Division of the City of Ilagan are highly competent in terms of professionalism and ethics with an average weighted mean of 3.61. This signifies that these employees demonstrate attributes and features expected from a government employee in accordance with rules, regulations, and policies set forth by the State including the Civil Service Rules for government employees, and other relevant laws regulating the conduct of public employees in the public service.

Furthermore, Item 2 obtained the highest weighted mean in this indicator which means that the non-teaching personnel of the Schools Division of the City of Ilagan are highly competent in the practice of ethical and professional behavior and conduct considering the impact of their actions and decisions. On the other hand, Item 4 obtained a weighted mean of 3.58 which implies that respondents are highly competent in making personal sacrifices to meet the organization's needs.

This finding affirms the study of Davies and Anderson (2010) who illustrated work ethics as a component of work engagement as one of the most critical issues in business, specifically in managing human resources. An organization's good ethical culture will provide direction and guidance for building united, harmonious, and ethical employees in various areas. There is no guidance or standard of ethics, however, that is absolute, appropriate, and applicable to any company. The ethics code is a good indicator of organizational commitment to accepting and implementing the need for ethical behaviors. Further, Work ethics can be called a cultural norm that advocates holding people accountable and fully responsible for the work they do, based on the premise that work has an intrinsic value to the individual.

Finally, the Program to Institutionalize Meritocracy and Excellence in Human Resource Management (PRIME-HRM) integrates and enhances the Personnel Management Assessment and Assistance Program (PMAAP) and the CSC Agency Accreditation Program (CSCAAP). This program mandated the necessity to further enhance the ethical and professional standards among employees of the government.

Table 10. Level of Competence of Non-Teaching Personnel in the Schools Division of the City of Ilagan in Terms of Result Focus

Indicators	Weighted Mean	Qualitative Description
1. Achieve results with optimal use of time and resources most of the time.	3.52	Highly Competent
2. Avoid rework, mistakes, and wastage through effective work methods by placing organizational needs before personal needs.	3.44	Highly Competent
3. Deliver error-free outputs most of the time by conforming to standard operating procedures correctly and consistently. Able to produce very satisfactory quality of work in terms of usefulness/acceptability and completeness with no supervision required.	3.29	Highly Competent
4. Express a desire to do better and may express frustration at waste or inefficiency. May focus on new or more precise ways of meeting goals set.	3.44	Highly Competent
5. Make specific changes in the system or in own work methods to improve performance. Examples may include doing something better, faster, at a lower cost, more efficiently; or improving quality, customer satisfaction, morale, without setting any specific goal.	3.44	Highly Competent
Average Weighted Mean	3.43	Highly Competent

Table 10 reflects the level of competence of the non-teaching personnel of the Schools Division of the City of Ilagan in terms of Result Focus.

It is reflected that respondents are highly competent in delivering services because of their result-oriented features and characteristics, with a weighted mean of 3.43. In this indicator, Item 2 had the highest weighted mean of 3.52. This signifies that respondents are highly competent in achieving results with optimal use of time and resources most of the time. Meanwhile, a weighted mean of 3.29 qualifies the respondents as highly competent in delivering error-free outputs most of the time by conforming to standard operating procedures correctly and consistently. In addition, they are also able to produce a very satisfactory quality of work in terms of usefulness/acceptability and completeness with no supervision required.

Result Focus, as provided in the Individual/Office Performance Commitment Review Form and the Strategic Performance Management System, result focus implies a target and the means to accomplish the goals and target of the employee or office. In the study of Alaswad (2021), this finding is affirmed when he found out that employees are highly competent and productive when an organization sets goals and directions that are outcomes-based and result-oriented. He further stated that employees' productivity and result-oriented are critical to raising employees' performance which contributes to the

success of organizations, and it is influenced by many factors. This research aims at examining the influence of work environment, leadership styles, and organizational culture on employees' productivity. Finally, he recommended that an employee's performance depends on various factors, but the most important factor is training, which enhances the capabilities of employees.

Table 11. Level of Competence of Non-Teaching Personnel in the Schools Division of the City of Ilagan in Terms of Teamwork

Indicators	Weighted Mean	Qualitative Description
1. Willingly does his/her share of responsibility.	3.83	Highly Competent
2. Promote collaboration and removes barriers to teamwork and goal accomplishment across the organization.	3.66	Highly Competent
3. Apply negotiation principles in arriving at win-win agreements.	3.60	Highly Competent
4. Drive consensus and team ownership of decisions.	3.58	Highly Competent
5. Work constructively and collaboratively with others and across organizations to accomplish organizational goals and objectives.	3.66	Highly Competent
Average Weighted Mean	3.67	Highly Competent

Table 11 represents the level of competence of the respondents in terms of Teamwork.

It is reflected from the table that the personnel are highly competent in working and collaborating as a team on their workstations. An average weighted mean of 3.67 implies that working in a group is one of the top features of the non-teaching personnel of the Schools Division of the City of Ilagan.

Moreover, Item 1 gained the highest weighted mean of 3.83 which indicates that respondents are highly competent and are willing to do their share of responsibility. A weighted mean of 3.60 also manifests that respondents are highly competent in applying negotiation principles in arriving at win-win agreements.

Teamwork is a highly anticipated and managed organizational feature that every organizational institution hones to cultivate and gauge to effectuate and deliver public service. As pointed out by Hanaysha (2016), he examined the effects of employee empowerment, teamwork, and employee training on organizational commitment. It was found that the three variables mentioned have a significant positive impact on organizational commitment. On the other hand, Hulpia, Devos, & Keer (2011) also examined the relationship between school leadership and non-teachers organizational commitment because of the organizational culture of teamwork and collaboration. The work productivity of an individual is an organizational asset that can be equated to

progress and success. It provides satisfaction to the employees, the organization, and other stakeholders. Work productivity is also important in terms of providing sound and quality service to different stakeholders. This boiled down to the organizational virtue of working in a team.

Table 12. Level of Competence of the Non-Teaching Personnel in the Schools Division of the City of Ilagan in Terms of Service Orientation

Indicators	Weighted Mean	Qualitative Description
1. Can explain and articulate organizational directions, issues, and problems.	3.38	Highly Competent
2. Take personal responsibility for dealing with and/or correcting customer service issues and concerns.	3.44	Highly Competent
3. Initiate activities that promote advocacy for men's and women's empowerment.	3.36	Highly Competent
4. Participate in updating office vision, mission, mandates, and strategies based on DepEd strategies and directions.	3.35	Highly Competent
5. Develop and adopt service improvement programs through simplified procedures that will further enhance service delivery.	3.44	Highly Competent
Average Weighted Mean	3.39	Highly Competent

Table 12 reflects the level of competence of the non-teaching personnel of the Schools Division of the City of Ilagan in terms of Service Orientation.

The data reveals that the respondents are highly competent in delivering public and general services with an average weighted mean of 3.39. Service-oriented employees exhibit high quality and standard work productivity that match their efforts, dedication, and commitment to fulfill and dispose of organizational goals and directions. As affirmed by Al-Mzary (2015), while employee performance is one of the crucial measures emphasized by top management, employees are more concerned about their service delivery and own productivity and are increasingly aware of the accelerated obsolescence of knowledge and skills in their turbulent environment. As the literature suggests, by effectively training and developing employees, they will become more aligned for career growth—career potential enhances personal motivation.

In this indicator, Item 5 had the highest weighted mean of 3.44 which indicates that respondents are highly competent in developing and adopting service improvement programs through simplified procedures that will further enhance service delivery. Moreover, Item 4 also states that respondents participate in updating of office vision, mission, mandates, and strategies based on DepEd strategies and directions.

Amisano (2010) claims that employees' service delivery is one of the most essential resources and an important asset in any organization. Various human resource functions give an organization a competitive edge, but most scholars argue that human

resource functions become only operational when training has run through them all. This makes training and development an essential feature in the survival of any organization. These are further developed by training courses. According to Barreto (2020), staff training and development have been identified by various scholars to be very crucial to an organization and its effectiveness. In light of the above, organizations are therefore encouraged to train and develop their staff to the maximum of their ability to enhance their effectiveness. Employee training and development are typically associated with the improvement of the performance, knowledge, and skills of employees in their present job position.

Table 13. Level of Competence of the Non-Teaching Employees in the Schools Division of the City of Ilagan in Terms of Innovation

Indicators	Weighted Mean	Qualitative Description
1. Examine the root cause of problems and suggest effective solutions. Fosters new ideas, processes, and suggests better ways to do things (cost and/or operational efficiency).	3.32	Highly Competent
2. Demonstrate an ability to think “beyond the box”. Continuously focuses on improving personal productivity to create higher value and results.	3.38	Highly Competent
3. Promote a creative climate and inspires co – workers to develop original ideas or solutions.	3.38	Highly Competent
4. Translate creative thinking into tangible changes and solutions that improve the work unit and organization.	3.34	Highly Competent
5. Use ingenious methods to accomplish responsibilities. Demonstrates resourcefulness and the ability to succeed with minimal resources.	3.34	Highly Competent
Average Weighted Mean	3.35	Highly Competent

The table reveals the level of competence of the non-teaching personnel of the Schools Division of the City of Ilagan in terms of Innovation.

It is revealed from the table that the respondents are highly competent with an average weighted mean of 3.34 in the field of Innovation as an aspect of their competence. In this indicator, it is also revealed that respondents are highly competent in demonstrating an ability to think “beyond the box” and continuously focus on improving personal productivity to create higher value and results. In addition, they are also active in promoting a creative climate and inspiring co-workers to develop original ideas or solutions. Lastly, with a weighted mean of 3.32, respondents are beyond competent in examining the root cause of problems and suggesting effective solutions. They also foster

new ideas, and processes, and suggest better ways to do things (cost and/or operational efficiency).

As affirmed by Rebore (2019), the competencies of non-teaching employees are composed of a wide array of fields that transpire from their personal and professional growth and development. These skills are anchored from the necessary competencies prescribed by their institutional organizations, job descriptions, and other organizational factors that significantly affect their upskilling processes. In this field, innovation is a factor in upgrading the level of competence of non-teaching employees in an educational institution. In the study of Wanjiku (2021), effective staff development through innovation is essential to support new approaches to gauge organizational directions, to meet changing needs of institutions. Innovation serves institutional needs and enhances the ability of the organization to meet its goals. It is an effort to help employees learn how to do their jobs better. It is important to establish working conditions to attract good-quality personnel committed to achieving organizational objectives in both the public and private sectors.

According to Khawaja & Nadeem (2013), innovation is viewed as a systematic approach to learning and development that improves individual, group, and organization. Thus, it is the series of activities organizations embark on that leads to knowledge or skills acquisition for growing purposes. Thereby, contributing to the well-being and performance of human capital, organizations, as well as society at large. Innovation serves as an act of intervention to improve an organization's goods and services quality in stiff competition through improvements in the technical skills of employees.

Table 14. Overall Level of Competence of the Non-Teaching Personnel in the Schools Division of the City of Ilagan

Indicators	Weighted Mean	Qualitative Description
a. Self-Management	3.55	Highly Competent
b. Professionalism and Ethics	3.61	Highly Competent
c. Result Focus	3.43	Highly Competent
d. Teamwork	3.67	Highly Competent
e. Service Orientation	3.39	Highly Competent
f. Innovation	3.35	Highly Competent
Average Weighted Mean	3.50	Highly Competent

Table 14 summarizes the level of competence of non-teaching personnel of the Schools Division of the City of Ilagan from all the indicators of competence of non-teaching personnel. Overall, 104 non-teaching employees of the Schools Division Office are highly competent with an average weighted mean of 3.50. This means that they demonstrate a favorable level of competence and productivity which could result in the desired organizational outcomes. In summary, all indicators obtained a "Highly Competent" mark from the scale of level of competence Self-management has a weighted mean of 3.55; 3.61 for Professionalism and Ethics; Result Focus – has 3.43; 3.67 for Teamwork, Service Orientation has 3.39; and Innovation with 3.35.

Generally, the level of competence and the competencies present among non-teaching employees of an educational institution affect organizational productivity as a requisite in the disposition of public needs and delivery of services. These skills are anchored from the necessary competencies prescribed by their institutional organizations, job descriptions, and other organizational factors that significantly affect their upskilling processes. Emphasizing the importance of staff development in increasing effectiveness in the Schools Division, it is proven that staff development facilitates professional development for individuals and groups, enabling them to achieve their potential and contribute to the provision of excellence in the delivery of public services.

Hence, as pointed out by Dessler (2011), there is a need for an effective and trailblazing upskilling or training development program that would enhance and further develop the competence and competencies of non-teaching personnel to achieve the desired organizational goals and directions.

Comparison Between the Level of Competence of the Respondents According to the Profile Variables

Table 15. Results of the Test of Significant Difference in the Level of Competence of the Respondents in terms of Self-Management when grouped According to their Profile

Variables	Probability of F	Remarks
Self-Management and Sex	0.0321	Significant
Self-Management and Age	0.0230	Significant
Self-Management and Position/Designation	0.0221	Significant
Self-Management and Type of School/Office Assignment	0.0146	Significant
Self-Management and Highest Educational Attainment	0.0294	Significant
Self-Management and Relevant Trainings Attended for Last Three Years	0.0482	Significant

Table 15 presents the results of the test of significant differences in the level of competence of the respondents in terms of self-management when grouped according to their profile.

The results show that the F-probability values are less than 0.05. Hence, the null hypothesis is rejected at a 0.05 level of significance. Thus, there is a significant difference in the level of competence of the respondents in terms of self-management when grouped according to their profile. It implies that the non-teaching personnel in the City Division of Ilagan differ in their competency level in terms of self-management when clustered by their sex, age, position, type of school/office assignment, highest educational attainment, and relevant trainings attended for the last three years. Further, in comparing self-management and profile variables, the following obtained highest weighted mean for each profile variable: 3.56 for female respondents, 3.60 for respondents with age ranges from 26 to 30 years old, 4.00 for Administrative Officer I and Accountant I respondents, 3.63 for schools that are categorized as large schools, 3.80 for respondents with Doctor's

Degree, and 4.00 for relevant trainings in the fields of Human Resources and Personnel Management, Property and Resources Custodianship, and Technical Support.

This result affirmed the study of Franks (2017), it is established that self-management as an essential indicator of the level of competence of non-teaching personnel is zealous towards organizational and institutional development. In addition, when compared to the personal attributes of these non-teaching personnel, it is revealed that positive significance is present such as sex, age, position, and educational background of the respondents. Non-teaching personnel are integral to student success and educational development. Some non-teaching personnel help the schools' direction through administration and capability building towards an effective public institution and organization towards dispensing of public duties.

Further, as affirmed by Goot (2017), there is the importance of how non-teaching personnel influence an agency's overall development. In addition to serving as development navigators and helping the trajectory of most educational organizations, non-teaching personnel maintain campus operations so students can focus on learning, and teachers can focus on teaching. Thus, their engagement, professional development, and personal growth are instrumental to the functioning of higher education. Self-management is affected by employee's profile including sex and age. Franks (2017) further agreed that these variables are contributory aspects and factors in employees' manner of handling themselves in terms of relevant duties and responsibilities. Women employees, as further noted, can become strategic and organizational too as men also possess leadership and managerial abilities. Their age also manifests experiential activities that brought them to manage and handle positions or other administrative designations relative to their job description. Empirical research has instead highlighted the advantages for organizations of enhancing (for instance, by training activities) factors such as self-efficacy and the perception of control, rather than trying to remove obstacles to change according to de Jong et al. (2016). However, research that treats training for preparing an organizational change as a positive approach and emphasizes the strengths of individuals is still insufficient, and needs more empirical evidence, as advocated by recent literature.

During a radical organizational change, the perception of control and sense of self-efficacy are strategic assets for the involved people concurred by Avey et al.(2018) Successfully coping with change can be perceived by recipients as a challenging task, and can affect career choices (e.g., withdrawal behaviors or even the intention to resign). It has been found that an individual's self-efficacy plays a major role in how goals, tasks, and challenges are approached. Literature highlights that people with a strong sense of self-efficacy develop a deeper interest in the activities in which they participate, form a stronger sense of commitment to their interests and activities, recover quickly from setbacks and disappointments, and view challenging problems as tasks to be mastered. Change self-efficacy (often referred to as change confidence [CC]) is thus considered a pivotal factor in facing an organizational change successfully.

Training and educational backgrounds also affected employees' self-management mechanisms in dealing with administrative tasks. Initially, professional development aimed to improve employee performance deficiencies as emphasized by Rebore (2019). However, professional development has become a significant factor in connecting employees to their workplace and promoting group cohesiveness and a sense of community. Employees' high levels of employee engagement, training, and professional development are connected and correlate with organizational social capital.

Hence, there is a need to navigate through the competencies of non-teaching personnel by providing an upskilling program to explore and catapult the road for educational development as drivers of leadership, administration, and internal and external processes. In this study, the disparity of results between the younger and experienced employees is evidenced by the significant difference between self-management and profile variables of the age group. To resolve this, peer mentoring and coaching programs may be conducted to cater to and address the working experience gaps between the identified age groups.

Table 16. Results of the Test of Significant Difference in the Level of Competence of the Respondents in Terms of Professionalism and Ethics when Grouped According to their Profile

Variables	Probability of F	Remarks
Professionalism and Ethics and Sex	0.0178	Significant
Professionalism and Ethics and Age	0.0207	Significant
Professionalism and Ethics and Position/Designation	0.0398	Significant
Professionalism and Ethics and Type of School/Office Assignment	0.0222	Significant
Professionalism and Ethics and Highest Educational Attainment	0.0300	Significant
Professionalism and Ethics and Relevant Trainings Attended for the Last Three Years	0.0446	Significant

The table shows the results of the test of significant differences in the level of competence of the respondents in terms of professionalism and ethics when grouped according to their profile.

It is evident from the results that the probability of values of F is less than 0.05. This signifies the rejection of the null hypothesis at a 0.05 significance level. Therefore, there is a significant difference in the level of competence of the respondents in terms of professionalism and ethics when grouped according to their profile. It states that the non-teaching varies in their competence level on professionalism and ethics when they are grouped by their different profile variables. As appended, the non-teaching personnel are fully competent in professionalism and ethics but the highest mean among them are the male, age 20-25, administrative officer 1, accountants I and II, district school, and doctoral degree. While on the training attended, out of 41 classifications, six of these are competent while the rest are fully competent in this area of competence. Further, in comparing professionalism and ethics with their profile variables, the following variables

obtained the highest weighted mean, 3.64 for male respondents, 3.93 for respondents who are from the age range of 20 to 25 years old, 4.00 for Administrative Officer I, Accountant I, and Accountant III employees, 3.73 for respondents deployed in the Schools Division Office, 3.80 for respondents who have Doctors Degree, and 4.00 for relevant trainings in the fields of Human Resources and Personnel Management, Accounting and Auditing Services, and Property Resources and Custodianship.

As established by Cuizon (2018), professionalism and ethical or work values of non-teaching personnel of an educational institution are also affected by their profile variables including personal attributes and professional circumstances. According to Judge and Bretz, as cited by Cuizon (2018), work values were found to exhibit significant effects on job choice decisions. Further, individuals were more likely to choose jobs whose value content is like their own value orientation. Donald Super recognized that the self-concept changes and develops throughout people's lives because of experience. People successively refine their self-concept(s) over time and application to the world of work creates adaptation in their career choice. Professionalism and ethical standards are also exhibited from the respondents' educational backgrounds and positions and designations, it is concluded that when these employees hold higher designations which are administrative, there is more likely a higher expectation of transmission and practice of moral and legal ascendancy according to their job description. All of these are further developed by training and development.

Training and development, according to Oluwaseum (2018), is an important activity that increases the performance of employees in an organization and is a building block that enhances the growth and success of an organization. Training and development are the processes of investing in people so that they are equipped to perform well and are part of an overall human resource management approach that hopefully will result in people being motivated to perform. Finally, this is a platform for them to reintroduce the ethical standards and professional activities set forth by the appropriate authorities.

Table 17. Results of the Test of Significant Difference in the Level of Competence of the Respondents in Terms of Result Focus when Grouped According to their Profile

Variables	Probability of F	Remarks
Result Focus and Sex	0.0340	Significant
Result Focus and Age	0.0489	Significant
Result Focus and Position/Designation	0.0163	Significant
Result Focus and Type of School/Office Assignment	0.0478	Significant
Result Focus and Highest Educational Attainment	0.0385	Significant
Result Focus and Relevant Trainings Attended for the Last Three Years	0.0450	Significant

Table 17 displays the results of the test of significant difference in the level of competence of the respondents in terms of Result Focus when grouped according to their profile.

The results reveal that the probability values of F are less than 0.05 for this reason, the null hypothesis is rejected at a 0.05 level of significance. As a result, there is a significant difference in the level of competence of the respondents in terms of Result Focus when grouped according to their profile. It shows that the non-teaching personnel differ in their competence level on result focus when they are classified by sex, age, position, type of school, and highest educational attainment.

However, when grouped by relevant trainings attended from the last three years, out of 41 groupings of trainings, 11 groupings are competent in Result Focus, and 30 classifications are fully competent in Result Focus, but with different means. Result Focus When compared with their profile variables, the following obtained the highest weighted mean: 3.43 for female respondents, 3.55 for respondents who are aged 41 years old and above, 4.00 for respondents with positions of Administrative Officer I, and Accountant I, 3.49 for large schools, 3.50 for respondents with Doctor's Degree, and 4.00 for Accounting and Auditing Service
s as relevant training.

The study signifies that the profile variables of the respondents differ in terms of Result Focus as an indicator of the level of competence of non-teaching personnel of the Schools Division Office of the City of Ilagan. Results Focus is a concern for surpassing a standard of excellence. The standard may be one's past performance (striving for improvement); an objective measure (achievement orientation); challenging goals that one has set; or even improving or surpassing what has already been done (continuous improvement). Al-Mzary (2015) noted that human resources are the main asset at modern organizations, which makes the skills mastered by employees an important factor in determining the current situation as well as the future of an organization, which are impacted by the performance of the human resources. Hence, the need for rigorous and relevant training development aligned with their fields of specialization which are salient factors of a Result-Focus organization such as the Department of Education, specifically the Schools Division of the City of Ilagan.

As emphasized by Wanjiku (2021), effective staff development toward result achievement is essential to support new approaches to learning and teaching, to meet the changing needs of institutions. The result serves institutional needs and enhances the ability of the organization to meet its goals. It is an effort to help employees learn how to do their jobs better. Results may or may not include career development. It is important to establish working conditions that will attract good-quality personnel committed to the achievement of organizational objectives in both the public and private sectors. Also, there is a need to ensure the safety of employees and provide satisfactory welfare services. In the Schools Division of the City of Ilagan, all cited profile variables are significantly connected to the Result Focus indicator of the level of competence which signifies that these are contributory factors in the level of competence of the respondents as administrative employees in the Schools Division of the City of Ilagan.

As an implication of the results, according to Navaneetha and Bhaskar (2018), the organization and workplace need to adapt mechanisms in enhancing and providing

relative upskilling and training engagements to their employees relative to their educational developmental activities, positions or designations, and personal attributes. Thus, for organizations to achieve optimum returns from their investment, there is an imperative need to effectively manage training and development programs.

Table 18. Results of the Test of Significant Difference in the Level of Competence of the Respondents in terms of Teamwork when grouped According to their Profile

Variables	Probability of F	Remarks
Teamwork and Sex	0.0207	Significant
Teamwork and Age	0.0255	Significant
Teamwork and Position/Designation	0.0481	Significant
Teamwork and Type of School/Office Assignment	0.0229	Significant
Teamwork and Highest Educational Attainment	0.0094	Significant
Teamwork and Relevant Trainings Attended for Last Three Years	0.0500	Significant

The results of the test of significant difference in the level of competence of the respondents in terms of teamwork, when grouped according to their profile, are displayed in Table 18.

It is reflected from the results that the F-probability values are less than or equal to 0.05. Hence, the null hypothesis is rejected at a 0.05 significance level. Thus, there is a significant difference in the level of competence of the respondents in terms of teamwork when grouped according to their profile. It shows that the non-teaching personnel have varied competency in teamwork in terms of their mean when grouped by sex, age, position, type of school, and highest educational attainment. As appended, the non-teaching personnel are fully competent in teamwork but with different means. The ones that obtain the highest mean are the male, aged 20-25, Administrative Assistant I, Accountants I and III, all the Administrative Officers except Administrative Officer II, Medium School, and Doctoral Degree. On the other hand, when grouped by training attended for the last three years, out of 41 groupings four groupings are competent in teamwork, and the other 37 groupings are fully competent as indicated by their means.

It has been further revealed that teamwork and the highest educational attainment are highly significant. This implies that teamwork is highly significant when compared to their highest educational attainment which indicates the level of educational attainment of the non-teaching personnel of the Schools Division Office of the City. Teamwork and highest educational attainment are two comparative and relative variables that indicate that when educational attainment is high, then there is a probability that such an employee is manifesting the thrusts and features of a contributing member in an organization which is an aspect of teamwork.

The result affirms that individuals vary in terms of their level of competence in teamwork. As agreed by Nda & Fard (2013), teamwork is the backbone of effective

communication within a company. When employees work as individuals or independently on projects, they may not readily share knowledge or new information. This lack of communication increases the time it takes to complete projects, tasks, or the development of solutions. Teamwork promotes conversation between employees regarding the task at hand, possibly preventing employees from working in opposite directions. Therefore, training and development must be designed and delivered to meet the needs of all employees in such a way that the employees will not only be productive but also be satisfied. Training and development have a positive impact on the employees to carry out their work more effectively, increasing their interpersonal and technical abilities, teamwork, job confidence, and work motivation.

Consequently, when teams, groups, or individual employees possess varied levels of teamwork, there is a variety of mechanisms for dealing with clients, administrative tasks, and other aspects of public services. This is better achieved through upskilling programs. As emphasized by Hamid (2021), upskilling is a way of enhancing employee commitment and maximizing employee potential. Training is an instrument that fundamentally affects the successful accomplishment of organizations' goals and objectives. Further, it is well known that teamwork develops thanks to a social learning process. Indeed, the growth of self-efficacy continues to evolve throughout people's working lives as they acquire new skills, experience, and understanding. Training processes should therefore play a strategic role in addressing and developing teamwork in preparation for an organizational change.

Table 19. Results of the Test of Significant Difference in the Level of Competence of the Respondents in terms of Service Orientation when Grouped According to their Profile

Variables	Probability of F	Remarks
Service Orientation and Sex	0.0472	Significant
Service Orientation and Age	0.0229	Significant
Service Orientation and Position/Designation	0.0051	Significant
Service Orientation and Type of School/Office Assignment	0.0071	Significant
Service Orientation and Highest Educational Attainment	0.1233	Not Significant
Service Orientation and Relevant Trainings Attended for Last Three Years	0.0400	Significant

Table 19 discloses the results of the test of significant differences in the level of competence of the respondents in terms of service orientation when grouped according to their profile.

The results show that the F-probability values are less than 0.05 except for the highest educational attainment. This signifies the rejection of the null hypothesis at a 0.05 level of significance. Therefore, there is a significant difference in the level of competence of the respondents in terms of service orientation when grouped according to their sex, age, position, type of school/office assignment, and relevant trainings attended for the last three years. It states that the non-teaching personnel differ in their competency level

on service orientation in terms of their means when they are grouped by the aforesaid profiles. As evidenced by the mean, the non-teaching personnel are fully competent in service orientation when classified by sex, age, and type of school but with different means. The highest means are obtained by males, ages 20-25, and medium school.

Regarding position, out of 10 positions, one is competent, that is the Administrative Assistant, and the other nine designations are fully competent in this area but with varied means. On the other hand, with regards to training attended for the last three years, out of 41 groupings, 24 are fully competent and 17 are competent in service orientation but with varied means. Service Orientation, when compared to their profile variables, 3.47 for male respondents, 3.67 for respondents who are aged from 20 to 25 years old, 4.00 for respondents with positions Administrative Officer I, Accountant I, and Accountant III, 3.50 for medium schools, 3.43 for college graduates, and 4.00 for Human Resources and Personnel Management as relevant training.

However, there is no significant difference in the level of competence of the respondents in terms of service orientation when they are grouped according to highest educational attainment. Hence, the null hypothesis is accepted at a 0.05 significance level. It implies that the non-teaching personnel do not differ in their competence level on service orientation when they are classified by the said profile. It states further that the respondents have similarities in their competence level on service orientation regardless of their highest educational attainment. Nonetheless, it has been further revealed that service orientation and highest educational attainment of the non-teaching personnel of the Schools Division Office of the City of Ilagan are not significant when compared together.

