The prohibition against the deprivation of life, liberty or property under the Bill of Rights is not absolute. In fact, a person may be deprived of his property, or liberty or even life, if found guilty beyond reasonable doubt of an offense or felony defined and penalized under the existing penal statutes. Nevertheless, this deprivation of liberty or life shall not take place unless due process was strictly observed, and that a speedy, impartial and public trial had been conducted.(1987 Philippine Constitution, Section 14, Article III, n.d.)

The Philippines, in compliance with the constitutional mandate to respect human rights and value the dignity of a person, is obliged to perform its duty to keep the community safe against lawless elements, and at the same time, regard full respect and observe the fundamental rights of all persons, including those arrested, suspected, and even convicted criminal offenders.

As eloquently explained by the Supreme Court of the Philippines, in the case of *People v. Sapla, citing the case of Tudtud,* to quote:

> "… the Bill of Rights is the bedrock of constitutional government. If people are stripped naked of their rights as human beings, democracy cannot survive and government becomes meaningless. This explains why the Bill of Rights, contained as it is in the Article III of the Constitution, occupies a position of primacy in the fundamental law way above the articles on governmental powers."(*People v. Sapla, G.R. No. 204045 (2020)*, n.d.)

The "freedom" and "equality" of the people, which the Bill of Rights seeks to protect, are sacrosanct concepts safeguarded by International Human Rights Law through the Universal Declaration of Human Rights. This Universal Declaration of Human Rights is document embodying the agreement of the countries on the freedoms and rights that deserve universal protection in order for every individual to live their lives freely, equally and in dignity.(Amnesty International, 2024)

The Universal Declaration of Human Rights, among others, provides that everyone *is entitled in full equity to a fair and public hearing by an independent and impartial tribunal, in the determination of his rights and obligations and of any criminal charge against him.* (*Universal Declaration of Human Rights, Article 10*, n.d.)

As one of its obligations, the Philippines is bound to comply with the Universal Declaration of Human Rights as it is a generally accepted principle of international law, following the mandates of the Constitution that *the Philippines adopts the generally accepted principles of international law as part of the law of the land and adheres to the*

policy of peace, equality, justice, freedom, cooperation, and amity with all nations.(1987 Philippine Constitution, Section 2, Article II, n.d.)

With these constitutional duties, the State is burdened with the obligation to strictly observe due process requirements before a person may be legally deprived of his or her life, liberty or property. In the legal parlance, there is a definite process to effect deprivation of life or liberty, termed as Criminal Procedure. It is the method prescribed by law for the apprehension and prosecution of persons accused of a criminal offense, and their punishment in case of conviction.(Pamaran, 2012)

The due process requirement is strictly observed in Criminal Procedure. It has been said that a day in court is the touchstone of the right to due process. *Procedural due process is that which hears before it condemns, which proceeds upon inquiry and renders judgment only after trial. It contemplates notice and opportunity to be heard before judgment is rendered affecting one's person or property.*(*Macabingkil v. Yatco, et.al., G.R. No. L-23147 (1967)*, n.d.)

Subsequent to the prosecution and punishment of a person found liable for commission of a crime or offense is the correction and rehabilitation as an integral part of the Criminal Justice System. Criminal Justice System is the network of the government and private agencies intended to manage accused and convicted criminals. (Crowder & Turvey, 2013)

In an article entitled *The Role and Function of the Prosecution in the Philippine Criminal Justice System,* Criminal Justice System is defined as the *system or process in the community by which crimes are investigated, and the persons suspected thereof are taken into custody, prosecuted in court and punished, if found guilty, provisions being made for their correction and rehabilitation.*(Valle-Corpuz, n.d.)

The correction and rehabilitation of offenders are in line with the concept of Restorative Justice, focusing on the reparation and restitution of offender and resolution of issues arising from a crime. In Restorative Justice, the remorseful offenders accept the responsibility of their misconduct and thus, creates an obligation to make things right, by undertaking solutions which promote repair, reconciliation and reassurance. The Philippines, a member-country of the Commission on Crime Prevention and Criminal Justice, adopted the "Basic Principles on the Use of Restorative Justice Programmes in Criminal Matters". This is congruent with the goal of the Philippine Government to establish a humane correctional system that will promote the reformation of the offenders, and thus, will reduce the incidence of recidivism.(*Restorative Justice, Probation and Parole Administration*, n.d.)

The 1987 Constitution, United Nations Declaration on Human Rights, the Criminal Justice System and the Theory of Restorative Justice, among others, are legal instruments safeguarding individual's right to due process and prohibit human rights violations.

However, despite the existence of these legal instruments, deplorable acts of human rights violations committed by police force, military, and other security forces of the State have been an ordinary newscast. In an article entitled *Philippines: End Police Torture, Killings,* then President Aquino was urged to act decisively to punish the police and other state security forces who committed torture and extrajudicial killings. In the said article, it was emphasized that the progress in the justice system was overshadowed by failures to address other longstanding problems of human rights violations.(*Philippines: End Police Torture, Killings*, 2015)

Upon the assumption of office of the then President Rodrigo R. Duterte, the "War on Drugs" was implemented purposely to reduce the proliferation of dangerous drugs in the country. This campaign however was opposed by human rights groups claiming that this has led to the deaths of over 12,000 Filipinos, mostly urban poor. It was also alleged that at least 2,555 of the killings have been perpetrated by the PNP and worst, senior officials have instigated and incited the killings, which could amount to crime against humanity.(*Philippines' "War on Drugs,"* n.d.)

The killings related to the "War on Drugs" have been labelled as "Extrajudicial Killings". Extrajudicial killings, as defined by Black's Law Dictionary, are those killings done outside the course of a regular judicial proceedings.(*Black's Law Dictionary*, n.d.) As it is committed outside the bounds of the law, extrajudicial killing is considered as act of impunity and a violation of a person's right to due process. According to the United Nations Human Rights Special Rapporteur, extrajudicial, summary, or arbitrary executions, which referred to the deliberate killing of individuals outside of any legal framework, are a violation of the most fundamental right.(*United Nations Human Rights Special Rapporteur*, n.d.)

In 2019, then Senator Leila De Lima re-filed a bill which sought to strengthen the Commission on Human Rights, the National Bureau of Investigation and the PNP in investigating extrajudicial killings. More importantly, the bill sought to ensure that police officers will have the highest regard for human rights and rule of law in performing their sworn duties.(PhilStar, 2019)

It is not entirely correct however to condemn police officers in every operations involving death of a suspect. It is to be noted that not all extrajudicial killing is unlawful and an act of human rights violations. The Revised Penal Code provides for justifying circumstances that will absolve the police officer from criminal and civil liability, i.e., *Self-Defense* and *Fulfilment of a Lawful Duty.*

In Self-Defense, any person who acted in defense of himself or herself, or of his property, or of his or her relative, or of stranger does not incur any criminal liability provided that the three requisites are present, such as: Unlawful aggression, Reasonable necessity of the means employed to repel the aggression, and Lack of sufficient provocation on the part of the person defending himself or herself.(Revised Penal Code, Article 11 Paragraphs 1 to 3, n.d.) In Fulfillment of Lawful on the other hand, a public

officer acting in lawful exercise of duty or right of office is justified in case of injury or death that resulted therefrom.(Revised Penal Code, Article 11, Paragraph 5, n.d.)

The PNP Police Operational Procedure set forth guidelines on the use of force and firearms during police operations, in which, use of necessary force is allowed whenever necessary in enforcing law and maintaining peace and order, and also, use of firearms is allowed if the offender possess imminent danger of causing death or injury to the police officer or other persons.(*PNP Police Operational Procedures, RULES 7 and 8*, n.d.)

Most killings resulting from police operations, particularly during the height of the "War on Drugs", as claimed by police operatives, are result of either Self-Defense or Fulfillment of Duty. These narratives however, are widely disputed by Human Rights Groups, and resulted to the landmark step of the International Criminal Court --- the conduct of investigation in the killings relative to this government anti-illegal drug efforts.(McCarthy, 2021)

The predicament however, is that, in these police operations, more often than not, there were no disinterested eye-witness available to attest to the veracity of the claim of police officers of self-defense and lawful performance of duty. In 2017, a 26-year-old alleged drug suspect was arrested by police officers and thereafter killed in a claim of self-defense on the part of the police officers.(Gavilan, 2023)

In 2018, three police officers were convicted for the crime of Murder in relations to the death of a 17-year-old minor, during a drug sweep operation. The police officers claimed that the minor, who was a drug runner, drew a gun and fired at them, and hence, they returned fire in self-defense. To bolster their version of the incident, police officers showed official photograph of the crime scene with a gun and packets of methamphetamine next to victim's body. But the CCTV footage shows otherwise. The truth, as shown in the footage is, the three police officers dragged the minor into an alley, minutes before he was found dead. (Sullivan, 2018)

In an article published in Human Rights Watch, the narrations of police officers conducting drug raids are unreliable because these officers have been shown to manufacture evidence such as, planting of weapon and drugs, to justify the killing. (Conde, 2019)

In 2018, the PNP issued Memorandum Circular (MC) 2018-009, with subject *Operational Guidelines and Policies on the Use of Body Worn Camera.* This accordingly, is in recognition of the essential role of the trust and mutual respect of the law enforcement agencies and the community towards effective policing.

The Concept of Operation under PNP MC 2018-009 is consist of three phases, such as, the Pre-Operation Phase, Operations Phase, and Post Operations Phase.

The Pre-Operations Phase provides for the establishment of Command Center to properly record, monitor, oversee, evaluate and audit the actual police operations. It is

likewise provided that the trainings shall be conducted for the designated uniformed personnel and units on the proper care, maintenance and operations, and use of Body-Worn Camera (BWC). The Operation Phase provides among others, that the BWC shall be used in all planned operations and other law enforcement activities whenever possible and applicable. The Post Operations Phase on the other hand, provides that BWC shall be turned over to the team leader for submission to IT/BWC Custodian after operations for the downloading and storage of the data.(*PNP Memorandum Circular 2018-009*, n.d.)

Notwithstanding the fact that PNP MC 2018-009 provides administrative sanctions for its violation, in 2019 however, then PNP Chief Guillermo Eleazar said that police officers could not be forced to wear BWC. Accordingly, although Eleazar agrees that BWC could not be of help in promoting transparency amid questionable death linked to the war on drugs, still he claimed, that there is no law that requires the police officers to wear bodycams. (Balagtas-See, 2021)

Shortly after this claim, the Supreme Court issued Rules on the Use of Body Worn Camera in the Execution of Warrants. This issuance of the Supreme Court in effect amended the Rules on Criminal Procedure. Under this Rule, the police officers serving Warrant of Arrest and implementing Search Warrant, shall have one BWC and one Alternative Recording Device (ARD). In case of unavailability of BWC, there shall be a minimum of two ARDs. In cases of Warrantless Arrest, the use of BWC and ARDs shall be complied with insofar as it is practicable.(*A.M. No. 21-06-08-SC*, n.d.)

Pursuant to the Rules on BWC issued by the Supreme Court, failure to observe the rules during the implementation of Search Warrant shall render the evidence confiscated inadmissible, and the officers concerned shall be liable for contempt of court. On the other hand, the rule is different in service of Warrant of Arrest, or during Warrantless Arrest. Accordingly, failure to use BWC and ARDs during the service of Warrant of Arrest or during Warrantless Arrest shall not render the evidence confiscated inadmissible, provided that the non-compliance thereof can be justified by the operating officers. Nevertheless, deliberate failure of police officers to use BWC and ARD during service of Warrant of Arrest or conduct of Warrantless Arrest shall render the officer liable for contempt of court.

The Supreme Court further requires that the video recording from BWC and ARD shall be accompanied by an affidavit detailing the circumstances of the arrest or implementation of Search Warrant. It also provides for the Chain of Custody of the recordings as a measure to avoid improper access, review and tampering.

In an article published in Inquirer.Net, it was mentioned that the Supreme Court issued the Rules on Body-Worn Camera during implementation of Search Warrant and service of Warrant of Arrest in response to the calls from lawyers, human rights groups, and advocates due to the increasing incidents of extrajudicial killings. (Torres-Tupas, 2021)

According to Braga, et.al., (2018), police officers equipped with BWCs have fewer complaints and use of force reports than those officers without BWC. It was further found that officers with BWC made more arrests and issued more citations than those who were not equipped with BWC. The findings suggests that the use of BWCs resulted in the de-escalation of aggression, or have created a civilizing effect on the nature of police-citizen encounters. It is thus concluded that the reduction of complaints and use of force attributed to the use of BWCs is important in improving police-community relations.(Braga et al., 2018)

In 2021, Williams, et.al., claimed that BWCs can reduce police use of force incidents by 10% and civilian complaints against law enforcers by 15%. Based on the findings, BWC provides a considerable return on public investment and the benefits of its use outweighs its cost.(Williams, et al., 2021)

In an article entitled *Benefits and Barriers to Implementing Police Body-Worn Cameras,* the use of BWC was adopted by several police department across Canada and the United States purposely to utilize this new technology in an attempt to increase police transparency with certainty due to limited academic literature and pilot projects showing mixed results in its effectiveness in reducing excessing use of force by law enforcement officers. Accordingly, the use of force of police officers in line of duty is actually, an institution sub-culture. This institutional sub-culture is the collective mindset shaped by organizational procedures, incentives, management, and behaviors that plays a crucial role that explains the similar reaction of law enforcement officers to particular situations. Evidence suggests that the use of BWC can standardize the officer's reaction in various situations and this will lead to increased accountability that will continue even they are not equipped with BWCs, due to the increased levels of self-awareness and self-scrutiny brought about by the continuous use of BWC.(*Benefits and Barriers to Implementing Police Body-Worn Cameras*, n.d.)

On the contrary, Lee (2021) stated that BWC have little to no impact on policing, whether in preventing police violence or holding police accountable after the fact. Lee argued that the footage from BWC is being recorded from the officer's point of view, and worst, controlled by law enforcement. The footage taken from the BWC can be incomplete, and may be manipulated to bolster the narratives of the law enforcement officers.(Lee, 2021)

In the Philippines, the mandatory use of BWC by the PNP was sensationalized due to incident involving police officers assigned with Navotas Police Station who killed a 17-year-old boy, but the said police operation was not recorded in BWCs. The Chief of Police reasoned out that the police officers left their BWCs turned off during the operations as the devices run out of batteries. Due to this incident, Senator Sherwin Gatchalian filed Senate Bill 1057 or the proposed Police On-Body Cam Act which will require all law enforces to use on-body cameras and shall leave the same turned on and running until the termination of the operations. It was explained that the function of the on-body camera will be two-pronged: protect the public against police misconduct by improving law enforcement accountability and help protect our police men from false and uncorroborated accusations of abuse.(Chi, 2023)

In examining the perception of the police officers, the effectiveness of the use of BWC and ARDs during police operations to suppress extrajudicial killings and human rights violations committed by police officers will be assessed and evaluated to serve as basis to test the existing policy or develop a new one.

Research Questions

This study intends to describe the perception of the police officers in the use of BWC and ARDs as basis for recommendation or solution to address emerging issues in the conduct of police operations. Specifically, this aims to answer the following questions:

1. What is the profile of the respondents based on:
   a. Rank;
   b. Designation; and
   c. No. of years in the PNP service?

2. How do police officers perceive the use of BWC and ARDs in terms of the following:
   a. Necessity of the use of BWC and ARDs during police operations;
   b. Practicability of the use of BWC during police operations;
   c. Effectiveness of the use of BWC to prove proper conduct of police operations; and
   d. Level of complexity of documents to be submitted in Court in relation to BWC requirement?

3. From the point-of-view of the police officers, what measures or policy can be implemented in relation to the use of BWC and ARDs in terms of:
   a. Necessity;
   b. Practicality;
   c. Effectiveness; and
   d. Complexity of court required documents.

METHODOLOGY

The primary goal of this study is to determine the perception of the police officers in the use of BWC and ARDs as basis for recommendation or solution to address emerging issues in the conduct of police operations.

To achieve said objective, this study has adopted the Mixed-Method Triangulation Design. The Triangulation Design is the most common and well-known approach to mixing methods.(Creswell & Plano Clark, 2018) This design is utilized to obtain different but complementary data on the same topic in order to understand the research problem. By applying this design, the differing strengths and nonoverlapping weaknesses of quantitative methods and of qualitative methods are brought together.(Patton, 1990) This design was used considering that the study intends to directly compare and contrast

quantitative statistical results with qualitative findings, and to validate or expand quantitative results with qualitative data.

In particular, this study adopted the Concurrent Triangulation Research Design. The Concurrent Triangulation involves a single study containing qualitative and quantitative data collection which is conducted at the same time. The purpose of this type of investigation is to validation the findings generated by each method through evidence produced by the other. (Kroll & Neri, 2009)

The researchers based this study on the critical analysis of pertinent laws, rules and regulations, supplemented by survey and interview.

As to the Survey Questionnaire, the first part of which indicates respondents name, which the respondent has the option not to answer, designation, and the years of service in the PNP. The second part of the questionnaire is a checklist composed of 20 items, in which the respondents were asked to answer each question by encircling their responses using the scale: *1 – Strongly Disagree, 2 – Disagree, 3 – Undecided, 4 – Agree and 5 – Strongly Agree.* The results of the survey provide an approximation of the general perception as the respondents may have over or under assessed their answers.

The first part of the survey questionnaire is consistent with the details in the Personal Data Sheet (PDS) of the respondents. The researchers did not include the parts of the PDS that are not needed in this study.

The Content Validity Index is utilized to assess the suitability and clarity of various statements related to the necessity, practicality, effectiveness, and complexity of Court-required documents in utilizing BWC and ARD during police operations. Each aspect has a set of statements evaluated validators, who are content experts, indicating their agreement with the relevance of the statement.

The computed I-CVI (Item Content Validity Index) for all statements is 1, indicating full agreement among validators regarding the relevance of each statement. Similarly, the Scale Content Validity Index (S-CVI) and SCVI/UA (Universal Agreement) are also 1, indicating unanimous agreement among validators regarding the relevance of all statements in this aspect. This suggests a high level of agreement among validators that the use of BWC and ARD is essential for various police operations. Moreover, all tables who an Item-Level Face Validity Index (I-FVI) of 1, indicating complete agreement among validators regarding the clarity of each statement. The Scale-Level Face Validity Index/Average (S-FVI/Ave) is also 1, showing universal agreement across all statement. This suggests strong consensus among validators that the statements are clear and directly applicable to the context of the study.

The unanimous agreement among validators on both the content validity and face validity indices indicates a high level of consensus regarding the relevance and clarity of the statements, affirming the essential role of BWC and ARD in police operations, thus, necessitating the piloting of the study.

The reliability coefficients, as indicated by Cronbach alpha, offer valuable insights into the consistency and dependability of the measurement scales used in the assessment. In the domain **NECESSITY**, the coefficient stands impressively high at α = 0.910, reflecting an excellent level of internal consistency among the items assessing this aspect. This suggests that the items within this category consistently measure the intended construct with a high degree of reliability.

In contrast, the aspect of **PRACTICALITY** initially presents a somewhat lower coefficient of α = 0.687, indicating a level of reliability that could be improved. However, through the removal of certain items, notably item 4, the coefficient could be raised to α = 0.759, rendering it acceptable. Further refinement by eliminating items 5 and 6 could potentially elevate the reliability to 0.803, categorizing it as good, but it is not recommended.

In terms of **EFFECTIVENESS**, the coefficient is notably high at α = 0.918, indicating excellent internal consistency. Although there is a possibility of a slight improvement to 0.923 by removing item 3, this adjustment might not be necessary given the already excellent reliability.

Finally, the aspect of **COMPLEXITY OF COURT-REQUIRED DOCUMENTS**, demonstrates an outstanding level of reliability with a Cronbach alpha of α = 0.930, confirming the high internal consistency of the items within this domain.

Overall, these reliability coefficients provide valuable guidance for the refinement and interpretation of the assessment measure, enabling researchers to make informed decisions regarding their validity and reliability.

Likewise, a Structured Interview was conducted. The researchers prepared questions regarding respondents' view on how they perceive the use of BWC and ARDs during police operations, in terms of *necessity, practicability, effectiveness and the complexity of the Court-required documents,* and what measures or policy can be implemented to optimize the utilization of this technology for the betterment of the organization and for the benefit of the public.

The study covered 100 police officers-respondents, out of 225 police operatives from Mandaluyong City Police Station. However, during the retrieval of the Survey Questionnaire, only 90 responses were collated by the researchers. The respondents in this research were police officers in Sub-Stations (Sub-Station 1 to 9) of Mandaluyong City Police Station. The researcher used Purposive Sampling Technique. Purposive sampling involves an iterative process of selecting research subject rather than starting with a predetermined sampling frame.(Robinson, 2014)

The researchers conducted documentary analysis on the facts and information gathered from laws, rules and regulations, journals, studies, and researchers both from foreign and local origin pertaining to peace and order, human rights violations during

police operations and use of BWCs to deter police abuses and improve human rights-based policing.

The data gathered from the survey questionnaire for this study were collated, tabulated, analysed and interpreted in several tables using statistical methods, i.e., *frequency and percentage distribution, mean and standard deviation.*

RESULTS

Research Question 1. What is the profile of the respondents?

1.1. Rank

Table 1 shows the distribution of respondents according to rank. The largest group comprises Police Corporals (40.00%), followed by Patrolmen/Patrolwomen (37.78%), and Police Staff Sergeants (22.22%).

Table 1
Distribution of Respondents according to Rank

Rank	Frequency	Percent (%)
Patrolman / Patrolwoman	34	37.78
Police Corporal	36	40.00
Police Staff Sergeant	20	22.22
Total	90	100.00

1.2 Designation

Table 2 illustrates the distribution of respondents according to their designations. The majority of respondents are Patrollers (74.44%), followed by Shift Supervisors (10.00%), Desk Officers (8.89%), and Mobile Crew members (6.67%).

Table 2
Distribution of Respondents according to Designation

Designation	Frequency	Percent (%)
Desk Officer	8	8.89
Mobile Crew	6	6.67
Patroller	67	74.44
Shift Supervisor	9	10.00
Total	90	100.00

1.3. Number of years in the PNP service

Table 3 provides the distribution of respondents according to their years of service. Many respondents have 6 to 10 years of service (62.22%), while the remaining have up to 5 years of service (37.78%).

Table 3
Distribution of Respondents according to Years in Service

Years	Frequency	Percent (%)
5 years	34	37.78
6 to 10 years	56	62.22
Total	90	100.00

Research Question 2. How do police officers perceive the use of BWC and ARDs in terms of the following:

2.1. Necessity of the use of BWC and ARDs during police operations

The result in Table 4 provides valuable insights into the perceived necessity of body-worn cameras (BWC) and alternative recording devices (ARD) in various policing activities.

Table 4
Police Officers' Views on the Necessity of PNP Body-Worn Cameras (BWCs) and Alternative Recording Devices (ARDs)

Statements	Mean	SD	Verbal Interpretation
1. Service of Warrant of Arrest cannot be done properly without the use of BWC and ARD.	3.46	1.17	Agree
2. Warrantless Arrest cannot be done properly without the use of BWC and ARD.	2.91	1.25	Undecided
3. Implementation of Search Warrant cannot be done properly without the use of BWC and ARD.	3.51	1.16	Agree
4. Police operatives shall be equipped with BWC to ensure proper performance of duty.	3.83	0.94	Agree
5. The legitimacy operation can only be proven by the recordings in BWC and ARD.	3.73	1.04	Agree
Overall	3.49	0.32	Agree

2.2. Practicability of the use of BWC and ARDs during police operations

The data in Table 5 reveals a general agreement on the practicability of these technologies, albeit with some nuances in certain areas.

Table 5

Police Officers' Views on the Practicability of PNP Body-Worn Cameras (BWCs) and Alternative Recording Devices (ARDs)

Statements	Mean	SD	Verbal Interpretation
1. The rules on the use of BWC and ARD to be observed by police operatives are reasonable.	3.92	0.86	Agree
2. Police operatives strictly observe the rules without experiencing any challenge in logistics, and human resource.	3.50	1.02	Agree
3. The use of BWC and ARD aids the police operatives in the conduct of police operations.	3.77	1.04	Agree
4. There is sufficient number of BWC and ARD in the police stations/ units to be used by police officers in the conduct of police operations.	3.23	1.18	Undecided
5. Police operatives are trained to use and maintain PNP issued BWC and ARD.	3.62	0.97	Agree
6. Utilization and maintenance of BWC and ARD is cost-efficient.	3.71	0.93	Agree
Overall	3.63	0.22	Agree

2.3. Effectiveness of the use of BWC to prove proper conduct of police operations

The findings in Table 6 indicate a strong consensus on the positive impact of these technologies on various aspects of policing.

Table 6

Police Officers' Views on the Effectiveness of PNP Body-Worn Cameras (BWCs) and Alternative Recording Devices (ARDs)

Statements	Mean	SD	Verbal Interpretation
1. The use of BWC and ARD enhances the transparency and accountability of police officers.	4.04	0.72	Agree
2. The use of BWC and ARD provides an unbiased records of police encounters.	4.03	0.87	Agree
3. The use of BWC and ARD increased the performance of police officers in the conduct of police operations to suppress criminal activities.	3.88	0.93	Agree
4. The use of BWC and ARD aids the prosecution to secure conviction of arrested suspects during police operations.	4.02	0.81	Agree
5. The use of BWC and ARD aids the police officers in defending themselves in service-connected cases filed against them.	4.11	0.74	Agree
Overall	4.02	0.08	Agree

2.4. Level of complexity of documents to be submitted in Court in relation to BWC requirement.

The findings in Table 7 indicate a strong consensus among officers on their ability to manage these requirements effectively.

Table 7
Police Officers' Views on the Complexity of Court-Required Documents Related to the Use of PNP Body-Worn Cameras (BWCs) and Alternative Recording Devices (ARDs)

Statements	Mean	SD	Verbal Interpretation
1. Police operatives who utilized BWC and ARD are well-trained in preparation of documents/ affidavits to be submitted in court as required under the rules on BWC.	3.89	0.92	Agree
2. Police operatives who conducted police operations with BWC and ARD are able to submit in Court the required documents.	3.84	0.92	Agree
3. The documents/Affidavits to be submitted in Court is reasonable and can be complied with within the required period.	3.79	0.80	Agree
4. Police operatives strictly comply with the required Court compliance in relation to the use of BWC and ARD without experiencing any difficulty.	3.69	0.96	Agree
Overall	3.80	0.07	Agree

In sum, the result in Table 8 below presents a comparative analysis of body-worn cameras (BWC) and alternative recording devices (ARDs) based on four dimensions: **Necessity, Practicability, Effectiveness, and Complexity of Court-Required Documents**. The results show overall positive perceptions among police officers, as indicated by the mean scores in each category.

Table 8
Use of BWC and ARDs: Comparative Analysis

Statements	Mean	SD	Verbal Interpretation
Necessity	3.49	0.32	Agree
Practicability	3.63	0.22	Agree
Effectiveness	4.02	0.08	Agree
Complexity of Court Required Documents	3.80	0.07	Agree

Overall	3.74	0.20	Agree

Research Question 3. From the point-of-view of police officers, what measures or policy can be implemented in relation to the use of BWCs and ARDs in terms of:

6.4. **Necessity**

During the conduct of the interview, it was also pointed out that the BWCs and ARDs must be part of the uniform, hence, all police personnel must have an officially-issued BWC or ARD as the case may be. It is also necessary that the BWC and ARD are full-capable and technologically advanced in order to benefit from its full potential. Further, it was suggested that the training on the use and proper handling of BWC and ARD must be incorporated in the Basic Recruit Course of the PNP to enable the newly graduate police officers shall be equipped the moment that they will be deployed to their respective duties. Moreover, police officers-respondents pointed out that there shall be a system for storage and management of recorded data in order to maintain the integrity of the recordings and protect the privacy rights of the individuals arrested or subject of the police operations.

6.4. **Practicability**

In terms of practicability, the police officers-respondents emphasized that the BWC and the ARDs must be obligatory, only if BWC and ARD are available or issued to the police operatives. Also, police officers-respondents are of the view that the use of BWC and ARD shall only be used in overt police operations, and shall not be required in covert police activities. It was also highlighted that the police operatives shall have advanced and continuous training on the use and maintenance of BWC and ARD.

6.4. **Effectiveness**

As to the effectiveness, according to the police officers-respondents, the BWC and ARD to be procured shall be capable of recording comprehensive footage of events, i.e., clear video and audio recording, and long battery life. Also, there shall be a system to be implemented in order to monitor the compliance of the police operatives during operations. Likewise, some police officers-respondents suggested that the PNP shall raise awareness among citizens about the use and purpose of BWC and ARD.

6.4. **Complexity of Court-Required Documents**

With regard to the complexity of documents required in court, police officers-respondents are of the view that extensive training and seminars on the preparation of Affidavits of Arrest, Affidavits of Police Operatives, among others, shall be continuously conducted to all police operatives in order for them to efficiently comply with the requirements of the court.

DISCUSSION

The Profile of the Respondents

As to the profile of the respondents in terms of rank, Table 1 shows that the largest group comprises Police Corporals (40.00%), followed by Patrolmen/Patrolwomen (37.78%), and Police Staff Sergeants (22.22%). This distribution indicates a significant representation of lower and mid-level ranks, which can influence the overall perspective on BWCs and ARDs. Lower-ranking officers, such as Patrolmen/Patrolwomen, Police Corporal and Police Staff Sergeant, are typically more involved in direct, on-the-ground operation, where the practical benefits and challenges of BWCs and ARDs are most apparent. Their higher frequency suggests that the data reflects the experiences and views of those most frequently engaging with the public and potentially using BWC and ARD extensively.

As to the designation, Table 2 illustrates the distribution of respondents according to the particular police work they perform. The majority of the respondents are patrollers (74.44%), followed by Shift Supervisors (10.00%), Desk Officers (8.89%), and Mobile Crew members (6.67%). The predominance of patrollers, who are primarily responsible for field duties, highlights a focus on active policing roles. This group's significant representation suggests that the insights provided are deeply rooted in practical, operational experiences with BWCs and ARDs. Given their primary role in law enforcement activities, patrollers are likely to offer valuable feedback on the effectiveness and practicability of these technologies.

As to the number of years in the service, Table 3 above shows the distribution of respondents according to the years of their service with the PNP. Majority of the respondents have 6 to 10 years of service (62.22%), while the remaining were in the service for 5 years and below (37.78%). The distribution indicates a blend of relatively experienced officers alongside those who are newer to the police force. Officers with 6 to 10 years of experience likely have a well-rounded view of the traditional policing methods and the integration of new technologies like BWCs and ARDs. Their insights can provide a balanced perspective on how these devices impact policing practices over time, including adjustments in procedures and attitudes toward transparency and accountability.

Respondents' perspective on the use of BWC and ARDS as to its necessity during police operations

Table 4 above provides insights on the perceptions of the police officers-respondents on the necessity of BWCs and ARDs in various policing activities and operations. The data indicate that respondents agree on the importance of these technologies, although opinions vary depending on the context of their use.

In context of serving warrants of arrest, officers agree (M = 3.46, SD = 1.17) that BWCs and ARDs are essential. This agreement highlights the belief that these devices

enhance the accuracy and integrity of such operations, potentially reducing disputes about the conduct of arrests. Similarly, there is a strong consensus (M = 3.51, SD = 1.16) regarding the necessity of BWCs and ARDs during the implementation of search warrants, suggesting that officers recognize the value of recorded evidence in ensuring procedural compliance and protecting against misconduct allegations.

However, when it comes to warrantless arrests, the response is more ambivalent (M = 2.91, SD = 1.25). This undecided stance may stem from the spontaneous nature of such situations, where the practical challenges of using BWCs effectively come into play. Officers might be uncertain about the feasibility and immediate benefits of activating BWCs in high-pressure, unpredictable scenarios.

Despite this uncertainty, there is a strong agreement (M = 3.83, SD = 0.94) that police operatives should be equipped with BWCs to ensure proper performance of duty. This finding reflects a broad recognition among officers that BWCs can enhance their professionalism and accountability, likely leading to improved public trust. Furthermore, the belief that the legitimacy of operations can only be proven by recordings from BWCs and ARDs (M = 3.73, SD = 1.04) underscores the importance of these devices in documenting and verifying police actions, which can protect officers from false accusations and enhance the credibility of their operations.

The overall mean score of 3.49 (SD = 0.32) Indicates a general agreement on the necessity of BWCs and ARDs across different operational contexts. The relatively low standard deviation suggests a consistent belief among officers regarding the value of these technologies. This consensus aligns with existing literature, which shows that BWCs increase accountability by providing objective records of police encounters (Ariel et al., 2015). Officers may feel that BWCs protect them from unfounded complaints and legal issues by capturing comprehensive evidence.

The presence of BWCs can lead to behavioral changes among both police officers and civilians, often resulting in more professional conduct (Ariel et al., 2016). This might explain why officers believe BWCs are crucial for ensuring proper performance of duty. Additionally, research has shown that BWCs are associated with reductions in complaints against officers and use-of-force incidents (Jennings et al., 2015). This could be why officers see BWCs as necessary for proving the legitimacy of their operations and ensuring proper conduct during arrests and searches.

BWCs and ARDs also provide clear and unbiased accounts of police activities, which are invaluable in legal contexts (Lum et al., 2015). Officers' agreement on the necessity of BWCs for serving warrants and conducting searches likely stems from the desire to have indisputable evidence in court. However, the undecided response regarding warrantless arrests may reflect practical challenges, such as the spontaneity of such situations in which activating a BWC may not always be feasible (Harris, 2010) Concerns about privacy and the management of BWC and ARD data might also contribute to this uncertainty.

Respondents' perspective on the use of BWC and ARDS as to its practicability

Table 5 above reveals a general agreement on the practicability of these technologies, albeit with some nuances in certain areas. Officers agree that the rules governing the use of BWCs and ARDs are reasonable (M = 3.92, SD = 0.86). This high level of agreement suggests that the regulations are perceived as fair and achievable within the scope of their duties. The reasonable nature of these rules likely contributes to their effective implementation, as officers are more likely to adhere to guidelines they view as logical and manageable.

Similarly, there is a consensus that police operatives strictly observe the rules without experiencing significant logistical or human resource challenges (M = 3.50, SD = 1.02). This indicates that, for the most part, officers find it feasible to comply with the established protocols. The relatively higher standard deviation here, however, suggests that while many officers agree, there is some variability in experiences, possibly due to differences in resource availability or operational contexts.

The use of BWCs and ARDs Is also seen as beneficial in aiding police operations (M = 3.77, SD = 1.04). This agreement underscores the practical utility of these devices in everyday policing activities, enhancing the effectiveness and efficiency of law enforcement efforts. The data suggests that officers recognize the value added by BWCs in terms of operational support and evidentiary benefits.

However, there is some ambivalence regarding the sufficiency of BWCs and ARDs available in police stations (M = 3.23, SD = 1.18). This undecided stance may reflect varying levels of equipment distribution across different units, with some officers experiencing shortages while others have adequate supplies. The higher SD here points to significant disparities in equipment availability, which could impact the consistent use of these technologies across the board.

Training on the use and maintenance of BWCs and ARDs is positively viewed, with officers agreeing that they are adequately trained (M = 3.62, SD = 0.97). Proper training is crucial for the effective deployment and maintenance of technology, and this agreement suggests that the PNP has invested in preparing its personnel to utilize these tools effectively. Furthermore, officers agree that the utilization and maintenance of BWCs and ARDs are cost-efficient (M = 3.71, SD = 0.93). This perception of cost efficiency is important for the sustainability of the BWC program, as it suggests that the benefits of using these devices outweigh the costs involved in their deployment and upkeep.

Overall, the mean score of 3.63 (SD = 0.22) indicates a general agreement on the practicability of BWCs and ARDs in police work. The low standard deviation suggests a consistent belief among officers regarding the practical benefits of these technologies.

The findings align with existing literature, which emphasizes the importance of clear and reasonable guidelines for the successful implementation of BWCs (Beller, 2021). Studies also highlight the need for adequate training to ensure that officers can

effectively use and maintain BWCs, which is reflected in the officers' agreement on training adequacy (White, 2014). The ambivalence about the sufficiency of BWCs and ARDs aligns with findings that resource distribution can be uneven, affecting the uniformity of technology implementation (Cubitt et al., 2017).

Respondents' perspective on the use of BWC and ARDS as to its effectiveness

Table 6 indicate a strong consensus on the positive impact of these technologies on various aspects of policing. Police officers overwhelmingly agree that the use of BWCs and ARDs enhances transparency and accountability (M = 4.04, SD = 0.72). This high level of agreement underscores the belief that recording devices provide a clear and objective account of police activities, which can increase public trust and ensure that officers adhere to professional standards. This finding is supported by existing literature, which highlights that BWCs can lead to significant improvements in police accountability *(Ariel, Farrar, & Sutherland, 2015)*.

The perception that BWCs and ARDs provide unbiased records of police encounters Is also strongly supported (M = 4.03, SD = 0.87). Officers recognize that these devices offer an impartial perspective that can be critical in evaluating the conduct of both police and civilians. This aligns with research suggesting that BWCs can serve as a neutral third party, offering credible evidence in disputes and investigations *(Lum, Koper, & Merola, 2015).*

Furthermore, officers agree that BWCs and ARDs have increased their performance in suppressing criminal activities (M = 3.88, SD = 0.93). The belief that these technologies improve operational efficiency and effectiveness is consistent with findings that suggest BWCs can enhance officer performance by encouraging adherence to procedures and reducing the likelihood of misconduct (A. Braga et al., 2017). The data also shows strong agreement that BWCs and ARDs aid in securing convictions during prosecutions (M = 4.02, SD = 0.81). This indicates that officers believe these recordings provide robust evidence that can substantiate their actions and support the prosecution's case. Literature supports this view, highlighting that video evidence from BWCs can be crucial in court, offering clear and compelling proof of events *(White, 2014).*

Additionally, officers agree that BWCs and ARDs help them defend themselves in service-connected cases (M = 4.11, SD = 0.74). This finding suggests that officers see these technologies as protective tools that can exonerate them from false accusations and demonstrate the legality of their actions. Research corroborates this perception, showing that BWCs can provide crucial exculpatory evidence that protects officers from unwarranted claims *(Harris, 2010).*

Overall, the mean score of 4.02 with a standard deviation of 0.08 indicates a strong and consistent agreement on the effectiveness of BWCs and ARDs. This low SD suggests a unified belief among officers regarding the benefits of these technologies in enhancing transparency, accountability, performance, and legal defense.

The findings align with existing literature, which emphasizes the multiple benefits of BWCs, including improved transparency, accountability, performance, and legal protection for officers *(Ariel et al., 2015; Lum et al., 2015; Jennings et al., 2015).* The high agreement on the effectiveness of BWCs in various aspects of policing indicates that these technologies are viewed as valuable tools that significantly contribute to the integrity and efficiency of police operations.

Respondents' perspective on the use of BWC and ARDS as to the level of complexity of documents required by the court

The results in Table 7 indicate a strong consensus among officers on their ability to manage these requirements effectively. Police officers agree that those who utilize BWCs and ARDs are well-trained in the preparation of documents and affidavits required by the court (M = 3.89, SD = 0.92). This agreement suggests that the training provided to officers is thorough and equips them with the necessary skills to handle legal documentation effectively. Such training is crucial because it ensures that the evidence captured by BWCs is presented in a manner that is acceptable in court, thereby enhancing the judicial process.

Additionally, officers agree that they are able to submit the required documents to the court following operations involving BWCs and ARDs (M = 3.84, SD = 0.92). This consistency indicates that the procedural requirements for submitting evidence are generally manageable and within the officers' capabilities. It reflects the officers' confidence in their ability to comply with legal standards, which is essential for the successful prosecution of cases.

The reasonableness of the document submission requirements Is also acknowledged, with officers agreeing that these can be complied with within the required period (M = 3.79, SD = 0.80). This suggests that the deadlines and expectations set by the court are perceived as fair and achievable, allowing officers to fulfill their duties without undue pressure. The relatively lower SD here implies a consistent perception across different officers, indicating a broadly shared view of the reasonableness of these requirements.

Furthermore, officers agree that they strictly comply with court requirements related to the use of BWCs and ARDs without experiencing significant difficulty (M = 3.69, SD = 0.96). These findings highlight that, while there might be occasional challenges, the overall process of compliance is seen as manageable. The slight increase in standard deviation suggests some variability in experiences, which could be due to differences in individual cases or the complexity of specific operations.

Overall, the mean score of 3.80 (SD = 0.07) indicates a general agreement on the officers' ability to handle the complexity of court-required documents when using BWCs and ARDs. The low standard deviation reflects a consistent belief among officers that the training and procedural requirements are adequate and manageable.

The findings align with existing literature, which emphasizes the importance of comprehensive training and clear procedural guidelines in the effective use of BWCs in legal contexts (International Association of Chiefs of Police, 2019). Proper training ensures that officers are not only capable of using the technology but also proficient in preparing and submitting the necessary legal documentation. This enhances the overall effectiveness of BWCs in supporting law enforcement and judicial processes *(White, 2014).*

The measures or policies to be Implemented In relation to the use of BWCs and ARDs In terms of necessity, practicability, effectiveness and as to the complexity of the court required documents

As to the necessity, the officers pointed out that the use of BWC and ARD shall be imposed and the same shall be part of the uniform of the PNP. With this, a fully-capable and technologically advanced devices shall be procured by the PNP to obtain its optimum potential. Considering that the use of BWC and ARD is necessary, officers are of the view that it shall be included in the training for Basic Recruit Course of the PNP so as to equip the newly recruited police officers. The officers further find it necessary that a system for storage and management of recorded data shall be developed in order to maintain the integrity of the recordings and uphold the right of the citizens subject of the arrest or police operations to privacy.

The view of the officers is rational since making the BWC and ARD part of the PNP uniform shall compel the police officers to carry the said devices for the entire duration of their duties. Also, the BWC and ARD shall be capable and advanced so as to use its full potential, such, it can provide audio recording, clear video, and can record the entire operation. The inclusion of the seminar or training to use BWC and ARD during the conduct of Basic Recruit Course will also prepare the police officers in their duties. With such, errors and mistakes in the use of BWC and ARD during actual police operations will be lessen. Also, the maintenance of a secured storage system for the recorded data is in line with the mandates of the Data Privacy Law. The Data Privacy Law protects the privacy of the individuals while ensuring free flow of information to promote innovation and growth, regulates the collection, recording, organization, storage, updating or modification, retrieval, consultation, use, consolidation, blocking, erasure or destruction of personal data, and ensures that the Philippines complies with international standards set for data protection through the National Privacy Commission.(Republic Act 10173, n.d.)

As to practicability of use, the officers emphasized that not all police operatives had their respective PNP-issued BWC or ARD. Hence, it shall not be obligatory considering that not all police stations have available devices. This sentiment of the officers is rooted from the fact that the BWC and ARD issued by the PNP are not sufficient for all police operatives. In an article written in 2021, the PNP commits to comply with the rules on BWC and ARD, although it acknowledged the fact that the organization does not have enough cameras for its personnel (Luna, 2021).

Police officers further pointed out that BWC and ARD shall only be used in overt police operations, and shall not be required in covert police activities, as it may compromise the operation, and worst, might put the life and safety of the officer conducting surveillance to imminent danger. It was also highlighted that the police operatives shall have advanced and continuous training on the use and maintenance of BWC and ARD in order to properly preserve its use and benefits.

In terms of effectiveness, the officers are of the view that in order for the use of BWC and ARD be effective in law enforcement activities, and to attain its objective, the devices to be procured shall be capable of recording comprehensive footage or video, the video as well as audio recording are clear, and the battery life of the device shall be long enough to cover the entire duration of the operation. This is consistent with the reality on the ground as displayed in one police operation in which the police officers reasoned out that the arrest that led to the death of a teenager was not recorded in BWC and ARD because said devices run out of batteries *(Chi, 2023)*. In addition, police officers strongly suggest that the PNP shall raise awareness among citizens regarding the use and purpose of BWC and ARD in order to avoid instances in which the subject to be arrested refused to give his or her consent in recording the arrest.

With regard to the level of complexity of the documents required by the court, majority of police officers can comply with the required submissions of the court. Accordingly, this compliance is prompted by the fact that failure on their part shall give rise to liability of contempt of court. Hence, although it may be difficult and complicated, police officers find a way to comply with those so as to avoid any disciplinary action. Nevertheless, police officers advocate that extensive trainings and seminars shall be conducted to all police operatives for them to be familiar and competent in preparing court documents required related to the use of BWC and ARD.

Conclusions

After a thorough evaluation of the related literatures, existing laws and issuances, and the results of survey and interview among police officers, it can be concluded that police officers agree that the BWC and ARDs are necessary in various policing activities. The perceived benefits of these technologies in enhancing accountability, transparency, and legitimacy are well-supported by existing literature. However, mixed perceptions about the use of BWC and ARDs suggest areas where further training or policy adjustments may be needed to address practical concerns and ensure the effective implementation of BWCs in all aspects of policing.

It is further concluded that police officers generally find the use of BWCs and ARDs practical and beneficial in their operations. While there are some concerns about equipment availability, the overall perception is positive, indicating that with adequate

resources and continued training, the use of these technologies can significantly enhance police transparency and effectiveness.

The findings of the research further lead to the conclusion that there is a strong consensus among police officers on the effectiveness of BWCs and ARDs. The perceived benefits in terms of transparency, accountability, performance, prosecution support, and legal defense are well-supported by existing literature. These findings highlight the critical role that BWCs and ARDs play in modern policing, providing clear and objective evidence that enhances the overall effectiveness of law enforcement activities.

The findings of the research further concluded that policies officers feel well-prepared and capable of managing the documentation requirements associated with the use of BWCs and ARDs. The perceived reasonableness of these requirements and the officers' ability to comply effectively contribute to the successful integration of these technologies into policing practices, ultimately supporting transparency and accountability.

Recommendations

1. Procurement of high-quality BWC and ARD to be issued to all police operatives.
2. Inclusion of use of BWC and ARD in Basic Recruit Course (BRC).
3. Provision of system for storage and management of recorded data.
4. BWC and ARD shall be used only for overt operations, and shall be optional in covert operations.
5. Conduct of continuous training for the maintenance of BWC and ARD.
6. Conduct of extensive and continuous trainings for the preparation of court-required documents.

Compliance with Ethical Standards

Research ethics is necessary for scientific integrity, human rights and dignity, and collaboration between science and society. This ensures that participation in studies is voluntary, informed and safe for research subjects. (Bhandari, 2021)

This study entitled, *Exploring Transparency: Police Officers' View on the Use of PNP Body-Worn Camera,* is the original work of the researchers and the latter further attest originality of this study and have cited all the references used.

Several ethical considerations were taken into account to ensure that this study was conducted in an appropriate manner. The participants had been informed of the purpose of the study and in turn, gave their verbal consent to the conduct of the survey and the roundtable discussion. The participants voluntarily participated in the survey and

they were assured that the information gathered will remain confidential and will be kept and be used for research purposes only.

The participants were further informed that they have the choice not to disclose their names in the survey form, and that they have been informed of their right to desist from participating as respondents in this study at any point. Permission from participants to take Minutes of the interview was likewise obtained.

Acknowledgements

The researchers express their heart-felt gratitude to those who, in one way or another, helped in the completion of this study.

ABSTRACT

The prevalence of electronic cigarettes has grown rampant across recent years; establishing its demographic target among young adults and evolving within the market as a competitive trend capable of expanding its influences to launch newly improved variants — among these are Disposable Electronic Cigarettes. Promoted as a smoking cessation aid and embellished with desirable attributes, it became favorable among the youth, yet remained controversial due to vague health claims. This study aimed to assess factors that influence young adults' perceptions toward disposable electronic cigarettes and accompanying health risks upon habitual consumption. Designed as a quantitative descriptive research method, the chosen sampling design is non-probability purposive sampling to streamline respondents based on specific criteria. Using a survey platform, a self-made 35-item questionnaire was distributed to one hundred (100) identified respondents, aged 18-26 years old, within the vicinity of Quezon City. Accordingly, data was analyzed by statistical treatment, ranging from frequency and percentage, weighted mean to ANOVA test. Results of study indicated that factors according to demographic profile varied with significant differences, but majority of young adults chose to consume disposable electronic cigarette despite their awareness of the potential health risks. While in the perception on health risks of habitual consumption of disposable electronic cigarette, majority agreed it satisfies psychological demands. Accessibility and availability of the product in communities influenced habitual consumption, especially among male users. Recommendations include reinforcement in awareness of health promotion, such as participation in health-oriented programs, and the strict regulation of E-cigarette manufacturers advised for transparency of chemical properties.

Keywords: *Disposable Electronic Cigarette, Habitual Consumption, Young Adult, Health Risk, E-cigarette, Purposive Sampling, ANOVA, Quezon City*

INTRODUCTION

Acknowledged as a growing global health concern, the electronic cigarette became an epidemic phenomenon that has risen dramatically since its release; originally developed with the purpose to facilitate as a derivative smoking cessation aid. However, as it has exponentially established its prominence in the marketing industry, electronic cigarette transformed into a trend that expanded in size and variety to contend for profit and value against competing products, including tobacco cigarette – its primary subject of purpose.

The World Health Organization (2020) describes electronic cigarette as battery-powered device that heats liquid and turns into aerosol vapor for inhalation. Its basic components are comprised of an e-liquid, nicotine and flavoring, which are adeptly devised to enable customization of product preference and dosage control. Also, it is encompassed under the general category of *Electronic Nicotine Delivery System (ENDS),* which refers to the umbrella term for non-combustible vaping products (Kotewar et al., 2023). In spite of the marketable success of electronic cigarette, however, it has become an area of concern for generating controversy among the public and experts due to its vague health claims.

Among the available variants of this product, disposable e-cigarette has grown distinctly popular among young adult consumers largely for the convenience, affordability, variety of flavor, advertisement and marketing packaging (Sese, 2023). Disposables are single-use devices that come prefilled with e-liquid and equipped built-in coil and battery which serves as an all-in-one package. This, in conjunction with the various influencing factors have significantly encouraged susceptible young adults to seek sensory experience and immediate satisfaction; potentially risking the development of habitual consumption and nicotine dependence - which subsequently leads to instigation of perceived health risks.

Furthermore, the Department of Health cited a Global Youth Tobacco Survey, in which it showcased the prevalence of usage expansion of disposable electronic cigarette among the Filipino youth. The presented data shows there is an 110% increase in consumption of the disposable electronic cigarettes in four years from 11.7% in 2015 into 24.6% in 2021 (Mocon-Ciraco, 2023). Additionally, based on a recent foreign study, Tattan-Birch (2022) stated an 18% increase of vapers who consume disposable electronic cigarettes from January 2021 to April 2022, are mostly pronounced among the young adults as its primary demographic. Case in point, the percentage of 18 years old vapers consuming disposable e-cigarette rose from 0.4% to 54.8%, amassing large usage among youth. Expectedly, the disposable e-cigarettes sold in the international market have nearly tripled in nicotine strength, quintupled in e-liquid capacity and significantly dropped in price by nearly 70% between 2017 and 2022 as stated in a Truth Initiative (2023) study.

Statistics are expected to progressively rise due to the leniency of regulation imposed by local government and non-compliance of e-cigarettes companies. The vaping epidemic in the Philippines exemplifies how commercial influences and government policies can

exacerbate health issues as it confronts the rising usage of electronic nicotine delivery system among Filipino youth (Sese, 2023). As aforementioned, habitual consumption of disposable electronic cigarettes can lead to dependence, in which the pleasure caused by the interaction of nicotine properties with the reward circuit motivates user to reliantly consume nicotine, despite the awareness of potential health risks (National Institute on Drug Abuse, 2018). Jankowski et al. (2019) further reinforced nicotine withdrawal effect can occur after cessation of chronic nicotine consumption. Exposure may have adverse effect with postulated risk, like impaired memory, substance abuse or poor performance. Excessive consumption can also develop lung complications. In February 2020, Centers for Disease Control and Prevention confirmed 2,807 cases of e-cigarette use associated lung injury with damage to the lungs and 68 mortality were attributed (Vandelaer, 2023).

The researchers pursued this study as a feasible research subject to examine due to its relevance in the contemporary society, the recency of occurrence which requires further research contribution and the realness of the problem as growing health concern. Upon observation of the prevalence and health circumstances regarding disposable electronic cigarettes, the researchers sought to concentratedly establish their scope in determining factors that influence the habitual consumption of disposable electronic cigarettes and its perceived health risks. Accordingly, the result of the study will serve as a contribution to the involved individuals, notably young adults, and as a basis for research endeavors.

Research Questions

This study aims to assess the young adults' perceptions toward disposable electronic cigarettes, and the accompanying health risks upon habitual consumption. Specifically, it attempts to answer the following questions:

1. What is the demographic profile of the respondents in terms of:
   1.1 Age
   1.2 Sex
   1.3 Educational Attainment
   1.4 Employment Status
   1.5 Weekly Allowance
   1.6 Monthly Salary

2. What are the factors that influence young adults to consume disposable electronic cigarettes?
   2.1 Interest
   2.2 Desirable Attributes
   2.3 Social Norms
   2.4 Knowledge

3. What are the perceived health risks of habitual consumption of disposable electronic cigarettes?
   3.1 Physical
   3.2 Psychological

3.3 sociocultural

4. Is there a significant difference in the factors that affect young adults to consume disposable electronic cigarette when grouped according to profile?

5. Is there a significant difference in the perception of respondents on health risks of the habitual consumption of disposable e-cigarette when grouped according to profile?

6. What health teachings can be disseminated to the respondents in relation to risks carried out by the habitual consumption of disposable electronic cigarettes?

METHODOLOGY

The researchers have employed a quantitative descriptive research method to assess the factors influencing the habitual consumption of disposable electronic cigarettes, and the perceived health risks. The data collection was assembled through an online survey questionnaire to derive the patterns and traits of the identified respondents. Moreover, it assessed the perception regarding the phenomenon of disposable electronic cigarettes; complementing the significance of Pender's Health Promotion Model (1982) framework.

The data gathering has been carried out in the vicinity of Quezon City, as the definitive location in assembling the respondents and optimizing the effectiveness and opportunity to acquire data. The chosen sampling design is a non-probability purposive sampling to streamline respondents based on specific criteria. Using the Google Form, a self-made 35-item questionnaire was distributed to one hundred (100) respondents, aged 18 to 26 years old, residents of Quezon City and an active consumer of the disposable electronic cigarette for more or less 3-6 months. The other demographic profile taken into account were their sex, educational attainment, employment status, weekly allowance and/or the monthly salary. An inclusion and exclusion criteria were employed for the identification of respondents displaying certain characteristics in order to achieve research objectives.

Additionally, the research adapted a 4-point Likert Scale format to interpret the gathered data, which consists of items that can be gauged according to respondents' perception. Prior to the survey distribution, the researchers undergone a validity testing to three (3) validators, all of whom confirmed that the research instrument is valid, appropriate and non-biased by evaluation. Revisions were advised for further improvements. Documents and permission letter necessary for the data collection have been managed. Thereafter, the researchers conducted a pilot testing in order to ascertain the feasibility of the study and identify weakness through a preliminary data measurement. The pilot test consisted of (10) ten respondents, which is ten percent sample size relative to its full-scale survey. After conducting the pilot testing, the researchers ran the reliability test using the data collected with the assistance of a statistician in the computation of the results. Using the Cronbach's Alpha formula, the value has indicated an internal consistency of 0.798 and with verbal interpretation of acceptable; confirming the reliability of research instrument.

The city-wide distribution of the questionnaire took place from the 8th to 10th of March 2024. Ethical considerations and provision of research context were properly addressed to the respondents beforehand. The researchers have formally sought assistance from Sangguniang Kabataan (SK) officers of the barangay to navigate the community and to introduce the potential residents. Provided that the survey questionnaire is answerable online, the researchers either handed their devices or requested that the respondents use theirs. Snack incentives were presented to the respondents as an appreciation for their efforts. After the researchers have completed conducting the survey, the gathered data were then analyzed through the application of the statistical treatment of data, such as Frequency and Percentage, Weighted Mean and Analysis of Variance, which were utilized to compute their respective research question with accompanying interpretation.

RESULTS

1. Demographic Profile of Respondents

Table 1.1 Frequency Distribution of Respondents in terms of Age

Age	Frequency	Percentage
24-26	44	44
21-23	44	44
18-20	12	12
Total	**100**	**100%**

Table 1.1 presents the frequency distribution of respondents in terms of their age. As indicated, there is an equal distribution between the age brackets 24-26 years old and 21-23 years old, constituting over 44% of the total, respectively. Followed by 18-20 years old, amounting to over 12% in the overall distribution of the respondents. These findings indicate that the majority of the respondents are between the age bracket of 21 to 26 years old.

Table 1.2 Frequency Distribution of Respondents in terms of Sex

Sex	Frequency	Percentage
Male	54	54
Female	46	46
Total	**100**	**100%**

Table 1.2 displays the frequency distribution of respondents in terms of sex. There are over fifty-four (54%) male and forty-six (46%) females who responded voluntarily in the researchers' survey questionnaire. The table interprets that there is marginal difference from the distribution of sexes, with the males being higher compared to the females.

Table 1.3 Frequency Distribution of Respondents in terms of Educational Attainment

Educational Attainment	Frequency	Percentage
Graduate Studies	2	2
College Graduate	29	29
College Undergraduate	53	53
Vocational Studies	3	3
High School Graduate	13	13
Total	**100**	**100%**

Table 1.3 presents the frequency distribution of respondents in terms of their educational attainment. Majority of the respondents are undergraduate college, accounting to over fifty three percent (53%). Following this, college graduates with over twenty-nine percent (29%). There are thirteen percent (13%) of the high school graduates and three percent (3%) of respondents have finished vocational studies. The least number of respondents were those pursuing graduate studies; constituting only two percent (2%). This implies young adult residents of Quezon City are diverse in terms of the educational attainment.

Table 1.4 Frequency Distribution of Respondents in terms of Employment Status

Status	Frequency	Percentage
Employed	35	35
Part-time	9	9
Student	47	47
Unemployed	9	9
Total	**100**	**100%**

Table 1.4 illustrates the frequency distribution of respondents in terms of employment status. Most of the respondents were students with forty-seven percent (47%), while employed respondents are over thirty-five percent (35%). Part-time and unemployed were of equal percent in sum of nine (9%). This suggested that students who are not employed made decisions to purchase disposable e-cigarettes using their allowances.

Table 1.5 Frequency Distribution of Respondents in terms of Weekly Allowance

Weekly Allowance	Frequency	Percentage
2,200-above php	26	26
1900-2100 php	2	2
1600-1800 php	4	4
1300-1500 php	12	12
1000-1200 php	16	16
700-900 php	5	5
400-600 php	10	10
100-300 php	7	7
Not Applicable	18	18
Total	**100**	**100%**

Table 1.5 shows the frequency distribution of respondents in terms of weekly allowance. The most frequent weekly allowance of respondents is 2,200php with over twenty six percent (26%). With the eighteen percent (18%), they said not applicable. Furthermore, sixteen percent (16%) of respondents have weekly allowances of 1,000-1,200php, and twelve percent (12%) with 1300-1500php. Seven percent (7%) of respondents have a weekly allowance of 100-300php, while five percent (5%) have 700-900php. Only four percent (4%) have 1600-1800php allowance, and two percent (2%) with 1900-2100php.

Table 1.6 Frequency Distribution of Respondents in terms of Monthly Salary

Monthly Salary	Frequency	Percentage
30,000 php and above	12	12
25,000-29,000 php	7	7
20,000-24000 php	5	5
15,000-19000 php	6	6
10,000-14,000 php	9	9
5,000-9,000 php	13	13
Not Applicable	48	48
Total	**100**	**100%**

Table 1.6 displays the frequency distribution of the respondents in terms of the monthly salary. Among the respondents, there is over forty eight percent (48%) that earned the most frequent response of "not applicable" when surveyed about monthly salary. This is assumed as the total number of full-time students and unemployed people who, by reasoning, do not receive a monthly salary, but still has the financial means to purchase and supply themselves with disposable electronic cigarettes. While the highest monthly earnings of more than 30,000php, 25,000–29,000php, and 20,000–24,000php went to twelve percent (12%), seven percent (7%), and five percent (5%) of respondents. Conversely, the least amount of monthly salaries is 15,000-19000php, which is six percent (6%) of the respondents. This is then followed by 10,000-14,000php, amounting to over nine percent (9%) respondents answers; and lastly, monthly salary of 5,000-9,000php belong to thirteen percent (13%) of respondents who were surveyed. Overall, the monthly salary is conditional and applicable only to respondents who are employed.

2. Factors that influence young adults to use disposable electronic cigarettes

Table 2.1 Computed Weighted Mean on the factors that influence young adults to consume disposable electronic cigarettes in terms of Interest

Items	Weighted Mean	Verbal Interpretation
1. I started using disposable electronic cigarettes out of curiosity.	2.82	Agree
2. The media and public figures influenced me to use disposable electronic cigarettes.	2.48	Disagree
3. The advertisement appealed to me into using disposable electronic cigarettes.	2.44	Disagree

4. I use disposable electronic cigarettes to quit or reduce smoking.	2.77	Agree
5. I use disposable electronic cigarettes to compare its quality to tobacco cigarettes.	2.35	Disagree
Over all Computed Weighted Mean	**2.57**	**Agree** (With Impact)

Table 2.1 shows a computed weighted mean on the factors that influence young adults to consume disposable electronic cigarettes in terms of their interest. With the highest weighted mean of 2.82, this indicates that majority of the young adults have started consuming disposable electronic cigarettes mainly out of curiosity. With a weighted mean of 2.77, they have also agreed to consuming disposable electronic cigarette in order quit or reduce smoking tobacco cigarette. Moreover, the respondents disagreed that both the media and public figures have influenced them to consume disposable electronic cigarette, with a weighted mean of 2.48. Additionally, they also did not think that advertisement of the product significantly appealed to them into using disposable electronic cigarette, with a weighted mean of 2.44. The respondents disagreed that they primarily use disposable electronic cigarettes to compare its quality to the tobacco cigarettes, with a weighted mean of 2.35. As a result, the overall weighted mean is 2.57 with verbal interpretation of “agree”. Thus, interest as a factor has impact in influencing the young adults to consume disposable electronic cigarettes in satisfying their curiosity.

Table 2.2 Computed Weighted Mean on the factors that influence young adults to consume disposable electronic cigarettes in terms of Desirable Attributes

Items	Weighted Mean	Verbal Interpretation
1. I use disposable electronic cigarettes because they are affordable.	2.78	Agree
2. I use disposable electronic cigarettes because they offer a variety of flavors I like.	3.36	Strongly Agree
3. I use disposable electronic cigarettes because they are customizable for a more personalized experience.	3.05	Agree
4. I use disposable electronic cigarettes because they do not smell bad.	3.38	Strongly Agree
5. I use disposable electronic cigarettes because they are accessible in product design.	3.07	Agree
Over all Computed Weighted Mean	**3.11**	**Agree** (With Impact)

Table 2.2 shows a computed weighted mean on the factors that influence young adults to consume disposable electronic cigarettes in terms of desirable attributes. With a weighted mean of 3.38, majority of the respondents use disposable electronic cigarettes because they do not smell bad. Secondly, with a weighted mean of 3.36, they use it because they offer a variety of flavors that fits their preferences in taste. Moreover, they approved that disposable electronic cigarettes are accessible in product design, such as using it in places where smoking is otherwise prohibited, and with the weighted mean of 3.07. Following this, respondents use it as they are customizable for personalized

experience and product design, with the weighted mean of 3.05. As for the lowest weighted mean of 2.78, they respondents consume disposable electronic cigarettes because they are affordable. The overall computed weighted is 3.11 with the verbal interpretation of agree. This concludes that the respondents indicated that consumption of disposable electronic cigarettes influenced by the desirable attributes has an impact.

Table 2.3 Computed Weighted Mean on the factors that influence young adults to consume disposable electronic cigarettes in terms of Social Norms

Items	Weighted Mean	Verbal Interpretation
1. I use disposable electronic cigarettes because I feel pressured by my peers who engage in using it	1.97	Disagree
2. I use disposable electronic cigarettes because it is trendy and it makes me look cool.	1.99	Disagree
3. I use disposable electronic cigarettes because people close to me use them (e.g. family/friend).	2.30	Disagree
4. I feel a sense of belongingness in the vaping community.	2.24	Disagree
5. Disposable electronic cigarettes help me engage in social opportunities.	2.10	Disagree
Over all Computed Weighted Mean	**2.12**	**Disagree** (With Less Impact)

Table 2.3 illustrates the computed weighted mean on the factors that influence young adults to consume disposable electronic cigarettes in terms of social norm. With the highest weighted mean of 2.30, the respondents disagreed that they use disposable electronic cigarettes because the people close to me use them. Next, with a weighted mean of a 2.24, they don't feel sense of belongingness in the vaping community. Correspondingly, the respondents don't think that disposable electronic cigarettes help engage in social opportunities, with weighted mean of 2.10. Furthermore, the lowest computed weighted mean of 1.97 denotes to respondents disagreeing feel pressured by my peers who use disposable electronic cigarettes. Holistically, the overall computed weighted mean results to a 2.12, which designates that social norms have a lesser impact compared to the other factors.

Table 2.4 Computed Weighted Mean on the factors that influence young adults to consume disposable electronic cigarettes in terms of Knowledge

Items	Weighted Mean	Verbal Interpretation
1. I am aware of the contents inside the disposable electronic cigarettes.	3.27	Strongly Agree
2. Disposable electronic cigarettes are promoted as an alternative to quit tobacco smoking	3.05	Agree
3. Disposable electronic cigarettes are healthier compared to smoking tobacco cigarettes.	2.46	Disagree

4. Disposable electronic cigarettes are less harmful to those around me compared to tobacco cigarettes	2.76	Agree
5. Disposable electronic cigarettes contain harmful chemicals that may cause long-term health effects.	3.14	Agree
Over all Computed Weighted Mean	**2.94**	**Agree** (With Impact)

Table 2.4 shows a computed weighted mean on the factors that influence young adults to consume disposable electronic cigarette in terms of knowledge. As shown, its highest weighted mean 3.27 indicates that the respondents are aware of the contents inside the disposable electronic cigarettes. With the weighted mean of 3.14, they agree that these contain harmful chemicals that may cause long-term health effect. Following this, the respondents agree that disposable electronic cigarettes are promoted as an alternative product in order to quit tobacco smoking, with the computed weighted mean of 3.05. Furthermore, with a weighted mean of 2.76, the respondents think disposable electronic cigarettes are less harmful to those around them compared to tobacco cigarettes. The lowest weighted mean of 2.46 indicates that the disposable electronic cigarettes are healthier compared to smoking tobacco cigarettes. Although they are perceived as less harmful, it still contains harmful chemicals, therefore making it an unhealthy choice. The overall computed weighted mean is 2.94; signifying that there is impact in respondents being knowledgeable about the harmful effects of consuming disposable e-cigarettes.

3. Perceived health risks of habitual consumption of disposable electronic cigarettes

Table 3.1 Computed Weighted Mean on the perceived health risks of habitual consumption of disposable electronic cigarettes in terms of Physical

Items	Weighted Mean	Verbal Interpretation
1. I noticed that coughing and wheezing has been frequent since I started vaping.	2.22	Disagree
2. My throat would feel dry and itchy after vaping.	2.38	Disagree
3. I experience headaches or dizziness after vaping	2.24	Disagree
4. I feel the urge to vomit after I vape.	1.79	Disagree
5. I experience heart palpitations when I vape.	1.95	Disagree
Over all Computed Weighted Mean	**2.12**	**Disagree** (With Less Impact)

Table 3.1 presents the computed weighted mean on perceived health risks of habitual consumption of disposable electronic cigarette in terms of physical. As indicated, the highest computed weighted mean of 2.38 interprets that the respondents disagree that their throats felt dry and itchy after vaping. Additionally, with a weighted mean of 2.24, they do not experience headaches or dizziness after vaping. Thirdly, they disagree that coughing and wheezing has been frequent since they started vaping with a weighted mean of 2.22. The respondents do not experience heart palpitation when they vape with

the weighted mean of 1.95. The lowest computed weighted mean of 1.79 states that the respondents don't feel the urge to vomit after they vape. The overall computed weighted mean was 2.12, which means that physical as a perceived health risk has lesser impact.

Table 3.2 Computed Weighted Mean on the perceived health risks of habitual consumption of disposable electronic cigarettes in terms of Psychological

Items	Weighted Mean	Verbal Interpretation
1. I frequently use disposable electronic cigarettes because it gives a sense of immediate satisfaction.	3.09	Agree
2. I often find myself reaching for my disposable electronic cigarette without thinking about it.	2.80	Agree
3. The urge to vape becomes stronger when I haven't done it within a few days.	2.64	Agree
4. I use disposable electronic cigarettes to relieve myself from emotional tension or stress.	3.19	Agree
5. I find myself to be easily irritated or uncomfortable when I cut vaping for a few days.	2.26	Disagree
Over all Computed Weighted Mean	**2.80**	**Agree** (With Impact)

Table 3.2 shows the computed weighted mean on perceived health risks of habitual consumption of disposable electronic cigarette in terms of psychological. The highest weighted mean of 3.19 indicates that respondents use disposable electronic cigarette to relieve themselves from emotional tension or stress. The respondents also noticed that frequently consuming disposable electronic cigarettes gave them a sense of immediate satisfaction, and with a weighted mean of 3.09.

Furthermore, they often find themselves reaching for disposable electronic cigarette without thinking about it, and has a weighted mean of 2.80 Moreover, the urge to vape becomes stronger when they have not done it within a few days, and it has a weighted mean of 2.64.

Meanwhile, the lowest weighted mean of 2.26 indicates that the respondents find themselves easily irritated or uncomfortable when they cut vaping for a few days. The overall computed weighted mean is a result of 2.80 implicating that the respondents agree that a psychological aspect has an impact.

Table 3.3 Computed Weighted Mean on the perceived health risks of habitual consumption of disposable electronic cigarettes in terms of Sociocultural

Items	Weighted Mean	Verbal Interpretation
1. I often impulsively spend money on disposable electronic cigarettes.	2.52	Agree

2. Poor family relations and lack of family affection significantly impact my tendency to vape.	1.99	Disagree
3. My attitude and awareness towards vaping is influenced by the community.	2.40	Disagree
4. The availability and accessibility of disposable electronic cigarettes in the community can affect my pattern of usage.	2.70	Agree
5. The bad impression related to smoking influences me to choose vaping as the perceived safer alternative.	2.56	Agree
Over all Computed Weighted Mean	**2.43**	**Disagree** (With Less Impact)

Table 3.3 presents the computed weighted mean on perceived health risks of habitual consumption of disposable electronic cigarette in terms of sociocultural. With a weighted mean of 2.70, the respondents agree that the availability and accessibility of disposable electronic cigarettes in the community affect the pattern of usage. Next, with a weighted mean of 2.56, they agree the bad impression related to smoking influences them to choose vaping as the perceived safer alternative.

Additionally, they agree that they often impulsively spend money on disposable electronic cigarettes, with weighted mean of 2.52. With a weighted mean of 2.40, they disagreed that the attitude and awareness towards vaping is influenced by the community. The respondents do not consider that poor family relations and lack of family affection significantly impact the tendency to vape, with 1.99 weighted mean. The overall computed weighted mean is 2.43 This suggests that the sociocultural aspect in the perceived health risk of habitual vaping has a lesser impact.

4. Significant difference in the factors that influence young adults to consume disposable electronic cigarettes when grouped according to profile

Table 4.1 Test of Difference between factors that influence young adults to consume disposable electronic cigarettes when grouped according to profile in terms of Interest

Profile	Interest	Sum of Square	df	Mean Square	f	Sig-Value	Decision	Verbal Interpretation
Age	Between Groups	9.48	15	0.63	1.465	0.138	Accept	Not Significant
	Within Groups	36.27	84	0.43				
	Total	45.76	99					
Sex	Between Groups	4.05	15	0.27	1.091	0.377	Accept	Not Significant
	Within Groups	20.79	84	0.248				
	Total	24.84	99					

Educational Attainment	Between Groups	11.68	15	0.779	0.858	0.612	Accept	Not Significant
	Within Groups	76.27	84	0.908				
	Total	87.96	99					
Employment Status	Between Groups	30.11	15	2.007	2.137	0.015	Reject	Significant
	Within Groups	78.89	84	0.939				
	Total	109.00	99					

Table 4.1 determines a test of the difference between factors that influence young adults to consume disposable electronic cigarettes when grouped according to profile in terms of interest. The F-values and significant values for the following: Age 1.465 and 0.138, Sex 1.091 and 0.377, Educational Attainment 0.858 and 0.612, Employment Status 2.137 and 0.015.

Since the computed significant value for status is 0.015, which is less than a 0.05, therefore the hypothesis was decidedly rejected. This signifies that there is a significant difference between factors that influence young adults to use disposable electronic cigarettes when grouped according to status in terms of interest.

This implies based on the research results that the status of the respondents matters in their interest, although majority of the respondents have started consuming disposable electronic cigarettes out of curiosity and then later developed into habitual consumption. Meanwhile, the respondents who were employed and earned their own money can allot weekly allowance for the purchase of disposable electronic cigarettes for satisfaction.

Table 4.2 Test of Difference between factors that influence young adults to consume disposable electronic cigarettes when grouped according to profile in terms of Desirable Attributes

Profile	Desirable Attributes	Sum of Square	df	Mean Square	f	Sig-Value	Decision	Verbal Interpretation
Age	Between Groups	6.91	12	0.58	1.289	0.239	Accept	Not Significant
	Within Groups	38.85	87	0.45				
	Total	45.76	99					
Sex	Between Groups	4.46	12	0.372	1.588	0.11	Accept	Not Significant
	Within Groups	20.38	87	0.234				
	Total	24.84	99					
Educational Attainment	Between Groups	5.30	12	0.441	0.465	0.93	Accept	Not Significant

	Within Groups	82.66	87	0.95				
	Total	87.96	99					
Employment Status	Between Groups	6.71	12	0.56	0.476	0.924	Accept	Not Significant
	Within Groups	102.29	87	1.176				
	Total	109.00	99					

Table 4.2 determines the test of difference between factors that influence young adults to consume disposable electronic cigarettes when grouped according to profile in terms of desirable attributes. The F-values and significant value for the following: Age 1.289 and 0.239, Sex 1.588 and 0.11, Educational Attainment 0.465 and 0.93, Employment Status 0.476 and 0.924, respectively.

Since the computed significant value for the age, sex, educational attainment and the employment status is greater than 0.05, the decision is to accept the hypothesis which denotes that there is no significant difference between the factors that influence young adults to use disposable electronic cigarettes when grouped according to profile in terms of desirable attributes.

This implies that based on the research results, the profile of the respondents has no significant difference in regards to determining the factors that influence young adults to consume disposable electronic cigarettes in terms of the desirable attribute. Regardless of the selected demographic profile of the respondents, there is a comparable pattern that the majority of the young adults who consume disposable electronic cigarettes would share similar perceptions that the desirable attributes of the product can influence the act of vaping among young adults.

Table 4.3 Test of Difference between factors that influence young adults to consume disposable electronic cigarettes when grouped according to profile in terms of Social Norms

Profile	Social Norms	Sum of Square	df	Mean Square	f	Sig-Value	Decision	Verbal Interpretation
Age	Between Groups	4.04	14	0.29	0.588	0.867	Accept	Not Significant
	Within Groups	41.72	85	0.49				
	Total	45.76	99					
Sex	Between Groups	7.67	14	0.548	2.711	0.002	Reject	Significant
	Within Groups	17.17	85	0.202				
	Total	24.84	99					
Educational Attainment	Between Groups	10.14	14	0.724	0.791	0.676	Accept	Not Significant

	Within Groups	77.82	85	0.916				
	Total	87.96	99					
Employment Status	Between Groups	21.95	14	1.568	1.531	0.117	Accept	Not Significant
	Within Groups	87.05	85	1.024				
	Total	109.00	99					

Table 4.3 determines the test of difference between factors that influence young adults to consume disposable electronic cigarettes when grouped according to profile in terms of social norms. The F-values and significant value for the following: Age 0.588 and 0.867, Sex 2.711 and 0.002, Educational Attainment 0.791 and 0.676, Employment Status 1.531 and 0.117, respectively.

Since the computed significant value for sex is 0.002 which is less than 0.05, therefore the decision is to reject the hypothesis. Therefore, the decision signifies that there is a significant difference between the factors that influence young adults to consume disposable electronic cigarettes when grouped according to sex in terms of social norms.

This implies that male and female vapers have varying differences on why they choose to consume disposable electronic cigarettes in the context of social norms. Social identities depend on social opportunities as individuals examine and categorize people into groups and identity, which can foster and enhance their social network. As a result there is an impact on social norms with the consumption of disposable electronic cigarettes in relation to the construction of social identity.

Table 4.4 Test of Difference between factors that influence young adults to consume disposable electronic cigarettes when grouped according to profile in terms of Knowledge

Profile	Knowledge	Sum of Square	df	Mean Square	f	Sig-Value	Decision	Verbal Interpretation
Age	Between Groups	4.09	14	0.29	0.596	0.861	Accept	Not Significant
	Within Groups	41.67	85	0.49				
	Total	45.76	99					
Sex	Between Groups	4.60	14	0.328	1.379	0.181	Accept	Not Significant
	Within Groups	20.24	85	0.238				
	Total	24.84	99					
Educational Attainment	Between Groups	15.05	14	1.075	1.253	0.254	Accept	Not Significant
	Within Groups	72.91	85	0.858				

	Total	87.96	99					
Employment Status	Between Groups	20.27	14	1.448	1.387	0.177	Accept	Not Significant
	Within Groups	88.73	85	1.044				
	Total	109.00	99					

Table 4.4 determines the test of difference between factors that influence young adults to consume disposable electronic cigarettes when grouped according to profile in terms of knowledge. The F-values and significant value for the following: Age 0.596 and 0.861, Sex 1.379 and 0.181, Educational Attainment 1.253 and 0.254, Employment Status 1.387 and 0.177, respectively.

Since a computed significant value for age, sex, educational attainment and employment status is greater than 0.05 therefore the decision is to accept the hypothesis that there is no significant difference between factors that influence young adults to use disposable electronic cigarettes when grouped according to profile in terms of their knowledge.

As aforementioned, there is no disparity among the demographic profile in regards to knowledge as a factor that influences consumption of disposable electronic cigarettes for the reason that majority of the respondents largely share similar perceptions about it. Majority of them have agreed that they are knowledgeable of the contents inside the product, and that they are aware that disposable electronic cigarettes contain harmful chemicals that can potentially induce the long-term health effects from habitually vaping. Furthermore, a significant portion of the respondents have conformed to the knowledge that disposable electronic cigarettes are promoted as derivative smoking cessation aid.

5. Significant difference in the perception of respondents on health risks of the habitual consumption of disposable e-cigarettes when grouped according to profile

Table 5.1 Test of Difference between the perception of respondents on health risks of the habitual consumption of disposable e-cigarettes when grouped according to profile in terms Physical

Profile	Physical	Sum of Square	df	Mean Square	f	Sig-Value	Decision	Verbal Interpretation
Age	Between Groups	7.97	14	0.57	1.281	0.236	Accept	Not Significant
	Within Groups	37.79	85	0.45				
	Total	45.76	99					
Sex	Between Groups	3.89	14	0.278	1.127	0.347	Accept	Not Significant
	Within Groups	20.95	85	0.246				
	Total	24.84	99					

Educational Attainment	Between Groups	11.73	14	0.838	0.934	0.526	Accept	Not Significant
	Within Groups	76.23	85	0.897				
	Total	87.96	99					
Employment Status	Between Groups	21.04	14	1.503	1.452	0.148	Accept	Not Significant
	Within Groups	87.96	85	1.035				
	Total	109.00	99					

Table 5.1 determines the test of difference between the perception of respondents on health risks of the habitual consumption of disposable e-cigarettes when grouped according to profile in terms of physical. The F-values and significant value for the following: Age 1.281 and 0.236, Sex 1.127 and 0.347 Educational Attainment 0.934 and 0.526, Employment Status 1.452 and 0.148 respectively.

Since the computed significant value for age, sex, educational attainment and the employment status is greater than 0.05 therefore decision is to accept the hypothesis that there is no significant difference between the perception of respondents on health risks of the habitual consumption of disposable electronic cigarettes when grouped according to profile in terms of physical. This implies based on the result of the study that regardless of the profile at any part of the age considered, different sex male or female, no matter what degree they have finished and status in life, the respondents are aware that vaping using disposable electronic cigarettes was not beneficial to their physical state and could develop into potential health risks upon habitual consumption disposable electronic cigarettes.

Table 5.2 Test of Difference between the perception of respondents on health risks of the habitual consumption of disposable e-cigarettes when grouped according to profile in terms Psychological

Profile	Psycho-logical	Sum of Square	df	Mean Square	f	Sig-Value	Decision	Verbal Interpretation
Age	Between Groups	6.99	13	0.54	1.193	0.298	Accept	Not Significant
	Within Groups	38.77	86	0.45				
	Total	45.76	99					
Sex	Between Groups	3.03	13	0.233	0.92	0.536	Accept	Not Significant
	Within Groups	21.81	86	0.254				
	Total	24.84	99					
Educational Attainment	Between Groups	10.48	13	0.806	0.895	0.562	Accept	Not Significant

	Within Groups	77.48	86	0.901				
	Total	87.96	99					
Employment Status	Between Groups	15.72	13	1.21	1.115	0.358	Accept	Not Significant
	Within Groups	93.28	86	1.085				
	Total	109.00	99					

Table 5.2 determines the test of difference between perception of respondents on health risks of habitual consumption of disposable e-cigarettes when grouped according to profile in terms of psychological. The F-values and significant value for the following: Age 1.193 and 0.298, Sex 0.92 and 0.536, Educational Attainment 0.895 and 0.562, Employment Status 1.115 and 0.358 respectively.

Since the computed significant value for the age, sex, educational attainment and the employment status is greater than 0.05, therefore the decision is to accept the hypothesis which indicates that there is no significant difference between the perceptions of the respondents on perceived health risks of habitual consumption of disposable electronic cigarettes when they grouped according to profile in terms of the psychological aspect.

This implies that there is no significant difference between the perceptions of respondents on health risks of the habitual consumption of disposable electronic cigarettes because regardless of the demographic profile of the respondents, they have all confirmed that the psychological aspect of consuming disposable electronic cigarettes can attribute to the development of health risks due to their habitual consumption.

Table 5.3 Test of Difference between the perception of respondents on health risks of the habitual consumption of disposable e-cigarettes when grouped according to profile in terms Sociocultural

Profile	Socio-cultural	Sum of Square	df	Mean Square	f	Sig-Value	Decision	Verbal Interpretation
Age	Between Groups	12.71	15	0.85	2.154	0.014	Reject	Significant
	Within Groups	33.05	84	0.39				
	Total	45.76	99					
Sex	Between Groups	5.27	15	0.351	1.508	0.121	Accept	Not Significant
	Within Groups	19.57	84	0.233				
	Total	24.84	99					
Educational Attainment	Between Groups	12.00	15	0.8	0.885	0.583	Accept	Not Significant
	Within Groups	75.95	84	0.904				

	Total	87.96	99					
Employment Status	Between Groups	15.70	15	1.045	0.942	0.522	Accept	Not Significant
	Within Groups	93.30	84	1.111				
	Total	109.00	99					

Table 5.3 determines the test of difference between perception of respondents on health risks of the habitual consumption of disposable e-cigarettes when grouped according to profile in terms sociocultural. The F-values and significant value for the following: Age 2.154 and 0.014, Sex 1.508 and 0.121, Educational Attainment 0.885 and 0.583, Employment Status 0.942 and 0.522 respectively.

Since the computed significant value for age is 0.014 which is less than 0.05, therefore the hypothesis was rejected, which has indicated that there is a significant difference between the perception of respondents on health risks of the habitual consumption of disposable electronic cigarette when grouped according to age in terms of sociocultural.

DISCUSSION

For the first research question, most of the young adults' ages are between 24-26 and 21-23 respectively, as the predominant age range among the respondents of the study. In a recent foreign study, Tattan-Birch (2022) stated that there is an 18% increase of vapers who use disposable electronic cigarette from January 2021 to April 2022, were largely pronounced among young adults as the highest amount of demographic user. In regards to their sex, there are fifty-four (54) male and forty-six (46) female ratio of respondents indicating that the male respondents are marginally higher than the female respondents who have participated in the survey questionnaire. According to Piñeiro et al. (2016), the male respondents reported to have more positive expectancies about electronic cigarettes, including the taste, social facilitation, and energy while the females rated electronic cigarettes higher for the weight control and psychological relief benefits.

Furthermore, in regards to the educational attainment, a significant proportion of the respondents are classified as undergraduate college students with a fifty-three (53) in total. In regards to employment status, majority of the respondents are students with over forty-seven (47) partakers. In regards to the weekly allowances of the young adult respondents, the frequent weekly allowance is 2,200php and above, which indicates that majority of the respondents have the financial capacity to purchase disposable electronic cigarette. In regards to the monthly salary, the most frequent response for the monthly salary is not applicable; stating the respondents earn an irregular sum or none.

For the second research question, in terms of the interests about disposable electronic cigarettes, the respondents reflected on how it is mainly because of curiosity as to why they started to habitually vape. With an overall weighted mean of 2.82, it demonstrates to have an impact to respondents. Several studies reported that curiously is another reason

why people use e-cigarettes. As a recent invention, e-cigarettes have been of interest to people who want to try something new and unconventional (Bearss, 2018). In regards to the desirable attribute of disposable electronic cigarettes, it is thought to be desirable for consumption due to the absence of unpleasant smell. Based on the overall weighted mean of 3.38 there is impact in relation to the attractive features of the device. According to Mugharbil et al. (2023), The positive sensory experience, such as pleasant smell, various flavors and taste were most appealing aspects of disposable e-cigarettes.

However, in regards to the social norms surrounding disposable electronic cigarette, the respondents did not agree that they were influenced to vape by others, irrespective if they were closely associated with them. With an overall weighted mean of a 2.30, it is apparent this has lesser impact among respondents. In a contrasting study, Chao et al. (2019) says that individuals' behaviors are influenced by their peers and other groups to which they are associated in social network or establishment of personal social identity.

Interestingly, in regards to factors that affect young adults to use disposable electronic cigarettes in terms of knowledge, a significant portion of the respondents are aware of the constituents that are inside of the disposable electronic cigarette along with potential health risks that they might develop due to habitual vaping. This is demonstrated based in overall weighted mean of 3.27, which signifies that there is impact to the respondents.

For the third research question, in terms of the physical aspect, the respondents largely disagreed in feeling any manifestation of dryness and itchiness in their throats after vaping. The overall weighted mean of 2.12 indicates that physical has less impact in the perceived health risks of habitual consumption of disposable electronic cigarette. In a contrasting study, however, exposure to chemical concentrations found in disposable e-cigarettes has potentially been shown to stimulate irritation to the throat, as stated in a study of National Library of Medicine (2018). Also, Eissenberg (2020) states that vaping exposes the lungs to various chemicals with irritating potency in the vaporizing process.

In terms of the psychological aspect, majority of the respondents habitually consuming disposable electronic cigarettes do it to relieve themselves from the emotional tension or stress. This is based on the overall computed weighted mean of 2.80; designating that there is impact in the psychological aspect that perceives health risks from the habitual consumption of a disposable electronic cigarette. In a 2024 foreign study, a systematic review on adolescents' health perceptions on e-cigarettes scrutinized that most youth perceive vaping as a coping mechanism to manage their stress and anxiety.

Lastly, in terms of sociocultural, the respondents determine that the pattern of habitual consumption of disposable electronic cigarettes is due to both the availability and accessibility in the area. With an overall weighted mean of 2.70, the sociocultural aspect holds impact in perceived health risks as direct consequence of habitual consumption of disposable e-cigarette. Correspondingly, several studies included in the review reported that people use e-cigarettes out of convenience and affordability (Mugharbil, 2023). The convenience is due to the prevalence of product; therefore, it becomes easily accessible

and available in various communities, and the affordability influences the sociocultural aspect by means of unhealthy impulsion to purchasing disposable electronic cigarettes.

For the fourth research question, the difference between factors that influence young adults to use disposable electronic cigarettes when grouped according to profile. In terms of interest, the F-values and significant values were determined through the following: Age 1.465 and 0.138, Sex 1.091 and 0.377, Educational Attainment 0.858 and 0.612, Employment Status with 2.137 and 0.015. According to Mullins (2022), the promotion for electronic cigarettes purposely target the youth population in commercials by linking vaping with the intriguing ideals, like happiness, friendship and success. They are commonly marketed by stating the advantage of e-cigarettes over normal cigarette.

Meanwhile, in terms of desirable attributes, the F-values and significant value for the following are: Age 1.289 and 0.239, Sex 1.588 and 0.11, Educational Attainment 0.465 and 0.93, Status 0.476 and 0.924 respectively. The sensory experiences of vaping were desirable qualities, such as smell and flavor, are found to be prominent roles to motivate the use of vaping products. As confirmed by similar studies, a major determinant to use electronic cigarette was the provision of pleasant sensory experience (Lee et al., 2017). In terms of social norms, the F-values and significant value for the following: Age 0.588 and 0.867, Sex 2.711 and 0.002, Educational Attainment 0.791 and 0.676, Employment Status 1.531 and 0.117 respectively. Blank and Hoek (2022) supplement the impact of social norms with disposable electronic cigarettes in relation to construction of social identity. Social identities depend on social opportunities as individuals examine and categorize people into groups and identify among groups which foster and enhance self-esteem. Youth compare groups to refine or strengthen affiliation and social identity.

In terms of knowledge, the F-values and significant value for the following: Age 0.596 and 0.861, Sex 1.379 and 0.181, Educational Attainment 1.253 and 0.254, Employment Employment Status 1.387 and 0.177 respectively. In a similar study, Popova (2020) has explained that it is partly because disposable e-cigarette manufacturers are not always transparent in which chemicals or drugs have been incorporated within the product. The lack of transparency in ingredients resulted in young adults becoming susceptible to habitual consumption of disposable electronic cigarette due to misconstrued knowledge.

The test of difference between the perception of respondents on health risks of the habitual consumption of disposable e-cigarettes when grouped according to profile in terms physical. The F-values and significant value for the following: Age 1.281 and 0.236, Sex 1.127 and 0.347, Educational Attainment 0.934 and 0.526, Employment Status 1.452 and 0.148 respectively. Maryam & Barthelemy (2020) states that there is a worrying increase among young adults who perceive e-cigarettes as a new and safe trend and part of healthy life. Thus, leading to the negligent acts with electronic cigarette which can be adapted up by young adults without careful health-related considerations.

In terms psychological, the F-values and significant value for the following: Age 1.193 and 0.298, Sex 0.92 and 0.536, Educational Attainment 0.895 and 0.562, Employment Status 1.115 and 0.358 respectively. Cabral (2022) stated in his current study that aims to

examine rates of cigarette smoking, e-cigarette use, dual usage, and cannabis vaping during the early months of the pandemic. In the study, it determines the influence of intentions to use electronic cigarette in relieving psychological distress (i.e., anxiety, depression, loneliness or stress) on vaping behaviors among young adults respondents.

In terms of the sociocultural aspect, the F-values and significant value for the following: Age 2.154 and 0.014, Sex 1.508 and 0.121, Educational Attainment 0.885 and 0.583, Employment Status 0.942 and 0.522 respectively. Societal interpretations transformed vaping into an accessory lifestyle choice, influenced by consumerism culture and trend. Furthermore, social representations of electronic cigarettes impact its acceptability with varying perceptions; highlighting the role of social influence in shaping attitudes towards vaping, and the prevalence based on its availability and accessibility (Davidson, 2023).

Conclusions

The young adults, aged 21-26, are predominant age ranges in consumers of disposable electronic cigarette, with relatively higher usage in male respondents. Most of the young adult vapers are undergraduate college students with a weekly allowance of 2,200php above; signifying they have the financial capacity to buy disposable electronic cigarette. Moreover, the initial interest of consuming disposable electronic cigarettes was primarily due to curiosity and desirable attribute of absence of any unpleasant smell encouraged further inclination to habitually consume the product. The young adults autonomously decided to engage in the habit of vaping, thus they have not been influenced by others. Accordingly, they were also aware of the contents that are inside disposable electronic cigarette, along with health risks they can possibly develop. Despite their awareness, however, they still continued to habitually consume the disposable electronic cigarettes.

The physical health risks were not apparent among the respondents in regards to their habitual consumption, but they found it significantly effective in relieving psychological demands, such as emotional tension or stress. Furthermore, due to the availability and accessibility of disposable electronic cigarettes in their communities, this has greatly motivated the young adult respondents in persisting with their habitual pattern of vaping.

A significant difference is confirmed between factors that influence young adults to use disposable electronic cigarettes when grouped according to status in terms of interest. Although most of the respondents started using disposable electronic cigarettes out of curiosity and became a habit, the employment status of respondents matters in interest because it varies how a student or employee consumes disposable electronic cigarettes.

Also, there is a significant difference between factors that influence young adults to use disposable electronic cigarette when grouped according to sex in terms of social norms. Males consider more positive expectancies about electronic cigarettes, including taste, social facilitation or energy, while females for the weight control and psychological relief. There is a significant difference between the perception of respondents on health risks of the habitual consumption of disposable e-cigarettes when grouped according to age in

terms of sociocultural due to differences in attitudes and awareness towards vaping, and because of the accessibility and availability of disposable e-cigarette in community.

Dissemination of health teachings, particularly the reorientation of chemical properties of disposable electronic cigarette and the health consequence of habitual consumption, adaptation of healthy diversions and partaking in health-oriented programs, are effective interventions which corresponds to the Health Promotion Model of Pender (1982) as a holistic guide for the young adults to avoid developing health risk due to habitual vaping.

Recommendations

After the analysis of findings and formulation of a conclusion, the following suggestions are presented to enhance the research in terms of data, design, and implementation.

1. In accordance to Health Promotion Model, autonomous health-seeking practices should be integrated into the health teaching. Young adults should be oriented of the chemical properties inside disposable electronic cigarettes, and the imminent health consequences of habitual consumption. Additionally, they should consider engagement in healthier diversion or activity which do not impose detrimental risk to their health, and should be encouraged to partake in health-oriented programs.

2. The government should intensify their effort to strictly regulate the manufacture of disposable electronic cigarettes and their legal distribution to the market, so that observation of toxic chemical property is strictly assessed with vigilant inspection.

3. For the manufacturers of disposable electronic cigarettes, product advertisement should incorporate precautionary health measures and avoid promotion of vague health claim. Transparency of its content, especially chemicals, is recommended.

4. For the community, proposals of seminars and programs about the prevalence of disposable electronic cigarettes among the Filipino youth should be conducted to raise awareness on the growing health concern due to various influential factors that encourage habitual consumption of the device and its perceived health risks.

5. Due to the study's limitations, future researchers should expand their study on a larger scope in terms of sample size, research locale, and the age inclusion in an effort to maximize the results based on varied size and age range of respondents.

6. Future researchers can compare the impact of disposable electronic cigarettes to other variants under Electronic Nicotine Delivery System (ENDS) to determine its level of influence to a targeted demographic relative to other e-cigarette variants.

7. Provided that this study is centralized on disposable electronic cigarette, this can serve as a foundation for future studies which corresponds to the subject or it can be a baseline for the comparative studies that can utilize the data for comparison.

Compliance with Ethical Standards

In accordance with the ethical consideration of the study, the researchers have adhered to appropriate standards of conduct and principle in order to safeguard the well-being of the respondents and ensure the integrity of research. Moreover, the researchers did not force respondents to be surveyed as they were informed beforehand that participation is voluntary and that withdrawal was readily a choice should they decide not to participate.

The necessary document and permission letter were secured before the initiation of the survey. Confidentiality was ensured, and data were strictly used for academic purposes. The conclusion derived from the results is assured to be clear of any data manipulation.

Acknowledgments

This study, in form and function, is a collaborative product of diligence and knowledge made possible through the participation and contribution of the significant persons. The researchers would like to sincerely express their profound gratitude and utmost respect for the assistance and guidance of the following:

To our thesis lecturer, Prof. Kevin de Vera, for his invaluable lessons through the course of the research. His consultation and discussion were helpful in the making of the study.

To our thesis adviser, Prof. Michael John Agustin, for his encouraging presence during our defenses and the consistent guidance he generously shown throughout the journey.

To the panelists of the title defense, Prof. Cabale, Dr. Obod, Prof. Picardal, and Dean Reyes for their constructive criticism and insightful remark as improvement to our paper.

To the panelists of the final defense, Prof. Cabale, Dr. Abtuh, Prof. De Vera and Dean Reyes for the meticulous evaluation and subsequently, for the approval of our research.

To the validators, Mr. Borbon, Mrs. Imson, Mrs. Dugay and Ms. Cariño, for the expertise given in reviewing the questionnaire and confirming the accuracy of research instrument

To the statistician, Mrs. Nena Dimailig, for her significant contribution in mathematical expertise and statistical analysis that are integral to the quantitative design of our study.

To the Sangguniang Kabataan (SK) officers from Barangay West Kamias for extending their services and resources to help us identify potential respondents in the community.

To the respondents of the study who voluntarily participated and cooperated to bring this research into success. Without them, this study would not at all have been possible.

Once more, to Doctor Marilyn Obod, the head of the Research and Development and Publication Office of World Citi Colleges, for the profound support and opportunities that are given to us to enhance the quality of our paper and to be presented in a conference.

Lastly, to the researchers, Jewel Cruz, Austin Florida, Alrei Panganiban, Kristine San Pedro and to our former member, Mikaella Pagatpatan. In its essence, this research is a culminative effort forged in commitment and in cooperation; consistently upheld by the researchers since the proposal of topic. The coordination and devotion are the driving forces that withstood all obstacles and have successfully led the research to completion.

ABSTRACT

The purpose of this study was to investigate the factors contributing to breakfast skipping among senior high school students and assess its impact on their academic performance. The study aimed to identify the reasons behind breakfast skipping and understand how it affects students' overall academic achievement. The researchers employed a quantitative research approach, involving a sample of 105 senior high school students. The sample was divided into seven sections, with 15 participants in each section. Data was collected through structured questionnaires that assessed breakfast consumption patterns, reasons for skipping breakfast, and academic performance indicators. The questionnaires were given to the participants during their regular school hours. A checklist survey or questionnaire was used to gather data on the factors and impact associated with skipping breakfast and the students' GPA. Additionally, correlation analysis was used as a statistical tool to analyze the data. The study revealed several factors contributing to breakfast skipping on the academic performance of the students, and it’s not a rare occurrence. And the several impacts of skipping breakfast on academic performance do not make an impact on them. Students who regularly skipped breakfast still gain a good academic performance, meaning they still perform very well. The findings emphasized the importance of breakfast in providing essential nutrients and energy for optimal cognitive function. Having acknowledged the above results, the researchers wish to recommend that further studies be made to find educational institutions that should raise awareness among students, parents, and teachers about the importance of breakfast and its impact on academic performance. This can be achieved through educational campaigns and workshops that promote healthy breakfast habits. Researchers also suggest schools should provide breakfast options for students, ensuring they have access to nutritious meals before starting their classes. And also,

further research is needed to explore specific interventions and strategies that can effectively address breakfast skipping among senior high school students and improve their academic performance.

Keywords: *factors, impact, academic performance, skipping breakfast, quantitative, MSU-Sulu senior high school.*

INTRODUCTION

Education is an important contribution to an individual's access and one of the best processes of a child's life because it allows us to explore, discover, and do things freely, not repeat what previous generations have done. A stress-free life is important and leads to a healthy mind. Healthy means that learners will not fear to explore life, as they have seen someone who is not afraid but is fair in facing the challenges of the present and the future. In the 21st century, there is always race and tuff competition everywhere in the field of education, and students' academics feel pressure and tension in the academic world to survive in so-called competitions because academic achievement is important for future decisions in life. Breakfast is often called 'the most important meal of the day', and for good reason. As the name suggests, breakfast breaks the overnight fasting period. It replenishes your supply of glucose to boost your energy levels and alertness, while also providing other essential nutrients required for good health. Skipping breakfast among Filipino students has several negative effects on the on the rates of overweight and obesity among students. According to SCISPACE, breakfast skipping negatively affects cognitive skills, including memory, concentration, and academic performance. It is also associated with higher levels of fatigue, depression, and lower self-esteem.

Skipping breakfast can have a huge impact on students' academic performance. Hence, having stomach intact or eating while studying serves as a way of learning for others and learning is an important aspect in education as uttered by Sabbaha et. al., (2024) cited by Abdulmajid et. al., (2024), Balla et. al., (2024) Jarak et. al., (2024), Sabbaha et. al., (2024), Basir et. al., (2024), Usman et. al., (2024), and Sakili et. al., (2024). Breakfast is perceived as healthy and even more important than other meals. Students who skipped breakfast during the week had significantly lower academic performance from 32 to 38 points than those who ate breakfast. Research found that with the increase in breakfast consumption, academic performance also increased. Lack of breakfast is associated with a low nutritional condition and therefore leads to low academic performance (Akeredolu and Okafur, 2015).

Breakfast is common among adolescents, but little research has been conducted on the effects of breakfast on school performance. Furthermore, attention problems partly mediated the relationship between breakfast delay and school performance. This large-scale study emphasizes the importance of breakfast as a determining factor for school performance. Some of the reasons for missing breakfast, and the most common reason for missing breakfast, are "no hunger in the morning, sometimes no time to eat." Some

students have experienced headaches, weakness, and difficulty concentrating when they don't get breakfast. Failure to prepare breakfast can be a problem for students 'academic performance, as they can't focus and are constantly distracted in class. However, if we can address skipping breakfast well, it can help improve the performance of students.

Further research is needed to investigate specific mechanisms that affect academic performance by avoiding breakfast. Understanding the reasons why breakfast is avoided and its direct impact on cognitive functions and academic results can help to fill this gap in research. Research gap for the topic. This research aims to provide a comprehensive understanding of the situation at this specific location and could contribute valuable insights for the university and the wider academic community.

Research Questions

This study seeks to answer the following research questions:

1. What are the factors of skipping breakfast among the Grade-11 GAS students in Mindanao State University-Sulu Senior High school?
2. What is the level of academic performance of the grade 11 GAS students'?
3. What is the impact of skipping breakfast to the Grade-11 GAS students' academic performance?
4. Is there a significant relationship of factors of skipping breakfast to the academic performance of GAS grade 11?

RESEARCH METHODOLOGY

Research Locale

This study was conducted at Mindanao State University-Sulu SHS, located at Capitol Site, 7400, Jolo, Sulu. ChEd holds a secondary public school at Mindanao State University-Jolo during the school year 2023-2024. This school comprises a senior high school and offers two tracks, which are academic and technical vocational tracks. Under the Academic Track are the General Academic Strand (GAS) and the Science, Technology, Engineering, and Mathematics Stand (STEM).

Sampling Method

The participants of the study are the general academic strand of Grade 11 students of Mindanao State University-Sulu Senior High School located at Capitol Site, 7400, Jolo, Sulu. The number of participants was 105, with 15 students in each GAS section. The participants will then answer the questionnaires given by the researchers to determine the factors and impact of skipping breakfast.

In this study, the researchers used Purposive Sampling or Judgement sampling to select the participant of the study. According to Crossman (2020), as cited by Jailani et al. (2024), Basir et. al. (2024), Sasapan et. al. (2024), Abdulhari et. al. (2024), Hadjibun

et. al. (2024), and Sabbaha et. al. (2024) Purposive Sampling is a non-probability sample that is selected based on characteristics of a population and the objective of the study.

Research Instrument

Gathering the data, questionnaires were used to determine the factors contributing to skipping breakfast among the senior high school students of Mindanao State University-Sulu. Some questions were taken from the internet, though there were some that were slightly revised and subjected to reading by experts in the field of research who were tasked with stabilizing the content on the basis of clarity, relevance, and purity.

Data Gathering Procedure

The researchers collected data by first obtaining a letter of permission from the Senior High School Department Director of Mindanao State University, Sulu. A letter of permission was also sent to the respondents' class advisers to enable researchers to conduct questionnaires on the subject of skipping breakfast. When the letter was approved, the researcher personally delivered the research instrument and recovered it. The responses of the respondents were collected, verified, and compiled to obtain the original score.

Statistical Techniques

A weighted mean is used to describe the factors affecting the performance, its impact on the students, and their level of academic performance at Mindanao State University-Sulu. While the significant relationship between factors and the impact of skipping breakfast on academic performance is dealt with within correlations.

RESULTS AND DISCUSSION

Table 1 Factors of Skipping Breakfast Among the Grade 11 GAS Students

Statement	Mean	Std. Deviation	Description
1. I don’t like the food choices.	2.46	.734	Yes
2. It’s a habit	2.45	.747	Yes
3. My family skipped breakfast. and so do I.	2.44	.649	Yes
4. Unable to prepare	2.40	.767	Yes
5. I need to lose weight	2.40	.614	Yes
6. Away from family	2.31	.776	Maybe
7. Work pressure	2.30	.831	Maybe

8. No time to have breakfast	2.30	.810	Maybe.
9. I don't feel hungry.	2.29	.717	Maybe
10. I don't like eating early in the Morning.	2.25	.794	Maybe
Grand Mean	2.36		Yes

Legend; 1.00-1.67=No (Disagree), 1.68-2.34=Maybe (Undecided), 2.35-3.00=Yes (Agree)

Table 1 shows the results on the factors contributing to skipping breakfast among the Grade 11 GAS students. It was found out that the Grade 11 GAS students in MSU-Sulu SHS answered yes, which means they agreed on the listed factors of skipping breakfast, as it can be seen in the table that it has a grand mean of 3.26. This indicates that skipping breakfast among the Grade 11 GAS students at MSU-Sulu SHS is not a rare occurrence.

Table 2 Students' Level of Academic Performance

	Mean	Std. Deviation	Description
Academic Performance	86.32	3.9	Very Satisfactory

Note: Did not meet the expectation= 74 and below; Fairly Satisfactory=75-8; Satisfactory = 80-84; Very Satisfactory = 85-89; and Outstanding = 90-100.

As shown in this table, the level of academic performance of grade 11 GAS students garnered a mean of 86.32% with a verbal description of satisfactory. This means that the level of academic performance of grade 11 GAS students at Mindanao State University-Sulu Senior High School is very satisfactory, which signifies that they are not affected by the factors of skipping breakfast.

Table 3 Impact of Skipping Breakfast Among the Grade 11 GAS Students

Statement	Mean	Std.	Description
1.I always feel the lack of concentration during class sessions.	1.79	.829	Maybe
2.I have experienced feeling tired or fatigue in the morning due to skipping breakfast.	1.75	.704	Maybe
3. Lack of class participation lead into my poor performance.	1.74	.797	Maybe
4.Skipping breakfast can affect my academic	1.63	.763	No

performance or ability to learn.			
5. Skipping breakfast can affect my academic performance or ability to learn.	1.62	.671	No
6. Skipping breakfast can have an impact to my brain function and subsequent performance.	1.55	.695	No
7.Skipping breakfast can make an impacts on my performance in exams or tests.	1.55	.671	No
8. I have experienced a decline in my academic performance.	1.55	.650	No
9.I have experienced low energy level during the school I day.	1.55	.604	No
10.I often find myself feeling hungry or distracted during morning classes when I skip breakfast.	1.52	.539	No
Grand Mean	1.47		No

Legend; 1.00-1.67=No (Disagree), 1.68-2.34=Maybe (Undecided), 2.35-3.00=Yes (Agree)

Table 2 shows the perceived impact of skipping breakfast on the academic performance of Grade 11 GAS students. It was found that the grade 11 students perceived that the lists of possible impacts of skipping breakfast on student academic performance were not true to them. The grand mean obtained was 1.47 with a verbal description of no, which means disagree. Pollitt and Mathew (1998) summarized the literature on the impact of breakfast on cognition, finding that no definitive conclusion was justified. However, they found that the data strongly suggests that omitting breakfast interferes with perception and learning, which is more pronounced in nutritionally vulnerable students. But despite skipping breakfast, the students still manage to do very well in their academic performance in school.

Table 4. Relationship of Factors of skipping breakfast to the academic performance of GAS grade 11

Variables	1	2
Factors of Skipping Breakfast	-	
General Average	.273**	-

Note: "p < .05, "p <.01.

A Pearson correlation coefficient was computed to assess the linear relationship between factors of skipping breakfast and the academic performance of the students. The findings revealed that there is a correlation between the two variables, *r (103) =-273**, p = .005*.

Conclusions

Based on the findings of this study, the factors of skipping breakfast showed that the students of MSU-Sulu SHS Grade 11 GAS have said "yes, which means the students agreed about the factors of skipping breakfast. In terms of the level of academic performance among students at MSU-Sulu Senior High School, it was assessed as very satisfactory." This means that there is a great level of satisfaction, even though the student has perceived the factors of skipping breakfast. The impact of skipping breakfast among the students of MSU-Sulu Senior High School Grade 11 GAS has been said “NO” which means the students did not perceive the statements, but the students are still able to gain very satisfactory results in their academic performance. The relationship between factors such as skipping breakfast and students’ academic performance is not related. Based on research findings, there are reasons for skipping breakfast that did not have an impact on the students’ academic performance.

Recommendations

1. Increase awareness and education. It is crucial to raise awareness among students, parents, and educators about the importance of breakfast for academic performance. Conduct workshops, seminars, or informational sessions to educate them about the benefits of a nutritious breakfast and the potential consequences of skipping it.

2. Improve breakfast options: Collaborate with school cafeterias or food service providers to offer a variety of healthy and appealing breakfast options. Ensure that the available choices are nutritious, balanced, and cater to different dietary preferences and restrictions.

3. The school may create a breakfast-friendly environment. Establish a positive and inviting breakfast environment within the school premises.

4. The school may designate a dedicated breakfast area where students can comfortably enjoy their meals. Consider incorporating socialization opportunities, such as breakfast clubs or peer support groups, to encourage regular breakfast consumption.

5. Implement breakfast programs. Develop and implement breakfast programs that provide students with access to a nutritious breakfast, especially for those who may face financial constraints or time limitations at home. These programs can include initiatives such as grab-and-go breakfasts, breakfast in the classroom, or breakfast vouchers.

6: The concerned school may engage with parents and guardians in promoting a healthy breakfast, habits at home. Provide them with resources, such as recipe ideas or meal planning tips, to support them in preparing nutritious breakfasts for their children.

7.The teachers may continuously monitor and evaluate the effectiveness of the implemented interventions. Collect data on breakfast consumption rates, academic performance, and student feedback to assess the impact of the initiatives and identify areas for improvement.

Compliance with Ethical Standards

Researchers have guaranteed that participants in the study will have the freedom to check and respond to the questionnaire provided. Furthermore, the researchers ensure that the questionnaire is readable. and concise.

Acknowledgements

The authors of this study would like to express their thoughtful gratefulness to those who, or are in one way or the others, have colossally contributed to the success of this research exploration.

ABSTRACT

This study investigates the challenges faced by female school administrators in Jolo and the strategies they employ to overcome these obstacles. Using a qualitative research approach, in-depth interviews were conducted with both male and female respondents to gain comprehensive insights into the experiences of female administrators. Thematic analysis was used to identify key challenges, including gender bias, balancing professional and personal responsibilities, safety concerns, lack of professional development opportunities, and cultural expectations. Despite these hurdles, the study reveals relevant and strategic approaches of these administrators. By recognizing and addressing gender bias, engaging in continuous personal development, and employing transformational leadership styles, female administrators able to improve their leadership effectiveness and advance their careers. Their data-driven decision-making, supportive interactions with colleagues, encouraging relationships with students, and cooperative community engagement further highlight their positive impact in Jolo. The findings explicitly revealed the need for an equitable work environment that supports the growth and success of female leaders, specifically enhancing the effectiveness of educational institutions.

Keywords: *Female leadership, educational administration, challenges faced by female administrators, coping strategies, empowerment.*

INTRODUCTION

The world has seen the transformation and advancement in the new millennium. The efficacy and quality of education are correlated with the ability to adapt to transformative processes. Women in the province of Sulu, who make up half of the population and are primarily responsible for raising the next generation, are now recognized to have excellent employment because of their education, which also serves as a necessary condition for them to adjust to these changes. In the study of Rehbock, S. K. (2020), he illustrates the unique demands of leadership in academia, a context which is currently characterized by changing conditions and developments such as new public management and heightened international competition. Academics have to fulfill multiple demands and are increasingly expected to be effective leaders.

Women participate more in production and development when they have higher education. It is believed that the future of women leaders seems to be bright due to higher female educational attainment (Maheshwari 2023). Furthermore, to educate women and men equally, more work needs to be put into establishing professional attitudes in both the social and educational spheres.

Sulu is a crucial area where the government works to make improvements in employment. When it comes to employment involvement, women are less advantaged than men. In the Republic of the Philippines, women's participation in the labor force appeared to decline in proportion to their level of education. This statement brought to light the limited prospects available to women in our nation, particularly considering that the Philippines is a developing nation with a need for more employment opportunities.

When it comes to educational leadership, women are often stereotyped as being unequal to what men can do. Even though equal chances encompass opportunities presented in various educational institutions in Sulu nowadays, the number of women in line for leadership still needs to grow. In the present time, there are growing criticisms faced by women leaders due to gender inequality. Some of these problems were manifested to degrade women's capacity by citing that women are less capable compared to men.

Rauhaus, B. M., & Carr, I. A. S. (2019) perceived that gender differences in faculty responsibilities and experiences may impact individuals' professional experiences related to job satisfaction, advancement, and promotion. In the discussion of traditional beliefs, there are many individuals who are thinking that men should always the ones to lead. In the study of Alameeri, K., Alshurideh, M., & Al Kurdi, B. (2023) wherein articulated that the importance of paying attention to the factors affecting women in leadership and management in order to empower them and decrease gender discrimination in the workspace. Recent research has highlighted the evolving pathways for women in leadership. A study by Sandberg and Thomas (2020) emphasizes that despite increasing opportunities, women still encounter unique challenges that shape their leadership trajectories. The concept of the "glass cliff," where women are more likely to be appointed to precarious leadership positions during times of crisis, has been further examined by Ryan et al. (2016).

Stemming the structure of school administration, there are female teachers-in-charge and deans in Sulu who are grappling with criticisms. The belief of average performance indebted to every female leader is a manifestation of gender discrimination. However, there are no complexities in female leaders' administration skills, but the fact that setbacks of putting women in high-rank positions still need to be corrected most. But the ideas of Wadesango, N., & Karima, R. (2016), it is said that Women should accept change and perceive taking hardship positions as a way of climbing to the upper echelons of educational educators.

Even while women and men have collaborated throughout history and at all societal levels, their contributions have only sometimes been equally acknowledged, and women have consistently been viewed as secondary to males. Women who hold low-status employment are accepted as usual. They have, however, found it extremely challenging to begin working in high-status positions or to advance in their careers. All too often, women who aspire to hold senior administrative posts face the phenomenon known as the "glass ceiling." As a result, it can be said that with administrative positions that require greater responsibilities, women are found in limited numbers (Çelikten, 2004; Ergün, 1996; Shum & Cheng, 1997). Successful female administrators often employ a range of strategies to overcome barriers. A study by Brown, Kelan, and Humbert (2018) suggests that developing resilience and adaptive leadership skills are crucial for navigating gender biases. Moreover, engaging in continuous learning and seeking out leadership training programs are identified as effective strategies (McKinsey & Company, 2020).

It is noteworthy to observe the numerous distinctions between the duties of men and women despite the advancements made by women employed in various sectors (Acuner & Sallan, 1993). Any legal issues do not impede the appointment or advancement of women. Despite having equal educational backgrounds, women are afforded different chances than men.

Keating and Safir (2019) argue that authenticity in leadership allows women to build trust and credibility with their teams. By being transparent, empathetic, and consistent in their actions, female leaders can foster a positive and inclusive organizational culture. This approach not only enhances team performance but also supports the personal and professional growth of the leader and her team members.

Teaching has historically been a vocation that is suited for women (Apple, 1994). Nonetheless, women are underrepresented in higher jobs in both high schools and colleges (Blackmore, 1998). This indicates that men are more likely to work in administration (Streitmatter, 1999). The proportion of female administrators in the Ministry of Education has yet to reach 25%, even though 48% of Filipino primary and secondary school teachers are female.

Due to the literature above, the researchers aimed to investigate the level of challenges of female administrators in Jolo, Sulu, Philippines.

According to research, women who become school administrators frequently have different career paths that are marked by a variety of entry points, career breaks, and nonlinear routes. These trajectories may be impacted by elements including obligations to one's family, harassment at work, and a lack of mentorship opportunities (Brunner et al., 2019). Examining the professional trajectories of female school administrators in Sulu can shed light on how cultural norms and professional goals interact.

Obstacles that face female school administrators include discrimination based on gender, problems juggling work and personal obligations, and restricted access to opportunities for professional growth. Research indicates that policies encouraging gender equity, mentorship programs, and supportive work settings are crucial in tackling these issues (Brunner et al., 2019; Fitzgerald & Gunn, 2020). Targeted interventions to assist the professional growth and advancement of female school administrators in Sulu can be informed by an understanding of the unique challenges they encounter.

Despite experiencing difficulties, female administrators of schools show resiliency and use a variety of leadership techniques to overcome obstacles and encourage constructive change within their organizations. Studies highlight the significance of promoting gender-sensitive policies, creating networks of support, and cultivating inclusive leadership practices (Karp & Helou, 2018). Analyzing the leadership techniques used by Sulu's female school administrators can provide valuable insights into how to get past obstacles and promote institutional change.

Research by Eargly and Carli (2007) emphasized that gender stereotypes can influence perceptions of leadership effectiveness, with traits traditionally associated with leadership often aligning more closely with male characteristics. This explains that the male genes are more coherent with the leadership standard. A study by the World Economic Forum (2023) highlights that despite progress, unconscious biases still significantly impact women's career advancements. The research emphasizes the need for greater awareness and proactive measures to create representative power structures within organizations (World Economic Forum).

Within this educational setting, the amplification of the perspectives and experiences of female school administrators has been influential in shaping educational leadership and gender equality in Sulu. Yeakey, C. C., Johnston, G. S., & Adkison, J. A. (1986) explicitly stated that interest in the study of race/ethnic minorities and women in public school administration had evolved over the past decade. This study draws attention to how crucial it is to acknowledge and resolve the particular difficulties faced by women in leadership positions in the field of education.

In addition, gender disparities in educational leadership are widely documented, understanding how women become underrepresented in senior administrative positions. There are studies indicating that societal norms, cultural expectations, and institutional biases contribute to these disparities, limiting women's access to leadership roles (Shakeshaft, 2019). In Sulu, where traditional gender roles may influence perceptions of women's leadership capabilities, understanding these dynamics is crucial.

Hence, women who become school administrators frequently face different career breaks and nonlinear routes in leadership. These trajectories may be impacted by obligations to one's family, harassment at work, and a lack of mentorship opportunities (Brunner et al., 2019). Examining the professional trajectories of female school administrators in Sulu can shed light on how cultural norms and professional goals interact. Hence, Harrison, M. G., King, R. B., & Hocson, S. M. G. (n.d.) sought out that the ability of school heads to foster a school ethos supportive of counselling is essential in enabling counsellors to leverage the multifunctional nature of their work, become embedded and centrally positioned in the school community, and enhance their effectiveness. Doing so can enable counselling to be more culturally accessible to young people. It is why female leaders are also in need to be backboned by moral and trainings supports.

Based on the review-related literature and studies presented, the researchers aims to quantify the experiences and challenges encountered by female school administrators in Jolo, Sulu, focusing on their perspectives and struggles in the institution.

Research Questions

The study seeks to investigate the challenges faced by female school administrators in Jolo. Hence, it addresses the following research questions:

1. What specific challenges do female school administrators encounter in their professional roles within the educational institutions of Jolo?

2. How do these female administrators overcome the challenges they face in their leadership roles?

3. In what ways does gender influence their leadership styles, decision-making processes, and interactions with colleagues, students, and the community?

METHODOLOGY

This study used a qualitative research design, specifically a phenomenological approach, to explore and understand the lived experiences, leadership journeys, and challenges faced by female school administrators in Jolo. This approach is chosen to provide in-depth insights into the subjective experiences and personal narratives of the participants.

Purposive sampling is adopted to select participants who are female school administrators in Jolo. There were three secondary schools surveyed: Hadji Butu School of Arts and Trades, Sulu College of Technology Inc., and Southern Mindanao Islamic Institute as access participants of the study. There were 10 female leaders and 10 male leaders from said school obtained as final sample size for the possible themes or insights from the interviews.

Hence, the study used in-depth Interview such as semi-structured in-depth interviews for the participants. This method is used to have flexibility in probing deeper into participants' responses and uncovering rich, detailed narratives about their leadership journeys and challenges. The following is the interview guide that is part in developing a questionnaire. These ensure that key topics are covered while allowing participants the freedom to express their thoughts and experiences. Key topics included such as:

- Background and career trajectory
- Leadership style and philosophy
- Key milestones and achievements
- Challenges faced in their roles
- Strategies for overcoming challenges
- Support systems and networks

The participants were given 60-90 minutes to answer the formulated questionnaire. Their responses were audio-recorded and transcribed verbatim for accurate data analysis. Key themes were identified and essentially coded through participants' experiences and perspectives on their leadership journeys and challenges. These themes were refined and validated through iterative analysis.

Prior the conduct of the survey, the participants were provided with detailed information about the study's purpose, procedures, risks, and benefits. Written informed consent were provided before the commencement of the interviews. Hence, the researchers ensured that Participants' confidentiality will be strictly maintained. Pseudonyms were used in all transcripts, reports, and publications in order to protect participants' identities.

While Participation in the study were considered voluntarily. To ensure credibility, member checking was conducted where participants will be asked to review and verify the accuracy of the transcribed interviews and preliminary findings. Peer debriefing sessions will be conducted to enhance the dependability and confirmability of the findings. By following this methodology, the study aims to provide a comprehensive understanding of the leadership journeys and challenges faced by female school administrators in Jolo, contributing valuable insights to the field of educational leadership.

RESULTS

DISCUSSION

This chapter explained and discussed the tabular presentation of non-numerical data gathered from the respondents. The researchers elaborated on the different categories of female administrators' concern about their leadership challenges and perspectives.

Table 1

Presented the Female Administrators' Challenges and Perspectives			
Research Question no. 1	**Codes**	**Categories**	**Themes**
1. What specific challenges do female school administrators encounter in their professional roles within the educational institutions of Jolo?	A1 . Gender Bias and Discrimination	Assumption of competence	Challenges Faced by Female School Administrators in Jolo
	A2- Balancing Professional and Personal Responsibilities	Managing of household tasks and caregiving roles	
	A3- Safety and Security Concerns	Impact of ongoing conflicts and threats	

	A4- Lack of Professional Development Opportunities	Hindered growth and advancement	
	A5-Inadequate support from the educational system	Insufficient mentoring	
	A6- Cultural and Societal Expectation	Pressure from traditional gender roles	

Table 1 elicits the responds of the respondents on the emerging theme, Challenges Faced by Female Administrators in Jolo. Both Male and Female respondents stated that Female administrators often faced significant gender bias and discrimination, leading to an assumption of their incompetence. This bias manifests in various ways, including undermining their authority, questioning their decisions more frequently than those of male counterparts, and an overall lack of respect for their capabilities. This creates an environment where women must work harder to prove their competence and gain the same level of recognition as men.

Based on the statements of the respondents on the code Balancing Professional and Personal Responsibilities**,** Female administrators in Jolo struggle with balancing their professional duties with household tasks and caregiving roles. Cultural expectations had placed the burden of managing home responsibilities primarily on women. This is known factor that increased stress and burnout of Female leaders. Hence, the respondents stated that dual responsibility impacts Female ability to fully commit to their administrative roles, often resulting in compromised professional performance.

Hence, in terms of Safety and Security Concerns, the ongoing conflicts and threats in Jolo present significant safety and security concerns for female administrators. These concerns are not only about their personal safety but also about the safety of their students and staff. The constant worry about security issues makes it challenging for them to perform their duties effectively and without distraction.

With further Lack of Professional Development Opportunities there is a notable lack of professional development opportunities tailored to the needs of female administrators. This lack of targeted training and development programs hinders their growth and advancement within the educational system. Without access to proper professional development, female administrators are less able to innovate and lead effectively.

In terms of Inadequate Support from the Educational System, the respondents stated that the educational system in Jolo provides fewer leadership training for school administrators. There is a lack of mentoring, networking opportunities with other female leaders, and institutional policies that promote gender equality.

The code Cultural and Societal Expectations traditional gender roles and societal expectations place additional pressure on female administrators. These cultural norms

create resistance to women in leadership positions, both within educational institutions and in the broader community. Such expectations limit their ability to assert their authority and implement changes, challenging their professional legitimacy.

Table 2

Presented the Female Administrators in overcoming challenges			
Research Question no.2	**Codes**	**Categories**	**Themes**
2. How do these female administrators overcome the challenges they face in their leadership roles?	A1- Identification of Challenges	Gender Bias and Stereotypes	Overcoming challenges and enhancing leadership effectiveness
	A2- Strategies to overcome challenges	Personal Development	
	A3- Impact of Strategies on Leadership Effectiveness	Career advancement	

The table 2 presents a detailed and structured examination of how female administrators overcome leadership challenges. Based on the result, recognizing gender bias and stereotyping role are the first step towards addressing these issues. By identifying these barriers, female administrators will be better equipped to develop targeted strategies to counteract the biases and advocate for a more equitable work environment.

According to the respondents stated that engaging in personal development is a proactive approach that female administrators take to empower themselves. This includes participating in leadership training, team-building activities, and continuous learning. These efforts result in increased confidence, improved skill sets, and greater adaptability, which are essential for overcoming challenges and excelling in leadership roles.

The strategies employed by female administrators lead to significant career advancement. By investing in personal development and effectively managing challenges, these leaders enhance their decision-making abilities, achieve higher job satisfaction, and experience professional growth. This career advancement not only benefits the individual administrators but also serves as an inspiration and a role model for other women aspiring to leadership positions.

Hence the theme of overcoming challenges and enhancing leadership effectiveness encapsulates the successful journey of female administrators. Through a combination of self-awareness, personal development, and strategic action, these leaders transform potential obstacles into opportunities for growth and improvement. Their interest to

acquire and surmount these challenges demonstrates adaptability and commitment to continuous improvement.

Moreover, the ability to identify and acknowledge gender bias and stereotypes is a crucial positive step. It empowers female administrators to confront these issues head-on, raising awareness and driving change within their organizations. This proactive stance fosters a more inclusive and supportive work environment.

The emphasis on personal development reflects a positive and forward-thinking approach. Female administrators who prioritize their growth and development are better prepared to handle leadership challenges. This proactive mindset leads to enhanced leadership capabilities, greater resilience, and a more robust professional presence.

The positive impact of these strategies is evident in the career progression of female administrators. By overcoming gender-related challenges through personal development and strategic action, these leaders achieve significant career milestones. This success not only validates their efforts but also paves the way for future generations of female leaders, contributing to a more diverse and equitable leadership landscape.

Table 3

Research Question no.3	Codes	Categories	Themes
3. In what ways does gender influence their leadership styles, decision-making processes, and interactions with colleagues, students, and the community?	Leadership Style	Transformational	Gender Influences in Leadership and Organizational Behavior
	Decision-Making	Data driven	
	Interaction with Colleagues	Supportive	
	Interaction with Students	Encouraging	
	Interaction with Community	Cooperative	

The table presents a comprehensive analysis of how gender influences leadership styles, decision-making processes, and interactions with colleagues, students, and the community. The research question at the center of this analysis seeks to understand the nuanced ways in which gender impacts these various dimensions of leadership and organizational behavior.

The code Transformational under the category of leadership style indicates a trend where gender plays a significant role in the adoption of transformational leadership. According to the respondents Female Administrators in Jolo were Transformational leaders and were known for their ability to inspire and motivate their teams to achieve beyond expectations. This style involves fostering an environment of collaboration, innovation, and personal development. Hence the researchers found out that female leaders are more likely to exhibit transformational qualities, emphasizing interpersonal relationships, empowerment, and team cohesion. This aligns with the broader understanding that transformational leadership is associated with positive organizational outcomes, including increased employee satisfaction and performance.

In terms of decision-making, the respondents stated that Female Administrators are Data driven. This highlights an aspect for using empirical evidence and data to guide decisions. This approach ensures that decisions are objective and based on concrete information rather than subjective judgment. Gender can influence this propensity, with some studies indicating that female leaders may rely more on collaborative and data-informed decision-making processes. This can be attributed to a tendency to seek comprehensive perspectives and minimize biases, thus enhancing the accuracy and effectiveness of decisions.

The supportive nature of interactions with colleagues, as indicated by the code "Supportive," underscores the role of gender in fostering a positive work environment. Supportive leaders provide encouragement, assistance, and backing to their colleagues, promoting teamwork and collaboration. Female leaders are often associated with a more supportive and empathetic interaction style, which can lead to increased morale, stronger relationships, and improved overall team performance. This supportive approach helps create a culture of mutual respect and trust, essential for organizational success.

The code "Encouraging" within the category of interaction with students reflects a leadership approach that emphasizes motivation and upliftment. Leaders who adopt an encouraging style focus on helping students achieve their potential and fostering a positive learning environment. Gender influences this interaction style, with female leaders often being more nurturing and encouraging. This approach can significantly impact students' academic and personal growth, leading to better educational outcomes and a more supportive school culture.

The cooperative nature of interactions with the community, as captured by the code "Cooperative," highlights the importance of gender in community engagement. Cooperative leaders work collaboratively with community members and stakeholders, building partnerships and engaging in mutual support for common goals. Female leaders are frequently seen as more community-oriented and cooperative, focusing on relationship-building and collective action. This cooperative approach can enhance community relations, foster trust, and drive successful community initiatives.

Conclusions

The study on female school administrators in Jolo reveals a complex landscape of challenges and strategies that shape their professional experiences. The findings indicate that these administrators face significant hurdles, including gender bias, balancing professional and personal responsibilities, safety concerns, lack of professional development opportunities, inadequate support from the educational system, and cultural expectations. These challenges create an environment where female leaders must work harder to prove their competence and gain recognition, often leading to increased stress and burnout.

Despite these obstacles, the resilience and adaptability of female administrators in Jolo are evident in their proactive approaches to overcoming challenges. Recognizing and addressing gender bias is a crucial first step that empowers them to advocate for a more equitable work environment. Engaging in personal development through continuous learning, leadership training, and team-building activities enhances their skills, confidence, and adaptability. These efforts not only help them manage challenges effectively but also contribute to their professional growth and career advancement.

The study highlights the importance of transformational leadership among female administrators, characterized by their ability to inspire and motivate teams, foster collaboration, and emphasize personal development. This leadership style is associated with positive organizational outcomes, including increased employee satisfaction and performance. Additionally, the data-driven decision-making approach adopted by female administrators ensures that decisions are objective and based on empirical evidence, enhancing their effectiveness and minimizing biases.

The study concluded that supportive interactions with colleagues and encouraging relationships with students further underscore the positive impact of female leadership. By fostering a collaborative and empathetic work environment, female administrators build strong teams and improve overall morale. Their cooperative approach to community engagement strengthens partnerships and drives successful initiatives, benefiting both the school and the broader community.

Therefore, the study underscores the significant contributions of female school administrators in Jolo despite the challenges they face. Their commitment to personal development, strategic action, and transformational leadership not only advances their careers but also sets a positive example for future generations of female leaders. By addressing gender bias, prioritizing professional growth, and fostering supportive relationships, these administrators create a more inclusive and effective educational environment. Their success serves as an inspiration and a catalyst for change, promoting gender equity and driving organizational success in the field of education.

Recommendations

To address the challenges faced by female administrators in Jolo, it is essential to implement comprehensive anti-discrimination policies that eliminate gender bias and discrimination within educational institutions. Introducing work-life balance programs, such as flexible working hours, parental leave, and on-site childcare facilities, can support female administrators in managing their dual responsibilities.

Enhancing safety and security protocols, in collaboration with local law enforcement and community leaders, is crucial for ensuring their safety and mitigating threats. Expanding professional development opportunities through targeted workshops, seminars, and courses can enhance leadership skills and career growth. Creating mentorship and networking programs will provide female administrators with valuable support and knowledge sharing. Promoting gender equality and conducting awareness campaigns to challenge traditional gender roles and societal expectations are necessary to foster a more inclusive environment. Cultivating a supportive institutional culture that values diversity and provides equal opportunities for advancement will further empower female leaders.

Encouraging transformational leadership training will help them inspire and motivate their teams effectively. Implementing data-driven decision-making practices, with access to data analytics tools and training, ensures that decisions are based on empirical evidence and objective analysis. Strengthening community and stakeholder engagement by promoting cooperative and collaborative interactions will build strong partnerships and enhance community relations. These recommendations collectively aim to create a more equitable, supportive, and effective educational environment for female administrators in Jolo.

Compliance with Ethical Standards

This study, titled "Female Administrators in Jolo: Their Leadership Journey and Challenges," has been reviewed and scrutinized by the School Research Team in Hadji Butu School of Arts and Trades. These researchers are trained and mentored by Ugnayan ng Pahinungod, University of the Philippines-Mindanao. All procedures involving the participants adhered to the ethical standards and its policies. Informed consent was obtained from all participants, who were fully informed about the nature, purpose, and potential risks of the research. Participation was voluntary, with the option to withdraw at any time without penalty. The researchers ensured that confidentiality was maintained by anonymizing data and and could be accessed only by the research team. The authors declare no conflict of interest. Thus, we thank the participants for their valuable contributions and acknowledge the support from to Hadji Butu School of Arts and Trades.

Acknowledgements

This research, titled "Female Administrators in Jolo: Their Leadership Journey and Challenges," is a work of solicited effort, guidance, and encouragement from numerous individuals from our institution. Indeed, we are sincerely grateful for their invaluable support in the process of writing this research.

We would like to extend our heartfelt gratitude to our Director General in MBHTE-BARMM,DG Marjuni M. Maddi for the motivation and inspiration indebted on us.

We are also immensely thankful to the female administrators in Jolo who generously shared their experiences, insights, and challenges. Their stories and perspectives are the heart of this study. May your courage in leadership continue to inspire many.

Our sincere thanks go to Hadji Butu School of Arts and Trades for providing the necessary resources in conducting this research. The support from the administration in providing the means to craft and obtain the data needed is immeasurable.

To our Colleagues and friends who helped shape this research to be successful. Your words of encouragement and thoughtful discussions have greatly enriched this research process.

A special thank you to my family, whose unconditional love, patience, and understanding have been our pillar of strength throughout this endeavor.

Thank you all for being a part of this journey.

Declaration of Interest

As proud Tausug of the province of Sulu, we, the researchers of the study are immensely pleased to present our research topic entitled, "Female School Administrators in Jolo: Their Leadership Journey and Challenges." Our interest in this study is rooted in our strong commitment to acquiring an understanding of the particular educational leadership of female administrators in the Municipality of Jolo who are facing work and cultural challenges.

Furthermore, our primary goal is to explore the experiences of female school administrators in Jolo. Jolo is a known municipality in Sulu for its rich cultural heritage with its highly competitive working environment. Hence, this study aims to shed light on the leadership journey of these women, the obstacles they encounter, and the strategies they employ to overcome these challenges.

Our motivation for this research stems from a strong belief in the transformative power of education and its critical role in effective leadership. We believe that leadership chooses no gender and it always plays a driving force to have educational success. From the global perspective, female administrators often face distinct challenges compared to their male counterparts, including gender biases, cultural expectations, and security concerns.

This research aligns with our broader academic interests in gender studies, educational leadership, and provincial development. As it reflects gender equality and empowering women in leadership positions, therefore, we tend to highlight interventions and practices that would help regress the specific challenges of female administrators in Jolo.

Thus, our dedication to this research is driven by a genuine interest in understanding and addressing the unique challenges faced by female school administrators in Jolo. At the same time, we are committed to conducting this study with the highest standards of academic rigour and ethical integrity, ensuring that the voices and experiences of these women are accurately and respectfully represented.

ABSTRACT

This qualitative study examined the perceptions and communication frequency patterns of Filipino Generation Z speakers regarding the slang phrase "forda ferson." Drawing insights from twenty key informants in Gingoog City, the research explored the frequency, contextual usage, associated meanings, and communicative contributions of the slang. Utilizing content analysis, the study revealed that "forda ferson" facilitated informal and playful communication, fostering camaraderie among speakers. While it effectively described actions and behaviors within social groups, its usage also posed comprehensibility challenges for those outside the immediate social and generational context. The findings underscored the dynamic nature of language evolution, indicating that the popularity of slang terms like "forda ferson" might decline over time. This research highlighted the interplay between language and social interaction, showcasing how slang emerged to fulfill specific communicative needs while reflecting broader societal shifts.

Keywords: *communication patterns, Generation Z, language evolution, slang, social interaction*

INTRODUCTION

Change is inevitable for both language and humans. Humans adapt to the current era they are living in and strive to keep up with present trends. Language, in turn, undergoes similar transformations. The inevitable change in language is manifested over time, highlighting that language continuously evolves with new sets of words being introduced to society (McWhorter, 2016). One intriguing aspect of language evolution is the emergence of slang words and phrases, which serve as markers of identity and belonging within particular communities (Alawiyah et al., 2023). This phenomenon is evident in the Philippines, a country where the creation and use of slang words, phrases, and expressions are prolific. The emergence of newly invented words has become an integral part of daily interactions and communication among Filipinos, particularly among the younger population.

Filipinos are known for their inventiveness and creativity in crafting new slang and expressions. The slangs created by Filipinos address their communication needs. The Filipino slang phrase "forda ferson" (or "For the Person" in its original form) exemplifies this linguistic creativity, demonstrating how Filipinos playfully develop new expressions to convey nuanced meanings (De Leon, 2022). This phrase, along with other slangs, illustrates how communication has evolved. The manner in which Filipinos communicate today differs from the past, with a noticeable shift in preferences for conveying ideas and information, particularly among younger generations.

For instance, the phrase “forda shopping ang ferson” describes a person who enjoys spending money on material things or who has just made a purchase. The combination of words in this phrase reflects the individual's status and attitude towards material possessions. This expression not only highlights personal preferences but also reflects the lifestyle, habits, and social group of the individual. It shows how language succinctly expresses nuances of identity and attitudes.

The phrase "forda ferson" originated on the video-sharing platform TikTok, thanks to content creator Chrishanna Luisa Olavidez Austria. In one of her videos, Austria, appearing flushed, greeted her followers with “mga ferson” and called herself a "drunk girl." Just before ending the video, she noticed her reflection and commented, "forda red girl." This video went viral and received 21 million views (De Leon, 2022). Subsequently, the phrase gained widespread popularity and usage among Filipino speakers, especially the younger generation. Its popularity has become a part of contemporary Filipino communication, showcasing its impact on modern linguistic practices.

The changes in language and communication reflect our technology-driven society. The phrase “forda ferson,” which gained popularity on TikTok, demonstrates how social media platforms facilitate the rapid spread of newly invented words and expressions. Technology provides an avenue for innovative linguistic developments and their dissemination (Jebaselvi et al., 2023). If these terms are accepted and deemed relevant for communication, their spread from social media platforms to everyday usage becomes more prevalent.

Slang, characterized by its informality and distinctive use in communication, unites individuals within the same community who share cultural experiences. Generation Z, born between 1997 and 2012, exemplifies this trend. Exposed to today's technological advancements, Generation Z is at the forefront of creating and using new slang terms and expressions to convey their thoughts, ideas, and opinions (Almeida et al., 2020). Despite its informal nature, slang contributes significantly to the richness of language and communication (Mahapatra et al., 2022).

Furthermore, the use of slang terms and expressions reflects the interconnectedness of the society in which they are invented and used. The Philippines is known for its linguistic creativity, with people frequently altering language to signify specific actions or concepts. This dynamic linguistic expression involves adding or removing prefixes and suffixes, rearranging syllables, reversing words, and blending terms from different languages (Limos, 2019). For example, the slang "yorme" is an alteration of "mayor." This linguistic creativity dates back to the 19th century. In an interview with CNN Philippines, Jay-ar Igno, a Linguistics professor at the University of the Philippines, referred to this method of creating words as 'tadbalik.' Roy Cagalingan from the Komisyon sa Wikang Filipino noted that revolutionaries historically used this technique to conceal their identities. For instance, writer Marcelo H. del Pilar adopted the pseudonym "Plaridel" by rearranging the letters in his surname (De Guzman, 2017). Today, people enjoy inventing and using new words, often modifying existing words to make them their own and employing unconventional grammar or pronunciation to make them catchier.

The evolution of language, as evidenced by contemporary slang usage, demonstrates that language is not passive. The continuous addition of new words testifies to language's fluidity and adaptability to meet its users' needs (Knetemann, 2020). The way people communicated in the past differs from the present, with each era having its unique linguistic characteristics. In today's generation, where Filipino slang terms are popular, these expressions will eventually be documented in history, highlighting their contribution to communication and their role as a linguistic playground for experimentation with new words and expressions.

The adaptability of language enables individuals to use it as a tool for expression. Slang fosters a sense of community and belonging, allowing individuals to connect more deeply. The gradual shift in expression provides individuals with a sense of place, using newly invented words and expressions to build connections with others. Although some may take language for granted due to our innate ability to communicate, there is a need for a deeper understanding of language's profound impact on our daily lives.

Research Objectives

This study aimed to analyze Filipino Gen Z speaker's perceptions and frequency of usage patterns in communication focusing on the Filipino slang phrase "forda ferson". The implications and derived connotations of the phrase will be in the context of Filipino youth. This also sought to understand how language evolves and adapts to meet the

needs of its speakers. Furthermore, the paper intended to show how these slang terms can contribute to the daily communication of the Filipino Gen Z speakers.

Research Questions

The researchers developed four primary questions that were presented to the key informants aiming to address the demands of the study:

1. How frequently do the participants use the phrase “forda ferson”?
2. In what context is “forda ferson” typically employed?
3. What meanings or connotations are associated with the phrase “forda ferson”?
4. What is the implication of the phrase “forda ferson” to communication?

METHODOLOGY

This study utilized a qualitative research design to gather in-depth insights from twenty key participants, focusing on their personal perspectives regarding the topic.

To achieve the study's objectives, a psycholinguistic content analysis was employed. This method involves systematically categorizing and analyzing the responses of key informants to extract meaningful insights. Specifically, survey questionnaires featuring the phrase "forda ferson" were distributed to Filipino Generation Z speakers. These responses were coded for frequency of usage, contextual application, associated meanings or connotations, and their contribution to communication.

To ensure a representative sample of Generation Z speakers, the questionnaires were distributed electronically to individuals who were best suited to provide relevant answers. Researchers verified the compatibility of the informants' responses with the questionnaire items before accepting them. The sample comprised twenty individuals from Gingoog City. This study underscores the importance of eliciting authentic responses from participants, free from external influences or the opinions of others.

RESULTS AND DISCUSSION

Research Question 1: How frequently do the participants use the phrase “forda ferson”?

Table 1.
Frequency of participants’ utilization of the phrase “forda ferson”

The frequency of usage of the phrase "forda ferson" among participants reveals a diverse pattern, indicating varying levels of integration of this phrase into their everyday lexicon. The data from Table 1 categorizes participants' usage into several distinct frequencies, which can be broadly grouped for analytical clarity.

Key Informants	Frequency of Use
R1, R14, R17	Rarely Used
R2, R3	Frequently Used
R4, R20	Never Used
R5, R12	Not Often
R6, R15	Seldom
R7	Couple of Times
R8	No Longer Used
R9, R10, R16	Occasionally
R11	Almost Everyday
R13	Daily
R18	Often Used
R19	Sometimes

A significant portion of participants, specifically those identified as R1, R14, R17, R5, R12, R6, R15, and R7, fall into the category of rare usage. This group, comprising 40% of the total respondents, reports using the phrase rarely, not often, or seldom. This suggests that while the phrase is known to them, it does not feature prominently in their regular communication.

Conversely, a smaller subset of participants, R2, R3, R11, R13, and R18, which constitutes 25% of the respondents, report frequent usage. This group includes those who use the phrase almost every day or daily, indicating that for them, "forda ferson" is a significant part of their daily vocabulary. The occasional users, including R9, R10, R16, and R19, represent 20% of the participants. These respondents use the phrase sporadically, which may imply contextual or situational usage rather than a habitual one. The data also shows that a minority of participants, specifically R4, R20, and R8, who make up 15% of the sample, never use the phrase or have ceased to use it altogether. This could reflect a variety of factors, such as personal preference, cultural shifts, or the phrase falling out of favor or relevance in their social circles. As noted by Fishman (1991), language usage patterns are often indicative of broader social dynamics and can reflect underlying cultural trends and shifts.

Overall, the distribution of frequency usage indicates that "forda ferson" is not uniformly used among the participants. The majority of respondents either rarely or occasionally use the phrase, suggesting it holds niche rather than widespread significance within the group. The presence of a subset of frequent users highlights that while the phrase may not be universally prevalent, it retains strong relevance for a particular segment of the participants. This pattern of usage could provide insights into social or linguistic trends within the group, indicating areas where the phrase retains cultural importance and areas where it is diminishing in relevance. As Labov (2001) posits, the dynamic nature of language and the different ways in which linguistic elements permeate individual communication practices are reflective of the adaptability and evolution of language in response to social contexts.

In conclusion, the varying frequency of "forda ferson" usage among the participants underscores the dynamic and context-dependent nature of linguistic

practices. This variability not only highlights individual differences in language use but also points to broader cultural and social factors that influence how and why certain phrases gain or lose prominence within a community.

Research Question 2: In what context is “forda ferson” typically employed?

Table 2.
Context of “forda ferson” utilization

Key Informants	Context of Use
R1, R3, R6, R9, R11, R13, R15	Describing or Referring to Someone
R2, R4, R10, R16	Informal Context
R5	Teasing a Person
R7, R8, R17, R18, R19	Conversations with Friends
R12	Expression of oneself
R14, R20	Highlighting a Gesture or Interest

The phrase "forda ferson" is employed in a variety of contexts, reflecting its versatility and the nuanced ways it integrates into different communicative scenarios among the participants. Analyzing the contexts of use as reported in Table 2 provides insights into the socio-linguistic dynamics and the cultural nuances underpinning this phrase.

A substantial proportion of participants, specifically R1, R3, R6, R9, R11, R13, and R15, use "forda ferson" when describing or referring to someone. This context suggests that the phrase is a descriptor, potentially highlighting characteristics, behaviors, or identities in a familiar or colloquial manner. The usage here aligns with common linguistic practices where certain phrases become shorthand for complex descriptions or shared understandings within a community (Eckert, 2012).

Another notable context for "forda ferson" is its use in informal settings, as indicated by R2, R4, R10, and R16. This grouping underscores the phrase's role in casual, everyday interactions, where formality is relaxed, and conversational norms are more flexible. Informal contexts often allow for greater linguistic creativity and the incorporation of colloquial expressions, which can enhance relatability and social bonding (Coupland, 2014).

Participants R5, R7, R8, R17, R18, and R19 employ "forda ferson" in conversations with friends or for teasing a person. This indicates that the phrase functions as a social tool to create in-group cohesion and shared humor. Such usage is common in peer group interactions, where language plays a crucial role in reinforcing social ties and mutual understanding (Meyerhoff, 2018). The teasing aspect, specifically noted by R5, further illustrates the playful and intimate nature of the phrase, suggesting it is used in environments where social bonds are strong, and mutual teasing is a form of affection or camaraderie.

R12 uses "forda ferson" for self-expression, indicating a personal and perhaps introspective application of the phrase. This context points to the flexibility of "forda ferson" in capturing individual identity or sentiment, aligning with the idea that language is a powerful tool for personal expression and the articulation of one's self-concept (Holmes, 2013).

Lastly, R14 and R20 use "forda ferson" to highlight a gesture or interest. This context implies a more action-oriented or demonstrative usage, where the phrase underscores specific behaviors or focal points in interaction. Highlighting gestures or interests suggests a performative aspect, where language is used to draw attention and convey significance (Kendon, 2004).

Overall, the diverse contexts in which "forda ferson" is used illustrate its multifaceted role in communication among the participants. The phrase's adaptability to describe people, function in informal and friendly interactions, serve as a teasing mechanism, facilitate self-expression, and highlight gestures or interests underscores its linguistic and social utility. The varied applications of "forda ferson" reflect its embeddedness in the socio-cultural fabric of the group, demonstrating how language evolves and adapts to meet the communicative needs of its users.

Research Question 3: What meanings or connotations are associated with the phrase “forda ferson”?

Table 3.

Meanings and connotations associated with the phrase “forda ferson”

Key Informants	Meanings and Connotations
R1, R19	Highlighting or Pointing out about a Person
R2, R11	Indirect Reference
R3	Classifying a Type of Person
R4	Originated from the phrase “for the person”
R5	Pointing out the Obvious or Complimenting
R6	Non-serious Alternative Reference
R7, R13	Referring to themselves or others
R8	Literal Meaning only
R9	Lessens Intimidation and Prevents Offense
R10	Describing a Feeling or Situation
R12, R14, R15	Expressing Interest
R16	Teasing and Joking
R17, R18, R20	Describing an Action

The meanings and connotations of the phrase "forda ferson" among participants demonstrate its rich semantic diversity and contextual flexibility. The data from the key informants, as shown in the table, provide a nuanced understanding of how this phrase operates within different communicative frameworks. Firstly, R1 and R19 use "forda ferson" to highlight or point out a person, indicating that the phrase serves as a tool for

drawing attention to specific individuals. This usage aligns with the general linguistic function of deictic expressions, which are used to point out or specify entities within a given context (Levinson, 2004). This deictic use underscores the phrase's role in social interactions where identifying and focusing on individuals is necessary.

R2 and R11 employ "forda ferson" as an indirect reference. This suggests a pragmatic function where the phrase is used to allude to someone without direct mention, perhaps to maintain politeness or subtlety. Indirect references are common in communication as they allow speakers to navigate social sensitivities and preserve face (Brown & Levinson, 1987).For R3, "forda ferson" classifies a type of person, indicating that the phrase has a categorical function. This connotation implies that "forda ferson" can be used to group individuals based on shared characteristics, contributing to the construction of social categories and identities (Agha, 2007).

R4 notes that the phrase originated from "for the person," highlighting its etymological roots. Understanding the origin of colloquial phrases is crucial as it provides insights into their initial meaning and subsequent semantic shifts (Tagliamonte, 2016). R5 uses "forda ferson" to point out the obvious or to compliment, indicating its dual role in emphasizing evident traits or actions and in expressing positive social evaluations. This usage aligns with the communicative function of compliments as social lubricants that enhance interpersonal relationships (Holmes, 1988).

R6 perceives "forda ferson" as a non-serious alternative reference, suggesting a playful or informal usage. This aligns with the concept of linguistic play, where language is used creatively and humorously to foster social bonding (Crystal, 1998). R7 and R13 use the phrase to refer to themselves or others, indicating a flexible personal reference. This flexibility in reference suggests the phrase's adaptability in various interactional contexts, enhancing its utility in everyday conversation (Goffman, 1981).

R8 applies a literal meaning to "forda ferson," indicating a straightforward interpretation without additional connotations. Literal usage can reflect the foundational understanding of the phrase before it acquires more nuanced meanings (Gibbs, 1994). R9 mentions that the phrase lessens intimidation and prevents offense, highlighting its mitigating function in communication. This usage is crucial in maintaining harmony and reducing potential conflicts in social interactions (Mcleod, 2023). R10 uses "forda ferson" to describe a feeling or situation, indicating its metaphorical extension beyond referring to people. Metaphorical language allows for more expressive and nuanced communication (Lakoff & Johnson, 1980).

R12, R14, and R15 employ the phrase to express interest, showcasing its role in indicating curiosity or engagement with a topic or person. Expressing interest is a key component of active and empathetic listening in communication (Rogers & Farson, 1987). R16 uses the phrase for teasing and joking, emphasizing its playful and humorous connotation. This usage aligns with the social function of humor in creating rapport and relieving tension (Hay, 2000). Finally, R17, R18, and R20 use "forda ferson" to describe an action, indicating its descriptive function in narrating or explaining behaviors.

Descriptive language is essential for effective storytelling and conveying detailed information (Tannen, 1989).

In summary, the diverse meanings and connotations of "forda ferson" among participants illustrate its multifunctional role in communication. Its applications range from direct reference and classification to playful teasing and metaphorical description, highlighting its semantic richness and adaptability within various social contexts.

Research Question 4: What is the implication of the phrase “forda ferson” to communication?

Table 4.
Implication of the phrase “forda ferson” to communication

Key Informants	Communication Implications
R1, R6, R16	Lightens Conversation
R2, R18	Sense of Camaraderie and Belonging
R3, R7, R8, R14, R17	Fun, Enjoyable, and Humorous Communication
R4, R10, R15	Enhances Communication
R5	Adds Spice, Emphasis and Character
R9	Prevents Misunderstanding and Intimidation
R11, R20	Causes Confusion and Communication Barrier
R12	Self-identification
R13	Good for Informal Conversations
R19	Makes Communication Casual

The phrase “forda ferson” carries significant implications for communication, influencing various aspects of interaction among the participants. The data from Table 4 provides a detailed overview of these implications, highlighting the multifaceted role the phrase plays in shaping communicative dynamics.

One of the primary implications, as noted by R1, R6, and R16, is that “forda ferson” lightens conversation. This aligns with the broader concept of linguistic strategies that reduce conversational tension and foster a more relaxed and congenial atmosphere (Norrick, 1993). By incorporating humor and light-heartedness, the phrase helps to ease social interactions and make them more enjoyable. Additionally, R2 and R18 indicate that the phrase fosters a sense of camaraderie and belonging. This suggests that “forda ferson” functions as a social glue, reinforcing group identity and cohesion. Shared linguistic practices, such as using specific phrases, are crucial in creating and maintaining social bonds within a community (Eckert, 2012). The sense of belonging facilitated by the phrase underscores its role in social integration and solidarity.

For R3, R7, R8, R14, and R17, “forda ferson” makes communication fun, enjoyable, and humorous. This indicates that the phrase adds an element of playfulness to interactions, which can enhance the overall communicative experience. Humor and enjoyment in communication are essential for building rapport and positive relationships

(Hay, 2000). The playful use of “forda ferson” likely contributes to a more vibrant and engaging conversational dynamic. R4, R10, and R15 highlight that the phrase enhances communication. This enhancement could be due to the phrase’s ability to convey nuanced meanings and add expressive depth to interactions. Enhanced communication through such phrases helps in articulating thoughts more effectively and enriches the interactional content (Gumperz, 1982).

R5 mentions that “forda ferson” adds spice, emphasis, and character to communication. This suggests that the phrase serves as a linguistic tool to emphasize certain points and make interactions more vivid and memorable. The use of distinctive phrases can inject personality and energy into conversations, making them more engaging and impactful (Crystal, 1998). R9 notes that the phrase prevents misunderstanding and intimidation. This implies that “forda ferson” can function as a mitigative device, softening potentially harsh statements and reducing the risk of miscommunication. Mitigative language strategies are vital in maintaining politeness and preventing conflicts in interactions (Brown & Levinson, 1987).

However, R11 and R20 observe that the phrase can cause confusion and act as a communication barrier. This indicates that not all participants may be familiar with or understand the phrase, leading to potential misinterpretations. The introduction of colloquial or context-specific language can sometimes hinder clear communication, especially if the interlocutors do not share the same linguistic background (Giles & Coupland, 1991). R12 points out that “forda ferson” aids in self-identification, suggesting that the phrase can be used to express personal identity or affiliation. Language is a powerful tool for self-expression, and specific phrases can serve as markers of identity and group membership (Holmes, 2013).

R13 finds the phrase well-suited for informal conversations, indicating its appropriateness in casual and relaxed settings. Informal language is characterized by its flexibility and creativity, and phrases like “forda ferson” enhance the informal communicative style (Coupland, 2014). Finally, R19 asserts that the phrase makes communication casual. This reinforces the idea that “forda ferson” contributes to a laid-back and informal conversational tone, which can be more accessible and less intimidating for participants. Casual communication often fosters openness and spontaneity, facilitating smoother and more dynamic interactions (Tannen, 1989).

In conclusion, the phrase “forda ferson” plays a significant role in communication among the participants, with implications ranging from lightening conversations and fostering camaraderie to enhancing communication and preventing misunderstandings. However, it also has the potential to cause confusion if not universally understood. These diverse implications underscore the complexity and multifaceted nature of linguistic expressions in social interactions.

Conclusions

The Filipino slang "forda ferson" provides substantial insights into its usage, social functions, and implications for language evolution and adaptation. Primarily employed in informal settings, this slang facilitates casual, playful communication among friends and close acquaintances, enabling individuals to express themselves freely without the constraints of formality. It functions not only as a linguistic tool but also as a social mechanism that enhances connections and fosters a sense of camaraderie among speakers.

Additionally, "forda ferson" is often used to describe actions, behaviors, and characteristics, either of oneself or others. This indicates that the slang provides an efficient way to share information about personal traits and actions within conversational contexts. Furthermore, it introduces a tone of playfulness and humor, contributing to more engaging and enjoyable interactions. This social function underscores its role in strengthening interpersonal bonds and creating a friendly atmosphere during communication.

However, the use of "forda ferson" is not without challenges. While it facilitates communication within certain social groups, it can lead to misunderstandings or misinterpretations among individuals unfamiliar with its meaning. This highlights a broader issue in language evolution: the balance between innovation and comprehensibility. As new terms and slang emerge, they can create generational or social divides, posing challenges for those outside the immediate social and generational group.

The findings reflect the dynamic nature of language. The varied frequency of informants using "forda ferson", ranging from occasional to seldom, indicates that the slang, once at its peak on social media, is gradually waning in popularity. This trend aligns with the natural life cycle of language, where terms may rise to prominence rapidly and then decline as language users shift their preferences. The fact that some individuals are aware of the slang but do not use it themselves further illustrates individual differences in adopting linguistic trends, influenced by personal communication needs and preferences.

Overall, "forda ferson" exemplifies how language evolves and adapts within social contexts. Slang terms emerge to fulfill specific communicative needs, reflecting the dynamic interplay between language and social interaction. While these terms can enhance communication within groups, they also highlight the challenges of maintaining mutual understanding across different social and generational boundaries. Ultimately, the evolution and adaptation of language are continuous processes shaped by the changing needs and preferences of its users.

Recommendations

The findings of this study on the Filipino slang "forda ferson" offer valuable insights into its usage and social functions. However, to advance our understanding of its implications for language evolution and adaptation, further research is recommended.

Future studies should aim to enhance depth by utilizing larger and more diverse samples to capture a broader spectrum of perspectives and usage patterns. This could involve investigating different age groups, social backgrounds, and regional contexts to identify variations and commonalities in the application of "forda ferson".

Moreover, researchers could adopt a longitudinal approach to observe how the usage and popularity of the slang evolve over time, providing a comprehensive understanding of its life cycle within linguistic trends. Examining the influence of digital media and cultural shifts on the dissemination and decline of slang terms could also yield valuable insights into societal changes.

In cases where the current findings suggest intriguing or unexpected outcomes, further research is essential to validate these results and explore underlying mechanisms. Such studies could delve into the cognitive and social processes that facilitate the adoption and diffusion of slang, thereby contributing to a more nuanced comprehension of language dynamics in contemporary society. This multifaceted approach will not only enrich scholarly discourse but also offer practical implications for understanding language evolution and adaptation in diverse cultural contexts.

Compliance with Ethical Standards

Prior to their participation, informed consent was diligently obtained to ensure voluntary engagement in the study. Additionally, stringent measures were implemented to guarantee the anonymity of informants, thereby fostering an environment conducive to open and uninhibited idea exchange. Participants were also informed of the study's objectives and purposes, ensuring transparency throughout the research process.

The well-being of participants was conscientiously safeguarded to prevent any conflicts of interest during the study. This approach promoted integrity and facilitated unbiased data collection, which is essential for rigorous and valid analysis. There was a meticulous avoidance of bias in the interpretation of findings, and results were exclusively utilized for research purposes, adhering strictly to scholarly standards.

Acknowledgements

The researchers extend sincere gratitude and appreciation to the following individuals and groups:

Firstly, to our research adviser, Mr. John Louie Guimaras, for his invaluable guidance, assistance, insightful comments, constructive suggestions, and provisions that significantly contributed to the completion and accomplishment of this study.

To the Gen Z speakers who generously participated in our study, we extend our heartfelt thanks. Their contributions were indispensable; despite busy schedules, they dedicated their time to share insights that greatly enriched our research.

We are deeply grateful to our parents, friends, and loved ones whose unwavering encouragement and continuous support were pivotal to the success of this research endeavor. Their support bolstered our efforts and inspired us throughout the process.

Furthermore, we extend thanks to all individuals who directly or indirectly assisted us in conducting this study. Each contribution, whether large or small, played a role in our research journey.

Above all, we express gratitude to our heavenly Father for granting us the wisdom, knowledge, and insight necessary to complete this study. His guidance and mercy were foundational to our ability to navigate challenges and accomplish our academic pursuits.

GULAYAN SA BAKURAN PROGRAM IN APLAYA NATIONAL HIGH SCHOOL-ANNEX, SANTA ROSA CITY: BASIS FOR ENTREPRENEURIAL PROGRAM

Flaviana Elises De Jesus, LPT, MAED

Technology and Livelihood Education Department
Aplaya National High School Annex, Santa Rosa City, Laguna
Philippines

https://doi.org/10.5281/zenodo.11780403

ABSTRACT

This study investigates the reconfiguration of the annual activities of the Department of Education (DepEd) in response to the public health emergency brought by COVID-19, specifically focusing on the 2020 Brigada Eskwela and Oplan Balik Eskwela as clarified in DepEd Order No. 53, s. 2020. The research employs a qualitative design, utilizing interviews and document analysis to explore the adaptation strategies of DepEd in ensuring the health, safety, and well-being of learners, teachers, and personnel while supporting the provision of learning opportunities through multiple delivery modalities. One significant initiative, Gulayan sa Tahanan (Urban Vegetable Gardening at Home), is highlighted as part of the Brigada Eskwela and School-Family-Community Partnership. This program promotes sustainable food supply at homes, engaging learners in gardening activities that enhance their understanding of Science, Home Economics, Health, and other learning areas, while raising awareness about the importance of health and food security. Additionally, Gulayan sa Tahanan fosters economic productivity by teaching entrepreneurial skills, as learners and families can sell excess produce to generate income. The analysis reveals that the initiative not only addresses food security but also minimizes household expenses and provides a practical model for small-scale food production, thereby contributing to family and community resilience during the COVID-19 crisis. Overall, the study underscores the multifaceted benefits of integrating urban gardening into educational activities, highlighting its role in promoting health, education, and economic stability in times of crisis.

INTRODUCTION

The Aplaya National High School-Annex, as one of the schools in the Division of Santa Rosa City, has actively participated in the implementation of the "Gulayan sa Bakuran Program," as mandated by Division Memorandum 330, s.2020, titled "Implementation of Gulayan sa Bakuran Project." This initiative emphasizes that "Gulayan sa Bakuran: Container and Backyard Vegetable Gardening" is a productive activity for teaching and non-teaching personnel, learners, and their families. Its primary aim is to advocate for and aid in expanding food adequacy levels during the pandemic. The project is designed to achieve three objectives: developing health awareness through gardening during the coronavirus pandemic, encouraging personnel, school heads, teachers, students, and their families to plant vegetables for food consumption, and fostering an appreciation for gardening and its importance to daily life.

Despite the project's intentions, there was a lack of clarity in the guidelines provided, leading Aplaya National High School to adapt the implementation by modifying the "Gulayan sa Paaralan" procedures to fit the context of home environments. This adaptation involved activities such as vegetable gardening, utilization of garden produce, and the creation of seed banks or nurseries. This initiative aims to extend learning tasks for students and teachers while instilling the value of gardening. Over time, the "Gulayan sa Bakuran" program can help students learn from the process of growing and caring for plants.

The vegetable gardening activities initially conducted at school are now practiced at home through the "Gulayan sa Bakuran" or "Tahanan" as part of the Technology Livelihood Education (TLE) subject. During the pandemic, students, teachers, administrators, and non-teaching staff used their backyards, empty lots, or small pots to plant vegetables and fruits, providing a source of food supply during this time of crisis. Additionally, gardening has served as a productive and enjoyable leisure activity.

The researchers of this study are directly involved in the program as educators, specifically implementing the "Gulayan sa Bakuran: Container and Backyard Vegetables Gardening Program" as TLE teachers at Aplaya National High School-Annex in the City Schools Division of Santa Rosa. They have observed that the program is timely, given its objective of advocating for and aiding in the expansion of home and community food adequacy levels during the pandemic.

The project begins with an online launch and orientation after being cascaded by SDO personnel and school heads to the focal persons, teachers, and parents. After the launch and orientation, participants prepare their land or garden and seedlings for planting at home. The project's success is ensured through strong monitoring and evaluation of its implementation.

Teachers, students, parents, and non-teaching personnel are encouraged to plant easily grown vegetables at home, such as onions, sweet potatoes, ginger, garlic, radish, cassava, river water spinach, jute leaves, mustard, snow cabbage, malabar spinach,

camote leaves, gabi, tomatoes, eggplants, lady's fingers, bitter gourd, and chili peppers. These vegetables provide fresh, edible portions of herbaceous plants—roots, stems, leaves, flowers, fruits, or seeds—that participants can use for food consumption.Sufficient knowledge about plant growth is necessary for successful gardening. For root crops, a wide area with full sunlight and well-drained soil is essential, along with organic fertilizer and proper soil preparation. Leafy vegetables require moist, nutrient-rich soil with continuous irrigation, while fruits need fertile, sandy loam soil. Moreover, the "Gulayan sa Tahanan" program not only teaches learners how to plant and gain profit from gardening but also fosters young entrepreneurship, benefiting students from all socioeconomic backgrounds by nurturing unconventional talents and skills. This entrepreneurial activity creates opportunities, ensures social justice, instills confidence, and stimulates the economy, creating income opportunities for the participants and others.

Given these observations, the researchers believe there is a need to assess the "Gulayan sa Bakuran" program at Aplaya National High School-Annex, Division of Santa Rosa City, as a basis for an entrepreneurial program. This assessment will involve the participating teaching and non-teaching personnel and students, aiming to initiate vegetable gardens in their homes as a sustainable food basket for daily vegetable consumption.

Research Questions

The study aims to assess the Gulayan sa Bakuran in Aplaya National High School - Annex, Division of Santa Rosa City: Basis for Entrepreneurial Program

Specifically, it seeks to answer the following questions:

1. What is the profile of the respondents in terms of:
    - 1.1. Teaching/ Non-Teaching
        - 1.1.1. Age
        - 1.1.2. Sex
        - 1.1.3 Educational Attainment
        - 1.1.4 Length of Service
    - 1.2. Students
        - 1.2.1 Age
        - 1.2.2 Sex
    - 1.3 Parents
        - 1.3.1 Age
        - 1.3.2 Sex
        - 1.3.3 Educational Attainment
        - 1.3.4 Employment Status
2. What do respondents grow in their backyard in terms of:
    - 2.1 Root Crops
    - 2.2 Leafy Vegetable
    - 2.3 Fruits
3. How do plants grow in terms of:
    - 3.1 Root crops
    - 3.2 Leafy Vegetables
    - 3.3 Fruits

4. How do the respondents consume the backyard produce in terms of:
    4.1 Root crops
    4.2 Leafy Vegetables
    4.3 Fruits
5. What marketing plan may be developed as Basis for Entrepreneurial Program based on the findings?

METHODOLOGY

Research Design

The researcher used descriptive-quantitative research. This assumed that phenomena should be studied objectively with the goal of obtaining single truth, or at least reality within known probabilities, with an emphasis on measurement, numerical data and experiments. Specifically, this study made use of the descriptive method of research with the questionnaire as the primary instrument. A descriptive research involved collecting data to test hypotheses or to answer questions concerning the status of the subject of the study. A descriptive study determines and reports the way things are. Descriptive research is scientific research that describes events, phenomena or fact systematically dealing with a certain area or population. Specifically, it will use a descriptive-survey research design in which investigators administer a survey to a sample or to the entire population of people to describe the attitudes, opinions, behaviors, or characteristics of the population (Creswell, 2002).

In this study, the use of descriptive-survey research was employed in Aplaya National High School -Annex in the Division of Santa Rosa City for SY 2020-2021. The focus of this research was to assess the Gulayan sa Bakuran in Aplaya National High School -Annex, Division of Santa Rosa City as the basis for entrepreneurial program.

Participants of the Study

This study covered the teachers and non-teaching staff and parents and students involved in the implementation of the Gulayan sa Bakuran program. For the students, a stratified random sampling technique was used in the study since the researcher selected randomly from strata that divide the population covering Grade 7. The respondents were selected using the sampling technique so that the researcher may fairly generalize the results back to the population from which they were chosen. A total of 61 teaching staff of Aplaya National High School - Annex participated in the Gulayan sa Bakuran based on the school record. Further, all the 10 non-teaching staff were also included.

Table 1

Distribution of student participants by Section in Grade 7

Sections	Students	
	Population	Sample
Archimedes	56	10
Aristotle	56	10
Copernicus	55	10
Euclid	56	10
Kepler	56	10
Pasteur	55	10
Faraday	69	15
Descartes	72	15
Newton	66	12
Kelvin	72	15
Galileo	74	15
Pascal	71	15
Maxwell	72	15
Edison	71	15
Mendel	72	15
Ptolemy	73	14
Total	**1,046**	**206**

Table 1 shows the distribution of student participants in Grade 7 in terms of their respective sections. Using Slovin's formula with 95% confidence level and 5% margin of error, the total population of 1,046 students who were involved in Gulayan sa Bakuran had a sample size of 206. The online distance learning sections Archimedes, Aristotle, Copernicus, Euclid, Kepler, and Pasteur had 10 participants each while the modular distance learning sections had 15 student-respondents for each except for Newton with 12 and Ptolemy 14 student-participants. As stated, the sample size employed a stratified random sampling technique so that it will enable the researcher to obtain a sample population that best represents the entire population being studied and making sure that each subgroup of interest was represented.

Instrumentation

The key instrument used in the study is a survey questionnaire. A questionnaire is a set of orderly arranged questions, carefully prepared to answer the specific problems of the study (Zulueta and Costales, 2003).

A questionnaire was devised to obtain necessary data in the Gulayan sa Bakuran in Aplaya National High School -Annex, Division of Santa Rosa City as Basis for Entrepreneurial Program. It was composed of two parts. The first part determined the demographic characteristics of the respondents while the second part identified the assessment of Gulayan sa Bakuran program in Aplaya National High School -Annex in the Division of Santa Rosa City specifically asking for the grown plants classified under root crops, leafy vegetables, and fruits. Further, questions pertaining to the consumption

of the produce were included. A five-point rating scale indicated below was used to answer specific questions relative to the treatise.

Rating		Range		Interpretation
5	-	4.51-5.00	-	Always (Daily/Everyday)
4	-	3.51-4.50	-	Often (4 times a week)
3	-	2.51-3.50	-	Sometimes(2times a week)
2	-	1.51-2.50	-	Seldom (Once a week)
1	-	1.00-1.50	-	Never (Never)

The draft of the instrument was submitted to the research adviser for checking. Then, it was subjected to a dry run for validation among 10 teaching and non-teaching, and 10 students and 10 parents who were not involved in the study. The results of the dry run served as a basis in revising and improving the instrument prior to its actual administration.

The instrument was administered among the respondents via online using Google forms and/or email. The gathered data were tallied, tabulated, and analyzed accordingly.

Data Gathering Procedure

The gathering of data began with the process of seeking permission and approval to conduct the study. A letter was sent to the principal or school head of Aplaya National High School Annex requesting for the approval to conduct the online survey. Upon approval, the researcher started the study by subjecting the respondents to answer the validated questionnaire. Also, questions regarding the survey were entertained and answered by the researcher and the instructions were clearly explained before the respondents started doing the activity. The last step of data gathering was collecting the accomplished survey in the google form to come up with the data that were subjected to statistical treatment, analysis, interpretation and presentation.

In addition, the ethical guidelines as specified in the research management guidelines of the Department of Education were followed by the researcher, as those ethical considerations were carefully observed throughout this study. The consent form to the participants required the researcher to explain to them the importance/significance and objectives of the study. The data and information gathered were kept in full confidentially. The works of researchers of other authors were properly recognized.

Statistical Treatment of Data

The researcher used the frequency count and percentage distribution to determine the profile of the respondents in terms of age and gender. Percentage distribution is a descriptive statistic used to determine the number of respondents responding to a particular category against the total number of the respondents while frequency count refers to the number of times the response falls or occurs under a given category.

The formula in getting the percentage is:

$$\%=f/(x)100\%$$

Where:

%- percent 100- constant

f- Frequency

x- Total number of respondents

The Weighted Mean was used to determine the Gulayan sa Bakuran in Aplaya National High School -Annex, Division of Santa Rosa City: Basis for Entrepreneurial Program in terms root crops, leafy vegetables and fruits consumption.

The Weighted Mean was used to calculate the central tendency of the response of the respondents. The formula for getting the Weighted Mean is:

$$WM= (\sum fx)/n$$

Where:

$\sum fx$= sum of all the products of f and x

Where:

f= frequency.

X= weight of each option

$\sum$= sum of all

n= total population

To interpret the weighted mean, a five-point rating scale indicated below will be used to determine assessment of Gulayan sa Bakuran program:

Rating		Range		Interpretation
5	-	4.51-5.00	-	Always (Daily/Everyday)
4	-	3.51-4.50	-	Often (4 times a week)
3	-	2.51-3.50	-	Sometimes(2times a week)
2	-	1.51-2.50	-	Seldom (Once a week)
1	-	1.00-1.50	-	Never (Never

Moreover, One-Way Analysis of Variance (ANOVA) was utilized to test the significant difference on the Gulayan sa Bakuran in Aplaya National High School - Annex, Division of Santa Rosa City as Basis for Entrepreneurial Program.

$$F = \frac{MST}{MSE}$$

$$MST = \frac{\sum_{i-1}^{k}(T_i^2/n_i) - G^2/n}{k \quad 1}$$

$$MSE = \frac{\sum_{i-1}^{k}\sum_{j-1}^{n_i} Y_{ij}^2 \quad \sum_{i-1}^{k}(T_i^2/n_i)}{n-k}$$

In the given formula, F is the variance ratio for the overall test, MST is the mean square due to groups (between groups), MSE is the mean square due to error (within groups, residual mean square), Yij is an observation, Ti is a group total, G is the grand total of all observations, ni is the number in group i and n is the total number of observations.

Pearson r Coefficient of Correlation was used to determine the significant relationships namely: how the respondents grow the plant and consumed the produce in terms of Root crops, Leafy Vegetables, and Fruits; and the respondents' profile and the plants they grow in terms of root crops, leafy vegetables, and fruits.

$$r = \frac{\sum (x_i - \bar{x})(y_i - \bar{y})}{\sqrt{\sum (x_i - \bar{x})^2 \sum (y_i - \bar{y})^2}}$$

In the given formula, Pearson r was used to analyze if a relationship exists between two variables, x and y. If there is a relationship that exists, then the extent that x influences y can be determined by means of the coefficient of determination which is equal to the square of r and multiplied by 100%.

r is the correlation coefficient, xi are the values of the x-variable in a sample, \bar{x} is the mean of the values of the x-variable while y_{i} are the values of the y-variable in a sample and \bar{y} is mean of the values of the y-variable.

Scope and Limitations

The study focuses on the assessment of the Gulayan sa Bakuran in Aplaya National High School -Annex, Division of Santa Rosa City: Basis for Entrepreneurial Program in Aplaya National High School Annex in the Division of Santa Rosa City for School Year 2020-2021. It covers the teachers, students and non-teaching staff involved in the implementation of the said program root crops such as Onions ,Sweet Potatoes, Ginger, Garlic ,Radish and Cassava, in leafy vegetables, River water/spinach, Jute leaves, Mustard, Snow Cabbage, Malabar Spinach, Camote leaves, and Gabi, and fruits are Tomato, Eggplant, Lady's fingers, Bitter gourd, and Chili Peppers, since the researcher will randomly select Grades 7 because the researcher is a grade 7 teacher in TLE that's why she uses grade 7 as one of her respondents.. Using Slovin's formula with 95% confidence level and 5% margin of error a total of 198 students will be selected from 16 sections. The respondents will be selected using the sampling technique so that the researcher may fairly generalize the results back to the population from which they were chosen. The school is selected because it is one of the institutions in the city division classified as very large in terms of its typology. In addition, it is the researcher's teaching post. Relative to teacher-participants, demographic profiles such as age and gender will be considered. All the 51 teachers of Aplaya National High School Annex participating in the Gulayan sa Bakuran will be involved in the study. Further, all the 10 non-teaching staff will also be included.

RESULTS

A. How Respondents Grow Specific Plants. The findings of the study revealed that there is a significant difference on how the respondents grow the specific plants in terms of root crops based on the computed F-value of 7.49.

On the other hand, leafy vegetables obtained a computed F-value 0.74 revealing that there is no significant difference on how the respondents grow the specific plants in terms of leafy vegetables.

Lastly, a computed F-value of 0.53 was found in terms of fruits which implied there is no significant difference on how the respondents grow the specific plants in terms of fruits.

B. How Respondents Consume the Produce of Specific Plants. The results disclosed that in root crops there is a computed F-value of which means that there is a significant difference on how the respondents consume the produce of specific plants in terms of root crops.