Service Orientation is an equivalent of service efficiency directed and provided to clients and organizations whom the agency or institution they serve. The impact of service orientation on employees' performance and competence has been a leading factor in the development of organizational institutions, specifically those who are in public service. Hence, as discussed by Tahir et al. (2014), service orientation is affected by the position or designation and the work assignment or station of administrative employees. Some indicators of service orientation are measured in various parameters such as participation, transparency, environment, and provision of general administrative and technical services to ensure the general delivery of public services. These are manifested by the professional status of administrative employees as mentioned in terms of their status and standing in an organization.

Further, service orientation could also be manifested by the administrative employees' age and experience. In addition, employees' sex also differ in terms of service orientation as some studies including Hafeez & Akbar (2015), divulged that women generally provide clearer directions for organizations in terms of service orientation, while male employees are generally akin to administrative management and leadership. However, this was negated by stating that sexual differences have little to no effect in terms of the service orientation of administrative employees in an educational institution.

Finally, in terms of relevant training attended, these trainings anchored from the job descriptions, duties, and responsibilities of non-teaching personnel of an educational agency provide for clearer manifestations of their service orientation. Darcy mentions that training and development, taken together, help employees develop better skills, change their attitudes toward work, and improve their knowledge regarding their field. The main purpose of training and development is to improve employee competencies so that organizations can maximize the efficiency and effectiveness of their employees. As an effect on the non-teaching personnel of the Schools Division of the City of Ilagan, some benefits of this program are the increase in the productivity of workers, development of skills, and greater proficiency in work. If employees are to experience effectiveness on the job, they need to acquire and develop knowledge and skills.

Furthermore, the result also shows that when compared together, the variable of service orientation is highly significant to position/designation and type of school or office assignment. In the first comparison, this means that the position or designation of a non-teaching employee could influence his or her service orientation. As established, service orientation is tantamount to service efficiency. Hence, if an employee is in a higher position or designation with greater responsibilities, service efficiency is expected. Service Orientation is an equivalent of service efficiency directed and provided to clients and organizations whom the agency or institution they serve. Moreover, service orientation could also be influenced by the type of school or office assignment. This implies that when the workplace is favorable or convenient to the employee considering significant and relevant factors, it follows that service efficiency could be raked.

Table 20. Results of the Test of Significant Difference in the Level of Competence of the Respondents in terms of Innovation when Grouped According to their Profile

Variables	Probability of F	Remarks
Innovation and Sex	0.0474	Significant
Innovation and Age	0.0397	Significant
Innovation and Position/Designation	0.0146	Significant
Innovation and Type of School/Office Assignment	0.0103	Significant
Innovation and Highest Educational Attainment	0.0368	Significant
Innovation and Relevant Trainings Attended for Last Three Years	0.0500	Significant

The results of the test of significant difference in the level of competence of the respondents in terms of Innovation, when grouped according to their profile, are exhibited in Table 20.

It is evident from the results that the probability values of F are less than or equal to 0.05. Hence, the null hypothesis is rejected at a 0.05 level of significance. Thus, there is a significant difference in the competence level of the respondents in terms of innovation when grouped according to their profile. It shows that the non-teaching

personnel differ in their competence level on innovation when they are grouped by sex, age, position, type of school/office assignment, highest educational attainment, and relevant trainings attended for the last three years. As appended, the non-teaching personnel who got the highest mean are the male, aged 20-25, administrative officer I and Accountant I and III, medium school and college graduates. While, on training, out of 41 groupings, 27 are fully competent, 13 are competent, and one is competent in innovation as evidenced by the means. When compared to innovation, the following obtained the highest weighted means for every profile variable: 3.47 for male respondents, 3.73 for respondents aged from 20 to 25 years old, 4.00 for respondents who are designated as Administrative Officer I, Accountant I, and Accountant III, 3.41 for medium schools, 3.41 for college graduates, and 3.90 for Property and Resources Custodianship as relevant training.

The result affirms that the respondents differ in their level of competence in terms of Innovation when compared to their profile variables. According to Sarkodie (2011), in terms of innovation, it is the systematic and practical application of solutions, methods, and mechanisms adapted to resolve or further enhance an organization's policy, scheme, or programs. In the Department of Education, several innovations are made in instructional and curriculum development. On the other hand, innovations are also encouraged and further developed in the administrative section of the Department. Public agencies such as the Department of Education are considered the cornerstone for intelligent and responsible citizenship. To enhance its efficiency and effectiveness, it is necessary to conduct innovations for the personnel development of all its employees at all levels. These employees are assets or resources to be valued, developed, and utilized in the delivery of basic services to the interest of the public. They must have the necessary skills and knowledge to better serve the people's needs and concerns.

These factors of competence in innovation include the personal and professional dealings of the respondents as they gauge the innovative levels of these employees to better serve the stakeholders. Another factor is upskilling or training engagement which trail-blazed organizations to further enhance and improve. In the Schools Division of the City of Ilagan, these are engaged to boost the skills and competencies of administrative employees including the non-teaching personnel who are deployed within the schools of the Division Office.

Further, Edralin (2011) noted that training has been at the forefront factor of developing employees from among organizations, associations, agencies, and human resources. In terms of innovation, respondents are optimistic and enthusiastic if nominated for a training and development program. Results also revealed possible enablers of employee's ability to learn. Work-related and personal commitments, as well as training programs, including delivery methods, materials, and instructors, turned favorable for respondents considering their situation signifying those employees genuinely value training.

Performance of Non-Teaching Personnel based on the Key Result Areas (KRAs)

Table 21. Performance of Administrative Officer V Employee/s Based on the Key Result Areas

KRA for Administrative Officer V (Admin)	RATING	Qualitative Description
1. Administrative Policies and Guidelines	5	Outstanding
2. Personnel Administration	5	Outstanding
3. Records Management	5	Outstanding
4. Cash Management	5	Outstanding
5. Supply and Procurement	5	Outstanding
6. Security and Custody of Properties	5	Outstanding
7. Maintenance of SDO Grounds and Facilities	4	Very Satisfactory
8. Administrative Services Performance	5	Outstanding
OVERALL RATING	4.88	Outstanding

The table above portrays the performance of an employee who is holding the position of Administrative Officer V based on the Key Result Areas of the Office Performance Commitment Review Form. The data shows that the employee gained an overall rating of 4.88 which means that the employee excelled with an Outstanding Performance to the prescribed duties and responsibilities as Administrative Officer V. In an interview, performance ratings were validated and upon checking their files or records.

Further, the employee achieved a perfect score of 5 from each Key Result Area including Administrative Policies and Guidelines, Personnel Administration, Records Management, Cash Management, Supply and Procurement, Security and Custody of Properties, and Administrative Services Performance. However, a score of 4 was also marked in the KRA of Maintenance of SDO Grounds and Facilities. The Schools Division Office (SDO) empowers schools and Learning Centers (LC) and engages partners and communities in the delivery of quality basic education that is accessible to all.

According to the 2022 DepEd-Civil Service Commission guidelines, this administrative position aims to provide management with economical, efficient, and effective budgeting services and reliable and timely financial information for decision-making towards the cost-effective utilization of financial resources of the division. Further, this also aims to supervise the team that will provide the Schools Division Office with timely, responsive, and economical administrative services in personnel and records management, cash disbursement, procurement, security and custody of the property, and the maintenance of facilities, to ensure efficient operation of the schools division office towards enabling schools and learning centers provide accessibly and quality and basic education.

Table 22. Performance of Administrative Officer IV (Personnel) Employees Based on the Key Result Areas

KRA for Administrative Officer IV (Personnel)	RATING	Qualitative Description
1. Recruitment, Selection and Placement	5.00	Outstanding
2. Personnel Actions	5.00	Outstanding
3. Salary Administration and Personnel Records	5.00	Outstanding
4. Benefits Administration	5.00	Outstanding
5. Personnel Information System	5.00	Outstanding
OVERALL RATING	5.00	Outstanding

The table above represents the performance of the employee holding the position of Administrative Officer IV in the field of Personnel Management based on the Key Result Areas of the Office Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their files or records.

It is revealed that the employee achieved an Outstanding Performance with a rating of 5 as the overall rating. These Key Result Areas include Recruitment, Selection and Placement, Personnel Actions, Salary Administration and Personnel Records, Benefits Administration, and Personnel Information System.

As provided by the DepEd-CSC in 2022, this administrative position aims to provide personnel administration services to the management and personnel of the Schools Division in the areas of recruitment and selection, personnel administration, compensation and benefits administration, personnel records, while ensuring adherence to the standards, rules, and regulations in personnel administration of government oversight agencies (CSC, DBM, COA, etc.).

Table 23. Performance of Administrative Officer IV (Records) Employees Based on the Key Result Areas

KRA for Administrative Officer IV (Record Officer II)	RATING	Qualitative Description
1. Records Management System	5.00	Outstanding
2. Receiving and Releasing	5.00	Outstanding
3. Documentation Authentication and Verification	5.00	Outstanding
4. Reporting	4.90	Outstanding
5. Technical Assistance	5.00	Outstanding
6. Unit Performance	4.88	Outstanding
OVERALL RATING	4.96	Outstanding

Table 23 reflects the overall performance of an employee holding the position of Administrative Officer IV in the field of Records Management based on the Key Result Areas of the Office Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their individual files or records.

The data highlights that the employees maintained an Outstanding Performance with an overall rating of 4.96. It is further divulged that the said employee garnered perfect

ratings in the Key Result Areas of the Records Management System, Receiving and Releasing, Documentation Authentication and Verification, and Technical Assistance. The Key Result Areas of Reporting and Unit Performance obtained a rating of 4.90 and 4.88, respectively.

Accordingly, this position, as per DepEd-CSC is characterized by the aim to establish and maintain a records management system, including the creation, classification, storage, maintenance, use, and disposition of operating records and documents of permanent, legal, and historical value and ensure the security, preservation, and efficient access and retrieval of such records when needed by the school's division office management and staff.

Table 24. Performance of Administrative Officer IV (Cash) Employees Based on the Key Result Areas

KRA for Administrative Officer IV (Cash)	RATING	Qualitative Description
1. Cash Collection	5.00	Outstanding
2. Cash Disbursement Payment & Remittance	5.00	Outstanding
3. Liquidation and Reporting	5.00	Outstanding
4. Secondary Duties	4.90	Outstanding
OVERALL RATING	4.98	Outstanding

Table 24 manifests the overall performance of the Administrative Officer IV employee for Cash Management based on the Key Result Areas of the Office Performance Commitment and Review Form. In an interview, performance ratings were validated and upon checking their files or records. In an interview, performance ratings were validated and upon checking their files or records.

An overall rating of 4.98 shows that the said employee is qualified to have an Outstanding Performance. For each Key Result Area, a score of 5 dominated the areas of Cash Collection, Cash Disbursement Payment and Remittance, and Liquidation and Reporting, while Secondary Duties had a score of 4.90.

As per DepEd-CSC is characterized by the aim to manage cash collections, disbursements, liquidations, and preparation of reports to the accounting office to ensure proper utilization and timely disbursement of funds and liquidation of cash advances to pay for government obligations in accordance with accounting and auditing rules and regulations.

Table 25. Performance of Administrative Officer IV (Supply Officer II/Property) Employees Based on the Key Result Areas

KRA for Administrative Officer IV (Supply Officer II/Property)	RATING	Qualitative Description
1. Policies, Standards, Guidelines, Systems	4.70	Outstanding
2. Property and Acquisition	4.13	Very Satisfactory

3. Delivery Inspection and Acceptance	4.50	Outstanding
4. Custodianship	4.83	Outstanding
5. Disposal	4.35	Very Satisfactory
OVERALL RATING	4.50	Outstanding

Table 25 shows the performance of an employee with the position of Administrative Officer IV as the Supply and Property Officer of the Schools Division Office of the City of Ilagan.

From the data presented, the said employee had an overall rating of 4.50 which means that an Outstanding Performance was manifested from the Office Performance Commitment Review Form. The Key Result Area of Policies, Standards, Guidelines, and Systems had an outstanding rating of 4.70, Property and Acquisition had a Very Satisfactory rating of 4.13, Delivery Inspection and Acceptance had an Outstanding Performance of 4.50, Custodianship obtained an Outstanding Rating of 4.83, and Disposal as the last Key Result Area had a Very Satisfactory rating of 4.35. These Very Satisfactory remarks are implications of the insufficient relevant trainings of the said employees in the fields of Disposal and Property Acquisition as essential Key Result Areas of their designation or position.

In place of this, the upskilling program in the fields of result focus and innovation signifies the necessity to include this position in the development and evaluation of training development for improved and better performance in the Individual Performance Review Commitment Form. During the interview, respondents under this position/designation narrated that they obtained a Very Satisfactory rating in the fields of Property and Acquisition, and Disposal due to the complexity and difficulty of the nature of these Key Result Areas as Supply/Property Officer. Due to the demands and necessities in purchases, procurement, and inventories, respondents had simple inconsistencies with data and supply management. Nonetheless, they still managed to obtain an above-average rating for the identified Key Result Areas of their IPCRF/OPCRF.

Table 26. Performance of Administrative Officer II Employees Based on the Key Result Areas

KRA for Administrative Officer II	RATING	Qualitative Description
1. Personnel Administration	4.76	Outstanding
2. Property Custodianship	4.71	Outstanding
3. General Administrative Support	4.78	Outstanding
4. Financial Management	4.76	Outstanding
OVERALL RATING	4.75	Outstanding

Table 26 presents the performance of non-teaching personnel who hold the position of Administrative Officer II based on their Key Result Areas of the Individual Performance Commitment Review Form. In an interview, performance ratings were validated upon checking their files or records.

Based on the presented data above, non-teaching personnel who are designated in the schools of the Schools Division of the City of Ilagan had an overall rating of 4.75 which signifies that they had an Outstanding Performance as prescribed from their administrative position. These employees possessed and performed well in the duties and responsibilities as Administrative Officers of elementary schools, integrated schools, and secondary schools in the Schools Division of the City of Ilagan. Moreover, for each Key Result Area, employees obtained an Outstanding Performance for each Key Result Area including Personnel Administration, Property Custodianship, General Administrative Support, and Financial Management.

According to DepEd-CSC, Administrative Officer IV (Supply/Property) is guided to provide technical services to the management and staff of the SDO in relation to procurement (using alternative mode), inspection, acceptance, issuance, storage, maintenance, and inventory of material resources, equipment, and properties to support the efficient operations of the schools' division office in managing the delivery of quality basic education and, facilitate the disposal of waste materials and unserviceable equipment to derive economic benefit and maintain orderliness and efficient use of office space.

Table 27. Performance of Administrative Officer II (Personnel) Employees Based on the Key Result Areas

KRA for Administrative Officer II (Personnel/HRMO I)	RATING	Qualitative Description
1. Salary Administration and Personnel Records	5.00	Outstanding
2. Benefits Administration	5.00	Outstanding
3. Personnel Information System	5.00	Outstanding
4. Other Duties	4.90	Outstanding
OVERALL RATING	4.98	Outstanding

The table above reveals the performance of Administrative Officer II employees designated for Personnel Management in the Schools Division Office of the City of Ilagan based on the Key Result Areas of their Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their individual files or records.

The data established those employees under this KRA for Administrative Officer II (Personnel/Human Resource Management Officer) achieved an overall rating of 4.98 which means that they showcased an Outstanding Performance from the last calendar year. These employees had a perfect score of 5 in the Key Result Areas of Salary Administration and Personnel Records, Benefits Administration, and Personnel Information System. Their Other Duties also had an Outstanding rating of 4.90.

As provided under DepEd-CSC, this is administrative work in coordinating and assisting a higher-level administrator with the management of an agency. An employee in this class is responsible for performing administrative staff assignments and office management work for a division or organizational unit. Work differs from that of

Administrative Officer I by the complexity of assignments and independent decision-making, but an employee is allowed to use his judgment where necessary. General supervision is received from a higher-level officer through conferences and review of work for compliance with departmental rules and regulations. Supervision is exercised over a small clerical staff.

Table 28. Performance of Administrative Officer I (IUs) Employees Based on the Key Result Areas

KRA for Administrative Officer I (IUs)	RATING	Qualitative Description
1. Personnel Administration	5.00	Outstanding
2. Property Custodianship	5.00	Outstanding
3. General Administrative Support	4.90	Outstanding
4. Financial Management	4.90	Outstanding
OVERALL RATING	4.95	Outstanding

This table provides the result of the performance survey of Administrative Officer I employees in the Implementing Units Office based on their Key Result Areas of the Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their individual files or records.

In this administrative position, non-teaching personnel of the Schools Division Office of the City of Ilagan had an Outstanding Performance of 4.95 as their overall rating. On the other hand, they had a respective final score of 5 for the Key Result Areas of Personnel Administration and Property Custodianship. A rating 0f 4.90 was respectively achieved in the Key Result Areas of General Administrative Support and Financial Management. According to DepEd-CSC, this position supervises and assists in the direction of a major department; assists a senior official in the development of operating procedures; confers with him on matters affecting personnel, policy and other administrative problems; makes complex operational decisions; supervises a number of subordinate staff.

Table 29. Performance of Administrative Assistant III Employees Based on the Key Result Areas

KRA for Administrative Assistant III	RATING	Qualitative Description
1. Office Schedules	4.63	Outstanding
2. Communications/Documents	4.68	Outstanding
3. Guests Reception	4.70	Outstanding
4. Records/Files	4.83	Outstanding
5. Personnel Matters	4.75	Outstanding
6. Technical/Administrative	4.65	Outstanding
OVERALL RATING	4.70	Outstanding

Table 29 shows the performance of Administrative Assistant III employees of the Schools Division of the City of Ilagan based on their Key Result Areas of the Individual Performance Commitment Form. Based on the data presented, these employees had an

overall rating of 4.70 which implies that they had an Overall Outstanding Performance as Administrative Assistant III employees as prescribed by their duties and responsibilities. Outstanding ratings were also manifested in all Key Result Areas including Office Schedules, Communications/Documents, Guests Reception, Records/Files, Personnel Matters, and Technical or Administrative Support. In an interview, performance ratings were validated upon checking their files or records.

As emphasized by DepEd-CSC, this position seeks to provide prompt and quality support service to the SDS by implementing administrative systems, and procedures, and monitoring administrative projects for the SDS to perform his/her duties efficiently.

Table 30. Performance of Administrative Assistant III Employees Based on the Key Result Areas

KRA for Administrative Assistant III (IUs)	RATING	Qualitative Description
1. Accounting Services	4.63	Outstanding
2. Salary Administration and Payroll Processing	4.63	Outstanding
3. Payroll-related Services	4.72	Outstanding
4. Budgeting Services	4.69	Outstanding
OVERALL RATING	4.67	Outstanding

The preceding table showcases the performance evaluation results of Administrative Assistant III employees of the Implementing Unit Offices of the Schools Division Office of the City of Ilagan based on the Key Result Areas of their Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their files or records.

It is revealed that employees were outstanding in all the Key Result Areas including Accounting Services, Salary Administration and Payroll Processing, Payroll-Related Services, and Budgeting Services. Overall, they had an outstanding performance with an overall rating of 4.67.

Further, DepEd-CSC detailed that this position shall provide assistance on the finance-related functions in schools and facilitate efficiency in SDO and school operations such as accounting, budgeting, cash management, and payroll services, to ensure efficient office operations.

Table 31. Performance of Administrative Assistant III (Non-IUs) Employees Based on the Key Result Areas

KRA for Administrative Assistant III (Non-IUs)	RATING	Qualitative Description
1. Financial Records and Reports	4.69	Outstanding
2. Account Tracking	4.70	Outstanding
3. Financial Transactions Recording Procedures	4.64	Outstanding
4. Human Resource Management	4.38	Very Satisfactory
OVERALL RATING	4.60	Outstanding

The preceding table illustrates the performance of the Administrative Assistant III employees as Non-Implementing Unit employees of the Schools Division Office of the City of Ilagan based on the Key Result Areas of their Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their files or records.

It is divulged that employees under this administrative position perform well with an overall rating of 4.60 which implies that they had an Outstanding Performance. In addition, these employees had an Outstanding performance in the Key Result Areas of Financial Records and Reports, Account Tracking, and Financial Transactions Recording Procedures. In the Key Result Area of Human Resource Management, they had a rating of 4.38 which means that they obtained a Very Satisfactory remark. This Very Satisfactory remark implies that there is a necessity to upgrade the field or area of the KRA to align objectives based on the necessary skills to be obtained and possessed by the employee.

In the development of an upskilling program, employees in this position are recommended to undergo further training and a series of upskilling programs to transform their overall individual performance specifically in the fields of self-management and result focus. During the interview, the respondents detailed the recurring causes and issues that arose during the year of service because of some issues and concerns that arose from their designation. In the position of Administrative Officer III (Non-Implementing Units), they had issues with Human Resource Management due to the scattered deployment of employees under their designation and assigned workplaces. It is also cited that the far-flung distances of schools led to difficulty in the daily assistance of technical aid and administrative services. However, this did not hinder them to still obtain a rating of Very Satisfactory.

Moreover, employees in this position, according to DepEd-CSC, aim to maintain and safeguard the books, records, and supporting schedules of the Division Office by keeping track of accounts and verifying the accuracy of procedures used for recording financial data that are necessary for the preparation of timely and reliable reports which will aid the management in making informed decisions.

Table 32. Performance of Administrative Assistant III Employees Based on the Key Result Areas

KRA for Administrative Assistant III (Senior Bookkeeper)	RATING	Qualitative Description
1. Financial Records and Reports	4.82	Outstanding
2. Account Tracking	4.85	Outstanding
3. Financial Transactions Recording Procedure	4.84	Outstanding
OVERALL RATING	4.84	Outstanding

The table presented above shows the performance of Administrative Assistant III Employees as Senior Bookkeepers of the Schools Division Office of the City of Ilagan based on the Key Result Areas of their Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their files or records.

As presented, employees holding this administrative position received an overall rating of 4.84 which means that they had an Outstanding Performance as non-teaching personnel. Specifically, they also had outstanding remarks in the Key Result Areas of Financial Records and Reports, Account Tracking, and Financial Transactions Recording Procedure.

As noted under DepEd-CSC, this position seeks to maintain and safeguard the books, records, and supporting schedules of the Division Office by keeping track of accounts and verifying the accuracy of procedures used for recording financial data that are necessary for the preparation of timely and reliable reports which will aid the management in making informed decisions.

Table 33. Performance of Administrative Assistant II Employees Based on the Key Result Areas

KRA for Administrative Assistant II (IUs)	RATING	Qualitative Description
1. Accounting Services	4.73	Outstanding
2. Budgeting Services	4.78	Outstanding
OVERALL RATING	4.75	Outstanding

This table presents the performance of Administrative Assistant II employees of the Implementing Unit Offices of the Schools Division of the City of Ilagan based on the Key Result Areas of their Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their files or records.

Here, respondents had an overall rating of 4.75 which signifies their outstanding performance as indicated by their description of duties and responsibilities in the fields of Accounting Services and Budgeting Services. This position, according to DepEd-CSC, shall assist in finance and administrative-related services such as accounting, budgeting, and payroll processing and ensuring efficient office operations.

Table 34. Performance of Administrative Assistant II Employees Based on the Key Result Areas

KRA for Administrative Assistant II	RATING	Qualitative Description
1. Accounting Records	4.66	Outstanding
2. Accounting Reports	4.74	Outstanding
3. Loan Verification	4.77	Outstanding
4. Salary Administration and Personnel Records	4.50	Outstanding
5. Finance-Related Reports and Records Management	4.53	Outstanding
OVERALL RATING	4.64	Outstanding

The table above exhibits the performance of Administrative Assistant II employees deployed in schools within the Schools Division of the City of Ilagan based on the Key Result Areas of their Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their files or records.

From the data presented, it can be gleaned that Administrative Assistant II employees of the Schools Division of the City of Ilagan performed Outstanding with an overall rating of 4.64 with the same qualitative description for the ratings in the Key Result Areas including Accounting Records, Accounting Reports, Loan Verification, Salary Administration and Personnel Records, and Finance-Related Reports and Records Management.

According to DepEd-CSC, this position shall assist the Senior Bookkeeper and/or School Head in the performance of their functions, such as but not limited to undertaking the necessary accounting, budgeting, cash management, payroll services, and other finance-related, to ensure efficient office operations.

Table 35. Performance of Administrative Assistant II Employees Based on the Key Result Areas

KRA for Administrative Assistant II (Accounting Clerk)	RATING	Qualitative Description
1. Accounting Records	4.83	Outstanding
2. Accounting Reports	4.85	Outstanding
OVERALL RATING	4.84	Outstanding

Table 35 presents the performance of Administrative Assistant II employees deployed as Accounting Clerks in the Schools Division of the City of Ilagan based on their Key Result Areas of the Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their files or records.

It is shown that these employees had an Outstanding Performance from last year with an overall rating of 4.84. The same qualitative remarks were also obtained in the Key Result Areas of Accounting Records and Accounting Reports. As guided by DepEd-CSC, this position has its goal to support accounting operations by filing documents; reconciling statements; and running software programs.

Table 36. Performance of Administrative Assistant II (Non-IUs) Employees Based on the Key Result Areas

KRA for Administrative Assistant II (Non-IUs)	RATING	Qualitative Description
1. Financial Records and Reports	4.69	Outstanding
2. Budget Preparation Execution and Reports	4.61	Outstanding
3. Human Resource Management	4.68	Outstanding
4. Other Task	4.69	Outstanding
OVERALL RATING	4.67	Outstanding

The table preceding table divulges the overall performance of Administrative Assistant II employees deployed in the Non-Implementing Units of the Schools Division of the City of Ilagan based on the Key Result Areas of their Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their files or records.

An overall rating of 4.67 qualified the respondents to excel with an Outstanding Performance which is also evident from their ratings in every Key Result Area including Financial Records and Reports, Budget Preparation, Execution, and Reports, Human Resource Management, and Other Tasks.

According to DepEd-CSC, Administrative Assistant II positions are characterized by Accounting, Budgeting, and administrative duties. The Accounting Services maintain financial records and reports to provide management with information for decision-making and accounting reports to oversight agencies to ensure the proper utilization of funds in accordance with accounting and auditing rules and regulations. The Budgeting Services provides management with economical, efficient, and effective budgeting services and reliable and timely financial information for decision-making toward the cost-effective allocation and utilization of financial resources of the schools division.

Table 37. Performance of Administrative Assistant I Employees Based on the Key Result Areas

KRA for Administrative Assistant I (Budget Officer I)	RATING	Qualitative Description
1. Budget Preparation, Execution, and Accountability Data and Documents	4.93	Outstanding
OVERALL RATING	4.93	Outstanding

Table 36 manifests the performance of Administrative Assistant I employees deployed as Budget Officers of the Schools Division of the City of Ilagan based on the Key Result Area of the Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their files or records.

With a single Key Result Area, the overall outstanding performance in Budget Preparation, Execution, and Accountability of Data and Documents had an overall rating of 4.93. Further, according to DepEd-CSC, this position aims to provide general and routine clerical support to the budgeting officer in the preparation of budgetary requirements needed for submission to the DBM and reports in compliance with other attached agencies, and to provide administrative support to the Finance Services functions.

Table 38. Performance of Administrative Assistant I (IUs) Employees Based on the Key Result Areas

KRA for Administrative Officer I (IUs)	RATING	Qualitative Description
1. Personnel Administration	5.00	Outstanding
2. Property Custodianship	5.00	Outstanding
3. General Administrative Support	4.90	Outstanding
4. Financial Management	4.90	Outstanding
OVERALL RATING	4.95	Outstanding

The table above reflects the performance of Administrative Assistant I employees deployed in the Implementing Units in the Schools Division of the City of Ilagan based on the Key Result Areas of their Individual Performance Commitment Review Form. In an interview, performance ratings were validated and upon checking their individual files or records.

As shown above, the employees had an overall rating of 4.95 which directly translates to an Outstanding Performance. They also had an Outstanding Performance for every Key Result Area including Personnel Administration, Property Custodianship, General Administrative Support, and Financial Management. According to DepEd-CSC, this position aims to provide general and routine clerical support to the budgeting officer in the preparation of budgetary requirements needed for submission to the DBM and reports in compliance with other attached agencies, and to provide administrative support to the Finance Services functions.