Moreover, leafy vegetables obtained a computed F-value of 8.48 explaining that there is a significant difference on how the respondents consume the produce of specific plants in terms of leafy vegetables.

Furthermore, a computed F-value of 9.94 was obtained in terms of fruits displaying that there is a significant difference on how the respondents consume the produce of specific plants in terms of fruits.

C. Relationship Between Teaching/Non-Teaching and How they Grow the Plant and Consume the Produce of a Specific Plant. A computed r-value of 7.63 was obtained interpreted as very high implying that there is a significant relationship between teaching and non-teaching personnel's manner of growing plant and consumption of the produce with the specific plants classified under root crops.

There is a significant relationship between teaching and non-teaching personnel's manner of growing plants and consumption of the produce with the specific plants classified under leafy vegetables as revealed by the computed r-value of 8.48 interpreted as very high.

Lastly, a computed r-value of 9.94 interpreted as very high was obtained displaying that there is a significant relationship between teaching and non-teaching personnel's manner of growing plants and consumption of the produce with the specific plants classified under fruits.

D. Relationship Between Parents/Students and How they Grow the Plant and Consume the Produce of Specific Plants. There is a significant relationship between parents and students' way of growing plants and consumption of the produce with the specified plants classified under root crops as exhibited with the obtained computed r-value of 7.49 interpreted as very high.

A computed r-value of 0.74 was garnered and interpreted as high revealing that there is no significant relationship between parents and students' manner of growing of plant and consumption of the produce with the specific plants classified under leafy vegetables.

Lastly, a computed r-value of 0.53 interpreted as moderate was found exhibiting that there is no significant relationship between parents and students' manner of growing of plant and consumption of the produce with the specific plants classified under fruits.

E. Relationship of Between How the Plants Grow to the Profile of Teaching/ Non-Teaching Respondents. In terms of age, a computed r-value of -0.09, 0.04 and -0.05 were obtained having a negligible correlation. Thus, there is no significant relationship between age and how the plants grow in root crops, leafy vegetables, and fruits to teaching and non-teaching respondents.

Relative to sex, a computed r-value of 0.09, 0.16 and -0.04 with a negligible correlation were garnered revealing that there is no significant relationship between sex and how the plants grow in root crops, leafy vegetables, and fruits to teaching and non-teaching respondents.

Meanwhile, a computed r-value of -0.25, -0.08 and -0.01 were obtained implying that there is a negligible correlation were obtained in terms of educational attainment. Hence, there is no significant relationship between educational attainment and how the plants grow in root crops, leafy vegetables, and fruits to teaching and non-teaching respondents.

Furthermore, a computed r-value of -0.04, 0.18 and 0.04 interpreted having a negligible correlation were found revealing that there is no significant relationship between length of service and how the plants grow in root crops, leafy vegetables, and fruits to teaching and non-teaching respondents.

F Relationship of Between How the Plants Grow to the Profile of Parent Respondents. In terms of age, a computed r-value of 0.06, 0.08 and 0.01 were obtained having a negligible correlation. Thus, there is no significant relationship between age and how the plants grow in root crops, leafy vegetables, and fruits to parent respondents.

Relative to sex, a computed r-value of 0.05, 0.05 and 0.12 with a negligible correlation were garnered revealing that there is no significant relationship between sex and how the plants grow in root crops, leafy vegetables, and fruits to parent respondents.

Meanwhile, a computed r-value of -0.09, -0.09 and -0.13 interpreted having a negligible correlation were obtained in terms of educational attainment. Hence, there is no significant relationship between educational attainment and how the plants grow in root crops, leafy vegetables and fruits to parent and student respondents.

Furthermore, a computed r-value of -0.08, -0.07 and -0.10 interpreted with a negligible correlation were found revealing that there is no significant relationship between employment status and how the plants grow in root crops, leafy vegetables and fruits to parent and student respondents.

G. Relationship of Between How the Plants Grow to the Profile of Student Respondents. A computed r-value of -0.06, -0.02 and 0.01 were obtained having a negligible correlation. Thus, there is no significant relationship between age and how the plants grow in root crops, leafy vegetables, and fruits.

Lastly, a computed r-value of -0.10, -0.09 and -0.01 interpreted having a negligible correlation were found uncovering that there is no significant relationship between sex and how the plants grow in root crops, leafy vegetables, and fruits to student respondents.

DISCUSSION

Table 1

Demographic Profile of Teaching/ Non-Teaching Participants

Characteristics	F	%
1.1. Age		
21-30	11	18%
31-40	25	41%
41-50	19	31%
51-60	5	8%
61 and above	1	2 %
Total	**61**	**100%**
1.2. Sex		
Male	11	18%
Female	50	82%
Total	**61**	**100%**
1.3. Educational Attainment		
Bachelor's degree	37	61%
Bachelors with MA Units	17	28%
Master of Arts degree	4	6%
Master of Arts with Doctorate Units	2	3%
Doctoral degree	1	2%
Total	**61**	**100%**

1.4.	**Length of Service**		
3 years and below		18	30%
4-9 years		24	39%
10-14 years		8	13%
15-20 years		7	11%
21 years and above		4	7%
Total		**61**	**100%**

Table 1 shows the demographic profile of the teaching and non-teaching participants in terms of age, sex, educational attainment, and length of service. In terms of age, 25 (41%) of the respondents belong to 31-40 years old, 19 (31%) of the respondents belong to 41-50 years old, 11 (18%) of the respondents were from 21-30 years old, 5(8%) from 51-60 years old and 1 (2%) belong to 61 and above. The teaching and non-teaching personnel belonged to the early and middle adulthood stage with age groups spanning from 18-40 as early adults; 40-65 as middle adults. The study assumes that age variable influences the respondent's assessment of the Gulayan sa Bakuran Program as found in several studies like Scott et. al. (2020) which examined relationships between home gardening and older adults' self-reported well-being. It showed adults aged 60 and above showed positive aging-self perceptions towards aging while engaged in gardening activities at home. Gardens provide important restorative benefits for older adults. Likewise, the study of Chamin-Pui et. al. (2021) found significant associations between improvements in well-being, perceived stress, and physical activity across ages. The participants in the said study were gardeners and non-gardeners above 18 years.

Relative to sex, 50 (82%) were female and 11 (18%) were male. Majority of the teaching and non-teaching were female. The sex variable is assumed to have effect on the Gulayan sa Paaralan Program. The study of Philpott et. al (2020) revealed that gender influenced plants' richness and composition. Specifically, women plant more plant species than men. It was also concluded that plant selection as well as the richness of plants grown are likely a function of gardener socio-demographic characteristics. The findings of the said study could shed light to the present study since there is a dominance of the female group among the teaching and non-teaching personnel.

In terms of educational attainment, there were 37 (61%) respondents having bachelor's degree followed by 17 (28%) Bachelor's degree with MA Units, 4 (6%) with Master of Arts degree, 2 (3%) with Master of Arts with Doctorate Units and 1 (2%) having Doctoral degree. All the teaching and non-teaching participants were educationally qualified. Majority of them showed a basic entry requirement in the public school which is a bachelor's degree. On the other hand, it can be noted that several participants pursue continuing professional development, specifically acquiring further graduate studies units

and degrees. It indicates that teaching and non-teaching staff are already concerned about their educational qualification and professional development as revealed by Gula-gula (2021). On the other hand, there are still staff in the locale of the study whose educational qualification is equivalent to the minimum entry requirement. This could be supported by the age of the said personnel. They could acquire advanced knowledge and skills in pedagogy and work if they continue to pursue graduate studies like their fellow teachers and staff.

In terms of length of service,18 (30%) had 3 years and below, 24 (39%) with 4-9 years, 8 (13%) having 10-14 years, 7 (11%) with 15-20 years and 4 (7%) having 21 years and above. It can be gleaned from the teaching and non-teaching personnel that they had diverse years of service in the institution. Most of them had served their school from 4 -9 years while others have been in the field for more than a decade. It signifies that they have acquired varied experiences in participating different school programs like the Gulayan sa Bakuran.

Significantly, among the demographic profile most of the respondents belong to 31-40 years old in terms of age. In terms of sex, majority were female and majority of the respondents' educational attainment were bachelor's degree holder. Lastly, most of the respondents had 4-9 years length of service.

Table 2

Demographic Profile of Pupil Participants

Characteristics	F	%
1.5. **Age**		
12 Years old	98	48%
13 Years old	98	48%
14 Years old	10	4%
Total	**206**	**100%**
1.6. **Sex**		
Male	110	53%
Female	96	47%
Total	**206**	**100%**

Table 2 displays the demographic profile of the student-participants highlighting age and sex. In terms of age, 98 (48%) were 12 years old, 98 (48%) were 13 years old and 10 (4%) were 14 years old. The students were at the appropriate age as Grade 7 students. Majority of them are aged 12 - 13 years old. They belong to the adolescent stage, also known as teenagers. The age characteristics of the students is assumed to influence their assessment towards the Gulayan sa Paaralan. According to Cornell University (2020) gardening improves opportunities for children, youth, adults, and families to gain interest and eat more fruits and vegetables. Middle school-aged students indicate that gardening affects their vegetable consumption, including improved recognition of, attitudes towards, preferences for, and willingness to taste vegetables. Gardening also increases the variety of vegetables eaten.

In terms of sex, 110 (53%) were male while 96 (47%) were female. Majority of the students were male. Van et. al. (2016) in their study found that students participating in gardening were most likely to be male of younger age and living in rural areas. It was also found that gardening was positively associated with healthy dietary habits among students such as greater fruit and vegetable consumption. Also, students also who participate in gardening report slightly lower levels of depressive symptoms and enhanced emotional well-being and experience higher family connection than students who do not participate in gardening. In the study of Lier et. al. (2016) participation in the gardening activity implemented by school is dominated by the male students. Students who participated in gardening were more likely to share frequent meals with their families than students without gardens at home. Furthermore, results showed fruit and vegetable consumption and home availability of fruits and vegetables were significantly associated with gardening activity. In general, Utter et. al. (2016) concluded that school gardens have a positive impact on student health.

The table reveals that in terms of age most of the respondents were 12 and 13 years old. Lastly, relative to sex majority of the students were male.

Table 3

Demographic Profile of Parent Participants

Characteristics	F	%
1.7. <u>Age</u>		
21-30	8	4%
31-40	106	51%
41-50	72	36%
51-60	17	8%

61 and above	3	1%
Total	**206**	**100%**

1.8. **Sex**		
Male	28	14%
Female	178	86%
Total	**206**	**100%**

1.9. **Educational Attainment**		
1.10. Elementary graduate 2%	5	
1.11. High School graduate 50%	104	
1.12. College undergraduate 31%	63	
Bachelor's degree	34	17%

1.13. **Employment Status**		
1.14. Employed Specify 33%	68	
1.15. Unemployed 67%	138	
Total	**206**	**100%**

BARANGAY/RESIDENCE		
Ibaba	7	4 %
Kanluran	4	2 %
Labas	41	23 %
Malusak	32	18 %
Market Area	34	19 %
Tagapo	60	34%
Total	**178**	**100%**

Table 3 reveals the demographic profile of parents in terms of age, sex, educational attainment, employment status and residence. In terms of age, 8 (4%) of the respondents belong to 21-30 years old, 106 (51%) of the respondents belong to 31-40 years old, 72 (36%) of the respondents were from 41-50 years old, 17 (8%) from 51-60 years old and 3 (1%) belong to 61 and above. Like the teaching and non-teaching personnel, the parent participants belonged to the early and middle adulthood stage. It is also assumed that their age distribution influences their assessment of the Gulayan sa Paaralan Program. Bui et. al. (2018) stated that parents have an impact on a child's development. The study assumes that parents also play a role in the implementation of the gardening program under study. On the other hand, Cornell University (2020) found that having a garden as an adult was positively associated with fruit and vegetable consumption.

Relative to sex, 28 (14%) were male and 178 (86%) were female. Majority of the parent participants were female. As stated in the study of Philpott et. al (2020) it revealed that gender influenced plants' richness and composition. The current study assumes that the sex variable of parents influences their assessment towards the gardening program. Specifically, women plant more plant species than men. It was also concluded that plant selection as well as the richness of plants grown are likely a function of gardener socio-demographic characteristics.

In terms of educational attainment, there were 5 (2%) who were Elementary graduates, 104 (50%) high school graduates, 63 (31%) college undergraduates and 34 (17%) obtaining bachelor’s degrees. The parents showed a diverse educational level. Majority of them have completed basic education as high school graduates. Several of them have attained college level and degrees. The educational attainment of parents reflects their knowledge about planting and growing various plants. Duncan (2016) noted that households with gardens had students more interested in participating in the school garden program.

In terms of employment status, 68 (33%) were employed while 138 (67%) were unemployed. Thus, majority of the parents were unemployed. This means that they have more time to participate in the Gulayan sa Bakuran. The study also assumes that the Gulayan sa Paaralan is an avenue for the unemployed parents to generate profit to support and produce a sustainable source of food for the family. For employed parents, the gardening program assumes associations between improvements in well-being, perceived stress, and physical activity of parents as reiterated by Chamin-Pui (2021). In a systematic review on environmental influences on fruit and vegetable consumption, Cornell University (2020) revealed improved intakes in fruits and vegetables. Further, the study of Taboka (2016) showed results that gardens had positive gross margins to leafy vegetables, onions, tomatoes, and green pepper which showed higher viable gross margins.

Lastly, in terms of residence 7 (4%) reside in Ibaba, 4 (2%) from Kanluran, 41 (23%) from Labas, 32 (18%) from Malusak, 34 (19%) from Market Area and 60 (34%) residing in Tagapo. Majority of the respondents confirmed that they reside in areas near the school namely Labas, Malusak, Tagapo and Market Area. These areas are

commercial sites where there is a possibility to sell various kinds of vegetables and crops grown by the residents from the Gulayan sa Paaralan. In these areas the parents are near the market that is why they can sell their vegetables, fruits, and root crops. While in Ibaba and Kanluran they are far from the market, so they just consume it by their family. Rojo et. al. (2015) categorizes family gardens as urban food gardening which encompass agricultural activities with generally low economic dependence on material outputs. Family gardens in urban settings are non-commercial, food producing undertakings that aim to provide the respective household and families with vegetables, fruits, and herbs. The type of urban setting highly influences the character of the garden. In dense urban areas, balcony or rooftop cultivations in pots are more common, whereas in detached housing, a part of the garden is allocated to growing vegetables, fruits, and herbs.

As highlighted in this table, among the demographic profiles most of the respondents belong to 31-40 years old in terms of age. Relative to sex, majority were female and majority of the respondents' educational attainment were high school graduate. In addition, most of the parent respondents were unemployed. Lastly, most of the respondents reside in Barangay Tagapo.

Conclusions

Corollary to the findings, the following conclusions were drawn:

1. Profile of the Respondents

1.1 Teaching and Non-Teaching Personnel. Majority belong to 31-40 years old, female and having bachelor's degree. Lastly, mostly had 4-9 years length of service.
1.2 Students. Most of the respondents were 12 and 13 years old and male.
1.3 Parents. Most of the respondents belong to 31-40 years old, female and high school graduates. In addition, most of the parent respondents were unemployed and residing in Barangay Tagapo.

2. Respondents Plants Grown in the Backyard

In terms of root crops, teaching and non-teaching personnel commonly planted onions and ginger while parents and students typically were planting onions and sweet potatoes. Relative to leafy vegetables, teaching and non-teaching personnel commonly planted kamote leaves/tops and pechay while parents and students were planting kangkong and camote leaves/ tops typically.

Lastly, teaching, and non-teaching personnel usually planted sili (chili peppers) while parents and students were commonly planting tomatoes in terms of fruits.

3. How Plants Grow in the Backyard

There are varied responses on how the plants grow in the backyard. In generally, plants classified under root crops considered the following ways: in planting onions, majority of the teaching and non-teaching personnel revealed that it grows in the backyard

by transplanting/using bulbs - plants the bulb ¾ inch deep and 3 inches apart from each while parents and students revealed that in planting onions, they ensured that the plant site receives full sunlight and maintains well-drained soil. Both the teaching and non-teaching personnel and parents and students revealed that in planting sweet potatoes, they ensure the planting site receives full sunlight and warm climate. In planting ginger, both the teaching and non-teaching personnel and parents and students revealed they choose a planting site that receives 2 - 5 hours direct sunlight and is protected from strong winds. In planting garlic, the teaching and non-teaching personnel mentioned that they harvest garlic when most of the leaves have turned brown by digging the bulbs up while parents and students revealed that they water the plant regularly when it is dry.

Relative to radish, teaching and non-teaching personnel considered setting the planting site with partial shade from sunlight. On the other hand, parents and students considered preparing the soil, removing rocks, trash, and large sticks from the planting area. Both the teaching and non-teaching personnel and parents and students revealed that in planting sweet potatoes, they ensure the soil in the plant site is loose and not water logging.

In leafy vegetables, the following were the usual ways of growing the plants: in planting kangkong (river/water spinach), they ensure the planting site has watery or swampy and/or muddy soil with lots of organic matter and full sunlight. In planting saluyot (jute leaves), teaching and non-teaching personnel considered harvesting saluyot late in the afternoon 30 days after planting by cutting the crop 20 - 25 cm from the ground. Subsequent harvesting is done 1 to 2 weeks interval up to 7 months while parents and students revealed that they select a planting area that has full sun or partial shade with well-worked, well-drained soil rich in organic matter.

Both the teaching and non-teaching personnel and parents and students revealed that in planting mustasa, they select a planting area that has full sun or partial shade with well-worked, well-drained soil rich in organic matter. In planting pechay, teaching and non-teaching personnel considered watering the plants well daily and watching it grow in a few days while parents and students revealed that they select a sunny place and loamy soil with plenty of organic materials. In planting alugbati, teaching and non-teaching personnel mentioned that they apply compost or manure once a month to maintain fertility of the soil while parents and students revealed that they water the plant regularly in the morning and late in the afternoon.

In addition, both the teaching and non-teaching personnel and parents and students revealed that in planting camote leaves, they ensure the planting site receives full sunlight and warm climate. In planting gabi (taro), teaching and non-teaching personnel stated that the leaves were picked as soon as the first leaf has opened; harvest taro leaves cut-and-come-again, never stripping the plant of all its leaves while parents and students revealed that they select a planting site that has rich, moist, well-drained soil to moisture-retentive soil.

When it comes to fruit, the following were the common practices: Both the teaching and non-teaching personnel and parents and students revealed that in planting tomato

(kamatis) they ensure the site receives 6 hours of sunlight each day. Similarly, in planting eggplant (talong) they ensure that the soil is well-drained, fertile, sandy loam with a pH between 5.5 and 7.2. Moreover, in planting okra they ensure the planting site has full sunlight and fertile, well-drained soil.

In planting ampalaya (bitter gourd)/leaves, teaching and non-teaching personnel mentioned that they harvest the first batch of immature fruits at a deep green stage. These are approximately 25-30 cm long. Repeat harvesting every 3-5 days preferably in the morning to maintain the freshness of the fruits. Do not harvest the shoots because it will lessen the fruit-bearing performance of the plant resulting in reduced fruit yield. On the other hand, parents and students employed direct seeding or breaking the seed coat lightly and soak the seeds in water for 24 hours, then wash. Incubate for 24-48 hours until the radicles appear. On the first day, plant the seeds with uniform germination to have a uniform stand of plants on site. Lastly, in planting sili (chili pepper)/leaves both the teaching and non-teaching personnel and parents and students revealed that they pluck and/or cut the leaves from the stem.

4. Consumption of Backyard Produce

Both the teaching and non-teaching personnel and parents and students usually share the root crops, leafy vegetables and fruit produce with other households or to the local community.

5. Results of Hypothesis Testing for Significant Difference/ Relationship

5.1 How Respondents Grow Specific Plants. There is a significant difference on how the respondents grow the specific plants in terms of root crops on the other hand, there is no significant difference on how the respondents grow the specific plants in terms of leafy vegetables. Lastly, there is no significant difference on how the respondents grow the specific plants in terms of fruits.

5.2 How Respondents Consume the Produce of Specific Plants. The results disclosed that there is a significant difference on how the respondents consume the produce of specific plants in root crops, leafy vegetables, and fruits.

5.3 Relationship Between Teaching/Non-Teaching and How they Grow the Plant and Consume the Produce of a Specific Plant. There is a significant relationship between teaching and non-teaching personnel's manner of growing plants and consumption of the produce with the specific plants classified under root crops, leafy vegetables and fruits.

5.4 Relationship Between Parents/Students and How they Grow the Plant and Consume the Produce of Specific Plants. There is a significant relationship between parents and students' way of growing plants and consumption of the produce with the specified plants classified under root crops. On the other hand, there is no significant relationship between parents and students' manner of

growing of plants and consumption of the produce with the specific plants classified under leafy vegetables and fruits.

5.5 Relationship of Between How the Plants Grow to the Profile of Teaching/ Non-Teaching Respondents. There is no significant relationship between the demographic profile such as age, sex, educational attainment, and length of service and how the plants grow in root crops, leafy vegetables and fruits to teaching and non-teaching respondents. Thus, a negligible correlation was underscored.

5.6 Relationship of Between How the Plants Grow to the Profile of Parent Respondents. There is no significant relationship between the demographic profile such as age, sex, educational attainment, and employment status and how the plants grow in root crops, leafy vegetables and fruits to parent and student respondents. Consequently, a negligible correlation was accentuated.

5.7 Relationship of Between How the Plants Grow to the Profile of Student Respondents. There is no significant relationship between the demographic profile such as age and sex and how the plants grow in root crops, leafy vegetables, and fruits to student respondents. Thus, a negligible correlation was revealed.

Recommendations

Considering the salient findings and concrete conclusions derived from the study, the following are highly recommended to:

School Administrator Since the school head is one of the major implementers of the Gulayan sa Bakuran: Container and Backyard Vegetables Gardening Program, the result of the study could provide objective data on the assessment of the said program. Eventually, it will provide a basis for an entrepreneurial program which may be a sound basis of policy making, guidelines formulation and monitoring and evaluation of the program. The school heads are hereby encouraged by the following in recommendations:

1.Encourage local school districts to participate in backyard gardening.
2.Encourage all schools to provide a feeding program out of the produce.
3. Support the development of a backyard gardening program.
4. Support upgrades or exchanges of equipment to homes.
5. Strengthen bonds between home gardeners, schools, and communities.
6. Foster respect and concern for the environment.
7. Involve community volunteers, who assist students as they plant, tend, and learn.
8. Plan/ modify a garden program that is in line with the backyard gardening inspired curriculum.
9. Attend regular meetings to facilitate the rollout of the vegetable garden, indigenous garden, along with general problem solving and planning of special events, publicity etc.

10. Plan weekly garden classes/ technical assistance, ensuring they are applicable to all participating age groups.
11. Plan the planting of the vegetable and backyard gardening and involve the whole school community in the process.
12. Plan any development of the vegetable garden infrastructure – incorporating the pre-existing vision – and involve the school community in the process.
13. Coordinate and support garden volunteers, compile and update volunteer information, help coordinate volunteer events, advertise for volunteers and respond to interest from potential volunteers

Teachers -The results of the study could provide teachers deeper appreciation which may lead to integration of concepts related to gardening and the Gulayan sa Bakuran program in the teaching and learning process. Likewise, it may serve as reflection on how the program turns to be a productive activity as part of Work from Home (WFH) that may have a health benefit in its longer sense and for its economic benefit the study could value the available specifically the planted vegetables as food amidst the crisis posed by COVID-19. The following are therefore suggested.

1. As a teacher, you should be able to have open communication regarding the topic of Gulayan sa Paaralan.
2. Continually communicate with parents and children via messenger about the assessment gulayan sa paaralan.
3. Communicate the school regarding the results of the output of the learners.
4. Students' progress in terms of how they plant leafy vegetables, fruits, and root crops should be monitored on a regular basis.
5. Discuss the planting in their garden with the parents and students as it relates to the gulayan sa bakuran assessment.
6. Extend the classroom beyond traditional settings by expanding it outside and more particular to every home.
7. Provide students with hands-on learning opportunities while increasing environmental awareness and vital experience in problem-solving.
8. Develop self-confidence and a sense of "capableness" along with new skills and knowledge in food growing as vital for the 21st century among the learners/
9. Provide garden-based teaching addresses different learning styles and intelligences.
10. Inculcate student responsibility, patience, perseverance, and how to deal with disappointment if the garden does not grow the way they expected.

School Staff - In addition, school staff could develop health awareness through gardening while having more time at home during coronavirus pandemic. In addition, the study may help in promoting food security. Gardening may give learners hands-on learning opportunities while also raising environmental awareness and providing valuable on hand learning. School gardens are also a fantastic approach to teach children about nutrition by allowing them to connect the dots between growing food and eating a healthy diet.The following are therefore suggested.

1. Include nutritional education, shown to improve attitudes toward vegetables in general.
2. Encourage family members to plant vegetables and promote healthy habits to continue.
3. Engage the students in the whole process (planning, implementation, and evaluation).
4. Equip learners with food processing to further utilize the harvests/produce (canning, freezing, drying, etc.).
5. Capacitate learners with food processing ideas/ innovation to further utilize the harvests/produce (canning, freezing, drying, etc.).

Students- could see that gardening has always been a very important segment of one's life in and out of the school. Likewise, students may realize that a healthy body is essential in developing their mental and physical aspects. Being one of the respondents in assessing the Gulayan sa Paaralan:The following are the recommendations for the students.

1. While still young you must learn how to plant.
2. You need to learn to eat leafy vegetables,root crops and fruits.
3. Remember that vegetables and fruits are delicious to eat if you grow them yourself.
4. Learn the proper process of what to do first.
5. Your habit of planting it is good for the environment and also for your personal life.
6. Spend more time active in backyard gardening.
7. Start choosing healthy foods over junk food.
8. Learn to focus, be patient, and cooperative in the Gulayan activity at home.
9. Participate in school and backyard gardening programs.
10. Demonstrate increased self-esteem and an improved understanding of personal responsibility, as well as enhanced relationships and increased involvement with parents and other family members.
11. Recognize the importance of food security.
12. Be resourceful about obtaining items needed for the garden.

Parents- The more parents involved in their student's education, the better their entire motivation, behavior, and participation specifically in the Gulayan sa Bakuran Program. Thus, this study could raise parent's consciousness on health and nutrition by planting vegetables in available spaces in their homes. Keeping your children engaged and challenged in their educational setting, as well as supporting their learning, is an important part of being involved in their life.In this assessing of Gulayan sa Bakuran when the students sees that parents are active in doing this outdoor activity for sure they will be more easily to learn it.The following are suggested to the Parents;

1. Provide them more instruction about how plants grow, what are the benefits in doing this activity.
2. Implement them the importance of knowing how to cultivate the soil in a proper way.

3. When they are doing the planting on their own,as a parent you should monitor their work if they do correctly.
4. Parents should be a model to students.
5. Always support your students if you see that they love this kind of program.
6.Plan/design their backyard garden according to their site and goals.
7. Inculcate to their children responsibility, patience, perseverance, and how to deal with disappointment if the garden does not grow the way they expected.
8. Incorporate Garden harvests/produce into meal programs, so students benefit from the added nutritional value of backyard-grown produce.
9. Ensure that their children eat right and have an active role in backyard gardening. Also, ensure that children have access to healthy food.
10. Work in the backyard gardening, doing general gardening tasks like weeding, and completing jobs not finished by students.

Community -The school community or stakeholders play an important role in managing schools thus involving them in the Gulayan sa Bakuran Program as partners of the school will make the school more conducive to teaching and learning. Further, the study may also enjoin them for more responsible and active participation in school activities, programs and projects.

1. Develop partnerships that can support backyard gardening.
2. Engage youth in the planning process
3. Contribute to increasing the relevance and quality of education, improving the children's and their parents' knowledge of food production techniques and nutrition.
4. Stimulate the development of home/ backyard gardens.
5. Leverage community resources and assist students in achieving positive outcomes.
6. Create a space where community members and teachers are all perceived as equal in terms of knowledge, and contributions.
7. Provide an avenue where backyard produce was swapped/bartered for other goods and/or service. Likewise, in selling/marketing the produce by a stand and/or roadside stalls or selling to retail outlets (e.g. restaurants or business establishments who purchase locally grown fruits and vegetables).

Future Researchers Future Researchers. This study could provide baseline data on future research that may be conducted related to the topic. They will be able to identify gaps and priority areas in the implementation of Gulayan sa Bakuran that may require further investigation.

Compliance with Ethical Standards

The study was carried out in accordance with ethical guidelines, ensuring that all participants provided informed consent before taking part. They were free to withdraw at any time without consequence, and their anonymity and confidentiality were strictly protected to preserve their privacy. The well-being of participants was a top priority throughout the research process. The study was free from conflicts of interest, and all

sources of information were properly cited and acknowledged to avoid plagiarism. The findings were interpreted objectively and accurately, without bias. The purpose of this study is to contribute to the Gulayan sa Bakuran"program at Aplaya National High School-Annex, Division of Santa Rosa City, as a basis for an entrepreneurial program. This assessment will involve the participating teaching and non-teaching personnel and students, aiming to initiate vegetable gardens in their homes as a sustainable food basket for daily vegetable consumption.

Acknowledgments

Thank you, Lord God. I know you helped me through this journey. Pssssssstttt, look! You made it.

I would like to express my heartfelt gratitude to all the panelists: Dr. Rolando Entila, Dr. Elsa E. Gumiran, Dr. Lovinia C. Reyes, Dr. Rita C. Ortiz, and Sir Yllan Gerente, and the entire MaEd Team at LNC. Thank you so much for all your suggestions and recommendations. Our wakefulness and tiredness have finally paid off.To Dr. Liberty Dela Cruz Agustin, thank you for allowing me to conduct my research at our school. To my co-teachers, the teaching and non-teaching personnel, parents, and students who were my respondents, thank you for taking the time to answer my questionnaire.To Sir Kier John Armenta Maginang, even with your busy schedule, you still managed to answer my questions, even if they seemed repetitive.Ate Shiney Flores, you know what it is, thank you for the support. You're next.To all my friends out there, I won't list everyone to avoid forgetting someone.

To my #1 supportive partner Renato Duartedejesus and Rossvien Niatto, thank you so much. My inspiration, Nanay Ester Pigalan Elises and Gloria Elises Flores, thank you for the trust.To my family, especially Liberty Duarte, who believed in me 100%.

“You don’t have to be great to start, but you have to start to be great.” – Zig Ziglar

HOMEROOM GUIDANCE PROGRAM: INSTITUTIONALIZING AN ESSENTIAL NON-ACADEMIC SCHEDULE IN THE CITY SCHOOLS DIVISION OF TANAUAN

Ismael C. Casquejo, Agatona C. Vaydal

Senior High School, Tanauan City Integrated High School, Tanauan City, Batangas, Philippines

https://doi.org/10.5281/zenodo.11425676

ABSTRACT

DepEd Order No. 31, s. 2012 sets aside a time for the Homeroom period. This underlines the importance of homeroom in the school schedule. Students can easily be influenced by the environment and the media, which do not always have wholesome ideas to share. Learners need the proper guidance they can get and Homeroom periods can be one of those opportunities where they can be guided. This research is initiated to pay more attention to how Homeroom classes are conducted. The researchers will try to revisit the conduct of the homeroom periods in Tanauan City Division. If the data gathered shows inadequacy, then, modifying structure, themes, and perspective might help educators and learners get the most out of this period. Correspondingly, developing a module for homeroom classes can help deliver it according to what the Department of Education intends it to be.

Keywords: *Homeroom, Guidance, Program, Schedule, Theme*

INTRODUCTION

DepEd Order No. 31, s. 2012 provides a time for the Homeroom period. This underlines the importance of homeroom in the school schedule. Learners need the proper guidance they can get and Homeroom periods can be one of those opportunities where they can be guided. Teenage learners can be heavily influenced by the media and the environment. But the contents of the media may not always portray wholesome features

and the environment where some learners live may not be conducive to their moral and personal growth. Because of these matters, the school remains to be a relevant avenue where they can holistically grow and develop virtues that will make them worthwhile citizens when they grow older (Sutton, 2020).

To form and develop worthwhile citizens have never been so important in these times when values can easily be corrupted by irresponsible use of technology. Accordingly, there is a consensus among the older generation that young people today do not have the same values practiced before. Values formation seems to have been disregarded. In school, the homeroom period is one schedule when students can get guidance to put their lives in proper perspective. But this period of the class schedule can be spent aimlessly without any program prepared by the persons concerned.

This research was initiated to pay more attention to how Homeroom classes are conducted. There are a number of literature related to this topic, but, there is more to be explored. The researchers looked into the conduct of the homeroom period in the City Schools Division of Tanauan. The data gathered showed inadequacy, therefore modifying structure, themes and perspective might help educators and learners get the most out of this period. Correspondingly, developing a program and accompanying module for homeroom classes can be helpful in delivering it according to what the Department of Education intends it to be.

Research Questions

In educational settings, the provision of comprehensive guidance and support services plays a pivotal role in fostering students' academic achievement, socio-emotional well-being, and overall personal development. Homeroom guidance programs serve as fundamental platforms for delivering such support within schools, aiming to address students' diverse needs and equip them with essential life skills.

This study seeks to address the following key questions:

1. How is homeroom class being taught in terms of:
    1.1 Preparation
    1.2 Introduction
    1.3 Activity
    1.4 Summary?
2. What possible themes or lessons can be taught in the homeroom period?
3. What program should be created to truly harness the potential of the homeroom period?

METHODOLOGY

The target population of this study is Tanauan City Division secondary school heads, guidance counselors and teachers. Teachers who are current or previous class advisers are the respondents of the questionnaires because usually, they are the ones who conduct homeroom classes. Likewise, guidance counselors were involved in this study because they should be the ones who provide topics for Homeroom discussion. School heads involvement in this study was crucial because of their role as leaders of the schools. They should be knowledgeable about the results and implications of this division-wide research.

The study utilized researcher-made questionnaire, interviews and focus group discussions. The researchers asked the permission of the Schools Division Superintendent and concerned Supervisor for the conduct of the research. The questionnaire was given to secondary school teachers based on the sample size determination made (Kibuacha, 2021). Likewise, the school heads and guidance counselors were interviewed regarding the conduct of the homeroom classes in their respective schools. Focus group discussion was conducted with school heads, guidance counselors, and teachers for some possible modifications in Homeroom classes and creation of a Homeroom Class module that will be used in the Division.

The data collected was collated and tabulated to facilitate analysis. It was organized and categorized using the research questions to be able to identify the themes and patterns to be presented (Caulfield, 2023). To answer the particular questions raised in this study, data were treated carefully, classified and methodically organized according to the certain point established in this study.

RESULTS

1. How is homeroom class being taught?

Homeroom Structure		
1. Preparation	**Weighted Mean**	**Verbal Interpretation**
1.1 asks assistance from Homeroom Guidance Committee (or equivalent) for theme or topic for discussion	2.93	Oftentimes
1.2 reflects on the learners' needs	3.58	Always
1.3 sets aim/s or objective/s	3.55	Always
2. Introduction	**Weighted Mean**	**Verbal Interpretation**
2.1 gives the learners information about the topic	3.57	Always
2.2 tells learners what are expected from them	3.55	Always

2.3 creates a climate of oneness and acceptance among the members of the group to avoid uncomfortable moments during the activity	3.55	Always
3. Activity	**Weighted Mean**	**Verbal Interpretation**
3.1 considers activities which are relevant to learners' personal experiences	3.44	Oftentimes
3.2 provides materials or asks learners' to bring necessary materials	3.34	Oftentimes
3.3 processes activity to truly harness its effect	3.39	Oftentimes
4. Summary	**Weighted Mean**	**Verbal Interpretation**
4.1 gives reflection questions or prompts to diagnose learners' understanding	3.44	Oftentimes
4.2 asks learners for feedback or questions	3.47	Oftentimes
4.3 relates previous and future themes to the current topic whenever merited	3.43	Oftentimes

4.00 – 3.50 - Always (A) 3.49 – 2.50 - Oftentimes (O)
2.49 – 1.50 - Seldom (S) 1.49 and below - Never (N)

2. What possible themes or lessons can be taught in the homeroom period?

Grade 7		
Rank	**Topic**	**Frequency**
1	Student Profile	31
2	School Discipline	30
3	Cleanliness in the Classroom	29
4	Bullying	27
5	Report Card	23
6	Character Formation	21
8	Parent-Teacher Association	19
8	Family Relationship	19
8	Absenteeism	19
10	Love and Responsibility	17

For grade 7, the topic of Student Profile had the most frequency. As new students, the advisers should get pertinent information about them. The information gathered from the students will be helpful to know their background and better help them in cases when they fail the different standards of the school.

Grade 8		
Rank	**Topic**	**Frequency**
2	Class Officers	15
2	Report Card	15
2	Emotional Intelligence	15
4	Managing Conflicts	14
5.5	Personal Goal Setting	12
5.5	Absenteeism	12
7	Home Visitation	10
8	Leadership	8
9.5	Budgeting of Resources	6
9.5	Media Savvy (Effects of Media)	6

The topic of Class Officers had the most frequency among grade 8 advisers. The grade 8 advisers did not ignore their importance for a functional classroom, and they are worth discussing in homeroom periods. Class officers are the representatives of the teachers when they are not around.

Grade 9		
Rank	**Topic**	**Frequency**
1	Character Formation	29
2	School Discipline	27
3	Love and Responsibility	24
4.5	Student Profile	23
4.5	Cleanliness in the Classroom	23
6	Family Relationship	20
7.5	Personal Goal Setting	18
7.5	Building Self-esteem	18
9	Absenteeism	17
10	Managing Conflicts	16

Character Formation is the topic with the highest frequency among grade 9 advisers. Grade 9 level students might be at the peak of their curiosity to explore matters beyond what is acceptable to school norms which is why they face some issues with school authorities. The key remains proper guidance to avoid untoward incidents. Homeroom can be the most appropriate time to do this and character formation is highly appropriate for their level.

Grade 10		
Rank	**Topic**	**Frequency**
1	Student Profile	24
2	Character Formation	23
3.5	Family Relationships	18

3.5	Cleanliness in the Classroom	18
5	School Discipline	17
6.5	Love and Responsibility	16
6.5	Building Self-esteem	16
9	Parent-Teacher Association	15
9	Health and Grooming	15
9	Absenteeism	15

The grade 10 advisers highly ranked topics on Student Profile, Character Formation, and Family Relationships. Worth emphasizing is the choice of character formation and family relationships among them (Kapunan, 2004). Considering the needs of their students, the grade 10 advisers made appropriate choices. Providing topics regarding character and relationship to students can guide them to make correct responses in the situations they encounter.

Grade 11		
Rank	**Topic**	**Frequency**
1	School Discipline	7
3.5	Student Profile	5
3.5	Love and Responsibility	5
3.5	Building Self-esteem	5
3.5	Cleanliness in the Classroom	5
7	Character Formation	4
7	Parent-Teacher Association	4
7	Student Evaluation	4
9.5	Values, Vision and Mission	3
9.5	Class Officers	3

School Discipline had the most frequency among grade 11 advisers. Reaching senior high school does not guarantee that students are already disciplined. Underlining discipline even at this stage will be helpful to students to control themselves as they enter their adulthood.

Grade 12		
Rank	**Topic**	**Frequency**
1	School Discipline	6
2	Family Relationship	5
5	Vision for Homeroom	4
5	Personal Goal Setting	4
5	Study and Reading Strategies	4
5	Managing Conflicts	4

Like the grade 11, the grade 12 advisers chose school discipline as their primary topic. Discipline is truly a factor in being able to contribute to the community. The graduating students cannot be fully contributing and functioning individuals to society unless they are taught the non-negotiable importance of discipline, especially at the last year of their high school life.

DISCUSSION

Though not primarily a content subject, homeroom can be given preparation and attention like the usual content subjects (Kelly et al., 2005). The result of the study regarding its delivery is indicated in the table. The research divided the structure of homeroom into four parts namely, preparation, introduction, activity and summary. For the first part, introduction, the indicator, asks for assistance from Homeroom Guidance Committee (or equivalent) for theme or topic for discussion, had the lowest weighted mean of 2.93. This indicates that the conduct of homeroom is not centralized. Advisers do homeroom classes from their initiative. If the Homeroom Guidance Committee is established and had a ready program, the weighted mean could have not been this low.

The second part, introduction, also had three items. The highest weighted mean among them is gives the learners information about the topic. The other two had the same weighted mean. The low weighted mean of creates a climate of oneness and acceptance among the members of the group to avoid uncomfortable moments during the activity can be connected to the lack of briefing or preparation on the part of the advisers coming from authorities concerned in delivering homeroom classes.

The third part, activity, had the item considers activities which are relevant to learners' personal experiences with the highest weighted mean. This shows the sensitivity of the advisers to diagnose the needs of the learners (Ridnouer,2006).

As for the fourth part, summary, asks learners for feedback or questions had the highest weighted mean. While the lowest was relates previous and future themes to the current topic whenever merited. This indicates lack of continuity and coherence of topics or matters discussed and can be associated again to the deficiency of a program for homeroom classes. Accordingly, Mendoza (2005) articulated the importance of homeroom as it provides right conduct and good manners. These two are crucial for developing adolescents to be good citizens as they mature. Hence, preparation for homeroom classes should not be overlooked.

Conclusions

1. It can be seen from the result that the conduct of the homeroom classes can still be improved. It is not centralized, that is, there is no one authority who tells the appropriate

class structure nor topics to be discussed. Likewise, it can be deduced that the conduct of homeroom class depended on the adviser's initiative.

2. From the result of the questionnaire, some of the topics which emerged were: School Discipline, Love and Responsibility, Character Formation, Student Profiling and Cleanliness in the Classroom among others. These topics are highly relevant and based on the needs observed by the advisers. Topics such as these can affect the class dynamics for the entire duration of the school year.

3. Based on the result of the study, a homeroom program can be created to facilitate its delivery. There should be a governing body or committee which will structure the class program for unified administration. Making an institutionalized homeroom program will benefit all advisers during their homeroom time and not only those who have initiative in conducting it.

Recommendations

Homeroom class has its own merits. Learning is not only confined to the content subjects. Some students are very much in need of personal human learning to make sense of their personal lives. Properly conducting homeroom classes and discussing topics relevant to students' lives can answer some of their personal and relational needs. It is therefore recommended that a program be developed regarding class structure and topics to be discussed.

Topics picked by the advisers should be highly considered by the committee. These topics should be appropriately researched and a module should be made out from them. Advisers should be well informed as to how to deliver the topics in the module.

Homeroom class should be given attention (Breaux, 2005). The content subjects do not cover all the needs of growing young learners. There are matters beyond content subjects which deals with the emotional and relational dimensions of learners. Homeroom can be one of the class schedules which can address these dimensions.

Compliance with Ethical Standards

Permission was asked from authorities to conduct this research. Before making the respondents answer the questionnaire, they were given an informed consent form so that there would be no coercion involved in conducting the study. Those who were involved were informed of the purposes of the data that were asked of them.

Sensitive issues were carefully handled with respect to the differences of views (Resnik, 2020). Anonymity of respondents was strictly observed unless the study necessitates

otherwise, but if such happens, authorization from those concerned will be graciously asked by the researchers.

Acknowledgments

This study could not have been possible without the generous help of several people who motivated, inspired, assisted, and supported our entire endeavor. Their names are not just written in this manuscript but engrained in every fiber and vein of the researchers' hearts. Their names are gratefully acknowledged, and their inspiration will always be treasured.

To the Republic of the Philippines, Department of Education, Region IV-A CALABARZON (4th Cycle Basic Education Research Fund (BERF)) for the fund given to accomplish this research.

To Ms. Teresita C. Casquejo and Ms. Florinda Casquejo-Gagasa, Education Program Supervisor at the City Schools Division of Tanauan for their inspiration and unwavering support;

To Ms. Maria Liza M. Faustino, Senior Education Program Specialist, Planning & Research at the City Schools Division of Tanauan for her encouragement;

To the respondents of this study;

And above all, to Our Lord Jesus Christ through the intercession of His Mother Mary for the grace and gift of life and talent.

ABSTRACT

This study aims to assess the endemic fish species of fauna in Lake Lanao. Also, it developed a Contextualized STEM Lesson on Biodiversity and Contextualized Biodiversity Handbook. Philippines Republic Act 105333 mandates the utilization of Contextualization and localization of the curriculum in education. However, the unavailability of prepared contextualized STEM Lessons on Biodiversity hinders its goals and functions in improving science education specifically regarding scientific literacy. To its end, the development of contextualized STEM Lessons on Biodiversity is conceived to address this gap. Before the development of contextualized teaching-learning material, pre-assessment biodiversity services interview of the residents of Lake Lanao, picture documentation, and identification of living organisms found in the area were conducted. The results of these steps become the main outputs of the developed teaching-learning material. The contextualized STEM Lesson Plan on Biodiversity underwent the following steps during its development: (a) identification of fish species; (b) determining the lesson focus; (c) crafting of competency and activity; (d) designing and conceptualizing of the Contextualized STEM Lesson on Biodiversity; (e) expert validation; (f) revision; (g) developed Contextualized STEM Lesson on Biodiversity.

Keywords: *STEM Lesson, Contextualization, Biodiversity*

INTRODUCTION

Lake Lanao, the second largest lake in the Philippines, is geographically located in the province of Lanao del Sur, Central Mindanao. It lies between 8° N. Latitude and 124° E. Longitude (Lewis 1978). Frey (1969) considered its basin volcanic due to its collapse associated with the 1955 earthquake. Lake Lanao has a vast watershed of approximately 147, 460 ha (hectares). It exerts considerable influence over the local climate, making Marawi City the summer capital of Southern Philippines.

One of the areas for which the lack of scientific literacy is present on the pressing biodiversity and environmental issues that the country is facing. Endowed with several centers of diversity, endemism, and biological richness, the Philippines is hailed as the 'Galapagos times ten' (Heaney & Regalado, 1998) and considered as one of the 18 megadiverse countries in the world (NEDA, 2011). Most Filipinos are unaware of the country's biodiversity and the need for its conservation (Bagarinao,1999). This resulted in the endangerment of Philippine biodiversity whereas of 2008, 221 species of fauna and 526 species of flora have been included in the list of threatened species (NEDA, 2011).

Apart from biodiversity conservation in the lake watershed, the flux of nutrients and pollutants should be a top priority of an ecosystem-based management that needs to employ innovative socio-environmental approaches involving participatory, multisectoral, multidisciplinary, integrated, and ecomanagement efforts. The looming climate change, which may undoubtedly lead to further loss of biodiversity services, needs to be incorporated into the watershed modelling and management framework.

In addition to contextualization, integration of STEM (Science, Technology, Engineering, and Mathematics) is one of the current trends in education that aims to develop the deep mathematical and scientific underpinnings that students need to be competitive in the 21st-century workforce (Jolly, 2014). This approach to STEM education is called the integrated approach where STEM content areas are taught as though they are in one subject and can be done with a minimum but not limited to two disciplines (Roberts & Cantu, 2012).

To provide a viable solution to the gaps mentioned may it be in terms of strengthening the weak link between what is learned at school and the contexts that surround the learner to strengthen learning, low scientific literacy, the limited literature of studies of species in Lake Lanao (Marawi City, Lanao del Sur), and the utilization of results of such studies in improving the teaching-learning process have motivated the researcher to develop a Contextualized STEM Lesson on Biodiversity and Contextualized Biodiversity Handbook.

Research Objectives

This study aims to:

1. Identify the local fish species of fauna found in Lake Lanao;
2. Develop the Contextualized STEM Lesson on Biodiversity; and,
3. Create a Contextualized Biodiversity Handbook.

Research Questions

1. Teaching the concept of biodiversity in learning activities, especially science education is an important urgency to bring up biodiversity literacy competence. Education plays a crucial place where biodiversity education should be mainstreamed through the development of scientific literacy among students (Jose-Castillo, 2019).

2. The dismal performance of the Philippines in the 2022 Program for International Student Assessment (PISA) indicates that the students in the country are five to six years behind in learning competencies, according to the Department of Education (DepEd). Overall, the Philippines achieved a 2.2-percent point hike in mathematics from 2018 to 2022, 6.9 percent in reading, and a 0.8 percent drop in science proficiency. Contextualization of lessons to empower students to be more responsive to real-world issues while at the same time improving the learning process (DepEd, 2016). However, there is a lack of contextualized materials available and if available are confusing (Valin & Jenner, 2020).

3. It is vital to develop a ready-to-use Contextualized STEM Lesson and Contextualized Biodiversity Handbook that will influence a scientifically literate citizenry in environmental decision-making. Bagarinao (1999) suggested Protected areas as sources for biodiversity education. Mainstreaming Biodiversity Education in formal education will enable people to recognize the relationship between the health of biodiversity and their well-being (Jose-Castillo, 2018).

METHODOLOGY

This study utilized both qualitative and quantitative research design. The descriptive method with qualitative support was used to treat the responses of the learners, administrators, and teachers during the semi-structured needs assessment interview, as well as the elders' and residents' responses during the semi-structured assessment interview on the fish species and their services in Lake Lanao, and the panel of experts' comments and suggestions. On the other hand, the qualitative research design aspect was utilized in the evaluation of the developed Contextualized STEM Lesson on Biodiversity and Contextualized Biodiversity Handbook. Meanwhile, during the identification of fish species in Lake Lanao, purposive and opportunistic sampling was utilized to identify the species that are necessary inputs for the development of the Contextualized STEM Lesson on Biodiversity and Contextualized Biodiversity Handbook.

There were four (4) major phases in the conduct of this study.

The first major phase was the conduct of the semi-structured interview with the elders and residents of Lake Lanao about the species (plants and animals) and their benefits. Responses were categorized based on the species' services, local name, and common name. The data gathered from this stage were analyzed and the results became the springboard in the conduct of the identification of the species in Lake Lanao.

The second major phase was the field species observation in Lake Lanao (presence of plants and animals) where sampling and interviews were utilized.

The third phase was the development of the Contextualized STEM Lesson on Biodiversity which was based on a needs assessment interview of key informants (learners, teachers, and administrators) for the need to develop a contextualized STEM Lesson on Biodiversity and Contextualized Biodiversity Handbook. The data gathered from this stage were analyzed and the results became the springboard in the development of the Contextualized STEM Lesson Plan on Biodiversity and the Contextualized Biodiversity Handbook. The design of the lesson was adapted from the STEM lesson plan structure designed by Theeresan and Yuenyong (2018) where the context was based on the local area of Lake Lanao which included examples like the fish species in Lake Lanao and organisms found in it.

The fourth major phase was the evaluation of the developed Contextualized STEM Lesson on Biodiversity and the Contextualized Biodiversity Handbook. This phase involved a "panel of experts" which was comprised of in-service teachers from MSU-Baloi Community High School, in-service Biology teachers, and STEM experts who evaluated the developed teaching-learning material.

In addition, the researcher thoroughly explained to the students the purpose and the objectives of the study, so that the students become completely aware of what they're about to participate in. The researcher also emphasized to the students that the data gathered from the study was confidential and was solely for academic purposes only.

Furthermore, the researcher exerted an effort to the extent of creating a positive environment among the participants of the study.

RESULTS AND DISCUSSION

The local species and the services of Lake Lanao were the bases of the development of the Contextualized STEM lesson on Biodiversity and Contextualized Biodiversity Handbook. This was evaluated by STEM experts, and in-service teachers through a STEM rubric of Tecson (2019). The following subsections were the results and discussion of identified fish species and the evaluators' ratings of the developed learning material.

4.1.1 Identified Fish Species in Lake Lanao

This is a pioneering study on the identification of fish species found in Lake Lanao. In this study, a total of five (5) species were recorded and identified from Lake Lanao. the identified fish species inhabiting the lake were classified based on the family as illustrated in Table 1.

Table 1. List of fish species recorded in Lake Lanao

Table 1. List of fish species recorded in Lake Lanao

Family	Species	Local Name	Origin
Channidae	*Ophiocephalus striatus* (Bloch, 1793:141)	Aruan	Native (FAO, 2005) Catalog of fishes, 2003
Cichlidae	*Oreochromis niloticus*	Tilapia	Introduced (FAO, 2005)
Osteoglossidae	*Clarias macrocephalus*	Katipa	Introduced (FAO, 2005)
Eleotridae	*Hypseleotris agilis*	Katulong	Introduced (FAO, 1960s)
Osphronemidae and Helostomatidae	*Trichogaster pectoralis*	Gourami	Indonesian origin (FAO, 2012)

Of the five (5) freshwater fish species identified, four (4) freshwater fish species belong to the Channidae family which is the Ophiocephalus striatus *(Aruan*). The other (5) freshwater fish belonging to the Cichlidae family which is the Oreochromis niloticus (*Tilapia*), (1) freshwater fish belong to the Osteoglossidae family which is the Clarias macrocephalus (*katipa*), and (1) freshwater fish belonging to the Eleotridae family which is the Hypseleotris agilis *(katulong*). There is also (1) freshwater fish Trichogaster pectoralis (*Gourami*) which belongs to the family Osphronemidae and Helostomatidae. These are the fish species found in Lake Lanao during the conduct of the study.

4.1.2 Local Species and its Services of Lake Lanao

A semi-structured interview on the local species and its services was conducted which serves as a preliminary assessment tool on the species present in Lake Lanao and their uses as identified by the residents living in the area. This assessment gave the research insights into the species found in Lake Lanao. The data gathered was deemed important as a springboard for the conduct of the entire study as it functions as an indicator of the species that can be identified in the area. The results of this component indicated the use of species and their services by the residents of Lake Lanao as well as

to determine what are the prospective products of these services that can provide more livelihood to the residents.

4.2.1. Development of Contextualized STEM Lesson on Biodiversity

The development of contextualized STEM lessons on biodiversity underwent several processes. In this section, the major findings of the stage are presented along with its implications.

4.2.2 Identified Fish Species in Lake Lanao

Aruan is another native favorite fish species of the Maranao dwellers living in Lake Lanao. They are very common in freshwater plains and survive the dry season by burrowing in the bottom mud of lakes, canals, and swamps, and feed on fish and crustaceous (FAO, 1999).

Oreochromis niloticus (Tilapia) is one of the sources of food and livelihood for the people living on the banks of Lake Lanao. In the early 1970s, the introduction of Nile tilapia (Oreochromis niloticus) in the country was made. It is a species light in color, enhanced the image of tilapia, and boosted commercial production (FAO, 2005). According to the Food and Agriculture Organization of the United Nations (2017), is the most consumed farmed fish in the Philippines, with an average yearly consumption of 4.6 kg per person.

The freshwater catfish *Clarias macrocephalus* is native to the Philippines but is fast becoming scarce in many natural habitats. It is a favorite food fish due to its tender and delicious meat. Recently, the farming of Clarias macrocephalus has gained interest among catfish growers. Like other catfish species, it is resistant to diseases, can be stocked at high densities, and can tolerate low water quality, FAO (2005).

Hypseleotris agilis Herre of Lake Lanao, Philippines as a possible source of indigenous drugs. The fish is locally known as *katulong* belonging to the family Eleotridae which is believed to have been accidentally introduced sometime in the 1960s along with tilapia and milkfish fry stocking in the lake for aquaculture, FAO (1960s).

One of the freshwater fish in Lake Lanao used as food and is also sold is *Trichogaster pectoralis (Gourami)* locally known as *gourami/mirakulo*. It was introduced to the Philippines from Thailand in 1938 (FAO, n.d.). Figures 9 to 12 show the different freshwater fish species found in Lake Lanao. These freshwater fish species are a main source of food and a vital livelihood for the people along the banks of the lake. According to the Food and Agriculture Organization of the United Nations (2008), fish is a source that has a localized economic and nutritional dependence as it provides a crucial source of protein.

4.2.3 Experts' Rating of the Contextualized STEM Lesson on Biodiversity

In-service science teachers, in-service Biology teachers, and STEM experts evaluated the developed Contextualized STEM Lesson on Biodiversity.

Figure 1 shows the distribution of ratings in each of the criteria for the teaching-learning material.
The scale used in rating:

1.0 – 1.54 Needs Improvement
1.75 – 2.49 Good
2.50 – 3.24 Very Good
3.25 – 4.00 Excellent

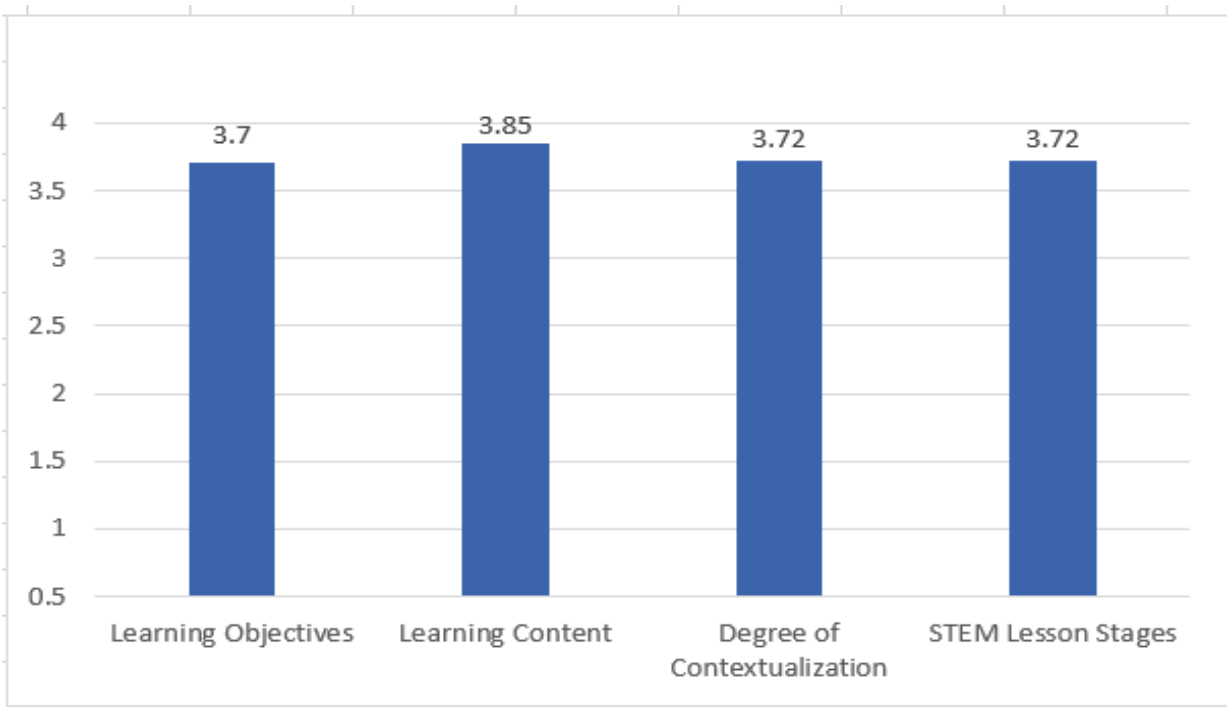

Figure 1. Experts' rating of the Developed Contextualized STEM Lesson Plan on Biodiversity

Figure 1 above shows the summary of ratings by the in-service and in-service biology teachers. The Contextualized STEM Lesson on Biodiversity was rated Excellent in terms of its learning objectives where it is characterized as SMART, based on behavioral terms that can be easily observed, appropriate to the content it offers a clear and concise description of the concept. In the criteria for the degree of contextualization, it is rated as excellent which shows that it links the lesson to the local context of Lake Lanao and the real-world problems. In summary, the whole material got a total weighted average of 3.85 which means excellent and indicates that the material has an exemplary quality in terms of its learning objectives, learning content, degree of contextualization,

and the STEM stages denoting that it is now ready to be used in teaching Biodiversity topic for Grade 8 learners.

4.2.4 Comments and Suggestions of the Panel of Experts of the Contextualized STEM Lesson on Biodiversity

One of the components of the rubric in evaluating the developed Contextualized STEM Lesson on Biodiversity is the comments and suggestions sections. This was done to gather more insights and comments to improve the teaching-learning material figures below show the comments and suggestions of the developed Contextualized STEM Lesson on Biodiversity:

Table 2. Revisions based on the comments and suggestions of the panel of experts

Before	After
CONTEXTUALIZED STEM LESSON ON BIODIVERSITY **LESSON DESCRIPTION** This lesson explores the concept of biodiversity within the local content of Lake Lanao. **LESSON OBJECTIVES** • To define biodiversity its significant and uses. • To identify local species found in Lake Lanao. • To design sustainable fishing gears for the protection of endangered and economically important species found in Lake Lanao .	CONTEXTUALIZED STEM LESSON ON BIODIVERSITY **LESSON DESCRIPTION** This lesson explores the concept of biodiversity within the local content of Lake Lanao. **LESSON OBJECTIVES** • To define biodiversity its significant and uses. • To identify local species found in Lake Lanao. • To design sustainable fishing gears for the protection of endangered and economically important species found in Lake Lanao . • To involved themselves in the protection of biodiversity in Lake Lanao . **LESSON PROPER:**
Comment: Identification of the social issue stage, change the picture of fish in the lake, and ask students more questions about the lake until they can reach the presence of the fish in the lake.

Table 2 shows the addition of a new learning objective which is an effective one. This was added because in making the objectives for the lesson, the three domains of learning should be shown especially the affective domain. The lesson can have more than 3 objectives but it must contain cognitive, psychomotor, and affective objectives.

4.3.1 Development of the Contextualized Biodiversity Handbook

The development of the Contextualized Biodiversity Handbook underwent several processes. In this section, the major findings of the stage are presented along with its implications.

1. Chosen topic standards and competencies

The competencies that were used as the basis for the learning objectives in each of the activities of the handbook were to explain the concept of a species and explain the advantage of high biodiversity in the stability of an ecosystem. These standards were transformed into specific learning objectives in the different activities in the Handbook.

2. Incorporation of the identified species present in Lake Lanao, Lanao del Sur

In this stage, the species identified were depicted in each of the activities for contextualization of the lessons making it relevant and timely for the learners.

3. Designing and Conceptualization of the Contextualized Biodiversity Handbook

The design and conceptualization of the contextualized Biodiversity handbook were based upon the contextual learning theory where a constructivist hands-on approach using the learners' context was utilized. The handbook was composed of teachers' lesson guides, students' activity sheets, and rubrics.

4. Face Validation

The material was face-validated by the panel members and thesis adviser for initial comments and suggestions to improve the developed Contextualized Biodiversity Handbook.

5. First Phase Revision

The comments and suggestions of the thesis adviser and the panel members were applied in revising the Contextualized Biodiversity Handbook.

6. Expert Validation

It was evaluated based on its learning objectives, learning content, degree of contextualization, spelling and grammar, and illustrations and images used.

7. Second Phase Revision

During the second phase of revision, the comments and suggestions of the panel of experts were applied in terms of the learning objectives, learning content, degree of contextualization, spelling and grammar, and illustrations and images used.

8. Developed Contextualized Biodiversity Handbook

After the second phase revision, the developed contextualized biodiversity handbook was now complete which includes the teacher's learning guide, students' activity sheet, and rubrics for the activities and outputs. The developed Contextualized Biodiversity Handbook is a supplementary material for the developed Contextualized STEM Lessons on Biodiversity that will be used in teaching biodiversity to Grade 8 students.

4.3.2 Experts' Rating of the Contextualized Biodiversity Handbook

In-service science teachers, in-service Biology teachers, and STEM experts evaluated the developed Contextualized Biodiversity Handbook in terms of learning objectives, learning content, degree of contextualization, grammar and spelling, illustration, and images. Figure 2 shows the rating in each of the criteria of an excellent teaching-learning material.

Figure 2 shows the summary of the experts' rating in each of the criteria of an excellent teaching-learning material using the following scale:

1.0 – 1.54	Needs Improvement
1.75 – 2.49	Good
2.50 – 3.24	Very Good
3.25 – 4.00	Excellent

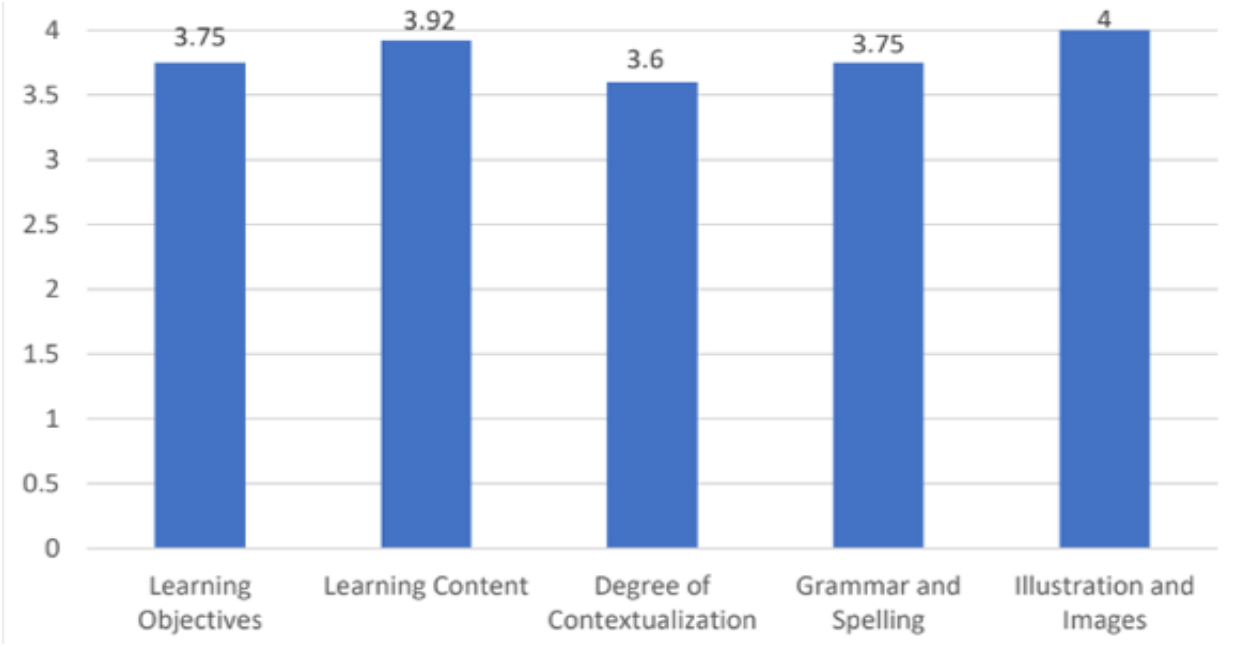

Figure 2. Experts' rating of the developed Contextualized Biodiversity Handbook

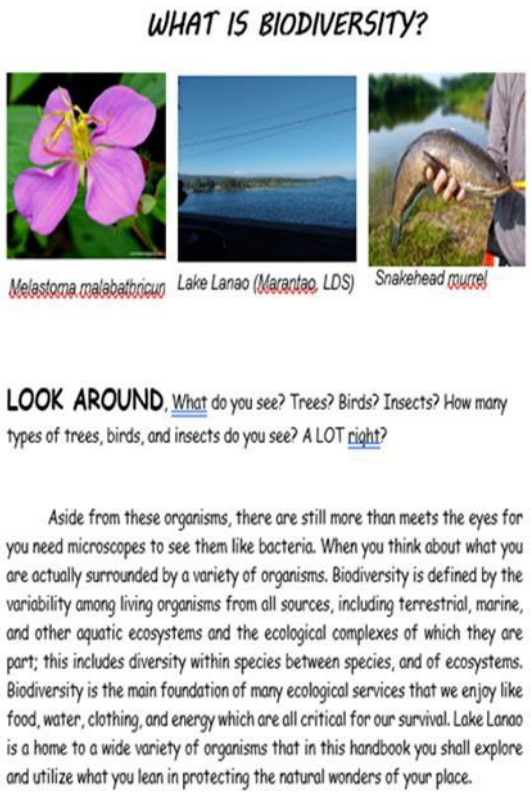

Figure 2 shows the summary ratings of the panel of experts which was comprised of in-service biology teachers, in-service teachers, and STEM experts. The Contextualized Biodiversity Handbook was rated excellent in terms of its learning objectives which implies that the learning objectives were SMART (Specific, Measurable, Attainable, Relevant, Time-bounded) and expressed in behavioral terms. On the other hand, in terms of learning content, it was also rated as excellent where the organization of content is in a logical order and the concepts were accurately presented. The degree of contextualization is also excellent which means that the handbook was creatively modified to accommodate the unique context and values of the locality and connected to real-world problems. The spelling and grammar were also excellent where few errors of English grammar were spotted.

Lastly, in terms of the images and illustrations used it was also rated as excellent where appropriate illustrations and images were used that effectively draw the attention of the readers and aid in the delivery of the concept. In summary, the developed Contextualized Biodiversity Handbook was rated Excellent and can be utilized as a supplement for any learning material and the developed Contextualized STEM Biodiversity Lesson.

4.3.3 Comments and Suggestions of the Panel of Experts of the Contextualized Biodiversity Handbook.

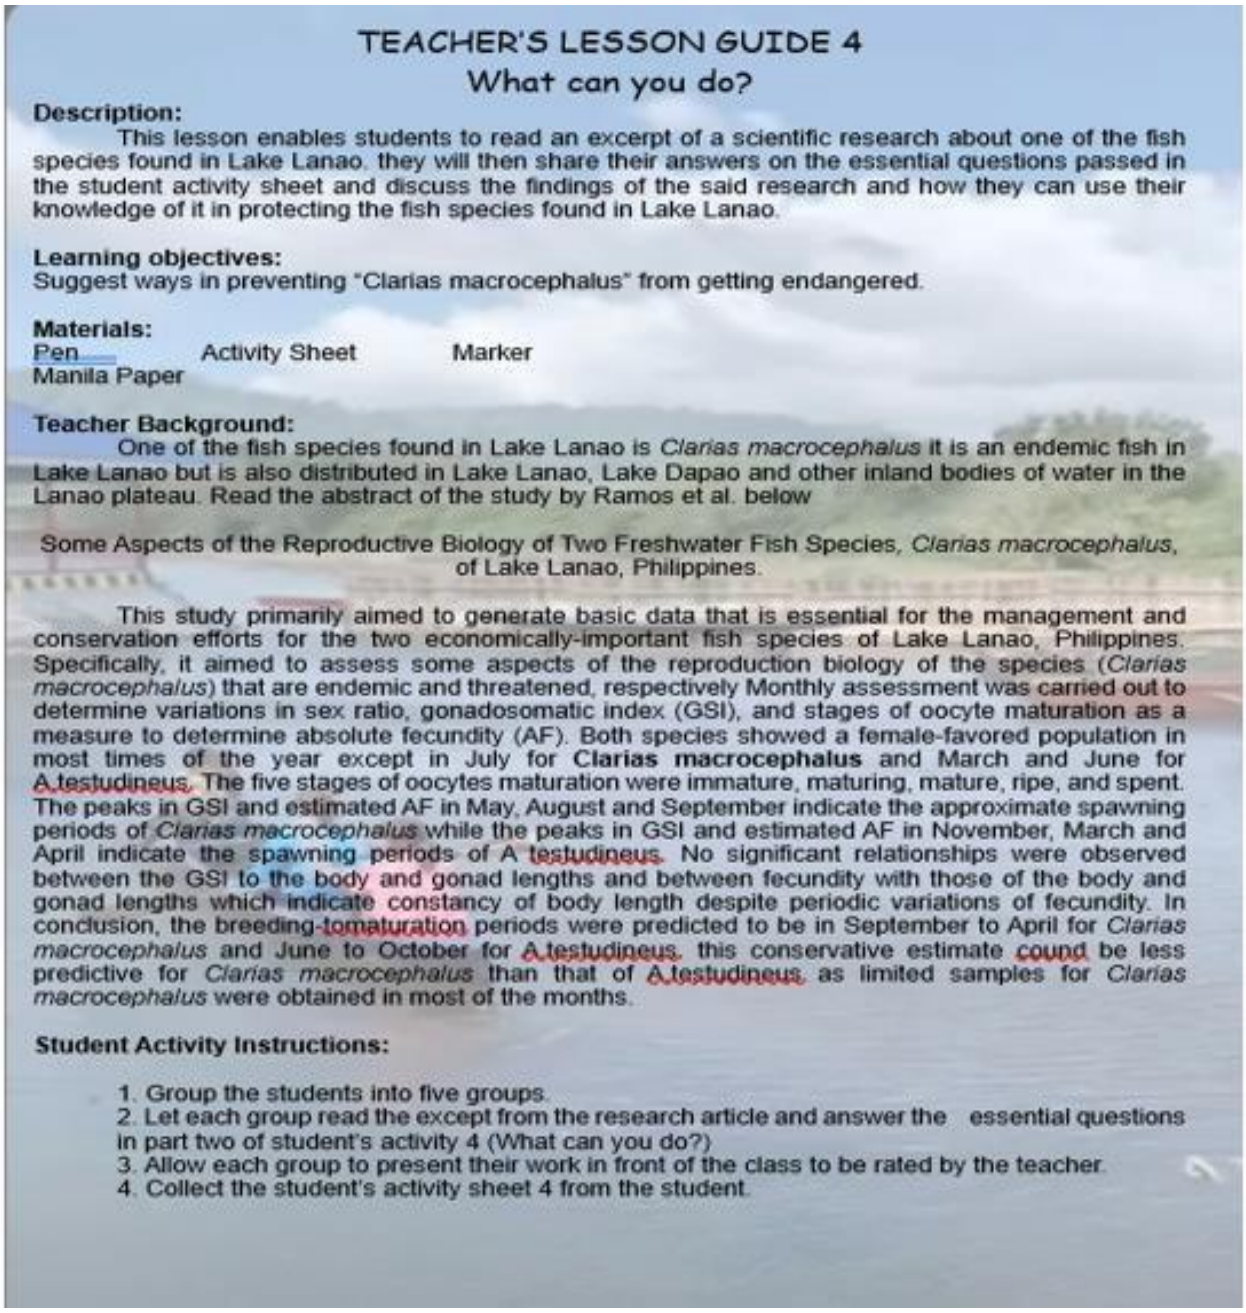
The in-service biology evaluated the developed contextualized teaching-learning material and some of the comments and suggestions of the experts. This component of the rubric for the evaluation of the developed contextualized allows the panel of experts to write down and illustrate the corrections and changes that should be made to improve the contextualized teaching-learning material. To this end, this gave the researcher the necessary feedback that is needed to improve the teaching-learning materials that she developed. The comments and suggestions are illustrated in Table 3.

Table 3. Revisions based on the comments and suggestions of the panel of experts.

<table>
<tr><td colspan="2">Comment: Add an introduction page after the table of contents.</td></tr>
<tr><td>Before</td><td>After</td></tr>
<tr><td>No introductory page</td><td> 
</td></tr>
<tr><td colspan="2">Comment: In activity two hide the species cards around the school for the students to find instead of handing them to them directly.</td></tr>
<tr><td>Before</td><td>After</td></tr>
</table>

1. Scatter the pictures of the species around the school. 2. Let them write the name of each species that they can find as the total number of different species that they can write as “species richness” 3. Instruct students to count and record the number of individuals of each species – something like 4 Philippine Eagles, 3 tilapia fish, and 5 bumblebees. Define the number of individuals of each species as the species abundance. 4. Define species diversity as the species richness (number of species in an area) and species abundance (number of individuals in each species) 5. Divide the class into 5 groups and let them find the pictures of the species you hid around the campus, student, activity sheet 2 (species diversity), and manila paper. 6. Have the students sample the school area 2 times.	1. Hand the students the picture of the sticky note activity test meeting. 2. Get students two minutes to write down the names that they see in the picture and define the total number of different species that they can write as ‘species richness’. 3. Instruct students to count and record the number of individuals of each species- something like 1 robin bird, 3 katipa fish, and 2 Aruan fish. Define the number of individuals of each species as the species abundance. 4. Define species diversity as the species richness (number of species in an area) and species abundance (number of individuals in each species). 5. Divide the class into five groups and hand them the species cards, and students’ activity sheet 2 (species diversity). 6. Instruct them to shuffle the species cards and get 10 species cards without looking at them.

A new page was added to the developed contextualized Biodiversity Handbook. This new page contains the introduction on the topic of Biodiversity and acts as a springboard for the teachers to get an overview of what biodiversity is. One of the panel of experts suggested that in activity two hide the species cards around the school for the students to find instead of handing them to them directly. This was done for students to experience and be engaged in their role as biologists looking for samples for their studies.



4.3.4 Features of the developed Contextualized Biodiversity Handbook

The Contextualized Biodiversity Handbook was developed to become the supplementary material for the implementation of the developed Contextualized STEM Lesson on Biodiversity. Figure 3 shows the cover page of the developed material:

Figure 3. Cover page of the Contextualized Biodiversity Handbook

Figure 4 below shows a sample teacher's guide that will be used by the teachers as a guide and as a reference for conducting the activity that each lesson has. The contextualized biodiversity handbook contains four (4) lesson guides for four different activities that are the foundational concepts to be delivered during the implementation of the Contextualized STEM Lesson on Biodiversity specifically on the need for knowledge stage.

TEACHER'S LESSON GUIDE 4

What can you do?

Description:

This lesson enables students to read an excerpt of a scientific research about one of the fish species found in Lake Lanao. they will then share their answers on the essential questions passed in the student activity sheet and discuss the findings of the said research and how they can use their knowledge of it in protecting the fish species found in Lake Lanao.

Learning objectives:

Suggest ways in preventing "Clarias macrocephalus" from getting endangered.

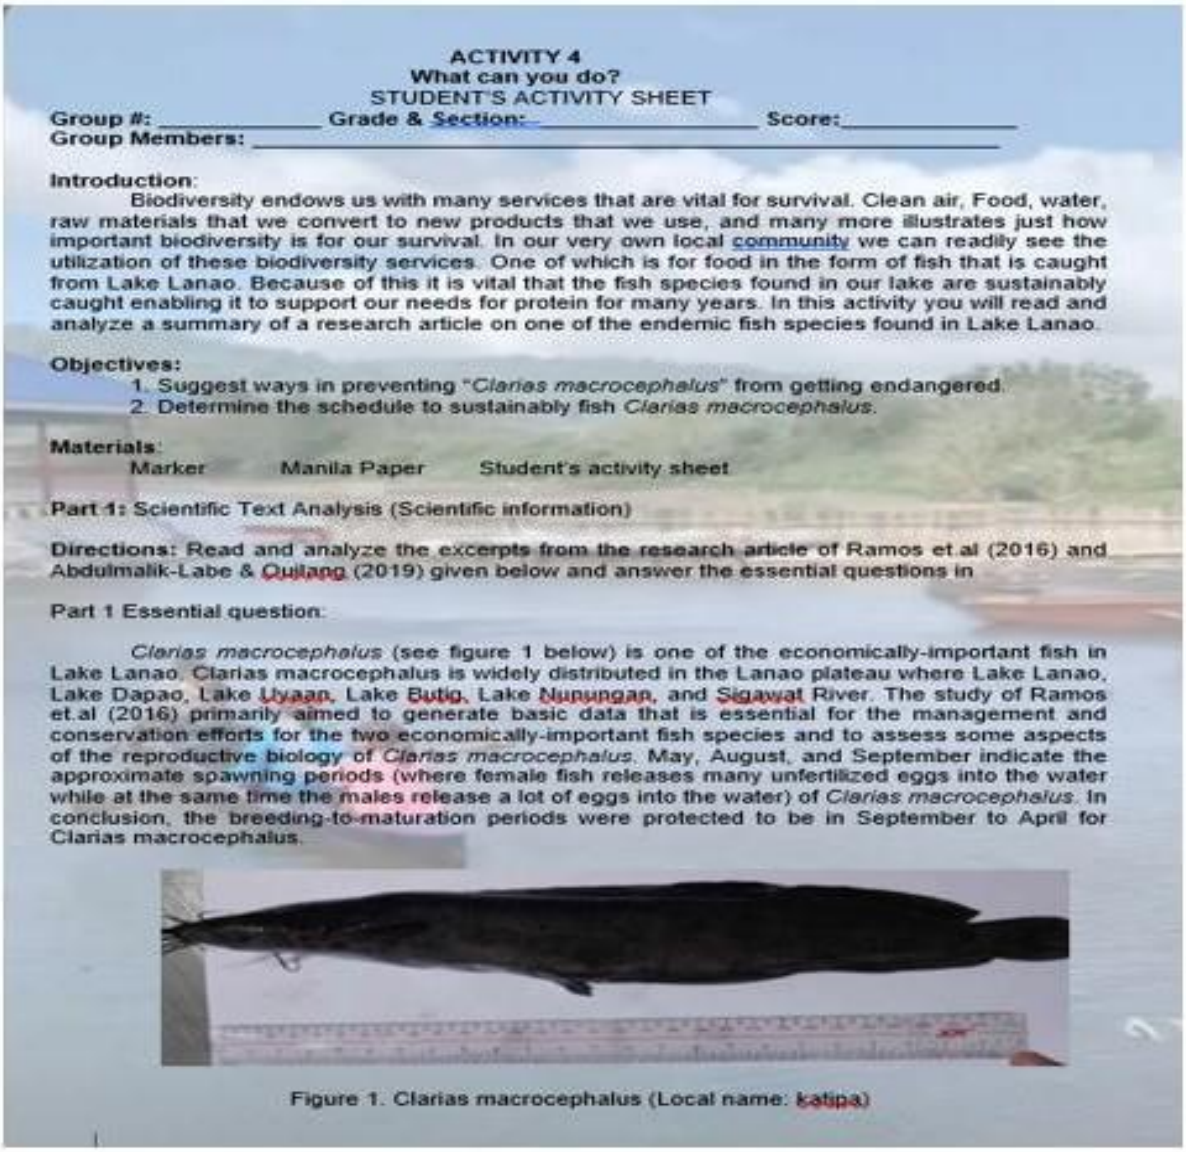
Materials:

Pen Activity Sheet Marker
Manila Paper

Teacher Background:

One of the fish species found in Lake Lanao is *Clarias macrocephalus* it is an endemic fish in Lake Lanao but is also distributed in Lake Lanao, Lake Dapao and other inland bodies of water in the Lanao plateau. Read the abstract of the study by Ramos et al. below

Some Aspects of the Reproductive Biology of Two Freshwater Fish Species, *Clarias macrocephalus*, of Lake Lanao, Philippines.



This study primarily aimed to generate basic data that is essential for the management and conservation efforts for the two economically-important fish species of Lake Lanao, Philippines. Specifically, it aimed to assess some aspects of the reproduction biology of the species (*Clarias macrocephalus*) that are endemic and threatened, respectively Monthly assessment was carried out to determine variations in sex ratio, gonadosomatic index (GSI), and stages of oocyte maturation as a measure to determine absolute fecundity (AF). Both species showed a female-favored population in most times of the year except in July for **Clarias macrocephalus** and March and June for A.testudineus. The five stages of oocytes maturation were immature, maturing, mature, ripe, and spent. The peaks in GSI and estimated AF in May, August and September indicate the approximate spawning periods of *Clarias macrocephalus* while the peaks in GSI and estimated AF in November, March and April indicate the spawning periods of A testudineus. No significant relationships were observed between the GSI to the body and gonad lengths and between fecundity with those of the body and gonad lengths which indicate constancy of body length despite periodic variations of fecundity. In conclusion, the breeding-tomaturation periods were predicted to be in September to April for *Clarias macrocephalus* and June to October for A.testudineus. this conservative estimate coupd be less predictive for *Clarias macrocephalus* than that of A.testudineus as limited samples for *Clarias macrocephalus* were obtained in most of the months.

Student Activity Instructions:

1. Group the students into five groups.
2. Let each group read the except from the research article and answer the essential questions in part two of student's activity 4 (What can you do?)
3. Allow each group to present their work in front of the class to be rated by the teacher.
4. Collect the student's activity sheet 4 from the student.

Figure 4. Sample teacher's guide (teacher's lesson guide 4)

The teacher's guide in the contextualized Biodiversity Handbook contains: (1) Description – this part of the teacher's guide describes the lesson that will be presented and an overview of what the students will be doing; (2) Learning objectives/s – contains the specific learning objective for the lesson; (3) Materials – this section shows the list of the materials that must be prepared for the conduct of the lesson; (4) Teacher Background – This section provides the background knowledge that the teacher will use to deliver the concepts for the lesson; and (5) Student Activity Instructions – which will be used by the teachers to carry out the activities for each of the lessons.

ACTIVITY 4
What can you do?
STUDENT'S ACTIVITY SHEET

Group #: _____ Grade & Section: _____ Score:_____
Group Members: _____

Introduction:

Biodiversity endows us with many services that are vital for survival. Clean air, Food, water, raw materials that we convert to new products that we use, and many more illustrates just how important biodiversity is for our survival. In our very own local community we can readily see the utilization of these biodiversity services. One of which is for food in the form of fish that is caught from Lake Lanao. Because of this it is vital that the fish species found in our lake are sustainably caught enabling it to support our needs for protein for many years. In this activity you will read and analyze a summary of a research article on one of the endemic fish species found in Lake Lanao.

Objectives:

1. Suggest ways in preventing "*Clarias macrocephalus*" from getting endangered.
2. Determine the schedule to sustainably fish *Clarias macrocephalus*.

Materials:

Marker Manila Paper Student's activity sheet

Part 1: Scientific Text Analysis (Scientific information)

Directions: Read and analyze the excerpts from the research article of Ramos et.al (2016) and Abdulmalik-Labe & Quilang (2019) given below and answer the essential questions in

Part 1 Essential question:

Clarias macrocephalus (see figure 1 below) is one of the economically-important fish in Lake Lanao. Clarias macrocephalus is widely distributed in the Lanao plateau where Lake Lanao, Lake Dapao, Lake Liyaan, Lake Butig, Lake Nununggan, and Sigawat River. The study of Ramos et.al (2016) primarily aimed to generate basic data that is essential for the management and conservation efforts for the two economically-important fish species and to assess some aspects of the reproductive biology of *Clarias macrocephalus*. May, August, and September indicate the approximate spawning periods (where female fish releases many unfertilized eggs into the water while at the same time the males release a lot of eggs into the water) of *Clarias macrocephalus*. In conclusion, the breeding-to-maturation periods were protected to be in September to April for Clarias macrocephalus.

Figure 1. Clarias macrocephalus (Local name: katipa)

Figure 5. Sample student's guide (activity 4)

Figure 5 shows a sample of students' activity sheets that will be used by the learners during each lesson. Each activity sheet contains: (1) Introduction – a short overview of the topic for the students to know; (2) Learning objectives – the objectives of the activity the what and the how of the activity; (3) Materials – in this section the materials needed for the activity are listed for early preparation; (4) Task – this contains the tasks that must be done by the students to achieve the objectives; (5) Essential questions – this section provides students with questions that must be answered to assess what they learned from the activity; and (6) action plan – in this section a plan, proposal or solution will be provided by the learners based on the tasks or social issues presented in the lesson.

Conclusions

The developed Contextualized STEM Lesson was rated Excellent in terms of its learning objectives where it is characterized as SMART (Specific, Measurable, Attainable, Relevant, Time-bounded) based on behavioral terms that can be easily observed, appropriate to the content where it offers a clear and concise description of the concept and the comments and suggestions of the panel experts of the Contextualized STEM Lesson adding of a new learning objective which is an effective one. Moreover, the Contextualized Biodiversity Handbook was rated excellent in terms of its learning objectives and expressed in behavioral terms.

Recommendations

Further studies on the Biodiversity of Lake Lanao must be carried out to have a holistic assessment of the state of the lake and the possible practices and programs that must be carried out to protect it. Specifically, the abundance of each of the species as compared to the alien invasive species must be further investigated.

It is further recommended to implement the developed Contextualized STEM Lessons on Biodiversity and the Contextualized Biodiversity Handbook for Grade 8 Learners. This way it can aid students in making decisions when faced with biodiversity-related dilemmas in life.

Ethical Considerations

The researcher asked the school principal and the parents of the participants because the study entails the involvement of the residents in Lake Lanao. This was done to guarantee that the student's involvement in the study was entirely voluntary and guided and that they were free to decline or withdraw at any moment.

Acknowledgments

Sincerest gratitude is extended to the Department of Science and Technology – Science Education Institute (DOST-SEI) for the research funds, Mindanao State University – Iligan Institute of Technology for providing the researchers a place of learning, innovation, and opportunity, and their dear parents for the unwavering support and love. Above all to the Almighty Allah s.w.a for the guidance and wisdom.

ABSTRACT

This study aims to understand the impact of language learning resources on English proficiency of senior high school students in MSU-Sulu. The study utilized qualitative research design through descriptive method. The data were collected through open-ended interviews with committed educators. In addition, six MSU-Sulu Senior High School dedicated English teachers were selected as the participants of this study. The research identified a range of resources at the school including traditional materials such as textbooks and dictionaries and technological resources like online platforms and mobile apps. The result shows that utilizing a variety of these resources effectively improved students' English proficiency. This included enhanced vocabulary, better comprehension skills, and increased fluency. It is also revealed that these resources have indispensable role in molding not only students' learning as well as the teaching style and enthusiasm of the MSU-Sulu teachers. Challenges faced by teachers in utilizing these resources were also highlighted in this study. The study also explored the strategies employed by teachers to overcome these challenges and to effectively incorporate these resources into their teaching. This study also recommends conducting a comprehensive inventory and assessment of the current language learning resources, implementing regular surveys or feedback methods to assess the perceived impact of language learning resources, addressing the stated challenges that English language teachers encounter while accessing and utilizing language learning resources, encouraging English language teachers to collaborate and share expertise. Lastly, future researchers doing a similar study are encouraged to include both students and teachers as participants and may consider utilizing quantitative analysis as their approach.

Keywords: *Language Learning Resources, English Proficiency, Mindanao State University-Sulu, Philippines*

INTRODUCTION

English proficiency has become critical in unlocking both professional and personal prospects in today's linked world. With the increasing globalization and interconnectedness of the world, the ability to communicate effectively in English has become a valuable skill not just for students but for every individual in the world. Mastering English is not only beneficial for academic success, it also opens doors to a world of opportunities in various fields and also essential for international communication. In fact, Santos et al., (2022) stated that the Philippines recognizes English as one of its official languages. All individuals must be fluent in both written and spoken English. (Eslit & Valderama, 2023). This will allow for more transparent and effective communication.

Language learning resources such as books, online resources, technologies and other resources have a significant role in enhancing everyone's English proficiency. According to Sari et al. (2022), e-books assist develop not only communication and collaborative skills, but also critical problem-solving abilities. Park and Lee (2021) recommend that teachers should encourage young students to continue reading printed books in order to strengthen their in-depth reading comprehension and grammar skills. The study of Macancela (2019) also points out that websites make a significant contribution to English language learning by helping teachers employ dynamic strategies that make it easier to reinforce the cognitive approach. Assessing the effectivity of various language learning resources is essential, ranging from conventional textbooks to smartphone apps and internet platforms. It can determine which resources are most beneficial in improving English proficiency.

English teachers choose a variety of materials to keep their students engaged, challenged, and ultimately equipped to become self-assured communicators. Prwati et al., (2019) stated that Learning resources have many different applications in the teaching-learning process. Making the best use of educational materials can support both teachers and students in the process of teaching and learning. The growing diversity of language learning resources, including textbooks, online platforms and technologies provide numerous opportunities to enrich language instruction. However, along with the benefits, English teachers face obstacles in effectively integrating these resources into their teaching. As stated by Johnson et al., (2016), although most teachers recognize the advantages of educational technologies, they often find it challenging to integrate new tools into their lessons in a seamless and efficient manner. Every level of school system faces substantial obstacles when it comes to technology integration, from the accession of new technological equipments to the modification of curricula and teaching methods to accommodate new educational resources.

For MSU-Sulu senior high school students, not having access to certain resources, particularly those that mostly rely on technology can pose some challenges in their learning.

Lack of resources might result in students not receiving a proper education and can be very difficult for teachers. It could lead to a decrease in enrollment.

This study will examine the availability of these resources for use in educational settings and explore strategies for bridging the digital divide between digital resources and traditional materials such as locally accessible websites and textbooks. Additionally, investigating English teachers' preferred learning styles and resource accessibility can inform initiatives to address resource disparities and ensure equitable access to quality language learning opportunities.

The study's significance from its potential to improve students' academic performance and English proficiency. It attempts to improve students' academic performance by identifying efficient language learning tools and methods catered to their linguistic backgrounds. As a means of developing students' language proficiency as well as their appreciation of the diversity of the English language and cross-cultural understanding. Faculty members may also improve the educational system to better prepare students for their future academic and professional endeavors by using the study's practical findings to inform curriculum design and resource allocation. Informed professional development programs can enable educators to become more proficient language learning facilitators by recognizing how teachers function as curators and catalysts in optimizing the impact of resources. This study also offers future researchers a starting point to investigate sociolinguistic effects on language learning in various settings, including MSU-Sulu.

Research Questions

This study seeks to find out the impact of language learning resources on the English proficiency of senior high school students in MSU-Sulu, focusing on the perspectives and experiences of MSU teachers as key participants.

Specifically, this study seeks answers to the following questions:

1. What language learning resources are available in MSU-Sulu senior high school for improving English proficiency?
2. What are the impact of language learning resources on the English proficiency of senior high school students in MSU-Sulu as perceived by English language teachers?
3. What are the challenges faced by English language teachers in accessing and utilizing language learning resources for English language education in MSU-Sulu Senior High School?
4. What are the strategies employed by English language teachers in utilizing language learning resources to enhance the English proficiency of senior high school students in MSU-Sulu?

RESEARCH METHODOLOGY

Research Locale

The study was conducted in Mindanao State University-Sulu Senior High School, Philippines. The mentioned high school is in Capitol Site, Jolo Sulu and was established in 2016. It has two buildings. The first, or main building, can be found near the campus gymnasium, while the second, which is considered its administration building, is situated between the College of Agriculture and the College of Arts and Sciences. In addition, it offers three (3) strands: General Academic Strand (GAS), Humanities and Social Sciences (HUMMS), and Science, Technology, Engineering and Mathematics (STEM).

Sampling Method

The researchers selected a purposive of six senior high school English teachers that are currently working at MSU-Sulu to serve as participants in this study. Their perspectives from years of influencing young brains, were invaluable. Participants were recruited through voluntary participation and informed consent.

In this study, the researchers used Purposive Sampling or Judgement sampling to select the participant of the study. According to Crossman (2020), as cited by Jailani et al. (2024), Sasapan et. al. (2024), Basir et. al. (2024) and Sabbaha et. al. (2024) Purposive Sampling is a non-probability sample that is selected based on characteristics of a population and the objective of the study.

Research Instrument

The main instrument used in conducting this study was a self-developed questionnaire which consists of open-ended questions. The focus of this research was open-ended interviews with dedicated teachers to investigate the impact of language learning resources on the English proficiency of senior high school students at MSU-Sulu. The researchers explored their findings on the usefulness of current tools, the problems in utilizing these resources, and their suggestions for optimizing the learning environment through open-ended conversations. In addition, Züll, (2016) defined open-ended survey questions as any questions that do not have an established list of possible answers. When answering open-ended questions, participants must come up with an original response that they can express verbally or in writing.

Data Gathering Procedure

Furthermore, before distributing the survey questionnaires, the researchers checked that all study participants gave their consent.

For the procedure of collecting data, the researchers asked permission from the director of MSU-Sulu senior high school to allow them to conduct their study. The researchers then secured a written permit. Afterward, the researchers gave a letter to each target participants to ask for their permission and cooperation for the launching of the questionnaire consisting open-ended questions for initiating the interviews. The researchers then deployed the survey questionnaire and retrieved it the day after, for participants to have enough time answering it. Lastly, the researchers compiled and analyzed the data that was provided by the participants.

RESULTS AND DISCUSSION

In this section, the data gathered from the participants of this study are coded, analyzed and categorized into themes to further understand the impact of language learning resources on English proficiency of senior high school students in MSU-Sulu.

3.1 Language Learning Resources available in MSU-Sulu Senior High School.

Language learning resources covers a wide range of materials including books, online resources, technologies and other resources that could help not just students but everyone to learn and improve their English proficiency. Books have long been staple resources for students, they continue to play an important role in language acquisition. Park and Lee (2021) recommended that teachers should encourage young students to continue reading printed books in order strengthen their in-depth reading comprehension and grammar skills. Online resources such as websites, apps and platforms have revolutionized the way people learn languages. Wang et al., (2023) stated in their study that the internet is a valuable resource in a culture that has advanced technologically, and the study found out that the internet significantly impacts academic self-efficacy and the process of learning English. Language learning technologies such as information and communication technologies (ICT) and educational technologies (EdTech) have also expanded the opportunities for immersive practice and feedback. These resources can assist learners in honing their English proficiency such as listening, speaking, reading, and writing ability. According to Huda (2023), the widespread use of the internet and the development of technology have completely changed the way that people learn, allowing learners to acquire knowledge in new ways.

Available language learning resources. According to the participants' narrative, English teachers of MSU-Sulu senior high school utilizes a mix of traditional and technological resources in their instruction. This includes materials like books, modules, dictionaries, and visual aids, alongside online resources like videos, mobile apps, and projector presentations. Notably, the recent implementation of free university-wide internet by MSU-Sulu has made accessing online resources significantly easier for students compared to previous years. The result of Andreyeva et al., (2019) research showed that, in comparison to traditional teaching approaches, the use of computer technology in the process of teaching foreign languages provides for better results in practically all language elements and types of speech activity. However, Guarino et al., (2014) emphasized in their study that the internet can be a useful tool in meeting their educational needs but textbooks remained as students' preferred resource. Thus, teaching English can be done through both conventional and technological methods.

> *I usually use books, modules, dictionaries for vocabulary building, worksheets, instructional or online videos, class activities or group activities such as, presentation (speaking, writing, and reading activities) in teaching (P1, Excerpt 1).*
>
> *The available language learning resources used in MSU-Sulu SHS preferably were modules, also by means of video/video presentation to be shown in the projector, others may use flashcards, project supplies and visual*

aids (P2, Excerpt 2).

The only available language learning resources in MSU-Sulu are Textbooks, Mobile App, Language Learning books, and Language Learning websites (P4, Excerpt 3).

Based on what I have experienced during this semester, there are various language learning resources available in MSU-Sulu Senior High School such as books and as well as online resources since MSU-Sulu provides free internet (P5, Excerpt 4).

As language learning requires ample resources, they include the use of multimedia resources as learning materials. Though not limited to, the use of today's technological advances has vastly impacts the educational scenario. Credible sites such as google scholar.com brottanica.com and other learning resources are some I personally use as well other than the modules prescribed by the DepEd (P6 Excerpt 5).

Frequently used language learning resources. With regards to the frequently used resources when teaching English to the students, it is said that modules, textbooks, mobile apps, and online resources are used more often by the English teachers at MSU-Sulu senior high school. This finding from Park and Lee (2021) is directly relevant to the results about the language learning resources available at MSU-Sulu senior high school. The results indicate that teachers primarily utilize a combination of traditional and technological resources, including textbooks and modules, which can be considered forms of "printed books" in the context of this study.

Moreover, some of them rely more heavily on technological advancements as sources, as they can assist them in grasping and seeking more information and comprehensive texts, particularly in the field of English language learning education. Additionally, Macancela (2019) emphasized the importance of technological tools such as website in the variety of interactive activities and practices for understanding the English language, and improving the motivation of students in the improvement of the activities of the subject.

I frequently use textbooks or modules, worksheets or activity sheets and class activities (P1 Excerpt 6).

I personally used modules, wherein ahead of time given to them, so that they may have something to read, background of the subject or ideas to be studied (P2, Excerpt 7).

Basically I only used textbooks, mobile app, and language learning websites (P4, Excerpt 8).

I usually use online resources, to seek for more comprehensive texts especially in the field of language teaching (P5, Excerpt 9).

As I have mentioned, I heavily rely on the technological advances, as to take advantage of its proliferance modules, research materials and other studies related to my topics are all integrated as my sources in which I use for instruction (P6, Excerpt 10).

Helpful language learning resources for teaching English. Based on the teachers' statements, not all of the available resources are helpful, and some of them may also be unhelpful in teaching. According to the participants, the resources that are helpful to them are textbooks, mobile apps, video presentations, and online resources. On the other hand, one of them stated that visual aids are unhelpful because students don't really pay attention to what is written there.

> *The most helpful one is the video presentation, subject to be shown in the projector, it really helps students visualize and understand deeply the discussion. The unhelpful one I think is the visual aids, they do not pay attention of what is written there (P2, Excerpt 11).*
>
> *To be honest, all of the resources that can be found in MSU-Sulu SHS, such as books, e-books, e-paf and such are very helpful in terms of acquiring knowledge and effectively delivering it to the students (P5, Excerpt 12).*
>
> *As mentioned, websites carrying various disciplines are integral for me as I facilitate the learning of my students. So far, studies I find on Google scholar.com and the modules from DepEd are my top reliable resources (P6, Excerpt 13).*

3.2. Impact of Language Learning Resources on English Proficiency of Senior High School Students in MSU-Sulu.

The use of language learning resources has a significant impact in both teaching and learning English. Hassan (2014) mentioned that most individuals believed that without any learning materials, learning a language in an academic environment is impossible. Integrating language learning resources in teaching also allows students to enhance their English proficiency such as speaking, reading, and writing, and their confidence and motivation to engage with the English language. For MSU-Sulu teachers, having access to language learning resources such as books, online resources, and technologies also allows them to create effective and immersive learning environments. By utilizing these resources, MSU-Sulu teachers can further improve their English teaching process, ultimately leading to improved English skills of students.

Impact of language learning resources on students' English proficiency. The responses provided by English teachers offer a diverse perspective on the impact of language learning resources on senior high school students' English proficiency at MSU-Sulu. The teachers acknowledge the varied preferences among students, highlighting the importance of adapting resources to cater to individual learning styles. Several teachers emphasize the positive impact of different resource types, such as worksheets and mobile apps, in enhancing students' speaking, reading, and writing skills. Clear instructional purposes are noted as crucial for effective learning. One teacher, however, exclusively relies on modules, emphasizing their role in expanding students' English vocabulary in writing. Experience plays a significant role, as one teacher with over nine years of service stresses the importance of students' willingness to exert effort for effective learning. Electronic means, as mentioned by another teacher, are recognized for their accessibility and contribution to English proficiency, especially in the early stages of lecturing. In the study of Alghamdi et al.

(2019), stated that incorporating authentic tasks and resources into English language instruction can improve students' speaking fluency and equip them with the skills they need to communicate effectively outside of the classroom.

> *The impact of the different types of resources may vary depending on how students respond to each types. There are many students who find it hard to learn language proficiency through having on the spot activity rather find themselves engaged in having worksheets are activity sheets where they can really express themselves on their own (P1, Excerpt 14).*
>
> *Through these different types of resources used, it has really good and strong impact to the students' English proficiency such as speaking, reading, and writing where it established clear instructional purposes. In their speaking, it makes positive connections to others where they can comfortably share their ideas, feelings and experience. In reading they could actually comprehend well and visualize it. Lastly, writing- through this, it could support and assess the so called (HOTS) preferably the overall critical thinking and analysis that they have undergone through the said resources (P2, Excerpt 15).*
>
> *Since I only use module, base from their activities some students have widen their vocabulary in English in terms of writing (P3, Excerpt 16).*
>
> *I strongly believe, that learning depends on the capacity of the students to learn. I believe they learn when they eagerly exert effort. Base on the experience, in more than 9 years in service and in teaching, all of these resources are helpful when they properly instructed on how to use and how they should apply for instance the Mobile App (P4, Excerpt 17).*
>
> *Among all the types of resources that I use, the ones given by the DepEd has given me far more favorable results from my class (P6, Excerpt 18).*

Utilization of language learning resources enhanced students' confidence and motivation to engage with the English language. The participants of this study collectively illustrate their belief in the importance of English proficiency and the positive impact of language learning resources on students' confidence and motivation. They highlight the role of these resources in helping students reach the fluency level of their peers and the effectiveness of engaging in school activities like speech or English clubs. There's an emphasis on the enthusiasm and self-directed learning of students, as well as the increasing engagement observed throughout the semester, particularly through internet-based language learning. Additionally, one of the participants underscores the complex nature of teaching instruction and the role of language resources in enhancing teaching methods. Overall, it emphasizes the transformative effect of language resources on students' language proficiency journeys. Yokubjonova et al. (2022) stated that reading English-language books has been highlighted as a crucial component of language acquisition, fostering the growth of vocabulary, grammar, and critical thinking abilities. These studies collectively suggest that reading books, especially literature, can have a significant and positive impact on the development of English language skills and proficiency.

> *I believe that being able to use English as a language is a must and what I have noticed in my class with the execution of the language learning resources*

help them unleash the capacity to be at par with those who are fluent and proficient in English. Their motivation and confidence has improved and this can be a great indicator of their progress in their language learning proficiency journey (P1 Excerpt 19).

I could probably say that if they had really enhanced the so called used of language resources by means of engaging different school activities both inside and outside the class for example joining clubs like speech club, English club where it promotes and boosts students' confidence and motivation (P2 Excerpt 20).

I believe students with great enthusiasm and interests will definitely learn not only with the guidance of the teachers, rather even in their own little way (P4 Excerpt 21).

I can see that as we go along with our class for this semester, they are really becoming more engaged through language learning when it is from the internet (P5, Excerpt 22).

I believe that the use of language learning resources has enhanced my students' confidence and motivation to engage with the English language because this embodies a much more complex method of research, relearning and perfecting the profession of teaching instruction as a teacher (P6, Excerpt 23).

Utilization of language learning resources in teaching help teachers improve their way of teaching English. Based on the participants' statements, language learning resources did not just helped students to improve their English proficiency but also helped teachers like them in many ways. Their statements expressed gratitude and appreciation for how these resources helped them improve their way of teaching, as well as, their passion in their profession. It became clear that the participants recognized the indispensable role of language learning resources in shaping not only their students' learnings but also their own evolution as dedicated teachers. Teachers' resourcefulness is essential since the appropriate and effective use of all existing resources is critical to the development of any educational system or organization. Resources are crucial to education and to instructors in particular since they can help to advance both their personal and professional growth (Chigeza, 2022).

As a teacher, the application of language learning resources does not only limit to students. Along with the execution of these language learning resources, I have also noticed that, these made me, if not good or fluent or proficient, at least able to handle my class discussions with its proper and sufficient execution (P1, Excerpt 24).

It usually means a lot and helpful for us, as a teacher, engaging and using different types of language learning resources could have a very big impact, we also learned and studied. Thus, facing and engaging students is but a challenge. We may encounter from time to time, so we really see to it, that we must prepared enough. And the so called mastering, in facing our energetic students, to prevent any circumstances, for instance, lackness of skills in establishing clear discussions (P2, Excerpt 25).

I have a lot of personal achievement in terms of how the language

learning resources had helped me improve my way of teaching English. I could barely remember how I manage to come up with a standardized pronunciation and literally speak spontaneously (P4, Excerpt 26).

As a teacher, it is way more effective to impart knowledge by using any language learning resources that you can use, I have improved it through these resources because it makes me confident in facing the students (P5, Excerpt 27).

As a teacher, and most significantly a lifelong learner, the use of resources for learning are what I deem necessary to comprehensively be more dependent on. Arrogance has no space in the field of education (P6, Excerpt 28).

3.3 Challenges Faced by English Language Teachers in Accessing and Utilizing Language Learning Resources for English Language Education in MSU-Sulu Senior High School.

Students' use of language learning resources profoundly impacts their English language education. Understanding the challenges English teachers face in accessing and utilizing resources at MSU-Sulu Senior High School allows for the development of more effective and tailored teaching strategies. The study of Agung (2019) demonstrates the various challenges that English teachers face in teaching English language. These challenges include the poor level of language comprehension among the students, limited resources of materials, the communication gap that exists between the lecturers and the students, the students' lack of interest and engagement in the classroom, and the absence of social and environmental support.

Main Barriers and Obstacles that the Teachers Encounter in Utilizing Language Resources. The interviews revealed that students' anxiety can hinder participation in recitations, discussions, and other learning activities. According to Sadighi (2017) anxiety related to learning a foreign language is one of the affective factors that has a negative impact on language acquisition. Noise from neighboring classrooms is also highlighted as main obstacle for it disrupts lessons and makes it difficult for students to learn effectively. Cheryan et al., (2014) points out in their study that learning is significantly impacted by a building's structural features. Furthermore, there is a strong correlation between lower student achievement and poor lighting, noise, poor air quality, and inadequate heating in the classroom.

Participant 6 revealed that language barrier is also one of the obstacles teachers faced in effectively teaching English. Students with limited English proficiency may struggle to understand the learning resources. According to Ashikuzzaman (2023), Language barriers in the classroom have the potential to seriously impair participation, interrupt the flow of information, and restrict meaningful interactions between teachers and students.

These responses showcase the importance of considering various factors beyond the resources themselves. Effective language learning requires addressing student anxiety, adapting to classroom environments, and bridging language barriers.

One obstacles and barriers that I usually encountered in my class during recitations and discussion is the level of students anxiety, even not in speaking but on the entirely of the learning process, for if the students find it hard to learn speaking, reading, and writing and other activities will be affected too (P1, Excerpt 29).

In my own experience, the main barriers and obstacles that I encountered in utilizing language learning resources in my teaching is "physical noise", perhaps our classrooms are usually close enough to one another, it is really hard for me to compete with voice coming from the other room (P2, Excerpt 30).

Language barrier is one of the main barriers or obstacles that I faced in integrating these resources in my teaching. Not all learners can comprehend the English language, as much as the others could (P6, Excerpt 31).

Students' behavior affecting the teachers' utilization of language learning resources. Students' behavior is a two-way street when it comes to language learning resources. As Participant 2 points out, disruptive behavior throws a wrench in a teacher's ability to use resources effectively. It's hard to concentrate on implementing a lesson plan when you're constantly managing the classroom. Khasinah (2017) defined disruptive behavior of students as students' misbehavior or poor involvement in class. Such behaviors frequently cause disruptions to the teaching and learning process in the classroom since these actions have an impact on both teachers and other students as well. On the other hand, Participant 6 suggests that student behavior can also be a signal of their interest. Disengaged students might be acting out because the chosen resources aren't engaging them. In both cases, understanding the reasons behind students' behaviors allows teachers to adapt their approach and resource selection. This can lead to a more productive learning environment where students are actively involved and teachers can effectively utilize the resources at their disposal. Moreover, it is essential for teachers to stimulate their student's enthusiasm for learning the English language. (Amjah, 2013).

Yes, it really affects my utilization of language learning resources especially in my teaching. I can't concentrate well, because all the time I keep my eyes watching on them and always reminding them to be behave, not just me, as well as their classmates will be affected, so the tendency is there will no learning at all (P2, Excerpt 32).

Definitely. Because the learners' behaviors are a reflection of how well they are interested in the class (P2, Excerpt 33).

Supports and professional development that the teachers need to effectively integrate language learning resources into their teaching. In accordance with the participants' assertion, there are various form of support and professional development that they need in order for them to effectively teach English to their students. These includes the access to workshops and seminars for integrating language learning resources, interaction with influential and inspiring individuals to support mental well-being and professional growth, opportunities for further education such as educational courses and masteral degrees to enhance teaching skill, regular and rigorous remedial classes and constant drills to support

student performance, especially in language, peer support and interaction with co-teachers for collaborative learning and development, self-motivation, and support from superiors, as well as, the encouragement from peers to navigate the challenges of the teaching profession. Additionally, Sancar et al., (2021) stated that developing teachers professionally is essential to raising student achievement. Furthermore, their varied form of support and needs from dynamic nature of their profession encompasses not only professional development but also the well-being, educational advancement and progress of the students.

> *For professional development, it is with great privileged to attend workshops and seminars on the integration of language learning resources (P1, Excerpt 34).*
>
> *I think the kind of support that I am longing for and could help my professional development is to be with good influential people. I think this means a lot for me, verily if you were being surrounded good people that will always remind and inspired you to work harder and love your profession, you will be inspired to go to school. I mean for me mental health is very important, thus if this will be affected it loosen your capability to control emotion (P2, Excerpt 35).*
>
> *It is always a must to fully understand what you are teaching and master your topics. This is through taking educational courses and masteral degrees (P3, Excerpt 36).*
>
> *I believe a regular and a rigorous remedial class can be of by helps in order to give way to these students with their performance especially in language. Constant drills is highly recommended too (P4, Excerpt 37).*
>
> *Maybe in terms of peer support from my co-teachers, I hope I can interact with them more (P5, Excerpt 38).*
>
> *The kind of support that we need as teachers come from our own selves. The teaching profession is challenging, and self-motivation as a professional is important. Also supports from our superiors at work and peers is important (P6, Excerpt 39).*

3.4 Strategies Employed by English Language Teachers in Utilizing Language Learning Resources to Enhance the English Proficiency of Senior High School Students in MSU-Sulu.

Having effective strategies for teaching the English language is crucial and essential. English has become the primary medium of communication in the global community, making it important to provide proper focus and methods for its instruction. Creating an immersive language learning environment, including technology, realistic materials, offering regular feedback, and encouraging extracurricular language practice are all successful techniques for helping students improve their English language skills. By using these tactics, instructors can help students become confident and effective English language users, providing them with a valuable asset that will open doors to a globalized world. (Budiman et al., 2023). In the pursuit of enhancing English proficiency among senior high school students at MSU-Sulu, English language teachers employ a variety of strategies to effectively utilize language learning resources. These strategies are designed to create an engaging and immersive

learning environment that fosters language acquisition and proficiency. By understanding the specific needs and learning styles of their students, teachers at MSU-Sulu implement tailored approaches that harness language learning resources to optimize the English language learning experience. Additionally, this manner sets the stage for an exploration of the diverse and impactful strategies employed by English language teachers to elevate the English proficiency of senior high school students within the unique context of MSU-Sulu.

Teaching strategies and methods that the teachers employed to help students enhance their English proficiency. Based on the participants' statements, it appears that they are implementing a structured strategic approach to classroom activities. The sequence of group discussions, partner group reporting, and word recitation suggests an interactive and collaborative learning environment. Additionally, the English language teachers' strategy focuses on engaging students in reporting and facilitating discussions, indicating a commitment to ensuring understanding and clarity for the students. Discussion and reporting have been identified as an effective approach to foster a better learning environment and habit of collaborative problem-solving, which helps participant students develop research ideas and skills in various educational contexts especially in English language (Dancis et al., 2023). Additionally, participant 3 stated that he/she used the grammar translation method, which focuses on translating between the target language and the native language, and also the incorporate elements of the direct method into his/her teaching approach. These strategies technically help students understand the structure and grammar of the target language, as well as develop their translation, speaking and listening skills, promoting fluency and natural language use. Moreover, a grammar translation method is currently one of the effective means of building foreign language competences in English (Ishchenko et al., 2022).

To help students grasp complex concepts, learn from each other and develop important social and communication skills, enhance their understanding and retention of the material, and develop their language proficiency and skills, both participants 4 and 6 employed the direct instruction or method, which prioritize unconstrained communication in teaching, aiming to benefit both teachers and students. Furthermore, direct instruction is one of the most widely used teacher-centered methodologies and has proven effectiveness in providing information and developing step-by-step skills. Its central purpose is promoting student on-task behavior through explicit instruction, ongoing support, and student engagement in successful practice, being focused on the interaction between teachers and students. (Guzmán, 2020).

In addition, participant 4 mentioned that the usage of the audio-lingual method and communicative language teaching method is beneficial. Nita and Syafei (2012) also concluded that audio-lingual method and communicative language teaching are useful and applicable in teaching speaking skills.

> *I prepare group discussions, partner group reporting, and word recitation as my teaching strategies (P1, Excerpt 40).*
>
> *As of now, since my subject is Reading Writing Skills I see to it, I engage my students in reporting. Everyone are subject to report, also we have a brief discussion right after reporting, I'm going to make sure, there will be no doubts and clarifications left. In terms in writing, I give them activity assignment to be*

done at home. (P2, Excerpt 41).

I simply use grammar translation method and with the collaboration of direct method (P3, Excerpt 42).

Direct instruction, lecture, cooperative learning, and experiential learning are the best strategies and the direct method. Audio-lingual method and communicative language teaching method are the best method. Each of these has its own strengths and weaknesses (P4, Excerpt 43).

Direct method, I believe that teaching without constraint in communication serve both the teachers and students well (P6, Excerpt 44).

Integrating technologies to support English teaching. The participants emphasize the potential of technology, particularly cellphones and apps, to enhance English proficiency among students. They highlight the importance of leveraging technology for educational purposes. For instance, using the internet for research and assignments, as well as utilizing apps for pronunciation practice and incorporating video presentations for interactive role plays. They also encourage students to embrace technology as a tool for educational advancement and language learning, recognizing its ability to engage and empower students in their English language development. According to Speck (2019), English language learners will benefit if they approach technology. Smart phone technology will use the benefits of studying, enhancing, rehearsing, and developing speaking skills.

I guess everyone has their own access to the internet by means of cellphone, through that, they could actually search deeply and to have a better and clear understanding towards English proficiency.

Giving them assignment from time to time so that they could not just used their cellphone for entertainment but for as well, educational purposes (P2, Excerpt 45).

I always ask my students to use technology in order to enhance and further their knowledge. For instance, I will ask them to use an app to check if the pronunciation for a certain word is correct or not. In making a role play, I used to ask them to provide it with video presentation (P4, Excerpt 46).

Modifying the use of resources in teaching English according to the different learning needs and language backgrounds of the students. In conformity with the participants' narrative, they indicated the importance of relating the resources they utilize and the lesson content to the students' backgrounds and experiences. They emphasize the significance of understanding students' comprehension levels and language backgrounds, as well as the necessity of adjusting teaching methods and resources accordingly. Additionally, participant 2 highlights the value of thorough lesson planning, assessing students' understanding, and ensuring that lessons are effectively delivered. Moreover, their combined approaches and strategies underscore how they modify the use of resources in teaching English according to the different learning needs and language backgrounds of students. Furthermore, Raza (2018) stated that teachers must fulfill each student's learning needs in a classroom with varying levels of language proficiency by using strategies that will benefit all students.

Modification of each resources has something to do with students' level

of understanding. I for one, if I noticed that my students were not able to cope up with lesson discussed, I did some adjustments on my way of teaching. I ensure that student were provided with each learning resources base on their need and language background (P1, Excerpt 47).

Well for me, I'm going to make sure that planning lessons must secured first, of course understanding the status of your students lastly having an "assessment" right after discussions and the rest is history (P2, Excerpt 48).

Sometimes, I actually relate the learning resources to their rationality, and such, I use examples like how would they be if they were the people in the stories (P5, Excerpt 49).

Conclusions

This study investigated the impact of language learning resources on the English proficiency of MSU-Sulu senior high school students. Through interviews with English teachers, the research identified a range of resources available at the school. These included traditional materials like books and dictionaries, alongside technological resources like online platforms and mobile apps. The study revealed that utilizing a variety of these resources effectively improved students' English proficiency. This included enhanced vocabulary, better comprehension skills, and increased fluency. Additionally, the teachers themselves reported a positive impact on their teaching styles and enthusiasm.

However, the research also highlighted challenges faced by teachers in utilizing these resources. Limited access to resources, a lack of training on integrating them, and a shortage of classroom facilities were some of the key obstacles. Interestingly, the study also found that student factors like anxiety levels and disruptive behavior could affect resource effectiveness. These challenges emphasize the need for solutions to maximize the potential of language learning resources and optimize the learning experience for MSU-Sulu students.

The study explored strategies employed by teachers to overcome these challenges and to effectively utilize language learning resources in enhancing students' English proficiency. These included implementing structured activities, creating interactive learning environments, and integrating technology into assessments. Notably, teachers reported using a mix of methods like the audio-lingual method and communicative language teaching to enhance student engagement.

Recommendations

Based on the findings of this qualitative study on the impact of language learning resources on English proficiency of senior high school students in MSU-Sulu, the following recommendations are offered:

***1. Resource Assessment*.** Conduct a comprehensive inventory and assessment of the current language learning resources in MSU-Sulu senior high school to identify gaps and areas for improvement. This could involve working with teachers, administrators, and

students to gain insights into the efficacy and usefulness of present resources. Umar (2018) stated that assessment for learning involves frequent, interactive assessments of students' progress and knowledge to detect learning difficulties and tailor education to individual needs. A comprehensive analysis of his research demonstrates that this style of assessment is very successful at improving students' academic performance and enthusiasm to learn.

2. Proficiency Feedback. Implement regular surveys or feedback methods to assess the perceived impact of language learning resources on the English proficiency of senior high school students. Engage English language teachers in reflective discussions to better understand their observations and recommendations for improving the effectiveness of these resources. In the study of Al-Bashir et al. (2016), stated that individualised written feedback can be useful in assisting students to learn. However, the process is time consuming. If there are a large number of students, it places additional strain on teachers' time to produce these remarks.

3. Teacher Support. Address the stated challenges that English language teachers encounter while accessing and utilizing language learning resources. This could include offering professional development opportunities, assigning adequate funding for resource engagement, and building support networks to assist instructors in overcoming technological or administrative obstacles. An et al. (2022), their research found that perceived teacher support is substantially related to learning engagement. Learning motivation mediates the relationship between perceived teacher support and learning engagement.

4. Collaboration Workshops. Encourage English language teachers to collaborate and share expertise in order to exchange best practices and strategies for efficiently utilizing language learning resources. Create forums or workshops where teachers can share successful ideas and learn from one another's experiences, thereby improving the English proficiency of senior high school students in MSU-Sulu. Burton (2015)'s qualitative study found that effective teacher collaboration includes shared or common goals, teacher efficacy, and positive interdependence among teachers. Other related themes arose, including successful collaboration activities that improve the learning environment.

5. Inclusive Research. Future researchers doing a similar study are encouraged to include both students and teachers as participants. Researchers can acquire a comprehensive picture of the impact of language learning resources by merging student viewpoints and English proficiency data into quantitative analysis. This technique not only adds to the study data, but it also provides useful insights into students' experiences and learning outcomes, allowing for a more comprehensive evaluation of the effectiveness of language learning resources in improving English proficiency. According to Nayman and Altun's (2021) research, teachers' and students' perspectives on learning and teaching are compatible under a basic framework that includes self-study, student involvement, active lesson process, teaching the lesson as art, and, most importantly, the importance of reading habits.

Compliance with Ethical Standards

The researchers followed the research ethics protocol listed below throughout the research process.

Protection from bodily and psychological harm. The researcher ensured that the study's participants were not subjected to embarrassment, insult, harassment, injury, or any

other type of distress. Instead, the researchers maintained the individuals' physical and psychological safety.

Confidentiality of the collected data. The researchers also made sure that the participants' personal information and other data obtained were kept anonymous and strictly confidential unless they provide their full approval.

Absence of deception. The researchers ensured that there was no deception involved in the process of the study. All participants were informed about the study's objective, how the results were used, any potential negative effects of their participation, and who will have access to the results. Furthermore, before distributing the survey questionnaires, the researchers checked that all study participants gave their consent.

Acknowledgements

In deep humility and gratitude, we acknowledge the Almighty God for His unending blessings and guidance throughout our research journey, leading us to its successful completion. We extend our deepest and most sincere appreciation to our adjudicator and research adviser, PROF. NURMINI U. SUPIAN for invaluable supervision, support, patience, and wealth of knowledge have been instrumental in shaping our research study. It has been a privilege and an honor to learn and grow under her expert guidance. We are immensely grateful to Prof. Norman A. Abdurahman, Ed.D, DPA, our esteemed school director, for granting us the opportunity to conduct our research among the chosen participants in MSU-Sulu SHS Faculty members. We also express our sincere gratitude to the senior high teachers who generously provided their consent and support, enabling the full participation of our selected respondents. We extend our heartfelt thanks to Prof. Roslina J. Rahimulla, our statistician, whose technical expertise and willingness to share her knowledge have been invaluable in analyzing our research data and ensuring the statistical accuracy of our study. To our respondents, the faculty members with English specialized subject, we offer our deepest appreciation for your willingness to participate and your invaluable contributions to our research. Your cooperation and know-how have been essential in making this study possible. We also wish to acknowledge the countless others who have supported us throughout this journey, including our families, friends, and colleagues. Your encouragement and belief in our work have been a constant source of inspiration.

IMPLEMENTATION OF ADOPT-A-SCHOOL PROGRAM: SUCCESS STORY OF BUENAVISTA NATIONAL HIGH SCHOOL

Emerica L. Sotto, MAED, Noel R. Palomares, Ed.D.

Graduate School Department, Marinduque State University
Marinduque, Philippines

https://doi.org/10.5281/zenodo.12634742

ABSTRACT

This study aims to examine the successful implementation of Buenavista National High School's (BNHS) Adopt-a-School Programs (ASPs), established through Republic Act No. 8525, and to explore how the school earned two awards for two consecutive years: first runner-up in the division under the mega category and champion in the cluster of Buenavista. Furthermore, this study seeks to identify BNHS' practices that could be benchmarked by other schools and to pinpoint factors needing enhancement to achieve the highest possible recognition. This was through a face-to face interview using a self-constructed guide questionnaire, emphasizing the ASPs' processes: pre-implementation, implementation, post-implementation, and the effects of the projects based on participants' or beneficiaries' perceptions and as reflected in the school report card. Its validity was confirmed by professionals: an Education Program Supervisor, a Research Expert, a Language Expert, and a Statistician. The data were collected through triangulation methods, including in-depth interviews, observation, and documentary analysis, and analyzed using thematic analysis. The responses of program participants, implementing bodies, and school organization members during face-to-face interviews indicated that the ASPs were successful, as evidenced by positive feedback and school report card data. Most ASPs had long-term effects on beneficiaries, as perceived and noted by interviewees. Among the five ASPs at BNHS, two became annual programs, and one was adopted by the Rural Health Unit of the Local Government. The BNHS practices that could be emulated by other schools include formulating short-term ASPs with long-term effects to meet learners' essential needs, leading to annual ASPs that strengthen community linkages; recognizing volunteer groups and stakeholders; providing incentives to outstanding volunteers; and holding "Gabi ng Pagkilala," to recognize various stakeholders' support. Despite BNHS's consistent ranking as first runner-up for two consecutive years in the division and achieving Level 1 in the school

report card, there are areas for improvement. These include consistent adherence to the roles and functions of implementing officers, proper documentation, and accountability in implementing the ASP.

Keywords: *Adopt-a-School Program, Brigada Eskwela, beneficiaries, benchmarking, implementation, donors, sponsors, volunteers, volunteerism, organizations, Memorandum of Agreement, Deed of Donation, Deed of Acceptance*

INTRODUCTION

Presented in this section are the basis of what the researcher will investigate: research questions, hypotheses, and the significance of the study. In this, it was described how the study differs from the other studies and addresses something that is neither yet known nor has been studied before. It also includes the scope, delimitation, and fundamental nature of the study.

Public schools face significant challenges in attaining quality education. One is the lack of resources to further both students and school improvement. Schools could not achieve all the goals and objectives without the support of the community and by merely relying on the government's funds.

To remedy the budget discrepancy, the Department of Education (DepEd) sought the involvement and assistance of private entities to aid public schools in realizing an educational program within an agreed period through Republic Act No. 8525. The Act Establishing an Adopt-a-School Program (ASP), approved on February 14, 1998, is encapsulated in the ASP Toolkit for using generic forms and implementation.

As a counterpart, DepEd has been providing support funds since 2009 to sustain partnership initiatives under the ASP at the regional and division levels, as stated in DepEd Order No. 6 series of 2016, or the so-called Utilization of Support Funds for Adopt-a-School Program. It is intended to support and fund the implementation of Brigada Eskwela (BE), as stated in the 2009 Brigada Eskwela Manual. BE is a unique program of the Department of Education that acts as a frontline activity in dealing with the numerous issues facing Philippine education. From 2020, the allocation was diverted from the former materials for rehabilitating school classrooms to the provision of printing materials for Self-Learning Materials (SLM) for the students because of the changes brought up by COVID-19. Due to this pandemic, the former main objective of DepEd concentrated on providing the students with sufficient learning materials, following the Policy Guidelines for the Provision of Learning Resources in the Implementation of the Basic Education Continuity Plan.

At present, budget allocation has changed because of the improvements in global health. The amount received by the Department of Education from the National Budget for Fiscal Year 2022 supports all the Department's current programs, activities, and projects while paying particular attention to initiatives that support the adoption of blended learning

modalities and the safe and gradual return to face-to-face instruction, such as Flexible Learning Options (FLOs), School Maintenance and Other Operating Expenses (MOOE), Government Assistance and Subsidies.

Regardless of the situation of the country's economic status, schools need the involvement of the community. Daniel (2019) stated that needs of a school, specifically learners, must be satisfied to realize vision and mission of the education that will benefit them. Together, school and community partners can create learning opportunities and access to resources that promote students' growth and learning.

Throughout the fiscal year, more than two-thirds of the governments struggle to keep the anticipated composition of their expenditures. Most industries are impacted by this, particularly those that are service-oriented like education (Kadirov et al., 2023). Thus, consistent support and cooperation of every aspect of the community is indispensable in the realization of every launched project by the school.

To answer the call of the Department of Education, the Division of Marinduque continuously creates various programs under the ASP that could respond to the needs of the learners, eliminating barriers to an effective learning process. Offices designated for this endeavor include the Private Sector Partnerships Unit (PSPU), inclusive of one of the three units handled by the Educational Program Supervisor (EPS) under the different partnership needs of the DepEd, aside from the Government and Community Partnerships Unit (GCPU) and Special Events Unit (SEU).

In support of the ASP of DepEd, Buenavista National High School (BNHS) consistently supports the advocacy of the Office of the Schools Division of Marinduque concerning implementing the national projects. BNHS has persistently sought the cooperation of all stakeholders to implement each ASP launched by the school and the department to suit the needs of the students for the last five years. Among these projects were: Send-off Programs for Players; a Forum on Teenage Pregnancy and Early Marriage; Healing and Firming of Families for a More Holistic Education (HAFFMHE); and the Concreting of BNHS Ground. Aligned with these projects is the National Flag Project of ASP, Brigada Eskwela (BE), which has been conducted every school year and, with the new guidelines, is now a whole-year-round program of the department.

Being a Guidance Designate who untiringly finds ways to improve the learning condition of the students in and out of the school by creating various programs that have been extended to the community for support, the researcher was encouraged to probe the success of the implementation of ASPs in BNHS through the shared experiences of the beneficiaries of the programs under ASP guided by the philosophy, vision, and mission of Homeroom Guidance as mandated by the DepEd Revised Implementation of Homeroom Guidance for School Year 2021-2022. Further, the researcher wishes to identify the various forms of assistance extended to the school and justify the ASP outcomes reflected in the school report card and statements of the beneficiaries of the programs. Likewise, to establish the strong collaborative efforts of family, school, community, government, and other institutions and organizations in realizing projects under the ASP of BNHS.

With the above scenario, the researcher would like to conduct this study to justify the successful implementation of ASP in BNHS through in-depth interviews, with the hope that the results of this study could help improve the implementation of the school's ASPs. Furthermore, the researcher wishes other schools could eventually benchmark those ASPs to provide better services for the clientele and further strengthen connections with other stakeholders. Barret (2023) stated in his paper that escalating commitment in an educational setting demonstrates the ability to create a useful theoretical framework for comprehending the factors that can impede the adoption of school projects. He further discussed that these evidence-based are alternatives in place of low-value practices to justify the success of any school-initiated project.

With great consideration and appreciation for the varied assistance from the sponsors, consistent support from stakeholders, and the efforts of the project coordinators of the ASPs, it is justifiable to recognize how the ASPs of Buenavista National High School achieved success as the Two-time First Runner-up Best Implementer in the entire division. Additionally, it is important to identify areas for improvement that are preventing the school from achieving the highest recognition in ASP implementation. There is hope that the various ASPs of the school can be benchmarked by other schools, finding the advantages to be beneficial in multiple ways.

Research Questions

This study was moving toward its primary objective of probing the successful implementation of the Adopt-a-School Program at Buenavista National High School.

Specifically, it sought to answer the following questions:

1. What are the practices of Buenavista National High School (BNHS) towards the implementation of the Adopt-a-School Program in the following phases?
1.1 Pre-Implementation
1.1.1 Root cause analysis
1.1.2 Approaches
1.1.3 Partners
1.1.4 Document of partnership
1.2 Implementation Proper
1.2.1 Varied resources
1.2.2 Documentation
1.2.3 Problems encountered
1.2.4 Progress monitoring
1.3 Post Implementation
1.3.1 Completion of the program
1.3.2 Significant role
1.3.3 Completion monitoring as stated in the IRR
1.3.4 Evaluation
2. In the course of the implementation of the ASP, what assistance was coming from the donors in support of the following areas?

2.1 Learning environment;
2.2 Learning support;
2.3 Technology support;
2.4 Health and nutrition;
2.5 Reading program;
2.6 Training and development;
2.7 Direct assistance; and
2.8 Assistive Learning Devices for Students with special needs
3. What are the effects of the Adopt-a-School Program on the school's performance?
3.1 based on the perception of the participants; and
3.1.1 efforts of the school through its ASPs
3.1.2 ASPs addressed the problems
3.1.3 emulation of BNHS'ASPs
3.2 based on the School Report Card (SRC)
3.2.1 decreased in drop-out
3.2.2 increased in enrolment
3.2.3 increased in participation rate of stakeholders
3.2.4 doubled numbers in awards and recognition
3.2.5 increasing sources of ASP funds
4. What are the keys to the successful implementation of Buenavista National High School's Adopt-a-School Programs?
4.1 Collaboration of the community members
4.2 Efforts of the proponent or organizer
4.3 Accountability
5. From the success stories of the Adopt-a-School Program at Buenavista National High School, what Adopt-A-School Program could be benchmarked by other schools?

METHODOLOGY

This chapter presents the research design in terms of methodology, research locale, research population and sample, research instrument, and data-gathering procedures.

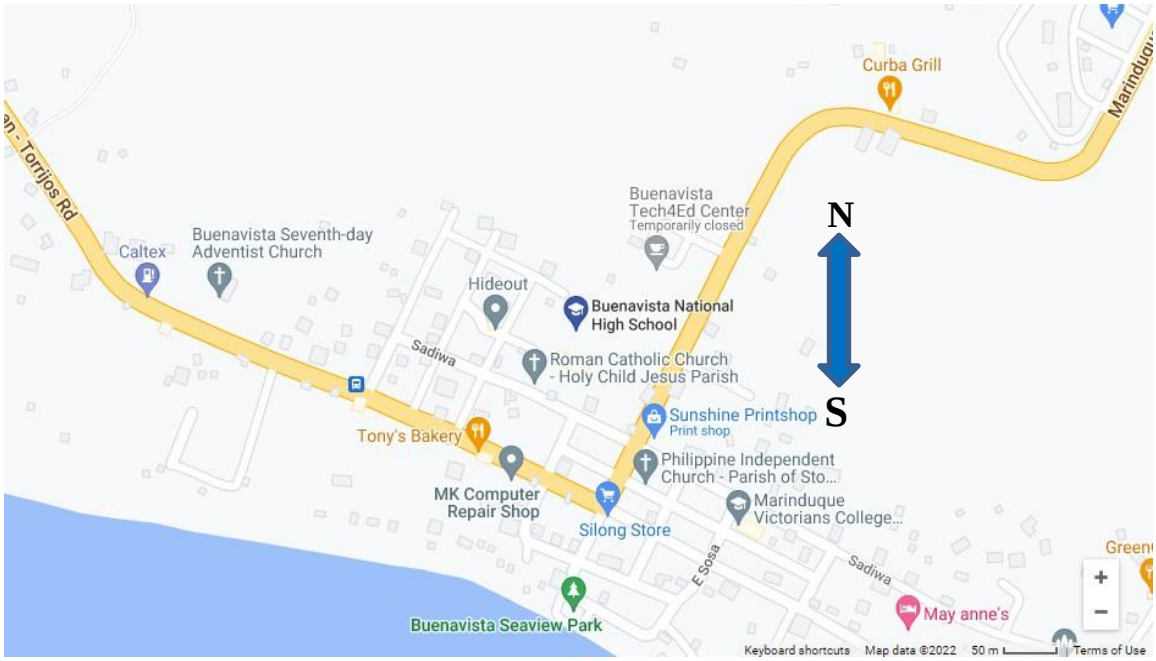
Research Design

This study employs a qualitative research design, specifically the Transcendental Phenomenological Design through epoche, to explore the success stories of implementing the Adopt-a-School Programs at Buenavista National High School. This methodology is preferred because the researcher aims to capture the stories of the ASPs' program beneficiaries as they experienced becoming a part of these extended services of the school to its learners, family of the learners, stakeholders and other community members. According to Heotis (2020), phenomenology and hermeneutics, especially the philosophical ideas of Edmund Husserl and Martin Heidegger, form the foundation for phenomenological research methodologies. Husserl's central thesis is that one can investigate and describe the essential elements of one's experience while suspending

presuppositions to understand the essence of an event. On the other hand, the primary goal of choosing a phenomenological methodology was to encapsulate the entire meaning of the participants' experiences as shared in their own words.

The researcher deemed a phenomenological methodology appropriate for this study, as it allows others to understand the meaning participants attribute to their actions, including their thoughts, feelings, beliefs, values, and assumptive worlds. To understand the essence of the studied phenomenon, the researcher aimed to provide an accurate and vivid description of the lived experience (Neubauer et al., 2019). The researcher must understand the deeper perspectives captured through face-to-face interaction (Alhazmi and Kaufmann, 2022). Also, the researcher discussed the importance of understanding the participants' stories regarding implementation, experiences, and lessons acquired in the Adopt-a-School Program. Thus, when describing that experience, the researcher remains free from theoretical or social constructs.

To complete this study, the researcher—a Guidance Designate who is actively involved in every ASP at BNHS—applied the epoche method by bracketing preexisting beliefs, attitudes, and feelings. Heotis (2020) emphasized Moustakas' elaboration that the researcher should be open, receptive, and naive when listening to participants share their experiences with the phenomenon under investigation. Moreover, Alhazmi and Kaufmann, (2022) advised researchers to engage in this reflection throughout the study and to make explicit our understandings, beliefs, biases, and assumptions. The researcher bracketed the data, gave each statement equal weight, and elicited insignificant responses. The researcher grouped the participant responses into themes, which served as the foundation for a textural description of the phenomenon. Neubauer et al. (2019), emphasized phenomenological reflection and imaginative variation in constructing structural themes and characterizations from the textural meanings that go beyond the façade and into the essence of the experience. The researcher's final step involves synthesizing meaning and quality, combining all fundamental structural and textural descriptions into a single statement that captures the essence of the program's entire implementation.



Research Locale

This study was conducted in the Buenavista District, specifically at Buenavista National High School (BNHS). This school is considered the most highly populated school in the district, with a total student population of 1502 for the school year 2022-2023, and it is expected to increase, with 63 teaching and non-teaching personnel per Plantilla.

The locale of the study was chosen because the school was awarded the 2021 and 2022 Brigada Eskwela Best Implementing School under the Mega School Category in the cluster and First Runner-Up in the division level by the Division Office for two consecutive years in the previous assessments of various schools with the implementation of the Adopt-a-School Program Brigada Eskwela.

Figure 2

Location Map of Buenavista National High School

Source:https://www.google.com/maps/search/Buenavista+National+High+School,+Buenavista,+Marinduque/@13.2519266,121.9412918,14z/data=!3m1!4b1?entry=ttu

Research Population and Sample

This study employed a purposive sampling technique in selecting the population. The beneficiaries of the Adopt-a-School Program (ASP) implemented by BNHS in different categories over the previous five years were considered. These categories include Healing and Firming Families for a More Holistic Education (HAFFMHE), Annual Send-off Programs for Provincial Players, Annual Brigada Eskwela, Annual Forum on Teenage Pregnancy and Early Marriage, and Concreting of BNHS Grounds.

The number of respondents for the face-to-face interview was fourteen (14), chosen from various beneficiaries with direct involvement and first-hand information about the ASP programs of BNHS. For HAFFMHE, different types of respondents were selected to represent each beneficiary type, including separated parents, single parents, and orphans. For the Send-off Program for Players, respondents included a coach, a Sports Coordinator from past and present, a MIMAROPARAA player for two consecutive years, and a silver medalist provincial player. For the Forum on Teenage Pregnancy, respondents included a former student who attended the forum and later became a beauty queen in college, as well as a former student who attended the program and is now a mother. For the Concreting of the School Ground, respondents included the school head, the President of the PTA, the Alumni Association Treasurer, and the President of the Supreme Student Government when the project was implemented. For Brigada

Eskwela, both internal and external stakeholders were consulted. Internal stakeholders included the present principal, the BE Coordinator, and the ASP School Coordinator. External stakeholders included a church deacon representing their group and an officer from civic organizations.

Research Instrument

The researcher conducted structured, in-depth phenomenological interviews using a validated self-made questionnaire with the beneficiaries. Audio-video recording was utilized to better understand the interviewees' answers. The questions were directed toward the participants' experiences, feelings, beliefs, and convictions about BNHS' implementation of ASPs.

The interview guide questionnaire consists of the following parts: pre-implementation, implementation proper, post-implementation, assistance from donors to support ASP implementation, and effects of the project based on the perception of the participant.

The first part comprises pre-implementation questions, reflecting the procedures and preliminaries made by the different personalities involved before conducting the ASP. This includes the reason for the need to conduct the ASP, who was involved in identifying BNHS as the beneficiary school, what made the school qualified for the program, and the documents to confirm the transactions between the beneficiaries and the sponsors.

The subsequent section covers implementation questions, addressing the procedures for accomplishing the ASP. These questions encompass the sufficiency of supplies for the project, the problems encountered, and the remedies or precautions taken by the implementing bodies during the implementation, as well as the documents and procedures used to track the progress of the program being implemented.

The following set of questions pertains to post-implementation, measuring the effectiveness of the project implementation according to the adherence of the implementing bodies to the department's protocol. This part includes sharing the interviewees' experiences of being part of the ASP, their perceived importance of their role in implementing the ASP, and the procedures and documents used in monitoring the projects.

After the questions on the different phases of the project's implementation, the confirmation of the common forms of assistance provided to the school in accomplishing the ASPs was identified and validated. The sufficiency of the assistance was measured, and interventions were made if problems were encountered with regards to the supplies.

Finally, the last part of the interview guide determined the beneficiaries' perceptions of the effects of the project on their lives. This included the realizations they had after benefiting from or engaging in accomplishing the programs, the factors that, for them,

contributed to the success of the project, and their beliefs or confirmation that the ASPs must be implemented by other schools.

Data Gathering Procedures

In gathering the data for this study, the researcher followed the primary steps outlined below:

First, the researcher requested an endorsement from the Dean of the Graduate School. This endorsement was then forwarded to the principal of BNHS for approval. The content of the research study underwent assessment and evaluation until permission was granted. It was ensured that no government funds would be used during the activity in accordance with DepEd Order No. 9 Series of 2005. Classes were not disrupted, and proper coordination with the school administrators was arranged before the conduct of the activity.

Triangulation was utilized, incorporating interviews, observations, and document analysis. Face-to-face interviews played a crucial role in collecting in-depth information about the successful implementation of the Adopt-a-School Program (ASP) at Buenavista National High School, eliciting the perceptions and descriptions of the participants' experiences.

Although success stories could be investigated through observation, shared interactions, and literature, the researcher conducted in-depth interviews with open-ended questions with the participants. The researcher engaged directly with the participants, posing a few open-ended questions using a validated self-structured questionnaire to ultimately understand the respondents' stories. Audio recordings were utilized with their permission to fully evaluate and comprehend the interviewees' statements regarding the ASP of BNHS.

Furthermore, observational notes regarding the participants' techniques for recounting their experiences, behavior during the interview, and similar information were utilized as supplementary data. Positive outcomes of the ASPs were even observed based on their way of life and responses that reflected the outcomes of the ASP in their personal development.

To provide a figurative justification for the successful implementation of the ASP in BNHS, data related to the different projects implemented in the previous five years was obtained from the respective offices. This included the total number of beneficiaries for each project, the total number of volunteers, the total number of consistent donors, the total cash amount incurred, the total amount of goods in cash, the total number of Deeds of

donations executed, and the total number of MOAs signed. These data were presented through tabular presentations and graphs.

Statistical Treatment of Data

In presenting the findings of the study, a thematic analysis framework was utilized since the study focused on the experiences of the respondents. This method was chosen due to its constant-comparative nature, involving systematic reading and re-reading of transcripts (Braun et al., 2019). The thematic analysis process was conducted systematically to ensure the quality of the final product. Whether this was applied to interviews or focus groups, is based on the premise that participants' memories are valuable for inquiry, synthesis, and in-depth description of their experiences. This approach assumes that information recorded in documents or other artifacts accurately reflects reality at the time it was created and should be treated with the same level of confidence as participant-spoken memories. Lochmiller (2021) emphasized the importance of the researcher's interpretation of recorded data from participants or found in documents as compelling. The researcher followed similar procedures by conducting interviews with open-ended questions and analyzing data from documents related to the ASPs.

Lochmiller described the analysis process involving three phases: setup, analysis, and interpretation. The credibility and trustworthiness of the reported information must be highly regarded to conduct thematic analysis. No alterations or substitutions were made to the respondents' statements, who were beneficiaries of various ASPs at BNHS. To provide a comprehensive understanding of the respondents' experiences and feelings, a tabular presentation of statements is included in Chapter Four.
This procedure involves organizing the dataset for analysis, including transcribing identifying references from audio and video sources along with handwritten field notes. Bracketing the researcher's beliefs about the successful implementation of ASPs in BNHS ensured the integrity of the analysis.

After bracketing, the focus shifted to intuition, with an emphasis on attributing meaning to the phenomenon. Grouping invariant horizons into themes allowed for a composite description of the essence of all participants' stories. This description served as the core of the ASP success story at the school, potentially useful for benchmarking activities by other schools.

Data analysis followed, with coding and categorizing to make sense of the significant meaning of the phenomenon. Greening (2019) described this as the third step in the phenomenological process, involving analyzing and describing the data. The researcher persistently worked with detailed data to emerge essences and themes from respondents' statements, striving for a thorough description of the phenomenon.

Participants' quotes were included for vivid and convincing findings description, with all responses given equal value and non-overlapping, non-repetitive statements listed. Through taking notes, the participants behavior was used for digesting information that is

applied in their actual daily lives after their experiences with the ASPs of the school. As a result, this helped with long-term, in-the-moment mental processes by facilitating the coding of information, which relieves mnemonic processes and aids in the creation of the answer. Data from documents were presented through graphs, tables and figures, with comparisons made for a more detailed description of events. Line graphs depicted movement, change, and trends in support for the ASP project.

Finally, the social significance of the findings was emphasized, describing the positive effects experienced by beneficiaries and validating the benchmarking of projects.

RESULTS and DISCUSSION

This chapter presents the statistical data relative to the problems posited. The corresponding analyses and interpretations of the data were incorporated into this chapter.

The first section discusses Buenavista National High School practices in implementing Adopt-a-School Programs, followed by an examination of the common forms of assistance provided to the school. It explores the effects of the ASPs on the school's performance, as perceived by beneficiaries and reflected in the School Report Card data. The latter part of the chapter delves into ASPs and practices that could serve as benchmarks for other schools.
Emerging themes, based on participants' accounts of the entire process justifying the successful implementation, are supported by documents vividly detailing each project and phase. Various graphs, tables and figures are presented for each project to assess implementation success visually. Additionally, narratives of participants and beneficiaries of the projects are included, complementing the data to complete the triangulation process of analysis.

For every challenge concerning learners, the school implements intervention programs through ASPs. Similarly, in the execution of various Adopt-a-School Program, Buenavista National High School endeavors to make a difference to achieve the objectives of each ASP launched. The entire process typically comprises three stages: pre-implementation, implementation, and post-implementation.

Practices of Buenavista National High School Towards the Implementation of Adopt-A-School Program

The very first phase of any school program or project is very crucial. This will determine the success or failure of the objective set by the ASP. It is an essential preparatory process that aims to collect information and requirements. The primary goal is to justify the need for conducting the ASP and how to successfully carry out the objectives of the program.

Pre-implementation Phase

The pre-implementation stage conceptualized the various projects that justified the

requirements to implement the proposed project. This stage comprises of the root-cause analysis, the partner agencies that supported the school, the various civic organizations, other stakeholders, reasons for selecting BNHS as a recipient of the program, people involved in the selection of BNHS as a beneficiary, and the signing of the MOA. Likewise, in this stage the different forms used in each part of the phase were taken into consideration, scrutinized and analyzed as a requirement and an attachment that could justify the implementation of the specified phase of implementation.

The various ASPs stated herein were formulated based on the needs of the learners, as stated by Harrington and De Bruler (2019), who said that student-centered learning is an educational philosophy or approach to learning that places students' needs and interests at the forefront of the operations and decision-making of a school or district. Added hereto is the concrete support of the various components of the community in the implementation of each ASP. Astbury (2022) emphasized that, in the end, schools will attain more effective primary output delivery over a longer period by forging deeper and more positive ties with stakeholders—both locally and nationally. This reiterates that stakeholders play a big role in the success of each project in the school that has effects on the educational outcomes of the learners.

Table 1 presents the Adopt-a-School Programs of Buenavista National High School and their beneficiaries.

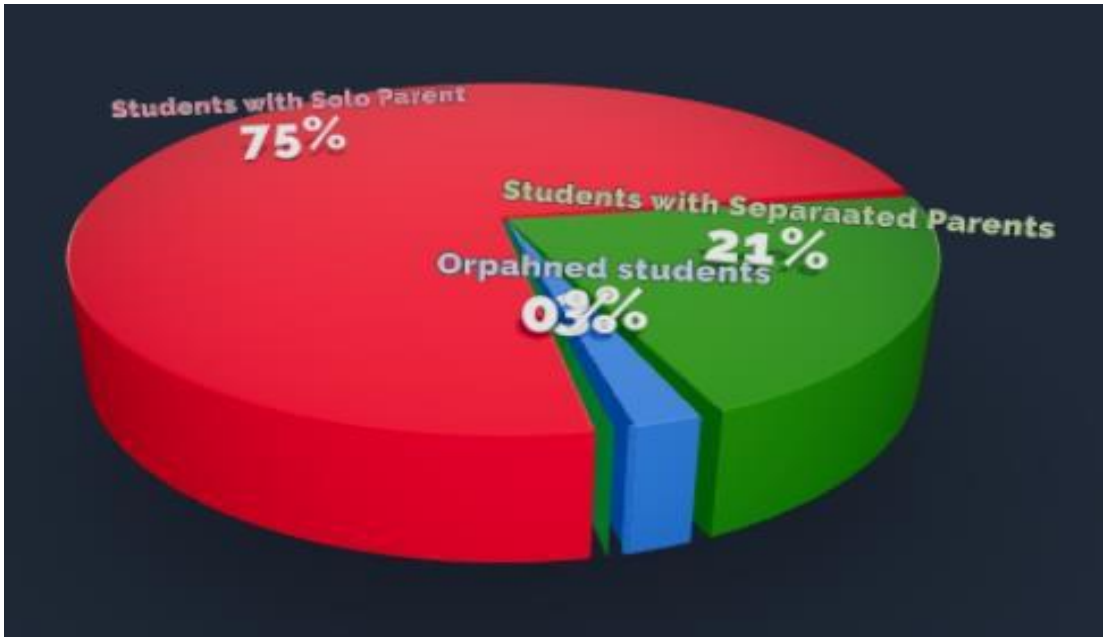
Table 1

Adopt-a-School Programs of Buenavista National High School and Their Beneficiaries

Adopt-a-School Program	Total No. of Beneficiaries
HAFFMHE	215
Send-off Programs for Players	220 varies annually
Forum on Teen-age Pregnancy and Early Marriage	400 Varies according to the annual enrollment
Concreting of BNHS Ground	1500 School Population, Stakeholders, Teachers
Brigada Eskwela	Varies according to annual enrollment

Source: Junior and Senior High School Guidance Offices of Buenavista National High School

The different ASPs cited in Table 1 underwent data gathering and root-cause analysis to justify the needs for their implementation. as stated by the implementing authorities.



ASPs cited have varied numbers of beneficiaries. Among these are the Send Off Program for Players, Forum on Teenage Pregnancy and Early Marriage, and Brigada Eskwela.

The number of beneficiaries for Brigada Eskwela and the Forum on Teenage Pregnancy and Early Marriage varies according to the school enrollment, same with Send Off Program for Players.

Figure 3, "Beneficiaries of Healing and Firming for a More Holistic Education," shows the percentage of beneficiaries.

Figure 3

Beneficiaries of Healing and Firming for a More Holistic Education

Sources: Junior High School and Senior High School Guidance Offices

In the pie graph the greatest percentage of the program's beneficiaries are students with a single parent; with a total number of 163 students out of the 215 beneficiaries Additionally, the program included 46 students with separated parents and six orphaned students. The total number of beneficiaries was 14.33% of the total student population. The project was spearheaded by the Senior High School Guidance Office with the coordination of the SHS Coordinator.

For the annual Send Off Program for Players, the number of beneficiaries varies according to the events the players will compete in at the provincial meet. This program includes the coaches and all members of the delegation. Previously, beneficiaries were

from different secondary schools in the district, but in the recent program, it included both elementary and secondary schools in the entire district, due to a strong request from the district supervisor. This is another proposed annual program by the Guidance Office.

The Forum on Teenage Pregnancy and Early Marriage ASP varies in the number of beneficiaries according to the school's annual enrolment. This is an annual ASP of the school in coordination with the Population Commission through the Buenavista Teen Center and the Guidance Office.

The ASP for Concreting of the School Grounds benefits the entire school population, including internal and external stakeholders. This project provides lasting services that can be enjoyed by various components of the educational system if the school continues to serve the community. The program was initiated by a former school head in cooperation with the Brigada Eskwela implementing bodies.

Since Brigada Eskwela is now a year-round ASP, a greater population benefits from its provisions. This initiative incorporates various other ASPs of the school, involving different implementing bodies, offices, organizations, and stakeholders.

The school always considers the urgency of the ASPs' implementation, the number of beneficiaries, and the positive outcomes that the project may bring to the lives of the beneficiaries. This means all aspects of the learning process and members of the community are considered before confirming the ASP's implementation.

Data in Table 2 are the interviewees' responses during the face-to-face interview about the pre-implementation stage of the ASPs.

Table 2

Pre-implementation Phase of Adopt-a-School Program in Terms of Root Cause Analysis

Theme	Definition	Responses
1. Convened	Referring to the attendance of the concern individuals during the root-cause analysis upon identifcation of the problem	*"Naga-root-cause analysis. Ang mga involve ay ako, Physical Facilities Coordinator, MDRRM School Coordinator, Barangay Councilor, SSG President, Teacher's Association President etc. May data kitang hawak from the identified problems at ito ay mga totoong data. Genuine data."* - The Present Principal *"Opp. Naga convene lahat ng committees ng school before ang actual Brigada Eskwela para I-analyze yung mga needs ng school at paano nag- arise ang ganong needs."* - BE School Coordinator *"Mayroon. Bumabaha sa campus. Ayaw padaanin ang kanal sa central school. Sa barangay naman ay, yung dinadaanan ay subdivision. Hindi pwedeng gastusan ng barangay kasi no public fund sa pwedeng gamitin sa private entity."* - Former Gen. PTA President of BNHS

		"May root-cause analysis with Mr. Lining. Nilapit sa mga teachers sa meeting. Nilapit din sa PTA, LGU and Alumni. Supplementary materials lang sa PTA, Barangay at mga students. Kung meron limited
2. Convened	Referring to the attendance of the concern individuals during the root-cause analysis upon identification of the problem	*"Walang share ang SSG. Alumni ang main partner, the labor, and materials ay galing sa kanila. Even the planning ay sa Alumni, through Engr. Arvin Siena."* - Former BNHS TIC (Concreting of School Ground
3. Absence	Concerned person failed to attend the root-cause analysis	*"Wala po akong na-attendan na meeting noon. Basta po ang unang-unang recall ko ng project, prinoposed ko po sya ay way back before 'nung ako pa lang po ay Grade 10, humangad po ako bilang President. Prinesent, prinoposed ko po 'nung debate. After po nun ay wala na po akong natatandaan na meeting of some sort about the project."* - Former SSG President (Concreting of School Ground)

Theme	Definition	Responses
		"Walang root-cause analysis. Originally ang plano ay bibili ng lote. Konti ang nakalap ng pondo. Nasa three hundred thousand lang ang pondo. Kulang para sa school lot dahil 1.5 milyon halos ang halaga ng lote. Hanggang nakapag-desisyon na pagandahin na lang yung school groung o yung school? Hanggang hindi na rin nangyari dahil nag-usap na sila ni Ma'am Saporna about sa maputik na ground ng school. Tapos sabi ni President, why not ipa-semento na lang yung ground laanan ng pondo." - Alumni Treasurer (Concreting of School Ground)
4. Attendance not required	Presence of the person for the stage is unnecessary	*"Hindi po ako kasama sa root-cause analysis. Papasok lang po ako kapag may donation na."* - ASP School Coordinator

The participants, who were the beneficiaries of the ASPs, justified that consultations were held by the various committees involved before implementing the Adopt-a-School Program (ASP) at Buenavista National High School (BNHS). This is anchored to DepEd Order No. 026, series 2022 titled Implementing Guidelines on the Establishment of School Governance Council, the School-Based Management (SBM) supports the participation of stakeholders, equips the local community to own the decisions taken, and encourages the growth of current networks in the schools. In these, include root-cause analysis as part of the BNHS' SBM Team.

It has been confirmed by the BNHS principal that a root cause analysis was done. *"Naga-root-cause analysis."*

It was also reiterated in the statement of the School BE Coordinator. *"Opo. Naga convene lahat ng committees ng school."*

When the various ASPs started to implement them, even the former PTA agreed that root cause analysis was being done. He mentioned one of the analyses:

"Bumabaha *sa campus. Ayaw padaanin ang kanal sa central school. Sa barangay naman ay, yung dinadaanan ay subdivision. "Hindi pwedeng gastusan ng barangay kasi no public fund sa pwedeng gamitin sa private entity."*

Similarly, the Resource Gap Analysis Tool of ASP, prescribed by DepEd in implementing ASP which was stated in the IRR, was used to confirm that there is a need for a program due to the lack of funds. According to the principal, it usually involves the principal, physical facilities coordinator, SMDRRM coordinator, Faculty, PTA, SSG, Alumni officers, Barangay officials, and stakeholders.

Table 3 contains the data gathered related to the ASP Teenage Pregnancy and Early Marriage Cases in Buenavista National High School.

Table 3

Teenage Pregnancy and Early Marriage Cases in Buenavista National High School from School Year 2018- 2019 to School Year 2021-2022

School Year	Teenage Pregnancy		Early Marriage		Total
	JHS	*SHS*	*JHS*	*SHS*	
2021- 2022	3	0	0	0	**3**
2020 - 2021	1	0	0	2	**3**
2019 - 2020	0	2	0	0	**2**
2018 - 2019	1	5	0	0	**6**
TOTAL	**5**	**7**	**0**	**2**	**14**

Source: Junior High School and Senior High School Guidance Offices of Buenavista NHS

Prior to the conduct of the ASP, data were gathered relative to the emerging problems that hinder the learning of the students. The urgency of conducting the project was evident due to the increasing number of teenage pregnancies both in the junior high school and in the senior high school. In the School Year 2018-2019, most of the cases of teenage pregnancy involved the senior high school students with five cases and one case in the junior high school. These figures made the offices concerned to conduct the ASP.

After the initial conduct of the ASP in the following school year, School Year 2019-2020, the cases somehow dropped to 40% in the senior high school with two cases and a zero case in the junior high school. In the following school year, a zero case in teenage pregnancy was achieved by the senior high school with a one case in the junior high school. In the school year 2021-2022, the cases in the junior high school gradually increased thrice the case in 2020-2021 which is one while the senior high school maintained its zero case in teenage pregnancy.

On the other hand, early marriage cases among students were rare aside from the two cases in the senior high school in the school year 2020-2021. This could be attributed to

the minor ages of the students in the junior high school. The couple cannot be married although they lived together as a family.

The documents collected confirmed that the school consistently employs RCA because the members of the School-Based Management (SBM) team believe in its effectiveness. One key advantage of RCA is that it enables teams to take appropriate actions to correct issues and prevent their recurrence, resulting in fewer errors and less rework (TechArcis, 2021).

However, there were instances when some officers did not attend or were not informed about the consultations, even though implementing an ASP at BNHS requires the involvement and engagement of most stakeholders.

One such instance was highlighted by the SSG President, who stated: *"Wala po akong na-attendan na meeting noon..."*

The SSG Adviser, a faculty member, represented the SSG President. Another officer who did not attend in one of the root cause analyses was the Alumni Treasurer. She said during the interview that:
"Walang root-cause analysis. Originally ang plano ay bibili ng lote."

This is because only their alumni president was consulted. Nevertheless, after the consultation, the body was immediately informed about the plan regarding the problem relayed by the teacher-in-charge.

Another key implementer who did not attend the consultations was the ASP School Coordinator.
"Hindi po ako kasama sa root-cause analysis…"

She was informed regarding the problem during faculty meetings, as stated by the former TIC of BNHS.
"May root-cause analysis with the BE School Coordinator…"

The Department of Education emphasized that root cause analysis is necessary to unravel the ultimate source of the problem as stated in Section F, Roles and Responsibilities of All SGC Members of DepEd Order No. 026 Series of 2022, pursuant to the Governance of Education Act of 2001.

The latter was not observed in some circumstances based on the statements of the SSG President and the ASP Coordinator of the School though most of the key personalities were able to represent their offices in every root-cause analysis.

Table 4 below contains the statements of the respondents regarding the different partner agencies of BNHS that supported the school's ASPs.

Table 4

Pre-implementation Phase of ASP in Terms of Partner Agency Who Supported the School as One of the Approaches of Buenavista National High School

Theme	Definition	Common Responses
1.Volunteerism	The act of involving themselves voluntarily as a group or individual in accomplishing ASPs of BNHS without further notice	*"Madami. Unang-una na ang PNP, BFP, LGU at Municipal Government Unit, Eagles, Akrho, Tau Gamma, Iglesia Ni Cristo, Marinduque Riders Club, mga private business owners, public individuals, Senior Citizen, Alumni, Kuya Kuy's Adventures, FCB, Office of the Vice-Governor, Casa John."* - BNHS' Present principal
		"Mga group of fraternities ay willing mag-render ng service like Akrho, Tau Gamma, Religious Group INC, Eagles, Riders Marinduque Club. Usually ay labor and assistance. Minsan school supplies pag maigi siguro ang budget." - BE School Coordinator
2. No Partner Agency	The ASP was solely accomplished by one body or organization of stakeholders	*"Alumni. They preferred to give back something to their alma mater. Nag pledge ang mga batches through the initiatives of the Alumni President. Nakikita ko duon na they love the school, whatever is good for the school, whatever is good for the student's parang that certain goal. Na ganito ang pagtingin ko sa school. Ganito ang ambag ng BNHS sa akin. Kung tutuusin it is not just thousands but hundred thousand."* - Former BNHS' TIC
		"Ang mostly po na nakikita ko nung naga implement na ay LGU. May engineer na present, Engr. Reynan Siena, Alumni President, Engr. Arvin Siena. Wala po akong nakitang PTA President nun." - Former SSG President
		"Walang ka partner agency ang alumni. Pero yung first part yata nung concrete ground ay sa PTA nun. Meron din daw share ang teachers at the classroom." - Alumni Treasurer
		"First part of the concreting of the school ground, walang partner agencies. Nagbenta ng t-shirt for seventy-five pesos, twenty-five pesos ay napunta for the concreting. Apat na quadrants, one for each year level. First year muna, naghati-hati sa paggawa ng ground. Ang labor ay through volunteerism. Walang counterpart ang alumni sa first part of the project." - Former PTA President

In the pre-implementation phase of the Alternative Learning System Program (ASP) at Buenavista National High School (BNHS), it is common for partner agencies such as the Philippine National Police (PNP), Bureau of Fire Protection (BFP), Local Government Unit (LGU), and Municipal Government Unit (MGU) to be involved. This aligns closely with Section 2 of Republic Act No. 9418, also known as The Bayanihang Bayan Program (BBP), which aims to institutionalize strategies for rural development and strengthen volunteerism, emphasizing the participation of various sectors in public and civic affairs. This consistent involvement of government agencies may be attributed to their awareness of BBP and their commitment to participating in school activities, particularly during Brigada Eskwela. Such engagement aligns with their obligations under the Results-Based Performance Management System (RBPMS), specifically in terms of community and inter-agency linkages, as mandated for government employees.

In addition to government volunteers, several civil society organizations and private sectors frequently contribute to the ASPs at BNHS. These include The Pathway, Akrho, Tau Gamma, Riders Club of Marinduque, Kuya Kuy's Adventure, Senior Citizens Association of Buenavista, and Iglesia Ni Cristo, among others.

The principal said that:
“Mga group of fraternities ay willing mag-render ng service.”

Along with these volunteers, the Alumni, PTA, and SSG are always present and supportive of the school's programs and projects. The former TIC said that:
“Alumni. They preferred to give back something to their alma mater. Nag pledged ang mga batches through the initiatives of the Alumni President.”

Alumni played a significant role in supporting Buenavista National High School (BNHS), particularly during the concreting of the school grounds, showcasing the valuable assistance alumni can offer. Jotform Education (2021) underscores the potential for graduates to contribute financially and otherwise as they progress in their careers, suggesting that school administrators should strategize ways to leverage alumni resources effectively. This involvement of alumni was prominently observed in the Alternative Learning System Programs (ASPs) at BNHS, where alumni members extended various forms of assistance to the school to ensure the successful completion of projects.

Mourya (2021) highlights the importance of specific leadership approaches when working with volunteers in non-profit organizations, emphasizing the need to cultivate enthusiasm and motivation as volunteers are not monetarily compensated. Aranda (2019) supports this assertion, noting that different motivations for volunteering can impact outcomes differently, with self-determined motivations leading to better health and lower burnout rates among volunteers compared to those with control motivations.

The ASPs at BNHS greatly relied on volunteerism, involving groups, organizations, and individuals in service provision. The collective participation of various stakeholders significantly contributed to the success of each ASP. BNHS well-established connection with its parents, stakeholders and community members greatly contributes to achieving

every set goal, endeavor and ASP. While one respondent noted the absence of partner agencies in supporting a Parent-Teacher Association (PTA) initiative, it underscores the immediate partnership between the school and parents' organization in addressing school needs.

Table 5 presents the school year with equivalent forms of assistance and services extended to the school with monetary equivalent, and number of partners or volunteers.

Table 5

Buenavista National High School Brigada Eskwelas' Forms of Assistance and Service with Monetary Equivalent and Number of Partners from School Year 2019-2020 to School Year 2021-2022

SCHOOL YEAR	FORMS OF ASSISTANCE	MONETARY EQUIVALENT	NO. OF PARTNERS
2021- 2022	**Generated Resources**		
	>Assistance to Learners	3, 950. 00	
	>Assistance to Teachers	21, 850.00	
	>Assistance to School	55, 220.00	
	Subtotal 1	**81, 020.00**	
	Volunteer Services and Value-Added Activities	1, 6697, 481.26	
	DRRM Implementation	9, 000. 00	
	Community Home Partnership	239, 040.00	
	WinS	0.00	
	Brigada Pagbasa	270, 000.00	
	GRAND TOTAL	**2, 296, 541.26**	**129**
SCHOOL YEAR	**FORMS OF ASSISTANCE**	**MONETARY EQUIVALENT**	**NO. OF PARTNERS**
2020-2021	**Generated Resources**		
	>Assistance to Learners	61, 795.00	
	>Assistance to Teachers	135.00	
	>Assistance to School	65, 060.00	
	Subtotal 1	**126, 990.00**	
	Volunteer Services and Value-Added Activities	**29, 027.63**	
	DRRM Implementation	9, 000. 00

2019-2020	**GRAND TOTAL**	**871, 210.00**	**47**
2018-2019	**GRAND TOTAL**	**65, 015.00**	**29**

*Latest 2 school years are in a more detailed presentation to justify the award received of the school
*Later years of ASPs implementation were not uploaded due to the unavailability of the ASP database

Sources: Brigada Eskwela Summary of Donations - Office of the Principal, Brigada Eskwela Database of BNHS, ASP School Coordinator

The data clearly demonstrate the increasing number of volunteers over the past four years of implementing the program. These indicate a steady rise each year: 2019 recorded 29 partners, 2020 saw 47 partners, 2021 reported 59 partners, and 2022 documented 129 partners. These figures underscore the enduring bond between the school and its community and stakeholders.

Paraiso (2022) emphasizes the positive impact of community involvement on academic achievement and school improvement, noting that collaboration among families, communities, and schools fosters student encouragement, participation in advanced programs, and improved attendance. This involvement is key to addressing school-related challenges, fostering strong partnerships, and mitigating dropout rates.

The progressive increase in the number of Brigada Eskwela partners and the corresponding monetary contributions each year reflects the unwavering support of BNHS stakeholders. Furthermore, statements from volunteers representing various organizations, partner agencies, and other stakeholders affirm the full support of the community towards the school's Alternative Learning System Programs (ASPs). The concurrent rise in volunteer numbers and monetary assistance, underscores the coordinated efforts and strong support from community members for the benefit of learners and the school.

In Table 6 presented are the approaches that made BNHS the beneficiary school of the volunteers for the ASP.

Table 6

Pre-implementation Phase of the Adopt-a-School Program in Terms of Approaches for Selecting the School as a Partner for the Program

Theme	Definition	Common Responses
1. Sense of Connection and Strong Partnership	Strong connection between BNHS and its stakeholders Involving the stakeholders in the process of planning, implementing, and accomplishing an ASP for BNHS	*"Sa palagay ko ay dahil sa open communication sa kanila. Pangalawa ay transparency, yung nakikita nila kung saan napupunta yung inabigay nila. Another ay accountability, yung properly accounted ang donations nila. May report tayo. Strong partnership, yung nakikita nila, kung paano kita mag-reach out sa kanila; ako ang gadala ng sulat. Kung hindi makapunta ay inatawagan ko sila. Yung ramdam nila na kailangan natin sila. Aside dun sa nakikita nila ang needs ng school."* - Present Principal *"Siguro po dahil sa pangangailangan ng mga bata. Bago pa kami pumalaot sa mas malawak na programa na wala naman kaming pondo, why not ito na ang pagawa dahil ito na ang kailangan. Maliban sa may nagawa na tayo ay ito talaga ang kailangan."* - Alumni Treasurer *"Karamihan po sa myembro nila, ng mga grupo ay alumni ng BNHS. Dahil siguro rin ay nabibigyan sila ng recognition. May mga certificates po na ina-issue ang school*

		natin para marecognize ang effort nila." - School BE Coordinator *"Karamihan ay alumni ang members or employees nila kaya alam ang pangangailangan ng school. Dahil din siguro nasa bayan tayo at malapit, magandang puntahan."* - School ASP Coordinator

Theme	Definition	Common Responses
2. Alternative way	Internal stakeholder's another approach of realizing a project	*"Maganda naman ang adhikain natin at kung tutuusin ang mga t-shirt natin ay maganda naman at mura."* - Former PTA President

The strong connection between Buenavista National High School (BNHS) and its alumni, stakeholders, and community members community is very evident with the statements of the beneficiaries in Table 6. This made them decide to make BNHS the recipient of their services and led them to select BNHS as the recipient of their services and projects. According to Giving Compass (2022), volunteers have the freedom to choose how they support the school for the benefit of its students and the institution. This motivates volunteers to actively participate in every Adopt-a-School Program (ASP) at BNHS. Alumni and stakeholders, regardless of their affiliations with various organizations, offices, or companies, strive to contribute and ensure the success of every ASP, providing motivation, hope, and resilience (Giving Compass, 2022).

As revealed in the statements of respondents in Table 6, the alumni treasurer shared the rationale behind their full support for concreting the school grounds, despite having other plans for the organization's funds. There was a sense of urgency regarding the project, which was deemed essential for the benefit of the learners. Regardless of their preference, the needs of the school are their priority.
"Siguro po dahil sa pangangailangan ng mga bata. Bago pa kami pumalaot sa mas malawak na programa na wala naman kaming pondo, why not ito na ang pagawa dahil ito na ang kailangan…"

According to Jotform Education (2021), alumni can support their alma mater in various ways, including reconnecting with current students and devising strategies to aid the school in achieving success in all its endeavors. This phenomenon is evident not only in Buenavista National High School (BNHS) but also in numerous other educational institutions.

Two respondents highlighted that most members in volunteer organizations are BNHS alumni. As such, they possess a strong sense of voluntary engagement in addressing the needs of BNHS.

The ASP Coordinator of the school has faith with the alumni members.
“Karamihan ay alumni ang members or employees nila kaya alam ang pangangailangan ng school.”

Same statement was uttered by the School BE Coordinator, *“Karamihan po sa myembro nila, ng mga grupo ay alumni ng BNHS.”*

On the other hand, the present school head of BNHS believes that not only open communication plays a vital role in making the school a recipient of programs but also transparency.
“Sa palagay ko ay dahil sa open communication sa kanila. Pangalawa ay transparency, yung nakikita nila kung saan napupunta yung inabigay nila …”

Another important aspect was the proper financial reporting of most projects and the personal connection with the stakeholders. An action that can be made possible by exhibiting moral principles in the management of finances, such as being truthful, reliable, and possessing a high degree of integrity when acquiring, allocating, using, analyzing, and reporting on school finances (Bhoke, 2021).

“Another ay accountability, yung properly accounted ang donations nila. May report tayo…”

Buenavista National High School (BNHS) employs various approaches to promote ongoing projects and encourage support and participation from the community. However, personal connections and proactive efforts to engage with the community foster strong bonds and partnerships. Personalizing communication somehow bonds the school to its stakeholders and advances volunteering for school needs. Volunteers are often motivated by a sense of volunteerism when inquiring about participating in Brigada Eskwela (BE) initiatives. Some organizations and volunteers await the school's invitation or request for their services. Upon notification, whether orally or in writing, they mobilize their resources, exemplified by the solidarity demonstrated by the Iglesia ni Cristo brethren, who unite as one body to contribute. Likewise, most of the organizations and brotherhoods in the community or where alumni are members are one call away in every ASP of the school.

BNHS also maintains connections with stakeholders through various channels, including a community radio station named Radyo Kamalindig, the school's Facebook page managed in coordination with the Division Office, and Messenger. Radyo Kamalindig serves as a platform to disseminate information about school activities to the public. The stakeholders and community members are constantly updated to the whereabouts of the school through this Chanel. With regards to social platforms, at present, the school's Facebook page boasts nearly 4,240 followers, with posts reaching approximately 14,127 individuals and garnering 5,716 engagements. These platforms serve as effective means of informing volunteers about the ASPs conducted by the school. Because of the easiest way of connecting with others through the technology, its vast scope contributes to the feasibility of every program launched.

These different approaches employed by Buenavista National High School in the implementation of the school's ASPs truly get the support of the different stakeholders. Aside from the established credibility of the school after serving the community for more than fifty years, the school has non-stop and varied ways on how to continuously get hold of the connection with its immediate support system members. The school sees to it that the involvement of stakeholders in every endeavor is present. This factor is the strongest tie that binds the school to its serving community.

In Table 7, statements of the participants indicate who was involved or what made BNHS the beneficiary of the Adopt-a-School Program. This emphasizes volunteering as the main factor of involvement.

Table 7

Pre-implementation Phase of ASP in Terms of Partners Involved in the Selection of BNHS as Beneficiary

Theme	Definition	Common Responses
1. Volunteerism	Volunteers and decide to render their services to BNHS in the implementation of the ASPs	*"Usually ay sila na ang naga-offer ng services once na malaman nila na naga-start na ang Brigada Eskwela. Dun nakikita yung volunteerism talaga. Sa marketing strategy natin na pag-ere sa Radyo Kamalindig at sa Fb account natin nalalaman nila dahil may access sila. Yung malalapit binibigyna ng letters."* - School BE Coordinator *"Alumni at PTA ang nagakusang nagawa. Yan 'yung SBM. Katulad nung Teachers' Day, sila na ang nagkusa, ababa mo na sa kanila, sa stakeholders ang operations. Kusa na silang nalapit. LGU and MLGU din kusangnalapit. Eagles din ay nagakusa. Example ay yung clothes for a section of students. Private donors."*- Present Principal *"Private company, organization of the Siena Brothers."* - Former TIC
2. Stakeholders Choice	Initiative of the stakeholders and volunteers to choose the school they would be rendering their service	*"Endorsed ng destinado, pinagtibay ng Tagapangasiwa."* - INC Deacon *"May body po ang municipal council. So, halimbawa ay ang maga render ng service lamang ay buong municipal council, ang maga-organize, ang ga validate po kung saan sila maga ano ay yung council chairman."* - Regent for Alumni Affairs Tau Gamma Phi Provincial Council *"Sila ang nagde-decide (Chairman ng alumni and other officers) ibinababa na lang sa amin."* - Alumni Treasurer

Volunteering encompasses various terms across languages, yet its essence remains relatively simple to understand in English. According to Mourya (2021), volunteering involves individuals dedicating their free time to assist others, whether informally within communities or formally through organized efforts by institutions. The decision to

volunteer should always be left to the individual. Similarly, Muller (2018) defines volunteering as the provision of services without monetary compensation, emphasizing that it is a voluntary act and not obligatory. Those who volunteer extend assistance to others, beyond their immediate family or relatives, as highlighted in the work of DepEd ASP Toolkit Procedures.