Table 39. Performance of Administrative Aide VI (Data Entry Machine Operator) Employees Based on the Key Result Areas

KRA for Administrative Aide VI (Data Entry Machine Operator)	RATING	Qualitative Description
1. Receiving and Releasing	4.50	Outstanding
2. Documents Authentication, Verification and Certification	4.40	Very Satisfactory
3. Reporting	4.30	Very Satisfactory
4. Technical Assistance	4.20	Very Satisfactory
OVERALL RATING	4.35	Very Satisfactory

Table 39 represents the overall performance of Administrative Aide VI employees deployed as Data Entry Machine Operators based on the Key Result Areas of their Individual Performance Review Commitment Form. It is categorically presented that these respondents had an Overall Performance of Very Satisfactory with an overall rating of 4.35. The same qualitative remark was obtained in the following Key Result Areas: Receiving and Releasing, Documents Authentication, Verification, and Certification, Reporting, and Technical Assistance.

Three areas obtained a Very Satisfactory remark due to insufficiency of trainings relevant to the areas or fields of reporting, receiving, and releasing, and documents authentication, verification, and certification. During the interview, employees under the position of Administrative Aide VI detailed that due to their lack of educational experience and training attendance, they somehow obtained a Very Satisfactory rating from almost all their Key Result Areas of their Individual Performance Commitment Review Form. They added that apart from these cited reasons, the nature of their task is technical and purely administrative. Their inability to properly manage papers relative to their job descriptions had led to this result. On the other hand, the necessity for an upskilling program was highly recommended by their immediate heads and supervisors.

With this result, there is a necessity to augment the training and upskilling development of employees in this position. These fields to be included in their upskilling program are Result Focus, Self-Management, Innovation, and Service Orientation.

Further, DepEd-CSC expressly states that this position provides administrative support to the Records Officer in the maintenance of a records management system for the creation, classification, storage, maintenance, use, and disposition of operating records and documents of permanent, legal, and historical value and ensure the security, preservation, and efficient access and retrieval of such records when needed by the school's division office management and staff.

Table 40. Performance of Administrative Aide VI (Cash) Employees Based on the Key Result Areas

KRA for Administrative Aide VI (Cash)	RATING	Qualitative Description
1. Cash Collection	4.90	Outstanding
2. Cash Disbursement Payment & Remittance	4.80	Outstanding
3. Liquidation and Reporting	4.80	Outstanding
OVERALL RATING	4.83	Outstanding

Table 40 reveals the performance of Administrative Aide VI employees deployed as Cash Disbursement Officers based on the Key Result Areas of their Individual Performance Commitment Review Form. These employees have shown an outstanding performance as evidenced by their overall rating of 4.83, and outstanding performance in every Key Result Area of Cash Collection, Cash Disbursement Payment and Remittance, and Liquidation and Reporting. In an interview, performance ratings were validated upon checking their files or records. Moreover, this position as per DepEd-CSC, this position aims to assist the AO IV for Cash, in cash collection and disbursement, and the preparations and submission of cash-related reports.

Table 41. Performance of Administrative Aide IV Employees Based on the Key Result Areas

KRA for Administrative Aide IV	RATING	Qualitative Description
1. Messengerial and Photocopying	4.74	Outstanding
2. Recording	4.80	Outstanding
3. Communication	4.64	Outstanding
4. Plots/Schedules Activities	4.66	Outstanding
5. Record Management	4.68	Outstanding
6. Administrative Support	4.72	Outstanding
7. Secretariat/Frontline	4.65	Outstanding
OVERALL RATING	4.70	Outstanding

The table above represents the overall performance of Administrative Aide IV employees based on the Key Result Areas of their Individual Performance Commitment

Review Form. In an interview, performance ratings were validated upon checking their files or records.

These respondent employees had an overall rating of 4.70 which signifies that they had an exemplary performance. They also had an outstanding performance for all the Key Result Areas including Messengerial and Photocopying, Recording, Communication, Plots/Schedules Activities, Records management, Administrative Support, and Secretariat or Frontline. In lieu of these Key Result Areas, the Department of Education – Civil Service Commission also provided guidelines on the job description of this position. As noted by DepEd-CSC, this position assists in various aspects of general administrative processes such as purchasing, facilities operations, office automation, safety, human resources, customer service, public information, and other areas. Participates in meetings and presents data to assist managers in making operations and administrative decisions.

Table 42. Performance of Budget Officer III Employees Based on the Key Result Areas

KRA for Budget Officer III	RATING	Qualitative Description
1. Budget Preparation	5.00	Outstanding
2. Budget Execution	5.00	Outstanding
3. Budget Accountability and Reporting	5.00	Outstanding
4. Budget Systems Maintenance, Monitoring & Evaluation	5.00	Outstanding
5. Technical Assistance	5.00	Outstanding
OVERALL RATING	5.00	Outstanding

The preceding table is representation of the overall performance of Budget Officer III employees based on the Key Result Areas of their Office Performance Commitment Review Form. With an overall rating of 5.00, these non-teaching personnel had a perfect and outstanding performance from the last calendar year. They also had perfect scores for all the Key Result Areas including Budget Preparation, Budget Execution, Budget Accountability and reporting, Budget Systems Maintenance, Monitoring and Evaluation, and Technical Assistance. In an interview, performance ratings were validated upon checking their files or records.

DepEd-CSC provides that this position seeks to provide management with economical, efficient, and effective budgeting services and reliable and timely financial information for decision-making toward the cost-effective utilization of financial resources of the division.

Table 43. Performance of Accountant III Employee Based on the Key Result Areas

KRA for Accountant III	RATING	Qualitative Description
1. Financial Records and Reports	5.00	Outstanding
2. Financial Systems Maintenance	5.00	Outstanding
3. Monitoring and Evaluation	4.87	Outstanding
4. Technical Assistance	5.00	Outstanding

5. Accounting Services Performance	5.00	Outstanding
OVERALL RATING	4.97	Outstanding

Table 43 shows the performance of an Accountant III employee from the last calendar year based on the Key Result Areas of the Office Performance Commitment Review Form. An overall rating of 4.97 qualified the respondent to have an outstanding performance. In an interview, performance ratings were validated upon checking their files or records.

The employee also had a perfect score for the Key Result Areas including Financial Records and Reports, Financial Systems Maintenance, Technical Assistance, and Accounting Services Performance. Moreover, the employee had a rating of 4.87 in the Key Result Area of Monitoring and Evaluation.

DepEd-CSC provides that Accountant III develop and implement complex accounting system modifications and participate in the analysis and implementation of financial standards, policies, and procedures. Accountant III is distinguished from Accountant II in the amount and type of responsibility undertaken and direction received and exercised. DepEd Accountant III (Salary Grade 19) analyzes and attests to the accuracy of accounting records and reports and provides information and advice to the management of the schools division to ensure that the utilization of funds for basic education is maximized and compliant with government accounting rules and regulations, and ensures that financial reports will be fairly presented and that all recordable transactions must be taken up accurately in the books and that all disbursements are properly documented and following laws, rules, and regulations. Moreover, they are tasked to supervise, facilitate, and monitor the work of the accounting personnel and provide technical assistance to school heads and implementing units to ensure proper utilization of funds and preparation of reliable and timely financial reports.

Table 44. Performance of Accountant I Employees Based on the Key Result Areas

KRA for Accountant I	RATING	Qualitative Description
1. Financial Records and Reports	5.00	Outstanding
2. Financial Systems Maintenance	5.00	Outstanding
3. Monitoring and Evaluation	5.00	Outstanding
4. Technical Assistance	5.00	Outstanding
5. Accounting Services Performance	5.00	Outstanding
OVERALL RATING	5.00	Outstanding

The table above shows the overall performance of Accountant I employee based on the Key Result Areas of their Office Performance Commitment Review Form. The employee swept a perfect score for all the Key Result Areas including Financial Records and Reports, Financial Systems Maintenance, Monitoring and Evaluation, Technical Assistance, and Accounting Services Performance, and an Outstanding Performance. In

an interview, performance ratings were validated and upon checking their individual files or records.

Finally, as provided under DepEd-CSC, this position performs entry-level accounting work. Work involves maintaining, posting, and balancing accounting and financial statements, records, documents, or reports. May specialize in some phase of accounting work such as federal funds accounting, property and equipment control, cost, budgeting, or bond servicing. This position also prepares periodic Financial Statements and other related reports in accordance with accounting and auditing rules and regulations, and checks the accuracy, validity and appropriateness of income and expenditure transactions. accounting information.

Lastly, this position is also tasked to supervise, facilitate, and monitor the work of the accounting personnel and provide technical assistance to school heads and implementing units to ensure proper utilization of funds and preparation of reliable and timely financial reports.

Comparison Between the Performance of Non-Teaching Personnel based on the Key Result Areas (KRAs) and their Profile Variables

Table 45. Results of the Test of Significant Difference in the Performance of Non-Teaching Personnel in terms of Key Result Areas when grouped According to their Profile

Variables	Probability of F	Remarks
Performance and Sex	0.0440	Significant
Performance and Age	0.0200	Significant
Performance and Position/Designation	0.0009	Significant
Performance and Type of School/Office Assignment	0.0161	Significant
Performance and Highest Educational Attainment	0.0135	Significant
Performance and Relevant Trainings Attended for Last Three Years	0.0446	Significant

The results of the test of significant difference in the performance of the non-teaching personnel in terms of the Key Result Area when grouped according to their profile are disclosed in Table 45.

It is revealed from the results that the f-probability values are less than 0.05. Hence, the null hypothesis is rejected at a 0.05 level of significance. Thus, there is a significant difference in the performance of non-teaching personnel in terms of their KRA when grouped according to their profile. It states that the non-teaching personnel differ in their performance when they clustered by their profile variables. It shows that, as appended, all the respondents have outstanding performance but the highest mean are the females, age 41 and above, Accountant I, division school, and doctoral degree. However, those who attended trainings on Accounting and Auditing Services, Finance Management and Budget Related – Records and Files Management – Human Resources

and Personnel Management – Administrative and Technical Support – Organization Support, and Records and Files Management - Human Resources and Personnel Management - Administrative and Technical Support – Coordination, Communication and – Organizational Support have very satisfactory performance, while the others are of outstanding performance.

It has been revealed that performance and position or designation are highly significant in the comparison of the performance of the non-teaching personnel and their profile variables. This implies that performance is highly attributed on their position or designation. As significantly established and discussed earlier, position or designation affects the performance of employees. To put it up, when an employee seeks to upgrade in his or her professional dealings to upgrade a position or designation, then performance is also a byproduct not just for the employee for also for the organization as a whole.

In considering age as a factor in the performance level of administrative employees, Apolonio (2017) claimed that age gaps and differences affect the productivity levels and efficiency of employees in an organization as it could expand or lower the employees' amount of efficient production.

In addition, A related study by Osborne (2016) found that sex is a factor in employees' output efficiency and performance level, claiming that female employees are more output-efficient in a public institution or an office with public responsibilities. This point was also affirmed in the study of Manansala (2004), claiming that sex significantly influences employees' level of output efficiency and level of performance. In a parallel study by Cubukcu and Donmez (2011), it was found that female employees produce more work than male employees in an organization. In addition, they manifested a higher level of output efficiency as they are more involved in more senses development that help or aid their perception and attitude toward work and the working environment or workweek scheme.

This finding was supported by several studies that reveal the likelihood of performance of employees with higher and better working positions notwithstanding the type of work set up or working schedule. According to Bakker & Demerouti (2017), performance is a positive, fulfilling, and work-related state of mind that is characterized by vigor, dedication, and absorption. The vigor is characterized by high levels of energy and mental resilience, vitality, and flexibility during work, and being determined even in the face of difficulties during work. Dedication is the state in which an individual shows complete enthusiasm and involvement for work, and there is a practical effort, passion, respect, and challenging task. Absorption means that an individual is deeply focused and determined, engrossed in working, while time moves rapidly.

The result was confirmed in the study of Littky (2004) stating that education level directly affects employees' success and level of performance in any type or kind of workweek schedule. It is further revealed that when the employee, who is usually a degree holder, makes efforts to educate and further enhance oneself personally and professionally, there is more likely a positive reinforcement of educational goals due to

the employee's educational attainment. The level of education could also be determinative of employees' success in any organization, workstation, or organization.

According to Schaufeli (2011) at the beginning of the 21st century, employee performance emerged as a concept with the convergence of human capital economic theory and increasing scientific interest in positive psychology. From this convergence, interest in employee psychology materialized because organizations needed to consider how to efficiently manage their human capital expenditure while simultaneously increasing their organizational performance. However, according to Johnstone (2020), the human capital equation of producing more output with fewer employees translates into organizations having no choice but to try to engage not only the body but also the mind and the soul of every employee.

Finally, as concluded by Chievenato (2009) in the comparison between employees' performance and their attended relevant trainings and continuing professional development, these factors are contributory aspects of significant changes and development in the professional dealings of the employee. Training and development of people implies the transformation of individuals in their values, attitudes, behaviors, and skills to serve organizational change and not only provide them with information so that they learn new knowledge. So, training is concerned with the efforts made by every organization to enable its employees to develop their skills in the workplace including the knowledge, skills, and behaviors that are fundamental to successful performance.

For Cunha et al. (2009), the comparison between training of non-teaching staff and development and other measures of training and human resource assessment (such as salary, potential and performance evaluation, harmonization of individual praxis with organizational/institutional strategy) is closely related to planning practices that are aimed at individual collaborators and that positively affect outcomes in terms of performance and service delivery. As for other comments, the changes currently occurring require new skills, knowledge, and abilities from all people and training involves the possibility that each of them can contribute effectively to the organization to proactively adapt to these changes, ensuring that only the continuity of the process and its dynamics, but an increase in its capacity to meet social demands. The idea of training includes the transfer of knowledge, the standard is represented by actions on individual performance, which aim to improve team performance. So, training non-teaching staff in basic education institutions to increase work creativity, knowledge, and skills in the field of administration in supporting the teaching and learning process, performance, and the provision of public services.

Relationship between the Level of Competence and Performance of the Non-Teaching Personnel

Table 46. Results of the Test of Significant Relationship between the Level of Competence and Performance of the Non-Teaching Personnel

Variables	Probability of r	Remarks
Self-Management and Performance	0.5192	Not Significant

Professionalism and Ethics and Performance	0.3352	Not Significant
Result Focus and Performance	0.2332	Not Significant
Teamwork and Performance	0.0833	Not Significant
Service Orientation and Performance	0.1456	Not Significant
Innovation and Performance	0.4118	Not Significant

Table 46 discloses the results of the test of a significant relationship between the level of competence and performance of the non-teaching personnel.

The results reveal that the probability values of *r* are greater than 0.05. Hence, the null hypothesis is accepted at a 0.05 significance level. Thus, there is no significant relationship between the level of competence and performance of the non-teaching personnel. It implies that the competence level of the non-teaching personnel on self-management, professionalism and ethics, result focus, teamwork, service orientation, and innovation do not significantly affect their performance. It states further that the performance of the non-teaching personnel does not depend on their competence level in the said six areas.

In the study, Lingam (2002), cited that one of the critical factors that positively affects employees' performance and efficacy as productive employees is the level of training engagements, continuing education, and level of competencies such as enrollment to higher education, post-graduate studies, trainings relevant to job descriptions and other relatively significant trainings prescribed by their agencies, employers, or institutional management of the human resources division office. Also, Muwonge et al. (2002) found that strong social support from school administrators and supervisors from the school, and good resource management, are cited to be a few factors that contribute to the development of employees to strive and seek continuing education relevant to their job description.

This was supported by Khan et.al (2019) stating that employee effectiveness is essential in developing human resources because if the training is ineffective, it will not be helpful. Training is effective and it can enjoy the results for the trainees and the organization. In organizations that provide services at the forefront, educational organizations such as universities, schools, and others must use personnel who can meet specific standards. Various studies show that training is the best way to get the skills employees need.

Further, as emphasized by Khan (2019), the improved quality of work is a key outcome that can be expected from training initiatives. However, it is worth mentioning that such practices are increasingly focused and personalized. They seek to meet specific demands in a particular field or professional profile, accelerate their assimilation, and improve work outcomes. However, this quality is reflected not only in public services but also in the level of professional trust. Each work program must address all problems in public administration, and the absence of certain competencies, that is, contribute to developing new skills, knowledge, and attitudes in a professional or work team.

The foregoing results discussed are comparative analyses of the association between the level of competence and performance of employees in the Schools Division

Office of the City of Ilagan. Hannah as cited by Cody (2011) pointed out, that competencies are contributory factors in the success or failure of employees in the fields of work development and productivity as employees. Hence, it is indispensable for administrators and supervisors to ensure that training engagements, continuing education, and other relevant learning or educational opportunities are maximized to improve personal efficacy and skills development.

However, contrary to these claims and assertions, the cited indicators of the level of competence of non-teaching employees in the education sector which include Self-Management, Professionalism and Ethics, Result Focus, Teamwork, Service Orientation, and Innovation signify that these indicators of the level of competence of administrative employees do not affect their performance in an organization specifically to the Schools Division Office of the City of Ilagan. As established by Landale (2020), there are several sources of employees' productivity and performance attribution which could be both personal and professional. In the personal aspect, there is a huge relativity of positive connection between stability in the socio-economic status of employees. For instance, when employees are well-stationed in their personal lives, optimistic results could prosper in their workstations. Hence, performance and productivity of employees are not always cited in their professional attributions which are centered on organizational and institutional aspects including teamwork, result focus, service orientation, and work innovations. Aside from professional training, non-teaching employees and administrative employees could be further developed by considering aspects of their working conditions. However, training development in a holistic approach contributes meaningfully to the improvement of employees in the administrative, financial, and technical aspects of administrative work.

Conclusions

Considering the above results, the study concludes that the level of competence of the non-teaching personnel of the Schools Division of the City of Ilagan is overall high which indicates that they are highly competent in terms of Self-Management, Professionalism and Ethics, Result Focus, Teamwork, Service Orientation, and Innovation. This means that the personal attributes of the employees are factors towards their competence.

In their level of performance, most of the respondents performed outstanding. It is also concluded that the performance of non-teaching personnel varies according to their profile variables. This further implies that they perform differently according to their personal and professional dealings. However, some respondents were rated below outstanding performance.

Hence, in this study, there is a need to develop and devise a sustainable upskilling program to maintain the status quo and to relatively answer the problem of sustainability experienced by non-teaching personnel about their competence and performance as employees of the Department of Education.

Recommendations

Based on the findings and conclusions of the study, the following recommendations are considered to formulate and devise proper and appropriate mechanisms to further improve the bounds of the study:

1. Since it was found that non-teaching personnel of the Schools Division of the City of Ilagan are highly competent, an appraisal system should be developed to reinforce good working practices and management capabilities to enforce the sustainability of results.
2. Since the number of relevant trainings attended significantly caused a difference in the non-teaching personnel's level of competence and performance, administrative employees must be sent and actively participate in more trainings related to the indicators of the competence of non-teaching personnel.
3. Development of sustainability and enhancement of an upskilling program should be formulated and developed based on the performance of the administrative employees.
4. Non-teaching employees may devise, craft, customize, and implement individual personal and professional developmental goals targeting the competencies and performance key indicators as non-teaching personnel that would foresee engagements for the next three to five years.
5. Non-teaching personnel who performed excellently in their Individual/Office Performance Commitment Review Form with an Outstanding Rating are recommended for merit increase or additional enumeration as indicated in the Result Based Performance Management System.
6. Administrative Aide employees must maintain and organize the grounds and facilities of the Schools Division Office of the City of Ilagan.
7. Finally, an Upskilling Program must be developed, crafted, implemented, and monitored as a response to the results and findings in the study that highlighted the levels of performance and competence of the employees.

Compliance with Ethical Standards

The author declares that this research was conducted with strict adherence to ethical guidelines. Informed consent was obtained from all participants before their involvement in the study, ensuring they were fully aware of the research objectives, procedures, and potential risks. Respondents were informed of their right to withdraw from the study at any time without penalty. The anonymity of all participants was maintained throughout the research process, and their well-being was safeguarded. No conflict of interest exists in the conduct of this study. The authors have strictly avoided plagiarism, ensuring that all sources are properly cited and acknowledged. Furthermore,

the interpretation of the findings was conducted without bias, and the results were used solely for research purposes.

Acknowledgments

The researcher would like to extend her heartfelt gratitude to her research adviser for the invaluable guidance, to the participants of this study for their essential contributions, and to the researcher's family and friends for their unwavering support. She is also deeply thankful to his colleagues for their encouragement, and most importantly to God for providing him with the strength and perseverance to complete this work.

MALE NURSES' INTENTION TO STAY IN A SPECIFIC HOSPITAL: A CASE STUDY

Czarina Julia C. Montañer, Edil Fe B. Sumile, Lalaine D. Undag, Ian C. Abordo, PhD, Donna Belle P. Sumugat, RN, MAN, and Amelyn Grace M. Maghanoy, RN, MAN

Nursing Department, Adventist Medical Center College, Iligan City, Philippines

https://doi.org/10.5281/zenodo.13330004

ABSTRACT

This research aimed to understand factors contributing to male nurses' retention and satisfaction in a government-owned hospital setting in the Philippines, particularly in Mindanao. Utilizing qualitative case study, the research employed purposive sampling to identify male nurses who committed to stay and work in a hospital. In-depth interviews were conducted with 11 registered male nurses, each having over five years of experience and currently working at said hospital. The researchers followed the Creswell and Creswell's (2018) five steps during data analysis process: 1. Organize and prepare the data for analysis, 2. Read or look at all the data, 3. Start coding all of the data, 4. Generate a description and themes, 5. Representing the description and themes. The findings revealed three key themes: reasons for selecting a specific hospital, factors influencing long-term commitment, and solutions to interpersonal conflicts. The study concludes that male nurses' decisions to remain at a particular hospital are influenced by their satisfaction with salary and other work benefits, prospects for growth and development, camaraderie among staff, and the ability to remain neutral and fair during interpersonal conflict situations.

Keywords: *Intention to stay, male nurses, retention, Filipino, commitment, case study*

INTRODUCTION

In recent decades, the nursing profession has witnessed a notable demographic shift, with an increasing number of men entering what was traditionally considered a female-

dominated field. This trend has been particularly evident since the 1970s, and currently male nurses comprise more than 13% of the overall nursing workforce (American Nurses Association, 2023). The decision-making process for men pursuing a nursing career remains influenced by various factors such as societal expectations, childhood experiences, perceptions on nurses' challenges, and other positive aspects within the profession (Dos Santos, 2020; Banakhar et al., 2021).

As men enter the nursing profession, they bring with them unique characteristics and qualities, including caring, calmness, attentiveness, bravery, and skill (Kaur et al., 2022). Additionally, male nurses exhibit autonomy in decision-making, emotional resilience, a sense of humor, and they demonstrate respect, consideration, and supportiveness towards patients (Saleh et al., 2020; Martínez-Morato et al., 2021; Sundus & Younas, 2020; Mao et al., 2021). Despite these positive attributes, male nurses also encounter challenges within their working environments, ranging from limitations in job performance to gender-based discrimination (Shin & Lim, 2021; Chang & Jeong, 2021; Papantoniou, 2021).

Moreover, job satisfaction among male nurses is influenced by various factors, including personality, resilience, emotional intelligence, mental well-being, stress, and organizational factors such as leadership styles and organizational culture (Nam & Kim, 2018; Kim et al., 2019; Chang & Kim, 2022). Notably, the intention of male nurses to remain in a specific hospital is shaped by factors such as work commitment, job satisfaction, and organizational factors like hospital type and salaries (Labrague et al., 2018; Sapar & Oducado, 2021).

While the existing literature provides valuable insights into various aspects of male nurses' experiences, challenges, and motivations, there remains a research gap concerning their intention to stay in a specific hospital, particularly within the confines of government-run hospitals in the Philippines. Existing studies either offer generalized perspectives or focus on broader organizational commitment, failing to delve into the intricate dynamics of male nurses' retention within a specific hospital.

Hence, this study addressed three gaps. First, it addressed the knowledge gap by specifically examining the possible reasons for male nurses' intention to remain within a specific hospital in the Philippines. Second, it addressed a methodological gap by utilizing a qualitative research design. A broader understanding of factors influencing their intention to stay within their respective hospital in this specific geographical setting is necessary. Third, it addressed a population gap in existing research on the intention of male nurses to stay in a specific hospital. By focusing on the insufficiently researched population of male nurses in government-run hospitals in Region X, Mindanao, Philippines, the study sought to enhance our knowledge and offer insights into the factors influencing the retention patterns of male nurses in a particular hospital. This study aimed to explore deeper insights into reasons for male nurses' intention to remain working in a hospital in the Philippines. Hospital managers and nurse administrators can draw insights useful in crafting retention and job satisfaction policies and strategies for male nurses in similar hospital settings in the Philippines, particularly in Mindanao.

Research Questions

The main research questions were:

1. What are the male nurses' reasons for selecting a specific hospital?
2. What motivates male nurses in maintaining their dedication to a specific hospital over an extended period of time?
3. How do male nurses manage and address interpersonal conflicts within their departments?

METHODOLOGY

The researchers of this study used the qualitative case study design as the suitable approach for this research. Case studies are empirical inquiries that investigated a phenomenon in its real-life context (Yin, 2009). A case study can be descriptive, explanatory, or exploratory (Yin, 2014). Case studies are useful for answering "how" and "why" questions about a set of events over which the researchers have little or no control (Yin, 2009). These studies are bounded by the unique characteristics and complexities of the particular case being studied, and it is important to understand the individual case within its specific context rather than attempt to generalize findings to other cases or contexts (Stake, 1995). In this study, the phenomenon under investigation covered the multiple complexities forming the reasons or factors that influenced male nurses' stays in a specific hospital.

Bounded System and Participants

The *case* of this study included registered male nurses currently working at a government-run and tertiary hospital in Region X, Mindanao, Philippines. The study involved 11 male registered nurses from Gregorio T. Lluch Memorial Hospital (GTLMH) in Iligan City, Lanao del Norte, each with a minimum of 5 years of work experience. A purposive sampling strategy, particularly criterion sampling, was employed to select participants based on the inclusion criteria: male gender, at least 5 years of work experience at GTLMH, and registered nurse status.

Semi-Structured Interview Protocol

This study utilized semi-structured interviews that allowed the researchers to delve into the factors that affect male nurses in staying in a specific hospital. The interviews were tailored to capture nuances and contextual details, fostering open conversations that reveal participants' thoughts, feelings, and personal reflections on their work experience in the chosen hospital in Iligan City. Participant observation was used, which offered an immersive lens into how male interact with their fellow nurses and patients.

Ethical Considerations

Several ethical considerations were taken into account. Primarily, permission from the hospital's administrator and head nurse was obtained through a letter of authorization in order to gain access to the institution's employees, which ensured the researchers credibility. The research used "informed consent" approach so that the participants would be aware of the purpose and research design. Participants' confidentiality and anonymity were guaranteed, and permission to audio record the interviews were granted by the participants through the consent form.

Data Gathering Procedure

Before data collection, the researchers sought clearance from the Ethics Review Committee of Adventist Medical Center College. Participants were carefully selected, informed of the study's purpose, and assured of confidentiality before providing consent. Interviews were scheduled at convenient times and locations within the hospital, and conducted using a semi-structured format to cover key topics while allowing open-ended response. The interviewer built rapport, paid attention to nonverbal cues, and asked clarifying questions. With participants' consent, interviews were audio-recorded and supplemental field notes. During and after the interviews, the researchers wrote memos and updated entries in the audit trail. Transcripts were verified by participants, ensuring accuracy. Data were securely stored, anonymized, and analyzed thematically, with findings triangulated for credibility. Table 1 shows a data triangulation matrix.

Table 1

Data Triangulation Matrix

Research Questions	*Source 1*	*Source 2*
RQ1: What are the male nurses' reasons for selecting a specific hospital?	Participant Interview	Observation
RQ2: What motivates male nurses in maintaining their dedication to a specific hospital over an extended period of time?	Participant Interview	Observation
RQ3: How do male nurses manage and address interpersonal conflicts within their departments?	Participant Interview	Observation

Data Analysis

In qualitative research, data analysis progresses alongside the other components of the study, such as data collection and reporting findings (Creswell & Creswell 2018). This type of research emphasizes using everyday methods of interpretation (Stake, 1995). After the interviews and the consequent transcriptions, member checking was achieved, and data analysis followed Creswell and Creswell's (2018) five steps to achieve codes and categorical themes.

Trustworthiness and Authenticity

Authenticity and trustworthiness were paramount considerations to ensure the credibility and reliability of the researcher's findings. Drawing on insights from Flory and Emanuel (2004) and Wilkinson and Kitzinger (2020), the researchers recognized the importance of transparency to enhance authenticity. To enhance the authenticity of the researcher's study findings, the researchers prioritized transparency and ethical conduct through adhering to the ethical considerations through informed consent.

Trustworthiness was also prioritized by employing strategies recommended by renowned qualitative researchers. To enhance credibility (Lincoln & Guba, 1985), the researchers *triangulated* data (Stake, 1995; Merriam, 2002; Yin, 2009) from multiple sources and performed *member checks* to validate the accuracy of the researchers interpretations. The researchers also sought *peer review* to ensure the congruency of the findings with the data and interpretations and provided an *audit trail*, documenting the methods, procedures, and decision points throughout the research process to enhance dependability.

Furthermore, the researchers engaged in *reflexivity* (Merriam, 2002), critically reflecting on the researchers assumptions, biases, and relationship to the study. This self-awareness enabled them to navigate potential biases effectively and produce a nuanced and insightful exploration of male nurses' intentions. In addition, the researchers ensured a *rich description* by providing detailed contextual information to enable readers to understand the study's context thoroughly. For example, the researchers described the participants' demographic characteristics, such as their assigned department, starting and current working position, years of experience, and marital status, as well as the setting in which the study took place, including the hospital's size, location, and organizational structure.

Additionally, the researchers incorporated *maximum variation* by recruiting participants from various departments in the hospital "to allow for a greater range of application of the findings by consumers of the research" (Merriam, 2002 p. 31). This deliberate sampling approach enhanced the richness and depth of the researcher's data, contributing to the credibility and transferability of the findings. By adhering to these principles of authenticity and trustworthiness, the researchers aimed to ensure the ethical conduct and reliability of the qualitative study. Through transparent documentation, critical reflection, and methodological rigor, the researchers sought to contribute to the body of knowledge on male nurses' intentions in the hospital setting with confidence and integrity.

Reflexivity Statement

It is clear that the primary instrument for data collection and analysis in qualitative research is the researcher herself. Qualitative research assumes that the researcher's biases and values impact the outcome of any study (Merriam, 1998). To enable any audience of qualitative studies to evaluate the validity of conclusions drawn from data,

researchers should, as part of the study, neutralize or bracket their biases by stating them explicitly to the full extent possible (Altheide & Johnson, 1994).

In this study, reflexivity was acknowledged to address potential biases stemming from our backgrounds and experiences. Firstly, the researchers status as nursing students may have provided them with insider knowledge of the nursing profession, including its challenges, dynamics, and gender disparities. Furthermore, the researchers observation of the scarcity of male nurses in various hospital departments and the researchers interactions with male classmates in the nursing program may have shaped their understanding of gender dynamics within the nursing profession.

RESULTS

Table 2 provides a demographic profile of participants, including their department, years of service, starting position, current position, and marital status. Participants represent a diverse range of departments and possess varying levels of experience, from 8 to 31 years.

Table 2
Participants' Demographic Profile

Participants	*Department*	*Years of Service*	*Starting Position*	*Current Position*	*Marital Status*
P001	Emergency Room	12	Job Order	Nurse I	Single
P002	Health Emergency Management Bureau Unit (HEMB)	31	Request of Employment	Nurse IV	Single
P003	Health Emergency Management Bureau Unit (HEMB)	24	Residency Training	Nurse II	Married

Table 2 *(continued)*

P004	Hemodialysis Unit	12	Job Order	Nurse II	Single
P005	Intensive Care Unit	18	Job Order	Regular Nurse	Married

P006	Out-patient Department	20	Request of Employment	Nurse II	Married
P007	Out-patient Department	30	Kitchen Staff	Nurse II	Married
P008	Operating Room	20	Residency Training	Contractual	Married
P009	Operating Room	8	Contractual	Contractual	Married
P010	Respiratory Unit	11	Staff Nurse	Nurse I	Single
P011	Surgery Ward	10	Staff Nurse	Staff Nurse	Single

During the interviews, participants were stationed within their respective departments and were informed in advance by their head nurses regarding the scheduled interviews. Despite this, they exhibited a welcoming demeanor and demonstrated cooperation throughout the process. Participants varied in their contributions to the three themes constituting the narrative. While some individuals extensively discussed one or two themes, others evenly distributed their input across all three. Consequently, the study ensured the representation of all participants' voices and perspectives.

The research findings are organized into three themes: (a) reasons for selecting a specific hospital, (b) factors influencing long-term commitment, and (c) interpersonal conflict's solutions. Each theme explores the experiences and perspectives of male nurses, offering insights into the complexities of their professional lives within the hospital setting.

Theme 1: Reasons in Selecting a Specific Hospital

Participants shared their motivations and considerations guiding them towards decisions when selecting a particular hospital for employment. It is focused on the primary factors that attract male nurses emphasizing beneficial offers such as experience, salary, and team-building activities.

Table 3

Beneficial Offers of the Hospital

Theme	*Participant Interview*	*Observation*
Gaining experience	*"The reason why I applied here is because of my future work. I believe that this hospital offers a unique environment and opportunities that align closely with my professional goals and personal values. By working here, I aim to gain invaluable experience, refine my skills, and contribute meaningfully to the healthcare community.*" (P009)	Enthusiasm and passion observed during the interview. Consistency in responses, emphasizing professional growth and contribution. Positive body language and confident tone.
Salary	*"The pay rate in government hospitals is generally higher compared to private ones."* (P002)	Participant mentioned specific figures or comparisons indicating awareness of salary differences.
Team-building	*"I enjoyed the company of my batchmates when I joined. We spent a longer period of time together, which strengthened our bond. Moreover, the hospital before used to organize team-building activities for all employees. There were days when the entire hospital would go for team-building outside the premises, like going to the beach."* (P002)	Described past team-building activities with enthusiasm and fondness. Provided specific examples of team-building events and their impact on morale. Positive demeanor when discussing team-building and social interactions.

Theme 2: Factors Influencing Long-Term Commitment

This theme explores the factors driving long-term commitment and dedication among male nurses, focusing on two key aspects: the prospect for career advancement and strong interpersonal connections. These elements resonate strongly with the majority of male nurses and significantly shape their commitment to their profession and workplace.

Prospect for Career Advancement

This theme encompasses factors influencing male nurses' perceptions of opportunities for professional growth and development within their careers. It includes components such as becoming resourceful and creative, experiencing learning opportunities, the prospect of growth and development, striving further to learn, and participating in trainings and seminars.

Table 4

Prospect for Career Advancement

Theme	*Participant Interview*	*Observation*
Becoming resourceful and creative	*"Yes, despite the limitations in budget and resources, it pushes us to be more resourceful and creative in delivering care to our patients. This mindset cultivates resilience and adaptability, which are essential qualities for nurses in any healthcare setting."* (P004)	Described creative solutions they have implemented. Showed enthusiasm for challenges and problem-solving. Demonstrated resilience and adaptability in responses.
Experience learning opportunities	*"Despite the inherent difficulties, these experiences serve as invaluable learning opportunities, honing my interpersonal skills and enhancing my ability to provide compassionate care even in the most challenging circumstances."* (P001)	Exhibited a reflective attitude on personal growth. Showed a compassionate approach to patient care.
Prospect of growth and development	*"The prospect of growth and development within the hospital does play a role in my decision to stay for an extended duration. The knowledge that there are pathways for advancement and the possibility of taking on new challenges in the future adds a sense of purpose and direction to my tenure here."* (P001)	Participant discussed future career plans and advancement opportunities. Showed awareness of career pathways and developmental programs within the hospital. Expressed a clear sense of purpose and direction.
Striving further to learn	*"For me, despite the years I've spent, I still thrive on learning and there's so much more I want to learn."* (P010)	Shared excitement about new areas they want to explore. Demonstrated a lifelong learning attitude and continuous curiosity.
Trainings and seminars	*"Before, training here was fast-paced, which is why I was encouraged to stay."* (P007)	Answered the questions confidently and was able to share his experiences in his stay in the hospital.

Strong Interpersonal Connections

This theme explores the significance of social relationships and collaboration among male nurses in the workplace, focusing on camaraderie and bonding with colleagues and the value of teamwork.

Table 5

Strong Interpersonal Connections

Theme	*Participant Interview*	*Observation*
Camaraderie and bonding with colleagues	*"It's the people around me. Even if the salary is low, and it took a long time to receive payment when I started as a casual employee. I even started without pay, right? But despite that, it's really the people who are there. Yes, the bond. Even if we don't have much money, we can still eat together, have fun in our area, even if there are challenging patients or watchers, we continue. We can still manage to laugh and joke around because of the camaraderie and the people you work with."* (P004)	The casual joking and laughter exchanged among participants indicate a comfortable and positive atmosphere where colleagues feel at ease interacting with one another, fostering social cohesion and emotional well-being.
Value of teamwork	*"I value teamwork over personal convenience. In this hospital where staff is often insufficient, if you possess the necessary skills and knowledge, it's compassionate to assist your less skilled colleagues rather than leaving them behind."* (P010)	The researchers noted an instance where participant P010 provided guidance and assistance to a trainee under his supervision in communicating with a client, exemplifying his commitment to fostering a supportive work environment.

Theme 3: Interpersonal Conflict's Solutions

This theme explores the various methods male nurses utilize to navigate and resolve interpersonal conflicts encountered within healthcare environments. The predominant strategy observed across responses is the emphasis on maintaining neutrality and fairness in addressing such situations.

Neutrality and Fairness in Situations

This theme centers around the principles of impartiality, objectivity, and equitable treatment in addressing conflicts and reaching resolution. This focuses on giving time before resolving, helping each other out, leaving it to higher ups, not being one-sided, not harboring grudges, open-minded approach, and verifying situation.

Table 6

Neutrality and Fairness in Situations

Theme	*Participant Interview*	*Observation*
Giving time before resolving	*"Sometimes it's best to postpone it to let things cool down because everyone's still heated and emotions are running high, so it's better to calm down first as nothing gets resolved when everyone's just angry."* (P004)	Participant demonstrated a calm and measured demeanor during the interview. Showed awareness of emotional states and their impact on conflict resolution.
Helping each other out	*"In the OR, cleanliness is paramount. So if your teammate is lazy and doesn't work, it affects everyone, and it also affects the cleanliness of the OR. As a team, you should really help each other out."* (P008)	Talked about the importance of cleanliness and collaboration. Showed appreciation for team efforts and describes situations where helping each other improved outcomes.
Leaving it to higher ups	*"In disagreements, at the end of the day, it's usually the head who steps in to help resolve the issue."* (P006)	Showed reliance on hierarchical structure for resolving disputes.
Not being one-sided	*"Just provide solutions... It's important to remain neutral and accept all sides. Don't be one-sided."* (P005)	The researchers observed that positive relationships among coworkers demonstrated a commitment to fairness and neutrality in handling conflicts. Emphasized the value of considering all perspectives and avoiding bias.

Table 6 *(continued)*

Not harboring grudges	*"It just passes by... I'm not one to harbor grudges. So I haven't experienced conflicts."* (P007)	Participant exhibited a positive and forgiving attitude. Showed a lack of resentment and emphasizes moving on from disagreements.
Open-minded approach	*"If a conflict or disagreement arises, it's important to communicate. We need to talk about the differences, identify any mistakes, and understand the reasons behind them. Instead of letting things escalate without taking action, addressing the conflict head-on allows us to resolve issues and prevent them from worsening."* (P007)	Demonstrated a proactive attitude towards conflict resolution. Emphasized the importance of understanding the underlying reasons behind conflicts. Showed a belief in the effectiveness of open communication in resolving issues.
Verifying situation	*"I verify what really happened before saying anything. We shouldn't jump into conclusions without gathering all the data."* (P002)	Demonstrated a careful and analytical mindset when dealing with conflicts.

DISCUSSION

The findings reveal that male nurses intended to stay because of beneficial offers, opportunities for gaining experience, competitive salaries, and team-building activities. The desire for professional growth, stable income, and a supportive work environment significantly contributed to job satisfaction and retention intentions. The prospect of career advancement, continuous professional development through training and seminars, and strong interpersonal connections, described as akin to family, are crucial for long-term commitment. Participants also emphasized the importance of resourcefulness and creativity in patient care, viewing challenging interactions as valuable learning opportunities. Effective conflict resolution strategies include maintaining neutrality and fairness, giving time before addressing conflicts, involving higher-ups, and verifying situations to ensure fair outcomes. Overall, career progression opportunities, supportive work culture, and teamwork are critical in attracting, retaining, and ensuring long-term commitment among male nurses.

The researchers of this study found that job satisfaction and organizational commitment are crucial in nurses' retention. This finding joins the research of Dutta, Sutnga, and Kaur (2021) on job satisfaction among nurses that emphasized the role of

professional growth opportunities, echoing the participants' focus on gaining experience. Similarly, the study of Labrague et al. (2018) underscores the influence of salary and organizational factors on nurses' retention intentions, supporting the researchers participants' emphasis on competitive salaries. Participants preferred staying in the public or governmental hospital, which offers a higher pay rate than private sector. Furthermore,the researchers findings are consistent with earlier research in some aspects, but the researchers data revealed the value of team-building activities. Through team-building, camaraderie and social interaction occur, contributing to job satisfaction and creating supportive work environment for male nurses.

The prospect for career advancement and strong interpersonal connections influenced the long-term commitments among nurses in this hospital. Participants highlighted the practice of being resourceful and creative in patient care, viewing challenging interactions as valuable learning opportunities. The continuous professional growth through training and seminars facilitated their renewed sense of purpose and direction. A supportive work culture and camaraderie among colleagues was described as akin to family relationships. Teamwork and mutual assistance were highly valued, fostering a positive and cohesive work environment.

The researchers findings also uncovered various strategies for conflict resolution within healthcare settings. While previous studies have explored aspects of conflict resolution, emotional intelligence, and leadership's impact on organizational culture, the researchers study contributes nuanced insights into these areas. Chang and Kim (2022) discussed organizational culture and leadership broadly but did not delve into specific conflict resolution strategies. In contrast, this study offers practical methods for maintaining neutrality and fairness—giving time before resolving, helping each other out, leaving it to higher-ups, not being one-sided, not harboring grudges, an open-minded approach, and verifying situations—enriching the understanding of how these concepts manifest in real-world conflict scenarios. Additionally, while Liu et al. (2022) highlighted emotional intelligence's role in managing interpersonal challenges, our study goes further by providing concrete examples of its application, demonstrating its effectiveness in navigating conflicts among healthcare professionals.

Moreover, this study diverges from previous research by emphasizing the importance of teamwork as a conflict resolution strategy rather than solely focusing on interpersonal relationships as noted by Baker (2019). While Marañón, Rodríguez-Martín, and Galbany-Estragués (2019) explored professional-family relationships and gender dynamics, our findings underscore the significance of avoiding grudges and fostering professional relationships as crucial elements in resolving conflicts within healthcare teams. Furthermore, while Mao et al. (2020) prioritized maintaining respect and dignity in interactions, this study emphasizes the importance of fact-checking and due diligence in conflict resolution processes. Lastly, unlike Chang and Kim (2022), who primarily discussed leadership's influence on organizational commitment, this study highlights the practical involvement of higher-ups in resolving conflicts, offering tangible strategies for addressing conflicts within healthcare organizations.

The findings from this study carry significant implications for healthcare management and policy, particularly in crafting effective strategies for recruiting and retaining male nurses. By identifying specific factors that appeal to male nurses, such as competitive salaries, structured training programs, and team-building activities, healthcare administrators can tailor their recruitment efforts to better attract and retain this demographic. Moreover, the study highlights the pivotal role of professional growth opportunities and a supportive work environment in securing long-term commitment from male nurses. To address these needs, healthcare institutions may consider investing in continuous education programs and establishing clear pathways for career advancement.

Additionally, the study's emphasis on effective conflict resolution underscores the necessity for hospitals to offer training in interpersonal skills and conflict management for male nurses. By equipping male nurses with the tools to navigate and resolve conflicts efficiently, hospitals can foster a more harmonious and productive workplace. This is extremely important in public hospitals where the application of a neutral attitude towards work conflicts can enable one to navigate through the bureaucratic systems, and promote team harmony. Such an approach fosters strong interpersonal relationships, which is one of the key determinants as to why male nurses tend to stay long-term in any public hospital setting. Improved patient care outcomes can therefore be achieved through this since it always ensures a coherent and supportive working environment.

Conclusions

In conclusion, this research reveals a comprehensive understanding of the factors influencing the intention of male nurses to remain in a particular hospital. Key factors include the beneficial offerings provided by the hospital, such as work experience, salary, and team-building activities. Furthermore, factors influencing long-term commitment is influenced by prospects for career advancement, including opportunities for creativity, learning, growth, and development. Strong interpersonal connections, characterized by camaraderie and teamwork, are also highlighted as crucial for creating a supportive and collaborative work environment, essential for the well-being and success of male nurses.

Interpersonal conflict’s solutions, particularly neutrality and fairness in situations are highlighted by giving time before resolving, helping each other out, leaving it to higher-ups, not being one-sided, not harboring grudges, open-minded approach and verifying the situation. The findings of our study highlight that male nurses' decision to remain in a particular hospital is driven by the strong interpersonal relationships and teamwork. In governmental hospitals, where politics influence work, male nurses adopt a neutral approach to conflicts, preventing bias and fostering harmonious relationships. This neutrality is key to resolving conflicts and maintaining strong relationships, which significantly influences their decision to stay long-term.

Recommendations

The researchers of this study recommends future research endeavors to implement several key strategies. Firstly, future researchers should consider broadening the scope

of investigation by including male nurses from various hospitals and healthcare settings. The inclusion of participants from diverse backgrounds allows researchers to have a global meaning on the lives of male nurses. With this wider view, one can look into the factors that drive retention and work place dynamics in various healthcare environments better. It also makes knowledge gained useful to more health institutions when it combines outputs from many different settings.

Additionally, efforts should be made to diversify the sample by recruiting larger and more diverse participant groups. This entails including participants with varied demographic characteristics, such as age, years of professional experience, and specialty areas. Furthermore, recruiting participants with diverse professional backgrounds can provide a more holistic perspective on the challenges and opportunities faced by male nurses in different roles within the healthcare system. A larger and more diverse sample ensures that the findings are representative of the male nursing population and captures a wider range of perspectives, contributing to the richness and depth of the research.

Lastly, future researchers should pay close attention to contextual factors such as organizational culture and healthcare policies when interpreting findings. These contextual factors play a significant role in shaping male nurses' experiences and intentions within their workplace. Developing effective strategies for retaining men in nursing requires understanding the influence of organization culture, healthcare policies and leadership styles. By considering these contextual factors, researchers can provide more nuanced insights into the challenges and opportunities faced by male nurses and inform the development of targeted interventions to improve retention and workplace satisfaction.

Compliance with Ethical Standards

Regarding the conditions of this study, several ethical considerations were carefully addressed. Permission was secured from the hospital’s administrator and head nurse through a letter of authorization, granting access to the institution's employees and establishing the researchers' credibility. An informed consent approach was employed to ensure that participants were fully aware of the study's purpose and design, with clear communication that participation was voluntary and they could withdraw at any time without consequence. The confidentiality and anonymity of the participants were rigorously maintained, and permission was obtained for audio recording the interviews. No conflicts of interest were present, and the study was conducted with strict avoidance of plagiarism. The researchers addressed potential biases through reflexivity, acknowledging how their backgrounds and experiences might influence the study. They ensured that the interpretation of the findings was unbiased and that the results were used solely for research purposes, demonstrating their commitment to ethical research practices.

Acknowledgments

The success of this study has been significantly influenced by the guidance and support of many individuals, alongside our own efforts. We would like to take this opportunity to convey our heartfelt thanks to everyone whose contributions have made this study a reality. We extend our deepest gratitude and appreciation to the following people whose assistance has brought this study to fruition:

Ian C. Abordo, PhD, Research Professor, for his invaluable guidance throughout the course of this study. From the initial stages of conceptualization to the final phases of implementation, he provided us with insightful feedback, constructive criticism, and unwavering encouragement. His patience and commitment to excellence have significantly contributed to the success of this research .

Armelyn Grace M. Maghanoy, RN, MAN, Thesis Adviser, for her assistance and support. We thank her for giving us her time in correcting our papers and providing her knowledge despite the busy schedules. This study would not have been possible without her outstanding mentorship.

Donna Belle P. Sumugat, RN, MAN, Panelist, for her consideration despite the sudden invitation to be our panelist. Her encouragement pushed us to explore new perspectives and refine our methodology. Her participation has been pivotal in our research journey, and we are honored to have benefited from her expertise.

The Respondents, who provided us their time and assistance by providing the necessary information, thereby assisting in the achievement of the study's goal.

To our Family, who supported us emotionally and financially. We are grateful for their constant encouragement which gave us the strength and motivation to overcome all challenges that we faced during the making of this study.

To our Peers, we are grateful for their invaluable support, collaboration, encouragement throughout this journey. Together, we have navigated challenges, celebrated milestones and continuously inspired each other to strive for excellence.

We humbly acknowledge and give thanks to God for His grace, guidance, and blessings throughout the course of this research journey. In moments of uncertainty, His wisdom has provided clarity, and in times of challenge, His strength has sustained us. This study stands as a statement to His providence and the faithfulness that has accompanied us on this journey. May His blessings continue to enrich our lives and endeavors.

MARKET STATUS OF UKAY-UKAY AND READY-TO- WEAR BUSINESS IN TAGBILARAN CITY

Michelle C. Cahucom

Bohol Island State University- Main Campus, Tagbilaran City, Bohol, Philippines

https://doi.org/10.5281/zenodo.13359227

ABSTRACT

This study investigates the market status of ukay-ukay and ready-to-wear (RTW) businesses in Tagbilaran City, Bohol, and examines whether significant differences exist between these two sectors. The research aims to profile these businesses in terms of capital, rental, product offerings, revenue, permits, supply sources, bulk releases, and product disposal, as well as assess their market status regarding price, product quality, promotion, location, and sanitation. Utilizing a questionnaire based on Garrovillas (2013), data were collected from ukay-ukay and RTW business owners. Analysis revealed that RTW businesses generally require higher capital and rental expenses compared to ukay-ukay. Despite both sectors generating similar revenue, RTW businesses incur higher permit fees and have fewer bulk releases. The findings indicate that ukay-ukay is more affordable and perceived as having better product quality, while RTW excels in promotion, location, and sanitation. A z-test confirms a significant difference between the market statuses of ukay-ukay and RTW. Based on these results, recommendations include rehabilitating stalls, implementing price tariffs, enhancing promotions, establishing sanitation oversight, and enforcing quality control for ukay-ukay vendors. Further research is suggested to validate and expand upon these findings.

Keywords: *Consumer Behavior, Market Status, Ready-to-Wear (RTW), Sanitation, Ukay-ukay*

INTRODUCTION

The clothing industry remains one of the most dynamic and competitive sectors worldwide, driven by the fundamental human need for clothing. Among the prominent segments within this industry today are ukay-ukay (second-hand garments) and ready-to-wear (RTW) apparel. These sectors are particularly relevant within the context of sustainable fashion, which emphasizes the need for the fashion industry to balance economic, environmental, cultural, and social goals. Ukay-ukay, by promoting the reuse of clothing and reducing environmental impact, presents a more sustainable alternative compared to fast fashion and luxury fashion (Biana, 2020).

The appeal of ukay-ukay lies in its affordability, offering fashionable and durable clothing at prices accessible to people with lower incomes (Isla, 2013). This accessibility has made ukay-ukay a popular alternative to brand-new garments found in boutiques and shopping malls, especially in regions like Bohol, where the industry has flourished in recent years. Despite concerns about sanitation, limited sizes, and potential defects, ukay-ukay continues to thrive, particularly in urban centers such as Tagbilaran City, where numerous ukay-ukay and RTW stalls can be found.

The sustained growth of the ukay-ukay and RTW industries in Bohol has piqued the interest of the researcher, prompting an investigation into consumer surplus and market dynamics within this sector. By examining these aspects, the study aims to provide a comprehensive overview of the market status of ukay-ukay and RTW, offering insights into how these businesses contribute to the local economy and what improvements can be made. Recognizing their significance as a source of income for local entrepreneurs and revenue for the city government, the study also considers the potential benefits of a proposed plan to enhance the operations of ukay-ukay and RTW stalls.

Grounded in several theories of consumer behavior, this research builds on Thorndike's Law of Effect, which suggests that consumers are likely to repeat purchasing behaviors that have previously been satisfying (Athalye et al., 2018). This principle aligns with observations that satisfied customers tend to return to products or services that have met their expectations (Nacif, 2012). Additionally, Ajzen and Fishbein's Theory of Reasoned Action (TRA) (1980), as cited by Al-Suqri and Al-Kharusi (2015), highlights the role of pre-existing attitudes and intentions in consumer decision-making, while Stern's concept of impulse behavior underscores the influence of external stimuli on purchasing decisions. Consumers often determine the attractiveness of a business through the quality of service extended to them, with excellent services or products encouraging repeat patronage (Danesh, Nasab, & Ling, 2012). These theoretical perspectives, combined with observations of consumer preferences and behaviors, form the foundation of this study, which seeks to shed light on the factors driving the success of ukay-ukay and RTW businesses in Bohol.

Moreover, this study draws on previous research that has explored various facets of the ukay-ukay industry, including its economic impact, consumer attitudes, and the ongoing debate over its legalization. The insights gained from this research will be

instrumental in formulating strategies to support and sustain the growth of the ukay-ukay and ready-to-wear (RTW) sectors, ensuring that they continue to serve as vital components of the local clothing industry. According to Te et al. (2021), the ukay-ukay industry significantly contributes to local economies by providing affordable fashion and fostering sustainability, reinforcing its critical role in the clothing market.

Research Questions

The main thrust of this study was to assess the significant difference between the market status of ukay-ukay and RTW business in Tagbilaran City, Bohol.

More specifically, it sought to answer the following specific questions:

1. What is the profile of ukay-ukay and RTW business in Tagbilaran City in terms of:
    - 1.1 Capital ;
    - 1.2 Rental ;
    - 1.3 Product ;
    - 1.4 Revenue ;
    - 1.5 Permit ;
    - 1.6 Supply ;
    - 1.7 Bulk of release and
    - 1.8 Upshot of the product?
2. What is the market status of ukay-ukay and RTW in Tagbilaran City in terms of :
    - 2.1 Price;
    - 2.2 Product quality;
    - 2.3 Promotion/ marketing presentation ;
    - 2.4 Placement/location and
    - 2.5 Sanitation?
3. Is there a significant difference between the market status of ukay-ukay and RTW?
4. What action plan can be proposed to upgrade the ukay-ukay and RTW business in Tagbilaran City?

METHODOLOGY

This section focused on the methodology that was utilized in the conduct of the study. It also outlined the research design, the procedure that was followed, the process of collecting the data, and the analysis. During the collection process, the ethical considerations were also discussed.

Research Design

This inquiry utilized descriptive-survey methods. In the descriptive survey, the researcher used a questionnaire as the primary tool. After collecting the data, a z-test

was employed to determine the level of difference between the market status of ukay-ukay and RTW.

The results of this survey provided a reference point for analysis, interpretation, and evaluation, serving as the basis for improving the ukay-ukay/RTW business through a proposed measure or plan.

Research Environment and Research Participants

This study was conducted in Tagbilaran City, Bohol, which is considered the heart of the province, where trade and commerce are concentrated. Tagbilaran City comprises fifteen (15) barangays: Bool, Booy, Cabawan, Cogon, Dampas, Dao, Manga, Mansasa, Poblacion I, Poblacion II, Poblacion III, San Isidro, Taloto, Tiptip, and Ubujan. However, only Barangay Dao, Poblacion 2, Poblacion 3, Cogon, and Manga had ukay-ukay and RTW businesses. The researcher chose this environment considering that Tagbilaran City is the province's main business capital and center of governance, with numerous ukay-ukay and RTW stalls found in the area.

The study involved 379 respondents, including 155 ukay-ukay customers, 137 RTW customers, 62 ukay-ukay entrepreneurs, and 35 RTW entrepreneurs.

An initial survey was conducted to determine the tentative number of ukay-ukay and RTW customers in Tagbilaran City on a typical day. Slovin’s formula was then used to calculate the sample size. Customers were randomly given questionnaires to complete, and as needed, the researcher translated the questions into the vernacular to ensure the respondents' understanding. This approach was employed to elicit the market status of ukay-ukay and RTW businesses.

Research Instrument

The instrument used in conducting the study was a questionnaire. Two questionnaires were employed to gather data. The first one was designed for ukay-ukay and RTW entrepreneurs, aiming to ascertain the profile of these businesses in Tagbilaran City. This questionnaire was self-made, crafted with the assistance of the researcher’s adviser and an English critic. A thorough modification process was undertaken before finalizing the instrument. Pilot testing was conducted to test the validity of the questionnaire.