In the Department of Education (DepEd) ASP Toolkit Procedures for Participation in the Adopt-a-School Program, adopting private entities have the freedom to select the school, region, and focus area for their efforts. The Adopt-a-School Program Secretariat maintains a list of priority schools and their specific needs to assist private businesses in their selection process.

During the pre-implementation phase, most respondents at BNHS concur that immediate partners and volunteers typically engage with schools upon learning about ASP or Brigada Eskwela through various project promotion strategies.

The School BE Coordinator states that:
"Usually ay sila na ang naga-offer ng services once na malaman nila na naga-start na ang Brigada Eskwela."

They provide this service to the BNHS every year. The principal confidently added during the interview.
"Alumni at PTA ang nagakusang nagawa. Yan 'yung SBM"

Khan (2020) placed emphasis on the vital role of parents in promoting school-community relationships. He stressed that it works as a link between school and community. Moreover, he pointed out that parental involvement in constructive areas proved positive for schools. The active participation of the PTA Officers and every parent truly helps to make others move and do their parts as components of the education circle.

On the other hand, other organization leaders coordinated with the school personnel and informed the members once their participation was confirmed.
"Sila ang nagde-decide (Chairman ng alumni and other officers of the brotherhood) ibinababa na lang sa amin."

Another volunteer organization is the Iglesia Ni Cristo (INC). According to the interviewed deacon, they usually wait for the final decision of their leader in the provincial district office, which is coordinated with the church leader in the area.
"Endorsed ng destinado, pinagtibay ng Tagapangasiwa."

While volunteer groups may formally secure requests from schools for documentation purposes, their primary objective is to actively participate in the school's projects. This demonstrates their willingness to contribute and respond to the school's needs, as highlighted by Republic Act No. 9418, also known as the Volunteer Act of 2007. This legislation institutionalizes strategies for rural development, strengthens volunteerism, and promotes corporate social responsibility by providing time, expertise, and services to recipient schools.

Becoming involved in Buenavista National High School's (BNHS) initiatives, regardless of the form of assistance, motivates volunteers and stakeholders to work towards the successful completion of projects launched by the school or initiated by stakeholders for the benefit of students. Aranda (2019) identified several variables—such as values, knowledge, self-esteem improvement, social aspects, and fulfilment of functions—as key predictors of satisfaction with volunteering.

Table 8 presents statements from respondents regarding the circumstances under which the Memorandum of Agreement should be utilized in the implementation of the Adopt-a-School Program (ASP).

Table 8

Pre-implementation Phase of ASP in Terms of Execution of Memorandum of Agreement and Kick-Off Program

Theme	Definition	Common Responses
1. No MOA	MOA means the Memorandum of Agreement expected to be executed by both parties, the recipient and the donor, endorsing the program by the sponsor or donor to Buenavista National High School with agreed duties and responsibilities for the consistent functionality of the project or ASP.	*"Wala pong MOA na pinipirmahan."* - Present Principal *"Wala pong MOA ang Send-off Program for Players and Teenage Pregnancy dahil mga short term ASPs ito."* - ASP Coordinator *"Wala pong opening ceremony at MOA."* - Former SSG President *"Wala pong MOA. Hindi ang ko aware na may MOA before. May financial report na pinasa for reporting sa school as a form of donation from the Alumni."* - Former TIC
2. No Opening due to Pandemic	Opening program or Kick-off was not observed because of pandemic.	*"Walang opening ceremony dahil sa Covid19."* - Former PTA President
3. With Kick-off	Kick-off program is the opening program of an ASP like Brigada Eskwela Kick-off program was observed based on the statements of the respondents.	*"May opening or kick-off program ang Brigada Eskwela."* - Present Principal *"With kick-off ceremony kapag Brigada Eskwela"* - ASP Coordinator *"May kick-off program. May attendance."* - BE Coordinator *"May kick-off program ang Brigada Eskwela. Nakaka-attend po kami."* - INC Deacon *"May kick-off ang Brigada Eskwela. Umaattend po kami."* - *Regent of Tau Gamma* *"Pero Brigada Eskwela meron pong Kick-Off."- Former SSG President*

4. Other Response	Statement conflicts with the other respondents.	*"Wala pong documents referring to the endorsement of the project, concreting of the school ground. Walang financial report maliban sa nag-closed na ako ng account."*- Alumni Treasurer

The opening or kick-off program marks the start of the implementation proper of the ASP project. Among the fourteen respondents, six confirmed that kick-off ceremony was held, and they even attended it.

The representative of Tau Gamma confidently stated, *"May kick-off ang Brigada Eskwela. Uma-attend po kami."*

This is like the reply of the INC Deacon, *"May kick-off program ang Brigada Eskwela. Nakaka-attend po kami."*

A concise program typically involves the attendance of Buenavista National High School (BNHS) teaching staff, project proponents, beneficiaries, and stakeholders. The project's scope of work, budget, and timeline are identified at this stage, marking the beginning of project implementation.

DepEd Order No. 66 series of 2003, included in the DepEd ASP Program Toolkit, mandates the signing of a Memorandum of Agreement (MOA) prior to the implementation of larger projects. The MOA establishes collaboration arrangements, such as service partnerships or agreements for technical support and training, as outlined in Republic Act No. 8525, known as the "Adopt-a-School Act of 1998." This legislation emphasizes that a MOA should be executed between the adopting entity and the school's head, subject to assessment and approval by the Schools Division Superintendent.

Four respondents confirmed the absence of an MOA in the concreting project of the school grounds. One respondent noted the absence of documentation endorsing their project, while another attributed it to the pandemic, indicating challenges in implementation despite consistent observation of Kick-Off Ceremonies.

To ensure alignment with departmental guidelines outlined in R.A. 8525, documents were scrutinized and analysed at each project implementation level.

Table 9 presents the varied forms of documents per implementation level of the Adopt-a-School Programs of Buenavista National High School.

Table 9

Buenavista National High School Adopt-a-School Programs and Brigada Eskwela Documents Used in Every Phase of the Implementation

ASP	Pre-implementation						Implementation			Post-implementation

Establishing a foundation for quality, traceability, and historical recordkeeping is crucial in documenting individual documents as well as the overall documentation of projects (Verma, 2024). Table 9, detailing Buenavista National High School's Adopt-a-School Programs and associated documents for each implementation phase, highlights the specific documents required and observed during project implementation.

Most Adopt-a-School Programs (ASPs) at BNHS fall under short-term projects that do not necessitate the implementation of Memorandum of Agreements (MOAs). Because of this, during the pre-implementation phase, common required forms include Root Cause Analysis, Resource Gap Analysis, Project Proposal, Deed of Donation, Deed of Acceptance, and for Brigada Eskwela (BE), a Resource Mobilization Form.

Archiving school project documents means they are available for anybody to refer to when working on similar projects or other related programs and projects. When a program or a project is completed, proper documentation and accomplishment reports and documentation must be filed and data in your school records management system be readily available anytime (Moensted, 2023).

If the project involves a school and its learners and it is a public school, everyone has the right to access every whereabouts that involves the school and its learners. This means the public has the right to its documentation, this is school-based management system.

Each ASP at BNHS underwent root cause analysis and resource gap analysis, as stated by the respondents in Table 9. Some documents were not applicable or required for certain ASPs, such as the absence of a project proposal for BE due to its annual nature and distinct implementation guidelines. Conversely, the Concreting of the School Grounds project primarily utilized Root Cause Analysis and Resource Gap Analysis, with other forms being less evident in its pre-implementation phase, as noted by respondents and observed during document scrutiny.

The former TIC mentioned during the interview:
"Wala pong MOA. Hindi ako aware na may MOA before. May financial report na pinasa for reporting sa school as a form of a donation from the Alumni"

She hesitated to demand the document since the Alumni Association initiated to accomplish the said project.

For other ASPs of the school, the School ASP Coordinator confirmed the needless of securing the MOA since most of the provisions were consumables and in short term.
"Wala pong MOA ang Send-off Program for Players and Teenage Pregnancy dahil mga short term ASPs ito.", stated by the ASP Coordinator.

In compliance with Section D Statement of Goals, Policies, and Principles of the Guidelines for Building Partnerships for the K–12 Basic Education Program outlined in DepEd Order No. 40 Series of 2015, all school-level partnerships are mandated to be governed by a Memorandum of Agreement (MOA), while partnerships at the division, regional, and national levels should, at a minimum, be covered by a Memorandum of Understanding (MOU). It is imperative that all cooperative endeavors adhere to prevailing laws and DepEd directives, especially those concerning child protection.

This statements clearly cited the needs of proper documentation in relation to conducting school-related programs that requires partnership or involvement of sponsoring agency or organizations, specially Adopt-a-School Program that involves great value of assistance. This is also embedded in the guidelines of conducting the ASP.

Table 10presents the documents utilized by Buenavista National High School to verify the transfer of donations to the school.

Table 10

Implementation Phase of Adopt-a-School-Program in Terms of the Documents to Confirm Transfer of Donations

Theme	Definition	Common Responses
1. Documented	ASPs of BNHS were mostly well documented or followed the procedure of the department in accepting donations as stated in the ASP Guidelines	*"Deed of donation, acceptance. No MOA. No MOU or Memorandum of Understanding. Office to Office."* - the present principal *"Deed of donations for consumables. Deed of acceptance for non-consumable, long term. Madalas ay pahatid lang ang items pero noted and reported."* - ASP Coordinator *"Property Custodian at ASP ay may napapirmahan na Deed of Donation. Ang mga through G-cash o transmittal ay may confirmation sa messenger. Pinapadalhan din po sila ng DOD na pinipirmahan ng representative nila."* - BE Coordinator *"Usually po ay attendance, types of service rendered."* - Tau Gamma Regent

		"Meron pong documents na napirmahan sa school, attendance. Kumpleto." - INC Deacon
Theme	**Definition**	**Common Responses**
2. Undocumented	Other officers of the governing bodies were not informed about the endorsement document in another project.	*"Ang napansin ko po sa concreting ay walang documents akong nakikita as SSG President. Baka po sa principal meron.* *Ang papel ko po as SSG nun ay magsa-ayos nung mga students.",* the former SSG President *"Walang documents."* - Former TIC *"Wala pong document refers to the endorsement of the project. Walang financial report maliban sa klinosed ko na ang account namin dito sa province. Binayaran lahat. Kasama ko si ___sa pag closed sa account."* - Alumni Treasurer
3. Unaware Officer	The officer was not aware about the endorsement document	*"Hindi ko alam kung meron"* - Former PTA President

The data in Table 10 provides a summary of the documents utilized during implementation, including those that were successfully accomplished and those that were not. This summary is based on the statements of respondents. Five out of the nine respondents confirmed witnessing the implementation of project documentation and even signed the necessary forms.

For short-term assistance, a Deed of Donation (DOD) is typically completed by the donor.

"Property Custodian at ASP ay may napapirmahan na deed of donation.", stated by the BE Coordinator.

During the interview, the principal commented,
"Deed of donation, acceptance. No MOA. No MOU or Memorandum of Understanding. Office to Office".

These were all the usual documents being accomplished during ASPs in BNHS. In most ASPs of BNHS, DOD was being accomplished by the donors to be forwarded to the resource mobilization group in BE. In contrast, in other ASPs, the form may be directly given to the BNHS's ASP Coordinator and are subject to consolidation for updating the BNHS' ASP database.

According to the deacon volunteer,
"Meron pong documents na napirmahan na forms sa school, attendance. Kumpleto."

The volunteers' attendance sheets for BE, ASP, and HAFFMHE were signed after they received their supplies.

But three of the respondents expressed the opposite reaction. According to them, there were no documents observed during the endorsement of one of the projects, the concreting of school grounds, nor getting the attendance of the *workers.*

“Ang napansin ko po sa concreting ay walang documents akong nakikita.” commented by the former SSG President, when he was asked about the project’s documentation.

Furthermore, this was confirmed by the statement of the former TIC,
“Walang documents.”

According to the Alumni Treasurer, the laborers in the latter part of the project were being compensated by the Alumni Association.

Most of the ASPs of BNHS were short-term and thus did not require MOA. The common forms needed during the implementation were the resource gap analysis tool, project proposal, deed of donation, deed of acceptance, financial report, and attendance sheet.

Although BE is an ASP, this does not require each school to make a project proposal because it is DepEd’s flagship ASP project. Other projects, like the Forum on Teenage Pregnancy, are coordinated annually with the LGU and the Population Commission (POPCOM), and a MOA has not yet been executed but rather between The Buenavista Teen Center (BTC) and POPCOM.

The documents that were utilized during the implementation and the documents that failed to be accomplished were summarized in Table 9, Buenavista National High School Adopt-a-School Programs and Brigada Eskwela Documents Used in Every Phase of the Implementation. This was confirmed by the statements of the respondents in Table 10, Implementation Phase of Adopt-a-School-Program in Terms of the Documents to Confirm Transfer of Donations. Among the nine respondents (9) who answered the question referring to documentation of ASP, five (5) of them confirmed that they witnessed the implementation of documenting the projects and they even signed in the forms.

For short-term assistance, a DOD is accomplished by the donor.

“Property Custodian at ASP ay may napapirmahan na deed of donation.”, stated by the BE Coordinator.

During the interview, the principal commented, "Deed of donation, acceptance. No MOA. No MOU or Memorandum of Understanding. Office to Office”. These were all the usual documents being accomplished during ASPs in BNHS.

In most ASPs of BNHS, DOD was being accomplished by the donors to be forwarded to the resource mobilization group in BE. In contrast, in other ASPs, the form may be directly given to the BNHS’s ASP Coordinator and are subject to consolidation for updating the BNHS’ ASP database.

According to the deacon volunteer,
“Meron pong documents na napirmahan na forms sa school, attendance. Kumpleto.”

The volunteers' attendance sheets for BE, ASP, and HAFFMHE were signed after they received their supplies.

But three (3) of the respondents expressed opposite reaction. According to them, there were no documents observed during the endorsement of one of the projects, the concreting of school grounds, neither getting the attendance of the workers.

"Ang napansin ko po sa concreting ay walang documents akong nakikita." commented by the former SSG President, when he was asked about the project's documentation. Furthermore, this was confirmed by the statement of the former TIC *"Walang documents."*

According to the Alumni Treasurer, the laborers in the latter part of the project were being compensated by the Alumni Association.

Most of the ASPs of BNHS were short-term and thus do not require MOA. The common forms needed during the implementation were the resource gap analysis tool, project proposal, deed of donation, deed of acceptance, financial report, and attendance sheet.

Although BE is an ASP, this does not require each school to make a project proposal because it is DepEd's flagship ASP project. Other projects, like the Forum on Teenage Pregnancy, are coordinated annually with the LGU and the Population Commission (POPCOM), and a MOA has not yet been executed but rather between The Buenavista Teen Center (BTC) and POPCOM.

At present, the Rural Health Office of the LGU of Buenavista, under the leadership of the detailed public physician, is taking the initiative of conducting the forum in the different secondary schools of the district in partnership with the POPCOM. The sense of needing to conduct the program in every school was anticipated due to the progressive cases of teenage pregnancies and early marriage, making the municipality the second in rank among the six municipalities in the entire province as revealed by the RHU. In the previous conduct of the project, it was the LGU that requested the presence of the school's target population.

Implementation Proper Phase

This phase denotes the process of putting a project into action to produce the deliverables. Project coordinators, proponents, and ASP members managed resources and measured performances under the guidance of the BNHS' principal to ensure that the project stayed within its planned scope and budget.

The work of the project is carried out, and the adopt-a-school project plan is put into action during the implementation. It is critical to keep everything under control and communicate as needed when implementing. Continuous progress monitoring allows for necessary adjustments to be made, which are then documented as deviations from the original plan. This is the step where a project manager, usually the head of the school, spends most of his time.

During the implementation phase of an ASP the following documents must be evident as stated in the guidelines: Daily Accomplishment Report, Attendance Sheet of Volunteers or Beneficiaries and Monitoring Form. These forms were mostly accomplished during the implementation of the Brigada Eskwela as shown by the documents presented during the

data gathering phase of this study. This was supported by the statements of the respondents during the face-to-face interview being reflected in the next section of this paper.

Table 11 containing the statements of the respondents during the face-to-face interview about the sufficiency of the supplies for the different Adopt-A-School Programs.

Table 11

Implementation Phase of Adopt-a-School-Program in Terms of Sufficiency of Supplies for the Implementation of the Project

Theme	Definition	Common Responses
1. Sufficiency of Outsourced Supplies for the	Sufficiency of materials; outsourced and from MOOE depending on the number of volunteers	"Kalimitan ay sobra. Pag may excess ay inatabi muna. Maga-isip muna ng isang proyekto o baka may isang guro na nangangailangan at may project sila sa room ay duon abigay." - present principal
Theme	**Definition**	**Common Responses**
implementation of the project	and the scope of work they can cover during their scheduled period	*"Sapat ang materials dahil natapos ang project through alumni." - the former TIC.* *"Sapat naman ang naging amount incurred. May nai-forward pa na natirang budget sa susunod na PTA Officers." - Former PTA* *"Sapat naman ang pondo. Natapos ang project."* - Alumni Treasurer *"Sapat ang gamit para sa labor na nakalaan. Mabilis matapos ang gawain."* - INC Deacon *"Sapat naman po sa palagay ko. Nung tapos na po yung pag concrete ng ground ay may mga tira pa pong sacks of cement. Hindi ko lang po alam kung saan nagamit yung sobra. Hindi po kami na-inform as SSG."* - Former SSG President
2. Insufficiency of DepEd Supplies	Lacking in some materials provided by the MOOE that were being outsourced	*"Usually ay kulang ang materials for repairs. Dahil sa repairs ay maraming kailangan. Katulad po nyan ay repairs or replacement ng jalousies, doorknobs, and electric supplies. Kalimitan ay to follow na lang yung iba. Bukod sa services ay may materials din silang dala."* - BE Coordinator *"Kulang po kadalasan ang supplies from DepEd kaya ina-outsource. Kapag kulang pa rin po ang na-outsourced, teachers ang nagadagdag. Ipapasok na donation na yun nung teacher reported as donation ng teacher."* - ASP Coordinator
3. Refreshments Never Fails	Foods for the volunteer were assured every time	*"Hindi ko po naman masasabi na sobra. Hindi ko rin po masabina kulang. Pay minsan po ay depende sa pagkakataon. Minsan po ay may kinakailangang gamit. Minsan ay kulang. Ang hindi po nawawala dyan tuwing naga volunteer kami ay, ang maganda po dyan ay lagi silang may pa-meryenda sa amin. So naa-appreciate namin yun, dahil parang yun lang ang ganansya namin sa aming serbisyo."* Tau Gamma Regent

The ability of the school will be tested during the implementation of a program, especially when most of the supplies will be outsourced. Reyes (2023) stated that the renowned management expert Peter Drucker famously advised to do the best and outsource the rest. A school truly needs the cooperation of the entire village to achieve success in every endeavor.

About 88% of the respondents' population confirmed the sufficiency of the supplies when conducting an ASP program.

With the positive response of the community, resources for the various ASPs of BNHS were commonly sufficient, as stated by the present principal.
"Kalimitan ay sobra. Pag may excess ay inatabi muna. Maga-isip muna ng isang proyekto o baka may isang guro na nangangailangan at may project sila sa room ay duon abigay."

This was supported by the statement of the INC Deacon,
"Sapat ang gamit para sa labor na nakalaan. Mabilis matapos ang gawain."

The statement of the SSG President on the concreting of the school grounds was parallel to the statements of the other respondents,
"Sapat naman po sa palagay ko. Nung tapos na po yung pag concrete ng ground ay may mga tira pa pong sacks of cement."

On the other hand, supplies from DepEd were commonly not enough, as commented by the ASP Coordinator,
"Kulang po kadalasan ang supplies from DepEd kaya ina-outsource."

In the ASPs stated herein, sufficiency of the materials was achieved with the assistance of the donors.

The sufficiency and insufficiency depend on the circumstance, as stated by one group of volunteers,
"... minsan po ay depende sa pagkakataon…, ang maganda po dyan ay lagi silang may pa-meryenda sa amin. So naa-appreciate namin yun, dahil parang yun lang ang ganansya namin sa aming serbisyo."

There were circumstances when volunteers provide for the lacking materials just to maximize the time they would render. Sometimes the teachers provided the lacking materials just to ensure completion of the work.

"Kapag kulang pa rin po ang na-outsourced, teachers ang nagadagdag. Ipapasok na donation na yun ng teacher, reported as donation ng teacher."

This denotes that the volunteer themselves found ways to remedy the problems that came along the ways of implementing the ASP.

Table 12 presents the problems encountered and remedied during the implementation phase of the ASPs.

Table 12

Implementation Phase of Adopt-a-School-Program in Terms of the Problems Encountered During the Implementation

Theme	Definition	Common Responses
1. Problems Encountered	Hindrance in any form that meddled during the implementation of the projects Nature-related problems that hinder the implementation of the ASP	*"Natural or nature-related problems commonly like naga-ulan, mainit, etc. Paghanap ng skilled workers fit the job."* - the present principal. *"Yung weather. Laging naga-ulan nung inagawa 'yung grounds."* - - the Alumni Treasurer *"Documentations ang common problems kapag may projects. Ang nangyayari ay isa o dalawang tao lang ang gumagawa ng report although may mga tao dun sa iba't-ibang tao ang naka-assign. Hindi pa rin na-aadress. A-inform dapat ang designated person about the functions and roles. Kung ano ang function mo dun ka lang."* - the ASP Coordinator *"Security ng mga bata at safety ng mga bata. Always remind the learners to be safe. Nag-meeting ang faculty."* - Former TIC *"Ang common problems po ay materials. Marami po ang labor supplies. Namo-monitor ang percentage ng work done sa daily accomplishment report. Usually, po ay sa materyales ang problema. Wala nang magamit na materyales ang volunteer sa labor."* - BE Coordinator *"Kalimitan kulang ang gamit sobra ang skilled workers. Inasabi po sa guro ang kulang at inabili ang kulang na gamit."* - INC Deacon *"Nung naga-implement po ay on-going ang mga klase, tapos ang problema po ay hindi makapag-flag ceremony sa ground. Sa tapat or pasilyo ng room ang formation ng mga students during flag ceremony. Ang isa pa pong problema ay pag napasok ang mga estudyante ay medyo siksikan ang mga daan, crowded ang hallways. Kinausap po kami ni Ma'am Laarni para makatulong sa traffic ng mga bata 'tas one pathway lang gagamitin."* - Former SSG President *"Ang normaling nai-encounter namin halimbawa sa internal problem kasi dito na 'yung mga residente, mga brod coming from Bagacay ay yung transportation allowance. Minsan ay ina-shoulder po ng aming pondo."* - Tau Gamma Regent
2. No Problem Encountered	There was awareness of the stakeholders regarding the project	*"Wala namang problems encountered dahil alam naman ng lahat na kaylangan yan."* - Former PTA President

In any project, program, or endeavour, risk equals success. A good school leader or project manager can achieve this by employing the appropriate strategy. Furthermore, school administrators demonstrate effective leadership by delegating authority to others and engage in collaborative, cooperative, participative, democratic, and focused leadership styles (Senjaya, 2019).

Among the common hindrances encountered during the ASP implementation of BNHS were natural risks that are out of human control, the unending needs for materials once the work started, and the very challenging documentation for every phase of the program.

"Natural or nature-related problems commonly like naga-ulan, mainit, etc. Paghanap ng skilled workers fit for the job."

This was seconded by the Alumni Treasurer stating,
"Yung weather. Laging naga-ulan nung inagawa 'yung ground."

A few identified differentiated challenges occurred while implementing the cited ASPs of BNHS.

Among these were:
"Ang common problems po ay materials. Marami po ang labor supplies.", according to the School BE Coordinator.

This was supported by the statement,
"Kalimitan kulang ang gamit, sobra ang skilled workers. Inasabi po sa guro ang kulang at inabili ang kulang na gamit.", commented by the one of the leaders of volunteers on problems occurred and the safety of the students.

Another form of challenge is the security of the learners during the concreting of the school grounds as stated by the former TIC of the school.

"Security ng mga bata at safety ng mga bata. Always remind the learners to be safe. Nag-meeting ang faculty."

On the part of the brotherhood member volunteers, the common problem was the budget for fare of the group,
"Ang normaling nai-encounter namin halimbawa sa internal problem kasi dito na 'yung mga residente, mga brod coming from Bagacay ay yung transportation allowance. Minsan ay ina-shoulder po ng aming pondo."

For the ASP Coordinator of BNHS, the challenge that must be given thorough attention is the proper documentation of every ASP.

"Documentations ang common problems kapag may projects. Ang nangyayari ay isa o dalawang tao lang ang gumagawa ng report although may mga tao dun sa iba't-ibang tao ang naka-assign. Hindi pa rin na-aadress. A-inform dapat ang designated person about the functions and roles. Kung ano ang function mo dun ka lang."

To guarantee that all parties involved are aware of the goals, deliverables, schedule, progress, and other aspects of the project, documentation is crucial. Inadequate paperwork can make it simple for misunderstandings and miscommunications to happen, which can cause delays or even project failure (Moensted, 2023).

Somehow, on the part of the former PTA President, the awareness of everyone about the project prohibited any problem.
"Wala namang problems encountered dahil alam naman ng lahat na kaylangan yan."

This was supported by Barret (2023) who stated that goals that are specific, measurable, attainable, relevant, and time-bound (SMART) help to ensure that stakeholders are "on the same page" about the planned work.

A thorough planned program will surely achieve its set goal and minimizes its conflict. BNHS proved that all are subject to adjustment and adherence to the set objectives regardless of the ASP will truly yield a positive outcome.

No one is perfect, not even highly trained school managers, but for a school, each component has a responsibility to use all their capabilities to ensure that the project does not fail. After all, the school is counting on this to work. When proposing a project to prospective sponsors, the proponent is essentially promising to execute it successfully, and failure to do so for any reason will affect the credibility of the person, group, or organization. Careful planning and strong leadership can go a long way in ensuring the success of an adopt-a-school project.

Table 13 summarizes the various hindrances or common problems encountered, interventions made and the stakeholders who took the appropriate actions in pursuing the different Adopt-a-School Programs of Buenavista National High School.

Table 13

Adopt-a-School-Programs of Buenavista National High School: Common Problems Encountered, Interventions and Stakeholders Who Made the Intervention

ASP	Common Problems Encountered During Implementation	Intervention	Stakeholder Who Made the Intervention
Brigada Eskwela	Insufficiency of materials for the repair and repaint	Donation of necessary materials	Volunteers, Donors, SSG & PTA
	Over supply of skilled workers to render their services during the day	Rescheduling of the labor service provider	PTA,Volunteer Organizations
	Transportation of group of volunteers from other towns	Provision from the groups' fund	Volunteers & Organizations
	Documentations of the outsourced materials (personal tapping and direct endorsement of the materials to the teacher-adviser)	Centralized documentation and endorsement of the donations	ASP Coordinator and BE Committee Members

ASP	Common Problems Encountered During Implementation	Intervention	Stakeholder Who Made the Intervention

Send off Program 2023	Additional members of the delegation (beneficiaries) who were not included in the memorandum	Consummation of the buffer pack of goods	Donors and Sponsors
Forum Teenage Pregnancy & Early Marriage 2019	Behavior of the students during the forum	Speakers strategic approach in getting the attention of the attendees	Partner Agencies - RHU and PNP
HAFFMHE	Cancellation of the delivery of goods from donors outside the province due to bad weather	Outsourcing the necessary supplies for the completion of the project	Organizers of the ASP
Concreting of School Grounds	Resource constraint to cover the concreting of the entire grounds Nature-related e.g. heavy rain, insufficiency of materials	Outsourcing the necessary supplies for the completion of the project Rescheduling of the scheduled work	Alumni, PTA and SSG PTA Officers, Alumni and Project Coordinators

Source: BNHS ASP School Coordinator, BNHS BE School Coordinator, Guidance Designates, PTA Officers, Groups of Volunteers

Barret (2023) emphasized the significance of planning in the proverb "if you fail to plan, plan to fail," particularly applicable to launching new projects in schools. A well-defined plan and a dedicated implementation team are crucial for project progression. The proactive approach of BNHS school administrators in planning and executing projects significantly contributed to achieving set goals, notwithstanding challenges encountered in their Adopt-a-School Programs (ASPs).

Table 13, "ASPs of Buenavista National High School: Common Problems Encountered, Intervention and Stakeholders Who Made the Intervention," illustrates the various issues encountered during BNHS ASP implementations, alongside interventions and involved stakeholders ensuring project success. Stakeholder involvement, including PNP, RHU, PTA, SSG, Alumni, Volunteers, and other organizations, played a pivotal role in refining and completing projects.

Despite anticipated difficulties, maintaining positivity towards goal attainment is imperative, necessitating teamwork and unity to overcome obstacles. Alomes (2020) advocates for meaningful interaction and collaboration among all education stakeholders to foster effective learning environments and systems. Every facet of the learning environment must contribute to achieving success in educational endeavors, as observed in BNHS ASP implementations.

During Brigada Eskwela (BE) implementation, common challenges included material shortages and transportation costs for organization members, often covered by the volunteering group funds. Weather-related factors also impacted activities such as school ground concreting.

Table 14 below elucidates the respondents' statements related to the monitoring of Buenavista National High School's Adopt-a-School Programs.

Table 14

Implementation Phase of Adopt-a-School Programs in Terms of Monitoring of the Project

Theme	Definition	Common Responses
1. Project Monitoring	Refers to updated progress of the project's implementation	*"Pagdating sa monitoring aside sa may assign ka bilang head ay ginagawa mo talaga ang monitoring and implementation para ma-monitor ang progress at quality. Ako mismo ang napili. Halimbawa ay sa kulay. Nasabi ko "Gusto ko'y ganyan." Inabigay at ina-check ko ang design. Inapabago ko, inapapalitanpag hindi ko nagugustuhan o palagay ko hindi matibay. Sa BE may daily monitoring progress."* - the present principal *"Monthly Report and Partnership Database. Monthly posting of donations."* - ASP Coordinator *"Every day tsine-check ang report gamit ang daily accomplishment report form."* - BE Coordinator *"Pinupuntahan naman natin. Bawat year level ay may assigned day at mino-monitor naman kung may ginagawa talaga. May attendance naman ang mga vlunteers. Hinahabol para sa graduation yung concreting 'nung school ground."* - Former PTA President. *"Usually naman din po ay nata-track din naman namin yung progress. So, halimbawa, kasi po ay ina-recognized din po 'yung effort. Halimbawa'y nakatanggap ng certificate, meaning ay naging successful po ang mga projects."* - Tau Gamma Regent *"Attendance at may monitoring ng trabaho. May mga teachers na natingin sa trabaho ng volunteer."* - INC Deacon
2. No monitoring	Other personalities failed to monitor the project	"*Wala po. Umalis na rin si Sir President. Nag-online na lang siguro sila sa evaluation and endorsement."* - Alumni Treasurer *"Sa side po ng SSG ay wala kaming document na hawak about tracking of the project. Maybe sa side po ng gumawa o sa principal."* - Former SSG President *"May plan naman shinare through verbal, walang document. Nakahiyang mag demand dahil wala tayong share sa project."* - Former TIC

Monitoring is the ongoing evaluation of a project or program in respect to the predetermined timeline for implementation. It is also a useful management tool that, when utilized correctly, ought to offer ongoing input on how the project is being carried out and help identify potential obstacles and triumphs so that choices can be made quickly (Otieno, 2019).

Most of the ASPs were monitored by the implementing authorities and there were circumstances when monitoring was not required and observed as revealed by the statements of the respondents.

The school principal and other implementing officers monitored the Adopt-a-School Program (ASP). Progress report forms were being accomplished and submitted as reflected in Table 9, Buenavista National High School Adopt-a-School Program and Brigada Eskwela Documents Used During the Entire Implementation.

“Pagdating sa monitoring, aside sa may assigned ka bilang head ay ginagawa mo talaga ang monitoring and implementation para ma-monitor ang progress at quality”.

As for the ASP,
“May Monthly Report and Partnership Database. Monthly posting of donations.”

The BE Coordinator supported the statement,
“Every day tsine-check ang report gamit ang Daily Accomplishment Report Form ng Brigada Eskwela.”

Even the former PTA President has the same stance on this,
“Pinupuntahan naman natin. Bawat year level ay may assigned day at mino-monitor naman kung may ginagawa talaga. May attendance naman ang mga volunteers.”

Appendix S, "Brigada Eskwela Form 06 Daily Accomplishment Report Form," and Appendix Q, "Brigada Eskwela Form 04 Daily Attendance of Volunteers Monitoring Form," were utilized to track project progress, aligning with implementing guidelines for Brigada Eskwela (BE). Per BE guidelines, all relevant forms were submitted to the division office for evaluation once a school was nominated for Best Brigada Implementer.

Contrastingly, no specific document within the Adopt-a-School Program (ASP) toolkit was designated for project monitoring. The ASP Toolkit outlines fourteen sections for implementation, with related documents including the MOA (Appendix L), DOD (Appendix J), DOA (Appendix K), and Resource Gap Analysis (Appendix I). In the absence of a dedicated ASP Monitoring Form, monitoring efforts relied on observation, with each implementing body office contributing to the process.

SSG and alumni members occasionally faced limitations in accessing project monitoring yet remained vigilant in coordinating for student safety and welfare.
“Sa side po ng SSG ay wala kaming document na hawak about the tracking of the project.”, recalled by the former SSG President.
For the treasurer of the alumni, she was unaware if there was communication about the status of the project.
“Wala po. Umalis na rin si Sir President. Nag-online na lang siguro sila sa evaluation and endorsement.”

The former school TIC's statement somehow supported the alumni treasurer's statement,
“May plan naman shinare through verbal, walang document. Nakahiyang mag demand dahil wala tayong share sa project.”

A project's ability to succeed depends on thorough and ongoing project monitoring.

With careful project monitoring, a school head can obtain important information about how a project is progressing and utilize that information to make well-informed decisions.

Table 15 presents the Management and Evaluation Framework of the Department of Education and the responsibilities of each implementing offices to ensure the success implementation of any program of the government in relation to education.

Table 15

Basic Education Monitoring and Evaluation Framework Section VIII Roles and Responsibilities of Offices

National	Secretary	Planning Service	All operating units
Regional	Regional Director	Quality Assurance Division	All operating units
School Division	Schools Division Superintendent	School Governance and Operations Division	All operating units
School	School Head	School Head	All personnel and stakeholders in the school

Note: Reprinted from “DepEd Basic Education Monitoring and Evaluation Framework (BEMEF),” by M.A. Llego.Copyright 2024 by “TeachePh.”

Table 15, entitled "Basic Education Monitoring and Evaluation Framework Section VIII Roles and Responsibilities of Offices," delineates the Measurement and Evaluation (M&E) System and the corresponding lead, process owner, and responsible offices within the Department of Education's (DepEd) Basic Education Monitoring and Evaluation Framework (BEMEF). Aligned with Republic Acts (RA) 9155, the "Governance of Basic Education Act of 2001," and RA 10533, the "Enhanced Basic Education Act of 2013," DepEd undertakes significant projects, programs, and activities to ensure accessibility and quality improvement in basic education, with all operational units at governance levels accountable for achieving this objective. Table 15 illustrates how measurement and evaluation will be conducted across educational offices, with corresponding lead roles, process owners, and responsible offices. BEMEF is intricately linked to the planning and budgetary strategy of the Department.

At the school level, the school head assumes immediate responsibility for project monitoring and evaluation, as indicated in the table. Various measures were implemented to ensure projects were monitored and completed according to departmental protocols. Despite some individuals lacking direct access to project monitoring, they observed project progress, with representatives from their bodies attending monitoring sessions. The absence of a monitoring form for regular ASPs did not impede the school's ability to track progress, as implementing officers were present throughout the process. Otieno (2019) advised implementing officers and project managers to collaborate on establishing suitable monitoring and assessment systems.

Continuous and thorough project monitoring is vital for project success. Florida Tech (2018) emphasized that school heads can gather crucial insights into project progress through meticulous monitoring, enabling informed decision-making. BNHS's holistic involvement in its ASPs significantly contributed to achieving set goals.

The set goals will not be achieved without assuring that a project is proceeding according to schedule and that its tasks are being performed through project monitoring. In this, numerous indicators need to be tracked, including the budget, the completion time, and the quality standard. The significance of each varies based on the project's nature. Anticipating future needs is another aspect of project monitoring.

The subsequent table, Table 16, summarizes notable beneficiary experiences regarding ASP implementation which discovered after monitoring the ASPs.

Table 16

Implementation Phase of Adopt-a-School-Program in Terms of Experiences of the Beneficiaries

Theme	Definition	Common Responses
1. Self-fulfilling	The sharing of feelings experienced by the various components of the ASP of BNHS	*"Sa Pre and un ang mga ang re hen sio ns. Ang hirap sa planning. May mga negative thoughts ang mga na-tap. Sino 'yung mga taong masuporta sa iyo? Identification ng stakeholders. Technical working group ay kailangan po na, may gawain pala kaso alumni na ang nag-accomplished." - the Former TIC Sa implementation, may mga pagkakataon na kulang ang mga gamit at pagbabahagi ng tao. Kusa na silang pumupunta during implementation kung ano man ang maitulong nila. Every year yun kahit na dumaan sa maraming administrasyon. Nag-offer na sila sa Brgy. Eswela na dahil na-announce naman sa national tv."* - BE Coordinator *"Pre. Thinking na imposible masolusyunan ang pag-concrete ng ground. I grabbed the opportunity when they offered the project. As a taga-naman. Meron ngakaming malaking amount, kaya may ang pinanggagalingan sa school. Maraming plano para sa school. Implementation. Kinakabahan bek, 'di mat p s. May responsibilidad akong kasama sa trabaho ng kumausap. Kung sakali ay MOOE ang option para matapos.* *"Nung pre-implementation, malaking honor 'yung prinoposed ko. Nakaka-proud na sinuportahan ng LGU ang project natin. Overwhelming. Nung during, na-dis appoint po kami kasi may proposal po kaming sinubmit para sa paggawa kaso wala kaming nagawa. Okay lang din kasi there's nothing we can do rin dahil students kami. The least that we did was pag-facilitate ng mga students para di magka-problema sa paggawa. Okay naman po it was a big help for the students and the teachers."* - the Former SSG President *"Masaya. Nakaka-inspire ang mga ginagawa nila. Masasaya ang mga guro. Nagagawa ang mga dapat gawin." (Masaya at nakangiti na naghahayag).* - INC Deacon *"Ano po sya ay, ahm, magandang experience kasi nakakatulong ka eh. Ang pagtulong po ay malaking bagay. Kumbaga, tumulong ka sa school, pero eventually hindi naman 'yung school ang natulungan mo kundi yung mga bata nanag-aaral dun so magiging multiplier effect 'yung iyong tulong.*

		So, accomplishing po sya, isang magandang bagay na ginawa mo sa iyon kapwa at sa community na kinabibilangan mo. "Sa post-implementation ay self-fulfilling kasi nakapagbigay ka ng serbisyo na walang kapalit. (Nakangiti na may pag-aalinlangan) - Tau Gamma Regent
2. Challenging	There was problem encountered but was managed	*"Mahirap mag-implement ng project lalong-lalo na kung di-gusto ng nakararami. 'Yung 50 pesos ay ang hirap singilin. Ayaw din ni Sir Matibag magpasingil. Medyo challenging. Voluntary. Kesa mag-solicit ay nag-fund raising tayo. Para naman sa school yan, sa bata at sa nakararami."* - Former PTA President *"Post implementation ang pinakamahirap. 'Pag di properly documented. Minsan ay through GC."* - the ASP Coordinator

During the implementation phase of Adopt-a-School Programs (ASPs), beneficiaries' and respondents' experiences were classified into two categories: self-fulfilling and challenging, reflecting on their responses.

For implementing bodies, the most rewarding aspect post-ASPs was fulfilment, as indicated by their responses. Aranda et al. (2019) identified key indicators of self-fulfilment, including values, knowledge, self-esteem enhancement, social factors, and particularly the accomplishment of tasks.

Apprehensions were prevalent during each implementation phase, particularly among implementing bodies. From the initial step of problem identification, ideas to address the issues seemed boundless.

During the pre-implementation phase, primary concerns revolved around obtaining body approval for the idea, feasibility of project implementation, strategies for fundraising, and identification of potential partners.

"Sa pre andun ang mga apprehensions. Ang hirap sa planning. Mahirap mag-tap ng tao. May mga negative thoughts ang ibang mga na-tap…", smilingly uttered by the present principal.

For the former TIC, on concreting of the school ground.
"Pre. Thinking na imposible masolusyunan ang pag-concrete ng ground. I grabbed the opportunity when they offered the project."

The former TIC expressed that the pre-implementation phase was the most challenging aspect of ASP implementation for her. This sentiment aligns with the findings of Barret et al. (2023), who suggested that individuals exhibiting a strong commitment to a course of action, even in the face of adverse outcomes, may be experiencing escalation of commitment.

For the former SSG President, as a student,
"Nung pre-implementation, malaking honor 'yung prinoposed ko. Nakaka-proud na sinuportahan ng LGU ang project natin. Overwhelming."

During the implementation period, the following concerns surfaced; sufficiency of the funds to cover the entire project, possible alternative source of fund in case of insufficiency, and the possibility of utilizing the MOOE in case of insufficiency.

"…may mga pagkakataon na kulang ang mga gamit at panahon.", answered by the present principal.

The same worry was felt by the former PTA President,
"Mahirap mag-implement ng project lalong-lalo na kung di-gusto ng nakararami. 'Yung 50 pesos ay ang hirap singilin. Ayaw din ni Sir Matibag magpasingil. Medyo challenging. Voluntary…"

For the school BE Coordinator, there was a sense of assurance that the project would be completed due to the regular cooperation of the stakeholders.
"Buhos na tulong ng tao. Kusa na silang pumupunta during implementation kung ano man ang maitulong nila. Every year yun kahit na dumaan sa mahirap na taon. Maraming regular na nagbibigay at regular na tumutulong. Nag-o-offer na sila…"

For a group of volunteers like the Tau Gamma, helping the school means assisting all the components of the school, especially the learners. When people recognize and appreciate their efforts, volunteers are most at ease (Muller, 2018).

"…Kumbaga, tumulong ka sa school, pero eventually hindi naman 'yung school ang natulungan mo kundi yung mga bata na nag-aaral dun so magiging multiplier effect 'yung iyong tulong. So, accomplishing po sya…"

On the other hand, the post-implementation phase is the less-worrying phase most of the time. It is somehow crucial when it comes to documents that would justify the credibility of the project's implementation. The principal said:
"Sa post-implementation, reporting, and consolidation of documents ng bawat in-charge ang challenge. In post-implementation. Documentation and consolidation difficulty. Feeling tapos na, may gawain pa pala kaso alumni na ang nag-accomplished."

The above statements of the implementing bodies proved Barret et al. (2023) claim that the psychological characteristics that affect the escalation of commitment are determinants that center on how people's cognitive and affective processes may lead them to persist in their unsuccessful path. Because of those different inevitable aspects of implementing a project, the success of the project became more persistent.

"Sa post-implementation ay self-fulfilling kasi nakapagbigay ka ng serbisyo na walang kapalit.", the answer of the Tau Gamma Regent.

Same with the representative of the INC Volunteer Group.
"Masaya. Nakaka-inspire ang mga ginagawa nila. Masasaya ang mga guro. Nagagawa ang mga dapat gawin.", the Deacon was smiling when answering the question.

Challenging was the immense feeling felt by the former PTA President during the implementation period. For the ASP Coordinator it was during post-implementation period.

The Former PTA President though challenged had an option of performing his duties,
"Mahirap mag-implement ng project lalong-lalo na kung di-gusto ng nakararami. 'Yung 50 pesos ay ang hirap singilin. Ayaw din ng dating superentindent magpasingil. Medyo challenging. Voluntary. Kesa mag-solicit ay nag-fund raising tayo…"

This is the most difficult period for an ASP School Coordinator like me,
"Post implementation ang pinakamahirap. 'Pag di properly documented. Minsan ay through GC."

For volunteers, engaging in ASP implementation represents a profoundly self-fulfilling endeavor. Despite the absence of monetary compensation, Muller (2018) underscored that volunteers may seek reciprocal exchanges and equitable recognition for their efforts. Instead of financial remuneration, volunteers value non-monetary gestures from benefactors. They understand that their efforts are integral as volunteers within the school community.

Although project execution may entail complexity, most respondents reported experiencing a sense of fulfillment upon completion, knowing they contributed to the welfare of others. Engaging in community service bolsters volunteers' confidence, as they feel a natural sense of accomplishment from helping individuals and the broader community. This sense of pride and connection to their actions leads to increased self-esteem. Segal and Robinson (n.d.) noted that volunteers who feel confident in themselves are more likely to maintain a positive outlook on life and pursue their future aspirations.

Post-implementation Phase

The post-implementation phase marks the culmination of the project's scope, aligning with the plan outlined in the project proposal or Budget of Work. This phase involves consolidating project documentation across different levels, assessing implementation and functionality, and devising a maintenance plan. Otieno (2019) emphasized that the post-implementation phase is not about assigning blame but rather identifying successful aspects and areas for improvement. Lessons learned from this phase can inform future projects, including those covered by ASPs or other school-related initiatives.

This section delves into the collective experiences of project implementers, volunteers, stakeholders, beneficiaries, and other ASP components, highlighting their perspectives on participation and the value they attribute to project implementation. It evaluates whether projects were effectively monitored and evaluated for ASP completion. Additionally, the utilization of various forms throughout implementation phases is assessed to ensure compliance with ASP implementation guidelines outlined in the Implementing Rules and Regulations (IRR) of RA 8525.

Otieno (2019) stressed that post-project evaluation entails a systematic and objective analysis of project accomplishments. He emphasized the importance of reviewing project summaries and evaluations to determine if anticipated targets were met, extract lessons learned, and provide timely feedback for future endeavors. Through this process, encountered problems are addressed, and corresponding solution measures are proposed to enhance future project implementations and ensure desired outcomes are achieved according to the project plan.

The post-mortem or post-project review is also known as the post-implementation review. The Project Implementation Review is a crucial component of the overall project planning process since it provides significantly more significant insights than just determining if the project was successful. These insights are quite helpful because they can be used as lessons learnt in any future endeavors. This is carried out in the project closure phase.

Table 17 presents respondents' statements regarding the significant of their roles and how they performed during Adopt-a-School Implementation.

Table 17

Post-implementation Phase of the Adopt-a-School-Program in Terms of the Role in the Implementation

Theme	Definition	Common Responses
Significant Role	Every role performed by each component of the implementing bodies, regardless of the designation and distinction	*"Ang main role ng coordinator ay ma-inform ang mga committees kung ano ang gagawin during the BE 'tas pag na-inform na sila yun ready na for implementation. Kanya-kanya na sila. Ako lang 'yung parang moderator.* *Transparency ang talagang reason bakit bumabalik-balik sila sa school. Kitang-kita ng nag-donate kung saan napupunta ang kanyang binigay."* - BE Coordinator *"Accountability. Accountable ka sa lahat ng actions, situations, at undertakings at nangyayari sa project like BE."* - Present Principal *"It is worth it for the project. Taking the risk for the students, teachers, and school."* - Former TIC *"Ang importansya lang ng role ko ay sa report. Dun kasi ako mapapasok at Brigada Eskwela."* - ASP Coordinator *"Very important din po dahil kung hindi namin na-facilitate 'yung mga students kung saan madaan, mapunta ay malaking tulong na rin sa pag-concrete ng ground. Hindi na namroblema 'yung mga workers sa pagsasabi sa mga student's kung ano dapat at hindi dapat gawin. Nakapag-focus po sila sa paggawa nila."* - Former SSG President *"Mahalaga sya sa planning at pagda-direct nung mga myembro. Halimbawa, sino kailangan, ano dadalhin. So, para maging organisado. Kasi ito'y hindi isa o talong myembre, marami."* - Tau Gamma Regent *"Kasiyahan ng Dyos. Napupuri ang gawa ng kapatiran. Kapurihan ng panginoong Dyos 'yan."* - INC Deacon

3. Challenging Role	Personality and credibility of the leader was tested	*"Challenging. First PTA President in Marinduque from Buenavista. Una okay na lahat. Nag-shift lahat. Nasabi na sa tao need na baguhin. Tinitingnan din kasi ng tao kung may integridad ka, kakayahan. Pag nakita naman nila na may kakayahan ay susuportahan din nila. 'Pag wala ay di rin sila naniniwala. Sa panahon naman natin ay sinusuportahan kita at kung hindi naman ay itutuloy pa rin naman. Determination. Integridad. Capability. Key determinants na binibigay ng sumusuporta o nasasakkupan. Minsan ay iba-iba ang tingin ng mga tao. Perception nila yan."* - Former PTA President
4. Difficult	The duty requires time management and attention	*"Mahirap. Unang-una maya maya may padala, maya maya ang p.m ko dahil sa padala sa Palawan Pawnshop, kaya nanghihingi na ko ng isang booklet ng resibo. Iniiwan ko na lang tas binabalikan ko. Talagang busy. Talagang maayaw na ako. 'Yung pagbayad ng lang ng quarterly ng BIR, wala namang pumapasok na pera. Bakit nagbabayad pa kami? One-year na kami hindi nagre-renew."* - Alumni Treasurer

The responses of beneficiaries, stakeholders, and members of implementing bodies were classified into three categories: significant, challenging, and difficult roles. Each role was deemed significant in the implementation of every ASP, with each contributor playing a vital part in the overall success. Out of the eight respondents queried, six identified their roles as significant. Senjaya (2019) emphasized that for schools to thrive, parents and community members must share ownership of the outcomes generated.

The school head, involved at all levels, initiates a root-cause analysis in collaboration with subject coordinators and relevant office personnel. They conceptualize potential ASPs to address identified issues, collaborating with concerned offices and tapping into various organizations and stakeholders as potential partners in project realization, alongside the Parent-Teacher Association (PTA), Student Government (SSG), and other relevant entities. Above all, the school head is accountable for every individual and activity within the school, ensuring accountability remains a primary duty.

"Accountability. Accountable ka sa lahat ng actions, situations, at undertakings at nangyayari sa project like BE.", answered by the principal.

On the other hand, the former TIC has her strategy,
"It is worth it for the project. Taking the risk for the students, teachers, and school."

According to the former school head, it is one of the circumstances a school head must anticipate for a successful ASP.

For the BE Coordinator, as the school coordinator of BE, he serves only as the moderator. His main task is to inform the BE's various committees regarding their assignments and functions.

"Kanya-kanya na sila. Ako lang 'yung parang moderator. Transparency ang talagang reason bakit bumabalik-balik sila sa school. Kitang-kita ng nag-donate kung saan napupunta ang kanyang binigay."

On the other hand, proper dissemination must be ensured, or all components will not function well.

Moreover, for all the ASPs, the active participation of the PTA Officers and SSG is always anticipated. They serve as the prime movers that keep the project working until it is accomplished. For the former SSG president to him his role,
"Very important din po dahil kung hindi namin na-facilitate 'yung mga students kung saan madaan, mapunta ay malaking tulong na rin sa pag-concrete ng ground. Hindi na namroblema 'yung mga workers sa pagsasabi sa mga students."

The First PTA League President in the Division of Marinduque said that he was challenged due to the situation under Covid19.

"Challenging. First PTA President in Marinduque from Buenavista. Una okay na lahat. Nag-shift lahat. Nasabi na sa tao need na baguhin. Tinitingnan din kasi ng tao kung may integridad ka, kakayahan."

The key determinants of a leader for others to support every project are determination, integrity, and capability are the key determinants of a leader for others to support every school project (Ahmed, 2018). Other parents are evaluating the tolerance and capacity of their leader. The SSG President, though minimal, did their best to manage their co-students to help during the project's implementation.

"Very important din po…Hindi na namroblema 'yung mga workers sa pagsasabi sa mga students."

A leader's position is critical in directing the many organizations providing services for the project's completion.

"Mahalaga sya sa planning at pagda-direct nung mga myembro."

Moreover, for church-related organizations, recognition is to glorify God's name.

Muller (2018) highlighted that within voluntary groups, individuals with specific talents and qualifications often hold leadership positions, assuming responsibility for goal setting, decision-making, and serving as spokespersons. These leaders have elevated status, allowing them to guide other members, if followers accept this dynamic. To foster a sense of fulfillment conducive to effective teamwork and overall achievement, leaders must possess strong instincts regarding followers' expectations.

Massucco (2021) emphasized the importance of efficient communication tools, such as school apps, school messengers, text notifications, and electronic communication, for teachers and administrators. Regular updates on school events encourage greater parental involvement, promoting a stronger connection between the school and its stakeholders.

ChalkyPapers (2023) underscored the significance of collaborations between schools and communities, suggesting that such partnerships can yield fruitful outcomes in the

long term. This collaborative approach encourages stakeholders to engage more actively in school programs and provide additional support for learners.

Regarding volunteerism, Aranda et al. (2019) noted that motivations for volunteering vary, extending beyond altruism. Recent studies propose two motivational patterns - inward-oriented and outward-oriented - which correlate with volunteer satisfaction. Volunteers are more likely to feel valued, accepted, and satisfied in their roles when supported and supervised adequately by school members and stakeholders.

Table 18 shows how each respondent recounted in their statements the memorable moments they had experienced while contributing to every ASP of BNHS.

Table 18

Post-implementation Phase of the ASP in Terms of Remarkable Experiences Acquired

Theme	Definition	Common Responses
Varied Remarkable Experiences	Significant experiences of the respondents about ASP differ from each other, but everything is worth remembering	*"Isang sabi lang sa alumni ay talagang nagapadala ng suporta agad. Pati mga PTA ay talagang masuporta. Kahit sino naman. Marami pating naga presenta." (Smiling)* - present principal *"Yung pinarangalan ang BNHS as number 1 sa cluster tas second sa division. Sa loob ng sampung taon ay ngayon lang kita na-recognize. Sini-celebrate itong award na ito dahil pinagtulungan natin. The best na siguro ito ng pagiging coordinator. Pressured ngayong BE dahil baka iba naman kalabasan."* - BE Coordinator *"Grabbing the opportunity offered by the alumni because it is a once in a lifetime opportunity for the benefit of the many and the coming generations."* - Former TIC *"Masarap dahil nakakatulong."* - Alumni Treasurer *"May inabigay na certificate ang school. Dinisplay ko sa extension ng kapilya sa Bicas-bicas. (Nakangiti)* - INC Deacon *"Yung malakas ang outsourcing ang remarkable experiences ko dahil masarap mag-report 'pag maraming donations. Nakakalungkot pag akaunti."* - ASP Coordinator *"Mahirap mag-invest sa isang programa lalo 'pag involve ay pera. Public school at lahat ay hindi well-off. 'Pag maganda ang project kahit mahirap ang buhay pinagkakaisahan. Walang maliit na ambag sa maliit na proyekto. Kaya namang mag-ambag sa pag-boluntaryo. Hindi man pera, malaki na rin."* - Former PTA Coordinator *"During the implementation po ay di magamit ang ground kapag flag ceremony ay may mga classrooms po na nasa dulo. Ang suggestion ng mga SSG ay lakasan ang mic or puntahan sa mga classrooms dahil hindi na rin po sila malabas ng room. Inisa-isa ng mga SSG sa mga classroom teachers."* - Former SSG President

For the current principal, a significant moment was the consistent support received from the alumni. This support was demonstrated through prompt approval of requests after discussing issues with others, ensuring that no gap would go unfilled.

“Isang sabi lang sa alumni ay talagang nagapadala ng suporta agad. Pati mga PTA ay talagang masuporta. Kahit sino naman. Marami pating naga presenta.” (Smiling).

This justifies the experiences of the ASP School Coordinator, that the overflowing donations were her remarkable experience as a coordinator, making her feel delighted in encoding the donations in the database.

“Yung malakas ang outsourcing ang remarkable experiences ko dahil masarap mag-report ‘pag maraming donations.”

For the former principal,
“Grabbing the opportunity offered by the alumni because it is a once-in-a-lifetime opportunity for the benefit of the many and the coming generations.” was her outstanding experience.

Thinking of the more prolonged effects of the project. With similarities on the part of the School BE Coordinator,
“Yung pinarangalan ang BNHS as number 1 sa cluster tas second sa division. Sa loob ng sampung taon ay ngayon lang kita na-recognize. Sini-celebrate itong award na ito dahil pinagtulungan natin. The best na siguro ito ng pagiging coordinator.”

For the former PTA President, his remarkable experience was realizing the difficulty of investing in a program that involves money, especially in a public school with more not-so-well-off parents. He appreciated the willingness of each to share according to their abilities.

‘Pag maganda ang project kahit mahirap ang buhay pinagkakaisahan. Walang maliit na ambag sa maliit na proyekto. Kaya namang mag-ambag sa pag-boluntaryo. Hindi man pera, malaki na rin.”

For the former SSG President's remarkable experience, their effort of reaching out to students in each classroom for the announcements during the flag ceremony, which students could not attend due to the under-construction ground,
"Inisa-isa ng mga SSG ang mga classroom ng bawat teachers."

This made him realize the importance of their role as SSG.

For the alumni representative, it is a good feeling that they were able to help others. They want to give back, reconnect and inspire, especially the young minds. Some also conveyed a sense of identity that linked them to both the school and the neighborhood and the desire to help, advise and inspire students.

Lastly, for the volunteer groups, awarding a certificate of recognition is well-appreciated because it recognizes their efforts for the services they rendered.

"Dinisplay ko sa extension ng kapilya sa Bicas-bicas.", stated the Deacon.

The instrumental role played by individuals in elevating BNHS to its current stature as a distinguished learning institution is remarkable.

According to Why Volunteer/Inter in Lakshyam (n.d.), volunteering is described as a simple yet effective and rewarding way to contribute to a cause that holds personal significance. The organization highlights several benefits of volunteering, including increased empathy towards others, enhanced confidence and overall personality development, and the potential to add value to one's resume, giving it a competitive edge. Volunteers believe that there is a sense of fulfilment and satisfaction in giving back to others rather than receiving.

These insights into volunteering have facilitated remarkable experiences for volunteers and school constituents, who purposefully dedicate their time to charitable endeavours. Volunteering serves as an effective tool for bringing people and communities together, empowering them, and fostering their capacities. As noted by Daniel et al. (2019), building relationships with diverse individuals in various settings outside the classroom is essential for learning, growth, and development.

Table 19 reflects how each Adopt-a-School Program was monitored during the implementation.

Table 19

Post-implementation Phase of the ASP in Terms of Monitoring of the ASP Implementation

Theme	Definition	Common Responses
Well-monitored Project	The constant practice of monitoring the status of the project's implementation with documentation.	*"BE may monitor, may daily accomplishment report. HAFFMHE, meron din. Palagi nga ang update about the progress kaya lang hindi documented. Wala tayong general form para sa short-term ASP."* - Present Principal *"Very light monitoring of the quality of project's implementation and quality."* - Former TIC *"May monitoring at may mga forms po for each phase na ina-accomplish."* - BE Coordinator *"May progress report po ay sa kanila na. Hindi ko po sakop 'yun."* - ASP Coordinator *"Monitoring ay per year level na, per PTA Classroom President and Adviser. From time-to-time naman ay may natingin sa school, principal, teachers, officers, SSG."* - former PTA President *"May naga monitoring maya maya ng progress ng trabaho ng mga brads from the school personnel."* - Tau Gamma Regent

"Merong natingin-tingin. Maasikaso ang mga maestra. Tuwang-tuwa sila. Inaalam kung sapat ang mga gamit, kung nagmeryenda na kami." - INC Deacon

"Nadalaw po nung engineer every now and then. May nakikita po ako natingin-tingin sa mga nagawa ng project." - Former SSG President

"Meron po," - Alumni Treasurer

Each phase of the project received consistent feedback from respondents, indicating that monitoring was conducted for each project. A monitoring form was utilized by the person in charge during monitoring activities to ensure periodic review of the project's status. Individuals responsible for monitoring included the principal, teachers, organization officers, and volunteers, with provisions made for refreshments during monitoring sessions.

In the Revised Implementing Rules and Guidelines of Republic Act (RA) No. 8525, also known as the Adopt-a-School Program Act or DepEd Order No. 2 Series of 2013, Part IV outlines program administration. Rule 1 Section d pertains to monitoring and evaluation of the program, albeit without specifying forms for utilization, unlike in the ASP BE.

Additionally, under DepEd Order No. 29, Series of 2022, which pertains to the Adoption of the Basic Education Monitoring and Evaluation Framework (BEMEF), the school is designated as an accountable office responsible for providing directives and determining strategies to achieve agency performance targets, as defined in Section III. BNHS implemented monitoring for every ASP, either with a formatted monitoring form for DepEd or through alternative means, as confirmed by the present principal.

"BE may monitor, may daily accomplishment report. HAFFMHE, meron din. Palagi nga ang update about the progress kaya lang hindi documented. Wala tayong general form para sa short-term ASP."

The BE Coordinator supported this statement of the principal.

"May monitoring at may mga forms po for each phase na ina-accomplish."

Even the ASP Coordinator mentioned the progress report she observed, though this is not under her jurisdiction.

"May progress report po, ay sa kanila na. Hindi ko po sakop 'yun."

The implementation of BNHS' ASPs demonstrated a clear embrace of School-Based Management (SBM), as indicated by respondents' statements. This approach, as highlighted in the Consumer Guide from the Office of Research and Education, has the potential to enhance learning environments for students by engaging teachers, parents, and community members in critical decision-making processes (Llego, n.d.).

Through the transfer of significant decision-making authority and empowerment of various school components, stakeholder involvement progressively increased as they recognized the significance of their contributions to the educational system.

The former PTA President affirmed the monitoring of the project, underscoring the commitment to overseeing ASP implementation.

"Monitoring ay per year level na, per PTA Classroom President and Adviser. From time-to-time naman ay may natingin sa school, principal, teachers, officers, SSG."

The Tau Gamma Regent's statement was paralleled to the statement of the former PTA President.

"May naga monitoring maya maya ng progress ng trabaho ng mga brads from the school personnel."

On the part of the INC Deacon, he emphasized the active monitoring by the teachers.

"Merong natingin-tingin. Maasikaso ang mga maestra.Tuwang-tuwa sila. Inaalam kung sapat ang mga gamit, kung nagmeryenda na kami."

The former SSG President shared his observations on the participation of the other volunteers.

"Nadalaw po nung engineer every now and then. May nakikita po ako natingin-tingin sa mga nagawa ng project."

Even the alumni representative observed the same circumstances.

"Meron po."

Monitoring of forms for BE were submitted to the Division Office during the nominations of BNHS in the Division of Marinduque for Best Brigada Implementer.

Table 20 presents the statements of the respondents on how the ASPs were evaluated after its implementation.

Table 20

Post-implementation Phase of the Adopt-a-School Program in Terms of Evaluation of the Project After the Implementation

Theme	Definition	Common Responses
1. Evaluated	The last action that an ASP must attain after it has been accomplished This serves as the determinant in the re-implementation and	*"BE, may evaluation form ang Brigada."* - Present Principal *"Internal evaluation from the BNHS Faculty"* - Former TIC *"May evaluation form at narrative reports."* - BE Coordinator *"May evaluation po ng mga projects." - Tau Gamma Regent*

	termination of the ASP.	*"Inatingnan nila kung okay na ang trabaho, kung maayos o may aayusin pa."* - INC Deacon

Theme	Definition	Common Responses
		"Opo. During LAC session, tinatanong ang feedback from the teachers at kung ano ang sinabi na nakarating sa teachers.Positive ang common feedbacks like sa HAFFMHE, send-off tuwang-tuwa ang mga players, early pregnancy ay kasali ang JHS Grade 10. Concreting ay okay lang kaso feedback mali, na inuna muna dapat ang drainage bago concrete ground." - ASP Coordinator
2. Not Evaluated	Evaluation was not observed by the other respondents	*"Wala. Ang mahalagang evaluation dyan ay 'yung mga tao. Makikita ang effectiveness ay dahil hindi na sila napuputikan."* - Former PTA President *"Wala po. Umalis na rin si President. Nag-online na lang siguro sila sa evaluation and endorsement."* - Alumni Treasurer *"Wala po akong alam na evaluation 'nung project. Hindi kami pinatawag. Siguro po ay sa dating TIC."* - Former SSG President

To enhance future projects, it is crucial to conduct a thorough analysis of the project, focusing on areas where mistakes were made, and improvements can be implemented. Each project should serve as a learning opportunity for the team, allowing them to assess its success and areas for improvement (Florida Tech, 2018).

The ASPs of BNHS were divided into two categories for this phase: evaluated and not evaluated, based on respondents' statements. Most respondents confirmed that the school's ASPs were evaluated, with only three indicating otherwise.

While some respondents mentioned being unaware or unable to participate in the evaluation process due to absence, and one respondent had their own method of evaluation, it was evident that a definite evaluation was conducted for each project.

The present principal confirmed the availability of evaluation forms and narrative reports for the Brigada Eskwela (BE) projects. For ASPs, evaluation was conducted through feedback from various stakeholders due to the lack of a specific evaluation form for this purpose.

"May evaluation form at narrative reports."

This was seconded by the BE Coordinator,
"Opo. During LAC session, tinatanong ang feedback from the teachers at kung ano ang sinabi na nakarating sa teachers. Positive ang common feedback like sa HAFFMHE, send-off tuwang-tuwa ang mga players, early pregnancy ay kasali ang JHS Grade 10.", reiteration of the School Adopt-a-School Program Coordinator.

Feedbacking of the ASPs were done anchored to Table 15, Basic Education Monitoring and Evaluation Framework Section VIII Roles and Responsibilities of Offices body evaluated its ASPs, as suggested by the framework in school-based sessions during LAC sessions and after each ASP. Results were discussed and properly disseminated to the stakeholders during the General PTA Meeting.

If the ASP does not have an evaluation form, as most ASPs listed below do, internal and external evaluations were made during the LAC session cited by the ASP Coordinator.

"Positive ang common feedback like sa HAFFMHE, send-off tuwang-tuwa ang mga players, early pregnancy ay kasali ang JHS Grade 10. Concreting ay okay lang kaso ang feedback mali, na inuna muna dapat ang drainage bago concrete ground."

The Tau Gamma Regent confidently stated,

"May evaluation po ng mga projects."

For the other group of volunteers,
"Inatingnan nila kung okay na ang trabaho, kung maayos o may aayusin pa."

The recipients, donors, and implementing organizations of the implemented ASP made evaluations based on their comments and feedback.

According to the previous TIC of the school,
"Internal evaluation from the BNHS Faculty"

Although most of the key personalities were informed about the evaluation, there were some officers of the school bodies who were not.

"Wala po. Umalis na rin si President. Nag-online na lang siguro sila sa evaluation and endorsement."

The respondent, who is the current Treasurer of the alumni, was not notified about the review of the project,
"Wala po akong alam na evaluation 'nung project. Hindi kami pinatawag. Siguro po ay sa dating TIC."

The SSG was not told about the internal appraisal of the project's concreting. However, the SSG Adviser among the faculty members for most of the ASPs represented their organization.

The former PTA President viewed his way of evaluating an accomplishment,
"Wala. Ang mahalagang evaluation dyan ay 'yung mga tao. Makikita ang effectiveness ay dahil hindi na sila napuputikan."

As part of their responsibilities, faculty members evaluated the services and scope of work of volunteer organizations.

Eby (2022) emphasized that any evaluation worth undertaking should ultimately save a school time and money while producing better results. Evaluation serves as a mechanism for documenting outcomes and facilitating improvement, enabling others to learn from both successes and failures. This process facilitates the efficient allocation of limited time and resources (FloridaTech, 2018). Moreover, it provides guidance for all activities undertaken by the school administration committee, allowing for modification and enhancement of educational initiatives.

The present principal noted the absence of a monitoring and evaluation form for short-term ASPs in Table 19 but intends to develop one for school-based monitoring and evaluation in the next year of ASP implementation.

In order to improve on the next project, it is important to analyze the project and concentrate on the areas where it went wrong and made mistakes. Each project should allow the team to improve as it assesses its success (Florida Tech, 2018).

The ASPs of BNHS were categorized into two for this phase: evaluated and not evaluated, as evident in the statements of the respondents. Most of them confirmed that the ASPs of the school were being evaluated. Only three responded as not evaluated.

Although some of the respondents commented that they were not aware or failed to evaluate the ASP due to their absence from the process and one of them had his own way of evaluating, a definite evaluation was made for each project.

The evaluation form and narrative report for BE were available, as confirmed by the present principal of the school. For ASP, evaluation was through feedback of the different components due to the lack of a specific evaluation form for this.

“May evaluation form at narrative reports.”

This was seconded by the BE Coordinator,

“Opo. During LAC session, tinatanong ang feedback from the teachers at kung ano ang sinabi na nakarating sa teachers. Positive ang common feedback like sa HAFFMHE, send-off tuwang-tuwa ang mga players, early pregnancy ay kasali ang JHS Grade 10.”, reiteration of the school adopt-a school program coordinator.

Feedbacking of the ASPs were done anchored to *Table 15,* Basic Education Monitoring and Evaluation Framework Section VIII Roles and Responsibilities of Offices body evaluated its ASPs as suggested by the framework in school-based sessions during LAC sessions and after each ASP. Results were discussed and properly disseminated to the stakeholders during the General PTA Meeting.

If the ASP does not have an evaluation form, as most ASPs listed below do, internal and external evaluations were made during the LAC session cited by the ASP Coordinator.
“Positive ang common feedback like sa HAFFMHE, send-off tuwang-tuwa ang mga players, early pregnancy ay kasali ang JHS Grade 10. Concreting ay okay lang kaso ang feedback mali, na inuna muna dapat ang drainage bago concrete ground.”

The Tau Gamma Regent confidently stated,

“May evaluation po ng mga projects.”

For the other group of volunteers,
“Inatingnan nila kung okay na ang trabaho, kung maayos o may aayusin pa.”

The recipients, donors, and implementing organizations of the implemented ASP made evaluations based on their comments and feedback.

According to the previous TIC of the school,
“Internal evaluation from the BNHS Faculty”

Although most of the key personalities were informed about the evaluation, there were some officers of the school bodies who were not.

“Wala po. Umalis na rin si President. Nag-online na lang siguro sila sa evaluation and endorsement.”

The respondent, who is the current Treasurer of the alumni, was not notified about the review of the project,
“Wala po akong alam na evaluation ‘nung project. Hindi kami pinatawag. Siguro po ay sa dating TIC.”

The SSG was not told about the internal appraisal of the project's concreting. However, the SSG Adviser among the faculty members for the majority of the ASPs represented their organization.

The former PTA President viewed his way of evaluating an accomplishment, *“Wala. Ang mahalagang evaluation dyan ay ‘yung mga tao. Makikita ang effectivenessn ay dahil hindi na sila napuputikan.”*

As assigned to them, faculty members evaluated the volunteer organizations' services and scope of work.

Eby (2022) reiterated that any evaluation that is worthwhile must ultimately save a school's time and money and yield better results. It offers a mechanism to chronicle results and a means of improvement so that others can learn from one's achievements and failures. This allows for the efficient delegation of limited time and resources (FloridaTech, 2018). Additionally, it provides direction for everything the school administration committee does while modifying and enhancing educational initiatives.

The present principal mentioned the unavailability of a monitoring and evaluation form for short-term ASP in Table19 but will attempt to formulate one for school-based M&E in the next year of ASP implementation.

Assistance from Donors to Support ASP Implementation

This phase will discuss the provisions extended by the sponsors or partner groups, agencies and organizations in accomplishing the different ASPs of BNHS as allowed forms of assistance stated in R.A. 8525 extracted from the statements of the respondents during the face-to-face interview.

Table 21 includes the statements of the participants related to the provided forms of assistance for each ASPs.

Table 21

Common Form of Assistance According to Adopt-a-School Program

Theme	Definition	Common Responses
1. In-kind donation and services	Form of support resources that mostly extended to BNHS by partner agencies or organizations, donors, and stakeholders Consumable learning-support assistance and services for the learners that requires DOD but does not require MOA	*"Alumni: services, t-shirts, construction materials. Malaking percentage ang service."* - BNHS ASP School Coordinator *"Ang nakita ko po sa concreting ay mga equipments, provided nila, yung materials at workers."* - Former SSG President *"Labor; mason, carpentry, painters and clearing of school grounds."* - INC Deacon *"Usually, po ay in terms of human resources, labor, ganyan kung ano-ano."* - Tau Gamma Leader *"Learners' support. Readily available like electric fan, pagkain. Kadalasan ay madaling mapakinabangan. Mga short terms. Culture of volunteerism and gift-giving.* *Wala masyadong long term like pa-training mula sa stakeholders. Time, materials, labor ang kadalasan nilang inabigay. May mga long-term effect din siguro sa mga bata na di malimutan."* - Present BNHS Principal *"Maraming nagdo-donate. Yung mga maliliit na stakeholders ay nagbibigay ng certain amount: pa meryenda, bakery ay tinapay. May malalaking establishments like hardware ay pintura, paint brush, tinner, yero. Ang mga alumni ay cash donations."* - BE School Coordinator

The Buenavista National High School (BNHS) Adopt-a-School Program (ASP) and Corresponding Forms of Assistance outlined various types of assistance available, with most forms being short-term, except for the concreting of school grounds. The forms of assistance provided include cash, health and sanitation supplies, food supplies, school supplies, t-shirts, electric fans, television, training, and orientation. These forms of assistance are all covered by ASP Act provisions.

During document review, it was observed that the common form of assistance received by BNHS, as reflected in the ASPs, primarily consisted of in-kind forms of assistance,

with services being the predominant type. Respondents uniformly classified assistance in a similar manner.

In the case of Brigada Eskwela (BE), labor comprised the largest percentage of assistance, as indicated by data presented in Table 5, which outlines forms of assistance and service with monetary equivalents and the number of partners for school years 2019-2022.

The ASP Coordinator affirmed this observation during the interview, further substantiated by Table 21, which details the common forms of assistance according to the Adopt-a-School Program.

"Malaking percentage ang service. Usually, po ay in terms of human resources, labor, ganyan kung ano-anu."

The Tau Gamma representative and the INC Deacon elaborated on the specific forms of labor rendered, including masons, carpenters, painters, electricians, plumbers, welders, and helpers.

In-kind donations were prevalent during short-term ASPs. According to Jitasa (2021), in-kind donations refer to the transfer of assets, goods, products, or services provided by individuals, organizations, or businesses, which are non-monetary contributions made to nonprofit organizations. These donations vary according to the needs of the learners pursued in the ASPs.

The DepEd ASP Toolkit states that stakeholders can choose from a menu of options called packages within the software. These packages encompass various initiatives such as the construction of new school facilities, libraries, computer labs, staff development, nutrition programs, and the supply of instructional materials and learning kits. This approach ensures that the demands of the school are met in alignment with the capabilities and goals of the business sector.

The statements of the respondents further justified the forms of in-kind donations.

"Learners' support. Readily available like electric fan, pagkain. Kadalasan ay madaling mapakinabangan."

Moreover, the BE coordinator said that some stakeholders contribute in terms of food and cash donations.
"Yung mga maliliit na stakeholders ay nagbibigay ng certain amount: pa meryenda, bakery ay tinapay. May malalaking establishments like hardware ay pintura, paint brush, tinner, yero. Ang mga alumni ay cash donations."

According to the former SSG President on concreting of the school ground,
"Ang nakita ko po sa concreting ay mga equipments, provided nila, yung materials at workers."

Corroborated by the current principal and reflected in the ASPs provided herein are rare donations for the long term.

"Wala masyadong long term like pa-training mula sa stakeholders. Time, materials, labor ang kadalasan nilang inabigay. May mga long-term effect din siguro sa mga bata na di malimutan."

Table 22 projects the different Adopt-a-School Programs of Buenavista National High School and the various forms of assistance provided by the ASPs to the beneficiaries

Table 22

Adopt-a-School Programs of Buenavista National High School and The Corresponding Forms of Assistance Provided

	Direct Assistance	Cash Assistance for MIMAROPA RAA Players				
	Assistive Learning Devices for Students with Special Needs					Eyeglasses

Source: Junior High School and Senior High School Guidance Offices

The form of assistance provided varies per project to address the specific needs of learners, ultimately benefiting parents and teachers as well.

The ASP Send Off Program for Players aims to offer moral support and assistance to the Buenavista district delegation in the annual Provincial Meet. Provisions include food and health supplies, player orientation, and cash assistance for MIMAROPARAA players.

The Forum on Teenage Pregnancy and Early Marriage focuses on raising awareness about reproductive health to reduce cases of teenage pregnancies and early marriages. Program provisions include reproductive health lectures and snacks for participants and speakers.

The Healing and Firming for a More Holistic Education (HAFFMHE) program facilitates communication between the school and student families to enhance understanding and collaboration for an optimal learning environment. The program provides responsible parenthood lectures and addresses basic family needs.

Brigada Eskwela (BE) is an annual program consisting of short-term and long-term assistance based on donor or sponsor provisions, covering various ASP provisions.

The Concreting of the School Grounds aims to enhance school facilities and promote students' physical and socio-emotional well-being through school activities. Provisions include sacks of cement, corrugated steel, labor, and a mixer.

HAFFMHE and Concreting of the School Grounds are one-time implementation projects, with the possibility of HAFFMHE being re-implemented depending on project outcomes.

In each ASP, BNHS aims for longer-term effects to improve learners' lives and foster community advancement.

Effects of the Adopt-a-School Programs on the School's Performance

This section examines the outcomes of the various ASPs implemented by BNHS, alongside the school's performance as indicated by figures in the School Report Card. It delves into the effects of the distinct ASPs on beneficiaries and evaluates the effectiveness of projects and programs based on beneficiary appreciation and perception.

As suggested by Eby (2022), reviewing the project scope, assessing project requirements, examining the project budget, and gauging client and internal satisfaction are key methods for evaluating project success.

The initial components of BNHS' ASPs were discussed in earlier sections of this paper. The subsequent statements from beneficiaries assess whether project interventions under BNHS' ASPs have led to longer-term impacts and sustainable changes for beneficiaries and, eventually, target extension beneficiaries, as indicated in the SRC and in respondent statements.

These assessments include positive effects on beneficiaries, whether emotional or intellectual, as articulated during interviews. They also aim to determine whether intended problems have been successfully addressed. Ultimately, successful implementation of BNHS' ASPs will be reflected in the emulation of BNHS' ASPs by other institutions.

Based on the Perception of the Participants

The various Adopt-a-School Programs at Buenavista National High School were reviewed and assessed by the respondents based on their perceptions. This includes the advantages and disadvantages of implementing the ASP. The benefits of the participants being beneficiaries of the ASP were highlighted. Likewise, the impressions and reactions of the respondents during the face-to-face interview were taken into consideration because the researcher believes that these have great impacts on the credibility of the project's success.

Table 23 reflects the efforts of the school implementing body in conducting the different Adopt-a-School Programs based on the statements of the beneficiaries of the programs.

Table 23

Efforts of the school through its Adopt-a-School Programs

Send Off Program for Players		
Theme	**Definition**	**Common Responses**
Reached out and inspired sports delegation members	The main objective of the Send Off Program for Players	*"Nagulat po ako, kami 'nung ina-nounce na may send-off program. Nakaka-touch naman po ang mga sinabi ng mga guro sa programa bago mag distribute ng goody bags. Naisip ko first time na nangyari ito sa akin, yung maramdaman ko ang suporta ng lahat, hindi lang ng coach. Sabi ko, Wow! Kailangan kong maging best player."* (Smiling. Overwhelmed). *"Mas na-inspired po akong makipag-compete sa Provincial at MIMAROPARAA dahil naiisip ko nakakahiya naman na todo suporta ang mga guro,magulang at buong Buenavista tapos hindi ko abigay 'yung the best ko.* *Bilang player mas disiplinado po ako dahil naisip ko hindi lang pangalan ko o ng event namin ang dala ko, kundi buong bayan ng Buenavista. Sabi ko 'pag nakapagtapos ako at nagka trabaho, ako naman ang susuporta sa mga players."* - Provincial and two-time Basketball MIMAROPAARAA player *"Malaki po ang naitulong ng send-off programs for players ng BNHS. Mas ginanahan po akong makipag-compete sa bawat event. Mas pinaunlad nito ang bawat manlalaro ng BNHS.* *Masaya po dahil mas na-inspire ang mga manlalaro ng BNHS. Naibigay nila ang tulong panganagilangan ng mga players."* - Taekwondo Player - Provincial Silver Medalist *"Unang-una natuwa ako dahil coach, ako ay natuwa dahil may tumugon sa pangangailangan ng aming mga players.* *Ganun pa man at nakakahiya na dapat ang coach o teacher ay mag-provide ng sarili nilang panganagilangan, nakakatuwa dahil kasama ang mga coaches sa binigyan ng tulong.* *Ang alam ko pong focus ng programa ay BNHS lang. Subalit dahil mahusay ang nag-organisa ng proyekto at pilantropo ang mga sponsors. Ako po'y lubos ang kagalakan na ang buong cluster ng Buenavista ay nabibiyayaan ng ganitong programa. Sana po sa sunod pa ay higit duon at hindi lamang high school kundi kasama na rin ang elementarya."* - BNHS PESS Coordinator and Coach

Healing and Firming Families for a More Holistic Education (HAFFMHE)		
Theme	**Definition**	**Common Responses**

Realization and Appreciation of Parental Roles	The beneficiary parent realized her role as a parent through the ASP of the school. The beneficiary appreciated the effort made by the school by holding the ASP.	*"Malaki ang naitulong. Naibahagi ang konting pangangailangan ng aming mag-ina tulad ng spaghetti, bigas, sardinas, gatas, kape, asukal, noodles at mga biscuits."* *"Masaya po ako. Napa-aga ang punta ko sa school. Naisip ko na dapat maaga at mapila pa para makapirma sa attendance. Sinabihan ko mga anak ko na mag-aral mabuti at 'pag sila sy nakatapos at naging maayos ang buhay ay sila naman ang matulong sa iba."* *"Nagapasalamat ako at napasama sa mga nakatanggap. Ito pa naman 'yung panahon na walang-wala kami dahil sa dami ng gastos ' nung na hospital at namatay ang asawa ko."* (Naiiyak na nagsasalita. Garalgal ang boses) - widowed *"Mas na-appreciate ko ang pag-aral dahil may mga taong gustong tumulong sa amin kahit papano."* *"Masaya dahil napasama sa nabigyan ng mga biyaya."* - orphaned
Forum on Teenage Pregnancy and Early Marriage Forum		
Theme	**Definition**	**Common Responses**
Self-realization and awareness	The beneficiary realized something after benefiting from the ASP	*"Natutunan at nalaman ko ang mga maaaring mangyari kapag naging isang batang ina. Ipinakita 'dun 'yung mga posibleng mangyari kapag ma-aga ang pagbubuntis.* *Naisip ko sana hindi mangyari sa akin 'yun. Pero sa hirap ng buhay ay hindi rin naiwasan.* *Na-realize ko na tama at maganda ang mga ipinakita ni Dra. sa mga videos dahil 'yung iba nasubok lang nang nasubok hindi naiisip ang akalabasan ng kanilang ginagawa"* - Former student of BNHS who attended the forum on Teenage Pregnancy and Early Marriage *"Nagkaroon ako ng self-realization at self- awareness about sa teenage pregnancy. Natutunan ko kung paano ba ito maiiwasan at 'yung mga kaakibat na responsibility if ever na mangyari ito. Malaki ang impact nito sa pagkatao ko ngayon dahil naging mulat ako sa reyalidad ng buhay . . . mapalad ako dahil isa ako sa mga mag-aaral na nabigyan ng pagkakataong mauto at maging bukas ang kaisipan patungkol sa isyung ito."*- Former student of BNHS who attended the forum and was hailed as 2022 Miss World Tourism Philippines

In every ASP launched by BNHS, beneficiaries reported feeling inspired, challenged, appreciated, and realizing new insights, as reflected in interview statements. These effects stem from the diligent efforts of the implementing bodies, consistent donor support, and contributions from all involved in realizing each project. The positive outcomes following each program's implementation have motivated BNHS and its implementing bodies to continue pursuing their objectives through annual implementation.

Dumpit (2021) assured a strong correlation between school improvement and community involvement, noting that increased school improvement results from both community involvement and the Adopt-A-School Program. Organizations adopting BNHS programs benefit from positive public relations through their engagement with a critical community component. Lubienski et al. (2018) confirmed that schools benefit from this involvement, as students gain enrichment from programs that expand their knowledge base, and school staff and faculty receive necessary support.

Interviewee responses highlighted their appreciation and recognition of BNHS's efforts, particularly for the Send Off Program, which motivated players to excel and increased the number of awards received by the school and district in the Provincial Meet. A former Provincial and two-time Basketball MIMAROPAARAA player expressed his overwhelming appreciation for the program during its first implementation, underscoring the program's positive impact on the participants.

“Nagulat po ako, kami ‘nung ina-nounce na may send-off program. Nakakatouch naman po ang mga sinabi ng mga guro sa programa bago mag distribute ng goody bags. Naisip ko first time na nangyari ito sa akin, yung maramdaman ko ang suporta ng lahat, hindi lang ng coach.”

Another athlete, the former Taekwondo Provincial Medalist, made a positive comment about the program.
“Malaki po ang naitulong ng send-off program for players ng BNHS. Mas ginanahan po akong makipag-compete sa bawat event. Mas pinaunlad nito ang bawat manlalaro ng BNHS.”

According to Amaro (2020), engaging in high school athletics offers enduring and indisputable advantages, particularly when athletic administrators foster a climate that both encourages and tests the growth attitude. When individuals receive this kind of help, they form behaviors that last into high school.

One of the players said,
"Sabi ko, Wow! Kailangan kong maging MVP." (face lighted).

The players were even reminding themselves to be more disciplined because of what they heard from the speakers during the send-off program. Moreover, they pledged themselves to do the same thing.

"Bilang player mas disiplinado po ako dahil naisip ko hindi lang pangalan ko o ng event namin ang dala ko, kundi buong bayan ng Buenavista."

One of them said,
“Sabi ko ‘pag nakapagtapos ako at nagka trabaho, ako naman ang susuporta sa mga players.”

The unanticipated domino effect of the program on the players and the community was a success on the part of BNHS.

Beneficiary players of the Send-Off Program claimed the success of the program by the changes and realizations they had based on their experiences in the ASP. They felt the community's enthusiastic support gave them a hard push to do their best during the provincial meet, thinking the entire district of Buenavista was competing with them.

Even one of the coaches appreciated the efforts extended by BNHS to the players.

“Unang-una natuwa ako dahil coach ako. Ako ay natuwa dahil may tumugon sa pangangailangan ng aming mga players.”

On the other hand, the School PESS Coordinator and coach were both delighted and inspired by the effort extended, which benefited both the players and the coaches. This positive outcome was contrary to the coach's initial expectation that only BNHS players would benefit. The program's benefits were extended to include not only the BNHS coaches but also the coaches and players from secondary schools throughout the entire district. This broader impact underscored the program's inclusive and far-reaching influence, contributing to a more comprehensive and supportive environment for all participants involved in the district's athletic programs.

“Ang alam ko pong focus ng programa ay BNHS lang. Subalit dahil mahusay ang nag-organisa ng proyekto at pilantropo ang mga sponsors, ako po’y lubos ang kagalakan na ang buong cluster ng Buenavista ay nabibiyayaan ng ganitong programa. Sana po sa sunod pa ay higit duon at hindi lamang high school kundi kasama na rin ang elementarya.”

The PESS Coordinator expressed a desire for the program to be extended to the entire district in the next year of its implementation. This wish was realized the following year when the district supervisor aimed to benefit the delegation of the entire district. Amaro (2020) emphasized that schools providing athletic opportunities and support help players and students maintain lifelong habits. The progressive achievements in the Provincial Meet and the athletes' positive evaluations of the ASP reflect the value they place on the support extended to them. This support leaves a lasting impact on their lives, as they remember being encouraged and supported during their competitive years.

For the ASP Healing and Firming for a More Holistic Education (HAFFMHE) beneficiaries, the program was successful due to the realization of parental roles and the appreciation expressed by parents. This activity aimed to bridge the connection between the school and special members of the parent community, such as solo parents, widowed parents, and orphaned students. Dagupon and Garin (2022) define a solo parent as someone who lives alone or without a partner, raising a child or children on their own. In most cases, this role is taken up by mothers.

ChalkyPapers (2023) explained that the partnership between the community and the school benefits both sides. Schools significantly impact neighborhoods by meeting the critical need for local children's education. As a result, communities can help schools establish mutually beneficial relationships, creating a positive learning environment and helping students internalize values and cultural norms. One of the intangible contributions of BNHS to the community through this ASP is that parents became more inspired to do their best for their children, working both as mother and father.

Overall, the involvement of the community in supporting ASPs like HAFFMHE fostered a more inclusive and supportive environment, encouraging parents to take an active role in their children's education and well-being. This collaboration between the school and the

community is essential for creating a nurturing environment that benefits students and their families.

A separated parent said,
“Para po sa akin ay successful ang programa. Mas na-appreciate ko po ‘yung mga anak ko. Na kahit walang suporta ang ama nila ay mas na-appreciate ko malasakit ng BNHS. Naiisip pa nila ang mga kalagayan ng bawat estudyante bukod pa sa aturo nila.”

Another indicator of the programs’ success was the intangible contribution to the parents that they felt being challenged because of what BNHS did for their children and being thankful for having been included among the beneficiaries.

“Successful po ang programa. Mas na-realize ko bilang magulang na dapat mas magsikap ako. Kung ibang tao nga may malasakit sa amin dapat mas may malasakit kami sa myembro ng pamilya.”

“Hindi ko po inaasahan na ako po’y mapasama sa ganung programa para sa mga single parents sa BNHS. Kaya ako po’y nagapasalamat”

This activity had a profound impact on one of the parents because when the activity occurred, it was weeks right after the death of her husband. The widow said,
“Ito pa naman ‘yung panahon na walang-wala kami dahil sa dami ng gastos ‘nung nasa hospital at namatay ang asawa ko.” (Crying talking. The voice was scratchy).

“Malaki ang naitulong. Naibahagi ang konting pangangailangan ng aming mag-ina tulad ng spaghetti, bigas, sardinas, gatas, kape, asukal, noodles at mga biscuits.”

The widowed encouraged her children to do the same once they succeeded in life.
“Masaya po ako…Sinabihan ko mga anak ko na mag-aral mabuti at ‘pag sila ay nakatapos at naging maayos ang buhay ay sila naman ang matulong sa iba.”

The statement of the widowed parent strongly supports Little (n.d.) that everyone gains when educational institutions and neighborhood organizations collaborate to enhance learning. Partnerships truly help to increase program quality, make better use of resources, and better align goals and curricula by strengthening, supporting, and even transforming individual partners.

Not only the parents were able to appreciate the program, but also the children.
“Mas na-appreciate ko ang pag-aral dahil may mga taong gustong tumulong sa amin kahit papano. Masaya dahil napasama sa nabigyan ng mga biyaya.”

The program may not have fully met the beneficiaries' needs, but it provided them with assistance that was deeply appreciated for its purposes and intentions. Dumpit (2021) acknowledged that the government and schools might not be able to offer a straight remedy without outside help. Therefore, the school head must ensure that partnerships and volunteerism in schools through community participation are crucial to maintaining and raising the standard of public education.

Regarding the beneficiaries of the Teenage Pregnancy and Early Marriage Forum, the realization on their part is the best indicator that proved the program's success. The forum made them fully aware of their reproductive health and related topics, helping them become sexually responsible individuals and parents someday. This initiative by BNHS could help reduce the worldwide cases of unplanned pregnancies. Nearly half of pregnancies worldwide are unplanned, and over 218 million women lack access to birth control. There are many innovative instances of advancement in reducing the unmet need for family planning, promoting gender equity, and lowering birth rates, from Guatemala to Kenya and the Philippines (Peluso, 2023).

One of the beneficiaries, who became a mother at an early age months after attending the forum, admitted that she was informed about the consequences but ironically failed to practice what she heard. The realization came after facing the results of her actions. This underscores the importance of such forums in providing critical information and the ongoing need for support and education to help young individuals make informed decisions.

The Teen Pregnancy and Early Marriage Forum highlights the importance of continuous education and support. While the immediate impact might not be visible for all attendees, the long-term benefits and the gradual shift in awareness and behavior can contribute to reducing teenage pregnancies and promoting responsible sexual behavior. This aligns with global efforts to address unplanned pregnancies and improve reproductive health education.

“Successful po ang programa. Natutunan at nalaman ko ang mga maaaring mangyari kapag naging isang batang ina. Ipinakita ‘dun ‘yung mga posibleng mangyari kapag ma-aga ang pagbubuntis.

“Na-realize ko na tama at maganda ang mga ipinakita ni Doktora sa mga videos dahil ‘yung iba nasubok lang nang nasubok hindi naiisip ang akalabasan ng kanilang ginagawa”, she uttered with hesitation on her face.

Though there was regret on her part, realization was the only thing that was left.

"Naisip ko sana hindi mangyari sa akin ‘yun. Pero sa hirap ng buhay ay hindi rin naiwasan," she added.

Unlike the other beneficiary, a former student of BNHS who attended the forum and was hailed as the 2022 Miss World Tourism Philippines, realized the possible outcomes right before she got involved into a difficult situation. She directly stated,

“Para po sa akin ay successful ang programa. Nagkaroon ako ng self-realization at self-awareness about sa teenage pregnancy.Natutunan ko kung paano ba ito maiiwasan at ‘yung mga kaakibat na responsibility if ever na mangyari ito. Malaki ang impact nito sa pagkatao ko ngayon dahil naging mulat ako sa reyalidad ng buhay.”

“Para sa akin, mapalad ako dahil isa ako sa mga mag-aaral na nabigyan ng pagkakataong matuto at maging bukas ang kaisipan patungkol sa isyung ito.” (Smiling.)

Her appreciation for learning about life through attending the ASP on Teenage Pregnancy and Early Marriage was evident in her smile. This program not only addresses the current conditions of the beneficiaries but also impacts their future. Khan et al. (2019) emphasized that young adults' reproductive health involves their ability to recognize and manage risks and implications associated with it. A girl's adolescent experiences significantly influence her life and the lives of her family members.

The beneficiaries confirmed during face-to-face interviews that the ASPs of BNHS positively contributed not only to the learners but also to their families and community members. This feedback highlights the far-reaching impact of the programs, which extend beyond immediate educational outcomes to broader social and familial benefits. It can be inferred that if families benefited from the programs, community therefore benefited in the implementation of the ASPs.

The BNHS ASPs have shown that well-designed and thoughtfully implemented programs can create a ripple effect, fostering a supportive environment for learners, their families, and the wider community. These initiatives not only enhance educational experiences but also contribute to the holistic development of individuals, equipping them with the knowledge and skills needed to navigate various life challenges.

School and community partnerships can provide students today with a better education and help with the demands put on the schools to meet expectations set by the Department of Education. Through communities in schools, students can have access to resources that can help them succeed in school. The benefits of community and school partnerships are numerous. The community can support educators in an ever-evolving world where there is increased pressure on them to ensure that pupils meet high standards of excellence.

Table 24 contains the statements of the participant beneficiaries of the programs justifying that the problems affecting the learning of the students were remedied by the Adopt-a-School Programs of Buenavista National high School.

Table 24

Adopt-a-School Programs Addressed the Problems

Send-off Program for Players		
Theme	**Definition**	**Common Responses**
Problem addressed	The ASP was able to remedy,solve and give solution to the problem	*"Opp. Malaking bagay sa isang player 'yung may basic needs ka ng baon papunta sa competition katulad ng shampoo, sabon, toothpaste, toothbrush, deodorant, medyas, face towel, biscuit, milo energen at gatorade. Nakakabawas bigat sa isipin ng player 'yung mga pangangailangang ganun. 'Pag MIMAROPARAA nga po ay may cash allowance pa ako." (Somewhat like surprised by the added assistance as a regional player)* - Provincial and MIMAROPARAA Player *"Opp. Dahil binigyan din po kami ng dagdag kaalaman at impormasyon bago pa mag-distribute ng mga goody bags. Nabibigyan ng karagdagang pangangailangan ang mga manlalaro."* - Taekwondo Player

		"Naniniwala po ako na nakatugon ito pero yung' sasabihin po natin na 100% na pagtugon sa pangangailangan ng mga players ay siguro po'y hindi naibigay ang lahat 'yung isangdaang porsyento. Subalit nagpapasalamat pa rin ako dahil ano pa man ang kinaya ng budget ng programang ito, ay napakalaking tulong sa mga mag-aaral, players at coaches." - Coach and PESS Coordinator
Healing and Firming Families for a More Holistic Education- HAFFMHE		
		"Opo dahil sa mga pagkukulang ng mga magulang sa kanilang mga anak ay natutugunan ng mga teachers." - separated *"Nakatulong po sa amin kahit limitado ang naibigay ay nakatulong sa amin."* - widowed *"Natutugunan ang problema na dapat solusyunan. Nakakain kami dahil nabigyan at nakalibre ng pagkain,"* – orphaned
Forum on Teenage Pregnancy and Early Marriage		
		"*Natutugunan po dahil napaliwanagan po ang mga kabataan at nang matakot din po na mangatipan at magbuntis."* - former student *"Isa itong hakbang upang matugunan ang problema sa ating lipunan sapagkat dahil dito nagkaroon ng ka alaman ang mga kabataan patungkol sa lumalaganap na teen age pregnancy."* - former student

Government school systems, such as BNHS, have limited resources to achieve their objectives, making efficient resource use a primary goal of school activities. Through the ASPs of BNHS, issues arising from the school's budget scheme were addressed, and appropriate actions were taken. Astbury (2022) confirmed that these alternatives and strategies to rectify the issues are more suitable as short-term solutions, but they are still preferable to students' achieving goals that exceed the school's financial capabilities.

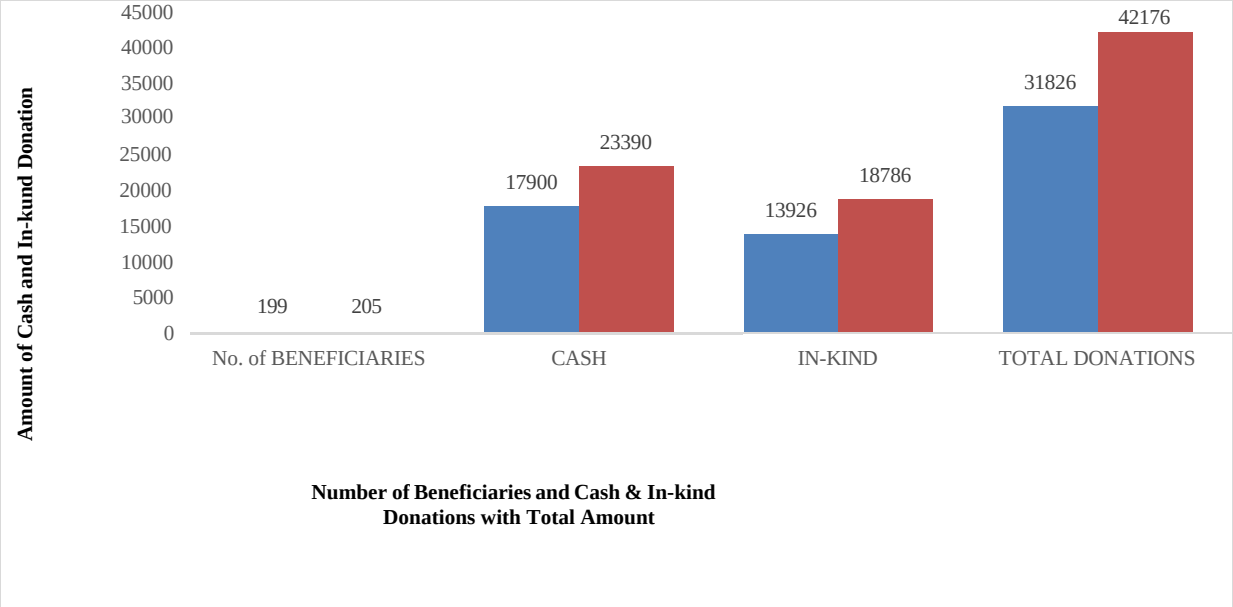
One hundred percent of the beneficiaries and respondents agreed that the ASPs had addressed the problems. The ASP Send Off Program for Players enabled the players to focus solely on their preparation for the competition, without being distracted by any other aspects. One beneficiary player commented and overwhelmingly expressed:

"Malaking bagay sa isang player 'yung may basic needs ka na baon papunta sa competition."

The MIMAROPARAA Player commented,
"Nakakabawas bigat sa isipin ng player 'yung mga pangangailangang ganun."

Added to this assistance to him as a player was pocket money for the regional event.

"Pag MIMAROPARAA nga po ay may cash allowance pa ako," he added to his statement.



For the former provincial medalist in Taekwondo, there was more than the goods during the send-off program,
"Nabibigyan ng karagdagang pangangailangan ang mga manlalaro…binigyan din po kami ng dagdag kaalaman at impormasyon bago pa mag-distribute ng mga goody bags."

According to Amaro (2020), three of the most significant participation takeaways that students carry with them into their post-graduation years are: (a) a greater sense of self-confidence in forming relationships with others and possessing an increased capacity for empathy; (b) improving self-awareness and consequently understanding the impact of their actions on others; and (c) laying the groundwork for enduring fitness routines.

Figure 5 illustrates the graph of in-kind and cash donations for provincial players of Buenavista District.

Figure 5

Cash and In-Kind Donations for Send-Off Program for Players School Year 2018-2019 and School Year 2019-2020

Legend:

School Year 2018-2019 School Year 2019-2020

*No Provincial Meet in SY 2020-2022 due to Covid19 pandemic

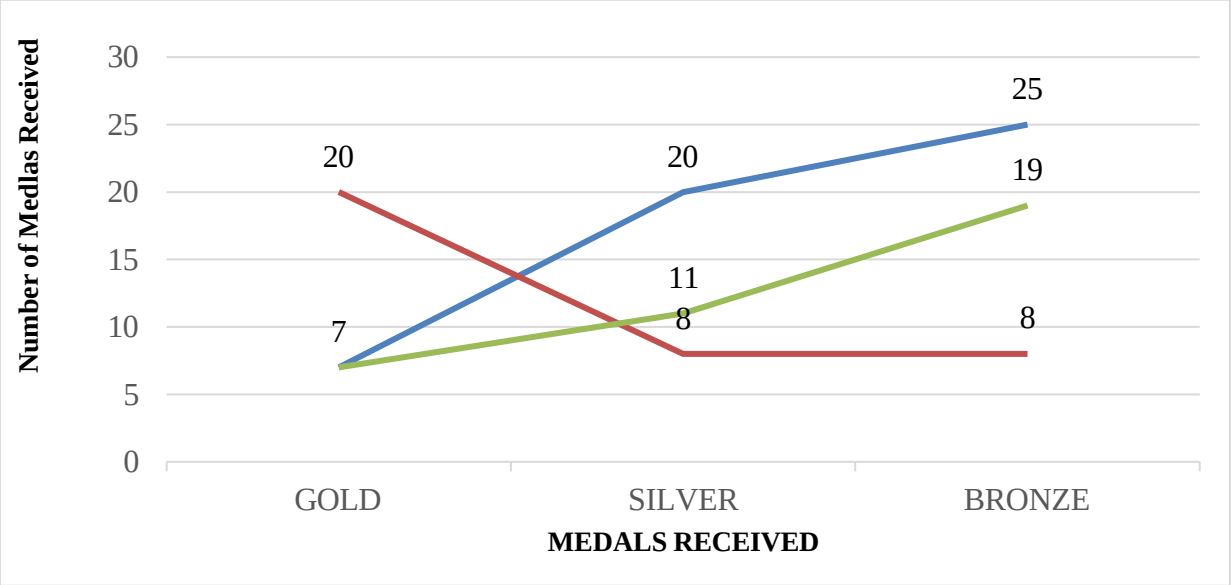
Source: BNHS Sports Coordinator, Guidance Offices of Buenavista NHS and the Division of Marinduque Sports Committee

Figure 5, "Cash and In-Kind Donations for the Send-Off Program for Players, School Year 2018–2019 and School Year 2019–2020," illustrates the progress of in-kind and cash donations over the previous years of implementing the Send-Off Program for Players. The graph reflects the progressive support of donors and sponsors for the players, indicating a positive community response and successful implementation of the ASP.

In the school year 2018–2019, there were 199 beneficiaries of the program. The school, through the Guidance Offices, incurred seventeen thousand nine hundred pesos (P 17,900.00) in cash donations and received in-kind donations worth thirteen thousand nine hundred twenty-six pesos (P 13,926.00), totalling thirty-one thousand eight hundred twenty-six pesos (P 31,826.00). For the school year 2019–2020, there were 205 beneficiaries, with total cash donations of twenty-three thousand three hundred ninety

pesos (P 23,390.00) and in-kind donations worth eighteen thousand seven hundred eighty-six pesos (P 18,786.00).

The data reveal an increase in cash donations in the second year of implementation and a decrease in in-kind donations. This trend indicates that the organizers and proponents of the ASP successfully gained the trust of donors and sponsors. The increasing total amount of donations over the years justified the community's support for the BNHS project. The latest Send-Off Program saw an even greater total of ninety-four thousand five hundred sixty-five pesos and twenty-five centavos (P 94,565.25).



The School PESS Coordinator at BNHS noted that while the problem has not been fully addressed, the efforts put into the project are appreciated.

"Subalit nagpapasalamat pa rin ako dahil ano pa man ang kinaya ng budget ng programang ito, ay napakalaking tulong sa mga mag-aaral, players at coaches."

Figure 6 shows the trend of the medals received by Buenavista District in the previous implementations of the ASP.

Figure 6

Medals Received by Buenavista District in the Provincial Meet from School Year 2018-2019 to School Year 2022-2023

Legend:

2018-2019 2019-2020 2-2023

*No Provincial Meet in 2020-2022 due to Covid19 pandemic

Source: DepEd Division of Marinduque Sports Committee

For the ASP Send-Off Program for Players, there was noticeable progress in the number of medals received by the district, where most of the players came from BNHS, as reflected in Figure 6, "Medals Received by Buenavista District in the Provincial Meet From 2018 to 2023." This figure clearly shows a positive impact following the implementation of the ASP.

Each year, the line graph in Figure 6 indicates a progressive increase in the total number of medals won by the Buenavista District. This significant improvement in the performance of players and coaches in the Provincial Meet is evident from the data. In 2018, Buenavista District earned 19 bronzes, 11 silvers, and seven gold medals. In 2019, the district earned 20 bronzes, eight silver, and eight gold medals. By the latest 2023 games, the district had earned 25 bronzes, 20 silvers, and seven gold medals. The consistent improvement in performance each year suggests that the ASP has had a positive influence on the players' achievements during the competition.

The beneficiaries of the program widely believed in its benefits. One program beneficiary, a separated parent, viewed the ASP as a substitute for a father's unfulfilled commitment to his children, highlighting the program's positive personal impact.

“Opo dahil sa mga pagkukulang ng mga magulang sa kanilang mga anak ay natutugunan ng mga teachers.”

The other beneficiary parent appreciated the assistance although it was limited. “Nakatulong po sa amin kahit limitado ang naibigay ay nakatulong sa amin.”

A beneficiary student and child stated that they were able to eat because of the ASP, *“Natutugunan ang problema na dapat solusyunan. Nakakain kami dahil nabigyan at nakalibre ng pagkain,”*

Beneficiaries of the Teenage Pregnancy and Early Marriage Forum believe that the project addressed the problem and that they learned something from the ASP.

“Natutugunan po dahil napaliwanagan po ang mga kabataan at nang matakot din po na mangatipan at magbuntis.” stated by one of the attendees of the forum.

Added to this is the perception of the beauty queen, another attendee.
“Isa itong hakbang upang matugunan ang problema sa ating lipunan sapagkat dahil dito nagkaroon ng ka alaman ang mga kabataan patungkol sa lumalaganap na teenage pregnancy.”

Figure 4, "Teenage Pregnancy and Early Marriage Cases in Buenavista National High School from School Year 2018–2019 to School Year 2022–2023," shows a declining trend in these cases during the implementation of the ASP. This indicates the program's success in raising awareness among students about their reproductive health.

Khan et al. (2019) stated that given the mutual interaction of health and education, the school-based approach has been effective in behavior-oriented education in numerous cases. Adolescent girls who receive health education in school are more conscious of

their personal health and better equipped to safeguard their reproductive health from potential risks.

Adopting a school has advantages for all involved. Adopting the school gives the person or the organization a receives positive public relations because of its connection to such a significant segment of the community. The involvement helps the school because it exposes pupils to enriching programs that broaden their knowledge. The teaching personnel and the school head receives assistance in their endeavors. The parents feel less burdened in the financial aspect due to the extended assistance of the adopting entity that caters the needs of their children. Most of all the children will feel the support not only from their parents but also from the entire community. This will somehow encourage them to make a change for the betterment of their status in life.

Table 25 presents the statements of beneficiaries regarding the adopt-a-school programs held by Buenavista National High School. Their feedback reflects the effectiveness of these programs and their contributions to the students, parents, and community members. Additionally, the beneficiaries expressed their thoughts on the potential for other schools to emulate such programs.

Table 25

Emulation of Buenavista National High School's Adopt-a-School Programs

Send-off Program for Players		
Theme	**Definition**	**Common Responses**
BNHS' ASPs Emulation	ASPs of BNHS will be imitated or will try to be implemented by other schools or institutions to radiate their positive effects, further strengthen connections between the school and the community, and yield a better outcome for the various aspects of the learning environment.	*"Siguro po ay dapat itong gayahin, palaganapin sa anumang paaralan sa lalawigan sapagkat malaking tulong po ito lalong lalo na sa DepEd na kung saan ay kapos o kulang ang budget ng departamento sa sports development kaya't kailangan po natin ng mga bukas palad na mga tao, naorganizer na tutulong sa mga ganitong programa para sa mga players."* - Coach *"Maganda pong gawin ng bawat school ito. Halimbawa sa lahat ng schools ng Buenavista Cluster. Kapag ganyan po*
Send-off Program for Players		
Theme	**Definition**	**Common Responses**
		mas marami maiibigay sa players ng BNHS dahil yung programa po sa atin ay pang buong Buenavista ay kasama pati ang mga coaches sa pina babaunan ninyo. Mas mararamdaman po pati ng mga players ang suporta ng bawat community nila, mas inspired." - Player *"Mas okay na ibahagi ng bawat paaralan ang ganitong programa. Nakaka-inspire sa mga manlalaro na mapagbuti ang kanyang paglalaro sa napiling event. Sa ganitong paraan hindi malayo na maka-produce ang Buenavista ng isang National Player."* - Player

Healing and Firming Families for a More Holistic Education- HAFFMHE		
Theme	**Definition**	**Common Responses**
BNHS' ASPs Emulation		*"Ako po'y naniniwala na dapat subukan o isagawa ng ibang paaralan. Makakatulong po ito sa mga magulang at mga mag-aaral. Dahil sa kakulangan sa kinikita. Isa itong karagdargang pangangailangan sa araw-araw. Lalo na at aisa akong nakita. Ako'y naga sari-sari store lang. Ang makatawid sa pangangailangan sa ilang araw ay malaking bagay na."* - Separated *"Opo. Marami ang makikinabang. Kung kaya ng school (BNHS) ay bakit hindi gawin dahil ang daming nangangailangan. Napakalaking tulong na po 'nun para sa isang pamilya at nagataasan ang mga presyo ng bilihin.Hindi po ako nahiya pumila at 'yun ay biyaya."* - Widowed *"Opo. Maraming matutuwa dahil makakatanggap sila ng biyaya galing sa school."* - Orphan
Forum on Teenage Pregnancy and Early Marriage		
Theme	**Definition**	**Common Responses**
BNHS' ASPs Emulation		*"Dapat na maging proyekto ng ibang schools ito para mas marami ang nakaka-alam ng magiging buhay nila at maging handa upang maiwasan ang mga posibleng dahilan upang maging batang ina o ama. PAra mas malaman nila ang hirap ng buhay. Mas maunti ang mababuntis ng maaga at matatakot dahil sa mga videos na napapanuod."* - Former student *"Nararapat lang na isagawa ito ng ibang mga paaralan, dahil ang pagco-conduct ng mga symposium at orientation ay isa sa mabisang paraan upang maiwasan ng mga kabataan ang maagang pagkakaroon ng anak at pamilya, kung saan dito papasok ang comprehensive sex education, self-awareness, STD/HIV prevention and youth development."* - Former student

One hundred percent (100%) of the respondents believe that ASPs at BNHS have beneficial impacts and that other schools or institutions may implement them.

The first Adopt-a-School program of BNHS to be tried out by the other schools is the Send-off Program for players. As stated in one of the player's responses,
"Nakaka-inspire sa mga manlalaro na mapagbuti ang kanyang paglalaro sa napiling event. Sa ganitong paraan hindi malayo na maka-produce ang Buenavista ng isang National Player."

With this kind of project, players could feel the support they need evident in another player's response,
"Mas mararamdaman po pati ng mga players ang suporta ng bawat community nila, mas inspired."

As a government institution, the school is tasked under Program Objective 1 of DepEd Order No. 25 s. 2015, or the Implementing Guidelines on the Special Program in Sports,

to not only develop the academic aspect of the child but also its sports skills. BNHS strongly supports this advocacy of the department and be one of those pushes that could encourage athletes to pursue their passion for sports.

According to one of the players, if Send Off Program will be implemented by other schools,

"…mas marami maiibigay sa players ng BNHS dahil yung programa po sa atin ay pang buong Buenavista…"

Based on one of the coaches, not only does the entire district benefit from the outputs of such kinds of projects related to sports but also DepEd in the larger sense.

"… malaking tulong po ito lalong lalo na sa DepEd na kung saan ay kapos o kulang ang budget ng departamento sa sports development …"

Likewise, HAFFMHE must try to implement in other schools to strengthen the connection among family members and lighten their burden in relation to everyday needs occasionally.

Schools have historically prioritized family and community engagement in grades K–12. However, as pupils get older, parental involvement in schooling tends to decrease. According to some research, parental participation dropped by up to 17% between middle school and the third through fifth grades. This pattern, along with the continued difficulties in academic recovery, highlights the necessity of including and assisting more district community members in the K–12 school environment (Hanover Research, 2023).

"Makakatulong po ito sa mga magulang at mga mag-aaral. Dahil sa kakulangan sa kinikita… Lalo na at aisa akong nakita… Ang makatawid sa pangangailangan sa ilang araw ay malaking bagay na.", a separated parent stated.

Even though the supplies received by the families were very limited, their value is immeasurable for the beneficiaries,

"Napakalaking tulong na po 'nun para sa isang pamilya at naga-taasan ang mga presyo ng bilihin.", the reply of a single parent.

For families with a single working parent, having relief from a few days of expenses for their basic needs is significant. Beneficiaries may perceive the support of both the school and the community towards families like theirs when they receive these items. The school demonstrates concern not only for the education of its students but also for the welfare of the entire family. Delgado (2019) noted in his paper that experts on parental involvement in education assert that a family's level of engagement in a child's education is the most reliable predictor of that child's success. When students feel supported by their parents, they become more motivated and develop a passion for learning.

Furthermore, during the Forum on Teenage Pregnancy and Early Marriage, respondents expressed agreement that the ASP should be adopted by other schools because it would greatly assist in educating the younger generation about these prevalent issues. One

respondent, reflecting on personal experiences of failing to apply learned lessons, responded affirmatively when asked if other schools should implement similar projects.

"Para mas malaman nila ang hirap ng buhay. Mas maunti ang mabubuntis ng maaga at matatakot dahil sa mga videos na napapanuod."

According to one of the respondents, it is better to educate teenagers because they will be warned not to do something abruptly and unprepared for an unexpected consequence.

The other respondent of the ASP believes that this must be done by other schools as an effective way of preventing teenagers from getting too early into forming families.

"…dito papasok ang comprehensive sex education, self-awareness, STD/HIV prevention, and youth development."

With the ongoing implementation trend of the ASP Forum on Teenage Pregnancy and Early Marriage by the RHU in Buenavista, secondary schools in the district may not necessarily need to adopt the program outright. Instead, they could integrate follow-up sessions into other subject areas to serve as constant reminders of the information and lessons learned from the forum. The RHU of the LGU has been extending its services to secondary schools in the district by emulating the ASP Program of BNHS, facilitated by the annual coordination between BNHS and the RHU. This collaboration is expected to lead to a reduction in cases related to teenage pregnancy and early marriage, and with follow-up initiatives at home, it may foster the development of more responsible couples in the coming years.

The ASPs have proven to be beneficial for the beneficiaries, who suggest implementing similar programs in other schools to better understand the outcomes, based on their positive experiences.

However, beneficiaries are not the sole beneficiaries of the ASPs; BNHS itself has gained intangible benefits from implementing them. While these may not be immediately evident in material aspects or recognition, they likely manifest in strengthened connections between the school and its clientele, their families, and the community at large. Various individuals involved in each project may have experienced realizations, and there are likely underlying benefits that only future generations can fully appreciate, especially through the community's response to BNHS's needs and those of its future clientele.

Based on the School Report Card (SRC)

San Miguel (2019) elucidated that the guidelines for conducting the planning process at the school level were established through the release of DepED Order 44 series of 2015, titled "Guidelines on Enhanced School Improvement Planning (SIP) and School Report Card (SRC)." The Department of Education reiterated that the SRC is a key component of the DepEd School-Based Management initiative, to be prepared twice a year by each school during the school year. Its purpose is to enhance shared governance, raise community and stakeholder awareness, and encourage greater community involvement in improving the learning environment at the school.

Parafina (2018) further elaborated that the SRC provides comprehensive information on all essential aspects of the school. In this paper, the summarized SRC data of BNHS somehow reflects the differences or contributions made by the ASPs of BNHS, which have contributed to the school's current level of performance as indicated in the SRC.

Table 26 presents the data included in the school report card of Buenavista National High School, essential for measuring and addressing the inquiries covered by this study. This data serves to justify the improvement in the school's performance in previous school years.

Table 26

Summarized Data on the School Report Card of Buenavista National High School from School Year 2018-2019 to School Year 2021-2022

School Year	Enrollment	Health & Nutritional Status		Teachers' Highest Educational Attainment		Funding Sources	School Award & Recognition	Status of Annual Implementation Plan	Stakeholders Participation

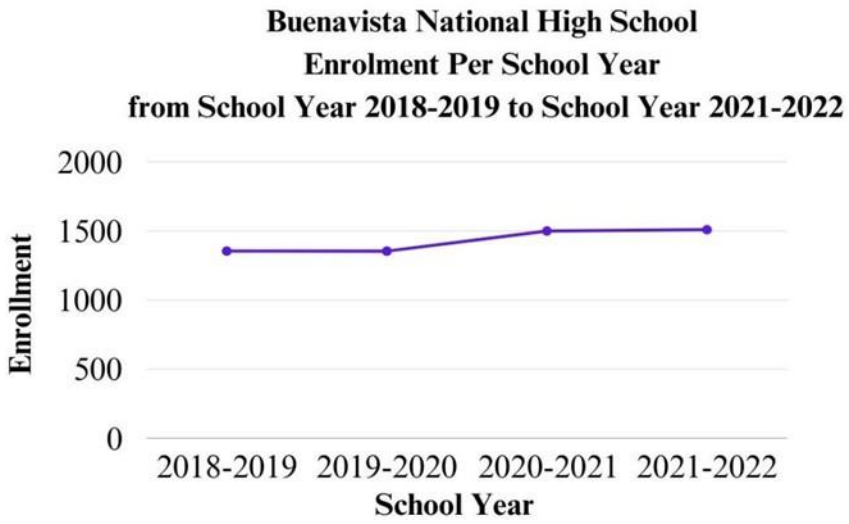
Source: Principal's Office of Buenavista National High School

In Table 26, "Summarized Data on the School Report Card of Buenavista National High School from School Year 2018-2019 to School Year 2021-2022," information has been compiled from the past four consecutive school years. However, certain aspects of BNHS's SRC mentioned in this paper, such as the teacher-to-student ratio, chair-to-student ratio, and books-to-student ratio, were not observed during the COVID-19 pandemic. Data for the SY 2018-2019 were particularly limited. The data summarized and presented here were gathered and provided to the researcher during the period when this study was conducted.

Each category of the SRC will be comprehensively discussed in the following sections, accompanied by graphical presentations to facilitate a better understanding of the data collected during face-to-face interviews with the respondents.



Enrolment Per School Year

Figure 6 is the graph of Buenavista National High School's enrolment from school year 2018-2019 to school year 2021-2022 extracted from the SRC of the school.

Below is the graph of Buenavista National High School's enrolment from school year 2018-2019 to school year 2021-2022 extracted from the SRC of the school.

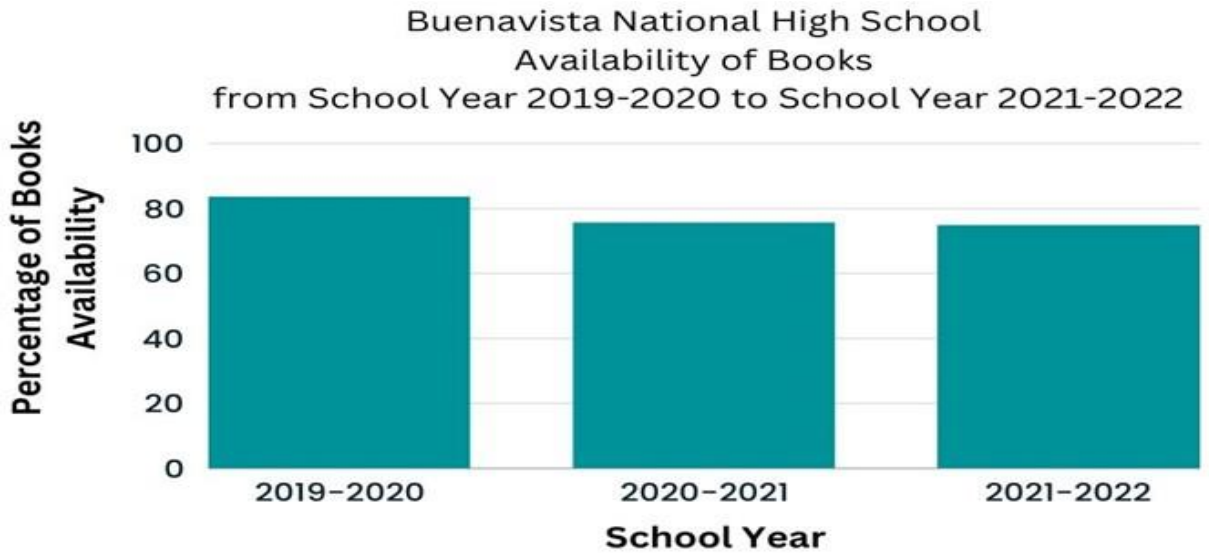
Figure 6

Buenavista National High School
Enrolment Per School Year from School Year 2018-2019 to School Year 2021-2022

Source: Buenavista National High School School Report Card

In the school year 2018–2019, enrolment stood at 1,355 students. Subsequently, there was a slight increase 1,354 students in the school year 2019–2020, followed by a more significant rise 1,500 students in 2020–2021, and 1,510 students in 2021–2022. These figures indicate a progressive increase, suggesting that members of the community had confidence in BNHS's ability to accommodate their children and provide the necessary education for them to become competent individuals, despite other schools in the neighboring barangays**.**

Health and Nutritional Status



In the SY 2018-2019, no data were entered. However, in SY 2019-2020, there were 768 students within the normal range and 103 students outside the normal range, representing almost 25% of the total student population. Due to the pandemic, no weighing of students was conducted, making it difficult to gauge the effectiveness of the ASP's contribution to the school's progress. However, the ASP HAFFMHE was implemented in SY 2021-2022 to support the nutritional needs of learners, although this was not reflected in the SRC under donations, possibly due to the failure to update the school's SRC. The school anticipated a progressive improvement in the learners' nutritional status during the pandemic, with support from the Department of Education in the form of health supplies allocated from the MOOE, including face masks, alcohol, gloves, and sanitizers issued to both teachers and learners. Additionally, the LGU provided health supplies for learners, which were reflected in the SRC counterpart of the LGU.

Availability of Books

Below is the graph of Buenavista National High School’s availability of books from school year 2019-2019 to school year 2021-2022 extracted from the SRC of the school.

Figure 8

Buenavista National High School School Report Card
Availability of Books from School Year 2019-2020 to School Year 2021-2022

Source: Buenavista National High School School Report Card

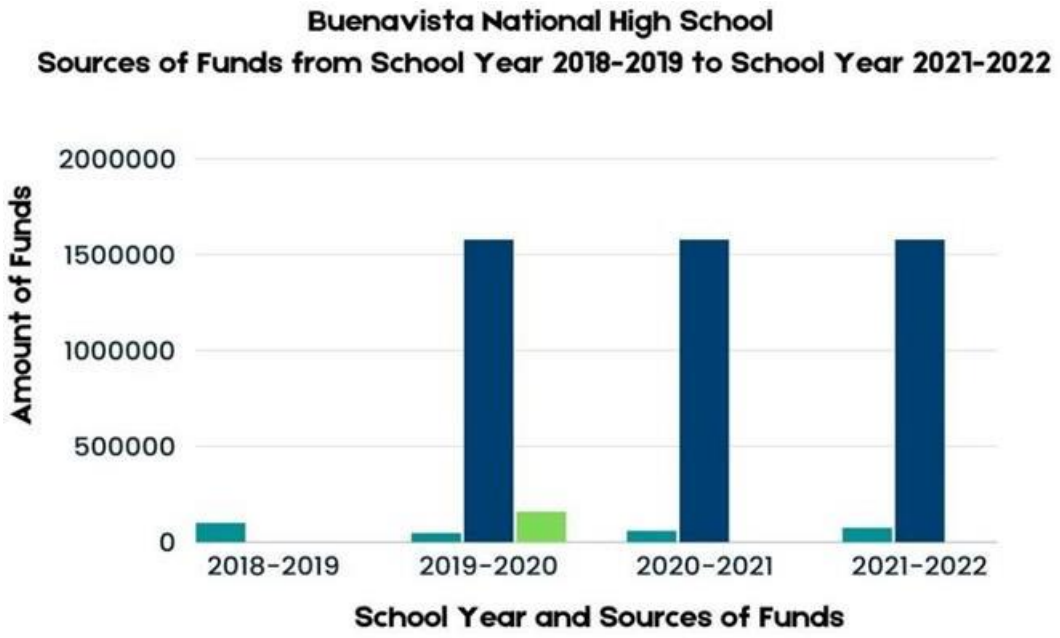
There was a decline in the percentage availability of books. Data in the graph show that there was 83.78% in the SY 2019-2020, 75.79% in the SY 2020-2021, and 75.03% in the SY 2021-2022. Deliveries of modules and books were made in the SY 2022-2023. No ASP for books during these school years.

In addition to having no access to books during the pandemic, few students nowadays read books; instead, they read online using the application or through social media for their activities.

Teachers' Highest Educational Attainment

Next noteworthy element of the SRC is the number of teachers in each category of the Highest Educational Attainment. It shows that the number of faculty members who were taking masteral degrees progressively increased from 33 in SY 2019-2020 to 45 in the following year, SY 2020-2021. The number of teachers taking masteral degree decreased in SY 2021-2022, having 38 only. In this period, localization was availed of by some of the faculty members who were presently residing in distant municipalities.

The positive movement in the number of teachers with masteral degrees was due to the encouragement of the school head during LAC sessions for the faculty members to further their education because of the new guidelines for the promotion of teachers. Added to this is the awareness of the teachers that they need to further their knowledge in serving the technology-updated generation of learners.



Funding Sources

Figure 8 reflects Buenavista National High School's funding sources from school year 2018-2019 to school year 2021-2022 extracted from the SRC of the school.

Below is the graph of Buenavista National High School's funding sources from school year 2018-2019 to school year 2021-2022 extracted from the SRC of the school.

Figure 8

Buenavista National High School
Funding Sources from School Year 2018-2019 to School Year 2021-2022

*Source:*Buenavista National High School School Report Card

The indicator "Sources of Funds" consistently included two main counterparts: Maintenance and Other Operating Expenses (MOOE) and donations, for the four previous school years at BNHS. The total funding sources ranged between 1,578,000.00 PHP to 1,803,000.00 PHP. Figure 8, "Buenavista National High School Funding Sources SY 2018-2019 to SY 2021-2022," directly reflects the percentage share of the ASPs of the school and the counterpart of the other resources. Donations through the ASPs were an indispensable portion of the funding sources for Buenavista National High School and any public schools.

In SY 2018-2019, donations from alumni, estimated at 100,000.00 PHP for concreting the school grounds, were not reflected in the SRC of the school.

In SY 2019-2020, the total fund was 1,802,088.00 PHP. In this included 1,578,000.00 PHP MOOE; 16,938.00 PHP from canteen shares; 47,150.00 PHP in donations; and other unspecified resources comprising 160,000.00 PHP.

For SY 2020-2021, the total funding source was 1,639,101.00 PHP. The MOOE allotment was 1,578,000.00 PHP, with total donations amounting to 61,101.00 PHP.

In the previous school year 2021-2022, the total funding source was 1,654,559.61 PHP. This comprised MOOE with 1,577,999.61 PHP, and donations worth 76,560.00 PHP.

These data reflect the increasing needs of BNHS over the previous four school years. As the demand of the learners increases, the ASP share also increases. This indicates that stakeholders and other community members can sustain the assistance needed by the school each year.

School Award & Recognition

Below is the graph of Buenavista National High School's school award and recognition from the school year 2018-2019 to school year 2021-2022 extracted from the SRC of the school.

Figure 9

Buenavista National High School School Report Card
School Award and Recognition from School Year 2018-2019 to School Year 2021-2022

Note: Only the number of awards per level was indicated not the rank obtained from the level.

Source: Buenavista National High School School Report Card

The School Awards and Recognitions received by BNHS are the most notable part of the SRC. Despite the challenges posed by the pandemic, the school continued to excel. In SY 2019–2020, BNHS received six awards: four at the District Level, one at the Division Level, and one at the National Level. However, in 2021-2022, BNHS achieved a remarkable 11 awards: two at the National Level, four at the Regional Level, four at the Division Level, and one at the District Level. This significant increase in awards nearly doubled the school's previous achievements.

The courage of the participants to compete during the pandemic can be attributed to the encouragement and support of the coaches, teachers, parents, and the school head, alongside the abundant talent among the students. Financial support provided through the ASP of the school also played a crucial role in enabling participation in these competitions.

Status of Annual Implementation Plan

The Status of Annual Implementation Plan maintained a one hundred percent (100%) yield by the school over the previous three school years, from 2019–2020 to 2021–2022. This clearly indicates that the school faithfully executed the set annual programs and projects in the School Improvement Plan through collaborative efforts from various components of the learning environment, both internal and external.

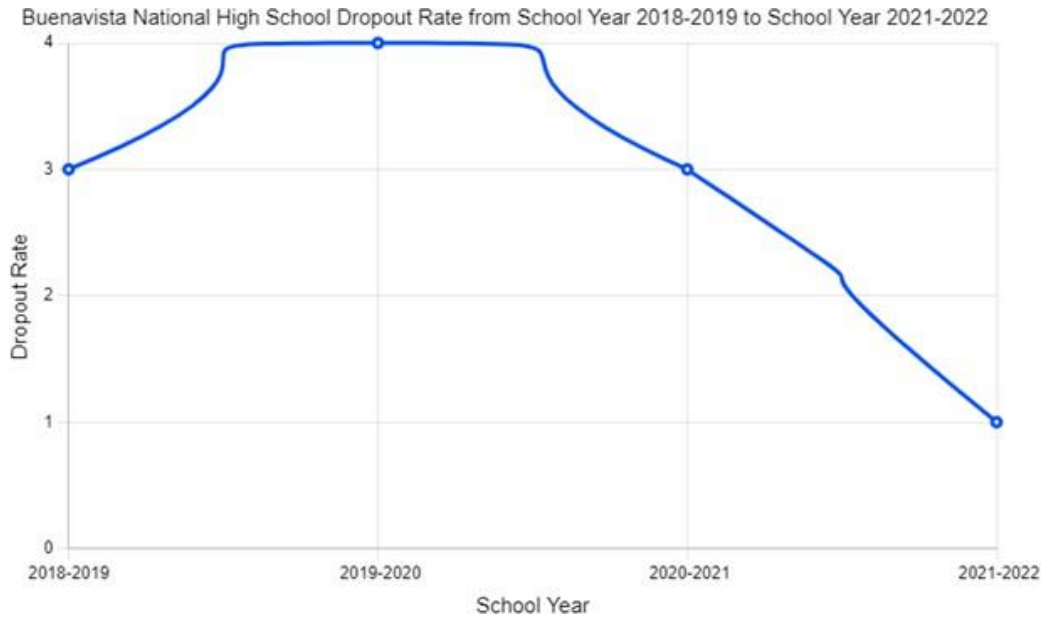
Stakeholders' Participation, as emphasized by Siles (n.d.), involves shared understanding and active involvement in decision-making processes, leading to empowerment and shared project ownership. This indicator strongly supports the successful implementation of the school's ASPs, consistently demonstrating their integral role in every aspect of the school's endeavors.

Before the pandemic hit in SY 2019–2020, the school received financial support totaling 47,150 PHP from private individuals and the LGU. However, there was a decline in stakeholders' participation in SY 2020–2021 due to the peak of COVID-19. Fortunately, after the pandemic subsided in SY 2021-2022, the school received a total 863,543 PHP from contributions and participation of the private and public sectors, once again facilitated through the ASPs of the school.

Stakeholders' Participation

Siles (n.d.) emphasized that stakeholder participation in the project entails having a shared understanding and taking part in the decision-making process. Empowerment and shared project ownership result from it, which means the project should begin with consultation and end with decisions made in unison in order to maximize involvement.

This indicator strongly justified the successful implementation of the school's ASPs by remarkably setting its consistent piece of the pie in every endeavor of the school. Before the pandemic enraged the school year 2019–2020, the school was able to avail financial support with a total worth of forty-seven thousand one hundred fifty pesos (47,150 PHP) from private individuals and from the LGU of the municipality. There was a gap in the



stakeholders' participation in the school year 2020–2021 due to the peak level of COVID-19. Right after the pandemic ends in the school year 2021-2022, the school was able to receive a total of eight hundred sixty-three thousand five hundred forty-three pesos (863,543 PHP) from the contributions and participation of the private and public sectors. Again, these were under the ASPs of the school.

Rate of Dropouts by Cause

Below is the graph of Buenavista National High School's dropout rate from school year 2018-2019 to school year 2021-2022 extracted from the SRC of the school.

Figure 11

Buenavista National High School
Dropout Rate from School Year 2018-2019 to School Year 2021-2022

Source: Buenavista National High School School Report Card

An indication of the efficacy of a nation's educational system is the percentage of students that drop out and miss school. They are important indicators of the challenges the nation's education system may face in the future (Samuel, 2023).

Another positive indicator of a performing school is the declining number of drop- outs. For BNHS, it decreased with a big difference from 52 students to 9 students. The increasing data on enrollment revealed that the school can encourage students to finish their studies despite the challenges they are facing. Nonetheless, data on the drop-out

rate showed a significant decrease from 52 in the first two years to 9 in the current school year, 2022-2023. This could be attributed to the situation during the pandemic and the campaign by BNHS to go back to school. The common reasons for students to drop out of school in the school years 2018–2019 and 2019–2020 were individual-related factors, while in the school year 2020–2021, it was domestic-related factors. These were the target objectives of the guidance offices in formulating the ASPs for the school.

Promotion Rate

BNHS maintained a high promotion rate ranging from 95% to 100% over the past four school years. This consistency indicates the school's commitment to advancing students to subsequent grades or graduation levels. The small fluctuations observed in the promotion rates are minimal and likely within the expected variation.

Literacy Level

Limited data were available for the literacy level aspect of the SRC, with data only available for SY 2019-2020 showing percentages in English and Filipino. This scarcity of data may hinder a comprehensive analysis of literacy trends over time.

Learner-Teacher Ratio

BNHS faces challenges in maintaining an ideal learner-teacher ratio due to a lack of classrooms. Despite efforts such as assigning co-advisers and maximizing available space, the average number of students per advisory remains high, ranging from 45-55 students. This situation underscores the urgent need for additional classrooms to improve the learning environment.

Learner-Classroom Ratio

The school struggles with inadequate classroom space, particularly for junior high school teachers who lack faculty rooms. The shortage of classrooms has persisted over the past two school years, with the current need estimated at ten (10) classrooms to meet DepEd's standards. The delay in classroom construction due to space constraints highlights the importance of collaboration with stakeholders to address infrastructure needs.

Learner-Toilet Ratio

Despite having functional and clean toilets, BNHS faces challenges in maintaining an adequate learner-to-toilet ratio, as the increasing student population has outpaced toilet facilities' capacity. The limited space available presents obstacles to expanding toilet facilities, indicating the need for creative solutions to address this issue.

Learner-Seat Ratio

BNHS experiences a shortage of seats, with the number of lacking chairs increasing over the past two school years. The school is exploring strategies to remodel existing chairs

to meet students' needs. However, the persistent shortage underscores the necessity for additional resources to ensure adequate seating for all learners.

Overall, while BNHS has made significant strides in various aspects of its SRC over the past four years, challenges such as infrastructure limitations persist. Collaboration with stakeholders and creative solutions will be essential in addressing these challenges to further improve the school's performance and meet the evolving needs of its learners.

Keys to the Successful Implementation of Buenavista National High School's Adopt-a-School Programs

For projects to be implemented successfully and yield the best results, a strong foundation is necessary. The implementing group can guarantee project success by efficiently managing a project strategy during the planning phase. Eby (2022) seconded that thorough planning can determine the success of any endeavor. While Florida Tech (2018) adheres to the statement that success is possible by maintaining its alignment and progress facilitated by providing everyone with clarity, openness, and consistency in the workflow process.

For BNHS, a strong connection with the community and stakeholders is the best to guarantee the success of every program or project launched by a school.

Table 27

Keys to Successful Implementation of the Project Send-off Program for Players

Send-off Program for Players		
Theme	**Definition**	**Common Responses**
Connection and Cooperation	The strong link between the school and the various aspects of the community that makes every ASP of BNHS successful	*"Palagay ko po 'yung pagtutulungan ng lahat ng myembro ng community. Hindi lang teachers, students, magulang at iba pang tao. Nag-i-extend sila ng suporta sa players sa abot ng kanilang makakaya."* - MIMAROPARAA Player
Proponent or Organizer's Effort	Efforts of the proponent or organizers played a major part for the success of the ASP	*"Naging successful ang programa at epektibo. 'Yung concern at pagtutulungan siguro ang nagbigay buhay upang maging successful ang bawat send-off program for players."* - Taekwondo Player *"Unang-una kaya naging matagumpay ang programa ay dahil sa organizer. Kung walang organizer ay hindi ito magpu-pursue kahit pa may mga donors. Hindi ito mama-materlialize. So, para sa akin dahil sa mga organizers ay naisasakatuparan ang mga gawain katulong ang mga donors."* *"Ako'y naniniwala na matagumpay ang programa dahil nagamit nila ang mga pangangailangan habang sila'y andun sa tatlo hanggang limang araw na palaro."* - Coach

Healing and Firming Families for a More Holistic Education- HAFFMHE		
Theme	**Definition**	**Common Responses**
Teachers" Effort Accountability	Components of the school took effort in extending services to the learners and their families. There is an assurance that BNHS is responsible and could deliver the service set for the specific ASP.	*"Naging matagumpay ang proyekto dahil nagsisikap ang mga guro na mabigyan solusyon ang mga problema ng mga mag-aaral maging akademik man o pangtahanan. Sa abot ng kanilang makakaya ay pilit nilang abutin ang bawat pangangailangan ng bawat mag-aaral."* - Separated *"Matagumpay ang proyekto dahil nabigyan ang lahat ng dapat makinabang at dahil 'yan sa pagsisikap ng mga guro."* - Widowed *"Maraming nangangailangan ang natulungan kaya naging matagumpay ang project na mga walang maayos na trabaho atkapos sa buhay."* - Orphan
Forum on Teenage Pregnancy and Early Marriage		
Theme	**Definition**	**Common Responses**
Successful ASP Effort of the school, Guidance and LGU	The assessment of the implemented project. The determining factors towards project's successful implementation	*"Successful ang programa dahil napanuod na nila at napakinggan nila ang mga maaaring mangyari sa buhay nila."* - Teenage Pregnancy Program Beneficiary *"Ang pagtutulungan ng LGU, paaralan at Guidance Office and naging susi upang maging matagumpay ang proyekto.Ang pagkakaroon ng madalasang symposium ukol sa isyu ay isang magandang paraan at ganun din ang pagkakalat ng kaalaman sa pinakamabilis na pamamaraan."* - Teenage Pregnancy Program Beneficiary

The Center for Educational Innovation (n.d.) enumerated the characteristics of successful team projects. Among the characteristics of successful team projects are well-defined collaboration, relevance and authenticity, and team accountability. At least two of these are being practiced by BNHS based on the statements of the respondents: collaboration and authenticity and team accountability.

The first key is the collaboration of the various components of the community. Senjaya (2019) affirmed that all stakeholders must engage fully and intelligently for a school administrator to be successful. In this include the MLGU,

LGU, teachers, parents, members of the different civic organizations, and others.

Collaboration, which is always practiced at BNHS and in any public school. In every endeavor of the school, coordination with the various organizations in the school is consistent. The programs of the school are extended to the community for collaboration and assistance. Organizations, whether school-related, government-related, or non-civic, are being involved out of willingness to ensure their participation in accomplishing the endeavor. The responses of the interviewees could justify the intensity of their participation in every project of the school.

"Palagay ko po 'yung pagtutulungan ng lahat ng myembro ng community. Hindi lang teachers, students, magulang at iba pang tao. Nag-i-extend sila ng suporta sa player sa abot ng kanilang makakaya."

Same with the comment of another beneficiary from teenage pregnancy and early marriage, *“Ang pagtutulungan ng LGU, paaralan at Guidance Office and naging susi upang maging matagumpay ang proyekto.”*

A further justification is provided by a remark from another player benefit stating that success was accomplished through the cooperation of the many components.

“…Yung concern at pagtutulungan siguro ang nagbigay buhay upang maging successful ang bawat send-off program for players.”

The second key determinant based on the statements of the respondents, accountability. Under the leadership of the school principal, accountability is always included as one of the main considerations of the implementing body. As a response from the principal for Table 6, Pre-implementation Phase of Adopt-a-School Program in Terms of Reasons for Selecting the School as Recipient of the Program, this is one of the possible reasons for choosing BNHS as a beneficiary of a project.

“Another ay accountability, yung properly accounted ang donations nila. May report tayo.”

The last key to the successful implementation of the school’s ASPs were due to the efforts of the proponents. The efforts exerted by the project proponent or organizers of the ASPs that paved for the success of the programs.

One remarkable response from a beneficiary coach reiterated that the ASPs of the school became successful because of the organizers' efforts.

“Unang-una kaya naging matagumpay ang programa ay dahil sa organizer. Kung walang organizer ay hindi ito magpu-pursue kahit pa may mga donors. Hindi ito mama-materlialize. So, para sa akin dahil sa mga organizers ay naisasakatuparan ang mga gawain katulong ang mga donors.”

Two of the parent beneficiaries of HAFFMHE stated that the success of the ASPs was solely attributable to the organizer’s' efforts to address student issues through these projects.

“Sa abot ng kanilang makakaya ay pilit nilang abutin ang bawat pangangailangan ng bawat mag-aaral.”

Teachers, organizers, and other members of BNHS cannot achieve success in every attempt, despite their efforts. A successful ASP requires the participation of each component: PTA, SSG, stakeholders, organizations, and the entire community. Indeed, it takes a village to educate a child.

According to Khan (2020), the phrase "project success" refers to the particular standard decided upon by the client and the project team prior to the start of the project. After the project is completed, teams use these requirements, benchmarks, and deliverables to gauge project success.

ASPs at the school can be considered successful, with more of the characteristics being practiced by BNHS. The responses of the respondents and figures in the data gathered could justify the success of its implementation and coverage.

Adopt-a-School Programs of Buenavista National High School that could be benchmarked by other schools

A versatile method for examining and enhancing practically any part of a project or program in the school is benchmarking. This will support any essential modifications made by the head of the school and the implementing bodies beneficial for enhancing any procedures or programs (Intuit Mailchimp, n.d.).

With regular benchmarking the school will enable to develop precise, quantifiable short-term strategies grounded in current performance rather than past results, allowing for gradual performance gains over time. Transforming a performance deficit into performance leadership is the goal of surpassing the top performers (Gradecam, 2020).

Buenavista National High School is one of those schools that aims to better their services their clientele and at the same time widen and strengthen their connections with their stakeholders and members of the community in which the institution is rendering its services. For educational institutions to succeed and expand, benchmarking is essential. It gives schools the authority to set realistic goals, evaluate student performance honestly, and pursue greatness constantly.

In the dynamic realm of education, educational institutions are perpetually endeavoring to enhance their efficacy and furnish their students with optimal learning opportunities. In this circumstance, benchmarking is a useful tool that can help in this pursuit of excellence. By comparing performance and procedures with those of other organizations, benchmarking will enable BNHS to promote a continuous improvement culture.

ASPs of Buenavista National High School that may be benchmarked by other schools could be justified by the statements of the respondents after experiencing being part of the program as a beneficiary or as an implementer of the ASP. The respondents' statements play a great role in identifying those ASPs that truly contributed to the betterment of the school's services to the members of the community and that need to improve more to further its implementation.

The following are the ASPs that could be benchmarked by other schools:

A. Send Off Program for Players

The Send-off Program for Provincial Players started on 2018 upon the pursuance of the former principal, who happened to be always ushering the delegation of Marinduque to the MIMAROPARAA.

In this annual program, the players will be trained and oriented before leaving for the provincial competition. A day before their departure, each player and coaches of all the events in the entire cluster will be attending the send-off program in BNHS. They are

given goody bags with basic supplies they may need during the competition. Delegates of Buenavista Cluster to the regional competitions are also given pocket money. The supplies intended to lessen the expenses of the players and coaches and to inspire them.

With regards to the stages of its implementation, there were assigned teachers for the program. A synchronize acceptance of donations was through the guidance offices of the school. Donations were in two forms: in-kind and cash. For in-kind donations, every item being forwarded to the office is being recorded for the monitoring of the items' sufficiency. On the other hand, cash donations were recorded together with the screenshots of the donations through electronic cash forwarder of the designated person for the acceptance. For cash donations handed over to the school, these are being kept for a while waiting for the inventory of the items before the actual packing of the goods. Cash were used in purchasing the items that will complete the needed supplies of the players.

During the distribution phase of the goods, there were attendance sheets of the recipients on the day of the distribution per event. The coaches were there facilitating their players for the various parts of the send-off program. After some talks like orientations and the like topics needed by the player were discussed by the speakers, students will fall in line by event for the distribution.

After the implementation of the project is the accomplishment of the financial report to be confirmed by various committees ensuring transparency in the implementation of the entire program. These documents that compromised the financial report will be posted for the information and recognition of the donors.

With Send-off Program for Players, the spirit of encouragement and inspiration of the players are being ignited. They tend to play hard thinking that they are playing by representing the entire district and that there are people relying on them to be the best player they can be.

B. Healing and Firming for a More Holistic Education (HAFFMHE)

As a support to Forum on Teenage Pregnancy and Early Marriage, the school launched another short-term ASP in October 2021, the HAFFMHE. This supports orphaned, with solo parent, and with separated parents' students. The school believes that the student and parent beneficiaries somehow must be given importance and encouragement to continue supporting the education of their children.

This ASP was intended be conducted during Christmas break for the families to feel that BNHS was their extended family and was with them in celebrating the holidays.

In the implementation of the program, parents attended a short parenting seminar through the efforts of the invited speakers such as a resource person from DSWD, Sangguniang Bayan Member in-charge of the education sector and the School Guidance Designates. This aimed to remind the parents that regardless of the situation they are in as a parent, the welfare and education of the children is the main priority and that the school is with them in carrying their responsibilities.

Right after the program was the distribution of pack of goods with basic needs and something they could supposedly cook for the previous celebrations. Among these goods were: spaghetti pack, kilos of rice, sugar, milk, sardines, biscuits, shampoos and bath soaps.

This BE strengthens the link of the school to the community specifically with the learners and the parents. The school is taking its extra effort of extending its services to the community by becoming part of each household that needs patronage. Lastly, for the children and parent to realize and appreciate the presence of each other, that they need to stick together and work for the betterment of their future.

C. TEENAGE PREGNACY and EARLY MARRIAGE FORUM

This ASP of BNHS was initiated due to alarming number of cases of teenage pregnancy that involve the BNHS students, the best counteraction of the school is to create a program that will broaden the knowledge of the learners about reproductive health directly from a designated LGU health physician. This program is with the coordination to the Rural Health Unit (RHU) of Buenavista through the leadership of Dra. Eleanor Grate. Its implementation varies progressively each year.

During the first years of its implementation, students were lectured inside the classroom per section. The municipal physician wanted to maximize participation of the participants during the lecture and in the often forum. First, figures of cases in the entire province down to the local vicinity will be viewed and discuss. Next, the present situation of the family and the consequences the subjects are facing due to the situation they are engaged in. Students were also lectured on the disadvantages on health of teenage pregnancy and early marriage as well as the financial crisis they are suffering from. Pictures and Videos with statements of the subjects were presented to the attendees for greater realization of the possible situation they may be facing if ever engage in that situation. These aims to sway the minds of the students to go away from activities that are leading to early teenage pregnancy and early marriage.

At present, the RHU is in connection with the Population Commission in the implementation of the said project. This is an advantage for BNHS because the local government is one of the beneficiaries of the agency and is supporting projects in relation to population education that involve teenagers.

There was a decline in the number of cases specially in the senior high school students when the ASP started its annual implementation. This may be because students in the senior high school have better understanding with regards to sex education and are somehow informed and aware of the consequences they might be facing if ever engaged in such situations because of the forum. Further, cases in grade 8 consistently reappearing maybe because they were not included in those who attended the forum with the senior high school students.

Conclusions

Based on the results of the study, the following conclusions were drawn:

1. Buenavista National High School's implementation of its ASPs greatly applies the School-Based Management, involving its stakeholders as its strong allies being strengthened by its recognition with consistent adherence to R.A. 8525 in accomplishing documents with an exemption in securing a MOA.

2. BNHS strictly initiated and formulated ASPs that cover only by R.A. 8525 provisions.

3. ASPs of BNHS have great effects to its beneficiaries that they felt moved for the efforts of the school and wish to pay back someday and even commending the ASPs to other schools for emulation.

4. There were significant changes in the data of the School Report Card in the previous school years that could be attributed as results of the ASPs parallel to the progressive changes of responses in supporting the ASPs.

5. ASPs of BNHS is always a success due to the cultured link of the school to the community members resulted from being liable of the different components of the school especially proponents of ASPs in every innovation launched.

6. The ASPs of the BNHs could be benchmarked by other schools to further improve the implementations and likewise be adapted and modified by other schools depending on the needs of the learners and the school.

Recommendations

Considering the presented research results and findings, the researcher wishes to recommend the following:

1. BNHS must keep and develop a record, or a database of the ASPs implemented by the school for future utilization, reference and MOA implementation. Likewise, the school may assign an office for Alumni and stakeholders inside the school campus and continue doing the Gabi ng Parangal for stakeholders with assigned presentations for them.

2. The school must maintain adherence to R.A. 8525 in relation to provisions of assistance to learners.

3. The school must find ways on how to continue short term ASPs with long term effects to continue the cultured link with the community.
4. Areas of improvement in the SRC where ASPs are useful could be identified and further given priorities for better and consistent results.

5. Efforts of the proponent or organizer in materializing the ASPs must be recognized, given credit to advance their career, and incentives to further encourage and inspire others in accomplishing extra efforts for the welfare of the learners.

6. Encourage other schools, after benchmarking the ASPs of BNHS, to develop their own ASPs that could bridge the needs and further improve the performance of the learners and the entire school.

Ethical Consideration

This study has set several considerations to ensure the privacy and confidentiality of the respondents and participants. Among the significant issues that were taken into consideration are informed consent, confidentiality, the anonymity of the respondents, and data protection.

During the face-to-face interview, the interviewees were informed about the purpose of conducting the interview and their part as respondents. Further, they were informed that an audio recording will be needed so as not to miss their statements, and notetaking will be necessary for the observation and additional details during the interview. A waiver was given to the respondents regarding the confidentiality of the information they did not want to disclose and their identity. An assurance that the information gathered will be used solely for its intended purposes and will be treated with confidentiality was sought, along with their cooperation. The cooperation of the respondents was valued and praised with the hope that this study will further promote the connections between the concerned individuals.

Acknowledgments

The researchers of this study would like to thank everyone who has offered guidance and encouragement throughout the years in pursuing this thesis.
First and foremost, to the researchers' thesis panelists; Dr. Diosdado P. Zulueta, Dr. Leodegario M. Jalos Jr., and Dr. Joy S. Montejo, thank you for providing valuable feedback and suggestions. You truly molded the researchers to become more tenacious in the search for extensive wisdom;
To the researcher's very fastidious copy editor; Ms. Jessica L. Semilla, and language editor Ms. Anna Roffel M. Lozada, warmest appreciation for the insightful acumen while reviewing this paper;
To the respondents, for providing honest and valuable information, it truly amazed the researchers as they discovered the impacts and connections made by the ASPs to their lives;
To a friend Elsa F. Solito, who had served as the ultimate push and kept reminding inside to accomplish what had started and coincided;
Lastly, to the researchers' family members, Randy C. Sotto, for the immeasurable support and unwavering encouragement. And to the children, Rency, Janjan, and Sophia, for the sacrifices during the authors' absence from attending to their studies while struggling on their own.

IMPLEMENTATION OF SCHOOL-BASED MANAGEMENT AMONG THE CENTRAL SCHOOLS IN MARINDUQUE: BASIS FOR SBM STRATEGIC PLAN

Kayce Joy L. Saliendrez, Menandro M. Merlin, DEM

[1]Graduate School, Marinduque State University, Marinduque, Philippines

https://doi.org/10.5281/zenodo.11626766

ABSTRACT

This study examined the implementation of School-Based Management (SBM) among central schools and aimed to develop a strategic plan model based on the findings. The primary objective was to assess the SBM implementation in terms of the four core areas such as leadership & governance, curriculum and learning, accountability and continuous improvement, and management of resources through stakeholders' assessment, SWOT Analysis, and feedback, and propose a strategic plan to enhance SBM effectiveness. A mixed-method research approach was utilized, combining quantitative surveys and qualitative feedback from key stakeholders, including nine (9) school heads, 140 teachers, nine (9) SPTA Presidents, and nine (9) LGU Representatives. The data were analyzed using mean rating, thematic analysis, and a non-parametric test to evaluate the hypothesis. The Mann-Whitney U Test revealed a considerable disparity between internal and external stakeholders. Results revealed that all indicators are assessed as "implemented" by stakeholders. Internal stakeholders assessed all indicators as "highly implemented" while external stakeholders saw it as "less implemented" in leadership and governance and "implemented" in other core areas. These results highlight the significance of alignment of perception among stakeholders. Feedback revealed strengths and areas for growth in leadership, curriculum, accountability, and resource management. Recommendations include encouraging teamwork, resolving disputes, increasing stakeholder engagement, and adopting continuous monitoring and evaluation to improve SBM processes.

Keywords: *Feedback*, *Marinduque State College- Graduate School, School-based Management, School-Parent Teacher Association, Stakeholders' Assessment, SWOT*

INTRODUCTION

School-based management (SBM) is a cornerstone in enhancing educational quality and cultivating a conducive learning environment. Its significance cannot be overstated, as it provides schools and learning communities with a sense of direction and guidance tailored explicitly to their unique needs. According to Fitzgerald (2016), school-based management is like the localized version of the education sector's holistic and comprehensive management system.

School-based management is a theoretical and practical solution designed to cater to schools and learning communities' distinct educational and social requirements. As Arar (2018) emphasizes, the school-based management system tailors explicitly to meet the diverse demands of schools, encompassing academic, instructional, professional, social, and holistic aspects of school development. Through SBM, schools equip all stakeholders, including school leaders, managers, teachers, staff, and partners, with specific guidelines, policies, and standards to which they must adhere. This practical approach empowers educators and administrators to manage their schools and foster an effective and conducive learning environment.

Wivono (2017) discussed that the relevance and contributions of school-based management towards school development and improvement lie in the level and quality of implementation of the programs and policies along its four core areas. Specifically, the four core components of SBM that define its functionality to school development are leadership and governance, curriculum and instruction, accountability and continuous improvement, and management of resources. According to Bhuiel (2021), the core component of leadership and governance supports the administrative functions and system of schools. Meanwhile, the curriculum and instruction reinforce the learning community's academic and educational functions. The core area of accountability and continuous improvement seeks to address the need to promote collaborative relations with the stakeholders or school partners. On the other hand, the SBM component of the management of resources highlights the opportunities and services to promote the proper, purposeful, transparent, and efficient distribution and utilization of school resources. It underscores the importance of each stakeholder's role in successfully implementing school-based management, making them feel valued and integral to the process.

Green (2017) emphasized the collaborative nature of school-based management, underscoring the vital and crucial roles that stakeholders play in its comprehensive implementation. This collaborative approach recognizes not only the services of school heads, leaders, teachers, and professionals but also the quality and functionality of social support services extended by multisectoral partners, making each stakeholder feel valued and integral to the process.

As Mitrofanova (2004) asserts, stakeholders are not just participants, but crucial contributors to the comprehensive and socially focused approach to school development programs. The implementing units and sectors of school programs place significant emphasis, recognition, and gratitude on the support services provided by the internal and external stakeholders in school improvement. Stakeholders play a pivotal role in providing the necessary support that is essential, valuable, and advantageous in maintaining and enhancing holistic programs and learning community advocacies.

The indispensable support systems of stakeholders can also be highlighted and recognized along the integral components of school development programs. In governance, parents and other community-based partners also assume noble leadership roles and functions in school-based systems. Meanwhile, regarding curriculum management, stakeholders can ensure the preservation of resources in the community that can support the localization of instruction. Regarding promoting accountability, stakeholders nurture the sense of volunteerism integrated into the conduct of noble school programs and advocacies.

As a result, the Philippine educational system is constantly evolving, embracing new academic policies and practices to ensure that the system's output can adjust and react to the evolving requirements of the times. It improves good leadership and school governance while improving the educational system's progress.

Despite SBM's theoretical soundness and practical applicability, a critical gap exists in effectively gathering stakeholders' feedback and assessment to inform and improve SBM practices. This is not just a gap, it's a chasm that urgently needs to be addressed. This gap impedes realizing SBM's full potential by hindering the alignment of school management with community needs and priorities. The Division of Marinduque exemplifies this challenge, as the mechanisms for stakeholder involvement and feedback in SBM initiatives are inadequate.

An analysis of the pre-problem situation in Marinduque reveals common issues linked with stakeholders' feedback systems. While programs and activities promoting stakeholder involvement may exist, they often fail to integrate feedback mechanisms that capture diverse perspectives on SBM implementation. For instance, stakeholders engaged in initiatives like Clean and Green or *Brigada Eskwela* may not feel adequately empowered to provide feedback on curriculum and learning systems, leading to a disconnect between community initiatives and educational priorities.

This gap in stakeholder feedback is particularly concerning given SBM's comprehensive framework, which encompasses leadership and governance, curriculum and instruction, accountability and continuous improvement, and management of resources. Without robust feedback mechanisms across these core components, schools risk overlooking valuable insights into areas for improvement and potential solutions to address challenges.

Recognizing the importance of stakeholder engagement in SBM, the present study is not just another research project but a crucial step toward a better future. It aims to

determine and assess various SBM practices in selected schools in Marinduque. Unlike previous studies, this research delves further into stakeholders' support for SBM through a feedback system, aiming for a more distinctive, thorough, and comprehensive understanding of SBM implementation.

Through this study, the researcher seeks to illuminate the limitations of existing feedback mechanisms and propose solutions to enhance stakeholder engagement in SBM. This research contributes to the ongoing efforts to improve educational quality and foster a supportive learning environment in Marinduque and beyond by bridging the gap between school management and community needs.

The study also analyzed the extent of stakeholders' feedback towards SBM activities conducted and implemented along the four core components of school-based management. These salient core areas and components are leadership and governance, curriculum and instruction, accountability and continuous improvement, and management of resources that can integrate and embrace the social support of stakeholders, particularly in terms of feedbacking or communicating and translating responses and reactions toward the SBM tasks and programs. The researcher deems examining the stakeholders' assessment and feedback toward SBM implementation is necessary and beneficial. This feedback system would reflect how these school partners are genuinely engaged, involved, concerned, and committed to supporting school-based management and development. In addition to addressing the gap in stakeholder feedback, conducting a SWOT (Strengths, Weaknesses, Opportunities, Threats) analysis is imperative to assess the current state of SBM implementation in Marinduque comprehensively. This analysis will provide a holistic understanding of the internal and external factors influencing SBM practices and inform strategic decision-making to enhance educational quality and stakeholder engagement. Moreover, the data from this study will be used to enhance SBM implementation and stakeholders' feedback and support towards SBM through a proposed strategic plan model.

Research Questions

This statement of the problem aims to address critical questions regarding SBM implementation and stakeholder engagement in the Division of Marinduque.

Specifically, it aimed to address the following inquiries:

1. What is the assessment of SBM implementation through;
    1.1 stakeholders’ assessment in terms of:
        1.1.1 leadership and governance
        1.1.2 curriculum and learning
        1.1.3 accountability and continuous improvement
        1.1.4 management of resources
    1.2 SWOT analysis?
2. What are the stakeholders' feedback on the SBM implementation in the four core areas?
3. What SBM Strategic Plan Model could be proposed for central schools?

METHODOLOGY

Research Locale

The research locale for this study is central schools within the Division of Marinduque. namely Don Luis Hidalgo Memorial School (Boac North District), Boac South Central School, Mogpog Central School, Sta. Cruz-North Elementary School, Sta. Cruz South Central School, Sta. Cruz East Central School, Torrijos Central School, Buenavista Central School, and Gasan Central School.

Research Population & Sample

This study divided its primary informants or respondents into four groups. The first group was composed of school heads of central schools in the Division of Marinduque. Meanwhile, the second group comprised selected teachers from the central schools in the division. The third group includes a parent and the president of the School Parent-Teacher Association (SPTA). The fourth group is from the Local Government Unit (LGU), a barangay Kagawad assigned to the Committee of Education. Total population of school heads, SPTA President and LGU representatives from the nine (9) schools were respondents of this study. The researcher used Slovin's Formula to determine the sample size for teacher-respondents. The number of teacher-respondents for each school was determined using percentages. Teacher-respondents were selected using a random sampling method, ensuring that every member of the population had a fair opportunity to be chosen.

Respondents of the Study

The researcher classified these respondents into two major categories of stakeholders: internal and external. 158 Internal stakeholders include the nine (9) school heads, 140 teachers, and the nine (9) SPTA President, while external stakeholders include the nine (9) barangay Kagawad from the Local Government Unit.

Data Gathering Procedure

After addressing the ethical considerations and issues of the study, the researcher proceeded to the comprehensive implementation of data collection methods and procedures. These data collection methods aligned with the primary research objectives. The researcher administered survey questionnaires to four groups of respondents and informants, how stakeholders assess the implementation of School-based management practices in the four (4) core areas in terms of leadership and governance, curriculum and learning, accountability and continuous improvement, and management of resources—feedback gathered from the respondents regarding their responses to the questionnaire.

Specifically, the adapted survey questionnaires were distributed and administered to the respondents in August 2023 and collected after three weeks of administration. The researcher conducted all data collection procedures following ethical guidelines and provided informed consent to the respondents to protect their confidentiality and privacy.

The data management procedures encompass various tasks, such as tallying quantitative data in Excel, utilizing SPSS for statistical analysis, and coding quantitative data to generate themes. These procedures are meticulously designed to ensure the systematic collection of comprehensive and reliable data, effectively addressing the research questions.

Research Instrument

Accurate and valuable data to support the study's objectives were collected using adapted survey questionnaires. The researchers adapted the survey form from the standard SBM assessment tool 2023 and administered questionnaires to school heads, teachers, parents, and the Local Government Unit (LGU).

The first part is about the demographic profile of respondents. The researcher utilized the gathered data to describe the respondents. The second part of the study involved the adapted survey tool, which focused on various school-based management practices in four core areas: leadership and governance, curriculum and learning, accountability and improvement, and management of resources. The nine (9) central schools in the Division of Marinduque implemented these practices. It was based and adapted these SBM activities from the core components of SBM cited and specified in the SBM Assessment Tool.

The questionnaire utilized a numerical rating scale (Likert scale) to obtain responses to several items (characteristics) assigned numerical values. This research considered a four-point scale extending from a minimum of one (1) to a maximum of four (4).

Responses were assigned with a numerical value ranging from one (1) to four (4) with corresponding interpretation as follows:

Likert-Scale Ratings of Stakeholders' Assessment on the Implementation of School-based Management

Rating	Scale	Interpretation	Description
4	3.25-4.00	Highly Implemented	Practiced the activity more than 4 times in a school year.
3	2.50-3.24	Implemented	Practiced the activity 3 times or thrice in a school year.
2	1.75-2.49	Implemented	Practiced the activity 2 times or twice in a school year.
1	1.00-1.74	Least Implemented	Practiced the activity once in a school year.

In this study, the researcher carefully considered and assessed the validity of the research instruments to ensure they accurately measured the variables of interest. It involved conducting pilot tests, reviewing the instruments with experts in the field, and

using established measures to assess criterion validity. By establishing the validity of the instruments, the study aimed to ensure that the data collected was reliable and could be used to draw meaningful conclusions. Content validators comprised supervisors, teachers with master's degrees, and language experts. Content validators indicated the validity of each criterion by checking the scale with a rating that extends from a minimum of one (1) to a maximum of five (5).

Likert Scale Ratings for Instrument Validity Assessment

Rating	Scale	Interpretation	Description
5	4.20 – 5.00	Very much valid	This indicates that the validator strongly agrees with the statement.
4	3.20 – 4.19	Valid	This indicates that the validator agrees with the statement.
3	2.60 – 3.19	Moderately valid	This indicates that the validator neither agree or disagrees with its validity.
2	1.80 – 2.59	Slightly valid	This indicates that the validator leans towards agreement to its validity but there are some doubts regarding its accuracy and appropriateness
1	1.00 -1.79	Not valid	This indicates that the validator strongly disagrees with its validity indicating lack of confidence to its accuracy and appropriateness to measure the intended outcome.

Result of Content Validation from Experts

Criteria	Mean	Interpretation
1. The purpose in the questionnaire/survey/inventory is stated clearly.	5	Very much valid
2. The questionnaire/survey/inventory have all essential questions which properly addressed the specific statement of the problems of this research.	4.86	Very much valid
3. The questionnaire/survey/inventory have items which properly addressed the objectives of this research.	5	Very much valid
4. The questionnaire/survey/inventory have a well distribution of items which properly addressed the variables of this research.	4.71	Very much valid
5. Every respondent would be able to choose from the scales and the ratings found in the questionnaire/survey/inventory.	5	Very much valid
6. The questionnaire/survey/inventory have items which are suitable to the comprehension of the respondents.	4.14	Valid

7. The questionnaire/survey/inventory have items which are suited to the vocabulary of the respondents.	4.29	Very much valid
8. The questionnaire/survey/inventory have items which cater all types of respondents.	4.29	Very much valid
9. All words in the questionnaire/survey/inventory are spelled correctly. Grammar, punctuation, spacing and word usage is appropriate.	4.71	Very much valid
10. The questionnaire/survey/inventory are easy to use and pleasant to look at.	4.57	Very much valid
11. The items in the questionnaire/survey/inventory are clear and a respondent would not have to ask for clarification.	4	Valid
12. The table presentation, line styles and arrangement of items enhance the layout and meaning of the questionnaire/survey/inventory.	4.43	Very much valid
TOTAL	4.58	Very much valid

Legend: (5) – Very much valid, (4)- valid, (3) – moderately valid, (2) – Slightly valid, (1)- not valid

The table shows that ten out of 12 criteria were rated very valid, with five (5) as the highest weighted mean. It suggests a strong consensus among validators and indicates that most positively perceive the instruments' accuracy and appropriateness in measuring the intended construct or outcome.

It underwent pre-testing from the school head, teachers, parents, and other stakeholders. The researchers excluded the participants of the pre-testing from the actual study. The researchers subjected the results of the pre-test to reliability testing. Reliability pertains to a measure's consistency or stability across time or different conditions. Cronbach's alpha is a statistic commonly used to evaluate the internal consistency reliability of a scale or questionnaire. It measures the degree of association among a set of items as a collective unit, indicating the degree to which items within a scale assess the same underlying construct.

Assessment of Instrument Reliability Using Cronbach's Alpha

Core Areas	N of Items	Cronbach's Alpha
Leadership and governance	7	.936
Curriculum and planning	7	.939
Accountability and Improvement	7	.904
Management of resources	5	.854

Legend: (α ≥ 0.9) = Excellent, (0.9>α ≥ 0.8) = Good, (0.8 >α ≥ 0.7) = Acceptable, (0.7>α ≥ 0.6) = Questionable, (0.6>α ≥ 0.5) =Poor, (0.5>α) = Unacceptable

The table displays coefficients of 0.94 for leadership and governance, 0.94 for curriculum and learning, 0.90 for accountability and improvement, and 0.85 for

management of resources, obtained using Cronbach's Alpha. These values signify that the instrument is reliable. The alpha coefficient ranges from zero (0) to one (1). A zero value indicates that there is no correlation between the items. They are entirely independent of each other.

Statistical Treatment of Data

Researcher organized, tallied, and tabulated the data collected from the completed questionnaire for enhanced interpretation and analysis. Descriptive statistics were used and integrated in this study to treat, interpret, and analyze data.

The researcher treated the data using mean rating to assess how stakeholders evaluate the implementation of school-based management in the four core areas: leadership and governance, curriculum and learning, accountability and improvement, and resource management. Moreover, SWOT (Strengths, Weaknesses, Opportunities, Threats) Analysis was also applied after the assessment of SBM Implementation by the stakeholders to evaluate the situation further.

The study utilized a 4-point Likert scale, which typically involved ordinal data, where respondents selected a response option that best represents their opinion or level of agreement on a given statement. These responses were categorical and do not adhered to a continuous normal distribution. The Mann-Whitney U test employed in this study is a non-parametric statistical test utilized to compare two sample groups, which are internal and external stakeholders. The researcher calculated the p-value for samples. A p-value, or probability value, describes the likelihood of the data occurring by random chance. Statistical significance is expressed commonly as a p-value ranging from 0 to 1. A smaller p-value indicates more substantial evidence to reject the null hypothesis. A p-value less than 0.05 (typically ≤ 0.05) is statistically significant. It means that there is strong evidence against the null hypothesis.

The researcher applied thematic analysis to stakeholders' feedback on implementing school-based management in the core areas. Creswell (2014) described it as a systematic process for coding data in which specific statements are analyzed and categorized into themes representing the phenomenon of interest. Responses were listed and read multiple times to understand the content comprehensively. Systematically code the feedback, identifying recurring patterns, topics, or themes within the data. This can involve assigning labels or codes to text segments that capture each theme's essence. Codes are grouped based on similarity or relevance to form broader themes. The researcher refined or revised themes through iterative analysis, ensuring that it accurately captured the content of the feedback.

Scope and Delimitation of the study

The scope of this research study encompasses the stakeholders' assessment and feedback on implementing school-based management in its four core areas: leadership and governance, curriculum and learning, accountability and improvement, and resource management. It also analyzed the significant differences in the assessment and feedback

between the internal and external stakeholders. Internal stakeholders include the school head, teachers, and parents, while external stakeholders include the Local Government Unit (LGU) related to education. Data collected in this study will enhance the implementation of school-based management and stakeholders' feedback, support services, and involvement in school-based activities.

The major limitation of this study is that it focused on the stakeholders' assessment and feedback on implementing School-based Management in the four (4) core areas. The respondents of the survey were also limited to school heads, teachers, parents, and external stakeholders from the Local Government Unit (LGU) of the nine (9) central schools in the Division of Marinduque such as Don Luis Hidalgo Memorial School (Boac North), Boac South Central School, Mogpog Central School, Sta. Cruz-North Central School, Sta. Cruz-South Central School, Sta. Cruz-East Central School, Torrijos Central School, Buenavista Central School and Gasan Central School. The assessment did not initially include an in-depth analysis of the financial aspects of SBM implementation, such as budget allocation and economic management unless the stakeholders mention these aspects as critical areas for improvement.

RESULTS

Table 1.1.1

Assessment of Internal (N= 158) and External (N= 9) Stakeholders on the Implementation of SBM in terms of Leadership and Governance

	1. **Established Communication Campaigns:** 100% of plan has already launched communication campaigns, demonstrating proactive efforts to communicate information and engage	1. Limited engagement of local government (LGU) representatives in resource inventory processes may impede comprehensive resource management.

	stakeholders successfully. 2. **Regular Stakeholder Workshops:** 100% Holding regular workshops displays a commitment to promoting debate and collaboration among stakeholders, which fosters a sense of inclusivity and participation. 3. **Implementation of Professional Development Programs:** 30% involvement of the implementation of professional development programs, suggesting a focus on improving stakeholders' skills and capacities, which can lead to better performance and outcomes. 4. **Clear Communication of Benefits**: 50% giving of emphasis on the positive impact of SBM practices and clearly communicating the benefits of proposed reforms can help garner support and foster a positive	2. Inadequate understanding of the discussion process among stakeholders may inhibit successful communication and collaboration. 3. Inadequate resource allocation for necessary revisions may hinder the plan's ability to respond to changing circumstances. 4. Potential resistance to change owing to insufficient information about the benefits of proposed reforms could stymie progress. 5. Lack of inclusion in decision-making processes can lead to stakeholder disengagement and jeopardize the plan's success.

	perception among stakeholders. 5. **Emphasis on Positive Impact**: 100% highlighting the positive impact of SBM practices, indicating an awareness of the importance of showcasing successes and impact to maintain momentum and motivate stakeholders.	
Opportunities 1. Increased collaboration with representatives from local government units (LGUs) could improve resource management and support for educational projects. 2. Using technology to improve communication platforms and discussion processes may result in increased stakeholder involvement and participation. 3. Exploring alternative funding sources or reallocating resources may	**Combination 1:** S-O Strengths-Opportunities How can the strengths be employed to take advantage of the opportunities? Using IS to take advantage of EO By combining internal strengths **such as strong communication campaigns, stakeholder workshops, and professional development programs with chances for enhanced collaboration and technological integration, the school may better engage external stakeholders.** Using **established communication channels improves collaboration with local government entities,**	**Combination 3:** W-O Weakness-Opportunities How can the weakness be overcome to take advantage of the opportunities? -improving IW by taking advantage of EO To maximize the success of the SBM Management Strategic Plan, **issues such as limited engagement of LGU representatives and insufficient resource allocation must be addressed. Overcoming these deficiencies necessitates proactive outreach, focused training, and a complete resource review.** By embracing opportunities such as **improved communication**

alleviate gaps in resource allocation for necessary changes. 4. Improving communication about the benefits of proposed reforms may reduce opposition to change and build a more supportive atmosphere. 5. Developing more inclusive decision-making processes that actively incorporate stakeholders may increase buy-in and commitment to the strategic plan's objectives.	**whereas workshops promote discussion and support for suggested improvements. Integrating technology into professional development increases engagement and stressing the beneficial impact of strategic initiatives generates stakeholder buy-in,** resulting in the successful implementation of the SBM Management Strategic Plan.	**platforms and participatory decision-making, the strategy can improve collaboration, seek alternative finance, and encourage stakeholder support, maximizing its chances of success.**
Threats 1. Resistance to Change: Stakeholders' unfamiliarity with new processes or fear of disruption may delay the implementation of the SBM Management Strategic Plan. 2. Budget Constraints: Financial constraints or budget cuts may impede the	**Combination 2**:S-T Strengths-Threats How can the strengths be used to counteract the threats that hinder the attainment of successful school-based management? Using IS to deal with ET The SBM uses its strengths, such as **communication campaigns and stakeholder workshops,** to combat challenges	**Combination 4:** W-T Weakness-Threats How can the weaknesses be overcome to counteract the threats that hinder the attainment of the success of school-based management? - defensive strategies directed at reducing IW and avoiding ET. To combat the threats to school-based

allocation of resources required to carry out the plan successfully, limiting its ability to fulfill goals. 3. Political instability: Changes in government leadership or policies may cause uncertainty and disruptions, compromising the strategic plan's continuity and support. 4. Technological Challenges: Technical challenges or limits in applying technological solutions for communication or resource management may impede the plan's goals. 5. Stakeholder Disengagement: A lack of buy-in or active involvement from stakeholders, including teachers, parents, and community members, could undermine the plan's success by limiting collaboration and support.	such as **opposition to change, funding restrictions, and stakeholder disengagement.** The plan seeks to alleviate problems and assure successful school-based administration by stressing positive outcomes and using technology-focused development activities. **Clear communication channels and stakeholder engagement** help the plan overcome political turbulence and ensure continuity amidst leadership changes, hence increasing its efficacy in attaining its goals.	management's success posed by resistance to change, budget constraints, political instability, technological challenges, and stakeholder disengagement, defensive strategies must be implemented to address the weaknesses identified in the SBM Management Strategic Plan. **Proactive measures such as increasing local government representatives' engagement in resource inventory processes, improving stakeholders' understanding of discussion processes, allocating adequate resources for revisions, providing comprehensive information about proposed reforms to reduce resistance to change, and encouraging inclusion in decision-making processes** can all help to mitigate the impact of these threats. By employing defensive methods targeted at minimizing internal weaknesses and avoiding external threats, the SBM Management Strategic Plan can strengthen its

		resilience and raise its chances of success in attaining its goals of successful school-based management.