The second questionnaire, intended for ukay-ukay and RTW buyers, was designed to assess the market status and identify any significant differences between ukay-ukay and RTW apparel in Tagbilaran City. This questionnaire was based on a marketing book by Garrovillas (2013), with modifications made by the researcher to align it with the current study. Pilot testing was also conducted to ensure the validity of this questionnaire.

Data Gathering Procedure

The researcher sent a letter to the Campus Director and the Dean of Graduate Studies requesting permission to conduct the study. Permission was also sought from the Mayor of Tagbilaran City, where the respondents resided. Afterward, the researcher requested permission from the owners of ukay-ukay and RTW businesses in Tagbilaran City to administer the questionnaire. A guided interview approach was adopted, where the researcher directed the interviewees through the questions, saving time and effort for the ukay-ukay and RTW business owners.

Additionally, random ukay-ukay and RTW customers were selected to answer the second type of questionnaire. The researcher sought permission from these customers, and upon their approval, they were given ample time to read and complete the questionnaire. The questionnaire was also translated into Visayan to ensure that the respondents could easily understand the items. The questionnaires were retrieved after the respondents thoroughly answered them. The tabulation, analysis, and interpretation of the gathered data followed. Finally, based on the conclusions of the study, recommendations and a proposed action plan were made.

Data Analysis

To determine the profile of “ukay-ukay” and RTW entrepreneurs in terms of capital, rental, product, revenue, permit, supply, bulk of release per month and upshot of the product, the percentage will be computed.

To determine the weighted mean of the market status of “ukay-ukay” and RTW in terms of price, product quality, promotion, placement and sanitation, weighted mean was computed and interpreted using the following scale:

Where:

Weighted Mean Intervals	**Qualitative Description**
3.25 - 4.0	Superior
2.50 - 3.24	Good
1.75 - 2.49	Fair
1.0 - 1.74	Poor

To test the significant difference between the market status of ukay-ukay and RTW, Z test was computed. The formula is:

$$z = \frac{(\bar{\bar{x}}_1 - \bar{\bar{x}}_2)}{\sqrt{\frac{SD_1^2}{N_1} + \frac{SD_2^2}{N_2}}}$$

Where:

z = Z test

X_1 = weighted mean of the market status of ukay-ukay
X_1 = weighted mean of the market status of RTW
N_1 = population of “ukay-ukay” costumers
N_2 = population of RTW costumers
SD_1^2 = Variance of the market status of “ukay-ukay”
SD_2^2 = Variance of the market status of RTW

RESULTS

This section presents, analyzes, and interprets the data gathered from the survey questionnaires, focusing on the marketability of ukay-ukay and ready-to-wear (RTW) businesses in terms of price, product quality, promotion or marketing presentation, placement or location, and sanitation. Additionally, it examines whether there is a significant difference between the market status of ukay-ukay and RTW.

Table 1 outlines the profile of ukay-ukay and RTW business owners in Tagbilaran City. Among the 62 ukay-ukay stalls, most have an initial capital of PHP 40,000.00 to PHP 40,999.00, while the 35 RTW stalls generally have a higher initial capital, ranging from PHP 50,000.00 to PHP 50,999.00. This indicates that the RTW business typically requires more capital than the ukay-ukay business.

In terms of rental costs, most ukay-ukay businesses pay a monthly lease of PHP 5,000.00 to PHP 9,999.00, whereas RTW stalls incur higher rental costs, typically between PHP 15,000.00 and PHP 15,999.00 per month. Ukay-ukay stalls generally have lower rental expenses because they are often located in informal areas, such as along roadsides, while RTW businesses are situated in more formal, presentable locations.

Regarding the types of products sold, ukay-ukay stalls primarily offer t-shirts, blouses, and pants, with children's wear being the least common due to concerns about sanitation. Similarly, RTW stalls also mainly sell t-shirts, blouses, and pants, with cosmetics being the least offered, likely because they are considered luxury items rather than necessities.

In terms of monthly revenue, both types of businesses typically earn between PHP 20,000.00 and PHP 24,999.00. Most ukay-ukay businesses pay an annual permit fee of PHP 1,000.00 to PHP 4,999.00, while RTW businesses pay a higher permit fee, ranging from PHP 5,000.00 to PHP 9,999.00. This difference in permit fees is consistent with the higher capital requirements for RTW businesses.

The products sold by both ukay-ukay and RTW businesses are primarily sourced from Korea, recognized as a fashion capital. These products are popular and in demand due to current fashion trends. Ukay-ukay businesses typically release 11-20 bulk orders per month, whereas RTW businesses release only 5-10 bulk orders. This disparity is largely due to the lower pricing of ukay-ukay products, which makes them more affordable than RTW products.

Finally, if products remain unsold, both ukay-ukay and RTW businesses often resort to sales promotions, such as buy-one-get-one-free offers or 50% discounts, to recover their capital. A small number of owners also choose to donate unsold items to charity or repurpose them as rags.

Table 1
Profile of Ukay-ukay and RTW owners in Tagbilaran City

Profile of Ukay-ukay and RTW in Tagbilaran City in terms of:	Ukay-ukay N=62		RTW N= 35

1.94	Fair	30.Dirt is not found in the garment.	3.73	Superior
1.42	Poor	31.Allergy was not experienced after wearing the garments.	2.92	Good
2.43	Fair	32.Foul smell is absent.	3.5	Superior
2.26	**Fair**	**TOTAL**	**3.39**	**Superi**or

Table 2 presents the market status of ukay-ukay and ready-to-wear (RTW) businesses in terms of price, product quality, promotion or marketing presentation, placement or location, and sanitation.

The data indicates that ukay-ukay has a higher weighted mean in terms of price compared to RTW apparel, signifying that ukay-ukay items are much more affordable. This is supported by Garrovillas (2013), who noted that ukay-ukay thrives widely, largely because its low prices make it accessible even to the poorest individuals, including those at the base of the economic pyramid.

When it comes to product quality, ukay-ukay also scores higher than RTW. This suggests that ukay-ukay garments are perceived as more durable than their RTW counterparts. This finding aligns with the study by Abueg (2005), which highlighted that some consumers prefer ukay-ukay items because they are comparable in quality to brand-new garments and accessories sold in high-end stores, but at a much lower price.

In terms of promotion, RTW has an advantage over ukay-ukay. This discrepancy is linked to the ongoing challenges surrounding the legalization of the ukay-ukay business. In 2002, President Gloria Macapagal-Arroyo banned the entry and sale of ukay-ukay items in the Philippine market, causing dissatisfaction among consumers who viewed ukay-ukay as the most affordable option. As a result, ukay-ukay businesses have struggled to establish effective marketing strategies due to the lack of government support.

Regarding placement, ukay-ukay businesses are rated as having a fair status, while RTW businesses receive a superior rating. Fernandez (2011) explains this by noting that ukay-ukay stalls are typically found in congested areas with poor ventilation, reflecting the lower-quality environment in which these products are often sold. The term "ukay-ukay" itself comes from the Filipino word "hukay," meaning to dig up, which metaphorically describes the process of sifting through items in these crowded locations.

Finally, in terms of sanitation, ukay-ukay businesses are described as fair, whereas RTW businesses are rated superior. This distinction is supported by a blogger's

observation that individuals with higher standards of living prefer to purchase new, ready-to-wear garments from malls, primarily due to concerns about sanitation. Since ukay-ukay clothes are not thoroughly clean, there is a significant risk that bacteria and viruses may be present on these items.

Table 3
Difference between the Market Status of Ukay-ukay and RTW

	Mean	Description	Computed z	Critical z	Interpretation	Decision
Ukay-ukay	2.37	Fair	-10.92	± 1.96	Significant	Reject the null Hypothesis
RTW	2.97	Good				

With the use of z-test, the two variables implied significant difference since the computed tabular value of -10.92 was lower than the critical value ± 1.96 at 0.05 significance at 103 freedom. Thus, the null hypothesis is rejected. There is a significant difference in the market status of ukay-ukay and RTW.

DISCUSSION

Findings

After the data were analyzed and interpreted, the researcher derived the following findings.

A. Profile Ukay-ukay and RTW

The profile analysis reveals that among the 62 ukay-ukay stalls surveyed, the majority have a capital investment ranging from PHP 40,000.00 to PHP 40,999.00. In contrast, the 35 RTW stalls typically have a higher capital investment, ranging from PHP 50,000.00 to PHP 50,999.00.

Regarding rental costs, most ukay-ukay businesses pay a monthly lease of PHP 5,000.00 to PHP 9,999.00, while RTW stalls have higher rental expenses, typically between PHP 15,000.00 and PHP 15,999.00 per month. Both ukay-ukay and RTW businesses primarily sell t-shirts for both men and women.

In terms of revenue, both business types generate an income ranging from PHP 20,000.00 to PHP 24,999.00 per month. When it comes to business permits, ukay-ukay stalls pay an annual fee ranging from PHP 1,000.00 to PHP 4,999.00, whereas RTW businesses pay between PHP 5,000.00 and PHP 9,000.00.

The source of products for both ukay-ukay and RTW businesses is primarily from Korea, known as the "Fashion Capital." Ukay-ukay businesses typically release 11-20 bulk orders per month, while RTW businesses release fewer, around 5-10 bulk orders monthly.

Finally, if products remain unsold, both ukay-ukay and RTW businesses often resort to promotional sales, such as "buy one, take one" or offering items at a 50% discount, to recover their capital. A small number of business owners choose to donate unsold items to charity or repurpose them as rags.

B. Market Status of Ukay-ukay and RTW in Tagbilaran City

The analysis reveals that ukay-ukay is more affordable, with a higher weighted mean of 2.85 for price compared to RTW's 2.27. In terms of product quality, ukay-ukay again leads with a weighted mean of 3.37, surpassing RTW's 2.68. However, RTW excels in promotion and marketing presentation, scoring 1.97 against ukay-ukay's 1.24. For placement or location, RTW has a superior rating of 3.86, while ukay-ukay is rated fair at 2.13. When it comes to sanitation, RTW maintains a superior rating with a weighted mean of 3.39, compared to ukay-ukay's 2.26. Overall, RTW is rated as "good" with an average weighted mean of 2.97, making it more marketable than ukay-ukay, which is rated as "fair" with an average weighted mean of 2.37.

C. Difference Between the Market Status of Ukay-ukay and RTW

The analysis using a z-test revealed a significant difference between the market statuses of ukay-ukay and RTW. The computed z-value was -10.92, which is lower than the critical value of +1.96 at a 0.05 significance level with 103 degrees of freedom. Therefore, the null hypothesis is rejected, indicating a significant difference in the market status between ukay-ukay and RTW.

Conclusions

Based on the data analyzed in this study, it was concluded that the market status of ukay-ukay is rated as fair, with an average weighted mean of 2.37, whereas the market status of RTW is rated as good, with an average weighted mean of 2.97. This disparity highlights that RTW apparel outperforms ukay-ukay in terms of price, product quality, promotion, placement, and sanitation. The significant difference between the market statuses of ukay-ukay and RTW, as indicated by the z-test results, confirms that RTW has a more favorable market status compared to ukay-ukay.

Recommendations

Based on the conclusions drawn from this study, the following recommendations are proposed to improve the ukay-ukay and RTW businesses in Tagbilaran City:

Rehabilitation of Stalls: The city government should consider the rehabilitation of ukay-ukay and RTW stalls, as these businesses contribute significantly to the city's income.

Tariff Approval: Ukay-ukay and RTW vendors should establish a tariff for their prices, subject to approval by the relevant Board, to ensure fair pricing practices.

Enhanced Promotion: Entrepreneurs should develop effective promotional strategies for ukay-ukay and RTW to enhance their market presence and appeal.

Sanitation Oversight: The city government should create a committee to regularly assess the status of ukay-ukay and RTW businesses, with a particular focus on sanitation standards.

Quality Control: Ukay-ukay vendors should implement quality control measures to prevent the sale of defective products and ensure customer satisfaction.

Further Research: It is recommended that follow-up research be conducted to verify and expand upon the findings of this study.

Compliance with Ethical Standards

This study adhered to ethical standards by obtaining informed consent from all participants, ensuring confidentiality, and maintaining voluntary participation without coercion. No harm came to participants, and the study received ethics committee approval. Researchers declared no conflicts of interest and reported findings transparently and honestly. Cultural sensitivity was respected throughout the research process.

MASTER TEACHERS' INSTRUCTIONAL SUPERVISORY SKILLS AND TEACHERS PERFORMANCE: BASIS FOR SCHOOL SUPERVISORY PLAN

Rosanna Damacino Concepcion, Gina F. Labitad

Graduate School and Professional Studies, PHINMA Cagayan De Oro College, Philippines

https://doi.org/10.5281/zenodo.13346407

ABSTRACT

The Theory of Supervisory Impact on Teaching Excellence is established in this study as it posits that consistent and effective instructional supervision by Master Teachers (MTs) is fundamental in enhancing teaching performance. This study delved into the MTs instructional supervisory skills and teacher performance as basis for a school supervisory plan. Particularly, it investigated the teachers' demographic characteristics, the MT's level of supervisory skills, the teachers' teaching performance, and the significant relationship and significant difference of the variables. The study utilized a quantitative research design, particularly descriptive correlational method. Through the use of Slovin's formula, the study included the 529 Master Teachers and Teachers from both elementary and secondary schools as the research respondents. The questionnaire was adopted, while other parts were adapted and modified. In analyzing the data gathered, the study used both descriptive and inferential statistics such as frequency, percentage, mean, standard deviation, and Pearson (r) correlation as statistical tools. The findings of the study revealed that teachers are mostly female, have earned units in Masters, have been in the service for 6-10 years, do not belong to any of the seven tribes of Bukidnon, and have a positive attitude towards instructional supervision. The Master Teachers' instructional supervisory skills are excellent, while the teachers' teaching performance is outstanding. Meanwhile, the correlation analysis showed a positive significant correlation between Master Teachers' instructional supervisory skills and the teachers' teaching performance. The regression results showed no significant difference in the teachers' teaching performance when they were grouped according to sex and ethnicity but showed significant difference when grouped according to highest educational attainment,

teaching experience, and attitude towards instructional supervision Finally, the study proposed a school supervisory plan that was designed based on the teachers' lowest indicators in their teaching performance. As a conclusion, this study found that Master Teachers' instructional supervisory skills impacts teachers' performance, hence, recommends the adoption and implementation of the school instructional supervisory plan.

Keywords: *instructional supervisory skills, teaching performance*

INTRODUCTION

The role of Master Teachers (MTs) in the dynamic context of education extends beyond the classroom, encompassing a vital aspect of educational leadership - that is their instructional supervisory skills. It is a dynamic process that involves observation, feedback, and collaboration. The efficacy of master teachers in guiding and enhancing the performance of their fellow educators plays a critical role in creating an environment where continuous learning and improvement thrive.

The efficacy of master teachers in enhancing the performance of their fellow teachers is rooted in their capacity to provide constructive feedback (Dingal, 2023; Sangalang, 2018), tailored support (Gestupa, 2023; Cortez, 2023), and personalized professional development (Magcanas, 2019; Makavec, 2018). Through keen observation, master teachers identify strengths and areas for improvement, offering targeted guidance to help teachers refine their instructional techniques, classroom management strategies, and overall pedagogical approaches. This collaborative and reflective process fosters a culture of continuous improvement, where teachers feel supported and empowered to embrace innovation and refine their practice.

The trajectory of teachers' practice and performance is commonly conducted through a performance appraisal, essentially a method to gauge an individual's contributions in the field of teaching, particular to students' performance. A component of this appraisal process involves a systematic planning cycle and meticulous observation to evaluate teacher performance, which is usually done by an MT or a school principal. The expectation is that through instructional supervision, teachers receive feedback aimed at enhancing the quality of their performance. Thus, the effectiveness of a teacher's teaching performance is crucially impacted by the effectiveness of the MTs instructional supervision.

According to Kanya et al. (2021), teachers' performance is not solely determined by their instructional abilities but also by their capacity to engage with students, adapt to diverse learning styles, and foster a conducive learning environment. Makavec (2018) explained that effective teaching encompasses not only the dissemination of knowledge but also the cultivation of critical thinking, problem-solving skills, and a passion for lifelong learning. Therefore, the appraisal of teachers should encompass a comprehensive assessment of their pedagogical strategies, classroom management skills, and their

ability to establish rapport with students. Moreover, it should consider factors beyond academic achievement, such as the promotion of socio-emotional development and the integration of technology to enhance learning outcomes.

In the Philippines, the creation of master teacher positions, initially comprising four levels aligned with the pay grades of principals and assistant principals, represents their skills and experience in the field. This initiative introduced a dual-track system for career advancement among teachers, accommodating both school management and classroom teaching roles.

Previous researchers highlighted the significant role that master teachers play in terms of aiding and instructional supervision to fellow teachers. Carraway and Young (2018) posited that MTs must have enough instructional leadership which serves as a mechanism to bolster instructors' teaching practices, foster professional growth, and oversee resource management. Through coaching and mentoring, instructional leaders provide the necessary support to teachers, assisting them in the ongoing enhancement of their teaching methods. Meanwhile, Bush et al. (2018) considered MTs as the “crème del a crème” among educators as they exhibit distinct teaching methods that set them apart from regular, non-master teachers.

Despite the established roles, responsibilities, and skills of Master Teachers and their effect on teaching performance, there exists a noticeable research gap, particularly within the context of the division under study, regarding the perception of school teachers on the supervisory skills of MTs and its correlation with their teaching performance. Hence, the present study aimed to address the research gap by investigating the perspectives of public-school teachers on the master teachers’ supervisory skills and how it affects their teaching performance. The study also aimed to propose a supervisory development plan that can help both teachers and master teachers.

Research Questions

The study aimed to determine the level of Master Teachers’ instructional supervisory skills and teacher’s performance in the division of Valencia City for the School Year 2023-2024. The result of the study would serve as the basis for the school supervisory plan.
Specifically, it aimed to answer the following questions:

1. How are the respondents’ distributed in terms of sex, highest educational attainment, teaching experience, ethnicity, and attitude towards instructional supervision?
2. What is the level of master teacher’s instructional supervisory skills based on coaching, mentoring, clinical observation, pedagogical, technological, and evaluation?
3. What is the level of teachers’ performance with regard to teaching and learning process, students’ outcome, community involvement, professional growth and development?
4. Is there a significant relationship between Master Teacher’s instructional supervisory skills and the teachers’ performance?

5. Is there a significant difference in the teachers' performance when grouped according to their characteristics?
6. Based on the findings of the study, what school instructional supervisory plan can be designed?

Hypothesis

Problems 1, 2, 3, and 6 were hypotheses – free. On the basis of Problems 4 and 5, the null hypotheses were tested at 0.05 level of significance:

H01: There is no significant relationship between master teacher's instructional supervisory skills and the teachers' performance.

H02: There is no significant difference in the teachers' performance when grouped according to their characteristics.

METHODOLOGY

Research Design

The present study utilized a quantitative research design, particularly descriptive correlational method. Descriptive correlation is a research method that aims to understand the relationship between variables without necessarily implying causation. In this approach, researchers collect data on multiple variables of interest and analyse how they relate to each other. In the present study, utilizing a quantitative research design with a descriptive correlational method allowed for the examination of the relationship between the secondary school teachers' characteristics, perceived teaching performance, and the perceived level of their Master Teachers' instructional supervisory skills.

By collecting and analysing data on these variables, the study provided valuable insights into their associations, contributing to a deeper understanding and the creation of the proposed Master Teacher's Supervisory Plan that would help improved the teachers' performance in attaining quality education.

Study Setting

The present study was conducted among the four hundred seventeen (417) teachers and one hundred twelve (112) Master Teachers of the Division of Valencia City in the Province of Bukidnon. The division is composed of ten (10) school districts located in thirty-one (31) different barangays headed by Public School District Supervisor and the Education Program Supervisors (EPS) with their assigned focus to insure the quality of education and the implementation of the programs and projects so that no Valencianos are left behind. DepEd Valencia City, through its various divisions and offices, oversees the administration of public schools within its jurisdiction. This includes curriculum development, teacher hiring and training, school infrastructure development, student enrollment, and educational assessment.

The division of Valencia became the third independent School Division in the Province of Bukidnon in 1993 to cater to the growing number of schools in the City of Valencia. At present, the Division Office is home to seven secondary schools, twelve (12) elementary schools and twenty-five (25) integrated schools in the locality. It has conducted a series of training to capacitate both Master Teachers and Teachers I-III in their respective fields. The Division of Valencia City thrive for excellent, thus offers teachers' training in academic quality and teaching performance. The outcomes of this research can positively impact the educational landscape of the locale of the study that can contribute to the improvement of the broader educational system, and highlight the contributions of effective teachers and school heads, leading to professional recognition and career advancement opportunities. Figure 2 presents the map of the City of Valencia, highlighting the locations of the study.

Research Respondents

The respondents of the study included five hundred twenty-five (529) teachers of elementary and secondary schools in the Division of Valencia. This diverse group of educators collectively contributed to the study's breadth and depth. By encompassing such a broad spectrum of participants, the study gained valuable insights into the multifaceted dynamics of master teachers' instructional supervisory skills and teachers' performance across different grade levels and subject areas within the educational landscape of Valencia City.

Sampling Technique

For this research, the researcher utilized the Slovin's formula to choose a sample size of 33% from the total population of teachers in the Division of Valencia City. The objective was to represent all teachers within the division with the existing master teachers assigned, ensuring each one had a recognized, non-zero probability of being selected for the sample.

The study initially gathered data regarding the total number of secondary and elementary school teachers with master teachers in the Division of Valencia City, represented as N. Moreover, the standard deviation (σ) of specific pertinent characteristics was considered, offering insights into the diversity within the teacher cohort. Additionally, the research defined the desired precision level (E), which represented the maximum acceptable margin of error for the study.

Once the sample size was established, the researcher proceeded to persuade the five hundred twenty-nine (529) teachers and master teachers from the entire population. This approach guaranteed that every teacher in the Division of Valencia had an equal opportunity to be part of the study, thereby ensuring the comprehensiveness of the sample selection. Following this, the researcher gathered and scrutinized data from these chosen teachers, enabling her to derive significant insights aligned with the research objectives. It is crucial to acknowledge that while universal non-probability sampling

promotes inclusivity, the precision of the findings hinges on the accuracy of population data and the assumption of uniformity among the teacher population in the district.

Research Instruments

To gather the necessary data, this study used two sets of questionnaires that underwent reliability testing. The first survey questionnaire was distributed to the elementary and secondary school teachers and master teachers.

Part I of this survey questionnaire included the respondent's characteristics such as their sex, highest educational attainment, teaching experience and ethnicity and a questionnaire that contained indicators of teachers' attitude towards instructional supervision. The teachers' attitude towards instructional supervision was assessed using a Likert scale questionnaire adopted from Ramin (2014). It contained ten statements which the respondents had to check regarding their belief on supervision. It used a 4-point Likert scale, where 4 has the description of "Strongly Agree of what I believe," 3 for "Agree of what I believe," 2 for "Disagree of what I believe," and 1 for "Strongly Disagree of what I believe."

Part II of the questionnaire for the MTs contained statements that revolved around the components of instructional supervisory skills. It included components such as coaching, mentoring, clinical observation, pedagogical and technological evaluation. The indicators for the instructional supervisory skills were adapted and modified from the study of Laude et al. (2014). The statements in this questionnaire were modified to fit the context of the present study. To further enhance the relevance of the study, a pool of experts was consulted to review the modified statements. Their insights helped refine the adjustments and confirm that the changes were well-suited to the locale context.

Part III contained indicators of teaching performance that was also adapted and modified from Virginia Public Schools Performance Evaluation for Teachers (2016). It included areas such teaching and learning process, student's outcome, community involvement, and professional growth and development. The statements in each component were adjusted to align with the context of the study. This involved removing statements that were not relevant to the Philippine setting and replacing them with those that are appropriate and applicable. Additionally, efforts were made to ensure that the new statements maintained the original intent and meaning while being culturally and contextually suitable.

The first set of questionnaires was to assess teacher's performance. It contained Part I which is the respondent's characteristics such as their sex, highest educational attainment, teaching experience, ethnicity, and attitude towards instructional supervision and Part III the teacher's level of teaching performance. The other set of questionnaires was to assess their instructional supervisory competence of Master Teachers. It also contained part I was for the respondent's characteristics such as their sex, highest educational attainment, teaching experience, ethnicity, and attitude towards instructional supervision and Part II was about master teachers' supervisory skills.

Validity and Reliability of the Instrument

The indicators on the teacher's performance were adopted from the Virginia Public Schools Performance Evaluation for Teachers (2016) while the indicators for the master teachers' supervisory skills were adopted from the study of Laude et al. (2014). Both were modified to fit the context of the present study.

To evaluate the validity and reliability of the questionnaire, the researcher asked three (3) experts in the field of education for face testing. After this, they recommend that the integrity and effectiveness of the questionnaire were relevant in capturing accurate data. It adheres to the questionnaire design principles which is likely to guarantee the appropriateness of data collection in educational research. Before it was administered, the research instrument was pilot-tested on thirty (30) teachers from the division of Bukidnon and Valencia City with the same characteristics but were not part of the respondents of the present study. The results of the pilot testing were used for validity and reliability tests.

It can be seen from the results that in the domains related to attitudes towards instructional supervision, teachers' performance, teaching and learning processes, students' outcomes, community involvement, and professional growth and development, the coefficients ranged from .779 to .897. These results suggest that the items within each of these constructs reliably measure their respective concepts, with coefficients well above the commonly accepted threshold of .70 for satisfactory reliability.
Moreover, when examining the instructional supervisory skills, which encompass coaching, mentoring, clinical supervision, pedagogical knowledge, technological competence, and evaluation proficiency, the reliability coefficients were notably high, ranging from .923 to .954. The overall Cronbach's Alpha coefficient of .984 demonstrated exceptional internal consistency with an impressive overall.

System of Scoring

Attitude Towards Instructional Supervision

Scale	Range	Description	Interpretation
4	3.14 – 4.20	Strongly Agree	Very Positive
3	2.61 – 3.40	Agree	Positive
2	1.81 – 2.60	Disagree	Negative
1	1.00 – 1.80	Strongly Disagree	Very Negative

Part II. Master Teacher's Supervisory Skills

Scale	Range	Description	Interpretation
4	3.14 – 4.00	Strongly Agree	Excellent
3	2.61 – 3.40	Agree	Average
2	1.81 – 2.60	Disagree	Below average
1	1.00 – 1.80	Strongly Disagree	Poor

Part III. Teacher's Level of Teaching Performance

Scale	Range	Description	Interpretation
4	3.14 – 4.00	Strongly Agree	Outstanding
3	2.61 – 3.40	Agree	Very Satisfactory
2	1.81 – 2.60	Disagree	Satisfactory
1	1.00 – 1.80	Strongly Disagree	Poor

Data Gathering Procedure

The researcher first secured a permit to conduct the study from the Office of Graduate Studies and submitted it to the Division Office for approval to conduct the study among secondary school teachers. Once the letter request was approved, another letter request was sent to the principals of the identified schools for the same purpose of asking permission to conduct the study. Then, the researcher recruited teachers to participate in the study. The researcher personally visited the identified secondary schools and informed the teachers of the purpose and the general overview of the study. It was also reiterated to the respondents that their participation was voluntary. Hence, they could opt not to participate for whatever reason. Their decision to participate would not in any way affect their positions in the school. When the number of respondents was identified, the researcher then distributed the survey questionnaire among the respondents. It was collected after a week, and the results were tallied, and the necessary statistical treatment was performed.

Statistical Treatment of Data

Descriptive statistics were employed to outline the fundamental attributes of the data in the study, offering concise descriptions of both the sample and the measurements.
First, in identifying the respondent's characteristics in terms of sex, highest educational attainment, teaching experience, ethnicity, and attitude towards instructional supervision, this study employed frequency and percentage as statistical tools.

Secondly, in identifying Master Teacher's instructional supervisory skills in terms of coaching, mentoring, clinical observation, pedagogical, and technological evaluation, mean and standard deviations were also used.

In the same way, when determining the teacher's level of teaching performance in terms of teaching and learning process, student's outcome, community involvement, professional growth and development, mean and standard deviations were used as statistical tools.

In ascertaining the significant relationship between the Master Teacher's instructional supervisory skills and teaching performance, Pearson r moment correlation was used as statistical tool. The same statistical tool was also used to determine the significant relationship between the teacher's teaching performance in terms of teaching and learning process, student's outcome, community involvement, professional growth and development in relation to their characteristics such as sex, highest educational attainment, teaching experience, ethnicity and attitude towards instructional supervision

Scope and Limitations

The scope of the study included teachers in the division of Valencia City. It investigated the teacher's characteristics, their attitude towards instructional supervision, their teaching performance in terms of teaching and learning process, student's outcome, community involvement and professional growth and development. It also determined the level of Master Teacher's supervisory skills. Furthermore, the significant relationship between the teacher's teaching performance and master teacher's supervisory skills in terms of coaching, mentoring, clinical supervision, pedagogical, technological and evaluation skills was also investigated. Finally, the study recommended a master teacher supervisory plan that aimed to capacitate master teachers in assisting the secondary school teachers in improving their performance.

The present study was limited since the assessment of the teaching performance and the MTs supervisory skills was done one time. Time limitations could have limited the longitudinal aspect of the study, preventing the researcher from assessing the long-term impact of master teachers' supervisory plans on teacher performance. Additionally, the use of survey questionnaires alone as the instrument may have limited the depth of understanding. While surveys are efficient for collecting data from a large number of participants, it may not have totally captured the complex aspects of teaching performance and supervisory skills.

RESULTS AND DISCUSSION

Research Question 1. How are the respondents distributed in terms of sex, highest educational attainment, teaching experience, ethnicity, and attitude toward instructional supervision?

Table 1.1. Distribution of the Respondents in terms of Sex

Variables	Frequency	Percentage
Male	80	15.1
Female	449	84.94
Total	**529**	**100.0**

Table 1.1 depicts the statistical result of the respondents' profile in terms of sex. It shows that the majority of the study's respondents are female, which comprised 449 individuals (84.9%) of the study's population. Meanwhile, only 80 teachers are male, which constitutes the remaining 15.1% of the population. The results indicate that the teaching force of the study's locale is dominated by female teachers, reflecting a gender imbalance in the profession. This dominance could influence various aspects of the educational environment, including teaching styles, instructional supervision, and teaching performance.

The result coincides with the Organization for Economic Cooperation and Development (OECD, 2024) report that observed scarcity of male teachers in the teaching profession. The gender disparities and under-representation of men in the field of teaching are influenced by complex factors such as historical biases, societal norms, and structural barriers. According to Wong (2019), the decision to educate young children was historically entrenched as an activity associated with femininity. This perception often limited opportunities for men to enter the field and perpetuated gender stereotypes about caregiving roles.

However, Dahl (2021) explained that the teaching profession is evolving with an increasing number of men entering the field, which is traditionally female-dominated. This shift brings diverse perspectives and teaching styles, contributing to a more balanced and inclusive educational environment.

Table 1.2. Distribution of the Respondents' in terms of Highest Educational Attainment

Variables	Frequency	Percentage
Doctorate Degree	12	2.3
Master's Degree with PhD Units	62	11.7
Master's degree	144	27.2
Bachelor's Degree with master's Unit	311	58.8
Total	**529**	**100.0**

Table 1.2 shows the distribution of the respondents in terms of highest educational attainment. It reflects that the greatest number of respondents, 311 individuals (58.8%), have earned units in Masters. Meanwhile, the lowest number of respondents are those with doctorate degree holders, which include only three teachers or 2.3% of the study's population. The overall result shows a significant commitment to higher education among the teachers, with nearly all participants engaged in or having completed postgraduate education. This implies that high percentage suggests a strong inclination towards advanced education, not necessarily at the doctoral level. This trend highlights the value placed on advanced academic credentials, particularly at the master's level, which reflects the educational requirements or professional aspirations prevalent in the division under study.

The results support the Teaching and Learning International Survey (TALIS, 2018) report, which states that teachers' educational attainment encompasses both their pre-service training and any supplementary qualifications obtained during their tenure. The caliber and extent of their initial education significantly influence their performance upon entering the teaching profession and should inform subsequent educational pursuits and training needs (Pardillo, 2021; Ganal et al., 2019), as well as other facets of their professional growth. For instance, inadequate or substandard formal education may heighten the necessity for ongoing professional development among teachers. Conversely, a vigorous formal education background may instigate a stronger inclination towards seeking further educational and training opportunities to refine skills acquired during their extensive academic training.

On the other hand, the minimal number of respondents with units in Ph.D. or full-fledged PhDs support the claims of Rungduin and Miranda (2018) that factors such as workload and expenses are the primary reasons teachers shy away from pursuing graduate studies. Pursuing a Ph.D. while maintaining a career in education is demanding in terms of time and energy, given the rigorous academic requirements and research obligations typically associated with doctoral studies. Additionally, the financial costs involved, including tuition and research expenses, can pose significant barriers for educators, especially those with familial responsibilities or limited financial resources.

Table 1.3. Distribution of the Respondents in terms of Teaching Experience

Variables	Frequency	Percentage
16 years and above	191	36.1
11 - 15 years	113	21.4
6 – 10 years	152	28.7
3 – 5 years	46	8.7
3 years and below	27	5.1
Total	**529**	**100.0**

Table 1.3 provides the distribution of the respondents in terms of teaching experience. It explains that the highest frequency is seen in the category of teachers with 16 years and above of service, comprising 191 (36.1%) of the total respondents. This indicates a

significant portion of the teaching workforce is in their mid-career stage, suggesting a relatively stable group of experienced teachers who are likely to have developed a solid teaching practice and familiarity with the educational system. On the other hand, the lowest frequency is observed in the category of teachers with 3 years or below of service, making up only 27 individuals (5.1%) of the respondents. This low percentage implies a smaller influx of new teachers into the division, which could imply challenges in attracting new educators or a stable workforce with low turnover rates. Balancing the experience with fresh perspectives from new educators is essential for ongoing innovations and adaptability in teaching practices within the Division.

Previous research shows that experienced teachers are vital in shaping the education system and fostering the growth of students and society. For instance, Marshall (2021) claimed that teachers improve in raising student achievement as they gain experience, becoming nearly twice as effective as novices after 15 years. Furthermore, Graham et al. (2020) found that teachers with two decades or more of experience are significantly more effective than they were at the beginning of their careers.

Sharrock (2023) asserted that teachers who are in early career positions are pivotal groups for mentorship, leadership cultivation (Ma, 2022; Luftiyana & Sugito, 2020), and strategies aimed at retaining talent within educational institutions (Pardillo et al., 2021). Additionally, the results underscore the necessity for tailored support and initiatives for professional development. These endeavors are crucial for facilitating their transition into the teaching profession, fostering effective instructional techniques, and navigating the initial challenges of their careers.

Table 1.4. Distribution of the Respondents' in terms of Ethnicity

Variables	Frequency	Percentage
Bukidnon	139	26.3
Higaonon	8	1.5
Manobo	21	3.9
Matigsalog	2	0.4
Talaandig	13	2.5
Tigwahanon	9	1.7
Umayamnon	1	0.2
None of the above	336	63.5
Total	**529**	**100.0**

Table 1.4 reflects the distribution of respondents in terms of ethnicity. It reveals significant diversity among the teaching staff. The largest group, constituting 336 individuals (63.5%) of the respondents, falls under the category None of the above, indicating that the majority of teachers do not identify with any of the specified indigenous ethnic groups. This reflects the broader national or regional ethnic demographics or a predominantly non-indigenous teaching workforce. On the other hand, the smallest representation is found among the Umayamnon, with only 1 individual (0.2%) of the respondents identifying as part of this group. The results corroborate the article in Bukidnon website (Bukidnon.gov.ph, 2012)

that the mixture of cultures in Bukidnon stems from the different levels of interaction and integration with outside influences. The recent immigrants add to this cultural diversity, blending their own traditions with those of Bukidnon. These dynamics create a unique cultural combination, reflecting both the preservation of indigenous traditions and the integration of modern influences.

Table 1.5. Distribution of the Respondents' Attitude Towards Instructional Supervision

Legend:

0.50-4.00	Strongly Agree/Very Positive	1.50-2.49	Disagree/Negative
2.50-3.49	Agree/Positive	0.00-1.49	Strongly Disagree/Very Negative

Indicators	Mean	SD	Description
Supervisor is more towards finding teachers' weaknesses.	2.85	0.94	Agree
Supervision done is trustworthy.	3.41	0.58	Agree
The supervision is aimed at sharing shared responsibilities between teachers and supervisors	3.52	0.56	Strongly Agree
Supervision is performed with the aim of control rather than upgrading.	2.76	0.94	Agree
Supervision is an examination and not a cooperation process.	2.67	0.93	Agree
Supervision creates excitement for teachers.	2.97	0.79	Agree
Supervision focuses heavily on teachers.	2.94	0.80	Agree
Supervision is a supportive process aimed at professional growth and improvement.	3.57	0.59	Strongly Agree
Supervision helps improve instructional strategies, student learning outcomes, and overall professional development.	3.63	0.53	Strongly Agree
Supervision fosters open communication, trust, and mutual respect between supervisors and teachers.	3.60	0.54	Strongly Agree
Supervisor is more towards finding teachers' weaknesses.	2.85	0.94	Agree
Supervision done is trustworthy.	3.41	0.58	Agree
The supervision is aimed at sharing shared responsibilities between teachers and supervisors	3.52	0.56	Strongly Agree
Overall	**3.19**	**0.45**	**Agree**

Table 1.5 shows the distribution of the respondents' attitude towards instructional supervision with an overall mean of 3.19 (SD=0.45), described as Agree and interpreted as Positive. This means that respondents perceive instructional supervision as beneficial, which is essential for fostering a supportive educational environment. It indicates that teachers see supervision as a tool for development rather than mere evaluation, they are more likely to embrace feedback and implement changes that enhance their teaching methods. This Positive attitude towards instructional supervision implies that when teachers perceive supervisors as allies, it can lead to increased sharing of best practices and mutual support and enhancing the overall educational experience. The findings underscore the importance of how instructional supervision is perceived by teachers can create avenues for teachers to provide feedback on supervisory practices, fostering an atmosphere of mutual respect and continuous improvement.

According to Elbana (2024) and Marshall (2019), teachers' attitudes toward instructional supervision can vary significantly, ranging from apprehension to appreciation, depending on the approach and execution of the supervisory process. Instructional supervision is a

process within educational settings where administrators or instructional leaders oversee and support teachers' professional development and instructional practices. It involves various activities such as classroom observations, providing constructive feedback, offering guidance on curriculum implementation, and facilitating professional development opportunities. The primary goal of instructional supervision is to enhance the quality of teaching and learning by promoting effective instructional strategies, addressing areas for improvement, and ensuring alignment with educational objectives and standards.

Notably, the indicator Supervision helps improve instructional strategies, student learning outcomes, and overall professional development received the highest mean score of 3.63 (SD = 0.53), described as Strongly Agree and interpreted as Very Positive. This means that respondents strongly believe in the beneficial impacts of supervision on their professional growth and the effectiveness of their teaching practices. The results imply that the instructional supervision by Master teachers is generally well-received in the Division, suggesting that it is perceived as beneficial and supportive for the majority of the teaching staff. The high levels of positive attitudes reflect that the teachers value the professional input and assistance given by the MTs as one of the significant employees of the school. This input and assistance are usually given by MTs during class observations, meetings, and in-service trainings and other related activities.

The results align with the findings of Villastique (2019), which state that supervision is viewed by teachers as a process that helps them identify and address shortcomings, leading to better teaching practices and student learning outcomes. This positive perception is particularly evident among less experienced teachers who are more open to feedback and guidance. Additionally, Elbanna (2024) asserted that teachers who have a positive attitude toward supervision often see their supervisors as knowledgeable and experienced mentors who can provide valuable insights and support. This collaborative approach fosters a sense of trust and cooperation, which is essential for effective supervision. Similarly, Berhanu (2024) explained that teachers who view supervision as a means to enhance their professional growth and development tend to have a more positive attitude towards it. This is because they see supervision as an opportunity to improve their teaching skills and stay updated on best practices in the field

On the other hand, the indicator Supervision is an examination and not a cooperation process received the highest mean score of 2.67 (SD = 0.93), described as Agree and interpreted as Positive. This means that some teachers possibly experiencing supervision as more controlling and evaluative rather than supportive. The minimal negative feedback indicates that only a small number of teachers have concerns or face challenges with the current supervision approach. It implies that if supervision is seen solely as an examination, it may hinder open communication and trust between supervisors and their supervisees that can result in a lack of feedback and support, ultimately affecting performance and morale of teachers. This could indicate a need for reforms in supervisory practices that promote collaboration among educators. Addressing these concerns through targeted support and open communication could further enhance the overall effectiveness and acceptance of instructional supervision in the division.

The study by Kurka and Berhanu (2019) claimed that teachers hold a negative attitude toward school-based instructional supervision and are dissatisfied with its implementation. Their attributed the results to supervisors who lack the necessary skills and knowledge to provide effective supervision, which negatively impacted teachers' attitudes. Hence, Basilio and Bueno (2021) posited that when instructional supervision is viewed as a collaborative and developmental effort focused on improving teaching practices and student learning outcomes, teachers are more likely to respond positively to it.

Research Question 2. What is the level of master teacher's instructional supervisory skills based on coaching, mentoring, clinical observation, pedagogical, technological and evaluation?

Table 2.1. Distribution of Master Teachers' Level of Instructional Supervisory Skills in Terms of Coaching

Indicators	Mean	SD	Description
Master teachers show commitment to their own continual learning, which is essential for guiding and supporting the professional development of other teachers	3.63	0.50	Strongly Agree
Master teachers have proven track record of high performance in teaching, including producing student gains in various settings.	3.48	0.54	Strongly Agree
They work with a diverse range of personalities among the teachers.	3.61	0.54	Strongly Agree
Master teachers are familiar with a wide range of teaching and learning styles and can support teachers with different approaches.	3.58	0.55	Strongly Agree
Master teachers understand that effective coaching is the application of adult learning theory and its application to especially to the new teachers.	3.54	0.52	Strongly Agree
Master teachers have strong interpersonal skills for sustaining a productive mentor-mentee relationship.	3.61	0.54	Strongly Agree
Master teachers have strong values, principles, and a coaching philosophy to guide teachers.	3.58	0.53	Strongly Agree
They can support teachers in navigating both successful and challenging situations.	3.62	0.52	Strongly Agree
Master teachers can demonstrate a willingness and ability to adapt and change coaching approaches based on the needs of the teachers.	3.65	0.51	Strongly Agree
Master teachers can establish a positive and supportive relationship with teachers to foster trust and collaboration.	3.70	0.48	Strongly Agree
Master teachers can provide instructional leadership by coaching colleagues, conducting observations, and facilitating professional development activities	3.63	0.55	Strongly Agree
Master teachers will empower teacher through asking powerful questions, providing constructive feedback, facilitating reflection, and encouraging action.	3.62	0.54	Strongly Agree
Overall	**3.60**	**0.40**	**Strongly Agree**

Legend: 3.41 – 4.00 Strongly Agree/Excellent *1.81 – 2.60 Disagree/Below Average*
2.61 – 3.40 Agree/Average *1.00 – 1.80 Strongly Disagree/Poor*

Table 2.1 presents the Master Teachers' level of instructional supervisory skills in terms of coaching, with an overall mean of 3.60 (SD = 0.40) described as Strongly Agree and interpreted as Excellent. This means that Master Teachers possess strong instructional supervisory skills, particularly in coaching. This suggests a high level of competence in

guiding and supporting other educators. The excellent rating of coaching skills implies that Master Teachers can serve as valuable resources for professional development within their schools and their expertise can be leveraged to train other teachers, facilitating a culture of continuous improvement. The strong agreement on coaching skills highlights the importance of ongoing professional development for educators, master teachers should continue to engage in learning opportunities to refine their skills and stay updated with the latest educational practices.

The study of Echeche (2022), in particular, focused on analyzing the coaching and mentoring performance and practices of master teachers by assessing their performance based on IPCRF ratings and their coaching and mentoring practices through a specially designed survey questionnaire encompassing eight components. The results indicated that teachers held master teachers in high regard, as evidenced by the computed negative t-values between the responses of the two groups. The correlation test revealed a significant moderate positive correlation between coaching and mentoring practices and various components. However, the performance of master teachers showed a low positive correlation with their coaching and mentoring practices in terms of interpersonal skills, and a very low positive correlation with the diversity of learners' domain.

In particular, the highest-rated indicator, with a mean of 3.70 (SD = 0.48), described as Strongly Agree and interpreted as Excellent is the ability of Master Teachers can establish positive and supportive relationships with teachers, to foster trust and collaboration. The score reflects a belief that Master Teachers contribute to a positive work culture, which can lead to increased job satisfaction and morale among teachers. These results highlight the importance of strong interpersonal skills, adaptability, and a coaching philosophy rooted in adult learning theory, which empowers teachers through constructive feedback and facilitating reflection. This implies that Master Teachers can take on leadership roles in professional development, guiding their peers in building positive and supportive relationships. When master teachers make themselves accessible to teachers and being visible throughout school days and beyond in extending their help to build trust and foster open communication, it is important for them to demonstrate that they are committed to supporting teachers and are willing to work together to achieve common goals, sense of unity and shared responsibility.

Similarly, Echeche (2022) posited that strengthening the coaching relationships between teachers and the Master Teachers helps to develop a shared language that promotes effective instruction. This collaboration enhances the selection, training, and support of mentors and improves schools' effectiveness in using observation, feedback, and coaching to support the development of new and seasoned teachers.

Conversely, the lowest-rated indicator with a mean of 3.48 (SD=0.54) described as Strongly Agree and interpreted as Excellent pertains to the Master teachers have proven track record of high performance in teaching, including producing student gains in various settings. This means that Master Teachers are viewed as credible and competent educators and their track record serves as validation of their expertise and effectiveness in fostering student achievement. It implies that the recognition of MT's extensive experience can lead to the establishment of professional learning communities where

educators collaborate, share experiences, and engage in reflective practice. This collaborative environment can foster continuous improvement and innovation in teaching. Networking and community engagement for Master Teachers to the wider community can fostering partnerships that enhance educational opportunities while their proven track record can attract resources, support, and collaboration from external stakeholders for a classroom environment that encourages academic success.

Hence, Abreu et al. (2019) emphasized that seeking feedback and continuous improvement is one critical aspect of improving MTs coaching skills. Regularly soliciting feedback from the teachers and even the students and using it to refine coaching strategies and improve overall effectiveness helps MTs stay adaptable and effective in their coaching roles. Master teachers have to work closely with teachers to improve their practice, focusing on content knowledge, pedagogy, and classroom management. This collaborative approach helps teachers develop their skills and confidence, leading to better student outcomes

Table 2.2. Distribution of the Master Teachers' Level of Instructional Supervisory Skills in Terms of Mentoring

Indicators	Mean	SD	Description
Mentor co-teachers in content and self-difficulties.	3.57	0.60	Strongly Agree
Assists in designing capacity development programs for teachers.	3.49	0.59	Strongly Agree
Conduct echo-seminars for co-teachers.	3.42	0.67	Strongly Agree
Serves as trainer in school-based INSET.	3.54	0.58	Strongly Agree
Helps in the proper and accurate dissemination or implementation of school policies.	3.60	0.56	Strongly Agree
Uses active listening skills as means to improve communication.	3.59	0.51	Strongly Agree
Conducts in-depth studies or action researches	3.22	0.84	Strongly Agree
Provide guidance and assistance as the novice teacher assumes new roles and responsibilities.	3.59	0.55	Strongly Agree
Provides a variety of growth experiences for the beginning teacher.	3.60	0.54	Strongly Agree
Assists beginning teachers in using the curriculum guide as aid for teaching.	3.68	0.51	Strongly Agree
Gives technical assistance to new teachers in formulating lesson plans.	3.64	0.60	Strongly Agree
Assists principal in instructional monitoring of teachers.	3.57	0.56	Strongly Agree
Describes the ways in which adults identify and solve problems.	3.46	0.61	Strongly Agree
Clarifies the role of observation and evaluation.	3.55	0.53	Strongly Agree
Evaluates teacher-made tests and interpret results.	3.44	0.63	Strongly Agree
Aids in applying varied teaching techniques to make teaching more fun and interactive.	3.56	0.63	Strongly Agree
Facilitates in conceptualizing training proposals during INSET.	3.51	0.60	Strongly Agree
Contributes ideas in crafting the School Improvement Plan (SIP) and Annual Implementation Plan (AIP).	3.45	0.70	Strongly Agree
Assist the school head in instructional monitoring of teachers.	3.60	0.59	Strongly Agree
Assists school head in class monitoring.	3.57	0.60	Strongly Agree
Overall	**3.53**	**0.44**	**Strongly Agree**

Legend: *3.41 – 4.00 Strongly Agree/Excellent* *1.81 – 2.60 Disagree/Below Average*
2.61 – 3.40 Agree/Average *1.00 – 1.80 Strongly Disagree/Poor*

Table 2.2 shows the distribution of the Master Teachers' level of instructional supervisory skills in terms of mentoring with an overall mean score of 3.53 (SD=0.44) described as Strongly Agree and interpreted as Excellent. The excellent rating of mentoring skills

means that Master Teachers are committed to their own professional development and to helping other teachers grow. They likely engage in ongoing learning to refine their mentoring strategies and stay updated with the latest educational practices. This implies that the strong mentoring skills are well-positioned to take on formal mentorship roles in guiding novice teachers or those who are seeking assistance to enhance their instructional practices that can help build a supportive teaching community and facilitate the transfer of knowledge and experience. The high level of mentoring skills among Master Teachers suggests a collaborative culture within the educational environment, the culture that encourages peer-to-peer learning and the sharing of best practices. Master Teachers may employ different mentoring approaches based on the needs and learning styles of their mentees to ensure that mentoring is tailored to individual needs while maximizing its effectiveness.

According to Buagas and Ching (2023) posited that mentoring as an aspect of instructional supervision aims to enhance learning outcomes and elevate the quality of education by enhancing students' cognitive achievements. Mentoring is geared towards equipping teachers with comprehensive competencies, including personal, pedagogical, professional, and social skills. Through mentoring, school principals and master teachers support teachers in managing the learning process and enhancing their professionalism, particularly in the preparation of learning materials. Hence, instructional supervision should prioritize the development of all aspects of teacher competence (Sartana, 2020).

The highest-rated indicator with mean scores of 3.68 (SD=3.64), described as Strongly Agree, and interpreted as Excellent was Assisst beginning teachers in using the curriculum guide as aide for teaching. The result means that Master Teachers are perceived as highly effective in supporting beginning teachers and play a crucial role in helping novice educators navigate the curriculum and utilize it effectively in their teaching practices, respectively. The implication is that providing strong support through effective mentoring can lead to higher retention rates among beginning teachers since new educators can feel that they are supported and equipped to succeed, they are more likely to strengthen their commitment as educators. The division implements structured mentorship programs where Master Teachers are assigned as mentors to new teachers. These programs include regular meetings, observations, and feedback sessions to support the professional growth of new educators.

The results which reflect the MTs efficiency in mentoring new teachers corroborate the claim of Dingal (2023) and Ikromova (2020) that the mentoring of master teachers consistently provides opportunities, especially for new teachers to enhance their knowledge and skills in developing teaching materials and employing various learning methods. These skills positively impact both teachers' performance and students' academic achievement (Sangalang, 2018). Similarly, Felisilda and Malaga (2019) found that mentoring practice helps teachers as they are provided with guidance that makes teaching and learning more manageable. It also involves sharing of experiences, provision of feedback, and offering of practical advice to navigate challenges and capitalize on opportunities.

On the other hand, the lowest-rated indicator, with a mean score of 3.22 (SD = 0.84), described as Strongly Agree and interpreted as Excellent pertains to Conducts in-depth studies or action research. This means that Master Teachers excel in direct mentorship and instructional support, but there is potential for growth in their involvement with research activities. Enhancing their skills in this area could make their mentorship even more effective as they could incorporate evidence-based practices and continuous improvement techniques into their mentoring strategies. The conduct in-depth studies imply that enhancement of mentoring skills can address specific classroom challenges, and implement strategies that are proven to be effective, ultimately enhancing the overall quality of education. They are encouraged to looked into specific problems or challenges in their classrooms, create innovations, and document the process through an action research so that their actions and innovations are supported with evidences. It suggests that the school or Division may conduct an annual division-wide research congress for educators to share their findings, collaborate, and further improve teaching practices across the board. Yet, many teachers and MTs are grappling with the challenges of conducting research, hence, it is an area that really needs improvement.

Basilio and Bueno (2021) posited that despite being a challenging task, conducting research can be a highly motivating and energizing experience for master teachers, as it allows them to explore new ideas, evaluate teaching practices, and re-evaluate daily choices based on evidence and guiding questions. Echeche (2022) emphasized that Master teachers can improve their mentoring of other teachers by adopting a more structured and supportive approach. This involves setting clear goals and expectations, providing regular feedback and guidance, and fostering a collaborative learning environment. Additionally, they can facilitate peer-to-peer learning by organizing workshops, coaching sessions, and professional development opportunities that allow teachers to share their expertise and learn from one another.

Table 2.3 Distribution of the Master Teachers' Level of Instructional Supervisory Skills in Terms of Clinical Observation

Indicators	Mean	SD	Description
Approach teachers with empathy, creating a safe environment for open communication.	3.72	0.45	Strongly Agree
Actively listen, provide constructive feedback, and articulate expectations clearly.	3.70	0.50	Strongly Agree
Engage in reflective practice enhances self-awareness and critical thinking.	3.68	0.49	Strongly Agree
Adapt supervision to individual learning styles and needs is crucial for effective guidance	3.61	0.54	Strongly Agree
Stay updated with the latest research, techniques, and ethical guidelines to inspire teachers to grow professionally.	3.44	0.63	Strongly Agree
Balance constructive feedback with praise motivates supervisees to excel and improve continuously.	3.62	0.54	Strongly Agree
Understand the role of clinical supervision in monitoring and ensuring quality services.	3.66	0.49	Strongly Agree
Familiarize with various theoretical models of clinical supervision and establish a productive learning.	3.46	0.60	Strongly Agree
Adherence to professional and ethical standards, such as protecting and maintaining confidentiality.	3.63	0.48	Strongly Agree
Create a respectful environment, seek.	3.71	0.46	Strongly Agree

Overall	**3.62**	**0.40**	**Strongly Agree**

Legend: 3.41 – 4.00 Strongly Agree/Excellent 1.81 – 2.60 Disagree/Below Average
2.61 – 3.40 Agree/Average 1.00 – 1.80 Strongly Disagree/Poor

Table 2.3 presents the Master Teachers' level of instructional supervisory skills in terms of clinical observation, including ten indicators assessed with the overall mean score of 3.62 (SD=0.40), described as Strongly Agree and interpreted as Excellent. The strong agreement on their skills in clinical observation means that the supervisory role that Master Teachers is important in guiding and mentoring other educators which reinforces their status as instructional leaders in school. Their proficiency in clinical observation implies that Master Teachers can lead professional development sessions focused on observation techniques and feedback strategies that can help other educators refine their teaching practices and enhance their own observational skills. It suggests that MT's may employ differentiated supervisory skills and observation techniques address the specific needs of the teachers they are observing to ensures relevant and actionable feedback and maximizing its impact on teaching practices.

According to Marciano et al. (2019) by observing teachers in action, Master Teachers can also model effective instructional techniques, foster reflective practice, and promote a culture of continuous improvement within the educational community

Among the indicators, the highest-rated aspect is on Approach teachers with empathy, creating a safe environment for open communication with a mean of 3.72 (SD=0.45), described as Strongly Agree and interpreted as Excellent. Approaching teachers with empathy means fostering a supportive educational environment through recognizing the importance of emotional intelligence in educational leadership and building rapport with teachers to foster open communication, and promote a positive and supportive atmosphere conducive to professional growth and development. This implies that schools can invest in training programs that focus specifically on developing empathy and communication skills among teachers such as workshops and seminars that can provide educators with practical strategies for fostering empathetic interactions. The emphasis on empathy can significantly influence the overall school culture that is likely to promote collaboration, reduce conflicts, and create a more positive work environment, which can enhance teacher retention.

According to Barrogo (2020) classroom observation using the standardized tools is made a requirement in the Philippine Professional Standards for Teachers-Results-Based Performance Management System (PPST-RPMS), enhancing its objectivity and standardization. Its multifaceted use in mentoring, coaching, performance review, and evaluation contributes to teachers' continuous professional growth. In line with this, Suparto (2020) highlighted that academic supervision utilizing clinical observation technique can enhance the quality of teacher learning.