Year 2: Community-Driven Curriculum Development	Collaborate with the community to develop a curriculum that reflects local needs and values.	• Engage community members in the co-creation of curriculum content and resources. • Incorporate diverse perspectives and cultural relevance into curriculum development. • Ensure stakeholder	• Facilitate workshops and focus groups to brainstorm curriculum ideas and priorities. • Form working groups of educators, community	• Funding for curriculum development workshops, materials, and expert consultation. • Staff time for facilitating collaboration and managing stakeholder input.	12 months

		representation in decision-making processes.	members, and experts to develop curriculum content. • Review existing curriculum materials and identify opportunities for integration with local context and values. • Establish mechanisms for ongoing community input and feedback throughout the curriculum development process.	• Collaboration with cultural experts, community leaders, and curriculum specialists.	
Year 3 Stakeholder-Driven Problem-Solving	Empower stakeholders to participate in problem-solving and decision-making related to curriculum implementation.	• Foster a culture of collaboration and shared ownership in addressing curriculum challenges. • Provide training and support for stakeholders to contribute to problem-solving processes. • Establish mechanisms for stakeholders to raise concerns and propose solutions.	• Host problem-solving workshops or forums where stakeholders can identify and prioritize curriculum challenges. • Facilitate collaborative brainstorming sessions to generate	• Funding for problem-solving workshops, facilitation, and support materials. • Staff time for organizing events, facilitating discussions, and managing feedback mechanisms. • Collaboration with conflict resolution specialists, facilitators, and	12 months

			solutions to identified problems. • Develop protocols for stakeholders to submit proposals and feedback on curriculum issues. • Implement a feedback loop to ensure that stakeholders are informed of decisions and outcomes resulting from their input.	community organizers.	
Year 4: Strengthening Community Engagement	Deepen community engagement in curriculum implementation and assessment processes.	• Expand opportunities for community members to participate in curriculum-related activities. • Develop communication strategies to keep stakeholders informed and engaged. • Strengthen partnerships with community organizations and leaders.	• Organize community events, such as curriculum fairs or open houses, to showcase student work and projects. • Establish regular communication channels, such as newslette	Funding for community events, communication materials, and outreach efforts. Staff time for managing communication channels and coordinating community engagement activities. Collaboration with marketing professionals, event planners, and community leaders.	12 months

			rs or social media updates, to share curriculum news and updates. • Collaborate with community organizations to integrate curriculum activities into local events and initiatives.		
Year 5: Contextualizing Assessment Results	Involve stakeholders in interpreting and contextualizing assessment results to inform curriculum improvements.	• Provide training for stakeholders on interpreting assessment data and understanding its implications. • Facilitate discussions to analyze assessment results and identify areas for curriculum enhancement. • Develop strategies for communicating assessment findings to the community in a meaningful way.	• Conduct workshops or training sessions to build stakeholders' capacity in data interpretation and analysis. • Organize focus groups or forums to discuss assessment results and their implications for curriculum planning. • Develop communication	• Funding for training sessions, facilitation, and communication materials. • Staff time for organizing workshops, facilitating discussions, and developing communication materials. • Collaboration with data analysts, educational researchers, and communication specialists.	12 months

			materials, such as infographics or presentations, to present assessment findings to the community in an accessible format.		
Year 6: Sustainability and Celebration	Ensure the sustainability of community involvement efforts and celebrate achievements.	• Develop a sustainability plan to institutionalize community engagement practices in curriculum planning and implementation. • Organize events to celebrate achievements and recognize the contributions of stakeholders. • Establish mechanisms for ongoing community feedback and involvement.	• Develop a sustainability plan outlining strategies for maintaining community involvement in curriculum planning and implementation. • Organize a culminating event to celebrate achievements and showcase student accomplishments. • Establish feedback mechanisms, such as advisory committees or online	• Funding for sustainability planning, celebratory events, and feedback mechanisms. • Staff time for developing the sustainability plan and organizing celebratory events. • Collaboration with community leaders, educators, and stakeholders for input and support.	12 months

			forums, for ongoing community input and involvement.		
ACCOUNTABILITY AND IMPROVEMENT					
Year 1: Stakeholder Engagement Plan Development	Develop a comprehensive stakeholder engagement plan to outline strategies for engaging and collaborating with external stakeholders, including LGU. Develop a structured approach to engage and collaborate with external stakeholders to enhance school-based management.	• Develop a stakeholder engagement plan outlining roles, responsibilities, and communication strategies for engaging with external stakeholders. • Establish communication channels and feedback mechanisms to facilitate ongoing engagement with external stakeholders.	• Strengthen a stakeholder engagement committee which is the School Governing council with representation from school staff, parents, and community members. • Develop a stakeholder engagement plan outlining strategies for engaging with external stakeholders, including LGU.	Staff time for organizing stakeholder forums, developing communication channels, and initiating partnerships. Collaboration with the LGU, community organizations, advocacy groups, and government agencies for support and engagement Staff time for committee formation and plan development. Budget for stakeholder engagement activities.	12 months
Year 2: Implementation of Stakehold	Actively engage external stakeholders in	• Increase LGU participation in school planning and decision-	• Develop education	• Funding for educational	12 months

			• Invite LGU representatives to participate in school planning and review meetings.		
Year 3: Capacity Building and Project Collaboration	Empower external stakeholders to contribute effectively to school-based management initiatives.	• Provide training and capacity-building opportunities for LGU representatives on school-based management principles and practices. • Collaborate with LGU on at least two school improvement projects. • Conduct a comprehensive review of existing participatory assessment systems, involving LGU representatives, and identify implementation challenges. • Develop strategies to address identified implementation gaps, including the involvement of LGU representatives, to improve the effectiveness	• Develop training programs for LGU representatives on school-based management and project management. • Identify and implement school improvement projects in collaboration with LGU. • Analyze existing participatory assessment systems, involving LGU representatives, to identify strengths, weaknesses, and implementation	• Funding for assessment reviews, stakeholder engagement activities involving LGU representatives, and implementation support. • Staff time for conducting reviews, facilitating engagement, and monitoring implementation involving LGU representatives. • Collaboration with evaluation experts, implementation specialists, and community organizers for support and expertise.	12 months

		of participatory assessment processes. • Engage LGU representatives in co-designing and implementing solutions to address identified challenges.	challenges. • Conduct focus groups or interviews with LGU representatives to gather insights and perspectives on implementation gaps. • Collaborate with LGU representatives to co-design and implement solutions to address identified challenges. • Monitor and evaluate the effectiveness of implemented solutions, involving LGU representatives, and adjust as needed.		
Year 4: Monitoring and Evaluation	Ensure that stakeholder engagement efforts are	• Implement a monitoring and evaluation framework for stakeholder engagement	• Collect feedback from LGU representatives on	• Funding for communication tools, meeting spaces, and	12 months

yielding positive results and adjust strategies as needed to improve LGU and other external stakeholders' involvement.	activities, with a specific focus on LGU engagement. • Use evaluation findings to refine stakeholder engagement strategies and improve LGU involvement. • Strengthen communication and collaboration channels with external stakeholders, including the LGU. • Develop joint initiatives and projects involving the LGU to address accountability and improvement priorities. • Cultivate a culture of shared ownership and responsibility among external stakeholders, including the LGU.	their engagement experience and use it to inform future engagement activities. • Conduct regular reviews of stakeholder engagement efforts and adjust strategies based on feedback. • Organize regular meetings and forums involving LGU representatives to maintain communication and collaboration. • Identify joint initiatives and projects involving the LGU that align with shared accountability and improvement goals. • Establish working groups or task	collaborative projects involving the LGU. • Staff time for organizing meetings, facilitating collaboration, and coordinating projects involving LGU representatives. • Collaboration with the LGU, community organizations, advocacy groups, and government agencies for joint initiatives and support.	

			forces involving LGU representatives to drive collaborative projects forward.		
Year 5: Sustainability and Continual Improvement	Empower external stakeholders, including the LGU, to take active roles in driving accountability and improvement initiatives forward. Embed stakeholder engagement in the school's culture and practices, and continually enhance LGU involvement.	• Develop a sustainability plan for stakeholder engagement, outlining long-term goals and strategies for maintaining LGU involvement. • Implement at least one new strategy to enhance LGU engagement based on lessons learned.	• Conduct a review of stakeholder engagement efforts to identify strengths and areas for improvement. • Develop a sustainability plan for stakeholder engagement, outlining strategies for maintaining and enhancing LGU involvement.	• Budget for training programs and capacity-building activities. • Human resources for organizing events and providing support to external stakeholders.	12 months
Year 6: Recognition and Celebration	Acknowledge the importance of external stakeholder involvement and strengthen relationships through	• Organize a recognition event to acknowledge the contributions of LGU representatives and other external stakeholders.	• Plan and organize a recognition event to celebrate the contributions of LGU	• Budget for organizing the recognition event. • Staff time for event planning and coordination.	12 months

	recognition and celebration.	• Use the event to reinforce the importance of external stakeholder engagement and strengthen relationships with LGU.	representatives and other external stakeholders. • Use the event as an opportunity to showcase successful collaborations and highlight the benefits of external stakeholder engagement.		
Management of Resources					
Year 1: Stakeholder Engagement Plan Development	Develop a structured approach to engage and collaborate with key stakeholders to enhance resource management and stakeholder involvement in planning, monitoring, and evaluation.	• Develop a stakeholder engagement plan outlining roles, responsibilities, and communication strategies for engaging with key stakeholders. • Establish communication channels and feedback mechanisms to facilitate ongoing engagement with key stakeholders.	• Conduct a stakeholder meeting with School Governing council with representation from school staff, parents, and community members. • Develop a stakeholder engagement plan outlining strategies	• Staff time for committee formation and plan development. • Budget for stakeholder engagement activities.	12 months

			for engaging with key stakeholders, including the LGU.		
Year 2: Implementation of Stakeholder Engagement Plan	Actively engage key stakeholders in resource management, planning, monitoring, and evaluation to improve school-based management.	• Increase LGU participation in school resource planning and decision-making by 25%. • Collaborate with the LGU to identify and address resource management priorities.	• Hold regular meetings with LGU representatives and other stakeholders to discuss school resource needs and priorities. • Invite LGU representatives to participate in school planning and review meetings.	• Staff time for meeting coordination and communication with LGU. • Budget for meeting expenses and stakeholder engagement materials.	12 months
Year 3: Capacity Building and Project Collaboration	Empower key stakeholders to contribute effectively to resource management and school improvement initiatives.	• Provide training and capacity-building opportunities for LGU representatives on resource management and school improvement principles and practices. • Collaborate with the LGU on at least two school	• Develop training programs for LGU representatives on resource management, planning, and monitoring.	• Training resources for LGU capacity building. • Budget for project implementation and collaboration with the LGU.	12 months

		improvement projects.	• Identify and implement school improvement projects in collaboration with the LGU.		
Year 4: Monitoring and Evaluation Framework	Ensure accountability and transparency in resource management and stakeholder engagement.	• Develop key performance indicators (KPIs) for resource management and stakeholder engagement. • Implement a monitoring and evaluation system to track progress and effectiveness.	• Develop KPIs for resource management, stakeholder engagement, and school improvement. • Implement a monitoring system to track progress against KPIs.	• Staff time for developing KPIs and monitoring systems. • Budget for system implementation and training.	12 months
Year 5: Sustainability and Continual Improvement	Embed stakeholder engagement in the school's culture and practices, and continually enhance LGU involvement.	• Develop a sustainability plan for stakeholder engagement, outlining long-term goals and strategies for maintaining LGU involvement. • Implement at least one new strategy to enhance LGU engagement	• Conduct a review of stakeholder engagement efforts to identify strengths and areas for improvement. • Develop a sustainability plan	• Staff time for sustainability planning and strategy development. • Budget for implementing new strategies for LGU engagement	12 months

		based on lessons learned.	for stakeholder engagement, outlining strategies for maintaining and enhancing LGU involvement.		
Year 6: Recognition and Celebration	Acknowledge the importance of key stakeholder involvement and strengthen relationships through recognition and celebration.	• Organize a recognition event to acknowledge the contributions of LGU representatives and other key stakeholders. • Use the event to reinforce the importance of key stakeholder engagement and strengthen relationships with the LGU.	• Plan and organize a recognition event to celebrate the contributions of LGU representatives and other key stakeholders. • Use the event as an opportunity to showcase successful collaborations and highlight the benefits of key stakeholder engagement.	• Budget for organizing the recognition event. • Staff time for event planning and coordination.	12 months

DISCUSSION

Table 1.1.1 shows Internal stakeholders assessed leadership and governance from 3.59 to 3.68, which is indicated as highly implemented. Indicator I3, "Inclusiveness and Diversity," had the highest mean score of 3.68. It highlights internal stakeholders' favorable opinions of the organization's commitment to inclusiveness and diversity. Indicator I7, "Recognition of Contributions," has the lowest mean score among internal stakeholders, at 3.59, but is still classified as "Highly Implemented." It indicates a slightly lower perception of the organization's effectiveness in recognizing contributions, though sentiment remains generally positive. Suggesting that it requires further investigation to determine why it obtained a somewhat lower rating despite an overall favorable assessment. The overall mean score of 3.66, which falls within the "Highly implemented" range, demonstrates the positive evaluation of SBM implementation regarding leadership and governance. To further enhance this implementation, we should build on the strengths highlighted in items I3 and I6, address the shortcomings identified in item I7, and regularly evaluate leadership and governance procedures. Maintaining stakeholder involvement and providing professional development opportunities for leadership roles in SBM is also critical. By following these suggestions, SBM implementation can move forward positively, ensuring that it corresponds with the objectives and effectively serves the school community.

Whang's (2021) findings emphasized the importance of strong collaboration among internal stakeholders, including teachers, parents, and school staff. The principal's role as a leader in SBM involves reinforcing collaboration and integrating opportunities to support the network of school partners and contributors. Furthermore, Acibar (2019) found that school heads attained very satisfactory ratings in school leadership, indicating that internal stakeholders may perceive leadership in SBM positively. It suggests alignment with Whang's emphasis on collaboration and leadership.

On the other hand, external stakeholders' assessments ranged from 2.33 to 2.78, which gave Indicator I3, "Inclusivity and Diversity," the lowest mean score of 2.33, classifying it as "Less Implemented." It suggests a perceived deficiency in stressing inclusivity and diversity compared to internal stakeholders' perspectives. Indicator I1, "Participation in Decision-Making," had the highest mean score of 2.78 among external stakeholders, indicating it is "Implemented." It shows a modest impression of the organization's efficacy in incorporating external stakeholders in decision-making. From seven (7) indicators, four (4), or 57.14%, were assessed as less implemented, and three (3), or 42.86%, were implemented. Several suggestions to address these perceived shortcomings include increased training and support for school leaders, establishing regular feedback mechanisms, clear communication channels, investment in capacity-building initiatives, and promoting a culture of continuous improvement. By implementing these suggestions, educational institutions can improve the perceived effectiveness of leadership and governance within the SBM framework, thereby enhancing overall stakeholder satisfaction and the quality of education delivery.

Internal stakeholders had a high mean score of 3.66 when considering total ratings, indicating a widespread opinion of "Highly Implemented" leadership and governance methods. External stakeholders had a lower overall mean score of 2.49, with most indicators falling into the "Less Implemented" group. Internal stakeholders perceived a high degree of leadership and governance practices, but external stakeholders believed these practices were less evident, particularly in areas such as inclusion and diversity. Although in total, stakeholders assessed leadership and governance 3.08, which means “Implemented”, addressing the identified areas may improve governance effectiveness and align business practices with external expectations.

School-based management emphasizes shared decision-making and collaboration among stakeholders, including external ones like community leaders and NGOs. These stakeholders are crucial in shaping schools' leadership and governance practices. In support of the findings, Meador (2019) highlighted the importance of solid leadership in SBM and how it depends on the commitment and effort of principals. Similarly, Whang (2021) emphasized the need for stakeholder collaboration to reinforce SBM. Further, Gonzales (2018) discussed best practices in fostering school-community relations, indicating that involving external stakeholders, such as through general assemblies, enhances leadership and governance in SBM. In addition, Mitrofanova (2004) emphasized the importance of societal support for schools to achieve their educational goals, underscoring the role of external stakeholders in shaping leadership and governance practices.

Green (2017) outlines the pertinent strategies to foster a positive school-community dynamic in line with the results and findings. These methods consist of critical theory, interpretivism, and positivism. School administrators use these methods to connect the school and the community. Leaders should provide services that benefit the community partners and the academic institution fairly.

Another study conducted by Vallejo et al. (2018) assessed public high schools' capacity to form community partnerships. Respondents were schools from Northern Aurora School. According to the study's findings, the principal has the most influence over teachers' motivation to form engaged partnerships with stakeholders. Furthermore, researchers discovered that school administrators' help and networks of support for educators are crucial in assisting faculty members in overcoming obstacles at work.

As such, understanding how effectively governance and leadership structures contribute to the school's success depends on the opinions of internal and external stakeholders regarding implementing school-based management (SBM) in terms of leadership and governance.

Therefore, to effectively implement SBM in leadership and governance, it is imperative to solicit feedback from various stakeholders, utilize multiple data sources, and facilitate collaborative discussions among stakeholders to identify areas of strength, challenges, and opportunities for Improvement. Schools can create more successful leadership practices and governance structures that promote the general success and

well-being of the school community by embracing the opinions of both internal and external stakeholders.

Table 1.1.2 shows that internal stakeholders rated Indicator I1, "Curriculum Design and Development," with a mean score of 3.70, suggesting it is "Highly Implemented." It highlights their assessment of the organization's comprehensive and practical curriculum design strategy. Although Indicator I4, "Alignment with Educational Standards," had the lowest mean score among internal stakeholders (3.56), it remains in the "Highly Implemented" category, indicating a slightly lower perception of alignment with educational standards.

External stakeholders assessed Indicator I1, "Curriculum Design and Development," the highest, with a mean score of 3.00, classifying it as "Highly Implemented." It is consistent with internal stakeholders' opinions, stressing the organization's expertise in curriculum design. However, Indicator I4, "Alignment with Educational Standards," had the lowest mean score among external stakeholders at 2.33, qualifying it as "Less Implemented." It indicates a perceived lack of alignment with educational standards, highlighting an area that requires addressing. The overall mean score, calculated at 2.58, falls within the "Implemented" category, indicating that, on average, stakeholders perceived the implementation of SBM in terms of curriculum and learning as adequately practiced. To address areas needing Improvement, targeted support for less practiced areas, such as items I4 and I5, could be provided, including professional development opportunities for teachers and curriculum enhancements. Implement continuous monitoring and evaluation systems to ensure ongoing alignment with stakeholder expectations, foster collaborative decision-making processes, and promote best practices in curriculum development. Additionally, investing in professional development opportunities for educators can enhance their ability to effectively implement SBM principles in the classroom. By implementing these suggestions, educational institutions can further improve the implementation of SBM in terms of curriculum and learning, leading to improved academic outcomes and stakeholder satisfaction.

Internal stakeholders have a high mean score of 3.65, firmly believing in the "Highly Implemented" curriculum and learning activities. In contrast, external stakeholders have a lower overall mean score of 2.58, indicating a less favorable opinion. The bulk of metrics for external stakeholders fall into the "Implemented" and "Less Implemented" categories, suggesting room for Improvement to meet external expectations.

Two (2) indicators, such as those in I6 and I7, related to reviewing assessment tools and contextualizing assessment, were not included on the SPTAs' questionnaires since they were unrelated to their tasks as parents. School heads and teachers assessed it as "highly Implemented," with a mean score of 3.70 (I6) and 3.69(I7).

Dare (2022) discussed the principal's role in planning the curriculum system and monitoring curriculum growth and status. Conversely, Principals under SBM are accountable for motivating the school community toward educational goals. In connection with the findings from Moradi (2016), they compared the implementation of SBM in developed countries. As a result, schools that have submitted authority to local councils

and parent-teacher organizations likely impact curriculum decisions. It suggests that internal stakeholders, including teachers, might perceive the impact of SBM on curriculum differently based on their involvement in decision-making.

The involvement of external stakeholders, including community leaders, can significantly influence the development and Improvement of the curriculum within schools. To support the findings, Merlo (2021) mentioned the role of principals in managing curriculum under SBM, highlighting the need for strong leadership. Additionally, Arar (2018) and Wivono (2017) discussed the positive impact of SBM on education quality and outcomes. Also, Gaspar (2022) found a significant relationship between SBM practices and transformational management styles, indicating how leadership influences curriculum and learning outcomes. In addition, Vallejo et al. (2018) evaluated the competence of public high schools in establishing partnerships with the community, suggesting that external stakeholders contribute to curriculum development through active partnerships with schools.

In conclusion, internal stakeholders regard curriculum and learning approaches as quite effective, particularly in curriculum design and development. External stakeholders share a positive outlook but underline the need for progress, particularly aligning with educational requirements. Addressing these issues may improve overall effectiveness and alignment with external expectations in curriculum and learning processes.

Islam (2019) studied several facets of a program-offering entity's (POE) curriculum in Bangladesh using stakeholder feedback. Data analysis reveals that perspectives from different stakeholder groups are consistent regarding assessment domains, including curricular mapping, assessment, and feedback methods. On issues like "program load," the views of students—present and former—differ from those of the academic community.

PSGR Krishnammal College for Women (2020), an independent arts and science college in India, asked its stakeholders for curriculum development and design input. In this regard, PSGRKCW makes the required accommodations for student, teacher, and stakeholder input replies on institutional processes connected to the curriculum. The primary objective of stakeholder feedback is to gather meaningful data to enhance teaching, learning, assessment, and capacity. One of the most critical components of the teaching and learning process is the curriculum, which requires ongoing and regular evaluation. The curriculum review committee of the institute, which is duly established and meets at the end of each semester, evaluates the compilation of comments received from all stakeholders. Modifications are proposed in the Board of Studies meeting following a thorough input examination. The changes required are implemented based on the BOS members' recommendations. Meanwhile, this study demonstrates how school administrators actively participate in implementing school-based management, valuing stakeholder feedback, and cultivating a feeling of ownership.

Table 1.1.3 shows that internal stakeholders highly rate Indicator I4 “Continuous Improvement Processes" with the highest mean score of 3.86, classifying it as "Highly Implemented." It indicates a strong commitment to continuous improvement processes within the organization, emphasizing an ongoing enhancement culture. Indicator I3,

"Accountability Measures," had the lowest mean score among internal stakeholders, at 3.59, although it is still classified as "Highly Implemented." It indicates a slightly weaker perception of accountability measures; however, the overall attitude remains positive.

On the other hand, external stakeholders evaluate Indicator I4, "Continuous Improvement Processes," as the highest-rated, with a mean score of 2.78, classifying it as "Implemented." While this suggests a reasonable opinion, there is a considerable difference compared to internal stakeholders. Indicator I3, "Accountability Measures," had the lowest mean score among external stakeholders, 2.67, and is classified as "Implemented," indicating a perceived need for Improvement in accountability measures.

Internal stakeholders have a high mean score of 3.70, indicating widespread acceptance of "Highly Implemented" accountability and improvement procedures. It is encouraged to build on identified strengths, address areas of concern, and promote transparency and continual evaluation to improve implementation. Furthermore, offering adequate resources and support for accountability and improvement projects might help them become more effective and sustainable. Prioritizing these proposals maximizes SBM's impact on accountability and Improvement, resulting in improved educational outcomes and stakeholder satisfaction. In contrast, external stakeholders had a lower overall mean score of 2.69, reflecting a less positive attitude. All indicators for external stakeholders are in the "Implemented" category, indicating areas that may need improvement to meet external expectations. To build on this positive perception, consider implementing continuous evaluation mechanisms, improving communication channels to ensure transparency, encouraging data-driven decision-making, investing in capacity-building initiatives, and establishing feedback mechanisms to foster continuous Improvement. These guidelines can help educational institutions strengthen their SBM implementation, resulting in better outcomes and stakeholder satisfaction.

Internal stakeholders believe accountability and improvement techniques, particularly continuous improvement processes, are highly effective. External stakeholders exhibit a positive attitude but emphasize improvement areas, particularly accountability measures and constant development, to align with internal perceptions and expectations. In general, stakeholders assessed accountability and continuous improvement as 3.20 or Implemented, yet addressing the identified issues may increase overall effectiveness and alignment with external expectations in accountability and improvement initiatives.

Maca's (2019) study underscored the significance of transparency in the conduct of school heads during SBM, which fostered increased levels of collaborative practices, supporting the findings. It indicates that internal stakeholders positively perceive accountability when transparency is maintained. Alvarado (2019) found out that school principals faced constraints in SBM compliance due to limited managerial competencies and insufficient training. It may affect internal stakeholders' perceptions of accountability if they perceive gaps in the school head's ability to implement SBM effectively.

External stakeholders, such as community leaders, play a vital role in holding schools accountable and driving continuous improvement under SBM.

Tacay (2022) highlighted the goal of SBM to foster Improvement in teaching-learning outcomes, indicating the importance of accountability and Improvement. Additionally, Bhuiel (2021) examined the impacts of SBM on school development and Improvement, emphasizing the role of principals in motivating teachers and fostering collaboration with external stakeholders. Green (2017) highlights the significance of fostering positive school-community relations by emphasizing equitable services for both entities. This approach ensures mutual accountability and Improvement, effectively meeting the needs of both the school and the community. By prioritizing equity in providing services, schools can strengthen their ties with the community and enhance collaboration, ultimately leading to better outcomes for all involved parties.

According to Driscoll (2022), principals who are passionate and committed to improving the educational system must deliver high-quality school-based management services to see real progress in their institutions. To succeed in school-based management and academic leadership, principals must exhibit various values and qualities that characterize excellent leadership. These qualities include being trustworthy and powerful, connecting, communicating, working together, and being upbeat.

In De la Fuente's (2022) study, he provided evidence that schools can effectively address the needs and demands of their student body and their learning communities by implementing the SBM. The school head addresses the need for improved learning outcomes before implementing the School-Based Management System. School heads operating under the SBM system possess extensive training and skills in educational leadership, stakeholder engagement, school planning and intervention, resource management, and project supervision. Republic Act 9155, sometimes called the Governance of Basic Education Act, also serves as one of the legal pillars supporting the school-Based Management System. According to Macadatar (2020), this act stipulates that a school head must oversee the institution and have authority, accountability, and responsibility for achieving better learning outcomes and accomplishments. The school head's duties under the SBM system include managing the school and providing instructional leadership, assessing the instructors' work, and encouraging effective student learning outcomes, among other things.

To fulfill these SBM roles and responsibilities correctly and effectively, the head of the school must have six essential leadership traits. These include having a clear vision and being knowledgeable, approachable, and open. Additionally, competent school administrators ensure that staff members and professionals have technical support and are eager to promote the empowerment of individuals, the student body, and other stakeholders.

In table 1.1.4 Internal stakeholders consistently viewed the procedures as “Highly Implemented”, with average scores ranging from 3.61 to 3.68. This uniformity shows a strong internal consensus on the effective implementation of SBM in the context of management and resource allocation, demonstrating that the approach has been well-

welcomed by internal stakeholders. The highest mean score of 3.68 interpreted as “Highly Implemented”, assigned to I5, indicates a very strong endorsement from one subset of internal stakeholders.

External stakeholders, on the other hand, vary in their assessments of the activities, describing them as "Implemented" with mean ratings ranging from 2.44 to 2.89. The lowest mean score of 2.44 interpreted as “Less Implemented”, assigned to I1 and I3, shows a less cheerful outlook than the highest mean score of 2.89 as “Implemented”, supplied by I4. This suggests that specific areas or features of SBM linked to management and resources may need to be improved or aligned with the expectations of certain external stakeholders.

The overall mean score of 2.62 for external stakeholders shows credence to the notion that practices are classified as "Implemented." Overall, internal stakeholders have a strong and consistent positive perception. In contrast, external stakeholders have a generally positive outlook with some variations in specific aspects of management and resources that require targeted improvement.

The results are supported by the fact that school-based administration is a difficult, demanding, and complex profession. Latorilla (2018) aimed to provide significant ideas and expertise in the pursuit of supporting the strengthening of the school-based management system. The concurrent mixed technique of research was used in this study. The thirty pre-selected school heads, ten from central schools, and twenty from non-central schools within a division were the respondents. The findings demonstrated that most of the study's school heads firmly agreed on the value, usability, and comprehensiveness of the school-based management system. However, the respondents also mentioned that one of the main obstacles to SBM's adoption is the time-consuming processes that are involved in its many different sectors. The respondents also mentioned a lack of funding support for SBM programs and limited expertise in recording proof of SBM accomplishments.

The results support the research of Alvarado (2019), who investigated the barriers to public school administrators' compliance with school-based management. The study examined how RA 9155-mandated school principals manage the difficulties and limitations associated with implementing SBM. A descriptive-normative research design was used in the study. The fifty randomly chosen principals from the public schools in Southern Leyte served as the study's informants. The Performance Appraisal System for School Administrators, modified, was used to collect the data. The results demonstrated that the respondents' administrative competencies in SBM were found to be inadequate, in addition to their implementation of a range of educational programs. This resulted from inadequate training in SBM domains and initiatives.

In assessing the implementation of School-Based Management (SBM) regarding the management of resources, both internal and external stakeholders play crucial roles, each offering unique perspectives and insights.

Overall, both internal and external stakeholders' assessments of resource management in SBM implementation are essential for ensuring that resources are effectively utilized to support the educational needs of students and promote school improvement. By engaging in dialogue, collaboration, and ongoing evaluation, schools can address stakeholders' concerns and optimize resource management practices to enhance teaching and learning outcomes.

Based on these assessments, recommendations for improvement may include refining communication and collaboration between internal and external stakeholders, addressing perception gaps through dialogue and feedback mechanisms, and continuing to invest in capacity-building and resource management initiatives to strengthen SBM implementation across all components. Overall, the tables showed a good impression of SBM implementation, with opportunities for targeted development to guarantee continuing effectiveness and alignment with stakeholder expectations.

Contrary to the positive findings highlighted in the overview of SBM implementation, the study conducted by Ubongen (2022) raises concerns about the managerial competencies of school principals in Southern Leyte. The findings revealed limitations in managerial competencies, particularly in implementing various school programs under SBM. This suggests that despite the emphasis on empowering school leaders through SBM, challenges related to skills development and resource management may hinder effective implementation.

Similarly, Alvarado (2019) explored constraints on SBM compliance among public school principals, revealing limitations in managerial competencies and insufficient training on SBM areas and projects. This underscores the importance of addressing capacity-building initiatives to enhance the effectiveness of SBM implementation, particularly in empowering school leaders with the necessary skills and competencies to navigate complex educational landscapes. Furthermore, De Luna (2021) identified challenges and complexities in SBM implementation, particularly regarding the equal participation of all school professionals and community members. This suggests that while SBM aims to decentralize decision-making and empower stakeholders, challenges related to inclusivity and participation may hinder its effectiveness, highlighting the need for fostering collaborative practices and addressing barriers to engagement.

Overall, while SBM holds promise for improving school systems and fostering stakeholder engagement, addressing challenges related to managerial competencies, inclusivity, and capacity building is crucial for ensuring its successful implementation and sustainability

Assessing the implementation of School-Based Management (SBM) requires considering the perspectives of both internal and external stakeholders, each bringing unique insights and expectations to the evaluation process. Internal stakeholders, such as teachers, administrators, students, and parents, offer firsthand experience and a deep understanding of the day-to-day operations and challenges within the school. Their assessments often focus on the practical aspects of SBM, such as its impact on teaching practices, student outcomes, and school culture. In contrast, external

stakeholders, including government officials, community members, and educational experts, provide a broader perspective, often emphasizing the alignment of SBM with academic policies and goals at the regional or national level. Their assessments may also consider the broader societal impact of SBM, such as its role in promoting equity and inclusivity in education. Understanding and reconciling the differences in evaluation between these two groups is crucial for understanding the effectiveness of SBM and informing future policy and practice.

Table 1.1.5 The Mann-Whitney U Test results in Table 1.15 show a substantial variation in how internal and external stakeholders evaluate School-Based Management (SBM) implementation across several domains. Leadership and Governance, Curriculum and Learning, Accountability and Improvement, and Resource Management all had p-values lower than the standard significance level of 0.05. As a result, the null hypothesis, which states no significant difference between internal and external stakeholders' assessments, is rejected for all these aspects in the Tests of Normality. It implies a statistically significant difference in perceptions of SBM implementation between the two stakeholder groups.

The Mann-Whitney U Test interpretation emphasizes identifying and correcting these inconsistencies to improve alignment and satisfaction among internal and external stakeholders throughout SBM implementation. Leadership and governance, curriculum and learning, accountability and Improvement, and resource management are all critically important aspects of school-based management (SBM) methods. Studies continually highlight the critical significance of these components in successfully implementing SBM efforts. Leadership and governance lay the groundwork for effective school decision-making and strategic planning. SBM revolves around curriculum and learning, driving educational outcomes and student accomplishment gains. Accountability and continuous improvement systems promote openness, evaluation, and Improvement of school performance. Meanwhile, sound resource management is critical for allocating resources to support teaching and learning activities. These components collectively create the environment of SBM implementation, underlining the vital need for careful consideration and integration within education.

As a result, differences between internal stakeholders (teachers, staff, and administrators) and external stakeholders (government agencies, parents, and community members) regularly emerge when assessing the use of school-based management (SBM). Various factors, such as varied expectations, degrees of involvement, and priorities, contribute to these disparities.

To address these disparities, internal and external stakeholders must communicate effectively, collaborate, and understand one another. When implementing SBM, educational institutions must participate in meaningful conversations with all stakeholders, incorporate them into decision-making processes, and stress accountability and transparency. Recognizing and embracing a variety of opinions can help schools improve their ability to satisfy the needs and expectations of all stakeholders, resulting in better educational outcomes.

To support the findings, Villar (2021) analyzed the significant relationship between the styles employed in support of school-based management and the level of school climate in the public elementary schools in the Division of Quezon City. The study made use of the descriptive-correlational method of research. The respondents, comprised of this division's school heads and teachers, were randomly selected. Moreover, the researcher used the ordinary least squares statistical test for data treatment and analysis. The study results showed that most respondents highly agreed and perceived that social support was the most vital element to define the success of school-based management for school heads. However, physical resources were the principal respondents' most insufficient and problematic area of SBM.

Furthermore, Gaspar (2022) determined the significant relationship between school leaders' transformational management philosophies and SBM practices. The study included the descriptive-correlational research methodology. The respondents were Congressional District I-B public school heads. The findings demonstrated a positive association between the school heads' attendance at training and their school-based management strategies. Additionally, a strong correlation appeared between the respondents' transformational management abilities—such as romantic influence and intellectual stimulation—and the SBM performance of school leaders.

Conversely, another study by Ubongen (2022) examined the impact of school heads' SBM practices on teachers' instructional ability. The survey included the descriptive-correlational method. The data came from the chosen school heads of the public schools in the Province of Sarangani's Kiamba District. The findings demonstrated how closely the respondents observed the five SBM components. Along with the school leaders, stakeholders' involvement, school improvement process, school-based resources, and performance accountability, the principals showed high SBM abilities upon evaluation.

1.2 Assessment of SBM Implementation through SWOT Analysis

In the dynamic landscape of educational governance, understanding the intricacies of School-Based Management (SBM) implementation is paramount for fostering effective learning environments. As stakeholders engage in the assessment of SBM initiatives, it becomes evident that their perspectives, experiences, and insights serve as invaluable assets in shaping educational policies and practices. However, to truly harness the potential of stakeholder feedback and propel educational institutions toward success, it is essential to complement these assessments with a structured analysis. One such indispensable tool in strategic planning is the SWOT Analysis, which systematically evaluates the Strengths, Weaknesses, Opportunities, and Threats inherent in SBM implementation. By conducting a SWOT Analysis following stakeholder assessments, educational leaders can gain deeper insights into the internal dynamics and external factors influencing SBM, thereby empowering them to make informed decisions, capitalize on strengths, address weaknesses, seize opportunities, and mitigate threats to enhance the overall effectiveness and sustainability of SBM initiatives.

Table 1.2 shows the SWOT analysis, which evaluates the internal strengths and weaknesses and the external opportunities and threats of the proposed strategic management plan for school-based management (SBM). This analysis focuses on four distinct combinations:

The S-O (Strengths-Opportunities) scenario envisions leveraging internal strengths such as successful communication campaigns and stakeholder workshops to capitalize on possibilities such as improved collaboration with local government and technical improvements. In contrast, the S-T (Strengths-Threats) combination focuses on leveraging internal strengths to fight external threats, such as opposition to change and budget limits, by stressing positive outcomes and incorporating technology-driven solutions. Meanwhile, the W-O (Weaknesses-Opportunities) perspective emphasizes Addressing internal weaknesses, such as low involvement and inadequate resource allocation, to capture increased collaboration and communication opportunities effectively. Finally, in the W-T (Weaknesses-Threats) scenario, the strategy entails overcoming internal weaknesses to minimize external threats, such as opposition to change and financial constraints, by implementing defensive measures such as increased involvement and strategic resource allocation. Over the following six years, the SBM plan aspires to maximize its efficacy by strategically utilizing strengths, fixing weaknesses, and deploying proactive and defensive actions.

The literature and studies about the SWOT analysis of the proposed strategic management plan for School-Based Management (SBM) provide valuable insights into its implementation, challenges, and outcomes. One key aspect highlighted is the pivotal role of school principals in driving SBM success through effective leadership and management practices, as supported by Meador's (2019) and Merlo's (2021) studies. These studies emphasized the importance of principals in leadership, curriculum management, and teacher evaluation, aligning with the SWOT analysis's emphasis on effective school leadership.

Additionally, the SWOT analysis underscores the significance of visionary leadership and stakeholder collaboration for successful SBM implementation. Dowdy (2018) and Whang (2021) offer empirical support, emphasizing the need for visionary leaders with practical communication skills and strong collaboration among stakeholders to foster a positive SBM environment.

Moreover, the analysis suggests that the effectiveness of SBM can significantly impact student outcomes, with school leaders playing a central role. Lyons (2018) provides empirical evidence supporting this assertion, highlighting the influence of school-based management competence on teachers' working conditions and students' academic achievement.

Furthermore, the SWOT analysis references Republic Act 9155 as a legal foundation for SBM, highlighting the policy framework supporting decentralization and school autonomy. Macadatar (2020) elaborates on this legal framework, reinforcing the SWOT analysis's reference to RA 9155 and its implications for school leadership and management.

Lastly, the analysis acknowledges challenges and constraints in SBM implementation, such as limited managerial competencies and financial support. Alvarado (2019) supports this identification of challenges, providing empirical evidence for school leaders' constraints in effectively implementing SBM initiatives. These connections underscore the importance of effective leadership, collaboration, and policy frameworks in successful SBM implementation while acknowledging the challenges that address it.

2. Feedback of Stakeholders in the Four Core Areas of SBM Implementation

2.1 Leadership & Governance

In figure 4 , "Leadership and Governance" takes center stage, highlighting its pivotal role in school management. This theme encompasses various leadership aspects, decision-making processes, and organizational structures. Surrounding this central theme is "Community Collaboration and Engagement," emphasizing the importance of stakeholder involvement. Linked closely are "Transparency and Communication," critical for effective engagement. Adjacent to leadership is "Leadership Training and Development," stressing ongoing learning for school leaders. "Shared Leadership and Governance" underscores collaborative decision-making, while "Plan Review and Adaptation" and "Program Planning and Coordination" emphasize iterative processes and structured implementation, respectively.

2.1.1 Community Collaboration and Engagement

Community collaboration and engagement in the context of education involves actively involving stakeholders such as parents, students, teachers, administrators, and community members in decision-making processes, planning, and implementation of school initiatives. It encompasses participatory decision-making, consultation, partnerships, resource sharing, involvement in school activities, and transparent communication. By fostering a sense of ownership, shared responsibility, and mutual respect within the school community, community collaboration and engagement contribute to improved student outcomes, enhanced accountability, and the overall success of schools. Feedback from stakeholders highlights the importance of collaborative efforts in crafting inclusive plans that address the needs and aspirations of all parties involved.

As one of the respondents said, *"The school collaborated closely with stakeholders and the community to craft a comprehensive school development plan that addresses the needs and priorities of all involved parties."*

Similarly, other respondents said, *“Aktibo kaming nakilahok sa paaralan sa pagbuo ng plano para sa pag-unlad, tiyak na kinikilala nito ang tunay na pangangailangan ng aming pamayanan."* ("We actively participate in school in formulating plans for development, which definitely recognizes the genuine needs of our community.")

SBM emphasizes the involvement of stakeholders, including parents, teachers, students, and community members, in decision-making processes regarding school governance and development plans. This collaborative approach ensures that the needs and aspirations of all parties are considered. According to a study by UNESCO, "Involving communities in school management is a key strategy for school improvement. When parents, teachers, students, and community members work together, schools are more likely to be responsive to local needs and to succeed in their mission to educate children" (UNESCO, 2005).

Fullan (2003) discussed the importance of engaging stakeholders in school leadership and decision-making processes. He emphasizes that successful school improvement efforts require the active involvement of the entire school community, including teachers, parents, students, and community members.

Meanwhile, respondents said, *“Stakeholders were consulted but not all concerns were addressed."*

Likewise, another respondent, said *"Nakikita namin ang pagpapabuti ng plano ng paaralan ngunit maaaring kailanganin pa itong palawakin upang masaklaw ang iba pang mga opinyon at ideya ng mga stakeholders." ("*We see the improvement of the school's plan, but it may need to be expanded to encompass the opinions and ideas of other stakeholders.")

Involving stakeholders in decision-making ensures that diverse perspectives are considered, leading to more comprehensive and inclusive plans. However, it's important to address all concerns raised during the collaboration process to foster a sense of ownership and commitment among stakeholders.

While there are strengths such as collaborative plan development and clear role delineation, areas needing Improvement include responsiveness to emerging needs, stakeholder engagement in policy formulation, and consistency in information sharing. Addressing these areas could foster greater transparency, inclusivity, and collaboration within the school community.

Empowering stakeholder engagement and decision-making is essential for cultivating a positive school environment, as highlighted by Whang (2021). Dare (2022) and Lyons (2018) stress the influence of school leaders' behavior and values on SBM success and overall school performance. By fostering stakeholder collaboration, SBM promotes inclusivity and transparency, aligning with the imperative for stakeholder engagement in policy formulation.

Furthermore, SBM enhances responsiveness and transparency in addressing emerging needs, as Driscoll (2022) and De la Fuente (2022) noted. This approach allows schools to respond to learning needs and addresses areas requiring Improvement accurately. Moreover, when effectively executed by school leaders, SBM promotes educational quality and autonomy, as evidenced by Nollora (2021) and Papa (2022). The alignment of SBM with legal frameworks, such as Republic Act 9155, underscores the

importance of decentralized decision-making in achieving higher learning outcomes and ensuring leadership accountability, as articulated by Macadatar (2020) and De Jesus (2022).

2.1.2 Plan Review and Adaptation

SBM encourages regular review and adaptation of school plans based on feedback and changing circumstances. This iterative process allows schools to remain responsive to emerging needs, challenges, and opportunities.

According to a respondent, *"Regular reviews of the developed plan are conducted, with adjustments made promptly to address emerging needs, challenges, and opportunities, reflecting the school's commitment to continuous improvement."*

Similarly, another respondent said, *“Feedback-driven refinements enhance plan effectiveness”*

Meanwhile, a respondent from the external stakeholders said

"May ilang mga hakbang ang paaralan sa pag-evaluate ng plano, ngunit kailangan pa ng mas malawak na pakikisangkot ng mga stakeholder upang mapanatili itong epektibo."

("The school takes several steps in evaluating the plan, but broader involvement of stakeholders is needed to maintain its effectiveness.")

A report by the World Bank states, "Regular monitoring and evaluation of the school improvement plan are essential for its success. Schools should conduct periodic reviews to assess progress, identify challenges, and make necessary adjustments" (World Bank, 2018). Moreover, Sergiovanni (2005) emphasizes the importance of continuous improvement in school leadership and governance. He argues that effective leaders are responsive to feedback and willing to adapt their plans and strategies to meet the evolving needs of their school communities.

The success of School-Based Management (SBM) hinges on collaborative practices among various stakeholders within the educational community. As Meador (2019) and Merlo (2021) noted, principals play a pivotal role in orchestrating SBM efforts encompassing educational leadership, teacher evaluation, and disciplinary management. Dowdy (2018) emphasized the necessity for visionary leadership and practical communication skills among school leaders, underscoring their immersion in day-to-day SBM tasks.

2.1.3 Shared Leadership and Governance

Shared leadership and governance refer to a collaborative approach to decision-making and management within an organization or community. It involves distributing authority, responsibilities, and decision-making power among multiple individuals or groups, rather than concentrating it solely in the hands of a few leaders. This approach

fosters inclusivity, transparency, and collective ownership of goals and outcomes, ultimately leading to more effective and sustainable solutions.

According to a respondent. *"The school effectively establishes a clear organizational structure that fosters shared leadership and governance, ensuring that decision-making processes are inclusive and participatory."*

Additionally, a respondent stated, *"Collaborative governance structures in place fostering shared leadership."*

Meanwhile, according to an external stakeholder,

"May mga simula ng mga hakbang mula sa paaralan tungo sa pagsasamang pamumuno, ngunit may mga pagkukulang pa sa implementasyon at pagpapatupad."

("There are initial steps taken by the school towards shared leadership, but there are still deficiencies in implementation and execution.")

SBM promotes shared leadership and governance structures where decision-making responsibilities are distributed among various stakeholders. This fosters a sense of ownership and accountability within the school community. In their research, Mulford and Silins (2003) emphasize the importance of shared leadership in SBM, stating that "Effective school leadership is not the province of one person but is distributed among teachers, administrators, parents, and students." Furthermore, Harris (2008) explores various perspectives on distributed leadership in education, highlighting its benefits for school improvement. He discusses how shared leadership can empower teachers, parents, and students to take on leadership roles and contribute to decision-making processes.

The findings from the provided studies shed light on the crucial role of stakeholders, particularly local government units (LGUs), in the context of school-based management (SBM) and its implications for leadership and governance. Vallejo et al. (2018) underscored the pivotal role of principals in fostering collaboration between schools and external stakeholders, highlighting their importance in motivating teachers to develop active partnerships with stakeholders, including LGUs. It emphasizes the significance of effective leadership in establishing and maintaining strong connections with the broader community to support school initiatives.

Additionally, Bakwai's (2013) assessment of school-community relations skills among public high school principals revealed a proactive approach among many principals in enhancing connections with the community. Strategies such as community visits and recognition of active stakeholders indicate an acknowledgment among school leaders of the importance of fostering strong ties with the community, including local government entities, to bolster school initiatives and programs.

2.1.4 Transparency and Communication

Transparent communication channels between the school and its stakeholders are crucial for accountability and trust-building. Regular sharing of progress updates and feedback sessions fosters transparency and inclusivity.

According to a respondent,

"Regular dialogues with stakeholders empower them to contribute meaningfully to policy formulation, ensuring that community initiatives remain relevant and responsive to evolving needs."

Additionally,

"Engaging stakeholders in dialogue fosters a culture of transparency and accountability, enhancing trust and collaboration within the school community."

However, external stakeholders stated

"Feedback sessions should be conducted more consistently to ensure inclusivity."

Also, another stakeholder said,

"Hindi gaanong aktibo ang pagbabahagi ng impormasyon sa progreso ng edukasyon sa paaralan, kung kaya't marami sa komunidad ang hindi lubos na nakakaalam sa mga pangyayari."

("The sharing of information on educational progress within the school is not very active, which is why many in the community are not fully aware of the events.")

SBM emphasizes transparent communication channels between the school and its stakeholders to ensure accountability and foster trust. Regular sharing of progress updates and feedback sessions promotes transparency and inclusivity. There must be a continuous communication for strengthening collaboration and partnerships. Feedback from the stakeholder shows that there are challenges in ensuring consistent and inclusive communication practices. According to a study by Datnow and Hubbard (2002), "Transparency and open communication are essential components of successful school-based management. Schools that engage in regular dialogue with stakeholders are more likely to build trust and collaboration within the community.". Moreover, Bryk and Schneider (2003) discuss the importance of trust in fostering effective communication and collaboration within schools. They argue that transparent communication builds trust among stakeholders and creates a positive school culture conducive to improvement.

Furthermore, Okog & Abraham (2019) delve into the competence of schools in managing school-community relations, emphasizing the management skills of principals in dealing with school staff and engaging in school-community relations programs. Their analysis suggests that effective leadership in SBM extends beyond internal management to active engagement with external stakeholders such as LGUs, indicating the need for school leaders to cultivate relationships beyond the school gates for holistic school development.

Furthermore, Hassan et al.'s (2013) analysis highlights the reciprocal relationship between community involvement and school-community relations, emphasizing the importance of collaboration between schools and their communities, including LGUs, in fostering positive interactions and support systems. These studies collectively underscore the critical role of effective leadership and collaboration with external stakeholders in SBM. School leaders can enhance governance practices by fostering strong partnerships and engagement with the community, including LGUs, ultimately contributing to improved school outcomes and student achievements

2.1.5 Leadership Training and Development

Leadership and training are intertwined aspects of personal and organizational development, essential for cultivating effective leaders and fostering continuous improvement. Leadership entails guiding, inspiring, and empowering individuals or teams to achieve common goals, while training involves imparting knowledge, skills, and competencies necessary for fulfilling leadership roles effectively. Through structured training programs, individuals can enhance their leadership abilities, including communication, decision-making, and problem-solving skills. Effective leadership, in turn, enables organizations to navigate challenges, inspire innovation, and drive success. Therefore, the symbiotic relationship between leadership and training is pivotal in cultivating capable leaders and ensuring organizational growth and resilience.

SBM advocates for long-term programs aimed at training and developing school and community leaders. Investing in leadership capacity building ensures that stakeholders have the necessary skills to contribute effectively to school governance and improvement efforts.

According to the respondent,

"The school consistently implements long-term programs aimed at addressing the training and development needs of both school and community leaders, fostering continuous growth and improvement."

Additionally, *"The school organizes diverse, impactful programs for continuous development.*

Meanwhile, according to another stakeholder, *"The school occasionally addresses leadership training needs."* Furthermore, according to a respondent, *“Limited leadership programs hinder community progress."*

This shows that there is an implementation of long-term programs addressing the training and development needs of school and community leaders but needs strengthening and improvement. Stakeholders must be informed and well-trained and equipped with skills needed in the implementation of the program to ensure the success of its implementation. There should be consistent programs for continuous growth and community engagement. Challenges with limited investment in leadership capacity building and coordination can also be conveyed from the stakeholder’s feedback.

In a report by the OECD (2016), it is recommended that "Schools should provide ongoing professional development opportunities for teachers, administrators, and community members involved in school governance. Leadership training programs can enhance the effectiveness of school-based management initiatives." Additionally, Leithwood and Sun's (2012) meta-analysis examines the effects of transformational leadership on various outcomes, including teacher learning and student achievement. They emphasize the importance of investing in leadership development to enhance school effectiveness and student success.

2.1.6 Program Planning and Coordination

Program planning and coordination involve systematically designing, organizing, and implementing initiatives to achieve specific goals. It includes identifying needs, setting objectives, allocating resources, and bringing together stakeholders to collaborate efficiently. Effective planning and coordination ensure seamless execution and maximize impact.

According to one of the school heads,

"The school consistently organizes meetings and forums to share updates and gather feedback on the progress of the education program, fostering transparency and collaboration."

Similarly, another stakeholder, stated that *"Regular sharing of progress updates enhances transparency and engagement."*

However, a respondent said,

"The school occasionally conducts sessions to share updates on the education program's progress and gather feedback from stakeholders, promoting transparency and continuous improvement."

Another stakeholder stated that

"Napansin namin na ang SPTA ay hindi gaanong aktibo o hindi kasangkot sa proseso ng pagbuo ng plano ng paaralan."

(We noticed that the SPTA (School Parent-Teacher Association) is not very active or involved in the school development planning process.)

Moreover, an external stakeholder emphasized that

"May mga hakbang ang paaralan upang magkaroon ng mga programa para sa pagsasanay ng mga lider, ngunit kailangan pa itong palawakin at palakasin upang masaklaw ang lahat ng sektor ng komunidad."

("The school takes steps to have programs for the training of leaders, but it needs to be expanded and strengthened to encompass all sectors of the community.")

This clearly shows that efforts to establish diverse and impactful programs for continuous development. There is also need for better planning and coordination to strengthen leadership programs and create opportunities for expanding and enhancing programs to encompass all sectors of the community. SBM necessitates effective planning and coordination of programs to address the diverse needs of the school community. Establishing clear goals and coordinating efforts ensures that leadership programs are impactful and inclusive. According to a study by Leithwood and Mascall (2008), "Effective program planning and coordination are essential for the success of school-based management initiatives. Schools should develop comprehensive plans that align with their vision and goals, and coordinate efforts across all stakeholders to ensure implementation success." Likewise, Spillane et al (2001) discuss the distributed nature of school leadership and the importance of collaboration and coordination among leaders. They argue that effective program planning requires shared responsibility and a collective focus on achieving common goals.

Additionally, Bakwai's (2013) assessment of school-community relations skills among public high school principals revealed a proactive approach among many principals in enhancing connections with the community. Strategies such as community visits and recognition of active stakeholders indicate an acknowledgment among school leaders of the importance of fostering strong ties with the community, including local government entities, to bolster school initiatives and programs.

Furthermore, Hassan et al.'s (2013) analysis highlights the reciprocal relationship between community involvement and school-community relations, emphasizing the importance of collaboration between schools and their communities, including LGUs, in fostering positive interactions and support systems. These studies collectively underscore the critical role of effective leadership and collaboration with external stakeholders in SBM. School leaders can enhance governance practices by fostering strong partnerships and engagement with the community, including LGUs, ultimately contributing to improved school outcomes and student achievements.

2.2 Curriculum and Learning

Figure 5 provides a visual representation of the interconnectedness of these themes, with "Curriculum and Learning" serving as the focal point. Each theme contributes to the overall goal of enhancing educational outcomes and student learning experiences within the SBM framework.

2.2.1 Inclusive Curriculum Design and Planning:

It emphasizes the importance of designing a curriculum that caters to the diverse needs of students, ensuring inclusivity and equity in education. Stakeholders recognize the meticulous planning and refinement processes involved in curriculum development, which involve regular consultations with educators, parents, and community members.

According to one of the school heads,

"The curriculum is meticulously designed and refined to address the diverse development needs of every learner within our school community, ensuring inclusivity and equity in education."

Additionally, another respondent stated that

“May mga hakbang na isinagawa ang paaralan upang mas mapalapit ang edukasyon sa pang-araw-araw na buhay ng mga mag-aaral”

("The school has taken steps to make education more relevant to the daily lives of students.")

This aligns with the principle of SBM as state in DepEd order No. 83, series of 2012 which states that the community and learners' context and aspirations anchor the curriculum and learning systems, which are collaboratively developed and continuously improved. According to Marzano and Waters (2009), effective curriculum design acknowledges the diversity of learners and provides opportunities for differentiated instruction. This inclusive approach fosters student engagement and academic success.

The comprehensive analysis of the findings revealed significant insights into the multifaceted dynamics of school-based management (SBM), particularly concerning curriculum and learning aspects. A prominent finding across the studies is the indispensable role of school leaders, notably principals, in driving the successful execution of SBM initiatives. Meador (2019) and Merlo (2021) both emphasized the pivotal importance of educational leadership, encompassing tasks such as teacher evaluation and curriculum management, in realizing the objectives of SBM. These findings highlight the centrality of effective leadership in steering SBM toward its intended goals.

Moreover, the success of SBM initiatives in curriculum development depends on the commitment and engagement of school leaders in day-to-day tasks, as emphasized by Dowdy (2018). Principals set strategic directions, assess teaching methods, monitor learning achievements, and encourage parental involvement. Whang (2021) stresses the importance of fostering stakeholder collaboration to create a positive school environment conducive to effective curriculum development and implementation. The integration of opportunities to support the network of school partners, as Whang advocates, reinforces the inclusive and transparent nature of SBM, aligning with the varied perspectives provided by school heads, teachers, and SPTAs.

2.2.2 Community-Centered Curriculum Integration

Community-driven curriculum integration involves a collaborative approach to education that incorporates local knowledge, values, and needs into the curriculum design process. By engaging community members as active participants in shaping educational content and experiences, this approach aims to create a more relevant, culturally responsive, and inclusive learning environment. It recognizes the importance of

honoring diverse perspectives, fostering community ownership, and empowering learners to connect their studies to real-life contexts and challenges.

According to one of the stakeholders,

"The curriculum is designed to incorporate local context and community experiences, ensuring relevance and application to real-life situations through partnership with local organizations."

Likewise, another respondent said that

"Collaborative efforts between school and community stakeholders result in the creation of engaging learning materials and activities that promote creative thinking and problem-solving skills."

However, a stakeholder stated that

"School strives to align curriculum with community life, but there's room for improvement in actively involving community members in curriculum design and evaluation."

Additionally,

"May mga hakbang na isinagawa ang paaralan upang tiyakin na may kinatawan ang komunidad sa pagbuo ng mga paraan at materyales sa pagtuturo, ngunit kailangan pang mas palakasin at paigtingin ang ugnayan at kooperasyon."

("The school has taken steps to ensure community representation in the development of teaching methods and materials, but there is a need to strengthen and enhance cooperation and collaboration.")

"There's room for improvement in community engagement efforts to maximize the impact on learners' awareness and practice of good citizenship."

Feedback on curriculum and learning sheds light on curriculum development and implementation, revealing varying levels of agreement or concern. There are initiatives in integrating real-life situations but needs to broaden community representatives in curriculum design and evaluation. It also indicates room for improvement in community engagement to maximize its impact in curriculum.

Integrating community values and experiences into the curriculum enhances its relevance and applicability to students' lives. By incorporating local context and perspectives, schools can create more meaningful learning experiences that resonate with students. A study by Brouwer et al. (2016) emphasizes the importance of community involvement in curriculum development. Engaging community members ensures that the curriculum reflects the cultural, social, and economic realities of the local context, promoting authentic learning experiences.

According to Cuttilon (2021), primary education in the Philippines aims to help students reach their full potential by instilling a love for their country, correct values, and developing skills and academic competency, all essential aspects of nation-building.

2.2.3 Stakeholder Engagement in Curriculum Development

Stakeholder engagement in curriculum development is crucial for ensuring that the curriculum meets the diverse needs of students and promotes meaningful learning experiences. While there are collaborative efforts between school and community stakeholders, there's a need for broader representation and active involvement to enhance the effectiveness of educational initiatives.

According to one of the respondents,

"Collaborative efforts between school and community stakeholders result in the creation of engaging learning materials and activities that promote creative thinking and problem-solving skills."

Similarly, *"Technology experts collaborate with educators to integrate digital tools into the learning process."*

Meanwhile, other stakeholders stated that

"Mayroong limitadong koordinasyon at pakikipagtulungan ng mga guro at mga kinatawan ng paaralan sa pagpili at pagpaplano ng mga araling naaayon sa mga pangangailangan ng mag-aaral."

("There is limited coordination and collaboration between teachers and school representatives in selecting and planning lessons tailored to students' needs.")

Additionally, *"Mayroong limitadong koordinasyon at komunikasyon sa pagitan ng paaralan at komunidad sa pagtukoy at pagpaplano ng mga aspeto ng kurikulum naaayon sa lokal na karanasan ng mga mag-aaral."* ("There is limited coordination and communication between the school and the community in identifying and planning aspects of the curriculum that align with students' local experiences.")

While there are collaborative efforts between school and community stakeholders, there's a need for broader representation and active involvement to enhance the effectiveness of educational initiatives. Involving stakeholders such as educators, parents, and community members in curriculum development ensures that the curriculum meets the needs and expectations of all stakeholders. This collaborative approach fosters ownership and commitment to the curriculum, leading to its effective implementation.

According to Harris (2008), stakeholder engagement is essential for successful curriculum development. Collaborating with various stakeholders ensures that diverse perspectives are considered, leading to a more comprehensive and relevant curriculum that reflects the values and priorities of the school community. Jaboya (2018) emphasized

the importance participation of internal and external stakeholders in curriculum enhancement, community development, and student activities.

PSGR Krishnammal College for Women, an autonomous Arts and Science College in India emphasized the importance of gathering feedbacks from its stakeholders on Curriculum Design and Development. Valuable insights are taken from stakeholders such as teachers, parents, students and other stakeholders. It shows how school leaders value feedback from the stakeholders and foster a sense of ownership as they are active parts of school-based management implementation.

In support of the findings, this aspect of School-Based Management (SBM) underscores the collaborative nature of decision-making within educational institutions. Meador (2019) and Merlo (2021) highlight the critical role of school principals in overseeing SBM practices, including curriculum management, among other responsibilities. Their leadership is essential in ensuring the effective implementation of SBM initiatives, aligning curriculum development with the school's objectives and the learning community's needs.

Furthermore, the interconnectedness between school leaders and external stakeholders, including local government bodies, emerges as a crucial factor influencing the effectiveness of SBM. Whang (2021) stressed the significance of fostering strong collaboration between school communities and external stakeholders, while Dare (2022) highlighted how the behavior and values of school leaders play a pivotal role in promoting successful SBM practices. These findings accentuate the symbiotic relationship between school leaders and various stakeholders in driving positive outcomes through SBM, underscoring the importance of collaborative partnerships in educational governance.

2.2.4 Continuous Assessment and Improvement

Continuous assessment and improvement are essential components of SBM, contributing significantly to the quality of teaching and learning experiences. Stakeholders recognize the need for ongoing review and enhancement of assessment tools to meet evolving student needs and educational standards.

As one of the school head said, "*The continuous review and enhancement of assessment tools contribute significantly to the quality of teaching and learning experiences".* This aligns with SBM principles, which emphasize the importance of data-driven decision-making and continuous improvement.

Additionally, *"Regular review ensures alignment with evolving educational standards and best practices."*

Meanwhile, an external stakeholder highlighted,

"Mayroong mga pagsisikap ngunit medyo limitado pa ang koordinasyon at pagsasagawa ng pagsusuri ng mga sistema ng pag-aaral, kung saan ang ilang bahagi ng komunidad ay aktibo ngunit hindi pa ganap na kasangkot." ("There are efforts, but

coordination and implementation of assessment systems are still somewhat limited, with some parts of the community being active but not fully engaged.")

Continuous assessment and improvement are integral components of SBM, allowing schools to monitor student progress, evaluate the effectiveness of teaching practices, and make data-informed decisions to enhance learning outcomes. Regular assessment ensures that the curriculum remains responsive to students' evolving needs and educational standards. Meanwhile, based on feedbacks of external stakeholder indicates to broaden coordination and engagement of other stakeholders. Leithwood and Sun (2012) highlight the importance of continuous improvement in school leadership practices, including curriculum assessment and development. Schools that prioritize ongoing assessment and improvement demonstrate a commitment to excellence and student success. A study by Amon and Anggal (2021) highlighted the importance of schools' vision and mission, education process changes, and curriculum program adjustments to continuously improve the quality of learnings.

2.3 Accountability and Continuous Improvement

In School-Based Management (SBM), accountability and continuous improvement are essential. Accountability ensures that all stakeholders, including educators, administrators, and the community, are responsible for their roles and decisions, promoting transparency and trust. Continuous improvement focuses on regularly enhancing educational processes and outcomes through consistent feedback, evaluation, and adaptation. Together, they foster a dynamic and responsive educational environment where practices are continually refined to meet the evolving needs of students and the community.

2.3 Accountability and Continuous Improvement

Figure 6 illustrates the interconnected themes derived from stakeholders' feedback on School-Based Management (SBM) implementation. At the center is "Accountability and Continuous Improvement," representing the primary goal of SBM. Surrounding this central concept are arrows pointing towards it, each labeled with a theme: "Clarity and Consistency of Roles and Responsibilities," "Community Engagement and Ownership," "Regular Participatory Assessments," "Collaborative Development and Communication," and "Training and Consultation." These themes highlight the essential aspects contributing to achieving accountability and continuous improvement within the SBM framework.

2.3.1 Clarity and consistency of Roles and Responsibilities

The importance of clearly defining the roles and responsibilities of various stakeholders within the SBM framework is highlighted in this theme. When roles are well-defined, stakeholders understand what is expected of them, leading to accountability and effective decision-making. Consistency in communicating these roles ensures that everyone in the community is aware of their responsibilities, fostering alignment and coherence in the implementation of SBM initiatives.

As one of the respondents said, *“Roles defined well, with consensus from stakeholders, ensuring accountability”* Similarly, *“Defined roles ensure efficient functioning and smoother decision-making processes”*

However, external stakeholders stated that, *“Roles and responsibilities are generally understood but may lack clarity in some areas.”*

It indicates that there is consensus building on roles and responsibilities but there is a need for clarifications among external stakeholders. Clear delineation of roles and responsibilities is fundamental for effective governance and accountability within SBM. When roles are well-defined and consistently communicated, stakeholders understand their obligations, leading to more efficient decision-making and implementation processes.

2.3.2 Community Engagement and Ownership

Community engagement refers to the active involvement of various stakeholders, including parents, teachers, students, and local community members, in the decision-making processes related to education. When communities are engaged, they feel a sense of ownership over the educational outcomes and are more likely to support and participate in SBM initiatives. Community ownership fosters transparency, trust, and collaboration between schools and their surrounding communities.

According to one of the respondents,

“Community ownership of the accountability system fosters transparency and trust."

Similarly, *“Feedback mechanisms ensure stakeholders' voices are heard and considered."*

However, a stakeholder stated that, *“The school involves the community in shaping its accountability system, albeit with some room for improvement to ensure broader participation and ownership."*

Additionally, *“Nakikita namin ang mga pagpupulong at konsultasyon ng paaralan kasama ang mga kinatawan ng komunidad upang pag-usapan ang mga tungkulin at pananagutan, subalit may mga aspeto pang kailangan pang ayusin." ("We see school meetings and consultations with community representatives to discuss roles and responsibilities, but there are still aspects that need to be improved.")*

Moreover, another stakeholder stated that, *“May mga patuloy na hadlang tulad ng kawalan ng oras, resurso, at koordinasyon na nagpapahirap sa pagbuo at implementasyon ng sistema ng pananagutan.” ("There are ongoing obstacles such as lack of time, resources, and coordination that make it difficult to develop and implement an accountability system.”)*

These responses collectively suggest that while the school has made significant strides in involving the community and establishing feedback mechanisms, there is a recognized need for ongoing improvements to ensure broader participation and more effective community ownership of the accountability system. Caldwell (2005) provides a comprehensive examination of the principles, practices, and outcomes of SBM across different educational contexts. The study is structured to address the core components of SBM, including the delegation of decision-making authority to individual schools, the involvement of various stakeholders such as teachers, parents, and community members, and the mechanisms for ensuring accountability and transparency.

2.3.3 Regular Participatory Assessment

Regular participatory assessments involve gathering feedback and input from stakeholders to evaluate the effectiveness of SBM initiatives. These assessments provide valuable insights into what is working well and what needs improvement within the education system. By involving stakeholders in the assessment process, schools can ensure that decisions are informed by community needs and priorities, leading to more responsive and effective educational practices.

According to one of the stakeholders, *"Regular participatory assessments have become a cornerstone of the school's culture, enabling it to gather invaluable feedback from the community to inform our improvement plans."*. Likewise, *“The collaborative development of our performance accountability system has enabled us to effectively track progress, address challenges, and celebrate successes, fostering a culture of accountability and excellence.”*

However, an external stakeholder stated that, *“Nakakatuwa na may mga programa ang paaralan na nakatuon sa pakikilahok ng komunidad sa pagsusuri ng kanilang performance, bagaman maaaring hindi ito ganap na nangyayari sa bawat pagkakataon.”. (" It is delightful that the school has programs focused on community participation in evaluating their performance, although this may not be fully happening in every instance.")*

Similarly, another stakeholder said that, *“Nakikita namin ang mga hakbang ng paaralan sa pagsasagawa ng regular na participatory assessment, bagaman may ilang aspeto pa silang maaaring mapabuti para sa mas malawakang partisipasyon ng komunidad.”. ("We see the school's efforts in conducting regular participatory assessments, although there are still some aspects they can improve to achieve broader community participation.”)*

While the school has made strides in integrating participatory assessments and collaborative development into its culture, there are challenges related to consistent implementation and broader community involvement that need to be addressed for more effective and inclusive practices. The external stakeholder acknowledges the existence of programs focused on community participation in evaluating performance but suggests that these programs may not be consistently implemented.

Regular assessments involving various stakeholders provide valuable insights into the effectiveness of SBM initiatives and areas needing improvement. By engaging stakeholders in the assessment process, schools can gather diverse perspectives and ensure that decision-making is informed by community feedback. Bruns et. al (2011) report underscores the importance of accountability in education systems and provides valuable insights into the design and implementation of accountability reforms. It highlights the complex nature of accountability mechanisms and the need for careful planning and monitoring to ensure their effectiveness.

Furthermore, the connection between school leaders and external stakeholders, including parents, local government entities, and community members, emerged as a crucial factor in SBM's success, as discussed by Whang (2021) and Dare (2022). These studies underscored the importance of reinforcing SBM with robust collaboration among all stakeholders, highlighting the pivotal role of school leaders in fostering positive relationships and partnerships within the school community. In summary, these findings highlighted the complex interplay between school leadership, stakeholder engagement, and SBM practices, providing valuable insights for enhancing educational outcomes through decentralized decision-making and collaborative governance frameworks within SBM.

2.3.4 Training and Consultation

This refer to providing opportunities for stakeholders to build their capacity, share knowledge, and receive support related to SBM implementation. Training sessions help stakeholders understand their roles and responsibilities within the SBM framework, while consultations provide forums for discussing challenges, sharing best practices, and seeking input from stakeholders. By investing in training and consultation processes, schools can empower stakeholders to contribute meaningfully to the improvement of education outcomes.

According to one of the school heads, *“Training sessions help stakeholders understand their roles and responsibilities within the SBM framework.”*

Additionally, *“Training and consultation provide opportunities for stakeholders to build capacity, share knowledge, and align practices with SBM principles.”.*

Meanwhile, an external stakeholder stated that, *“May mga limitadong hakbang lamang na ginagawa ang paaralan upang masiguro na ang mga kinatawan ng komunidad ay aktibong nakikilahok sa pagbuo at pagpapabuti ng mga proseso sa pananagutan. Mas mainam na magkaroon ng pageensayo o seminar ang lahat ng stakeholders upang mabigyang linaw ito.”*

("The school is taking limited steps to ensure that community representatives are actively involved in the development and improvement of accountability processes. It would be better to have training or seminars for all stakeholders to clarify this.")

While the school has implemented training sessions and consultations to facilitate understanding and alignment with SBM principles, there are opportunities for improvement in ensuring broader and more active involvement of community representatives in accountability processes. Addressing these challenges through more inclusive initiatives, such as training or seminars, could enhance stakeholder engagement and contribute to more effective implementation of SBM principles. The suggestion for training or seminars for all stakeholders to clarify their roles and responsibilities indicates a desire for more comprehensive and inclusive initiatives to enhance understanding and participation among community representatives.

It is highlighted by Capili (2017) that implementing SBM integrates programs and activities for teachers' empowerment, such as conferences, seminars, workshops, mentoring services, and training programs. The sustainability of teachers' access to these traditional professional empowerment services highly depends on the efforts and endeavors of school leaders to serve the needs of the teachers. Similarly, Gaspar (2022) Trainings and seminars attended by the School Heads in regional, division and district level have a significant relationship to their SBM implementation.

According the World bank (2007) a sound training program for parents, teachers, and school personnel is critical to ensure the successful implementation of school-based management because many of them are likely to lack the skills necessary to carry out their new responsibilities. These skills include organizational skills such as planning and management, combined with process skills such as team building, interpersonal relations, and conflict resolution. Training must be provided not only to school staff but also to parents and community members to give them the skills to enable them to carry out their new roles effectively.

2.4 Management of Resources

In the implementation of School-Based Management (SBM), effective management of resources plays a pivotal role in ensuring the success and sustainability of educational initiatives. SBM empowers schools to make decisions regarding resource allocation, encompassing financial, human, and material resources, to best meet the needs of students and the school community. This entails not only the judicious distribution of funds but also the strategic deployment of personnel, facilities, and instructional materials. By decentralizing decision-making processes, SBM aims to enhance resource utilization efficiency, promote innovation, and tailor educational programs to local contexts. Furthermore, effective resource management fosters accountability, transparency, and stakeholder engagement, as schools collaborate with various stakeholders to optimize resource allocation strategies. As such, understanding the principles and practices of resource management in SBM is essential for schools to maximize their potential in providing quality education and fostering student success.

Figure 7 illustrates the key themes identified in stakeholder feedback related to School-Based Management (SBM) implementation. Each theme represents a distinct aspect of resource management in SBM, ranging from regular resource inventories to challenges and opportunities for improvement. Visualizing these themes helps

stakeholders gain insights into the priorities, concerns, and effective practices associated with SBM implementation.

2.4.1 Regular Resource Inventories and Decision-Making

Regular Resource Inventories and Decision-Making in the context of School-based Management (SBM) refers to the ongoing process within a school where resources such as finances, facilities, human resources, and instructional materials are regularly assessed, cataloged, and managed. This practice allows schools to maintain an accurate and up-to-date inventory of their resources, which is essential for informed decision-making. By continuously evaluating their resources, schools can allocate them effectively to support teaching and learning activities, address challenges, and improve overall school performance. Regular resource inventories also help schools identify areas for improvement and ensure that resources are used efficiently to achieve educational goals.

According to one of the school heads, *"School is actively working on improving the frequency and depth of our resource inventories to better inform decision-making and enhance the impact of resource allocation on student learning outcomes.".*

Similarly, a teacher-respondent, stated that, *"We recognize the importance of regular resource inventories, and working towards refining our processes to ensure they align more closely with community needs and aspirations."*

However, one of the stakeholders emphasize that *"Limited stakeholder involvement may result in overlooking community needs and preferences."*

Additionally, another stakeholder said, *"Napansin namin ang kakulangan ng paaralan sa regular na imbentaryo ng mga resources, na maaaring magdulot ng kawalan ng kaayusan at epektibong paggamit ng mga ito." ("We observed the school's lack of regular inventory of resources, which may lead to disorganization and ineffective use of these resources.")*

The feedback emphasizes the importance of conducting regular resource inventories to inform decision-making processes. Although, feedbacks from other stakeholders indicates an inconsistent resource inventory. This aligns with the principles of SBM, which advocate for data-driven decision-making and the efficient utilization of resources to improve student outcomes. Stakeholders also recognize the best practices of schools in conducting regular inventories of school resources which builds transparency, accountability and trust among stakeholders.

2.4.2 Transparency and Accountability

Transparency and accountability are crucial aspects of effective resource management in SBM. Stakeholders need to be informed about resource allocation decisions and how they align with community needs to build trust and confidence.

According to one of the respondents, *"Transparent inventory practices build community confidence in resource management.".* Similarly, *"Regular dialogues enhance*

transparency and accountability in resource allocation. Stakeholder involvement improves alignment between resource plans and community needs, fostering ownership and commitment."

Transparency and accountability are crucial aspects of effective resource management in SBM. Stakeholders need to be informed about resource allocation decisions and how they align with community needs to build trust and confidence. A study by Hallinger and Heck (2010) investigated the role of transparency and accountability in school leadership. They found that schools with transparent and accountable leadership practices were more effective in resource management and stakeholder engagement.

2.4.3 Challenges and Opportunities for Improvement

Managing resources effectively is crucial for the successful implementation of School-Based Management (SBM). However, this task comes with various challenges, such as limited resources, inadequate infrastructure, and inefficient processes. Despite these challenges, there are significant opportunities for improvement. By enhancing capacity building, implementing better monitoring and evaluation systems, engaging stakeholders, improving planning, and integrating technology, schools can overcome these challenges and optimize their resource management under SBM, ultimately leading to better educational outcomes.

According to one of the respondents, *“Limited stakeholder involvement may result in overlooking community needs and preferences.” Similarly, “There is room for improvement in enhancing inclusivity, accessibility, and consistency in resource management practices.”.*

Additionally, *“While some initiatives are in place, there are opportunities to strengthen partnerships and deepen stakeholder engagement for more effective resource management.”*

One of the external stakeholders, also stated, *“Nakikita namin ang limitadong partisipasyon ng LGU sa pagsasagawa ng imbentaryo ng mga resources ng paaralan.” (“We observe the limited participation of the Local Government Unit (LGU) in conducting inventory of school resources.")*

The feedback acknowledges existing challenges, such as limited stakeholder involvement and inconsistencies in resource management practices. This highlights the need for continuous improvement efforts to address these challenges and capitalize on opportunities for enhancing resource management effectiveness. Addressing these areas of Improvement could lead to more efficient resource utilization and, ultimately, enhanced outcomes for the school community.

The studies conducted by Bhuiel (2021), Mohd (2020), Evertson (2020), Kalkan (2020), Moradi (2016), and Tirri (2020) provided valuable insights into various aspects of school-based management (SBM) and its impact on resource management within educational institutions. Bhuiel's (2021) emphasis on motivational support for teachers

and learners, consistent discipline, and fostering parent-teacher communication aligns with the high satisfaction expressed by School Parent-Teacher Associations (SPTAs), suggesting that effective communication and collaboration contribute to efficient resource management. Mohd highlighted the crucial roles of school heads and education officers in ensuring SBM effectiveness, emphasizing the importance of leadership in addressing areas like inventory practices and stakeholder involvement. Similarly, Evertson underscored the pivotal role of school principals in fostering collaboration among teachers, supporting the need for deeper discussions highlighted in feedback

Moradi's insights into SBM's decentralized nature in developed countries resonate with the recognition of community engagement efforts, suggesting the empowerment of local stakeholders positively impacts resource management. Additionally, Tirri's identification of principals' professional development challenges align with feedback indicating the need for deeper discussions to enhance program development, emphasizing ongoing professional development for effective resource management within SBM frameworks.

Dowdy (2018) and Dare (2022) highlighted the pivotal role of school leaders in driving SBM initiatives through visionary leadership and effective communication. Principals oversee day-to-day SBM activities, set strategic directions, and foster stakeholder collaboration to achieve school improvement goals. Moreover, principals play a crucial role in reinforcing SBM with strong cooperation between all stakeholders, as discussed by Whang (2021) and Dare (2022), fostering positive relationships and partnerships within the school community.

The findings also emphasized the multifaceted nature of SBM, where school leaders must navigate challenges and complexities to ensure its success. Factors such as leadership competence, collaboration with stakeholders, and management of resources significantly influence SBM outcomes. Additionally, the study highlighted the importance of stakeholder engagement in SBM, with internal and external stakeholders playing vital roles in decision-making processes and fostering a conducive learning environment. The findings underscored the intricate interplay between leadership, stakeholder collaboration, and resource management within the SBM framework, providing valuable insights for enhancing educational outcomes and school development

Table 3 presents the yearly breakdown of the structured approach for implementing strategic priorities in leadership and governance, curriculum and learning, accountability and Improvement, and management of resources over six years, with each year building upon the progress of the previous years and focusing on specific objectives, activities, resources, and durations to achieve long-term success in SBM implementation. The pursuit of successful School-Based Management (SBM) implementation is critical for educational growth, with an emphasis on strategic areas such as stakeholder inclusion, systematic reviews, policy consensus-building, and collaborative leadership. Prioritizing community involvement in curriculum development, varied representation, enhanced community monitoring, active participation in citizenship education, and improving learners' creative and problem-solving skills can improve curriculum and learning. Improving communication, stakeholder involvement, community-defined accountability

mechanisms, collaborative processes, participatory assessments, efficient resource management via enhanced inventory procedures, inclusive conversations, transparent monitoring, and recognizing success stories of critical stakeholders all contribute to the overall Improvement of SBM implementation.

Conclusions

Based on the findings of the study, it is as a result of this concluded that:

1. The assessment findings on school-based management (SBM) implementation reveal a nuanced picture of strengths and areas for improvement. Internal stakeholders generally perceive leadership and governance favourably, contrasting with the perspectives of external stakeholders who identify areas needing enhancement. However, internal and external stakeholders agree on the high curriculum and learning implementation levels, accountability and improvement, and resource management. Significant disparities emerge between internal and external assessments across various domains, particularly in leadership and governance, curriculum and learning, and resource management, indicating the need for closer collaboration and communication to align perceptions and enhance overall SBM effectiveness. The research findings from the SWOT analysis of school-based management (SBM) highlight the critical interplay between internal strengths and weaknesses and external opportunities and threats. By leveraging internal strengths like effective communication campaigns and stakeholder engagement, SBM initiatives can seize external opportunities such as improved collaboration with local governments and technical advancements. Moreover, proactive measures, including emphasizing positive outcomes and integrating technology-driven solutions, enable SBM to confront external threats like opposition to change and budget constraints. Addressing internal weaknesses, such as low involvement and inadequate resource allocation, is essential for capitalizing on increased collaboration and communication opportunities. Simultaneously, mitigating external threats through defensive strategies, such as enhanced involvement and strategic resource allocation, ensures the resilience and effectiveness of SBM initiatives in navigating challenges and fostering sustainable growth within educational settings.

2. Feedback from internal and stakeholders, including teachers, school heads, and School Parent-Teacher Associations (SPTAs), provided valuable insights into strengths and areas for improvement in SBM implementation. Similarly, feedback from external stakeholders, such as Local Government Units (LGUs), offered additional perspectives on leadership and governance, curriculum and learning, accountability, and resource management practices within schools.

3. A proposed strategic plan model to improve SBM implementation utilizes strengths, tackles weaknesses, seizes opportunities, and mitigates threats. This comprehensive SBM strategic plan outlines specific activities, objectives, strategies,

timelines, stakeholders, and expected outcomes, aiming to drive positive change and foster continuous improvement within the educational community over the next six years.

Recommendations

Based on the findings and conclusion of the study, the following are as a result of this recommended:

1. The Administration creates a collaborative environment within the institution by fostering continuous communication and collaboration between internal and external stakeholders and establishing regular feedback mechanisms to address evolving expectations and concerns, ensuring a dynamic and responsive approach. Moreover, implementing professional development programs for stakeholders is essential to enrich their comprehension of School-Based Management (SBM) practices and foster a shared vision for the educational institution's success.

2. Stakeholder representatives comprehensively review School-Based Management (SBM) discrepancies, including Leadership and Governance, Curriculum and Learning, Accountability and Improvement, and Resource Management. Establish open dialogues with internal and external stakeholders to address perceived differences, aggressively seeking feedback for a collaborative strategy that effectively addresses discrepancies. Moreover, prioritize developing focused programs, including tailored training and awareness campaigns to enhance understanding and alignment with SBM practices. Direct the emphasis towards specific areas contributing to the observed discrepancies. To maintain progress, stakeholders argue for a systematic process for continuous monitoring and evaluation and regular assessments of intervention impact, allowing for required modifications and supporting continual improvement.

3. School Parent-Teacher Associations (SPTAs) and Local Government Units (LGUs) foster collaboration and inclusivity among all stakeholders involved in School-Based Management (SBM) implementation to improve engagement, consistency, and depth across various domains, enhance professional development for stakeholders, optimize resource utilization, establish effective communication platforms, promote collaborative decision-making, and ensure continuous monitoring and evaluation, to collectively contributes to the overall improvement and success of the educational environment.

4. The proposed strategic plan model for SBM Implementation prioritize collaborative efforts between internal and external stakeholders to ensure alignment and shared understanding of goals and strategies. Incorporating feedback from both groups, particularly in areas of perceived disparity such as leadership and governance, curriculum and learning, and resource management, is highlighted. Furthermore, the plan focuses on targeted interventions to address identified areas for improvement, including enhancing communication channels, providing professional development opportunities, and fostering a culture of accountability and continuous improvement. Fostering collaboration, addressing disparities, and implementing targeted interventions, the

strategic plan effectively guides SBM implementation over the six years and ultimately enhancing educational outcomes and school effectiveness.

Compliance with Ethical Standards

In this study, the researcher considered several ethical considerations. The researcher first seeks to meet and address the moral concerns of the study. These ethical standards include seeking first the approval of school leaders for the research proposal. The authorities received letters of request from the Schools Division Superintendent and Public Schools District Supervisors of the nine (9) central schools and school heads. Moreover, before obtaining informed consent, the researchers gave respondents detailed information about the study's purpose, procedures, and potential risks and benefits. The consent form clearly stated that the Participation was voluntary, allowing participants the choice to withdraw from the study at any time without penalty. In addition, the researchers assured them that this research would strictly comply with the Data Privacy Act by keeping the identities of the informants private and confidential.

Acknowledgments

The researcher sincerely expresses her profound gratitude to the individuals who shared their valuable knowledge and expertise. Their imparted learnings enable the researcher to conduct this piece of work. With this, she would like to acknowledge the following for their assistance:

Dr. Juliet Q. Nabos, Dean of the Graduate School, for her unending patience and unwavering support in helping to complete this study.

Dr. Menandro M. Merlin, her adviser, for his perseverance in reviewing the work as well as for his invaluable help, advice, and remarks that the researcher will always value.

Ms. Ma. Teresa Chavez, her statistician, for her persistent efforts in handling the study statistically and for helping her comprehend and analyzed the results.

Dr. Elvin C Perlas, Gasan District Supervisor and to the School Heads, Teachers, selected Stakeholders of the respondent schools for providing complete assistance and cooperation during the data collection procedure.

Ms. Mildred S. Madriaga, Head Teacher I of Tabionan Elementary School for her full support and encouragement to pursue her graduate studies.

Tabionan Elementary School Teaching Force, her dear colleagues, for their encouraging words, genuine concern, and moral support.

IMPLEMENTATION OF THE MANDATORY HOURS OF WORK AND REST ONBOARD CONTAINER SHIPS

Capt. Gilbert Lugtu Castro and Loren Mae M. Naquita, Ph.D.

Philippine Merchant Marine Academy, Graduate School, Manila, Philippines

https://doi.org/10.5281/zenodo.12098752

ABSTRACT

The purpose of this study was to determine how the required hours of work and rest on container ships were implemented. It intends to boost productivity and enhance the working conditions and well-being of seafarers regarding rest and work hours with respect to Maritime Labour Convention (MLC) 2006. It employed quantitative and qualitative-descriptive methods, leveraging the strengths to comprehensively address the objectives. The study found that as age increases, the perceived impact of factors on mandatory hours of work and rest decreases slightly. However, factors such as position on board, license acquired, length of sea service, and length of service on container ships have a negative correlation with these challenges. The study identified operational demands, heavy workloads, multiple responsibilities, work and rest hours data recording errors, insufficient communication with ship management, inadequate staffing levels, poorly planned crew rotations, and unexpected circumstances disrupting scheduled work and rest periods. However, age was not found to be a significant influencing factor in these challenges. The findings suggest that age may not be a significant influencing factor in the perceived challenges associated with mandatory hours of work and rest. To improve implementation of mandatory hours of work and rest on container ships, the following are recommended: adding crew, implementing proper planning and management, ensuring a backup system for duty rotation, amending policies under the Maritime Labour Convention 2006, arranging hotel accommodations during port operations, and ensuring sufficient crew for maintenance during passages and port activities, possibly by arranging rider ship maintenance and repair personnel.

Key Words: *container ship, implementation of hours work and rest, Maritime Labour Convention 2006, Filipino seafarers, rights of seafarers*

INTRODUCTION

Seafaring ranks as a highly rewarding and sought-after career among Filipinos, notably those engaged in sea-based occupations. In fact, the Philippines emerges as a principal labor source for international maritime vessels, providing significant economic benefits to the families of Filipino seafarers. This important contribution is highlighted by the UNCTAD's Review of Maritime Transport (2021), which recognizes the Philippines as the global leader in supplying both officers and seafarers to the worldwide maritime industry. According to research conducted by the Institute of Developing Economies in 2018, the Philippines, the country that supplies the research greatest number of seafarers worldwide, is crucial to the supply of seafarers.

In the maritime industry, protecting the health and safety of seafarers is essential. Since the maritime work is physically demanding and requires long hours, it is vital to create guidelines to safeguard the wellness of crew members. The maritime sector has long understood how weariness impairs sailors' performance and attentiveness, endangering overall safety on board. In the past, the sector has often struggled with lengthy work hours and erratic schedules, which has resulted in accidents connected to fatigue and decreased productivity among seafarers. International marine organizations have therefore developed policies and agreements to tackle these issues, stressing the significance of enforcing required work and rest hours.

The research study on work and rest hours for crew members on container ships is crucial, given the unique pressures these vessels face in transporting perishable goods. Container ships are among the fastest cargo ships, essential to ensuring that items such as fresh produce, pharmaceuticals, and other time-sensitive goods reach their destinations in optimal condition. This urgency places immense demands on both the ship and its crew, as any delays can lead to significant financial losses and wasted resources due to spoilage. Effective management of crew work and rest hours is therefore, essential to maintaining the high operational standards required for these fast-paced journeys. Fatigue is a well-documented risk factor that dramatically increases the likelihood of human errors, which can lead to accidents, mechanical failures, and unanticipated delays. A well-rested crew, on the other hand, is more alert, capable, and better equipped to handle the demands of their roles, ensuring the ship can maintain its schedule and deliver its cargo promptly. This study was focused on analyzing the factors and challenges associated with the implementation of mandatory hours of work and rest policies onboard container ships, which are crucial for ensuring the safety, well-being and efficient functioning of seafarers and maritime operations. It is in this context that this research sought to dig into the perceptions and rightful observance in the implementation of the mandatory work and rest hours with reference to MLC 2006 and safeguard the working conditions and welfare of the seafarers for them to remain productive and efficient in their chosen field. It is therefore logical to investigate the working conditions and welfare of the seafarers on board container ships and ensure that the same serves the purpose.

Research Questions

This study was primarily focused on analyzing the factors and challenges in the implementation of mandatory hours of work and rest onboard containers ships. Specifically, this research study sought answers to the following questions:

1. What is the demographic profile of the respondents in terms of:
   a. Age
   b. Rank/Position on Board
   c. License Acquired
   d. Length of Sea Service
   e. Length of Sea service on Container ships
2. How is the mandatory hours of work and rest onboard container ships implemented?
3. What are the factors affecting the implementation of hours of work and rest in accordance to MLC 2006?
4. Is there a significant relationship in the seafarers' responses on the factors affecting the implementation of mandatory hours of work and rest when grouped according to profile?
5. What are the challenges in the implementation of the mandatory hours of work and rest of the Maritime Labour Convention 2006?
6. Is there a significant relationship in the seafarers' responses on the challenges in the implementation of the hours of work and rest of the MLC, 2006 when grouped according to management, operational and support levels?
7. Based on the result of the study, what can be recommended to improve the implementation of the mandatory hours of work and rest of the Maritime Labour Convention (MLC), 2006?

METHODOLOGY

Research Design

The study employed both quantitative and qualitative-descriptive methods, leveraging the strengths of each to comprehensively address its objectives. Data collection involved administering surveys through questionnaires and conducting semi-structured interviews. The survey questionnaire was designed to be user-friendly and concise, requiring no more than 10 minutes to complete. This research necessitated open and reflexive engagement to gather in-depth perspectives. Consequently, the researcher conducted semi-structured interviews with selected management level officers aboard container ships. The study focused on several key variables: the implementation of hours of work and rest on container ships, factors influencing this implementation, and the challenges encountered in the process.

Sampling Method Used

The primary respondents of the study were the Filipino seafarers who worked on international containers ships for at least 2 years and on vacation during the period of January to March 2024. A non-random sampling technique was used to select the respondents. The sample were classified as purposive as the researcher sough only those seafarers who were on vacation during data gathering and willing to participate in the study. A total of 165 seafarers working in container vessels participated in the survey and 25 of them participated in the semi-structured interview. The number of respondents that were included in the target demographic sample were seafarers from container ships who were available during the data gathering.

Instrumentation

The self – made survey questionnaire was the primary data-gathering tool. The instrument was consisted of four (4) parts namely. Part 1 consists of Personal Information/Demographic Profile of the Respondents in terms of: Age, Position/Designation, License, Nationality, Educational Attainment, Length of Sea Service, and Length of Sea service on Container ships; Part 2 – Implementation of the mandatory hours of work and rest onboard container ships, Part 3 – Factors Affecting the mandatory work hours and hours of work in the MLC 2006 namely: General Information, Conditions of Employment, MLC 2006 Regulation 2.3, Code Standard A2.3 and Guideline B2.3; and Part 4 – Challenges encountered in the mandatory implementation of the mandatory work hours and rest hours of the officers and crew on board container ships. Cronbach Alpha technique was used to validate the contents of the survey questionnaire. Survey questionnaire was validated with the assistance of statistician while the semi-structured interview was validated by the research adviser. The survey questionnaire designed for the seafarers has the following parts: Implementation of Mandatory Hours of Work and Rest with 16 items (α = .757), Factors Affecting Implementation of Hours of Work and Rest with 10 items (α = .716), and Challenges in the Implementation of Hours of Work and Rest with 10 items (α = .870). Table 1 describes the internal consistency for the computed Cronbach's alpha for each part.

Table 1
Cronbach's Alpha Interpretation

Cronbach's Alpha	Internal consistency
$0.9 \leq \alpha$	Excellent
$0.8 \leq \alpha < 0.9$	Good
$0.7 \leq \alpha < 0.8$	Acceptable
$0.6 \leq \alpha < 0.7$	Questionable
$0.5 \leq \alpha < 0.6$	Poor
$\alpha < 0.5$	Unacceptable

Data Gathering Procedures

Before using the survey questionnaire, the researcher sought validation of its content with the assistance of experts through the adviser. The said instrument was pre-tested to a group of ten (10) seafarers, who are also connected in the seafaring industry with a minimum of two (2) years working on container ships but were excluded as respondents of the study. The researcher obtained the necessary permission to conduct the survey from the management of the shipping company involved in the study. This step was essential to ensure that the study complied with all regulatory and ethical standards. The shipping company operates a fleet of 38 container ships, providing a substantial base of operations for the survey. To collect data, the researcher employed purposive sampling, a method chosen for its effectiveness in targeting specific, relevant populations. A total of 200 questionnaires were distributed to crew members and management, yielding 165 responses. This achieved an impressive 82.5% retrieval rate, indicative of robust participant engagement and effort by the researcher. It was important for the integrity of the study that each of the 38 container ships was represented, ensuring comprehensive data coverage across the company's operations. To collect this data, significant efforts were made to ensure the highest possible response rate. The researcher established multiple channels of communication, followed up with potential respondents, and provided clarifying information as needed to guarantee thorough participation. In addition to the survey, semi-structured interviews were conducted to 25 selected management-level officers. Selection criteria were based on availability and willingness to engage in open, candid discussions about the implementation of hours of work and rest on their respective ships. These interviews provided invaluable qualitative data, enriching the overall findings of the study. Each interview was meticulously planned to draw out detailed and relevant information regarding implementation of work and rest schedules.

Data Analysis

The questionnaires were retrieved online, tabulated and tallied though the assistance of the statistician, which were then analyzed and interpreted. To characterize and describe the demographic profiles of the respondents in terms of age, position on board, license, length of sea service and length of sea service on container ships, the frequency count, percentage distribution and average mean were used. Weighted mean was employed in describing the perspectives of the respondents on the different factors affecting the implementation of the work and rest hours on board container ships. Finally, the obtained Weighted Means were treated using the arbitrary 4-Point Likert scale, as follows.

Rating	Scale	Verbal Interpretation
4	3.25 – 4.00	Strongly Agree
3	2.50 – 3.24	Agree
2	1.75 – 2.49	Disagree
1	1.00 – 1.74	Strongly Disagree

To analyze and examine the significant relationship about the perspectives of the informants on the implementation of the mandatory work and rest hours, when grouped according to age, position on board, license, length of sea service and length of sea service on container ships, the study made use of the Pearson Correlation coefficient, particularly in the interpretation of data, as follows:

Table 2
Guidelines for Interpreting Pearson Correlation Coefficient (r)

Guidelines for Interpreting Pearson Correlation Coefficient (r)

Strength of Relationship Between Variables	Positive	Negative
Weak	.10 to .29	-.10 to -.29
Moderate	.30 to .49	-.30 to -.49
Strong	.50 to 1.00	-.50 to -1.00

RESULTS

There were 165 respondents in this study. They are all Filipino seafarers on board container ships with a minimum of 2 years of experience. Table 3 presents the profiles of the respondents according to age. As seen from the table, 43 out of the 165 of the respondents, which is 26.06 % of the total respondents, belong to the age bracket of 26-30. On the other hand, 35 or 21.21% of the respondents belong to the age bracket of 36-40. This is followed by 34 or 20.61% belonging to the age bracket of 31-35 years old. The least number of the respondents belong to the age bracket of 56-60 which has 2 or 1.21% of the total respondents. Majority of the respondents belong to ages 26 – 30 years old. This is contrary to the study of Pauksztat, et. al. (2021) that the average age of the seafarers is 40 years old. However, the minimum age requirement of the seafarers had been complied as per MLC 2006, Regulation 1.1 which is not less than 18 years of age in this research study.

Table 3
Respondent's Age

AGE	f	%
21-25	6	3.64%
26-30	43	26.06%
31-35	34	20.61%
36-40	35	21.21%
41-45	16	9.70%
46-50	24	14.55%
51-55	5	3.03%
56-60	2	1.21%

n	165	100.00%

Table 4 presents the profile of the respondents in terms of rank or position on board container ships. As seen from the table, 26 or 15.76% of the respondents are able-bodied seamen (AB), which belong to the support level. This is followed by 3rd officers with 12 or 7.27% of the participants belong to the operational level. This is followed by Bosun with 11 or 6.67% of the respondents, which is on the support level. The least number of the respondents belong to the Steward department, which has only one (1) participant or 0.61% of the total number of respondents. This means that majority of the seafarers on board container ships are able-bodied seamen. According to the information published by Liveseas in 2024, the maritime industry is an intricate network of operations, and at the heart of these operations lie the tireless Able Seamen (AB). These individuals form the backbone of most deck crews, ensuring that our ships sail smoothly and safely across the seven seas. This comprehensive overview unravels the various facets of the Able Seaman role, shedding light on their responsibilities, challenges, and the overall career path. The role of an Able Seaman (AB) is both versatile and integral. The AB is the all-rounder of the ship's crew, adept at a range of tasks that ensure smooth operations at sea. Their responsibilities extend from the deck to the bridge, alternating every fortnight, making their role dynamic and indispensable. Hence, more ABs are needed on board ships. Moreover, the ratings or those under the support levels are the most affected group in the observance of hours of work and rest since they are the ones doing the leg works and related jobs. This was confirmed in the unstructured interview with the respondents.

Table 4
Rank/Position Onboard

RANK/ POSITION ONBOARD	f	%
Management Level		
Master	8	4.85%
Chief Officer	7	4.24%
Chief Engineer	5	3.03%
2nd Engineer	5	3.03%
Operational Level		
2nd Officer	9	5.45%
3rd Officer	12	7.27%
3rd Engineer	6	3.64%
4th Engineer	4	2.42%
Electro-Technical Officer	5	3.03%
Support Level		
Deck Ratings		
Bosun	11	6.67%

Able-Bodied Seaman	26	15.76%
Ordinary Seaman	19	11.52%
Engine Ratings		
Wiper/Motorman	9	5.45%
Oiler	20	12.12%
Fitter	2	1.21%
Ratings		
Chief Cook	10	6.06%
Messman	6	3.64%
Steward	1	0.61%
n	165	100.00%

Table 5 presents the profile of the respondents in terms of licenses acquired. They were further classified into management, operational and support levels accordingly. As seen from the table, 35 or 21.21% of the participants did not specify their licenses acquired. This is followed by those who are complied with Regulation II-5 (Deck) with 27 or 16.36% of the total respondents. This means that they had been certified to follow the minimum requirements of having been trained as deck officer prior to boarding ships or boarded ships with 500 gross tonnage and above as minimum requirements. Next to the highest number of respondents are with Officer-in-Charge (OIC)-Navigational Watch (Deck) License with 22 or 13.33% of the total number of respondents The least number of licenses from the participants are Registered Master Electrician and Electrical Engineer, which both have 1 or 0.61% of the total number of respondents. There were 35 or 21.21% of the respondents have either no license or did not specify at all. These licenses are major considerations in relations their employment conditions regarding the positions, designations and responsibilities attributed to the seafarers. This is also an important factor in the determination of their financial remunerations and related benefits to their employment contracts. Moreover, all these information could be referred to the standard terms and conditions governing the employment of Filipino seafarers on-board Ocean-going vessels. This was also confirmed in the unstructured interview with the respondents.

Table 5
Licenses Acquired

LICENSE ACQUIRED	f	%

n	165	100.00%

Table 6 presents the profile of the respondents in terms of length of sea Service in years. As seen from the table, 8 or 41.21% of the respondents belong to the group of those with 6-10 years of experience on board. This is followed by those who belong to 1-5 years of experience with 48 or 28.48% of the total number of respondents. Twenty-eight (28) or 16.97% belong to those with 11-15 years of shipboard experience. Only two (2) or 1.21% of the participants have one (1) or less number of years of experience at sea. This can be aligned with the BIMCO (2021) which states that the demographic profile for STCW-certified ratings shows that while 75% of Indian seafarers are aged between 21 and 40, significant proportions of Ukrainian, Chinese, and Filipino seafarers fall within the 51-60 age bracket. Data for management level officers (master, chief officer, chief engineer, second engineer), operational level officers, and support level ratings shows ages have all increased in 2015. The International Chamber of Shipping's most recent Seafarer Workforce Report (ICS, 2021) confirmed and found the following distinctions between seafarer age profiles and nationality: Largest proportion of officers aged between 21 and 30 are Indians, Largest proportion between 31 and 40 are Chinese, Most Filipino officers are aged over 41, Almost a quarter of Russian officers are over 50 years of age.

Table 6
Length of Sea Service

NO. OF YEARS IN SEA SERVICE	f	%
< 1	2	1.21%
1-5	47	28.48%
6-10	68	41.21%

11-15	28	16.97%
16-20	10	6.06%
21-25	4	2.42%
26-30	6	3.64%
n	165	100.00%

Table 7 presents the length of sea service of the respondents on container ships. Majority of the seafarers on board container ships are within 6 -10 years on board. It could be gleaned from the table that 69 or 41.82% of the respondents belong to those with 6-10 years of experience on container ships. This is followed by those with 1-5 years of experience on board container ships with 49 or 29.7% of the total number of respondents. While 29 or 17.58% of the respondents are with 11-15 years of sea service on container ships. The least number of sea experience onboard container ships belong to those with 21-25 years sea service with only 1 or 0.61% of the total respondents.

Table 7
Length of Sea Service on Container Ships

LENGTH OF SEA SERVICE	f	%
< 1	13	7.88%
1-5	49	29.7%
6-10	69	41.82%
11-15	29	17.58%

21-25	1	0.61%
n	165	100%

Interview Respondents Profile

Table 8 presents the profile of the interview respondents in terms of position, and all are management level officers. They were purposively chosen by the researcher since they are the most senior in terms of length of service and had vast experiences on ships, specifically on-board container ships. As seen from the table, eight (8) or 32.0% are masters followed by seven (7) Chief Officers or 28.0% of the total number of respondents. Both the Chief Engineer and the Second Engineers got five (5) each or 0.20% of the total respondents.

Table 8
Interview Respondents Profile

Interviewee	f	%

Master	8	32.0%
Chief Officer	7	28.0%
Chief Engineer	5	20.0%
2nd Engineer	5	20.0%
Total	25	100%

DISCUSSION

Table 9 presents the status of the implementation of the mandatory hours of work and rest on board container ships. As seen from the table, the respondents strongly disagree on the item on a table of shipboard working arrangements of rest hours and work hours are in the international working language in English (item no.1) which means that it is fully implemented. The rest of the items (items no. 2-12) belong to the group where the respondents agree, which means that those are being implemented and observed. To wit: the maximum hours of work or minimum hour of rest are also included in the table of shipboard working arrangement; enough time for meals is provided to the crew, e.g. 1 hour for main meals; additional measures or initiatives onboard by the Master, Chief Officer and Chief Engineer to promote the well-being and work-life balance of seafarers; the master exercise his overriding authority to suspend the work schedule in the event of emergency where the safety of the ship and crew are in danger; musters and all drills take place with minimal disturbance to periods of rest; normal working hours are based on an eight-hour day with one day rest per week; Working and rest hours are recorded on board, and each crew member receives a copy; records are being checked and observed by Chief Officer and Chief Engineer to ensure effective compliance with MLC 2006 regulations; the ship's flag registry verifies that the ship is in compliance to work hours and rest hours period of the crew under the regulations of MLC 2006 regulation A 2.3 and B 2.3.1 and the Planned Schedule at sea is being observed and followed in accordance with shipboard working arrangements under the MLC 2006 regulation. The respondents disagree on the item on the Planned Schedule at ports is being observed and followed in accordance with shipboard working arrangements under the MLC 2006 regulations. The items (number 13-15): a 30-minutes break every after two (2) hours of work onboard the ship is allowed, the ship flag registry under which the ships operate provide maximum allowable work hours and sufficient rest hours period under MLC 2006 regulations and the crew work more than 72 hours at any seven-day period are all rated by the respondents and agreed upon as being implemented and observed on board container ships. However, the respondents strongly disagree on the item on the crew works more than 14 hours in any 24-hour period was described by the respondents as not being implemented and observed. Majority of the items were agreed by the respondents as being implemented. However, this also means that there were crucial

items on the mandatory implementation of hours of work and rest in container ships noted and need some attention. This was supported by Graham and Walters (2020) who had stressed that the seafarer's bill of rights provides a firm but flexible response to poor working conditions in global shipping. Hence, the MLC 2006 and STCW required conditions are strictly adhered to and how the standards are to be met. This is to ensure that seafarers have adequate work and rest periods for them to be more productive and for them to enjoy their work on board. Similarly, the work of Bhatia (2019) claimed that there is an imbalance of the workloads and manning levels on ships. Moreover, companies send report for them to disregard any appeal from the seafarers to address a lack of manning on board. Finally, the respondents report that the maritime industry lacked commitment to deal with fatigue which is a vital consideration for the working conditions of the seafarers" productivity and well-being of the seafarers.

Table 9
Implementation of Mandatory Hours of Work and Rest Onboard Container Ships

INDICATORS	MEAN	VI
1. A table of shipboard working arrangements of rest hours and work hours are in the international working language in English.	3.68	Strongly Agree
2. Maximum hours of work or minimum hour of rest are also included in the table of shipboard working arrangement.	3.22	Agree
3. Enough time for meals is provided to the crew, e.g. 1 hour for main meals.	3.21	Agree
4. Additional measures or initiatives onboard by the Master, Chief Officer and Chief Engineer to promote the well-being and work-life balance of seafarers.	3.20	Agree
5. The master exercise his overriding authority to suspend the work schedule in the event of emergency where the safety of the ship and crew are in danger.	3.19	Agree
6. Musters and all drills take place with minimal disturbance to periods of rest.	3.04	Agree
7. Normal working hours are based on an eight-hour day with one day rest per week.	2.63	Agree
8. Working and rest hours are recorded on board, and each crew member receives a copy.	2.58	Agree
9. Records are being checked and observed (Observance and Implementation) by Chief Officer and Chief Engineer to ensure effective compliance with MLC 2006 regulations.	2.57	Agree
10. The ship's flag registry verifies that the ship is in compliance to work hours and rest hours period of the	2.55	Agree

crew under the regulations of MLC 2006 regulation A 2.3 and B 2.3.1(Monitoring)		
11. The Planned Schedule at sea is being observed and followed in accordance with shipboard working arrangements under the MLC 2006 regulations.	2.53	Agree
12. The Planned Schedule at ports is being observed and followed in accordance with shipboard working arrangements under the MLC 2006 regulations.	2.53	Agree
13. A 30-minute break every after 2 hours of work on board the ship is allowed.	2.48	Disagree
14. The crew work more than 72 hours in any seven-day period.	1.81	Disagree
15. The crew work more than 14 hours in any 24-hour period.	1.65	Strongly Disagree
OVERALL MEAN	2.68	Agree

Legend: 3.25 – 4.00 — Strongly Agree; 2.50 – 3.24 — Agree; 1.75 – 2.49 — Disagree. 1.00 – 1.74 —Strongly Disagree; VI – Verbal Interpretation

Table 10 presents the factors affecting the implementation of hours of work and rest periods according to the perspectives of the seafarer respondents. All the items (no. 1-6) were rated and described by the respondents as Strongly Agree. To wit: Adverse weather conditions, rough seas, or situations requiring extra attention and effort; Ships stay one day at port and after completion of loading and discharge of cargoes operations in port.; Unpredictable port operations, delays, and extended waiting time for berthing; Tight voyage schedules and time constraints; Business Pressures (these are commercial pressures to meet delivery deadlines, maximize efficiency, and reduce costs may prioritize work completion over crew rest requirements) and Insufficient crew members. On the other hand, Items 7 and 8 on the ship Design and Technology: Inadequate accommodation facilities, noise levels, vibration, and ergonomic factors and Poor communication between the crew and shore-based management were rated by the respondents as Agree. The items no. 9 and 10 on rest period of crew are strictly observed and the extent to which ship's flag registry effectively monitor and enforce the implementation of work and rest hours onboard the ship was rated by the respondents as Disagree. The respondents Agree on majority of the items. This means that the respondents generally agreed to the items on the factors affecting the implementation of hours of work and rest in accordance with MLC 2006. Medani (2024), stated that a seafarer also has a right to safe working and living conditions. The ILO's Convention and Protocol establish minimum labour standards for seafarers on merchant vessels. Significantly, it introduced the initiative of port state control in ensuring compliance with these standards; a concept which is duplicated in Regulation is particularly important to seafarers as it requires flag states to guarantee their vessels meet safety standards,

satisfy conditions of employment on these vessels and further that these vessels comply with ILO standards while mandating port states to verify compliance through inspection methods. The minimum requirement for seafarers to work on a ship are summarized into four parts, which are age requirements, medical prerequisites, training and recruitment/placement services. It states that seafarers must be medically fit, with a certificate issued by an approved doctor for duties that they will be assigned onboard as per STCW. As per the medical standards of MLC 2006, most of the ratified countries are providing a medical certificate with an average validity of 2 years. As all concerned are cognizant of the fact that the STCW regulations and medical standards specified within for seafarers are the same anywhere in the world, yet the medical issued by one nation is not accepted by another nation or company when a seafarer is switching companies, but still holds a valid MLC ratified country's medical certificate. For example, a medical certificate issued to an Indian seafarer in Malaysia as per STCW regulations is not accepted while joining another shipping company in the UAE, whose recruitment placement service provider in India needs an Indian directorate general of shipping approved medical certificate to be uploaded in the DGS website. When all the regulations can be traced back to IMO & ILO, and regulation applies to seafarers are same for all, irrespective of the geographic location of the seafarer, why is it that a seafarer must undergo medical, just because of proper lack of implementation and lack of countries trust on each other's administration. Many seafarers have undergone this situation, but as there is no way around it, seafarers must follow the rules. To encounter this predicament, it must consider creating an international format and recognition of doctors and clinics internationally to carry out medical examination for seafarers, which would be valid and acceptable worldwide within the prescribed validity period. This will at the least tackle one of the predicaments confronted by the seafaring community. This is also a logical consideration on the conduct of the study about the implementation of the mandatory hours of work and rest on board container ships.

Table 10
Factors Affecting the Implementation of Hours of Work and Rest

FACTORS	MEAN	VI
1. Adverse weather conditions, rough seas, or situations requiring extra attention and effort	3.57	Strongly Agree
2. Ships stay one day at port and after completion of loading and discharge of cargoes operations in port.	3.55	Strongly Agree
3. Unpredictable port operations, delays, and extended waiting time for berthing	3.48	Strongly Agree
4. Tight voyage schedules and time constraints	3.45	Strongly Agree
5. Business Pressures (these are commercial pressures to meet delivery deadlines, maximize efficiency, and reduce costs may	3.35	Strongly Agree

prioritize work completion over crew rest requirements)		
6. Insufficient crew members	3.28	Strongly Agree
7. Ship Design and Technology: Inadequate accommodation facilities, noise levels, vibration, and ergonomic factors	3.05	Agree
8. Poor communication between the crew and shore-based management	2.93	Agree
9. Rest periods of crew are strictly observed and implemented as per schedule.	2.47	Disagree
10. The extent to which ship's flag registry effectively monitor and enforce the implementation of work and rest hours onboard the ship.	2.45	Disagree
OVERALL MEAN	3.16	Agree

Legend:
3.25 – 4.00 — Strongly Agree; 2.50 – 3.24 — Agree; 1.75 – 2.49 — Disagree; 1.00 – 1.74 —Strongly Disagree; VI – Verbal Interpretation

The results presented in Table 11 reveal some correlation between the factors affecting the implementation of mandatory hours of work and rest, particularly when grouped by respondents' profile characteristics. When examining the respondents' age, a statistically significant weak, negative correlation emerged ($r = -.175$, $p = .025$). This suggests that as age increases, there is a tendency for a slight decrease in the perceived impact of these factors on the implementation of mandatory hours of work and rest. Secondly, when considering the respondents' position onboard, a similar weak, negative correlation was observed ($r = -.228$, $p = .003$). This implies that individuals in different positions onboard exhibit varying perspectives of the influence of these factors, with a slight decrease in correlation as the position onboard changes. Furthermore, the length of sea service also demonstrated a statistically significant weak, negative correlation ($r = -.241$, $p = .002$). This implies that individuals with different lengths of sea service hold distinct perspectives on the factors affecting the implementation of mandatory hours of work and rest, with a minor decline in correlation as the length of sea service increases. In contrast, no statistically significant relationship was found between these factors and the respondents' length of sea service onboard container ships ($r = -.133$, $p = .089$), suggesting that this specific variable may not strongly influence perspectives regarding mandatory hours of work and rest in the context of container ships.

Table 12 presents the challenges in the implementation of the mandatory hours of work and rest onboard container ships. As seen from the table, the respondents Strongly Agree on all the items 1-7 as follows: Operational demands that require to work beyond the prescribed hours; Heavy workload at port activities and tight schedules between ports; Multiple responsibilities, which can make it challenging to track and limit the working hours effectively; Work and rest hours data recording and documentation errors; Insufficient communication or consultation with the ship's management; Inadequate staffing levels or poorly planned crew rotations and Unforeseen circumstances disrupting scheduled work and rest periods. However, the item on unbalanced distribution of workload among the crew members (No. 8), the respondents Agree. On the other hand, the items on cultural norms or social expectations that encourage longer working hours and Inadequate onboard accommodations, such as cramped or uncomfortable living quarters, that leads to lack of enough rest, where the respondents Disagree. This means that the last 2 items described have not been regarded by the respondents as a challenge in the mandatory implementation of the hours of work and rest as per regulation of MLC 2006. Majority of

the items on the Challenges in the Implementation of the Mandatory Hours of Work and Rest of the MLC 2006 had been agreed by the respondents, except on the noted items which the respondents disagree such as cultural norms or social expectations that encourage longer working hours and inadequate onboard accommodations, such as cramped or uncomfortable living quarters, that leads to lack of enough rest. As a result, the following are the identified challenges as a result of the study: 1. Operational demands that require to work beyond the prescribed hours, 2. Heavy workload at port activities and tight schedules between ports, 3. Multiple responsibilities, which can make it challenging to track and limit the working hours effectively, 4. Work and rest hours data recording and documentation error, 5. Insufficient communication or consultation with the ship's management, 6. Inadequate staffing levels or poorly planned crew rotations, and 7. Unforeseen circumstances disrupting scheduled work and rest periods. All these items were confirmed by the respondents in the semi-structured interview.

Table 12
Challenges in the Implementation of the Mandatory Hours of Work and Rest

CHALLENGES	MEAN	VI
1. Operational demands that require to work beyond the prescribed hours	3.40	Strongly Agree
2. Heavy workload at port activities and tight schedules between ports	3.38	Strongly Agree
3. Multiple responsibilities, which can make it challenging to track and limit the working hours effectively	3.36	Strongly Agree
4. Work and rest hours data recording and documentation errors	3.32	Strongly Agree
5. Insufficient communication or consultation with the ship's management	3.28	Strongly Agree
6. Inadequate staffing levels or poorly planned crew rotations	3.26	Strongly Agree
7. Unforeseen circumstances disrupting scheduled work and rest periods	3.25	Strongly Agree
8. Unbalanced distribution of workload among the crew members	3.19	Agree
9. Cultural norms or social expectations that encourage longer working hours	2.28	Disagree
10. Inadequate onboard accommodations, such as cramped or uncomfortable living quarters, that leads to lack of enough rest	2.20	Disagree
OVERALL MEAN	3.09	Agree

Legend: 3.25 – 4.00 — Strongly Agree; 2.50 – 3.24 — Agree; 1.75 – 2.49 — Disagree. 1.00 – 1.74 —Strongly Disagree; VI – Verbal Interpretation

Table 13 shows some existing correlations concerning the challenges encountered in the implementation of mandatory hours of work and rest, particularly when grouped according to the respondents' profile characteristics. As for the respondents' position onboard, a statistically significant weak, negative correlation was identified (r = -.238, p = .002). This suggests that individuals in different roles onboard exhibit varying degrees of correlation with the challenges in implementing mandatory hours of work and rest, indicating a potential impact of position-related factors on the perceived difficulties. Similarly, the License Acquired yielded significantly weak, with negative correlation (r = -.159, p = .077). This suggests that the various licenses of each of the seafarers exhibits different degrees of correlation with the challenges in implementing mandatory hours of work and rest, which may mean a negative relation on the perceived challenges in the implementation of the mandatory hours of work and rest on board container ships. Moreover, the length of sea service displayed a statistically significant weak, negative correlation (r = -.271, p < .001). This implies that respondents with diverse lengths of sea service experience distinct levels of correlation with the challenges in implementing mandatory hours of work and rest, with a more pronounced decrease in correlation as the length of sea service increases. Lastly, when focusing on the length of sea service onboard container ships, a statistically significant weak, negative correlation was observed (r = -.167, p = .032). This suggests that individuals with varying lengths of sea service on container ships may perceive different degrees of correlation with the challenges, demonstrating a potential influence of vessel type on these perspectives. However, there was no statistically significant relationship found between these challenges and the respondents' age (r = -.144, p = .066), indicating that age might not be a substantial influencing factor in the perceived challenges associated with implementing mandatory hours of work and rest.

Table 13
Correlation Analysis of Profile with the Challenges in the Implementation of the Mandatory Hours of Work and Rest

PROFILE		
1. Age:	Correlation Coefficient	-.144

Result of the Interview

Table 14
Knowledge and understanding of MLC 2006

Questions:	Category/Theme
Q1: Are you provided with a detailed work schedule that clearly outlines your hours of work and rest periods as per MLC 2006 regulations regarding mandatory hours of work and rest onboard container ships? (Yes /No) Q2: Have you received on board familiarization training or information on MLC 2006 regulations, pertaining to rest hours and works hours on board (Yes/No) Q3: Do you understand the requirements of mandatory rest hours and works hours on board the vessel under MLC 2006 regulations? (Yes/No)	Schedule of work and rest Familiarization training Understanding of the requirements
Summary of Responses: The responses are unanimously affirmative for all the questions. This means that the seafarers are provided with a detailed work schedule of hours of work and rest, had done familiarization training, and had adequate understanding on the implementation of the mandatory hours of work and rest on board container ships.	

Table 15
Implementation of Mandatory Hours of Work and Rest

Questions:	Category/Theme
Q4: Are the mandatory hours of work and rest consistently followed on board container ships? (Yes/No) Q5: How often, if any, have you observed instances where the mandatory hours of work and rest were not followed? (4 - Frequently; 3 – Occasionally; 2 – Rarely; 1 – Never) Q6: Are there specific roles or tasks on board that require working beyond the prescribed hours of work and rest?	Consistently followed. Observation Specific roles beyond prescribed
Summary of Responses: *1.* The question on consistently followed was answered No. This means that there are cases that some of the schedules are not followed due to unavoidable circumstances beyond control. *2.* This also applies to the idea that as per observation there are instances that there are instances that occasionally, hours of work and rest are not followed. *3.* Lastly, it was confirmed that there are specific roles or tasks that require working beyond hours of work and rest on board container ships.	

Table 16

Factors Affecting Implementation

Question:	Category/Theme
Q3: What are the factors affecting the implementation of the mandatory work hours and rest on board container ships?	
Summary of Responses: (These factors are identified by the respondents in the interview and were ranked accordingly). 1. Insufficient communication or consultation with the ship's management	Communication gap

2. Multiple responsibilities, which can make it challenging to track and limit the working hours effectively. 3. Adverse weather conditions, rough seas or situations requiring extra attention and efforts. 4. Heavy workload at port activities and tight schedules between ports 5. Work and rest hours data recording and documentation errors. 6. Inadequate staffing levels or poorly planned crew rotations	Heavy work loads Adverse weather conditions Multi-tasking Recording errors Inadequate staff

Table 17
Challenges in the Implementation

Question:	Category/Theme
Q3: What are the challenges in the implementation of the mandatory work hours and rest on board container ships?	
Summary of Responses: (The following challenged were identified by the respondents) 1. Operational demands that require to work beyond the prescribed hours. 2. Heavy workload at port activities and tight schedules between ports 3. Multiple responsibilities, which can make it challenging to track and limit the working hours effectively. 4. Unbalanced distribution of workload among the crew members 5. Inadequate onboard accommodations, such as cramped or uncomfortable living quarters, that leads to lack of enough rest.	Operational demands Heavy work loads Multi-tasking Unbalance distribution. Inadequate accommodation

Table 18
Recommendation to improve implementation.

Question:	Category/Theme
Q4: What measures to you think can be taken to improve the implementation of the mandatory work hours and rest on board container ships?	
Summary of Responses: 1. Additional crew for container ships 2. Charterers and ship owners to arrange a day rest of all officers and crew after each cargo port operation completion and proceed to anchorage. 3. Increase ship manning requirement for each flag state on the vessels. 4. Formulation of company policies to assure proper implementation of the mandatory hours of work and rest on container ships. 5. Ensure a backup system for duty rotation to allow crew members to take rest periods, especially during busy schedules or multiple port rotations.	Additional crew A day rest after operation Safe manning requirements New Company policy Backup system

Conclusions

Findings of the study revealed that as age increases, there is a tendency for a slight decrease in the perceived impact of the factors on the implementation of mandatory hours of work and rest. However, the position on board, license acquired, length of sea service and length of service on container ship have negative correlation with the different factors. The results also showed some existing correlations concerning the challenges encountered in the implementation of mandatory hours of work and rest, particularly when grouped according to the respondents' profile characteristics. Individuals in different roles onboard exhibit varying degrees of correlation with the challenges in implementing mandatory hours of work and rest, indicating a potential impact of position-related factors on the perceived difficulties. Various licenses of each of the seafarers exhibits different degrees of correlation with the challenges in implementing mandatory hours of work and rest, which may mean a negative relation on the perceived challenges in the implementation of the mandatory hours of work and rest on board container ships.

Moreover, the length of sea service displayed a statistically significant weak, negative correlation and the diverse lengths of sea service experience distinct levels of correlation with the challenges in implementing mandatory hours of work and rest, with a more pronounced decrease in correlation as the length of sea service increases. The length of sea service onboard container ships was found to be statistically significantly weak,

negative correlation was observed that individuals with varying lengths of sea service on container ships may perceive different degrees of correlation with the challenges, demonstrating a potential influence of vessel type on these perspectives.

However, there was no statistically significant relationship found between these challenges and the respondents' age which means that age might not be a substantial influencing factor in the perceived challenges associated with implementing mandatory hours of work and rest. The following were identified challenges as a result of the study: operational demands that require to work beyond the prescribed hours, heavy workload at port activities and tight schedules between ports, multiple responsibilities, which can make it challenging to track and limit the working hours effectively, work and rest hours data recording and documentation error, insufficient communication or consultation with the ship's management, Inadequate staffing levels or poorly planned crew rotations, and unforeseen circumstances disrupting scheduled work and rest periods.

Recommendations

The following are the recommended measures to improve the implementation of mandatory hours of work and rest on board containers ships: consider additional crew onboard to prevent working overload and fatigue, especially after cargo operations, with suggestion for at least one day of rest at anchorage, implement careful planning and management by officers, including proper to anticipate workloads and rest requirements, including proper record-keeping of work and rest hours, ensure a backup system for duty rotation to allow crew members to take rest periods, especially during busy schedules or multiple port rotations, review, amend and adopt policies related to crew working hours and rest periods under the Maritime Labour Convention 2006 to address specific challenges faced by the container ships, arrange hotel accommodations for crew during port operations, allowing at least 24 hours of rest ashore and provide additional compensation for overtime work and ensure sufficient crew on board older ships for adequate maintenance during passages and port activities, possibly by arranging rider ship maintenance and repair personnel.

Compliance with Ethical Standards

Given the nature of this study, there are certain ethical declarations that were considered. All respondents were treated with respect and courtesy. The research was conducted using an informed consent, in which all participants were advised about the study's purpose and procedures and consent to record the interview was obtained. The responses of the respondents were treated with confidentiality. When the results are published, no information will be linked to any individual, vessel, or shipping company to assure anonymity of the respondents. Privacy were protected as only those people linked to this research project have access to the collected data. Related literatures and studies were properly cited and reference list to prevent plagiarism.

Acknowledgments

The researcher would like to offer this piece of work to Almighty God, above all, for His wisdom, and the provision of courage, which have enabled him to pursue this study. He is also indebted to the Philippine Merchant Marine Academy Graduate School under the leadership of Dean Ma. Nissa C. Espiritu MSc and CDR Victoria Q. Paraggua, PhD., together with the other members of the faculty and staff for their motivation. The researcher would like to thank his adviser, Prof. Loren Mae Niquita, PhD; to the members of the oral defense panel: Chairman, Dr. Victoria Q. Paragua, and members: Capt. Vincent Brian P. Conde, Jr. and Capt. Neopol L. Salvador, PhD for their untiring and excellent advises and support for the betterment of this research study; also, to Hon. Atty. Panos Zalachoris and Mr Nikolaos Savvas Owner of Shipping company he works for the opportunity afforded him to conduct the study. To his beloved beautiful wife Miliza M. Castro, and sons Gimil and Gerson, for the moral support and understanding while doing the research study and who served as his inspiration to move on. Lastly, to his Adviser Prof. Loren Mae M. Naquita, PhD, and friends, to them the researcher will forever be grateful.

IMPLEMENTATION OF TVET PROGRAM: INPUT TO ACTION PLAN TOWARDS ENHANCED PROGRAM IMPLEMENTATION

Rosacris A. Siena

Graduate School, Marinduque State University, Marinduque, Philippines

https://doi.org/10.5281/zenodo.11546309

ABSTRACT

This study assesses the implementation of Technical and Vocational Education and Training (TVET) programs from the viewpoints of trainers and trainees. Data was collected from 50 trainers and 367 trainees across 13 TESDA institutions using a 65-item questionnaire. The mean and thematic analysis were used to answer research questions, and an independent t-test with a 0.05 significance level was employed to evaluate the null hypothesis. The study found overall positive feedback on the implementation of Curriculum Design, Training Delivery, Training Facilities, and Trainers' Qualifications. However, perceptions varied on the degree of implementation of Tools, Equipment, and Materials, with trainers seeing it as "implemented" and trainees as "fully implemented." Challenges included limited industry engagement, insufficient resources, late material delivery, space constraints, and cost issues. Solutions proposed include industry collaboration, sharing of modules, establishing partnership with industry, utilizing multi-purpose spaces, and availing free online training.

Keywords: *Assessment of TVET programs, Curriculum Design, Training Delivery, Tools, Equipment, and Materials, Training Facilities, Trainers' Qualifications, Coping strategies and challenges*

INTRODUCTION

There is an increasing need for a competent workforce to adapt to new technology, foster innovation, and support economic development in today's fast-changing global

marketplace. Technical Vocational Education and Training or TVET programs are essential in preparing people with the knowledge and skills to satisfy these demands. These courses offer hands-on training applicable to the workplace, preparing students for various careers and improving their employment prospects.

The foundation of any country's economic and social progress is its knowledge and skills (Goel, 2010), and the development of the talented and creative workforce required for the rapidly evolving technology workforce depends heavily on Technical Vocational Education and Training (Afeti, 2010). TVET programs are essential for equipping Filipinos with the knowledge and abilities required to work in various industries. Students can improve their technical skills, trade competencies, and entrepreneurial aptitude through formal and informal education and training provided by the TVET system.

According to Morales (2019), the rising demand of the competitive labor market and the persistent problem of unemployment and underemployment have raised several TVET issues and concerns. Are graduates provided with quality education and training in preparation for their employment? Do the graduates possess the competencies that employers seek? Are program interventions and other support activities capable of increasing graduates' employability?

Nations such as South Korea, Taiwan, and Japan make significant investments in vocational education systems to tackle the issues caused by a lack of skilled labor (Tilak, 2003). Some nations have implemented strict quotas and admission exams to control university enrollment rates and promote TVET system enrollment. They have had faster industrial and economic growth due to a talented and dynamic middle-class workforce.

Through an empirical survey, Liu et al. (2015) found that China's vocational education policies must be implemented better. Vocational colleges and enterprises and other industry stakeholders should deeply participate in making vocational education policy, creating a social atmosphere to pay attention to vocational education, and strengthening propaganda of the implementation of occupation education policy.

As Philippine society values degrees and diplomas of higher education more than TVET, the latter is generally regarded as inferior education, and the community needs to fully realize the importance of TVET to the labor market. Besides, structural unemployment caused by mismatched supply and demand is found in the Philippine labor market. The qualification rate of TVET graduates reaches 88.0%, but their employment rate is still at a low rate of 60.9% (NTESDP, 2018). Graduates of TVET face a limited employment market, primarily caused by the poor quality of TVET and the irrelevance of school learning with enterprise work practices. One of the main issues is the low employability of Philippine TVET graduates, which is only 65% (NTESDP, 2018). TVET providers are frequently accused of offering and generating low-quality skills and technical education. This reality is reflected in the labor market, which is defined by a 70:30 ratio of low-value work to mid- to high-value work (NTESDP, 2018).

The implementation of TVET programs can be assessed by looking at the learning outcomes, getting input from participants and stakeholders, and conducting assessments to establish the program's overall success and pinpoint areas that need improvement. To ensure the success and relevance of the TVET program, it emphasizes the necessity for ongoing monitoring, review, and modification. It entails making the necessary alterations and enhancements to the program's structure, delivery strategy, and evaluation methodology using the feedback and information acquired during the evaluation phase (Odiorne, 1968).

The importance of evaluations from both trainers and trainees lies in their mutual accountability and the opportunity for continuous improvement. Both stakeholders have unique perspectives and insights to offer, contributing to a more holistic understanding of the training program's effectiveness. By actively involving both trainers and trainees in evaluations, the overall quality of the training experience can be enhanced, fostering a collaborative learning environment.

In an evaluation of the Strengthened Technical and Vocational Education Program-Competency Based Curriculum (STVEP-CBC) implementation in Region X, Northern Mindanao, Alfred et al. (2012) recommended that more frequent monitoring be done to ensure that the program is carried out effectively and efficiently. However, there are limited Philippine TVET program evaluations that can be found in the literature. In fact evaluation in TESDA Marinduque is very rare and no up to date evaluation of TVET program implementation is available. Hence, this study was conducted to provide input to an action plan towards enhanced program implementation in TESDA Marinduque.

Research Questions

The study aimed to determine the implementation of the TVET program as input to an action plan for enhanced program implementation.

Specifically, it looked for responses to the following queries:

1. What is the level of implementation of TVET Programs as assessed by the trainers and trainees in terms of?
    1.1 Curriculum Design;
    1.2 Training Delivery;
    1.3 Tools, Equipment, and Materials;
    1.4 Training Facilities; and
    1.5 Trainers' Qualifications
2. Is there any significant difference in the trainers' and trainees' assessments of the implementation of TVET programs?
3. What problems do the trainers and trainees encounter in the implementation of TVET programs?
4. What coping strategies do trainers use to address the challenges faced by themselves and their trainees during the implementation of TVET programs?

5. What strategies could be proposed to enhance program implementation as part of the action plan?

METHODOLOGY

Research Locale

The study was conducted in the province of Marinduque, specifically in the five municipalities (Boac, Mogpog, Sta. Cruz, Torrijos, and Gasan) where the TVET Institutions are located. It involved three TESDA Technology Institutions (TTIs) and 10 TESDA-Accredited Schools.

Research Population and Sample

The facts and data needed for the study were gathered from the trainers and trainees covered from January 2022 - June 2023 training period of three TESDA Technology Institutions (TTIs), namely the Buyabod School of Arts and Trade (BSAT), Torrijos Poblacion School of Arts and Trades (TPSAT) and Provincial Training Center (PTC) and 10 TESDA Accredited schools, such as the Marinduque Manpower and Trade Skills Institute, Inc. (MMTSI), Santa Cruz Institute (Marinduque), Inc. (SCI), Marinduque Technical Vocational Institute Inc. (MTVI), Marinduque Technical Training Center Inc. (MTTCI), AGREA Agricultural Communities International Foundation, Inc., DMDC Farm, Mogpog International Culinary School (MICS), and Regalia's Learning and Training Center, Inc. (RLTC), Agsikapin Technological Training Institute, Inc., and KALUPPA Foundation, Inc., in Marinduque were used as the respondents of the study.

Stratified Random Sampling is a method used in statistical research to ensure that the sample accurately represents the population by dividing the population into district subgroups or strata. Each stratum is then sampled independently using a random sampling technique. In the context of selecting trainees in TVET institutions, the proportionate and disproportionate stratification formulas {sample size/population size} (stratum size) were used to determine the number of trainees from each institution.

Respondents of the Study

The respondents of this study are trainers and trainees of the three TESDA Technology Institutions (TTIs) and 10 TESDA Accredited schools in the province of Marinduque.

Data Gathering Procedure

Before conducting the survey, the researcher sought permission from the schools involved. Before being distributed, the instrument is validated by various individuals knowledgeable about the execution of TVET programs in Marinduque. Data collection has been made possible through the assistance and participation of trainers from each

institution. At the start of the data-gathering process, the researcher outlined the study's purpose, objectives, and expected outcomes. Following this, respondents received a consent form detailing confidentiality measures and their rights. The data collection methods, including surveys and interviews, were explained, with a focus on confidentiality and privacy. Respondents were assured that data would be stored securely and used solely for research. Maintaining clear communication fosters trust and encourages participants to ask questions. Then, they were given questionnaires to complete at their convenience. After a week, the researcher collected the questionnaires from each institution, concluding this phase of the study.

The primary research tool used in the study is the personal self-made questionnaire which the researcher administered to the 13 TVET Institutions in Marinduque.

Research Instrument

The study used a series of questionnaires to collect pertinent data that would answer the study's challenge. A self-made questionnaire was utilized to collect the data required for the study's completion. The researcher sought approval from four specialists to validate the research instrument: Jezreel R. Ferrer-Assistant Professor II (BSAT), Norinel R. Pielago-Senior TESD Specialist (PTC-Marinduque), Olimpio Pacheco Jr. - Senior TESD Specialist (PTC-Marinduque), and Teresita A. Ferrer-Associate Professor IV (TPSAT) who are experts in the implementation of TVET programs.

First, the study determined the level of TVET program implementation regarding curriculum design, training delivery, tools, equipment, materials, training facilities, and trainer qualifications. The following Likert scale was used to assess the program implementation.

Table 1.

SCALE	RANGE	INTERPRETATION	DESCRIPTIVE RATING
4	3.51-4.00	Fully Implemented	100% implementation
3	2.51-3.50	Implemented	More than 50% implementation but not 100%
2	1.51-2.50	Moderately Implemented	Less that 50% implementation
1	1.00-1.50	Not Implemented	0% implementation

Second, the researcher identified the challenges faced by trainers and trainees in implementing TVET programs, along with the coping strategies employed by the trainers. The final draft incorporates the ideas and recommendations provided by the validators.

Statistical Treatment and Data Analysis

The following statistical procedures were used for data analysis: mean score, thematic analysis, and t-tests. The t-test compares trainers' and trainees' assessment in terms of TVET program implementation.

As a result, the data for SOP 1 on the level of implementation of TVET programs as assessed by trainers and trainees was measured using Mean. Meanwhile, for SOP 2 on the significant difference in trainers' and trainees' assessments of TVET program implementation, the t-test was used for the comparison.

Moreover, SOP 3 focused on the challenges experienced by trainers and trainees, while SOP 4 examined into the coping strategies employed by trainers to address the issues faced by both themselves and their trainees during the implementation of TVET Programs, utilizing thematic analysis.

Scope and Delimitation of the Study

This study evaluated the implementation of TVET Programs of three TTIs and 10 TESDA-Accredited schools in the province of Marinduque. The study focuses on the level of implementation of TVET programs in terms of curriculum design, training delivery, tools, materials, equipment, training facilities, and trainer qualifications.

Moreover, the problems that trainers and trainees encountered in implementing TVET programs and the coping strategies to address the issues are also discussed. The population involved herein are 50 trainers and 367 trainees during the training period of January 2022 to June 2023.

RESULTS

Table 2.

Level of TVET Programs' Implementation as Assessed by the Trainers and Trainees

No.	Indicators	Trainee			Trainer			Total		
		Mean	**SD**	**Description**	**Mean**	**SD**	**Description**	**Mean**	**SD**	**Description**
1	Curriculum Design	3.78	0.228	Fully Implemented	3.72	0.140	Fully Implemented	3.77	0.220	Fully Implemented
2	Training Delivery	3.65	0.322	Fully Implemented	3.57	0.268	Fully Implemented	3.64	0.317	Fully Implemented
3	Tools, Equipment and Materials	3.66	0.295	Fully Implemented	3.47	0.284	Implemented	3.63	0.300	Fully Implemented

4	Training Facilities	3.59	0.312	Fully Implemented	3.58	0.256	Fully Implemented	3.59	0.305	Fully Implemented
5	Trainer's Qualification	3.68	0.241	Fully Implemented	3.70	0.126	Fully Implemented	3.68	0.230	Fully Implemented
	Grand Mean	3.67	0.203	Fully Implemented	3.62	0.139	Fully Implemented	3.67	0.197	Fully Implemented

Legend: 1:00-1.50=Not Implemented (0% implementation); 1.51-2.50=moderately Implemented (Less than 50% implementation); 2.51-3.50=Implemented (More than 50% implementation but not 100%); 3.51-4.00=fully Implemented (100% implementation)

Table 3.
Significant Differences between the Implementation of TVET Programs as Assessed by the Trainers and Trainee Respondents

Curriculum Design	3.192	.075	Accept Ho	Not Significant
Training Delivery	2.606	.107	Accept Ho	Not Significant
Tools, Equipment, and Materials	17.731	.000	Reject Ho	Significant
Training Facilities	.043	.835	Accept Ho	Not Significant
Trainers' Qualification	.465	.496	Accept Ho	Not Significant
Implementation of TVET Programs	2.864	.091	Accept Ho	Not Significant

Table 4.
Problems Faced by Trainers and Trainees in TVET Program Implementation

Areas of Concern	Problems Encountered
1. Curriculum Design	• Lack of local industry and ineffective job placement support for the graduates
2. Training Delivery	• Limited selection of books and journals • Late delivery of training materials and supplies
3. Tools, Equipment, and Materials	• Availability and completeness of training tools, equipment, and materials.
4. Training Facilities	• Space limitations
5. Trainers' Qualification	• Low number of higher qualification holders • Cost/financial constraints

Table 5.
Coping Strategies used by trainers and trainees when faced with problems during TVET program implementation

Areas of Concern	Problems Encountered	COPING STRATEGIES
1. Curriculum Design	• Lack of local industry and ineffective job placement support for the graduates	• Collaborate with local industries to secure on-job-training placements for students. • Establish formal agreements or memorandums of understanding (MOUs) that outline the terms and expectations for the OJT program.
2. Training Delivery	• Limited selection of books and journals • Late delivery of training materials and supplies	• Sharing of modules • Display training materials visually using PowerPoint presentation • Conduct a thorough inventory strictly and regularly.
3. Tools, Equipment, and Materials	• Availability and completeness of training tools, equipment, and materials.	• Conduct a thorough inventory strictly and regularly.
4. Training Facilities	• Space limitations	• Utilization of Multi-Purpose Spaces • Implementation of Flexible Scheduling
5. Trainers' Qualification	• Low number of higher qualification holders • Cost/financial constraints	• Avail free online training and seminar • External Training and Certification Programs

Table 6.

Summary of the Research Problems Encountered, Coping and Proposed Strategies

Areas of Concern	Problems Encountered	COPING STRATEGIES	PROPOSED STRATEGIES
1. Curriculum Design	• Lack of local industry and ineffective job placement support for the graduates	• Collaborate with local industries to secure on-job-training placements for students. • Establish formal agreements or memorandums of understanding (MOUs) that outline the terms and expectations for the OJT program.	• Intensify the identification of local industry for the deployment of on-job-training (OJT) • Alumni Engagement
2. Training Delivery	• Limited selection of books and journals • Late delivery of training materials and supplies	• Sharing of modules • Display training materials visually using PowerPoint presentation • Conduct a thorough inventory strictly and regularly.	• Invest in digital resources and online databases • Utilization of Online Learning Management Systems (LMS) • Early submission of purchase request prior to the training schedule.
3. Tools, Equipment, and Materials	• Availability and completeness of training tools, equipment, and materials.	• Conduct a thorough inventory strictly and regularly.	• Establish partnership with industry
4. Training Facilities	• Space limitations	• Utilization of Multi-Purpose Spaces • Implementation of Flexible Scheduling	• Establish Memorandum of Agreement (MOA) for Off-Campus Physical Facilities
5. Trainers' Qualification	• Low number of higher qualification holders • Cost/financial constraints	• Avail free online training and seminar • External Training and Certification Programs	• Provide financial assistance or time off for employees to pursue these opportunities.

Table 7.

Key Steps in Implementing TVET Program's Enhancement

Areas of Concerns	Proposed Strategies	Key Steps to Implement
1. Curriculum Design	• Intensify the identification of local industry for the deployment of on-job-training (OJT) • Alumni Engagement	• Conduct an analysis to identify local industries that align with the institution's programs and courses. • Establish connections and partnerships with industry leaders through networking events, industry associations, or alumni networks. • Engage in dialogue with industry representatives to understand their needs, requirements, and potential opportunities for OJT placements. • Collaborate with industry partners to develop a framework for OJT, including the duration, learning objectives, evaluation criteria, and potential employment opportunities.
2. Training Delivery	• Invest in digital resources and online databases • Utilization of Online Learning Management Systems (LMS) • Early submission of purchase request prior to the training schedule.	• Assess the current resources available and identify gaps in digital resources and online databases. • Allocate a budget for the acquisition or subscription of digital resources and online databases relevant to the curriculum and training needs. • Research and select reputable providers or platforms that offer comprehensive and up-to-date resources. • Collaborate with the IT department or external vendors to implement the necessary infrastructure and systems for accessing and managing digital resources.
3. Tools, Equipment, and Materials	• Establish partnership in industry	• Identify relevant industries/potential partners • Establish communication channels • Define the goals and objectives of the partnership. • Develop a partnership agreement.
4. Training Facilities	• Establish Memorandum of Agreement (MOA) for Off-Campus Physical Facilities	• Identify potential off-campus physical facilities that can be used for training sessions or workshops. • Reach out to the owners or administrators of these facilities to discuss the possibility of establishing a Memorandum of Agreement (MOA). • Collaboratively draft the MOA, clearly outlining the terms, expectations, and responsibilities of both parties. • Seek legal review and approval of the MOA to ensure compliance with relevant laws and regulations. • Regularly review and update the MOA as needed to reflect any changes or improvements.
5. Trainers' Qualification	• Provide financial assistance or time off for employees to pursue these opportunities.	• Develop a policy or program that outlines the criteria and process for providing financial assistance or time off for employees to pursue external training and certification programs. • Allocate a budget specifically for supporting employee development and training opportunities. • Regularly assess the impact and effectiveness of the program and make adjustments as necessary.

Table 8.

Input in the Action Plan for TVET Programs' Enhancement

	Areas of Concern	Objectives	Tasks	Expected Output
1.	Curriculum Design	• Strengthen partnerships with industry, government, and other stakeholders to enhance the effectiveness and reach of TVET programs.	• Identify potential industry and government partners. • Arrange meetings with potential partners to discuss collaboration opportunities. • Develop joint initiatives, such as internships, guest lectures, and curriculum development.	• Established partnerships with industry and government organizations that can contribute to the effectiveness and reach of TVET programs. • Create opportunities for students to gain practical experience through internships, access industry expertise through guest lectures, and align the curriculum with industry needs.
2.	Training Delivery	• Enhance training delivery through digital resources and online platforms.	• Research and select appropriate online platforms for training delivery. • Develop or source digital resources relevant to the curriculum. • Train instructors on how to use these platforms and resources effectively.	• Identified and implemented online platforms that enhance training delivery, allowing for flexible learning options and access to digital resources. • Equipped instructors with the necessary skills to effectively utilize online platforms and digital resources in their teaching, enhancing the quality of training delivery.
3.	Tools, equipment, and materials	• Improve tools, equipment, and facilities for hands-on training.	• Evaluate the current state of tools, equipment, and facilities. • Identify and procure necessary upgrades or replacements. • Ensure all users are trained on safe and effective use of the new tools and equipment.	• Acquired updated tools, equipment, and facilities that meet the needs of the training programs, ensuring a conducive learning environment.
4.	Training Facilities	• Strengthen the overall infrastructure of TVET training institutions.	• Conduct a thorough assessment of the existing infrastructure. • Develop a plan for necessary upgrades or additions. • Implement the infrastructure improvement plan.	• Created a roadmap for infrastructure improvements, addressing identified gaps and enhancing the overall infrastructure of TVET training institutions.
5.	Trainers' Qualification	• Enhance trainers' qualifications and professional development. • Enhance the capacity of TVET instructors through regular training and professional development.	• Identify areas where trainers need further qualifications or development. • Arrange for relevant training programs, workshops, or courses. • Monitor and evaluate the effectiveness of these professional development activities.	• Identified specific areas where trainers require additional qualifications or professional development to enhance their teaching capabilities. • Provided trainers with opportunities for further qualifications and professional development, enabling them to deliver high-quality training.

DISCUSSION

Table 2 displays the findings of the assessment of trainers and trainees, which shows the same outcome for the overall implementation of TVET programs. Trainee respondents assessed a grand mean value of 3.67 with a standard deviation of 0.203, while trainer respondents evaluated a grand mean value of 3.62 with a standard deviation of 0.139. With a standard deviation of 0.197 and a combined mean rating of 3.67, the two are considered "fully implemented." The two respondents agreed that curriculum design, training delivery, tools, materials and equipment, training facilities, and trainer qualifications had been “fully implemented."

Curriculum design has a strong alignment between the designed curriculum and the perceived needs of the trainees. This alignment is essential for effective knowledge transfer and skill development during training delivery. Competency-Based Training (CBT) serves as the foundation of training facilities, encompassing various key areas such as the Practical Work Area, Distance Learning Area, Learners' Resource Area, Institutional Assessment Area, Trainer's Resource Area, Quality Control Area, Support Service Area, and Contextual Learning Area.

Creating an atmosphere that is conducive to effective learning is imperative in the realm of Technical and Vocational Education and Training (TVET). The role of TVET teachers, trainers, or instructors is dominant in the TVET industry as they are instrumental in facilitating the learning process and imparting technical skills to trainees. Therefore, it is essential to ensure that these instructors are well-equipped and adequately prepared to deliver high-quality training that meets the standards of competency-based education.

By focusing on the continuous professional development of TVET instructors, providing them with the necessary resources, and fostering a supportive environment for their growth, institutions can enhance the overall quality of training delivery and ultimately contribute to the development of a skilled workforce that meets the demands of the industry. The commitment to empowering instructors and enhancing their capabilities is a crucial aspect of ensuring the effectiveness and success of competency-based training programs in the TVET sector. Williams et al. (2021) underscore the significance of continuous professional development for TVET trainers. Institutions that offer regular training opportunities, workshops, conferences, and networking events for trainers create a culture of lifelong learning and ensure trainers stay updated with emerging trends, technologies, and teaching methodologies.

The difference in the obtained mean value from the evaluation of the two groups of respondents resulted in the specific findings observed in the tools, equipment, and materials considered. The grand mean suggests that, on average, both trainees and trainers perceive a high level of implementation in tools, equipment, and materials. However, trainers' ratings indicate potential room for improvement or further collaboration.

The grand mean across all indicators reflects high satisfaction and consensus between trainees and trainers regarding the full implementation of TVET programs. The findings suggest a generally positive perception of the implemented TVET programs, with all indicators showing high fulfilment. Consistency between the perspectives of trainees and trainers is crucial, indicating a shared understanding of the effectiveness of various program components. While the overall implementation is strong, the slightly lower trainer rating in the "Tools, Equipment, and Materials" category may warrant further investigation and potential resource provision and utilization improvements.

These findings are encouraging and suggest that the TVET programs successfully meet their objectives, as trainers and trainees perceived. Regular assessments and open communication channels can further contribute to the continuous improvement of these programs, suggesting that the programs are effectively meeting the needs and expectations of both parties.

According to the data displayed in Table 3, the p-values for the variables are greater than the significance level of 0.05, which implies that there is no significant difference in the assessment of trainers and trainees, except for the tools, equipment and materials. The lack of significance suggests no statistically significant difference in how trainers and trainees assess the implementation of curriculum design, training delivery, training facilities, and trainer qualifications. Similar perceptions between the two groups indicate a shared understanding of the effectiveness of curriculum design, training delivery, training facilities, and trainer qualifications.

However, the respondents have differing views on how tools, equipment, and materials are used in the TVET program implementation. It suggests that the null hypothesis is not supported. It also indicates that participants showed up and expressed their opinions about the study, as the results reveal notable variations. Perhaps the disparities between the two respondents' evaluations stem from their differing perspectives on how they utilized the tools, equipment, and materials—whether they were complete—if they were using.

Moreover, the results imply that rejecting the null hypothesis would enlighten the researcher to arrive at vigorous recommendations that would enhance the implementation of TVET Programs regarding tools, equipment, and materials. To provide effective teaching and learning in TVET establishments, instructional resources in many developing countries still require improvement (Wondaferew, 2012). For example, in Nigeria, the non-use of instructional materials in TVET institutions has impeded teachers' and students' ability to teach and learn (Okwudishu, 2005; Gambari & Okoli, 2007).

Table 4 shows the problems encountered by the trainers and trainees in implementing TVET programs. In the research conducted, the researcher identified problems and challenges encountered by both trainers and trainees within the training environment. Through a thorough analysis of the data collected, the researcher identified a range of issues that were commonly shared among the two groups. To streamline the findings, responses that were similar and common were consolidated.

The trainers and trainees who answered “Moderately implemented” in each indicators interviewed by the researcher about the problems faced in implementing TVET programs in terms of curriculum design, it became clear that there was a lack of local industry and ineffective job placement support for the graduates where trainees could apply their newly acquired knowledge and skills to use and practice, as well as ineffective job placement support. This suggests that the curriculum might not be aligned with the needs and demands of the local job market. Graduates may lack the skills and knowledge required by local industries, leading to difficulties in finding employment. Additionally, if there's inadequate support for job placement, graduates may struggle to secure positions even if they have the necessary skills.

In delivering training as part of implementing TVET programs the results showed that the school library had a limited selection of books and journals and the training materials and supplies were delivered late. A limited selection of learning resources can hinder the quality of training provided. Without access to a wide range of books and journals, trainees may miss out on valuable information and perspectives, limiting their understanding of the subject matter. Delays in delivering training materials and supplies can disrupt the learning process and impact the effectiveness of training programs. It may lead to missed learning opportunities and frustration among both trainees and trainers.

Furthermore, space constraints were stressed when the researcher interviewed trainers and trainees about the challenges they faced when implementing TVET programs in relation to training facilities. The implementation of training programs may be affected by inadequate space, which may limit the kinds of activities that can be carried out and the number of trainees who may take participation. The standard quality of instruction and the comfort of the trainees may be influenced by overcrowded spaces.

In terms of trainer qualifications, it revealed that there were low number of higher qualification holders and cost/financial constraints. The qualifications of trainers directly impact the quality of education provided. A shortage of trainers with higher qualifications may result in less effective teaching, as they may lack in-depth knowledge or expertise in their respective fields. Financial limitations may hinder the recruitment or retention of highly qualified trainers. Additionally, budget constraints might restrict opportunities for professional development, preventing trainers from staying updated with the latest industry trends and teaching methodologies.

The trainees can employ training tools, equipment, and materials because they disagree with the real training schedules, according to several of the trainees the researcher talked with. Simultaneously, the trainers stated that the late purchase request for training as well as the delayed delivery of supplies and materials indicate that the training tools, equipment, and materials must be finished and made available. Insufficient tools, equipment, and materials may hinder experiential training. Trainees may find it difficult to gain the practical skills that are frequently necessary for success in a variety of occupations if they do not have access to the relevant resources.

Addressing these concerns requires a comprehensive approach involving collaboration between educational institutions, industry stakeholders, and policymakers. It may involve curriculum revisions to align with industry needs, investment in resources and facilities, professional development opportunities for trainers, and improved support for student job placement.

Table 5 shows the coping strategies employed by trainers to address the issues faced by both themselves and their trainees during the implementation of TVET Programs in terms of curriculum design, training delivery, training tools, equipment and materials, training facilities and trainer's qualification.

In terms of curriculum design, trainers and trainees encountered problem that there was a lack of local industry and ineffective job placement support for the graduates where trainees could apply their newly acquired knowledge and skills to use and practice, as well as ineffective job placement support. Collaborate with local industries to secure on-job-training placements for students and establish formal agreements or memorandums of understanding (MOUs) that outline the terms and expectations for the OJT program which includes the duration of the training, learning objectives, evaluation criteria, and possible employment opportunities after completion are some of trainer's coping strategies.

Moreover, in training delivery, the results showed that the school library had a limited selection of books and journals that training materials and supplies were delivered late. As for the trainer's coping strategies, trainees share modules, display training materials visually using PowerPoint presentation. When it comes to the late delivery of materials and supplies, trainers conduct thorough inventory strictly and regularly.

Furthermore, the problems encountered during the implementation of TVET Programs regarding training facilities, it revealed space limitations. As to the trainer's coping strategies, utilization of multi-purpose spaces and implementation of flexible scheduling.

During the interviews conducted with trainees who indicated a moderate level of implementation, they expressed that while they were able to utilize the training tools, equipment, and materials provided to them, they also conveyed a sense of inadequacy regarding the availability and sufficiency of these resources. At the same time, the trainers mentioned that the training tools, equipment, and materials need to be completed and should be available during class time. This problem occurs because of late purchase request for training resources and the delayed delivery of materials and supplies. As part of the trainers' coping strategies, they conduct a thorough inventory strictly and regularly.

Furthermore, the study highlighted a scarcity of trainers with higher qualifications, attributing this shortage to cost-related financial constraints. In response to these challenges, trainers have adopted coping strategies such as engaging in free online training and seminars, as well as participating in external training and certification programs. These initiatives are aimed at enhancing their skills, adapting to evolving pedagogical methods, and improving their overall capabilities in the training domain.

The following problems encountered and coping strategies are plotted in Table 6 and mapped with the proposed strategies. In the area of curriculum design, one of the problems encountered is the lack of local industry and ineffective job placement support for graduates. To cope with this, a strategy is to collaborate with local industries to secure on-the-job-training (OJT) placements for students. By engaging in partnerships with industry leaders, educational institutions can provide students with practical experience and exposure to real-world work environments. Additionally, establishing formal agreements or Memorandums of Understanding (MOUs) can outline the terms and expectations for the OJT program, including the duration of the training, learning objectives, evaluation criteria, and potential employment opportunities after completion. This ensures a clear framework for both the educational institution and industry partner, fostering a mutually beneficial relationship.

In terms of training delivery, problems such as limited selection of books and journals and late delivery of training materials and supplies can be addressed through various coping strategies. Sharing of modules can help overcome the limited selection of resources by leveraging the expertise and materials available within the institution. Displaying training materials visually using PowerPoint presentations can enhance the delivery of content and engage learners. Conducting a thorough inventory strictly and regularly can help identify any gaps in training materials and ensure timely procurement or replenishment. Investing in digital resources and online databases can provide access to a wider range of materials, while implementing an Online Learning Management System can facilitate efficient distribution and access to training materials. Additionally, early submission of purchase requests prior to the training schedule can help mitigate delays in the delivery of necessary materials and supplies.

When it comes to tools, equipment, and materials, ensuring their availability and completeness is crucial. Conducting a thorough inventory strictly and regularly can help identify any missing or outdated items and facilitate timely procurement or replacement. Similarly, establish partnership with industry can help prevent delays in acquiring the necessary tools, equipment, and materials. By implementing these strategies, educational institutions can ensure that trainers and trainees have access to the resources they need for effective training delivery.

Space limitations in training facilities can pose challenges, but coping strategies can be implemented. Utilizing multi-purpose spaces within the facility can help maximize available space by repurposing areas such as conference rooms or cafeterias for training sessions when not in use for their primary functions. Implementing flexible scheduling allows for better utilization of space by accommodating multiple groups or departments at different times or on different days. Additionally, establishing Memorandums of Agreement (MOAs) for Off-Campus Physical Facilities can provide additional space when needed, either through rented conference rooms or partnerships with other organizations that have larger training facilities.

The low number of higher qualification holders among trainers can be addressed by availing free online training and seminars, which can provide opportunities for

professional development. External training and certification programs can also be explored, where employees can pursue advanced qualifications or certifications to enhance their skills. Providing financial assistance or time off for employees to pursue these opportunities can help overcome cost or financial constraints.

Overall, these proposed strategies aim to address the problems encountered in curriculum design, training delivery, tools, equipment, and materials, training facilities, and trainers' qualifications. By implementing these strategies, educational institutions can enhance the quality of training and better prepare graduates for the demands of the industry.

These strategies aligns to the TESDA Impact Evaluation Survey 2012, which reveals that TESDA-administered schools should provide more effort and purposive policies for interventions to strengthen the employment rate of its graduates. Policy interventions include:

- Expanding apprenticeship programs to ensure employment in the future,
- Utilizing Online Learning Management Systems (LMS),
- Continuous financial support in the provision of modern facilities and equipment and;
- Provide training and professional development opportunities

Table 7 presents the key steps to enhance the implementation of TVET programs. These address critical aspects of the program, including curriculum design, training delivery, tools, equipment and materials, training facilities, and trainer qualifications.

The proposed strategies aim to address key concerns within the educational institution systematically. For curriculum design, the institution plans to identify local industries relevant to its programs, fostering partnerships and dialogue to tailor on-the-job-training (OJT) opportunities. Similarly, in training delivery, emphasis is placed on investing in digital resources, including Online Learning Management Systems (LMS), and ensuring timely procurement of necessary materials. Clear guidelines and procedures are established for purchase requests in tools, equipment, and materials, while off-campus facilities are secured through Memorandums of Agreement (MOAs).

Finally, the institution commits to supporting trainers' qualification through financial assistance, communication of available support, and regular program assessment for continuous improvement. These strategies collectively aim to enhance curriculum relevance, resource accessibility, and trainer qualification, ensuring a comprehensive approach to educational quality and effectiveness.

Table 8 provides input for enhancing TVET programs to bridge the gap between education and the workforce. The focus is on improving skills and competencies to address unemployment, promote sustainable development, and support job growth in a dynamic economy through the expansion of TVET programs.

In curriculum design, fostering partnerships with industry, government, and other stakeholders is dominant. By engaging with these entities, TVET programs can ensure alignment with current industry needs and practices. This involves identifying potential partners, initiating discussions, and collaboratively developing initiatives such as internships and curriculum enhancements. Through these partnerships, students can gain practical experience, access industry expertise, and ultimately benefit from a more relevant and effective curriculum.

In training delivery, leveraging digital resources and online platforms can significantly enhance accessibility and effectiveness. Researching and selecting appropriate online platforms, developing digital resources, and providing instructor training are key tasks. By implementing these tools effectively, TVET programs can offer flexible learning options and ensure access to relevant materials, thereby improving the overall quality of training delivery.

Improving tools, equipment, and facilities for hands-on training is crucial for providing students with a conducive learning environment. This involves evaluating current resources, procuring necessary upgrades or replacements, and ensuring proper training for users. Up-to-date tools and facilities enable students to develop practical skills effectively, preparing them for real-world scenarios.

Strengthening the overall infrastructure of TVET training institutions is essential for long-term sustainability and effectiveness. Conducting assessments, developing improvement plans, and implementing necessary upgrades or additions are key steps. By addressing infrastructure gaps, institutions can enhance the overall learning environment and support the delivery of high-quality training programs.

Enhancing trainers' qualifications and professional development is vital for ensuring the delivery of high-quality education. Identifying areas for improvement, arranging relevant training programs, and monitoring effectiveness are crucial tasks. By investing in trainers' development, TVET programs can ensure that instructors are equipped with the necessary skills and knowledge to deliver effective training and support student success. By focusing on these areas of concern and implementing the outlined objectives and tasks, TVET programs can enhance their effectiveness, relevance, and reach, ultimately better preparing students for success in their chosen fields.

Conclusions

Based on the findings, the researcher arrived at the following conclusion, to wit:

The study provided a comprehensive assessment of the level of implementation of TVET programs, offering valuable insights into the perspectives of both trainers and trainees. Overall, the findings indicated a positive perception of the program's implementation, with both groups largely agreeing on the "fully implemented" status across various components. However, in the assessment of tools, equipment, and materials revealed slight discrepancies between trainers and

trainees, highlighting potential areas for improvement. Moreover, the identified challenges, including misalignment of curriculum design with local industry needs, limited resources, space constraints, and a shortage of highly qualified trainers, impact the quality and effectiveness of the TVET programs.

Recommendations

In the context of the above enumerated findings and conclusions, the researcher arrived at the following recommendations:

1. **While the TVET programs in Marinduque are largely successful, there are areas that need to be addressed for continuous improvement. By implementing the proposed strategies and taking the necessary steps, it is expected that the quality, relevance, and effectiveness of the TVET programs will be enhanced, ultimately improving the employment prospects of the graduates.**

2. **For TVET institution to implement a vigorous monitoring and evaluation system to continuously assess the quality and impact of TVET programs. Collect feedback from trainers, trainees, employers, and other stakeholders to identify areas for improvement and track progress towards program goals and objectives.**
3. Provide training and capacity building opportunities for both trainers and trainees to enhance their skills in using tools, equipment, and materials effectively. Offer workshops, seminars, and hands-on training sessions to familiarize trainers and trainees with the latest technologies and best practices in their respective fields.

Compliance with Ethical Standards

As the author of this study, I affirm that ethical standards were rigorously upheld throughout the research process. Prior to data collection, informed consent was obtained from all participants, emphasizing their voluntary participation and the freedom to withdraw from the study at any point without consequences. The anonymity of the respondents was meticulously preserved to ensure confidentiality and protect their privacy. Measures were taken to safeguard the well-being of the participants, prioritizing their mental and emotional welfare.

Furthermore, I confirm that there is no conflict of interest that could influence the conduct or outcomes of this study. Strict adherence to academic integrity was maintained, with plagiarism vigilantly avoided in all aspects of the research. The interpretation of the findings was approached without bias, ensuring objectivity and reliability in the analysis. The results obtained from this study are solely intended for research purposes, contributing to the advancement of knowledge in the respective field.

Acknowledgments

The researcher is grateful to the following individuals for their great assistance and profound insight in the preparation of this study.

Dr. Julieta Q. Nabos, for her complete support and for sparing her valuable time in providing inputs to improve her manuscript, for which she expresses her heartfelt gratitude;

Engr. Nelson Rufino M. Montejo, her statistician, for his patience and guidance in the study paper analysis;

Engr. Joey M. Morales, for his assistance with this research;

Mr. Jerome M. Lingon, for refining the grammatical structure of the work;

Ms. Jessica L. Semilla, for her careful attention to detail and invaluable feedback, greatly improving the quality of this manuscript;

The TESDA PO Marinduque, for providing the necessary data needed in the study;

The Graduate School Librarian, for providing the researcher a set of valuable references;

Mr. Norinel R. Pielago, Mr. Jezreel R. Ferrer, Mr. Olimpio Pacheco and Ms. Ma. Teresita A. Ferrer, for validating the questionnaire of the researcher;

To always supportive personnel of BSAT, TPSAT, PTC, MICS, MMTSI, MTVI, SCI, MTTCI, RLTC, AGREA, DMDC, Agsikapin and Kaluppa Foundation, who offered their time and knowledge to finish this research;

The respondents, for spending their valuable time filling out the questionnaires;

SIENA Family, her supportive family whose words of encouragement made her pursue this study;

Above all, the researcher would like to thank Almighty God for giving her the strength, knowledge, ability, and opportunity to undertake this research study. Without His blessings, this achievement would have been possible.

ABSTRACT

The study aimed to assess the level of Grade 10 students' conceptual understanding in Chemistry when exposed to structured inquiry-based learning. The study employed a One-Shot Pretest-Posttest Pre-experimental Design, administering a pretest before intervention and a posttest after. Participants were 28 students from Grade 10, section Alithia at Kalilangan National High School (KNHS), during the 2023-2024 school year. Before the intervention, most students demonstrated very low conceptual understanding, with only a small percentage achieving average or low understanding levels. However, after being exposed to structured inquiry-based learning, a substantial improvement was observed in students' post-test scores. The paired T-test results further supported the effectiveness of the structured inquiry-based learning approach, showing a notable increase in mean post-test scores compared to pretest scores. The study concludes that structured inquiry-based learning significantly enhances students' conceptual understanding and academic performance in Chemistry. The findings of the study recommend that the Department of Education consider implementing structured inquiry-based learning to improve the conceptual understanding of students. Future researchers may use this study to support further investigations into the benefits of structured inquiry-based learning.

Keywords: *Structured Inquiry-Based Learning, Conceptual Understanding, Chemistry Education, Pre-experimental Design, Instructional Strategies*

INTRODUCTION

Science education was deemed very important as it played a pivotal role in a person's life. Accordingly, science education cultivates students' abilities in scientific inquiry, fostering values like objectivity, curiosity, and honesty, while also instilling habits of mind such as critical thinking (SEI-DOST & UP NISMED, 2015). Apparently, conceptual difficulties are the primary problem that students encounter when trying to understand a subject, as concepts are built upon prior knowledge and form the foundation of an individual's thinking. These difficulties arise due to challenges in grasping and fully understanding the underlying concepts (Akram, et. al., 2014). According to Naz & Mushtaq (2022), numerous studies in chemistry education literature have addressed the challenges students face in understanding fundamental chemistry concepts in schools. Concepts are formed through a process of abstraction, where ideas or thoughts are developed based on the common properties of objects or events, and difficulties or issues related to these concepts or the process of forming them are known as conceptual difficulties. These challenges in grasping chemistry concepts pose significant concerns for science educators, teachers, and students.

Integrating different learning strategies helps to address this concern among students. According to The InterAcademy Partnership (IAP) (2021), incorporating Inquiry-Based Learning enhances students' understanding of science by engaging them in the investigative nature of the subject. This approach helps students contextualize materials and develop critical thinking skills. Learning chemistry through structured inquiry-based learning made it more understandable and allowed students to be more active, which promoted conceptual understanding (Kwitonda, et. al., 2021). Szalay (2015) conducted a study on the promotion of structured inquiry-based teaching in chemistry. The research findings indicated that the implementation of structured inquiry-based activities enhanced students' cognitive abilities in the subject of chemistry. Analyzing the domain of structured inquiry-based learning revealed many positive aspects; however, it also highlighted some negative aspects. According to Wheatley (2018), Some drawbacks included the insufficient time for teachers to prepare, inadequate funding for materials, and a lack of understanding on how to effectively implement structured inquiry-based learning. Teachers often lacked the necessary experience and guidance to successfully facilitate student-led lessons. Previous research, while comprehensive, overlooked the potential challenges that teachers encountered when utilizing inquiry-based learning. The research study focused on improving students' understanding of chemistry concepts through structured inquiry-based learning within classrooms.

In addressing the pressing challenges present in teaching science, the researchers opted to investigate the effectiveness of the structured inquiry-based learning in improving the conceptual understanding of the grade 10 students in Chemistry at Kalilangan National High School. The study's results would provide evidence to guide teachers and researchers in improving teaching and learning practices.

Research Questions

The study was conducted to examine the Grade 10 students' conceptual understanding in Chemistry when exposed to a structured inquiry-based learning strategy. Specifically, it seeks to answer the following questions:

1. What is the level of Grade 10 students' conceptual understanding in Chemistry when exposed to structured inquiry-based learning strategy in terms of pre-test and post-test?
2. Is there a significant difference in the conceptual understanding of Grade 10 students in Chemistry when exposed to a structured inquiry-based learning strategy in terms of pre-test and post-test?

METHODOLOGY

This study employed a One-Shot Pretest-Posttest Pre-experimental Design, involving 28 Grade 10 students from Kalilangan National High School, with 7 males and 21 females, under the Enhanced K to 12 Basic Educational Curriculum for the School Year 2023-2024. Data was collected through a validated 30-item multiple-choice test, content-validated by a panel of Chemistry experts, assessing students' conceptual understanding of chemical reactions. The test was administered before and after the implementation of a structured inquiry-based approach. The study obtained necessary permissions from Central Mindanao University and the Institutional Ethics Review Committee (IERC) for ethical review and from the Office of the Principal at Kalilangan National High School. Student performance was evaluated using the K to 12 Basic Education Learning Progress and Achievement Indicators, with scores transmuted according to the formula:

Transmuted score = raw score/highest possible score x 50 + 50

The grading scale was as follows:

Grading Scale	Descriptive Rating	Qualitative Description
90% - 100%	Outstanding	Very High Conceptual Understand
85% - 89%	Very Satisfactory	High Conceptual Understanding
80% - 84%	Satisfactory	Moderate
75% - 79%	Fairly Satisfactory	Low Conceptual Understanding
Below 75%	Did Not Meet Expectation	Very Low Conceptual Understanding

Descriptive statistics (means) were computed for pre- and post-assessment scores to gauge the overall impact of structured inquiry-based learning on conceptual understanding. A paired-sample t-test was used to compare the mean scores of the pre- and post-assessments, assessing the significance of the difference in students' conceptual understanding following the intervention. The study's scope was limited to the specific topic of chemical reactions in Grade 10 Chemistry, and the results may not be generalizable to other subjects or grade levels.

RESULTS

The study aimed to assess the effectiveness of structured inquiry-based learning strategy on students' conceptual understanding in Chemistry. By implementing this approach, the researchers aimed to enhance learning experiences and educational outcomes.

A. Conceptual Understanding of Students in Chemistry

Table 1 presents the conceptual understanding of students in Chemistry before and after being exposed to a Structured Inquiry-Based Learning Strategy. Pretest and posttest scores are shown, detailing the frequency and percentage of students falling into different score ranges, which are categorized into qualitative descriptions based on a grading scale.

Table 1. Pretest and posttest Conceptual Understanding Scores of Students in Chemistry

		PRETEST		POSTTEST		
Score Range	Grading Scale	N	Frequency %	N	Frequency %	Qualitative Description
24-30	90-100	0	0	20	71.4%	Very High Conceptual Understanding
21-23	85-89	1	3.6	6	21.4%	High Conceptual Understanding
18-20	80-84	2	7.1	2	7.1%	Average
15-17	75-79	2	7.1	0	0%	Low Conceptual Understanding
Below 15	Below 75	23	82.1	0	0%	Very Low Conceptual

					Understanding
TOTAL	28	100	28	100	
Overall Mean		10.6		24.5	

Legend:

Grading Scale	Descriptive Interpretation	Qualitative Description
90-100	Outstanding	Very High Conceptual Understanding
85-89	Very Satisfactory	Very High Conceptual Understanding
80- 84	Satisfactory	Average
75-79	Fairly Satisfactory	Low Conceptual Understanding
Below 75	Did Not Meet Expectations	Very Low Conceptual Understanding

Table 2 presents the comparative mean scores between the student's conceptual understanding in Chemistry before and after exposure to Structured Inquiry-Based Learning Strategy.

Table 2. Paired T-Test to Compare Pretest and Posttest in Chemistry.

	Paired Difference		*t*	*Sig (2-tailed)*
	Mean	*SD*		
Pretest	10.6	4.14	1.70	0.000**
Posttest	24.5	2.20		

$p < 0.05$ is highly significant

DISCUSSION

As shown in data table 1, during pre-test, most students (82.1%) achieved a "Did Not Meet Expectations" score, indicating a very low conceptual understanding. Only a small percentage achieved satisfactory or high scores, suggesting a lack of deep understanding in Chemistry concepts prior to the implementation of structured inquiry-based learning. However, during the posttest, after exposure to structured inquiry-based learning, a significant improvement is observed. 71.4% of students achieved a "Very High Conceptual Understanding" score, indicating substantial progress in their understanding of Chemistry concepts. This improvement can be attributed to the active engagement fostered by inquiry-based learning, which encourages questioning, investigation, scientific methods, curiosity, and problem-solving. The data implies that traditional passive learning methods may not effectively foster deep conceptual understanding in Chemistry. The shift towards structured inquiry-based learning has shown promising results, with a significant proportion of students achieving high conceptual understanding. This highlights the importance of active student engagement in the learning process for effective knowledge acquisition in Chemistry. Moreover, the

data suggests that addressing factors such as the complexity of Chemistry concepts, passive learning experiences, and student motivation is crucial for improving conceptual understanding. Incorporating more effective teaching strategies, such as structured inquiry-based learning, can help address these factors and enhance student performance in Chemistry.

The findings are supported by existing research. Karpudewan et al. (2015) highlight the limitations of passive learning approaches in fostering robust conceptual knowledge, emphasizing the need for more active learning methods. Additionally, Mutoharo et al. (2015) assert that student motivation significantly contributes to understanding science concepts, aligning with the observed improvement in student performance after exposure to structured inquiry-based learning. Furthermore, Langitasari et al. (2016) suggest that conceptual understanding is best achieved through active involvement in the inquiry process, supporting the effectiveness of structured inquiry-based learning in enhancing student learning outcomes in Chemistry.

On the other hand, table 2 presents that we can observe a significant value of 0.000 at 0.05 ($p<0.05$) which indicates a significant difference. As presented on the table, it shows the results of a paired T-test comparing the pretest and posttest scores in Chemistry. The mean pretest score was 10.6 with an SD of 4.14 and the mean posttest score was 24.5 with an SD of 2.20. The t-value for both pretest and posttest was 1.70. The posttest mean score of 24.5 is higher than the pretest mean score of 10.6, indicating improvement in conceptual understanding after the intervention. The findings imply that the intervention or treatment implemented had a positive impact on the Chemistry scores, leading to a significant improvement in students' conceptual understanding. According to Naz and Mushtaq (2022), various research in the field of chemistry education has explored the challenges students encounter when trying to grasp fundamental chemistry concepts in schools. Concepts are developed through abstraction, a process where ideas or thoughts are derived from identifying the common properties of objects or events. The difficulties or issues that arise in understanding these concepts, or in the process of their formation, are referred to as conceptual difficulties. These difficulties are a major concern for educators and students alike, as they significantly impact the learning process in chemistry. Incorporating structured inquiry-based learning has been shown to significantly improve students' understanding of science by actively involving them in the investigative nature of the subject. This approach helps students connect learning materials to real-world contexts and cultivates critical thinking abilities. In the domain of chemistry, structured inquiry-based learning not only enhances comprehension but also promotes active student engagement, leading to a deeper grasp of concepts (Kwitonda et al., 2021).

Additionally, research conducted by Szalay (2015) supports these findings, demonstrating that structured inquiry-based activities enhance students' cognitive skills in chemistry and contribute to a more effective and engaging learning experience. Furthermore, the results are supported by the study of Kwitonda et al. (2021), which states that the use of structured inquiry-based learning in chemistry education has several benefits. It makes the subject more understandable for students and encourages

them to actively participate in the learning process. This hands-on approach promotes conceptual understanding, allowing students to grasp the fundamental concepts of chemistry more effectively. In line with the findings from the paired T-test analysis, the improved performance observed in the posttest scores may be attributed to the implementation of structured inquiry-based learning. By engaging students in hands-on activities, encouraging exploration, and fostering active learning, this teaching methodology facilitates a deeper understanding of the subject matter. Therefore, the results of the paired T-test, combined with the insights provided by Kwitonda et al. (2021), suggest that the use of structured inquiry-based learning in chemistry education can contribute to enhanced students' conceptual understanding.

Conclusions

Based on the results, the structured inquiry-based learning implemented in the study had a significant positive impact on students' conceptual understanding in Chemistry. Before the intervention, most students demonstrated very low conceptual understanding, with only a small percentage achieving average or low understanding levels. However, after being exposed to structured inquiry-based learning, a substantial improvement was observed in students' post-test scores. Most of the students achieved very high conceptual understanding, indicating a significant enhancement in their performance and comprehension of Chemistry concepts.

The paired T-test results further supported the effectiveness of the structured inquiry-based learning approach, showing a notable increase in mean post-test scores compared to pretest scores. This improvement signifies the success of the intervention in enhancing students' conceptual understanding and academic performance in Chemistry. The findings suggest that structured inquiry-based learning can be a valuable teaching methodology to promote active engagement, critical thinking, and deep conceptual understanding among students in Chemistry education. The results of the study indicate that there is no significant difference in the conceptual understanding of Grade 10 students in Chemistry when they are exposed to a structured inquiry-based learning strategy, as evidenced by the rejection of the null hypothesis.

However, the incorporation of a structured inquiry-based learning strategy, which includes structured support and guidance, has been found to enhance students' conceptual understanding in Chemistry and contribute to improved educational outcomes.

Recommendations

The study's findings have led to the following recommendations:

The Department of Education Teachers should consider implementing structured inquiry-based learning to improve students' conceptual understanding in Chemistry. This approach is rooted in the belief that when students engage in structured inquiry, they are more likely to develop a deeper understanding of the subject matter compared

to traditional teaching methods. They may use structured inquiry-based learning to provide students with a clear framework and specific guidelines while allowing them the freedom to explore and investigate within these boundaries. This method balances guidance with autonomy, helping students develop critical thinking skills, enhance their problem-solving abilities, and engage more actively with the content.

The Department of Education Teachers should use this as a tool to improve students' learning outcomes. By engaging in inquiry-based activities, students are encouraged to ask questions, design experiments, collect and analyze data, and draw conclusions based on their findings. This process not only reinforces their conceptual knowledge but also helps them understand the application of theoretical concepts in practical scenarios.

Future researchers may utilize this study to explore further the benefits of structured inquiry-based learning in Chemistry education. They can investigate various dimensions, such as the long-term retention of knowledge, the development of scientific skills, and the impact on students' attitudes toward Chemistry.

Compliance with Ethical Standards

The researchers conducted the study with a commitment to adhering to ethical standards. Informed consent was obtained from all participants, ensuring they were fully aware of the study's purpose, procedures, and their rights. Participants were informed that their involvement was voluntary and that they could withdraw from the study at any time without any negative consequences. The anonymity of the respondents was strictly maintained to protect their identities, and all data were kept confidential. The respondents' well-being was a top priority, and every effort was made to ensure that participation in the study did not cause any harm or distress.

The researchers obtained legal permission from Central Mindanao University and the Institutional Ethics Review Committee (IERC) for an ethical review of the implementation of the scale. No conflicts of interest were present in the conduct of this study. The researchers maintained objectivity and avoided any bias in the collection, analysis, and interpretation of data. To ensure the integrity of the research, plagiarism was strictly avoided, and all sources and contributions were properly acknowledged. The results of the study were used solely for research purposes, aimed at improving educational practices. The dissemination of the findings was conducted with the support of the School Principal, aiming to contribute to the professional development of teachers and the enhancement of students' conceptual understanding in Chemistry.

Acknowledgments

The completion of this research would not have been possible without the help and support of many individuals. In this vein, the researchers would like to extend their heartfelt appreciation and gratitude to the following people:

First and foremost, to the Most Gracious and Heavenly Loving Father ALMIGHTY GOD, for His continuous guidance, strength, and blessings throughout the entire research process.

To Ma'am Garin B. Come and Ma'am Raihana Umpar Toke, for invaluable guidance, mentorship, and unwavering support that has been instrumental in the successful completion of this study. Their visions and motivation have deeply inspired the researchers to strive for excellence.

To Sir Alex Tan Solar, School Principal of Kalilangan National High School, for granting permission to conduct the study at the school.

To the Grade 10 students of Kalilangan National High School, who volunteered their time and effort in the conduct of the study, despite their busy schedules. Their participation and cooperation were indispensable to the success of the research.

Finally, the researchers would like to extend their sincerest appreciation to their families for their unconditional love and support, both morally and financially.

ABSTRACT

This study aimed to determine the instructional materials utilized by English teachers in teaching English in the Tanjay City Division of the school year 2020-2021. With the use of purposive sampling, the researcher was able to invite 72 English teachers to take part in this investigation. Furthermore, using the explanatory sequential Mixed method, the research extracted teachers' significant experiences, including their challenges and best practices in utilizing these materials from a trained teacher to avoid bias from the researcher's perspective. Moreover, the survey questionnaire was floated manually and online for the respondents' comfort. The researcher followed strict adherence to safety protocols to avoid danger from COVID-19. Concerning data analyses, percentage distribution, weighted mean, Pearson's, and Spearman Rho Correlation were utilized for quantitative purposes. On the other hand, the researcher employed thematic analysis for qualitative data extracted from focused group discussions. The results revealed that teachers in their 30s, where the majority acquired insufficient training and could not finish advanced studies, utilized much use of Instructional Materials. Furthermore, the higher the Instructional materials are used, the more available they are, and vice versa, though teachers with higher education tend to lessen the use of instructional materials. Thus, the use and availability of instructional materials can help enhance students' learning, especially when they do tasks that experience the utilization of these materials (Theory of Cone of Experience), and they can associate their experiences by connecting to the new sets of ideas and concepts (Theory of Connectionism). Moreover, more instructional materials are used and available in the Highlands than in Lowland locations.

Keywords: *Instructional Materials in English Language Teaching, Challenges and Best Practices on the Utilization of Instructional Materials, Explanatory Sequential Mixed Method*

INTRODUCTION

"Young children learn differently from old children and adults, yet we can teach them many things if we adapt our materials and mode of instruction to their level of ability, but we miseducate young children when we assume that their learning abilities are comparable to those of older children and that they can be taught with materials and with the same instructional procedures to school-age children" – *(David Elkind*). This quote is very evident in the teaching and learning process since teachers lack knowledge on how to employ certain instructional materials that are congruently relative to the student's ability. The employment of instructional materials has significantly taken importance in their role in the student's courses in education. Students' learning experiences are greatly influenced by the instructional materials they use. These resources can include worksheets, movies, textbooks, and internet sites that offer learners crucial knowledge and direction. Students' comprehension and retention of material can be significantly impacted by the caliber and applicability of their teaching resources. In this regard, the theory of connectionism by Eduard Thorndike, an American Psychologist, says that when people can establish connections between a certain stimulus and a response, they have learned something (Lee, 2018). When learners form associations through any form of instructional materials, they have a high potential to relate and can perform in class discussions. Undeniably, the role of these materials in students' Learning becomes vital, especially when students are given opportunities to experience Learning using instructional materials. In this sense, the theory of the cone of experience by Edgar Dale (1960) takes place. Edgar Dale created the Cone of Experience, popularly called the Learning Pyramid. This model demonstrates the usefulness of various learning experiences in terms of retention. Dale asserts that students are more likely to retain the material when actively involved in their education. Concrete experiences, such as hands-on activities and direct engagement, are at the base of the cone.

In terms of retention, experiences are considered the best (S. J. Lee & Reeves, 2018). This idea means that when students are allowed to use and experience these materials in class, a higher percentage of retention and Learning will be attained. It is one of the advantages of utilizing instructional materials in teaching and Learning. However, issues will inevitably be pinned on this topic. Despite their adverse effects, the scantiness of instructional materials (IMs) generally led teachers to utilize them for all types of learners. In this aspect, the theory of constraints is relevant. According to the theory that Eliyahu M. Goldratt developed in the 1980s, every system has at least one limitation that prevents it from achieving its objectives and is one of the fundamental tenets of TOC. Organizations may significantly enhance their operations and produce better results by recognizing these limits and addressing them methodically (*Theory of Constraints (TOC) | Lean Production*, n.d.). Anent to address this problem, the Department of Education (DepEd) proactively addresses this issue. DO 13, S. 2012, or the Guidelines on the

Allocation, Delivery, and Distribution of Instructional Materials (IMs) to Support the k to 12 Curriculum. It is clearly stated in this Deped Order that The Department of Education (DepEd) has allocated funds from the Fiscal Year (FY) 2012 Textbook Funds and subsequent years until FY 2015 for the provision of the centrally procured Learning Activity Packages (LAPs), modules, and Other Instructional Materials (OIMs) to support the initial implementation of the K to 12 Curriculum. These materials will fill in the gaps in the Textbooks (TXs) and Teacher's Manuals (TMs) currently used in public elementary and secondary schools. Through this mandate, Learning can be achieved through various disciplines and strategies.

Nowadays, teachers have been using multiple tools to address learning issues among our learners in dealing with classroom issues. These strategies are proven to promote the abilities and bring the maximum potential of our learners in their respective roles in the class. These strategies include instructional materials that are utilized by teachers all over the world. These are considered sources of educational platforms such as printed materials, graphic organizers, audio, visual, audio-visual, electronic interactive, and teacher-made resources that provide timely and relevant information used in a particular course to aid learners in achieving the goal of Learning. Significantly, the instructional teaching materials make teaching and learning easier because they attract learners' attention, facilitate abstract concept understanding, save time by limiting the usage of wordy explanations, and allow learners to handle objects in the environment (Ambrocio, 2016). Some of these are multimedia tools that are also effective in delivering lessons in a classroom. Usually, these tools are animated and presented through videos (Guan et al.,2018). This static and dynamic application supports verbal instruction and comprehension (Alemdag & Cagiltay, 2018).

Furthermore, with computer-aided technology, English is no longer boring but fun. It stimulates, motivates, and encourages learners to bring their potential to the maximum level as of how learning occurs. With this advantage, these instructional materials provide knowledge and a view of the topic, including its facts and information that learners can relate to and connect to the learning process. However, utilizing these materials shall be scrutinized first to ensure the validity and effectiveness of our learner's needs, including their age and level of understanding (Bukoye, 2019). Teachers must use the right materials and knowledge for learning courses to succeed. There are a lot of tools and materials for instruction, but one must choose the ones that will fit in. In evaluating the materials, it is important to consider if these appeal to the learner, the material's credibility, validity, reliability, the ability of the materials to motivate, flexibility, and appropriateness of the material (Balachandaran, 2021).

Moreover, in preparing the content from the instructional materials, the teacher first needs to assess the student's background knowledge to have a strong foundation of contextualization. Contextualization refers to relating and presenting lessons in the context of the prevailing local environment, culture, and resources. Hence, lessons are becoming more real-life, customized, and appropriate. In this aspect, instructional materials play a vital role in developing skills among learners in the entire part of education.

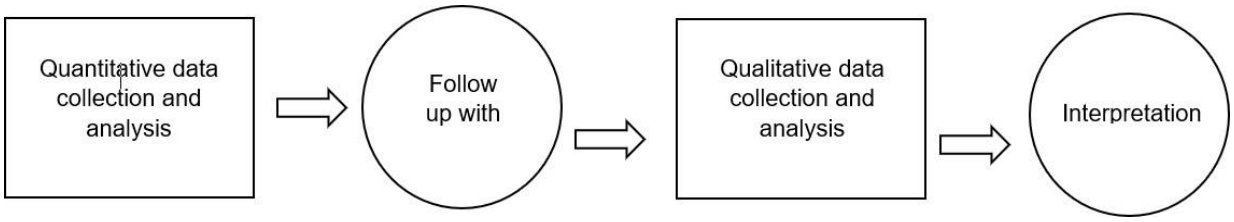
Relatively, the concept of instructional materials is utilized in this paper. This study is conducted to determine the instructional materials used by English teachers teaching English during the pandemic, their demographic profile, and other variables. Moreover, this research uncovers the English teachers' challenges and their best practices in the field in the school year 2020-2021. Thus, this study specifically answered the following questions.

Research Questions

1. What is the profile of the respondents in terms of:
   1.1 age;
   1.2 highest educational attainment;
   1.3 teachers' performance rating
   1.4 number of training days in English Language 2020-2021
2. To what extent do English teachers use the following instructional materials in terms of:
   2.1 printed;
   2.2 audio;
   2.3 visual;
   2.4 audiovisual; and
   2.5 teacher made resources;
3. What is the extent of availability of instructional materials utilized by English teachers in terms of:
   3.1 printed;
   3.2 audio;
   3.3 visual;
   3.4 audiovisual; and
   3.5 teacher made resources;
4. Is there a significant relationship between the instructional materials used by English
   teachers and their demographic profile?
5. Is there a significant relationship between the extent of use and availability of instructional materials utilized by English teachers?
6. Is there a significant difference between the availability and the extent of use of instructional materials when respondents are grouped according to location?
7. What challenges do English teachers encounter in the utilization of instructional materials?
8. How do English teachers cope with these challenges?

Hypothesis:

1. There is no significant relationship between the Teachers' use of the instructional materials and their Demographic Profile.
2. There is no significant relationship between the extent of use and availability of instructional materials utilized by English teachers.



3. There is no significant difference between the availability of instructional materials when respondents are grouped according to location.

METHODOLOGY

This part of the study discusses the research design, research locale, research respondents, research instrument, data gathering procedures, and data analyses.

Research Design

The study uses an explanatory sequential mixed technique of research. The explanatory sequential design of Creswell and Plano Clark involves first gathering quantitative data and then gathering qualitative data to supplement or further explain the quantitative results (*Basic Mixed Methods Research Designs*, n.d.) This strategy is justified because, while quantitative data and results offer a general image of the study problem, further analysis, particularly through the acquisition of qualitative data, is required to enhance, extend, or clarify the overall picture. The researcher used custom-made survey questionnaires to collect quantitative data on respondents' perceptions of English teachers' availability and utilization of instructional resources.

Explanatory Sequential Mixed Method
Creswell &Plano- Clark (2011)

The study also looked at how readily available instructional materials were in connection to how much they were used by English teachers. It also looked to see if there was any correlation between the demographics of the instructor responses and the IMs. The study also sought to identify the difficulties and effective strategies English teachers used while utilizing educational resources. The researcher used a mixed method in this case.

Research Locale

The study concentrated on the teachers of Tanjay City Division who are teaching English. Due to the pandemic, the researcher floated the survey questionnaire to teachers via online (Google Forms) and manual approach. Moreover, the FGD was administered to English teachers representing the hinterland schools, and the other was for the lowland schools.

In disseminating the survey questionnaire, the researcher ensured that it would be convenient for the respondents to support this study. The survey form was sent through emails or messenger accounts for those who chose online and manual distribution for those who preferred it. The said approach strictly observed the safety protocol standards of IATF, such as wearing a mask and disinfecting through alcohol before distributing the survey material. So, the researcher and the participant observed social distancing as a preventive measure.

Research Respondents

The researcher included eleven English teachers from hinterland schools and sixty-one (61) from lowland schools, for a total of seventy-two English teachers-respondents of Tanjay City Division. The selection of respondents utilized a purposive sampling technique. Based on the criteria made by the researcher, all the respondents were qualified to be part of the data gathering.

Research Instrument

This study utilized both self-made survey questionnaires and guide questions. The survey questionnaire treated the quantitative data, and the guide questions were used for qualitative data utilizing Focused Group Discussions (FGD).

The Development of a self-made questionnaire underwent pilot testing and was administered at Bais City Division. It was necessary to check the reliability of the questionnaire. As a result, the Cronbach Alpha is 0.789, indicating a high-reliability level. Thus, the questionnaire is internally consistent. Validity-wise, the questionnaire was scrutinized by three English Experts in the field.

Moreover, the question guide for FGD was made based on the study objective and research questions. Through Structured questions, the interviewer can be flexible in asking and probing questions based on the respondents' responses.

Data Gathering Procedures

This study involved three steps in the data-gathering process: pre-, during, and post-gathering. The pre-data collection phase involved the researcher determining the eligibility requirements for the participants. An English teacher was trained as part of this process and would lead concentrated group discussions to avoid personal bias from the researcher's perspective. Consequently, a letter of intent and permission was sent to the Division of Office in Tanjay. After the approval, the respondents were invited for an online orientation related to the nature and scope of the study. In addition, during data collection, the researcher applied two strategies: 1) sending the survey questionnaire through Google Forms for online choice and 2) floating the survey questionnaire with the help of the school heads for those who chose the manual survey. The researcher strictly followed the safety protocols when administering the manual survey.

On the other hand, the data-gathering procedure in the qualitative aspect was made possible through an online platform like Google Meet. A trained teacher was assigned to conduct the FGD with seven English teachers until data saturation was reached in the fourth session. Moreover, the interviewer returned to each respondent for member checking to make the data credible. It was necessary to check whether the interviewer's interpretation accurately reflected the respondents' intended meaning and whether their responses were nuances and changes. Lastly, after data gathering, the researcher tallied and tabulated all the data sets for quantitative and transcribed the representatives' responses for qualitative purposes.

Data Analyses

This study employed separate analyses since a mixed method was utilized in this research.

The demographic profile of the respondents was determined using the frequency and percentage distribution as provided with the formula:

$$P = f/n \times 100\%$$

Where: P – percentage
f – frequency
n – number of samples

The extent use of instructional materials utilized by teachers teaching English was rated based on the quantified rating. The categories on the extent use of instructional materials utilized by teachers teaching English ranged from 1 to 5.

Extent of Use of Instructional Materials		
Scale	**Verbal Description**	**Explanation**
5	Very Much	The instructional material is used in every session
4	Much	The instructional material is used four to 5 times a week
3	Seldom	The instructional material is used 2 to 3 times a week
2	Very seldom	The instructional material is used once a week
1	Not used at all	The instructional material is never used at all

The availability of instructional materials utilized by teachers teaching English was rated based on the quantified which ranged from 1 to 5.

Availability of Instructional Materials		
Scale	**Verbal Description**	**Explanation**
5	Always	The instructional material is available in the classroom
4	Often	The instructional material is available for use twice a week
3	Sometimes	The instructional material is available for use once a week

2	Seldom	The instructional material is available for use every two weeks
1	Never	The instructional material is never found in the classroom at all.

The Weighted Mean was used in interpreting the extent and availability of instructional materials utilized by English teachers with the following formula:

Weighted mean = Σwx/Σw.
where: Σ = the sum of
W = the weights
X= the value

(https://www.statisticshowto.datasciencecentral.com/weighted mean/

The challenges and good practices on teachers 'utilization of instructional materials are simply the responses made by the respondents during the FGD. The trained teacher interviewed a group from hinterland and lowland schools to substantiate the result of the quantitative data. The qualitative data was interpreted through Thematic analysis (*Caulfield, J. (2019) How to Do Thematic Analysis. - References - Scientific Research Publishing*, n.d.), which is explained in the research procedure.

Pearson R Correlation will be used to determine the significant relationship between the instructional materials used by English teachers and their demographic profile with a ratio or interval variables, as well as the significant relationship between the extent of use and availability of instructional materials utilized by English teachers.

The result was interpreted as follows:

Pearson's Correlation Coefficient	Interpretation
0.00	No association between the two variables
0.01–0.19	Negligible association between the variables
0.20–0.39	Weak association between the variables
0.40–0.69	Medium association between the variables
0.70–1.00	The strong association between the variables

In determining the significant relationship between the instructional materials used by English teachers and their demographic profile with ordinal variables, the Spearman Rho Correlation was utilized.

The Significance of the Relationship using Pearson's R and Spearman Rho Correlations was ascertained by rejecting the null hypothesis that there is no relationship between the two variables when the P-value is less than the Significance Level of 0.05. The T-test was used to determine the significant difference between the availability and

the extent of use of instructional materials when respondents were grouped according to location.

RESULTS AND DISCUSSION

The results acquired during this investigation are presented in this section. This also demonstrates the use of statistical methods in the presentation, interpretation, and explanation of the data.

1. Profile of the Respondents

Table 1. 1 Age

Age	Frequency	Percentage Distribution (%)
20 – 29	25	34.72
30 - 39	28	38.89
40 - 49	16	22.22
50 – 59	3	4.17
Total	72	100.00

Table 1.1 shows that 38.89 percent of the respondents were aged 30 - 39 years old. This implies that a number of the respondents are almost in the middle part of practicing their profession as teachers.

Table 1.2 Highest Educational Attainment

Educational Attainment	Frequency	Percentage Distribution (%)
Bachelor's Degree	67	93.06
Masters	5	6.94
Total	72	100.00

The table above presents that 93.06 percent of the respondents had bachelor's degrees which denotes that the majority had not finished advanced studies. This implies that teachers shall continue and finish advanced studies to improve their skills and be proficient in their profession (The Importance of Professional Development for Educators, (n, d.). In addition, advanced studies such as a master's degree can improve teaching skills and increase job stability (Five Benefits of Having a Master's in Education, 2021).

Table 1.3 Teachers' Performance Rating

Performance Rating	Frequency	Percentage Distribution (%)
Outstanding	1	1.39
Very Satisfactory	71	98.61
Total	72	100.00

The table above shows that 98.61 percent of the respondents performed Very Satisfactory, meaning that most of the respondents performed better in their profession

as teachers. This idea implies that teachers are encouraged to do their best and be proficient in their profession to deliver quality education. Thus, the said goal is anchored by the Philippine Professional Standards for Teachers (PPST), which ensures the delivery of quality, accessible, relevant, and liberating basic education in the country. This concept is aligned with the Guidelines on Establishment and Implementation of RPMS in DepEd, which manages monitors. It measures performance and identifies human resource and organizational development needs (RPMS-PPST: Helping teachers improve the delivery of quality basic education, 2018).

Table 1.4 Number of Training Days in English Language Year 2020-2021

Number of Training Days	Frequency	Percentage Distribution (%)
5 – 8	21	29.17
9 – 12	48	66.67
13 – 16	3	4.16
Total	72	100.00

The table above shows that 66.67 percent of the respondents had 9 to 12 training days in the English language in the school year 2020 to 2021. This idea implies that teachers should undergo more training relevant to English. Moreover, teachers' training was necessary to employ proper methods of teaching. Based on the result of the study conducted in Spain on the utilization of instructional materials, it is recommended that teachers continue to undergo training, workshops, and advanced studies to capacitate themselves in employing the tools appropriately (Bukoye, 2019).

2. Extent of English Teachers' Use of Instructional Materials

The extent of use of English teachers of instructional materials was determined in this study. This involved the printed, audio, visual, audio-visual, and teacher-made resources.

Table 2.1 Printed

Resources	Weighted Mean	Adjectival Rating
Magazine	2.53	Very Seldom
Newspaper	2.57	Very Seldom
Textbook	4.58	Very Much
Photographs	3.19	Seldom
Activity Sheets	4.68	Very Much
Posters	2.90	Seldom
Tarp	2.78	Seldom
Handouts	3.82	Much
Mean	3.38	Seldom

Adjectival Rating Equivalences:
4.21 – 5.00 – Very Much 3.41 – 4.20 - Much 2.61 – 3.40 - Seldom 1.81 – 2.60 – Very Seldom
1.00 – 1.80 – Not Used at All

Table 2.1 shows that the respondents seldom used printed instructional materials, as demonstrated by the weighted mean of 3.38. This idea implies that Printed resources are used 2 to 3 times a week. Impressively, they used many activity sheets, as shown by the weighted mean of 4.68. On the other hand, they used Very Seldom the Magazine, as exhibited by the Weighted Mean of 2.53. Moreover, the study, Activities of Students in Using Worksheet Based on Contextual Teaching and Learning, is pertinent to this outcome. The findings showed that using student worksheets based on contextual teaching and learning improves students' comprehension of the subject matter (Fauziah & Nurita, 2019).

2.2 Audio

Resources	Weighted Mean	Adjectival Rating
Tape Recorder	2.08	Very Seldom
Radio	1.92	Very Seldom
Cellphone	4.33	Very Much
Record Player	3.07	Seldom
Composite Mean	2.85	Seldom

Adjectival Rating Equivalences:
4.21 – 5.00 – Very Much 3.41 – 4.20 - Much 2.61 – 3.40 - Seldom 1.81 – 2.60 – Very Seldom
1.00 – 1.80 – Not Used at All

The table above presents that there respondents Seldom used Audio, as exhibited by the Composite Mean of 2.85. This means that Audio is used 2 to 3 times a week. Appreciatively, Very Much use of cell phones was practiced, as evidenced by the Weighted Mean of 4.33, while Radio was Very Seldom used, as evidenced by the Weighted Mean of 1.92. This is because students' usage of cell phones might cause them to get disengaged from the lecture, which can result in worse grades (Buccino, 2018). In addition, based on respondents' experience, respondents limit the activities requiring cell phones since other students do not, especially those living in the hinterland.

2.3 Visual

Resources	Weighted Mean	Adjectival Rating
Realia (Real Objects)	3.54	Much
Chalkboard	2.76	Seldom
Bulletin Board	2.38	Very Seldom
Flannel Story Board	3.21	Seldom
Handouts	4.13	Much
PowerPoint	4.43	Very Much
Still Pictures	3.60	Much
Flashcards	3.22	Seldom
Composite Mean	3.41	Much

Adjectival Rating Equivalences:
4.21 – 5.00 – Very Much 3.41 – 4.20 - Much 2.61 – 3.40 - Seldom 1.81 – 2.60 – Very Seldom
1.00 – 1.80 – Not Used at All

The table above exposes that Much use of Visual was done by the respondents using Handouts, Still Pictures, and Realia (Real Objects) as evidenced by the Weighted Mean of 3.41 and Weighted Means of 4.13, 3.60, and 3.54 respectively. This connotes that Visual is used four to 5 times a week. Surprisingly, seldom use of a Bulletin Board

was initiated as exhibited by the Weighted Mean of 2.38. Relevantly, according to the study titled Activities of Students in Using Worksheets Based on Contextual Teaching and Learning, using student worksheets based on contextual teaching and learning improves students' comprehension of the subject matter (Fauziah & Nurita, 2019).

2.4 Audio-Visual

Resources	Weighted Mean	Adjectival Rating
Television	3.90	Much
Film	3.22	Seldom
Projector	3.42	Much
Laptop	4.51	Very Much
Composite Mean	3.76	Much

Adjectival Rating Equivalences:
4.21 – 5.00 – Very Much 3.41 – 4.20 - Much 2.61 – 3.40 - Seldom 1.81 – 2.60 – Very Seldom
1.00 – 1.80 – Not Used at All

The table above shows that Much use of Audio-Visual was done as exposed by the Weighted Mean of 3.76. This indicates that Audio-Visual is used four to 5 times a week. While the Laptop was Very Much used, as shown by the Weighted Mean of 4.51, Film was Seldom used, as demonstrated by the Weighted Mean of 3.22. Laptops are useful for helping students sharpen their writing. Once students have mastered typing, they can "write" more quickly on a computer than by hand. It is also easier to find faults and make fixes when integrated grammar and spelling checkers and thesauruses are used. Students can examine their papers for plagiarism even after they are finished (Zadvinskis, 2022). Additionally, it can help students become computer-savvy. Individuals will likely increase their computer literacy by participating in more practical computer activities (the theory of cone of experience). The research titled "Students Computer Literacy and Academic Performance" found that students' academic performance improved as their computer literacy increased (Cadiz-Gabejan & Takenaka, 2021). Moreover, the teachers use laptops because of their portability. Since they are so small, laptops are quite portable. They can easily move from one place to another in a carrying case or backpack. They are, therefore, efficient tools that teachers may carry with them wherever they go (Bhattacharya, 2021). In addition, teachers use laptops since they are useful for their jobs, particularly reviewing and grading students (Street, 2017).

2.5 Teacher-made Resources

Resources	Weighted Mean	Adjectival Rating
SIM (Strategic Intervention Material)	3.04	Seldom
Assessment tool	4.25	Very Much
Vocabulary or word walls	3.88	Much
Flannel storyboard	2.90	Seldom
Posters	3.03	Seldom
Lesson plans	4.64	Very much
Spelling Lists	3.68	Much
Activity Sheets	4.43	Very much
Composite Mean	3.73	Much

The table above presents that the respondents used Teacher-made Resources as exposed by the composite Mean of 3.73. This means that the Teacher-made Resources are used four to 5 times a week. Furthermore, they used Very Much the Activity Sheets as shown by the Weighted Mean of 4.43, and Seldom used the Flannel storyboard as indicated by the Weighted Mean of 2.90. Furthermore, based on the result of the study titled, Students can easily relate the activity sheets and with the use of assessment tools, they can gauge the learning of the students. Students' understanding of the subject matter is improved by employing worksheets based on contextual teaching and learning (Fauziah & Nurita, 2019).

Table 2.6 Summary of Use of Instructional Materials

Instructional Materials	Mean of Weighted Means	Adjectival Rating
Printed	3.38	Seldom
Audio	2.85	Seldom
Visual	3.41	Much
Audio-Visual	3.76	Much
Teacher-made Resources	3.73	Much
Composite Mean	3.43	Much

Adjectival Rating Equivalences:
4.21 – 5.00 – Very Much 3.41 – 4.20 - Much 2.61 – 3.40 - Seldom 1.81 – 2.60 – Very Seldom
1.00 – 1.80 – Not Used at All

The summary presents that Much use of the Instructional Materials was done by the respondents specifically in the use of Audio-Visual, Teacher-made Resources, and Visual as demonstrated by the Composite Weighted Means of 3.43 and Weighted Means of 3.76, 3.73, and 3.41 respectively. This implies that the Instructional Materials are used four to 5 times a week. Besides, they Seldom Used Printed and Audio Instructional Materials as shown by the Weighted Means of 3.38 and 2.85 respectively. According to studies, using audio-visual resources in the classroom significantly benefits learners in grasping difficult subjects. These tools help the students understand these ideas quickly and simply. The most recent technological developments give teachers a lot of possibilities to simplify their tasks. The use of audio-visual aids in class planning has become more common among educators all around the world as a result (Prajapati, 2020).

3. Extent of English Teacher's Availability of Instructional Materials

The extent of English teachers' availability of instructional materials such as print, audio, visual, audiovisual, and teacher-made resources was also determined in this study.

Resources	Weighted Mean	Adjectival Rating
Magazine	2.38	Seldom
Newspaper	2.67	Sometimes
Textbook	4.17	Often
Photographs	3.07	Sometimes

Activity Sheets	4.54	Always
Posters	2.75	Sometimes
Tarp	2.81	Sometimes
Handouts	4.04	Often
Composite Mean	3.30	Sometimes

Table 3.1 Printed

Adjectival Rating Equivalences:
4. 21 – 5.00 – Always 3.41 – 4.20 - Often 2.61 – 3.40 - Sometimes 1.81 – 2.60 – Seldom
1.00 – 1.80 – Never

Table 3.1 above shows that Printed Instructional Materials are Sometimes available as demonstrated by the Composite Mean of 3.30. This implies that Printed Instructional Materials are available for use once a week. Impressively, Activity Sheets were Always available as presented by the Weighted Mean of 4.54. But magazine was Seldom used as presented by the Weighted Mean of 2.38. Substantially, this result is similar to the study titled, Activities of Students in Using Worksheet based on Contextual Teaching and Learning. The result revealed that the employment of student worksheets based on contextual teaching and learning increases students' understanding of the material (Fauziah & Nurita, 2019). Furthermore, the use of formative and summative assessments, contextualized or localized, can help both teachers and students. Teachers can measure the performance of the students and be guided to what skills and knowledge be improved. To the students, it can also help them self-assess their performance for improvement and maintenance of good practice (Benefits of Using Summative and Formative Assessments in ESL Classrooms, 2022).

Table 3.2 Audio

Resources	Weighted Mean	Adjectival Rating
Tape Recorder	2.26	Seldom
Radio	2.18	Seldom
Cellphone	3.89	Often
Record Player	3.22	Sometimes
Composite Mean	2.89	Sometimes

Adjectival Rating Equivalences:
4.21 – 5.00 – Always 3.41 – 4.20 - Often 2.61 – 3.40 - Sometimes 1.81 – 2.60 – Seldom
1.00 – 1.80 – Never

The table above presents that the Audio was Sometimes available as exhibited by the Weighted Mean of 2.89. This indicates that the Audio was available for use once a week. However, the cell phone was Often available as exhibited by the Weighted Mean of 3.89, and Radio was Seldom available as reflected by the Weighted Mean of 2.18. When teachers use cell phones as instructional material in the class, students also get to use this thing to relate to and experience the task (theory of Cone of Experience). Nevertheless, students' use of cellphone can distract their attention from learning the lesson and can lead to lower grades (Buccino, 2018). Another, when it comes to

experience, English teachers corroborated that if cell phones can be part of learning a lesson, it would be unequal to those students who cannot afford to buy cell phones for their classes. Thus, the goal of teaching-learning can be compromised. Relatively, radio was seldom used. One of the reasons why teachers seldom use radio is because many devices like laptops and televisions can offer more experience than using radio. Radio alone can just target the auditory sense of the learners while laptops and television both cater to the audio-visual senses. Hearing only has 20% of remembering while hearing and seeing has 50% which is evident in the audio-visual materials (Janoska, 2021).

Table 3.3 Visual

Resources	Weighted Mean	Adjectival Rating
Realia (Real Objects)	3.63	Often
Chalkboard	4.00	Often
Bulletin Board	3.56	Often
Flannel Story Board	3.01	Sometimes
Handouts	4.11	Often
PowerPoint	4.39	Always
Still Pictures	3.56	Often
Flashcards	3.36	Sometimes
Composite Mean	3.70	Often

Adjectival Rating Equivalences:
4.21 – 5.00 – Always 3.41 – 4.20 - Often 2.61 – 3.40 - Sometimes 1.81 – 2.60 – Seldom
1.00 – 1.80 – Never

The table above exposes that Visual was Often Available as exhibited by the composite mean of 3.70. This connotes that Visual was available for use twice a week. Favorably, PowerPoint was Always available as proven by the Weighted Mean of 4.39. On the other hand, Flannel storyboard was Sometimes available as evidenced by the Weighted Mean of 3.01. substantially, the use of PowerPoint is essential in engaging students to participate in class discussions. The PowerPoint presentations had a great impact on pupils because they believed it was entertaining and interesting to follow the lesson from the screen. The use of PowerPoint encourages pupils to attend class. (Effects of PowerPoint Presentation in the Academic Performance, 2022). This is just one of the positive effects of utilizing PowerPoint presentations. Teachers utilize this for the better conveyance of ideas. Likely, when communication is supplied through several channels, it is more effective than communication that is done through only one. It increases the likelihood that the entire message will be received by using many channels. A suitable image adds a new channel. Thus, the use of PowerPoint can motivate learners and provide better interaction with teachers (Pros and Cons Teaching via PowerPoint, 2021).

Table 3.4 Audio-Visual

Resources	Weighted Mean	Adjectival Rating
Television	3.93	Often
Film	2.93	Sometimes
Projector	3.03	Sometimes
Laptop	4.49	Always

Composite Mean	3.60	Often

Adjectival Rating Equivalences
4.21 – 5.00 – Always 3.41 – 4.20 - Often 2.61 – 3.40 - Sometimes 1.81 – 2.60 – Seldom
1.00 – 1.80 – Never

The table above displays that the Audio-Visual was Often available as exhibited by the Composite Mean of 3.60. This means that the Audio-Visual is available twice a week. Moreover, the Laptop was Always available as evidenced by the Weighted Mean of 4.49 but the Film was Sometimes available as exposed by the Weighted Mean of 2.93. When it comes to assisting learners in improving their writing, laptops are helpful. Once learners master typing, they can "write" on a computer more quickly than by hand. Using integrated grammar and spelling checkers and thesauruses also makes it simpler to spot errors and make corrections. Even after finishing their papers, students can check them for plagiarism (Zadvinskis, 2022). Also, it can improve the computer skills of the learners. The more they engage in hands-on computer activities (theory of cone of experience), the higher the opportunity to improve their computer literacy. A study titled, Students Computer Literacy and Academic Performance, revealed that the more computer-literate students were, the better they performed academically (Cadiz-Gabejan & Takenaka, 2021). As for the teachers, they utilize laptops due to their portability. Laptops are extremely portable due to their small size. In a carrying case or backpack, they are simple to transport from one location to another. Because of this, they are handy items that teachers can take wherever they go (Bhattacharya, 2021). Aside from this, teachers utilize laptops because it is useful in performing their tasks, especially reviewing and giving grades to their students (Street, 2017).

Table 3.5 Teacher-made Resources

Resources	Weighted Mean	Adjectival Rating
SIM (Strategic Intervention Material)	3.10	Sometimes
Assessment tool	4.21	Always
Vocabulary or word walls	3.44	Often
Flannel storyboard	2.82	Sometimes
Posters	3.08	Sometimes
Lesson plans	4.86	Always
Spelling Lists	3.68	Often
Activity Sheets	4.33	Often
Mean	3.69	Often

Adjectival Rating Equivalences:
4.21 – 5.00 – Always 3.41 – 4.20 - Often 2.61 – 3.40 - Sometimes 1.81 – 2.60 – Seldom
1.00 – 1.80 – Never

The table above exposes that Teacher-made Resources were Often Available as proven by the Weighted Mean of 3.69. This indicates that the Teacher-made Resources are available for use twice a week. Impressively, Lesson Plans were Always Available as exhibited by the Weighted Mean of 4.86 but the Flannel storyboard is Sometimes available as indicated by the Weighted Mean of 2.82. Substantially, lesson plan guides teachers in delivering the lesson. Teachers combine their understanding of their teaching

situation, methodology, and curriculum goals as part of lesson planning (The Importance of Lesson Planning for Student Success, 2022). Amidst the pandemic, according to the Department of Education, teachers in public schools would still be required to create daily lesson plans and logs to guarantee high-quality instruction. The government stated in a statement that using a DLL (Daily Lesson Log) "supports teachers in upholding quality education standards and helps them plan lessons efficiently and effectively" (PNA, 2022).

Table 3.6 Summary of Use of Instructional Materials

Instructional Materials	Mean of Weighted Means	Adjectival Rating
Printed	3.30	Sometimes
Audio	2.89	Sometimes
Visual	3.70	Often
Audio-Visual	3.60	Often
Teacher-made Resources	3.69	Often
Composite	3.44	Often

Adjectival Rating Equivalences:
4.21 – 5.00 – Always 3.41 – 4.20 - Often 2.61 – 3.40 - Sometimes 1.81 – 2.60 – Seldom
1.00 – 1.80 – Never

The summary shows that the Instructional Materials were Often Available as exhibited by the Composite Mean of 3. 44. This implies that the Instructional Materials are available for use twice a week. Moreover, Visual is Often Available as provided by the Weighted Mean of 3.70 but Audio is Sometimes Available as exhibited by the Weighted Mean of 2.89. This is supported by the responses of the teachers in FGD. According to them, they utilized handouts, activity sheets, and PowerPoint presentations because they observed how students reacted and interacted with teachers in class discussions. A study titled Investigating EFL Students' Attitude toward the Use of Visual Aids in English Lectures revealed that students had a positive attitude toward the use of visual aids in English class (Aljuhani & Maroof, 2019). Further, during FGD, teachers also said that audio was sometimes available but not all the time, English lessons require them to use audio materials. Some visual learners are not comfortable with the input provided by the audio material and prefer to see the images. Plus, it would be hard for students to comprehend and explain abstract concepts through audio format only (Disadvantages of Audio Technologies, n.d.).

4. Relationship Between the Instructional Materials Used by English Teachers and their Demographic Profile

The relationship between the extent of instructional materials used by English Teachers and the demographic profile such as age, highest educational attainment, teachers' performance rating, and number of training days were determined using Pearson R and Spearman Rho Correlation.

Table 4.1 Correlation Between the Instructional Materials Used by English Teachers and their Demographic Profile

Variables Correlated with Extent Use of Instructional Materials	Correlational Tool Used	Correlation Coefficient	P-Value
Age	Pearson R	0.224	0.058
Highest Educational Attainment	Spearman Rho	-0.257	0.030
Teachers Performance Rating	Spearman Rho	-0.054	0.651
Number of Training Days	Pearson R	-0.005	0.964

As reflected in the table above, Age and Highest Educational Attainment had weak correlations with the Extent of Use of Instructional Material as presented by the correlation of 0.224 and -0.257 respectively. Furthermore, the latter was significant as demonstrated by the P-value of 0.030 at 0.05 level. This implies that the higher the educational level the teacher has, the lesser he/she uses the Instructional Materials.

5. Relationship Between the Extent Use and Availability of Instructional Materials Utilized by English Teachers

The relationship between the extent of use and availability of instructional materials was determined using Pearson R Correlation.

Table 5.1 Correlation Between the Extent Use and Availability of Instructional Materials Utilized by English Teachers

Extent of Use of Instructional Materials Correlated with Availability of Instructional Materials	Correlational Tool Used	Correlation Coefficient	P-Value
	Pearson R	0.566	0.000

As shown by the table above Extent of use of Instructional Materials has a medium association with the Availability of Instructional Materials as exhibited by the Correlation Coefficient of 0.566 and is highly significant as evidenced by the P-Value of 0.000 at 0.05 level. This indicates that the higher the Instructional Materials the more available they are and vice versa.

6. Difference Between the Availability and the Extent of Use of Instructional Materials when Respondents are Grouped According to Location

The difference between the availability and the extent of use of instructional materials, when respondents are grouped according to location, was determined using T-Test at a 5% significance level.

Table 6.1 T-Test in Finding the Significant Difference Between the Availability and the Extent of Use of Instructional Materials when Respondents are Grouped According to Location.

Location	**Use of Instructional Materials**			**Availability of Instructional Materials**		
	Mean	p-value	**Interpretation**	Mean	P-Value	**Interpretation**
Low Land	3.38	0.150	Significant	3.38	0.652	Significant
High Land	3.58			3.40		

The table above shows that Instructional Materials in Highland Location are Used more than in Low Land as presented by the means of 3.58 and 3.38 respectively. This difference is proven significant as shown by the p-value of 0.150. This implies that teachers and students in Highland Locations can utilize more of the Instructional Materials than in Low Land Locations. This is because, some of the students in the hinterland do not have gadgets which led teachers to be creative and resourceful to employ a variety of instructional materials like printed, and audio, and limited use of visual, audiovisual, and even developed materials to cater the needs of the learners. On the other hand, teachers in low-income schools prefer ICTs in teaching to using traditional instructional materials because it can make their tasks easier and more productive. Aside from this, their students have gadgets, and they prefer modern ways of teaching the learning process (How Important Is Technology in Education? Benefits, Challenges, and Impact on Students, 2020). There are also more available instructional materials in the highland location than in the lowlands as exhibited by the means of 3.40 and 3.38 respectively. Said difference is significant as manifested by the p-value of 0.652. This indicated that varied instructional materials in land locations are more available than in lowland Locations.

Table 7. Thematic map of English teachers' experiences in utilizing instructional materials

Codes	**Themes**
Power interruption	
Students have no devices	
No signal in students' residence	Challenges amidst crisis
Cannot understand the medium of instruction in modules	
Teachers' lack of training	
Provision of parallel activities	
Translating English to Vernacular	Best practices amidst challenges
Contextualizing and localizing materials	

Challenges Amidst Crisis

When using instructional materials, English teachers in schools in the hinterland confront many difficulties. A significant obstacle is the need for more current and pertinent resources. It is difficult for many schools in rural locations to get textbooks, workbooks, and other supplies essential for efficient teaching and learning. This may make it more difficult for educators to provide learners with engaging lessons and teaching. The major problem for teachers pertains to power interruption whenever using audio-visual materials such as TVs, speakers, laptops for PowerPoint presentations, and projectors. In this regard, educators and students in a virtual classroom would require vital e-learning technologies that require continuous electricity to keep them functioning and avoid problems that could obstruct the students' learning experience (Castillo, 2021). Thus, it is important to identify problems that impede learning and take action to achieve learning goals (Fons, 2022), explained by the constraint theory. Moreover, another problem is the need for more possibilities for professional growth and training for English instructors in rural schools has been another problem. Teachers could find it easier to incorporate educational resources into their courses if they can access continuing support and advice. This might result in inconsistent teaching methods and make it harder to satisfy the various demands of the pupils. English teachers in schools in the hinterland often have to deal with a need for digital infrastructure. Reliable internet connectivity, computers, and other technical equipment are necessary to access digital resources and integrate multimedia into lectures, yet they sometimes need improvement in distant places. The statements of the participants support this event.

Respondent 4 said,
"Since I am teaching in a hinterland school, we experience a lack of devices and high-end technology-mediated materials. This prompted me to utilize a variety of materials like activity sheets, lesson plans, and customized and localized materials. also, I don't know how to use other techniques in the employment of other materials since I lack training on it."

Moreover, respondent 3 added,
"I agree. Most of the time, I used a variety of materials since we majority of our students cannot relate due to the absence of gadgets. Also, in the school, we don't have an internet connection in school, and we always experience power interruptions."

Respondent 1 added,
"Unlike in our school, since we are in urban areas, internet connection is available. So, most of the time I used a laptop, cellphones, power point presentations since these are available in our context."

Respondent 5 added,
"We're the same. Our students have cell phones and the internet is also available in our school. We can just send templates for activity sheets or even assignments to our

students. for the delivery of the lesson, I always use PowerPoint presentations since it helps a lot in stimulating my students' mood and they perform better with it."

Responded 6 answered,
"On the other hand, in my case, since I am teaching in the hinterland, I found it challenging to use ICT-related materials and devices. Although I use a laptop sometimes, it is not reliable since it has a small screen. We also don't have an internet connection, so we don't have much use for live online surfing. In delivering the lessons in my subject, I always use meta strips and localized materials."

Respondent 2 highlighted,
"I am a teacher in a lowland school, but we don't have an internet connection. But have TVs and a projector that we can use to present our lessons for the day. PowerPoint presentation amazes our learners but only simple presentations I can afford to do since I am not trained to use other teaching I also use activity sheets and assessment tools. Somehow, these aid me in assessing my students' performance. But most of the time, I used ICT-related instructional materials."

Lastly, respondent 7 said,
"There in the hinterland, we always used printed materials and other teacher-made resources since we didn't have an internet connection. I always use activity sheets, lesson plans, and assessment tools."

Utilizing instructional materials presents a big problem for English teachers working in rural schools. As expressed by the hinterland respondents, they have limited use of ICT-related materials since it is not convenient in their context. With this, Policymakers, school administrators, and teacher preparation programs must make it a top priority to provide teachers working in rural locations with sufficient resources, chances for professional development, and digital infrastructure. We cannot guarantee that all kids, regardless of where they live, have access to high-quality English instruction until we address these problems.

Best Practices Amidst Challenges

English teachers are essential in helping learners become more proficient in the language and literacy. Using the right teaching resources is one of the main elements of a good teaching strategy. To optimize learning outcomes, English teachers must use best practices when utilizing these materials, even when students have differing levels of comprehension in the modules. In this pandemic, students found it hard to comprehend the module content since modules are not localized and contextualized. This prompted the teachers to be innovative and resourceful in addressing learning issues for learners. The statements of the respondents substantiate this phenomenon.

Respondent 3 said,
"I always receive complaints from my students that they don't understand what's inside of the modules since the language of instruction English is. Moreover, they found the activities irrelevant in their context.

Respondent 7 added,
"In my case, I always make a point to read the module first then knowing the background knowledge of my students, I made parallel activities and localized my materials for my students to connect. I even translated the language into vernacular so they can understand better."

Respondent 4 stressed,
"Localizing materials is the best strategy I can employ. Modules were challenging for them, so I needed to localize and translate them for better understanding. I also made parallel activities just in case they cannot answer what's in the modules."

Respondent 6 answered,
"Most of the reported problems of my students is that the words or vocabulary used in the modules were a bit hard to understand. So, I read first the module, and I made a parallel activity for them, a simpler version of the modules yet still targeting the competencies and objectives of the lesson."

Moreover, respondent 1 said,
"Sometimes, I make a simple activity and attach it to the modules. There, students are guided with what to do on the given task."

Furthermore, respondent 2 answered,
"What I did is that I translated the difficult words and replaced them with easier ones for my students to understand. Moreover, there were times when I made localized materials like parallel activities to make sure that they could relate and use materials that are found in their surroundings."

Lastly, respondent 5 emphasized,
"I agree with all they said, even when students have gadgets and others may have them, the absence of an instructor makes them receive education quite difficult. So, I always make sure the activities are well-reviewed before distributing them to my students. I make parallel activities a simpler version of the module. Through this, they can still achieve their objectives.

Effective teaching in English can be hard to attain when there limiting factors that impede the teaching-learning process. This includes teachers' utilization of instructional materials. As expressed by the respondents, it is evident that they encounter challenges such as the unavailability of the materials due to their residence's resources, and students' difficulty in dealing with modules during the pandemic time. However, teachers demonstrated innovative characteristics to address this rising crisis by creating parallel activities, localizing materials for the students to connect and relate, and translating and

replacing difficult words with simpler versions. These acts are considered best practices of teachers in the lowlands and hinterland.

Conclusion

The findings of this study concluded that with many teachers in their 30s, where the majority acquired insufficient pieces of training and were unable to finish advanced studies, they perform better with much use of the Instructional Materials four to 5 times a week for 4 to 5 subjects and often available or used twice a week. Furthermore, the higher the Instructional Materials used, the more available they are, and vice versa, though teachers with higher education tend to lessen the use of Instructional Materials. Thus, the Use and Availability of Instructional Materials can help enhance students learning, especially when they do tasks that involve the utilization of these materials (Theory of Cone of Experience), and they can associate their experiences by connecting to the new sets of ideas and concepts (Theory of Connectionism). Further, the result also showed that English teachers experience challenges, including power interruption, especially when using laptops, TVs, power points, speakers, and projectors. Despite this, English teachers kept using these tools to help improve the students' academic performance. Also, teachers find it difficult to use modules since the contents are not localized, and students find it hard to understand the language, instructions, and content. However, this does not hinder English teachers from stopping teaching; instead, teachers have made parallel activities that are localized and simplified. Moreover, more instructional materials are used and available in the Highlands than in lowland locations.

Furthermore, this study recommends that teachers undergo training to better utilize instructional materials in addressing diverse learners. Moreover, DepEd must intensify the provision of instructional materials to teachers for a greater chance of availability. School administrators and school heads must encourage and support the needs of their teachers, especially in terms of instructional materials. For future researchers, using different variables in instructional materials can be a good focus for the next study. You can use a comparative analysis technique to determine the difference in the availability and extent of use of these materials and compare them to the setup of the new normal setting.

Compliance with Ethical Standards

The researcher hereby certifies that the study was carried out with caution and ethics. The researchers requested consent from the division office of the school in writing before the study's actual implementation. The researchers invited the potential volunteers to an orientation after they were approved. The researchers invited the potential volunteers to an orientation after they were granted approval. The study's nature and objectives, informed consent, participant anonymity, data confidentiality, and withdrawal rights were all on the agenda. The potential participants comprehended all these explanations. As a result, the participants signed the informed consent and indicated their support. Additionally, the sources cited in this research are appropriately recognized, and the study is free from plagiarism.

Acknowledgments

The researcher would like to extend his utmost gratitude to the following for the guidance, patience, encouragement, and unwavering support for the success of this academic endeavor.

Our ALMIGHTY GOD for being the source of wisdom and for making this goal possible in His will.

Saint Paul University Dumaguete, for the knowledge and wisdom contributed to my being. This means so much in my research journey.

Ma Theresa V. Avanzado, Schools Division Superintendent, Tanjay City Division, Principals and School heads for encouraging the English teachers to participate in the study.

ENGLISH TEACHERS who wholeheartedly accepted the invitation as respondents to the study.

My family for the never-ending support, and inspiration throughout the entire study. Thank you so much. To God be the Glory.

INSTRUCTIONAL MODULE: ITS EFFECT ON STUDENTS' MATHEMATICS PERFORMANCE

Anelyn P. Montes, Ph.D., Harry R. Palmes, Ph.D.

Calinog National Comprehensive High School, Department of Education, Region VI, Philippines

https://doi.org/10.5281/zenodo.11762843

ABSTRACT

This quasi-experimental study aimed at determining the effect of an instructional module on students' performance in mathematics of Grade 8 learners in a high school in the Municipality of Calinog, Province of Iloilo. The data were obtained through the use of a performance test and instructional module. The descriptive statistics used were frequency count and mean, while the Mann-Whitney U Test and Wilcoxon Signed-Rank Test set at 0.05 alpha were used as inferential statistics. The findings revealed that there was no significant difference in the pre-test mathematics performance in between the control group and the experimental group. Both groups fell on the same category interpreted as "satisfactory". The study further revealed that in the post-test, the experimental group scored much higher than the control group. The group's performance shifted from "satisfactory" to "very satisfactory", after the group was given the intervention, which was the instructional module. It can be concluded from the results that, the instructional module is an effective tool in teaching mathematics which resulted in better performance of the students.

Keywords: *Instructional Module, Mathematics Performance, Effect*

INTRODUCTION

It's a well-known fact that mathematics is a tough and demanding subject, and that some individuals find it boring. Specifically, it is frequently perceived as challenging, confusing, and unpleasant to some individuals. There is a stigma

associated with mathematics, and those who are good at it are often treated as if they are perfectly normal. In addition to being useful for applying basic numeracy skills, mathematics is significant. It is also the most effective method for assisting pupils in developing higher-order cognitive skills and logical reasoning. Accordingly, one of the main goals of mathematics instruction is to help students develop a positive attitude toward the subject (Abalde and Oco, 2023).

Filipino students generally do well in areas that require higher-order thinking skills, while they suffer in those that do not. According to the 2017–18 Global Competitiveness Report, which ranked the Philippines 79th out of 138 participating nations in terms of high-quality science and mathematics education, the performance of Filipino students in mathematics has to be improved (Schwab, 2018).

Thus, math presents a challenge to students. This could have to do with how the students feel about the subject or how their methods of learning mathematics are influencing their grades. These are only a handful of the inquiries that piqued the curiosity of the researcher and motivated him or her to carry out an analysis and collect information that can support the need for explanations on these persistent enemies (Raba, 2017: Zulaikha, Mansor, Jamaludin & Alias, 2021; Yusuf, Jusoh, & Yusuf, 2019).

One of the vehicles by which mathematics may become interesting is the use of different strategies like instructional modules. An instructional module is a learning material designed primarily for independent or self-study. It may also be used to complement instruction. It has benefits to both teacher and student. For the teacher, the ideal instructional model (instructional module) would make each course both a program of study and a collection of concepts to be internalized through “performance” or “competency–based” activities by the learners. Responsibility for achievement of pre-set goals is placed on the learners. The teacher in such a system coordinates, evaluates, counsels, and guides. Such activities are assumed to enhance the professional status of the teaching role.

The researchers finds it necessary to conduct a study and to find a possible solution like developing an instructional module in Mathematics that will help improve students’ performance. This instructional module which is self-pacing, non-threatening and self-evaluative will serve as supplementary material; which contains necessary exercises that will help enhance the skills learned by the students.

For the students, one purpose of an instructional module is to allow them to proceed at their own rate. The belief that self-pacing is desirable is based on the generally accepted assumption that learners do not achieve at the same rate and are not ready to learn at the same time. Another purpose is to allow the student to choose his learning mode. Choice among different learning modes is desirable if one assumes that learners solve problems and learn using different techniques based on unique behavioral repertoires.

Research Questions

This study aimed to determine the effectiveness of using instructional modules on the students' mathematics performance in a public mother school in the municipality of Calinog, Iloilo Western Visayas, Philippines.

Specifically, this study sought answers to the following questions:

1. What is the pre-test mathematics performance of the students in the control group (without instructional module) and the experimental group (with instructional module)?
2. Is there a significant difference in the pre-test mathematics performance of the students in the control group (without instructional module) and the experimental group (with instructional module)?
3. What is the post-test mathematics performance of the students in the control group (without instructional module) and the experimental group (with instructional module)?
4. Is there a significant difference in the post-test mathematics performance of the students in the control group (without instructional module) and the experimental group (with instructional module)?
5. Is there a significant difference in the pre-test and post-test mathematics performance of the students in the control group (without instructional module)?
6. Is there a significant difference in the pre-test and post-test mathematics performance of the students in the experimental group (with instructional module)?
7. What is the mean gain score in the pre-test and post-test of the students in both control group (without instructional module) and the experimental group (with instructional module)?

METHODOLOGY

This study made use of quasi-experimental research design which involved two sections of Grade 8 learners in a public mother school in the Municipality of Calinog, Province of Iloilo. These two sections were handled by the researchers. Since the study was experimental, one group was assigned as the control group (taught without using instructional module), and another group, was the experimental group (taught with instructional module). To determine the groupings, the researcher used the toss-coin procedure.

In the control group, where the lessons were presented without using the instructional module, the lessons were presented using the following procedures: (a) Presentation of the objectives; (b) Introduction of the Lesson; (c)Giving of Activities - The teacher presents activities for the students to analyze and answer; (d) Analysis - the teacher ask questions for the students to answer that will lead to the understanding of the lesson proper. (e)Assessment -Questions or exercises were given to the students to check their learning of the topic presented; and (f) Assignment - This was a follow-up of what the students had learned and applied what they have learned.

On the other hand, the experimental group taught with instructional modules, the teacher followed the following procedures: (a) Presentation of the objectives; (b) Introduction of the Lesson; (c) Presentation of the Lesson Proper. The teacher gave the instructional modules to each student and each student studied on her/his own and answered the exercises in the instructional module. They were given enough time to work on the exercises and the teacher checked the work of each student.

Instructional Module and Research Instrument

To determine the students' performance in mathematics in the two groups, researcher-constructed forty-item (40) test was used. This was validated and trial tested for reliability.

The researcher also made an instructional module containing all the required competencies for Grade 8 mathematics. These were also presented to the panel of experts for face and content validation. This instructional module was used by the researcher as intervention in the experimental group.

For both instruments, the topics included were in the fourth grading period coverage of the Grade 8 K-12 curriculum. These were: Module 10: Measures of Central Tendency and Measures of Variability; Lesson 1: Measures of Central Tendency for Ungrouped Data; Lesson 2: Measures of Variability; Lesson 3: Measures of Central Tendency for Grouped Data; Lesson 4: Measures of Variability for Grouped Data; Module 11: Introduction to Probability; Lesson 1: Basic Concepts of Probability.

Validity of the Instruments

To establish the validity of the instrument, the researcher submitted the draft of the test and instructional module to the thesis adviser for review, recommendations and suggestions. Then, the drafts were submitted to the panel of experts for face and content validation and inspection of each item for appropriateness, correctness, and meaningfulness of the specific inference. The experts' suggestions, recommendations, and corrections were considered in the refinement of the instruments.

Reliability of the Instrument

Upon the approval of the thesis adviser and panel of experts, the 70–item test was administered for reliability testing to 50 students who belong to one section of the selected school and who were not included in the study. The results underwent item analysis to determine which items would be retained, revised, or rejected. Out of 70 items, 24 items were retained, 30 items were rejected and 16 items were revised.

After retrieval of the accomplished instruments, the data were tabulated and organized. All statistical computations were processed using the Statistical Package for the Social Sciences (SPSS) software.

Data-gathering Procedures

Prior to the actual conduct of the study, the researcher secured permission to conduct the study on the aforementioned school and to use the Grade 8 students as subjects of the study.

After securing the necessary permission, the researcher then personally administered the pre-test to both groups before the start of the grading period and the post test after all the topics had been discussed during the fourth grading period.

The learning competencies and activities were the same for both experimental and control groups. The classes for both sections lasted for one hour per session and were conducted four times a week by the researcher herself. Subjects' attendance during classes was closely monitored to ensure that they completed the study.

The researcher conducted the pre-test at the start of the fourth grading period to both groups. A budgeted outlay was strictly followed and observed. The post-test was conducted by the researcher at the end of the grading period.

Data Analysis

The researcher-made test was reproduced according to the number of subjects of the study. Then the test were administered to the subjects as pre-test and post-test. The tests were corrected and results were analyzed, organized, tabulated, and interpreted using the Statistical Package for the Social Sciences (SPSS) software.

The statistical tools that were used in the study were the frequency count, the mean and Mann-Whitney U test and Wilcoxon Signed-Ranked Test for the inferential analysis.

RESULTS

Pre-test Performance in Mathematics of the Students in the Control Group and the Experimental Group

Results in Table 1 show that the pre-test mathematics performance of the control group (M = 11.34) and that of the experimental group (M = 10.24) were both satisfactory. A closer look at the results of the both groups showed that the control group obtained a mean score which was a quite higher than that of the experimental group.

Table 1. *Pre-test Mathematics Performance of the Students in the Control Group and the Experimental Group.*

Pre-test	N	Mean	Description
Control Group	53	11.34	Satisfactory
Experimental Group	51	10.24	Satisfactory
Total	104	10.80	Satisfactory

The interpretation was based on the following scale: 30.01 – 40.00 – Outstanding; 20.01 – 30.00 - Very Satisfactory; 10.01 – 20.00 - Satisfactory, and; 0.00 – 10.00 - Fairly Satisfactory.

Significant Difference in the Pre-test Mathematics Performance of the Students in the Control Group and the Experimental Group

To determine any significant difference between the control group and the experimental group's pre-test mathematics performance, the researcher employed the Mann-Whitney U. As indicated, the computed Z-ratio of -1.952 had a p-value (0.051) higher than the value set at 0.05 level of significance, hence, that the difference is "not significant".

Table 2. *Significant Difference in the Pre-test Mathematics Performance in Mathematics of the Students in the Control Group and the Experimental Group*

Pre-test	N	Mean Rank	Mann-Whitney U	Z-ratio	p-value	Remarks
Control Group	53	58.13	1053.00	-1.952	0.051	Not Sig.
Experimental Group	51	46.65				
Total	104					

p > 0.05, not significant

Post-test Mathematics Performance of the Students in the Control Group and the Experimental Group

Results in Table 2 show that the post-test mathematics performance of the control group was "satisfactory" (M = 18.92). On the other hand, the post-test mathematics performance in Mathematics of the experimental group was " very satisfactory" (M = 23.92).

Table 3. *Post-test Mathematics Performance of the Students in the Control Group and the Experimental Group*

Pre-test	N	Mean	Description
Control Group	53	18.92	Satisfactory
Experimental Group	51	23.92	Very Satisfactory
Total	104	21.37	Very Satisfactory

The interpretation was based on the following scale: 30.01 – 40.00 – Outstanding; 20.01 – 30.00 - Very Satisfactory; 10.01 – 20.00 - Satisfactory, and 0.00 – 10.00 - Fairly Satisfactory.

Significant Difference in the Post-test Mathematics Performance of the Students in Mathematics in the Control Group and the Experimental Group

To determine the significant difference between the control group's and experimental group's post-test mathematics performance, the researcher employed the Mann-Whitney U test. The computed Z-ratio of -3.81 had a p-value (0.000)lower than the value set at 0.05 level of significance, hence, the difference is "significant".

Table 4. *Significant Difference in the Post-test Mathematics Performance of the Students in the Control Group and the Experimental Group.*

Pre-test	N	Mean Rank	Mann-Whitney U	Z-ratio	p-value	Remarks
Control Group	53	41.23	754.00	-3.891	0.000	Significant
Experimental Group	51	64.22				
Total	104					

p < 0.05, significant

Significant Difference in the Pre-test and the Post-test Mathematics Performance of Students in the Control Group

To determine the significant difference in the pre-test and post-test mathematics performance of students in the control group, the Wilcoxon Signed-Rank Test was used. The results revealed that the computed Z-ratio of -5.898[a] had a p-value (0.000) lower than the value set at 0.05 level of significance, hence, the difference was "significant".

Table 5. *Significant Difference between the Pre-test and the Post-test Mathematics Performance of the Students in the Control Group*

Control Group	Wilcoxon Signed- Rank Test	N	Mean Rank	Z-ratio	p-value	Remarks
Post-test	Negative Ranks	3	9.00	-5.898a	0.000	Significant
Pre-test	Positive Ranks	47	26.55			
	Ties	3				
Total		53				

p < 0.05, significant

Significant Difference in the Pre-test and Post-test Mathematics Performance of Students in the Experimental Group

To determine any significant difference in the pre- test and the post-test mathematics performance of students in the experimental group, the researcher used the Wilcoxon Signed- Rank test. The results revealed that the computed Z-ratio of -6.097[a] had a p-value (0.000) lower than the value set at 0.05 level of significance, hence the difference is “significant”.

Table 6. *Significant Difference in the Pre-test and Post-test Performance in Mathematics of the Students in the Experimental Group*

Experimental Group	Wilcoxon Signed- Rank Test	N	Mean Rank	Z-ratio	p-value	Remarks
Post-test	Negative Ranks	0	0.00	-6.097[a]	0.000	Significant
Pre-test	Positive Ranks	49	25.00			
	Ties	2				
Total		51				

p < 0.05, significant

Mean Gain Scores of the Students in the Pre-test and Post-test in both the Control Group (without instructional module) and Experimental Group (with instructional module)

Results in Table 7 show that the main gain score in mathematics of the control group was 7.58), and that of the experimental group was 13.69). A closer look at the results for both groups would show that the control group obtained a mean gain score which is lower than that of the experimental group.

Table 7. *Mean Gain Scores of the Students in the Pre-test and the Post-test of Both the Control Group (without instructional module) and the Experimental Group (with instructional module).*

Group	N	Mean Gain
Control Group	53	7.58
Experimental Group	51	13.69

DISCUSSION

A closer look at the results of the both groups showed that the control group obtained a mean score which was a quite higher than that of the experimental group. This implies that although there was a slight difference in their mean scores, both are still described as “satisfactory”. This means that their performance was a result of previous knowledge they acquired and is limited such that they fall in the same category.

The control group scored a quite higher than the experimental group and this can be attributed to the learning styles, study habits, and attitudes of the subjects in their previous grade level. This result is consistent with a study on attitudes toward education and study habits conducted in 2019 by Capuno, Necesario, Etcuban, Espina, Padillo, and Manguilimotan. In that study, the researchers found that while the respondents had neutral attitudes toward their motivation, self-confidence, and enjoyment of mathematics, they had positive attitudes toward the subject matter overall. Additionally, the study demonstrates that although there was a weak positive correlation between respondents' academic performance in math and their belief in its value, there was a negligible positive correlation between respondents' attitudes and academic performance in terms of their motivation, enjoyment, and self-confidence. It was determined that attitudes and study habits of students have a major impact on how well they succeed in mathematics.

This implies that although both groups increased their performance, the experimental group (using instructional module) performed much higher than the control group (without using instructional module). Since, the intervention (instructional module) was given to the experimental group, it had a great effect on their mathematics performance.

Although the control group also demonstrated improvement in their post test performance, the results with the experimental group strongly pointed out the beneficial use of the instructional module. The module must have worked effectively to suit to the learners’ needs and therefore improved the mathematical competencies of the students. On the other hand, the absence of the instructional module in the control group could be interpreted as one factor that caused them to lag behind the experimental group.

The results further showed that the experimental groups' performance was given a positive impact on the use of the instructional module on the learning processes of the students. The intervention must have provided the students the opportunities to work in their own unique pacing as they went through their lessons, giving them more freedom to think and absorb well the ideas presented. The experimental group's performance shifted from "satisfactory" to "very satisfactory".

This finding is consistent with the theory put forth by Onyedikachi (2011), which was referenced in Oden's study (n.d.), according to which educational resources enable students to get a deeper comprehension of the material and become self-sufficient learners. Additionally, Ezekoka's (2008) study found that generated instructional materials were crucial to the modes of delivery of teaching and learning since they conveyed all pertinent information, data, and signals from the transmitting source—teachers—to the recipient—learners.

The outcome is consistent with the findings of Onasanwa and Omosewo (2011), who talked about instructional materials as a crucial element that may be utilized in the teaching and learning process to spread knowledge, statistics, concepts, and messages that could aid students in improving their academic performance.

The outcome and the research by Utami, Aminatun, and Fatriana (2020) are likewise similar. The data suggest that the use of student workbook offers favorable impact on students' learning since it might be one of the sources of learning besides the teacher's explanation. Additionally, the products' varied techniques and straightforward text help pupils learn them more easily. Ultimately, this study should serve as a helpful resource or manual for future researchers wishing to undertake comparable studies on the usage of student workbooks (LKS) as instructional aids.

Additionally, Susantini et al. (2016) found that using student workbooks (LKS) as a teaching tool has certain benefits for the classroom teaching and learning process. These benefits include making learning more condensed than it would be in textbooks and having a large number of practice questions that are relevant to the material being learned. Additionally, student workbooks can increase academic performance and foster greater student participation and effectiveness. As mentioned, a student workbook helps foster critical thinking abilities. Their performance shifted from "high" to "very high".

The significant difference in the pre-test and post-test results in the mathematics performance of the control group would mean that other factors might have contributed to the better performance of the students. It can also be attributed to the creativity of the mathematics teacher in his methods and approaches in teaching. According to (Sequeira (2012), learning can be considered as change that is permanent in nature because change is brought into students by a teacher through techniques like developing specific skills, changing some attitudes, or understanding specific scientific law operating behind a learning environment.The teacher tends to allow the students to their think further so that they will not be stuck "inside the box".

The teacher encourages the students to become independent in enhancing their thinking skills.

The significant improvement in the mathematics performance of the students in the experimental group can be attributed to the instructional module used as an effective intervention. The result showing the positive effect upon the learners is congruent with the study of Anwar (2017) in which stated that the use of student workbook help students to understand the lessons taught. Besides, this media not only be seen as a tool for teachers to teach but more as a means to convey and channel messages from sources (teachers, books, etc.) to recipients of messages (students learn). The student workbook is like a messenger that is not only used by the teacher as a teaching media but also can be used by the students to help their learning process.

The results provide more evidence in favor of the theory that module-based training can improve students' mathematical ability. Similar to Lim's (2016) study, which examined how word problem solving was taught to college students exposed to both the lecture style and modular training. According to his findings, modular instruction outperformed the conventional lecture style by a wide margin. It is concluded that modular instruction is a successful teaching strategy for teaching math, specifically word problem solving, based on the stated data. Similarly, Madriaga (2004) discovered that using modules allows teachers more time to work one-on-one with pupils. She went on to say that the experimental group that received modular education performed better. Additionally, in Rizaldo, et al. al., (2007), where they came to the conclusion that employing the modular teaching approach improved student performance and subject matter mastery.Hence, the use of the instructional module in mathematics as part of the study is one innovative step toward a better teaching-learning environment for students.

A closer look at the results for both groups would show that the control group obtained a mean gain score which is lower than that of the experimental group. This implies that the big difference in the mean gain scores of the experimental group and the control group could be attributed to the use of instructional module which greatly improved the mathematics performance of the experimental students.

Conclusions

Based on the foregoing results, the following conclusions were formulated:

1. The performance of the subjects in the pre-test is almost the same before the conduct of the study.
2. The instructional module is an effective tool in teaching mathematics which resulted in better performance of the students.
3. The creativity and varied teaching styles of the teacher in teaching also have an impact on students' mathematics learning.

4. Students perform better if they are exposed to materials which they can independently explore, manipulate, and use.

5. Learning is facilitated in self-contained, independent, and self-paced learning activities which are tailored to students' learning styles.

6. Collaborative learning is effectively achieved through the use of instructional module.

Parents' involvement ensures success in students' learning through performance of catch-up lessons in the modules.

Recommendations

The following recommendations are advanced:

1. Teachers should use a variety of teaching strategies and styles in teaching mathematics and not confined themselves to the traditional lecture discussion method.

2. Mathematics teachers should be encouraged to use the instructional module prepared by the researcher in their Mathematics lessons.

3. Classrooms should be equipped with support materials which students can explore, manipulate, and use independently.

4. Learning activities which are self-contained, independent, self-paced, and tailored to the students' learning styles in order to promote n interactive learning environment should be encouraged.

5. Mathematics department/division chairs should develop instructional modules in collaboration with the teachers to facilitate self-learning and provide visual instructional/ review materials to students.

6. Seminar-workshops in the development of instructional modules, workbooks, and other instructional materials should be conducted to equip teachers with skills to develop such materials for their personal and professional growth.

7. A follow-up studies may be conducted using instructional modules for other grading periods, other grade levels, and other subject areas.

Compliance with Ethical Standards

This study took into consideration the ethical standards in doing research. Informed consent was obtained from all participants prior to their inclusion in the study. Participants were informed about the study's purpose, procedures, and their right to withdraw at any time without penalty. Ethical standards also required the researchers to ensure the privacy and confidentiality of the subject being studied. Two standards applied in order to protect the privacy of the research participants. Almost all research guarantees the participants' confidentiality -- they were assured that identifying information would not be made available to anyone who is not directly involved in the study.

The author confirms that this thesis is their own work and that all sources have been appropriately cited. Each author confirms that the work is original and that

appropriate credit has been given to all sources and collaborators to avoid any form of plagiarism.

Acknowledgments

This endeavor would not have been realized without the assistance and admirable expertise of some very special people.

The researchers would like to express her deepest gratitude and appreciation and to those who extended their generous contribution, invaluable support and inspiration in the realization of this study, especially to the following:

The school head of the chosen school, for the approval to conduct this study and for her undying support and encouragement to pursue and finish my research despite all odds.

Student participants of the study, the respondents and the teachers who willingly and actively participate in the demonstration teaching and in answering the questionnaires as instrument in gathering the data needed for this study and for the help to achieve this overwhelming experience;

To the family of the researchers for their unconditional love, support, guidance all throughout the study and for redirecting the path to reach this success;

Above all, the Almighty Father for His bountiful blessings and graces, timeless strength and for giving the researcher profound knowledge and wisdom and who continue to direct and assist from the beginning until making this research a successful one;

Thank you and may the good Lord shower you all with His mighty grace and power!

ABSTRACT

The aim of this study is to explore the role of business education in preparing individuals with the necessary skills, knowledge, attitudes, and values essential for success in a dynamically changing business environment. Emphasizing the adaptability of business education to evolving technology and business practices, the research focuses specifically on the instructional proficiency of business teachers in selected Philippine higher education institutions (HEIs) and the challenges they encounter. The overarching goal is to propose effective intervention measures that can enhance instructional proficiency and address the identified challenges within the context of business education in these institutions. The study used a descriptive comparative to determine the differences between the three groups of respondents: the school managers, business teachers and students. Correlation is also utilized to examines relationships between different variables. In the context of the study, it may explore whether there is a correlation between teacher profiles and instructional proficiency. The respondents of the study comprised 8 (93%), school managers, 94 (10.98%) business teachers, and 754 (88.08%) business students, from selected HEIs and from the business administration program. The researchers opted for the use of ANOVA and Chi-square. Research findings indicate that business teachers have diverse industry and academic backgrounds, with high proficiency in various instructional areas. Significant differences in instructional proficiency are observed among private HEIs. However, no significant relationship is found between teacher profiles and instructional proficiency. Identified

challenges include limited industry support and networking opportunities. The study's findings have yielded several significant conclusions. Firstly, it is recommended to implement the proposed Teaching Capability Program, recognizing its potential to augment the instructional proficiency of business teachers. Secondly, the study affirms the exemplary instructional proficiency of business teachers, reflecting positively on the overall quality of business education. Notably, divergent assessments between school managers-students and teachers-students underscore varying perspectives on instructional proficiency, indicating a need for nuanced evaluations. To ensure the continual enhancement of business teachers' proficiency, a well-designed intervention measure has been proposed. This intervention plan is deemed suitable, acceptable, and feasible, recommending its practical adoption by educational institutions seeking to enhance the instructional capabilities of their faculty.

Keywords: *Instruction Proficiency, Business Teachers, Higher Education Institutions, Business Courses*

INTRODUCTION

Business education as the facet of educational training helps the individual to acquire relevant skills needed for living. As time changed, business education is considered to be an educational program that equips an individual with functional and suitable skills, knowledge, attitude, and value to enable students to operate in the environment they find themselves--as business arena continue to change.

Higher education institutions especially in the Philippines, have their role in the progress and development of society and aim to prepare scientific, technical, managerial, and administrative team in modern societies. From the use of typewriter to the computer, business curriculum has continually shaped itself to meet the needs of business—the gaps in technology and other important aspects in the business were addressed and adopted by the higher learning. However, the world of business become dynamic and the success and survival of business education constantly depends on its ability to adapt and keep pace with the needs of the recipients. Educational institutions have an important role in the improvement of a country’s workforce. The teacher, as one of the most prominent figures in the academe, plays an important role in students’ schooling and education. Business teachers are vital in helping institutions to deliver quality education through the effective and efficient utilization of classroom, subject business expertise, keep students engaged through appropriate use of teaching methodology and strategy; and conduct learning assessment and evaluation.

The researcher as a business teacher in HEI, delved in determining the competencies of the teachers handling business courses. The identification of instructional proficiency of business teachers lessens the industry gaps. There are some people in the industry that don’t possess the right skills for the job available in the industry (FutureLearn, 2023). Market and employment gaps still exist as strengthened in the JP Morgan research and the speech of the newly labor secretary—discussed extensively in

the next chapter. As a result, the success and survival of business education constantly depends on its ability to adapt and keep pace with the needs of its recipient. These changes present challenges for both the learners and business instructors.

Accordingly, a gap in the market is an area that businesses don't currently serve but that there is a customer demand for. This could be a new service opens in new window that hasn't previously existed or a new way of delivering existing service-—for students' clientele might or are still need to fill this gaps that business hasn't explored yet. It is believed that a dynamic business market needs transformational partners to fill this gap in whatever form. Therefore, it is vital that business education be a useful and essential component of transformation agenda if the curriculum of business programs across the regions is to continue to meet the needs of its students and the different industry that needs business graduates. Needless to say, that when schools are supportive of its human resources, it provides all the support to be able to meet the needs and address the industry gaps needs and graduate business skills. The primary principle of the competency model improves the performance of a teacher if they have all the competencies required to carry out their duties and responsibilities. Hence, specialization in a field and the frequency of performing a task will enable the teacher to perform the tasks effectively and efficient. With the different philosophies, ideals, and views on the skills gaps in business creating barriers between the stakeholders, this study was designed to explore the instructional proficiency of business teachers considering the mentioned factors. Also, would the credentials presented succeed in transforming economy through creative solutions that catalyze change in the field of business education.

Research Questions

The study explores the instructional proficiency of business teachers in selected Higher Education Institutions (HEIs) and the challenges faced by them toward the proposed intervention measure.

Specifically, this study aims to answer the following:

The study explores the instructional proficiency of business teachers in selected Higher Education Institutions (HEIs) and the challenges faced by them toward the proposed intervention measure.

Specifically, this study aims to answer the following:

1. What is the profile of business teachers with:
    - 1.1 Industry Experience
        - 1.1.1 Previous industry experience;
        - 1.1.2 Length of industry experience;
        - 1.1.3 Job position in the industry;
        - 1.1.4 Bachelor's degree earned;
        - 1.1.5 Highest educational attainment;
        - 1.1.6 Years of teaching experience?
    - 1.2 Academic Experience:
        - 1.2.1 Bachelor's degree earned;
        - 1.2.2 Highest educational attainment;

1.2.3 Years of teaching experience?

2. How do school managers, business teachers, and business students assess the instructional proficiency of business teachers in terms of:
   - 2.1 Classroom Management;
   - 2.2 Student Engagement;
   - 2.3 Subject Matter Expertise;
   - 2.4 Teaching Methodology and Strategy; and
   - 2.5 Learning Assessment and Evaluation?
3. Is there a significant difference in the instructional proficiency of business teachers in private HEIs as assessed by the three groups of respondents?
4. Is there a significant relationship between business teachers' profiles and instructional proficiency in private HEIs?
5. What are the challenges encountered by business teachers in private HEIs?
6. Based on the findings, what intervention measure may be proposed?

METHODOLOGY

Research Design

The study used a descriptive comparative and correlational research method to systematically investigate and analyze the instructional proficiency among business teachers in selected Philippine higher education institutions. This comprehensive approach involved describing the diverse profiles of business teachers, comparing instructional proficiency across various groups or categories, and exploring potential correlations between teacher profiles and proficiency levels. By employing this method, the study aimed to provide a nuanced understanding of the intricate relationships and patterns within the data, contributing valuable insights into the current state of business education and offering a foundation for targeted interventions and improvements

Population and Sampling

The population of the study was people working and studying in private higher education institutions. The HEIs participants are the National University, Technological Institute of the Philippines, and Jose Rizal University. The sample size for the study was determined using purposive sampling. According to Crossman (2020), a purposive sample is a non-probability sample that selects a population’s characteristics and the study’s objective. A purposive sampling technique is used in selecting the school managers and business teachers in the business program. The business students were selected through purposive-random sampling. Taylor (2023) defined random sampling as selecting sample participants to derive conclusions and assumptions about an entire population.

Table 1
Population of the Study

HEI Participants	School Managers N	Business Teachers N	Students N	Total
National University	2	35	3,034	3,071
T.I.P.	2	20	153	175
Jose Rizal University	4	39	1,900	1,943
TOTAL	**8**	**94**	**5,087**	**5,189**

Table 1 presents the population of the study namely: National University (3071), T.I.P. (175), and Jose Rizal University (1943), a total of 5189. The three groups of respondents comprised of school managers (8), 94 business teachers (94), and 754 business students (5087).

Respondents of the Study

As presented in Table 2, the respondents of the study comprised 8 (93%) school managers, 94 (10.98%) business teachers, and 754 (88.08%) business students from HEIs and from the business administration program.

Table 2
Respondents of the Study

Respondents	f	%
School Managers	8	0.93
Business Teachers	94	10.98
Students	754	88.08
TOTAL	**856**	**100.00**

Research Instrument

After perusing the literature, a draft survey questionnaire was submitted to the adviser, faculty, and experts for comments and suggestions. The revised questionnaire was then distributed to three groups of respondents to test run the questionnaire. The suggestions, corrections, and recommendations were collated and reflected in the drafted instrument for modification purposes. A questionnaire with three parts was formed to collect primary data. The first part of the questionnaire determines the profile of the business teachers with both industry and academic experiences. The second part measured instructional proficiency, and the third part determined the challenges encountered by business teachers in private higher education institutions. **Part I** focuses on the profile of the respondents in terms of the type of respondents and profile of Business teachers with industry and academic experience. **Part II** determines the instructional proficiency of teachers in Classroom Management, Student Engagement, Subject Matter Expertise, Teaching Methodology and Strategy, and Learning Assessment and Evaluation. **Part III** covers the challenges encountered by business teachers in private HEIs.

Validation of the Research Instrument

The survey questionnaire checklist was drafted several times before being forwarded to the research adviser and made the necessary correction. The experts in the field validated it. A dry run to co employees was also done to test the validity and reliability of the instrument. The study adopted content validity, indicating whether the test items represented the content the test was designed to measure. The pilot study assisted in determining the accuracy, clarity, and suitability of the instruments. It helped identify inadequate and ambiguous items such that those that failed to measure the variables were modified or disregarded completely, and new items were added. To ensure validity, the instruments used in the study were examined by the educational experts and adviser who are authorities in research.

Data Gathering Procedures

The following data-gathering procedures were observed:

1. The researcher sought permission from the school officials from the three higher education institutions to conduct the survey.
2. The researcher forwarded the online survey form via Google form to the Dean of the College of Business Education, and the latter then distributed the online survey form to the business teachers and students.
3. The researcher regularly monitors the responses of the respondents in the Google form to make sure that the required number of respondents in the study is met.
4. Tallied the data by group. Forwarded to the adviser to check the data before it was subjected to statistical treatment.
5. Presented, analyzed, and interpreted the data.

Statistical Treatment of Data

The following statistical tools for the interpretation of results according to sub-problems were used:

1. Percentage. This is used as descriptive statistics that describes a part of a whole. The formula that used in computing percentage in this is:
2. Weighted Mean. This is used to get the average frequency of the responses in each weighted item.
3. Ranking. This reinforces the percentage to show the proportional importance of an item considered.
4. Analysis of Variance. The ANOVA is more fitted in the research due to the comparison of more than two groups. This research has three different groups of small firms. The systematic factors have a statistical influence on the given data set, while the random factors do not, Kenton (2019).
5. Analysis of Variance (F-Test). It was used for unpaired small samples to reject or accept the hypothesis and to present significant differences in the responses of the respondents.
6. Chi-Square test. It is a statistical procedure for determining the difference between

observed and expected data. This test can also be used to determine whether it correlates to the categorical variables in our data. It helps to find out whether a difference between two categorical variables is due to chance or a relationship between them.

Likert's' Scale. To determine the verbal description of the scale and range, the five-point Likert's Scale was used, and its interpretation follows:

On the Instructional Proficiency of Business Teachers

Scale	Numerical Value	Descriptive Value
5	4.20 – 5.00	Highly Competent (HC)
4	3.40 – 4.19	Competent (C)
3	2.60 – 3.39	Moderately Competent (C)
2	1.80 – 2.59	Least Competent (LC)
1	1.00 – 1.79	Very Least Competent (VLC)

On the Challenges Encountered

Scale	Numerical Value	Descriptive Value
5	4.20 – 5.00	Highly Encountered (HE)
4	3.40 – 4.19	Encountered (E)
3	2.60 – 3.39	Moderately Encountered (ME)
2	1.80 – 2.59	Least Encountered (LE)
1	1.00 – 1.79	Very Least Encountered (VLE)

RESULTS

Sub Problem No. 1. What is the business teachers' profile regarding industry experience and academic experience?

1.1 Profile of Business Teachers with Industry Experience

Table 3

Less than 5 years	33	35.11
TOTAL	94	100.00

Table 3 presents the profile of Business Teachers with Industry Experience in terms of Previous industry experience, Length of industry experience, Job Position in the Industry, Bachelor's degree earned, Highest educational attainment, and Years of teaching experience. Findings of the descriptive statistics for the demographic characteristics revealed that the majority of Business Teachers were previously connected to Retail Trading (25.53%), Real Estate (21.28%), and Bank Industry (14.89%). Most of them had been in the industry for 10-14 years (31.91%), 5-9 years (26.59%), and 15-19 years (22.34%). Regarding Job Positions in the Industry, most

were in the Managerial position (59.57%), and some belongedto the Rank and File (19.15%). The Bachelor's Degree Earnedby the Business Teachers graduated in Banking & Finance and Marketing Management (25.53%) and Accountancy (18.08%) graduates. More than half of the business teachers' HighestEducational Attainment got a Master's Degree (59.57) and Doctoral Units (20.21). It was also observed that Years of Teaching Experience 5-9 years (40.42%) and less than 5 years (35.11). Based on the result, Business teachers at the HEIs are qualified to teach business subjects as they graduated from business programs and were highly experienced prior to teaching. The result confirms that teachers in business education had industry experience prior to joining the academic institution. The result concurs with the statement by Nelson and Kahu (2017) that one of the areas where problems emerge is education and that experience is valued more than potential, and expectations and requirements often reflect this. In today's world, the educators are expected to have a great deal of professional and personal qualities, and extraordinary skills (Asio & De Dios, 2019).

1.2 Profile of Business Teachers with Academic Experience

Table 4
Profile of the Business Teachers with Academic Experience

Bachelor's Degree Earned	n	%
Accountancy	17	18.08
Banking and Finance	24	25.53
Commerce	8	8.51
Entrepreneurial Management	2	2.13
Financial & Management Accounting	11	11.70
Human Resource Management	3	3.19
Logistic Management	5	5.32
Marketing Management	24	25.53
TOTAL	94	100.00
Highest Educational Attainment	f	%
Doctorate	18	19.15
With Doctoral units	19	20.21
Master's Degree	56	59.57
With Master's units	1	1.06
TOTAL	94	100.00
Years of Teaching Experience	n	%
20-24 years	1	1.06
15-19 years	11	11.70
10-14 years	11	11.70
5- 9 years	38	40.42
Less than 5 years	33	35.11
TOTAL	94	100.00

Table 4 revealed business teachers with Academic Experience in terms of Bachelor's degree earned, Highest educational attainment, and Years of teaching experience. Highest Educational Attainment of Business Teacherswith academic

experience showed that more than half graduated Master's Degree (59.57%), teachers with Doctoral Units (20.21%), and graduated with a Doctorate (19.15%). Business teachers' Years of Teaching revealed 5-9 years (40.42%) and less than 5 years (35.11%). The result revealed that teachers with academic experienceare more than qualified to teach business subjects, as reflected in their basic degree program, years of teaching experience, and highest educational attainment.

Sub Problem No. 2. How do school managers, teachers, and students assess the Instructional Proficiency of Business Teachers in terms of Classroom Management, Student Engagement, Subject Matter Expertise, Teaching Methodology and Strategies, and Learning Assessment and Evaluation?

Table 5
Assessment of Instructional Proficiency in Classroom Management

Indicators	School Manager		Teachers		Students		Composite Weighted Mean		Rank
	WM	VI	WM	VI	WM	VI	WM	VI	
Prepares for teaching with techniques ranging from counseling, focusing on understanding and mutually solving a problem, to behavior modification or ignoring inappropriate and reinforcing appropriate behavior.	4.88	HC	4.62	HC	4.48	A	4.66	HC	9
Prevents behavior problems through improved planning, organizing, and managing of classroom activities, better presentation of instructional material, and better teacher-student interaction, maximizing students' involvement and cooperation in learning.	4.63	HC	4.53	HC	4.50	A	4.55	HC	10
Emphasizes a positive classroom community with mutual respect between teacher and student.	5.00	HC	4.82	HC	4.60	A	4.81	HC	3
Adopts preventative techniques using praise and rewards to inform students about their behavior rather than to control student behavior.	4.88	HC	4.91	HC	4.45	HC	4.75	HC	7
Pronounces school rules, classroom rules, procedures, and consequences for positive outcomes.	4.88	HC	4.80	HC	4.49	HC	4.72	HC	8
Ensures a safe and supportive place to learn with clear routines and expectations	5.00	HC	4.77	HC	4.59	HC	4.79	HC	4
Encourages everyone to observe decorum and businesslike attitude in and outside the campus.	5.00	HC	4.90	HC	4.65	HC	4.85	HC	1
Uses affirmation teaching, which attempts to guide business students toward success by helping them see how their effort pay off in the classroom	5.00	HC	4.94	HC	4.57	HC	4.84	HC	2
Transforms a classroom into a community of well-behaved and self-directed business learners	5.00	HC	4.77	HC	4.56	HC	4.78	HC	5
. Relates to students as individuals positively, treating them with respect, making lessons interesting and varied, encouraging, and telling them to believe in themselves and their abilities.	4.88	HC	4.83	HC	4.58	HC	4.76	HC	6
Overall weighted mean	4.92	HC	4.79	HC	4.55	HC	4.75	HC	

Legend:

Scale	Range	Interpretation	Symbol
5	4.20 - 5.00	Highly Competent	HC
4	3.40 - 4.19	Competent	C
3	2.60 - 3.39	Moderately Competent	MC
2	1.80 - 2.59	Need to be Developed	ND
1	1.00 - 1.79	Highly Need to be Developed	HND

As presented by the data, the school managers, teachers, and students generally

rated the indicators of instructional Proficiency of Business Teaches in terms of Classroom Management as “Highly Competent”: “Involves business students in the learning process by understanding the learning goal and the criteria for quality work, receiving and using descriptive feedback, and taking stepsto adjust their performance” with a weighted mean of 4.85,as rank no. 1; “Business teachers are involved in the class to enhance the business learning experience of the students”with a weighted mean of 4.84, rank 2; “Develops and uses a variety of appropriate assessment strategies to monitor and evaluate learning” with a weighted mean of 4.81, as rank 3; “Prepares students for a career in business by familiarizing them with various business-related topics” with a weighted mean of 4.79, rank 4; “Uses assessment information to make decisions that support further learning and for opportunity identification” with a weighted mean of 4.78, rank 5; “Support learners in their immersion activities to feel the real world of work” with a weighted mean of 4.76, rank 6; “Integrates a pretest and post-test that effectively measure a learner’s relative competency within a core/business subject to *determine whether* learners satisfy the school’s requirements” with a weighted mean of 4.75, rank 7; “Involves students with different business-related organizations to deploy skills, subject knowledge, and also their relationship with the other students” with a weighted mean of 4.72, rank 8; “Learning and assessment are based on clear learning goals” with a weighted mean of 4.66, rank 9,and lastly, “Instruction and assessment are differentiated according to student learning needs” with a weighted mean of4.55, rank 10, respectively. Hence, the obtained overall weighted mean of 4.75 is verbally interpreted as “Highly Competent.” It can deduce from the table that Business teachers observe decorum and businesslike attitude on and outside thecampus. Furthermore, uses affirmation teaching as theyattempt to guide business students toward success as their effort pays off in the classroom. The findings concur with Garcines (2018) found that regarding classroom management, respect for authority is in order, and a great deal of patience toward students isshown. As part of the routines, learning activities must start on time, so coming to class early and leaving on time are observed. The class periods are spent productively, so aparticular subject's objectives should be achieved. In case there is a disciplinary problem, it is handled effectively.

2.1 Student Engagement;

Table 6
Assessment of Student Engagement

Indicators	School Managers		Teachers		Students		Composite Weighted Mean		Rank
	WM	VI	WM	VI	WM	VI	WM	VI	
Encourage class participation for class presentation and discussion.	4.25	HC	4.28	HC	4.36	HC	4.30	HC	10
Integrates ways and teaching strategies to make the business course related student’s lives.	5.00	HC	4.65	HC	4.58	HC	4.74	HC	7
Start the discussion with icebreaker activities that help students relax and get comfortable sharing their thoughts	5.00	HC	4.65	HC	4.60	HC	4.75	HC	6
Encourages students to work on business cases or project that requires integrating ideas or information from previous sources.	4.88	HC	4.89	HC	4.58	HC	4.78	HC	2.5
Encourages business students to interact with classmates and instructors by making learning	5.00	HC	4.87	HC	4.61	HC	4.83	HC	1

collaborative and competitive.									
Engages business students to visually conceptualize their understanding of the unit under study.	4.88	HC	4.84	HC	4.57	HC	4.76	HC	4.5
Use small group discussions, debates, role-plays, or online forums.	5.00	HC	4.64	HC	4.55	HC	4.73	HC	8
Conducts individual consultations for the most effective learning modes to engage students, as they benefit substantially in both the learning and development process	4.63	HC	4.80	HC	4.43	HC	4.62	HC	9
In-class active teaching activities are included in the teaching category, such as applied activities, case studies, business videos, and interactive business lectures.	5.00	HC	4.79	HC	4.55	HC	4.78	HC	2.5
. Encourages students' participation in peer-assisted study sessions, online practicing, and reviewing recorded lectures.	5.00	HC	4.70	HC	4.59	HC	4.76	HC	4.5
Overall weighted mean	4.86	HC	4.70	HC	4.54	HC	4.70	HC	

The assessment of respondents on the instructional proficiency of business teachers in terms of Student Engagement is in Table 6. As presented by the data, the school managers, teachers, and students generally rated the instructional proficiency of business teachers in terms of Student Engagement as "Highly Proficient" as follows: "Encourages business students to interact with classmates and instructors by making learning collaborative and competitive" with a weighted mean of 4.83, rank 1; both in rank 2.5, "Encourages students to work on business cases or project that requires integrating ideas or information from 4.78; rank 4.5 "Engages business to visually conceptualize what they understood from the specific units under study" and "Encourages students' participation in peer-assisted study sessions, online practicing, and reviewing recorded lectures" with weighted mean of 4.76;rank 6 is "Start the discussion with icebreaker activities that help students relax and get comfortable sharing their thoughts." with weighted mean of 4.75; rank 7, "integrates ways and teaching strategies to make the business course relevant to the students' lives" with a weighted mean of 4.74; rank 8, "Business faculty provides optimal opportunities for students to keep their appointment with their college/university studies and thrivein an engaging and intellectually stimulating environment" with a weighted mean of 4.73; rank 9, "Conducts individualconsultations for the most effective learning modes toengage students, as they benefit substantially in both the learning and development process" with a weighted mean of 4.62, and lastly, "Use small group discussions, debates, role-plays, or online forums" with a weighted mean of 4.30, respectively. These obtained mean values yielded an overall weighted mean of 4.70 and were verbally interpreted as "Highly Proficient." It manifests that business teachers encourage their students to interact with classmates and instructors by making learning collaborative and competitive.

2.3 Subject Matter Expertise;

Table 7
Assessment of Subject Matter Expertise

Indicators	School Manager		Teachers		Students		Composite Weighted Mean		Rank
	WM	VI	WM	VI	WM	VI	WM	VI	
Able to explain subject matter clearly	5.00	HC	4.93	HC	4.62	HC	4.85	HC	1
Makes use of their subject knowledge to organize and use content knowledge more effectively for their students to understand	4.88	HC	4.98	HC	4.44	HC	4.77	HC	8
Recognizes students who are struggling and change the way the information is presented and discussed to make it more understandable	5.00	HC	4.93	HC	4.46	HC	4.80	HC	5
Provide students with tasks that are appropriate for their academic skill level and that they can easily accomplish in the allotted time.	4.88	HC	4.88	HC	4.52	HC	4.79	HC	6.5
Demonstrates problem-solving skills and includes critical and digital literacy.	5.00	HC	4.98	HC	4.52	HC	4.83	HC	2
Allows students to solve meaningful, real-life, complex problems	4.88	HC	4.52	HC	4.50	HC	4.63	HC	10
Reinforces essential concepts and helps students cross the knowing/learning gap.	4.88	HC	4.73	HC	4.55	HC	4.72	HC	9
Demonstrate expertise by addressing students' inquiries in a confident and knowledgeable manner.	4.88	HC	4.98	HC	4.57	HC	4.81	HC	3.5
Develops innovative spirit among students to make good use of available opportunities.	4.88	HC	4.98	HC	4.52	HC	4.79	HC	6.5
Allows learners to test their knowledge regularly, reinforces essential concepts, and helps them cross the knowing/learning gap	4.88	HC	4.98	HC	4.57	HC	4.81	HC	3.5
Overall weighted mean	4.92	HC	4.90	HC	4.53	HC	4.78	HC	

The assessment of respondents on the instructional proficiency of business teachers in terms of subject matter expertise is in Table 7. As demonstrated by the data, the school managers, teachers, and students generally assessed the indicators of the instructional proficiency of business teachers in termsof classroom management as Highly Competent, which “Allows learners to test their knowledge regularly to reinforce essential concepts” with a weighted mean of 4.85, rank 1; “Develop instructional strategies, selecting appropriate resources, and designing meaningful learning activities ”with a weighted mean of 4.83, as rank 2; “Demonstrate expertise by addressing students' inquiries in a confident and knowledgeable manner.” and “Allows learners to test their knowledge regularly, reinforces essential concepts, and helps them cross the knowing/learning gap” with a mean of 4.81, as rank 3.5; “Break down difficult concepts into understandable components, use appropriate examples and analogies, and provide relevant context to enhance students' understanding” with a weighted mean of 4.80, as rank 5; “Provide students with tasks that are appropriate for their academic skill level and that they can easily accomplish in the allotted time” and “Develops innovative spirit among students to make good use of available opportunities” with a weighted mean of 4.79; “Makes use of their subject knowledge to organize and use content knowledge more effectively for their students to understand” with a weighted mean of 4.77, as rank 8; indicator 7 “Reinforces essential concepts and helps students cross the knowing/learning gap” with a weighted mean of 4.72, and lastly, 6 “Allows students to solve meaningful, real-life, complex problems” with a weighted mean of 4.63, respectively and yielded an

overall weighted mean of 4.78, verbally interpreted as Highly Competent. Based on the result, business teachers allow learnersto test their knowledge regularly to reinforce an essential concept and demonstrate problem-solving skills and include critical and digital literacy. The results concur with the study by Del Mundo and Refozar (2013) that accounting teachers are qualified to handle subjects at the tertiary level. This result intensified accounting teachers' role in the academe, notonly as CPA practitioners in their field but also in educational institutions. However, the problem identifiedin this study focused on students' behavior and attitude toward their studies. De Cree & Olsen (2023), clearly stated that teacher should be proficient in his or her subject and guide other professional and students on the project to ensure the content of their work is accurate.

2.4 Teaching Methodologies and Strategies

Table 8
Assessment of Teaching Methodology and Strategies

Indicators	School Manager		Teachers		Students		Composite Weighted Mean		Rank
	WM	VI	WM	VI	WM	VI	WM	VI	
Business teachers offer learners a competency-based approach to building their foundational business knowledge.	4.88	HC	4.91	HC	4.56	HC	4.78	HC	7.5
Business teachers communicate promptly and clearly to students, parents, and superiors about learners' progress.	4.88	HC	4.86	HC	4.48	HC	4.74	HC	9
Provides a venue for students to go beyond merely formulating a business plan.	4.88	HC	4.57	HC	4.45	HC	4.63	HC	10
Plan content instruction that will challenge individuality and entrepreneurial ability.	4.88	HC	4.98	HC	4.53	HC	4.80	HC	3
Considers national and local business environment in planning for instruction and strategy.	4.88	HC	4.98	HC	4.51	HC	4.79	HC	5.5
Uses various teaching methods, resources, and materials that allow students to be creative and innovative in learning applications.	4.88	HC	4.91	HC	4.58	HC	4.79	HC	5.5
Present business education foundational principles and develops entrepreneurial skills.	4.88	HC	4.93	HC	4.57	HC	4.79	HC	4
Enhances business problem-solving skills and analysis to develop decision-making.	4.88	HC	4.93	HC	4.54	HC	4.78	HC	7.5
Understand and operate in a climate that includes education and the business world as partners in career preparation	4.88	HC	4.98	A	4.56	HC	4.81	HC	1.5
. Develop business students with valuable entrepreneurial skills and concepts for learning.	4.88	HC	4.93	A	4.62	HC	4.81	HC	1.5
Overall weighted mean	4.88	HC	4.89	A	4.54	HC	4.77	HC	

The assessment of respondents on the instructional proficiency of business teachers in terms of teaching methodologies and strategies is in Table 8. As asserted by the data, the school managers, teachers,and students generally assessed the indicators on the instructional proficiency of business teachers in terms of teaching methodologies and strategies as Highly Competent, "Understand and operate in a climate that includes education with a weighted mean of 4.63, respectively. Thus, yielded an overall weighted mean of 4.77, verbally interpreted as and the business world as partners in career preparation" and "Develop business students with valuable entrepreneurial skills and

concepts for learning" with a weighted mean of 4.81, as rank 1.5; "Plan content instruction that will challenge individuality and entrepreneurial ability" with a weighted mean of 4.80,as rank 3; three indicators "Considers nationaland local business environment in planning for instruction and strategy," "Uses various teaching methods, resources, and materials that allow students to be creative andinnovative in learning applications," and "Present business education foundational principles and develops entrepreneurial skills" with a weighted mean of 4.79 as rank 5; "Business teachers offer learners a competency-based approach to building their foundational business knowledge" and "Enhances businessproblem-solving skills and analysis to develop decision-making" with a weighted mean of 4.78; "Business teachers communicate promptly and clearly to students,parents, and superiors about learners' progress" with a weighted mean of 4.74, as rank 9; and lastly, "Provides a venue for students to go beyond merely formulating a business plan" as Highly Competent. It can deduce that teachers understand and operate in a climate that includes education and the business world as partners in career preparation and develop business students with valuable entrepreneurial skills and concepts for learning.

2.5 Learning Assessment and Evaluation

Table 9
Assessment as to Learning Assessment and Evaluation

Indicators	School Managers		Teachers		Students		Composite Weighted Mean		Rank
	WM	VI	WM	VI	WM	VI	WM	VI	
Learning and assessment are based on clear learning goals.	4.88	HC	4.98	HC	4.64	HC	4.83	HC	1
Instruction and assessment are differentiated according to student learning needs	4.88	HC	4.83	HC	4.48	HC	4.73	HC	10
Develops and uses a variety of appropriate assessment strategies to monitor and evaluate learning.	4.88	HC	4.98	HC	4.52	HC	4.79	HC	5.5
Integrates a pre-test and post-test that effectively measure a learner's relative competency within a core/business subject to determine whether learners satisfy the school's requirements.	4.88	HC	4.87	HC	4.50	HC	4.75	HC	9
Involves students with different business-related organizations to deploy skills, subject knowledge, and also their relationship with the other students	4.88	HC	4.83	HC	4.59	HC	4.77	HC	8
Prepares students for a career in business by familiarizing them with various business-related topics	4.88	HC	4.93	HC	4.57	HC	4.79	HC	5.5
Involves business students in the learning process by understanding the learning goal and the criteria for quality work, receiving and using descriptive feedback, and taking steps to adjust their performance.	4.88	HC	4.93	HC	4.61	HC	4.81	HC	2
Business teachers are involved in the class to enhance the business learning experience of the students.	4.88	HC	4.93	HC	4.58	HC	4.80	HC	3
Uses assessment information to make decisions that support further learning and for opportunity identification.	4.88	HC	4.93	HC	4.56	HC	4.79	HC	5.5
Support learners in their immersion activities to feel the real world of work.	4.88	HC	4.93	HC	4.55	HC	4.79	HC	5.5
Overall weighted mean	4.88	HC	4.91	HC	4.56	HC	4.78	HC	

The assessment of respondents on the instructional proficiency of business teachers in terms of learningassessment and evaluation is in Table 9. As stated by the data, the school managers, teachers, and students generally assessed the indicators on the instructional proficiency of business teachers in terms of learning assessment and evaluation as Highly Competent, “Learning and assessment are based on clear learning goals” with a weighted mean of 4.83, as rank 1; “Involves business students in the learning process by understanding the learning goal and the criteria for quality work, receiving and using descriptive feedback, and taking steps to adjust their performance” with a weighted mean of 4.81, as rank 2; “Business teachers are involved in the class to enhance the business learning experience of the students,” with a weighted mean of 4.80, as rank 3; meanwhile, “Develops and uses a variety of appropriate assessment strategies to monitor and evaluate learning.,” “Prepares students for a career in business by familiarizing them with various business-relatedtopics,” “Uses assessment information to make decisions thatsupport further learning and for opportunity identification,” and “Support learners in their immersion activities to feel the real world of work” with a weighted mean of 4.79, as rank 5.5; “Involves students with different business-related organizations to deploy skills, subject knowledge, and also their relationship with the other students” with a weighted mean of 4.77, as rank 8; “Integrates a pre-test and post-test thateffectively measure a learner’s relative competency within acore/business subject to determine whether learners satisfy the school’s requirements” with a weighted mean of 4.75, as rank 9; and lastly, “Instruction and assessment are differentiated according to student learning needs” witha weighted mean of 4.73, respectively. Hence, yielded an overall weighted mean of 4.78, verbally interpreted as Highly Competent. The result shows that learning and assessment are basedon clear learning goals. It also involves business students in the learning process by understanding the learning goal and the criteria for quality work, receiving and using descriptive feedback, and taking steps to adjust their performance. The findings are reinforced in the study by De Aquino et al (2020) that assessment and evaluation are related to both instructional objectives and classroom learning activities and are indispensable elements in the learning process. They are useful for gathering data/information needed for various interests. Among other techniques to do evaluation and assessment, The teachers can use tests to evaluate and assess, starting from the small one, incorporating evaluation into the class routine, setting up an easy and efficient record-keeping system, establishing an evaluation plan, and personalizing the evaluation plan.

Table 10
Summary of Assessment

Indicators	School Manager		Teachers		Students		Composite Weighted Mean		Rank
	WM	VI	WM	VI	WM	VI	WM	VI	
Classroom management	4.92	HC	4.79	HC	4.55	HC	4.75	HC	4
Student Engagement	4.86	HC	4.70	HC	4.54	HC	4.70	HC	5
Subject matter expertise	4.92	HC	4.90	HC	4.53	HC	4.78	HC	1.5
Teaching methodology and strategies	4.88	HC	4.89	HC	4.54	HC	4.77	HC	3
Learning assessment and evaluation	4.88	HC	4.91	HC	4.56	HC	4.78	HC	1.5
Overall weighted mean	4.89	HC	4.84	HC	4.54	HC	4.76	HC	

The summary of respondents’ assessment of the instructional proficiency of

business teachers is presented in Table 10. Looking at the data, the respondents generally assessed the indicators on the instructional proficiency of business teachers as Highly Competent, “Subject matter expertise” and “Learning assessment and evaluation” with a weighted mean of 4.78 as rank 1.5; “Teaching methodology and strategies,” with a weighted mean of 4.77; “Classroom management,” with a weighted mean of 4.75, as 4; and lastly, “Student engagement,” with a weighted mean of 4.70, as rank 5, respectively. Thus, this obtained weight yielded an overall weighted mean of 4.76 and was verbally interpreted as Highly Competent. It can manifest that business teachers can be described as prepared to teach, and students can rely upon their teachers as they possess Subject matter expertise, learning assessment, and evaluation. Higher education institutions abide by the policy provided for in CHED Memo Order No. 17. The result of the study is in consonance with CHED Memorandum Order No. 17, which specifies the core competencies expected of BS Business Administration graduates regardless of the type of HEI they graduate from. In recognition of the spirit of outcomes-based education. . . of the typology of HEIs, it also provides ample space for HEIs toinnovate in the curriculum in line with the assessment of how best to achieve learning outcomes in their particular contexts and their respective missions.

Sub Problem No. 3. Is there a significant difference in the instructional proficiency of business teachers in private HEIs assessed by the three groups of respondents?

Table 11
Result of Significant Difference

Indicator	F-value	Decision	VI
1. Classroom Management	30.7068	Reject H_o	Significant
2. Student Engagement	4.7950	Reject H_o	Significant
3. Subject Matter Expertise	48.5600	Reject H_o	Significant
4. Teaching methodology and strategies	70.3043	Reject H_o	Significant
5. Learning Assessment and Evaluation	214.3888	Reject H_o	Significant
Overall	73.7510	Reject H_o	Significant

Degrees of Freedom = 2 and 27
Critical value at .05 = 3.487

The result of the significant differences among the assessment of the school managers, teachers, and student respondents in the instructional proficiency of business teachers in private HEIs is indicated in Table 11. As shown in the table, it could be observed in the results of significant differences obtained a computed F value of 30.7068, 4.7950, 48.5600, 70.3043, and 214.3888 were all exceed the critical value of 3.487. Hence, the overall computed F value of 73.7510 also greater than the critical with 2 and 27 degrees of freedom at a 0.05 level of significance. Thus, the statistical decision was to reject the null hypothesis and verbally interpreted it as significant. Since we failed to accept the null hypothesis, therefore, there is a significant difference on the assessment of the school managers, teachers, and students in the instructional proficiency of business teachers in private HEIs in terms of classroom management, student engagement, subject matter expertise, teaching methodology and strategies, and learning assessment and evaluation. Thus, this shows that the school managers, teachers, and students do not concur with their assessment in the instructional proficiency of business teachers in private HEIs in terms of classroom management, student engagement, subject matter

expertise, teaching methodology and strategies, and learning assessment and evaluation. Since the result of the Analysis of Variance indicates significant differences, it is fair to investigate where the differences lie. Post-hoc pairwise means comparisons are commonly performed after significant differences when there are more than two groups.

Table 12

Result of Post-Hoc Pairwise Comparison for Classroom Management

Groups	Mean Difference	TK-test	Verbal Interpretation
School managers – Teachers	0.13	3.7333	Significant
School managers – students	0.37	10.9036	Significant
Teachers - Student	0.24	7.1703	Significant

Result of Post-Hoc Pairwise Comparison for Student Engagement

Groups	Mean Difference	TK-test	Verbal Interpretation
School managers – Teachers	0.16	1.7772	Not significant
School managers – students	0.32	4.3557	Significant
Teachers - Student	0.16	2.5778	Not significant

Result of Post-Hoc Pairwise Comparison for Subject Matter Expertise

Groups	Mean Difference	TK-test	Verbal Interpretation
School managers – Teachers	0.02	0.8665	Not significant
School managers – students	0.32	12.4796	Significant
Teachers - Student	0.37	11.6134	significant

Result of Post-Hoc Pairwise Comparison for Teaching Methodology and Strategies

Groups	Mean Difference	TK-test	Verbal Interpretation
School managers – Teachers	0.01	0.8690	Not significant
School managers – students	0.34	14.0689	Significant
Teachers - Student	0.35	14.9378	significant

Result of Post-Hoc Pairwise Comparison for Learning Assessment and Evaluation

Groups	Mean Difference	TK-test	Verbal Interpretation
School managers – Teachers	0.03	2.5489	Not significant
School managers – students	0.32	23.9900	Significant
Teachers - Student	0.35	26.5389	significant

Tukey-Kramer Pairwise Comparisons Critical Value (.05, 3, 30) = 3.487

It could be gleaned from the results of the Tukey-Kramer Pairwise mean comparison for Classroom Management, it shows that that there is a significant difference on the assessment between group school managers, teachers, and students. For student engagement, it shows significantly differ on the assessment between groups of school administrators and teachers. Hence, no significant differences between groups of school administrators – teachers, and teachers – students. Moreover, for Subject Matter Expertise, it manifest significant different between group of school administrators - students and teachers and students. Hence, no significant differences between groups of

school administrators – teachers. Furthermore, Teaching Methodology and Strategies, it asserted significant different between group of school administrators -students and teachers and students. Hence, no significant differences between groups of school administrators – teachers. Lastly, Learning Assessment and Evaluation, it demonstrated a significant different between group of school administrators -students and teachers and students. Hence, no significant differences between groups of school administrators – teachers.

Sub Problem No. 4. Is there a significant relation between the profile and instructional proficiency of business teachers in private HEIs?

Table 13
Significant Relationship Between Bachelor's Degree Earned and instructional proficiency

Total	**24.50**	**24.50**	**24.51**	**24.50**	**24.21**	**24.21**	**24.25**	**24.24**	**24.10**	**24.09**	**23.65**	**23.65**	**22.71**	**22.71**	**24.18**	**24.18**	**23.14**	**23.13**	**215.25**	**0.0709**

Degrees of freedom = 32
Critical value at .05 = 43.77

The following table shows the results of the significant relationship between the profile and instructionalproficiency of business teachers in private HEIs. The result of the significant relationship between the Bachelor's degree earned and Instructional Proficiency of business teachers in private HEIs is presented in Table 13. It could be gleaned from the data that the computed chi-square value of 0.0709 is less than the critical value of 43.77 at a 5 percent level of significance with degrees of freedom equal to 32. The statisticaldecision is to accept the null hypothesis of no relationshipbetween the bachelor's degree earned by the respondents and the instructional proficiency of business teachers in private HEIs in terms of classroom management, student engagement, subject matter expertise, teaching methodology, and strategies, and learning assessment and evaluation This shows that the bachelor's degree earned by the respondents is independent of the instructional proficiency of business teachers in private HEIs in terms of classroom management, student engagement, subject matter expertise, teaching methodology and strategies, and learning assessmentand evaluation.

Table 14
Significant Relationship between Years of TeachingExperience and instructional proficiency

Indicators	20 - 24		15 -19		10 - 14		5 – 9		Less than 5 years		Total	χ^2
	O	E	O	E	O	E	O	E	O	E

Degrees of Freedom = 26.30
Critical value at .05 = 26.30

The result of a significant relationship between years ofteaching experience and instructional proficiency of business teachers in private HEIs is presented in Table 14. It could be gleaned from the data the computed chi-square value of 0.0662 is less than the critical value of 26.30 at a 5 percent level of significance with degrees of freedom equal to 16. The statistical decision is to accept the null hypothesis of no relationship between the years of teaching experience of the respondents and the instructional proficiency of business teachers in private HEIs in terms of classroom management, student engagement, subject matter expertise, teaching methodology and strategies, and learningassessment and evaluation. This shows that the years of teaching experience of therespondents are independent of the instructional proficiency of business teachers in private HEIs in terms of classroom management, student engagement, subject matter expertise, teaching methodology and strategies, and learning assessmentand evaluation. The result of the significant relationship between job position in the industry and instructional proficiency of business teachers in private HEIs is presented in Table 15.

Table 15
Significant Relationship between job position in theindustry and instructional proficiency

Indicators	Administrative Assistant		Assistance Manager		Managerial		Rank and File		Supervisory		Team Leader		Total	χ^2
	O	E	O	E	O	E	O	E	O	E	O	E

Degrees of Freedom = 16
Critical value at .05 = 26.30

The result of t h e significant relationship between t h e lengthof service rendered in the industry and the instructionalproficiency of business teachers in private HEIs is presented in Table 16. It could be gleaned from the data in Table 16 that the computed chi-square value of 0.0053 is less than thecritical value of 26.30 at a 5 percent level of significancewith degrees of freedom equal to 16. The statisticaldecision is to accept the null hypothesis of no relationshipbetween the length of service rendered in the industry of the respondents and the instructional proficiency of business teachers in private HEIs in terms of classroom management, student engagement, subject matter expertise, teaching methodology and strategies, and learning assessmentand evaluation This shows that the length of service rendered in the industry of the respondents is independent of the instructional proficiency of business teachers in private HEIs in terms of classroom management, student engagement, subject matter expertise, teaching methodology andstrategies, and learning assessment and evaluation. The result of the significant relationship between the highest educational attainment and instructional proficiency ofbusiness teachers in private HEIs is presented in Table 17. It could be gleaned from the data that the computed chi-square value of 0.0023 is less than the critical valueof 21.03 at a 5 percent level of significance with degreesof freedom equal to 12. The statistical decision is toaccept the null hypothesis of no relationship between the highest educational attainment of the respondents and the instructional proficiency of business teachers in private HEIs in terms of classroom management,

student engagement, subject matter expertise, teaching methodology andstrategies, and learning assessment and evaluation.

Table 17
Significant Relationship Between Highest Educational Attainment and instructional proficiency

Indicators	Doctoral Degree		With Doctoral units		Master's Degree		With Masteral Units		Total	χ^2
	O	E	O	E	O	E	O	E		
Classroom Management	4.91	4.88	4.81	4.80	4.74	4.77	4.90	4.90	**19.36**	**0.0004**
Student Engagement	4.79	4.81	4.69	4.74	4.72	4.71	4.90	4.84	**19.10**	**0.0012**
Subject Matter Expertise	4.97	4.98	4.94	4.91	4.88	4.88	5.00	5.02	**19.79**	**0.0002**
Teaching Methodology Strategies	4.97	4.97	4.87	4.89	4.88	4.86	5.00	5.00	**19.72**	**0.0000**
Learning Assessment and Evaluation	4.99	4.99	4.96	4.92	4.88	4.89	5.00	5.03	**19.83**	**0.0005**
Total	**24.63**	**24.63**	**24.27**	**24.26**	**24.10**	**24.11**	**24.80**	**24.79**	**97.80**	**0.0023**

Degrees of Freedom = 12
Critical value at .05 = 21.03

This shows that the highest educational attainment of the respondents is independent of the instructional proficiency of business teachers in private HEIs in terms of classroom management, student engagement, subject matter expertise, teaching methodology and strategies, and learning assessment and evaluation. The findings support the study conducted by Francisco (2020) found a significant relative contribution of the teacher's academic qualification, teachers' content knowledge, teachers' instructional quality, teachers' evaluation procedure, and teachers' job satisfaction to the academic performance of the participants.

Table 18
Summary of Significant Relationship

Indicators	Critical value	Computed Chi-square	Decision	Verbal Interpretation
Bachelors degree earned *vs* instructional proficiency	43.77	0.0709	Accept H_o	No relationship
Years of teaching experience *vs* instructional proficiency	26.30	0.0662	Accept H_o	No relationship
Job position in the industry *vs* instructional proficiency	31.41	0.0236	Accept H_o	No relationship
Length of service rendered in the industry vs instructional proficiency	26.30	0.0053	Accept H_o	No relationship
Highest educational attainment vs instructional proficiency	21.03	0.0023	Accept H_o	No relationship

In summary, Between BS degree earned, Teaching Experience, Job Position in the Industry, Length of Service rendered in the industry, and Highest educational attainment vs. Instructional Proficiency vs. instructional proficiency resulted in a critical value (43.77, 26.30, 31.41, 26.30, and 21.03), degrees of freedom (32, 26.30, 20, 16, and 12), the computed chi-square (0.0709, 0.0662, 0.0236, 0.0053, 0.0053, and 0.0023) tested at .05.

Sub Problem No. 5. What are the challenges encountered by business teachers in HEIs?

Table 19
Assessment of the Challenges Encountered

Indicators	Business Teachers		School Managers		Composite Weighted Mean		Rank
	WM	VI	WM	VI	WM	VI	
The formal education system lacks focus on developing creativity, innovation, and student mindset.	2.53	MiP	2.00	MiP	2.27	MiP	4
Lack of support in building relationships, networks, and social capital for teachers and students with entrepreneurial linings.	2.59	MiP	2.63	MoP	2.61	MoP	2
There is no funding support for students for start-up and procurement of products to help start the venture.	2.30	MiP	2.00	MiP	2.15	MiP	6
There is minimal support from the academe and industry to aid promising entrepreneurial undertaking to start and grow a business.	2.20	MiP	2.25	MiP	2.23	MiP	5
Availability of industry support for teacher's immersion	3.62	SP	3.50	SP	3.56	SP	1
There is no venue for students to go beyond merely formulating a business plan.	1.79	NAP	2.13	MiP	1.96	MiP	7

Legend

Scale	Range	Interpretation
5	4.20 - 5.00	Very Serious Problem (VSP)
4	3.40 - 4.19	Serious Problem (SP)
3	2.60 - 3.39	Moderate Problem (MoP)
2	1.80 - 2.59	Minor Problem (MiP)
1	1.00 - 1.79	Not at all a problem (NAP)

The assessment of business teachers and school managers on the challenges encountered in the instructional proficiency of business teachers in private HEIs is stated in Table 19. As clearly indicated by the data, the business teachers and school managers generally assessed the indicators on the challenges encountered in the instructional proficiency of business teachers in private HEIs, “Availability of industry support for teacher's immersion” rated Encountered with a weighted mean of 3.56, as rank 1; “Lack of support in building relationships, networks, and social capital for teachers and students with entrepreneurial linings” rated Moderately Encountered with a weighted mean of 2.61 as rank 2; “Teachers lack the training to apply entrepreneurial pedagogies” rated Least Encountered with a weighted mean of 2.48, as rank 3; “ The formal education system lacks focus on developing creativity, innovation, and student mindset” rated Least Encountered with a weighted mean of 2.27, as rank 4; “There is minimal support from the academe and industry to aid promising entrepreneurial undertaking to start and grow a business” rated Least Encountered with a weighted mean of 2.23, as rank 5; “There is no funding support for students for start-up and procurement of products to help start the venture” rated Least Encountered with a weighted mean of 2.15, as rank 6;

“There is no venue for students to go beyond merely formulating a business plan” rated Least Encountered with a weighted mean of 1.96, as rank 7; “The faculty lacks the management skills to improve planning, organizing, managing classroom activities, and better presentation of instructional materials” rated Very Least Encountered with a weighted mean of 1.67, as rank 8; “Lack of the knowledge to implement pedagogies prescribed in the syllabus” rated very Least Encountered with a weighted mean of 1.64, as rank 9; “Faculty members lack the knowledge and skills to manage the business market's complexity and unpredictability” rated Very Least Encountered with a weighted mean of 1.61, as rank 10; and lastly, “The faculty lacks business skills and literacy” rated Very Least Encountered with a weighted mean of 1.45, as rank 11, respectively. Thus, yielded an overall weighted mean of 2.06 and was verbally interpreted as Minor Problem. This means that schools should better equip the business teacher through immersion programs and the lack of support in building relationships, networks, and social capital for teachers and students with entrepreneurial linings. The result justifies the study by Ajisafe, Bolarinwa, and Edeh (2015) revealed the issues in Business Education as the inadequacies in the curriculum content of business education, non-relevance of the course content, poor implementation of the curriculum, time allocation, current issues and debates, qualification and quality of teachers, and facilities. It was mentioned by Ferguson (2022), it is important that teacher must juggle curriculum and lesson planning. In conclusion, business education remains the foundation of human resource development which provides knowledge, skills, attitudes, and understanding needed to perform in the business world as a producer or consumer of economic goods and services that business offers.

Sub Problem No. 6. Based on the findings, what Teaching Capability Program may be proposed?

An intervention measure was developed to address the issues faced in business education. The intervention covers the Key Areas, Objectives, Strategies & Activities, Time Frame, Person Involved, Fund, and Success Indicators.

Table 20
Matrix of the Teaching Capability Program

KEY RESULT AREA	OBJECTIVE	STRATEGY	ACTIVITIES	PERSON IN CHARGE	FUNDS / BUDGET	TIME FRAME	SUCCESS INDICATORS
Student Engagement	Identify students who needs activities	Establish a supportive and inclusive classroom culture	Use icebreakers or warm-up activities Flipped Classroom	Faculty	P10,000	1 School Year (August – May)	90% of the students in the class participated in the activity
	Individual consultations for optimizing student engagement in the learning and development process.	Engage students in a discussion about their preferred learning modes.	Create a timetable for faculty consultation Academic advising sessions Mentoring programs Use Online	Program Chair Faculty	P10,000		100% of the students in the class made for a scheduled faculty consultation

KEY RESULT AREA	OBJECTIVE	STRATEGY	ACTIVITIES	PERSON IN CHARGE	FUNDS / BUDGET	TIME FRAME	SUCCESS INDICATORS
			communication platforms				
	Utilization of small group discussions, debates, role-plays, or online forums.	Select topics that are relevant, thought-provoking, and meaningful to students' lives. Choose subjects that allow for multiple perspectives and encourage critical thinking.	Fishbowl Discussion Think-pair-share (TPS)	Faculty	P10,000		90% of the students in the class participated in the discussion and role playing
Classroom Management	Prevention of behavior problems through enhanced planning, organization, and management of classroom activities, improved presentation of instructional material, and optimized teacher-student interaction, maximizing students' involvement and cooperation in learning.	Encourage students to share any challenges or barriers they face in their learning journey. Discuss specific approaches, techniques, or resources that align with their preferred learning modes.	Discuss Challenges and Barriers Personalized Learning Strategies	Faculty	P20,000	1 School Year (August – May)	90% of the students have been prevented through classroom activities
	Preparation for teaching encompassing a range of techniques, including a counseling approach for problem understanding and mutual problem-solving, as well as behavior modification and the practice of ignoring inappropriate behavior while reinforcing appropriate	Encourage students to reflect on their own behavior, identify areas for improvement, and set goals for behavior modification. Acknowledge and reward students when they exhibit desired behaviors, such as active participation, respectful communication, or following instructions. Actively monitor	Monitor and observe Teach Self-Regulation Skills	Faculty	P20,000		Achieved 100% preparation of teaching techniques

KEY RESULT AREA	OBJECTIVE	STRATEGY	ACTIVITIES	PERSON IN CHARGE	FUNDS / BUDGET	TIME FRAME	SUCCESS INDICATORS
	behavior.	and observe students' behavior to identify instances of appropriate and inappropriate behavior.					
	Announcement and enforcement of school rules, classroom rules, procedures, and consequences to foster positive outcomes.	Organize the presentation of the rules, procedures, and consequences in a structured and logical manner. Explain the rationale behind each rule, procedure, or consequence.Demonstrate how to follow the rules, adhere to the procedures, and handle consequences calmly and respectfully.	Rule Presentation and Discussion Model Behavior Rule Collage	Faculty	P20,000		100% enforcement of school classroom rules and procedures
Teaching Methodology & Strategies	Provision of an avenue for students to extend their efforts beyond the formulation of a business plan.	Conduct or join a business idea competition	Business plan development	Faculty	P20,000	1 School Year (August – May)	Achieved 90% of students' formulation of business plan
	Timely and clear communication by business teachers to students, parents, and superiors regarding learners' progress.	Establish Communication Channels Prepare a progress report for individual learners	Student Progress Report	Faculty	P20,000		100% timely communication to parents and superiors regarding learners
	Enhancement of business problem-solving skills and analysis for the development of decision-making.	Utilized Problem-Based Learning	Give students a Real-World Case Studies Simulations and Role-Playing Exercises Group Projects and Collaboration	Faculty	P20,000		90% of business problem solving skills are enhanced
Subject Matter Expertise	Facilitation of student engagement	Assign activities involving	Internships or Work-Based Learning	VPAA Dean	P1,000,000	1 School Year	90% of the students in the class

KEY RESULT AREA	OBJECTIVE	STRATEGY	ACTIVITIES	PERSON IN CHARGE	FUNDS / BUDGET	TIME FRAME	SUCCESS INDICATORS
	in solving meaningful, real-life, complex problems.	relevant, meaningful, and real-life application	Cross-Curricular Projects Field Studies and Site Visits Authentic Assessments	Program Head Faculty		(August – May)	participate in cross-curricular projects, authentic assessments, field studies and site visits
	Reinforcement of essential concepts and assistance in bridging the knowing/learning gap for students.	Conduct activities involving unlocking difficulties such as defining terms and concepts, relation to other fields, identifying prior knowledge	Concept Mapping Conceptualize through Examples and Analogies	Faculty	P100,000		Conducted 100% on activities unlocking difficulties
	Utilization of subject knowledge to enhance the organization and effective utilization of content knowledge for student understanding	Design activities or exercises that gradually scaffold students' understanding	Scaffolded Activities	Faculty	P100,000		Utilized 100% of the subject knowledge
Learning Assessment & Evaluation	Differentiation of instruction and assessment based on student learning needs	Review the teaching, and learning activities to ensure that it is aligned with the assessment and learning objectives	Horizontal and Vertical Alignment of Learning Outcomes	Dean Program Chair Faculty	P1,000,000	1 School Year (August – May)	Instructional assessment based on student learning skills have been 100% differentiated
	Integration of a pre-test and post-test that effectively assesses a learner's relative competency within a core/business subject, aiming to determine whether learners meet the school's requirements.	Conduct mapping of pre-test and post-test given on core/business subjects if it measures learners' competency	Develop pre-test and post-test activity	Faculty	P100,000		100% integration of pre-test and post-test to assess learner's competency
	Engagement of students with various business-related organizations to apply skills,	Coordinate internships or work placements with the selected organizations.	Internships or Work-Based Learning Immersion Program	VPAA Dean Program Head	P1,000,000		100% of engagement of students on various business-related

KEY RESULT AREA	OBJECTIVE	STRATEGY	ACTIVITIES	PERSON IN CHARGE	FUNDS / BUDGET	TIME FRAME	SUCCESS INDICATORS
	subject knowledge, and foster relationships with other students.	Reach out to the identified organizations / industries and establish partnerships		Faculty			organization to apply skills

DISCUSSION

1. On the business teachers' profile with industry experience and academic experience

   The business teachers with industry experience revealed that they were previously connected to Retail Trading (25.53%) and Real Estate as they had been in the industry for 10-14 years (31.91%) and mostly occupying Managerial positions (59.57%) with earned BS Banking &Finance and Marketing Management (25.53%) and Accountancy (18.08%) graduates. More than half of the business teacherswith Master's Degrees (59.57); and have been teaching for 5-9 years (40.42%). Meanwhile, for business teachers with Academic Experience: Highest Educational, more than half graduated Master's Degree (59.57%); Years of Teaching revealed 5-9 years (40.42%) and less than 5 years (35.11%); and graduated their baccalaureate program in Banking & Finance and Marketing Management (25.53%).
2. On the Instructional Proficiency of Business Teachers in Classroom Management, Student Engagement, Subject Matter Expertise, Teaching Methodology, and Strategies, and Learning Assessment and Evaluation

   The instructional proficiency of business teachers in Subject Matter Expertise, Learning Assessment & Evaluation, Teaching methodologies & strategies, Classroom Management,and Student Engagement were rated as Highly Competent,with a grand mean of 4.76.
3. On the significant comparison

   The computed F value of 57.6308 with 2 and 12 degrees of freedom is greater than the critical value of 3.89 at a 0.05 level of significance. Thus, the statistical decision was to reject the null hypothesis and verbally interpretedit as significant.
4. On the significant relationship between the profile and the instructional proficiency of business teachers

   In summary, Between BS degree earned, Teaching Experience, Job Position in the Industry, Length of Service rendered in the industry, and Highest educational attainment vs. instructional proficiency resulted in a critical value (43.77, 26.30, 31.41, 26.30, and 21.03), degrees of freedom (32, 26.30, 20, 16, and 12), the computed chi-square (0.0709, 0.0662, 0.0236, 0.0053, 0.0053, and 0.0023) tested at .05. The statistical decision is to accept the null hypothesis of No Relationship between the profiles and the instructional proficiency of business teachers.

5. On the challenges encountered by business teachers in HEIs
   The prevalent challenges faced by the business teachersof HEIs revealed that the availability of industry support for teacher immersion and the lack of support in building relationships, networks (Encountered), and social capital for teachers and students (Moderately Encountered) as supported by mean values of 3.56 and 2.61, respectively withan overall value of 2.06, described as Least Encountered.

Conclusions

Based on the findings of the study, the conclusions were derived:

1. Adaptation of the proposed Teaching Capability Program.
2. Business teachers excel in their instructional proficiency.
3. The school managers-students and teachers-students do not share the same assessments.
4. Concerns met are found to be minimal.
5. The proposed intervention measure was developed to address the continuity and sustainability of teachers' proficiency.

Recommendations

1. Adapt the proposed Teaching Capability Program.
2. School managers may consider the strategies presented in the output of the study.
3. Conduct an immersion program for business teachers to keep them updated on the dynamics of the environment. This could be done by establishing strong partnerships with the industry for teachers' immersion programs.
4. The proposed output can be regularly subjected to review and improvement. Apply and retool it to other schools.
5. The issues slightly encountered should be addressed as follows:
   5.1. Availability of industry support for teacher's immersion. Establish partnerships or collaborations with various industries.
   5.2 Lack of support in building relationships, networks, and social capital for teachers and students with entrepreneurial linings. Create a platform or community where teachers and students with entrepreneurial interests can come together, share ideas, and collaborate. This could be an online forum, a social media group, or a dedicated physical space within the school.
   5.3 Teachers lack the training to apply entrepreneurial pedagogies. Organize workshops, seminars, or training sessions specifically focused on entrepreneurial pedagogies. These programs should provide teachers with an overview of entrepreneurship education, examples of best practices, and practical strategies for incorporating entrepreneurial elements into their teaching.
6. Further study may be conducted in different settings but similar variables to validate the result of the study.

Compliance with Ethical Standards

This is a declaration by the author/s in his/their own words and in paragraph form which includes compliance with obtaining informed consent, the respondents' freedom to withdraw from the study at any time, anonymity of the respondents was maintained, the respondents' well-being was safeguarded, no conflict of interest exists in the conduct of the study, plagiarism was strictly avoided, there was no bias in the interpretation of the findings and that the results were used purely for research.

Acknowledgments

The researcher would like to express sincere gratitude and appreciation to the following people for their different contributions: First and foremost, to Dr. Froilan Labausa, Dr. Allan Galvez, and Ms. Maria Louella P. Sta. Maria for the permission granted to make this study possible and for allowing the researcher to gather the necessary data from their institution. To the respondents for generously dedicating their time and participation in the research. Their cooperation made this study possible. Special thanks to the researcher's children—Elijah, Theon, and Riley Capacite—for their unwavering support, love, and motivation throughout the research process. Additionally, heartfelt thanks to the researcher's family for their continuous moral support. Above all, gratitude is offered to Almighty God, without whom none of this would have been achievable.

INTERDISCIPLINARY CONTEXTUALIZATION IN THE DEVELOPMENT OF INSTRUCTIONAL MATERIAL IN GRADE 7 MATHEMATICS

Karen Mae L. Elen

Mathematics Department, Mandurriao National High School, Iloilo City, Philippines

https://doi.org/10.5281/zenodo.11639665

ABSTRACT

This developmental research aimed to create interdisciplinary contextualized instructional material in mathematics for Grade 7 students. The progress was based on the Analyze, Design, Develop, Implement, and Evaluate (ADDIE) Model. The analyze, design, and develop stages were done with the data gathered from observations and interviews of two Grade 7 mathematics teachers, and two department heads from two public schools in Iloilo. The participants suggested to develop an activity book for fourth quarter topics that focused on statistics concepts. For the implementation stage, an activity book was pilot tested in one Grade 7 section composed of 50 students. The evaluation stage involved expert's rating of the material's acceptability and the students' satisfaction. Mean and standard deviation were used in the analysis. The results showed that the developed material was highly acceptable, and the students' satisfaction was also highly satisfied. The activity book was clearly an appropriate material for interdisciplinary contextualization in the classroom. Experimental studies may be done in order to ascertain the effectiveness of the developed material.

Keywords: *Interdisciplinary Contextualization, ADDIE Model, Activity Book, Acceptability, Satisfaction*

INTRODUCTION

The belief was inculcated in everyone's mind that Mathematics becomes harder as time goes by (Thompson, 1994) which turn into notion that affects and limits the

students' mathematical performance. It creates a mental barrier that significantly impacts individual's performance and attitude towards the subject. Heckman & Weissglass (1994) believed that Mathematics will be learned by more students if: (1) taught with other subjects in a real-world context, (2) practical learning apprenticeships are developed, and (3) educators articulate and challenge their own beliefs and values about Mathematics, learning, and teaching. This suggests that teachers should use available resources in their locality and within the context of the students so that they could relate and appreciate the real context of Mathematics. This supports the study of Barrido (2015) that the student learns best when he acts on objects and events within his environment and in the process, gains understanding and derives meaning of those objects and events. Also, Akande (1985) claims that learning can occur through one's interaction with one's environment which refers to facilities that are available to facilitate students learning outcome.

The DOST-SEI and MATHTED, Inc. (2011a) expounded that the goal of Mathematics education in the Philippines is mathematical empowerment. The goal encompasses skills and one of those skills is making mathematical connections. They also promote Interdisciplinary Contextualization (ICon) which defined as connecting/linking concepts/skills within learning areas (e.g., Math or Science) and across learning areas (e.g. Math and Science and Others). In fact, many universities are making campus wide efforts to teach interdisciplinary courses that often adopt contextual learning as a way to integrate course content (Curry, et. al., 2012). Interdisciplinary contextualization is connecting and reinforcing the subject matter rather separate and unrelated (Chernus & Fowler cited by Tan, 2016). This allows instructors and students to make broad and easy connections among disciplines, even those with distant epistemologies (Nikitina, 2002) and it achieves broad external connections between distant disciplinary shores (Nikitina and Mansilla, 2003). Nikitina (2002) identified that uncovering the difference in the underlying assumptions of different disciplines helps the instructor and the student see different systems of knowledge as complementary or connected as ways of making meaning of the world around us. Interdisciplinary contextualization strengthens learning by providing students with a more comprehensive understanding of the subject matter and preparing them for success in a rapidly changing world.

Aramide and Bolarinwe, cited by Adipo (2015), opine those instructional materials have the potential for enhancing students learning. The use of instructional materials in teaching and learning of Mathematics makes students to learn more and retain better what they have been taught and it also promotes and sustains students' interest (Adebanjo as cited in Adebule and Ayoola, 2015). These serve as support system of the teacher in imparting the lesson and aid in cultivating the teaching and learning process in mathematics.

Without seeing the practical applications of math, students might find it abstract and irrelevant, which can diminish their interest and engagement. This gap in teaching and learning mathematics pushes the researcher to conduct this research study. The researcher aims to develop an instructional material that provide a richer, more engaging learning experience for students. In the context of grade 7 mathematics, interdisciplinary

contextualization can help students see the relevance of math in different areas of their lives and academic pursuits.

Research Questions

This study aims to develop instructional material in Mathematics that integrate interdisciplinary contextualization. Specifically, it will seek to answer the following:

1. What are the features of an interdisciplinary contextualized instructional material in Mathematics?
2. What is the level of acceptability of interdisciplinary contextualized instructional material in terms of:
    a. physical aspects
    b. objectives
    c. learning activities
    d. evaluation procedure; and
    e. integration of interdisciplinary contextualization.
3. What is the students' level of satisfaction of the Math 7 interdisciplinary contextualized instructional material in general in terms of:
    a. physical aspects
    b. pedagogical uses
    c. evaluation procedure; and
    d. relevance to the real-world context.

METHODOLOGY

This study employed a Type 1 developmental research. This category typically involves situations in which the product development process used in a particular situation is described and analyzed and the final product is evaluated (Richey, Klein, and Nelson, 2015). The progress was based on the Analyze, Design, Develop, Implement, and Evaluate (ADDIE) Model.

This research was composed of two intact classes of Grade 7 students from two schools in Iloilo of School Year 2017-2018. The two schools were chosen purposively through the qualification of having a large number of the student population. Two grade 7 Mathematics teachers and two head Mathematics teachers from these schools were also included as participants of this study. Moreover, in evaluation phase, six experts were included in which two experts for each field of expertise (Grade 7 Mathematics, production of instructional materials, and interdisciplinary contextualization) and 1 intact class to each school.

The data gathered from the thorough interviews with the teachers and objective classroom observations were the bases in developing the instructional material.

Thematic analysis was used for the qualitative data. Means and standard deviations were used to analyze quantitative data.

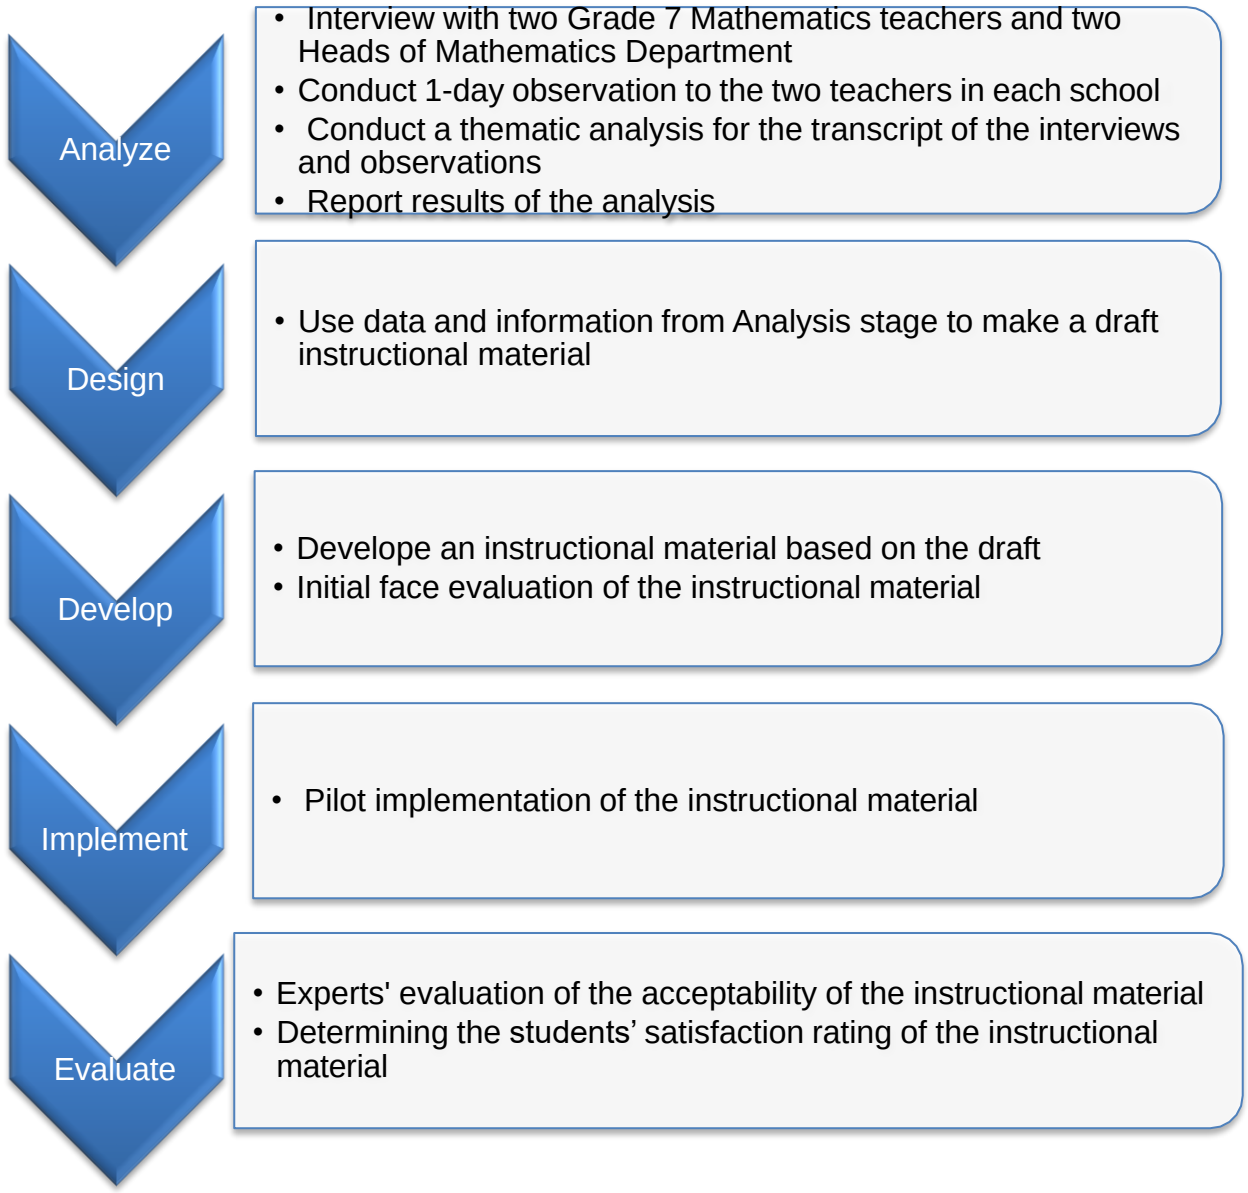

Figure 1. The research procedure

RESULTS

Table 1 summarizes the features in developing instructional material implemented in interdisciplinary contextualized mathematics.

Table 1
Features in Developing Instructional Material Implemented in Interdisciplinary Contextualized Mathematics

Features	Descriptions	Sources of Data	Sample Coded Extracts
Students' Common Environment/Status	Slum areas and poverty status	Interview and Observation	". . .*ara gid sila na ya iban ya* poverty *ang iban gani ya* below poverty *gid* in terms of socio-economic status."
Classroom Management	Give students a collaborative learning process	Interview and Observation	"So from time to time *gina* group *ko sila* or *gina pares-pares*"
Student's Learning Tactics	Peer tutoring	Interview and Observation	"So *makita mo man kis-a nga ga* peer tutoring *sila duwa sang* seatmate *niya*."
Instructional material needed in implementation of interdisciplinary contextualization	Activity book	Interview	"It must be associated with the pictures that are connected to the problems."

Table 2 shows the ratings of the activity book in general and in terms of physical aspects, objectives, learning activities, evaluation procedure, and integration of the interdisciplinary contextualization.

Table 2
Overall Acceptability Rating of the Interdisciplinary Contextualized Activity Book

	N	*SD*	*M*	*Description*
Overall Rating		0.23	3.44	*Highly Acceptable*
Physical Aspects	6	0.21	3.40	*Highly Acceptable*
Objectives	6	0.33	3.60	*Highly Acceptable*
Learning Activities	6	0.28	3.42	*Fairly Acceptable*
Evaluation Procedure	6	0.32	3.33	*Highly Acceptable*
Integration of Interdisciplinary Contextualization	6	0.33	3.45	*Highly Acceptable*

Note: Description is based on the following scale: 3.26-4.00 (Highly Acceptable), 1.76-3.25 (Fairly Acceptable), 1.00-1.75 (Unacceptable)

Table 3 summarizes the ratings obtained by the interdisciplinary contextualized activity book in statistics in physical aspects, pedagogical uses, evaluation procedure, relevance to the real-world context. The overall mean (*M* = 3.33, *SD* = 0.39).

Table 3
Overall Students' Satisfaction Rating of the Interdisciplinary Contextualized Activity Book

	N	*SD*	*M*	*Description*
Overall Rating		0.39	3.33	*Highly Satisfactory*
Physical Aspects	50	0.38	3.38	*Highly Satisfactory*
Pedagogical Uses	50	0.36	3.36	*Highly Satisfactory*
Evaluation Procedure	50	0.45	3.26	*Highly Satisfactory*
Relevance to the Real-World Context	50	0.46	3.31	*Highly Satisfactory*

Note: Description is based on the following scale: 3.26-4.00 (Highly Satisfactory), 1.76-3.25 (Fairly Satisfactory), 1.00-1.75 (Unsatisfactory)

DISCUSSION

After analyzing the data gathered from the interviews and observations, the researcher came into a conclusion to worked on a homework type of activity book that more on pictures wherein connected to the activity and with step-by-step process so that the students could answer on their own. This serves as remedy for the untackled topics for the fourth quarter.

The overall mean (*M* = 4.69, *SD* = 0.22) shows that the interdisciplinary contextualized activity book was “highly acceptable.” This means that the interdisciplinary contextualized activity book has highly met the experts’ expectations.

The overall mean (*M* = 3.33, *SD* = 0.39) means that the interdisciplinary contextualized activity book in selected topics in statistics was “highly satisfactory.” It means that the interdisciplinary contextualized activity book in selected topics in Statistics had highly met the students’ expectations.

With this, even the developed activity book is homework type and the topics involved have not yet been discussed but then the students were able to answer the activities because of the presence of different disciplines and the involvement of authenticity which they are experiencing.

Conclusions

Based on the findings of the study, the following conclusions were drawn:

1. Activity book is certainly one of the means and highly needed in implementing interdisciplinary contextualized mathematics 7.
   The interdisciplinary contextualized activity book in statistics consists of the basic features such as objectives, summary of the important terms and concepts in the lesson, learning activities and iconnect.
2. The interdisciplinary contextualized activity book in statistics was acceptable in terms of physical aspects, objectives, learning activities, evaluation procedure, and integration of interdisciplinary contextualization as reflected in the evaluation by the experts.
3. The interdisciplinary contextualized activity book in statistics addressed the need of the students to have activities that aid to cope with the last topics of the school year which is about statistics that cannot be covered anymore due to insufficient time. Moreover, the students were satisfied in terms of physical aspects, pedagogical uses, evaluation procedure, and relevance to the real-world context.

Recommendations

Based on the findings and conclusions of this study, the following recommendations are suggested:

1. The LRMDS may consider interdisciplinary contextualized resource materials such as activity book.
2. IMCS may promote interdisciplinary contextualization to researches not only in the field of Mathematics but also to other subject areas.
3. School heads, policy-makers and curriculum designers may consider looking into the development of an integrated curriculum or integrated lessons.
4. The teachers, most especially the Mathematics teachers because most of the students found this subject difficult, may include other disciplines and real life contexts based on students' experiences in teaching.
5. To the students, especially those who are constructivist type, may be given an opportunity to learn and appreciate mathematical concepts through such material.
6. A research to compare the effectiveness of interdisciplinary contextualization not only in mathematics but also to the other subject area may be undertaken. A research study that may also use and improve the research instruments, especially the experts' evaluation form and students' satisfaction survey form, and test its reliability on a larger number of samples. Other researchers are encouraged to conduct similar investigations or even enhance this study not only in mathematics but also in other disciplines in which the experts will observe the actual implementation of the activity book.

Compliance with Ethical Standards

A letter and consent form for the participants were provided. The consent form contains the assurance of their rights that will not be violated and will take their identity privately. Also, they were informed that their participation in this study was voluntary and will not cause them any harm. The results were used solely for research purposes only, ensuring integrity and ethical conduct throughout the study.

Acknowledgements

The researcher would like to extend her heartfelt gratitude for her success, this research study will be impossible without the following people who have to be mentioned: The researcher's dream to pursue her Master's degree became possible with the great help of Department of Science and Technology (DOST) led by Sec. Fortunato dela Peña and the DOST-Science Education Institute (DOST-SEI) headed by Dr. Josette T. Biyo through the National Consortium in Graduate Science and Mathematics Education (NCGSME) scholarship program; Dr. Rosemarie G. Felimon, her thesis adviser; panel members; instrument validators; principals of the two schools where the research conducted; evaluators; and participants.

To her mother, Mrs. Eva L. Elen, for her never-ending support and unceasing love. Mr. Eduardo A. Elen, her late father, who died during the making of this research study, her greatest inspiration and strength in pursuing this degree. Above all, the Almighty God for giving the strength, courage, and confidence required for the completion of this research study. Praise all the honor and glory to God Almighty!

ABSTRACT

Resilient adolescents often demonstrate adaptive behaviors, such as effective coping mechanisms, strong social support networks, and a positive self-concept, contributing to their ability to navigate challenges and succeed academically (Masten, 2014). These adaptive behaviors allow resilient youth to regulate emotions, focus on goals, and persevere despite setbacks (Luthar & Cicchetti, 2000). This adaptability is crucial for navigating the pressures and demands of adolescence, ultimately leading to greater academic success (Rutter, 1987). Through quantitative analysis, the research delves into the connection between resilience and academic performance in Filipino adolescents. Therefore, this study examines how resilience is connected to academic performance in Filipino adolescents through a quantitative method. In educational settings, it is essential to have resilience, which is the capacity to adjust and recover from obstacles, to succeed. The study explores resilience's effect on Filipino teenagers' academic performance. Furthermore, the research utilizes quantitative techniques to examine data gathered from Filipino teenagers, most likely through surveys or questionnaires assessing resilience and academic achievement. Thus, the examination will establish the magnitude and orientation of the relationship between these two variables.

Keywords: *resilience, academic performance, Filipino adolescents, quantitative analysis*

INTRODUCTION

Some factors contribute to academic success, and understanding them is essential. In this period of technological advancement, resilience has become an important psychological construct. Resilience means the ability to adjust to adversity constructively by an individual. In this context, Filipino teenagers confront different challenges, including socioeconomic disparities, cultural expectations, and academic pressures. Academic performance fluctuation among students in various community settings is a prevalent issue for students, administrators, and school counselors (Delestre, 2016). Several studies have shown resilience is important in determining students' performance (Mirza & Arif, 2018). This study explores the relationship between resilience and academic achievement to provide useful insights for educators, parents, and policymakers.

The relationship between resilience and academic achievement among Filipino adolescents will be examined quantitatively. In this study, the researchers will assess resilience factors such as coping strategies, self-efficacy, and social support. The researchers will also identify patterns that influence their performance in school. Additionally, the study will explore potential moderating variables, such as gender and school environment.

The results of this research help enhance understanding of the factors that impact academic performance in Filipino teenagers. This study can guide the creation of programs that enhance resilience in Filipino youth, to improve their academic performance.

Due to the pandemic, Filipino teenagers face various emotional challenges due to exposure to social media platforms and the changing socio-economic environment. Filipino adolescents say that some students use grit to deal with adversities, while others lack the necessary skills to overcome challenges.

Adolescents face academic difficulties, societal expectations, and self-discovery during this important developmental stage. Teenagers in the Philippines, like all others, encounter particular challenges that can influence how well they perform in school. This research explores how resilience may impact the academic performance of Filipino teenagers.

In the Philippines, education is given top priority; however, students face numerous challenges and grapple with various hurdles. Socioeconomic factors such as poverty and a lack of resources may impede quality education access and lead to a challenging learning atmosphere. Furthermore, societal values that prioritize group unity and expectations from parents can contribute to the academic pressure to excel.

Resilience, which is the capacity of an individual to adjust and bounce back from challenges, is crucial for achieving success in academics, as stated by Wu in 2013. Various factors, such as genetics, epigenetics, development, psychosocial influences, and neurochemical elements, play a role in influencing it (Wu, 2013). Factors that provide protection and support, like self-regulation abilities, positive parenting, community

support, and quality education, are essential for developing resilience (Masten, 2009; Cutuli, 2018). Furthermore, resilience is crucial for job longevity in teaching and can be improved by evaluating challenges, understanding how to cope with them, and finding effective solutions (Bobek, 2002).

It is also the capacity to adjust to and recover from challenges. In an academic setting, resilient adolescents can handle stress, conquer obstacles, and stay motivated even when faced with adversity. Research has demonstrated a beneficial connection between resilience and academic success among different cultural groups.

Research indicates that resilience plays a key role in academic achievement, though there is limited information on this matter, especially among Filipino adolescents. Understanding this relationship within the Philippine setting is crucial. Family dynamics, cultural values, and educational systems are resilience factors that have demonstrated their influence on academic success.

Studying the connection between resilience and academic achievement in Filipino adolescents can offer important understanding. We can create specialized interventions and support systems by pinpointing the particular elements of resilience that play a role in achieving academic success. This can help Filipino teenagers overcome academic obstacles, creating a stronger and more successful student community.

Research Questions

The primary objective of this study is to investigate the relationship between resilience and academic achievement among Filipino teenagers. To achieve this objective, this study answered the following specific questions:

1. How do resilience levels differ between boy and girl Filipino adolescents, and how does this difference quantitatively impact their academic performance?
2. Is there a significant difference between Filipino adolescents with high resilience and those with low resilience levels?
3. Do Filipino adolescents with specific resilience factors exhibit significantly different academic performance levels compared to those without these factors?

METHODOLOGY

This research utilized a quantitative research methodology. Three hundred sixty Filipino adolescents from public and private schools, aged eleven to seventeen, were gathered as participants through an online platform with help from their class advisers. They filled out a validated survey instrument called the Student Resilience Survey based on CORC (SRS, 2016) and modified its format for this study. The survey includes a 40-question assessment with 10 subscales that gauge how students view their traits and the supportive elements in their surroundings. Self-esteem, empathy, problem-solving, goals and aspirations, family connection, school connection, community connection, autonomy

experience, meaningful participation in community activity, and peer support. A 5-point scale was used to rate each item (*1 = never, 2 = rarely, 3 = sometimes, 4 = often, 5 = always*). The participants were selected using a basic homogeneous random sampling technique based on the adolescents' age.

To measure the resilience and academic performance of the participants, resilience inventories were also supported by their average grades for the school year 2023–2024. The information was analyzed statistically to understand the connection between the variables. The basic information was obtained utilizing descriptives and frequencies, and the associations and impacts were analyzed using ANOVA, correlation, and linear regression techniques as well. Moreover, to calculate descriptive statistics, correlation analysis, analysis of variance, and t-tests, the SPSS 22 program is used.

RESULTS

Research Question #1:

How do resilience levels differ between boy and girl Filipino adolescents, and how does this difference quantitatively impact their academic performance?

In this study, the focus was on examining the relationship between resilience and academic achievement in Filipino adolescents. For the resilience factors in family connection, Table 1.1 displays the weighted mean scores, frequencies, and standard deviations differentiated by gender. The findings indicate that girls exhibit higher resilience scores in the family connection domain than boys. There is variability in the responses, with the highest responses in subscale 1 and the lowest in subscale 3. Overall, the data suggests that most items show a tendency toward more frequent "often" occurrences concerning the family connection factor across the entire sample.

Table 1.1: *Comparison of resilience factors between boys and girls in the family connection*

Gender	*Factors* **Family Connection**			
	At home, there is an adult who *is interested in my schoolwork*	At home, there is an adult who *believes that I will be a success*	At home, there is an adult who *wants me to do my best*	At home, there is an adult who *listens to me when I have something to say*
	Weighted Mean and Level of Frequency			
Boys N = 180	2.71 Sometimes	3.52 Often	3.76 Often	3.18 Sometimes
Girls N = 180	3.48 Sometimes	4.33 Often	4.48 Often	3.65 Sometimes
Total N=360	3.09 Sometimes	3.92 Often	4.12 Often	3.42 Often
Std. Deviation	1.239	1.024	.868	1.124

The data in Table 1.2 reveals that, in comparison to boys, girls tend to report a higher frequency of school connections. The overall pattern across all subscales shows a tendency towards more frequent occurrences of 'often' in the entire sample. Subscale 2 exhibits the highest frequency, while subscale 4 shows the least. These findings suggest that girls may perceive or mention these subcategories more frequently than boys, potentially influenced by the school context.

Table 1.2: *Comparison of resilience factors between boys and girls in school*

Gender	*Factors* **School Connection**			
	At school, there is an adult who *cares about me*	At school, there is an adult who *tells me when I do a good job*	At school, there is an adult who *listens to me when I have something to say*	At school, there is an adult who *believes that I will be a success*
	Weighted Mean and Level of Frequency			
Boys N = 180	3.37 Sometimes	3.33 Sometimes	3.40 Often	3.46 subscale 3
Girls N = 180	4.28 Often	4.08 Often	3.92 Often	4.34 Often
Total N=360	3.83 Often	3.71 Often	3.66 Often	3.90 Often
Std. Deviation	1.053	1.054	1.022	1.009

connection

In examining community connection as a contributing factor, it is notable that Table 1.3 demonstrates significant gender discrepancies in the assessed subscales through frequencies, with consistently higher frequencies reported by girls across all items. The overall data indicates that “often” is the more commonly reported frequency across all subscales, suggesting that these experiences are prevalent among the population. Although there are slight variations in responses, indicating a considerable degree of consistency in how participants perceive or experience specific events, some subscales show more variability in the responses. Hence, this analysis underscores the importance of considering gender disparities, given the widespread occurrence of these situations in the community.

Table 1.3: *Comparison of resilience factors between boys and girls in the community connection*

Gender	*Factors* **Community Connection**			
	Away from school, there is an adult who *cares about me*	Away from school, there is an adult who *tells me when I do a good job*	Away from school, there is an adult who *believes that I will be a success*	Away from school, there is an adult who *I trust*
	Weighted Mean and Level of Frequency			
Boys N = 180	3.29 Sometimes	3.09 Sometimes	3.42 Often	3.24 Sometimes
Girls N = 180	3.99 Often	3.89 Often	4.11 Often	3.96 Often
Total N=360	3.64 Often	3.49 Often	3.76 Often	3.60 Often
Std. Deviation	1.065	1.168	1.027	1.184

The findings in Table 1.4 demonstrate substantial gender-related differences in the factors linked to self-esteem, with girls indicating higher occurrences. The overall data shows in this table that the experiences measured are prevalent among the participants. The diversity in responses, especially for subscale 1, indicates the extensive array of individual experiences. These outcomes emphasize the importance of considering gender disparities and individual experiences when interpreting and utilizing this data in the future.

Table 1.4: *Comparison of resilience factors between boys and girls in self-esteem*

Gender	*Factors* **Self-esteem** *Are there students at your school who would*			
	Tell you you're their friend	*Ask you to join in when you are all alone*	*Tell your secrets*	*I can do most things if I try*
	Weighted Mean and Level of Frequency			
Male N = 180	3.49 Often	3.21 Sometimes	2.27 Sometimes	3.22 Sometimes
Female N = 180	4.52 Often	3.79 Often	3.14 Sometimes	3.86 Often
Total N=360	4.01 Often	3.50 Often	2.71 Sometimes	3.54 Often
Std. Deviation	2.885	1.220	1.393	1.016

The data presented in Table 1.5 reveals a significant gender gap in empathy. The participation of girls led to an increase in the number of subscales considered. The data overwhelmingly suggests that girls commonly reported experiencing the subscales, and the variability in responses ranged from minimal to very slight, indicating a reasonable level of consistency in how individuals perceive and respond to specific circumstances.

Table 1.5: *Comparison of resilience factors between boys and girls in empathy*

Gender	*Factors* **Empathy**			
	Choose you on their team at school	*Make you feel better if something is bothering you*	*I feel bad when someone gets their feelings hurt*	*I try to understand what other people feel*
	Mean and Level of Frequency			
Boys N = 180	3.00 Sometimes	3.27 Sometimes	3.42 Often	3.49 Often
Girls N = 180	3.56 Often	3.66 Often	4.18 Often	4.25 Often
Total N=360	3.28 Sometimes	3.46 Often	3.80 Often	3.87 Often
Std. Deviation	1.152	1.191	1.044	.969

The results presented in Table 1.6 highlight a significant gender gap in problem-solving factors, with a consistent increase reported by girls across all subscales. The collective data indicates that subscales 1 and 2 are commonly encountered, while the others are only sporadically reported. The responses vary widely, ranging from slight to high. Additionally, the high variability of responses in a broader range of human experiences underscores the need for strategies.

Table 1.6: *Comparison of resilience factors between boys and girls in problem-solving*

Gender	*Factors* **Problem-Solving**			
	I can work out my problems	*When I need help, I find someone to talk to*	*I know where to go for help when I have problems*	*I try to work out problems by talking to them*
	Weighted Mean and Level of Frequency			
Boys N = 180	3.15 Sometimes	2.69 Sometimes	2.85 Sometimes	2.72 Sometimes
Girls N = 180	3.65 Often	3.65 Often	3.52 Often	3.41 Often
Total N=360	3.40 Often	3.17 Sometimes	3.19 Sometimes	3.06 Sometimes
Std. Deviation	1.097	1.294	1.319	1.292

In Table 1.7, a notable gender disparity in goals and aspirations is evident, as girls consistently indicate a higher frequency for each subscale. The collective data indicates that subscales 3 and 4 are generally perceived as “often,” while subscales 1 and 2 are reported as “sometimes.” The moderate variations in responses underscore a wide spectrum of individual experiences and gender differences.

Table 1.7: *Comparison of resilience factors between boys and girls in goals and aspirations*

Gender	*Factors* **Goals and Aspirations**			
	I do things at home that make a difference (i.e. make things better)	*I do things at school that make a difference (i.e. make things better)*	*I have goals and plans for the future*	*I think I will be successful when I grow up*
	Weighted Mean and Level of Frequency			
Boys N = 180	2.86 Sometimes	2.77 Sometimes	3.42 Often	3.31 Sometimes
Girls N =180	3.57 Often	3.56 Often	4.29 Often	4.27 Often
Total N=360	3.22 Sometimes	3.17 Sometimes	3.86 Often	3.79 Often
Std. Deviation	1.123	1.084	1.046	1.057

The analysis of the data presented in Table 1.8 indicates gender disparities in autonomy experience, with girls reporting higher levels on subscales 2 and 4 compared to boys. The collective data suggests that subscale 4 is commonly experienced “often,” while the other subscales are experienced “sometimes.” The considerable variance of experiences among the participants in responses to subscale 1 points to a wide range. Hence, these results underscore the importance of delving deeper into the data to examine distinctions between boys’ and girls’ experiences.

Table 1.8: *Comparison of resilience factors between boys and girls in autonomy experience*

Gender	*Factors* **Autonomy Experience**			
	I am a member of a club, sports team, church group, or other group	*I take lessons in music, art, and sports, or have a hobby*	*At school, I decide things like class activities or rules*	*There are many things that I do well*
	Weighted Mean and Level of Frequency			
Boys N = 180	3.01 Sometimes	3.20 Sometimes	2.43 Sometimes	2.98 Sometimes
Girls N = 180	2.81 Sometimes	3.58 Often	3.12 Sometimes	3.87 Often
Total N=360	2.91 Sometimes	3.39 Sometimes	2.77 Sometimes	3.43 Often
Std. Deviation	2.146	1.208	1.263	1.042

The data presented in Table 9 indicates significant differences in the participation of girls and boys in community activities. It shows that girls consistently report higher frequencies for all subscales, indicating a notable gender gap. Subscales 1 and 3 are encountered “often,” while subscales 2 and 4 are encountered “sometimes,” demonstrating a range of experiences. Whilst, the results emphasize the relevance of considering gender-specific variations and diverse experiences in future applications of this data.

Table 1.9: *Comparison of resilience factors between boys and girls in meaningful participation in community activities*

Gender	*Factors* **Meaningful Participation in Community Activities** *Are there students at your school who would*			
	Explain the rules of a game if you don't understand them	*invite you to their home*	*Pick you for a partner*	*I help my family make decisions*
	Weighted Mean and Level of Frequency			
Boys N = 180	3.36 Sometimes	2.86 Sometimes	3.23 Sometimes	2.83 Sometimes
Girls N = 180	4.09 Often	3.46 Often	3.68 Often	3.47 Often
Total N=360	3.73 Often	3.16 Sometimes	3.45 Often	3.15 Sometimes
Std. Deviation	1.092	1.288	1.203	1.118

The data analysis presented in Table 1.10 indicates significant gender disparities in peer support factors, with girls consistently reporting higher rates across all measures. The overall data in this table shows that most participants experience subscales 1, 2, and 4 "often," while subscale 3 is experienced "sometimes" by the majority. The variation in response rates suggests a wide range of personal experiences, and these findings underscore the importance of considering gender-specific characteristics and diverse experiences of the participants.

Table 10: *Comparison of resilience factors between boys and girls in peer support*

Gender	*Factors* **Peer Support** *Are there students at your school who would*			
	share things with you	*help you if you hurt yourself*	*I would miss you if you weren't at school*	*help you if other students are being mean to you*
	Weighted Mean and Level of Frequency			
Boys N = 180	3.46 Often	3.36 Sometimes	3.09 Sometimes	3.23 Sometimes
Girls N = 180	4.17 Often	3.79 Often	3.50 Often	3.72 Often
Total N=360	3.81 Often	3.57 Often	3.30 Sometimes	3.47 Often
Std. Deviation	.999	1.112	1.277	1.137

The data presented in Table 1.11 demonstrates that boys have a lower weighted average mean (3.13) compared to girls (3.82), indicating that, on average, girls are outperforming boys in this particular measure. The standard deviation results reveal that the boys' scores are more closely clustered around the mean, while the girls' scores are more widely spread. Although the higher mean for girls suggests better average performance, the higher standard deviation implies a wider range of performance among girls. This variability may indicate that while some girls achieve very high scores, others may score much lower, resulting in a greater disparity within the group.

On the other hand, the boys' scores are more consistent but lower on average. This could indicate a more uniform level of performance among boys, with fewer high and low extremes compared to the girls. Overall, while girls show higher average performance, the variability in their scores is also greater.

Table 1.11: *Summary of the comparison of resilience factors between boys and girls*

Group Statistics			
Resilience Factors	***Gender***	***Average Mean***	***Average Std. Deviation***
Home Connection	*Boys*	*3.29*	*0.823*
	Girls	*3.99*	*1.138*

Meaningful Participation in Community	*Boys*	*3.07*	*0.985*
	Girls	*3.68*	*1.267*
Peer Support	*Boys*	*3.29*	*0.932*
	Girls	*3.80*	*1.245*
Total	*Boys*	*3.13*	*0.911*
	Girls	*3.82*	*1.328*

The data presented in Table 1.12 shows that the average grade of 87.47 suggests that the overall performance of the students is quite high. The median grade of 88 and the relatively symmetrical distribution of grades around the median signify a balanced performance across the board. The range of 23 points, with the highest average grade reported being 97 and the lowest grade of 74, demonstrates a considerable spread in the grades achieved. The most common average grade level is 91, achieved by 9.2% of students, followed closely by a grade of 84 with 8.9%, and grades of 94 and 90, each with 6.9%. Conversely, the least common average grade is 97, achieved by only 0.6% of students, indicating relatively few students reach this high level of performance. Grades 74, 75, and 76 are rare, each achieved by only 0.3% of students.

The distribution of grades shows that most adolescents perform well, with a significant percentage achieving grades in the low to mid-90s. Few students excel with a grade of 97, while a small percentage of teenagers have grades lower than 76.

This study indicates that although academic performance is generally positive, there are chances for enhancement, especially for students with lower grades. Examining the elements that play a role in high and low achievements could help in creating approaches to assist all students in achieving their academic best.

Table 1.12: *Students' Academic Performance based on their average grade*

Students' Academic Performance based on their Average Grade Average Grade = 87.47 Median = 88 Highest Average = 97 Lowest Average = 74			
Average Grade (Most)	**Percentage**	**Average Grade (Least)**	**Percentage**
91	9.2%	**97**	0.6%
84	8.9%	**74**	0.3%
94	6.9%	**76**	0.3%
90	6.9%	**75**	0.3%
93	6.7%		

Research Question #2

Is there a significant difference between Filipino adolescents with high resilience and those with low resilience levels?

Table 2: *Mean comparison between high and low resilience levels results of T-Test*

Variables	F	Sig	t	df
Resilience Factors	14.039	.000	.069	358

Resilience is one factor influencing adolescents' well-being, or the specific measures used weren't sensitive enough to capture the nuances of resilience in a Filipino context. The findings reveal that there is no identifiable distinction between Filipino teenagers who have high resilience and those with low resilience levels. The degrees of freedom (358) and the very small t-value (.069) indicate that the means of the two groups are almost the same and the discrepancy is not statistically important. Therefore, Filipino adolescents' academic performance is inversely related to their resilience.

Research Question #3

Do Filipino adolescents with specific resilience factors exhibit significantly different academic performance levels compared to those without these factors?

Table 3: *Relationship of Academic Performance to Factors of Resilience*

Variables	df	F	Sig.	Interpretation	Decision to Ho
Academic Performance * Resilience	1	11.958	.001[b]	Significant	Reject the Ho and accept the H1

The data presented in Table 3 shows that resilience factors significantly impact Filipino adolescents' academic performance. An F-value of 11.958 is quite high, and a p-value of 0.001 indicates that the model accounts for a significant portion of the variance in educational achievement. Although, the level of significance means the importance of the flexibility factors. Even though the model is statistically significant, it explains only a diminutive part of the variance, suggesting that other factors not included in this model can also significantly affect academic performance.

DISCUSSION

Filipinos are known survivors of circumstances and strong fighters in desperate situations. Despite facing disappointments and tragedies, they emerge more determined to overcome the odds. Resilience is one of the most outstanding characteristics of Filipinos, who consistently exhibit a positive attitude and the belief that they can triumph over adversity. In this era of technology, Filipino adolescents still have the unwavering

conviction that they can overcome any challenges, such as school achievement. Hence, this study focuses on the relationship between resilience and the academic performance of Filipino adolescents.

The data presented in Table 1.1 indicates that girls tend to have a higher score on resilience in the home connection domains than boys. Research findings have proved that the level of family support that girls enjoy in their academic activities is at a higher level than that enjoyed by their male counterparts. This disparity is often exhibited in various aspects, including parent activity, encouragement, and resource provision in their involvement (Eccles, 1993). For example, mothers are, in most cases, more likely to engage daughters in academic discussions, study facility provision, and school function participation (Hill & Lynch, 1998). For instance, the fact that girls are associated with getting better grades than boys is a factor that explains the higher parental support accorded to girls.

In addition, cultural and societal orientations perpetuate the common myth that girls are more "academically-oriented" than boys, thereby subjecting them to higher investment in their academic success. For example, this can be manifested in terms of expanded opportunities for girls, such as the availability of extracurricular activities, tutoring, and college preparatory programs (Epstein, 1988). This tends to create more opportunities and support for girls, enhancing their academic growth and success.

While much progress has been made in promoting gender equality in education, data indicates that girls in some areas still receive more school support than boys (refer to Table 1.2). Studies have found that teachers tend to provide girls with more positive feedback, offer them more opportunities to participate in class, and hold higher expectations for their academic performance (Sadker & Sadker, 1994). This differential treatment may stem from unconscious biases and traditional gender roles that often associate academic success with femininity (Eccles, 1993). Therefore, it is only fair to say that such trends are not universal and significantly vary from one factor to another, whether it is socioeconomic background, school culture, or individual teacher practices. It is important to ensure a balanced and fair educational environment where all students, regardless of gender, receive the support they need to flourish academically (National Academies of Sciences, Engineering, and Medicine, 2019). In this respect, work to reduce unconscious bias in pedagogical activities and work on creating an inclusive learning environment will ensure that boys also get the attention and encouragement being offered to girls.

According to the data analysis from Table 1.3, girls stated they are more involved in the community than boys. The academic achievement of teenagers is significantly enhanced by the influence of their peers. Multiple studies have shown that children who spend time with classmates and peers who value education are more likely to be actively engaged, hardworking, and successful in school (Wentzel, 2002). Positive peer pressure can come in many different forms, such as encouraging study habits, providing assistance, or serving as a source of encouragement by setting a good example. Peer groups can also

be informational and knowledgeable resources, foster a sense of community, and increase academic self-efficacy (Wentzel & Asher, 1995).

Similarly to this, peers can play a positive or negative role in academia. Adolescents who associate with disengaged classmates or harbor pessimistic views about learning are at a higher risk of experiencing disengagement from school.

Some research indicates that girls tend to receive more social support from their peers at school than boys (Table 1.4). Among the reasons for attempting to explain this are societal expectations and gendered norms that have associated girls with emotionality and emotional expression. It has been established that girls offer more prosocial behaviors and practices, including supportive emotionality and building closer and more intimate friendships with peers, than boys. These close friends therefore offer a sense of belonging and security, and this relates to elevated well-being and academic performance.

However, it is important to note that this difference in social support does not imply that boys do not experience social support or that they are less capable of offering it. Differences that may be observed may emerge due to the different socialization practices and encouragements of boys and girls in ways of expressing emotions and seeking support (Goodwin, 2002). Schools have a crucial role in this respect in creating supportive and socially inclusive environments for all students, regardless of gender, by promoting positive peer relationships and emotional literacy and providing diverse opportunities for social interaction and connection.

Data analysis shows a notable gender gap in this specific factor of empathy (Table 1.5). Girls' participation increased the number of subscales considered. Moreover, research has shown that girls are more empathetic than boys, an observation linked to a blend of biological and social elements. Studies have revealed that girls are more likely than boys to express and recognize emotions, especially those associated with sadness and distress, from a very young age (Eisenberg & Lennon, 1983). This may result from hormonal factors, with females having high levels of *oxytocin*, a hormone proven to play a role in social bonding and empathy (Taylor et al., 2000).

Societal expectations and gender role stereotypes also strongly influence empathetic development. Girls receive more encouragement to be open about their emotions and to be nurturing and caring, whereas boys receive stronger socialization practices that encourage them to be emotion-suppressing in favor of assertiveness and independence (Eisenberg et al., 2007). Differences in such socialization factors, therefore, affect how empathy is expressed and understood, which could be an explanation for this observed gender gap. To acknowledge the differences between males and females, it also has to be stated that empathy is a complex product that a whole host of other factors can influence.

Studies have found that girls tend to do well in verbal fluency, reading comprehension, and social problem-solving (Table 1.6), while boys may perform better in visual-spatial

reasoning, mathematical skills, and problem-solving involving logical thinking (Hyde, 2005). However, the differences tend to be rather subtle and brought up by cultural expectations and opportunities.

It's important to consider that within each gender group, there is a broad range of individual variations. Socioeconomic background, educational opportunities, and parental support, among many other factors, are known to be significant moderators of the development of problem-solving abilities. Thus, both girls and boys should be provided with a diverse set of learning experiences while fostering a growth mindset where perceived gender gaps are narrowed for the benefit of individual potential (Dweck, 2006).