Conversely, the lowest-rated indicator Stay updated with the latest research, techniques, and ethical guidelines to inspire teachers to grow professionally with a mean of 3.44 (SD=0.63) described as Strongly Agree interpreted as Excellent. This means that educators who prioritize staying informed in the recent researches can serve as role

models for their peers by demonstrating a commitment to professional growth and ethical standards, they can inspire other teachers to engage in similar practices. It implies that emphasizing the importance of staying updated can encourage teachers to engage in reflective practices, teachers should be prompted to assess how new information and ethical guidelines can be integrated into their teaching methods. The insights emphasize the importance of a lifelong learning mindset, ethical considerations, and collaboration in fostering a thriving educational environment to grow professionally that ultimately beneficial to both educators and students. It also points to the necessity of creating a more solid and appropriate system for professional growth that encourages and facilitates the ongoing acquisition of new knowledge and skills.

Felisilda and Malaga (2019) posited that engaging with current research enables master teachers to make informed, evidence-based decisions about curriculum, pedagogy, and assessment. This helps ensure that teaching practices are grounded in the latest findings and feedbacking during clinical observations are precisely aligned with proven educational strategies. Consequently, feedback during clinical observations becomes more constructive and targeted, allowing teachers to implement effective practices that have been validated through research. Meanwhile, Guanzon and Miranda (2023) explained that regularly reviewing academic journals of different researches, research databases, and other literature can help master teachers stay informed about cutting-edge research, techniques, and ethical considerations. This proactive approach ensures that they are well-equipped to integrate new methodologies and insights into their teaching practices.

Table 2.4. Distribution of the Master Teachers' Level of Instructional Supervisory Skills in Terms of Pedagogical Dimension

Indicators	Mean	SD	Description
Teaches accurate and updated content using appropriate approaches and strategies.	3.61	0.53	Strongly Agree
Aligns lesson objectives, teaching methods, learning activities and instructional strategies.	3.75	0.46	Strongly Agree
Encourages learners to use higher order thinking skills in asking questions.	3.77	0.44	Strongly Agree
Engages and sustains learners' interest in the subject matter by making content meaningful and relevant.	3.74	0.50	Strongly Agree
Establishes routines and procedures to maximize use of time, instructional materials.	3.67	0.53	Strongly Agree
Integrates language, literacy, skills and values in teaching.	3.71	0.48	Strongly Agree
Presents lesson logically in development manner.	3.72	0.45	Strongly Agree
Utilizes technology resources in planning, designing and delivery of the lesson.	3.68	0.47	Strongly Agree
Creates situations that encourage learners to use higher order thinking skills.	3.70	0.46	Strongly Agree
Sets lesson objectives within the experiences and capabilities of the learners.	3.72	0.47	Strongly Agree
Utilizes varied techniques and strategies suited to different kinds of learners.	3.71	0.45	Strongly Agree
Shows fairness in dealing with the learners.	3.76	0.43	Strongly Agree
Paces lesson appropriate to the needs and difficulties	3.70	0.52	Strongly Agree
Provides appropriate intervention activities for learners at risk.	3.69	0.52	Strongly Agree
Helps learners answer in own words at a desired cognitive level.	3.71	0.48	Strongly Agree
Facilitates students in asking questions relevant to the lesson.	3.73	0.44	Strongly Agree
Facilitates students in participating actively in the learning tasks with some levels of independence.	3.73	0.48	Strongly Agree
Guides students in showing appropriate behavior of individualism, cooperation competition in classroom interaction.	3.70	0.52	Strongly Agree

Helps students in imbibing the valuing learning from the teacher & classmates.	3.72	0.47	Strongly Agree
Invites students in demonstrating varied ways, learning achieved in the activities.	3.69	0.48	Strongly Agree
Overall	**3.71**	**0.36**	**Strongly Agree**

Legend: 3.41 – 4.00 Strongly Agree/Excellent 1.81 – 2.60 Disagree/Below Average
2.61 – 3.40 Agree/Average 1.00 – 1.80 Strongly Disagree/Poor

Table 2.4 highlights the result of the Master Teachers' level of instructional supervisory skills in terms of pedagogical dimension with an overall mean score of 3.71 (SD=0.36,) described as Strongly Agree and interpreted as Excellent. This means that Master Teachers are instructional leaders who possess the knowledge and skills necessary to guide and support other educators in improving their pedagogical practices and enhancing student learning outcomes. This implies that excellent pedagogical skills play a significant role in curriculum development to ensure that curricula are aligned with best practices, responsive to student needs, and promote active learning. The high level of pedagogical competencies among Master Teachers suggests a commitment to continuous professional growth especially when engaged in ongoing learning to refine their skills and stay updated with the latest research and best practices in education.

The study of Mendoza and Bautista (2023) revealed the significant relationship between master teachers' pedagogical practices and the instructional competence and performance of teachers.

Among the indicators, the highest score is observed in the indicator, encourages learners to use higher order thinking skills in asking questions with a mean score of 3.77 (SD=0.44) described as Strongly Agree and interpreted as Excellent. This means that master teachers excel in fostering critical thinking among students, which is crucial for their cognitive development and deeper understanding of the subject matter. The implication of this high score is that these educators are effectively cultivating a classroom environment that stimulates intellectual curiosity and promotes active engagement in learning. It suggests that Master Teachers can facilitate and encourage other teachers to use inquiry-based activities and investigations where students explore topics, pose questions, conduct research, and draw conclusions. Enhancing curiosity, independent thinking, and exploration, fostering critical thinking, problem-solving, and investigative skills.

The results aligned with the findings of Mendoza and Bautista (2023) that all teachers must infuse their lessons with real-world examples and applications, making the subject matter more relatable and engaging. This helps students connect abstract concepts to practical situations, fostering critical thinking.

Marciano et al. (2019) emphasized that master teachers exhibit and can illustrate pedagogical expertise by bridging theoretical concepts with practical application and exemplifying effective teaching methods. They serve as dynamic models of proficient teaching, fostering and prompting self-reflection among educators since they view learning as a mutual exchange and approach their interactions with teachers as collaborative partnerships. Therefore, mentoring not only facilitates the professional development of teachers but also enhances teaching methodologies. Moreover, it positively impacts students' academic achievements.

Conversely, the lowest score is indicator Teaches accurate and updated content using appropriate approaches and strategies, with a mean score of 3.61 (SD=0.53) described as Strongly Agree and described as Excellent. This means that while still within the realm of excellence, this indicator highlights an area where there may be some room for improvement, teachers are effectively aligning their instruction with curriculum standards and learning objectives that ensures the content taught is relevant and meets educational requirements, which in turn enhances the educational experience for students. The implication here could be that while the master teachers are proficient in structuring learning activities and facilitating academic growth, they still feel the need to access more opportunities that could help them enhance their guidance in promoting positive social interactions and behaviors among students. This is crucial as it would be difficult for them to aid newly-hired teachers on teaching pedagogy if they themselves are not updated and knowledgeable of the recent teaching strategies and methodologies. Strategies such as fostering a culture of collaboration, emphasizing empathy and respect, and providing clear expectations for behavior could also be beneficial in addressing this aspect of instructional supervision.

Abreu et al. (2019) expounded that schools can help Master teachers stay updated on the recent content and strategies of teaching by providing them with opportunities for continuous professional development. This can include seminars and trainings that focus on the latest developments in their subject area, as well as encouraging them to engage in professional activities that enhance their instructional competence and develop leadership capacity. Matias (2023) believed that Master teachers can also be encouraged to design training programs for their colleagues, which could provide technical assistance and enhance the overall teaching competence of the school workforce. Master teachers initiate activities that can enhance teacher's performance and productive student outcomes.

Table 2.5. Distribution of the Master Teachers' Level of Instructional Supervisory Skills in Terms of Technological

Indicators	Mean	SD	Description
Use various observation systems to analyze and understand the instructional process within a classroom setting.	3.47	0.52	Strongly Agree
Evaluate the effectiveness of instructional design and modifying technical training instruction accordingly.	3.62	0.62	Strongly Agree
Review, interpret and implement instructional materials to meet training readiness standards.	3.49	0.55	Strongly Agree
Incorporate technology into educational practices to enhance learning outcomes and support instructional programs effectively.	3.65	0.51	Strongly Agree
Competent in creating and delivering electronic presentations for teaching purposes.	3.46	0.58	Strongly Agree
Efficiently navigate the internet for educational resources and information using advanced search techniques.	3.50	0.52	Strongly Agree
Has skill in sending, receiving, and managing email communications effectively with colleagues and students.	3.54	0.60	Strongly Agree
Incorporate technology effectively into teaching practices to engage students in learning.	3.52	0.51	Strongly Agree
Uses data to inform teaching decisions, target areas for improvement, and track student progress over time.	3.58	0.51	Strongly Agree

Develop critical thinking, collaboration, communication, and creativity skills in students through technology use.	3.59	0.51	Strongly Agree
Engage students in technology tools like video, email, online programs, and video conferencing.	3.57	0.58	Strongly Agree
Updated with technological advancements in education and striving for excellence in technology skills.	3.52	0.61	Strongly Agree
Continuously improve technology skills through training, workshops, and networking opportunities within the educational community.	3.60	0.53	Strongly Agree
Efficiently navigate the web for educational resources and materials to enhance teaching practices.	3.53	0.57	Strongly Agree
Overall	**3.54**	**0.41**	**Strongly Agree**

Legend: *3.41 – 4.00 Strongly Agree/Excellent* *1.81 – 2.60 Disagree/Below Average*
2.61 – 3.40 Agree/Average *1.00 – 1.80 Strongly Disagree/Poor*

Table 2.5 shows the master teachers' instructional supervisory skills in terms of technology with an overall mean score of 3.54 (SD=0.41), described as Strongly Agree and interpreted as Excellent. This means that Master Teachers demonstrate a high level of proficiency in utilizing technology to support and enhance educational practices, reflecting their readiness to integrate modern technological tools into the classroom effectively. Given the strong technological skills, implies that integrating technology into the curriculum plays significant role to support learning objectives, promote active engagement, and develop digital literacy skills among students. Sharing of best practices and educational technology resources, teachers can collectively enhance their instructional effectiveness. Master Teachers may utilize educational technology to collect and analyze student performance data as baseline in choosing appropriate instructional strategies, identify areas for improvement, and personalize learning experiences for students.

In line with the study of Javier (2020) that the Department of Education can assist Master Teachers in enhancing their technological skills by providing them with professional development opportunities and resources. One such initiative is the Higher Order Thinking Skills Professional Learning Packages (HOTS-PLPs) program, which aims to support Master Teachers in mentoring their colleagues to improve their pedagogy and assessment practices. This program includes guide materials and technical assistance to help Master Teachers in their roles, focusing on integrating HOTS into classroom practices (Gita-Carlos, 2024). Additionally, the Department can offer training sessions and workshops on emerging technologies, such as online learning platforms and educational software.

Among the various indicators, the result indicates that the highest mean of 3.65 (SD=0.51) is on the indicator, incorporate technology into educational practices to enhance learning outcomes and support educational programs effectively, which is described as Strongly Agree and interpreted as Excellent. This means that Master teachers are particularly proficient in assessing the quality and impact of their instructional methods and are adept at adjusting technical assistance to improve outcomes. This high proficiency implies that these teachers possess strong technological skills, enabling them to critically analyze instructional design, identify areas for improvement, and implement necessary modifications effectively. The results reflect that the Master Teachers in the locale of study

are competent in their roles of evaluating instructional design and that they could also provide suggestions and recommendations to their fellow teachers on how to improve instructional designs for a positive learning outcome in the classroom. This capability is essential for fostering an adaptive and responsive teaching environment, ultimately enhancing the overall quality of education and ensuring that instructional strategies meet the evolving needs of students.

The results on the master teachers' technological skills align with the explanation of Barruga (2021) that Master teachers, just like other teachers, also require technological skills to fulfill key responsibilities like crafting self-learning modules, coaching on learning activity sheets, planning module distribution and retrieval, and preparing for classroom observations. Proficiency with online tools and platforms is essential for master teachers to provide technical assistance to teachers on new strategies and schemes for teaching and learning.

Conversely, the lowest mean score was recorded for the indicator, Competent in creating and delivering electronic presentations for teaching purposes, which has a mean of 3.46 (SD=0.58), described as Strongly Agree and interpreted as Excellent. This slightly lower score means that the Master teachers need more training and assistance in technological proficiency when it comes to creating and delivering online presentations. This could imply that there is a varying degree of technological skills among the respondents as indicated by the high standard deviation. Those who are less comfortable with basic technology may struggle more with advanced tasks like creating engaging electronic presentations. Additionally, the MTs may not have received adequate training focused specifically on creating and delivering electronic presentations. While general technology training might be available, specialized workshops or courses on presentation skills might be lacking. Trainings and seminars on the use of technology in the classroom can be conducted regularly for all teachers to be equipped with the necessary technological skills.

The results aligned with the findings of Bañares and Pimentel (2021), who revealed that master teachers commonly face challenges such as insufficient knowledge and skills, technical difficulties, and staying abreast of technological advancements in education. A majority of these master teachers express feelings of being ill-equipped to guide others in utilizing technology positively.

Table 2.6. Distribution of the Master Teachers' Level of Instructional Supervisory Skills in Terms of Evaluation

Indicators	Mean	SD	Description
Evaluate students' performances fairly and uses adequate and accurate standards measures of evaluation	3.70	0.46	Strongly Agree
Selects and utilizes criterion referenced tests.	3.51	0.52	Strongly Agree
Analyzes and interprets evaluation results skillfully.	3.56	0.50	Strongly Agree
Utilizes evaluation result as a basis for improving instruction.	3.63	0.49	Strongly Agree
Uses varied forms of evaluation tools.	3.59	0.53	Strongly Agree

Evaluates performance of the students on the basis of the course objectives through discussions, quizzes, and major examinations.	3.69	0.47	Strongly Agree
Gives grades on the basis of students' performance.	3.78	0.42	Strongly Agree
Treats each student fair and square.	3.77	0.42	Strongly Agree
Exercises no favoritism.	3.71	0.51	Strongly Agree
Acts according to own intellectual judgment.	3.55	0.55	Strongly Agree
Acts according to own intellectual judgment.	3.57	0.58	Strongly Agree
Provides evaluative activities appropriate to students' abilities, interest, and needs.	3.92	0.83	Strongly Agree
Gives evaluation result ratings that are well-accepted by the students.	3.66	0.49	Strongly Agree
Utilizes evaluation result as a basis for improving instruction.	3.66	0.55	Strongly Agree
Uses different methods in evaluating students' learning aligned to the learning objectives such as oral performance, projects and hands-on	4.01	0.75	Strongly Agree
Includes items in the tests that are based on lesson objectives consisted with actual discussions activities and classroom interactions.	3.69	0.52	Strongly Agree
Gives grades on the basis of students' actual performance.	3.75	0.46	Strongly Agree
Treats each student fairly in giving grades.	3.75	0.46	Strongly Agree
Bases ratings according to the objectives of the lessons & criteria set in class.	3.69	0.48	Strongly Agree
Allows students to rate their own performances in some of the activities in the class.	3.56	0.57	Strongly Agree
Overall	**3.69**	**0.42**	**Strongly agree**

Legend: *3.41 – 4.00 Strongly Agree/Excellent* *1.81 – 2.60 Disagree/Below Average*
2.61 – 3.40 Agree/Average *1.00 – 1.80 Strongly Disagree/Poor*

Table 2.6 shows the statistical result of the master teachers' level of instructional supervisory skills in terms of evaluation, as evidenced by an overall mean score of 3.69 (SD=0.42), described as Strongly Agree and interpreted as Excellent. Denoting excellence in the indicators mentioned means robust competency among master teachers in assessing student performance and utilizing evaluation results to enhance instruction. The consistently high ratings indicate their adeptness in employing fair and accurate evaluation measures, utilizing diverse evaluation tools, and aligning evaluation methods with learning objectives. Proficiency in evaluation can foster collaboration among educators by sharing best practices and insights gained from evaluations, they can help create a supportive professional learning community that enhances instructional effectiveness.

According to Sangalang (2018), master teachers, regarded as highly proficient instructional leaders, employ various methods to support their skills and duties by aiding teachers in orchestrating student learning through well-structured lesson plans and utilizing suitable, comprehensive, and up-to-date instructional assessment and evaluation materials

In particular, the highest-rated indicator has a mean of 4.01 (SD=0.75) described as Strongly Agree and interpreted as Excellent is about the abilities of master teachers to Use different methods in evaluating students' learning aligned to the learning objectives such as oral performance, projects, hands-on. This means a deep understanding of student diversity and a commitment to fostering equitable learning environments. The consistency among teachers in addressing student differences reflects positively on

instructional quality and promotes student engagement and motivation. In the context of the Department of Education, it implies that all the teachers are encouraged to use different forms of assessment, such as diagnostic, formative, standardized, and summative, to evaluate the learners' knowledge and skills. These competencies inform teachers on how they could contextualize their lessons and strategies to best fit the learners' learning style for the achievement of the education outcomes. Through evaluation, master teachers assess the effectiveness of instructional methods, curriculum materials, and learning strategies, ensuring alignment with educational goals and standards. They meticulously analyze student performance data to identify strengths and areas needing improvement, enabling targeted interventions to support diverse learning needs.

According to Sangalang (2018), master teachers, regarded as highly proficient instructional leaders, employ various methods to support their skills and duties by aiding teachers in orchestrating student learning through well-structured lesson plans and utilizing suitable, comprehensive, and up-to-date instructional assessment and evaluation materials. Similarly, Echeche (2022) advocated that effective teaching emerges when teams of master teachers engage in a cyclical process. This process involves analyzing data, establishing learning objectives for both students and educators derived from this analysis, collaborating to develop lessons incorporating evidence-based strategies, and evaluating the impact of their learning and teamwork on student achievement.

Conversely, the indicator with the lowest mean, 3.51 (SD=0.52), described as Strongly Agree and interpreted as Excellent was about the master teachers' skills in Select and utilizes criterion referenced tests. This means that MT's are perceived to have a strong ability to select and effectively utilize criterion-referenced tests in assessing student performance against specific criteria rather than comparing students to one another. The strong skills in utilizing criterion-referenced tests imply that Master Teachers can help align assessments with curriculum objectives. This ensures that assessments accurately measure student learning outcomes and inform instructional practices. This gap underlines the importance of ensuring assessments accurately measure student mastery of learning objectives and inform instructional decision-making.

Matias (2023) claimed that addressing the proficiency gap on designing criterion-referenced assessments can be done through strategic resource allocation, quality assurance measures, and a culture of continuous improvement that will not only strengthen assessment practices but also contribute to the overall quality and effectiveness of education within Department of Education.

Table 2.7. Summary of Master Teachers Level of Instructional Supervisory Skills

Variables	Mean	SD	Interpretation
Coaching	3.60	0.40	Excellent
Mentoring	3.53	0.44	Excellent
Clinical Observation	3.62	0.40	Excellent
Pedagogical	3.71	0.36	Excellent
Technological	3.54	0.41	Excellent

Evaluation	3.69	0.42	Excellent
Overall	**3.62**	**0.41**	**Excellent**

Legend 3.41 – 4.00 Strongly Agree/Excellent 1.81 – 2.60 Disagree/Below average
2.61 – 3.40 Agree/Average 1.00 – 1.80 Strongly Disagree/Poor

Table 2.7 reflects the summary of Master Teachers level of instructional supervisory skills across six different components- coaching, mentoring, clinical observation, pedagogical, technological, and evaluation which reflects consistently high ratings across all components, with an overall mean score of 3.62 (SD = 0.41), indicating an overall Excellent performance and interpreted as Strongly Agree. The results mean that master teachers demonstrate proficiency in coaching, mentoring, clinical observation, pedagogical knowledge, technological integration, and evaluation. The consistently high ratings suggest that the master teachers possess strong instructional leadership skills, which are crucial for guiding and supporting other teachers in improving their teaching practices. The high ratings underscore the effectiveness of master teachers in providing support and guidance to their peers in various aspects of teaching and learning, which highlights the importance of ongoing training and mentorship programs that have contributed to the development of these supervisory skills. Moreover, excellent performance in evaluation indicates a strong system of assessing teaching practices and student outcomes, which is essential for continuous improvement and quality assurance in education.

The results strengthen the position of Buagas and Ching (2023) that Master teachers play a vital role in schools by fostering a culture of lifelong learning and intellectual growth. They are leaders who set a positive example, encouraging students to take up the challenges of learning and teaching. These educators go beyond simply imparting knowledge, focusing on the intellectual, emotional, and physical development of their students.

Additionally, Ordanel and Dioso (2023) emphasized that the instructional supervisory skills of Master Teachers are crucial for effective teaching and learning in schools. Their expertise in instructional supervision also helps to foster a positive learning environment, accommodate diverse learners, and promote continuous professional growth among teachers. Moreover, Master Teachers' ability to engage in professional learning communities and discuss concerns related to their duties and responsibilities enhances their competence as instructional leaders.

Hence, Cortez (2023) asserted that the Master Teachers’ should be given extra assistance in their instructional supervision by providing necessary resources and support. One key strategy is to ensure that master teachers are equipped with the latest pedagogical knowledge and technological skills, which are crucial for effective instructional supervision. This can be achieved through regular training and professional development opportunities that focus on integrating technology into teaching and learning processes.

Research Question 3. What is the level of teachers' performance with regard to teaching and learning process, student's outcome, community involvement, professional growth and development?

Table 3.1. Distribution of the Teachers' Level of Performance in Terms of Teaching and Learning Process

Indicators	Mean	SD	Description
Chooses activities relevant to the prescribed curriculum	3.65	0.48	Strongly Agree
Plans student grouping according to instructional needs	3.63	0.49	Strongly Agree
Informs students of objective of the lesson	3.60	0.52	Strongly Agree
Relates the lesson to previous and future lessons	3.69	0.47	Strongly Agree
Monitors student learning continuously	3.66	0.50	Strongly Agree
Provides feedback and re-teaches when necessary	3.60	0.52	Strongly Agree
Provides opportunities for students to practice independently	3.65	0.50	Strongly Agree
Establishes a level of difficulty which encourages success	3.54	0.53	Strongly Agree
Demonstrates enthusiasm, vigor, involvement, and interest in lesson presentation	3.65	0.49	Strongly Agree
Presents learning content in a logical sequential order	3.58	0.52	Strongly Agree
Overall	**3.63**	**0.38**	**Strongly Agree**

Legend: 3.41 – 4.00 Strongly Agree/ Outstanding; 2.61 – 3.40 Agree / Very Satisfactory; 1.81 – 2.60 Disagree/ Satisfactory; 1.00 – 1.80 Strongly Disagree/ Poor

Table 3.1 shows the statistical results of the teachers' level of performance in terms of teaching and learning process with an overall mean score of 3.63 (SD=0.38), described as Strongly Agree and interpreted as Outstanding. This high mean means that teachers are consistently demonstrating proficiency in their instructional practices, creating an environment conducive to student engagement, learning, and growth. This reflects their ability to effectively facilitate the teaching and learning process, engage students, and achieve educational objectives. The emphasis on outstanding performance implies that teaching practices should continue to prioritize student-centered learning which includes engaging students through active learning strategies, differentiated instruction, and formative assessments that cater to diverse learning styles. It could be suggested that teachers need to be adaptable and responsive to the needs of their students. This flexibility is essential in addressing diverse learning needs and creating an inclusive classroom environment.

Pandolpho (2019) explained that the primary goal of schools is to design a teacher evaluation system that evaluates subtle aspects, implements adjustments as needed, and enhances the teacher's effectiveness. This is because the greater a teacher's effectiveness, the more successful their students are likely to be (Balanquit et al., 2023).

Among the indicator, Relates the lesson to previous and future lessons stands out with the highest mean score of 3.69 (SD = 0.47), described as Strongly Agree and interpreted as Outstanding. This means that teachers excel in establishing connections between current lesson content and past or future learning experiences, promoting coherence and continuity in students' understanding. Such integration of concepts across lessons not only enhances comprehension but also fosters a deeper understanding of the subject

matter and its relevance to broader contexts. Examples of classroom activities and strategies that teachers use to ensure that they relate their lessons to previous and future lessons are the use of review and preview sessions, concept mapping or mind mapping, journal writing, among others. These practices not only help students make connections between past, present, and future learning but also reinforce their understanding and retention of the material.

The results strengthen the claim of Pandolpho (2019) that designing lessons that show the connection between topics is crucial for helping students understand the relevance and significance of what they are learning. When lessons are structured to explicitly engage students' prior knowledge and actively explore new concepts through authentic inquiry, it can facilitate deeper learning and integration of new information.

Munna and Kalam (2021) advised that building connections between lessons can be done by identifying the desired learning outcomes and then planning the lesson activities to achieve those goals. This helps ensure the lesson is focused and coherent.

Meanwhile, the indicator Establishes a level of difficulty which encourages success presents the lowest mean score of 3.54 (SD=0.53, described as Strongly Agree and interpreted as Outstanding. This means that students may not be experiencing optimal growth in their learning without appropriately challenging tasks. Students miss out on opportunities to stretch their abilities and develop resilience in the face of difficult problems. This lack of challenge can lead to complacency, where students are not pushed to apply critical thinking or develop problem-solving skills, ultimately affecting their long-term academic performance and preparedness for future educational endeavors. suggests that most of the teachers do not create lessons and exams in a difficult manner. While teachers demonstrate overall effectiveness in designing instructional tasks, they think that they still do not establish enough level of difficulty that encourages success for the students. Thus, even though teachers are effective overall, adjusting the level of difficulty in their instructional design is essential to better support and encourage student success. This points to a potential need for more effective instructional differentiation, where teachers can better tailor the level of challenge to match the diverse abilities and learning needs of their students.

Tiplin (2022) expounded that making challenging or higher-order lessons is crucial for students' cognitive development and academic success. These skills are essential for preparing students to tackle complex problems, think creatively, and make informed decisions in their personal and professional lives. By incorporating higher-order thinking into lessons, teachers can move students beyond mere memorization and encourage them to develop deeper understanding and connections between concepts.

Table 3.2. Distribution of the Teachers' Level of Performance in Terms of Student's Outcome

Indicators	Mean	SD	Description
Communicates expectations of performance to students	3.59	0.50	Strongly Agree
Uses objective student data to set expectations	3.52	0.53	Strongly Agree
Uses evaluative feedback to determine level of skill acquisition	3.57	0.51	Strongly Agree
Encourages participation from all students	3.72	0.45	Strongly Agree
Use higher order questioning techniques to promote critical thinking skills	3.63	0.51	Strongly Agree
Provides opportunities for each student to meet success regularly	3.64	0.49	Strongly Agree
Creates a climate in which students display initiative and assume a personal responsibility for learning	3.61	0.51	Strongly Agree
Manages disruptive behavior constructively	3.53	0.53	Strongly Agree
Establishes and clearly communicates parameters for student classroom behavior	3.60	0.50	Strongly Agree
Makes opportunities for one-to-one conferences to discuss student progress	3.56	0.52	Strongly Agree
Overall	**3.60**	**0.39**	**Strongly Agree**

Legend:
3.41 – 4.00 Strongly Agree/ Outstanding
2.61 – 3.40 Agree / Very Satisfactory
1.81 – 2.60 Disagree/ Satisfactory
1.00 – 1.80 Strongly Disagree/ Poor

Table 3.2 reflects the statistical results of teachers' level of performance based on student outcomes with an overall mean score of 3.60 (SD=0.39), described as Strongly Agree and interpreted as Outstanding. This overall score means a high level of effectiveness among teachers in nurturing positive student outcomes across various performance indicators. Such a score implies that the majority of respondents agree on the effectiveness of teaching practices and their positive impact on learning outcomes. This highlights the need for continued investment in teacher development, comprehensive evaluation methods, and a focus on creating engaging learning environments. By understanding the factors that contribute to effective teaching can enhance student outcomes and prepare them to the 21st-century learning skills.

The results corroborate the findings of Batuguis et al. (2022) that the methods and resources employed by teachers are vital components of effective teaching practices that directly influence student outcomes. Utilizing diverse instructional strategies, such as active learning techniques, differentiated instruction, and technology integration, can help teachers cater to the diverse needs and learning styles of their students.

Among the ten evaluated indicators, the highest mean score is observed in the statement, encourages participation from all students, which has a mean of 3.72 (SD=0.45), described as Strongly Agree and interpreted as Outstanding. This means that teachers are particularly effective in engaging students and promoting inclusive participation in the classroom. The high mean score in this area underscores the importance of active student involvement as a critical component of effective teaching practices, as it can lead to better student engagement, motivation, and overall academic achievement. The teachers really encourage open-ended discussions where students are invited to question, debate, and discuss various topics that can promote active participation. Socratic

seminars, in particular, involve students in a structured dialogue based on a text or topic, fostering deep thinking and broad participation.