The concept that girls are inherently more motivated and interested in studies compared to boys (Table 1.7) is a complex one since this is often based on societal expectations and stereotypes. It has been demonstrated that girls tend to do better academically during primary and secondary school, primarily in language arts and social studies, when compared with boys (Hyde, 2005). There is no guarantee, however, that such differences imply a more intense level of inherent motivation. Parental support, teacher expectations, and social influences can significantly affect a child's level of interest and performance in school, regardless of gender.

A further piece of research indicates that boys can be more prone to risk-taking behaviors, which in rare cases might cause a decrease in their academic achievements. But this doesn't exactly make them less motivated or uninterested in learning. It's right to stress that both genders can have quite a wide scope of motivations and interests, which is why a supportive and inclusive learning environment is likely to help all students succeed and reach their full potential.

Challenges often noted for boys, who may mask their underestimation of abilities with lower self-perceptions of academic performance relative to girls (Marsh, 1990), are plausible through a multitude of explanatory routes concerning societal demands on masculinity, peer influences, and the perceived importance of traditionally masculine characteristics of physical and verbal assertiveness. This might mean that boys, also, are encouraged not to undertake "feminine" activities that require much cognitive stimulation.

Solving this problem demands a rather comprehensive approach, including the creation of an all-inclusive and congenial learning atmosphere where boys feel free to express their talents and interests. Teachers and parents can be of immense help in developing a growth mindset concerning boys so that they are allowed to expose their capabilities and encouraged to seek help in areas where they require assistance. In addition, encouraging collaboration and teamwork within academic circles would help negate the stereotype because boys will appreciate teamwork.

Besides, many times, the girls demonstrate a greater degree of motivation and involvement in community programs and initiatives compared to their boys counterparts

(Table 1.9). This can be attributed to various factors, such as greater expectations from society to be nurturing, caring, and empathetic. Perhaps a girl is more likely to identify herself with social causes and hence more duty-bound to effect a positive change in the community. Moreover, in line with research, girls tend to develop more advanced social skills and communication abilities, which can contribute to their comfort and confidence in engaging in group activities and community-based initiatives.

Additionally, girls often have unique challenges and experiences that make them want to advocate for social change. For example, girls may be more aware of gender equality, social justice, and environmental sustainability issues. Such heightened awareness can translate into a strong desire to make a difference in the world. Involving girls in community programs and initiatives is not only beneficial for their development but also encourages a sense of agency and civic engagement, empowering them to positively change the world.

Research has also indicated that girls are likely to have a more favorable perception among peers in many respects compared to boys (Table 1.10), especially concerning social competence, empathy, and emotional intelligence (Goodwin & Watts, 2014). There are various reasons for this trend, including societal expectations regarding the same, which would be much more relevant for girls. More likely, girls engage in prosocial behavior, such as support or displays of kindness, which can contribute to a better reputation among their peers. Additionally, girls may have an advantage in understanding social dynamics and how to resolve conflicts in the process of communication, making their communication smoother and relationships stronger.

In summary of the findings related to research question 1 using the T-Test, data analysis reveals that girls with a weighted average mean of 3.82 are more resilient than boys with a weighted average mean of 3.15. Multiple studies have consistently shown that girls tend to demonstrate greater resilience than boys, particularly in domains such as literacy, numeracy, and overall well-being (Dwiningrum, 2022; Ivonne, 2007; Wasonga, 2002; Shukla, 2009). This trend is often attributed to the presence of stronger support networks, both within the family and in the broader community, for girls compared to boys (Wasonga, 2002). Nevertheless, it is crucial to note that resilience is not solely determined by gender but is also influenced by individual experiences and the learning process (Dwiningrum, 2022).

Furthermore, research by Zacharias (2020) and Sunarti (2018) did not find significant differences in resilience levels based on depressive symptoms, anxiety, region, poverty, gender, or type of school. Additionally, Medina (2019) also found no significant difference in resilience levels among adolescents in a specific educational institution. These findings suggest that while gender may play a role in resilience, other factors such as mental health, socio-economic status, and environmental influences may not significantly impact resilience levels in Filipino adolescents.

Similarly, the study may have been affected by sample bias, as the resilience scales utilized may not have been appropriate for the Filipino cultural context. Cultural elements

such as "pakikisama" (harmonious interpersonal relationships) that impact resilience may not be fully understood. Looking back, the Philippines has an extensive history of dealing with difficulties, ranging from natural calamities to socio-economic hurdles. However, Filipinos are famous for their outstanding resilience, which is their capacity to recover from difficult situations. Factors in Filipino culture that contribute to this resilience include placing importance on the welfare of the community and nurturing robust social connections that offer support in times of hardship. Therefore, it is important in Filipino culture to uphold harmonious interpersonal connections, as this encourages teamwork, resolution of disputes, and a feeling of being part of a community, all vital for overcoming obstacles. A component of Filipino culture involves the "bahala na" mentality, which translates to "leaving it to God" or accepting whatever may come. It may appear passive at times, but it can also be seen as a hopeful acknowledgment of things beyond one's control, enabling adjustment and concentration on finding solutions.

In Filipino culture, there is a significant focus on interpersonal connections, referred to as "pakikipagkapwa-tao," showcasing their resilience. The importance of strong social connections and community support are essential for overcoming difficulties and creating a feeling of inclusion (Enriquez, 1992). Filipinos depend greatly on their families, friends, and communities for emotional backing, practical help, and shared moments, aiding them in dealing with hardship and staying optimistic (Hollnsteiner, 1970). This deeply rooted belief in interconnectedness enables Filipinos to gain strength from their social connections, enhancing their resilience and nurturing a feeling of unity in the face of challenges (Jocano, 1999).

Filipinos are famous for their bravery and determination when confronted with challenges. This quality drives their resolve to conquer obstacles. (Albay, 2021) stated that there are four aspects to Filipino resilience: self-efficacy, positive attitudes towards challenges, cognitive emotion regulation, and future orientation among youth. Additionally, they possess a strong dedication to work and a persistent attitude, which are crucial for overcoming challenges and bouncing back from failures.

In brief, the sample might not represent the broader Filipino adolescent population and could be skewed toward a specific socioeconomic background or geographical location where challenges are less severe. Generally, Filipino adolescents might exhibit a high baseline level of resilience due to cultural values such as family support (kapwa) and a positive outlook (bahala na). This could narrow the range of scores, making it challenging to detect differences between high and low-resilience groups.

It has been demonstrated in this study that resilience factors have a notable influence on the academic achievement of Filipino adolescents, as depicted in Table 3. Findings from Robilla's (2012) research indicated that greater economic and material pressure on children correlates with lower academic performance due to diminished mental and psychological well-being, as well as reduced life satisfaction. Addressing these factors has the potential to empower students and contribute to their educational success. It’s

important to remember that resilience goes beyond bouncing back from adversity; it's about perseverance despite challenges.

This suggests that adolescents with specific resilient attributes generally exhibit slightly better academic performance than those without these attributes. Thus, there is compelling evidence indicating the presence of a linear correlation between adolescents with certain factors and those without said factors. The positive correlation (0.179) shows that when one variable increases, the other usually increases as well (and vice versa). Nevertheless, correlation should not be mistaken for causation, requiring additional analysis and interpretation in a specific context is necessary to understand the practical consequences of this relationship.

Consequently, resilience factors like strong social support networks (kapwa) and positive coping mechanisms can help adolescents manage academic stress more effectively, leading to better focus and concentration during studies. In total, cultural values like "sipag at tiyaga" and a strong sense of family obligation can motivate students to persist through academic challenges and achieve their goals. Factors such as strong family connections, support systems, and a sense of belonging fostered by "pakikisama" can contribute to higher self-esteem and confidence, as these can translate into a more positive attitude toward learning and a willingness to take academic risks. Ultimately, resilience can help adolescents cope with personal challenges that might otherwise lead to absenteeism. This allows for consistent participation in classes, which is important for academic progress.

Conclusions

This research investigates through quantitative methods, how resilience and academic performance are linked in Filipino adolescents. It analyzes how gender may relate to resilience within the school setting. Although the results indicate that girls might show more academic resilience than boys, a deeper understanding is needed. Teen girls often present a higher level of empathy, aspiration, and community engagement core to academic success. This might cause them to attend more school activities, go on field trips, access study help, and also the various academic programs. These children frequently strengthen their working relationships with peers regarding their social roles to be more capable of and ready to assist others. In contrast, boys potentially showing more autonomy and independence may experience difficulties asking for help and in doing so, may cooperate less in the way they learn. While both sexes are being supported more or less similarly by the school community and their problem-solving skills are even similar, their social expectations and the consequences for their personalities can affect their academic success in the end. To begin with, managing emotions, having strong social support, and believing in oneself are complex concepts of resilience. To pinpoint and understand where gender disparities may be most visible, future studies need to explore this specific aspect. Do girls excel at reaching out to peers or teachers for assistance? Are they equipped with more effective methods for managing their emotions? These questions need to be looked into more closely. Secondly, the effect of other factors, like

sociocultural factors, must be considered. Gender biases, cultural norms, and school settings can all influence the development of academic perseverance. Expectations to adhere to conventional ideas of masculinity could prevent boys from asking for assistance or showing weakness, which could impede their ability to bounce back from challenges. Likewise, educational systems that perpetuate these stereotypes may accidentally put boys at a disadvantage.

It seems that while resilience factors do influence academic performance, the data does not show significant differences in academic outcomes between adolescents categorized as having high or low resilience. The results showed a modest but statistically significant positive relationship, indicating that teenagers with high and low resilience levels do not differ significantly in their academic performance, and resilience factors are connected to academic performance in teenagers. This suggests that while resilience contributes to academic success, it does not necessarily differentiate academic performance among those with varying levels of resilience. It appears that other factors such as support systems, learning environments, and personal circumstances may play a more critical role in influencing academic performance among adolescents. Therefore, fostering resilience should be part of a broader strategy that addresses multiple aspects of a student's life to effectively support their academic journey.

This implies that Filipino adolescents with greater resilience generally achieve higher academic success, although the impact may be small. The weak connection suggests that other variables may also have a considerable influence, though these findings can reinforce the increasing focus on resilience in achieving academic success. Further studies could investigate these factors, like economic status, the availability of educational materials, and teaching strategies concerning academic success among the students. Furthermore, the small impact size highlights the multifaceted characteristics of resilience, and while promoting resilience is beneficial, it may not be the only way to enhance academic achievement. Studying certain aspects of resilience that are most strongly linked to academic success could be productive. This research also provides important insights into how resilience influences academic achievement in teenagers. Although the correlation is positive, it is important to recognize its limitations and examine how other elements interact. Understanding this delicate connection allows educators, guidance counselors, and policymakers to create a more comprehensive approach and plans that help teenagers succeed academically.

To summarize, this research provides a simple start to a nuanced discourse that gives insight into a possible gendered feature of academic resilience by recognizing the various dimensions of resilience and the impact of social and cultural factors, which is vital for understanding its whole character. Further research and investigation into these intricacies may lead to the development of more specific interventions that promote resilience in every student, regardless of gender, and can help students overcome academic obstacles and excel in their educational journey by fostering this valuable quality in every person. This research contributes to understanding the factors that determine academic success in the Philippine context. The emphasis on resilience sets the foundation for applying strategies and treatments to develop it.

Recommendations

Cultural characteristics of coping and support systems are validated for Filipino adolescents to ensure that samples include participants from various socioeconomic backgrounds, regions, and experiences that can be considered in employing resilience scales in future research. In addition, mixed methodologies can be used to obtain insights into the lived experiences of adolescents with different levels of resilience and follow teenagers to see how resilience affects their mental health, academic achievements, and other outcomes.

Even if there are no statistically significant differences between the groups, a qualitative approach may show practical discrepancies, making it beneficial to investigate additional factors that influence and promote resilience, such as religious views, resource availability, and coping techniques. Future research can provide a more nuanced picture of resilience among Filipino adolescents by addressing these issues. This insight can help design programs aimed at promoting resilience and positive mental health in this population.

Compliance with Ethical Standards

This research study adheres to the highest ethical standards, following established guidelines. Participants were informed about the study's purpose, procedures, and potential risks. Confidentiality and anonymity were maintained throughout the study.

Data collection followed ethical guidelines and relevant institutional policies. Personal identifiers were removed from the datasets to ensure privacy, and the data was securely stored and accessible only to authorized researchers.

The study has one major author (myself) and two co-authors. Authorship was determined based on substantial contributions to the research. All authors participated in the data analysis using SPSS.

Moreover, no conflict of interest exists among the authors. The researchers declare no financial or personal relationships that could bias the study. In addition, the study received no external funding, and all data collection, analysis, and publication costs were self-supported. Hence, the researchers are committed to upholding ethical principles and ensuring the integrity of our research.

Acknowledgements

The researchers would like to express their sincere gratitude to the following individuals: Teacher Jamaila Albao, Ma'am Cella Ocampo, and Ma'am Amy Velasco, and to the

institutions that contributed to the completion of this research. Their support, guidance, and encouragement were invaluable throughout the entire process.

The research was only possible with the cooperation and participation of the individuals who volunteered their time and shared their insights. Thus, the researchers appreciate their willingness to contribute to this work. Moreover, the researchers also extend their gratitude to Glendale School where they are connected.

Finally, yet importantly, the researchers are grateful for the steadfast support of their families, the core author's husband - Sam; Harold (Teacher She's husband), and the core author's children: Engr. Jj, Aeron, Sassy, Poging Lucien (Teacher She's son) and friends. Their encouragement, patience, and understanding have carried us through challenging times. Thank you for being a vital part of this journey.

ABSTRACT

This study examined the job satisfaction of the teachers in selected public elementary schools situated in the diverse region of Muslim Mindanao, Pangutaran district. This paper primarily aimed to delve into the relationship of teacher's profile with the level of job satisfaction of elementary school teachers in Pangutaran District. Specifically, the researchers were driven to find answers to these following questions: a) What is the profile of teachers in selected elementary school in Pangutaran district? b) What is the level of job satisfaction of teachers in selected elementary school in Pangutaran District? And lastly c) Is there any significant relationship of teacher's profile with their job satisfaction of teacher's in selected elementary school in Pangutaran District? The researchers used Mean and Standard Deviation as statistical tools in dealing with the three research questions mentioned above. SPSS or Statistical Package for Social Sciences was used in analyzing the data. The findings revealed that the null hypothesis is rejected in Job satisfaction in terms of the work itself and working condition and environment when grouped according to educational attainment, current position, and length of service and accepted when grouped according to age, gender, and monthly income. In the final analysis, teachers are more satisfied in terms of the work itself and their working condition when their profile is grouped according to age, gender, and monthly income while they fell less satisfied when their profile is grouped according to educational attainment, current position and length of service.

Keywords: *job satisfaction, teachers, supervision, profile, working conditions and environment*

INTRODUCTION

Job satisfaction describes the feelings attitudes or preference of individual regarding work. It indicates how content an individual is towards his or her work. Armstrong (2006) defines job satisfaction as the attitudes and feelings people have about their work. Positive and favorable attitude towards work indicate job satisfaction, while negative and unfavorable attitude indicate dissatisfaction. Accordingly, the teachers' job satisfaction is significantly correlated to their commitment to the institution and that teachers who are content with their jobs always get committed to the organization. Therefore, the satisfied feeling of the teachers towards their institution positively affects their performance, thus, contributes to school success as a whole. (Balla et al, 2024; Jupakkal et al, 2024; Isa et al, 2024 & Abdurahman, 2023)

Pangutaran District consists of 23 public elementary and 8 primary schools headed by 16 school heads under the stewardship of 1 district supervisor. Most of the head teachers, principals and teachers in-charge holds masteral units if not a master or doctor's degree. For the school year 2016-2017, the overall numbers of teaching and non-teaching personnel of public elementary and primary schools in Pangutaran District were totaled to 177. Of which, 118 are females and 59 are males which can be further specified into the position of 135 Teacher I, 15 Teacher II, 3 Teacher III, 3 Master Teacher I, 1 Head Teacher III, 11 Principal I, 1 Principal II, 3 Teachers in-Charge, 3 School Nurses, 1 Administrative Aide and 1 District Supervisor.

Public school teachers as with any other professions have to be satisfied or must feel the satisfaction in carrying out their job no matter where their place of assignment (Abdurahman & Omar, 2021; Abdurahman, 2024). Teachers in the far-flung island municipality of Pangutaran, Sulu must find job satisfaction wherein at par comparable to the other more accessible areas in Sulu. Job satisfaction in order to be acquired is motivated and developed by giving the school teachers at hand their basic needs, peaceful environment, just leaders and moral support from their school head. Job satisfaction is tied up with economic, social, and cultural conditions where the public-school teachers are assigned. Many experts said that job satisfaction has something to do or related with job incentives.

Satisfaction of the public-school teachers, along with the just leadership of school heads, effective teaching learning activities and high students' achievements is a hallmark of a well-managed educational institution; favorable attitudes are the product of effective behavioral management, the continuing process of building a supportive human climate in the school. According to Locke (1976: 25) job satisfaction is a pleasurable or positive emotional state resulting from the appraisal of one's job experience. It is like any attitude, which generally acquired over a period as an employee gives more and more information about the work place. Job satisfaction is a critical factor in organizational behavior it needs to be understood, mentioned and built with so many haunt organizations. This study is concerned with the job satisfaction of public-school teachers in Pangutaran School District based on the perspective of their personal experiences.

Job satisfaction of the elementary school teachers in Pangutaran school district needs to be assessed whether they are still affected with organizational culture given the curriculum, delayed release of salary, newly deploying order, and sluggish process of the promotion. Generally, teachers at the island municipality have experienced problem in the k-12 curriculum due to inadequate teaching learning materials. The indicators of dissatisfaction of teachers investigated included teachers' commitment to work. This research attempted to link the above indicators and the main factors under the study which included the factors influence of work environment on teacher job satisfaction, colleagues, job security, work itself, and supervision.

Despite their deprived of many privileges, public school teachers kept on reporting, however, it does not necessary mean that they are satisfied. It needs further investigation and thorough observation, Butuan (1997; 22) citing McDonald said that to be happy in one's work is a privilege which we might argue, is the prerogative of few rather than of the many. Everyone has the right of a rewarding and satisfying job. Thus, concern over whether people like their jobs, their freedom to express their feelings about their work, and their ability to alter destiny through work are not parts of our tradition. According to Abdurahman et al (2024) that people clearly experience varying degrees of job satisfaction in their work according to the degree of their relationship with their upper level managers.

Moreover, this study sought to answer the level of job satisfaction of the faculty members of Pangutaran District, MBHTE, Sulu, Philippines. This investigation further give a baseline data for the school administrators and teachers to improve their performance in the academic playing field.

Research Questions

This study aimed to determine the relationship of teacher's profile with the level of job satisfaction of elementary school teachers in Pangutaran District. Specifically, this study sought to answer the following questions:

1. What is the profile of teachers in selected elementary school in Pangutaran district?
2. What is the level of job satisfaction of teachers in selected elementary school in Pangutaran District?
3. Is there any significant relationship of teacher's profile with their job satisfaction of teachers in selected elementary school in Pangutaran District?

RESEARCH METHODOLOGY

Research Locale

The setting of the study was conducted at diverse region of Muslim Mindanao, the Pangutaran District. The Pangutaran District consists of 23 public elementary and 8 primary schools headed by 16 school heads under the stewardship of 1 district

supervisor. Most of the head teachers, principals and teachers in-charge holds masteral units if not a master or doctor's degree. For the school year 2016-2017, the overall numbers of teaching and non-teaching personnel of public elementary and primary schools in Pangutaran District were totaled to 177.

Sampling Method

In this study, the researchers used Purposive Sampling or Judgement sampling to select the participant of the study. According to According to Crossman (2020), Purposive Sampling is a non-probability sample that is selected based on characteristics of a population and the objective of the study. Moreover, this study used descriptive research method. Descriptive method is scientific research involved in determining the description of the characteristics or attributes of the subject and the interaction of these characteristics with other environmental linkages.

Research Instrument

The study will utilize survey questionnaire. The first section that measured personal information, 50 items in five categories measured the key variables using a standard degree with 51-100% satisfied = 5 column VS, 1-50% satisfied = 4 column S, neither satisfied nor dissatisfied = 3 column U, 1-50% dissatisfied =2 column D, and dissatisfied =1 column VD. Teachers of the Pangutaran Public Elementary School shall be the target respondents. Statistics will be used in the analysis of the data.

Statistical Treatment of Data

For the analysis of data, the researchers used Mean and Standard Deviation as statistical tools in dealing with these following question; a) What is the profile of teachers in selected elementary school in Pangutaran district? b) What is the level of job satisfaction of teachers in selected elementary school in Pangutaran District? And c) Is there any significant relationship of teacher's profile with their job satisfaction of teacher's in selected elementary school in Pangutaran District?

Scope and Delimitation

This study focuses on the job satisfaction of the teachers in selected public elementary schools situated in the diverse region of Muslim Mindanao, Pangutaran district. The participant of this study is delimited to the teachers in selected elementary school in Pangutaran district. The study is confined in the academic year 2020-2021.

RESULTS

Profile of Teachers in Pangutaran District

This section presents the answer to question number 1: "what is the profile of the elementary school teachers in Pangutaran District?" This includes the age, gender, marital status, educational attainment, current position, salaries and length of service. The following distribution were revealed: As to age, majority (36%) were below 25 years old; as to gender, Majority (68%) were female; As marital status, Majority (64%) were married; as to educational attainment, majority (44%) were having their bachelor's

degree; as to monthly income, majority (62%) have an income of below 18,999.00; and as to length of service, majority of the faculty members were only serving 10 years and below.

Table 1: Profile of Respondents

CHARACTERISTICS	Frequency	Percent
Age		
below 25	18	36.0
26-35	16	32.0
36-45	16	32.0
Gender		
Male	16	32.0
Female	34	68.0

Baccalaureate	22	44.0
With Masteral Units	16	32.0
Masteral	12	24.0
Current Position		
teacher 1	44	88.0
teacher 2	4	8.0
teacher 3	2	4.0
Monthly Income		
below 18,999.00	31	62.0
P18,000-24,999	19	38.0
Length of Service		
below 10	37	74.0
11-20 years	12	24.0
21-30	1	2.0

Level of Job Satisfaction of Teachers in Pangutaran District

This section presents the level of job satisfaction of among elementary school teachers in selected elementary schools in Pangutaran District. The statistical tool used

in this problem is Mean and Verbal description. In a normal distribution, the Mean is used to determine the arithmetic Average for the measure of central tendency and the verbal description is the interpretation label for each corresponding mean. Meanwhile, the level of job satisfaction of the public elementary school teachers in Pangutaran District are distributed as follows: They are satisfied with the nature of the work itself (mean=3.93) ; satisfied with the working conditions and environment (mean= 3.84); satisfied with colleagues in the district (mean = 4.19); satisfied with the school supervision (mean = 3.68) but they are undecided in terms of safety and security (mean = 3.41).

Table 2: Level of Job Satisfaction of elementary school teachers in Pangutaran District.

JOB SATISFACTION	MEAN	VERBAL DESCRIPTION
A. The Work Itself		
1. teaching inside the classroom the whole weekdays	3.94	Satisfied
2. preparing lesson plans and other required reports	3.98	Satisfied
3. dealing with problem kids	3.80	Satisfied
4. maintaining classroom and other facilities	4.04	Satisfied
5. identifying pupils' needs	3.84	Satisfied
6. implementing school policies	4.10	Satisfied
7. evaluating pupils' achievement	3.86	Satisfied
8. Encouraging open communications for effective delivery of services.	3.80	Satisfied
9. Clearly defined and logically structured job.	3.92	Satisfied
10. Participating in various activities in the school and community.	4.02	Satisfied
Mean	3.93	**Satisfied**
B. Working conditions and Environment		
1.The attractiveness of your surroundings	4.24	Satisfied
2. The cleanliness, sanitation, lightning, ventilation and temperature of classrooms.	4.16	Satisfied
3. The friendly atmosphere prevailing among people in the school	3.98	Satisfied
4. Availability of teaching modules and gadgets	3.34	Undecided
5. Adequacy and equity of equipment's and supplies.	3.24	Undecided
6. Performing varied tasks, parts of which are incidental and intervening in your regular functions.	3.50	Satisfied
7. Your job's involvement in societal development.	4.06	Satisfied
8. Living up to the expectations of the school and the community.	4.04	Satisfied
9. Having contacts with local public officials.	3.82	Satisfied
10. Well defined and prescribed daily routine.	4.04	Satisfied
Mean	3.84	**Satisfied**
C. Colleagues		
1. The congeniality of your co-teachers	4.44	Satisfied
2. The spirit of teamwork with co-teachers	4.22	Satisfied

3. The acceptance you get from people in your school	4.36	Satisfied
4. The personal and official concern you get from people in your school.	4.28	Satisfied
5. Working with co-teachers having equal educational qualification with you.	3.98	Satisfied
6. Working with co-teachers having higher educational qualifications with you.	4.08	Satisfied
7. Having local co-worker to work with	3.96	Satisfied
8. The way co-teachers get along with each other	4.16	Satisfied
9. Experiencing a feeling f common purpose with co-teachers	4.28	Satisfied
10. Genuine interest in learners' educational progress of co-teaches.	4.20	Satisfied
Mean	4.19	**Satisfied**
D. Supervision		
1. The way the boss handles his staff.	3.90	Satisfied
2. The competence of my supervisors in making decisions	3.78	Satisfied
3. Being kept busy all the time	3.68	Satisfied
4. The chance to work alone in the job	3.64	Satisfied
5. The concern of your superiors on matters affecting you officially and personally	4.00	Satisfied
6. The chances for professional advancement and promotion on this job.	3.04	Undecided
7. The feeling of accomplishment and appropriate recognition you get from the job.	3.70	Satisfied
8. Supervisor's role in the performance appraisal of teachers.	3.84	Satisfied
9. Frequent delegation of authority	3.68	Satisfied
10. Healthy working relationships existing among school personnel	3.60	Satisfied
Mean	3.68	**Satisfied**
E. Safety and Security		
1. The peace and order situation in your assignment	3.82	Satisfied
2. The accessibility and means of transportation to your place of work	3.20	Undecided
3. The condition of the school plant and facilities in terms of your safety.	3.70	Satisfied
4. The provision in the constitution for teachers in terms of tenure in the office means a lot of you	3.68	Satisfied
5. The nature of your appointment in term of your civil service eligibility.	3.64	Satisfied
6. The adequacy of the benefits and assistance exerted by the GSIS and PAG-ibig in terms of loans, Medicare, retirement and life insurance.	3.36	Undecided

7. The fairness and effectiveness in the promotion of teacher's welfare by membership to local and national associations/union.	3.16	Undecided
8. As a teacher you are doing at least as well financially, as you would probably be doing in some other job.	3.36	Undecided
9. Adequacy of pay in providing your personal and family needs	3.18	Undecided
10. Having ample amount left for recreation and vacations.	3.04	Undecided
Mean	3.41	**Undecided**

C. Relationship Between Teacher's Profile of Selected Schools of Pangutaran District with Their Job Satisfaction on the Work Itself and Working Conditions and Environment

Table 3 presents the relationship of elementary school teachers of Pangutaran District with their job satisfaction in terms of Work itself and Working Condition and environment Moreover, the sig value are distributed as follows: Age (p=>.205 & .455); Gender (p=>.345 & .095); Marital status (p= > .241 & .130); Educational Attainment (p=<.004 & .035); Current Position (p=< .005 & .041); Monthly Income (p=>.067 & .451) and Lenth of service (p=<.001 & .000).

Table 3: Relationship teacher's profile and teacher's job satisfaction in terms of the work itself and working conditions and environment

Profile	JOB SATISFACTION			
	The work Itself		Working Cond & Environ	
	X^2	Sig. (2-sided)	X^2	Sig (2-sided)
Age	36.086[a]	.205	35.300	.455
Gender	13.333[a]	.345	20.000	.095
Marital Status	15.000[a]	.241	20.000	.130
Educational Attainment	57.000	.004**	60.000	.035*
Current Position	40.00	.005**	37.333	.041*
Monthly Income	20.000	.067	15.000	.451
Length of Service	52.000	.001**	47.000	.000**

***Significant at .01 level of confidence*
**Significant at .05 level of confidence*

The data in table 3 showed that the null hypothesis is rejected in Job satisfaction in terms of the work itself and working condition and environment when grouped according to educational attainment, current position, and length of service and accepted when grouped according to age, gender, and monthly income.

The data suggest that teacher's combined contributions of educational attainment, current position and length of service have significant influence on their level of job

satisfaction in terms of work itself and working conditions. Hence, it can be deduced that teachers who only finished baccalaureate degrees, occupying teacher 1 position; and serving below ten years in the profession are still less satisfied and therefore, they still have high level of satisfaction on their present work and their working conditions in the school.

On the other hand, teachers' combined contribution of age, gender, and monthly income do not significantly influence their level of job satisfaction in terms of work itself and working conditions. This finding explicitly views that in spite of the teacher's age, gender and monthly income, they felt contented and more satisfied in the present status of their work itself and working condition.

In the final analysis, teachers are more satisfied in terms of the work itself and their working condition when their profile is grouped according to age, gender, and monthly income while they fell less satisfied when their profile is grouped according to educational attainment, current position and length of service.

Table 4: Relationships of Job Satisfaction in terms of Colleagues and Supervision Grouped According to Profile

Table 4 presents the relationship of elementary school teachers of Pangutaran District with their job satisfaction in terms of Work itself and Working Condition and environment Moreover, the sig value are distributed as follows: Age (p=>.305 & .381); Gender (p=>.172 & .220); Marital status (p= > .172 & .324); Educational Attainment (p=>.168 & .149); Current Position (p=>.060& .103); Monthly Income (p=>.220& .172) and Lenth of service (p=>.071 and p=<.040).

Table 4: Job Satisfaction in terms of colleagues and supervision with the Profile of the respondents

Profile	JOB SATISFACTION

DISCUSSIONS

This section discusses the profile of the respondents which incorporates the age, gender, length of service and educational qualification. Besides this also tackles the level of teacher's job satisfaction in the context of the work itself , colleagues, working

condition and environment, supervision, and safety and security.

A. Profile of the Respondents

In table 1, the statistical tools used in this problem are Frequency and percentage distribution. The profile of the respondents is measured using frequency in order to tally the number of times each occurs. The number counted and listed under the column entitled Frequency. The *percentage* distribution for a category is obtained by multiplying the relative frequency for that category by 100 to derive the percentage value of each category.

In the first category which is age, the age starts in below 25 has frequency 18 at 36%, age 26-35 and 36-45 has same frequency of 16 at 32%. It would mean that majority of the teacher respondents have ages that ranged from 25 and below. In the second category which is gender, the Male has frequency of 16 at 32% and Female has a frequency of 34 at 68%. Obviously, majority of the respondents are females. In third category which is the Marital Status. Single respondents have a frequency of 18 at 36% and Married have a frequency of 32 at 64%. It means that majority of the teacher respondents are married.

The fourth category is the Educational Attainment. Frequency responses testify that respondents with Baccalaureate degree has are 22 at 44%; those with masteral units are 16 at 32% and masteral has frequency 12 at 24 %. Therefore, Majority of the respondents have only finished their bachelor's degree.

The fifth category pertains to the current position. Frequency responses also testify that 44 (88%) of the respondents are occupying teacher I position. While 4 (8%) of them are teacher II, and only 2 (4%) are currently occupying teacher III position.The sixth category is the Monthly Income. There were two options answered by the respondents as follows: Below 18,000.00 has a frequency of 31 at 62%, and P18, 000-24,999 has a frequency 19 at 38%. It can be said that majority 62% of the respondents have a monthly income of below 18,000 pesos only. Lastly, the seventh category is the Length of Service. Below 10 years has a frequency of 37 at 74%; 11-20 years has a frequency of 12 at 24%; and 21 - 30 years has a frequency of 1 at 2%. It is also obvious that majority 74% of the teacher respondents are serving in the government below 10 years.

Corollary, Saner and Eyupoglu (2012) found that there was no significant relationship between intrinsic job satisfaction and age; there is a major variety in extrinsic job satisfaction among academics in regard of age. The result of the study showed that older educators are, in general, more satisfied than the younger ones. The findings of another study (Clark et al., 1996) has also showed that until an educator reaches the age of approximately 31, job satisfaction decreases and only after that age it increases. As for payment, what teachers care is rank and their ages rather than their genders and devoted holidays. In addition; as teachers get older, their satisfaction derived from their occupation increases (Guo & Wang, 2017). Besides, Shrestha (2019) conducted a study with 345 teachers and she concluded that older teachers display more job satisfaction, hence, they have more commitment to the job, leading the way to high performance.

As to respondents' gender, Ma and MacMillan (1999), found in their study that

gender and professional seniority were important in job satisfaction. According to this study, female teachers were more satisfied than their male counterparts. Seniority showed a statistically significant but negative effect on job satisfaction of teachers. Teachers who stayed longer in the teaching profession were less satisfied with their professional roles. However, contrary to his finding, in Luuk National High school, there are more male teachers (56%) as compared to female teachers (Asanji et al, 2024).This means that male teachers are dominant in this national high school.

When the job experience is considered, it is stated that teachers working for a long time were found to be happier with their jobs (Ogedengbe et al., 2018). It was also noted that duration of teachers' working years did not have any effect on job satisfaction (Fattah, 2010). Tye and O'Brien (2002) also stated in their work that even though the longer one continues teaching the harder it gets to quit the profession, teachers feel battered. It is also mentioned that newly-joining teachers affect the motivation of teachers who are already in the profession for a long time.

Moreover, Bivona (2002) states in her research that teachers who have at least ten years of teaching experience are more optimistic towards teaching. It is also found that experienced teachers majored in education while only some of the novice teachers did so as they thought majoring is a loss of time. Furthermore, it was revealed that teacher training and experience decrease teachers' stress levels, enable them to feel adequate.

B. Job Satisfaction of the Elementary School Teachers in Pangutaran District

B.1. Job Satisfaction in terms of the Work Itself

Table 2 showed the level of job satisfaction of the elementary school teachers in Pangutaran District. Generally, the teachers were satisfied (mean = 3.92) as to the nature of their work in the Pangutaran District. Specifically, the teachers show their passion in their chosen career. They are satisfied in teaching inside the classroom the whole weekdays, prepared lesson plans and other required reports. Satisfied in dealing interpersonally like kid's problem, identifying pupils' needs, evaluating pupils' achievement, and as well as on external matters like maintaining classroom and other facilities and have no difficulty in implementing school policies. Teacher aim to encourage open communications for effective delivery of services to clearly defined the logically structured job by participating in various activities in the school and community.

B.2. Job Satisfaction of Teachers in Terms of Working conditions and Environment

As to the teacher's working condition and environment, there were eight (8) questions have obtained the rating of "satisfied" and two (2) were rated "undecided" with a rating of 3.34 and 3.24 respectively and these are - on the Availability of teaching modules and gadgets with weighted and Adequacy and equity of equipment's and supplies. In other words, teachers are satisfied in terms of working conditions and Environment specifically in the attractiveness of surroundings, the cleanliness, sanitation, lightning, ventilation and temperature of classrooms and the friendly atmosphere prevailing among people in the school and because of it they tend to perform varied tasks

with well-defined and prescribed daily routine, parts of which are incidental and intervening in regular functions, and somehow the job's involvement will lead in societal development that contacts with local public officials and but is undecided in the availability of teaching modules and gadgets and adequacy and equity of equipment's and supplies. In a nutshell, the teachers were satisfied (mean= 3.84) in terms of their working conditions and environment in the same district.

B.3. Job Satisfaction in Terms of their Colleagues in the District

Gleaning from table 2, the teachers of Pangutaran District were satisfied (mean = 4.19) in terms of their relationship with colleagues in the workplace. Specifically, teachers are satisfied with the congeniality of co-teachers with a spirit of teamwork. In the same vein, they are also satisfied working with co-teachers with equal and higher educational qualifications that constitute a good working experience. They also felt satisfied of having a local co-worker to work with and get along with each other and experiencing a feeling of common experience with a genuine interest in learners' educational progress.

B.4. Job Satisfaction in Terms of Supervision of Their School Heads

It was generally found in Table 2, that the elementary school teachers of Pangutaran District were satisfied (mean = 3.68) in terms of the supervisory activities conducted by their school heads in the district. The data also justifies that the pattern of supervisory relationships between teacher and administrators or supervisors is satisfying. This is to say, that that administrator or supervisor can handle his staff well. The competence of supervisors is seen in decision-making and in proper delegation of authority which in turn leads to a healthy working relationship among school personnel. The teachers were also being kept busy all the time, were given the chance to work alone in the job and felt the concern of their superiors on matters affecting them officially and personally. They strongly agreed on supervisor's role in the performance appraisal of teachers but is undecided on the relation of supervisors in their chances for professional advancement and promotion on this job.

The finding is reinforced by Parker as cited by Doctora (1994) pointed out that satisfaction caused productivity. He further said that a happy person is a productive one. Thus, school administrators and supervisors should design a school environment which is physically, mentally, socially, economically and spiritually satisfying. This is likewise supported by Lowler (1994) in Jacoba (1994), who pointed out the satisfaction and productivity are in circular relationship wherein one effect the other. A person who is satisfied tends to be motivated to work and is productive. Corollary to this statement is that a person who is not satisfied is more or less not motivated to work and is less productive.

B.3. Job Satisfaction in Terms of Their Safety and Security

Generally, the elementary school teachers of Pangutaran District were undecided (mean = 3.41) in terms of their safety and security in the workplace. This means they are not sure whether they are safe in the their respective school considering that most of the schools in the said district are located in the island municipalities and prone to the threat coming from the instability of whether conditions and the like.

Specifically they are undecided on the following aspects namely : on the means of transportation; adequacy of benefits from the GSIS and Pag-ibig; On welfare and promotions of teachers; on other financial benefits and maintenance of the their family; and laxity of time to be spent for their family recreations and other activities. However, they are also satisfied in some other aspects such as; peace and order, educational facilities in the school, administrative policies and other civil service rules on tenureship.

C. Relationship Between Teacher's Profile of Selected Schools of Pangutaran District and their Job Satisfaction

C.1. Teacher's Profile and Job Satisfaction on the Work Itself and Working Conditions and Environment

The data in the table 3 showed that the null hypothesis is rejected in Job satisfaction in terms of the work itself and working condition and environment when grouped according to educational attainment, current position, and length of service and accepted when grouped according to age, gender, and monthly income.

The data suggest that teacher's combined contributions of educational attainment, current position and length of service have significant influence on their level of job satisfaction in terms of work itself and working conditions. Hence, it can be deduced that teachers who only finished baccalaureate degrees, occupying teacher 1 position; and serving below ten years in the profession are still less satisfied and therefore, they still have high level of satisfaction on their present work and their working conditions in the school.

On the other hand, teachers' combined contribution of age, gender, and monthly income do not significantly influence their level of job satisfaction in terms of work itself and working conditions. This finding explicitly views that in spite of the teacher's age, gender and monthly income, they felt contented and more satisfied in the present status of their work itself and working condition.

In the final analysis, teachers are more satisfied in terms of the work itself and their working condition when their profile is grouped according to age, gender, and monthly income while they fell less satisfied when their profile is grouped according to educational attainment, current position and length of service.

C.2. Teacher's Profile and Job Satisfaction on the Work Itself and Working Conditions and Environment

The data in table 4 affirmed that the null hypothesis was rejected on the perceptions on job satisfaction in terms of supervision when the data are grouped according to length of service and accepted when grouped according to age, gender, marital status, educational attainment, current position and monthly income. The finding reveals that, of among the independent variables, only the length of service is considered to be a significant predictor of teacher's job satisfaction in terms of supervision. It would mean that new and inexperience teachers still need to deal with their peers in the

workplace in order to have a smooth working relationship.

Meanwhile, teacher's combined contribution of age, gender, marital status, educational attainment, current position and monthly income do not significantly influence their level of job satisfaction in terms of supervision. It would mean that they already feel more satisfied on the supervisory process of their administrator in the school.

In the same vein, the null hypothesis is accepted on their level of job satisfaction in terms of colleagues when grouped according to age, gender, marital status, educational attainment, current position, monthly income and length of service. It would mean that the combined contributions of the independent variables above do not significant influence the teacher's job satisfaction in terms working with colleagues in the workplace. It is further noted that none of these variables to have significantly influence teacher's job satisfaction in dealing with colleagues.

In the final analysis, teachers are more satisfied in term of supervision when their profile is grouped according to their age, gender, marital status, educational attainment, current position and their monthly income. And they are also more satisfied in terms of working with colleagues when their profile is group according to age, gender, marital status, educational attainment, current position, monthly income and length of service.

Conclusions

Given all the findings and the data at hand, it is therefore deduced that; A) Majority of the elementary school teacher at Pangutaran District age 25 and below. More females than males and married. On educational attainment, most of them have only finished their baccalaureate degrees and few are pursuing their graduate studies and still occupying Teacher I position. In terms of monthly income, majority are only receiving 18,000 and below and serving in the government below 10 years. B) The teachers are generally satisfied with their present work, working conditions and environment, colleagues in the school district, and supervision. C) Teachers are more satisfied in terms of the work itself and working condition when their profile is grouped according to age, gender, and monthly income while they fell less satisfied when their profile is grouped according to educational attainment, current position and length of service. D) Teachers are also more satisfied in term of supervision when their profile is grouped according to their age, gender, marital status, educational attainment, current position and their monthly income. And E) they are also more satisfied in terms of working with colleagues when their profile is group according to age, gender, marital status, educational attainment, current position, monthly income and length of service.

Recommendations

In the light of the aforementioned findings, the following recommendations are hereby advanced:

1. Since, majority of the teachers are female, higher authorities should hire more male teachers to handle several co-curricular and extra-curricular activities like sports activities and the like.
2. The school administrator should look into professional promotion since majority of the teachers are occupying teacher I position.
3. The school administrators should be directed towards single focused- that is solely to raise the level of motivation. Because, teachers can perform better if they are intrinsically and extrinsically motivated. Thus lead to satisfaction in the workplace
4. Teachers should pursue graduate studies since most of them have acquired only baccalaureate degrees. This is to ensure the maximization of the professional and pedagogical knowledge.
5. Further research studies on job satisfaction must be conducted. Specifically, this writer highly recommends the following research titles:
    a) Variables affecting Job Satisfaction and Performance of the Elementary School Teachers in Tapul District.
    b) Determinants of Job Satisfaction of the Elementary School Teachers in Lugus District.
    c) Determinants of Job Satisfaction of the Elementary school teachers in Jolo 1 district.

Ethical Considerations

The researchers hereby declare that an informed consent was obtained. In accumulation, the researchers assured that the information gathered from respondents are kept intact and confidential whereby all the data were kept in an archive where only the researchers can access. Ethical processes were strictly observed throughout the research endeavor in which the researchers have enjoyed their freedom to answer or refrain from participating along the process.

Acknowledgements

The authors would like to express their sincere gratitude to the administration of Mindanao State University-Sulu for the endless support to undergo this study; Likewise, to the school principals of Pangutaran District for allowing the researchers in conducting the exploration and investigation. Furthermore, to all selected teachers coming from diverse region of Muslim Mindanao, Pangutaran District for their participation in the study, and finally to those who, in one way or the others, have enormously contributed to the success of this research.

KASANAYANG PAGBASA SA FILIPINO NG MGA MAG-AARAL

Jingky T. Pumahing

DepEd – Benguet, CAR, Philippines

https://doi.org/10.5281/zenodo.12634530

ABSTRAK

Ang pangunahing layunin ng pag-aaral na ito ay matukoy at masuri ang kahandaan, mga hamon at solusyon sa kasanayang pagbasa sa Filipino ng mga mag-aaral. Ginamitan ito ng deskriptibong pamamaraan. Ang pag-aaral ay isinagawa sa Tocmo Integrated School, Itogon, Benguet sa panuruang taon ng 2022-2023 na may kabuuang bilang dalawampu't apat (24) na mga mag-aaral mula sa ika-sampung baitang bilang tagatugon. Ginamit ang talatanungan sa pag-aaral para sa kinakailangang datos at ito ay sinuri batay sa kinalabasan gamit ang frequency, weighted mean, at pagraranggo. Ang sumunod ay ang kinalabasan ng pag-aaral: Pinaghandaan ng mga mag-aaral ang mga kahandaan sa kasanayang pagbasa sa Filipino. Seryoso ang mga hamong hinaharap ng mga mag-aaral sa paghawan ng sagabal sa mga akda. Napakaepektibo ang Solusyon sa mga mag-aaral dahil Pinaghandaan ang kahandaan sa kasanayang pagbasa sa Filipino. Mula sa kinalabasan nito, ang mga sumusunod na konklusyon Pag-ibayuhing panatilihin ang ginawang paghahanda ng mga mag-aaral sa kasanayang pagbasa sa Filipino sa pamamagitan ng pagtiyak muna sa kahandaan sa pagbasa bago turuan sa pormal na pagbasa. Anumang galing at pagsisikap ng guro, hindi matututong bumasa ang mag-aaral na wala pang kahandaan sa pagbasa. Pagsasagawa ng team teaching ng dalawa o higit pang mga guro. Pag-iba-ibahin ang paraan, hindi lamang pamaraang pabuod at pamaraang pasaklaw, hindi lamang pamaraang pabalak, pamaraang pasuliranin at pagtuturong pangkatan, gumamit din ng pamaraang patuklas, aliwang paglalakbay, araling pagpapahalaga at pagdulog konseptwal. Gawing masining at kasiya-siyang karanasan ang kasanayan sa pagbasa. Kaiga-igaya at kasiya-siya para sa pag-aarala ang bumigkas ng tula, ang makilahok sa mga sabayang bigkasan, ang makisali sa mga kwentuhan at mga dula, ang lumikha ng mumunting tugma o tula, ang kumatha ng isang akda o kaya ay bumigkas ng isang talumpati. Lalo pang sumisigla ang mga gawaing ito, kung magdaraos ng mga patimpalak sa pagbasa.

Keywords: *kahandaan, hamon, solusyon, pagbasa, paghinuha, pagkilatis*

BATAYAN NG PAG-AARAL

Nakapagpapahaba ng interes ng mambabasa ang mga sulating pampanitikan. Nagsasalaysay ito tungkol sa buhay, pamumuhay, lipunan, pananampalaya at mga karanasang kaugnay ng iba't ibang uri ng damdamin tulad ng pag-ibig, kaligayahan, kalungkutan, pag-asa, pagkapoot, pagkasuklam, sindak at pangamba. Maaaring mawala o maubos ang kayamanan ng isang tao at maging ang kanyang pagiging makabayan, subalit hindi ang panitikan. Ito ang isang dahilan kung bakit pinag-aaralan ang larangan ng literatura sa mga paaralan.

Ang maikling kwento ay isang masining na anyo ng panitikan na naglalaman ng isang maiksing salaysay tungkol sa isang mahalagang pangyayari na kinabibilangan ng isa o ilang tauhan. Nag-iiwan ito ng isang kakintalan sa isip ng mga mambabasa.

Ayon sa lumabas na pag-aaral ng Generational White Paper (2016), ang mga tinatawag na kabilang sa Generation Z ay may pag-uugali na mas maikli ang pasensya, mabilis sa lahat ng bagay, maikli ang atensyon at may mataas na pagdepende sa teknolohiya. Kung ganito ang uri ng mga kabataan sa henerasyon ngayon, ang usapin sa literasi sa makrong kasanayan ay dapat na mapagtuunan kung talaga bang ito ay nalilinang. Pinagtibay ni Frankel et.al. (2016), na ang literasi ay dapat na patuloy na pinauunlad sa pamamagitan ng iba't ibang gawain o kaparaanan.

Isa ang kasanayang pagbasa sa limang makrong kasanayan na dapat mahubog sa mga mag-aaral. Ito ay may malaking kaugnayan sa iba pang makrong kasanayang pakikinig, pagsasalita, pagsulat, at panonood ng isang tao dahil nagkakaroon ng kakayahang makabuo ng mga kaisipan at makapagpahayag ng damdamin at maayos na makipagkomunikasyon sa lahat ng disiplina o larangan. Ang pagbasa ay isa sa mga kasanayang pangwika na tulay ng mga mag-aaral upang mapahusay at malinang ang kasanayan sa mabisang pag-unawa sa teksto. Ang mga kaisipang nakukuha at nabubuo sa pamamagitan ng pagbabasa, pakikinig, pagsasalita at panonood ay maaaring isulat upang maibahagi sa iba. Ang pagbasa ay isa ring kognitibong proseso ng pag-unawa sa mensaheng nakalimbag o ng anumang wikang nakasulat.

Batay sa International Reading Association (2019), ang pagbasa ay pagkuha ng kahulugan sa mga nakatalang titik o simbolo na nangangailangan ng sumusunod:

a. Ang paglinang at pananatili ng kawilihan sa pagbasa;
b. Ang paggamit ng istratehiya upang makuha ang kahulugan ng teksto;
c. Ang sapat na kaalaman o dati nang kaalaman at bokabularyo na tutulong sa pag-unawa sa teksto;
d. Ang kakayahan sa matatas na pagbasa;
e. Ang istilong gagamitin upang maunawaan ang salitang di-pamilyar;
f. Ang kakayahang umunawa sa mga nakatalang salita batay sa tunog o pagbigkas nito.

Ayon kay Baltazar (2017), ang pagbasa ay kasangkapan sa pagkatuto ng mga kabatiran ukol sa iba't ibang larangan ng pamumuhay. Sa katunayan, 90% sa napag-aralan ng tao ay mula sa kanyang karanasan sa pagbasa. Ayon naman kay William Gray (2016), ang proseso ng pagbasa ay may apat na hakbang gaya ng pagkilala sa salita, pag-unawa, reaksyon at integrasyon. At ito aniya ay nangangailangan ng matalas na pag-iisip, kakayahan sa pagtutulad o comparison, pagpapahalaga o valuing, pagpapasya at pagbuo ng reaksyon at paglutas ng suliranin.
Noong ika-25 ng Oktobre 2011, itinalaga ng Kagawaran ng Edukasyon ang Division Memorandum No. 244 na nagdedeklarang Nobyembre ang buwan ng pagbasa na gaganapin taun-taon. Ito ay para mapaunlad pa ng mga mag-aaral ang kanilang mga kasanayan sa pagbabasa na naglalayong magkaroon ng mataas na antas ng kaalaman. Kaakibat ng pagbasa ang komprehensyon ng mga mag-aaral sa interpretasyon ng kanilang binasa. Ika-29 ng Nobyembre 2018, itinalaga naman ang DepEd Memorandum No. 175, s.2018 bilang Pambansang Buwan ng Pagbasa para sa pampubliko at pribadong paaralan sa ating bansa. Layunin nitong ipagdiwang ang pagkakaiba-iba ng mga mag-aaral at kultura sa pamamagitan ng pagbasa.

Batay sa DepEd Order no. 14, S. 2018 na may pamagat na Policy Guidelines on The Administration of The Revised Philippine Informal Reading Inventory, nakasaad sa Seksyon 1 na ang pangunahing layunin nito ay matuto ang mga mag-aaral na bumasa at sumulat.

Ang Phil-IRI ay isang "assessment tool" na tumataya sa kakayahan sa pagbasa ng mga mag-aaral sa elementarya at sekondarya. Ito ang kauna-unahang patunay na panukat na naglalayong alamin ang kakayahan sa pagbasa ng mga mag-aaral sa larangan ng komprehensyon kasama ang bilis ng pagbasa na impormal na sinusukat sa paraang kwalitatib at kwantititib sa pamamagitan ng mga babasahin gaya ng maikling kwento at sanaysay. Ayon sa pananaliksik ng Phil-IRI (2018), isinasaad na may tatlong suliranin na kasangkot sa pagbasa. Ito ay sa bahagi ng dekowding, pag-unawa sa binasa, at pananatili sa malinaw na ipinapahayag sa resulta ng Phil-IRI Oral Test.

Inisa-isa naman ni Hebert (2019), ang sampung dahilan kung bakit kailangang araw-araw na ginagawa ang pagbasa. Una, ito ay nakatutulong sa mental na simulasyon. Ikalawa, nakababawas ng mga alalahanin. Ikatlo, nagbibigay kaalaman ang pagbabasa. Ikaapat, ito ay nagpapalawak sa kaalaman sa bokabularyo, Ikalima, sa tulong nito ito ay nakapagpapatalas ng memorya. Ikaanim, nagpapalakas din ito ng analitikal na kakayahan sa pag-iisip. Ika-pito, nakatutulong ito upang magkaroon ng pokus at konsentrasyon ang isang tao. Ikawalo, pinagbubuti nito ang kakayahan sa pagsusulat. Ika-siyam, nagbibigay ito ng kapahingahan at kapayapaan sa mambabasa at Ika-sampu, nagdudulot ito ng libreng libangan sa mga taong nagbabasa. Batay sa mga magandang dulot ng pagbabasa, tunay nga na ang gawaing ito ay hindi lamang basta nakasanayang gawain bagkus nagbibigay ito ng maraming benepisyo sa tao na dapat na binibigyang diin sa paaralan upang higit na mahikayat ang mga mag-aaral na bumasa.

Sa pagtuturo ng pagbasa, ang isa sa mga naituring na kabiguan ng guro ay ang kawalan ng kakayahan ng mag-aaral na unawain ang kanyang binasa, may kakayahan silang

basahin ang bawat salita ngunit hindi nauunawaan ang mensahe na nais iparating nito at ito ay isa sa mga salik na dinadahilan kung bakit nakakabagot sa kanila ang pagbasa. Mayroon din namang nakakaintindi subalit karamihan sa kanila ay hindi nakasasagot sa katanungan na hango sa akdang binasa na sumusukat sa kakayahan ng isipan kaugnay ng mga kasanayang pang-intelektwal na dapat malinang sa mga mag-aaral. Binanggit ni Estremera (2018), na may mga salik na nakaaapekto sa pagbasa. Una, mag-aaral, ikalawa, wika, ikatlo, guro, ika-apat, mga namumuno sa paaralan, ikalima, paaralan, ika-anim, tahanan at ika-pito, komunidad na kinabibilangan.

Inilahad naman ni Imam (2016) at ng kanyang mga kasama, ang mga kahinaan ng mga mag-aaral kung bakit natatamo ang mababang literasi lebel sa pagbasa ang mga mag-aaral. Una, bokabularyong konteksto. Ikalawa, pagtatala ng mga importanteng detalye. Ikatlo, panghuhula at Ika-apat, paghihinuha patungkol sa binasa. Ibig sabihin upang matamo ang mataas na pag-unawa sa pagbabasa kinakailangang magkaroon ng iba't ibang pagsasanay, aktibidades, drills, at mga pagsusulit sa paaralan. Ang kakayahan na magbasa ay lubos na nagpapayaman at nagpapahalaga para sa panlipunan at pang-ekonomiyang pag-unlad.

Sa mga guro upang maipabatid sa mga mag-aaral ang kahalagahan ng pagbasa sa pangkalahatan. Ang kasanayan sa pagbasa ang nagiging batayan upang ang mga mag-aaral ay magtagumpay sa kanilang pag-aaral. Natutulungan silang magkaroon ng kawili-wiling pagbasa at mapatunayan na ang pagbasa ay isang paraan ng pagkatuto (Van Den Broek at Espin, 2019).

Ang pakikilahok ng mga magulang sa pag-aaral ng kanilang mga anak ay lubhang mahalaga (Cabigao, 2021). Kapag gumugol ka ng oras sa pagbasa sa iyong mga anak, maaaring mas malamang na ipahayag niya ang kanyang sarili at angkop na makipag-ugnay sa iba sa isang malusog na pamamaraan. Dagdag ng website na life Hack, ang pagbasa ay nagdudulot ng mas mabuting writing skills sa mga bata. Dulot na rin ng mas maigting na bokabularyo, ang pagbasa ng mga magaganda at mabubuti ang pagkakagawa na mga libro at iba pang babasahin ay nagkakaroon ng magandang epekto sa pagsusulat ng mga nakababasa sa mga ito.

Sa mga administrador ng paaralan, ang resulta ng pag-aaral na ito ay nagdudulot ng kapakinabangan upang mas tuunan ng pansin ang pagbasa ng mga mag-aaral dahil magiging malaki ang epekto nito sa kanilang maayos na pagganap hindi lamang sa paaralan kundi pati na rin sa lipunan.

At sa mga kapwa mananaliksik, upang higit na suriin ang mahahalagang bagay o ideya na nakatutulong upang mapalawak ang hangarin ng bawat isa na mabuksan ang pananaw ng mga mag-aaral sa pagpapaunlad ng kanilang pagbasa lalo na sa mga akdang pampanitikan gaya ng maikling kwento sa Filipino.

Sa Teoryang Iskema, ang lahat ng ating naranasan at natutunan ay nakalagak sa isipan at maayos na nakalahad sa kategorya. Ang mga iskemang ito ay nadaragdagan,

nililinang, nababago at napapaunlad (Anderson & Pearson 1984). Bawat bagong impormasyon ay nadaragdag sa dati ng iskema.

Sa panulat ni John Locke (1690) na An Essay Concerning Human Understanding (Incarta Premium 2009), ipinalagay na sa pagsilang, ang isipan ng tao ay tabula raza o blank states. Nangangahulugang blangko ang isipan, at ang blangkong isipan ay unti-unting napupunan ng mga impormasyon dahil sa mga karanasan ng tao. Ang bawat natutunan ng tao ay naging iskema sa isipan. Sa teoryang ito, bawat bagong impormasyong nakukuha sa pagbasa ay naidagdag sa dati nang iskema. Ang iskema na ito ay ang mga nakaimbak na kaalaman. Maaring makapanghula ang mambabasa sa tulong ng kanyang taglay na dating kaalaman. Nagagawang basahin ang teksto upang mapatunayan ng mambabasa ang kanyang mga hinuha at hula. Nagsisilbing input ang teksto. Hindi ang teksto ang iniikutan ng proseso ng pagbasa kundi ang konsepto o kaisipang nabubuo sa isipan ng mambabasa.

Inilarawan ang prosesong ito bilang teoryang sikolohikal sapagkat ang teksto ay nagbibigay lamang ng direksyon sa mambabasa kung paano nabuo ang pagpapakahulugan. Binabasa niya ang teksto upang patunayan kung ang mga hinuha o ekspektasyon niya ay wasto, may kulang o dapat baguhin. Dahil dito, ang teksto ay lunsaran lamang sa pagbuo ng kahulugan. Hindi ang teksto ang sentrong iniikutan ng pang-unawa kundi ang tekstong nabubuo sa isipan ng mambabasa.

Ang Teoryang Bottom-up ay bunga ng tradisyunal na pananaw ng Teoryang Behaviorist na higit na nagbigay pokus sa kapaligiran sa paglinang komprehensyon sa pagbasa. Ayon sa teoryang ito, ang pagbasa ay pagkilala ng serye ng nakasulat na mga simbolo upang maibigay ang katumbas nitong tunog. Nanalig ang teoryang ito na ang pagkatuto sa pagbasa ay nagsimula sa pagkilala sa mga titik, salita, parirala, at pangungusap bago malaman ang kahulugan ng teksto. Ang pagbasa ay pagkilala ng mga serye ng mga nakasulat sa simbolo (stimulus) upang maibigay ang katumbas nitong tunog (response). Astorga (2010). Nasa teksto ang kahulugan at kailangang lumikha ng kahulugan batay sa teksto pagkatapos ay bibigyan ng interpretasyon saka maunawaan. (McCarthy, 1999 sa aklat ni Arrogante, 2007).

Sang-ayon sa kaisipan ni Bloomfield, ang Teoryang Bottom-up ay kailangang may kakayahang unawain ang mga simbolong pangwika gaya ng mga letra, kahulugan ng bawat salita o kaisipan at anupamang mga krokis na makikita at mga talababa upang pagsama-samahin ito hanggang maunawaan ang mensaheng taglay nito. Kung walang mga simbolong pangwika hindi rin mangyayari ang pag-unawa sa mga mensahe.

Ang Teoryang Top-Down ay matatawag na Teoryang Kognitibo na naniniwalang ang pagbasa ay nagmula sa isip ng mambabasa patungo sa teksto. Ang teoryang ito ay tinatawag ding inside-out model, concept-driven model, at whole-to-part model (Goodman, 1985 at Smith, 1994), dahil ang kahulugan o impormasyon ay nagsisimula sa mambabasa patungo sa teksto. Sa teoryang ito ay nakasalalay sa kapasidad ng pag-iisip at ang pag-unawa ng pagbasa. Ang intelehensiya ay nangangahulugang pangkalahatang

kapasidad ng pag-iisip (Spearman, 1904) at naging salik ito kung paano nalinang ng tao ang kanyang karunungan.

Paglalahad ng Suliranin

Layunin ng pananaliksik na malaman at masuri ang kahandaan, hamon at epektibong solusyon sa kasanayang pagbasa sa Filipino ng mga mag-aaral.

Ang suliranin na binigyang-tugon sa pananaliksik na ito ay ang mga sumusunod:

1. Gaano kaseryoso ang kahandaan sa kasanayang pagbasa sa Filipino ng mga mag-aaral?
2. Gaano kaseryoso ang mga hamon na kinakaharap ng mga mag-aaral sa kasanayang pagbasa sa Filipino?
3. Gaano kaepektibo ang mga solusyon sa mga hamon sa kasanayang pagbasa sa Filipino ng mga mag-aaral?

METODOLOHIYA

Disenyo ng Pag-aaral

Ginamit ng mananaliksik ang Paglalarawang Pagsisiyasat na gumamit ng talatanungan para makalikom ng mga datos. Ayon kay Calmorin (2016), ang pamamaraang palarawang pagsisiyasat ay pagbibigay kahulugan tungkol sa isang bagay o paksa sa kasalukuyan. Inilarawan ang tumpak na larawan ng kasalukuyang kalagayan ng mga bagay-bagay at ang kahusayan ng uring ito ay nakasalalay sa pagkabalido at pagkamaasahan ng mga datos.

Ang Purposive Sampling ang ginamit ng mananaliksik para sa mga tagatugon na mag-aaral. Ang Purposive Sampling ay napiling gamitin upang malimitahan ang bilang ng mga tagatugon. Sinasabing ang Purposive Sampling ay sadyang pagpili ng tagatugon dahil sa mga katangian na taglay ng mga tagatugon ayon kay (Etikan et al., 2016)

Lokasyon at Populasyon ng Pananaliksik

Ang pananaliksik na ito ay isinagawa sa paaralan ng Tocmo Integrated School, Tocmo, Loacan, Itogon, Benguet. Ang mga tagatugon ay dalawampu’t apat (24) na mag-aaral mula grade 10, Panuruang taon 2022-2023.

Instrumento sa Paglikom ng mga Datos

Nagsilbing instrumento sa pag-aaral na ito ang paggamit ng talatanungan sa pangangalap ng datos. Ang mananaliksik ay sumangguni sa mga eksperto upang malaman kung balido ang ipinamudmod na mga talatanungan. Ang mga nakalap na datos at impormasyon mula sa talatanungan ay ginamit ng mananaliksik. Ang mga sumusunod na panukat ang ginamit upang lapatan ng interpretasyon ang mga sagot sa kasanayang pagbasa sa Filipino ng mga mag-aaral. Ginamit ang check list upang sagutan ng mga mag-aaral ang mga katanungan mula sa instrumentong ginamit ng mananaliksik.

Paraan sa Paglikom ng mga Datos

Naisagawa ang pag-aaral at naipamudmod ang talatanungan sa mga mag-aaral sa paghingi ng mananaliksik ng liham ng rekomendasyon mula sa Dekano ng Paaralang Gradwado ng Baguio Central University. Nakuha ang rekomendasyon pagkatapos humingi ng pahintulot ang mananaliksik sa Punong-guro ng Tocmo Integrated School. Pagkatapos mapahintulutan, nakipag-ugnayan ang mananaliksik sa dalawang (2) tagapayo ng mga mag-aaral na tumulong sa pamimigay ng mga talatanungan.

Pagtrato ng mga Datos

Tinugon ang mga kinakailangang datos sa pananaliksik gamit ang frequency counts, weighted mean at pagranggo para sa kahandaan, mga hamon at epekto ng mga solusyon sa kasanayang pagbasa sa Filipino ng mga mag-aaral.

Etikal na Konsiderasyon

Ang mananaliksik ay humingi ng pahintulot at pagsang-ayon sa punong- guro ng paaralan at sa mga tagapayo ng mga mag-aaral na sangkot sa isinagawang pag-aaral. Nang naaprubahan na ang sulat, agad na isinagawa ng mananaliksik ang pag-aaral.

Tiniyak ng mananaliksik na naging kompidensiyal ang mga nalikom na mga sagot sa mga tagatugon at ginamit lamang sa pag-aaral. Iginalang ang resulta at buong-pusong pinasalamatan ang lahat ng mga taong naging bahagi ng pag-aaral na ito.

Siniguro rin ng mananaliksik na ang mga ginamit na sanggunian at iba pang reperensiya sa pag aaral ay kinilala at tinukoy nang tapat. Hindi rin nakaligtaan ng mananaliksik na ipahayag ang kaniyang karapatan sa pag-urong mula sa pagsagawa ng pag-aaral sa sandaling may limitaw na reklamo o kompidensiyal na problema mula sa tagatugon at ibang tao na may kaugnayan sa pag-aaral na ito. Ang mananaliksik ay walang pinanigan sa naging resulta ng pag-aaral na ito.

KINALABASAN AT PAGTATALAKAY

Kahandaan sa kasanayang pagbasa sa Filipino ng mga mag-aaral

Inilalahad ng Talahanayan 1 ang antas ng kahandaan ng mga mag-aaral sa kasanayang pagbasa sa Filipino. Mula sa Talahanayan 1 na may kabuuang bigat na 2.99 na nagpapahiwatig na Pinaghandaan ng mga mag-aaral ang kanilang kahandaan sa pagbasa sa Filipino. Ayon kay Belvez, P. (2000) ang panahon ng kahandaan sa pagbasa ay nag-iiba sa haba depende sa indibidwal, sa kapaligirang nilakhan ng bata, sa eksposyur niya sa mga aklat at iba-ibang babasahin at sa iba-iba at mayamang karanasan niya.

Mula sa Talahanayan 1 ang nangunguna sa ranggo na may kabuuang bigat na 3.25 ay Pinaghandaan ang personalidad at karanasan. Ayon pa rin kay Belvez (2000) ang mga unang karanasan ng bata sa tahanan, sa kapaligiran ay nakaaapekto sa personalidad ng mag-aaral at nakaaapekto naman sa kakayahan sa pagbasa at maging sa iba pang gawaing pagkatuto. May batang lumaki sa tahanan o kapaligirang marahas, malupit, may lumaki sa kapaligirang mabait at mabuti. May bata sa kasanggulan pa lamang ay nakalantad na sa mga aklat at mga babasahin. Ito'y mga salik na tumutukoy sa maaga o huling pagkakaroon ng kahandaan sa pagbasa.

Pumapangalawa sa ranggo na may kabuuang bigat na 3.00 na may katumbas na paliwanag na Pinaghandaan ng mga mag-aaral ang pag-unawa sa mensahe ng akda habang nagaganap ang interaksyon sa teksto. Kapag tayo ay nagbabasa, ang mga estratehiya natin sa pag-unawa ang dagliang nagbubunsod sa atin upang maiugnay ang ating kaalaman at mga karanasan sa mga impormasyon sa teksto upang makabuo tayo ng pagpapakahulugan.

Dalawa ang nasa ikatlo't kalahati (3.5) sa ranggo na may kabuuang bigat na 2.92 na may katumbas na paliwanag na Pinaghandaan ng mga mag-aaral ang pagbibigay ng kasingkahulugan ng mga salita na ginamit sa akda at kakulangan sa kaalaman sa bokabularyo.

Ang nasa ikalimang ranggo ay ang panlimang tagapagpahiwatig na may kabuuang bigat na 2.88 na nangangahulugang pinaghandaan ang pag-unawa sa malalalim na salita sa akda.

Batay sa resulta ng pag-aaral ang pala-palagay na pinaghandaan ang kahandaan sa kasanayang pagbasa sa Filipino ng mga mag-aaral ay hindi tanggap dahil ang kinalabasan ng pag-aaral ay may kabuuang bigat na 2.51 Pinaghandaan ng mga mag-aaral ang kasanayang pagbasa sa Filipino.

Gaano kaseryoso ang mga hamon na kinakaharap ng mga mag-aaral sa kasanayang pagbasa sa Filipino

Mula sa Talahanayan 2 na may kabuuang bigat na 3.08 at may katumbas na paliwanag na Seryoso ang mga hamon na kinakaharap ng mga mag-aaral sa pagbasa sa Filipino. Ayon sa pananaliksik ng Phil-IRI (2018), isinasaad na may tatlong suliranin na kasangkot sa pagbasa. Ito ay sa bahagi ng dekowding, pag-unawa sa binasa, at pananatili sa malinaw na ipinapahayag sa resulta ng Phil-IRI Oral Test. Sinasabi ng manwal ng Phil-IRI (2018), maikakategorya ang mga suliranin bilang maling pagbasa gaya ng maling bigkas, pagpapalit, hindi pagbigkas sa salita, pagsisingit, pagbabawas, at pag-uulit. Ang suliranin sa maling pagbasa ay itinuturing na nasa ilalim ng bahagi ng dekowding, isa sa pangunahing suliraning nararanasan ng mga mag-aaral sa pagbasa.

Ang una sa ranggo na may kabuuang bigat na 3.25 at may katumbas na pagpapaliwanag na seryoso ang paghahawan sa sagabal na kinakaharap ng mga mag-aaral sa kasanayang pagbasa sa Filipino. Ang Steck-Vaughn na tagapaglimbag ng mga materyales sa larangan ng edukasyon ay nagbigay ng mga elemento sa pagbasa na

makatutulong sa mga bata na maging matagumpay na mambabasa, isa na rito ang bokabularyo o talasalitaan. Ang bokabularyo o talasalitaan ay mga salitang nalalaman ng isang tao. Kailangan ng mag-aaral na magkaroon ng malawak na talasalitaan para maging mahusay na mambabasa. Mas maraming alam na salita ay mas makababuti sa kanya sapagkat malaki ang tsansa na maunawaan niya kung ano ang kanyang binabasa.

Maraming paraang magagamit sa pag-aalis ng sagabal o balakid. Isa rito ay ang pagpapabasa sa salita na nakasulat sa plaskard, ipabigay ang kahulugan at ipagamit sa sariling pangungusap. Maaari ring ipabasa ang mga pangungusap na nasa pisara na kinapapalooban ng mahirap na salita. Ito ay may salungguhit. Sa tulong ng kahulugang ibinibigay ng pangungusap ay matututuhan ng mag-aaral ang kahulugan ng salita.

Dalawa ang nasa ikalawa't kalahati (2.5) sa ranggo na may kabuuang bigat na 3.04 at may katumbas na paliwanag na seryoso ang pag-alam at pag-aaral nang mabuti sa mga kasanayan sa pagbasa; Pagsusuri sa tauhan at katangian nito. alamin at pag-aralan nang mabuti ang mga kasanayan sa pagbasa. Ayon sa lumabas na pag-aaral ng Generational White Paper (2016), ang mga tinatawag na kabilang sa Generation Z ay may pag-uugali na mas maikli ang pasensya, mabilis sa lahat ng bagay, maikli ang atensyon at may mataas na pagdepende sa teknolohiya. Kung ganito ang uri ng mga kabataan sa henerasyon ngayon, ang usapin sa literasi sa makrong kasanayan ay dapat na mapagtuunan kung talaga bang ito ay nalilinang. Pinagtibay ni Frankel et.al. (2016), na ang literasi ay dapat na patuloy na pinauunlad sa pamamagitan ng iba't ibang gawain o kaparaanan. Inilahad naman ni Imam (2016) at ng kanyang mga kasama ang mga kahinaan ng mga mag-aaral kung bakit natatamo ang mababang literasi lebel sa pagbasa ang mga mag-aaral:

- bokabularyong konteksto
- pagtatala ng mga importanteng detalye
- panghuhula
- paghihinuha patungkol sa binasa

Ibig sabihin upang matamo ang mataas na pag-unawa sa pagbabasa kinakailangang magkaroon ng iba't ibang pagsasanay, aktibidades, drills, at mga pagsusulit sa paaralan. Ang kakayahan na magbasa ay lubos na nagpapayaman at nagpapahalaga para sa panlipunan at pang-ekonomiyang pag-unlad.

Pang-apat sa ranggo na may kabuuang bigat na 2.92 na may katumbas na paliwanag na Seryoso ay ang mga hamon na kailangang linangin sa kasanayang sosyal at emosyonal. Magkakaiba-iba ang lawak at saklaw ng panlipunang pinagmulan ng mga bata. Iyong mga likas na matatalino ay malamang na galing sa masayang tahanan at maaaring makadama ng katiwasayan at kasiyahang lumahok sa mga gawaing pangklase at sa pagsasagawa ng mga payak na gawain. Sa isang kapaligirang ang mag-aaral ay hindi nagkakaroon ng mga suliranin gaya ng pagkatakot, pagkahiya, pangamba, at iba pa ay higit na magiging mabilis ang pagkakalinang ng kahandaan sa pagbasa. (Badayos)

Panghuli sa ranggo ay may kabuuang bigat na 2.88. Seryoso ang paliwanag na ang pagsasadula ng mga sipi mula sa mga akda.

Sa Talahanayan 2 batay sa pala-palagay na Hindi gaanong Seryoso ay hindi tanggap dahil ang kinalabasan ng pag-aaral na may kabuuang bigat na 2.51 ang katumbas na paliwanag ay Seryoso ang mga hamon na kinakaharap ng mga mag-aaral sa kasanayang pagbasa sa Filipino.

Gaano kaepektibo ang mga solusyon sa mga hamon sa kasanayang pagbasa sa Filipino ng mga mag-aaral

---

Inilalahad ng Talahanayan 3 kung gaano kaepektibo ang mga solusyon sa mga hamon sa kasanayang pagbasa sa Filipino ng mga mag-aaral batay sa naging tugon. Mula sa Talahahanayan 3 na may kabuuang bigat na 3.26 na may katumbas na paliwanag na Napakaepektibo ang solusyon sa kasanayang pagbasa sa Filipino ng mga mag-aaral. Noong ika-25 ng Oktobre 2011, itinalaga ng Kagawaran ng Edukasyon ang Division Memorandum No. 244 na nagdedeklarang Nobyembre ang buwan ng pagbasa na gaganapin taun-taon. Ito ay para mapaunlad pa ng mga mag-aaral ang kanilang mga kasanayan sa pagbabasa na naglalayong magkaroon ng mataas na antas ng kaalaman. Kaakibat ng pagbasa ang komprehensyon ng mga mag-aaral sa interpretasyon ng kanilang binasa. Sa mga sanhi ng hindi pare-parehong progreso ng pagkalinang ng kasanyan at kakayahan sa pagbasa, pangunahin sa mga ito ay:

1. pagkakaiba-iba ng indibidwal

2. hindi epektibong paraan ng pagtuturo na ginamit na guro, walang gaanong kasanayan, kabatiran sa pagtuturo;

3. kakulangan sa magagaling na babasahing instruksyunal;

4. hindi maayos na kapaligiran na pinag-aaralan o silid-aralan

5. at kawalan ng koordinasyon sa pagsisikap ng paaralan, ng tahanan at ng pamayanan.

Ang una (1) sa ranggo na may kabuuang bigat na 3.54 at ang katumbas na paliwanag na Napakaepektibo ang Solusyon sa kasanayan sa pag-unawa sa pagkuha ng pangunahing tiyak na detalye sa pagbasa, paghinuha, kasanayan sa paglalahat, kasanayan sa pagwawakas, kasanayan sa pagkilatis sa katotohanan, pagtukoy sa teksto at kasanayan sa pagsusuri sa mga teknik. Ayon kay Saucer (mula kay Ranco, 2002). Ang kasanayan sa pagbasa ay isang batayan upang ang mga mag-aaral ay magtagumpay sa kanilang pag-aaral. Ang pagbasa bilang kasangkapan sa pagtuturo ay siyang susi at katunugan kaya dapat maging layunin na matulungan ang mga mag-aaral na magkaroon ng

kakayahang bumasa. Matutulungan silang magkaroon ng kawili-wiling pagbasa at mapatunayan na ang pagbasa ay isang paraan ng pagkatuto.

Ayon sa pag-aaral ni Nila Banton Smith (1969) may apat na antas ng kategorya sa pag-uuri ng mga kasanayan sa pag-unawa:

1. Ang pag-unawang literal na nakapokus sa mga ideya at impormasyong tuwirang nakalahad sa teksto.

2. Ang interpretasyon na nangangailangan ng mas mataas na antas ng pag-iisip, pagbibigay kahulugan sa tulong ng pahiwatig, pagkuha ng pangunahing ideya;

3. Ang kritikal o mapanuring pagbasa ay nagpapahalaga ng kaangkupan, katiyakan, at pagkamakatotohanan ng impomasyong nakalahad sa teksto.

4. Ang malikhaing pagbasa na gumagamit ang tagabasa ng kakaibang kasanayan sa pag-iisip na lagpas sa antas ng pag-unawang literal, interpretasyon at mapanuring pagbasa. Sinisikap ng tagabasa na makabuo ng bago o pamalit na solusyon sa inihain ng awtor.

Dalawa ang nasa ikalawa't kalahati (2.5) sa ranggo na may kabuuang bigat na 3.29 at may katumbas na paliwanag na Napakaepektibo ang solusyon ang tagapagpahiwatig bilang tatlo (3) kontinyum na mga pamamaraan sa pagmomodelo ng pagbasa: Tuluyang pagbasa nang tahimik, tambalang pagbasa, sabayang pagbasa, impresyong neurolohikal, inuulit na pagbasa at nakarekord na aklat at sama-samang pagbasa at pagbasa ng mga panitikan sa Filipino. Ayon kay William Gray, ang proseso ng pagbasa ay may apat na hakbang gaya ng pagkilala sa salita, pag-unawa, reaksyon at inegrasyon. At ito aniya ay nagangailangan ng matalas na pag-iisip, kakayahan sa pagtutulad, pagpapahalaga, pagpapasya at pagbuo ng reaksyon at paglutas ng suliranin. Ang kasanayan sa pagbasa ay hindi lamang kasanayan sa pagkilala ng mga salita, komprehensyon o pag-unawa, pagsusuri at paghinuha. Ang pagbasa ay isang malawak at masalimuot na gawain at gawi.

Ikaapat sa ranggo ang pagbasa ng mga panitikan sa Filipino na may kabuuang bigat na 3.08 at may katumbas na paliwanag na Epektibo ang Solusyon sa Paggamit ng mga istilong: flashback, daloy ng kamalayan, pasuliraning wakas, tour de force, pahiwatig, pangangatwiran;

Ang kasanayan sa pagpapahalaga sa binasa ang pinakahuli sa ranggo na may kabuuang bigat na 3.00 na may katumbas na paliwanag na Epektibo ang Solusyon sa kasanayang pagbasa sa Filipino ng mga mag-aaral.

Sa Talahanayan 3 batay sa pala-palagay na Hindi Epektibo ang Solusyon ay hindi tanggap dahil ang kinalabasan ng pag-aaral na may kabuuang bigat na 3.26 ang

katumbas na paliwanag ay Napakaepektibo ang Solusyon sa mga hamon na kinakaharap ng mga mag-aaral sa kasanayang pagbasa sa Filipino.

Konklusyon

Batay sa mga kinalabasan ng pag-aaral, ang mga sumusunod na konklusyon ay nabuo:

1. Pinaghandaan ng mga mag-aaral ang mga kahandaan sa kasanayang pagbasa sa Filipino.
2. Seryoso ang mga hamong hinaharap ng mga mag-aaral sa paghawan ng sagabal sa mga akda.
3. Napakaepektibo ang Solusyon sa mga mag-aaral dahil Pinaghandaan ang kahandaan sa kasanayang pagbasa sa Filipino.

Rekomendasyon

Mula sa mga konklusyong nabuo sa pag-aaral, ang mga sumusunod na rekomendasyon ay inihaharap:

1. Pag-ibayuhing panatilihin ang ginawang paghahanda ng mga mag-aaral sa kasanayang pagbasa sa Filipino sa pamamagitan ng pagtiyak muna sa kahandaan sa pagbasa bago turuan sa pormal na pagbasa. Anumang galing at pagsisikap ng guro, hindi matututong bumasa ang mag-aaral na wala pang kahandaan sa pagbasa.

2. Pagsasagawa ng team teaching ng dalawa o higit pang mga guro. Pag-iba-ibahin ang paraan, hindi lamang pamaraang pabuod at pamaraang pasaklaw, hindi lamang pamaraang pabalak, pamaraang pasuliranin at pagtuturong pangkatan, gumamit din ng pamaraang patuklas, aliwang paglalakbay, araling pagpapahalaga at pagdulog konseptwal.
3. Gawing masining at kasiya-siyang karanasan ang kasanayan sa pagbasa. Kaiga-igaya at kasiya-siya para sa pag-aarala ang bumigkas ng tula, ang makilahok sa mga sabayang bigkasan, ang makisali sa mga kwentuhan at mga dula, ang lumikha ng mumunting tugma o tula, ang kumatha ng isang akda o

kaya ay bumigkas ng isang talumpati. Lalo pang sumisigla ang mga gawaing ito, kung magdaraos ng mga patimpalak sa pagbasa.

ABSTRACT

This study intends to determine the classroom management styles of kindergarten teachers in the Division of Lucena City and the level of engagement of kindergarten learners across behavioral, emotional, and cognitive aspects. It utilized descriptive-correlational research design. The data were statistically analyzed using percentage formula and mean score. Moreover, the significant relationship between kindergarten teachers' classroom management style and learners' level of engagement was statistically analyzed using the Pearson Correlation Coefficient (Pearson's r). The study involved 120 public school kindergarten teachers distributed across its districts: North District (34 teachers), East District (22 teachers), West District (30 teachers), and South District (34 teachers). The findings revealed that the interactionist style was the most practiced classroom management style among public school kindergarten teachers in the Division of Lucena City. Meanwhile, learners' level of engagement across behavioral, emotional, and cognitive dimensions during the first and second quarters of School Year 2023-2024 were on the developing level (sometimes engaged). It was also found that there was a significant correlation (weak positive correlation) between interactionist classroom management style and learners' emotional engagement during the second quarter. Thus, a lesson plan model utilizing interactionist classroom management style highlighting emotional development among kindergarten learners was proposed by the researcher.

Keywords: *Behavioral Engagement, Classroom Management Style, Cognitive Engagement, Emotional Engagement, Interactionist, Interventionist, Level of Engagement, Non-Interventionist*

INTRODUCTION

Classroom management is a crucial aspect of teaching as it encompasses various elements, such as time management, behavior management, and fostering positive relationships with the learners. A safe and stimulating learning environment is essential to ensure learners are engaged in learning activities and are motivated to achieve their academic goals. Furthermore, classroom management can be viewed as a complex concept that involves a teacher's personality, professional behavior, and competencies needed to perform their roles successfully.

Martin and Baldwin's theoretical model offers a comprehensive understanding of classroom management with three broad dimensions: Personality, Teaching, and Discipline. The Personality dimension pertains to a teacher's actions contributing to learners' personal growth and emotional well-being. The Teaching dimension relates to a teacher's actions that establish and maintain learners' learning activities. In contrast, the Discipline dimension concerns a teacher's strategies and actions to maintain appropriate standards of behavior in the classroom. Based on Wolfgang and Glickman's explanation of the relationship between teachers' behavior patterns and their beliefs about learners' personalities and motivations, the Martin and Baldwin model identifies three classroom management styles: Interventionist, Non-Interventionist, and Interactionist. Each style reflects a teacher's beliefs about how much control they should have over the classroom environment. To assess their classroom management style, teachers can use a self-assessment instrument based on the Martin and Baldwin model. Although each teacher may use all three styles, one typically dominates their behavior in the classroom. By understanding their dominant style, teachers can reflect on their strengths and areas for improvement and adopt more effective classroom management strategies to enhance learners' engagement and learning.

Kindergarten learners' emotional, cognitive, and behavioral engagement refers to the level of participation and involvement of young children in the learning process, including their feelings, thoughts, and actions related to the learning activities. Emotional engagement involves the affective aspect of learning, such as the level of interest, motivation, and enjoyment that learners experience during classroom activities. Cognitive engagement refers to the degree to which learners actively participate in the learning process, such as their level of attention, comprehension, and problem-solving skills. Finally, behavioral engagement relates to learners' observable behaviors in the classroom, such as their attendance, participation, and cooperation with teachers and peers. Together, these three types of engagement play a crucial role in kindergarten learners' academic and social development, as they impact the quality and depth of learning experiences and ultimately shape their future success in school and beyond.

Moreover, the kindergarten years, typically between the ages of 4 and 6, are considered a critical period in a child's development. During this time, children undergo significant

cognitive, social, emotional, and physical growth. They are particularly receptive to learning and develop fundamental skills and abilities that will serve as building blocks for future learning and development. The quality of learning experiences during kindergarten can have lasting effects on a child's future academic and personal success. Research suggests that early educational experiences strongly influence various outcomes, such as academic achievement, cognitive abilities, social skills, and emotional well-being. A strong foundation established during kindergarten can contribute to a positive trajectory in later school years and overall life outcomes. Kindergarten sets the stage for subsequent academic progress. Children acquire essential skills like literacy, numeracy, problem-solving, and critical thinking during this period. A high-quality kindergarten experience with practical instruction and engaging learning activities can foster a love for learning, curiosity, and a solid academic foundation that supports later educational achievements. Beyond academic outcomes, the kindergarten years also play a vital role in shaping a child's personal development. Kindergarten provides opportunities for socialization, emotional growth, and the development of social skills such as cooperation, empathy, and communication. Positive experiences during this time can enhance self-esteem, self-confidence, and overall social-emotional well-being, contributing to success in personal relationships and overall life satisfaction.

This study explores the relationship between classroom management styles of kindergarten teachers and the emotional, cognitive, and behavioral engagement of their learners in the Division of Lucena City. The kindergarten years are a critical period for children's development, and the quality of their learning experiences can have a significant impact on their future academic and personal success. Therefore, it is essential to investigate the classroom management styles that are most effective in promoting engagement among young learners. Thus, this study aims to contribute to the existing literature on classroom management and enhance the understanding of how teacher behavior and classroom management practices affect learner engagement. The findings of this study may have significant implications for improving teaching and learning practices in kindergarten classrooms in the Division of Lucena City and beyond.

Research Questions

1. What extent of a particular classroom management style is practiced by kindergarten teachers among:
    - 1.1 interventionist style;
    - 1.2 interactionist style; and
    - 1.3 non-interventionist style?
2. What is the level of engagement of kindergarten learners in terms of:
    - 2.1 behavioral engagement*;*
    - 2.2 emotional engagement*;* and
    - 2.3 cognitive engagement:
        - *2.3.1 literacy;* and
        - 2.3.2 *numeracy?*

3. Is there a significant relationship between classroom management styles practiced by kindergarten teachers and the level of engagement of kindergarten learners during:
    3.1 first quarter; and
    3.2 second quarter?
4. What lesson plan model can be proposed by the researcher from the findings of the study?

METHODOLOGY

Research Design

The researcher employed a descriptive-correlational research design to determine the correlation between teachers' classroom management styles and learners' level of engagement. The study utilized a descriptive research design to assess teachers' preferences by adapting a questionnaire for coding purposes. Similarly, the research design was descriptive to assess learners' engagement levels. Furthermore, the study is descriptive-correlational, aiming to determine relationship between different variables.

Research Locale

The researcher conducted her study in the Division of Lucena City. Lucena City is composed of four districts with 45 public elementary schools respectively (North District: 14 schools, East District: 10 schools, West District: 11 schools, and South District: 10 schools).

Research Population and Sample

The researcher employed a total enumeration sampling technique, encompassing all 120 public school kindergarten teachers within the Division of Lucena City. The division comprises 120 public school kindergarten teachers distributed across its districts: North District (34 teachers), East District (22 teachers), West District (30 teachers), and South District (34 teachers).

Table 1

Public School Kindergarten Teachers in the Division of Lucena City

District	No. of Kindergarten Teachers
North	34
East	22
West	30
South	34

Total	**120**

Research Instrument

The researcher utilized adapted questionnaire in collecting data in kindergarten teachers' classroom management styles. This was interpreted as follows:

Table 2

Classroom Management Style Scale and Qualitative Description

Scale	Range	Verbal Interpretation	Qualitative Description
5	4.50- 5.00	Very Great Extent	It signifies a high frequency and consistency in implementing these practices.
4	3.50- 4.49	Great Extent	It signifies regular implementation with considerable effectiveness, though it may lack the consistency of the highest level.
3	2.50- 3.49	Moderately Extent	It signifies a moderate frequency of practice implementation, reflecting an average level of effectiveness.
2	1.50- 2.49	Low Extent	It signifies an infrequent application of practices indicating a lack of regular engagement.
1	1.00- 1.49	Very Low Extent	It signifies a complete absence of the specified practices in daily operations.

The researcher then gathered the learners' level of engagement through kindergarten quarterly assessment result during first and second quarters. This was interpreted as follows:

Table 3

Level of Engagement Qualitative Description

Level	Indicators
(B) Beginning	The learner rarely demonstrates the competency. The learner rarely participates in class activities and/or initiates independent works.

	The learner shows interest in doing tasks but needs close supervision.
(D) Developing	The learner sometimes demonstrates the competency. The learner sometimes participates, with minimal supervision. The learner progresses continuously in doing assigned tasks.
(C) Consistent	The learner always demonstrates the competency. The learner always participates in different activities, works independently. The learner always performs tasks, and is advanced in some aspects.

Data Gathering Procedure

The researcher initiated the data collection process by seeking permission from the author of the adapted questionnaire via email. Subsequently, the researcher obtained approval from relevant authorities to gather data in the chosen locale. Once the schedule was confirmed, the researcher prepared her instruments, including an endorsement letter and necessary materials for the study. The researcher then commenced data gathering by administering the adapted questionnaire to the kindergarten teachers.

Upon completion of data collection, the researcher proceeded to interpret the gathered information from the questionnaire to analyze the teachers' preferred classroom management styles. Additionally, the researcher obtained data on kindergarten learners' level of engagement from recorded quarterly assessments during the first and second quarters. Subsequently, the researcher interpreted the data to analyze the level of engagement among the kindergarten learners.

Statistical Treatment of Data

For **Part I** of the study, which focused on classroom management styles, the statistical treatment involved using the Weighted Mean Formula to calculate the average preference for each management style among the kindergarten teachers. This formula considers the varying importance or weight assigned to each response option in the questionnaire.

For **Part II**, which examined the level of engagement among kindergarten learners, the statistical treatment involved utilizing the percentage formula to determine the proportion of learners actively engaged in classroom activities. This formula calculates the percentage of engaged learners based on the total number of learners assessed during the first and second quarters.

To test the hypothesis regarding the relationship between classroom management style and learners' level of engagement, the Pearson Product-Moment Correlation Coefficient was employed. This statistical measure assesses the strength and direction of the linear relationship between two variables, in this case, styles of classroom management and the level of learners' engagement.

Scope and Delimitation

This study probed only into identifying the extent of practice of classroom management styles of kindergarten teachers and the level of engagement of learners.

The responses of kindergarten teachers served as the basis for lesson plan model.

This study is limited to 120 public school kindergarten teachers in the Division of Lucena City.

The modified and adapted survey questionnaire served as the primary instrument in collecting the data needed in the study in terms of teachers' classroom management style while the data for the learners' level of engagement were gathered from the kindergarten quarterly assessment result during first and second quarters of School Year 2023-2024.

RESULTS

Part I. Extent of a Particular Classroom Management Style Practiced by Kindergarten Teachers

Table 4

Extent of Practice of Interventionist Classroom Management Style Among Kindergarten Teachers

Interventionist	**Weighted Mean**	**Verbal Interpretation**
1. When, during the class, one of my learners' loud laughs or starts crying, I get angry because he/she disturbs the class and I scold him/her.	2.53	Moderately Extent
2. I use to reward each learner achievement with good grade and to assess every failure with a bad grade or at least I criticize it.	3.97	Great Extent
3. I try to activate learners in class by calling them on.	4.76	Very Great Extent
4. I get angry when a learner disturbs class or harasses other learners, I immediately demand him/her to stop such behavior, or I'll have to punish him/her.	2.94	Moderately Extent
5. If any of the learners does not work during the class, I announce that he/she will stay during the break to complete the task, give him/her more extensive homework or give him/her a bad mark.	3.32	Moderately Extent
6. When I notice inappropriate, rude behavior, I always reprimand learners for that.	3.39	Moderately Extent
7. I believe that during the classes, learners have to keep quiet and listen to me in order to learn something.	4.13	Great Extent
8. When learners are restless during the class, I interrupt class explicitly requiring them to behave normally.	3.59	Great Extent
9. In order to ensure that learners will work sitting at their desks, I have to control them and exhort to work.	3.48	Moderately Extent

10. I require learners to do exactly what I tell them because I know that this is the only way they could learn the material.	3.53	Great Extent
	3.56	**Great Extent**

Source: Djigic, G. (2014). *Inventory for Teachers Self-Assessment in Classroom Management Styles - Development and its Psychometric Characteristics*

Legend:
4.50-5.00 *Very Great Extent*
3.50-4.49 *Great Extent*
2.50-3.49 *Moderately Extent*
1.50-2.49 *Low Extent*
1.00-1.49 *Very Low Extent*

Table 4 illustrates the interventionist classroom management style as practiced by kindergarten teachers, with a weighted mean of **3.56**, indicating a Great Extent response overall. Among the interventionist style practices, item 3, which states, "I try to activate learners in a class by calling them on," has the highest weighted mean of **4.76**, indicating a Very Great Extent response. Basically, learners at young age have short attention spans and easily gets distracted, thus, this suggests that kindergarten teachers actively employ strategies to engage learners such as by calling on them during class activities. Learners however, who participate in class are therefore be most likely more focused, better learners, and higher thinkers. An interventionist classroom management comprises of actions taken by teachers to create a supportive environment for the cognitive, behavioral, social and emotional development of learners (Korpershoek, 2016). A teacher who cares about his/her learners transmits knowledge effectively and has a good interaction with them due to the creation of an emotional link and environment (Kabeera, 2019).

Moreover, using rewards (item 2), getting learners' attention (item 7), establishing classroom rules (item 8), and directing kindergarten learners (item 10), are practiced to a Great Extent by kindergarten teachers. Interventionist classroom management involves five types of actions to help a teacher to offer high quality classroom management; (a) teachers must be caring to learners, (b) develop supportive relationship with learners, (c) organize and implement instructions in ways that optimize learners' access to learning, (d) teachers encouraging learners' engagement in academic tasks, and (e) using of group management methods (Korpershoek, 2016).

Table 5

Extent of Practice of Interactionist Classroom Management Style Among Kindergarten Teachers

Interactionist	**Weighted Mean**	**Verbal Interpretation**
1. I believe that learners learn best when I allow them to freely express opinions, ideas, and suggestions.	4.68	Very Great Extent
2. I seek to use various types of teaching activities to encourage active participation of all my learners during the lesson.	4.65	Very Great Extent
3. While learners work on their place, I stand in the place from which I have a view of the whole classroom and access to the learners who seek help.	4.76	Very Great Extent
4. I believe that learners should know that their success is my success as well and that they have the right to make a mistake, because they can correct it with my help.	4.3	Great Extent
5. I believe that it is important for learners to understand why it is important for them personally what they are learning; they can be free to choose the way in which they would like to learn.	4.42	Great Extent
6. It is important to me how do my learners feel and what they need.	4.83	Very Great Extent
7. If a learner disturbs class or other learners, I remind him/her on rules of behavior that all of us in the class are trying to respect.	4.57	Very Great Extent
8. When one of the learners does not work during the class, I approach him/her, checking what is going on and I am trying to animate his/her activity providing him/her the needed assistance.	4.63	Very Great Extent
9. Appropriate working atmosphere is important to me, so when I perceive an undiscipline learner, I want to solve the problem together with him/her in order to proceed with further work.	4.49	Great Extent
10. In order to maintain discipline in class, I use to remind learners on rules adapted by their own participation.	4.48	Great Extent
	4.58	**Very Great Extent**

Source: Djigic, G. (2014). *Inventory for Teachers Self-Assessment in Classroom Management Styles - Development and its Psychometric Characteristics*

Legend:

4.50-5.00 *Very Great Extent*
3.50-4.49 *Great Extent*
2.50-3.49 *Moderately Extent*
1.50-2.49 *Low Extent*
1.00-1.49 *Very Low Extent*

Table 5 presents the interactionist classroom management style as practiced by kindergarten teachers to a Very Great Extent with a weighted mean of **4.58.** The table shows that item 6, “It is important to me how my learners feel and what they need” has the highest weighted mean of **4.83**, and is practiced to a Very Great Extent by kindergarten teachers, followed by item 3, “While learners work on their place, I stand in the place from which I have a view of the whole classroom and access to the learners who seek help” to a Very Great Extent with a weighted mean of **4.76**, and item 1, “I believe that learners learn best when I allow them to express opinions, ideas, and suggestions freely” to a Very Great Extent with a weighted mean of **4.68**.

It can be viewed that kindergarten teachers in the Division of Lucena City utilized the interactionist style as classroom management to merely a Very Great Extent and Great

Extent. Teachers who practice the interactionist style encourage interaction and cooperation in the classroom, respect learner's personalities, and appreciate the initiatives, interests, and needs of learners (Ghazi, 2017). Hence, teachers share the responsibility inside the classroom with learners.

Table 6

Extent of Practice of Non-Interventionist Classroom Management Style Among Kindergarten Teachers

Non-Interventionist	**Weighted Mean**	**Verbal Interpretation**
1. While learners are working sitting at their desks, I do something else.	3.53	Great Extent
2. My reference to the rules of behavior in class could not greatly contribute to the regulation of learners' behavior.	3.28	Moderately Extent
3. When I assign the task to learners for work in the classroom, I think it is best for them to deal with it themselves without any help or control.	3.9	Great Extent
4. My duty is to assess learners, not to explain them my views regarding their efforts.	2.68	Moderately Extent
5. It is not up to me to bring up my learners during the classes.	2.56	Moderately Extent
6. My attention during the class is focused on teaching the appropriate unit, and it is only up to the learners whether or not they will participate in the work group.	3.03	Moderately Extent
7. I do not react to inappropriate behavior of some learners, but occasionally point out that each learner is responsible for his/her own behavior and learning.	3.54	Great Extent
8. I think that the learners themselves should assess whether and how the learning content is important to them personally.	3.63	Great Extent
9. It's not my job to deal with the feelings and needs of the learners.	1.48	Very Low Extent
10. While teaching a lesson, I do not deal with the reactions of learners.	1.6	Low Extent
	2.92	**Moderately Extent**

Source: Djigic, G. (2014). *Inventory for Teachers Self-Assessment in Classroom Management Styles - Development and its Psychometric Characteristics*

Legend:

4.50-5.00 *Very Great Extent*
3.50-4.49 *Great Extent*
2.50-3.49 *Moderately Extent*
1.50-2.49 *Low Extent*
1.00-1.49 *Very Low Extent*

Table 6 presents the non-interventionist classroom management style as practiced by kindergarten teachers with a weighted mean of **2.92** and verbally interpreted as Moderately Extent. Hence, non-interventionist style is moderately utilized by public school kindergarten teachers in Lucena City. As it could be gleaned from the table, item 9, stating that "It is not my job to deal with the feelings and needs of the learners" has the lowest weighted mean of **1.48** indicating a Very Low Extent, thus, kindergarten teachers in Lucena City really takes into consideration learners' feelings and needs in classroom

settings. The non-interventionist approach is based on the belief that a person has his own needs that tend to express and accomplish them, so the teacher has minimal control. On the other hand, teaching in kindergarten requires teachers an “extending hand” for learners. Although, they agree with item 3 to a Great Extent, “When I assign the task to learners for work in the classroom, I think it is best for them to deal with it themselves without any help or control”, with a weighted mean of **3.9**. It is also vital that as learners progress, minimal supervision or working independently may be implemented. Meanwhile, item 10, stating “While teaching a lesson, I do not deal with the reactions of learners”, has a low weighted mean of **1.6** indicating a Low Extent. Kindergarten teachers disagree with this practice, as learners’ reactions when teaching are an indication of how they are engaged in classroom teaching.

The non-interventionist classroom management style which is more constructive than the interfering strategy, should lead to constructive behavior and the growth of self-discipline, thus, the learners’ moral behavior can be high (Ghazi, 2017).

Table 7

Summary of Results of Extent of Practice of Classroom Management Styles Among Kindergarten Teachers

Classroom Management Styles	**Weighted Mean**	**Interpretation**	**Rank**
Interventionist	3.56	Great Extent	**2**
Interactionist	4.58	Very Great Extent	**1**
Non-Interventionist	2.92	Moderately Extent	**3**

Legend:
4.50-5.00 *Very Great Extent*
3.50-4.49 *Great Extent*
2.50-3.49 *Moderately Extent*
1.50-2.49 *Low Extent*
1.00-1.49 *Very Low Extent*

Table 7 reveals the ranking of classroom management styles as practiced by kindergarten teachers in the Division of Lucena City. It shows that kindergarten teachers integrate interactionist style in teaching to a Very Great Extent with a weighted mean of **4.58**, followed by interventionist style to a Great Extent with a weighted mean of **3.56**, and non-interventionist to a Moderately Extent with a weighted mean of **2.92**. Although each teacher may use all these three styles, one typically dominates their behavior in the classroom. By understanding their dominant style, teachers can reflect on their strengths and areas for improvement and adapt more effective classroom management strategies to enhance learners' engagement and learning. The results shows that interactionist style is dominant in kindergarten teachers as compared to interventionist and non-interventionist styles.

In addition, Kaur (2020) revealed that teachers who used an interactionist classroom management style had the highest level of learner engagement compared to teachers who used interventionist and non-interventionist styles.

Likewise, on a study by Sulistiyani (2018) on the correlation between classroom management styles and learner engagement in kindergarten. The results revealed that teachers who used an interactionist classroom management style had the highest level of learner engagement compared to teachers who used interventionist and non-interventionist styles.

Part II. Level of Engagement of Kindergarten Learners

Table 8

Kindergarten Learners' Level of Behavioral Engagement

Quarter (SY 2023-2024)	**Number of Learners**	***Health, Well Being, and Motor Development***					
		(C) *Consistent*		**(D)** *Developing*		**(B)** *Beginning*	
1st	5494	373	**6.79 %**	3637	**66.20 %**	1484	**27.01 %**
2nd	5440	1201	**22.08 %**	3465	**63.69 %**	774	**14.23 %**

Legend:
C-Consistent (*The learner always demonstrates the competency.*)
D-Developing (*The learner sometimes demonstrates the competency.*)
B-Beginning (*The learner rarely demonstrates the competency.*)

Table 8 reveals the result of kindergarten learners' level of behavioral engagement in terms of health, well-being, and motor development. During the first quarter, majority of the learners, or **66.20 %** (3637 learners), belongs to the developing level (sometimes engaged), while **27.01 %** (1484 learners), belongs to the beginning level (rarely engaged). Meanwhile, the remaining **6.79 %** (373 learners), belongs to the consistent level (always engaged).

Kindergarten learners' behavioral engagement during the first quarter falls under the developing level. Behavioral development in kindergarten describes how learners actively participate, comply with the rules and expectations of the classroom, and exhibit positive behaviors in the learning environment. As shown in the result, during the beginning quarter, these traits are not yet observed and most kindergarten learners belong to the developing and beginning level. Meanwhile, during the second quarter majority of the learners, or **63.69 %** (3465 learners), belongs to the developing level (sometimes engaged), while **22.08 %** (1201 learners), belongs to the consistent level (always engaged), meanwhile the remaining **14.23%** (774 learners), belongs to the beginning level (rarely engaged). Most of the learners still falls under the developing level during the second quarter, yet an increase in the consistent level was revealed. Learners become

more familiar with the classroom setting. Recognition, familiarization, and exposure to extended periods in an environment display higher levels of behavioral engagement.

Teachers' role is very important in the development of learners' behavior. Learners spend a majority of their time within the educational institution, where they not only acquire academic knowledge but also keenly observe and learn from their teachers. When learners believe that their teacher genuinely cares about their success and evaluates both their strengths and weaknesses, they are more driven to succeed in both school and in life in general. When learners receive constructive criticism and help to strengthen their areas of weakness, it is easier to maintain their motivation.

Furthermore, Chang and Chen (2019) discovered that kindergarten learners in classrooms with authoritative teachers demonstrated higher levels of behavioral engagement and academic achievement, while learners in classrooms with authoritarian or permissive management styles showed lower levels of engagement and achievement.

Table 9
Kindergarten Learners' Level of Emotional Engagement

Quarter (SY 2023-2024)	**Number of Learners**	***Socio-Emotional Development***					
		(C) *Consistent*		**(D)** *Developing*		**(B)** *Beginning*	
1st	5494	485	**8.83 %**	3561	**64.82 %**	1448	**26.36 %**
2nd	5440	1131	**20.79 %**	3482	**64.01 %**	827	**15.20 %**

Legend:
C-Consistent (*The learner always demonstrates the competency.*)
D-Developing (*The learner sometimes demonstrates the competency.*)
B-Beginning (*The learner rarely demonstrates the competency.*)

Table 9 shows the result of kindergarten learners' level of emotional engagement. During the first quarter, majority of the learners, or **64.82 %** (3561 learners), belongs to the developing level (sometimes engaged), while **26.36 %** (1448 learners), belongs to the beginning level (rarely engaged). Meanwhile, the remaining **8.83 %** (485 learners) belongs to the consistent level (always engaged). Emotional engagement of kindergarten learners falls under the developing level during the first quarter. Transitioning from a home environment to a school classroom can create a variety of emotional challenges for young children. Thus, teachers and learners must have supportive and nurturing interactions. A sense of trust and emotional connection is fostered by teachers who demonstrate empathy, understanding, and responsiveness to the emotional needs of the learners, which in turn encourages learning engagement. Learners tend to be more emotionally engaged in kindergarten settings that offer a healthy emotional climate that is defined by warmth, acceptance, and support. Learners are more likely to actively participate in learning when they feel secure, appreciated, and supported emotionally. Moreover, during the second quarter majority of the learners or **64.01 %** (3637 learners), belongs to

the developing level (sometimes engaged), while **20.79 %** (1131 learners), belongs to the consistent level (always engaged). Meanwhile the remaining **15.20%** (827 learners), belongs to the beginning level (rarely engaged). An increase of consistent learners was revealed during the second quarter. Emotional engagement in kindergarten is influenced by play-based activities and interactions with classmates. Learners can explore their emotions through play, learn social skills, and form emotional ties with others. Emotional involvement and social-emotional development are enhanced by cooperative play and favorable peer interactions. Emotional engagement in kindergarten is often facilitated when learning experiences are personally relevant and exciting to learners. When activities align with their interests, experiences, and developmental needs, learners are more likely to be emotionally engaged and motivated to participate.

Emotional engagement in kindergarten is often facilitated when learning experiences are personally relevant and exciting to learners. When activities align with their interests, experiences, and developmental needs, learners are more likely to be emotionally engaged and motivated to participate. Similarly, learners have the chance to express and control their emotions in kindergarten. Learners' emotional engagement can be increased by teachers who foster an environment that is welcoming and supportive of emotional expression while simultaneously teaching techniques for emotional control.

Thompson and Smith (2016) also found that kindergarten learners in classrooms with authoritative teachers demonstrated higher levels of academic achievement and positive social development compared to those in classrooms with authoritarian or permissive management styles.

Moreover, in the study by Farran (2015), findings indicate that both instructional support and emotional support, when combined, were significant predictors of the intensity of children's learning engagement. Moreover, the impact of instructional practices on learning engagement was contingent upon the emotional atmosphere within the classroom. Specifically, instructional practices had a more significant effect on the overall level of engagement in classrooms characterized by a more positive emotional tone. The study suggests that a supportive emotional environment enhances the effectiveness of instructional practices in promoting learner engagement. Therefore, fostering instructional and emotional support is essential for creating an optimal learning environment that maximizes learner engagement and learning outcomes.

Table 10

Kindergarten Learners' Level of Cognitive Engagement-Literacy

Quarter (SY 2023-2024)	**Number of Learners**	***Literacy***					
		(C) *Consistent*		**(D)** *Developing*		**(B)** *Beginning*	
1st	5494	367	**6.68 %**	2612	**47.54 %**	2515	**45.78 %**
2nd	5440	948	**17.43 %**	2954	**54.30 %**	1538	**28.27 %**

Legend:
C-Consistent (*The learner always demonstrates the competency.*)
D-Developing (*The learner sometimes demonstrates the competency.*)
B-Beginning (*The learner rarely demonstrates the competency.*)

Table 10 presents the result of kindergarten learners' level of cognitive engagement in literacy. During the first quarter, majority of the learners, or **47.54 %** (2612 learners), belongs to the developing level (sometimes engaged), while **45.78 %** (2515 learners), belongs to the beginning level (rarely engaged), meanwhile the remaining **6.68 %** (367 learners), belongs to the consistent level (always engaged). A high number of learners falls under the developing and beginning level was revealed during the first quarter. Initially, kindergarten is the start of formal schooling, thus learners arrive to school mostly illiterate. Cognitive engagement is more likely to be cultivated in kindergarten programs that use inquiry-based methods, where kids are encouraged to explore, investigate, and ask questions. Higher-order thinking, problem-solving abilities, and curiosity are all encouraged by inquiry-based learning. Meanwhile, during the second quarter majority of the learners, or **54.30 %** (2954 learners), belongs to the developing level (sometimes engaged), while **28.27 %** (1538 learners), belongs to the beginning level (rarely engaged), meanwhile the remaining **17.43%** (948 learners), belongs to consistent level (always engaged). A decrease in the number of beginning learners was revealed during the second quarter. Kindergartens' cognitive engagement is increased when they participate in experiential, hands-on learning activities. Children's cognitive growth is boosted by manipulating items, performing experiments, and working on real-world projects because they are actively creating new knowledge and making connections.

A study by Agbayani and Fajardo (2018) investigated the impact of teacher classroom management styles on the language development of kindergarten learners in the Philippines. The study found that teachers who used a positive and supportive classroom management style had a significant positive impact on the language development of kindergarten learners.

Furthermore, Rodriguez and Garcia (2018) observed that kindergarten learners exposed to an authoritative classroom management style exhibited more significant gains in literacy skills, including reading readiness, phonological awareness, and vocabulary development than learners in classrooms with authoritarian or permissive styles.

Table 11
Kindergarten Learners' Level of Cognitive Engagement-Numeracy

Quarter (SY 2023-2024)	**Number of Learners**	***Numeracy***					
		(C) *Consistent*		**(D)** *Developing*		**(B)** *Beginning*	
1st	5494	819	**14.90 %**	2766	**50.35 %**	1909	**34.75 %**
2nd	5440	1632	**30 %**	2650	**48.71 %**	1158	**21.29 %**

Legend:
C-Consistent (*The learner always demonstrates the competency.*)
D-Developing (*The learner sometimes demonstrates the competency.*)
B-Beginning (*The learner rarely demonstrates the competency.*)

Table 11 shows the result of kindergarten learners' level of cognitive engagement in numeracy. During the first quarter, majority of the learners, or **50.35 %** (2766 learners), belongs to the developing level (sometimes engaged), while **34.75 %** (1909 learners), belongs to the beginning level (rarely engaged), meanwhile the remaining **14.90 %** (819 learners), belongs to the consistent level (always engaged). As shown, half of the percentage of kindergarten learners falls under the developing level during the first quarter. A good start in the cognitive development of learners in numeracy. When kindergarten learners actively participate in their learning, such as through questioning, problem-solving, and critical thinking, they tend to exhibit higher levels of cognitive engagement. Deeper learning, knowledge retention, and cognitive growth are all facilitated by active participation. Moreover, cognitive engagement can be improved by giving children personalized education and learning experiences that match to their needs and interests. Active cognitive engagement is encouraged by recognizing and fostering each child's distinct cognitive abilities and posing suitable tasks. Meanwhile, during the second quarter majority of the learners or **48.71 %** (2650 learners), belongs to developing level (sometimes engaged), while **30 %** (1632 learners), belongs to consistent level (always engaged), meanwhile the remaining **21.29 %** (1158 learners), belongs to the beginning level (rarely engaged). An increase of the number of consistent learners was shown during the second quarter. Children's cognitive engagement is boosted by kindergarten tasks and activities relevant to and meaningful to them in real life. Enhancing intrinsic motivation and cognitive engagement is achieved through connecting learning to real-world, realistic circumstances and children's lives. Kindergarten play-based learning strategies promote cognitive engagement. As they participate in imaginative and symbolic play scenarios, children can actively explore, experiment, and build their problem-solving abilities through play.

Lee and Park (2021) indicated that kindergarten learners taught by authoritative teachers showed higher levels of mathematics achievement compared to learners in classrooms with authoritarian or permissive management styles. The study emphasized the importance of supportive and organized classroom environments for fostering mathematical skills development in young learners.

Part III. Significant Relationship between Classroom Management Styles Practiced by Kindergarten Teachers and the Level of Engagement of Kindergarten Learners

Table 12

Relationship between Kindergarten Teachers' Classroom Management Style and Learners' Level of Engagement for the First Quarter

Kindergarten Teachers' Classroom Management Style	Learners' Level of Engagement for the First Quarter	Correlation Coefficient	Degree of Relationship	p-value	Conclusion
Interventionist	Behavioral Engagement	0.083	Weak Positive	0.370	Not Significantly Correlated
	Emotional Engagement	0.049	Weak Positive	0.593	Not Significantly Correlated
	Cognitive Engagement-Literacy	0.005	Weak Positive	0.958	Not Significantly Correlated
	Cognitive Engagement-Numeracy	-0.098	Weak Negative	0.286	Not Significantly Correlated
Interactionist	Behavioral Engagement	0.145	Weak Positive	0.114	Not Significantly Correlated
	Emotional Engagement	0.064	Weak Positive	0.491	Not Significantly Correlated
	Cognitive Engagement-Literacy	0.033	Weak Positive	0.724	Not Significantly Correlated
	Cognitive Engagement-Numeracy	-0.106	Weak Negative	0.250	Not Significantly Correlated
Non-Interactionist	Behavioral Engagement	0.098	Weak Positive	0.287	Not Significantly Correlated
	Emotional Engagement	0.163	Weak Positive	0.074	Not Significantly Correlated
	Cognitive Engagement-Literacy	0.076	Weak Positive	0.409	Not Significantly Correlated
	Cognitive Engagement-Numeracy	-0.040	Weak Negative	0.663	Not Significantly Correlated

**Significant at $\alpha = 0.05$*

Table 12 shows the correlation between kindergarten teachers' classroom management styles and the level of engagement demonstrated by kindergarten learners during the first quarter of instruction. Effective classroom management is essential for creating a conducive learning environment, while learner engagement indicates the effectiveness of teaching practices. Understanding the relationship between these variables sheds light on the dynamics of classroom interaction and instructional efficacy in kindergarten settings. As shown, the results revealed that there were weak and non-significant correlations between kindergarten teachers' classroom management styles and learners' levels of engagement across various dimensions during the first quarter. Regardless of whether teachers adapt an interventionist, interactionist, or non-interactionist classroom management style, correlations with behavioral engagement, emotional engagement, cognitive engagement in literacy, and cognitive engagement in numeracy are consistently weak and statistically insignificant. These results suggested that variations in classroom management styles do not significantly influence the level of engagement observed

among learners during the initial quarter of instruction. Generally, kindergarten is the start of formal schooling and during early stages of instruction, learners are adjusting to a new environment that differs from their previous experiences. While many learners attend preschool or other “school-like” setting prior to kindergarten, research indicates that only about 60% of learners experience a center-based care setting as their primary care arrangement in the year before kindergarten (Rathbun, Zhang, & Snyder, 2016). For the other 40% of learners, transitioning to the kindergarten context may be challenging. Moreover, even learners who attend center-based settings prior to kindergarten experience dramatic shifts as they enter kindergarten, in both environmental experiences and expectations. Additionally, learners are also held to different expectations in the kindergarten setting. These include academic expectations, which are demonstrated by the greater emphasis on skill development and the amount of time spent in learning-focused activities, and behavioral expectations, which include staying on task and following stricter routines.

Lack of significant correlations between classroom management styles and learner engagement could also mean an indication that other factors, such as instructional practices, individual learner characteristics, and classroom dynamics, play a more influential role in shaping engagement levels during the early stages of instruction. As such, educators may need to focus on implementing a diverse range of instructional strategies and differentiation techniques to foster engagement among a heterogeneous group of learners. Similarly, researchers should consider exploring additional variables and factors contributing to learner engagement in kindergarten settings, including teacher-learner interactions, curriculum design, and socio-emotional factors. By gaining a deeper understanding of the multifaceted nature of learner engagement, educators and researchers can collaborate to refine teaching practices and optimize learning experiences for young children in kindergarten classrooms.

Table 13

Kindergarten Teachers' Classroom Management Style	Learners' Level of Engagement for the Second Quarter	Correlation Coefficient	Degree of Relationship	p-value	Conclusion
Interventionist	Behavioral Engagement	-0.004	Weak Negative	0.963	Not Significantly Correlated
	Emotional Engagement	0.055	Weak Positive	0.551	Not Significantly Correlated
	Cognitive Engagement-Literacy	0.033	Weak Positive	0.722	Not Significantly Correlated
	Cognitive Engagement-Numeracy	-0.110	Weak Negative	0.231	Not Significantly Correlated
Interactionist	Behavioral Engagement	0.162	Weak Positive	0.078	Not Significantly Correlated
	Emotional Engagement	0.189*	Weak Positive	0.038	Significantly Correlated
	Cognitive Engagement-Literacy	0.045	Weak Positive	0.624	Not Significantly Correlated

	Cognitive Engagement-Numeracy	-0.019	Weak Negative	0.837	Not Significantly Correlated
Non-Interactionist	Behavioral Engagement	0.071	Weak Positive	0.442	Not Significantly Correlated
	Emotional Engagement	0.083	Weak Positive	0.370	Not Significantly Correlated
	Cognitive Engagement-Literacy	0.044	Weak Positive	0.633	Not Significantly Correlated
	Cognitive Engagement-Numeracy	0.023	Weak Positive	0.799	Not Significantly Correlated

Relationship between Kindergarten Teachers' Classroom Management Style and Learners' Level of Engagement for the Second Quarter

**Significant at* $\alpha = 0.05$

Table 13 presents the relationship between kindergarten teachers' classroom management styles and the level of engagement exhibited by kindergarten learners during the second quarter of instruction. About the correlation analysis done for the first quarter, effective classroom management is pivotal in creating an environment conducive to learning accounting for learners' journey in the classroom as continuous learners' engagement serves a crucial role for instructional effectiveness. As presented, the results revealed weak and mostly non-significant correlations between kindergarten teachers' classroom management styles and learners' levels of engagement across various dimensions during the second quarter. For teachers employing interventionist, interactionist, or non-interactionist classroom management style, correlations with behavioral engagement, emotional engagement, cognitive engagement in literacy, and cognitive engagement in numeracy generally demonstrate weak and statistically insignificant relationships. However, there was an exception, such as a weak positive correlation between the interactionist classroom management style and emotional engagement, which is statistically significant, suggesting a potential influence of this management style on learners' emotional engagement during the second quarter. Beyond academic outcomes, the kindergarten years play a vital role in shaping a child's personal development. Kindergarten provides opportunities for socialization, emotional growth, and the development of social skills such as cooperation, empathy, and communication. Hence, qualitative ratings are also preferred on summarizing learners' overall performance, as they are more suitable for the age and developmental stage of kindergarten learners, as opposed to numerical grades. Positive experiences during this time can enhance self-esteem, self-confidence, and overall social-emotional well-being, contributing to success in personal relationships and overall life satisfaction.

On the other hand, findings also suggested that the lack of significant correlations between classroom management styles and learner engagement during the second quarter may indicate that other factors, such as instructional strategies, learner characteristics, and classroom dynamics, may play a more influential role in shaping engagement levels as instruction progresses. This underscores the importance of employing a diverse range of instructional approaches and differentiation techniques to foster engagement among learners.

Additionally, the identification of a significant correlation between the interactionist classroom management style and emotional engagement suggests a potential avenue for further investigation into the specific mechanisms through which classroom management styles influence emotional engagement among learners. Researchers should explore additional variables and factors that may contribute to learner engagement over time, including teacher-learner interactions, curriculum adaptations, and socio-emotional dynamics, to gain a comprehensive understanding of instructional effectiveness in kindergarten classrooms.

Part IV. Proposed Lesson Plan Model Based on the Study's Findings

Findings revealed that public school kindergarten teachers in the Division of Lucena City highly integrate interactionist classroom management style to a Very Great Extent in teaching. In was also revealed on the study a significant correlation (weak positive correlation) between interactionist classroom management style and emotional engagement among kindergarten learners. Hence, a lesson plan model utilizing interactionist classroom management style highlighting emotional development among kindergarten learners was proposed by the researcher. The proposed lesson plan model includes the Most Essential Learning Competencies (MELCs) for the first quarter in the kindergarten level. The proposed lesson plan is a modified model of lesson plan that is currently used by kindergarten teachers in the division. Its key feature is integrating interactionist style on emotional development of learners. However, it also covers behavioral development, cognitive development in literacy and numeracy among kindergarten learners. It follows the blocks of times in kindergarten and incorporates *"I do, we do, you do"* approach in work periods which promotes interactions between the teacher and the learners.

DISCUSSION

The significant findings of the study are summarized below:

1. Extent of a Particular Classroom Management Style Practiced by Kindergarten Teachers
    1.1. Interventionist classroom management style is practiced to a Great Extent by kindergarten teachers.
    1.2. Interactionist classroom management style is practiced to a Very Great Extent by kindergarten teachers.
    1.3. Non-interventionist classroom management style is practiced to a Moderately Extent by kindergarten teachers.
2. Level of Engagement of Kindergarten Learners
    2.1. On the level of behavioral engagement, during the first quarter majority of the learners belongs to the developing level (sometimes engaged), while during the second quarter majority of the learners belongs to the developing level (sometimes engaged).

2.2. On the level of emotional engagement, during the first quarter majority of the learners belongs to the developing level (sometimes engaged), whereas, during the second quarter majority of the learners belongs to the developing level (sometimes engaged).

2.3 On the level of cognitive engagement:

2.3.1. across literacy domain, during the first quarter majority of the learners belongs to the developing level (sometimes engaged, whereas, during the second quarter majority of the learners belongs to the developing level (sometimes engaged).

2.3.2. across numeracy domain, during the first quarter majority of the learners belongs to the developing level (sometimes engaged), while during the second quarter majority of the learners belongs to the developing level (sometimes engaged).

3. Significant Relationship between Classroom Management Styles Practiced by Kindergarten Teachers and the Level of Engagement of Kindergarten Learners

3.1. The results revealed weak and non-significant correlations between kindergarten teachers' classroom management styles and learners' levels of engagement across various dimensions during the first quarter.

3.2. The results revealed weak and mostly non-significant correlations between kindergarten teachers' classroom management styles and learners' levels of engagement across various dimensions during the second quarter. However, there was a weak positive correlation between interactionist classroom management style and emotional engagement, which was statistically significant.

4. A lesson plan model utilizing interactionist classroom management style highlighting emotional development among kindergarten learners was proposed by the researcher.

Conclusions

Based on the findings, the following conclusions are drawn:

1. Interactionist style was practiced to a Very Great Extent, by public school kindergarten teachers in the Division of Lucena City, followed by interventionist style to a Great Extent, and non-interventionist style to a Moderately Extent.

2. Based on the result, learners' level of engagement across behavioral, emotional, and cognitive (literacy and numeracy) dimensions during first and second quarters (initial and transitional stages) were on the developing level (sometimes engaged).

3. The result revealed that during the first quarter, classroom management styles and learners' engagement were not significantly correlated. Meanwhile, during the second quarter, there is a significant correlation (weak positive correlation) between interactionist classroom management style and learners' emotional engagement. Thus, the study rejects the research hypothesis that there is no significant relationship between teachers' classroom management style and learners' level of engagement.

4. A lesson plan model utilizing interactionist classroom management style highlighting emotional development among kindergarten learners was proposed by the researcher.

Recommendations

Given the preceding conclusions, the following recommendations are hereby offered:

1. Since the result showed that interactionist style was highly practiced classroom management style among public school kindergarten teachers in the Division of Lucena City, other teachers may also integrate an interactionist management style in their classroom setting that would foster engagement among learners.

2. Due to the findings that kindergarten learners' level of engagement during first and second quarters were on the developing level, teacher may use this study as reference for further development of their classroom management styles that would enhance result in the quarterly assessment of kindergarten learners.

4. Since the findings revealed that there is a significant correlation between interactionist classroom management style and learners' emotional engagement, teachers may adapt the proposed lesson plan model utilizing interactionist classroom management style that would enhance emotional engagement among kindergarten learners.

4. Since the result of the study only encompasses level of engagement of learners in the kindergarten level, future researchers may also look into other developmental stages. This study may also serve as their reference into further studying classroom management styles and factors affecting learners' engagement.

Compliance with Ethical Standards

The study ensured that informed consent was given to the following respondents. Freedom to withdraw from the study at any time, anonymity of the respondents was maintained, the respondent's well-being as safeguarded, no conflict of interests exists in the conduct of the study, plagiarism was strictly avoided, there was no bias in the interpretation of the findings and that the results were used purely for research.

Acknowledgments

The researcher owes deepest gratitude to those who made this thesis a reality.

To Marinduque State College Graduate Studies Faculty and Staff, to Quezonian Educational College, Inc. Faculty and Staff, to Public School Kindergarten Teachers in the Division of Lucena City, to Elvira Razon Aranilla Elementary School Faculty and Staff, to her family and friends, to her boyfriend, Jun Marc G. Madriaga.

Above all else, to Almighty God.

KNOWKALINGA: A KNOWLEDGE MANAGEMENT SYSTEM OF CULTURAL HERITAGE RESEARCH CENTER (CHRC)

Joy Lyn B. Jimenez, LPT., Mike Anthony D. Gragasin

College of Information Technology and Computer Science, University of the Cordilleras, Baguio City, Philippines

https://doi.org/10.5281/zenodo.12071154

ABSTRACT

The research paper 'KnowKalinga: A Knowledge Management System for Cultural Heritage Research Center (CHRC)' describes the design, development, and deployment of an online system that is dedicated to the preservation and promotion of Kalinga Heritage Culture. The paper addresses the challenges CHRC has faced during its attempts to achieve its vision and mission. The developed innovative online system is based on the WordPress platform and is client-centered. The clients include Kalinga Culture students, educators, researchers, and enthusiasts, as the platform serves as a centralized database and a sharing platform. The defined components consist of a cultural heritage research database, a learning center, interactive components, and collaboration tools that support client-to-client interaction. The paper proves the importance of the KnowKalinga system as a cultural awareness and preservation tool that stimulates collaboration and contributes to sustainable preservation. The paper as innovation describes significant meaning for the knowledge management and technology-enabled cultural preservation fields.

Keywords: *KnowKalinga, Cultural Preservation, CHRC, Digitalization, Indigenous Culture*

INTRODUCTION

"A people without knowledge of their history, origin, and culture is like a tree without roots" is a famous word from Marcus Garvey, inspires every one of us to have an important goal to preserve our cultural heritage to protect our unique traditions, practices and cultural knowledge for the future generations. According to Loriene Roy (2015) preservation of our cultural heritage is concerned with safeguarding the tangible representations of the culture including cultural clothing, pottery, and beadworks, as well as the non-tangible aspects of our culture such as language, oral stories, customs, and beliefs. We learn and understand our culture more from the stories and songs that our elders and forefathers shared, McQueen, J. (2019), thus, technology integration can help share and preserve this slowly vanishing cultural heritage, especially in this age of digital innovation. According to Hershey, R. (2010), many people believe that the Internet can be a tool to protect, maintain, and promote cultural diversity. As emphasized by Shiri, A. et al. (2021) in their study that across the world, Indigenous communities are increasingly interested in exploring digital technologies for different uses ranging from education, social engagement, cultural heritage preservation, and even initiatives aimed at stimulating distressingly grim prospects for language revitalization. Modern technology has the power to take digital storytelling possibilities to the next level, and the above is just one example of how it can help contemporary Indigenous groups. However as stated by Mdhluli, T.D., et al. (2021), the use of technology especially digitalization in preserving Indigenous knowledge (IK) has some challenges such as fears of issues related to copyright, intellectual property rights, and exploitation by external entities. There are also concerns about misinformation or misrepresentation of Indigenous knowledge which can potentially harm the authenticity and integrity of the Indigenous information. Regardless of the challenges and concerns digital libraries provide a solution, however, proper caution has to be exercised to avoid the pitfalls of ethics thereby guaranteeing successful preservation, management, and sharing of Indigenous Knowledge to future generations. Furthermore, cultural and natural heritages are referred to as treasures, and they are unique tourist destinations for every country. But turning this legacy - and this liability - into sustainable tourism development that will also safeguard the cultural heritage value for the future is much less straightforward, Pandey, R. et al. (2020). Defined and rooted in the preservation of cultural heritage, sustainable development means that we meet the needs of the current society without hindering the capacity of future generations to develop. Both community participation and public education, along with technological development are important in ensuring the durable preservation and display of cultural heritage in the light of environmental and societal change, Hoang, K. (2021).

As reported by Liew, C. et al (2021) With technology changing and how back in the day you necessarily be physically present in the place to understand better the Indigenous culture of a place but now that it's all been documented and moved to an online platform where it can be stored and accessed at all times, that's the part that makes these

digitalized collections most useful and the youth of today which very much inhabits this technological and digital world better resonates with digitalized information. For example, the Lha'hutit'en Digital Storytelling by Freeman, S. (2020) workshops with Elders and youth are just one example of bringing together people to restore what Indigenous elders hold collectively, ie: knowledge and insight into the culture. Sharing and learning from each other can create the long-term Intergenerational relationships that are so important in safeguarding cultural heritage. Co-convened by community and academic partners, this Learning Centre case illustrates the implications of intergenerational memory for protecting Indigenous legacies in the digital age. Hence, this research paper will explore the development and implementation of “KnowKalinga.com” a collaborative online system devised to promote cultural engagement.

Kalinga is one of the provinces with a rich cultural legacy that includes many traditions, rituals, arts folklore, and indigenous practices. However, as time goes on, it becomes evident that it runs the risk of losing this priceless cultural legacy. Oral traditions and cultures of our ancestors are at risk of being lost, so mobilizing the power of technology and putting it in the hands of young people is one way that policymakers are taking into consideration. Hence, efforts are being made by different organizations to promote and preserve cultural heritage, because of that, the integration of cultural heritage into students' curriculum is one of the measures that CHED-CAR has done. However, the availability of learning resources and materials is limited and some are subject to information checking. As a creative response to this issue, "KnowKalinga" is being developed, fusing technology and teamwork to provide a dynamic platform for promoting cultural preservation, education, and engagement among teachers, students, researchers, and Indigenous culture enthusiasts. Based on Suaib, N. et al. (2020) study found from the literature, most of the preservation efforts (including usage of computer graphics and media) reported were mostly centered around tangible cultural heritage. Since computer graphics and media technology has so much to offer, there are endless possibilities for cultural preservation efforts digitally both for tangible and intangible cultural heritage preservation.

Specifically, the overall goal of KnowKalinga is to develop an all-inclusive digital ecosystem for CHRC that integrates all the stakeholders in the endeavor to salvage and disseminate the cultural heritage of Kalinga province. KnowKalinga is envisaged as a single-stop shop where relevant information can be accessed regarding the rich cultural heritage of the people of Kalinga. The platform provides learning materials to educational institutions that can be embedded in the respective syllabi as content to be used in teaching to ensure it is a perfect source of information for all the activities that take place in schools. The system also avails relevant information to students to facilitate a comprehensive understanding of the content while ensuring they have the right information to access the learning model that promotes an in-depth understanding of the rich culture and tradition of the natives. Apart from school use, the platform also provides researchers with a prestigious forum to disseminate and publish their findings in the area

without fears of contradiction since it is supervised by CHRC. They can also access other academic materials on the platform to support their research projects. Tourists and cultural enthusiasts also access the platform to gain insight into the culture, tradition, and practice of the Kalinga people and beyond to achieve a complete understanding of the rich culture of the province as the information also helps boost safe tourism. The internet age when one needs to browse many websites to obtain information that may be inaccurate and lack authenticity is gone; with the supervision of CHRC, the system acts as a source of the truth and trusted information about Kalinga Province. Moreover, the Kalinga Province is divided into several tribes and sub-tribes all with unique practices and traditions within their culture. Therefore, the information-sharing capability of the platform where the users can contribute their experiences with each cultural practice to support each tale in the platform is the rock-bottom focus of the platform. The sharing triggers debates, generates useful information, and elicits sober views that may be used for research projects. The platform design promotes usage that allows users to upload their views about Kalinga culture and their research results.

Research Questions

The research paper entitled, "KnowKalinga: A Knowledge Management System for CHRC", primarily addresses the design, implementation, and evaluation of KnowKalinga as a knowledge management system for CHRC. The focus includes its development, implementation, and evaluation as a comprehensive solution for protecting, promoting, and sharing Kalinga's cultural heritage through learning materials, consolidated research repositories, user engagement features for cultural mapping as well as local crafter and artist promotion; it also investigates its usability through System Usability Scale (SUS), to measure the system's user-friendliness. The system celebrates the diversity of viewpoints and experiences, enhancing collective understanding of Kalinga's cultural heritage and its development and implementation is better discussed by answering the following research questions:

1. What are the challenges the Cultural Heritage Research Center of SLCB experienced in realizing its mission of preserving and promoting Kalinga’s cultural heritage?
2. What innovative technological solutions will help support the Cultural Heritage Research Center of SLCB in preserving, promoting, and sharing Kalinga's cultural heritage in this digital age?
3. What are the features of the system that can be integrated to answer the challenges the Cultural Heritage Research Center of SLCB experienced?
4. What is the level of user acceptability of the developed system, what challenges do users encounter, and recommendations for the proposed IT solutions improvement and sustainability?

However, it is also essential to recognize certain limitations within this research. The research's primary focus is the design and creation of KnowKalinga for CHRC

exclusively and excludes actual content generation such as research papers, learning materials, and cultural mapping. The research also focused on the promotion of local arts and crafts of the Kalinga people but online shops are not included in the system. Nevertheless, the research provides invaluable insights into the hands-on establishment of a knowledge management system dedicated to cultural heritage preservation.

METHODOLOGY

Agile scrum methodology is the combination of the agile philosophy and the scrum framework. Agile means “incremental, allowing teams to develop projects in small increments. Scrum is one of the many types of agile methodology, known for breaking projects down into sizable chunks called “sprints.” Agile scrum methodology is good for businesses that must finish specific projects quickly [5]. The Scrum methodology helps the researchers emphasize iterative development, collaboration, and flexibility for designing and implementing the proposed IT solution, hence the steps that the researchers undertake are listed below:

- Product Backlog Creation: Researchers collaborated with stakeholders to generate a list of all features, functionalities and requirements necessary for the KnowKalinga system to be complete. This list, known as Product Backlog serves as a comprehensive outline of its goals.
- Sprint Planning: Researchers in this phase selected items from their product backlog that they plan to work on during an upcoming sprint (a time-boxed development cycle, usually lasting 2-4 weeks). As part of this planning session, the team decided on the scope, goals, and tasks that must be achieved within that sprint.
- Sprint Execution: Researchers began implementing tasks specified in their sprint plan. Daily stand-up meetings were held to review progress and challenges, and plan the next steps. Working as part of a collaborative environment, various roles such as frontend development, content gathering, testing, and design were filled by researchers.
- Daily Stand-Up Meetings: Researchers convened briefly every week for short updates. They reviewed what had been accomplished over the previous week, discussed any plans they had for that particular week, and whether any impediments or challenges required addressing.
- Sprint Review: After each sprint, researchers presented their work to stakeholders - including CHRC Office staff - for feedback and validation of any features created during it. The CHRC Head, Sir. Danao evaluated the versions of the project and gave constructive criticism and recommendations for the enhancement of the project. Based on the feedback received, adjustments were then implemented

based on user comments. The project conducted a total of three sprints before the product was accepted by the CHRC Head and recommended for implementation.

- Sprint Retrospective: Following each sprint review meeting, the researchers held a retrospective meeting to analyze what went well and where improvements can be made in their development process. This enabled them to continually optimize and enhance their work methods.

In all of these steps, the researchers exercised collaboration, adaptability, and responsiveness. They had been communicating regularly with their stakeholders and soliciting their input at all times to approve that KnowKalinga was wholly created out of their specifications and anticipation. Agile Scrum gave the researchers the power to immediately and intelligently respond, make adjustments, mitigate any possible challenges, and develop a system that shall adequately educate others about the promotion and conservation of Kalinga. The tools chosen by KnowKalinga researchers to build the system are a selected set that gives them more control and the ability to customize. Consequently, their preferred Relational Database Management System is MariaDB. This RDBMS is the repository of all the user accounts, learning materials, and everyone's data, the research and the findings, the interactions on the forums, and other website-related data – ensures the integrity of the data and the data organization as well as a swift and efficient retrieval. They also selected the web Host service, Hostinger, which has been very secure and reliable for hosting the infrastructure of the KnowKalinga system. The robust system of deployment, scaling, and performance has left the researchers with only one thing to focus on, the experience to provide to the users. This is an important choice the researchers made when developing the Knowledge Management System based on the fact that the system's security and reliability in terms of content management depended on the platform. The choice was in two folds; utility which is more secure given its popularity and implications, and simplicity for easy utilization by information content creators and managers at CHRC.

RESULTS

To evaluate usability, the researchers employed the System Usability Scale (SUS), a validated tool containing 10 questions with response options ranging from "strongly agree" to "strongly disagree." Table 1 below displays this data that offers insight into user-friendliness and the effectiveness of systems.

KnowKalinga SUS Survey Results							
Question	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree	Odd Sum	Even Sum
1	13	8	0	0	0	21	8
2	0	7	7	11	5	14	16
3	12	7	1	2	1	21	8
4	0	2	3	12	2	5	14
5	10	7	1	0	0	18	8
6	0	7	4	11	2	11	13
7	10	7	1	0	0	18	8
8	0	2	3	10	3	5	13
9	10	7	2	0	0	19	9
10	0	6	3	4	9	9	13

Table 1. SUS survey results

The SUS survey was conducted by asking a number of respondents about how they feel when using the system. Each participant should choose between “Strongly Disagree” and “Strongly Agree” at 10 statements/questions. The researcher counted how many are the answers for the odd-numbered question and how many for evens. For example, the results show that the score is 49 from odd ones and 72 from even, on the score sheet the odd score will be subtracted from the even score (72-49= 23) and that would be 23. The total SUS Score was found by multiplying each persons' score by 2.5 and placing it all together. In this case, the result was about 57.5. The explanation value of these results was implemented according to guidelines and lies between “Good” and “Excellent”. It means that the majority of people would easily use the system, but opportunities for improvement still exists. Generally, the survey explains that people like to use the KnowKalinga: Knowledge Management System. At the same time, it allows the researchers to get some valuable feedback from target audiences to improve the current system and fix all the issues respondents could have experienced during their interaction with this system.

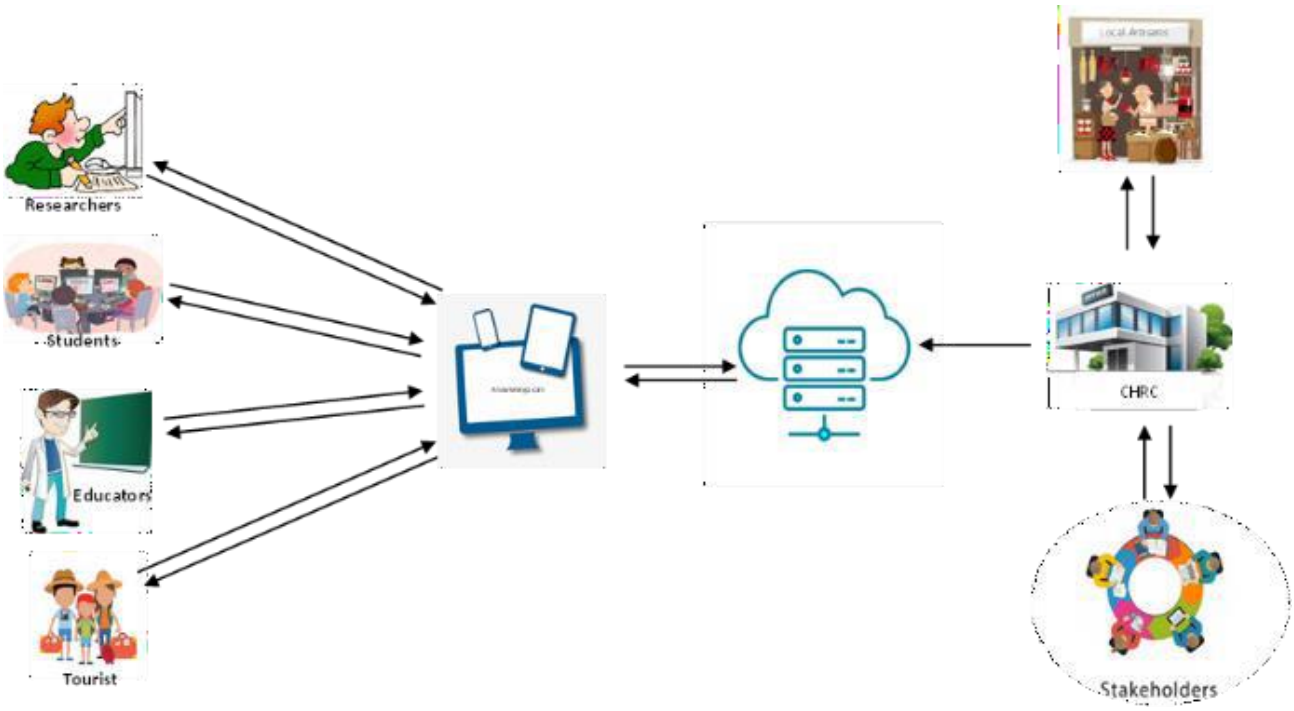
DISCUSSION

This section provides the main findings of the research which address the impediments faced by the Cultural Heritage Research Center in preserving and promoting Kalinga’s heritage. Moreover, this section will also provide the technology innovation solutions in the KnowKalinga: Knowledge Management system implemented to improve the identified features and their usability rating for recommendations to improve and sustain the system.

The following research determined some of the problems that the SLCB's Cultural Heritage Research Center had, making missions to protect as well as foster the cultural heritage of Kalinga difficult. Among other issues was the manual consolidation of researchers' works, which made the management of knowledge inefficient and slow. Secondly, the shared access to cultural resources was the biggest problem that CHRC faced. Since CHRC was not able to share its collection of the overall research, and educational materials on the diverse cultural aspects of Kalinga culture such as traditional arts, rituals, local cultures, and locale knowledge, the institution was not able to be a Kalinga cultural heritage repository and hub; lastly, both teachers and student were facing difficulty in finding correct and relevant cultural heritage information on the website. Hence, the available information contained inaccurate and incomplete information from unreliable websites.

In addition to this, the CHRC faced challenges in engaging all stakeholders including putting their ideas together in an inclusive manner. If there was a provided platform to facilitate knowledge sharing and cultural preservation amongst students, educators, researchers, indigenous culture enthusiasts, tourists, and a community; collaboration research would be highly effective and enhance learning from the activities.

To address the challenges presented by CHRC, this study proposed innovative technological solutions that promote the preservation, promotion, and sharing of Kalinga's cultural heritage in digital form. The researchers proposed a Knowledge Management System for CHRC "KnowKalinga", which is an online system that serves as the Kalinga Cultural Heritage research and knowledge repository utilizing WordPress as a Content Management Tool which includes the following architecture and features:



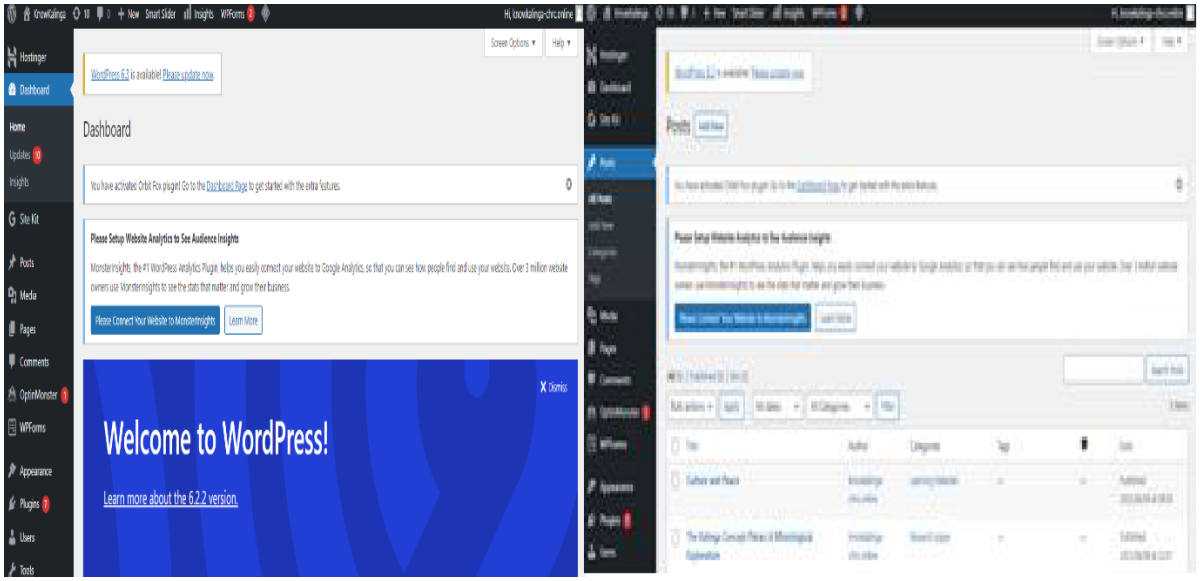


Figure 2. System Architectural Diagram

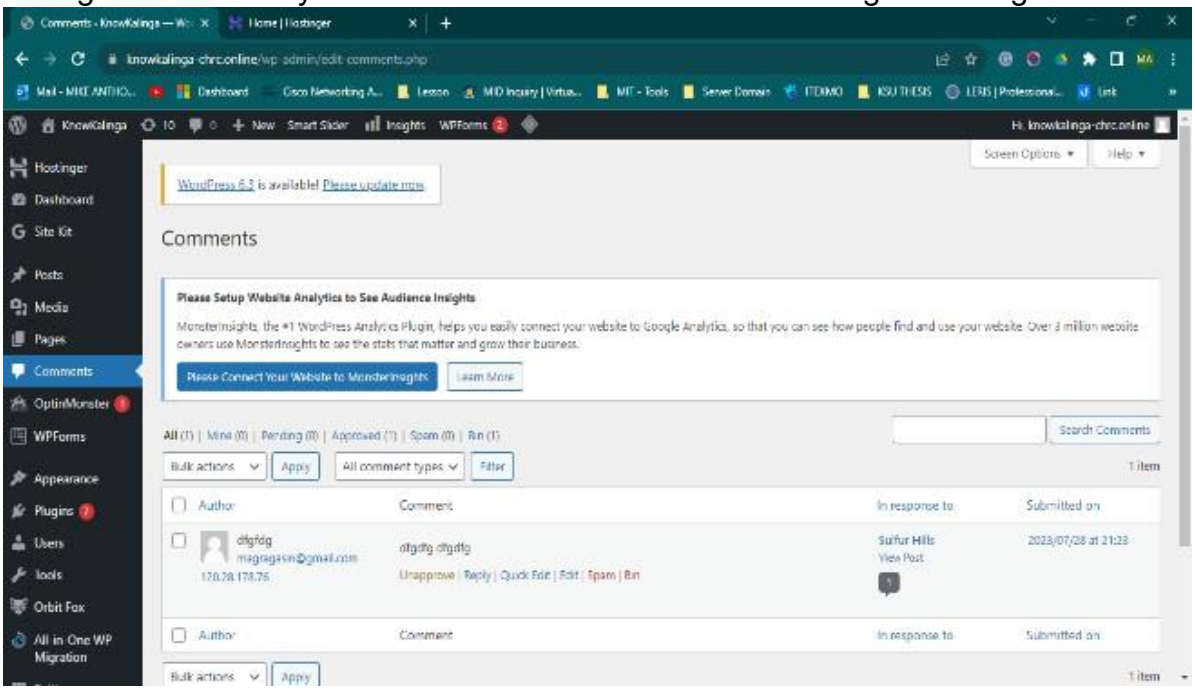


KnowKalinga system This reengineered system, based on an enhanced client-server architecture and a responsive and adaptable web application interface that can be accessed across laptops, desktops, smartphones, and tablets via any web browser, is easily accessible online for enhanced user convenience. The Cultural Heritage Research Center is at the heart of this system, acting as its central cloud infrastructure provider and administrator. CHRC plays an essential role in reviewing and approving research, learning materials, and content submitted and/or approved by stakeholders ensuring authenticity and quality before uploading to the system.

The CHRC Office retains its role as server manager, rationalizing the tracking of official records and the reviewing of data and content flow while also managing the advertisements local artisans upload onto the system. The client-server architecture promoted a smooth user experience in terms of viewing and providing feedback to other users and maintaining high-quality content through the CHRC Office's extensive checks

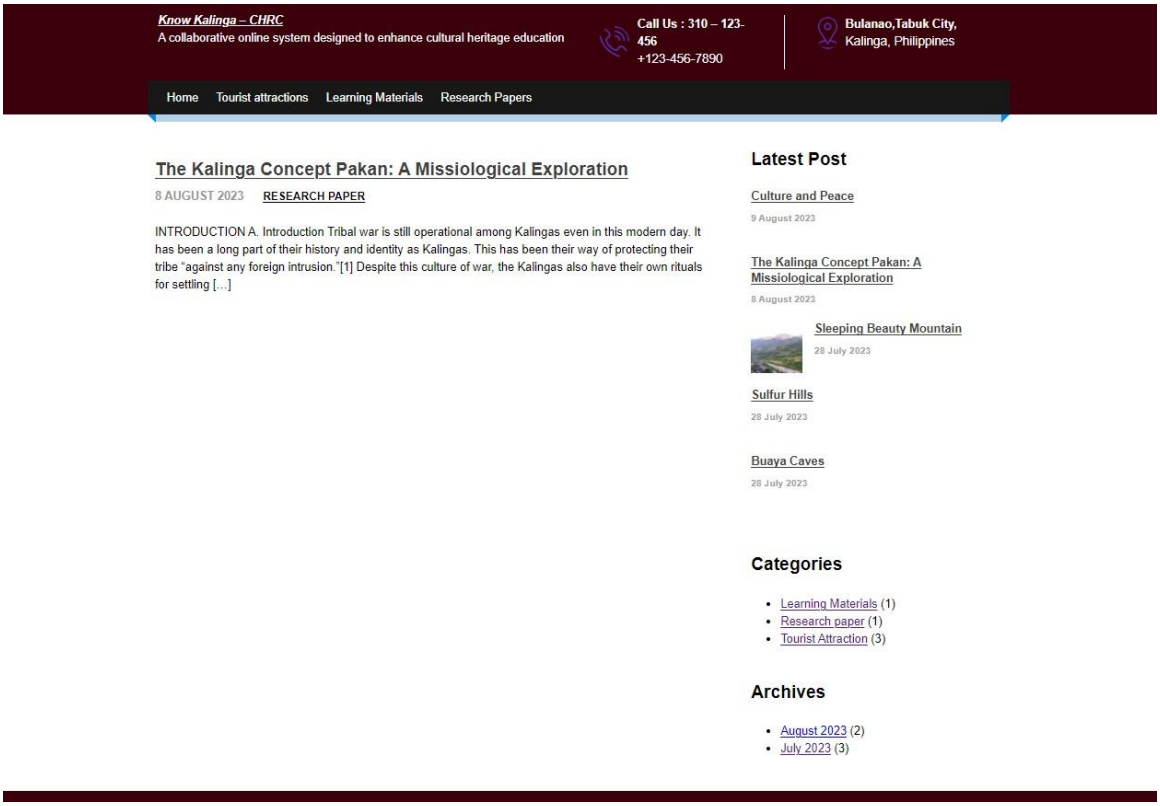
Screenshot 1 & 2. Administrator Dashboard and Post Management Board

The Admin Dashboard is the central control hub, an interface that empowers the admin to create, curate, and manage content for the cultural heritage project in Kalinga. This is an intuitive interface to make the work of uploading materials faster and easier, enabling them to readily access relevant resources about Kalinga's heritage.

Screenshot 3. Administrator Comment Management Board

Further, Administrators play a vital role in maintaining Kalinga's cultural heritage while providing users with genuine insights and authentic feedback in the Admin Dashboard. By fact-checking and filtering feedback and comments submitted by users,

administrators ensure accurate and reliable information dissemination throughout the system.

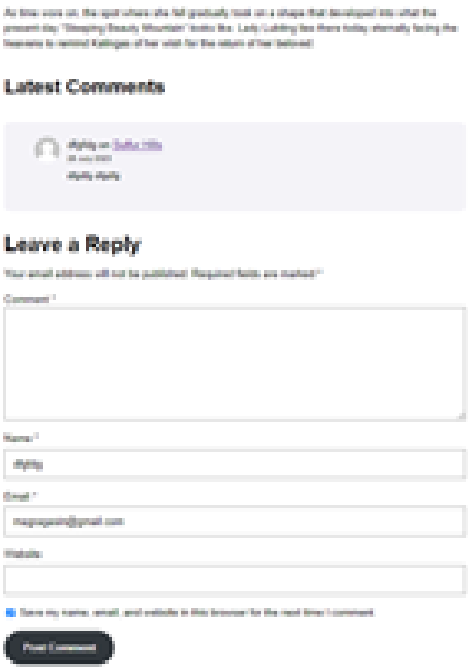


Screenshot 4. System Visitors Board

Meanwhile, Visitors Dashboard provides a vibrant slide show picture illustrating landscapes of different parts of Kalinga Province and exposes the interests and/or attractions of the 8 municipalities composing Kalinga on the lower portion of its page. In its screen front view, this lay-out welcomes visitors and informs them about the cultural richness and historical landmarks of the vibrant province.

The Learning Materials Dashboard is an extensive library of educational resources on Kalinga Cultural Heritage. To make these learning materials easily available to students, educators, researchers, and enthusiasts each item has been thoroughly cataloged with titles and authors. Users can engage with a range of subjects to deepen their understanding of Kalinga's vibrant legacy from traditional arts, rituals, indigenous practices, and more.

Screenshot 5. Learning Materials Dashboard



Screenshot 6. Research Papers Dashboards

The preceding page contains a comprehensive list of research compiled by the CHRC office. It reveals much information about the valuable cultural heritage of Kalinga. As a repository and sharing platform, the research papers not only keep much-needed records but also shows various perspectives: this way, the system creates an environment wherein other researchers might be inspired or learn from one another and be able to write a more comprehensive work on the same topic in the future. Hence it serves its primary purpose for which the CHRC office intended, and it also fosters exchange and innovation of knowledge within academic communities.

Screenshot 7. Tourist Spots Dashboard

The last section is a complete list of every tourist destination found in Kalinga Province. When the user clicks on a particular destination, he or she is connected to a more accessible summary explaining the importance, history, fascinating stories, and sub-specifics such as drop-off points, tour guide costs if one wants to use one, and more. Furthermore, the researchers have placed coordinates that can be clicked, and locations are quickly accessible by any user as it can quickly use Google Maps for each direction that goes directly to the tourist's point they are interested.

Screenshot 8. Visitors Comment Section

Being a land of different tribes and sub-tribes, it is clear that different interpretations of traditions practices and customs exist. Through the Visitors Comment Section provided in each uploaded content in the system, site users are enabled to post meaningful comments, encouraging users to share their thoughts, ideas, and opinions to create an ongoing debate around the cultural heritage of Kalinga. This feature becomes particularly vital as a virtual space for knowledge-sharing among community members; by providing this forum for the collaborative exchange of insights among them all it fosters a greater appreciation of Kalinga's rich cultural tapestry.

Conclusions

The research goal is to create a KnowKalinga Knowledge Management System as an attempt to protect, promote, and share Kalinga Cultural Heritage. The main challenge of Cultural Heritage Research Center (CHRC) is not having a centralized repository and sharing platform for the consolidation of the data and research they have accumulated in the office. Hence, to answer this the researchers develop a system that is integrated with features such as a centralized repository of well-curated learning materials and research of Cultural Heritage Research Center (CHRC), interactive culture-mapping for its users, and promotion of local artists and crafts. The use of WordPress in the development of the system has allowed easy editing and customization of the content and its client-server design assured smooth interactions and distribution of materials. Testing using the System Usability Scale user study reveals that the system excelled in its usability where services can be easily accessed and used by the various segments of users.

The KnowKalinga Knowledge Management System not only fills the knowledge gap for educators, students, researchers, tourists, and culture enthusiasts but also helps CHRC to achieve its mission of recognizing the cultural heritage of Kalinga and passing it on to the next generations. Positive responses to the survey suggest that this system has the potential to be used for educational purposes, appreciating cultures, and collaborations. KnowKalinga is an example of integrating technology and culture by assisting the understanding and promotion of Kalinga's diverse history for the next generations and users' participation and content improvement. It is expected to be beneficial through the participation of users and the improvement of content.

Recommendations

Considering the findings of the study, the researchers proposed the following recommendations: a.) Preserve the cultural artifacts, documents, and oral tradition in a digital format using modern technology. This will allow the artifacts to be properly archived and accessed long-term by both the current and the future generations. b.) Future researchers need to conduct more extensive and inclusive testing of the proposed method. Having a higher confidence level in the results will ensure that the usability of the proposed method tested is accurate. c.) Future research must focus on the better protection of the data records and optimize the process.

Compliance with Ethical Standards

Considering the findings of the study, the researchers proposed the following recommendations: a.) Preserve the cultural artifacts, documents, and oral tradition in a digital format using modern technology. This will allow the artifacts to be properly archived and accessed long-term by both the current and the future generations. b.) Future researchers need to conduct more extensive and inclusive testing of the proposed method. Having a higher confidence level in the results will ensure that the usability of the proposed method tested is accurate. c.) Future research must focus on the better protection of the data records and optimize the process.

Acknowledgments

The Researchers would like to thank the Cultural Heritage Research Center – St. Louis College of Bulanao for the support and assistance extended during the conduct of the study. Also, to the educators, researchers, and culture enthusiasts who participated during interviews and surveys, thank you for sharing additional knowledge that broadened the researcher's knowledge about the cultural heritage of Kalinga. Most importantly, the researchers are grateful to their mentors, Ma'am Anna Rhodora Quitaleg and Ma'am Melinda Beninsig for the pieces of advice, guidance, and encouragement that helped improve the methodology used and the quality of the result of this study.

LEVEL OF EFFECTIVENESS OF THE COAST GUARD DAMAGE CONTROLMAN RATING COURSE AND TRAINEE ONBOARD PERFORMANCE TOWARD PROGRAM ENHANCEMENT

CG CDR Julio S Colarina III

Graduate School Department, Philippine Merchant Marine Academy, Manila, Philippines

https://doi.org/10.5281/zenodo.12218524

ABSTRACT

The study employed a quantitative descriptive approach to evaluate the effectiveness of the Damage Controlman Rating Course (DCRC) and its impact on trainee onboard Performance. A sample size of 150 trainees was chosen to ensure statistical power and precision, to detect meaningful differences or trends in the data. The methodology included surveys and performance assessments to gather comprehensive data on trainees' experiences and outcomes. The analysis process involved statistical techniques to identify significant patterns and relationships. Findings revealed a pressing need for improvements in hands-on experience with firefighting equipment and room simulations for practical exercises. Respondents expressed dissatisfaction with outdated technology and poorly maintained equipment in training facilities, underscoring the necessity for significant upgrades. The study also identified a significant positive relationship between the course's effectiveness and trainees' Performance in managing shipboard emergencies, highlighting the critical importance of clear course objectives, comprehensive content, proficient instructors, and high-quality materials and facilities. In conclusion, while the Damage Controlman Rating Course demonstrates effectiveness in several key areas, there is considerable room for improvement, particularly in upgrading training facilities and equipment. Recommendations include prioritizing comprehensive course enhancements, tailoring training to address variations in effectiveness, implementing continuous evaluation and feedback mechanisms, and fostering a culture of constant learning and improvement within the Coast Guard community. These recommendations aim to enhance the course's effectiveness further and ensure participants are well-prepared to handle shipboard emergencies effectively.

Keywords: *Damage Controlman Rating Course (DCRC), Trainee onboard performance, Course objectives, Course Contents, Instructor Capabilities, and Training Materials and Facilities.*

INTRODUCTION

The training and preparedness of Coast Guard personnel are critical for ensuring maritime safety and operational efficiency. Among the various training programs, the Coast Guard Damage Controlman Rating Course (DCRC) stands out as a vital component. This course is designed to equip Coast Guard members with the necessary skills and knowledge to perform damage control duties effectively. Its impact is directly observable in trainees' performance once onboard and undertaking real-world missions. The course's effectiveness not only influences individual Performance but also contributes significantly to the overall operational efficiency and safety of Coast Guard missions.

The Damage Controlman Rating Course encompasses a comprehensive curriculum that includes both theoretical and practical elements. Trainees are prepared to handle emergencies such as fire outbreaks and structural damages in harsh maritime environments. The evolving nature of marine threats and operational challenges necessitates continuously assessing and enhancing this course. Safety concerns are prevalent in damage control procedures on Coast Guard vessels, necessitating an examination of current practices to identify potential hazards and propose improvements to enhance overall crew and ship safety.

The importance of the DCR Course in Coast Guard personnel training is well-documented. Jackson (2018), Fernandes and Ribeiro (2017), Guard (2019), and Carmassi et al. (2020) have all highlighted their critical role. The course focuses on leadership, communication, teamwork, equipment maintenance, ship stability, chemical, biological, and radiological defence, and hazardous material management. It enhances situational awareness among sailors, enabling them to identify hazards, assess damage severity, and make informed decisions during crises. The course also emphasizes CBR defence and hazardous material management, ensuring trainees are proficient in these critical areas. Overall, the DCR Course is crucial for Coast Guard personnel to handle emergencies effectively and safeguard vessels and crew members.

Evaluating the training effectiveness of the Damage Controlman Rating Course is essential. It involves assessing whether the course adequately prepares individuals for real-world damage control situations and identifying areas for refinement better to meet the needs of trainees and operational demands. Additionally, the operational efficiency of damage control measures is vital, as streamlining and optimizing procedures ensures that the response to damage incidents is swift, well-coordinated, and minimally disruptive to overall Coast Guard operations.

Several studies have highlighted the importance of effective training programs in maritime and military contexts. For example, Alberto (2019) emphasized the necessity of experienced leadership in maintaining high operational standards. Similarly,

Cucharo (2022) found a correlation between age, experience, and professional advancement, underscoring the importance of continuous training and experience in maintaining operational readiness. These findings highlight the significance of experience and constant training in high-stakes environments like the Coast Guard.

Damage factors in Coast Guard vessels provide crucial insights into the multifaceted nature of challenges faced in the maritime industry and the pivotal role of the Coast Guard Damage Controlman Rating Course in addressing them. Romulo et al. (2019) explore damage factors such as wear and tear and corrosion, highlighting the importance of proactive measures taught in the course. Tolentino (2019) emphasizes the critical role of safety protocol adherence and ongoing training, while Silo (2019) underscores the financial implications of damage and the importance of preventive maintenance strategies. Basas (2019) highlights the impact of extreme weather conditions, advocating for proactive measures and emergency response plans. Garcia (2019) stresses the importance of advanced maritime technologies and strict regulations to enhance situational awareness and safety. Dimayacyac (2017) underscores the significance of regular equipment inspections and timely repairs to prevent damage.

David (2018) emphasizes the necessity of effective training programs for cargo handling, while Guttierez (2019) explores the influence of vessel age and condition on potential damage. Noble et al. (2019) highlight challenges related to insufficient maintenance budgets and limited resources, suggesting the need for innovative solutions. Mendoza et al. (2017) and Igliane et al. (2018) offer insights into preventive measures such as effective coatings and operational conditions, respectively. Alberto (2019) discusses the implications of fatigue and stress on structural integrity, advocating for predictive models and regular inspections. Natividad et al. (2016) and Sumulong et al. (2017) focus on human factors and technological advancements, respectively, while Agudo et al. (2018) address environmental impact and response measures. Together, these studies emphasize the interconnectedness between real-world challenges and the course’s effectiveness, advocating for ongoing enhancements to ensure optimal trainee onboard performance and safeguard the integrity and safety of Coast Guard vessels.

However, there needs to be more literature regarding specific evaluations of the Damage Controlman Rating Course within the Coast Guard. Most existing research focuses on broader training and preparedness aspects but needs more detailed assessments of individual courses and their direct impact on operational Performance. This gap highlights the need for studies that provide a comprehensive evaluation of specialized training programs like the Damage Controlman Rating Course.

The present study aims to determine the effectiveness of the Coast Guard Damage Controlman Rating Course and its direct impact on trainees' onboard Performance. This analysis seeks to identify strategies for course enhancement, ensuring that the Coast Guard continues to excel in its vital role in maritime safety and security. By examining practical competencies in active-duty scenarios, the study will explore how the skills and knowledge imparted during training translate into real-world Performance. Additionally, it will assess the course's focus on critical thinking and problem-solving abilities, which are essential for handling unpredictable and high-pressure situations at sea.

This ongoing evaluation and improvement process is crucial in maintaining high training and operational readiness standards within the Coast Guard. The feedback and Performance of trainees onboard play a pivotal role in this enhancement process, providing real-world insights into the applicability and sufficiency of the training provided. The study will also emphasize the importance of constructive feedback from trainees and instructors, coupled with a systematic evaluation of onboard performance metrics, to identify areas for improvement in the course structure and content.

Thus, the effectiveness of the Coast Guard Damage Controlman Rating Course is critical for ensuring that Coast Guard personnel are well-prepared to handle emergencies and maintain operational efficiency. This study's findings provide valuable insights into the course's impact on trainees' Performance and highlight areas for improvement, ultimately contributing to enhanced maritime safety and security.

Research Questions

This study evaluated the level of effectiveness of the Coast Guard Damage Controlman Rating Course. It assessed the Performance of trainees onboard in applying the knowledge and skills learned during their training, leading to a proposed Enhancement Program. Specifically, this study sought to answer the following questions:

1. What is the level of effectiveness of the Damage Controlman Rating Course in terms of?
    - 1.1 Course Objectives
    - 1.2 Course Contents
    - 1.3 Instructor Capabilities
    - 1.4 Materials and Facilities
2. How do the Trainees perform in controlling the damage arising from shipboard emergencies?
3. Is there a significant relationship between the level of effectiveness of the Damage Controlman Rating Course and the trainees' Performance in controlling damage arising from shipboard emergencies?
4. Based on the findings, what Enhancement Program can be proposed to ensure that trainees are well-prepared and competent in carrying out damage control duties?

METHODOLOGY

The study evaluated the effectiveness of the Damage Controlman Rating Course (DCRC) and its impact on trainee onboard Performance within the Philippine Coast Guard (PCG). A total of 150 graduates were selected using stratified random sampling, dividing the population into subgroups based on their assigned vessels. The research used a test questionnaire and a survey questionnaire to assess the course's effectiveness and trainees' Performance in handling emergencies. The survey questionnaire assessed Course Objectives, Course Content, Instructor Capabilities, and Materials and Facilities, while the test questionnaire evaluated trainees' knowledge, skills, and abilities in handling emergencies. The results were presented to propose a Course Enhancement Program. A 5-point Likert scale was used to

determine the course's effectiveness across various aspects, and Pearson-r Correlation and Coefficient were used to test the significant relationship between the course's effectiveness and trainees' Performance in controlling damage. However, the study's scope was limited to evaluating the course's effectiveness and its impact on trainee onboard Performance, with limitations including self-reported data and the specific context of the Philippine Coast Guard.

RESULTS

Table 1

Level of Effectiveness of the Damage Controlman Rating Course in terms of Course

Indicators	WAM	VI
1. The course effectively provided me with the skills to identify different leadership qualities and identify cases of hazing and bullying within the Coast Guard community.	4.68	*EE*
2. The Damage Controlman Rating Course effectively emphasized the significance of adhering to shipboard regulations to uphold discipline and order within the Coast Guard vessel.	4.76	*EE*
3. The Damage Controlman Rating Course provides an understanding of authority and responsibility to enhance my decision-making capabilities.	4.59	*EE*
4. Identify various methods used in ship compartmentation and entering closed compartments, including a comprehensive understanding of Material Condition of Readiness symbols and markings.	4.18	*EE*
5. The course provided in-depth knowledge of the ship's piping system, including markings and colour coding, ensuring proficiency in system identification.	4.59	*EE*
6. Identify different types of valves and filters, along with their purposes, maintenance, and emergency repair procedures.	4.50	*EE*
7. The symbols used for valves and piping systems help in interpreting and acting upon relevant information.	4.76	*EE*
8. The course provided instructions on how to identify various kinds of damage on the ship and implement methods to fix different types of damage.	4.76	*EE*
9. Identify various methods used in ship compartmentation and entering closed compartments, including a comprehensive understanding of Material Condition of Readiness symbols and markings.	4.76	*EE*
10. Ways to preserve and ensure watertight integrity to address challenges related to ship integrity.	4.76	*EE*
Composite Mean	4.63	*EE*

Objectives

Legend: *4.21-5.00 Extremely Effective (EE), 3.41-4.20 Very Effective (VE), 2.61-3.40 Moderately Effective (ME), 1.81-2.60 Slightly Effective (SE), 1.00.1.80 Not Effective at All (NEA)*

Table 1 shows the Level of Effectiveness of the Damage Controlman Rating Course in terms of Course Indicator. Key findings reveal that indicator 2 achieved the highest mean score of 4.76, rated as Extremely Effective (EE). These objectives include emphasizing the significance of adhering to shipboard regulations to uphold discipline and order within the Coast Guard vessel, using symbols for valves and piping systems to help interpret and act upon relevant information, providing instructions on how to identify and fix various kinds of ship damage, understanding ship compartmentation

and entering closed compartments including Material Condition of Readiness symbols and markings, and ways to preserve and ensure watertight integrity to address challenges related to ship integrity.

The objective with the lowest mean score of 4.18, while still rated as Extremely Effective (EE), is identifying various methods used in ship compartmentation and entering closed compartments, including a comprehensive understanding of Material Condition of Readiness symbols and markings.

The overall composite mean for the course objectives is 4.63, indicating that the Damage Controlman Rating Course is rated as Extremely Effective (EE) in achieving its goals.

The Damage Controlman Rating Course has been evaluated to be highly effective in meeting its objectives, with all indicators falling within the highest category of effectiveness. The highest-rated objectives, each with a mean score of 4.76, reflect the course's strong emphasis on practical and critical aspects of shipboard operations and damage control. Specifically, the course excels in emphasizing the importance of shipboard regulations for maintaining discipline and order, providing a robust understanding of the symbols used for valves and piping systems, offering comprehensive instructions on identifying and fixing various kinds of ship damage, ensuring that participants understand ship compartmentation and Material Condition of Readiness symbols, and teaching methods to preserve watertight integrity, crucial for maintaining the ship's structural integrity and safety.

The objective with the lowest mean score of 4.18, while still rated as highly effective, suggests that there is slight room for improvement in teaching the methods used in ship compartmentation and entering closed compartments. This could involve enhancing the practical components or providing more detailed examples and scenarios to reinforce this knowledge.

Overall, the high composite mean of 4.63 demonstrates that the Damage Controlman Rating Course effectively equips Coast Guard personnel with the necessary skills and knowledge to perform their duties, particularly in areas critical to ship safety and operational efficiency. The diverse and comprehensive curriculum ensures that all relevant aspects of damage control and shipboard operations are covered, leading to well-rounded and capable personnel.

Hence, the composite mean of 4.63 indicates that the Damage Controlman Rating Course is highly effective in achieving its indicator, as evidenced by the consistently high mean scores across most indicators. The course covers a wide range of topics relevant to Coast Guard operations, ensuring that participants gain essential skills and knowledge for their roles. However, there may be slight variations in effectiveness based on the perceived relevance and complexity of individual indicators.

Tolentino (2019) conducted a study to evaluate the effectiveness of leadership training programs in improving participants' awareness and capability to address critical issues such as hazing and bullying within maritime organizations, with a specific focus on the Coast Guard community. The findings revealed that programs concentrating on the identification of leadership qualities and the management of issues like hazing and

bullying were well-received by participants. This positive reception translated into increased awareness and confidence in handling these challenges.

Hence, Tolentino's study provides empirical evidence supporting the effectiveness of leadership training programs in maritime organizations, highlighting their role in fostering an environment where issues like hazing and bullying can be effectively addressed through improved leadership awareness and skills.

Table 2
Level of Effectiveness of the Damage Controlman Rating Course in terms of Course Contents

Indicators	WAM	VI
1. The course provides comprehensive training on damage control techniques and procedures.	4.62	*EE*
2. It offers hands-on experience with firefighting equipment and damage control systems.	4.74	*EE*
3. The course covers emergency response protocols for various types of damage scenarios.	4.62	*EE*
4. It includes simulations and practical exercises to enhance skill development.	4.24	*EE*
5. The course adequately addresses the use of communication systems during emergencies.	4.62	*EE*
6. It provides thorough instructions on damage assessment and reporting procedures.	4.40	*EE*
7. The course content emphasizes the importance of teamwork and coordination in damage control efforts.	4.70	*EE*
8. It offers sufficient guidance on the maintenance and operation of damage control equipment.	4.70	*EE*
9. The course adequately prepares individuals to handle hazardous material incidents.	4.42	*EE*
10. It provides clear guidance on the procedures for containing and controlling flooding on a vessel.	4.62	*EE*
Composite Mean	**4.56**	***EE***

Legend: *4.21-5.00 Extremely Effective (EE), 3.41-4.20 Very Effective (VE), 2.61-3.40 Moderately Effective (ME), 1.81-2.60 Slightly Effective (SE), 1.00.1.80 Not Effective at All (NEA)*

Table 2 shows the Level of Effectiveness of the Damage Controlman Rating Course in terms of Course Contents. The findings revealed that indicator 2 has the highest mean score of 4.74, rated as Extremely Effective (EE), which was achieved by the indicator: "The course offers hands-on experience with firefighting equipment and damage control systems." This highlights the course's strength in providing practical, hands-on experience, ensuring trainees can handle real-life firefighting and damage control scenarios. While indicator 4 has the lowest mean score of 4.24, although still rated as Extremely Effective (EE), it was observed in the indicator: "The course includes simulations and practical exercises to enhance skill development." This suggests a slight need for enhancement in the frequency or complexity of simulations and practical exercises to improve skill development further.

The composite mean for the course contents is 4.56, indicating that the Damage Controlman Rating Course is rated as Extremely Effective (EE) in achieving its course content objectives. The course is highly effective in delivering comprehensive training that covers essential aspects of damage control and emergency response. High-scoring indicators, each with a mean score of 4.70, emphasize the importance of teamwork and coordination in damage control efforts and provide sufficient guidance on the maintenance and operation of damage control equipment. These aspects are crucial as they prepare individuals to work effectively in teams, ensuring coordinated and efficient responses to emergencies while maintaining the readiness and functionality of critical equipment.

The course effectively balances theoretical knowledge with hands-on practice, ensuring that Coast Guard personnel are well-prepared to handle a wide range of emergency scenarios. This comprehensive approach enhances the safety and operational efficiency of their vessels, demonstrating the overall effectiveness of the Damage Controlman Rating Course in delivering a well-rounded and practical education in damage control.

In support, Garcia (2019) supported the findings by finding that participants who received hands-on training demonstrated significantly higher proficiency in damage control techniques compared to those who received only classroom instruction. This was particularly evident in practical assessments related to firefighting, damage assessment, and emergency response protocols. Hence, the findings support the conclusion that the Damage Controlman Rating Course effectively delivers its content, particularly in areas emphasizing practical experience and skill development.

Table 3 shows the Level of Effectiveness of the Damage Controlman Rating Course in terms of Instructor Capabilities. Indicator 1: "The instructor in the Damage Controlman Rating Course exhibited a deep understanding of the subject matter, which contributed to a high level of confidence in their ability to impart crucial knowledge" received the highest mean score of 4.87. This highlights that the instructors' comprehensive knowledge and command over the subject matter are seen as the most valuable aspect of the course, fostering confidence among participants. This deep understanding likely plays a pivotal role in ensuring that trainees are well-prepared and informed, which is critical in high-stakes situations such as damage control.

Indicators 3 and 4: Both indicators, "The instructor demonstrated proficiency in cultivating leadership skills while sensitively addressing issues of hazing and bullying, contributing to a respectful and supportive course atmosphere" and "The instructor's ability to clarify the distinctions between authority and responsibility provides valuable insights into the organizational dynamics within a ship," received the lowest mean scores of 4.55. Despite being rated as "Extremely Effective," these scores suggest that there might be room for further enhancement in these areas, perhaps through more focused training or additional emphasis during the course.

Table 3
Level of Effectiveness of the Damage Controlman Rating Course in terms of Instructor Capabilities

Indicators	WAM	VI
1. The instructor in the Damage Controlman Rating Course exhibited a deep understanding of the subject matter, which contributed to a high level of confidence in their ability to impart crucial knowledge.	4.87	*EE*
2. Instructors effectively created a positive and inclusive learning environment, fostering participant engagement and collaboration.	4.75	*EE*
3. The instructor demonstrated proficiency in cultivating leadership skills while sensitively addressing issues of hazing and bullying, contributing to a respectful and supportive course atmosphere.	4.55	*EE*
4. The instructor's ability to clarify the distinctions between authority and responsibility provides valuable insights into the organizational dynamics within a ship.	4.55	*EE*
5. The instructor shared insights into customs and traditions observed in the Philippine Coast Guard, enriching the course content with cultural relevance.	4.56	*EE*
6. The instructors' explanation of the DC Status Board was clear and facilitated understanding in real-world scenarios.	4.75	*EE*
7. The instructor showcased practical expertise in identifying suitable materials for repair, ensuring a hands-on and applicable learning experience for all participants.	4.75	*EE*
8. The instructor effectively communicated the intricacies of external and internal forces affecting ship stability, enhancing our analytical skills in responding to dynamic situations.	4.75	*EE*
9. The instructor is adept at emphasizing the importance of preserving and ensuring watertight integrity, which is crucial for successful damage control efforts.	4.75	*EE*
10. The instructor's proficiency in explaining ship compartmentation, closed compartment entry, and Material Condition of Readiness symbols provided a solid foundation for participants to navigate these critical aspects confidently.	4.66	*EE*
Composite Mean	***4.69***	***EE***

Legend: *4.21-5.00 Extremely Effective, 3.41-4.20 Very Effective, 2.61-3.40 Moderately Effective, 1.81-2.60 Slightly Effective, 1.00.1.80 Not Effective at All*

The composite mean for the instructor capabilities is 4.69, indicating that overall, the instructors are perceived as highly effective in delivering the course content and fostering a conducive learning environment. This high composite means it reflects the overall satisfaction and approval of the participants with the instructors' Performance across various dimensions of teaching and interaction.

The exemplary aspects of the instructor's capabilities, as well as areas for potential improvement, despite their high ratings. The highest-rated indicator, with a mean score of 4.87, emphasizes the crucial role of instructors' subject matter expertise. This suggests that the depth of knowledge and the ability to convey this knowledge effectively is a cornerstone of the course's success. Participants felt confident in the instructors' ability to provide essential and accurate information, which is vital in damage control, where precise knowledge can significantly impact outcomes.
On the other hand, the lowest-rated indicators, each with a mean score of 4.55, while still rated as "Extremely Effective," indicate that there are areas where instructor capabilities could be further enhanced. These areas include the cultivation of leadership skills and the clarification of organizational dynamics within a ship. The slightly lower scores in these areas suggest that while the instructors are effective,

there may be opportunities to integrate more practical leadership exercises or in-depth discussions on authority and responsibility dynamics.

The Damage Controlman Rating Course is rated as highly effective overall in terms of instructor capabilities, as reflected by the composite mean of 4.69. The findings suggest that the instructors excel in their subject matter expertise and practical teaching methods. However, despite these areas already being rated highly effective, there remains a slight opportunity for improvement in leadership training and the explanation of organizational dynamics. Enhancing these aspects further elevates the course's overall effectiveness, ensuring that trainees are comprehensively prepared for all aspects of damage control.

The findings are supported by literature on the impact of instructor expertise on learning outcomes. Jackson's (2018) study found a strong positive correlation between instructor expertise and learning outcomes in technical training programs. Instructors with a deep understanding of the subject matter led to higher participant engagement, confidence, and knowledge retention. This aligns with the high rating of Indicator 1 in the Damage Controlman Rating Course. The study also highlighted the importance of creating a positive and inclusive learning environment, which contributes to a positive overall experience. The Damage Controlman Rating Course is highly effective overall, with a composite mean of 4.69. However, there is room for improvement in leadership training and understanding of organizational dynamics. Enhancing these aspects could improve the course's effectiveness.

Table 4 shows the Effectiveness of the Damage Controlman Rating Course in terms of Materials and Facilities. Indicator 7: "The course included real-world shipboard materials, which allowed participants to familiarize themselves with the equipment and tools used in their future roles as Damage Controlmen" received the highest mean score of 3.36, categorized as "Moderately Effective" (ME). This indicates that participants found the inclusion of real-world materials particularly beneficial in preparing them for their roles. Familiarity with actual shipboard equipment and tools is crucial for practical skill development and ensuring trainees are ready for real-world applications. Indicator 3: "Training manuals and visual aids are well organized to enhance the overall learning experience of the Damage Controlman Rating Course" had the second-highest mean score of 3.32, also rated as "Moderately Effective" (ME). This suggests that organizing instructional materials facilitates a better learning experience, helping participants understand and retain the course content more effectively.

Indicators 4 and 6: Both indicators, "The facilities used for practical exercises and simulations were equipped with up-to-date technology, ensuring participants had access to realistic scenarios resembling shipboard environments, thus enhancing their learning experience" and "The facilities used for hands-on training in repair and damage control exercises were well-maintained and equipped with the necessary tools," received the lowest mean scores of 1.79, categorized as "Not Effective at All" (NEA). These scores highlight significant concerns regarding the adequacy and condition of the facilities and equipment used for practical training. The need for up-to-date technology and well-maintained facilities suggests a critical area for improvement to enhance the training experience.

Table 4
Level of Effectiveness of the Damage Controlman Rating Course in terms of Materials and Facilities

Indicators	WAM	VI
1. The materials provided during the Damage Controlman Rating Course significantly contributed to a thorough understanding of shipboard damage control principles.	*2.65*	*ME*
2. The Firefighting Training Ground is a specialized facility utilized for hands-on training in firefighting techniques.	*2.65*	*ME*
3. Training manuals and visual aids are well organized to enhance the overall learning experience of the Damage Controlman Rating Course.	*3.32*	*ME*
4. The facilities used for practical exercises and simulations were equipped with up-to-date technology, ensuring participants had access to realistic scenarios resembling shipboard environments, thus enhancing their learning experience.	*1.79*	*NEA*
5. The variety of materials, ranging from instructional guides to interactive multimedia presentations, met the diverse learning styles of participants in the Damage Controlman Rating Course.	*2.70*	*ME*
6. The facilities used for hands-on training in repair and damage control exercises were well-maintained and equipped with the necessary tools.	*1.79*	*NEA*
7. The course included real-world shipboard materials, which allowed participants to familiarize themselves with the equipment and tools used in their future roles as Damage Control.	*3.36*	*ME*
8. The facilities for practical demonstrations, such as firefighting and welding exercises, were appropriately designed to ensure safety.	*2.66*	*ME*
9. The availability of a dedicated DC Status Board and related materials offered practical insights into ship status monitoring.	*2.90*	*ME*
10. The course materials and facilities integrated theoretical knowledge with practical skills.	*3.24*	*ME*
Composite Mean	***2.58***	***SE***

Legend: *4.21-5.00 Extremely Effective, 3.41-4.20 Very Effective, 2.61-3.40 Moderately Effective, 1.81-2.60 Slightly Effective, 1.00.1.80 Not Effective at All*

The composite mean for the materials and facilities is 2.58, indicating that overall, the materials and facilities used in the Damage Controlman Rating Course are perceived as "Slightly Effective" (SE). This relatively low composite mean reflects the participants' dissatisfaction with certain aspects of the course infrastructure, particularly the practical training environments.

The highest-rated indicator, with a mean score of 3.36, emphasizes the importance of including real-world shipboard materials in the course. Familiarity with actual equipment and tools is crucial for participants as it enhances their practical skills and

readiness for real-life scenarios. Additionally, well-organized training manuals and visual aids (mean score 3.32) are also valued by participants, suggesting that clear and structured instructional materials contribute significantly to the learning experience.

On the other hand, the lowest-rated indicators, each with a mean score of 1.79, point to significant issues with the practical training facilities. The outdated technology and poorly maintained facilities for practical exercises are substantial drawbacks that hinder the effectiveness of the training. These deficiencies in the training environment can detract from the overall learning experience, as they need to provide realistic and engaging simulations necessary for practical skill development.

Furthermore, the emphasis on practical, hands-on training in damage control and emergency response within the PCG's training curriculum may place additional demands on materials and facilities. Inadequacies in these areas could be more pronounced due to the intensive nature of practical exercises and simulations, leading to lower effectiveness ratings from participants.

Addressing these challenges may require a review of resource allocation priorities within the PCG's training programs and a concerted effort to invest in upgrading materials and facilities. While collaboration with MHEIs/MTIs can provide valuable supplementary training opportunities, internal resources must also be sufficient to ensure a high standard of training across all aspects of the curriculum. By addressing these weaknesses, the PCG can enhance the overall effectiveness of its training programs and better prepare personnel for their roles in damage control and emergency response situations.

The composite mean score of 2.58 suggests that, while the materials and facilities provided contain some practical elements, there is considerable room for improvement. The "Slightly Effective" rating indicates that the participants feel that the course infrastructure does not fully meet their needs for a comprehensive and practical training experience. Enhancing the facilities and ensuring they are equipped with up-to-date technology could significantly improve the effectiveness of the course.

These findings align with Guttierez (2019), emphasizing the critical role of comprehensive and well-organized learning materials in enhancing training effectiveness. The positive reception of course materials underscores their importance in participant satisfaction and preparedness. However, improvements in training facilities are essential to maximizing the overall effectiveness of the course, as highlighted by White's theory on effective learning, which emphasizes the importance of practical experiences in the learning process.

In conclusion, addressing the identified weaknesses in materials and facilities is crucial to enhancing the overall effectiveness of the Damage Controlman Rating Course. By investing in upgraded facilities and technology, the Philippine Coast Guard can ensure a higher standard of training and prepare personnel for their roles in damage control and emergency response situations.

Table 5

Performance of in Controlling the Damage Arising from Shipboard Emergency

Performance of in Controlling the Damage Arising from Shipboard Emergency	Course Objectives		Course Contents		Instructor Capabilities		Materials and Facilities

Table 5 shows the Performance of Controlling the Damage Arising from Shipboard Emergencies. In Excellent (95% - 94%), Trainees demonstrate excellent to very good performance levels across all aspects of their training program, including course objectives, course contents, instructor capabilities, and materials and facilities. The frequencies and percentages within these categories indicate a strong proficiency among trainees in understanding and managing damage during shipboard emergencies.

While in Good Performance (85%—89 %), a significant portion of trainees achieved a good performance level across all aspects, with frequencies and percentages indicating solid understanding and capability. This suggests that the majority of trainees exhibit competency in controlling damage and responding effectively to emergencies.

On the other hand, in Satisfactory Performance (80% - 84%), some trainees attained a satisfactory performance level, albeit to a lesser extent than the higher categories. While their Performance is acceptable, there may be areas for improvement or refinement in their training to enhance proficiency further.

Moreover, in Basic Performance (75% - 79%), Trainees in this category represent a minimal proportion, indicating rare instances of basic Performance. However, even one instance suggests a need for additional support or remedial training to address any deficiencies in understanding and managing damage during shipboard emergencies.

The overall mean percentage score for trainees' Performance across all aspects is calculated to be 89%, falling within the "Good" performance category. This indicates a solid overall performance level among trainees in controlling damage arising from shipboard emergencies.

Hence, the table presents a detailed assessment of trainees' performance levels across various aspects of their training program, highlighting areas of strength and areas that may require further attention or improvement. This information can be utilized to refine training programs and interventions to meet trainees' needs better and enhance their proficiency in managing shipboard emergencies.

Situational Test Scenarios

Course Objectives

Regarding Course Objectives, this scenario assesses the trainee's ability to manage damage control efforts during a shipboard emergency, specifically a fire outbreak on a neighbouring vessel.

The objectives align with demonstrating proficiency in managing damage control efforts and applying learned techniques and procedures to control damage resulting from emergencies. It also highlights the importance of utilizing available materials and facilities onboard for prompt response.

Furthermore, the scenario evaluates the trainee's understanding of hull inspection and damage assessment procedures following a collision. It aligns with understanding the importance of immediate assessment, containment, and reporting of damage to ensure the vessel's and its occupants' safety. It also emphasizes the application of learned techniques and procedures in assessing and addressing damage resulting from emergencies.

Furthermore, the scenario tests the trainee's leadership abilities during simulated emergency drills. It aligns to exhibit leadership skills in coordinating damage control efforts among the crew during emergency drills. It emphasizes the importance of effective coordination and communication among crew members to ensure a prompt and efficient emergency response.

Meanwhile, in the aftermath of a significant storm, damage was evident to the ship's infrastructure. This scenario assesses the trainee's ability to evaluate and address damage from a significant storm. It aligns with the objectives of demonstrating proficiency in managing damage control efforts during shipboard emergencies and applying learned techniques and procedures to control damage resulting from various emergency scenarios. It emphasizes the importance of immediate assessment, containment, and reporting of damage to ensure the vessel's and its occupants' safety.

On the other hand, during a simulated firefighting exercise, a trainee Damage Controlman notices a shortage of functional fire extinguishers. This scenario evaluates the trainee's ability to adapt and respond effectively without adequate firefighting equipment. It aligns to utilize available materials and facilities onboard to address emergencies promptly and effectively. It emphasizes the importance of resourcefulness and quick thinking in managing emergencies, even when faced with limitations in equipment or resources.

These scenarios provide practical situations where trainees can apply their knowledge and skills to manage shipboard emergencies effectively, aligning with the course objectives of demonstrating proficiency, applying learned techniques, exhibiting leadership skills, understanding the importance of immediate assessment, containment, and reporting, and utilizing available materials and facilities onboard.

Course Contents

The situational tests for the Damage Controlman course are designed to evaluate trainees' ability to apply their knowledge and skills in various emergency scenarios, covering multiple areas of the course content to ensure comprehensive assessment and preparedness for real-world emergencies. One scenario involves a fire outbreak on a neighbouring vessel where trainees must utilize firefighting equipment such as extinguishers and hoses, demonstrate effective communication with the neighbouring boat and their crew, engage in search and rescue operations, and ensure the safety and security of both the vessel and crew during the firefighting operation. This scenario focuses on applying firefighting techniques, use of emergency communication protocols, engagement in search and rescue, and security maintenance during emergencies.

Another scenario involves assessing hull damage after a collision, requiring trainees to inspect the hull for damage, document and report their findings accurately, manage flooding if it occurs, and use specialized tools and equipment for repairs. This scenario tests knowledge of hull inspection, damage assessment, reporting skills, flood containment capabilities, and maintenance tool use. A third scenario assesses leadership skills during emergency drills, requiring trainees to demonstrate effective leadership and coordination, maintain clear communication, and ensure vessel safety during the drill. This scenario evaluates leadership and coordination skills, effective communication during drills, and overall safety assurance.

In a post-storm damage control scenario, trainees must assess and report storm damage, manage flooding, perform repairs on damaged infrastructure, and handle hazardous materials safely. This scenario evaluates the ability to assess and report storm damage, manage floods, perform repairs, and handle hazardous materials. Lastly, a scenario involving a shortage of functional fire extinguishers during a simulated firefighting exercise requires trainees to adapt firefighting techniques using alternative methods, assess and repair non-functional extinguishers, inform the crew and higher-ranking personnel about the equipment shortage, and lead the crew in managing the situation despite the resource shortage. This scenario tests adaptability in firefighting techniques, technical skills in equipment maintenance, effective communication in emergencies, and leadership and coordination under pressure.

These scenarios collectively assess a trainee's technical proficiency in firefighting, hull inspection, flood containment, and equipment use; communication skills for coordinating efforts and reporting during emergencies; leadership and coordination during emergency drills and real-life scenarios; and adaptability in responding to equipment shortages and challenging situations. By covering these diverse and critical aspects, the situational tests ensure that trainees are well-prepared for the multifaceted challenges of damage control on a ship.

Instructor Capabilities

Interpreting the situational test in the context of the instructor's capabilities involves understanding how the instructor's skills and knowledge are applied to create and assess realistic and practical training scenarios for the trainees. The instructor's ability to simulate realistic emergency scenarios is paramount, as they must accurately replicate situations like fire outbreaks, collisions, or storms to provide trainees with

practical experience. Leveraging their extensive knowledge of damage control procedures, the instructor designs scenarios that test specific skills, ensuring trainees can apply correct techniques in various emergencies. Additionally, the instructor's experience in leadership training allows them to evaluate trainees' ability to lead and coordinate teams during drills, fostering effective communication and teamwork under stress. Their familiarity with onboard facilities ensures scenarios are practical, utilizing actual equipment and materials found on vessels.

In interpreting the situational test scenarios, each scenario reflects the instructor's capabilities in action. For instance, in a simulated fire outbreak on a neighbouring vessel, the instructor designs a realistic fire simulation for evaluating trainees' firefighting skills and search and rescue operations. Similarly, during a hull damage assessment post-collision scenario, the instructor simulates damage and flooding, testing the trainee's ability to assess and manage the situation. Emergency drill leadership scenarios allow the instructor to observe trainees' leadership and teamwork, while post-storm damage control scenarios evaluate their ability to handle complex situations and hazardous materials. In scenarios like firefighting equipment shortages, the instructor creates challenges that require trainees to adapt their strategies and demonstrate leadership. The instructor's capabilities are crucial in creating realistic and practical situational tests that comprehensively evaluate trainees' proficiency in damage control efforts, leadership, and emergency response.

Materials and Facilities

The materials and facilities provided for the situational tests are critical for simulating realistic shipboard emergency scenarios and assessing the trainees' abilities to handle them effectively. Each item plays a specific role in preparing trainees for various aspects of damage control. Firefighting equipment, such as extinguishers and hoses, are essential for training in firefighting techniques and procedures. Trainees will use these tools to practice extinguishing different types of fires, a vital skill for managing onboard fire emergencies. Tools for hull inspection and repair are necessary for hull inspection and damage assessment training. Trainees will use these tools to inspect the hull for damages, assess the extent of damage, and perform necessary repairs, ensuring the vessel's structural integrity.

Simulation facilities for emergency drills provide a controlled environment for conducting realistic emergency drills. Trainees will engage in various simulated emergency scenarios, such as fires or hull breaches, to practice and refine their emergency response and coordination skills. Communication systems are vital for training in emergency communication protocols. Trainees will use communication systems to coordinate efforts within their crew and with external parties during emergencies, ensuring effective information dissemination and command. Medical facilities and equipment are crucial for training in medical emergency response. Trainees will learn to provide first aid and manage medical emergencies, ensuring the health and safety of all onboard during crises.

Specialized tools for maintenance are essential for training in the maintenance and repair of onboard systems. Trainees will use these tools to perform maintenance and repairs, ensuring all systems and equipment are operational and reliable during emergencies. Emergency backup systems ensure the vessel remains functional during power failures. Trainees will learn to manage and operate emergency backup

systems, maintaining critical functions such as navigation and communication during power outages. Safety gear and protective equipment are essential for ensuring personal safety during emergency response. Trainees will use safety gear and protective equipment during drills and real-life scenarios to protect themselves from harm while performing their duties.

Navigation equipment is crucial for ensuring safe vessel operation, especially during emergencies. Trainees will learn to use navigation equipment to maintain course and avoid hazards during emergencies, ensuring the vessel's safe operation. Containment materials for hazardous spills are necessary for handling hazardous materials and spills. Trainees will use containment materials to manage and mitigate hazardous spills, protecting the environment and ensuring the safety of the crew and vessel.

The materials and facilities provided are integral to the comprehensive training in damage control. They enable the simulation of realistic emergency scenarios, allowing trainees to develop and demonstrate their proficiency in firefighting, hull inspection, emergency communication, medical response, maintenance, power management, personal safety, navigation, and hazardous material containment. This holistic approach ensures that trainees are well-prepared to handle the diverse challenges they may face in real-world shipboard emergencies.

Table 6

Overall Trainees' Performance in Controlling the Damage Arising from Shipboard Emergency

Level of Performance	Frequency	Percentage	Mean Percentage Score (Target)
Excellent (95% - 100%)	22	14.67	75%
Very Good (90% - 94)	54	36.00	
Good (85% - 89%)	61	40.67	
Satisfactory (80% - 84%)	12	8.00	
Basic (75%-79%)	1	0.66	
Total	150	100	
Mean	**89 % (Good)**		

Legend: *95-100 -Excellent, 90-94-Very Good, 85-89-Good, 80-84-Satisfactory 75-79-Basic*

Table 6 shows the Overall Trainees' Performance in Controlling the Damage Arising from Shipboard Emergency. In Excellent Performance (95% - 100%), Trainees achieving an excellent performance level constitute 14.67% of the total, with a frequency of 22. This indicates a high level of proficiency in controlling damage, with responses falling within the 95% to 100% accuracy range. While in Very Good

Performance (90% - 94%). Most trainees, comprising 36.00% of the total, fall into the very good performance category. These trainees demonstrated strong competence, with responses ranging between 90% and 94% accuracy.

On the other hand, in Good Performance (85%—89 %), a significant portion of trainees, representing 40.67% of the total, achieved a good performance level. This indicates a solid understanding and capability in controlling damage, with responses falling within the 85% to 89% accuracy range.

Furthermore, for Satisfactory Performance (80% - 84%), a smaller proportion of trainees, comprising 8.00% of the total, attained a satisfactory performance level. While their Performance is acceptable, there is room for improvement, with responses falling within the 80% to 84% accuracy range.

Meanwhile, for the Basic Performance (75% - 79%), only one trainee, accounting for 0.66% of the total, achieved a basic performance level. This suggests a need for additional support or remedial training to enhance their proficiency in controlling damage.

The overall mean percentage score is 89%, falling within the "Good" category. This mean score indicates that, on average, trainees performed well in controlling damage arising from shipboard emergencies. Most trainees achieved "Good" or "Very Good" performance levels, demonstrating a solid understanding and proficiency in managing damage during emergencies. The mean score in the "Good" category suggests that the training program effectively prepared trainees to handle shipboard emergencies and control damage.

The findings supported by Fernandes and Ribeiro (2017) analyzed trainee performance in simulated emergency scenarios using performance metrics such as response time, decision-making effectiveness, problem-solving abilities, teamwork, and adherence to emergency protocols. Relevant to the present study, the study found that trainees who scored in the "Excellent" category demonstrated exceptional proficiency in controlling damage from shipboard emergencies. They exhibited quick decision-making abilities, practical problem-solving skills, leadership, and teamwork capabilities. In this study, trainees in the "Very Good" and "Good" categories also demonstrated strong Performance in controlling damage during emergencies. The study also highlighted the importance of providing training and support for trainees in the "Satisfactory" or "Basic" categories. The study underscores the importance of effective emergency response training programs in preparing maritime personnel to handle emergencies effectively and mitigate damage onboard vessels.

Table 7 presents the results of testing the significant relationship between the level of effectiveness of the Damage Controlman Rating Course and the trainees' Performance in controlling damage arising from shipboard emergencies. The relationship is examined across four key components: Course Objectives, Course Contents, Instructor Capabilities, and Materials and Facilities. In Course Objectives, the p-value of 0.003 suggests a significant relationship between the effectiveness of the course objectives and trainees' Performance in controlling damage. The r-value of .654 indicates a moderate to high positive correlation, suggesting that as the

effectiveness of the course objectives increases, trainees' Performance in controlling damage also tends to improve.

Table 7

Testing of Significant Relationship between the Level of Effectiveness of the Damage Controlman Rating Course and the Trainees' Performance in Controlling Damage Arising from Shipboard Emergencies

	Level of Effectiveness of the Damage Controlman Rating Course							
	Course Objectives		**Course Contents**		**Instructor Capabilities**		**Materials and Facilities**	
	p-value	*r-value*	*p-value*	*r-value*	*p-value*	*r-value*	*p-value*	*r-value*
Trainees' Performance in controlling damage arising from shipboard emergencies	0.003	.654	0.005	.720	0.005	.708	0.003	.630

Legend: *± 1.00 Perfect Correlation ±.80 - ±.99 Very High Correlation, ±.60 - ±79High Correlation, ±.40 - ±.59 Moderate Correlation, ±.20 - ±.39 Low Correlation, ±0.1 - ±.19 Negligible Correlation*

Course content: A significant relationship is observed between the effectiveness of course content and trainees' performance, with a p-value of 0.005 and an r-value of .720. This indicates a high positive correlation, suggesting that practical course content contributes to better Performance in controlling damage.

Moreover, in Instructor Capabilities, the p-value of 0.005 indicates a significant relationship between the effectiveness of instructor capabilities and trainees' Performance. The r-value of .708 suggests a high positive correlation, indicating that well-equipped and skilled instructors positively impact trainees' ability to control damage.

In terms of Materials and Facilities, a significant relationship is observed between the effectiveness of materials and facilities and trainees' Performance, with a p-value of 0.003 and an r-value of .630. This indicates a moderate positive correlation, suggesting that adequate materials and facilities contribute to improved performance in damage control.

Hence, the results suggest that the effectiveness of various components of the Damage Controlman Rating Course, including objectives, contents, instructor capabilities, and materials and facilities, significantly influences trainees' Performance in controlling damage arising from shipboard emergencies. Ensuring the effectiveness of these components is crucial for optimizing training outcomes and enhancing shipboard emergency response capabilities.

In support, Jackson (2018) analyzed data from various training programs, including those focused on damage control and emergency response in maritime settings. The

researchers found strong positive correlations between the effectiveness of training components and trainees' Performance in emergencies.

Relevant to the findings, it is clearly defined that course objectives were associated with improved Performance in emergency response scenarios. Comprehensive and well-structured course content positively influenced trainees' Performance in emergencies. Instructor capabilities significantly impacted trainees' emergency response performance. Well-organized materials and modern facilities conducive to practical exercises were associated with improved emergency outcomes. The study underscores the importance of investing in training programs prioritizing clear objectives, comprehensive content, proficient instructors, and quality materials and facilities, particularly in maritime operations where effective emergency response is critical for safety and security.

Program Enhancement for the Damage Controlman Rating Course

The Program Enhancement for the Damage Controlman Rating Course aims to elevate the effectiveness and relevance of Coast Guard personnel training in shipboard emergency management. Through a comprehensive analysis, strengths and areas for improvement have been identified, emphasizing the importance of tailored enhancements to materials, facilities, and safety protocols. The program focuses on upgrading equipment and facilities to modern standards, conducting regular safety inspections, and soliciting stakeholder input for continuous improvement. Prioritizing safety, innovation, and collaboration, the program seeks to ensure that Coast Guard personnel are equipped with the knowledge, skills, and resources necessary to excel in their roles as Damage Control, thereby enhancing maritime safety and security.

Conclusions

1. The evaluation of the Damage Controlman Rating Course reveals its overall effectiveness across course objectives, contents, instructor capabilities, and materials and facilities. While the course excels in imparting critical shipboard operation skills, there are areas for improvement identified, particularly in teaching specific compartmentation methods and enhancing practical training through simulations and exercises. Despite these areas needing refinement, the course is perceived as highly effective in achieving its objectives, instilling participant confidence, and preparing Coast Guard personnel for their roles in ship safety and operational efficiency. Addressing the identified areas for enhancement, particularly in materials and facilities and technology updates, is crucial to optimize the course's effectiveness further and ensure comprehensive and practical training experiences for all participants.

2. The evaluation of trainees' Performance in controlling damage during shipboard emergencies reveals a range of proficiency levels across the cohort. While a significant portion achieved Excellent and Very Good Performance levels, indicating strong competence, there are opportunities for improvement, particularly among those with Satisfactory and Basic Performance ratings. These findings underscore the importance of ongoing training and support mechanisms to ensure all trainees are

adequately prepared to manage shipboard emergencies effectively, thereby enhancing maritime safety and security.

3. The findings highlight a significant positive relationship between the effectiveness of the Damage Controlman Rating Course and trainees' Performance in controlling damage during shipboard emergencies. Specifically, course objectives, contents, instructor capabilities, and materials/facilities all demonstrated notable correlations with trainees' proficiency levels, emphasizing the importance of these components in enhancing training outcomes. These results underscore the need for continuous improvement efforts targeting course design, instructional quality, and resource provision to maximize the effectiveness of training programs and bolster shipboard emergency response capabilities. Addressing the identified correlations can lead to more tailored and impactful training initiatives, ultimately contributing to enhanced maritime safety and security.

4. In light of the findings, the proposed Enhancement Program for the Damage Controlman Rating Course is designed to optimize Coast Guard personnel training in shipboard emergency management. By identifying strengths and areas for improvement, the program aims to tailor enhancements to materials, facilities, and safety protocols, ensuring they meet modern standards and are conducive to practical training. Through a collaborative approach that involves stakeholder input, the program prioritizes safety, innovation, and continuous improvement, ultimately equipping personnel with the necessary skills and resources to excel in their roles and enhance maritime safety and security.

Recommendations

1. The proposed program enhancement should be implemented to address the identified areas for improvement and optimize training outcomes. This includes upgrading materials and facilities to modern standards, conducting regular safety inspections, and soliciting stakeholder input for continuous improvement. By prioritizing safety, innovation, and collaboration, the program aims to enhance the overall effectiveness of the Damage Controlman Rating Course and ensure Coast Guard personnel are well-prepared and competent in carrying out damage control duties.

2. Given the identified areas for improvement in specific compartmentation methods and practical training through simulations and exercises, it is recommended to revise course content to include more comprehensive instruction on these topics. Additionally, increasing the frequency and quality of practical exercises can enhance trainees' hands-on experience and readiness for shipboard emergencies. This approach will ensure that trainees receive in-depth knowledge and practical skills essential for effective damage control operations.

3. Recognizing the varying proficiency levels among trainees, it is recommended to implement tailored support mechanisms for those with Satisfactory and Basic Performance ratings. This may include additional training sessions, mentorship programs, or individualized coaching to address specific skill gaps and improve overall

Performance. Such targeted interventions will help to bring all trainees up to a higher standard of competence and confidence in handling damage control situations.

4. To ensure the effectiveness of the Damage Controlman Rating Course, it is recommended that continuous improvement practices be integrated into course evaluation and development processes. Regular feedback mechanisms from trainees and instructors can inform iterative improvements to course content, instructional methods, and resource allocation. By systematically collecting and analyzing feedback, the course can be continuously refined to meet evolving needs and challenges, enhancing training outcomes over time.

5. Future research should include more extensive, diverse samples to validate findings and enhance generalizability. Longitudinal studies can track the long-term impact of the Damage Controlman Rating Course on trainees' Performance and career progression. Exploring unexpected findings through qualitative approaches can provide deeper insights. Comparative studies between maritime training programs can identify best practices and innovative techniques, providing evidence-based recommendations for enhancing course content and delivery.

Compliance with Ethical Standards

This study adhered to ethical standards, obtaining informed consent from all participants and ensuring their right to withdraw at any time. Anonymity and confidentiality were maintained to protect privacy, and personal identifiers were removed or coded. The respondents' well-being was a primary concern, and procedures were conducted with respect for their rights and dignity. No conflict of interest existed, and plagiarism was avoided by properly citing sources and acknowledging previous research contributions. Bias in the interpretation of findings was meticulously avoided. Objective data analysis techniques and rigorous methodological standards were employed to ensure the validity and reliability of the results. The findings and conclusions were used for academic and research purposes, contributing to maritime training and safety knowledge.

Acknowledgements

The researcher thanks the Dean of PMMA Graduate School, Ma. Nissa C. Espiritu, MSc, and esteemed panel members, Prof. Israel Florencio J. Torres, Ed.D., CG Capt. Cynthia E. Esquivias, MSc, and CDR Victoria Q. Paraggua, PMMA. Their willingness to share their expertise and dedicate precious time to reviewing, reading, and correcting this thesis paper is genuinely valued. Furthermore, gratitude is extended to the PMMA Graduate School for authorizing the research and offering essential support.

The researcher expresses profound thanks to his adviser, Marianne G. Arias, PhD, for her unwavering support, guidance, and encouragement throughout this endeavour. Her insights and constructive feedback were invaluable in shaping the direction and quality of this study.

Special appreciation is reserved for the study's respondents, who generously shared their knowledge and time, contributing significantly to the success of this research.

Their participation and insights were crucial in comprehensively evaluating the Damage Controlman Rating Course.

Finally, the researcher extends a general statement of gratitude to all individuals who assisted in conducting the study. This includes family, friends, and colleagues whose encouragement and support have been a constant source of motivation. Their contributions, whether big or small, are deeply appreciated and have played a significant role in completing this research.

ABSTRACT

This study aimed to determine the level of a teacher's motivation towards professional development across generations. It sought to answer the following questions the profile of the respondents as to generations, the motivational level of teachers towards professional development across generations (Generation Z or iGen, Generation Y (millennials), Generation X and Baby Boomers) in terms of the following factors: Content Focused; Active Learning; Task Collaboration; Effective Practices; Learning Support; Reflective Outlook and Sustainable Plan. The significant difference in the level of motivation towards professional development of the generations (Generation Z or Gen Z, (millennials) Generation Y, Generation X, and Baby Boomers) in terms of the following factors: Content Focused and Active Learning; Task Collaboration and Effective Practices; Learning Support and Reflective Outlook and Sustainable Plan. The program intervention could be proposed to motivate teachers to upgrade themselves toward professional development. Based on the findings as summarized, the following conclusions were drawn: Teachers were from Generation X 1965-1980 and Generation Y (millennials). The level of teachers' motivation across generations in Content-Focus, Active Learning, Task Collaboration, Effective Practices, Learning Support, Reflective Outlook, and Sustainable Plan were all well-motivated. There is a significant difference in the level of motivation towards professional development of the generations with Generation Z vs. Baby Boomers and Generation Y vs. Baby Boomers therefore the hypothesis is rejected. The researcher proposed a program intervention to motivate teachers to upgrade themselves toward professional development.

Keywords: *Teacher's motivation, professional, development, across generations*

INTRODUCTION

The most valuable resource in the educational system is the teacher. Professional development for educators is becoming more and more important as a means of assisting pupils in acquiring the increasingly sophisticated abilities necessary for success in the twenty-first century. Effective professional development (PD) is therefore necessary to assist educators in acquiring and honing the teaching techniques necessary to impart these skills.

Professional growth is necessary to promote and maintain progress in any field of professional activity. In order for students to develop more complex skills, they must thrive in the twenty-first century, at the same time that professional development for instructors is gaining popularity. Sophisticated teaching techniques are needed to develop student competencies like critical thinking, in-depth comprehension of challenging subject, complex problem solving, effective communication and teamwork, and self-direction. Consequently, in order to impart these talents, teachers need to acquire and refine the teaching strategies, which necessitates efficient professional development (PD). However, research indicates that a large number of professional development programs do not appear to be assisting in the modification of teaching practices or student learning. In light of this, the goal was to pinpoint the traits of effective professional development.

A number of increasingly complicated tasks, duties, and competencies in the teaching profession have become necessary in the twenty-first century due to the rise in educational expectations. One of the key factors in the performance of the institutions is the motivation level and generational disparities of teachers, who are the most strategic factor in educational efficacy (Akar, 2020).

Professional development is very important nowadays. Teachers are not only teachers. In lieu, the researcher believes that through this study, it would provide more awareness and deeper understanding of different challenges and perspectives of teachers from different generations. This study would help people understand their views on their current perspective on professional development. This study is seen to be beneficial not only for the teachers, learners, school heads, but as well as for the development of learning and quality education.

Research Questions

This study aimed to determine the level of a teacher's motivation towards professional development across generations. It sought to answer the following questions;

1. What is the profile of the respondents as to generations?
2. What is the motivational level of teachers towards professional development across generations (Generation Z or iGen, Generation Y (millennials), Generation X and Baby Boomers) in terms of the following factors:

2.1 Content Focused;
2.2 Active Learning;
2.3 Task Collaboration;
2.4 Effective Practices;
2.5 Learning Support;
2.6 Reflective Outlook;
2.7 Sustainable Plan?

3. Is there a significant difference in the level of motivation towards professional development of the generations (Generation Z or Gen Z, (millennials) Generation Y, Generation X, and Baby Boomers) in terms of the following factors:
   3.1 Content Focused and Active Learning;
   3.2 Task Collaboration and Effective Practices;
   3.3 Learning Support and Reflective Outlook;
   3.4 Sustainable Plan?
4. What program intervention could be proposed to motivate teachers to upgrade themselves toward professional development?

METHODOLOGY

Research Design

This study employed quantitative descriptive research design. This is suited to this type of research since it aims to measure and determine teachers' motivation toward professional development and its relationship to other variables. The goal of quantitative research is to quantify the process of gathering and analyzing data. It originated from a deductive method influenced by positivism and empiricist ideologies, which prioritized testing theories (Wikipedia). This research technique, which is related to the social, formal, applied, and natural sciences, encourages the objective empirical investigation of observable phenomena in order to test and comprehend correlations. This is accomplished by using a variety of quantification strategies and approaches, as well as observations on their widespread application as a research approach in several academic fields.

Research Locale

Quezon province is in the Southern tip of CALABARZON region in Luzon. Its capital is the city of Lucena. The province was named after Manuel L. Quezon.

This study was conducted in the Third Congressional District of Quezon Province, comprised of 12 municipalities, 213 elementary schools, and 50 secondary schools. The researcher chose this locale primarily to address the needs of the teachers for development, and to determine which generation of teachers are well motivated to develop professionally.

Research Population and Sample

In choosing the population and sample, the researcher would apply purposive sampling, where the researcher relies on judgment when choosing members of the population. The population was the selected teachers from different schools in the Third Congressional District of Quezon. The respondents of this research comprised of 204 teachers, wherein 17 teachers were selected from different generations from the 12 towns.

Research Instrument

The researcher employed a self-made survey questionnaire in this study to determine the profile of the respondents as to generations (generation z, generation y, generation x, and baby boomers; the data on the motivational level of respondents per generation were gathered from the areas of content focus, active learning, collaboration, models and modelling, coaching and expert support, feedback and reflection and sustained duration. for the validity of the instrument, the researcher conducted a pilot testing among 30 teachers classified according to the generations they belong to, wherein six (6) teacher respondents were coming from generation z, nine (9) teacher respondents from the millennial generation, nine (9) teacher respondents from generation x, and lastly, six (6) teacher respondents from the baby boomers generation.

Data Gathering Procedure

In conducting the data gathering, the researcher wrote a letter of request for the Schools Division Superintendent for the approval of the distribution of survey questionnaires to ensure utmost cooperation from the target respondents. The distribution was personally conducted by the researcher, as well as the retrieval. After the retrieval, the questionnaires were generated. The statistician would help the researcher in the statistical treatment and data analysis.

Statistical Treatment of Data

The data gathered through the questionnaire were classified, tabulated, and analyzed. These were treated with the frequency distribution, weighted mean, and rank order. The data that answered the specific problems were as follows:

The assessment for the respondent's profile was determined through Percentage and Frequency Distribution.

To determine the level of motivation of teachers for different tasks as bases for professional development, the scale below was used for the analysis of the data to be collected.

Scope and Delimitations of the Study

The study confined to the level of teacher's motivation towards professional development. It is delimited with teachers who are belong to millennials, X, Y, and Baby Boomers' generation. The population of the study was the selected teachers from different schools in the Third Congressional District of Quezon. The respondents of this research comprised of 204 teachers wherein 17 teachers were selected from different generations of the 12 towns. The collected data were the profile of the respondents as to generations: Generation Z or iGen (1997- 2010); Generation Y (Millennials) (1981- 1996); Generation X (1965- 1980); Baby Boomers (1946- 1964). The motivational level of teachers towards professional development across generations (Generation Z or iGen, Generation Y (millennials), Generation X and Baby Boomers) in terms of: Content Focused; Active Learning; Task Collaboration; Effective Practices; Learning Support; Reflective Outlook and Sustainable Plan. It also determined if there is a significant difference in the level of motivation towards professional development of the generations (Generation Z or Gen Z, (millennials) Generation Y, Generation X, and Baby Boomers) and created a program intervention that could be proposed to motivate teachers to upgrade themselves toward professional development.

RESULTS

Part I. Profile of the Respondents

Table 2.
Distribution of the Respondents According to Generations

Generations	Frequency	Percentage (%)
Generation Z (Gen Z) 1997-2010	36	17.65
Generation Y (Millennials) 1981 – 1996	60	29.41
Generation X 1965-1980	60	29.41
Baby Boomers 1946-1964	48	23.53
Total	204	100.00

Note: "If the p- value is greater than or equal to the significance level (0.05) NORMAL, otherwise NOT NORMAL."

PART IV. Program Intervention to Motivate Teachers to Upgrade Toward Professional Development

Continuous professional development (CPD) helps teachers improve their understanding of how to deliver effective education, and ensures they ca adapt to the changing needs of students.

However, at a time when many teachers are under pressure, and when the development needs of each teacher can vary substantially, it can be hard to understand how best to provide a professional development service for teachers. This intervention program can help create development plans for teachers.

DISCUSSION

Profile of the Respondents

Table 2 presents the distribution of the respondents according to generations. As can be seen from the table, most of the respondents were from Generation X 1965-1980 and Generation Y (Millennials) 1981-1996 with 29.41 % or, with a frequency of 60. It implies that most of the respondents are experienced educators. They have in-depth knowledge and more expertise in their fields.

This finding aligns with (Polat et al.,2019) that teachers in this generation are more dedicated to teaching as a profession, a civic responsibility, and a reflection of their ideals. They may have a greater love for working long hours because of their level of devotion to both their personal and professional lives.

However, only 23.53% were from baby boomers, and the lowest among the ranks comes from the new generation, Generation Z, with 17.65% because the present generation has just began their service while the baby boomers are declining the numbers.

Part II. Level of Teachers' Motivation Towards Professional Development Across Generations

Table 3.
Level of Teachers' Motivation Towards Professional Development Across Generations in terms of Content Focus

Table 3 presents the level of teachers' motivation towards content focus. Based on the data shown, the level of teachers' motivation was high, with a 3.97 grand mean. It implies that teachers identified the most needed for learners that focus on learning, such as strategies, training, and techniques.

Among all the statements, the statements "teachers apply teaching strategies associated with teaching strategies curricula" and "develop different materials for instructions varied for the teaching and learning process" with 4.03 mean respectively, which signify that they teachers are Well Motivated in these indicators. It is followed by the use of assessment tools with a 4.01 mean, while the applied strategies in teaching that has a 4.0 mean, which also means they are well motivated. Though the indicator

pertaining to teachers' application of ICT has the lowest mean of 3.80, it is still interpreted that they are well motivated.

The move to a 21st-century education is demanded among the teachers, however there is a divide between those who look at 21st-century education and preparing children for the digital world and educators who cling to the conventional image of schools (Yarrington, as cited by (Henebery, 2015).

Aligned with that and considering the present technology and the digital world than previous generations, experts emphasize that members of Generation Z are capable of thriving in both virtual and real environments. They see these two worlds as complementary to one other, thus they can move between them with ease (Chomątowska, Żarczyńska-Dobiesz, 2014).

Table 4.
Level of Teachers' Motivation Towards Professional Development Across Generations in terms of Active Learning

Table 4 reveals the mean scores of the level of teachers' motivation towards professional development across generations in terms of active learning. As can be seen from the table, the level of teachers' motivation in active learning has a 4.10 mean which implies that teachers are well motivated. It suggests that in terms of active learning, teachers consistently practice eagerness in exploring different pedagogical tasks.

The respondents believed that using real-life situations in the teaching and learning process with 4.17 mean, practicing classroom routines regularly with a mean of 4.14, creates a new teaching style in enhancing the active participation of learners (4.07), analyzes texts to identify potential literacy challenges to learners (4.06), and get hands-on experience in designing new teaching strategies (4.05) which makes them well motivated in these indicators.

Generally, the teachers, no matter what generation they are from, are all active in participating, especially in learning different processes, classroom routines, and teaching styles in the classroom. According to (Cox,2023), using real-world examples and tackling real-world problems in the classroom can make learning more meaningful to students. Moreover, it can help spark excitement in gaining knowledge about important issues.

Table 5.
Level of Teachers' Motivation Towards Professional Development Across Generations in terms of Task Collaboration

Table 5 shows the mean scores of the level of teachers' motivation towards professional development across generations in terms of task collaboration. As can be seen from the table, the level of teachers' motivation in active learning garnered an overall mean of 4.09 which also means that they are well-motivated in this component of professional development. It implies that in terms of collaboration, teachers are eager to

participate in tasks that involve cooperation with fellow teachers. Moreover, the respondents are found to be well motivated in creating an environment that is positively cooperative as evidenced by the mean of 4.15, participates in collaborative workshops and enjoys working with others with 4.09 mean, shares ideas and collaborates with colleagues, and promotes collaboration among colleagues within school and with other institutions with 4.07 mean, respectively.

Based on the results, teachers are well-motivated in assuring that they are part of a collaborative environment. It is a positive response that teachers create a collaborative environment for the quality education of the learners.

This finding is supported by (Ahmed,2019) who emphasized that collaborative learning is a method of education in which a group of students (two or more) attempts to learn something together using group projects, assignments, etc. In this type of learning, students learn from others' skills and resources. Collaborative learning is an educational approach to teaching and learning in which groups of students participate in solving issues, completing tasks, or creating products together.

Table 6.
Level of Teachers' Motivation Towards Professional Development Across Generations in terms of Effective Practices

Table 6 presents the mean scores of the level of teachers' motivation towards professional development across generations in terms of effective practices. As can be seen from the table, the respondents claimed that in terms of effective practices, they are well motivated to ensure effective practices for teaching and learning as evidenced by a grand mean of 4.0. Specifically, they claimed that they primarily practice demonstration teaching based on educational principles and practices (4.04), and they also use and provide curriculum (4.02).

Further, they also claim that view models include lesson plans, unit plans, sample student work, and Practice peer teaching observations (4.01). It only implies that teachers effectively practice by following the principles of teaching.

(Ahmed,2019) stated that designing and developing instruction that is effective, consistent, and meaningful can be achieved by following principles for good practice.

Table 7
Level of Teachers' Motivation Towards Professional Development Across Generations in terms of Learning Support

Table 7 shows the mean scores of the level of teachers' motivation towards professional development across generations in terms of learning support. As viewed in the table, it reveals that teachers are well-motivated in terms of learning support, with a 4.03 grand mean. It only implies that different generations claimed that they are well-motivated in giving learning support.

The respondents claimed that they are mostly focused on addressing learners' learning needs (4.09), that they are systematically monitoring learners' progress (4.07), and they are establishing and sustaining a culture of high expectations in support of the learners (4.03).

As learning support teachers engage students in the use of technology, explore, and participate in collaborative groups, interact with others, and make connections to real world experiences. They are also encouraged to use technology as instructional method in teaching (Lisenbee, 2016).

Further, according to (Hodges.2016), educators are transforming the workplace from an environment as learning support managers utilized force and control to manage staff to one that is more collaborative and team-oriented, with coaches assisting staff members in reaching their objectives. In order to bring about change, this new generation requires mentors to bounce ideas off of and to be regarded as valuable partners.

Table 8.
Level of Teachers' Motivation Towards Professional Development Across Generations in terms of Reflective Outlook

Table 8 presents the mean scores of the level of teachers' motivation towards professional development across generations in terms of reflective outlook. Overall, as can be seen from the table, the respondents claimed that they are well-motivated in reflective outlook across different generations as evidenced by a grand mean of 4.0.

Based on the responses, the teachers are well motivated when they exercise utmost professional discretion to avoid scandal, gossip, and any preferential treatment for the learner (4.03); building a reflective bridge between students and the book's content to whatever they are experiencing daily, and they address issues and problems and teaches reflectively both obtained a mean of 4.02.

These findings find support in Corwin press, who stated that one of the best methods for professionals of all generations to collaborate is to build a pleasant workplace, as stated in the book by (Abram & Von Frank,2013). Knowing exactly what has to be done and who is in charge of each task, no matter how big or small, is a necessary step on the road to success.

It only implies that a reflective outlook was highly practiced among teachers. They avoid improper actions and maintain reflection, as they also address different issues and problems.

According to the Code of Ethics of the Philippines, Section 1. A teacher is, above all, a human being endowed with life for which it is the highest obligation to always live with dignity, whether in school, in the home, or elsewhere section 2. A teacher should place a premium upon self-discipline as the primary principle of personal behavior in all relationships with others and in all situations section 3. A teacher shall continuously

maintain a dignified personality that could serve as a model worthy of emulation by learners, peers, and all others.

Table 9.
Level of Teachers' Motivation Towards Professional Development Across Generations in terms of Sustainable Plan

Table 9 shows the mean scores of the level of teachers' motivation towards professional development across generations in terms of sustainable plans. Overall, the respondents' responses claimed they are well motivated in sustainable plans. It implies that along with different generations, they all have the same response, as well as motivation in their assuring to have a sustainable plan for the school's development.

Most respondents agreed to take up an advanced educational degree to gain a fresh perspective, with a 3.89 mean. Then, followed by the statement, accept advice, criticism, and evaluation from administrators and attend professional workshops, training, and seminars, having a 3.87 mean.

According to (Washington,2019), professional development (PD) in the 21st century is vital to the growth and development of contemporary educators. Today's educational realm contains multiple perspectives, technologies, and opportunities for students and educational leaders. The goal of professional development for educators is to go beyond maintenance and to create sustainability and professional longevity.

PART III. Test for Significant Difference on the Level of Motivation Towards Professional Development of the Generations (Generation Z, Generation Y, Generation X, And Baby Boomers)

Table 10.
Kruskal Wallis H-Test: Comparison of the Level of Motivation Towards Professional Development of the Generations (Generation Z, Generation Y, Generation X, Baby Boomers)

The table above shows the Kruskal Wallis H-Test for the comparison of the level of motivation towards professional development of the generations (Generation Z, Generation Y, Generation X, Baby Boomers) as revealed by the respondents. It shows that in terms of content focus with 0.000 p-values, active learning with 0.048, task collaboration with 0.009 p-values, effective practices with 0.009, learning support with 0.005, reflective outlook 0.002, and sustainable plan with 0.000 all obtained significant. It only implies a significant difference in the Level of Motivation Towards Professional Development. They conclude that they have different perceptions of professional development since some are aging, new, and eager for development and promotion.

These findings find support in (Yaakob et al.,2020) said that the school organization consists of a multi-generation teacher community, which would mean professional development programs of one-size-fits-all should change towards fulfilling

the needs of all teachers to strengthen the quality of education. It is because each generation has different ways of accepting changes since teachers from different generations have various acceptance of professional development.

Table 11.
Dunn Post Ad Hoc Test in Determining Significant Difference in the Level of Motivation Towards Professional Development of the Generations

Table 11 shows the Dunn Post Ad Hoc Test to determine the significant difference in the level of motivation towards professional development of the generations (Generation Z, Generation Y, Generation X, and Baby Boomers). As shown in the table, in terms of content focus, there is only a significant difference between Generation Z vs. Baby Boomers (p value=0.000), Generation Y vs. Baby Boomers (p value= 0.000), and Generation X vs. Baby Boomers (p value=0.001). It may imply that Baby boomers have different perceptions in terms of professional development when compared to other generations of teachers which may be due to their attitude towards work since they are mainly at the age nearing retirement.

However, in terms of active learning, it is remarkably shown that in all generations, there is no significant difference in the active learning practices. As shown, Generation Z vs. Generation Y (p value=0.529), Generation Z vs. Generation X (p value=0.467), Generation Z vs. Baby Boomers (p value=0.075), Generation Y vs. Generation X (0.117), Generation Y vs. Baby Boomers (0.007) and Generation X vs. Baby Boomers (0.216). They dive deeper into the material with their teachers and peers before internalizing it and relating it to real-world experiences. Active learners participate in interactive discussions and activities related to the material and engage in quality study time – often using various study styles to absorb the information.

Table 12.
Dunn Post Ad Hoc Test in Determining the Significant Difference in the Level of Motivation Towards Professional Development of the Generations

Table 12 presents the Dunn Post Ad Hoc Test to determine the significant difference in the level of motivation towards professional development of the generations (Generation Z, Generation Y, Generation X, and Baby Boomers). As revealed by the data above, it shows a significant difference in task collaboration and effective practices among Generation Y vs Baby Boomers, with 0.001 for task collaboration and 0.001 for effective practices. It can be inferred that only the two early generations have differences in practicing their task collaboration and effective practices.

Meanwhile, the statement that millennials are sometimes stereotyped and overly dependent may be due to a misunderstanding of this generation of professionals. Many who have worked with them know there is another side to their story. Many young people are highly achieving, tenacious, confident, and progressive educators. They are often high-energy multi-taskers who are deeply tech-savvy and globally minded (Abrams, 2018). Millennial teachers can bring enthusiasm, tech readiness, competence, and

collaboration into the workplace. Many of them are accustomed to working in teams and enjoy having support and structure.

Table 13.
Dunn Post Ad Hoc Test in Determining the Significant Difference in the Level of Motivation Towards Professional Development of the Generations

Table 13 presents the Dunn Post Ad Hoc Test in determining the significant difference in the level of motivation towards professional development of the generations (Generation Z, Generation Y, Generation X, and Baby Boomers). As viewed from the data in the table, it can be inferred that in terms of learning support, Generation Y and Baby Boomers have significant differences, with the reflective to outlook with both 0.000 p values, respectively.

The data above implies that Generation Y and Z differ in how they handle their learning support to their learners and how they effectively look at their work. (Eulberg,2019) said that millennials, who have been taught the importance of balancing their careers with their personal lives- find this mindset less appreciated and practiced in education and struggle to reconcile their beliefs about self-care with the demands of being a teacher. Millennial teachers may face challenges today, but these professionals are the future of education (Eulberg, 2019).

In addition, they expect a comprehensive induction system that includes extensive training, sources, and supplies. Like many generations in the past, millennials can be quick to analyze their elders' shortcomings (Barker, 2015).

Table 14.
Dunn Post Ad Hoc Test in Determining the Significant Difference in the Level of Motivation Towards Professional Development of the Generations

Table 14 reveals the Dunn Post Ad Hoc Test in determining the significant difference in the level of motivation towards professional development of the generations (Generation Z, Generation Y, Generation X, and Baby Boomers). As revealed by the data above, it shows that in terms of the motivation towards professional development in maintaining sustainable development. It shows that Generation Z vs. Baby Boomers (0.002), Generation Y vs. Generation X (0.007), and Generation Y vs. Baby Boomers (0.000).

These findings imply that the motivation of teachers in making sustainable plans do not differ except when Gen Y and Gen Z are being compared because prospecting plans and the outlook of the younger teachers towards changes and development might differ from the perspective of seasoned teachers.

Sustainable development is becoming more and more implemented with each generation. Finally, in-house living in everyday situations can make a change towards sustainability happen with students and learners, but the other way is possible. Considering this, learning in a group in an everyday situation might be a new approach

for teacher training in Education for Sustainable Development. Teachers from different generations might have different perspectives (Hepper, 2018).

Table 15.
Test of Normality using Shapiro Wilk W-Test

Table 15 shows the test of normality using the Shapiro-Wilk W-Test conducted on the level of teachers' motivation towards professional development across generations. As can be seen from the table, the p-value of the variable obtained 0.001, which is not usual. It may imply that the level of motivation among the different generations shows different levels variances. It may mean that since they were in different generations, they might have different perspectives towards their work, especially on their motivation towards their professional development.

These findings may be related to the findings of (Galloway,2013) that many millennials are eager and ready for new learning and opportunities sooner rather than later. In education, however, states and districts often require teachers to have at least three, if not five or seven years in the profession before taking on formal leadership roles. The process may be even slower in individual schools. These restrictions may not sit well with younger teachers who want to take on leadership responsibilities or explore new roles, especially if they see their peers in other professions being promoted sooner and more often.

However, as stated in the book of (Abram Von Frank and Corwin,2013), the best ways for professionals of all generations to work together to create a harmonious workplace. Part of the path to success knows exactly what needs to be done and who is responsible for each task- small or big.

PART IV. Program Intervention to Motivate Teachers to Upgrade Toward Professional Development

Continuous professional development (CPD) helps teachers improve their understanding of how to deliver effective education, and ensures they ca adapt to the changing needs of students.

However, at a time when many teachers are under pressure, and when the development needs of each teacher can very substantially, it can be hard to understand how best to provide a professional development service for teachers. This intervention program can help create development plans for teachers.

Summary of Findings

This part presents the summary of findings to provide a gist of the significant results of the study.

1. Profile of the Respondents

In terms of the Profile of the Respondents, most of the respondents were from Generation X 1965-1980 and Generation Y (millennials) 1981-1996.

2. Motivational Level of Teachers Towards Professional Development Across Generations (Generation Z or iGen, Generation Y (millennials), Generation X and Baby Boomers).
   - 2.1 In terms of teacher's motivation across generations as to Content Focus, a "well motivated" level is observed.
   - 2.2 In terms of teacher's motivation across generations as to Active Learning, a "well motivated" level is observed.
   - 2.3 In terms of teacher's motivation across generations as to Task Collaboration, a "well motivated" level is observed.
   - 2.4 In terms of teacher's motivation across generations as to Effective Practice, a "well motivated" level is observed.
   - 2.5 In terms of teacher's motivation across generations as to Learning Support, a "well motivated" level is observed.
   - 2.6 In terms of teacher's motivation across generations as to Reflective Outlook, a "well motivated" level is observed.
   - 2.7 In terms of teacher's motivation across generations as to Sustainable Plan, a "well motivated" level is observed.

3. Significant Difference in the Level of Motivation towards Professional Development of the Generations (Generation Z or Gen Z (millennials), Generation Y, and Generation X, and Baby Boomers)

   - 3.1 There is no significant difference between Generation Z and Y, Generation Z and X and Generation Y and X while there is significant difference between Generation Z and Baby Boomers, Generation Y and Baby Boomers, and Generation X and Baby Boomers in terms of Content Focused and Active Learning.

   - 3.2 There is no significant difference between Generation Z and Y, Generation Z and X, and Generation Z and X, Generation Z and Baby Boomers, Generation Y and X, and Generation X and Baby Boomers while there is significant difference between Generation Y and Baby Boomers in terms of Task Collaboration and Effective Practices.
   - 3.3 There is no significant difference between Generation Z and Y, Generation Z and X, Generation Z and Baby Boomers, Generation Y and X and Generation Y and Baby Boomers while there is significant difference between Generation Y and Baby Boomers in terms of Learning Support and Reflective Outlook.

   - 3.4 There is no significant difference between Generation Z and Y, Generation Z and X, and Generation X and Baby Boomers while there is significant difference between Generation Z and Baby Boomers, Generation Y and X, and Generation Y and Baby Boomers in terms of Sustainable Plan.

4. A program intervention was proposed to motivate teachers to upgrade themselves toward professional development.

Conclusions

Based on the findings as summarized, the following conclusions were drawn:

1. Teachers were from Generation X 1965-1980 and Generation Y (millennials).
2. The level of teachers' motivation across generations in Content-Focus, Active Learning, Task Collaboration, Effective Practices, Learning Support, Reflective Outlook, and Sustainable Plan were all well-motivated.

3. There is a significant difference in the level of motivation towards professional development of the generations with Generation Z vs. Baby Boomers and Generation Y vs. Baby Boomers therefore the hypothesis is rejected.

4. The researcher proposed a program intervention to motivate teachers to upgrade themselves toward professional development.

Recommendations

The researcher recommends the following:

1. Since most of the respondents are middle-aged, teachers may continue to further improve their skills through different trainings and activities for the school such as Trend on new technology applications and workshop on materials and teaching tools.

2. Due to the findings that teachers are well-motivated across generations, teachers may intensify their level of motivation to be very well-motivated through continuous growth by means of engaging in different workshop. They may also consider helping the school for the development and improvement of the learners through providing them monitoring, encouragement, and continuing professional development.

3. Since that generation, older and younger generations have contrasting views on professional development in some areas. School heads may consider to host events where various generations are grouped together to discuss differing viewpoints. School heads may also continue to provide technical assistance to assist older generations.

4. The crafted intervention program may be utilized to reach the highest level of teachers' motivation toward professional development and contribute to their productivity for the learners and the schools.

5. Future researchers may conduct similar studies in other schools and consider the areas not covered and discussed in the study.

Compliance with Ethical Standards

In this study, ethical considerations were considered by the researcher. The participants remained anonymous throughout the study even to the researchers themselves. There will be no identifying information about the participants. Further, all the data were kept confidential. Participants were assured that identifying information will not be made available to anyone who is not directly involved in the study. Ethical considerations are form a major element in research.

Acknowledgments

My sincere gratitude goes to the Almighty God, the Creator of heaven and earth for making this study possible.

To Marinduque State College Extension of Graduate Programs to Eastern Quezon College, Inc. (EQCI) faculty and staff under the leadership of Dr. Diosdado P. Zulueta;

To Dr. Leodegario M. Jalos, Jr., the Chair of Graduate Studies Extension Programs for being hands-on considerate and organized in disseminating information about the studies.

To Dr. Melchor B. Espiritu, the Dean of Graduate Studies for continuously encouraging us to complete our studies.

To Mr. Abraham L. Cuevas, for providing guidance, patience, and understanding during this writing process.

To Dr. Diosdado P. Zulueta, Prof. *ir* Panchito M. Labay and Dr. Leodegario M. Jalos, Jr., her panelists, for their advices, suggestions, encouragement, and professional assistance.

To Dr. Rogel L. Limpiada, who served as the researcher's statistician.

To Dr. Joy R. Profugo her editor, and Ms. Cherie Ann M. Luna, copy editor, for their consideration and hard work.

To the respondents of this study who gave their precious time to answer the questionnaires.

To Mrs. Jenny R. Sister, the School Head of Olongtao Ibaba Elementary School and Mr. Cecilio M. Morelo, former School Head of Olongtao Ibaba Elementary School, for letting me finish this research.

To my family and co-teachers for their moral support and encouragement.

To my colleagues in Thesis Writing for their encouragement to finish this study.

Above all to Almighty God, for sending all the people she needs to realize this study.

ABSTRACT

This study aimed to explore the experiences of former persons deprived of liberty (PDLs) with the Welfare and Development Programs (WDP) administered by the Bureau of Jail Management and Penology (BJMP), focusing on their social reintegration. Using a phenomenological approach, it addressed how BJMP's WDP facilitated reintegration, the application of training in various life domains by former PDLs, and their recommendations for BJMP. Ten former PDLs from Burauen District Jail participated as co-researchers, achieving data saturation by the fifth interview. Data were collected through narrative accounts and responses, validated via verbatim transcription and member checking. Aged 40-50, the co-researchers provided insights into themes such as Effective Program Provision, Self-Reflection, Easier Job Placement, and Program Continuation, with sub-themes highlighting positive outcomes, interpersonal skills, life skills, and application of learned skills. Participants stressed the role of BJMP's programs in attitude change, skill development, and societal reintegration, benefiting their employability, relationships, and overall rehabilitation. The study concluded that BJMP's WDP significantly supports successful social reintegration, recommending program continuity, enhancement, collaboration with agencies like TESDA, and strengthened partnerships with governmental and non-governmental organizations to ensure effective implementation. It highlighted the necessity of comprehensive rehabilitation efforts for former PDLs, crucial for their societal reentry and the reduction of recidivism.

Keywords: *Lived Experiences, Welfare and Development, Social Reintegration, Former Persons Deprived of Liberty*

INTRODUCTION

One of the critical factors in the success of rehabilitation programs is the offender's adherence to the program's guidelines and their willingness to make meaningful changes in their lives. Most offenders tend to believe that rules do not apply to them, which contributes to their imprisonment (Delong and Reichert, 2019). This phenomenon in the contemporary period aligns with the principle of consequentialism, which focuses on managing and treating prisoners to prepare them for a productive life post-imprisonment (Bulow, ,2014).

Globally, government and security agencies have institutionalized programs aimed at reforming the psycho-behavioral aspects of offenders (Larsen, 2019). Manka et al. (2021) proposed several interventions representing a small sample of the many initiatives supported by the court system, often in partnership with local agencies and organizations. Some programs specifically target particular offender groups, such as former PDLs and high-risk young former PDLs. Despite the varying criminological semantics, individuals under penal facilities undergo personal reformation.

Solely, rehabilitation programs have continued in some areas with modifications. In Estonia, one-on-one sessions have persisted; in Thailand, preventive measures such as allowing trained detainees and prison officials to lead basic vocational training and ensuring adequate training materials have enabled the continuation of work programs. Online solutions were implemented where digital technology was available, facilitating the adaptation or introduction of new programs. For instance, in Ireland's Mountjoy Jail, online access to university courses was provided, and universities in the United States continued or initiated new courses for incarcerated individuals via online platforms (Global Prison Trends, 2021).

In addition, various jails and prisons offer diverse rehabilitation programs, including educational initiatives, recreational activities, and livelihood programs. One key area of focus is life skill training, which inmates frequently access. These programs, often referred to as counseling interventions, operate on the premise that many offenders may lack the basic understanding necessary to function effectively in society upon their release. Consequently, these courses cover a range of essential skills such as job application and interview techniques, financial and household management, healthy living practices, and parenting skills.

More so, rehabilitation programs, encompassing educational, vocational, and counseling initiatives, are critical in assisting former persons deprived of liberty (PDLs) in abandoning criminal lifestyles (Reamico, 2022). In Ghana, the prison system emphasizes the importance of providing inmates with basic and vocational education, aiming to reduce unemployment and facilitate social integration post-release (Baffour, 2021).

Hence, the Philippine Corrections System, comprised of government-run facilities, community volunteers, and private enterprises, is responsible for the incarceration, punishment, and rehabilitation of convicted individuals. The Bureau of Jail Management and Penology (BJMP) was established to address challenges in jail

management and criminology. Under R.A. 6975, the BJMP holds operational and administrative responsibility over all municipal, district, and city jails.

As part of its mandate, the BJMP envisions itself as a dynamic institution dedicated to the humane safekeeping and development of inmates (Section 2, BJMP Manual 2015). In 2010, the BJMP released a policy regarding the implementation of the Therapeutic Community and Modality Program (TCMP), which serves as a model for the PDLs Welfare and Development Program. The Therapeutic Community, as defined by the Philippine Department of Justice, is an environment that facilitates mutual help among inmates.

Despite receiving rehabilitation and learning skills through BJMP's livelihood programs, many released PDLs struggle to apply these skills outside prison due to societal mistrust and lack of opportunities. Djoana and Aoas (2020) noted that these livelihood programs aim to instill hope in prisoners rather than reinforce the perception that they have no future.

This study examines the socio-economic impact of BJMP's livelihood programs and the social lives of former PDLs. By engaging directly with former offenders and understanding their daily experiences, the researcher aims to uncover their urgent needs, the socio-economic effects of the BJMP programs, and the challenges they face in reintegration. This approach will enable the formulation of practical recommendations benefiting both former PDLs and society at large.

Lastly, the study aspires to significantly impact the lives of former PDLs by guiding them toward a positive future. By providing insights into the outcomes of welfare and development programs, this research will be invaluable to BJMP staff and other concerned organizations, offering crucial information to enhance the support provided to former PDLs.

Research Questions

The study focused on the assessment of the Former Persons Deprived of Liberty towards the Welfare and Development Program of the Bureau of Jail Management and Penology in the Social Reintegration Context

Specifically, it intends to explore on the following;

1. How does the Welfare and Development Program of the Bureau of Jail Management and Penology facilitate the reintegration of former persons deprived of liberty?
2. How do former persons deprived of liberty apply the training received under the Welfare and Development of Program of the Bureau of Jail Management and Penology across education, recreation, spirituality and livelihood in the course of reintegration?
3. What are the recommendations of former persons deprived of liberty towards the Bureau of Jail Management and Penology?

METHODOLOGY

Research Design

To assess the welfare and development programs for former persons deprived of liberty in Burauen District Jail, this study employed a qualitative research design to explain life events and give them significance.

This qualitative phenomenological study documented the experiences of former inmates and how the Welfare and Development Programs (WDP) of the Bureau of Jail Management and Penology (BJMP) assisted them in the context of social reintegration. The purpose of the study was to assess the WDP-BJMP programs provided by the Burauen District Jail. In this context, the researcher followed the guidance of Creswell (2013), utilizing qualitative research methods, particularly through the phenomenological approach.

Research Participants

The study's participants were former persons deprived of liberty (PDLs) from Burauen District Jail. The participants were purposively selected to ensure that the data collected would sufficiently address the study's main question. According to documents provided by the district jail, ten former PDLs who had served their sentences for the same violation (R.A. 9165) were included in the study.

To assess the program offered by Burauen District Jail, the researchers specifically chose these former PDLs because they could share their experiences related to the implemented welfare and development program. Their insights were crucial for identifying fundamental ways to improve the program.

Sampling Technique

Purposive sampling was used in this study. Purposive sampling is a non-probability sampling method based on selected characteristics of a population and the study's objective. It is also known as selective, judgmental, or subjective sampling. Hence, this method is frequently used and well-regarded in qualitative research for selecting information-rich data relevant to the phenomenon of interest. Purposive sampling was also used in this study because the process of choosing participants was based on the programs being studied rather than merely explaining them (Campbell et al., 2020).

The inclusion criteria for choosing the research participants were: a) released PDLs of the year 2018, b) residing in Julita, Tabon, Dagami, and Burauen Leyte, and c) released PDLs in 2018 with the same violation (R.A. 9165). The researcher used pseudonyms to ensure the anonymity of the participants, thus upholding their identities.

Research Locale

This study was conducted among former persons deprived of liberty at the Burauen District Jail, located in the 2nd District of Leyte Province.

For accessibility and its status as a Red Orchid Awardee, the study chose Burauen District Jail for its implementation of the Welfare and Development Program. The researcher selected Leyte Province, specifically the 2nd District or Burauen District Jail, as the site of the study.

Research Instruments

The primary instrument for data collection was a semi-structured interview guide that underwent pilot testing and credibility checks. The focus of the interview guide was to assess the programs offered by Burauen District Jail to former persons deprived of liberty. It consisted of open-ended questions derived from the study's problem statement. During the interviews, additional probing questions were posed based on participants' responses. The researcher employed indirect questioning techniques to elicit participants' explanations and perspectives on the implemented Welfare and Development Program of BJMP, covering areas such as Education, Livelihood, Spirituality, and Recreation.

More so, writing implements and materials were used to record participants' responses, while audio recording was conducted simultaneously, as agreed upon with the participants beforehand.

Data Analysis

In this study, the Collaizi Method was employed to conduct Inductive Thematic Analysis of participants' narrative accounts. The primary goal was to use Colaizzi's descriptive phenomenological approach to describe and illustrate the participants' experiences, while identifying emerging themes and exploring their interconnected relationships (Wirihana, 2018).

Ensuring the trustworthiness of the qualitative research, as emphasized by Stahl and King (2020), involved meticulous attention to data collection and analysis. The data underwent rigorous evaluation against criteria including credibility, transferability, dependability, and confirmability (Nowel et al., 2019). An interview schedule was utilized for direct data gathering from participants. The data analysis process was guided step-by-step by qualitative research experts: each participant's transcript was thoroughly reviewed and cross-checked to capture the breadth of experiences related to the Welfare and Development Program administered by the Bureau of Jail Management and Penology at Burauen District Jail.

Further, significant statements were meticulously extracted, transcribed with detailed references for verification, and organized into meaningful sub-themes. These sub-themes were then synthesized into overarching themes that formed the basis of a comprehensive description supported by relevant literature. Thus, the study culminated in outlining the fundamental structure of the phenomenon under investigation, and so, the researchers sought validation of their findings from the participants to ensure alignment between the descriptive results and the lived experiences of former persons deprived of liberty who were released in 2018 with similar violations.

Ethical Considerations

In conducting the research, several ethical considerations were addressed. Permission was obtained from relevant authorities to conduct interviews, and great care was taken to protect participants' rights and ensure confidentiality of collected data. Participants were given the option to choose a convenient time and location for interviews.

Hence, the participants were also informed about the researcher's journal, which documented perspectives, rationales, insights, and biases throughout the study process. Participants were assured of their right to withhold or withdraw information as desired, with a commitment to maintain confidentiality by ensuring that their identities would not be disclosed in any public reports or shared with others. Researchers ensured flexibility in scheduling interviews based on participants' availability and preferences for answering prepared questions.

All study-related costs were covered by the researchers as part of their academic responsibilities. During face-to-face interviews, strict adherence to safety measures, including wearing face masks, was observed. Participants did not receive financial compensation but were acknowledged with a small token of appreciation for their valuable time and contribution. Finally, after completing all study procedures, researchers planned to provide participants with a clear explanation of the study's findings.

RESULTS AND DISCUSSION

This chapter presents the narrative accounts derived from the collected data, encompassing themes and sub-themes that emerged from participants' responses. The primary objective of this study was to vividly capture the lived experiences of former persons deprived of liberty regarding the welfare and development programs, as well as their experiences with social integration.

Employing a phenomenological research design, the study aimed to address the following research questions:

1. How did the Welfare and Development Program of the Bureau of Jail Management and Penology facilitate the reintegration of former persons deprived of liberty?
2. How did former persons deprived of liberty apply the training received under the Welfare and Development Program of the Bureau of Jail Management and Penology across education, recreation, spirituality, and livelihood during their reintegration process?
3. What recommendations did former persons deprived of liberty have for the Bureau of Jail Management and Penology?

The study involved ten pre-identified co-researchers who were former persons deprived of liberty from Burauen District Jail. Data saturation was achieved by the fifth

interview. The analysis relied on narrative accounts and responses provided by these five co-researchers.

To ensure the validity of the findings, verbatim transcriptions of narrative accounts were returned to the co-researchers for member checking, validating the accuracy and authenticity of the information they provided. Results were presented with identifiers as FPDL (1) to (5), italicized, with translations enclosed in parentheses where necessary, accompanied by quoted responses and researcher feedback as supporting evidence.

The study participants comprised five former persons deprived of liberty who were released from Burauen District Jail. The profile of the co-researchers is summarized in Table No. 1 below:

Table 1 Age and Place of Origin of the Participants

	Characteristics	
Participants	Age	Place of Origin
FPDL 1	42	Julita, Leyte
FPDL 2	45	Burauen, Leyte
FPDL 3	47	Julita, Leyte
FPDL 4	50	Burauen, Leyte
FPDL 5	48	Burauen, Leyte

The table above illustrates that all participants fall within the age bracket of 40-50 years old. This demographic suggests that these individuals still have significant opportunities to lead fulfilling lives by applying the skills and knowledge acquired through programs provided by the agency

Thematic Reflection

The following are the discussions and interpretations of the common themes that emerged from the narratives of the participants.

Theme 1: Provision of Effective Programs

Without sufficient opportunities for skill development and capacity growth, an individual frequently returns to the society that imprisoned him or her as a jaded foe of that civilization. Such a former persons deprived of liberty frequently feels victimized rather than disciplined, which fuels his or her need for retribution. Additionally, former persons deprived of liberty who is viewed as one by society will probably cause more harm than good.

The rehabilitation of prisoners should start the moment they are taken into custody and should last until their release (Igbo, 2007). This is done to make sure they use the skills they learned throughout rehabilitation to lead law-abiding lives in society. Numerous initiatives are in place to steer offenders away from crime and toward worthwhile endeavors that make crime unappealing or detestable, such as moral or religious institutions, education, and vocational training. According to, FPDL 1 he said

that the programs provided for him are helpful in the sense that it changed and prepared for him to go back to the community.

> *"Naka bulig iton gehap na mga programa. Kay pag hikanhi ha community amo na ito nag bag'o ako".* [The program was helpful, since, when referred to the community, that's it, I've changed].

On a similar note, FPDL 2 stated that the program helped him to overcome his longingness to his family while he was in jail.

> *"Oo naman, an programa an nakabulig ha ak para baga deri dumuro nak kamingaw nak pamilya".* [Yes it is, the program help me to ease the feeling of missing my].

Meanwhile, FPDL 3 said that he made use of the programs as his leeway in entertainment while at the prison.

> *"Oo gad, saypa kay amo iton an akon baga nagiging kali-awan".[Probably yes, most especially that this serves as my pleasure].*

The responses of the participants concurred to the study of (Uche et al., 2015) as it talks about former persons deprived of liberty who actively pursue rehabilitation while they are in the custody of the jail agency as they develop skills that will help them find resources, opportunities, and employment once they are released (Uche et al., 2015). In collaboration with the government, the jail administration has offered a variety of rehabilitation programs in a number of institutions. These programs include a variety of topics, including farming, adult literacy, tailoring, welding, and woodworking.

These results are in line with Inciardi's (2009) observation that welfare and development programs involve a variety of activities, all of which can have an effect on prisoners' rehabilitation and effective reintegration into society after release, either directly or indirectly.

Sub-theme 1.1 Positive Outcomes of Program

After the persons deprived of liberty have served their sentences is always a major concern for both the government and society. This, however, can only be secured by providing them with a respectful opportunity to earn a living (Djoana and Aoas, 2020). Livelihood programs perse aim to alter attitudes, knowledge, and skills through a program of action service and education

However, this rehabilitation is a serious priority for both the government and society after they have fulfilled their terms. This, however, can only be achieved by providing them with a respectable means of earning a living. According to FPDL 1, he said that these programs are helpful for them so that they will not be bored during their stay inside.

> *"Usa ito hiya nga programa na inayad para haamon nga nadidto, para baga diri gehap kami ma lontogan pag inukoy didto". [That is a program made for us that was in Jail, and to ease our boredom in our stay in the Jail].*

Meanwhile, FPDL 3 said that these programs are helpful for him because it was hs avenue not to commit the mistake again.

> *"Para ha akon, koan iton hiya, ini nga mga borohaton nga igo buligan inin aton mga PDL na diri na makasala otro".* [For me, these programs are helpful in terms of PDL because it helped th PDL not to commit the mistake again].

More so, FPDL 4 gave emphasis that the programs have played an important role to him.

> *"Oo naka experience gadman ak ton didto, saypa kay baga nakabulig iton haak"*. [Yes, I've experience it in the Jail, most especially that it helps me].

With the passage of time, the responses of the participants agreed on the study of (Cano et al., 2023) that livelihood programs assist former persons deprived of liberty in building new abilities that can be utilized to earn money both inside and outside of jail.

With the premise of the BJMP's livelihood programs. It is still too early to tell how the program improves people's lives of former detainees, and what influence the program had on the participants' lives.

Sub-theme 1.2 Interpersonal Skills

Giving and receiving social assistance is a vital aspect of both individuals' and communities' existence. Such assistance is frequently exchanged within families, learning and working environments, communities, among coworkers, and in other connections (Education Reimagined, 2023).

And thus, policymakers thought that former prisoners needed help and support from family, relatives, and friends, as well as institutional institutions such as criminal justice agencies, correctional facilities, prison officers, and social welfare programs. In fact, FPDL1 described on his experiences on the importance of recreational activities.

> *"an recreation, orog man ton didto basketball, education liwat, mga pan ngiskwela sugad han ALS, pero an akon gud baga naka experience is an spirituality, kay baga sigi man gud nak ampo ton didto na makagawas na".* [The recreation, which is more on basketball, on the other hand, in Education was more on schooling just like with ALS, but what I experience the most is the spirituality. Since, I was more on doing prayers in there in able to get out].

While FPDL2 also gave emphasis on his experiences on the recreational activities that the BJMP provided for them as it develops his camaraderie among mates.

> *"Hito nga Recreation luwat, ini nga butang an akon paborito. Ha sulod han presuhan damo an mga pamulay nga nadidto ngan binuligan nakon para deri ako luntugon sugad, basketball, volleyball, table tennis ngan chess. Ini nga mga aktibididad it pinaka rason hito nga maupay nga relasyon ngan hit pagka murulay ha ika preso".* [In the area of Recreation, this area of the program was

my favorite. Inside the Jail there were many sports that was available that I have participated to kill my boredom namely, basketball, volleyball, table tennis and chess. These activities are the main reason in the creation of harmonious relationship and sportsmanship towards co-pdl].

On the same note, FPDL6 enjoyed the recreational opportunity that was gien to while on the custody of the BJMP.

> *"ha sulod han presuhan, mayda mga sports nga gin hatag para mag muruglay ngan mag upay an lawas luwat. Damoay adto nga sports mayda, basketball, volleyball, table tennis, ngan chess ngan basketball nak pinaka paborito kay katungod na baga player man ak anay ugsa ak ma sentensiyahan. Usa pa, namulay akon basketball hit mga competition sugad barangay ngan munusipyo nga lebel yana nga adi na ako ha hit kumyunidad".* [Inside the Jail, they were provided sports to play and to stay physically fit. There were numerous sports to play namely, basketball, volleyball, table tennis and chess and that basketball is my favorite one since I was some kind of a player before I served my sentence. Additionally, I play basketball during competitions such as barangay and municipal level now that I am in the community].

On a regular basis, correctional officers contact with these persons deprived of liberty, are a part of this interpersonal interaction. Interpersonal communication are truly abilities that are frequently underestimated. Simply said, it's necessary to place more emphasis on recreational activities that paves a way of an effective communication skills in corrections training. Knowing how to communicate and listen to others can help prevent incidents involving the use of force with offenders.

Sub-theme 1.3 Life Key Skills

For many people who have been deprived of their liberty likewise leaving jail and reentering society can be a tough process. Many people who have been deprived of their liberty are well-equipped to conduct productive lives once they are released. Various programs and organizations focus on teaching people who have been deprived of their liberty life skills. Hence, being a part of one of these programs is useful as it educates persons deprived of liberty a wide range of skills in order to aid their eventual reintegration into society.

Prison administrations provide persons deprived of liberty with external certification for their practical training, with documents that do not indicate that the skills were learned in prison, allowing for a smooth transition of former persons deprived of liberty to freedom (Ortaleza and Nabe, 2020). According to FPDL1 said that he has learned a lot on the livelihood program.

> *"May ada ada kogad nahabaruan parti hito nga programa. Kay ha livelihood dako adto nak nahubaruan".*[I was able to learn something within that program, however, it was on the livelihood, Ive learned a lot].

On the same note, FPDL3 shared something on what he have learned on the education and livelihood.

“Sugad han education, baga na update ini an akon mga nahibaruan. Han livelihood liwat, nanhibaro ako pag ayad hini nga mga magkote”. [In terms of Education, it updated my previous knowledge. With livelihood, I was able to learn meticulous task].

While FPDL5 have shared his learnings in general.

“Oo, baga damo iton akon mga nahibaruan didto parti hito nga programa“.[Yes, I’ve acquire several learnings in the Jail relative to that program]

Participants' responses agreed with Samilo et al., (2020), who stated in their paper that BJMP Valenzuela also works on and the strengths and weaknesses of the program to reform people and provide persons deprived of liberty (PDLs) with skills and learning that will be useful for them.

Former persons deprived of livert may also learn essential employability skills through these programs, which may lead to opportunities for employment upon their release to support themselves and even their families and live a reformed life that is different from their one before entering jail.

Theme 2 Self-Reflection

This training, which will be prioritized for prisoners with low levels of education and no prior work experience, is intended to improve their chances of successful self-employment after release. Simultaneously, the initiative is a first step toward the construction of a silver jewelry manufacturing and marketing facility, which will employ offenders and generate cash for them.

Understanding former persons deprived of liberty reentry into society after release is required for knowledge of their desistance processes (Vivares, 2023). As well as jails with a nice and well-organized social climate that is safe, helpful, and well-policed likewise treated convicts with humanity has to be detailed. According to FPDL1, he have learned on how to use the rosary and used it as his weapon on his fight while he was in jail.

“Amo iton an parti han kanan spirituality, sugad han mga pan rosary ngan pan ngadi, kay baga amo man gud iton an akon masyado nga nagagamit“. [That’s it, regarding spirituality, like those with rosaries, and with prayers, since that was mostly what I can used].

Meanwhile, FPDL2 have also explored on his ways on how he can supassd the problem through reading and other legal advices.

“Mayda gad gehap, amo naton han ak pagbinasa parte han akon kaso, nga kon paano ak makalosot, parte na gehap ito hit education”. [I also have those learnings, and that was in relation to my reading habits regarding my case, on how would I be dismissed, and that is already concomitant to education].

On the same manner, FPDL5 have gained learning that are useful on his present time as former person deprived of liberty.

“Sugad han kanan Edukasyon, mayda ko nabaruan ngadto kay tinutduan man ak nira, ngan hit livelihood, nabaro ak mag ayad Parol nga akon binaligya kada ma pasko, nabaro ako mangadi ngan magka maya koneksyion haiya, ngan nakabulig luwat adto pag upay pa nak mulay han basketball “. [Like the area of Education, I learned something for they were teaching me inside the Jail, and for the Livelihood, I learned to make a Parol that I sell during Christmas vacation, I learned to pray and to connect with him, and It have helped me improve my skills in basketball].

When former persons deprived of liberty are released from prison, they typically learn that their hopes for resuming normal life are not easy. This is especially true for long-term persons deprived of liberty who are less likely to meet various learning that are required in the social reintegration context.

Sub-theme Application of Learned Skills

Former persons deprived of liberty who developed good soft skills in prison have a better chance of decreasing their term, re-entering successfully, and finding meaningful work ((Cano et al., 2023)). As a result, an effective soft skills program necessitates careful skill selection and concentration, adaptive resources, various teaching techniques, continuous assessment, and precise tailored feedback and encouragement.

Thus, former persons deprived of liberty can extend soft skills training outside the correctional setting. According to FPDL2 shared his experiences relative to the phenomenon.

“kay an ak gin pagtoto-unan nak pansin is an ak kaso, naha apply ko logod an ak mga nabaruan parti nak kaso didto nga diri dapat buhaton dinhi, mga panotdo dinhi”. [What I was focusing was my case, but I were able to apply my learning relative to my studies of my case, lectures from the jail].

Same sentiment was shared by FPDL3 have applied his learnings on applying for a job that he was not able to encounter any difficulty.

“An akon baga mga nahabaruan tikang ha Jail, baga waray koman problema han akon pag apply hadto dinhi” [With all the learnings that I acquired from the Jail, it seems that I did not face problems with its application here in the community].

While FDL5 gave an emphasis on the usage of the learnings from the program that he can use in the social reintegration context.

“Oo, naha anu ko tun nga ak nabaruan about han livelihood, kay makakabulig gud ito haimo kun ada kana ha kumyunidad “. [Yes, I have applied those skills that I have acquired but, in the livelihood, I am satisfied about it since the course that has been offered can be used in a sustainable career once you are out in the community].

Former persons deprived of liberty can, in fact, use their acquired abilities in a variety of ways after their release. They can put their skills to use by looking for work or starting their own business. Teaching prisoner with practical work skills can boost their employability and provide them with better job opportunities, or better entrepreneurial abilities to assist them in self-employment.

Theme 3 Finding a Job Easier

The major objective of correctional officers is to instruct and teach former people who have been deprived of their freedom a variety of valuable occupations and assist them enhance their self-esteem, decision-making skills, and confidence in their future. Importantly, these professions will improve their employability, provide better employment opportunities, or, in the case of self-employment, better entrepreneurial skills to support them.

According to an Urban Institute study of Baltimore-area on former persons deprived of liberty, on social reintegration context tend to come from a concentrated collection of communities with "above-average unemployment rates. According to FPDL2 he has not encountered any problem during his application instead he was given advices.

> *"Dinhi ha community, baga waray man ako ig agi hin problema han pag apply hini nga akon nga nahibaroan, bagat, nanhihingaruyag pa an tawo nga nasusumatan nga amo ini, na ayaw diri dapat ta iton buhaton, delikado".* [Here in the community, I did not face problems in terms of applying these learnings that I acquired. Most of the citizen was even happy that I was able to share or impart my knowledge unto them, that they shouldn't do this because it's dangerous].

While FPDL4 shared also the same sentiment that he had not encounter any difficulty while he was applying for a job.

> *"Han pamiling han trabaho, kinaluyan ako han Ginoo nga waray ako kurian og waray magka problema han pag apply hin trabaho".* [Upon looking for a Job, I am blessed that I didn't have the difficulty or an issue in applying for a work].

On the same manner, FPDL5 have also shared his experiences that the prison have taught him so many lessons and those were very useful.

> *"An ak mga nabaruan didto sulod han presuhan, dako an gamit ha ak".* [The skills I have acquired inside the Jail was beneficial to me. And luckily upon looking for a job I didn't find any difficulty to be hired becuse of my past record].

These comments contradict the findings of Visher et al. (2011), who found that a high majority of former offenders have poor levels of educational attainment and work experience, health issues, and other personal qualities that make them difficult to hire.

For many of the participant's, finding work was a significant goal. As they were being released, their employment is a crucial component of the procedure for re-

entry jobs, more than just a consistent source of cash, can offer former inmates with a feeling of structure and responsibility as they try to reintegrate following release. Fortunately, in the context of Burauen District Jail, former persons deprived of liberty did not face a difficult path to finding and keeping work.

Theme 4 Continuation of the Programs

Prisons and jails are institutions for penal reform and rehabilitation. Correctional institutions likewise are supervised by the Department of Justice's Bureau of Corrections. They serve as a safe haven for education, socialization, moral healing, and self-improvement. The Bureau of JailManagement and Penology, specifically, is part of the Department of the Interior and Local Government, which in general oversees district, city, and municipal jails.

Livelihood services embraced the productivity of viable livelihood initiatives by reducing costs, looking for better markets, producing more, and improving quality (Patlunag, 2020). Included in the educational services are the facilitation of continued education for prisoners as well as the education of young and illiterate inmates. That is FPDL1 appeal from the department to continuously hold th program as it is helpful on the context of social reintegration.

> "*Angay ton paupayon kay maupay man an amon pan gawas nganhi, maupay man an palakad, kutob yana waray man kami ton manmalik ngadto ha presohan, baga nag bag'o na".* [It should be improved since our released here was with a good process, until this day, we did not return to the Jail, cause, of real reformation].

> While FPDL3 shared the same vision for the programs that BJMP ahs provided.

> *"Amo ito, kon makusog man ito yana, pakosgon pa ito nira, para man liwat hit kaupayan hit PDL".*[That's it, if it was currently strong, then make it even stronger, well, that's for the welfare of the PDL].

The delivery of various services can be measured by gauging former persons deprived of liberty's satisfaction with their quality of life. The degree of life that adds to happiness, contentment, and mental health advantages is referred to as the quality of life. Understanding their quality of life is essential for informing the government, jail administrators, and the community about the inmates' current situation. Measuring their level of happiness with their quality of life could provide a foundation for developing and designing effective and efficient rehabilitation programs (Patlunag, 2020).

Conclusions

The results of the assessment, derived from the narratives of former persons deprived of liberty, and the qualitative findings disclosed four major themes and seven sub-themes as follows: Theme 1: Provisions of Effective Programs, with sub-themes Positive Outcomes of Programs, Interpersonal Skills, and Life Key Skills. Theme 2: Self-Reflection, with sub-theme Application of Learned Skills. Theme 3: Finding Easier

Jobs. Theme 4: Continuation of the Programs. The results demonstrated that the programs provided by the BJMP-WDP were very useful and significantly aided former persons deprived of liberty in the context of social reintegration, particularly for those who worked to change for the better.

This was congruent with the study by Estillore and Aoas (2020), which found that the BJMP provided livelihood programs focusing on skill-based training for former persons deprived of liberty, as they learned and developed new skills that were extremely valuable. This was vital to their reintegration into normal society. The BJMP's livelihood projects yielded positive results and had a beneficial impact on the lives of former persons deprived of liberty. Furthermore, the employment opportunities available to former persons deprived of liberty improved their socioeconomic standing.

Recommendations

Based on the study's findings, the following recommendations for improvement and enhancements were provided:

1. The BJMP Burauen District Jail should continue and expand its livelihood programs, as they have made a significant contribution to the lives of former persons deprived of liberty.
2. The BJMP should offer more livelihood training, such as welding, by strengthening its collaboration with TESDA. T
3. The BJMP Burauen District Jail should also improve and strengthen its linkages and collaborations with other government and non-government agencies to assist in the efficient implementation of livelihood programs for former persons deprived of liberty. Moreover, enhancing the monitoring and evaluation processes for these programs is essential to ensure their effectiveness and to make necessary adjustments based on participant feedback.
4. Increasing awareness and advocacy efforts within the community is crucial to reduce stigma and create more employment opportunities for former persons deprived of liberty, facilitating their successful reintegration into society.

Compliance with Ethical Standards

The researchers declare that this study was conducted in strict compliance with ethical standards. Informed consent was obtained from all respondents, who were assured of their freedom to withdraw from the study at any time without any repercussions. The anonymity of the respondents was rigorously maintained to protect

their privacy, and their well-being was safeguarded throughout the research process. The researchers affirm that no conflict of interest existed in the conduct of this study.

Additionally, the researchers strictly avoided plagiarism and ensured that there was no bias in the interpretation of the findings. The results of this study were used solely for research purposes, adhering to the highest standards of academic integrity.

Acknowledgments

The researchers would like to express their profound gratitude to the Local Chief Executive of Burauen, Leyte, Hon. Mayor Juanito E. Renomeron, SB Members, and College Administrators of Burauen Community College, Dr. Jett C. Quebec, Atty. Absalon G. Apostol and Dr. Josefina Apostol for their steadfast support in completing this research paper. Likewise, to Dean Cheron Reyes, MSCrim, College of Criminology, and Dr. Solomon Alcober for their invaluable assistance in finalizing the paper. Same gratitude goes to Sir John Eric Go, MM, Director of OSAS, for approving the letters and providing moral support. Special thanks to Dr. Jessielyn Mesias-Abordo, Faculty of the College of Criminology at Visayas State University-Tolosa, who served as the External Expert and made the paper more scholarly. Above all, the researchers would like to express its deep appreciation to Burauen District Jail for granting approval and serving as the venue for the study, which greatly enriched the study.

ABSTRACT

English language learning is a complex phenomenon and challenging that is set of words, grammar, structure, unpredictable spelling, and complexity of organizational ideas. Learning the English language is pivotal to the development of the learners in all aspect. Thus, the classroom is the ideal platform to acquire and learning the English language with the assistance of English teachers. The COVID-19 Pandemic brought distraction to all educational system where the modular distance learning modality is being adopted while learners accustomed to face to face learning approach. This qualitative phenomenological study aimed to explore the lived experiences of selected Teduray English language learners during the modular distance learning from Datu Blah Sinsuat, District of Maguindanao-II, Division. The purposive sampling technique was used to select the participants relevant to the research study. The in-depth interview employing semi-structure research questionnaire was utilized to explicate the challenges and experiences in the phenomena.The Collaizi's, (1978) seven steps strategy in phenomenological approach was utilized to provide rigorous analysis of data. Thus, the findings of the study revealed important themes. Poor Reading Comprehension, Very Poor in Writing, Difficulty in Word Recognition, Poor Writing Skills. Consequently, the coping mechanism of Teduray English language learners were, Studying the Lesson, Asking Assistance from Parents/Siblings. Therefore, the suggested solution of the English

language teachers to the Teduray learners were, Enrichment Activities in Reading and Writing on Module, Learning Through Social Media Platform, Guidance and Supervision from Adults/Parents and lastly, Utilization of Dictionary. The study concluded that, Teduray English language learners had experienced serious difficult challenges in their learning English language on modular distance learning.

Keywords: *English language learning, lived experiences, modular distance learning, Teduray, phenomenology*

INTRODUCTION

Education has a significant impact on the lives of learners. Teachers are one of the most important tools in delivering high-quality education. The introduction of COVID-19 in the Philippines resulted in significant changes in the educational landscape. One of these is the Department of Education's implementation of a new form of instruction. Most education systems have been forced to adopt alternatives to face-to-face teaching and learning as a result of the present COVID-19 dilemma. Many educational systems have transferred activities online in order to continue teaching despite school closures (OECD, 2020). The transition in school teaching-learning delivery to modular distance learning made the delivery of fundamental quality education more difficult for school workers. As stated by Bagood (2020), DepEd authorities are continually looking for methods to overcome difficulties and capacitate teachers and school administrators to become more effective in the field of modular distant learning (Castroverde & Acala, 2021). The majority of students are modular (print) learners, especially in rural locations where internet access is not always available. They are learning at home with the assistance of their parents or guardians, who have taken on the role of teachers. Teachers, on the other hand, provide guidance to the parents. Teaching their children at home, particularly the younger ones from kindergarten to grade three. The same is true in Grades 4 to 6, albeit with less direction than in the early grades, when students receive more attention and monitoring. The modular system had certain difficulties, particularly in engaging students who were uninterested in studying (J. A. Barcenas and M. B. Bibon, 2021). Students also complained about too many activities in class. As they indicated, a teacher would assign them nearly three exercises in a subject, leaving them with less time to carefully answer all of them. Sundarasen et al. validated the difficulty of remote learning in their investigation (2020).

Some Malaysian university students voiced concern about the enormous number of assignments assigned by their professors. Their studies also demonstrated that this difficulty had a significant impact on the students' stress and anxiety levels. Sarvestani et al., (2019) have a similar situation, in which students complain about the huge volume and quantity of courses that they must complete. More learners think they didn't fully comprehend the modules. They even have trouble understanding the lessons when they are taught face to face (Helpline, 2020). As a result, it is clear that there are issues with using modular distance learning (Castroverde & Acala, 2021).

Therefore, a poor learning environment makes it difficult for students to participate in remote learning comfortably. Students' comments have repeatedly highlighted this issue. Creating a happy and supportive learning environment has always been a challenge in remote education, particularly for most disadvantaged families (Baticulon et al., 2020).

There are also parents who do not know how to read and write, making it more difficult to teach their children the lessons in their subject areas. This deficiency of learning the English language on Modular Distance Leaning is very much observable in one of the rural schools in Maguindanao II especially at Resa Elementary School, Kinimi Elementary School, and Nalkan Elementary School. Engaging in the teaching and learning process using the English language is a serious concern for the school and to its educators. In this context, this study was conducted to describe and understand the live experiences of grade 4 Teduray English Language Learners on Modular Distance Learning as affected by the factors which hamper their learning and ability to use English as an important component in their academic endeavor. This made the study relevant and timely.

Research Questions

This study determined the lived experiences of Teduray English Language Learners on Modular Distance Learning at Resa Elementary School, Kinimi Elementary School, and Nalkan Elementary School.

Specifically, the study sought answers to the following questions:

1. What are the challenges encountered by Grade 4 Teduray English language learners on modular distance learning in the following:
   1.1 reading; and
   1.2 writing?
2. What are the coping mechanisms of Grade 4 Teduray English language learners in overcoming the challenges on modular distance learning in the following:
   2.1 reading; and
   2.2 writing?
3. What are the suggested solutions of the English Language Teachers in the following language parameters:
   3.1 reading; and
   3.2 writing?

METHODOLOGY

This chapter presents the method employed in this qualitative research. This includes the research design used, research participants, the data collection, locale of the study, the research instruments, ethical consideration, and the data gathering procedures.

Research Design

The researchers used a qualitative design employing phenomenology in order to generate the interpretation of the text relating to the shared experiences of selected Teduray English language learners in the course of modular approach to learning during the Covid-19 pandemic. Phenomenology, as defined by Creswell (2013). As cited by Pulidao & Mohamad, (2023). In addition, qualitative research commonly produces a meaningful and detailed information about much smaller number of people and cases (Patton, 1990). that talks about the study of things in their natural setting (Denzin & Lincoln, 2011) as cited in Fukofuka ,2014; Mohamad, 2022; Manakan, Untong, Mohamad, & Sinsuat, 2023; Zaniel, Mohamad & Parcon, 2023; Ugalingan,. et al., 2023; Pulindao & Mohamad, 2023)

The Phenomenological approach was used to describe how one orients to live experiences (Sloan & Bowe, 2014). as cited by, Pulindao and Mohamad, (2023). Phenomenology allows the researchers to get in deep conversation with the participants in order to invite readers to understand the participants' livedexperiences through the texts disclosed in front of them. In order to collect the necessary data needed for the understanding aimed to determine the lived experiences of Teduray English language learners on Modular Distance Learning. The participants were asked on the challenges encountered by Grade 4 Teduray English language learners on modular distance learning in the following language parameters: a.) reading; and b.) writing, the coping mechanisms of Grade 4 Teduray English language learners in overcoming the challenges on modular distance learning in the following language parameters: a.) reading; and b.) writing, the suggested solutions of the Teduray learners in learning the English language in the following language parameters. This study focused on the description of the participants' lived experiences which relate to the phenomenon. Cresswell (2007) summaries the philosophical postulation associated with phenomenology as the study of the life experiencesof individuals, with the understanding that these experiences are conscious ones.The study includes the development of descriptions of the substances of these experiences, not explanations or analyses.

Locale of the Study

The study was conducted at Resa Elementary School, Kinimi Elementary School, and Nalkan Elementary School. Resa Elementary School is situated in Resa, Datu Blah Sinsuat, Maguindanao. It is approximately 46.1 km away from Cotabato City and 41.7 km away from Datu Odin Sinsuat Maguindanao. It is located at Barangay Resa in the municipality of Datu Blah Sinsuat in the province of Maguindanao. The 2015 Census determined that barangay Resa have 2,007 total of population. This represented 8.02% of the total population of Datu Blah T. Sinsuat municipality. On January 1950, Resa Elementary School was established at Sitio Kamis in barangay Resa. Due to the conflict happened in the year 2017 which resulted to the transfer of residents to other barangays, the school was also relocated at Sitio Padian of the same barangay. It was situated at 700sq land with five buildings consisting eight classrooms and one multifucntion room of the former Resa National High School where the said school was originated. Since the

said school was also transfered to other barangays in Datu Blah Sinsuat, the buildings was given to the Resaa elementary school with the pursuant of the land owner Datu Gimmie Sinsuat on his pure intention of education continuity to the people of barangay Resa. Resa Elementary School was re-established with the guidance of Ms. Marivic Solmerano Ariston, the current School Head of Sedem Elementary school who also acted as the school head of Resa Elementary School as well as Meti Primary School. Currently, the school is handled by its two permanent teachers headed by Hasma U. Butukan as Teacher in-Charge with the guidance of the District Supervisor Miss Samira S. Mustapha.On the other hand, Kinimi Elementary School is situated in Kinimi, Datu Blah Sinsuat, Maguindanao. It is approximately 38.8 km away from Cotabato City and 54.4 km away from Datu Odin Sinsuat Maguindanao. Kinimi Elementary School is demographically situated in Kinimi, one of the barangays in the municipality of Datu Blah T. Sinsuat in the province of Maguindanao. Kinimi Elementary School was tested again when flood hits, which resulted to devastation. The same of what was happened before the Kinimi Elementary School was rebuilt in the service of the people and its stakeholders with the utmost leadership of Mrs. Milaida T. Utto as a school principal. Meanwhile, the Nalkan Elementary School is situated in Nalkan, Datu Blah Sinsuat, Maguindanao. It is approximately 36.3 km away from Cotabato City and 36.9 km away from Datu Odin Sinsuat Maguindanao. Currently, the school is handled by its seven permanent teachers headed by Sampaguita S. Casada as School Principal with the guidance of the District Supervisor Miss Samira S. Mustapha.

Participants of the study

The participants of the study were seven (7) and three (3) English language teachers from Resa Elementary School, Kinimi Elementary School, and Nalkan Elementary School. These Teduray English Language Learners were officially enrolled during the school year 2021-2022.

The learner-participants were purposively chosen since they were Teduray English Language Learners from Grade 4 who are sincerely and willingly participated in the data gathering. The consent of their parents were secured. The teacher-participants were selected since they were the only English language teachers at the said schools.

Research Instrument

This study used a semi-structured interview guide questionnaire. This was verified and checked by thesis adviser and the panel members. The instrument contained an open- ended questions with three parts to gather information about the lived experiences of Teduray English Language Learners on Modular Distance Learning. The first question talked about the challenges in English Language Learning on Modular Distance Learning, second was their coping mechanisms in overcoming the challenges in English Language Learning on Modular Distance Learning, and the third was the suggested solutions of English language teachers to help address the challenges of Teduray English Language Learners in Modular Distance Learning. In this study, each interview started with acclimatization to prepare the participant psychologically and emotionally as the purpose

of the interview was slowly unfolded to them without necessarily being told. Since the participants understood Filipino language, the interviewers anticipate the possibility of asking questions in Filipino. Thus, the questions was framed in English but there was a ready translation in Filipino in the event the researcher sensed the need to use the translated version. Moreover, this was done to ensure that the questions are well-understood in order to obtain rich substantial data. A semi-structured set of questions were arranged to steer and guide the interview as well as to avoid leading questions as suggested by Morse and Richards (2002) (as cited in Kalis, 2018). A semi-structured interview guide is a technique for generating qualitative data and is characterized by open-ended questions rather than closed type to allow free flowing of thoughts from the participant. The interviewer is free to probe interesting areas that arise from participant's interest or concerns (Lindolf & Taylor, 2002) as cited in Kalis (2018).

To assess whether an instrument is valid, different sources of evidence could be evaluated such as content validity evidence. As cited by Samson (2017), (as cited in Kalis, 2018), Beck and Gable (2001), content validity stresses "the degree to which items in an instrument adequately represent the domain of content". Moreover, they state that content validity should be assessed in the developmental phase of the instrument rather than evaluating its final form.

Data Gathering Procedures

The following procedures were carefully followed during the conduct of the study: Transmittal letter was sent to the District Supervisor of Datu Blah Sinsuat District asking for her approval for the conduct of the study and to the Principal of Kinimi Elementary School and Nalkan Elementary School. A letter was sent also to the class adviser of Grade 4-A of Resa Elementary School, and Kinimi Elementary School, and Nalkan Elementary School and discuss the subject of the study. A letter of consent was sent to the guardian of the participants to ask permission and fully aware them about the study. Upon the approval, the researchers scheduled an in-depth interview with the participants. The in-depth-interview was scheduled at the most convenient time of the participants with their guardian/s at their respective schools. The in-depth-interview was conducted with the participant. They were invited at the school together with their guardian for the one on one interview which lasted for 20 minutes. Interview instruments and other materials was made ready for the use of the researchers. After the in-depth-interview, the researcher carefully transcribed the data gathered verbatim and systematically. The transcribing of data gathered was rechecked by listening to the recorded audio multiple times. This is to ensure the clarity and correctness of transcribing the information given by the participants. In order to validate this study, it was presented to the experts from Mindanao State University-Maguindanao.

Data Analysis

The researchers utilized the Collaizi's, (1978) seven steps strategy in data analysis in phenomenological approach that provided a rigorous and intensive analysis. (Mohamad, 2022). According to Collaizi, stated that, to understand, describe, depict and the lived

experiences of Teduray English language learners during the modular distance learning brought by the COVID-19 Pandemic. The main objective employing this method is generate a detailed description of certain phenomena. (Marrow, 2015) as cited by, Altecin, De Leon, Gomez, Grijalvo, Magabo and Villanueba, 2023). In addition, with each step staying close to the data. Transcripts were read repeatedly, significant statement, formulated meaning, cluster themes, developing exhaustive description, producing the fundamental structure and seeking verification of the fundamental structure to extract thematic analysis. As cited by. (Morrow, Roise, Rodriguez, Alison and King, Nigel 2015; Mohamad, 2022; Zaniel, Mohamad & Parcon, 2023; Ugalingan., et al, 2023) The responses of the participants were recorded, noted, and transcribed. The significant statements from the responses of the participants were singled out as basis of getting the code.Mohamad, (2022).

Ethical Considerations

Before allowing this study to take place, the researchers established an ethically sound ambiance. Nothing was done to infringe on the participants' rights to respect, privacy, and protection from physical and psychological damage. The District Supervisor, participants' class adviser, parents/guardians, and participants received the transmittal letters stating that both sides (the researcher and the participant) have agreed to engage in an interview, furthermore, the participants were notified ahead of time that the researcher and the adviser will have access to all of the information acquired. Additionally, the dignity of the subjects of this study were protected in accordance with the "confidentiality clause," which states that no identifying features or information, including names, would be included in transcripts or the final report. Furthermore, deletion of the voice recordings after transcribing was done for safety and confidentiality purposes of the participants of this study. Finally, it was assured that the participants in this study are aware of the study's purpose. The participants in this study were given clear and sufficient background information on which to make their own decisions about whether or not to participate.

RESULTS AND DISCUSSION

This chapter presents the phenomenological data gathered to achieve the objective of this study. The data were taken from audio recordings of the in-depth interviews of the Teduray English Language Learners and their English Language teachers. There were twelve (12) target participants in this phenomenological study but only ten (10) have participated. Those were the seven (7) Teduray English Langauge Learners and three (3) grade 4 English Language teachers from Resa Elementary School, Kinimi Elementary School, and Nalkan Elementary School. These recordings were manually transcribed and translated into English.

Throughout the process of identifying significant statements from each transcript of interviews to formulation of meanings and clustering themes that established the

surfaced patterns, themes were formulated according to influenced factors of the lived experiences of Teduray English Language Learners on Modular Distance Learning.

The Challenges Encountered by the Grade 4 Teduray English Language Learners on Modular Distance Learning in Reading as English Language Parameter

Table 1.1 reflects the significant statement, formulated meaning, code, and theme clusters of the responses about the challenges encountered by the Teduray English Language Learners on Modular Distance Learning in reading as English Language Parameter.

Table 1.1: Challenges Encountered by Teduray English Language Learners on Modular Distance Learning in Reading

Participants	Significant Statement	Formulated Meaning	Code	Theme Cluster
1	My mama teaches me. I can understand few of it… I can't read other words.	The learner taught by her mother to read.	001	Poor reading comprehension
2	It was Mama..who reads it. I can't read it, I can only read some.	The learner can't read but can read some.	002	Very poor reading
3	I can't read English. Tagalog/Filipino only.	The learner can't read English.	003	Reading problem
4	English is hard ma'am.I can't read it.	The learner can't read.	002	Very poor reading
5	I can only read few from it. I don't understand it. I don't understand the content of our module in English.	The learner can read few but can't understand.	002	Very poor reading comprehension

6	Ahmm.. I can only read few English words ma'am..ahmmm.. It is hard to understand. I understand only few words in English, so I can't answer all of my modules in English.	The learner has difficulty in reading and understanding words in English.	002	Very poor reading comprehension
7	I can read. Ahhhmmm… I understand few in English.	The learner can read but cannot understand everything.	002	Very poor reading comprehension

Table 1.1 presents the challenges encountered by the Teduray English Language Learners on Modular Distance Learning in reading. There were three (3) themes emerged from the seven (7) participants.

Theme 1 "poor reading comprehension" with the code 001, one participant mentioned that he can read some words in English language but there is lack of comprehension on it. This is supported by his statement that: "*My mama teaches me. I can understand few of it… I can't read other words."* (Transcript 1, lines 40-42)

This implies that Teduary English Language Learners need reinforcement to develop their reading comprehension skill. Reading is beneficial for language acquisition, according to Harmer (2008). Assuming that pupils comprehend what they read, the more they read, the better they get (Setiawan, 2017).

Majority of the participants mentioned that "very poor reading" coded 002 in English language means that it is hard for them to read and comprehend. This made the learners less interested in answering their modules. It was revealed by participant 2 from the transcription quoted as: "*It was Mama..who reads it. I can't read it, I can only read some."* (Transcript 2, lines 41-43)

Participant 4 mentioned in the interview that she was facing difficulty in reading English language. It was revealed by participant 4 from the transcription and lines: "*English is hard ma'am.I can't read it."* (Transcript 4, lines 46-47)

Most kids have inadequate reading skills, according to Njie (2013) and Rany (2013), due to a lack of effective learning methodologies, as well as their unwillingness and motivation to learn how to read (Setiawan, 2017).

Theme 3 “reading problem**”** with the code 003, one participant stated that he was having hard time in answering module since the learner mentioned that he cannot read English words. Participant 3 revealed it from the transcription and lines: “*I can’t read English. Tagalog/Filipino only.”*(Transcription 3, lines 43-44)

According to Njie (2013) and Rany (2013), most pupils have poor reading skills due to a lack of efficient learning methodologies as well as their unwillingness and motivation to learn to read. Setiawan, 2017

Theme 4 “very poor reading comprehension” with the code of 004, three (3) participants denoted that these learners could read but could not comprehend everything they read. The learner found it hard to understand the content of their modules as they revealed. Participant 5 revealed from the transcription and lines: *“I can only read few from it. I don’t understand it. I don’t understand the content of our module in English.”* (Transcript 5, lines 50-55)

When participant 6 was asked about her challenges in reading on Modular Distance Learning, she revealed that she has difficulty in reading and understanding words in English. It was revealed from the transcription and lines: “*Ahmm.. I can only read few English words ma’am..ahmmm.. It is hard to understand. I understand only few words in English, so I can’t answer all of my modules in English.”* (Transcript 6, lines 45-51)

Participant 7 stated on the interview that the learner can read English but cannot understand everything. It was revealed from the transcription and lines: “*I can read. Ahhhmmm… I understand few in English*.” (Transcript 7, lines 55 and 59)

Rany (2013) claims the limitations of pupils’ vocabulary proficiency impedes their reading ability as well as a challenge to teachers when teaching reading strategies to pupils (as cited in Setiawan, 2017).

The Challenges Encountered by the Grade 4 Teduray English Language Learners on Modular Distance Learning in Writing as English Language Parameter

Table 1.2 reflects the significant statement, formulated meaning, code, and theme clusters of the responses about the challenges encountered by the Teduray English Language Learners on Modular Distance Learning in writing as English Language Parameter.

Table 1.2: Challenges encountered by the Teduray English Language Learners on Modular Distance Learning in Writing

Participants	Significant Statement	Formulated Meaning	Code	Theme Cluster
1	I don't know what to write maam.	The learner do not know what to write	101	Very poor in writing
2	I know how to write..but sometimes the spelling is incorrect.	The learner know how to write but poor in spelling	101	Very poor in writing
3	Don't know English Language ma'am.	The learner does not have knowledge on writing using English Language	101	Very poor in writing
4	I know how to write..but I can only write few words.	The learner can write but only few words.	102	Poor writing skill
5	I find it hard to write in English ma'am, but sometimes the answers are found in the module. I'll just rewrite it, I just can't answer some when answers are not found in the module.	The learner finds it hard to write in English language	102	Poor writing skill

6	In English ma'am… spelling is difficult for me.	The learner is having difficulty in spelling.	102	Poor writing skill
7	I rewrite the answers that mama writes.	The learner can write by copying	102	Poor writing skill

Table 1.2 presents challenges encountered by Teduray English Language Learner on Modular Distance Learning in writing. This table emerged two (2) themes from seven (7) participants.

Theme 1 "very poor in writing" with the code 101 showed that the learners struggle on writing using English Language. Participant 1 revealed in the interview that he do not know what to write on his module. He stated it in the lines: *"I don't know what to write maam*." (Transcript 1, lines 47-48)

When participant 2 was asked the challenges he encountered on Modular Distance Learning in writing, he responded that he know how to write but poor in spelling. It was stated it from the transcription and lines: "*I know how to write..but sometimes the spelling is incorrect*." (Transcript 2, lines 57-59)

Participant 3 affirmed on the interview that he does not have knowledge on writing using English Language. It was stated it from the transcription and lines: *"I don't know English Language ma'am*." (Transcript 3, lines 49-50)

Students must master particular principles and develop abilities linked to handwriting, spelling, flow, punctuation, and structuring thoughts into readable texts, making writing competency more complicated and harder than other language skills (Richards, Richards, & Renandya & Renandya, 2002; Alsamadani, 2018; Adas & Bakir, 2013, Akhiar, Mydin & Kasuma, 2017). Students' enthusiasm is sometimes stifled by the complexity of writing, which has an impact on their comprehension and performance in language learning. In this regard, Zainab, Isarji, and Zaidi (2017) argued that students with poor writing proficiency tend to perform poorly in written examination and reporting research projects (as cited in Hassan et al., 2021).

Theme 2 "poor writing skill" with the code 102 indicated that the learners do not able to write using English language. As they revealed on the interview, there is lack of interest in answering modules since they struggle on writing using English language. They confirmed it on the transcription and lines: *"I know how to write..but I can only write few words."* (Transcription 4, lines 56-57); *"I find it hard to write in English ma'am, but*

sometimes the answers are found in the module. I'll just rewrite it, I just can't answer some when answers are not found in the module." (Transcription 5, lines 64-69); *"In English ma'am… spelling is difficult for me."* (Transcription 6, lines 61-62); and *"I rewrite the answers that mama writes.* "(Transcription 7, lines 65-66)

The primary obstacles identified by Dangle & Sumaoang (2020) were a lack of school funds in the design and delivery of modules, students' struggles with self-study, and parents' lack of understanding to academically assist their child/children. As a result, it is clear that there are issues with using modular distance learning (as cited in Acala and Castroverde, 2021).

The Coping Mechanisms of the Grade 4 Teduray English Language Learners on Modular Distance Learning in Reading as English Language Parameter

Table 2.1 reflects the significant statement, formulated meaning, code, and theme clusters of the responses about the coping mechanisms of the Teduray English Language Learners on Modular Distance Learning in reading as English Language Parameter.

Table 2.1: Coping Mechanisms of the Teduray English Language Learners on Modular Distance Learning in Reading

Participants	Significant Statement	Formulated Meaning	Code	Theme Cluster
1	I study my lesson ma'am.	The learner do not know what to write	201	Studying the lesson
2	Only Mama answers it.	The learner is dependent on her mother on answering the module.	202	Asking assistance from the mother
3	I ask my older sister to answer it.	The learners asks help from siblings.	203	Asking assistance from the sibling
4	Only my mother answers it.	Learners rely on their parents.	202	Asking assistance from the mother

5	I study my lessons ma'am.	The learner study her lesson.	201	Studying the lesson
6	I ask my older sister to teach me.	The learner asks help from siblings	203	Asking assistance from the sibling
7	She answers it. Mama reads it	The learner becomes dependent due to deficiency of reading.	202	Asking assistance from the mother

Table 2.1 presents coping mechanisms of the Teduray English Language Learners on Modular Distance Learning in reading. The seven (7) participants reveal three (3) themes.

Theme 1 "studying the lesson" with the code 201 revealed that despite the situation facing by the learners during Modular Distance Learning, they express positive attitude towards learning by studying their lessons. It is shown in the transcriptions and lines: *"I study my lesson ma'am."* (Transcript 1, line 58); *"I study my lessons ma'am."* (Transcript 5, line 83)

According to Jumat (2014), motivation is vital in boosting students' learning results (as cited in Gbollie & Keamu, 2017).Further, theme 2 "asking assistance from the mother" with the code 202 have shown that some of the Teduray English Language Learners has lack of interest in learning during Modular Distance Learning. The learners ask their parents to answer their modules instead of exerting effort to learn from it. It was revealed from the transcription and lines: *"Only Mama answers it."* (Transcript 2, lines 72); "*Only my mother answers it."* (Transcript 4, lines 70-71); and "She answers it. Mama reads it." (Transcript 7, lines 51-52).

Many studies indicate that when parents are involved, children learn and achieve more. Parents should take appropriate care of their children's physical and educational development to the extent that they are able to be independent and satisfy the needs of the world in which they live, according to Ceka and Murati (2016) (as cited in Gevero, 2021).

Theme 3 "asking assistance from the sibling" with the code 203 showed that the learners provide answers to their modules by letting their siblings answer it instead of doing it themselves. This also shows that the learners have less interest in learning the language during Modular Distance Learning since they are having difficulty in reading and comprehension as well. These were revealed on the transcriptions and lines: *"I ask my*

older sister to answer it."(Transcript 3, lines 61-62) and *"I ask my older sister to teach me." 6* (Transcript 6, lines 76-77).

Nonetheless, all of this is reduced to the point where they are completely aware of their "critical" position as study-buddy in this new usual instruction (Gevero, 2021).

The Coping Mechanisms of the Grade 4 Teduray English Language Learners on Modular Distance Learning in Writing as English Language Parameter

Table 2.2 reflects the significant statement, formulated meaning, code, and theme clusters of the responses about the coping mechanisms of the Teduray English Language Learners on Modular Distance Learning in writing as English Language Parameter.

Table 2.2: Coping Mechanisms of the Teduray English Language Learners on Modular Distance Learning in Writing

Participants	Significant Statement	Formulated Meaning	Code	Theme Cluster
1	I call Mama, I ask help from her. I don't know the other topics.	The learner ask help from parent.	301	Asking assistance from the mother
2	Mama writes the asnwers on a separate paper… then I just transfer it on my module.	The learner rely on their parents on answering their module	301	Asking assistance from the mother
3	My older sister writes answers to my modules.	The learner depends on sibling.	302	Asking assistance from the sibling
4	Only Mama answers it.	The learner depends on parent.	301	Asking assistance from the mother
5	I call my older sister or my papa.	The learner asks help from	302	Asking assistance from

		sibling and parent		the sibling
6	I imitate what my older sister writes.	The learner copies answers given by sibling.	302	Asking assistance from the Sibling
7	I ask Mama to teach me.	The learner asks guide to parent	301	Asking assistance from the mother

In table 2.2, the seven (7) participants reveal four (4) varied answers coded 301, 302, 303, and 304 regarding the coping mechanisms of the Teduray English Language Learners in writing on modular Distance Learning.

The first theme “asking assistance from the mother” with the code 301 indicates that due to difficulty in writing using the language, the learners’ best option is to ask help from their parents to answer their modules. Participants 1, 2, 4, and 7 revealed it on the transcriptions and lines: *“I call Mama, I ask help from her. I don’t know the other topics.”* (Transcript 1, lines 68-69); “*Mama writes the asnwers on a separate paper… then I just transfer it on my module.”* (Transcript 2, lines 82-84); “*Only Mama answers it.”* (Transcript 4, lines 81-82); and “*I ask Mama to teach me.”* (Transcript 7, lines 94)

Gevero (2021) goes on to say that when parents are aware of and involved in their children's educational process, the outcome is more likely to be positive and inspiring. Parents in this survey expressed fears, safety worries, and a sense of duty. Nonetheless, all of this is reduced to the point where they are completely aware of their "critical" position as study-buddy in this new usual instruction (as cited in Matilov, 2002).

Moreover, theme 2 “asking assistance from the sibling”with the code 302 implies that Teduray English Language Learners depend on their sibling when it comes to answering their modules. As they have mentioned on the interview, they find it hard to write using English language. To aid their problem on answering their module, they ask their sibling to provide the answers for them. These was affirmed by the partcpants 3, 5, and 6 on the transcription and lines: *“My older sister writes answers to my modules.”* (Transcript 3, lines 73-74); “*I call my older sister or my papa*.” (Transcript 5, lines 96-97); and *“I imitate what my older sister writes*.” (Transcript 6, lines 87-88)

Furthermore, reading comprehension teaching styles are vital in the learning process and can influence students' reading comprehension (Tingsona and Aquinob, 2021).

English Language Teachers' Suggested Solutions for the Teduray English Language Learner on Modular Distance Learning in Reading

The significant statement, formulated meaning, code, and theme clusters of the English Language Teachers' suggested solutions for the Teduray English Language Learner on Modular Distance Learning in reading is shown in the table 3.1

Table 3.1: English Language Teachers' Suggested Solutions for the Teduray English Language Learner on Modular Distance Learning in Reading

Participants	Significant Statement	Formulated Meaning	Code	Theme Cluster
1	As an English teacher, to improve learners' reading skills during Modular Distance Learning, activities that focuses on improving their macro skills such as writing should be lessen while activities that will improve reading skills should be emphasized.	Giving activities that will improve the reading skills of the learners should be focused during Modular Distance Learning.	401	Giving activities that would improve reading skill than writing skill
2	As a teacher, our number one job is to teach learners and to learn from them. In order for the learners to learn well, we have to apply actual learning experience to them and let them reflect on it for their everyday life. I recommend to let the learners read more and comprehend what they are reading. I also suggest to give focus on the slow learners. Giving videos about reading for them to	Reading more and practice comprehension are suggested by the English language teacher Parents' plays important role on learners' learning during Modular Distance	402 403	Practice reading Parents' guidance on the reading activities of their children

	watch might help, but this technique is not easy in this place. Parents also need to guide their children. By giving them extra effort to practice reading in this situation, it can help the learners to excel in their reading skills.	Learning		
3	Learners do not rely on the modules given. I strongly suggest they need extra effort to improve their reading skills like watching television or videos related to the language skills. Let them observe and imitate the unfamiliar words or difficult words and always check the dictionary and ask elders to guide and teach learners.	Integration of the Modular Distance Learning to technology and giving reinforcement to the slow learners were recomended Giving extra effort to the learners is recommended Learners should check unfamiliar words on dictionary.	404 405 406	Watching television or videos Guidance from the adult learners Using dictionary

Table 3.1 presents English Language Teachers' responses on the suggested solutions for the Teduray English Language Learner on Modular Distance Learning in reading. The three (3) participants revealed six (6) themes.

Theme 1 "giving activities that would improve reading skill than writing skill" with the code 401 reflected that English Language teachers are suggesting that more activities that will focus on the improvement of the reading skill of the learners during Modular Distance Learning. Teacher -participant 1 mentioned it on the transcription below:

"As an English teacher, to improve learners' reading skills during Modular Distance Learning, activities that focuses on improving their macro skills such as writing should be lessen while activities that will improve reading skills should be emphasized." (Transcript 1, lines 20-23)

According to a study conducted by Ambayon (2020), modular instruction is more effective in the teaching-learning method than traditional teaching methods since students learn at their own pace in this modular approach (Acala and Castroverde, 2021).

Theme 2 practice reading with the code 402 implied that the English language teacher is aware on the needs of the Teduray English Language Learner during Modular Distance Learning. As he stated on the interview, teachers need to focus on the slow learners and help them read more and practice comprehension for their improvement. Teacher-participant 2 revealed it on the transcription and lines below:

"*As a teacher, our number one job is to teach learners and to learn from them. In order for the learners to learn well, we have to apply actual learning experience to them and let them reflect on it for their everyday life. I recommend to let the learners read more and comprehend what they are reading. I also suggest to give focus on the slow learners. Giving videos about reading for them to watch might help, but this technique is not easy in this place. Parents also need to guide their children. By giving them extra effort to practice reading in this situation, it can help the learners to excel in their reading skills."* (Transcript 2, lines 20-30)

It is an unfettered self-learning approach in which pupils are stimulated and their interest is piqued by quick feedback and a comment supplied to practice exercises. As a result, this type of learning modality promotes a student-centered learning strategy. However, instructors, students, and parents faced numerous obstacles as a result of the deployment of modular learning (Acala and Castroverde, 2021).

Theme 3 "parents' guidance on the reading activities of their children" with the code 403 emphasized that parents' plays important role on learners' knowledge acquisition during Modular Distance Learning. Teacher-participant stated it on the transcription below:

"*As a teacher, our number one job is to teach learners and to learn from them. In order for the learners to learn well, we have to apply actual learning experience to them and let them reflect on it for their everyday life. I recommend to let the learners read more and comprehend what they are reading. I also suggest to give focus on the slow learners. Giving videos about reading for them to watch might help, but this technique is not easy in this place. Parents also need to guide their children. By giving them extra effort to practice reading in this situation, it can help the learners to excel in their reading skills."* (Transcript 2, lines 20-30)

Theme 4 "watching television or videos" with the code 404 exposed that integration of the Modular Distance Learning to technology and giving reinforcement to the slow

learners were recommended by the English language teacher as one activity to improve the reading skill of the leaner. Teacher-participant 3 stated it on the transcription and lines below:

> "*Learners do not rely on the modules given. I strongly suggest they need extra effort to improve their reading skills like watching television or videos related to the language skills. Let them observe and imitate the unfamiliar words or difficult words and always check the dictionary and ask elders to guide and teach learners."* (Transcript 3, lines 21-26)

Theme 5 "guidance from the adult learners" with the code 405 exposed that giving extra effort to the learners by guiding them on learning during Modular Distance Learning was suggested by the English language teacher as a help to improve the reading skill of the leaners. In addition, guidance from their parents is also essential since parents are the new teachers during this Modular Distance Learning. Teacher-participant 3 stated it on the transcription and lines below:

> "*Learners do not rely on the modules given. I strongly suggest they need extra effort to improve their reading skills like watching television or videos related to the language skills. Let them observe and imitate the unfamiliar words or difficult words and always check the dictionary and ask elders to guide and teach learners."* (Transcript 3, lines 21-26)

Theme 6 "using dictionary" with the code 406 exposed that learners when they encounter unfamiliar words, they should check it on the dictionary as suggested by the English language teacher as one activity to improve the reading skill of the leaners. Teacher-participant 3 detailed it on the transcription and lines below:

> "*Learners do not rely on the modules given. I strongly suggest they need extra effort to improve their reading skills like watching television or videos related to the language skills. Let them observe and imitate the unfamiliar words or difficult words and always check the dictionary and ask elders to guide and teach learners."* (Transcript 3, lines 21-26)

Moreover, it is undeniable that during this pandemic, learners must realize the importance of the use of other learning materials like checking dictionaries as suggested by the English teacher is necessary.

Other problems for elementary school pupils learning to write include a lack of exposure to books and reading resources, according to Foster (2015). (Jumat, 2014).

English Language Teachers' Suggested Solutions for the Teduray English Language Learner on Modular Distance Learning in Writing

The significant statement, formulated meaning, code, and theme clusters of the English Language Teachers' suggested solutions for the Teduray English Language Learner on Modular Distance Learning in writing is shown in the table 3.2

Table 3.2: English Language Teachers' Suggested Solutions for the Teduray English Language Learner on Modular Distance Learning in Writing

Participants	Significant Statement	Formulated Meaning	Code	Theme Cluster
1	Activities that will focus on improving writing skill should be easier depending on the level of the learners and to the area they live.	The teacher focus on activities to improve writing skill	501	Giving of simple writing activities
2	For me, writing skills is one of the foundation of the children. To learn from skills, to apply it, but writing skills can be different in its style. The school where I am assigned is very far. Since we are now in the pandemic, we only use Modular Distance Learning. For me, I can suggest to use some videos for the learners to watch. But since it is not easy in this place, tutorial would be a better help. Have a schedule to those pupils whoa re in need and having problems on their writing skills. When the teacher is free to guide and to enlighten their lack of capacity to write, the learners could manage. Also, parents are the best teacher on guiding their children to learn better.	The teacher helps the learners through tutorial Parents should guide their children to learn better	502 503	Tutorial Parent's guidance

3	Integrate writing in a task in learning materials like rewriting articles in the news. Meaningful activities that enhances writing skills. Writing essay and diaries could encourage them to express their ideas through writing.	Supplementary witing activities will enhance the learners writing skills	504	Giving writing activities

Table 3.2 presents the English Language Teachers' responses on the suggested solutions for the Teduray English Language Learner on Modular Distance Learning in writing. The three (3) participants revealed 4 themes.

Theme 1 "giving of simple writing activities" has the code 501 where in the English language teacher suggests that more activities should be given to the learners to improve their writing skill. The teacher should focus on activities that will improve learners' writing skill depending on their capacity. It was implied by teacher-participant 1 on the transcription and lines: "*Activities that will focus on improving writing skill should be easier depending on the level of the learners and to the area they live*." (Transcript 1, lines 28-30)

Theme 2 "tutorial" have the code 502 which emphasized that the teacher could help the learners through tutorial. He responded during the interview that tutorial would be a better help to the Teduray English Language Learners especially to those who are having problems on their writing skill. It was mentioned by teacher-participant 2 on the transcription and lines below:

> *"For me, writing skills is one of the foundation of the children. To learn from skills, to apply it, but writing skills can be different in its style. The school where I am assigned is very far. Since we are now in the pandemic, we only use Modular Distance Learning. For me, I can suggest to use some videos for the learners to watch. But since it is not easy in this place, tutorial would be a better help. Have a schedule to those pupils whoa re in need and having problems on their writing skills. When the teacher is free to guide and to enlighten their lack of capacity to write, the learners could manage. Also, parents are the best teacher on guiding their children to learn better."* (Transcript 2, lines 34-46)

Theme 3 "parent's guidance" have the code 503 stressed that parents should guide their children to learn better. Consequently, guidance of the parents on learners' education has big impact to their learning. It was stated by teacher-participant 2 on the transcription and lines below:

“For me, writing skills is one of the foundation of the children. To learn from skills, to apply it, but writing skills can be different in its style. The school where I am assigned is very far. Since we are now in the pandemic, we only use Modular Distance Learning. For me, I can suggest to use some videos for the learners to watch. But since it is not easy in this place, tutorial would be a better help. Have a schedule to those pupils who are in need and having problems on their writing skills. When the teacher is free to guide and to enlighten their lack of capacity to write, the learners could manage. Also, parents are the best teacher on guiding their children to learn better.” (Transcript 2, lines 34-46)

Theme 4 “giving writing activities” have the code 504 stressed that supplementary witing activities will enhance the learners writing skills. More writing activities like writing essay and diaries as mentioned in the interview, would help the learners improve their writing skill and could encourage them to express their ideas. It was implied by teacher-participant 3 on the transcription and lines: *“Integrate writing in a task in learning materials like rewriting articles in the news. Meaningful activities that enhances writing skills. Writing essay and diaries could encourage them to express their ideas through writing.”* (Transcrpt 3, lines 30-33)

"Many writing problems may stem from too little time dedicated to writing instruction or from writing instruction improperly designed around the learning needs of many students," according to Stein, Dixon, and Isaacson (1994) (as cited by Defazio et al., 2010)

DISCUSSION

Summary of Findings

Based on the data gathered and presented, the following are the findings of the study:

1. The challenges encountered by the Teduray English Language Learners on Modular Distance Learning in reading are poor reading comprehension, very poor reading, reading problem, and very poor reading comprehension.
2. The challenges encountered by the Teduray English Language Learners on Modular Distance Learning in writing are very poor in writing and poor writing skill.
3. The coping mechanisms of the Teduray English Language Learners on Modular Distance Learning in writing are studying the lesson, asking assistance from the mother, and asking assistance from the sibling.
4. The coping mechanisms of the Teduray English Language Learners on Modular Distance Learning in writing are asking assistance from the mother, and asking assistance from the sibling.

5. The English Language Teachers' responses on the suggested solutions for the Teduray English Language Learner on Modular Distance Learning in reading are giving activities that will improve reading skill, practice reading, parents' guidance on the reading activities of the children, using dictionary, and guidance from adult learners.

6. The English Language Teachers' responses on the suggested solutions for the Teduray English Language Learner on Modular Distance Learning in writing are giving of simple writing activities, tutorial, parent's guidance, and giving writing activities.

Conclusions

Based on the summary of the results, it is concluded that Teduray English Language Learners have encountered serious challenges both in reading comprehension and writing comprehension. Furthermore, most learners have cope these challenges by depending on their parents or sibling in answering their modules.

However, their English Language teachers suggested that giving more activities to improve the reading and writing skills of the learners would be a great help. Moreover, giving extra effort on tutorial to the learners especially to the slow learners is also suggested.

Recommendations

Based on the findings and conclusion of the study, the following are recommended.

1. The Department of Education may deploy additional English teachers that will enhance the reading and writing skills of the pupils.
2. The school administration may conduct seminar or training to capacitate English teachers to plan and implement remedial reading and writing program in school.
3. The English language teachers may develop strategies to address the learners' weaknesses in reading and writing skills in Modular Distance Learning.
4. The English Language Learners may develop genuine love for reading and writing to complete their reading and writing tasks in their modules.
5. The English teachers may use interesting reading and writing materials like Big Books and Guided Writing to enhance pupils' reading and writing skills.
6. Other researchers may conduct similar study to other setting and participants to further validate the result of the study. .

Compliance with Ethical Standards

Since the study is qualitative in nature particularly phenomenology. The research studies involved District Supervisor, English Teachers, class advisers, and parents/guardians, were received the transmittal letters stating that both sides (the researcher and the participant) have agreed to engage in an in-depth interview in order to explicate the significant statement needed to the study. the participants were notified ahead of time that the researchers and the adviser will have access to all of the information acquired. Additionally, the dignity of the subjects of this study were protected in accordance with the "confidentiality clause," which states that no identifying features or information, including names, would be included in transcripts or the final report.

Furthermore, deletion of the voice recordings after transcribing was done for safety and confidentiality purposes of the participants of this study.

Acknowledgement

The researchers are extending their genuine heartfelt gratitude to the following people who helped in completing this research studies

Dr. Lydia S. Bawa, thank you so much for sharing in-depth knowledge about this research, guiding, sharing words of wisdom, commentary, substantial suggestions, checking and editing the document.

Dr. Marissa N. Parcon, chairman of the panel members for additional in puts, constructive criticism, encouragement, and countless suggestions .

Dr. Leonel P. Untong, one of the panel members for her fathomless guidance, encouragement and brilliant ideas which enrich the content of this paper.

Dr. Datumanot O. Pendaliday, for valuable comments and suggestions

District Schools of Datu Blah Sinsuat, school heads, faculty and Pupils for giving permission to conduct the study.

MATATAG AGENDA: ANALYZING SCHOOL HEADS' AND TEACHERS' PERSPECTIVES IN LAMBAYONG DISTRICT I

Sealtiel Joy A. Domingo
Amiludin G. Masabpi, Ph.D.

Lambayong Central Elementary School, Division of Sultan Kudarat, Philippines

https://doi.org/10.5281/zenodo.12559940

ABSTRACT

This aimed to investigate the perspectives of school heads and teachers on the MATATAG agenda in District I of Lambayong, Division of Sultan Kudarat. The researcher used qualitative research designed specifically phenomenology nature of study, and purposively sampling technique was employed in the selection of school heads and teacher as participants. The data gathered was analyzed using thematic analysis to describe the information gathered and answer the problems of the study. The result revealed that school heads perceived that the Curriculum must align with the latest industry needs, and the programs, and activities projects in the school should aligned to the different objectives of every agenda. The curriculum centers on the pupils' holistic development, and makes the stakeholders aware of the MATATAG agenda. In terms of the teachers' perspectives on the agenda is that, the implementer always consider the learners' needs, and the teachers must solve first the problem of the reading abilities of the pupils. Also, teachers were always updated and prepared for ensuring that every learner had the access to quality education. Finally concluded that school heads and teachers facing tensions such as confusion, frustration, and powerlessness considering that head and teacher had crucial role in the implementation of agenda. Further, concluded that agenda prioritized teachers' training and development because of the critical role in curriculum reform to eradicate poor literacy and numeracy issues of the learners and quality of education.

Keywords: *School Heads, Teachers, MATATAG Perspectives, Lambayong*

INTRODUCTION

MATATAG Agenda aims to resolve basic education challenges, namely MA- Make the curriculum relevant to produce job-ready, active, and responsible citizens; TA- Take steps to accelerate delivery of basic education facilities and services; TA- Take good care of learners by promoting learner well-being, inclusiveness learning, and positive learning environment and G- Give support to teachers to teach better (DepEd, 2023). In the 2023 General Appropriations Act, the education sector received the highest budget (Republic of the Philippines, 2023). However, these national budget allocations for basic education are not enough to cover all the requirements for achieving our MATATAG Agenda (DepEd, 2023).

According to Grauwe (2022), IIEP-UNESCO stated that the Education 2030 Agenda, which reflects the seven objectives, not only defines a global agenda; it also offers guidance to countries and challenges them. This agenda has a multitude of implications for the planning and management of the education sector. Education 2030 is ambitious. So was the Exploratory Factor Analysis framework. It can be argued that the major progress made at the global level and in several countries demonstrates the potential value of ambition (IIEP-UNESCO, 2022). Further, such ambition may help to bring people together, to mobilize resources, and to create enthusiasm. But there are still many countries in South Asia that are at risk of not achieving even the EFA goals by 2030 (Grauwe, 2022). It is essential therefore that the agenda is accompanied by an analysis of key lessons learned by countries that have made progress (UNESCO, 2022).

The overarching agenda highlights the importance of Early Childhood Care and Education, emphasizes the need for universal secondary education, and underscores the significance of strengthening Technical and Vocational Education and Training to develop essential skills (IIEP-UNESCO, 2022). While there is a well-supported emphasis on teachers, the rationale behind prioritizing investments in facilities and scholarships is less apparent, as these are not the primary factors contributing to the success of education systems (UNESCO, 2022).

The K-12 program is a part of international educational standards. The implementation of the K-12 Curriculum is still a challenge of basic education in the Philippines as the teaching forces in senior high school, professional growth of the teachers, school facilities, and classrooms are integral parts of the major problems in the Philippine Education Department (DepEd, 2023). At this time, MATATAG Agenda has become the concern of school heads, and teachers because they are the direct persons involved in this agenda (DepEd, 2023).DepEd- Sultan Kudarat Division covers a large number of districts along remote areas that are facing problems such as a lack of facilities, school buildings, and teachers to capacitate personnel in the field of teaching and sustain the needs of our 21st-century learners (DepEd-Sultan Kudarat Division, 2023). Some schools are striving to meet the standard requirement in education so that quality of education may also be achieved (DepEd-Sultan Kudarat Division, 2023). DepEd-Sultan Kudarat Division. (2023). Challenges in Basic Education in Remote Areas. Department of Education, Sultan Kudarat Division. This is why the researcher assessed and evaluated

the status of education in the District of Lambayong I, and its readiness to face challenges to solve it, then finally initiate intervention to meet the targets of the MATATAG Agenda in the Division of Sultan Kudarat.

Research Questions

This study aimed to investigate the MATATAG Agenda: Analyzing school heads' and teachers' perspective in District I of Lambayong, Sultan Kudarat Division.

Specifically, it sought to answer the following questions:

1. What is the perspective of school heads on MATATAG Agenda?
2. What is the perspective of teachers on MATATAG Agenda?
3. How do school heads' and teachers' ready and prepared on this MATATAG Agenda?

METHODOLOGY

Research Design

This study employed a qualitative research methodology to explore the behaviors and perceptions of school heads and teachers regarding the MATATAG Agenda. Qualitative methods were chosen for their ability to provide rich, descriptive insights into participants' lived experiences. Among the various qualitative methods, the phenomenological research design was selected, as it is particularly effective in social and behavioral sciences when the goal is to understand complex phenomena such as perceptions and thoughts.

Participants of the Study

The participants of this study consisted of school heads and teachers from District I of Lambayong. Criteria have been established to select individuals who have significant experiences within their roles and who are likely to provide insightful feedback on the MATATAG Agenda.

Sampling Technique

In this research, a purposive sampling technique was employed to select participants who possess specific attributes that align with the study's objectives. Aiming for a sample size of 5 to 10 participants enables the study to remain focused while ensuring a comprehensive collection of data. The smaller sample size fosters an intimate exploration of the school heads' and teachers' perspectives and experiences with the MATATAG Agenda, providing richness and depth to the resulting analysis.

Data Gathering Instrument

The collection and analysis of data on participants' perspectives were facilitated through a self-made structured survey carefully constructed and developed for this study. The survey was designed to elicit rich, detailed information about the participants' views on the MATATAG Agenda.

Additionally, the survey was validated using the validation tool provided by East-West Mindanao College Inc. This validation process ensured that the survey effectively measured the intended constructs and met the necessary standards for reliability and validity.

Upon approval by the evaluation panels and validation through the East-West Mindanao College Inc. validation tool, the researcher was authorized to administer the developed survey. Before data collection, ethical clearance was sought from the East-West Research Ethics Committee (EREC) to ensure that the research adhered to ethical standards, including participant consent, confidentiality, and protection of participant rights.

Data Gathering Procedure

In the process of data collection, the researcher sought permission with notification from her research adviser, the Graduate School Dean, and the Schools Division Superintendent of Sultan Kudarat Division. After obtaining the necessary approvals, the researcher meticulously coordinated with the school principal to schedule in-depth interviews with the participants at convenient times, ensuring minimal disruption to their regular academic activities. The researcher took great care to build rapport with the participants, explaining the purpose and significance of the study to encourage open and honest communication.

During the interviews, the researcher used audio recordings to capture the participants' responses accurately, ensuring that every detail was documented for subsequent analysis. The use of audio recordings allowed the researcher to focus on the conversation and engage more fully with the participants, fostering a more natural and comprehensive dialogue. These recordings were later transcribed verbatim to maintain the integrity of the participants' responses. The transcriptions were then reviewed and cross-checked for accuracy, ensuring that the data reflected the true sentiments and insights shared by the participants. This careful and systematic approach to data collection ensured the reliability and validity of the research findings.

Data Analysis

Thematic analysis was utilized to analyze the qualitative data collected from the participants, comprising interviews and focus group transcripts. This method allowed for the identification of recurring patterns of meaning within the dataset, enabling a deeper understanding of the participants' perspectives on the MATATAG Agenda.

Following data collection, the transcripts were systematically reviewed to identify common themes and patterns emerging from the participants' responses which patterened after the study of Ngag (2023). Through an iterative process of coding and categorization, key themes were identified, reflecting the participants' perceptions, concerns, and insights regarding the agenda.

The analysis was guided by Flick's (2014) framework for thematic analysis, which provided a structured approach to organizing and interpreting the data. Themes were identified based on their frequency, relevance, and significance to the research objectives, ensuring that the analysis captured the essence of the participants' experiences and perspectives.

Scope and Limitations

This study focused on the new and updated agenda of the VP of the Philippines Sarah Z. Duterte, the DepEd MATATAG Agenda specifically on the perspectives of school heads and teachers in the implementation of agenda. The researcher was not evaluated the implementation because the program is still on the process of implementation. However, the focused was on the individual perspectives of school heads' and teachers' on this agenda despite of unresolved problem in education in the country.

RESULTS and DISCUSSION

MATATAG Agenda aims to resolve basic education challenges, namely MA- Make the curriculum relevant to produce job-ready, active, and responsible citizens; TA-Take steps to accelerate delivery of basic education facilities and services; TA-Take good care of learners by promoting learner well-being, inclusiveness learning, and positive learning environment and G- Give support to teachers to teach better. This study employed a qualitative-phenomenological research design to explore the perspectives of the school heads and teachers in Lambayong I.

The following were the findings of the study:

Firstly, there's a clear emphasis on aligning the curriculum with industry needs to enhance skill application. School heads in Lambayong District I stress the importance of updating the curriculum to ensure it meets contemporary industry demands, thus facilitating the practical application of skills acquired by learners.

Secondly, school heads underscore the significance of commitment and dedication to improving the educational system. They advocate for the implementation of the MATATAG curriculum to provide learners with the flexibility and adaptability needed

for the evolving job market, demonstrating a commitment to educational excellence and continuous improvement.

Lastly, there's a recognition of the crucial role of teacher preparation for successful curriculum implementation. School heads prioritize ensuring teachers are adequately prepared for the implementation of the MATATAG Agenda, including providing instructional materials and organizing training sessions to align with the demands of the new curriculum.

According to Cobo (2013), there is a growing demand for educational systems to adapt to the changing requirements of the labor market, ensuring that learners are equipped with relevant and up-to-date skills. This alignment is crucial for preparing students to meet contemporary industry demands, thus facilitating their transition from education to employment.

As to the perspectives of teachers on the MATATAG Agenda, several major findings emerge:

1. Teachers perceive the MATATAG Agenda as emphasizing holistic student development, focusing not only on academic achievement but also on essential life skills and values.

2. Teachers recognize the transformative nature of the curriculum, which prioritizes the holistic development of learners. Additionally, teachers observe that the MATATAG curriculum encourages student-centered learning approaches, promoting greater student engagement and ownership of learning processes.

3. Teachers appreciate the curriculum's focus on active student involvement and empowerment. Furthermore, teachers value the emphasis of the MATATAG Agenda on providing diverse learning opportunities tailored to meet individual student needs and interests. They recognize the importance of fostering an inclusive and supportive learning environment that caters to the diverse needs of all learners.

A study by Smith (2021) supports the findings regarding the perspectives of teachers on the MATATAG Agenda. Smith's research emphasizes the importance of holistic student development in educational curricula. It highlights how teachers value curriculums that not only focus on academic achievement but also incorporate essential life skills and values, which align with the core principles of the MATATAG Agenda. The study further underscores the transformative potential of such curriculums, noting that student-centered learning approaches can significantly enhance student engagement and ownership of the learning process. Moreover, Smith's findings indicate that teachers appreciate curriculums that provide diverse learning opportunities, tailored to meet the individual needs and interests of students, thereby fostering an inclusive and supportive educational environment.

On the preparations of school heads and teachers for the implementation of the MATATAG Agenda, the following were observed:

1. There's collaborative preparation for curriculum alignment, with school heads and teachers actively engaged in planning sessions to ensure alignment between teaching practices and the objectives of the MATATAG Agenda.

2. There's a focus on professional development for MATATAG Agenda implementation, with teachers participating in workshops and training sessions to enhance their pedagogical skills and familiarity with the new curriculum framework. Additionally, teachers are diligently working to develop and adapt instructional materials tailored to the requirements of the MATATAG curriculum, demonstrating a commitment to providing relevant and effective teaching resources.

3. School heads and teachers are fostering strong partnerships with parents and the local community to garner support and engagement in implementing the MATATAG Agenda, recognizing the importance of collaborative efforts in promoting educational excellence and ensuring the success of curriculum implementation.

One supporting study that aligns with these observations is from Fullan (2007), who emphasizes the importance of collaborative professional learning communities (PLCs) in educational reform. Fullan argues that successful implementation of new curricula and educational reforms depends significantly on the active involvement and collaboration of school leaders and teachers. The study highlights the need for continuous professional development and community involvement to ensure effective curriculum alignment and improved teaching practices.

Fullan (2007) supports the observed preparations of school heads and teachers for the implementation of the MATATAG Agenda, emphasizing collaborative planning sessions for curriculum alignment, professional development workshops, and strong community partnerships as critical factors for successful educational reform.

Conclusions

Based on the findings of the study, the researcher concluded the following:

1. The perspectives of school heads in Lambayong District I underscore the importance of aligning the curriculum with industry needs, emphasizing commitment to improving the educational system, and prioritizing teacher preparation for successful curriculum implementation.

2. The teachers in Lambayong District I view the MATATAG Agenda as transformative, prioritizing holistic student development by integrating essential life skills with academic achievement. They commend its promotion of student-centered learning, enhancing engagement and ownership of learning. Additionally, they value its emphasis on diversity and inclusivity, tailored to meet individual student needs. Lastly, teachers recognize the need for ongoing professional development to effectively implement the

agenda, ensuring adaptation to evolving educational trends and seamless curriculum integration.

3. Lambayong District I school heads and teachers are actively preparing for MATATAG Agenda implementation in the K to 10 Curriculum. They engage in collaborative planning, attend professional development workshops, and develop tailored instructional materials. Additionally, they align teaching practices with agenda objectives and foster partnerships to promote educational excellence.

Recommendations

The following are the recommendations of the study based on the findings:

1. DepEd may provide continued training and professional development opportunities for both school heads and teachers to enhance their readiness and effectiveness in implementing the MATATAG Agenda.

2. Teachers and school heads may also initiate collaboration among stakeholders to ensure alignment with MATATAG objectives and holistic development of students.

3. The school may continuously monitor and evaluate curriculum implementation to address emerging challenges and ensure its effectiveness.

4. Future researchers may conduct further investigation to understand further the readiness and perceptions of teachers about the MATATAG Agenda.

Compliance with Ethical Standards

Ethical considerations were prioritized throughout the study to ensure the protection and respect of all participants involved. Initially, participants were fully informed about the nature and objectives of the research, and their voluntary participation was emphasized. They were provided with comprehensive details about the study's purpose, their role as participants, and the specific ways in which their responses would be utilized. This information was communicated clearly and thoroughly to guarantee that participants had a complete understanding of the research before consenting.

Informed consent was obtained from each participant, with assurances that their participation was entirely voluntary and that they could withdraw from the study at any point without any negative consequences. Participants were also assured of the confidentiality and anonymity of their responses. It was made explicit that all collected data would be used solely for academic purposes, and measures were put in place to ensure that the data would not be used against the participants or the organization in any manner.

This approach ensured transparency and respected the autonomy of the participants. By upholding these ethical standards, the study maintained the integrity and trustworthiness of the research process, fostering an environment of trust and respect between the researcher and the participants.

Acknowledgments

This study would not have been possible without the guidance and assistance of several individuals. The researcher extends heartfelt gratitude to Marjuni M. Maddi, Director General of MBHTE-Higher Education, for his wisdom and encouragement, and Crispin A. Soliven Jr., CESE Schools Division Superintendent of Sultan Kudarat, for permitting the study. Special thanks to Patricea I. Sandigan, MAED, School President, for her unwavering support, and Emilia M. Lotilla, PhD, Dean of the Graduate School at East West Mindanao College Inc., for her invaluable input.

The researcher's adviser, Amiludin G. Masabpi, PhD, provided continuous support and profound knowledge, making this study possible. Panel members Jaime Boy U. Ngag, Jr., PhD, and Leodie D. Mones, PhD, offered meaningful advice, while Michael A. Poblador, PhD, meticulously reviewed the content. Juliet P. Tambungalan, MAED, Academic Chairperson, provided patience and guidance, and Lakim M. Hadjiesmael, PhD, Schools District Supervisor of Lambayong District I, supported the study permit. Agnes P. Lim, Principal of Lambayong Central Elementary School, and the school heads and teachers of Lambayong District I also contributed significantly.

Deepest gratitude is also extended to the researcher's parents, Joseph C. Alipio and Natividad T. Alipio, her brother and sister, her husband Ronald L. Domingo, and above all, Almighty God for His wisdom and blessings. To everyone mentioned, thank you, and may God bless us all.

ABSTRACT

This research employed a descriptive-correlational research design to investigate the relationship between mathematical problem-solving skills and mathematics achievement among Grade 7 learners at Libo-o Integrated School during the school year 2023-2024. The study involved 24 purposively sampled respondents, with data collected using a researcher-developed multiple-choice (30-item) test. Descriptive statistics such as frequency counts, percentages, and means were utilized, while the inferential statistical tools employed included the Mann-Whitney U test, Kruskal-Wallis test, and Spearman's rho. The findings revealed that the level of mathematical problem-solving skills was at an average level, while overall mathematics achievement was considered satisfactory. The study also examined the influence of gender and socioeconomic status on mathematical problem-solving skills and mathematics achievement. It was determined that socioeconomic status does not significantly impact mathematical problem-solving skills or mathematics achievement. However, in terms of gender, females tend to have higher averages in both mathematical problem-solving skills and overall mathematics achievement. Furthermore, the study uncovered a significant positive correlation between mathematical problem-solving skills and mathematics achievement, emphasizing the interdependence of these two variables. To address the research objectives, the study proposed the development of "Mathemagical: Game-Based Activity Sheets for Mathematical Problem-Solving Skills," which aims to enhance mathematical problem-solving skills by utilizing gamified learning experiences that engage learners in meaningful and enjoyable activities. In conclusion, this study offers valuable insights into the

dynamics of mathematical problem-solving skills and mathematics achievement among Grade 7 learners.

Keywords: *Mathematical Problem-Solving Skills, Game-Based Activity*

INTRODUCTION

Mathematical problem-solving is a crucial aspect of mathematics teaching and learning, influencing global curricula and attracting interest from mathematics education researchers for its long-standing importance (Liljedahl, Santos-Trigo, Malaspina, and Bruder, 2016). Numerous studies in educational evaluation have shown that pupils have difficulty completing mathematical problem-solving tasks. These difficulties are mostly brought on by difficulties in solving problems. Students adopt techniques that can be categorized as either problem-focused or emotion-focused coping methods to deal with these difficulties (Vidad and Quimbo, 2021). To foster critical thinking and problem-solving skills, students must first acquire a strong foundation in essential competencies. In order to promote meaningful learning in a math classroom, it is essential to have learning materials that align with the students' specific context readily accessible (Suguitan and Natividad, 2022).

In the research conducted by Layug, Valerio, and Capones (2021), it was reported that in 2018, the Programme for International Student Assessment (PISA) ranked the Philippines as the second lowest out of 79 participating nations worldwide. This suggests that the mathematics skills of students in the Philippines are quite weak. In the published work of Balagtas (2020), the Philippines likewise did poorly in Trends in International Mathematics and Science Study (TIMSS), which is consistent with the PISA 2018 results. Likewise, over the course of its involvement in the investigation, Filipino kids performed far worse on the TIMSS mathematics achievement test than Singapore, Taiwan, and Korea, which are some neighboring countries. Based on TIMSS (2019), the Philippines did not fare better in the 2019 Trends in International Mathematics and Science Study.

By providing relevant learning activities, the goal was to motivate students to continually improve their math knowledge and skills, ultimately dispelling the misconception that mathematics is a challenging subject. The purpose of this study was to assess and develop appropriate game-based activity sheets for the improvement of mathematical problem-solving skills in Grade 7 learners.

Research Questions

The main objective of this study is to determine the Math achievement of the respondents in mathematical problem-solving skills as a basis for the development of game-based activity sheets.

Specifically, this study seeks answers to the following questions:

1. What is the profile of the respondents when taken as a whole and when classified according to sex and socio-economic status?

2. What is the level of mathematics achievement among the respondents as a whole and when grouped as to sex and socio-economic status?

3. What is the level of mathematical problem-solving skills among the respondents as a whole and when grouped as to sex and socio-economic status?

4. Is there a significant difference in the level of mathematical problem-solving skills among the respondents when classified as to sex and socio-economic status?

5. Is there a significant difference in the level of mathematics achievement among the respondents when classified as sex and socio-economic status?

6. Is there a significant relationship between Math achievement and mathematical problem-solving skills among the respondents when classified as sex and socio-economic status?

7. What intervention can be developed based on the result of the study?

METHODOLOGY

This study employed descriptive-correlational research. Descriptive-correlational research is a type of research that is used to determine the relationship between two variables.

The respondents of the study were twenty-four (24) Grade seven learners of Libo-o Integrated School. The researchers utilized purposive sampling in choosing the said respondents for the study. This sampling method was chosen due to the limited number of respondents who fit the profile required for the study. According to Foley (2018), purposive sampling is a form of non-probability sampling in which researchers rely on their judgment when choosing members of the population to participate in their study. The tools that were utilized by the researchers in gathering the data were the researcher-made and expert-validated multiple-choice test. The researchers initially created a 30-item multiple-choice test. The instrument underwent expert consultation and validation before being implemented in face-to-face testing with a purposively selected learner. The reliability score was 0.75 Cronbach's alpha.

Upon receiving permission from the Dean of the School of Teachers Education to conduct research outside the school, the researchers sent a letter to the School Division of Passi City. After the letters were signed, the researchers sent a letter to the school principal of Agdayao Integrated School for pilot testing of the research instrument. The data was then sent to the statistician for a reliability test. After the statistician confirmed that the research instrument was reliable for the study, the researcher sent a letter to the school principal of Libo-o Integrated School for the conduct of the study. A face-to-face implementation was observed. Once the data was gathered from all the respondents, the researchers compiled and analyzed the data. Descriptive and inferential statistics were used to quantify the data and determine the association of variables included in the study. The data was analyzed using Frequency Count and Percentage, Mean, Mann-Whitney U test, Kruskal-Wallis H Test, and Spearman's rho. Frequency count and percentage were used

to describe the profile of the respondents in terms of sex and socio-economic status. Mean was used to find out the mathematical problem-solving skills of the respondents. The Mann-Whitney U Test was used to determine if there was a significant difference in the level of mathematical problem-solving skills among the respondents when classified according to sex. The Kruskal-Wallis H Test was used to determine if there is a significant difference in the level of mathematical problem-solving skills among the respondents when classified according to socio-economic status (low-income class, middle-income class, and high-income class). Spearman's rho was used to determine the relationship between Math achievement and mathematical problem-solving skills of the respondents.

RESULTS

Profile of the Respondents. Table 1 presents the profile of the respondents. Out of 24 respondents, 13 or 54.2% are males, and 11 or 45.8% are females. In terms of socio-economic status, 1 or 4.2% are classified as poor, 13 or 54.2% as low income, 7 or 29.2% as lower middle-income, and 3 or 12.5% as upper middle-income. This indicates a larger male participation in the study. According to Herbert, Joyline, and Elliot's (2020) study, there were 93 male learners and 87 female learners as respondents. These findings suggest a higher representation of male participants compared to their female counterparts. Sintema and Jita's (2022) study involved 490 students, 288 boys, and 202 girls from three schools, and it assessed mathematical problem-solving beliefs using a questionnaire. The results indicated a higher representation of male participants in mathematics surveys.

Table 1
Profile of the Respondents

Group	Categories	Frequency	Percent
Sex			
	Male	13	54.2
	Female	11	45.8
	Total	**24**	**100**
Socio-Economic Status			
	Poor	1	4.2
	Low Income	13	54.2
	Lower Middle-Income	7	29.2
	Upper Middle-Income	3	12.5
	Total	**24**	**100**

Level of Mathematics Achievement as to Sex and Socio-Economic Status. The results show that the level of mathematics achievement, taken as a whole, was satisfactory (M=81.38, SD=5.52). When grouped according to sex, males had a mean score of 78.61 (SD=3.07), while females had a mean score of 84.64 (SD=6.10). In terms of socio-economic status, lower middle-income students had a mean score of 82.71 (SD=7.59), which was interpreted as "satisfactory". This was followed by low-income students (M=77.00, SD=4.66), upper middle-income students (M=78.33, SD=4.16), and poor students (M=77.00). The findings of Peteros, Gamboa, Etcuban, Dinauanao, Sitoy, and Arcadio (2020) suggest that respondents believe in their ability to perform well in the subject, especially when they put more effort into math-related tasks. The study by Garinganao and Bearneza (2021) found that the average proficiency in algebraic skills among Grade 7 students in a Chinese high school suggests that they have a solid grasp of concepts such as signed numbers, arithmetic, fractions, exponents, and factors. The students' competence in algebraic skills significantly influences their overall academic performance in mathematics.

Table 2
Level of Mathematics Achievement

Group	Categories	Mean	N	Std. Deviation	Description
Sex					
	Male	78.62	13	3.07	*Fairly Satisfactory*
	Female	84.64	11	6.10	*Satisfactory*
	Total	**81.38**	**24**	**5.52**	***Satisfactory***
Socio-Economic Status					
	Poor	77.00	1	0	*Fairly Satisfactory*
	Low Income	81.69	13	4.66	*Satisfactory*
	Lower Middle-Income	82.71	7	7.59	*Satisfactory*
	Upper Middle-Income	78.33	3	4.16	*Fairly Satisfactory*
	Total	**81.38**	**24**	**5.52**	***Satisfactory***

Note: Outstanding (90-100), Very Satisfactory (85-89), Satisfactory (80-84), Fairly Satisfactory (75-79), and Did Not Meet Expectation (Below 75).

Level of Mathematical Problem-Solving Skills as to Sex and Socio-Economic Status. The results showed that the level of mathematical problem-solving skills, taken as a whole, was "average" (M=14.29, SD=4.88). When grouped according to sex, males

had a mean of 12.46 (SD=3.31), while females had a mean of 16.45 (SD=5.66). As for socio-economic status, lower-middle-income was "average" (M=15.4, SD=6.39), followed by low income (M=14.77, SD=4.27), upper-middle-income (M=13.00, SD=1.00), and poor (M=6.00, SD=0). Incebacak and Ersoy (2016) found that students generally performed well when solving problems similar to those they had encountered before. They were able to correctly understand and distinguish between the given information and the requirements of the problem. Quinto (2021) revealed that the participants in the study possessed a remarkable comprehension of GBL. Moreover, they held positive attitudes toward GBL and believed that its integration into education could enhance their understanding of mathematics. Problem-solving is an individualized process that requires various strategies to tackle. Prema and Sathiskumar's (2021) findings also demonstrated that demographic variables such as gender have a significant effect on the academic achievement of high school students. Female students possess significantly higher academic achievement than their male counterparts.

Table 3

Level of Mathematical Problem-Solving Skills

Group	Categories	Mean	N	Std. Deviation	Description
Sex					
	Male	12.46	13	3.31	*Below Average*
	Female	16.45	11	5.66	*Average*
	Total	**14.29**	**24**	**4.88**	***Average***
Socio-Economic Status					
	Poor	6.00	1	0.	*Poor*
	Low Income	14.77	13	4.27	*Average*
	Lower Middle-Income	15.14	7	6.39	*Average*
	Upper Middle-Income	13.00	3	1.00	*Average*
	Total	**14.29**	**24**	**4.88**	***Average***

Note: Advanced (25-30), Above Average (19-24), Average (13-18), Below Average (7-12), and Poor (0-6).

Difference in the Level of Mathematical Problem-Solving Skills as to Sex.

Differences in the level of mathematical problem-solving skills among the respondents were analyzed based on their sex. Table 4.1 shows that the Mann-Whitney U results revealed a significant difference in the level of mathematical problem-solving skills

according to sex (z=-2.125, p=.034). As a result, the null hypothesis was rejected. Guler and Cekmez's (2023) research indicates that problem-solving abilities among middle school students were similar between genders, with females scoring slightly higher on average (mean = 3.53 compared to 3.33 for boys).

Table 4.1
Difference in the Level of Mathematical Problem-Solving Skills as to Sex

Pair	Mann-Whitney U	Wilcoxon W	Z	p	Decision
Sex	35.000	126.000	-2.125	.034	Significant

**Significant @ p<0.05*

Difference in the Level of Mathematical Problem-Solving Skills as to Socio-Economic Status. The Kruskal-Wallis H test revealed that there is no significant difference in mathematical problem-solving skills among the respondents based on socio-economic status (df=3, p=.302). This indicates that the mathematical problem-solving skills of the respondents do not vary with socio-economic status. Thus, the null hypothesis was accepted. It was found that the mathematical problem-solving abilities of individuals were indirectly influenced by the educational levels of both parents, with family income playing a mediating role (Amalina and Vidakovick, 2023).

Table 4.2
Difference in the Level of Mathematical Problem-Solving Skills as to Socio-Economic Status

Pair	Kruskal-Wallis H	df	p	Decision
Socio-Economic Status	3.651	3	.302	Not Significant

**Significant @ p<0.05*

Difference in the level of Mathematics Achievement as to Sex and Socio-Economic Status. In Table 5.1, the Mann-Whitney U results revealed that there is a significant difference in the level of mathematics achievement among the respondents according to sex (z=-2.648, p=.008). Therefore, the null hypothesis was rejected. The findings from the study conducted by De Jesus (2023) suggest that students perceive MathScore as a valuable supplemental tool in their mathematics learning journey. The research revealed a significant difference in students' mathematics achievement based on their sex and total engagement time in MathScore per week. According to Egorova and Chertkova (2016), it was observed that sex differences existed across various measures of mathematical achievement. Specifically, girls demonstrated higher math grades in school compared to boys, whereas boys surpassed girls in their scores on the Unified State Exam (USE) in

mathematics. The variability among boys was greater, with a higher proportion of boys excelling at the upper end of the performance distribution. Notably, girls who held a positive perception of their math abilities outperformed boys on math tests.

Table 5.1
Difference in the level of Mathematics Achievement as to Sex

Pair	Mann-Whitney U	Wilcoxon W	Z	p	Decision
Sex	26.000	117.000	-2.648	.008	Significant

**Significant @ p<0.05*

Difference in the level of Mathematics Achievement as Socio-Economic Status. The Kruskal Wallis H test revealed that there is no significant difference in mathematics achievement among the respondents based on socio-economic status (df=3, p=.515). This indicates that the mathematics achievement of the respondents does not vary according to socio-economic status. Therefore, the null hypothesis was accepted. Cabuquin and Abocejo (2023) found that their study did not identify any significant differences between male and female students, suggesting that both genders have equal potential for academic success. The study concludes that fostering mathematical proficiency is crucial for academic achievement, and secondary education institutions should ensure that students, regardless of gender, have ample opportunities to engage with mathematics through classes and various activities. Academic achievement is significantly influenced by socioeconomic status, with students from higher socioeconomic backgrounds generally performing better than their counterparts from lower socioeconomic backgrounds, who face a variety of obstacles to their academic advancement (Aashiq, Zeb, Yan, and Tahir, 2023).

Table 5.2
Difference in the level of Mathematics Achievement as to Socio-Economic Status

Pair	Kruskal-Wallis H	df	p	Decision
Socio-Economic Status	2.288	3	.515	Not Significant

**Significant @ p<0.05*

Spearman's rho Result on the Relationship between the Level of Mathematical Problem-Solving Skills and Mathematics Achievement. Table 6 shows the relationship between the level of mathematical problem-solving skills and mathematics achievement, which is highly positively correlated with r = 0.725. The results also showed

that there is a significant relationship between mathematical problem-solving skills and mathematics achievement ($p = 0.000$, $p < 0.001$). Therefore, the null hypothesis was rejected. The study conducted by Hassan and Rahman (2017) highlights the significant role of problem-solving skills and metacognitive awareness in enhancing secondary school students' mathematics achievement. It is crucial to help students develop both metacognitive awareness and problem-solving skills, as both are related to mathematics achievement. According to Maheswari and Benjamin (2015), students with a limited understanding of mathematical concepts exhibit poor problem-solving skills. Those with moderate proficiency in mathematical concepts demonstrate average problem-solving abilities, while students with advanced mathematical skills showcase high problem-solving skills. Furthermore, there is a high positive correlation between problem-solving skills and academic achievement in mathematics among 7th-standard pupils.

Table 6

Relationship between the Level of Mathematical Problem-Solving Skills and Mathematics Achievement

**p<0.0001, Highly Significant*

Mathemagical: Game-Based Activity Sheets for Mathematical Problem-Solving Skills. The figure below shows the output of the study, “Mathemagical: Game-Based Activity Sheets for Mathematical Problem-Solving Skills." The content of this output consists of the first quarter competencies of Grade 7. Utilizing games as a pedagogical tool in the teaching of mathematics has been recognized as an effective approach to making mathematical learning enjoyable (Beyhan and Tural, 2007; as cited by Baskahya, 2021). This strategy not only fosters a positive learning experience but also helps counteract any misconceptions students may have about mathematics. Numerous mathematician-designed games have emerged, contributing to the advancement of mathematical skills and instilling a sense of enjoyment in the subject Baskahya, 2021). According to the findings of Rondina and Roble (2019), using mathematical game-based design activities, such as "A Line to Win," proved to be an effective method for enhancing students' computational skills.

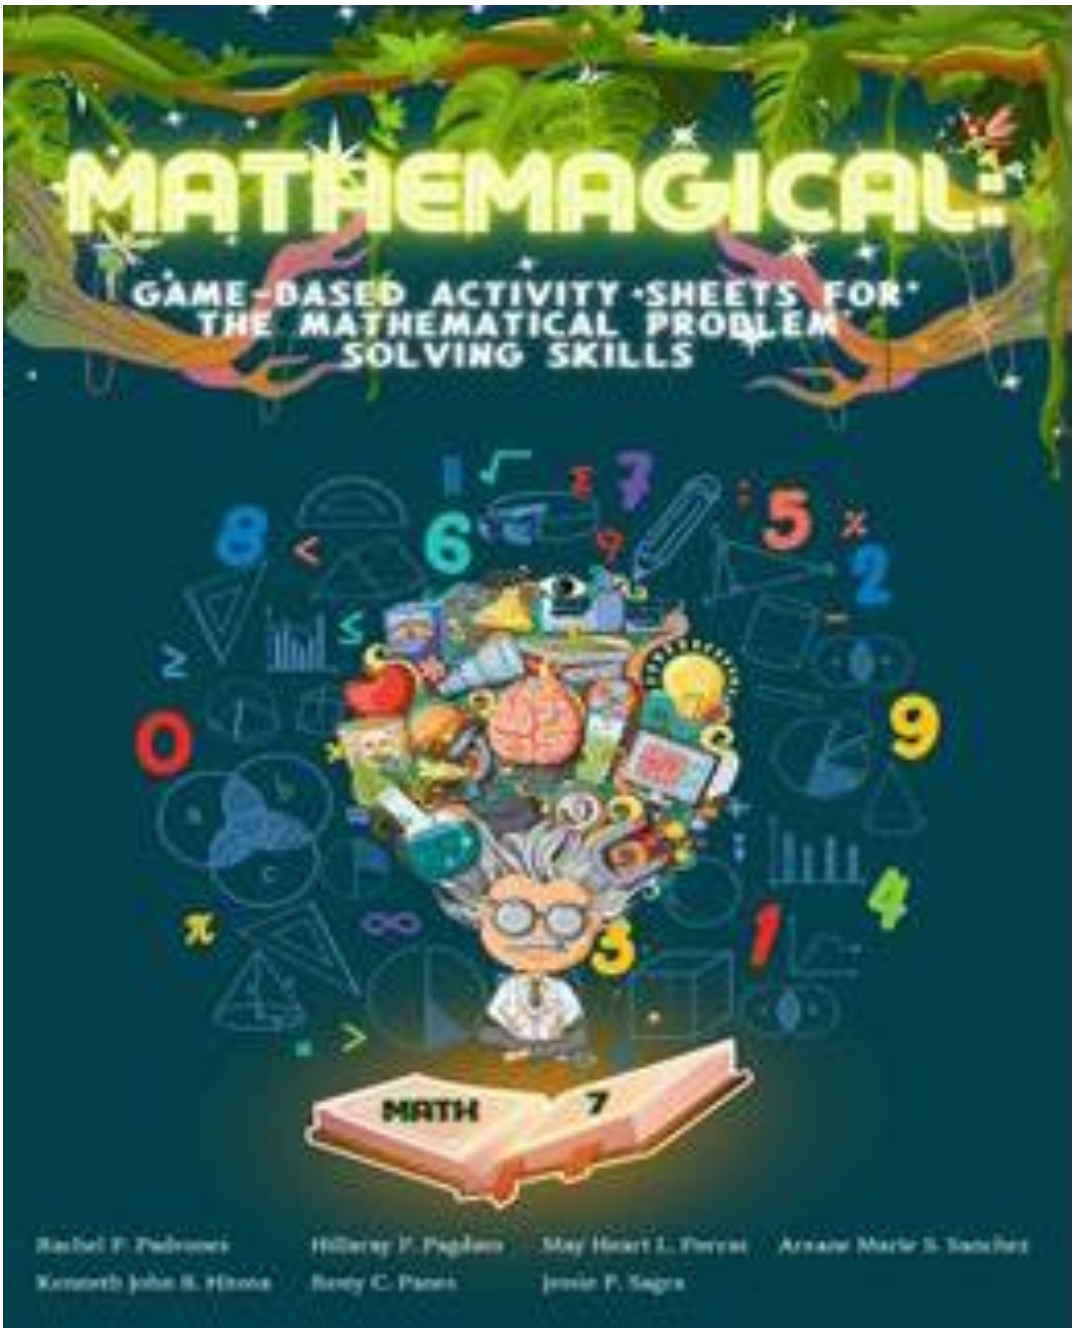

Figure 4. Shows the cover output of the study.

The fifteen competencies in the first quarter of Mathematics 7 were divided into three different games; each set of games has five competencies. The goal of these game-based activity sheets is to develop the mathematical problem-solving skills of seventh-grade learners. Additionally, to make the learning process effective and enjoyable at the same time, and to create a meaningful learning experience through the games that are presented in this output, the researchers created three different kinds of game-based

activity sheets, namely “Math-tastic Bingo, Math Race, and Math and Friends Scavenger Hunt.”

Math-tastic Bingo. The Math-tastic Bingo includes five competencies from the first quarter: illustrating well-defined sets, subsets, universal sets, null sets, the cardinality of sets, union, and intersection of sets, and different of two sets; solving problems involving sets with the use of a Venn diagram; representing the absolute value of a number line as the distance of a number from 0; performing fundamental operations on integers; and illustrating the different properties of operations on integers. The primary objective of the game is for players to achieve bingo by marking off numbers that correspond to the answers of provided questions or situations. The game offers three distinct playing options. Firstly, players can opt for a "free-tastic" table or blank space, allowing them to decide how to arrange numbers 1-24 on their bingo card. Secondly, the "speed round" introduces a time limit, challenging players to answer questions within the allotted time. The winner is determined by the player with the most marked squares. Lastly, the "math facts mix-up" involves presenting mathematical problems on separate cards, shuffling them, and calling them out randomly, introducing an element of surprise and additional challenges for the players.

Math Race. The Math Race includes five competencies: describing principal roots and determining whether they are rational or irrational; determining between what two integers the square root of a number is; estimating the square root of a whole number to the nearest hundredth; expressing rational numbers from fraction form to decimal form and vice versa; and performing operations on rational numbers. The aim of this game is for players to reach the finish line. They need to start by solving the equation that is posted on every road or way; getting the correct answer will advance them to the finish line. The first player to reach the finish line will be the winner.

Math and Friends Scavenger Hunt. The Math, Friends, and Scavenger Hunt includes five competencies: plotting irrational numbers (up to the square root) on a number line; illustrating the different subsets of real numbers; arranging real numbers in increasing or decreasing order and on a number line; writing numbers in scientific notation and vice versa; and represent real-life situations and solve problems involving real numbers. This game is fun and exciting and promotes teamwork and collaboration. The goal of this game is to explore by finding the answers in a designated area. The team should use creativity and teamwork to calculate solutions to uncover hidden answers. Each group will have a time limit and another minute to review answers and solutions. The team with the highest score will be the winner.

The game-based approach to learning involves students working in groups to engage with educational materials interactively and enjoyably, mastering fundamental competencies. Employing the game method in education aids students in comprehending the subject matter (Hastuti, Mustikaningtyas, & Widiyatmoko, 2014; as cited from Raupu,

Utari, Nursyamsi, and Marwiyah, 2022). In the Philippines, the Department of Education created Learning Activity Sheets for all grade levels for the 2020-2021 school year. These sheets include activities like coloring, word search, mazes, and math tests. They should also use manipulative, authentic materials and accommodate cultural, linguistic, and racial diversity. Games can serve as a useful starting point for daily study (Suguitan and Natividad, 2022).

DISCUSSION

The study involved purposively selected grade seven learners from Libo-o Integrated School, with both genders adequately represented. More males participated in the study than females. As for socio-economic status, more respondents were from low-income classes.