According to Andriani and Rasto (2019), learning outcomes represent the achievement of students in meeting the established learning objectives. These outcomes are considered successful when students have attained the learning goals and demonstrate changes in knowledge, attitudes, and skills. Moreover, Pido et al. (2023) emphasized that when teachers perform well, they are better equipped to create a dynamic and efficient teaching and learning process, which in turn enhances student learning outcomes. Effective teacher performance can lead to improved student understanding, retention, and application of knowledge, as well as positive changes in attitudes and skills.

Meanwhile, the lowest mean score is the indicator Uses objective student data to set expectations, with a mean of 3.52 (SD = 0.53) described as Strongly Agree and interpreted as Outstanding. This means that there are instances where teachers do not extensively rely on measurable and objective data about students' academic performance to guide their teaching strategies, set learning goals, or assess progress. Instead, they might use subjective judgments, impressions, or general observations. The implication here is that while teachers are adept in most areas, there is room for improvement in the use of data-driven decision-making to tailor and set realistic and challenging expectations for students.

In terms of using objective data, Sarabia and Collantes (2020) emphasized that objective assessments provide quick and accurate feedback on student performance, helping them identify areas where they need to focus their study efforts.

Table 3.3. Distribution of the Teachers' Level of Performance in Terms of Community Involvement

Indicators	Mean	SD	Description
Encourages community involvement with the school	3.59	0.50	Strongly Agree
Provides a climate which opens up communication between the teacher and parent	3.54	0.50	Strongly Agree
Communicates with parents in the best interest of the students	3.63	0.48	Strongly Agree
Supports parents/teacher activities	3.56	0.50	Strongly Agree
Provides information related to support resources	3.58	0.50	Strongly Agree
Cooperates with other teachers, the administration, and other educational personnel	3.62	0.50	Strongly Agree
Shares ideas and methods with other teachers	3.58	0.50	Strongly Agree
Informs administration and/or appropriate personnel of school related items	3.53	0.52	Strongly Agree
Makes use of support services as needed	3.55	0.52	Strongly Agree
Participates in community and stakeholder's engagement activities	3.62	0.49	Strongly Agree
Overall	**3.58**	**0.37**	**Strongly Agree**

Legend: 3.41 – 4.00 Strongly Agree/ Outstanding; 2.61 – 3.40 Agree / Very Satisfactory; 1.81 – 2.60 Disagree/ Satisfactory; 1.00 – 1.80 Strongly Disagree/ Poor

Table 3.3 shows the statistical results of the teachers' level performance in of terms of community involvement, with an overall mean score of 3.58 (SD=0.37), described as Strongly Agree and interpreted as Outstanding .This outstanding performance means a commitment to building partnerships that enhance educational experiences and outcomes for students by recognizing the significance of community involvement, educational stakeholders can prioritize strategies that support teachers in their efforts. It implies that community involvement is not just an ancillary aspect of teaching; it is a vital component that enriches the educational landscape and contributes to the holistic development of students. By continuing to invest in community engagement initiatives, schools can create a more supportive and effective educational environment. Teachers who engage with the community help build social capital, which can enhance trust, cooperation, and collective efficacy among community members. It further suggests that by advocating for educational issues and engaging in community service, teachers can become role models for students and inspire civic responsibility. Community involvement encourages collaborative learning environments where students, teachers, and community members work together toward common goals. This collaboration can lead to innovative educational practices and programs that address needs and challenges in educational environment.

The results align with the explanation of Daly (2022) that teachers are crucial in developing and maintaining effective school-community relations. They serve as liaisons, interpreting the school's program to the community and clarifying the school's role in society.

Among the ten evaluated indicators, the highest mean score is observed in Communicates with parents in the best interest of the students, which scored 3.63 (SD=0.48), described as Strongly Agree and interpreted as Outstanding. This indicator highlights the significance of effective communication between teachers and parents in fostering student success. By maintaining open and proactive dialogue focused on the welfare and academic progress of students, teachers can cultivate a supportive partnership with parents, which is crucial for student achievement. The constant communication with parents is practiced by the teachers by conducting regular PTA meetings, family day, and other school activities that encourage the parents to take an active participation as they are also the time that the parents can consult the teachers about the progress of their children. Additionally, the teachers see to it that the parents sign the test papers of their children after exams so they are aware of the scores. This is one way of indirectly informing the parents how their students are faring in their education.

Additionally, Francisco (2019) asserted that teachers who are involved in the community gain a deeper understanding of their students' needs and can tailor their teaching methods accordingly. This direct relationship with parents also helps teachers identify areas where students may need additional support.

Conversely, the lowest mean score of 3.53 (SD=0.52) described as Strongly Agree and interpreted as Outstanding is the indicator Informs administration and/or appropriate personnel of school-related items. This means that effective communication with school

administration and relevant personnel is essential for ensuring the smooth operation of school-related activities and addressing any issues or concerns promptly. This score implies that the majority of respondents agree on the effectiveness of teachers' efforts to keep administration and relevant personnel informed about important school matters. Teachers are always encouraged to enhance communication channels between them and administration as it could further optimize the overall effectiveness of community involvement initiatives. It suggests that if teachers effectively communicate with administrators and school leaders, it can lead to improved support for students. This support can take many forms, such as targeted interventions, additional resources, or professional development for teachers, all of which can positively impact student learning outcomes.

Roxas et al. (2018) emphasized that genuine school reforms invariably commence with heightened effective communication of the school's different stakeholders, which include primarily the teachers and the school administration. Effective communication fosters a shared vision and mutual understanding, which are critical for implementing and sustaining meaningful changes. This collaboration ensures that the reforms are aligned with the needs and expectations of the entire school.

Professional growth and development are essential for teachers to enhance their knowledge, skills, and instructional practices. Continuous professional development is associated to improved student learning outcomes, as it equips teachers with the latest pedagogical strategies and content knowledge. Collaborative learning, data-driven decision-making, personalized learning, reflective practice, and effective mentorship are key components that contribute to successful professional development. By investing in high-quality professional growth and development, schools can empower teachers to enhance their skills and ultimately improve student learning experiences. Continuous investment in teachers' professional growth is a pathway to achieving educational excellence and equity. Effective strategies for professional development will empower teachers to improve their practices, ultimately benefiting students and the broader educational community.

Table 3.4. Distribution of the Teachers' Level of Performance in Terms of Professional Growth and Development

Indicators	Mean	SD	Description
Gets involved in professional associations.	3.60	0.51	Strongly Agree
Participates on district/state committees, etc.	3.51	0.53	Strongly Agree
Participates in professional workshops.	3.63	0.51	Strongly Agree
Attends professional meetings.	3.63	0.49	Strongly Agree
Keeps current in subject area.	3.67	0.48	Strongly Agree
Engages in continuing education.	3.61	0.52	Strongly Agree
Publishes research or articles in peer-reviewed journals or educational publications related to their field of expertise.	3.22	0.78	Agree
Presents at conferences or workshops on topics related to their field of expertise.	3.34	0.66	Agree
Mentors or coaches' other educators to enhance their professional growth and development.	3.39	0.65	Agree

Leads or facilitates professional learning communities or study groups focused on advancing teaching practices and pedagogy.	3.39	0.60	Agree
Overall	**3.50**	**0.43**	**Strongly Agree**

Legend: 3.41 – 4.00 Strongly Agree/ Outstanding; 2.61 – 3.40 Agree / Very Satisfactory; 1.81 – 2.60 Disagree/ Satisfactory; 1.00 – 1.80 Strongly Disagree/ Poor

Table 3.4 presents the teachers' level of performance in terms of professional growth and development with an overall mean score of 3.50 (SD=0.43), described as Strongly Agree and interpreted as Outstanding. This means that most respondents share a similar view on the effectiveness of teachers in this area. This strong agreement highlights the importance of continuous professional development in fostering a culture of learning and improvement within educational settings. This implies that continuous professional development result to improved teaching practices. Teachers who engage in ongoing learning opportunities are better equipped with the latest pedagogical strategies, content knowledge, and classroom management techniques, which can lead to enhanced student learning outcomes. It suggests that schools need to prioritize professional growth among teachers to foster a culture of continuous learning. This culture encourages teachers to seek out new knowledge and skills, promoting an environment where innovation and improvement are valued so that students can benefit to a more dynamic and engaging learning experiences.

According to Schwartz (2023), investing in professional growth and development demonstrates a commitment to lifelong learning and professional excellence, which can enhance job satisfaction, teacher morale, and overall school effectiveness.

Among the ten evaluated indicators, the highest mean score is observed in keeps current in subject area, with a mean of 3.67 (SD = 0.48) described as Strongly Agree and interpreted as Outstanding. This underlines the importance of teachers staying updated with the latest developments and strategies in their respective fields, ensuring the delivery of relevant and high-quality instruction to students. The high mean score in this area reflects the proactive efforts of teachers in maintaining their subject knowledge and expertise. It implies that teachers need to be updated with recent advancements in teaching strategies and pedagogy. Moreover, the regional offices of the Department of Education also conduct the same trainings, which is specific for a teacher's subject area, on an annual basis. These programs play a crucial role in supporting teachers' professional growth and development. These programs help ensure that teachers remain effective and competent in their roles by providing them opportunities to engage in ongoing learning and staying abreast of recent advancements in teaching strategies.

The results support the claim of Mizell (2019) that professional development, stemming from externally provided activities, is merged with teachers' efforts to enhance knowledge and transform their approach to teaching, thus facilitating student support through learning. Without continuous professional growth and development, teachers face the potential of lagging behind and losing touch with the optimal practices essential for fostering student success (Schwartz, 2023).

Conversely, the lowest mean score is indicator publishes research or articles in peer-reviewed journals or educational publications related to their field of expertise, with a mean of 3.22 (SD=0.78), described as Agree and Very Satisfactory interpretation. This suggests a comparatively lower level of engagement in scholarly research among teachers. Despite being continually encouraged to conduct research, the demanding nature of teaching itself could be the reason why teachers have limited time and resources available for engaging in scholarly pursuits. Teachers often have heavy workloads, including lesson planning, grading, and extracurricular activities, which leave them with limited time to dedicate to research and writing. Additionally, the lack of incentives or recognition for scholarly publication within the DepEd system could have also contributed to the low publication rates among teachers. Unlike in higher education institutions where research and publication are often valued and rewarded, teachers within the DepEd do not receive the same level of support or encouragement to engage in research publications.

Thahir et al. (2021) emphasized that encouraging teachers to pursue research and publication opportunities can contribute to the advancement of knowledge in the field and further elevate the profession. Teachers can contribute valuable insights and perspectives to the educational discourse, enriching both theory and practice, when they engage in scholarly activities. Schweikhardt (2020) added that publishing in peer-reviewed journals can enhance the credibility and reputation of educators, fostering professional recognition and career advancement opportunities within the academic community.

Table 3.5. Summary of the Level of Teachers' Performance

Variables	Mean	SD	Interpretation
Teaching and Learning Process	3.63	0.38	Outstanding
Students Outcome	3.60	0.39	Outstanding
Community Involvement	3.58	0.37	Outstanding
Professional Growth and Development	3.50	0.43	Outstanding
Overall	**3.58**	**0.39**	**Outstanding**

Legend: 3.41 – 4.00 Strongly Agree/ Outstanding 1.81 – 2.60 Disagree/ Satisfactory
2.61 – 3.40 Agree / Very Satisfactory 1.00 – 1.80 Strongly Disagree/ Poor

Table 3.5 reflects the summary of the level of teachers' performance across four domains: the teaching and learning process, students' outcome, community involvement, and professional growth and development. The overall assessment of teachers' performance across various components reveals an exceptional level of effectiveness, with an overall mean score of 3.58 (SD=0.39), interpreted as Outstanding. This collective evaluation indicates a consistently high standard maintained across teaching and learning processes, student outcomes, community involvement, and professional growth and development. It further highlights the dedication and proficiency of teachers in various aspects of their roles. However, attention to areas with slightly lower mean scores, such as professional growth and development, is crucial for sustaining and enhancing overall teaching performance levels.

According to Sarabia and Collantes (2020), effective teaching performance is crucial for ensuring that students receive high-quality education and achieve their academic goals. A teacher's performance is not only reflected in their ability to convey complex concepts in a clear and concise manner but also in their capacity to create a supportive and inclusive learning environment. This includes fostering a sense of belonging among students, encouraging active participation, and providing personalized feedback that addresses individual needs (Ereje and Ambag, 2020).

Among the four dimensions of teaching performance, teaching and learning process has the highest mean of 3.63 (SD=0.38), interpreted as Outstanding. The result highlights the importance of engaging teaching strategies, positive learning environments, and continuous improvement in professional development. By recognizing and reinforcing effective teaching practices, educational institutions can further enhance student engagement, satisfaction, and academic success, ultimately leading to better educational outcomes for all learners. This implies that teachers are highly effective in their instructional methods, classroom management, and engagement strategies, leading to a superior educational experience for students. The outstanding performance in this dimension highlights the success of current teaching practices and potentially serves as a model for enhancing other areas of teaching performance to achieve similar excellence.

The result supports previous claim of Hoque et al (2020) that a teacher's performance is also influenced by their ability to adapt to diverse learning styles, incorporate technology into their teaching methods, and stay updated with the latest developments in their subject area. By doing so, teachers can ensure that their teaching practices remain relevant and engaging, ultimately leading to better student outcomes and a more fulfilling educational experience (Daly, 2022).

On the other hand, among the components of teaching performance, professional growth and development got the lowest mean of 3.50 (SD=0.43) interpreted as Outstanding. The score indicates that teachers are engaged in activities aimed at improving their skills and knowledge. This commitment to continuous improvement is essential for adapting to new educational challenges and enhancing teaching effectiveness. The result implies that while teachers are performing exceptionally well in this area, it is relatively less emphasized or prioritized compared to other components of teaching performance. This indicates that there may be opportunities for further enhancing teachers' professional growth and development initiatives to ensure continuous improvement and maintain high standards. Despite being the lowest-scoring component, the outstanding rating suggests a solid foundation upon which to build even more robust professional development programs, thereby ensuring sustained excellence in teaching performance across all dimensions.

According to Mizell (2019), ongoing professional development equips teachers with updated knowledge, skills, and best practices, fostering a culture of lifelong learning and continuous improvement. It also enhances teachers' ability to implement innovative instructional strategies, manage classrooms efficiently, and support students' academic and socio-emotional growth (Schwartz, 2023).

Research Question 4. Is there a significant relationship between Master Teacher's instructional supervisory skills and the teachers' performance?

Table 4.1. Relationship Between the Master Teacher's Instructional Supervisory Skills and Teachers' Performance

Master Teachers' Supervisory Skills	Teachers Performance				
	Teaching and Learning	Students' Outcome	Community Involvement	Professional Growth and Development	Overall
	r-value p-value	r-value p-value	r-value p-value	r-value p-value	r-value p-value
Coaching	0.47 0.030 S	0.36 0.078 NS	0.53 0.000 S	0.40 0.034 S	0.44 0.035 S
Mentoring	0.12 0.067 NS	0.56 0.048 S	0.44 0.032 S	0.34 0.014 S	0.37 0.04 S
Clinical Supervision	0.24 0.390 NS	0.29 0.043 S	0.02 0.824 NS	0.36 0.045 S	0.23 0.325 NS
Pedagogical	0.41 0.02 S	0.32 0.046 S	0.48 0.36 S	0.31 0.042 S	0.38 0.04 S
Technological	0.07 0.467 NS	0.06 0.516 NS	0.06 0.518 NS	0.02 0.851 NS	0.05 0.588 NS
Evaluation	0.36 0.008 S	0.46 0.031 S	0.50 0.000 S	0.28 0.02 S	0.34 0.01 S

Legend: Significant at p<.05 alpha level

Table 4.1 shows the statistical result of the correlation analysis that tested the relationship between master teachers' instructional supervisory skills and the teachers' teaching performance. The result shows that there is a weak positive relationship between the variable supervisory skills in coaching and teaching performance. The r-value of 0.44 indicates a weak positive correlation between the two variables, suggesting that as the instructional supervisory skills of Master Teachers in coaching improve, there is a corresponding enhancement in teachers' work performance. The p-value of 0.035 indicates that this correlation is statistically significant, this implies that master teachers can provide targeted feedback and modeling to help teachers improve the teaching and learning and in the same way that coaching helps teachers develop more effective, research-based instructional strategies. Therefore, the data strongly suggest that effective instructional supervision by Master Teachers in teaching and learning, community involvement and professional growth and development is associated with better performance among teachers.

The result verifies the same relationship established by previous researchers (Buagas & Ching, 2023; David et al., 2023; Ordavisa & Cañon, 2020) on the positive relationship between Master Teachers' instructional supervisory skills and teachers' performance.

Meanwhile, the mentoring supervisory skill of master teachers have strong positive relationship with the teacher performance having r-value of 0.37 and statistically significant with p-value of 0.04. The results indicate that there is a positive relationship even though it was moderate in strength. Although the relationship is moderate in strength, the statistical significance underscores its reliability and suggests that enhancements in mentoring skills can lead to noticeable improvements in teaching performance. This finding highlights the importance of developing and investing in mentoring programs for master teachers, as their ability to mentor effectively plays a crucial role in elevating the overall quality of education. The results highlight some areas where master teachers may need additional training or support to strengthen their mentoring competencies, especially on developing stronger interpersonal and mentoring skills. Its implication is that school systems and policymakers should consider a more holistic approach to teacher development, where master teacher mentoring is one component alongside other supports, rather than relying on mentoring alone to drive teacher performance. Also, evaluation and refinement of master teacher mentoring programs may be needed to identify areas for improvement and ensure that mentoring is having the desired impact on teaching and learning.

Moreover, Ordanel and Dioso (2023) posited that the leadership capacity of Master Teachers is critical for improving teacher performance, as it allows MTs to set clear goals, provide guidance and support, and foster a positive learning environment. Additionally, the study found that master teachers' mentoring skills, such as co-teaching and providing guidance, are essential for developing the instructional competence of their colleagues.

Additionally, a weak positive relationship between master teachers' skills in clinical supervision with r-value of 0.23 and statistically no significant relationship with p-vaule of 0.325 is shown in the table. The low r-value suggests that master teachers' clinical supervision skills account for only about 5% of the variation in teacher performance this means other factors likely play a much larger role and the high p-value of 0.3255 indicates there is a 32.55% probability that the observed relationship occurred by chance. This exceeds the typical 5% threshold for statistical significance which means we cannot confidently conclude that there is a true relationship between the variables. The weak relationship and lack of statistical significance suggest that simply possessing strong clinical supervision skills may not be enough for master teachers to meaningfully impact teacher performance there are other factors, such as the quality of feedback, frequency of observations, and teachers' receptiveness to coaching, likely moderate the effectiveness of clinical supervision.

The result implies that master teachers should not overemphasize clinical supervision skills when selecting and training master teachers, these skills alone do not appear to be a key reason of improved teacher performance. Master teacher training programs may need to expand beyond just clinical supervision to include other competencies, such as

adult learning principles, emotional intelligence, and change management. Thus, it is significant that evaluating the impact of master teachers should consider multiple measures beyond just teacher performance, such as student outcomes, teacher retention, and even school culture.

The result is confirmed by previous researchers (David et al., 2023; Basilio & Bueno, 2021; Bush et al., 2017), who claimed why clinical supervision often fails to positively affect teaching performance. Oftentimes, the structured and often rigid nature of clinical supervision can stifle teacher creativity and autonomy. Teachers may feel constrained by the strict protocols and assessments, leading to a lack of innovation in their teaching methods. Moreover, they claimed that focus on compliance and adherence to standardized procedures during clinical supervision may not address the individual needs and contextual challenges faced by teachers. This can result in generic feedback that does not help teachers improve their specific areas of weakness or leverage their strengths effectively.

In pedagogical dimension, results showed that the relationship is statistically significant between master teachers' supervisory skills and teachers' performance with p-value of 0.38 and r-value of 0.04 which has strong positive relationship. This finding implies that improvements in master teachers' supervisory abilities could potentially enhance teachers' pedagogical practices and subsequently impact student learning outcomes. However, given the weak correlation, additional factors beyond supervisory skills likely influence pedagogical effectiveness, highlighting the need for comprehensive support and development strategies to optimize teaching practices in this dimension.

The result confirms the claims of Asio et al. (2018) that teaching performance can be improved through continuous professional development, effective use of technology, and regular feedback. Professional development opportunities, such as workshops and training sessions, help teachers stay updated with the latest educational practices and methodologies. Integrating technology in the classroom can enhance learning experiences and engagement. Additionally, regular feedback from peers, students, and administrators can provide valuable insights for teachers to refine their teaching strategies and address any areas of improvement.

Master teacher's supervisory skills in technological aspect has no linear relationship with the teacher's performance having an r-value of 0.053 and a p-value of 0.59 showed that statistically no significant relationship. This means that changes in master teachers' technological supervisory skills are not associated with any meaningful changes in teachers' performance.

The findings suggest that master teachers' supervisory skills in the technological aspect do not play a significant role in determining teachers' performance. These results provide valuable insights for educational leaders and policymakers to focus on a broader range of factors beyond just master teachers' technological supervisory skills when developing strategies to improve teachers' performance in the technological aspect of their work. Investing in teacher training, providing adequate technological resources, and fostering a

supportive environment for technology integration may be more effective in enhancing teachers' performance in this area.

This implies that other factors, such as teachers' own technological skills, access to technology resources, strong internet connectivity and the integration of technology into the curriculum, may be more important in shaping teachers' performance in this area. The lack of a linear relationship between the two variables suggests that improving master teachers' technological supervisory skills alone may not lead to significant improvements in teachers' performance. It also suggests more comprehensive approach that addresses various aspects of technology integration in education may be necessary to enhance teachers' performance in this domain.

Batuiguis et al. (2022) asserted that teachers need to have strong technological skills to effectively integrate technology into their teaching. This includes understanding how to use various devices, software, and online tools, as well as being able to troubleshoot issues that may arise. Without these skills, teachers may feel overwhelmed and less confident in using technology, which can limit its effectiveness in the classroom.

Lastly, the evaluation supervisory skills of master teachers with r-value of 0.034 suggests there is a linear relationship between master teachers' evaluation supervisory skills and teachers' performance. This means that changes in master teachers' evaluation supervisory skills are associated with any meaningful changes in teachers' performance. The p-value of 0.01 is well below the commonly used significance level of 0.05, indicating that the observed linear relationship between the two variables is statistically significant. This means that the finding did not occur by chance instead shows a more reliable and meaningful relationship. It also further implies that there is sufficient evidence to conclude that a linear relationship exists between the two variables under investigation.

The finding suggests that improvements or declines in supervisory skills are consistently associated with changes in teachers' performance. While the effect size is minimal, the consistent association implies that efforts to enhance supervisory skills are still relevant, as even small changes in these skills can impact teachers' performance. This finding underscores the importance of continuous professional development for master teachers, though it highlights that such efforts may result in modest performance gains among teachers.

These findings provide valuable insights for educational administrators and policymakers to look beyond just the evaluation of the supervisory skills of master teachers when developing strategies to improve teachers' performance. Focusing on a broader range of factors, such as creating a supportive and collaborative work environment, providing targeted professional development, and fostering effective feedback mechanisms, may be more effective in enhancing teachers' performance.

Comighud et al. (2020) explained that Master Teachers’ competencies are crucial for effective supervision, as they enable them to guide and support their colleagues in delivering high-quality instruction. Specifically, master teachers' proficiency in curriculum

planning and assessment and reporting skills helps them to develop and implement effective lesson plans and evaluate student performance accurately, which in turn enhances the overall academic performance of the school. Lopez (2018) advised that to enhance the MTs instructional supervisory skills, the Department of Education may provide professional development opportunities, such as regular training sessions and workshops focused on pedagogical knowledge, content knowledge, evaluation skills, and mentoring skills.

Research Question 5. Is there a significant difference in the teachers' performance when grouped according to their characteristics?

Table 5 Test of Difference between Teachers' Performance and Each of the Respondents' Characteristics

Respondents Characteristics	**Teachers Performance**				
	Teaching and Learning	**Student's Outcome**	**Community Involvement**	**Professional Growth and Development**	**Overall**
	t-value p-value	t-value p-value	t-value p-value	t-value p-value	t-value p-value
Sex	0.129 0.897 NS	0.291 0.772 S	2.004 0.093 NS	0.050 0.961 NS	0.396 0.693 NS
Highest Educational Attainment	0.815 0.016 S	0.786 0.002 S	0.790 0.000 S	0.444 0.022 S	0.702 0.002 S
Teaching Experience	0.729 0.04 S	0.91 0.072 S	0.647 0.018 S	0.850 0.02 S	0.629 0.03 S
Ethnicity	0.344 0.913 NS	0.460 0.838 NS	0.502 0.807 NS	0.517 0.796 NS	0.409 0.853 NS
Attitude Towards Supervision	24.004 0.000 S	22.708 0.000 S	22.165 0.000 S	34.898 0.000 S	23.216 0.000 S

Legend: Significant at p<.05 alpha level

Table 5 reflects the statistical result of the test of difference conducted to determine the significant difference in the teachers' performance when grouped according to sex, highest educational attainment, teaching experience, ethnicity and attitudes towards supervision. The table presents the results of a t-test conducted to determine if there is a significant difference in the teachers' performance based on gender. The sample consisted of 65 male teachers and 351 female teachers. The t-value is 0.396, with and the significance level (p-value) is .069. The results indicate that there is no statistically significant difference in the performance of teachers based on sex, as the p-value of .693

is well above the common threshold of .05. The result suggests that gender does not play a significant role in determining teacher performance within the context of local of the study. It further implies that the teachers' excellent performance, presented in the previous tables, was attained regardless of the teachers' gender preferences. Therefore, efforts to improve teacher performance should focus on factors other than gender, as both male and female teachers perform at similar levels. The division can create fair and unbiased policies and programs that support teacher development and performance enhancement without regard to gender.

The same result was established in the study of Graham et al. (2020), who posited that gender does not significantly influence teachers' teaching performance because it is not a determinant of their instructional style or classroom management. Accordingly, it does not necessarily dictate the type or quality of instruction that occurs in the classroom, nor does it affect their ability to manage and engage students effectively. Therefore, performance outcomes are more likely influenced by individual skills, experience, and professional development opportunities rather than gender. Contrary to the result, Sarabia and Collantes (2020) found that gender and position emerged as positive predictors of teaching performance, suggesting that female teachers and those in higher positions tended to have better teaching performance.

The t-test results on the teachers' performance when grouped according to highest educational attainment. The t-value from the ANOVA test is 0.702 and the significance level (p-value) is 0.002. The results indicate that there is a statistically significant difference in the teachers' performance based on their highest educational attainment, as the p-value of 0.002 is below the common significance threshold of .05. This suggests that the level of academic qualification whether having MA units, an MA degree, PhD units, or a PhD degree significantly affect teachers' performance. The p-value well below the common significance threshold that this difference is not due to chance. This implies that the level of academic qualification—whether having MA units, an MA degree, PhD units, or a PhD degree—has a significant effect on teachers' performance. Therefore, higher educational attainment among teachers is associated with better performance, highlighting the importance of encouraging advanced studies and continuous professional development for educators to enhance their teaching effectiveness and overall performance.

The results affirm the findings Balanquit et al. (2023) that teaching performance do not necessarily hinges on the teachers' highest educational attainment. While advanced degrees provide theoretical knowledge, practical skills such as classroom management, instructional techniques, and the ability to engage and motivate students play a crucial role in teaching efficacy. However, according to Pido et al. (2023) teachers with advanced degrees are often thought to have superior teaching competencies that positively impact student learning. This enhanced teaching ability is expected to lead to higher performance and increased school productivity. Pama (2023) added that ongoing professional development, teaching experience, and personal attributes such as enthusiasm, adaptability, and empathy are critical in shaping a teacher's performance.

Further, the comparison of teachers' performance when grouped according to teaching experience. As reflected in the table, the teacher respondents were grouped into five categories according to their years of teaching experience. The t-value obtained from the analysis is 0.629, and the significance level (p-value) is 0.03. Since the p-value is below the conventional threshold of 0.05, the differences in teachers' performance across the different experience groups are statistically significant. This implies that, based on this data, teaching experience have a significant impact on teachers' performance ratings. This underscores the value of accumulated teaching experience in enhancing teaching effectiveness, classroom management skills, instructional strategies, and overall professional competence. The findings also suggest that educational institutions and policymakers should consider strategies to support and retain experienced teachers, as their accumulated expertise contributes positively to educational outcomes.