The overall level of mathematics achievement was deemed "satisfactory." When grouped according to sex, males performed at a "fairly satisfactory" level, while females achieved a "satisfactory" level. In terms of socio-economic status, those with low income and lower-middle income demonstrated a "satisfactory" performance, whereas individuals with poor and upper-middle income achieved a "fairly satisfactory" level.

The overall level of mathematical problem-solving skills was assessed as "average." When grouped according to sex, males were "below average," while females were deemed "average." In terms of socio-economic status, individuals with low income, lower-middle income, and upper-middle income were all evaluated as having "average" mathematical problem-solving skills.

There is a significant difference in the level of mathematical problem-solving skills among the respondents when grouped according to sex. There is no significant difference in the mathematical problem-solving skills among the respondents when grouped according to socio-economic status.

There is a significant difference in the level of mathematics achievement among the respondents according to sex. While there is no significant difference in mathematics achievement among the respondents according to socio-economic status.

There is a significant relationship between the level of mathematical problem-solving skills and mathematics achievement, which is highly positively correlated.

The overall proficiency in mathematical problem-solving skills was assessed as "average." In response to these findings, an intervention titled "Mathemagical: Game-Based Activity Sheets for Mathematical Problem-Solving Skills" was developed.

Conclusions

In light of the findings presented, the following conclusions were drawn:

Based on the respondents' profiles, most of the respondents are male rather than female. Additionally, a notable majority of participants originate from families with lower income levels. Sintema and Jita's (2022) study involved 490 students, 288 boys, and 202 girls, from three schools, assessing mathematical problem-solving beliefs through a questionnaire. The results show a higher representation of male participants in mathematics surveys.

It has been found in the study that the level of mathematics achievement as a whole was satisfactory. When grouped according to sex and socio-economic status, females interpreted the mean as satisfactory, which is higher than the male mean. Learners who were in the lower middle-income class showed a satisfactory level of mathematics achievement. This means that the female learners and lower-middle-income class respondents are satisfactory compared to males and other socio-economic classes. The study of Garinganao and Bearneza (2021) found that the average proficiency in algebraic skills among Grade 7 students in a Chinese high school suggests that they have a solid grasp of concepts such as signed numbers, arithmetic, fractions, exponents, and factors. The students' competence in algebraic skills significantly influences their overall academic performance in mathematics.

The research indicates that overall mathematical problem-solving skills are at an average level. When examining the data based on gender and socio-economic status, females perceived the mean as average, surpassing the male mean. Similarly, learners from the lower middle-income class, low-income class, and upper-middle-income class demonstrated an average proficiency in mathematical problem-solving. In essence, this suggests that female learners and those from the lower middle-income class, low-income class, and upper-middle-income class are on par with their male counterparts and individuals from other socio-economic classes in terms of mathematical problem-solving skills. Incebacak and Ersoy (2016) found that students generally performed well when solving problems similar to those they had encountered before. They were able to correctly understand and distinguish between the given information and the problem's requirements. Furthermore, Prema and Sathiskumar's (2021) findings exhibited that demographic variables such as gender have a significant effect on the academic achievement of high school students. The female students possess significantly higher academic achievement than their male counterparts.

The Mann-Whitney U test indicates that there is no statistically significant distinction in the proficiency of mathematical problem-solving skills based on sex among the participants. Similarly, the results of the Kruskal-Wallis H test suggest that there is no noteworthy variation in mathematical problem-solving skills among the respondents

concerning their socio-economic status. According to Guler and Cekmez's (2023) research, middle school students' problem-solving abilities were comparable between genders, with females scoring slightly higher on average. Additionally, the mathematical problem-solving abilities of individuals were found to be indirectly affected by the educational levels of both parents, with family income playing a mediating role (Amalina and Vidakovick, 2023).

Mann-Whitney U test results revealed that there is a significant difference in the level of mathematics achievement among the respondents according to sex. While Kruskal Wallis H test result revealed that there is no significant difference between the mathematics achievement among the respondents according to socio-economic status. The findings from the study conducted by De Jesus (2023) suggest that students perceive MathScore as a valuable supplemental tool in their mathematics learning journey. The research revealed a significant difference in students' mathematics achievement based on their sex and total engagement time in MathScore per week. Moreover, academic achievement is significantly influenced by socioeconomic status, with students from higher socioeconomic backgrounds generally performing better than their counterparts from lower socioeconomic backgrounds who encounter a variety of obstacles to their academic advancement (Aashiq, Zeb, Yan, and Tahir, 2023).

Spearman’s rho result on the relationship between the level of mathematical problem-solving skills and mathematics achievement at Libo-o Integrated School showed that there was a high positive correlation between mathematical problem-solving skills and mathematics achievement. The result also shows that there is a significant relationship between the level of mathematical problem-solving skills and mathematics achievement. The study conducted by Hassan and Rahman (2017) highlights the significant role of problem-solving skills and metacognitive awareness in enhancing secondary school students' mathematics achievement. It is crucial to help students develop both metacognitive awareness and problem-solving skills, as both are related to mathematics achievement.

The study aimed to address the average proficiency in mathematical problem-solving skills among seventh-grade learners by introducing an intervention titled "Mathemagical: Game-Based Activity Sheets for the Mathematical Problem-Solving Skills." The researchers created a game-based approach, incorporating three distinct activity sheets: "Math-tastic Bingo," "Math Race," and "Math and Friends Scavenger Hunt." The rationale behind the intervention was to create an effective and enjoyable learning process for students, fostering mastery in mathematical problem-solving skills. By integrating games into the educational framework, the researchers aimed to make the learning experience both engaging and meaningful. These games were specifically designed to cater to the needs of seventh-grade learners, aligning with the identified proficiency levels.

Utilizing games as a pedagogical tool in the teaching of mathematics has been recognized as an effective approach to making mathematical learning enjoyable (Beyhan and Tural, 2007; as cited by Baskahya, 2021). In the Philippines, the Department of Education created Learning Activity Sheets for all grade levels for the 2020-2021 school year. These sheets include activities like coloring, word search, mazes, and math tests. They should also use manipulative, authentic materials and accommodate cultural, linguistic, and racial diversity. Games can serve as a useful starting point for daily study (Suguitan and Natividad, 2022). Matienzo (2022), implies that providing students with supplemental worksheets that offer an appropriate level of challenge can foster motivation and active engagement in the learning process.

Recommendations

In light of the findings and conclusions of the study, the following recommendations are presented.

1. For learners, effective mathematics learning, learners should embrace diverse activities, such as game-based sheets, to enhance problem-solving skills interactively. Collaborative learning with peers through group activities and discussions fosters a deeper understanding of mathematical concepts by incorporating different perspectives. Consistent practice using game-based activities is crucial for reinforcing comprehension and boosting confidence in mathematical problem-solving.

2. For mathematics teachers, it is recommended to enhance the learning experience by incorporating game-based activities into the curriculum. This approach not only makes the subject more engaging but also fosters a deeper understanding of mathematical concepts. Recognizing the diversity in learning styles and abilities, teachers should employ differentiated instruction, combining traditional methods with game-based activities to cater to various preferences. Providing constructive feedback based on students' performance in these activities is crucial for promoting continuous learning, and helping students understand their strengths and areas for improvement.

3. For the Mathematics Department of Education Policy Makers and Learning Material Developers, it is crucial to enhance the mathematics curriculum by incorporating game-based learning strategies. This involves developing activity sheets that not only align with educational objectives but also make the learning process enjoyable for students. Additionally, emphasis should be placed on providing continuous professional development opportunities for teachers, enabling them to effectively integrate game-based learning into their teaching methods. This approach fosters a more engaging and dynamic learning environment.

4. For the community, create a nurturing learning environment at home by actively engaging in your child's education and providing access to educational games and

materials that align with classroom learning. Additionally, foster a sense of community by organizing workshops and events that center around enhancing mathematical engagement and problem-solving skills. By promoting collaboration within the community, these initiatives contribute to a supportive and enriching educational experience for all involved.

5. For parents and guardians, parents and guardians play a crucial role in fostering their child's mathematical development. Actively participating in their learning journey by discussing progress, assisting with homework, and incorporating enjoyable game-based activities can significantly enhance mathematical comprehension. Additionally, advocating for improved math education within the community and engaging with educators to understand the curriculum is essential. By supporting initiatives aimed at enhancing mathematical learning experiences, parents contribute to creating a positive and enriching environment for their children's mathematical education.

6. For future researchers, it is crucial to expand investigations into the efficacy of game-based learning in enhancing mathematics achievement and problem-solving skills. This involves exploring innovative technologies and methodologies to continually improve educational practices. Additionally, conducting longitudinal studies is recommended to comprehensively assess the enduring impact of game-based learning on students' mathematical performance and problem-solving abilities over an extended period. By delving into these areas, researchers can contribute valuable insights that can inform the ongoing development and implementation of game-based learning strategies in the realm of mathematics education.

Compliance with Ethical Standards

In conducting this study, strict adherence to ethical standards was maintained throughout the research process. Informed consent was obtained from the respondents prior to their participation, ensuring that they were fully aware of the study's purpose and procedures. Respondents were explicitly informed of their right to withdraw from the study at any time without any negative repercussions. Confidentiality was strictly upheld, with all personal identifiers removed to protect the identities of the respondents. The well-being of the respondents was safeguarded at all times, ensuring that their participation did not cause any harm or distress. There were no conflicts of interest influencing the conduct of the study, and the researchers ensured that all findings were presented objectively without bias. Plagiarism was strictly avoided, with all sources and references appropriately cited. The result of the study was solely for academic purposes, contributing to the improvement and mastery of mathematical problem-solving skills of the learners. Through these measures, the researchers ensured the highest standards of ethical integrity in the study.

MEDICAL-SURGICAL NURSES' KNOWLEDGE, PERCEPTION, AND ATTITUDE TOWARDS TELEMEDICINE

Rachelle Gil B. Pangilinan, RN
Joseph Michael D. Manlutac, PD-SMI, PhD, MPH, RN, FRIN, FRSPH

[1] *Graduate School, Angeles University Foundation, Angeles City, Philippines*
[2] *Faculty, Graduate School, Angeles University Foundation, Angeles City, Philippines*

https://doi.org/10.5281/zenodo.12664137

ABSTRACT

Telemedicine has been around for decades but has not been appreciated until recently. To disrupt the spread of the 2019 coronavirus disease (COVID-19) infection, health authorities are strategizing to shift face-to-face patient interaction to a virtual mode of care. Advances have been developed and protocols have been revised to accommodate different clients across the country. Studies were conducted and several issues were noticed. Among these, clinicians' knowledge, perceptions, and attitudes were factors affecting clinicians' willingness to use telemedicine. On the other hand, few studies only focus on nurses; therefore, the researchers would like to investigate the nurses' knowledge, perception, and attitude towards telemedicine from December 2023 to April 2024. An electronic questionnaire was developed that was adapted from the studies of Ayatollahi, et.al (2015) and. Chang, et.al (2021). The researchers include 355 participants classified as nurses, classified by the Saudi Commission for Health Specialties (SCFHS), aged 18-59 years to exclude vulnerable populations, working in the hospital with at least a year of medical-surgical clinical experience during the study regardless of work experience in a selected tertiary hospital in Riyadh, Saudi Arabia. The analysis of the data revealed that on average, medical-surgical nurses' knowledge of telemedicine is very high with an average of 4.62, have a very high perception of its advantages (mean=4.82), low extent of its disadvantages, a high view for its necessity(mean=4.82), ease of use (mean=4.81), security (mean=4.85) and strong positive attitude toward it (mean= 4.84-4.87).

Keywords: *telemedicine, telehealth nursing, knowledge, perceptions, attitude, virtual care*

INTRODUCTION

It is recorded that in 1993 the Saudi government launched a National E-health program under the supervision of the Ministry of Health (MOH, 2021) to deliver telemedicine services such as consultation and medical education through videoconferencing and networks. It provides medical care, and it accommodates patients' access to care inside and outside the country using advances in modern medical systems, and diagnostic and therapeutic applications. However, telemedicine implementation has not reached its full capacity due to several identified barriers (El Mahalli et al., 2012). Following the reports of COVID-19 infection in the country, an increase in the demand for healthcare providers (HCP) and the transmission of the said infection have affected the way of care delivery drastically (Alghamdi et al., 2020; Kaliyadan et al., 2020, Jalabneh et al., 2021; Ahmed et al., 2021). The healthcare authorities continue to discuss the preventive measures to stop the spread of COVID-19. National E-Health was one of the strategies that was implemented in the Kingdom of Saudi Arabia (KSA) to slow down the transmission of the virus including the use of telemedicine to improve the accessibility and quality of care among patients and HCP (MOH Saudi Arabia, 2021). The dramatic change in the modality of care from in-person into virtual practice has caused a shift in the paradigm of practice in healthcare and nurses were expected to adapt to an unfamiliar method of healthcare delivery (Rutledge & Gustin, 2021; Rouleau et al.,2017; Sensmeier, 2012). By contrast with telemedicine, telehealth (TH) includes a broader range of remote medical services than telemedicine. In addition to remote clinical services, TH can refer to non-clinical services such as training, education, organizational meetings, and information sharing to facilitate and support patient care management. (American Academy of Family Physicians, 2021). In this study, the terms TH and telemedicine are used interchangeably.

As a result of the COVID-19 outbreak, TH has been essential for the delivery of primary health services. MOH has encouraged people to use mobile apps rather than visit primary care clinics during this time (Kaliyadan et al., 2020). Besides from teleconsultations, TH applications have an important role in tracing, tracking, and disseminating information about COVID-19 (Alghamdi et al., 2020). As the largest professional group of HCPs, nurses have a vital role to play in ensuring the success of TH utilizations (Barret & Wallis, 2013). It is now appropriate to embrace this new paradigm and train nurses to not only support telemedicine but to take the initiative in ensuring that it is fully integrated into healthcare and becomes a crucial means of providing treatment (Kaliyadan et al., 2020). It is helpful both in reducing the administrative and technical problems in hospitals and saving a lot of HCPs time, which can be better allocated for the care of admitted patients (Kaliyadan et al., 2020). In KSA, telemedicine's goal is to improve the standards of medical care and the well-being of certain groups of patients. Many studies have proved that healthcare quality has tremendously improved by utilizing telemedicine services in consultations (Jalabneh et al., 2021; Assiri et al., 2021).

With the development and expansion of telemedicine services, this is expected to continue after the COVID-19 era (Bhaskar et al., 2020). TH seems to be a long-term care solution. Better patient outcomes, reduced workforce inequities, access to specialists or clinicians, a more effective healthcare system, and lower hospital transfer or travel expenses for families are just a few of the potential effects. Telenursing has been used to provide multimodal treatment, including remote interventions, follow-up, family education, and support, outside of acute settings, with a focus on chronic wellness and self-management. This allows for prompt nurse interventions while being under the supervision of a doctor, giving the patient convenience and a sense of security (Bashir & Bastola, 2018). The MOH is providing proactive measures for the country's vulnerable population through telemedicine, virtual, and phone and text message clinics, as well as online medication delivery. The implementation of electronic medical records in all hospitals across KSA is one of the core components of the healthcare strategy, in line with Vision 2030 (Global Health Exhibition, 2020). According to a recent report by KPMG Al Fozan & Partners (2021), KSA's health system will continue to benefit tremendously from better out-of-hospital and community-based services, as the Kingdom adopts Integrated Care Systems (ICS) and the MOH continues to implement its e-health strategy that seeks to connect all levels of care digitally. In addition to the rapid onset of digital healthcare transformation, the Kingdom is also experiencing a monumental shift in the way that the healthcare industry is working with partner industries, from both the public and private sectors, to provide innovative technologies and solutions to protect the healthcare infrastructure of the country. The hope is that all government entities and private organizations across the globe will continue to work together to design a better, more digitally connected way to cope with the pandemics of the future.

There are several digital tools used to enhance ICS delivery in KSA. There are platforms to provide care guidance that arm patients with relevant information and reminders of key points in their interaction with the healthcare system. Some employ wearable technologies that help patients track and manage existing conditions and enable preventive approaches. Most use remote telemedicine to diagnose and treat patients using video conferencing over mobile devices or a web portal, allowing them to access physicians, specialists, or care professionals from their homes. ICS also offers health networks that help people find new treatments, connect with others, and take action to improve their health outcomes. Additionally, it also provides continuous, automatic, and remote monitoring of users via sensors, to enable people to continue living in their own homes.

Quite a few studies have been carried out in KSA to assess clinicians' knowledge, perception, and attitude regarding this modality of healthcare to remotely manage acute or chronic patients. The researchers decided to take a different view and carried out a study to determine nurses' knowledge, perceptions, and attitudes towards telemedicine.

Research Questions

The study aims to determine nurses' knowledge, perception, and attitude towards telemedicine.

Guided by the overall objective, the study aims to answer the following questions:

1. To describe the medical-surgical nurses' demographic profile as to:
    a. Age;
    b. Sex;
    c. Civil Status;
    d. Nationality;
    e. Education attainment;
    f. Type of employment and;
    g. Length of KSA work experience.
2. To describe the medical-surgical nurses' knowledge of telemedicine.
3. To describe the medical-surgical nurses' perception of telemedicine as to:
    a. Advantages of telemedicine technology;
    b. Disadvantages of telemedicine technology;
    c. Necessity of telemedicine technology;
    d. Telemedicine technology ease of use, and;
    e. Security of telemedicine technology.
4. To describe the medical-surgical nurses' attitude toward telemedicine.
5. To determine the difference in knowledge, perception, and attitude in telemedicine across demographic variables.
6. To determine the relationship among knowledge, perception, and attitude of the respondents regarding telemedicine

---

METHODOLOGY

1. Study Design and Locale

This study is descriptive research where the researcher described the medical-surgical nurses' socio-demographic characteristics, knowledge, perceptions, and attitudes. This study was conducted in King Fahad Medical City (KFMC), one of the tertiary hospitals in Riyadh with a 1200-bed capacity. Being one of the largest and fastest-growing medical complexes in the Middle East and the capital of KSA, Riyadh, this hospital continues to strive to become a regional and international benchmark for specialist medical services.

2. Study Participants

2.1. Sample Size and Sampling

The sample size is measured because the sample group will be representative of the total population of the study. The target number of participants for the study was calculated using Raosoft® tool. Considering that the population size is more than 2800 (Al-Yamany, 2018) with a 5% margin of error, 95% confidence level, and a 50% response distribution; the calculated minimum recommended size is 338 participants.

The research made us of purposive sampling.

2.2. Inclusion and Exclusion Criteria

The researcher included a total of 355 eligible participants classified as nurses by the SCFHS taking care of medical-surgical patients, aged 18-59 years to exclude vulnerable populations, working in the hospital with at least a year of medical-surgical clinical experience during the study regardless of work experience from December 2023 to April 2024. The researcher involved participants through purposive sampling because the researchers could not access the complete list of hospital nurses' names. Participants who are more than 60 years of age, who are currently working in another setting with medical-surgical experience before the study, who do not wish to partake in the study, and those who are currently on vacation during the study period are excluded.

3. Research Instruments

The study utilized two questionnaires that were adapted from the previous study of Ayatollahi, et.al (2015) and. Chang, et.al (2021). The researcher chose these two instruments because of their applicability to the study of interest and revealed a wide perspective to cover the objectives of the study. Ayotallahi's study aimed to compare knowledge and perceptions of telemedicine technology among different groups of clinicians. The content validity of the questionnaire was checked, and the reliability was calculated using Cronbach's α coefficient (α = 0.73). Meanwhile, Chang's study aimed to identify factors that significantly affect nurses' behavioral intention to practice telenursing, applying the decomposed theory of planned behavior model as the research framework. The study adopted the content validity index of expert validity, and the total content validity index of the questionnaire was 0.93. The Cronbach's α value was used to evaluate the self-developed tool after collecting the data. The Cronbach's α value of attitude, subjective norms, perceived behavior control, and behavioral intention was 0.948, 0.862, 0.790, and 0.889, respectively, indicating good reliability of our self-developed questionnaire content. Therefore, these questionnaires are apt for the current research.

Since the researchers combined the two questionnaires, the newly developed questionnaire underwent a pretest, and reliability validation, and conducted a pilot study before floating it to the targeted participants. The researcher hired a psychometrician, language expert, subject matter expert, and statistician to test the validity and reliability of the tool. The self-made questionnaire was tested for reliability/ internal consistency using Cronbach's α with the following results: alpha of 0.9243, 0.9127, 0.9494, 0.9254, 0.9397, 0.9662 and 0.9676 (excellent internal consistency) for the constructs of knowledge, perception of the advantages, perception of the disadvantages, perception of the necessity, perception of the ease of use, perception of the security, and attitude of telemedicine technology.

The researcher will use this as a scoring guide. The overall perception was categorized, using Bloom's cut-off point, as good if the score was between 80 and 100%, moderate if the score was between 60 and 79%, and poor if the score was less than 60%. The overall attitude was categorized, using Bloom's cut-off point, as good if the score was between 80 and 100%, moderate if the score was between 60 and 79%, and poor if the score was less than 60% (Feleke, 2021).

4. Specific Procedures Based on Study Objectives

4.1. Procedure 1: Communication Letters

An electronic mail was sent to the nursing director and nurse managers. Individual consent is part of the electronic questionnaire to get the permission of the participants before proceeding with the electronic survey. The researcher hired a coordinator or data collector to follow up with participants' responses.

4.2. Procedure 2: Floating of Questionnaire

The study questionnaire was designed based on previously published research articles. The researchers developed an electronic questionnaire distributed to participants with instructions for filling out and obtaining the respondents' consent.

5. Statistical Analysis of Data

Guided by the statistician, researchers analyzed the data with Statistical Package for Social Sciences (SPSS) software, and results were shown using descriptive data (frequency percentage distribution, mean score, and standard deviation). ANOVA T-test was used to test the significant difference across nurses' demographic characteristics, knowledge, perception, and attitude. Non-parametric tests such as the Wilcoxon Rank Sum Test and the Kruskal-Wallis Test were used to test differences with data that do not show the normality of data. Dunn's test was used to test multiple comparisons of variables. Spearman correlation was used to determine the relationship between variables (knowledge, perception, and attitude).

RESULTS

A total of 355 nurses participated in this study. Table 1 presents the demographic profile of the medical-surgical nurses. Among these, 251 (70.70%) were female, and 104 (29.30%) were males. The majority were 25 to 35 years old (38.03%), followed by those 18 to 24 years old (27.89%), and 36 to 44 years old (20.56%). In terms of civil status, most of the respondents were single (65.07%), while others were married (33.80%). More than half of the nurses in the study were Filipinos (53.24%), followed by those from Saudi (19.72%), Indian (11.27%), and Jordanian (4.51%). Almost all (98.59%) were graduates of a Bachelor's degree, while 5 (1.41%) were other degree graduates, and 1 (0.28%) was a graduate of a post-doctoral degree. Almost all respondents were working full-time (99.44%), and only 2 were working part-time (0.56%). In terms of their length of KSA work experience in handling patients, most of them were working for 1 to 3 years (29.30%), followed by those working for 10 or more years (26.27%).

Table 1. Demographic characteristics of participants

Demographic Profile	Frequency	Percentage
Age (in years)		
18-24	99	27.89
25-35	135	38.03
36-44	73	20.56
45-54	33	9.30
55 and above	15	4.23
Sex		
Female	251	70.70
Male	104	29.30
Civil Status		
Single	231	65.07
Married	120	33.80
Others	4	1.13
Nationality		
Saudi	70	19.72
Filipino	189	53.24
Indian	40	11.27
Jordanian	16	4.51
Others	40	11.27
Educational Attainment		
Bachelor's degree	350	98.59
Others	5	1.41
Type of employment		
Full-time	353	99.44
Part-time	2	0.56

Length of KSA work experience in handling medical-surgical patients		
Less than 1 year	53	14.93
1-3 years	104	29.30
4-6 years	60	16.90
7-9 years	43	12.11
10 or more years	95	26.76

The knowledge of the medical-surgical nurses on telemedicine is presented in Table 2. The context in their assessment of their knowledge applied to the medical-surgical clients and/or units. Most of the nurses have a very high familiarity with telemedicine technology (79.44%), the medical applications of telemedicine (79.72%), tools (73.34%), and the use of telemedicine in other countries (62.54%). There are also conferences, speeches, and meetings regarding telemedicine technology being held in the majority of the workplaces of the nurses (78.59%). Moreover, 69.86% have a very high extent of applying the telemedicine guidelines in their unit. The majority also believe that there is a very high necessity for continuous training in the use of telemedicine (85.92%).

On average, nurses have very high knowledge of telemedicine except for the familiarity with the use of telemedicine in other countries, which they only have high knowledge of. Overall, the knowledge of telemedicine is very high with an average of 4.62.

Table 2. Knowledge of telemedicine technology

Statement	Very Low (1)	Low (2)	Average (3)	High (4)	Very High (5)	Mean	*VI
1. To what extent are you familiar with telemedicine technology?	6 (1.69%)	4 (1.13%)	13 (3.66%)	50 (14.08%)	282 (79.44%)	4.68	*VH
2. To what extent are you familiar with the medical applications of telemedicine technology?	4 (1.13%)	7 (1.97%)	14 (3.94%)	47 (13.24%)	283 (79.72%)	4.68	VH

*VI = verbal interpretation; *VH= very high; *H= high

The nurses' perception of the advantages of telemedicine technology is shown in Table 3.1. The majority are very familiar with the benefits of telemedicine (88.45%). Moreover, around 90% of the respondents believe that telemedicine is very effective in reducing transportation costs (91.27%), the cost of patient care in hospitals (91.55%), and in improving patient care (89.01%). Most of the nurses also believe that telemedicine influences satisfaction of patients in the care being provided (88.45%), that it saves nurses' time (90.42%), and provides faster and better medical care (90.42%).

The nurses have very high perception on the advantages of telemedicine technology with mean ranging from 4.79 to 4.85. Overall, the respondents have very high extent of agreement on the advantages of telemedicine technology (mean=4.82).

Table 3.1. Nurses' perception of the advantages of telemedicine technology

Statement	Very Low (1)	Low (2)	Average (3)	High (4)	Very High (5)	Mean	*VI
1. To what extent are you familiar with the benefits of telemedicine?	6 (1.69%)	1 (0.28%)	12 (3.38%)	22 (6.20%)	314 (88.45%)	4.79	*VH
2. In your opinion, to what extent is telemedicine effective in reducing the unnecessary transportation costs?	5 (1.41%)	2 (0.56%)	9 (2.54%)	15 (4.23%)	324 (91.27%)	4.83	VH
3. In your opinion, to what extent is telemedicine effective in reducing the costs of patient care in hospitals?	5 (1.41%)	3 (0.85%)	9 (2.54%)	13 (3.66%)	325 (91.55%)	4.83	VH
4. In your opinion, to what extent does telemedicine influence users' satisfaction in terms of care provided?	4 (1.13%)	2 (0.56%)	14 (3.94%)	21 (5.92%)	314 (88.45%)	4.80	VH
5. In your opinion, to what extent does telemedicine technology save nurses' time?	4 (1.13%)	1 (0.28%)	12 (3.38%)	12 (3.38%)	326 (91.83%)	4.85	VH
6. In your opinion, to what extent does telemedicine technology provide faster and better medical care?	3 (0.85%)	2 (0.56%)	15 (4.23%)	14 (3.94%)	321 (90.42%)	4.83	VH

*VI = verbal interpretation; *VH= very high

Table 3.2 presents the perception of the medical-surgical nurses on the disadvantages of telemedicine. In their opinion, there is a very low extent to which telemedicine disrupts a nurse-patient relationship (71.55%), to which it reduces the effectiveness of patient care (67.89%), it causes ethical issues in terms of privacy, confidentiality, and security (63.94%), and endanger their privacy (63.94%). They also believe that it has a very low extent in reducing the efficiency of patient care (64.51%), results in unauthorized access to patient medical information (64.51%), increase expenses of a hospital (76.90%), and increase malpractice in healthcare (65.91%).

On average, they believe that there is a very low extent to telemedicine disrupting nurse-patient relationships, reducing the efficiency of patient care, and increasing the expenses of a hospital. Overall, the nurses believe to a low extent the disadvantages of telemedicine technology.

Table 3.2. Nurses' perception of the disadvantages of telemedicine technology

Statement	Very Low (1)	Low (2)	Average (3)	High (4)	Very High (5)	Mean	*VI
1. In your opinion, to what extent may telemedicine technology disrupt a nurse–patient relationship?	254 (71.55%)	58 (16.34%)	26 (7.32%)	8 (2.25%)	9 (2.54%)	1.48	*VL
2. In your opinion, to what extent has telemedicine technology reduced the effectiveness of patient care?	241 (67.89%)	71 (20.00%)	27 (7.61%)	6 (1.89%)	10 (2.82%)	1.52	*L
3. In your opinion, can telemedicine technology cause	227 (63.94%)	79 (22.25%)	32 (9.01%)	6 (1.69%)	11 (3.10%)	1.58	L

ethical issue to the patient in terms of privacy, confidentiality and security issues?							
4. In your opinion, to what extent does telemedicine technology endanger patient privacy?	227 (63.94%)	83 (23.38%)	31 (8.73%)	4 (1.13%)	10 (2.82%)	1.55	L
5. In your opinion, to what extent does telemedicine technology reduce the efficiency of patient care?	255 (71.83%)	56 (15.775)	28 (7.89%)	5 (1.41%)	11 (3.10%)	1.48	VL
6. In your opinion, to what extent may telemedicine technology result in unauthorized access to patient medical information?	229 (64.51%)	81 (22.82%)	32 (9.01%)	3 (0.85%)	10 (2.82%)	1.55	L
7. In your opinion, to what extent may telemedicine technology increase the expenses of a hospital?	273 (76.90%)	48 (13.52%)	20 (5.63%)	5 (1.41%)	9 (2.54%)	1.39	VL
8. In your opinion, to what extent may telemedicine technology increase malpractice in healthcare?	234 (65.91%)	77 (21.69%)	30 (8.45%)	4 (1.13%)	10 (2.82%)	1.53	L
Overall mean for the perception of the disadvantages of						1.51	L

telemedicine technology							

*VI = verbal interpretation; *VL= very low; *L= low

The medical-surgical nurses also rated their perception on the necessity of telemedicine technology, and results are shown in Table 3.3. More than 90% of the nurses said that the extent that it provides healthcare on a timely manner (90.70%), that new techniques should be used with the current technology (90.42%), that it is essential in providing healthcare to remote areas (91.55%), and that it provides access to patient's information (91.83%) is very high. Moreover, 90.99% of the nurses said that there is a very high extent of implementation of telemedicine in their hospitals. In terms of its necessity for patient care, 89.58% believes it to be very high.

Overall and on the average, the nurses view the necessity of telemedicine technology as high with means ranging from 4.79 to 4.89 and an overall mean of 4.82.

Table 3.3. Nurses' perception of the necessity of telemedicine technology

Statement	Very Low (1)	Low (2)	Average (3)	High (4)	Very High (5)	Mean	*VI
1. In your opinion, to what extent is telemedicine technology necessary for patient care?	5 (1.41%)	2 (0.56%)	18 (5.07%)	12 (3.38%)	318 (89.58%)	4.79	*VH
2. In your opinion, to what extent can telemedicine provide healthcare to patients in a timely manner?	4 (1.13%)	2 (0.56%)	17 (4.79%)	10 (2.82%)	322 (90.70%)	4.81	VH
3. In your opinion, to what extent should new techniques be used along with the current technology?	4 (1.13%)	4 (1.13%)	13 (3.66%)	13 (3.66%)	321 (90.42%)	4.81	VH
4. In your opinion, to what extent is telemedicine essential to provide	4 (1.13%)	2 (0.56%)	15 (4.23%)	9 (2.54%)	325 (91.55%)	4.83	VH

healthcare to underprivileged and remote areas?							
5. In your opinion, to what extent can telemedicine technology provide nurses with instant access to patient information?	4 (1.13%)	2 (0.56%)	16 (4.51%)	7 (1.97%)	326 (91.83%)	4.83	VH
6. In your opinion, to what extent are national standards essential for telemedicine technology implementation?	4 (1.13%)	3 (0.85%)	15 (4.23%)	10 (2.82%)	323 (90.99%)	4.82	VH
Overall mean for the perception of the necessity of telemedicine technology						4.82	VH

*VI = verbal interpretation; *VH= very high

Table 3.4 shows the perception of nurses on the ease of use of telemedicine. The majority said that the extent of practicality for nursing staff is very high (90.70%). Similarly, there is also a very high extent of understanding software programs for telemedicine (91.27%), increasing efficiency (90.42%), reducing errors (90.42%), facilitating learning (90.14%), and increasing nursing skills (90.70%).

On average and overall, there is a very high extent perception of the ease of use of telemedicine technology among the medical-surgical nurses in the study. The overall mean is equal to 4.81.

Table 3.4. Nurses' perception of telemedicine technology ease of use

Statement	Very Low (1)	Low (2)	Average (3)	High (4)	Very High (5)	Mean	*VI
1. In your opinion, to what extent does the ease of use of telemedicine	4 (1.13%)	4 (1.13%)	14 (3.94%)	11 (3.10%)	322 (90.70%)	4.81	*VH

technology make it practical for the nursing staff?							
2. To what extent do easy-to-understand software programs make it easy for nurses to apply telemedicine technology?	3 (0.85%)	2 (0.56%)	16 (4.51%)	10 (2.82%)	324 (91.27%)	4.83	VH
3. To what extent does easy-to-use telemedicine technology increase the efficiency of nurse users?	3 (0.85%)	2 (0.56%)	17 (4.79%)	12 (3.38%)	321 (90.42%)	4.82	VH
4. To what extent does ease of use of telemedicine technology reduce nurses' errors?	3 (0.85%)	3 (0.85%)	18 (5.07%)	10 (2.82%)	321 (90.42%)	4.81	VH
5. To what extent does ease of use of telemedicine technology facilitate its learning?	3 (0.85%)	3 (0.85%)	18 (5.07%)	11 (3.10%)	320 (90.14%)	4.81	VH
6. To what extent does ease of use of telemedicine increase nurses' skills?	4 (1.13%)	5 (1.41%)	18 (1.69%)	6 (1.69%)	322 (90.70%)	4.79	VH
Overall mean for the perception of the ease of use of telemedicine technology						4.81	VH

*VI = verbal interpretation; *VH= very high

The security of telemedicine technology was also rated based on the nurses' perception with the results presented in Table 3.5. Like other constructs of perception on telemedicine, the majority, or more than 90% believe that there is a very high extent in

the following areas: the necessity of authorized access (92.11%), the necessity of policies and guidelines (91.83%), creation of framework for preventing data breach (92.39%), and for accessing medical information (92.11%). Moreover, they believe to a very high extent that telemedicine requires legal clarification for patients (92.39%), and that it needs to be supported by the nursing community (92.11%).

Overall, the perception of nurses on the security of telemedicine is to a very high extent with a mean equal to 4.85.

Table 3.5. Nurses' perception of the security of telemedicine technology

Statement	Very Low (1)	Low (2)	Average (3)	High (4)	Very High (5)	Mean	*VI
1. In your opinion, to what extent is authorized access necessary for the implementation of telemedicine?	2 (0.56%)	3 (0.85%)	16 (4.51%)	7 (1.97%)	327 (92.11%)	4.84	*VH
2. To what extent are security policies and guidelines necessary for the use of telemedicine technology?	2 (0.56%)	2 (0.56%)	14 (3.94%)	11 (3.10%)	326 (91.83%)	4.85	VH
3. To what extent does telemedicine need to be supported by the nursing community?	2 (0.56%)	3 (0.85%)	15 (4.23%)	8 (2.25%)	327 (92.11%)	4.85	VH
4. To what extent should a framework be created to prevent breaching data confidentiality when using telemedicine?	3 (0.85%)	3 (0.85%)	13 (3.66%)	7 (1.97%)	329 (92.68%)	4.85	VH
5. To what extent does telemedicine technology require legal clarification for patients?	2 (0.56%)	3 (0.85%)	13 (3.66%)	9 (2.54%)	328 (92.39%)	4.85	VH

6. To what extent does telemedicine technology require a formulated and clear framework for access to medical information?	3 (0.85%)	3 (0.85%)	13 (3.66%)	9 (2.54%)	327 (92.11%)	4.84	VH
Overall mean for the perception of the security of telemedicine technology						4.85	VH

Table 3.6 shows the summary of the nurses' perception.

Table 3.6. Summary table for nurses' perception

	Mean	VI
1. Overall mean for the perception of the advantages of telemedicine technology	4.82	VH
2. Overall mean for the perception of the disadvantages of telemedicine technology	1.51	L
3. Overall mean for the perception of the necessity of telemedicine technology	4.82	VH
4. Overall mean for the perception of the ease of use of telemedicine technology	4.81	VH
5. Overall mean for the perception of the security of telemedicine technology	4.95	VH

*VI = verbal interpretation; *VH= very high; *L= low

Table 4 shows the attitude of nurses towards telehealth nursing. More than 90% of the respondents strongly agree that the communication systems of telehealth can provide information interpretation function (91.83%) and can increase efficiency (91.83%). They also strongly agree that the following features are very important in telenursing: provide accurate information (92.11%), send instant messages (92.11%), fire instant alerts as soon as possible for abnormal physiological measurements (92.11%).

The majority also strongly agree that nurses should be familiar with using the telehealth communication system (92.39%) and that the system should be easy to use and easy to learn (91.83%).

In terms of telehealth being of service to patients, most of the nurses strongly agree that it would assist people with disabilities, older adults, and patients with chronic diseases (91.83%), that it helps patients carry out self-care (91.83%), self-manage and control health issues (92.11%), and develop good personal health management habits (91.27%). They also believe that it helps the patients reduce the frequency of hospital visits (92.11%) and save time in hospital consultations (92.11%). Most of the nurses also believe that it can help caregivers improve their care skills (91.27%) and can help reduce expenditure on national health insurance (91.55%).

The nurses strongly agree on the important roles they play in telenursing (90.99%); that professional competence is important (92.39%), must have excellent communication skills (92.96%), and that they should have the ability to provide care and consultations for chronic diseases (92.68%).

The average rating for each statement on the attitude of medical-surgical nurses on telehealth nursing ranges from 4.84 to 4.87, which corresponds to strongly agree.

Table 4. Attitude towards telehealth nursing

Statements	Strongly Disagree (1)	Disagree (2)	Neutral (3)	Agree (4)	Strongly Agree (5)	Mean	*VI
1. I think that telehealth communication system can provide medical personnel with information interpretation function.	2 (0.56%)	3 (0.85%)	14 (3.94%)	10 (2.82%)	326 (91.83%)	4.85	*SA
2. I think the ability of telehealth communication system to provide accurate information is very important in telenursing	2 (0.56%)	3 (0.85%)	13 (3.66%)	10 (2.82%)	327 (92.11%)	4.85	SA

3. I think the ability of telehealth communication system to instant messages is very important in telenursing.	2 (0.56%)	2 (0.56%)	14 (3.94%)	10 (2.82%)	327 (92.11%)	4.85	SA
4. I think the ability of telehealth communication system to fire instant alert as soon as it receives abnormal physiological measurements, including blood pressure, heart rate, blood glucose and blood oxygen values is very important in telenursing.	2 (0.56%)	2 (0.56%)	17 (4.79%)	7 (1.97%)	327 (92.11%)	4.85	SA
5. I think that telehealth communication system can increase work efficiency.	2 (0.56%)	2 (0.56%)	17 (4.79%)	8 (2.25%)	326 (91.83%)	4.84	SA
6. I think that nurses involving in telenursing must be familiar with the use of telehealth communication system	2 (0.56%)	3 (0.85%)	11 (3.10%)	11 (3.10%)	328 (92.39%)	4.86	SA
7. I think that an easy-to-learn and	1 (0.28%)	2 (0.56%)	14 (3.94%)	12 (3.38%)	326 (91.83%)	4.86	SA

easy-to-use telehealth communication system is very important for telenursing.							
8. I think that telenursing would assist people with disabilities, older adults, and patient with chronic diseases.	2 (0.56%)	1 (0.28%)	15 (4.23%)	11 (3.10%)	326 (91.83%)	4.85	SA
9. I think that telenursing can help the person being served to carry out self-care in their home or the living environment they are familiar with.	2 (0.56%)	1 (0.28%)	19 (5.35%)	7 (1.97%)	326 (91.83%)	4.84	SA
10. I think that telenursing can help the person being served with the ability to self-manage and consequently in controlling health issues (e.g. blood pressure, blood glucose, etc).	2 (0.56%)	4 (1.13%)	14 (3.94%)	8 (2.25%)	327 (92.11%)	4.84	SA
11. I think that telenursing can help the person being served to develop good personal health	2 (0.56%)	1 (0.28%)	17 (4.79%)	11 (3.10%)	324 (91.27%)	4.84	SA

management habits.							
12. I think that telenursing can help caregivers to improve care skills	2 (0.56%)	2 (0.56%)	16 (4.51%)	11 (3.10%)	324 (91.27%)	4.84	SA
13. I think that telenursing can help the person being served to reduce the frequency of hospital visits.	2 (0.56%)	3 (0.85%)	13 (3.66%)	10 (2.82%)	327 (92.11%)	4.85	SA
14. I think that telenursing can help the person being served to save time in hospital-consultation	2 (0.56%)	3 (0.85%)	10 (2.82%)	13 (3.66%)	327 (92.11%)	4.86	SA
15. I think telenursing can help reduce national health insurance expenditure.	2 (0.56%)	2 (0.56%)	15 (4.23%)	11 (3.10%)	325 (91.55%)	4.85	SA
16. I think that nurses play very important roles in telenursing.	3 (0.85%)	2 (0.56%)	13 (3.66%)	14 (3.94%)	323 (90.99%)	4.84	SA
17. I think that professional competence is very important for telehealth nurses.	1 (0.28%)	3 (0.85%)	11 (3.10%)	12 (3.38%)	328 (92.39%)	4.87	SA

18. I think that nurses participating in telehealth must have excellent communication skill.	2 (0.56%)	2 (0.56%)	11 (3.10%)	10 (2.82%)	330 (92.96%)	4.87	SA
19. I think that nurses participating in telehealth must have ability to provide care and consultation for chronic diseases	2 (0.56%)	1 (0.28%)	14 (3.94%)	9 (2.54%)	329 (92.68%)	4.86	SA
Overall mean for attitude on telehealth nursing						4.85	SA

*VI = verbal interpretation; *SA= strongly agree

Table 4.1 shows the summary of the knowledge, perception, and attitude on telemedicine of medical-surgical nurses based on Bloom's cut-off point. Bloom's cut-off point categorized knowledge as high if the score was between 28 to 35 (80% to 100%), moderate if the score was between 21 to 27 (60% to 79%), and low if the score was below 21 (<60%). In terms of perception, it was considered high if the score was between 132 to 165, moderate if between 99 to 131, and low if the score was less than 99. Lastly, attitude was categorized as high for scores 76 to 95, moderate for scores 57 to 75, and low for scores less than 57.

There were 314 (88.45%) nurses with high knowledge, 28 (7.89%) with moderate knowledge, and 13 (3.66%) with low knowledge. For the perception, 328 or 92.39% have good perception, 16 or 4.51% have moderate, and 11 or 3.10% have low or poor perception. Lastly, 332 (93.52%) have a high or positive attitude, 16 or 4.51% have moderate or neutral attitude, and 7 or 1.97% have a negative or low attitude.

Table 4.1. Knowledge, perception, and attitude on telemedicine

Construct	Category	Scores	n	%
Knowledge	High	28-35 (80%-100%)	314	88.45
	Moderate	21-27 (60%-79%)	28	7.89
	Low	<21 (<60%)	13	3.66

	Good	132-165 (80%-100%)	328	92.39
Perception	Moderate	99-131 (60%-79%)	16	4.51
	Poor	<99 (<60%)	11	3.10
	Positive	76-95 (80%-100%)	332	93.52
Attitude	Neutral	57-75 (60%-79%)	16	4.51
	Negative	<57 (<60%)	7	1.97

To determine if the demographic characteristics affect the knowledge, perception, and attitude on telemedicine, a test of difference across demographic profiles was utilized. Knowledge, perception, and attitude scores were computed by summing the ratings of the nurses on the statements under these constructs. Higher scores mean higher knowledge, positive perception, and positive attitudes toward telemedicine and telehealth. For the perception, negatively stated statements such as those under disadvantages were reverse coded to reflect positive perception. The scores were then subjected to a normality test and results showed that the data were not normally distributed. Hence, non-parametric tests such as the Wilcoxon Rank Sum Test and the Kruskal-Wallis Test were used to test differences. Table 5.1 presents the results of the tests.

There is a difference in the knowledge of telemedicine across nationality (p=0.0479), and length of work experience in KSA handling medical-surgical patients (p=0.0022).

For the overall perception of telemedicine, a significant difference was found across sex (p=0.0494), and employment status (p=0.0279). Males have a higher (more positive) perception of telemedicine compared with females, and those who work full-time also have higher (more positive) perception on telemedicine compared to those who work part-time.

Furthermore, there is a significant difference in the attitude toward telehealth nursing across sex (p=0.0353), and civil status (p=0.0005). Males have a higher (more positive) attitude on telehealth nursing compared with females.

Table 5.1. Test of difference on the knowledge, perception, and attitude in telemedicine across demographic characteristics of nurses

Demographic Variable	Knowledge	Perception	Attitude
Age	0.1104	0.4959	0.2767
Sex	0.3317	0.0494*	0.0353*

Civil Status	0.1228*	0.0792	0.0005*
Nationality	0.0479*	0.9387	0.7791
Educational attainment	0.0846	0.2355	0.3755
Employment status	0.9686	0.0279*	0.5768
Length of KSA work experience in handling medical-surgical patients	0.0022*	0.1132	0.2171

*significant at 0.05 level

Table 5.2 shows the multiple comparisons of knowledge across different civil statuses. From the Dunn's Test, significant differences were found between those single and widow/widower (p=0.0031), married and widow/widower (p=0.0026), and separated and widow/widower (p=0.0206). In all multiple comparisons, the widow/widower has lower knowledge compared with the other three categories.

Table 5.2. Multiple comparison test on knowledge across civil status

	Single	Married	Widow/Widower
Married	Diff= -0.35 p=0.3622		
Widow/Widower	Diff= 2.74 p=0.0031*	Diff= 2.79 p=0.0026*	
Separated	Diff= -0.77 p=0.2218	Diff= -0.73 p=0.2342	Diff= -2.04 p=0.0206*

*significant at 0.05 level

The multiple comparison of knowledge across nationalities is presented in Table 5.3. There is a significant difference between Jordanians and those from Saudi (p=0.0119), Filipinos (p=0.0045), Indians (p=0.0032), and other nationalities (p=0.0017). In all comparisons, Jordanians have higher knowledge.

Table 5.3. Multiple comparison test on knowledge across nationality

	Saudi	Filipino	Indian	Jordanian
Filipino	Diff= 0.38 p=0.3525			
Indian	Diff= 0.90 p=0.1832	Diff= 0.72 p=0.2344		

Jordanian	Diff= -2.26 p=0.0119*	Diff= -2.61 p=0.0045*	Diff= -2.72 p=0.0032*	
Others	Diff= 1.21 p=0.1137	Diff= 1.07 p=0.1422	Diff= 0.27 p=0.3939	Diff= 2.93 p=0.0017*

*significant at 0.05 level

The multiple comparison test for the difference in knowledge across the length of experience in KSA is shown in Table 5.4. There is a significant difference in knowledge among those less than one year when compared to those with experience for 4 to 6 years (p=0.0166), 7 to 9 years (p=0.0009), and above 10 years (p=0.0002). Those with longer experience have higher knowledge scores compared to those with less than 1 year. It can also be observed that the difference increases as the years of experience increase. There is also a significant difference between those with 1 to 3 years of experience compared with those with 7 to 9 years of experience (p=0.0196) and above 10 years of experience (p=0.0087). Those with higher years of experience also have higher knowledge compared with those 1-3 years.

Table 5.4. Multiple comparison test on knowledge across length of KSA work experience in handling medical-surgical patients

	Less than 1 year	1-3 years	4-6 years	7-9 years
1-3 years	Diff= -1.59 p=0.0563			
4-6 years	Diff= -2.13 p=0.0166*	Diff= -0.82 p=0.2050		
7-9 years	Diff= -3.13 p=0.0009*	Diff= -2.06 p=0.0196*	Diff= -1.20 p=0.1145	
Above 10 years	Diff= -3.53 p=0.0002*	Diff= -2.38 p=0.0087*	Diff= 0-1.24 p=0.1081	Diff= 0.20 p=0.4216

*significant at 0.05 level

Table 5.5 shows the multiple comparison test on attitude toward telehealth nursing across civil status. Only one pair showed a significant difference— single vs married (p=0.0001). Those with single status have a higher (more positive) attitude compared to married nurses.

Table 5.5. Multiple comparison test on attitude across civil status

	Single	Married	Widow/Widower
Married	Diff= 3.85 p=0.0001*		
Widow/Widower	Diff= 1.25 p=0.1059	Diff= 0.50 p=0.3081	
Separated	Diff= -0.24 p=0.4047	Diff= -0.67 p=0.2509	Diff= -0.84 p=0.2011

*significant at 0.05 level

The relationship of knowledge, perception, and attitude on telemedicine is presented in Table 6. Spearman correlation was used to determine the relationship between the variables. There is a significant relationship between knowledge and perception (p=<0.0001), knowledge and attitude (p=<0.0001), and perception and attitude (p=<0.0001). Furthermore, a strong relationship on all pairs of variables was observed (spearman correlation equal to 0.5805, 0.4047, and 0.4542, respectively).

Table 6. Relationship of knowledge, perception, and attitude on telemedicine

	Knowledge	Perception
Perception	0.5802 p=<0.0001	
Attitude	0.4047 p=<0.0001	0.4542 p=<0.0001

Figure 1 shows the scatter plot of the knowledge, perception, and attitude on telemedicine. As shown in the graph, as the knowledge increases, the perception also increases or is more positive; as the knowledge increases, attitude also increases or is more positive, and lastly as the perception increases, attitude also increases or is more positive.

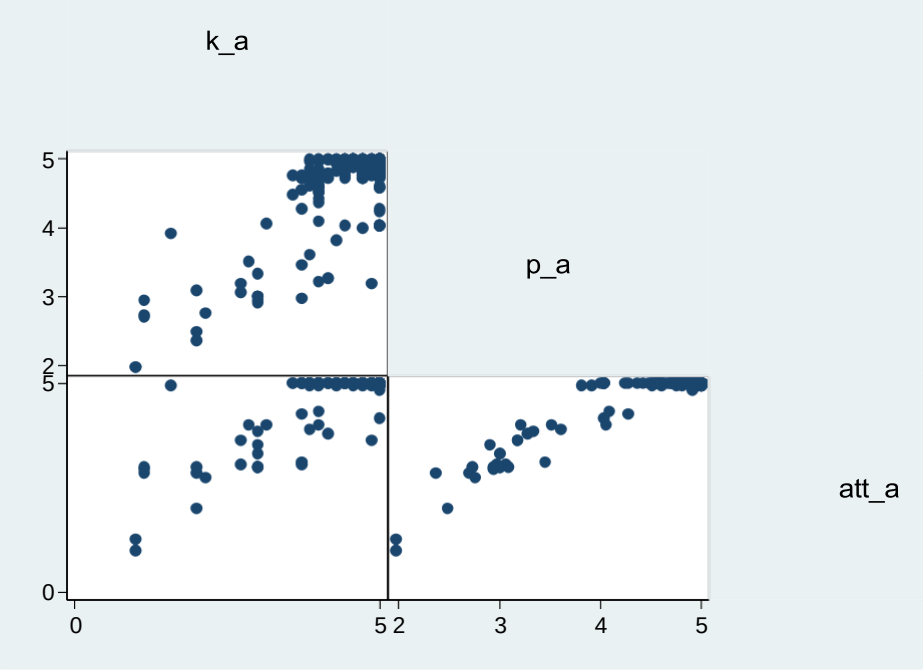

Figure 1. Scatter plot matrix of knowledge, perception, and attitude towards telemedicine.

DISCUSSION

Literature offers a generous number of studies that implies on the importance of telemedicine in the improvement of patient care in the medical industry and HCP play a vital role for its usage and sustainability. Still, there has not been any particular research regarding nurses' knowledge, perception, and attitude toward telemedicine and that is the focus this research and to fill in the gap in that area. Notably, our study showed that participants expressed an overall high knowledge, positive perception, and attitude. Although this study was randomized and anonymous, the study limits generalizability of some of its findings because of small-scale of sample. Also, since this study is self-reported, the results could be liable to underestimation or overestimation by the participants.

This study was able to describe the nursing population of KFMC. Zippia in 2023 gave an in-depth look into sociodemographic profile of employees of KFMC in total, self-reported details from employees. Their data is supportive to this study where they accounted 68% of KFMC employees are female, 50% are between the ages of 20-30 years, and 44% work and stay at the company for 1-2 years. In a discussion paper in 2019 talking about the nursing workforce in KSA revealed that the number of nurses produced in Saudi Arabia is extremely low therefore, the heavy reliance upon expatriates or foreign nurses for the health workforce from India and Philippines which also supports why majority of the nurses' respondents in this study are Filipinos.

One of the findings in our study showed widow/widower respondents have lower knowledge compared to married and single nurses. However, the researchers could not generalize this finding because those who belong to this group only account for 0.85% of the total sample size (3 out of 355 respondents). There is no other research to back this up, but a study done in China in 2020 (Yu-tong, 2021) explained that married nurses are less receptive to telemedicine because married women must work while taking care of their families to lessen the financial strain on their families and TH scope takes more time and adds further labor. However, Davis et al. (2017) proved that the TH approach also boosts nurses' take-home pay and elevates their level of expertise. Consistent with the findings of Tian et al. (2023), this also indirectly enhances married nurses' willingness to engage in telehealth services and their access to pertinent knowledge, boosting their initiative to successfully deploy telehealth.

Although this study revealed that Jordanian nurses have higher knowledge, the study limits the generalizability of the findings because those who belong to this group only account for 4.51% of the total sample size (16 out of 355 respondents). There has been no reported study that would have supported why Jordanians have higher knowledge when it comes to telemedicine but a study in 2022 by Murshidi et al. disclosed that most of the Jordanian participants portrayed favorable views toward telemedicine. Higher educational degrees, living in urban districts, and having a higher perception of electronic usage ability were linked to Jordanian's higher knowledge and better attitudes toward telemedicine.

Contrary to a finding in this study in which nurses with higher years of experience also have increased knowledge, there is a cross-sectional study that was carried out in the same research local which is King Fahad Medical City, KSA from June 2019 until February 2020, during which 370 healthcare professionals, including physicians, nurses, and other healthcare professionals participated that reported no statistically significant association observed between knowledge score of telemedicine and length of work experience (Bashir, et.al, 2023). Similar results were generated by a survey in Peru in 2021 to a group of physicians and medical students where there was no association of knowledge to experience and previous training in telemedicine (Garcia-Guiterrez, et.al, 2023).

This study has suggested that males have a more positive perception of telemedicine compared to females and to support this finding, a study regarding pandemic-triggered adoption of telehealth in Alabama that gathered data from March 2019-June 2021 revealed that both the female and male groups saw a considerable increase in the rate of telemedicine visits during the pandemic, with the male group experiencing a somewhat higher rate than the female group. This is probably because telemedicine services were not available for many female visits, including labor and delivery (Xu, et.al, 2022). Additionally, men were more likely than women to convert to telemedicine services during the epidemic because they tend to have higher levels of self-efficacy and trust in telemedicine technologies compared to women who are more likely to trust telemedicine services because of the influence of the people around them (Wu, et.al, 2021).

Another finding in this study suggests that nurses who work full time have more positive perception in telemedicine compared to who works part-time. Contradictory to this, a study done considering the clinical workload of physicians, in a large academic health

care system in New York City have suggested that doctors who utilized telemedicine more frequently during the pandemic's different phases completed more electronic health record-based after-hours work than doctors who utilized it less frequently. This shows that telemedicine as it is now provided might be less effective than in-person care and might put more pressure on doctors to work after hours (Lawrence, et.al, 2022).

Additionally, this study indicated that males have a more positive attitude compared to their counterpart which is congruent to the findings of a study on healthcare providers at Zagazig University and Hospitals in Egypt where men had the highest level of interest in telemedicine. This may be because many occupations have been forced to work remotely due to the coronavirus pandemic, and the increase in the use of internet services to maintain the work-life balance. One of the apps that people were more interested in at that time was TH. Factors such as the attitude towards TH, the relationship between the patient and the doctor, and the usage of technology may all play a role in the willingness to use TH (Fouad, et.al, 2023). On the contrary, Elhadi et al. 2021, who investigated telemedicine awareness, knowledge, attitudes, and skills of health workers in a low-resource country during the COVID-19 pandemic in Libya, found that there were no differences in attitudes between men and women.

In our study, single nurses have a more positive attitude compared to married nurses as reinforced by a study in Bangladesh in 2021 showed that compared to the married, the unmarried participants were significantly more likely to ‘may utilize’ and ‘will utilize’ telehealth (Kabir, et.al, 2022). Additionally, Chinese clinical nurses in the 2020 study also presented significantly higher domain scores recorded for nurses in the unmarried, head of responsible nursing group. There were positive correlations between telehealth readiness level and service experience, service willingness, mode cognition, manpower allocation, and policy guidance. Thus, having more opportunities to participate in telehealth services and training than ordinary nurses can improve personal readiness because of their clinical practice and learning.

Our study revealed that when the nurses' knowledge is high, their perceptions and attitudes toward telemedicine also increase. The same finding was disclosed by a global survey done by Navqi et.al in 2022. Another study shows that healthcare workers have a favorable attitude and perception towards telemedicine despite having limited knowledge of it (Bashir, 2023). This only shows that there is a promising opportunity to introduce remote working systems nationwide and to ensure the proper implementation and continuation of telemedicine across the country, it is necessary to establish specialized training programs for healthcare professionals, especially nurses.

Nurses are vital conductors of telemedicine in the country; unfortunately, the literature is very anemic in regards to data regarding nurses' knowledge, perception, and attitude toward telemedicine. Without health authorities' cognizance of this issue, enforcement of such technology will bring up a lot of issues. However, this research is very substantial because it generated insight into how nurses use technology and its future implications in local or global settings.

This study is not without any inefficiencies. The results may be dependent on over or under-estimation by the surveyed group. Additionally, several factors such as access to

the questionnaire and connectivity may have indirectly affected the outcome of the study since the distribution of the survey is online.

Conclusions

The hospital-wide investigation suggests multi-level grasp and understanding with telemedicine by exploring the nurses' knowledge, perception, and attitude in King Fahad Medical City among 355 respondents. We can shed light on nurses, in general, have very high knowledge of telemedicine, have very high perception on its advantages, low extent of its disadvantages, high view for its necessity, ease of use, security and strong positive attitude toward it.

The researchers were pleased to see that nurses in this study were very accepting of telemedicine implementation. With the nationwide use of mobile apps and remote telemedicine use that started during the COVID-19 pandemic and was carried out years after, structures and standards have been developed by Saudi's health system, and platforms were introduced to make the HCP work easier, faster, and more effective to reach out to patients who have less access to the facilities. It is at this time that we see technologies revolutionizing and TH has shown promise in clinical and non-clinical areas. The introduction of a new system will have its challenges, but telemedicine is now becoming widely accepted and may be successful in its application nationally.

Recommendations

This study has made notice of nurses' role in the effective operation of such technology in the workplace and as KSA approach Saudi Vision (2030) wherein health authorities has increased investment in digital healthcare, MOH should focus on strengthening the nurses' engagement and develop strategies for its long-term and wider scale use of telemedicine services in KSA by continuing to update legislation, regulations, security, and HCPs education and training.

Compliance with Ethical Standards

The researchers got an ethical clearance from the Ethics Review Committee and Institutional Review Board. Additionally, the researchers got approval from the Chairperson of the Nursing Research Committee in Riyadh, Second Health Cluster (King Fahad Medical City) to allow nursing staff to be included in the study. The researchers got an informed consent from participants by disclosing information regarding the study before they make an informed decision, facilitating understanding and promoting their voluntariness. The participants proceed to answer the survey once they agree and sign the informed consent. Participants can freely withdraw from the study without any questions and potential loss of any benefits. The researchers are responsible for safeguarding the participant's privacy and confidentiality following KSA's new Personal Data Protection Law Royal Decree M/19 of 9/2/1443H (16 September 2021); Cabinet Resolution No. 98 of 7/2/1443H (14 September 2021). The data is electronically stored and protected and does not include the name of the participants which means there is no way that data analysis can be traced back to the participants. The data was accessed by the research team for data analysis and stored as a computer file a year after publication

for reference and will then be deleted. Data and statistics will be published for public access.

The researchers do not see any conflicts of interest in this work. Plagiarism was strictly avoided, there was no bias in the interpretation of the findings and that the results were used purely for research. The authors would also like to declare that this research was not funded and conducted in the absence of any commercial or financial relationships that could be construed as a potential conflict of interest and was purely research in nature.

Acknowledgements

The authors would like to show their gratitude to Ms. Patricia Joy Magsino for her contribution in the statistical analysis of data, to the experts who validated the questionnaires, to the data collectors and respondents of this research.

MODERNIZING AGRICULTURAL EDUCATION: ENHANCING PEDAGOGY and TECHNOLOGY INTEGRATION FOR TEACHING AGRICULTURAL CROP PRODUCTION NC II IN THE 21ST CENTURY

Ronald M. Cristobal

San Mateo Vocational and Industrial High School, Schools Division of Isabela, Department of Education, Philippines

https://doi.org/10.5281/zenodo.12073152

ABSTRACT

This research investigates the integration of contemporary agricultural practices, including sustainable farming methods, precision agriculture, and agrotechnology. Emphasis is placed on how these innovations are incorporated into the curriculum to equip students with relevant and practical skills. This study seeks information on the perception of Grade 8 and 10 students composing of 49 participants at San Mateo Vocational & Industrial High School on the competencies of teachers in Agricultural Crop Production NC II. This study employs the Input-Process-Output (IPO) model of evaluation. The study utilized descriptive research design because the study tried to find out the competencies of teachers in teaching agricultural crop production under the Special Program of Technical Vocational Education. Descriptive research is used to describe characteristics of a population or phenomenon being studied. Since there are predefined categories, a respondent must choose from, it is considered descriptive research. These questions will not give the unique insights on the issues like exploratory research would. Instead, grouping the responses into predetermined choices will provide statistically inferable data. The data being gathered were interpreted and analyzed. Bracketing was performed to avoid bias. After data collection, the researchers found four (4) common themes. Each of these themes was discussed in terms of supporting or not supporting the review of literature. The majority of the findings of the study, supported by participants, served as authentic guidelines for the study. The fact that San Mateo Vocational and Industrial High School clearly adhere to the highest standards possible in developing its learners to be an effective part of society. It is evident from the high regard

of the respondents to the school in terms of adequacy and effectivity of its facilities and its teaching staff as well as the high regard to its administration.

Keywords: *Agriculture, Approaches and Strategies, Attitude, Crop Production, Curriculum, Department of Education or DepEd, Education, Learning, Perception, Performance, Skills, Special Program of Technical Vocational Education (SPTVE)*

INTRODUCTION

Agriculture continues to be the major and certain path to economic growth and sustainability. It encompasses all aspects of human activities. It is the act, art, a cultural necessity and science of production of goods and services through cultivation of land and management of plants and animals which creates an activity web–chain that satisfies social and economic needs.

It is opined that the last solution to our food problem would unavoidably involve the young ones (youth) who would be farmers of tomorrow. The objectives of agricultural education in secondary schools in the Philippines include stimulation of students' interest in agriculture. Enable students to acquire basic knowledge and skills in agriculture, expose students to opportunities in the field and prepare students for further studies and employment in agriculture. Because of the important role of agriculture in the development of this country, the program in Special Program for Technical Vocational Education (SPTVE), Technology and Livelihood Education (TLE) and Technical Vocational Livelihood (TVL) has been undergoing development.

In the Philippine system of education, there are factors that give difficulty to the implementation of objectives. The problems of inadequately-trained teachers, lack of support either from the government or from private sector, lack of solid planning, lack of follow-up of result – all these add to the difficulty Nem Singh et al., (2019) added.

In evaluating teacher's instructional competencies Joshua et.al., (2016) emphasized the use of student achievement as the basis to assess or evaluate teachers is one of the many approaches of teacher evaluation. Other approaches in evaluating teacher's instructional competencies include classroom observation, student ratings, peer ratings, principal/HOD/administrator ratings, self-rating, teacher interview, parent rating, competency tests, and other indirect measures.

According to Arthur and Philips, competence gives the teacher the responsibility to present evidence of the achievement of the students. The question is how teachers perform, identifies the competencies and relate to overall performance of the students according to the capacity.

Also, Kyriacou said that the essence of being an effective teacher lies in knowing what to do to foster students' learning and being able to do it. Effective teaching is primarily concerned with setting up a learning activity for each student which is successful in bringing about the type of learning the teacher intends. Successful teaching is thus crucially bound up with developments on both decision-making skills and action skills. This distinction between these two types of skills is extremely important, because teaching is as much a thinking activity as it is observable actions. Developing skills as a teacher therefore is as much about developing and extending the type of decisions that teachers make about their own teaching as it is about the successful execution of those decisions.

In an interview with Brandt, Shulman pointed out that the generalizations about effective teaching from the early process-product studies had too many limitations to be a basis for information. For instance, he noted that the sampling procedures used did not give a true reflection of what a real teaching process was like. According to Shulman, there is need for "a literature that focuses on the intersection of content and pedagogy, that brings together the 'wisdom of practice' on a topic by topic, idea by idea basis" according to Brandt. Shulman viewed use of research methods such as case histories and specific stories about classroom practice as significant for enriching this 'wisdom of practice'

More so, that Agricultural Crop Production NC II is one of the subjects in Secondary Schools; and as a Vocational subject, it cannot be taught effectively without the use of appropriate instructional materials.

According to the study of Delos Santos (2013), there are factors which affect the academic performance of TLE students. Profile of the students, in terms of age, gender, occupation of parents and their educational attainment are variables that contribute to the performance of the students. Other variables are attitude of the students, parental support to the students and their performance of students in TLE.

However, Garduque (2022) in his study stated that learning theories were not enough we need to have skills to do things. Those skills are technical skills and livelihood programs which may help the students and graduates to become skilled workers of the future.

Griffith and Wade, worked on a study of The Relation of High School Career and Work-Oriented Education to Postsecondary Employment and College Performance, A Six-Year Longitudinal Study of Public High School Graduates in Maryland, USA. Employment and college enrolment history of high school graduates of a large, suburban school district were examined.

On the other hand, strong academic achievement, technical skill, certainty of occupational choice, college readiness promote degree and job attainment in careers of interest and job satisfaction helps high school graduates to enter college. It means that academic and technical skills are still essential (ACT,2019).

In a study conducted by Powell, the researcher explored how the behaviors and practices of the principals of various schools in Virginia, USA, influence and contribute to the success. The findings led to some of the following conclusions: the vision of the principal is paramount for school success, the culture of the school must be as nurturing to teachers as the students; the teaching of curriculum is foremost.

According to Parker, the Technology and Livelihood Education views the family as a major source of nurturance, protection and renewal for the individuals. As an educational force, the family significantly contributes to the qualitative development of its individual members and has the potential to prepare them for effective productivity in respect of self and society As the relationship between the family, home & home financial matters is indivisible, so from this point of view, home financial aspects lives up to expectations through family to create adjusted relationship in the middle of individuals and social environment and hence making ready for sound human improvement.

Hence, the teaching of agriculture can be made more effective by the use of locally available aids. The persistent call by science educators as far back as two decades ago to improvise simple science equipment for use at the primary schools levels is a clear indication of their non-availability.

Thus, the advocacy to promote academic excellence and quality education in San Mateo Vocational & Industrial High School in view of making this institution a center of academic excellence in Agricultural Crop Production NC II made the researcher decide to conduct the study that will serve as a baseline for future research in agriculture education.

Research Questions

The study aims to show the respondent's perception in the following topics that relates to Agri-Crop Production education subject.

Specifically, it seeks to answer the following questions:

1. What is the extent level of realization of the objectives of Agricultural Crop Production NC II?
2. What is the extent state of Agricultural Crop Production education as to:
   - 2.1 Methods in Teaching
   - 2.2 Techniques in Teaching
   - 2.3 Teaching Strategies
   - 2.4 Teaching Approaches
   - 2.5 Instructional Materials used in Teaching
   - 2.6 Equipment Used in Teaching
   - 2.7 Facilities Used in Teaching
3. What are the problems encountered along the following:
   - 3.1 Student Variables
   - 3.2 Home Variables
   - 3.2 School Variables

3.3 Community Variables

4. What are the interventions implemented alongside with TLE/TVL education?

METHODOLOGY

The study utilized descriptive research design because the study tried to find out the competencies of teachers in teaching Agricultural Crop Production NC II under the Special Program for Technical Vocational Education (SPTVE) among the grade 8 and 10 students.

Descriptive research is used to describe characteristics of a population or phenomenon being studied. The main idea behind using this type of research is to better define an opinion, attitude, or behavior held by a group of people on a given subject. Consider your everyday multiple-choice questions.

Since there are predefined categories, a respondent must choose from, it is considered descriptive research. These questions will not give the unique insights on the issues like exploratory research would. Instead, grouping the responses into predetermined choices will provide statistically inferable data.

The study used a set of questionnaires that asks about the perception of the respondents on the competencies of teachers in Agricultural Crop Production NC II under the Special Program for Technical Vocational Education (SPTVE) at San Mateo Vocational and Industrial High School.

The questionnaire asks the respondents focusing on the level of competency in terms of knowledge, skills, attitude, validity of training module level of functionality and acceptability of the training module in teaching SPTVE – Agricultural Crop Production NC II.

Keeping in mind the end goal to acquire related information for this study, the specialist will use the poll as the real instrument and meetings as exploration procedures.

The researcher adopted survey questionnaires based on the purpose of the study.

The study was subjected to certain ethical issues. Prior to the conduct of the study, a request letter was given to the Schools Division Superintendent where the study was conducted. Participants were informed regarding the objectives of this study and reassured that their identity would be confidential and that the result will be used only for academic purposes. More importantly, informed consent was obtained from all the participants, this is meant for clinical studies only.

Then upon approval, the researcher administered the questionnaire to the respondents. Each respondent was be given enough time to accomplish the questionnaire.

After administering the survey questionnaire, the researcher retrieved the questionnaire. After which, the researcher tallied, computed, and analyzed the results.

Further, from the accomplished questionnaires, the data were be tallied, classified, organized, and presented in a tabular form to facilitate in-depth analysis and interpretation of data.

The following statistical tools are employed to answer the specific questions in the study. For problem 1 Frequency and percentage was used. For problem 2, 3, and 4, weighted mean, ranking was utilized.

RESULTS and DISCUSSION

The presentation of the result of the study presented in table forms and were treated comprehensively.

Table 1 presents the Extent of Realization of the General Objectives of Teaching Agricultural Crop Production NC II.

Table 1
Respondent's Perception on the Extent of Realization of the General Objectives of Teaching Agricultural Crop Production NC II

Particulars	MEAN	QD	Rank
1. The teacher demonstrates an understanding of basic concepts and underlying theories in agricultural crop production.	3.77	R	6
2.The teacher demonstrates common competencies in agricultural crop production as prescribed by TESDA Training Regulations.	4.15	R	1
3.The teacher demonstrates recognizes his/her Personal Competencies and Skills (PeCS) and is able to compare these with the PeCS of a practicing entrepreneur/ employee involved in agricultural crop production.	4.13	R	2
4.The teacher demonstrates an understanding of concepts, underlying theories and principles in the use of farm tools and equipment.	3.97	R	5
5.The teacher demonstrates an understanding of estimation and basic calculation.	3.77	R	6

6.The teacher demonstrates an understanding of interpreting plans and drawings.	4.03	R	4
7.The teacher demonstrates an understanding of applying safety measures in the farm.	4.10	R	3
Average Weighted Mean	3.99	Realized	

The respondent's perception on the extent of realization of the general objectives of teaching Agricultural Crop Production NC II garnered an average weighted mean of 3.99 or "Realized." First in rank is "The teacher demonstrates common competencies in agricultural crop production as prescribed by TESDA Training Regulations" with a weighted mean of 4.15 or "Realized." Second is "The teacher demonstrates recognizes his/her Personal Competencies and Skills (PeCS) and is able to compare these with the PeCS of a practicing entrepreneur/ employee involved in Agricultural Crop Production NC II." with a weighted mean of 4.13 or "Realized." Last in rank are "The teacher demonstrates an understanding of basic concepts and underlying theories in agricultural crop production." and "The teacher demonstrates an understanding of estimation and basic calculation." with a weighted mean of 3.77 or "Realized."

This table realized that the teacher demonstrates common competencies in agricultural crop production as prescribed by TESDA Training Regulations.

Table 2

Respondent's Perception on Methods Used in Teaching Agricultural Crop Production NC II

Particulars	MEAN	QD	Rank
1. Deductive Method	3.97	E	4
2. Inductive Method	4.10	E	2
3. Project Method	4.03	E	3
4. Lecture Method	4.13	E	1
Average Weighted Mean	4.06	Effective	

The respondent's perception on the effects of methods used in teaching Agricultural Crop Production NC II garnered an average weighted mean of 4.06 or "Effective." First in rank is "Lecture Method" with a weighted mean of 4.13 or "Effective." Second is "Inductive Method." with a weighted mean of 4.10 or "Effective." Last in rank is "Deductive Method." with a weighted mean of 3.97 or "Effective."

It is evident that Lecture method is most effective used in teaching Agricultural crop production NC II.

Table 3

Respondent's Perception on the Techniques Used in Teaching Agricultural Crop Production NC II

Particulars	MEAN	QD	Rank
1. Activities suit learners' mental ability	3.97	E	5
2. Teacher with appropriate materials	3.97	E	5
3. Praises students for giving the correct response	4.18	E	2
4. Check learner's assignment	4.23	VE	1
5. Disciplines students in private	4.18	E	2
6. Conducts home visitation	4.10	E	4
Average Weighted Mean	4.11	Effective	

The respondent's perception on the effects of strategies used in teaching Agricultural Crop Production NC II garnered an average weighted mean of 4.11 or "Effective." First in rank is "Check learner's assignment" with a weighted mean of 4.15 or "Realized." Second is "Praises students for giving the correct response." with a weighted mean of 4.13 or "Realized." Last in rank are "Activities suit learners' mental ability" and "Teacher with appropriate materials." with a weighted mean of 3.97 or "Effective."

Table 4

Respondent's Perception on Strategies Used in Teaching Agricultural Crop Production NC II

Particulars	MEAN	QD	Rank
1. Uses appropriate materials	4.49	VE	1
2. Demonstrations	4.10	E	3
3. Classroom contests	3.97	E	4
4. Educational Tour	1.97	SWE	6
5. Viewing	3.77	E	5
6. Exploration	4.23	VE	2
Average Weighted Mean	3.76	Effective	

The respondent's perception on the effects of strategies used in teaching Agricultural Crop Production NC II garnered an average weighted mean of 3.76 or "Effective." First in rank is "Uses appropriate materials" with a weighted mean of 4.49 or "Very Effective." Second is "Exploration." with a weighted mean of 4.23 or "Very Effective." Last in rank is "Educational Tour." with a weighted mean of 3.76 or "Effective."

The result from the table shows that uses appropriate materials is the most effective Strategies Used in Teaching Agricultural Crop Production NC II

Table 5
Respondent's Perception on Approaches Used in Teaching Agricultural Crop Production NC II

Particulars	MEAN	QD	Rank
1. Link Approach	4.07	E	3
2. Integrative Approach	4.03	E	4
3. Learning by doing	4.08	E	2
4. Activity	4.13	E	1
5. Guided Discovery Approach	4.03	E	4
Average Weighted Mean	4.07	Effective	

The respondent's perception on the extent of approaches of the instructional materials used in teaching Agricultural Crop Production NC II garnered an average weighted mean of 4.07 or "Effective." First in rank is "Activity" with a weighted mean of 4.13 or "Effective." Second is "Learning by doing." with a weighted mean of 4.08 or "Effective." Last in rank are "Integrative Approach." and "Guided Discovery Approach." with a weighted mean of 4.03 or "Effective."

The data shows that the respondents believe that the best approach in teaching Agricultural Crop Production NC II is through activities and learning by doing which ensures that the knowledge their learned is well established into their minds.

Table 6
Respondent's Perception on the Extent of Effect of the Instructional Materials Used in Teaching Agricultural Crop Production NC II

Particulars	MEAN	QD	Rank
1. Learning Competencies (LCs)	4.23	VE	2
2. Teachers' Manual	4.10	E	3
3. Agri-Crop Reference Books	4.26	VE	1
4. Dictionary	3.74	E	5
5. Charts	3.26	E	9
6. Pocket Chart	3.49	E	8
7. Posters	3.51	E	6

8. Television	3.51	E	6
9. Overhead Projector	3.77	E	4
10. Computer	3.26	E	9
Average Weighted Mean	3.71	Effective	

The respondent's perception on the extent of effect of the instructional materials used in teaching Agri-Crop Production garnered an average weighted mean of 3.71 or "Effective." First in rank is "Agricultural Crop Production NC II Reference Books" with a weighted mean of 4.26 or "Very Effective." Second is "Learning Competencies (LCs)" with a weighted mean of 4.23 or "Very Effective." Last in rank are "Charts." and "Computer" with a weighted mean of 3.26 or "Effective."

The result shows that books are still the most important instructional material in learning Agricultural Crop Production NC II, due to activities being performed on the field which a computer is not always available to use. This coincides with the result of the computer being last on the respondent's choice.

Table 7

Respondent's Perception on the Extent of Effect of the Equipment Used in Teaching Agricultural Crop Production NC II

Particulars	MEAN	QD	Rank
1. School Farm	4.23	VE	1
2. Garden Tools	4.10	E	2
3. Field Tools	3.97	E	3
4. Apparatus	3.77	E	5
5. Models	3.85	E	4
Average Weighted Mean	3.98	Effective	

The respondent's perception on the extent of effect of the equipment used in teaching Agricultural Crop Production NC II garnered an average weighted mean of 3.98 or "Effective." First in rank is "School Farm" with a weighted mean of 4.23 or "Very Effective." This result is not surprising since the respondents are being given firsthand experience on what they will encounter doing actual work. Second is "Garden Tools." with a weighted mean of 4.10 or "Effective." Having ample time to practice skills in using garden tools is of importance for the respondents' skill to develop. Last in rank is "Apparatus." with a weighted mean of 3.77 or "Effective."

The data shows that the School farm in San Mateo Vocational and Industrial High School is the effective Equipment Used in Teaching Agricultural Crop Production NC II.

Table 8

Respondent's Perception on the Extent of Effect of the Facilities Used in Teaching Agricultural Crop Production NC II

Particulars	MEAN	QD	Rank
1. Storage Cabinet	4.22	VE	3
2. Computer Laboratory	3.85	E	4
3. Industrial Arts Room	4.23	VE	1
4. Agricultural Arts Room	4.23	VE	1
Average Weighted Mean	4.13	Effective	

The respondent's perception on the extent of effect of the facilities used in teaching Agricultural Crop Production NC II garnered an average weighted mean of 4.13 or "Effective." First in ranks are "Industrial Arts Room" and "Agricultural Arts Room" with a weighted mean of 4.23 or "Very Effective." Last in rank is "Computer Laboratory." with a weighted mean of 3.85 or "Effective."

IA room and AA rooms are the most effective way of learning Agricultural Crop Production NC II according to the respondents.

It is evident that here is where they can hone their skills into becoming professional crop producers after they graduate. Not surprising is the computer laboratory being last. Although it is still last, it still has a high rating of 3.85 but because the respondents can't really practice Agricultural Crop Production NC II in the computer lab, hence the relatively low score.

Table 9

Respondent's Perception on the Extent of Problems Encountered in Teaching Agricultural Crop Production NC II Along Student Variables

Particulars	MEAN	QD	Rank
1. Poor foundation on the four macro skills	4.28	VS	1
2. Poor study habits	2.77	MS	6
3. Absenteeism	3.36	S	3
4. Discipline	3.23	S	4
5. Comes to school unprepared	3.15	MS	5
6. Failure to submit projects on time	3.72	S	2
7. Cutting classes	2.72	MS	7
8. Vandalism	1.72	NS	9

9. Negative Attitude towards the subject	1.92	SWS	8
10. Health	1.36	NS	10
Average Weighted Mean	2.82	Moderately Serious	

The respondent's perception on the extent of problems encountered in teaching Agricultural Crop Production NC II along student variables garnered an average weighted mean of 2.82 or "Moderately Serious." First in rank is "Poor foundation on the four macro skills" with a weighted mean of 4.28 or "Very Serious." The result maybe because most of the respondents come from low-income families and can't really guide their children through their early years of education. Second is "Failure to submit projects on time." with a weighted mean of 3.72 or "Serious" The latter result is related to the first problem since projects often require certain number of resources to accomplish. Being in low-income families restricts the ability of the learners to accomplish the task. Last in rank is "Health" with a weighted mean of 3.77 or "Serious." Being raised in a low-income family also affects the health of the learner, not being able to eat nutritious food and being able to afford medicine when it is needed pose a huge problem for the learner.

Table 10

Respondent's Perception on the Extent of Problems Encountered in Teaching Agricultural Crop Production NC II Along Home Variables

Particulars	MEAN	QD	Rank
1. Dearth of reading materials	1.97	SWS	8
2. Inability of parents to pay school obligations	2.28	SWS	6
3. Parents have no time to assist their children in school activities	2.90	MS	3
4. Negative attitude of parents in attending school meetings	2.72	MS	5
5. Lukewarm attitude of parents to support programs and activities of the school	2.08	SWS	7
6. Misconception on DEPED Orders, rules and policies	1.85	SWS	10
7. Overprotective parents	1.97	SWS	8
8. Low Income Family	3.03	MS	1
9. Parents Guidance	2.90	MS	3
10. Motivation/Encouragement	2.97	MS	2
Average Weighted Mean	2.47	SWS	

The respondent's extent of problems encountered in teaching Agricultural Crop Production NC II along home variables garnered an average weighted mean of 2.47 or

"Somewhat Serious." First in rank is "Low Income Family" with a weighted mean of 3.03 or "Moderately Serious." Second is "Motivation/Encouragement." with a weighted mean of 2.97 with a qualitative description of "Moderately Serious." Last is "Misconception on DEPED Orders, rules and policies" with a weighted mean of 1.85 or "Somewhat Serious."

The result of this table coincides with the data on the previous table in which the top problems that arise are in connection with low-income families. This may be due to the fact that San Mateo Industrial and Vocational School is a public school that caters mostly to children of farmers in which San Mateo has plenty of.

Table 11

Respondent's Perception on the Extent of Problems Encountered in Teaching Agricultural Crop Production NC II Along School Variables

Particulars	MEAN	QD	Rank
1. Dearth of instructional materials	2.03	SWS	2
2. Poor school potable water system	1.36	NS	10
3. Dearth of supplementary reading materials	1.72	NS	5
4. Inadequate modern facilities	1.72	NS	5
5. Inadequate reference books	1.87	SWS	4
6. Seldom does the teacher explain use behind such method	1.46	NS	8
7. Financial constraints	1.97	SWS	3
8. Activities given to students are often confined within the classroom	1.46	NS	8
9. Methods used by teachers at times are inconsistent with lesson objectives	2.23	SWS	1
10. Assignment given to students are left unchecked by teachers	1.67	NS	7
Average Weighted Mean	1.75	Not Serious	

The respondent's perception on the extent of problems encountered in teaching Agricultural Crop Production NC II along school variables garnered an average weighted mean of 1.75 or "Not Serious." First in rank is "Methods used by teachers at times are inconsistent with lesson objectives" with a weighted mean of 2.23 or "Somewhat Serious." Second is "Dearth of instructional materials" with a weighted mean of 2.03 with a qualitative description of "Somewhat Serious." Last is "Poor school potable water system." with a weighted mean of 1.36 or "Not Serious."

Table 12

Respondent's Perception on the Extent of Problems Encountered in Teaching Agricultural Crop Production NC II Along Community Variables

Particulars	MEAN	QD	Rank
1. Negative attitude of barangay officials to support the programs of the school	1.51	NS	8
2. Robbery	1.36	NS	10
3. Lukewarm attitude of constituents in attending school meetings and other gatherings	2.41	SWS	1
4. Unpleasant relationships between school personnel and the people	1.77	NS	5
5. Lack of modern facilities	1.79	NS	4

8. Political interventions	1.59	NS	6
9. Religious beliefs	1.41	NS	9
10. Value of education	2.23	SWS	2
Average Weighted Mean	1.77	Not Serious	

The respondent's perception on the extent of problems encountered in teaching Agricultural Crop Production NC II along community variables garnered an average weighted mean of 1.77 or "Not Serious." First in rank is "Lukewarm attitude of constituents in attending school meetings and other gatherings." with a weighted mean of 2.41 or "Somewhat Serious." Second is "Value of education." with a weighted mean of 2.23 with a qualitative description of "Somewhat Serious." Last is "Robbery" with a weighted mean of 1.36 or "Not Serious."

Table 13

Respondent's Perception on the Interventions used in Teaching Agri-Crop

Particulars	MEAN	QD	Rank
1. Innovation on materials to be used by the teachers	4.23	SA	1
2. Localization of immersion among the students	3.90	A	5
3. Establishment of goals among the students	3.92	A	4
4. The Local Government Unit strongly supports the school	4.03	A	2
5. The administration is working closely to the teachers	4.03	A	2

6. There is an extensive training	3.23	A	7
7. Students are highly encouraged to this field	3.67	A	6
Average Weighted Mean	3.86	Agree	

The respondent's perception on the interventions used in teaching Agricultural Crop Production NC II garnered an average weighted mean of 3.86 or "Agree." First in rank is "Innovation on materials to be used by the teachers." with a weighted mean of 4.23 or "Strongly Agree." Second are "The Local Government Unit strongly supports the school" and "The administration is working closely to the teachers" with a weighted mean of 4.03 with a qualitative description of "Agree." Last is "There is an extensive training." with a weighted mean of 3.23 or "Not Serious."

The data clearly coincides with previous data on administrative support and government support of the learners of San Mateo Vocational and Industrial High School

Conclusions

Based on the findings of the study, the following conclusions are drawn:

1. The researcher conclude that the realization of the General Objectives of Teaching Agricultural Crop Production NC II is based on the common competencies that is prescribed by TESDA Training Regulations.

2. The data gathered of the study showed that San Mateo Vocational and Industrial High School clearly adhere to the highest standards possible in developing its learners to be an effective part of society. It is evident from the high regard of the respondents to the school in terms of adequacy and effectivity of its facilities and its teaching staff as well as the high regard to its administration.

3. The researcher conclude that the respondents believe that learning by doing approach using actual Agricultural Crop Production NC II tools is the most effective way of learning Agricultural Crop Production NC II.

4. The results also revealed that it was identified and examined interventions implemented alongside Technical Livelihood education (TLE) in the context of Agricultural

Crop Production NC II. The findings shed light on effective strategies and measures taken to address challenges within the educational framework.

Recommendations

From the foregoing findings and conclusions drawn, the following recommendations are offered:

1. The school administrators should continue doing their programs in lifting the quality of life of its learners. They should continue their efforts in providing adequate learning resources for their students to ensure their readiness in facing real-life situations.

2. The teachers should explore other learning methods and develop more learning materials for their students.

3. Parents/Guardians should ensure that their children have adequate financial and moral support.

4. Future researchers should expound on this study by focusing on the problems encountered and find out interventions to limit or lessen the problem.

Compliance with Ethical Standards

The researcher's unwavering commitment to ethical standards is evident in the meticulous adherence to principles of integrity, respect, and responsibility towards participants. Prior to the study, informed consent was obtained, ensuring participants' understanding of the research purpose and procedures, while maintaining confidentiality and anonymity throughout. By avoiding conflicts of interest, plagiarism, and bias, the researcher upheld the study's credibility and trustworthiness and ensured that the findings were used solely for research purposes, reflecting a dedication to ethical research conduct.

Acknowledgments

The researcher expresses heartfelt gratitude to the study participants, colleagues, friends, and beloved family for their invaluable help, support, and guidance throughout the research endeavour. Their contributions have been instrumental in the successful conduct of the study, reflecting a deep appreciation for their assistance and encouragement.

ABSTRACT

This qualitative study was conducted to further understand the junior high school teachers' experiences in teaching using modular teaching modalities. A modality that requires teachers' great efforts including its formulation, production, and implementation. Looking into the different experiences of teachers in their use of modular teaching modality may suggest certain realizations that may lead to further development in the teaching and learning process. This study aimed to explore the different experiences of junior high school public teachers in Catbalogan City in their use of the modular teaching modality. This study is determined to know the positive and the negative experiences of the teachers, describe their preparations employed, and their aspirations in improving the said modality. The study utilized sixteen (16) junior high school public teachers from the ten (10) district schools in Catbalogan City Division. The themes created were: *Teaching with a Heart, Learning Independently, Developing Family Link, Healthy Teaching, Motivated and Inspired, Deteriorating Motivation for Learning, Unprogressive Result for Learning, Risk-taking for the Sake of Learning, Earning over Learning, Losing Trust among Parents, Exhausting Resources for Learning, Reliability of Students Learning*, *All efforts are Exhausted for Learning, Modifying Teaching and Learning using Modules for Learning, Demanding yet Rewarding, Mens Sana in Corpore Sano (A Sound Mind in a Sound Body), The Commitment to Continuous Learning, Assurance of Human Interactive Modules, Empowering for Alternative Learning Modality, Innovating Quality Amidst Flexibility, Modules with a Heart for Learners' Well-being, Focusing Further on the Essential, and Flexing the Curriculum for Quality.* The findings and recommendations were used to further understand modular teaching modality. Moreover, the realizations taken from the experiences of the teacher-respondents suggest innovation in the

formulation, production, and implementation of modules which are vital to the said modality.

Keywords: *Modular Teaching Modality, New Normal Education, Learning Modules, Experiences of teachers, Aspirations of teachers*

INTRODUCTION

There has recently been a growing interest in developing learning modules for self-paced learning, which is essential and practical in the pandemic. Many pieces of evidence show that learners learn best when they do it themselves, focusing on a specific learning task and succeeding at it, as indicated in the educational principles. In designing modules, teachers must remember that it is a great privilege and, at the same time, a responsibility. It can be found to be problematic in the beginning when designing, especially when identifying where things should begin (Burge, 2019).

The necessity of using blended learning specifically on the use of modular distance learning has led many researchers to talk about different learning modules and their effectiveness for learning. These studies, however, have never addressed the issues and challenges experienced in crafting and implementing the use of learning modules. A few pieces of literature speak about these issues.

In the Philippines, the educational system has adapted the new blended learning, which includes the modular distance learning modality in all public schools in the country. In this modality, learners are expected to complete the tasks in the module, after which they have to submit their outputs at the end of the week. Moreover, Mean-Chin (2020) enumerated some of the disadvantages seen in the implementation of the said modality. This includes the availability of the materials. Considering the number of students, the budget available, and the equipment to use in crafting and implementing these modules, teachers may not have it all together, which consequently results in the lack of modules produced, hence the unavailability of materials.

Furthermore, there have been a lot of issues regarding the sense of authority, which focuses on the pressure of studying among learners. Consequently, the pressure of learning is greater for them in modular distance learning than it is during face-to-face or in an online class, considering that learning of topics is solely given to them and their teachers are too far away to offer them help. Aside from this, there are also issues of focus and concentration among learners; the confusion brought about by unclear and incomprehensible instructions; the confusion brought about by the different subjects; and the confusion with their situations at home. Most importantly, the question of the parent's or guardian's educational background is one that teachers and educational institutions are considering, not because they don't have the ability, but because they don't have the confidence to help their students. Thus, students are then again left on their own in

accomplishing their modules, usually seeking the help of their peers and taking refuge in the information found on the internet.

The need for exploration in this area is necessary for the educational system to make the necessary interventions in making it more effective. And looking into this through the perspective of the teachers, make it more reasonable, given that they are the craftsperson and implementer of modules. In the desire to become a part of this intervention and being one of the many teachers who is experiencing such an endeavor, the researcher made the necessary move to be part of it. The skills and competence in conducting the research study make the intervention more effective given that the necessary research design is applied, and coming up with an effective training design that is research-based will help those who are in the administrative position to develop, design, and implement an effective one.

Furthermore, although the primary goal of developing a learning module is to have successful self-paced learning among learners in this pandemic, we can never deny the persons behind the development of learning modules. Thus, this study aims to explore the experiences of junior high school teachers in Catbalogan City Division in the modular distance learning modality. Thus, this study assumes that there are significant experiences that can be identified as they adapt to the modular distance learning modality and can be used for necessary intervention for a more effective teaching and learning process.

Research Questions

This study explored the experiences of Junior High School Teachers in modular teaching modality, Catbalogan City Division, Catbalogan City, Samar, School Year 2021-2022:

Specifically, the study sought to answer the following queries:

1. What are the positive and negative experiences the informants encountered in modular teaching modality?
2. How would the informants describe their preparation in the modular learning modality?
3. What are the aspirations of informants to improve the modular teaching modality?

METHODOLOGY

This study is a qualitative research design employing the single case study design. A single case study is an in-depth investigation of a person, a group of people, or a unit to generalize across multiple units. An extensive, systematic analysis of a single individual, group, community, or other unit in which the researcher investigates in-depth data relating to multiple factors is also known as a case study. Furthermore, by outlining the actions followed while employing a case study technique, the researcher is able to narrow down a complicated and broad topic, or phenomenon, into a manageable research issue (s). The researcher acquires a more in-depth understanding of the

phenomenon by gathering qualitative and quantitative datasets about it than if they only used one sort of data (Heale and Twycross, 2017).
Moreover, it is a detailed examination of a single person, group, or event. A case study examines practically every aspect of a person's life and background to find patterns and reasons for their behavior. Also, it is useful in many domains, including psychology, medicine, education, anthropology, political science, and social work (Cherry, 2019).

The study was conducted in all public junior high schools in the Catbalogan City Division. There are a total of eight (8) public junior high schools under the ten (10) district schools of the division. The following schools are: Samar National School, Eastern Visayas Regional Science High School, Catbalogan City Agro-Industrial School, Guinsorongan National High School, Silanga National High School, Pangdan National High School, Antonio G. Tuazon National High School, Catbalogan National Comprehensive High School. All of the schools cater to students coming from the city and the neighboring municipalities.

The Samar National School (SNS) is the mother school of the province of Samar, formerly known as Samar High School. It is located on San Francisco Street, Catbalogan City, Samar. It consists of four thousand one hundred sixty-four (4,164) junior high school students. Presently, one hundred ninety-four (194) junior high school teachers serve at Samar National School.

The Eastern Visayas Regional Science High School is the only science high school in the division. It is located in San Roque, Catbalogan City, Samar along Arteche Boulevard. It consists of three hundred fourteen (314) junior high school students. There are fifteen (15) teachers serving the school.

The Catbalogan City Agro-Industrial School is located on the 9 hectares of city-owned agricultural property in Brgy. San Vicente, Catbalogan City, Samar. The school is a training institution for giving Catbaloganons, particularly youngsters, the information, skills, and attitudes necessary to become producers and/or agripreneurs in response to the city government's food security and greening projects. The school is composed of one hundred fifty-eight (158) students and five (5) teachers.

The Guinsorongan National High School is located in Brgy. Guinsorongan, Catbalogan City, Samar formerly known as Guinsorongan Integrated High School. It has six hundred seventy-one (671) junior high school students with twenty-nine (29) teachers serving them.

The Silanga National High School is located in Brgy. Silanga, Catbalogan City, Samar. It is composed of one thousand four hundred twenty-six (1,426) junior high school students and fifty-seven (57) teachers.

The Pangdan National High School is situated on a hilly portion of Brgy.Pangdan, 8 kilometers away from the city. It consists of three hundred and six (306) junior high school students with sixteen (16) teachers.

The Antonio G. Tuazon National High School is the only secondary school in the Sierra Islands, located between Barangay Rama and Barangay Cinco in Catbalogan City, Samar. It consists of six hundred eleven (611) junior high school students with twenty-four (24) teachers serving them.

The Catbalogan National Comprehensive High School, formerly known as the Samar Regional School of Fisheries, is located in Brgy. Mercedes, Catbalogan City, Samar. It consists of one thousand two hundred four (1,204) junior high school students with fifty-two (52) teachers serving them.

To successfully come up with a centralized and effective gathering of narratives, participants in the study must have the following characteristics:(1) must be a legitimate faculty member or teacher at the institution; (2) must hold a teacher III or Master teaching position; and (3) must have experience crafting modules in the division.

There were sixteen (16) informants for this study. Eight of these informants were utilized for the Individual Interview (IDI) and eight informants for the Focus Group Discussion (FGD). There was one (1) informant from each of the eight (8) public junior high schools in the division who was utilized for the Individual Interview (IDI) and an additional (1) informant from each of the eight (8) public junior high schools was utilized for the Focus Group Discussion (FGD).

The research instrument that was used in the conduct of the study is the researcher-made interview questionnaire. The instrument was used to gather the needed data and ideas from the target informants. The research instrument contained open-ended questions which were answered by the informants. The open-ended questions determined the common patterns or themes of the answers that were provided by the informants. The answers to the open-ended questions were verified through focus group discussion. The research instrument was checked by experts. The purpose of this is to determine the reliability and validity of the instrument in collecting the desired information, time allocation to answer the questionnaire and format and sequencing of the questions.

There was an approval letter in the conduct of the data gathering given to different schools and the Schools Division Superintendent. The adviser has approved this letter from the researcher before distribution. Upon approval of the letter, the respondents were chosen from among the faculty members using the inclusion criteria presented and approved by the adviser. Subsequently, the researcher asked the respondents for a scheduled individual interview and a focused group discussion (FGD), with consideration to a particular health protocol and with much consideration to their availability. Moreover, ethical considerations were read and explained to the respondents to highlight the confidentiality of the interview.

The data collection process was conducted through an individual interview and a focused group discussion. Individual interviews were done in person over the months of October and November 2021, lasting around half an hour each or an average of 27.75 minutes, to elicit relevant experiences from the informants. The interview schedule was set accordingly. Moreover, FGD was conducted on November 19, 2021 at 4:10 in the afternoon and lasted for forty-five minutes through an in-person discussion. This discussion was conducted for an in-depth validation of the data gathered. The data was recorded using notes and audio recordings, which were then analyzed.
In the data analysis, the researcher utilized the phenomenological data analysis by Colaizzi, employing the following steps.

First, the transcripts were read several times to gain a sense of the full content. This stage adds the respondents' thoughts, feelings, and ideas to the bracketing diary. This helped to explore the phenomenon experienced by themselves.

Second, the respondents' significant statements were noted in each transcript. These statements were written on separate sheets and coded based on their transcript, page, and line numbers.

Third, at this stage, the collected statements were given significant meaning. Subsequently, the underlying meanings of each statement were coded into one category as they are reflected in the detailed description.

Fourth, after having an agreement towards all formulated meanings, grouping and acquired implications were taken from each category to reflect the themes' unique structure. Each cluster of the theme was in a code to include all formulated meanings related to that group of definitions. After that, groups of clustered themes were under code to have all acquired implications related to that group of purposes. After that, groups of clusters of themes that reflect a particular vision issue were incorporated together to form a distinctive construct of themes. Indeed, all these themes are internally convergent and externally divergent, meaning that each formulated meaning falls only in one theme cluster that is unique from other structures (Mason, 2002).

Fifth, the themes were arranged into a detailed description at this analysis stage. After merging all the pieces, the whole structure of the phenomenon was coded and noted, then an expert was asked to review on the findings in terms of richness and completeness to provide sufficient and detailed descriptions. Finally, the results were presented to the adviser for thorough explanation.

Sixth, this step is similar to the previous step, but there are no specific meanings involved. In this step, the reduction of findings was redundant, and eradicating misused or overestimated descriptions from the overall structure is repetitive. Hence, this endeavor was meant to emphasize the fundamental design. Some amendments were made to apply to generate transparent relationships between theme clusters and their extracted

themes, which includes eliminating some ambiguous structures that weaken the description.

Seventh, this step aimed to validate the study findings using the checking technique. The researcher got approval from the participants in advance for the conduct of the study.

RESULTS

This qualitative study used a thorough understanding of the transcribed responses of each key informant by reading and re-reading the transcripts to determine the general sense of the whole coverage of its content. The significant statements from the transcript of the interview and focus group discussions were extracted, recorded, and coded using Excel and manual coding. The significant statements were properly coded, noting the informant number and the response number for easy tracking.

There was a total of one hundred eighty-one (181) significant statements that reflected the positive and negative experiences of the informants in modular education in teaching in the new normal as well as the aspiration of the informants to improve modular education in teaching in the new normal.

From the one hundred eighty-one (181) significant statements extracted from the transcripts, the researcher developed Formulated Meanings from the significant statements gathered. There were one hundred twelve (112) Formulated Meanings developed from the significant statements. Of the one hundred twelve (112) Formulated Meanings, there were twenty-three (23) clustered themes and three (3) Emergent Themes. The emergent themes and Theme Clustered are as follows:

I. Positive and Negative Experiences in Modular Teaching Modality

A. Positive Experiences the Informants Encountered in Modular Teaching Modality

1. Teaching with a Heart
2. Learning Independently
3. Developing Family Link
4. Healthy Teaching
5. Motivated and Inspired

B. Negative Experiences the Informants Encountered in Modular Teaching Modality

1. Deteriorating Motivation for Learning
2. Unprogressive Result for Learning
3. Risk-taking for the Sake of Learning
4. Earning Over Learning
5. Losing Trust among Parents
6. Exhausting Resources for Learning

7. Undependable Students Learning

II. Descriptions of the Informants in the Preparation in Modular Teaching Modality

1. All Efforts are Exhausted for Learning
2. Modifying Teaching and Learning Using Modules for Learning
3. Demanding yet Rewarding
4. Mens Sana in Corpore Sano (A Sound Mind in a Sound Body)

III. Aspirations of the Informants in Improving the Modular Teaching Modality

1. The Commitment for Continuous Learning
2. Assurance of Human Interactive Modules
3. Empowering for Alternative Learning Modality
4. Innovating Quality Amidst Flexibility
5. Modules with a Heart for Learners' Well-being
6. Focusing Further on the Essential
7. Flexing the Curriculum for Quality Education

The emergent themes that were created were developed to describe the phenomenological narratives to describe the answers to the problem statement identified. The three (3) emerging themes with different theme clusters each are discussed below.

I. Positive and Negative Experiences in Modular Teaching Modality

A. Positive Experiences the Informants Encountered in Modular Teaching Modality

1. Teaching with a Heart. The theme that was developed from the phenomenological narratives expressed by the informants leads to a deeper meaning of teaching in this modular learning modality giving a chance of knowing learners better.

During the one-on-one interview, Informants 1 and 3 expressed their positive experience in the modular learning modality. They said:

I have known my students better and acknowledge their weaknesses, background, and status (IDI 3-1).

I was able to know my students very well, their status at home and the struggles that they are facing (IDI 1-1).

Knowing better my students not just merely their names but their lives at home (IDI 1-1.2).

In addition, six (6) Informants in the FGD expressed the same sentiments that were felt by the informants in the one-on-one interview. They expressed:

I have more time to study my topic and deliver it more accurately to the students (FGDI 1-1).

I have learned and explored other ways of teaching aside from the usual face-to-face classes. Aside from that, I have also allotted more time in monitoring students which I seldom do during the normal set-up (FGDI 1-1.2).

Getting to know better the background and personality of our learners is a positive experience for me (FGD1 4-1.2).

There is a realization that we need to be considerate to our students for every learner have their own struggles in life (FGDI 5-1).

Teachers became more creative and resourceful. With less resources we can be able to provide education to the students (FGDI 6-1).

Teachers were made to think out of the box and be creative to still ensure the delivery of quality education despite the challenges of the pandemic (FGDI 6-1.2).

The distribution and retrieval of modules, as well as providing guidance on how to use the modules, have been great experiences for me (FGDI 7-1).

2. Learning Independently. The said theme is derived from the responses of the informants describing the effect of modular learning among learners which can be considered a good sign for the process of learning.

Informants 2 and 5 during the one-on-one interview expressed how the modular mode of learning affected the performance of the learners. They mentioned:

They were able to become more independent in terms of comprehension, but the different lessons and at the same time working on several tasks both for every learning area and also managing their skills in time management to comply with needed outputs for a particular week, thus grooming them to be very flexible individuals (IDI 2-1.2).

I find it helpful on the part of the students because they will be knowledgeable on the different subjects while they are at home and safe to be infected by the virus. With this, they developed a kind of bond with their parents and guardians while answering the module (IDI 5-1).

When I checked my student's output. Their creativity is so amazing. Despite the fact that the teacher is not around physically to guide them at home, still they manage to expand their horizons. With this, I can say that they are learning (IDI 5-1.2).

Moreover, this was also supported by informant 5 in the FGD. The informant said:

It helps students to hone their time management. Children are safe from the pandemic for they are not allowed to go outside unless they are vaccinated (FGDI 5-1).

3. Developing Family Link. The theme is derived from the responses of the informants, expressing how the learning modules developed the link between family members, most of whom are parents making time to teach their children.

Seven (7) of the informants shared their experiences with the support and the link development of the families. They said:

There is a strong collaboration and partnership between the teachers and parents to make this distance learning a success. Parents reinforce the students at home. They also contact me to ask about the topic which is complex especially in my subject, Math (IDI 2-1.2).

Parents collaborate with me as a teacher in the learning process. I tutor the parent in school and the parent will tutor her child at home. The parents are happy to share to their children the learnings they gained from me as their child's teacher (IDI 5-1.2).

Its optimism is exemplified by parents who are never weary of picking up and returning school modules (IDI 6-1).

I can personally have a conversation with the parents/ guardians since I do the home visitation or monitoring (IDI 6-1.2).

We had a chance to talk to our learners and parents and we see their situation (IDI 8-1).

This sort of pedagogy encourages teacher-parent collaboration and partnership. Parents are already visible, and we can always talk about how to improve a child's performance or how to urge and inspire their child or children to accomplish more and be more in spite of their circumstances (IDI 7-1.2).

Teachers have not stressed-out disciplining directly the learners because they are at home. It is their parents or guardians who discipline them, remind them about the things to accomplish especially the deadlines of the modules and other learning tasks. In this situation, the parents can bond with their children. They can also tutor their children about the lesson intended for a particular week (IDI 7-1).

In addition, three (3) of the informants in the FGD expressed the same observation during visitation and follow-up of modular learning of the learners. They expressed:

I had been learning continues and the willingness to accept change. Learning continues with the shared responsibilities with the parents who guided and tutored their children at home. Learners also value and learn how to manage time effectively (FGDI 2-1).

It allows parents to tutor their kids at home and identify their kids' strengths as well as areas in which they are weak or unable to understand. This is their bonding moment also (FGD1 7-1.2).

On how to teach the lesson or topic at home, parents and guardians collaborate with us, the teachers. We collaborate for the benefit of the student. They also provided their children more time because some of them had lost work due to the pandemic (FGD1 8-1).

4. **Healthy Teaching.** The theme that has been developed comes from the phenomenological narratives expressed by the informants, expressing how light the process of teaching and learning is today in this pandemic because there are informants who see it as an avenue to stay healthy amidst the pandemic.

Four (4) informants mentioned how the pandemic has helped them improve their health. They mentioned:

I am not under as much time pressure in class, and less stress in terms of classroom management and discipline since no students are in the classroom but honestly speaking, I miss their noise and presence (IDI 3-1.2)

Teachers became more open-minded and more patient considering the delays of the materials needed in printing the modules. There is no room for "me" but "we" as us teachers in this school helped one another in printing, and sorting the modules just to meet the deadline and the schedule of the distribution of the modules (IDI 4-1.2).

I was able to reinvent myself and adjust to the circumstances as a result of these experiences (IDI 6-1).

The education system today, helps me to relax my vocal cords especially that I have a thyroid problem (IDI 8-1).

5. **Motivated and Inspired.** The theme generated from the phenomenological narratives expressed by the informants expresses the brighter side of the pandemic, where even if modular learning is quite demanding they can find the light of motivation and inspiration along with the modular learning modality.

Informant 4 expressed during the one-on-one interview the motivation for teaching despite the challenge of the pandemic. The informant mentioned:

I was able to teach despite this pandemic and education continues. Limited interaction during monitoring or distribution of modules but it is worth it. The fact that I can see their smiles holding and reading the contents of the module made me feel happy (IDI 4-1).

Seeing the students' real-life situations at home motivated me to strive harder. Despite living in an uncomfortable house and facing financial difficulties, they were able to continue their studies through this modality. Regular student monitoring serves as a wake-up call to all teachers to continue working with compassion and empathy (FGDI 8-1.2).

I can personally visit the learners and I can see the real situation of the learners at home. Some of them are really struggling financially and economically. The situation at home is very poor. Then I came to realize that there is a really a purpose of the monitoring and having this kind of learning modality (FGD1 4-1).

B. Negative Experiences the Informants Encountered in Modular Teaching Modality

1. **Deteriorating Motivation for Learning.** The theme that was generated from the narratives given by the informants expressed the opposite of the light of motivation and inspiration because some informants have deteriorating motivation for learning due to the other side of the modular learning modality.

Five (5) of the informants in the one-on-one interview expressed how their motivation deteriorated. They said:

I am saddened with the fact that despite of the teachers' efforts in printing the modules, sleeping late at night, and everything, some students does not care. They failed to comply the activities stated in the module (IDI 1-1).

There are some learners who encounters difficulty in understanding and completing these outputs for the lessons at hand resulting to non-submission of the completed module or submitting it without answers (IDI 2-1.4).

It is quite stressful preparing the modules for the students especially if you have a large number of students (IDI 3-1.4).

The returned modules, on the other hand, are either incomplete or contain no responses. It tainted the entire experience (IDI 6-1).

With this type of modality, there is no guarantee that the students are actually learning (IDI 7-1).

The five (5) informants' narrative during the one-on-one interview was supported also by Informants 2 and 3 during the FGD interview. They said:

The most challenging part as a teacher while on modular teaching modality is how I could help my students to comprehend well on the lessons reflected on the modules (FGDI 2-1.4).

The learner the way I see it cannot grasp the totality of the concept (FGDI 3-1.4).

2. Unprogressive Result for Learning. The theme was derived from the narratives of the informants expressing their frustration relative to the negative effect of the modular learning modality on the progress of students' learning in this pandemic.

Nine (9) of the informants expressed in their narrative the negative effect of the modular learning among learners. They said:

I found out that some of the learners really needs help from the teachers not only to develop their knowledge, but rather how to understand their situation, you know their… family background (IDI 1-1).

They rather not answer those things because they don't understand the content of the module especially in Math, Science, and English subjects (IDI 1-1).

The activities on the module shall really suit the needs and interests of the students because no two individuals are alike. Some of the activities are too hard for the learners to understand. Slow learners cannot easily grasp the content of the modules since it is standard and suited for fast learners. It is frustrating on the part of the slow learners especially when they have no parent or somebody at home to act as a tutor (IDI 4-3.2).

Some of my students cannot understand the content of the modules, especially in AP modules (IDI 6-1.4).

The challenge here is how to handle the 'SLOW LEARNERS' they can read but they cannot comprehend well... sometimes I allowed them to answer the modules in Waray- Waray language for them to express their thoughts and ideas (IDI 6-1.4).

There are learners who submitted their activities or answer sheets incomplete or no answer at all (IDI 8-1.4).

There are submitted activities/ answer sheet with no names and it is difficult for me to guess and check who is the owner of those submitted activities (IDI 8-1.4).

In addition, three (3) of the informants in the FGD shared the same sentiments with what the nine (9) other informants during the one-on-one interview. The FGD informants said:

Ensuring that students learn with the use of modules/LAS only, reaching out students who live on far flung barangays and municipalities, giving remediation to students especially those who got low scores in tests, printing of modules and other additional tasks such as distribution and retrieval of modules and output (FGDI 1-1.4).

There is a lack of social interaction between the teacher and students. Students didn't understand much what is in the module for some topics are hard to understand without further explanations (FGDI 5-1).

Challenges in printing the modules, challenges in writing the modules, challenges also in the delivery because the modular delivery hindered the 'teacher's touch' (FGDI 6-1.4).

The printing and sorting of modules are the drawbacks. It is not simple for teachers. Teachers cannot directly explain to the students; instead, parents do it. But because some of them lack education, parents cannot explain well the topic (FGDI 7-1).

Students who are having trouble understanding the lessons, particularly in Math, English, and Science. They are overburdened by the module's many activities. Some

students have already considered dropping out because they are too exhausted to complete the modules (FGDI 8-1.4).

3. **Risk-taking for the Sake of Learning.** The themes that were generated from the responses of the informants sharing the risks made by informants to continue the learning process.

The delivery of modules to the learners it is quite risky (IDI 2-1.4).

I feel bad knowing that the schedule of the distribution was not followed correctly (IDI 3-1).

The fare is expensive and aside from the fact that it is too dangerous for me to travel because I might be infected with the virus but I have no choice (IDI 5-1.4).

This was also supported by the informant during the FGD relative to the risks taken by the informants for continuous learning:

The delivery of the modules also we encounter delays. Time management is a challenge also (FGD1 4-1).

4. **Earning over Learning.** The theme generated from the narratives stated by the informants expresses the frustration of the informants towards some learners who choose to earn rather than invest in their academic performance.

With this frustration, informant shared the sentiments during the one-on-one interview supported with the narratives of informants from the FGD. They said:

They lack answers or performance tasks in my subject because they also lack resources at home and even hard to feed their hungry stomachs (IDI 3-1).

There is an instance that I came to my students' house and they are not around for they went to fishing. This is also one of the reasons why they cannot submit the modules on time because they prioritized fishing and other work to earn a living (IDI 4-1.4).

There are students who get their modules late than the given schedule (IDI 8-1.4).

During monitoring, some learners are not in their homes (IDI 8-1.4).

There are learners who are not at home during the scheduled monitoring because they are doing a job such as fishing, house helpers, and other child labor things (FGD1 4-1).

Students to be monitored were not around for they are doing some errands like plowing the field to support their daily needs. It made me feel bad (FGD1 6-1).

The risk and distance in the monitoring of students is one of the challenges. There is an instance wherein the dog is about to bite me. It really scares me. Rain or shine monitoring is a threat to my health. But I have to keep doing it because my students need me (FGD1 8-1.4).

5. **Losing Trust among Parents.** The theme-driven responses of the informants expressed another negative aspect seen in the modular learning modality, which is the participation of parents in the academic performance of their children and the demotivation brought by less cooperation.

From the one-on-one interview conducted it was clearly expressed by informants as to the behavior and actions done by parents. They said:

Some parents or guardians do not get the modules on the scheduled date and time, thus delaying the process. As a result, the completed modules will be returned late also (IDI 1-1.4).

Parents who fail to assist and give support to students, procrastination of students, mental health problems, late distribution and retrieval of modules, complex content on the modules, to name a few (IDI 1-3.1).

Despite various announcements and communications through text or messenger regarding the schedule of the distribution of modules, many of the students and parents do not even care. They shall wait that the said modules will be delivered to their respective homes (IDI 4-1).

When parents or guardians don't go to school on the schedule given to get the modules of their children (IDI 5-1.4).

The said experience was seconded by those informants from the FGD. They said:

Not all parents have the ability to teach their children, and other parents, and some of them also lacks time to do so since they are too busy working to provide for their children's fundamental needs (FGD1 7-1.4).

Some parents are unable to effectively teach at home because some of the topics are unfamiliar to them and difficult for them to comprehend due to their poor knowledge (FGD1 8-1).

6. **Exhausting Resources for Learning.** The theme driven from the narrative expressed by informants described another negative impact of the modular learning modality on the informants where they have insufficient materials for the production of modules.

There were seven (7) informants during the one-on-one interview expressed a narrative response that developed the theme. They said:

There are delays in the printing of the modules because of technical problems. Sometimes the printer is not working because of the volumes of prints produced (IDI 1-1.4).

Well, sometimes we run out of papers, ink, couple with a malfunctioning printer. The delays are intolerable (IDI 2-1.4).

There are more expenses and time consumed in the production and reproduction of modules. I even use my personal equipment and money just to meet the deadline and schedule of the distribution of learning materials (IDI 7-1).

I have difficulties retrieving the necessary output. I have to go to the students' house to check what is the reason for the delays. I have 30 advisees and it is difficult for me to reach them due to some clerical work to do. The number that they wrote on the enrollment form is not reachable also (IDI 7-1.4).

Teachers have so much paperwork mandated by DepEd. Instead of focusing on the preparation of learning materials, our time is consumed by the urgent deadlines of the documents needed (IDI 8-1.4).

Because of paper works or clerical works, checking of learners' output is too limited (IDI 8-1.4).

It takes time in printing of modules. Sometimes, printers are not working well because of over usage. It is hard to reproduce modules due to scarcity of bond paper and ink (IDI 8-1.4).

Moreover, Informants 1 and 7 in the FGD conducted share narratives with their experiences relative to this.

While the negative experience that I had in modular teaching is it is more tiring because teachers are bombarded with more paper works (FGDI 1-1).

It's also difficult to manage our limited time because we're constantly besieged with heaps of paper work, all of which is urgent. All I can do is just sigh (FGDI 7-1.4).

7. **Undependable Students Learning.** The theme is driven by the narrative responses describing their experience with the learner's learning authenticity and reliability.

Assessment and intervention are delayed since they return the modules after a week or longer, you know... ahmmm not all are religiously and taking the modular distance learning seriously (IDI 1-1.4).

The results of the assessment are not that credible anymore especially on the students' answers on the modules (IDI 1-1.4).

We give recognition to top students in Grade 10 but how can we be sure if the said student is really the person completing and answering the modules and performance tasks? See, the learning output is a question and I as a teacher is quite doubtful on that (IDI 2-1.4).

We cannot immediately provide immediate feedback to the students' performance. It takes time to provide feedback since I have to wait for the modules to be submitted to me (IDI 3-1.4).

Another challenge is checking if the students really answer the module. I have doubts that some of my students let somebody answer the module (IDI 5-1.4).

It is also a challenge checking the modules with no answer or parents returning the module without checking if it has answers or not (IDI 5-1.4).

The students are not performing well on their learning tasks. They submit a poor-quality product that does not adhere to the rubrics and requirements. They have this ingrained view that submitting an output, regardless of quality, is preferable than not submitting at all (IDI 7-1).

It is difficult to validate learners' performance because since there are some who have tutors, while some do not learn by themselves. Because of this system, you will not know, if the student/learner is really learning or just submitting the modules for grades specially so that at the last page of the modules, there are answers key (IDI 8-1.4).

Learners do not answer their modules seriously. Parents are the ones who answer the modules instead of the students and students tend to copy the answers of their classmates to the activities in the modules. They don't read the modules. They prefer to call a friend and ask for answers (FGD1 2-1).

Another challenge pose by the distance learning modality specifically on the modular teaching modality is the authenticity of the assessment. Although teachers are monitoring the learners at a regular basis at the back of the door, teachers are not so sure who answers some of these tests given to learners (FGDI 3-1.4).

Assessing the student is also a challenge because some of the activities are answered by the parents or tutors (FGD1 8-1.4).

II. Descriptions of the Informants in the Preparation in Modular Teaching Modality

1. All Efforts are Exhausted for Learning. The theme describes how, through the manifested effort, learning continues despite the challenge of the pandemic.

When the researcher inquired, there were six (6) informants on one-on-one interview shared about their experiences on the exhausting preparation of the modules, they confided:

Well, it's not new to all that the preparation in the modular teaching modality is quite tedious. (IDI 1-2).

The preparation demands the completeness of materials-bond paper, printer, ink, manpower, and etc. (IDI 3-2.2).

I see to it that the printer is working, with ink, and I have an adequate supply of bond papers so that there will be no delays during the printing. I also prepare some learning activity sheets and summative test questionnaires for the students to assess the level of knowledge and understanding they gained (IDI 5-2.1).

The preparation is time-consuming considering the number of pages to be printed and we only have limited resources like a printer. Though this is our job sometimes it is exhausting also and it saddened me to know that we have bashers because they are telling us that we are not doing a lot of work or not working and yet we receive a salary (IDI 4-2.2).

It takes a lot of effort to get everything ready. You need a lot of energy, time, and patience considering the volume of pages to be printed, students to be monitored, parents to deal with, etc. (IDI 7-2).

It is tiring but we have to follow what is being mandated to us (IDI 8-2.2).

Moreover, informants from the FGD added how they describe the preparation of the learning modules. They said:

Preparation in modular teaching modality is very tedious and difficult especially because of lack of resources such as printers, bond papers, etc. (FGDI 1-2).

The delivery of the modules is also a challenge. It is an added cost for we have to hire a banca to deliver those modules (FGDI 4-1.4).

All of these preparations are very time and energy-consuming because I spend almost 3 days just for printing alone (FGDI 1-2.2).

I download the modules, print, sort and distribute the modules. I sometimes deliver it to the students' respective homes for some of the parents do not get it from school (FGDI 7-2.1).

Internet connectivity since we are located in an island barangay. It is difficult for us to download the materials. We have to wait for Friday of Saturday to download everything (FGDI 4-1.4).

Time is a challenge too. We have limited time because printing alone takes much of our time (FGDI 4-1.4).

Reaching out to the learners with no cellphone or messenger account is also a challenge. What we did in the school is that the classmate with phones or messenger accounts will be the one to relay the message (FGDI 4-1.4).

2. Modifying Teaching and Learning Using Modules for Learning. The theme-driven describes the ways made by the informants to modify the teaching and learning with the use of the modules. This also gives an avenue where the informants become the innovators in order to make the teaching and learning process simpler and more understandable as they prepare the learning modules.

Informants 1, 2, and 3 during the one-on-one interview expressed that aside from the usual routine that they are doing, they also prepare materials that would reinforce the Learning Modules. They said:

I download the module, print it, segregate, and inform the parents to get it in school. I also contextualize the downloaded module for easy understanding of the students (IDI 1-2.1).

I also prepare Learning Activity Sheets as required following the Most Essential Learning Competencies. I also prepare materials that I will use during the monitoring or home visitation (IDI 1-2.1).

We have to download the SLM then we have to print them, then design additional tasks or exercises for enhancement and remediation for the lessons (IDI 2-2.1).

I download and print the modules. Segregate it and distribute it to the students whether through his parents or deliver it at home. I also prepare Learning Activity Sheets for remediation and enrichment activities (IDI 3-2.1).

Six (6) informants of the FGD seconded of the efforts being done in simplifying and reinforcing the learning of learners through the use of the modules. They added:

I prepare Work Home Learning Plan, learning activity sheets, gather soft copy of learning activity sheets, sort them and prepare for the distribution (FGDI 1-2.1).

I study the MELC or the Most essential learning competencies. Prepare the Weekly Home Learning Plan together with the Learning Activity Sheets, prepare, sort, and distribute modules (FGDI 2-2.1).

I prepare a weekly home learning plan, learning activity sheets, summative tests and of course print, sort, and distribute modules (FGDI 4-2.1).

A combination of trial-and-error mechanism that up to now it is still subject for perfection. Printers sometimes doesn't work. My body and mind need relaxation but because of so much work to do, coordinator ship, and all I can't (FGDI 6-2).

I also prepare a weekly home learning plan and activity sheets based on the MELCs (FGDI 7-2.1).

I download the modules, print, sort, and distribute it. I prepare weekly home learning plan. Learning activity sheets and the monitoring schedule (FGDI 8-2.1).

3. Demanding yet rewarding. The developed theme describes the demands that the modules require, which becomes for them a rewarding task. Along the way of the development of learning modules, informants mentioned the challenging tasks of doing

modules, but seeing the appreciation expressed by parents and learners, the feeling of exhaustion is carefully paid off.

In the one-on-one interview with the informants, Informants 3, 5 and 6 mentioned:

I can say that the preparation is quite exciting now. Yes, it is tedious and requires a lot of time and energy but seeing the students and parents appreciate your efforts is a good feeling (IDI 3-2).

The preparation is both exhausting and rewarding. It is exhausting since there are numerous pages per subject to print, and it is rewarding when I see all of the modules stapled, piled, and ready for release (IDI 5-2).

We have so many clerical works and it demands so much of our time (IDI 6-2.2).

On the contrary, Informants 4 and 8 in the FGD expressed the challenges of the preparation of modules. They said:

Assessing students is also a challenge. Authenticity of the result is a big question (FGD1 4-1.4).

The preparation is challenging (FGDI 8-2).

4. **Mens Sana in Corpore Sano (A Sound Mind in a Sound Body).** The quest for continuous learning in this pandemic has been challenging among the informants because they have to consider their health conditions, which will affect the effectiveness of learning in a way that is structured and planned in a learning condition just like in this pandemic.

Informants 4 and 7 expressed that the time that the pandemic caused an avenue for physical health restoration and adjustment for another mode of learning. They expressed:

I also prepare myself to be physically healthy (FGDI 4-2.1).

Challenging compared to face-to-face instruction and still adjusting on the situation (FGDI 7-2).

The emergent and clustered themes transpired from the phenomenological narratives expressed by the informants showed how they describe the preparation of the learning modules used in this time of pandemic.

III. Aspirations of the Informants in Improving the Modular Teaching modality

1. **The Commitment to Continuous Learning.** The theme is driven by the narratives given by the informants describing their commitment to continue learning through the use of learning modules.

There were three (3) informants that expressed their experiences and commitment to continue learning amidst the pandemic. They said:

Since it's our job we have to, and we have to double our effort. Just for the students to have this quality of education (IDI 1-2).

The preparations are self-fulfilling and gratifying knowing that despite the pandemic learning continues (IDI 1-2.2).

I also aspire for more supportive parents and guardians who will really support, guide, and collaborate with the teachers for a common goal (IDI 4-3).

2. Assurance of Human Interactive Modules. The theme is driven by the narratives given by the informants to describe the need for adjusting the modules for learners to have a sound understanding of the modules where they can interact through the answers expressed in their modules.

Informants 2 and 7 during the one-on-one interview expressed by saying:

The learning materials were one of the things I wanted to improve in modular distance teaching modality (IDI 2-3).

Every school must be supported and adequately funded because we run out of resources and it causes headaches and stress to the teachers (IDI 7-3).

Moreover, six (6) of the informants shared the same with the previous informants during the FGD. They said:

Choose materials, objective and content of modules that is relative to the students' real-life experiences. Incorporate mindfulness. Always get connected to the parents to monitor the students (FGD1 5-3.2).

The implementation of modular teaching modality gives great adjustment to teachers and learners. On the point of improving the modality. I would like to mention about the SLM write up where there are a number of errors on the modules. These must be corrected during home visitations and interventions must be done directly telling the learners about these productions (FGD1 3-3).

Reduced module activities, more examples for each subject, weekly home visits, limited face-to-face classes or Blended Learning, provision of colored printed modules, immediate information from teachers on what to answer in the modules, and teachers' leniency in the submission of students' outputs are all things that should be done to improve the modular teaching modality (FGD1 4-3.2).

Limited face-to-face instruction is what I aspire for. Modular teaching alone cannot suffice what the learners really need. Also, a unified modular textbook. No more printing because it is a waste of time. In this way, I or we can focus more with the teaching and learning rather than printing and sorting (FGD1 6-3).

The school/department should make mechanisms on how the teacher will incorporate teacher's touch and learner's feel even if through a modular delivery. Blended modality is still the ideal approach (FGD1 6-3.1).

Pair modular teaching with other modalities (FGD1 6-3.2).

3. Empowering for Alternative Learning Modality. The theme is driven by the narratives given by the informants that described their aspiration for the better implementation of the learning modules through capacity building and mentoring. Informants during the one-on-one interview narrated and said:

I attended webinars on how to deliver education using this type of modality, the modular distance teaching modality but the application is quite different (IDI 3-2.1).

Teachers should be trained effectively on how to deliver this type of modality (IDI 3-3).

Attend series of DepEd webinars that can help me gain new knowledge to cope up the new normal set-up (IDI 6-3).

Informants 1 and 8 during the FGD also added:

There should be at least one day in a week allocated for mentoring of students to clarify confusions, give instructions, and answer queries from the students. Technical assistance, trainings and seminars, should be provided to teachers (FGDI 1-3.2).

Teachers should be given the opportunity to attend seminars and workshops to improve their skills in delivering lessons in this type of modality. Prior to the implementation, we attended webinars, but I believe this was insufficient (FGD1 8-3).

4. Innovating Quality Amidst Flexibility. The theme is driven by the narratives shared by informants during the interview describing their aspiration to create innovations to make the teaching and learning process in this pandemic effective.

Informants during the individual interview shared and said:

Aside from teachers' seminars, modules should be error-free. Quality education is synonymous with error-free learning material. Limit or minimize the number of pages and activities in every module in all subject areas. (IDI 3-3.2).

All school teachers have autonomy and freedom to design their own modules. The modules, however, must be evaluated for quality assurance, and progress will be tracked and monitored (IDI 7-3).

We are all aware that errors are unavoidable at times. Teachers should reassess the modules and ensure that all learning activities are appropriate for the learners' needs (IDI 7-3.2).

Also, informants during the FGD shared same sentiments and said:

The content of the modules. It should be error-free (FGDI 3-3.1).

Limit the number of activities which some are already a duplication (FGDI 4-3).

The content of the modules should double check by the curriculum specialists (FGDI 5-3).

Modules that are free of errors and have been quality-assured by curriculum experts (FGD1 7-3).

Less activities for the students (FGD1 7-3).

Keep the activities in the modules to a minimum because it will be too much for the students (FGD1 7-3.2)

Minimize the activities in the modules because it will be a burden for the students (FGD1 8-3.2).

5. Modules with a Heart for Learners' Well-being. This theme was driven by the narratives shared by the informants describing their sentiments on the continual improvement of the modules, especially on the aspect of further polishing the modules, simplifying the content, and those that are error-free.

The informants from the individual interview said:

Yes of course, because the modular teaching modality is not perfect or even close to perfection. First, the curriculum itself, though the competencies have been lessened still we have a lot of competencies to be covered. I think DepEd shall look into this. Second, the learning activities to be answered or completed are too many. Students complain about this and they don't find it healthy and just for them. The activities are intended for everybody not considering the level of interest and knowledge of the students (IDI 4-3.1).

I aspire to an error-free module in a book-type format same with the private schools one modular textbook only every quarter. I believe we can reduce the cost of the printing if we can have this one. Also, reduce the activities in the module. Students are not happy with so many activities anymore. They are stressed out on this (IDI 5-3).

For me the modules alone, some content had a grammar error, blurry pic and the likes and it should be improved in order not to create any confusion on the part of the learner (IDI 6-3.2).

The contents of the modules must be simplified, and teachers must simplify the lessons. The teachers shall provide more examples. For easy description and identification of students, do not use black ink if the photo needs to be printed in color (IDI 7-3.1).

Module in a book style or format and with lesser activities but still adheres to the standards (IDI 8-3).

The content of the modules should be improved. There are so many activities that learners do not understand and difficult for them to answer (IDI 8-3.1).

The content of the modules should be improved. The DepEd should prepare books because printing of modules takes time and additional workload for teachers (IDI 8-3.2).

This was further supported by the informants from the FGD, describing the aspiration on the further development of the modules. They said:

One of these is on the materials necessary for the production of modules. Another is in terms of content of the modules. The content should be reduced to avoid wastage of resources without sacrificing the skills that the students should learn (FGDI 1-3.1).

Modules that are really suited to the needs of the individual learners for some of the activities are too complex and hard for the slow learners to comprehend (FGDI 7-3).

The content of the modules should be limited but is aligned with the standards. Avoid duplication of activities (FGDI 8-3).

6. Focusing Further on the Essential. The theme is driven by the researcher from the narratives shared by the informants describing their aspirations to improve the focus of modular learning which is to continue learning and to ensure that learners are learning. Informants from the FGD shared their aspirations on this aspect. They said:

I aspire for more organize process in printing and distribution of modules, and availability of resources to maximize time (FGDI 1-3).

DepEd shall limit the clerical works to teachers so that they can give more time and attention to teaching and learning and improving themselves so that they can really provide quality education to the learners (FGDI 4-3).

Provide a unified Self-learning module and no more printing anymore for it takes time to prepare the modules. Instead of focusing on the learners, monitoring, our time is already focused on the printing alone (FGDI 4-3.2).

A sort of modular textbook ready for distribution and the teacher will just distribute it. No need to print anymore volumes of pages and copies (FGDI 7-3).

Limit clerical works for teachers to have more time in the preparation and delivery of modular instruction (FGDI 7-3.2).

Limit clerical works for teachers to have more time in the preparation and delivery of modular instruction (FGDI 7-3.2).

Modules will be converted into modular textbooks, and I'll be able to distribute them as soon as I get them. Printing is no longer a chore. The days and time spent printing the module will be used in monitoring, home visits, and tutoring as a result (FGDI 8-3).

7. **Flexing the Curriculum for Quality Education.** The theme is driven by the researcher from the narratives shared by the informants describing their aspiration for changing or flexing the curriculum for the quality of education in this time of the pandemic.

Some of the MELC Competencies shall not be included because some competencies duplicate from other competencies and it is no longer necessary (IDI 6-3.1).

Curriculum decongestion (FGDI 4-3.1).

DISCUSSION

As presented by Shosha (2012), Colaizzi's phenomenological data analysis approach revealed an active strategy for achieving the depiction of those people's life experiences. It entails deciphering the data and determining key assertions, which are then translated into formed meanings. Following that, groupings of topic clusters were created to form the final thematic construct.

To accomplish each method effectively, several tactics and strategies were used to ensure the research outcomes were trustworthy. The correct implementation of Colaizzi's descriptive phenomenology approach would produce a comprehensive account of the corpus of knowledge about human experience, and hence would be a successful technique for laying the groundwork for future study (Shosha, 2012).

This case study that explored the different experiences and aspirations of the selected Junior High School teachers of Catbalogan City Division in Modular Distance Teaching Modality is anchored on the Transactional Distance Theory by Michael Moore (1997), Constructivist Theory by John Dewey (1938), and the Theory of Distance Education by Borje Holmberg (1995).

The main theory used was the Transactional Distance Theory of Michael Moore (1997). The idea distinguishes physical or temporal distance between learners and teachers during a transaction between them. Three elements must be considered while developing transactions between professors and students in distance learning. One is conversation, another is its structure and the learner’s autonomy as the third element. This theory assumes that distance learning is considered “transactional” if these three elements are present.

The constructivist theory of John Dewey (1938) is also a supporting theory of this research endeavor. John Dewey's Constructivist theory of education can be adapted to apply to the museum setting. The concepts are in line with our current understandings of learning

and knowledge, yet they are in opposition to traditional museum operations. In order to apply these ideas to our work, we must reflect on our own practices.

In this theory, what is being presented in the classroom makes a difference from what is encountered by every learner in day-to-day activities. That is why he would always speak of making teachers expert learners who can guide students into adapting cognitive strategies highlighting self-testing, articulating and understanding, asking probing questions, and reflection.

This study was also supported by the Theory of Distance Education of Borje Holmberg (1995), which focuses on how distance affects learning and how distance professors should engage with students. Borje Holmberg coiled the Guided Didactic Communication, which can be done in two ways: one-sided Simulated Conversations or two-sided Real Conversation.

In essence, Holmberg believes that fostering empathy between learning and tutoring parties through appropriate one- and two-way interactions motivates and encourages students to engage personally in their studies. "True learning is essentially an individual activity that can only be completed via an internalization process," it also implies. This is a reasonable assumption to make in favor of the concept of distance education.

Other related studies were also cited to support the findings of this study. Shown below are the emergent themes derived from the responses of the informants based on the sub-problems of the study.

I. Positive and Negative Experiences in Modular Teaching Modality

A. Positive Experiences the Informants Encountered in Modular Teaching Modality

This overarching theme depicts the sub-problem of the study what are the positive and negative experiences of the informants encountered in modular distance teaching modality. From the responses of the key informants, there are twelve (12) emergent themes were generated. There are five (5) emergent themes for the positive experiences encountered by the informants in the modular distance teaching modality and seven (7) emergent themes for the negative experiences encountered by the informants in the modular distance teaching modality. The emergent themes for the positive experiences encountered by the informants in the modular distance teaching modality are as follows:

1. Teaching with a Heart. The theme that was developed from the phenomenological narratives expressed by the informants leads to a deeper meaning of teaching in this modular distance learning modality, giving a chance to know learners better.

The informants' responses revealed that teachers prepare materials for self-paced learning that motivate both the academic and mental aspects of learners. They provide hands-on monitoring and innovative learning. Face-to-face monitoring allows them to gain a deeper understanding of the learners' and students' life. They also develop

resourcefulness in the preparation of learning modules. They imply innovation to ensure that learners receive quality education.

This emergent theme is greatly supported by the theory of Distance Education by Holmberg, which emphasizes that there is a big impact of distance education where the teachers must communicate with students to ensure real learning in the implementation of self-paced learning materials.

This was further supported by the study of Baysinger (2020), who mentioned that experts can devise tutorials even though they are in different institutions. Relatively, Willmot and Perkin (2016) highlight that the makers of modules experienced a good relationship with their students compared to before.

2. **Learning Independently.** The said theme is derived from the responses of the informants describing the effect of modular learning among learners, which can be considered a good sign for the process of learning.
The informants' responses tell us that students generate creative outputs with minimum supervision, develop independent learning submit outputs on time, and learn at their own pace at home.

This is well supported by the Constructivist Theory of John Dewey which emphasizes that education should be based on real-life experiences.In addition, Sejpal (2013) sees that modules enable learners to have control over their learning and accept greater responsibility for learning. This was also supported by Nadas and Vidal (2018) when they mentioned that modularization gives learners the chance to choose an appropriate learning approach and gives learners the chance to reset a unit rather than repeat the whole process of assessment. Also, Clover (2017) identifies that modular instruction gives the utmost convenience, which teaches learners to be independent learners.

3. **Developing Family Link.** The theme is derived from the responses of the informants expressing how the learning modules developed the link between family members at most are parents making time to teach their children.

This is supported greatly by the theory of Constructivism of John Dewey which highlights those students participating in real-world scenarios also could demonstrate their knowledge via creativity and teamwork.
It also reflects the study of Nadas and Vidal (2018) where they highlight those modules give a link between family and peers to prepare students for the future phase of their education.

4. **Healthy Teaching.** The theme that has been developed comes from the phenomenological narratives expressed by the informants, expressing how light the process of teaching and learning is today in this pandemic because there are informants who see it as an avenue to stay healthy amidst the pandemic.

This theme clustered is in line with the theory of Transactional Distance Theory of Moore (1997) which speaks of the second factor giving emphasis on the structure, specifically on the course's ability to accommodate individual students' needs which is part of the development of the learning modules.

Moreover, Hilmi et al. (2016) highlighted in their study that those teachers who were satisfied with the hygiene factors which include the relationship with the administration or supervisor, with their colleagues, pay factor, or salary, and also their satisfaction in terms of the motivation factor on both the fulfillment of the hygiene and motivation factors towards their job satisfaction.

5. **Motivated and Inspired.** The theme generated from the phenomenological narratives expressed by the informants expresses the brighter side of the pandemic where even if modular learning is quite demanding, they can find the light of motivation and inspiration along with the modular distance teaching modality.

This is supported by the Theory of Distance Education by Holmberg (Seville, 2019) which emphasizes that learners and teachers are motivated and encouraged to participate personally in the teaching and learning process through developing empathy between learning and tutoring parties through proper one- and two-way exchanges.
It was also supported by Wilmot and Perkin (2016) who found in their study that the makers of modules experienced a good relationship with their students compared to before.

B. Negative Experiences the Informants Encountered in Modular Teaching Modality

1. Deteriorating Motivation for Learning. The theme that was generated from the narrative given by the informants expressed the opposite of the light of motivation and inspiration because some informants have deteriorating motivation for learning due to the other side of the modular distance teaching modality.

The informants are disappointed with the unanswered activities in the module, a comprehension issue that leads to non-submission of outputs, exhaustion in the preparation of modules with a large number of students, and the modules submitted are incomplete in terms of activities.

This emergent theme is supported by the Theory of Distance Education formulated by Holmberg when he highlighted that another pervasive characteristic of distance education is the sense of personal connection between the teaching and learning parties that encourages enjoyment and motivation in the classroom. This is further supported by the study of Fox (2020) when she mentioned that strong motivation is required in the implementation of distance education.

2. Unprogressive Result for Learning. The theme was derived from the narratives of the informants expressing their frustration relative to the negative effect of the modular

distance teaching modality on the progress of students' learning in this pandemic. The informants revealed that modules in Math, Science, and English are not comprehensible, learners with intellectual capacity and no parental guidance and supervision cannot catch up with the activities, and learners lack the fundamental skills needed for learning the subject.

This is greatly supported by the Theory of Distance Education of Holmberg (Seville, 2019) which gives emphasis on the achievement of such goals and the implementation of precise study processes and approaches are aided by intellectual enjoyment and study motivation.

This was also supported by the study of Fox (2020) when she identified that in doing modular instruction in a distant learning approach, there is a need for strong motivation which has willpower, responsibility, and self-control.

3. Risk-taking for the Sake of Learning. This theme described the risks made by informants to continue the learning process. The informants revealed that they have to deliver the modules even if the fare is expensive and there is a risk of being infected by the virus. They are also dissatisfied with the lack of adherence to the module distribution schedule. This emergent theme is supported by the Transactional Distance Theory of Moore (1997) which highlights in the second factor that flexibility includes aspects like the extent to which course goals and objectives are pre-determined, the pedagogical model used in teaching the subject, the nature of course assessment, and the course's ability to accommodate individual students' needs.

Furthermore, this is also supported by the study of Kalantzis and Cope (2020) who highlighted that the teacher's task is to commit their learning design to the digital record and take the risk in the delivery of the module.

4. Earning over Learning. The theme generated from the narrative stated by the informants expresses the frustration of informants towards some learners who choose to earn rather than invest in their academic performance.
The informants affirmed that students prioritize work above school, which delays output submissions, there is a lack of learning owing to socioeconomic constraints, and students submit modules late.

This emergent theme is supported by the Theory of Distance Education of Holmberg (Seville, 2019) which highlights that distance education provides an avenue for learners to set a central concept of motivation in every decision made.
Moreover, this theory is also supported by the study of Nadas and Vidal (2018) who added that modularization affected the learning of learners because there will be a creation of danger, destruction, and inconsistency in the learning programs because of the delivery method and assessment practices in the curriculum; and the diversion of priority rather than focusing on learning.

5. Losing Trust among Parents. The theme-driven responses of the informants express another negative aspect seen in the modular learning modality, which is the participation of parents in the academic performance of their children and the demotivation brought about by lack of cooperation.
The informants expressed that some parents are not cooperating with the modular delivery instruction. They do not receive the modules on time. Owing to a lack of time, parents are unable to fully implement effective learning, and parents are unable to teach their children due to a lack of subject expertise.

This emergent theme is supported by the Theory of Distance Education of Holmberg which assumes that distance education involves the participation of stakeholders and parents. As a result, his idea aims to encourage personalized learning.

Moreover, the study by Fox (2020) highlights the need for strong motivation from the stakeholders and parents in order to fully implement the modules and their products. Also, Mak and Georges (2017) added that the satisfactory completion of the self-paced modules depends on having access to parents' guidance.

6. Exhausting Resources for Learning. The theme-driven from the narrative expressed by informants describes another negative impact of modular learning modality on the informants, where they have insufficient materials for the production of modules.
The informants revealed that producing modules consumes more time and personal resources. The lack of resources causes the delay of the module production.

This emergent theme, therefore, is supported by this emergent theme is supported by the Theory of Distance Education of Holmberg (Seville, 2019) which highlights that another characteristic that can be identified for distance education is a well-developed instructional material.

In relation to this, the study of Baysinger (2020) shared that a teacher who would consider in engaging in modular learning should be well-provided with equipment and materials and should be given an emphasis for the use of delivering it properly.

7. Undependable Students Learning. The theme is driven by the narrative responses describing their experiences on the aspect of the learner's learning authenticity and reliability. Furthermore, the originality of students' performance made during this time of pandemic is at stake. Since it's difficult to identify who made the work.
The informants revealed that the assessment is delayed due to late submissions, which causes feedback to be delayed, that the assessment results are unreliable, that there is uncertainty about the performance of the students in terms of their outputs and assessment, that the checking of the modules is difficult due to unanswered parts and doubts about their completion, and that the quality of outputs submitted by the learners is poor and does not meet the standards reflected on the rubric.

This emergent theme is supported by the Constructivist Learning Theory (Miranda, 2012) because it gives emphasis on the opposition to the idea of schools focusing on memorization and offered a technique of directed living which should be done in this pandemic.

This is true when Tedla and Desta (2015) highlight that the modules' ineffective results are because of the students' poor performance. The approach of instruction made in the modules makes students feel the teacher-centered approach. That is why instructors change their way of teaching to more teacher-centered education. In terms of assessment, instructors feel that their students don't grasp the required skill if they administer assessments frequently. Furthermore, it becomes a burden to them every time they assess because it only addresses the students' content understanding and not the skills developed. As an alternative, they suggested an interactive assessment, allowing learners to practice or apply what developed skills are after a module. And lastly, they found out the ineffectively of the module after seeing these problems.

II. Descriptions of the Informants in the Preparation of Modular Teaching Modality
There are four (4) emergent themes under this overarching theme that describe the responses of the key informants to the description of their experiences in the preparation of the learning modules.

1. All Efforts Are Exhausted for Learning. The theme describes the manifested effort done to continue learning despite the challenge of the pandemic. The key informants' direct experiences responded that their experiences in exerting all best efforts to make the teaching and learning effective using the learning modules.

The informants' responses revealed that the preparation of the learning modules is tedious and requires complete materials to avoid delay in the module production and makes the learning process effective in the temporal absence of the teacher.

This description presented by the informants is in consonance with the theory of Distance Education by Holmberg (Seville, 2019) which highlights that it is important that the structure should be clear which is referred to as the pedagogical model or means used for the teaching and learning process. Having mentioned this difficulty experienced by informants in the preparation of the learning modules, Baysinger (2020) affirms that teachers have to do more extensive labor in order to execute modular instruction.

2. Modifying Teaching and Learning Using Modules for Learning. The theme-driven describes the ways made by the informants to modify the teaching and learning with the use of the modules. This also gives an avenue where the informants become the innovator in order to make the teaching and learning process simpler and more understandable as they prepare the learning modules.

This finding supports the theory of Distance Education by Holmberg (Seville, 2019) which says that one of the pervasive characteristics of distance education is that there is well-developed self-instructional material.

This theme of giving an avenue for teachers to become a designer of their modules is supported by the study of the University Association for Contemporary European Studies (2020) which highlight that designing a learning module is a privilege and at the same time a responsibility for they have to develop it with a clear purpose, constructive alignment, and a contextualized course.

3. Demanding Yet Rewarding. The developed theme describes the demands that the modules require which becomes for them a rewarding task. Along the way of the development of learning modules, informants mentioned the challenging tasks of doing modules but seeing the appreciation expressed by parents and learners, the feeling of exhaustion is carefully paid off.

This theme clustered is in line with the theory of Transactional Distance Theory of Moore (1997) which speaks of the second factor giving emphasis on the structure specifically on the course's ability to accommodate individual students' needs which is part of the development of the learning modules.

Moreover, Kalantzis and Cope (2020) highlights that the teacher's task is to commit to their learning design and greatly relevant to the needs of the community which is greatly appreciated by students which becomes a fulfilling part for teachers.

4. Mens Sana in Corpore Sano (A Sound Mind in a Sound Body). The quest for continuous learning in this pandemic has been challenging among the informants that they have to consider their health conditions which will be catering the effectiveness of learning in a way that is structured and planned in a learning condition just like in this pandemic.

This is evident relatively with what the theory of Transactional Distance Theory of Moore (1997) which speaks of the temporal distance that separates learners from the teacher in the transaction between them and is occurring in this structured or planned learning situation.

This was also supported by the study of Fox (2020) when the study conducted identified that the implementation of distance education is an advantage on the part of the teacher for it provides convenience in any unexpected event.

III. Aspirations of the Informants in Improving the Modular Teaching Modality

This overarching theme depicts the sub-problem of the study what are the different aspirations of the teachers towards the implementation of the modular learning modality relative to the responses given by the informants of the study. From the responses of the

key informants, there are seven (7) emergent themes identified by the researcher. They are as follows:

1. The Commitment for Continuous Learning. The theme is driven by the narratives given by the informant describing their commitment to continue learning through the use of learning modules. The informants revealed that providing quality education to learners must continue despite the pandemic as part of the work.

This is consistent and supported by the Transactional Distance Theory of Moore (1997) when he highlights that distance does not mean that learning won't continue because it is just a temporal distance that separates learners from the teacher in the transaction between them and is occurring in the structured or planned learning situation.
This continuation of learning using modules that gives chance for learners to continue learning this pandemic is supported by the study of Dejene and Chen (2019) stating in his study that faculties and teachers have a problem to the point that they violate professional ethics caused by inadequacy of time, preparing modules for bulk or big size of classes.

2. Assurance of Human Interactive Modules. The theme is driven by the narratives given by the informants to describe the need for adjusting the modules for learners to have a sound understanding of the modules where they can interact through the answers expressed in their modules.

The informants revealed that contextualization of module content is required for easy comprehension. There is also a requirement to provide a feedback mechanism that may be used to change the teaching and learning process. To innovate the learning process, live interaction between the teacher and students will be utilized.

This is supported by the Transactional Distance Theory of Moore (1997) which mentions that there is a factor that let learners develop autonomy. They participate in the course the autonomy of the learner is inextricably linked. This can interfere with a learner's feeling of self-direction or self-determination. That is why the need for more humane interactive modules are developed the tendency for autonomy has big chances.

This was also supported by the study of Burge (2019) where it was described that three things should be considered in the preparation of the modules which includes; clarity of the purpose and aspirations of the modules for student participants and communicate these to students. It is essential that in creating a learning module, it is necessary to have clear, achievable goals or outcomes to increase every learner's learning gradually.

3. Empowering for Alternative Learning Modality. The theme is driven by the narrative given by the informants that describe their aspiration to have a better implementation of the learning modules through capacity building and mentoring. The informants revealed that there is a need for upskilling of teachers' talents and skills especially on the conduct of modular distance teaching modality.

This is supported by the Transactional Distance Theory of Moore (1997) under the second factor which is more on the structure which describes the rigidity or flexibility of the course. This factor also includes aspects like the extent to which course goals and objectives are pre-determined, the pedagogical model used in teaching the subject, the nature of course assessment, and the course's ability to accommodate individual students' needs.

This is also supported by the study conducted by Burge (2019) highlighting that the module is constructively aligned, meaning the learners can actively construct their understanding and all necessary alignment with the teaching and assessment with the intended learning outcomes. Therefore, it is necessary to consider the type of course handled, resources available, disciplinary context, and, of course, the national and legal requirements.

4. Innovating Quality Amidst Flexibility. The theme is driven by the narratives shared by informants during the interview describing their aspiration of creating innovations to make the teaching and learning process in this pandemic effective.

The informants agreed that developing a quality assurance framework and identifying content experts is essential. Quality certified modules encourage successful learning.
This is supported by the Transactional Distance Theory of Moore (1997) under the third factor which is more on the structure where the learners will be able to develop autonomy. As they participate in the course the autonomy of the learner is inextricably linked. This can interfere with a learner's feeling of self-direction or self-determination.

This is also true in the study of Pappas (2015) when he said that to create perfect learning which caters to the student-centered learning unit and these are the following: there must be an advanced and specified learning objective.

5. Modules with a Heart for Learner's Well-being. This theme was driven by the narratives shared by the informants describing their sentiments on the continual improvement of the modules, especially on the aspect of further polishing the modules, simplifying the content, and that which is error-free.

This is supported by the Theory of Distance Education of Holmberg (Seville, 2019) which highlights that one of the characteristics of Distance Education is that well-developed self-instructional material and two-way dialogue can generate such feelings.
This is further supported by the study of Pappas (2015) when he said that Learners must have feedback; when they made an error in answering scenarios or any question, it is essential to note that they will know how to improve moving forward.

6. Focusing Further on the Essential. The theme is driven by the researcher from the narratives shared by the informants describing their aspiration on changing or flexing the curriculum for the quality of education at this time of the pandemic. The informants stressed the importance of a defined method in module production and that centralized printing is advantageous.

This is supported by the Constructivist theory of Dewey (Lamon, 2020) which highlights that to present it in a clear way, what is being presented in the classroom makes a difference from what is encountered by every learner in day-to-day activities. That is why he would always speak of making teachers an expert learner who can guide students into adapting cognitive strategies highlighting self-testing, articulating and understanding, asking probing questions, and reflection.

This is supported by the study of Acuram (2015) when he mentioned that in Duldulao's Model, it is highlighted that modules should have the things to be known, things that are nice to be known, things that are less nice to be known, things that are barely relevant, and things that might be used someday. Accordingly, the structure and the content are equal, and the arrangement of materials is simple to complex.

7. Flexing the Curriculum for Quality Education. The theme is driven by the researcher from the narratives shared by the informants describing their aspiration on changing or flexing the curriculum for the quality of education this time of the pandemic. The informants highlighted that the curriculum should be revisited as some of the competencies are repeated.

This emergent theme is supported by Theory of Distance Learning by Holmberg (Seville, 2019) that highlight the need the implementation of correct study processes and approaches are aided by intellectual enjoyment and study motivation.

Further, this is supported by the study of Gupta (2017) when it was highlighted also that most of the 21st century learners would always want relevant, mobile, self-paced, and personalized content learning. And this need is fulfilled with the creation of learning modules. Also, Mutiara, Zuhairi and Kurniati (2007), added that in creating a learning module it must be remembered that it serves as a major learning resource for distance learners. The design, development and product of learning materials should carefully consider, the systematic and scientific principles of instructional design. Quality learning materials are very dependent upon consistent implementation of quality assurance principles.

Conclusions

This study explored the experiences of Junior High School Teachers in modular teaching modality, Catbalogan City Division, Catbalogan City, Samar, the School Year 2021-2022: Specifically, the study sought out answers to the following queries:

1. What are the positive and negative experiences of the informants encountered in the modular teaching modality?
2. How would the informants describe their preparation in the modular learning modality?
3. What are the aspirations of informants to improve the modular teaching modality?

This study employed the qualitative research design utilizing the single case-study approach to explore the narratives of junior high school teachers in the modular teaching modality. The study was conducted on all junior high school teachers in the Schools Division of Catbalogan City. Using the inclusion criteria identified by the researcher, sixteen (16) informants were identified to participate in the data gathering. Eight (8) of them participated in the individual interview (IDI). On the other hand, the remaining eight (8) participated in the Focus Group Discussion (FGD). An interview guide was utilized to gather data from the informants. This interview guide was validated by experts to establish the validity of its content. The data was analyzed using the Colaizzi method. Based on the result and findings of the study, three (3) emergent themes were identified. The first emergent theme with twelve (12) subthemes described the experiences of the junior high school in the modular learning modalities; the second emergent theme with four (4) subthemes described the preparation of the learning modules, and the third with seven (7) subthemes described the aspirations of the junior high school teachers on modular teaching modality.

For the positive experiences of the junior high school teachers in the modular teaching modality, the following subthemes were clustered: *Teaching with a Heart, Learning Independently, Developing Family Link, Healthy Teaching, Motivated and Inspired.* For the negative experiences of the junior high school teachers, the following subthemes were clustered: *Deteriorating Motivation for Learning, Unprogressive Result for Learning, Risk-taking for the Sake of Learning, Earning over Learning, Losing Trust Among Parents, Exhausting Resources for Learning, and Reliability of Students Learning*.

For the preparation of the learning modules, the following subthemes emerged: *All Efforts are Exhausted for Learning, Modifying Teaching and Learning Using Modules for Learning, Demanding yet Rewarding, and Mens Sana in Corpore Sano (A Sound Mind in a Sound Body).*

For the aspirations of the Junior High School Teachers on modular teaching modality, the following subthemes were clustered: *The Commitment to Continuous Learning, Assurance of Humane Interactive Modules, Empowering for Alternative Learning Modality, Innovating Quality Amidst Flexibility, Modules with a Heart for Learners' Well-being, Focusing Further on the Essential, and Flexing the Curriculum for Quality.*

Recommendations

Anchored on the findings of this study, the following recommendations are proposed:

1. **Revisiting the Most Essential Learning Competencies (MELCs).** The need for revisiting this is necessary to have a clear content alignment in the modules made. Capacitating teachers with these MELCs is important to further put inputs that would help the content be contextualized for easier understanding and learning among learners. The Department of Education must empower division offices for the successful implementation of the MELCs in their respective places. By doing this, the simplification

of content would be easier given that divisions will have a team of experts who would help in the development and contextualization of learning in this time of crisis.

2. **Module development and quality assurance by a team of experts.** In the development of the module, content writers and developers must have the necessary skills and knowledge to develop learning modules that would have to consider the mental condition of learners, especially those who are below-average learners. When modules are done, there must be a group of specialists who have to check the alignment of the activities in the module with the assessment, content, teaching, and learning tasks given, and what is in the MELCs.

3. **Provision of sufficient supplies and materials for mass production of modules to be used for modular teaching.** It is very important that materials are well provided so that the production will not stop. There must be a group in charge to focus on the production of modules so that teachers will have to focus on the follow-up and interventions so that competencies will be achieved despite the pandemic. This is also to free teachers from spending their personal resources on the production of modules. It is important that the group in charge of the production must innovate and build linkages that would help in providing supplies needed for the production of the modules.

4. **Minimizing the activities of the modules to cater to other interventions for better retention.** The teaching and learning activities in the module should be minimized so that the acquisition of skills among learners will have a spiral progression. Doing a student inventory would help teachers know how to craft modules having great consideration of the findings found from the student inventory and home visitations. The need for professional mentoring and skills-based training is needed by faculty so that the selection of assessment tasks and activities will be trimmed to the most essential activities that will only be added to the modules.

5. **SDO, Schools, and districts must provide frequent opportunities for continuing professional development for teachers.** Professional development activities should be appropriately supported and accessible to all teachers at all stages of their employment. Continuous education is required of teachers to maintain and develop their knowledge throughout time. Teachers' subject-specific pedagogical knowledge and skills should be developed so that they can provide proper technical assistance to learners and parents. Professional development should emphasize a deep understanding of content and discipline-based methods of inquiry, provide multiple perspectives on students as learners, and develop teachers' subject-specific pedagogical knowledge and skills.

Recommendations for Future Study

The researcher recommends the following research topics for future study:

1. Quantitative and qualitative study on the impact of modular teaching in skills-based subjects.
2. Quantitative study on the evaluation of learning modules on the study habits among learners.

3. Qualitative study on the attitude and perception of teachers on the use of modules in teaching laboratory subjects.

Compliance with Ethical Standards

The researcher received authorization from the OIC Schools Division Superintendent to conduct interviews at the respondents' schools and the respondents in the city division. The interview guide questions were validated by panel experts. Moreover, informed consent was given to the participants of the study. The objectives, beneficiaries, and potential risks of the study were explained, and the gathered data was utilized for research purposes. Participants were informed that their involvement was voluntary, and their confidentiality was preserved.

Interview data was kept confidential, with no responses or participant details disclosed without written consent. Confidentiality was maintained through informed consent and a detailed letter. Participants were assigned code numbers and access to identifying information was limited to a select few. Data was disposed of promptly after collection.

The researcher committed to maintaining data confidentiality within legal limits, ensuring that any identifiable information would remain confidential except to protect participants' privacy, rights, and welfare. Published or presented research results would not disclose any respondents' identities. Participation was voluntary, with no penalties or loss of benefits for refusal to participate. Respondents could withdraw consent and discontinue participation without any liability, and their legal rights and claims were not waived by participating in the study.

The study safeguarded data by securely storing all collected information. Only the researcher had access, with hard copies kept in a locked cabinet and digital files on a password-protected Data disposal included shredding hard copies of transcriptions, deleting digital files, and destroying the informed consent forms.

ACKNOWLEDGMENT

It is with profound thanks and sincerest appreciation that the author acknowledges her indebtedness to the following people who, in one way or another, assisted her in making this research work a successful reality.

To Dr. Rex T. Argate, her adviser, for his guidance and continued efforts in supervising and encouraging her in the performance of her work and for his devotion in checking her output as well as in making the necessary changes and suggestions in the manuscript and for imparting his knowledge and expertise in this study;
To Dr. Yolanda C. Sayson, the Graduate School Dean and the Chairman of the Dissertation Committee, for her recommendations, assistance, encouragement, and support;

To the members of the Panel of Oral Examinations: Dr. Renato C. Sagayno and Dr. Jose L. Pena, for their constructive criticisms and suggestions;
To Dr. Marilyn B. Siao, the Schools Division Superintendent of the Catbalogan City Division for allowing the researcher to conduct her study;
To the sample schools, school heads, and teachers who served as the potent source of information to come up with the findings of this study;
Likewise, to Karin M. Maceda, Vea Marie M. Quitalig, and Junior High School Teachers of Samar Colleges, Inc., for their encouragement and valuable help and support;
To her parents, Misael and Jocelyn Gadin, whose encouragement served as an inspiration;
To her children, Kate Angelique, Kenn Adrian, and Sophie Jane, and her husband, Elizer, who served as her strength and inspiration in life, and
Above all, to the Divine Assistance and Provision in her academic pursuit.

ABSTRACT

This study explores the impact of bamboo on human well-being, livelihood, and the environment in barangay Tangkuan, Omar Sulu. Bamboo's sustainability benefits human health, promotes sustainable livelihoods, and creates a better environment. The main objective of this study is to investigate the ways in which bamboo can contribute to improving the quality of life and reducing poverty for small-scale farmers. The reviewed literature highlights the significant importance of bamboo in promoting human well-being, livelihood, and environmental sustainability. Bamboo offers versatile economic opportunities, contributes to climate change mitigation, and supports biodiversity conservation. A mixed qualitative and quantitative study involved 110 respondents, with 100 surveyed quantitatively and 10 interviewed qualitatively. The findings showed that bamboo positively impacts the well-being of the respondents as it promotes a better quality of life. It revealed that bamboo highly impacted the respondent's livelihoods as it served as a source of income. It also shows that bamboo also benefits the environment by serving as a natural water filter, improving water quality, and generating oxygen. The study recommends the government have training regarding bamboo in terms of livelihood, promoting bamboo-based livelihood opportunities within the community. Additionally, encouraging the residents to grow more bamboo in the barangay and providing training on proper planting, care, and maintenance. Furthermore, teaching and implementing for the class the significant effects of bamboo on human well-being, livelihood, and environment. Lastly, to encourage future researchers to further expand the study about the interconnectedness of human well-being, livelihood, and environment with regards to the impact of bamboo.

Keywords: *Bamboo, impact, well-being, livelihood, environment, MSU-Sulu*

INTRODUCTION

As far as grass goes, bamboo is the tallest grass on earth. As everyone knows, bamboo's sustainability has made it advantageous for human health. It is sustainable and can be used to construct homes and bamboo chairs, among other necessities for human habitation. According to (Kamiński, et. Al 2016) bamboo is a robust, quickly growing, and incredibly sustainable material. It is employed structurally in various regions of the world and can grow up to 25 meters in six months. A bamboo shoot or sprout (Dabung in Bahasa sug) is a portion of the plant that can be consumed. This exceptional growth rate allows for quick and efficient utilization of bamboo resources.

Bamboo has many possible applications, making it a vital resource for those in developing nations who are impoverished (Paudyal & Gurung, 2019). Its fibers are utilized in handicrafts, industry, and clothing manufacturing. Its shoots and sprouts are also used as food. It is a commonly used raw material. The most significant non-wood plant is bamboo, which grows widely over most of the tropical and subtropical regions. It has emerged as an especially important and superior replacement for produced wood composites, including veneer, plywood, particleboard, fiberboard, pulp and paper, and stripboards and matboards (Chaowana, 2013). Outside of forests, bamboo can be found extensively in agricultural regions, along riversides, alongside highways, and in urban settings. Since bamboo is a multipurpose, quickly growing, and renewable plant, it was thought to be a good substitute for forest-derived lumber. Its many uses as wood and wood products have substantially boosted the agricultural economy by giving the rural poor who cultivate it jobs and income, as well as by fostering community development and generating income for governments (Akwada, 2016).

Moreover, bamboo has several health benefits in addition to its positive effects on the environment. Bamboo, the Tausug term "Dabung," refers to the plant's edible shoots, which provide nutritive value and adaptability in the kitchen. These shoots are a nutritious food because they are high in fiber, vitamins, and minerals. In addition to a healthy diet, meals prepared with bamboo shoots can result in enhanced immunity, better digestion, and general health. The woody ringed stems, known as culms, are typically hollow between the rings (nodes) and grow in branching clusters from a thick rhizome (underground stem).

Additionally, bamboo is highly versatile. It is capable growing in a variety of soils derived from different parent rocks, within its climatic habitats. Bamboo has also been planted on a scale along roadsides and canals. It is also planted in degraded forest areas particularly near habitations.

The study aims to explore the context of Barangay Tangkuan Omar Sulu, to understand the unique and diverse way in which bamboo influences human living and the surrounding ecosystem. Located in the province of Barangay Tangkuan Omar Sulu, is known as for its Rich natural resources and cultural heritage. Bamboo a prominent natural resource in the area, hold immense potential for improving the lives of the locale community and contributing to the environmental sustainability. This study seeks to

provide valuable insights into the opportunities and challenges associated with bamboo utilization, in furthermore, this research will delve into the environmental conservation aspect of bamboo.

Through a comprehensive analysis of existing literature, field observation and community engagement, this study seeks to provide a clear understanding of the Multifaceted Impact of bamboo on human well-being, livelihood and the environment in Barangay Tangkuan Omar Sulu

On the other hand, the local name of bamboo is called PATUNG in Bahasa sug term, KAWAYAN in Tagalog (Filipino) and the scientific name of bamboo, BAMBUSOIDEAE. It is a subfamily of flowering perennial plants in the grass family POACEAE. There are various genera and species of bamboo. Each with its own scientific name, some common genera of bamboo include PHYLLOSTACHYS, DENDROCALAMUS, and BAMBUSA. The finding of the research will contribute to the knowledge base on bamboo utilization, inform local stakeholders and policymakers, and guide sustainable development initiative that harness the potential of bamboo for the benefits of the community and the preservation of the environment.

The main objective of this study is to investigate the ways in which bamboo can contribute to improving the quality of life and reducing poverty for small-scale farmers. It also examines the role of bamboo in preserving ecosystems, conserving soil, and providing benefits. Additionally, the study explores how bamboo cooperatives can positively impact soil conservation efforts. Furthermore, it explores the potential for rehabilitating lands

On review literature of the researchers, it becomes evidence that there is a lack of local study focusing on the multifaceted impacts of bamboo on human well-being, livelihood and environment. The interaction of these factors provides researchers with insights into potential trade-offs or synergies, as well as strategies to improve well-being, encourage sustainable livelihoods, and reduce negative environmental impacts.

To achieve sustainable environmental interventions, it is crucial to understand how well-being, livelihoods, and environments interact with each other.

Research Questions:

The primary goal of this study is to determine the multifaceted impact of bamboo on human well-being, livelihood, and environment in Barangay Tangkuan, Omar Sulu. The following are the questions to achieve the goal of the study:

1. What is the impact of bamboo on well-being?
2. What is the impact of bamboo on the Livelihood?
3. What is the impact of bamboo on the environment?
4. In what ways does bamboo become multifaceted on the human live

METHODOLOGY

Research Design

The study utilized a mixed methods approach, combining qualitative interviews and quantitative surveys to gain a comprehensive understanding of the multifaceted impact of bamboo on the specified aspects in the mentioned Barangay. The qualitative interviews provided in-depth insights, while the quantitative surveys offered statistical data to support the findings. This process aimed to capture a holistic understanding of the impact of bamboo on human well-being, livelihood, and the environment of Barangay Tangkuan Omar, Sulu.

Mixed methods research is a sort of study where researchers integrate components of qualitative and quantitative research procedures for the general goals of understanding and corroboration (Johnson et. al., 2007). It involved using questionnaires to gather specific types of information about a particular subject. Furthermore, this method helped the researchers investigate the Multifaceted of bamboo: its impact on human well-being, livelihood and the environment in Barangay Tangkuan Omar, Sulu.

Research site

This study was conducted at Omar, Luuk Sulu North East, Philippine, a seaside area in the province of Sulu. The researchers chose the place of implementation due to its convenience when it comes to gathering the data. This study was connected at barangay Tangkuan Omar, Sulu which under the care of Barangay chairman, Radjabon S. Abun.

The barangay Tangkuan is located at Omar, Sulu. Its population as determined by the census 2020 was 2,608. This presented 9.29% of the total population of Omar, Sulu. Elevation at these coordinates is estimated at 25.5 meters or 83.7 feet above mean sea level. From Jolo to Omar are 56 km by road.

Participants

The participants for this study were the residents of Barangay Tangkuan Omar, Sulu, Philippines. The selection process involved engaging with community leaders and members to ensure a diverse representation of individuals involved in various aspects of bamboo-related activities, including bamboo farming, crafts, and conservation efforts. By targeting individuals with knowledge and experience in these areas, the researchers used purposive sampling to ensure that the participants could provide valuable insights and data relevant to the study objectives. With a total of 2,608 residents in the said Barangay as determined by the census 2020, 10 residents were selected for interviews (Qualitative), while 100 residents were surveyed (Quantitative). The reason for the selection of these participants is because they are the bamboo experts in the barangay and have experience in bamboo cultivation and utilization.

Instrumentation

A survey questionnaire was used as a research tool. In survey research, questions are usually closed-ended or include rating scales to collect uniform data. The survey questions were designed by the researchers based on the various information collected and consisted of a series of questions for respondents. Quantitative survey data was obtained using a 4-point Likert scale as follows: 4-Strongly Agree (SA); 3-Agree (A); 2-

Disagree (D); 1-Strongly disagree (SD). The survey questionnaires are divided into three parts. 1. Multifaceted of Bamboo: Its Impact on Human Well-being, 2. Multifaceted of Bamboo: Its Impact on Livelihood, 3. Multifaceted of Bamboo: Its Impact on the Environment in Barangay Tangkuan Omar, Sulu. The fourth part is the last part of the research and is conducting interviews. Guiding questions for the interview portion included exploring personal experiences and perspectives on the diverse impacts of bamboo on human well-being, livelihood, and the environment in the community of Barangay Tangkuan Omar, Sulu.

Data Collections

Due to the off-campus nature of the study, the researchers wrote a letter to the school director, Dr. Norman A. Abdurahman, to request permission. The researchers have also prepared a letter for the Barangay chairman of the Barangay Tangkuan Omar, Sulu, Radjabon S. Abun to seek their approval for conducting the research in their area, Barangay Tangkuan Omar, Sulu. This is to ensure that the research is legal, correct, and follows the proper process without violating any regulations in gathering the information needed. Each member of the group has sought permission from their respective parents to avoid any misunderstandings. Aside from going through the legal process, the researchers thoroughly planned their research as it is located far from the school. They made sure that their safety is prioritized and far from any potential hazards.

Statistical techniques

To study the impact of bamboo in Omar Sulu, descriptive statistics helped the researchers summarize the collected data. The tool that was employed was only the weighted arithmetic mean to assess the over research questions "What is the impact of bamboo on human well-being", "What is the impact of bamboo on livelihood", "What is the impact of bamboo on environment"

The researchers used thematic analysis to assess the research question "In what ways does bamboo become multifaceted on human lives”. By using this statistical tool, the researchers aimed to gain valuable insights into the multifaceted nature of bamboo, its impact on human well-being, livelihood, and the environment in Barangay Tangkuan Omar, Sulu.

RESULTS AND DISCUSSION

Table 4.1 Impact of Bamboo on Human Well-being

Statements	Mean	SD	Description
1. I believe that using bamboo products makes my life better.	3.6	0.5	Strongly Agree
2. I believe that incorporating bamboo-based materials in my home décor contributes to a healthier living.	3.3	0.5	Strongly Agree
3. I believe that supporting the use of bamboo positively impacts my overall well-being by contributing to a more sustainable and eco-friendly world.	3.2	0.5	Agree
4. I believe that supporting the bamboo industry contributes to the well-being of local communities and economies, which in turn affects my own well-being.	3.2	0.5	Agree
5. I believe that practicing sustainable living through the use of bamboo products positively impacts my overall well-being.	3.2	0.5	Agree
6. I believe that using bamboo as a natural, organic material positively impacts my	3.1	0.4	Agree
7. I believe that using bamboo products such as bamboo clothing and bedding, positively impacts my physical and mental well-being.	3.1	0.7	Agree
8. I believe that using bamboo kitchenware and utensils will reduce exposure to harmful chemicals.	3.0	0.7	Agree
9. I believe that bamboo-based skincare and beauty products help maintain my skin healthier.	2.5	1	Disagree
10. I believe that utilizing bamboo-based healthcare products, such as bamboo charcoal, is good for the health.	2.5	1	Disagree
Total	**3.1**	**0.6**	**Agree**

Legend: 1.00-1.75=SD; 1.76-2.50=D; 2.51-3.25=A; 3.26-4.00=SA

The overall weighted mean of the impact of bamboo on human well-being in barangay Tangkuan Omar Sulu is 3.1 and interpreted as "agree". This means that the residents in the said barangay "agree" that the presence of bamboo has highly impacted

their well-being, and this also means that the majority of the respondents were likely to match their experience with how bamboo helps their well-being. Among the questionnaire items, the statement "I believe that using bamboo products makes my life better" ranks highest with an average weighted mean of 3.6 and interpreted as strongly agree, while the statement "I believe that utilizing bamboo-based healthcare products, such as bamboo charcoal is good for the health" ranks lowest with an average weighted mean of 2.5 and interpreted as disagree.

Bamboo has been shown to have a good impact on wellbeing. Research shows that using wind to swing kinetic facades made of bamboo can provide background noise that supports the user's well-being and minimizes glare from sunlight, boosting the overall atmosphere and quality of rest in an apartment. (Ongkojoyo et. al., 2023). The findings of our study were likely reveals that bamboo plays a significant role in the practices of the local community, contributing to their overall well-being and sense of identity.

Table 4.2 Impact of Bamboo on Livelihood

Statements	Mean	SD	Description
1. Bamboo cultivation provides me with a sustainable source of income.	3.5	0.6	Strongly Agree
2. Bamboo weaving and handicrafts preserve traditional skills and cultural heritage for me.	3.5	0.6	Strongly Agree
3. Bamboo products have a beautiful and natural look, perfect for home design.	3.5	0.5	Strongly Agree
4. The production of bamboo crafts and bamboo products generates additional income for me	3.5	0.5	Strongly Agree
5. Bamboo plantations provide me with a renewable source of construction materials.	3.4	0.5	Strongly Agree
6. I believe bamboo cultivation helps the local economy	3.4	0.5	Strongly Agree
7. Bamboo weaving and handicrafts preserve traditional skills and cultural heritage for me.	3.4	0.5	Strongly Agree
8. Bamboo products are durable and eco-friendly, making them a great choice for sustainable living.	3.3	0.5	Strongly Agree
9. Bamboo harvesting and processing generate jobs, while bamboo-based products present a wide range of business opportunities	3.3	0.5	Strongly Agree

10. Bamboo- based livelihoods contribute to poverty alleviation in my community.	3.2	0.5	Agree
Total	**3.4**	**0.5**	**Strongly Agree**

Legend: 1.00-1.75=SD; 1.76-2.50=D; 2.51-3.25=A; 3.26-4.00=SA

Overall, the impact of bamboo on livelihood as perceived by the residents of barangay Tangkuan Omar Sulu gained a "strongly agree" with an overall weighted mean of 3.4 and was interpreted as "strongly agree." Among each situational/action statement or item given, the item "bamboo cultivation provides me a sustainable source of income" ranked first with an average weighted mean of 3.5, but the item "bamboo-based livelihood contributes to poverty alleviation in my community" ranked the lowest with an average weighted mean of 3.2 in the study on the impact of bamboo on livelihood in barangay Tangkuan Omar Sulu, and 3.4 is the overall average weighted mean.

Bamboo has a tremendous impact on livelihoods, delivering numerous socioeconomic benefits to communities. It is used for construction, handicrafts, fencing, musical instruments, and ceremonies, among other things, contributing to the income and livelihoods of people in many places. The findings of (Ayer et. al., 2023), underscore the importance of sustainable management and utilization of bamboo resources to ensure the long-term viability of livelihood opportunities and the preservation of cultural practices linked to bamboo. Based on the results and the literature, it has been proven that bamboo makes a significant contribution to society and the lives of individuals.

Table 4.3 Impact of Bamboo on the Environment

Statements	Mean	SD	Description
1. I saw that bamboo acts as a natural water filter, improving water quality.	3.6	0.6	Strongly Agree
2. 1. I believe that growing bamboo helps reduce deforestation	3.4	0.6	Strongly Agree
3. I believe that bamboo products are good for the environment as they are biodegradable and help reduce waste. Examples of these products include beddings, kitchen utensils, and furnitures made out of bamboo.	3.4	0.6	Strongly Agree
4. I understand that bamboo forests provide habitats for various plants and animal species and support the balance of ecosystems.	3.4	0.5	Strongly Agree

5. I appreciate bamboo as a renewable resource that grows quickly, making it an environmentally friendly choice.	3.4	0.6	Strongly Agree
6. I understand how growing bamboo promotes soil conservation and prevents erosion.	3.3	0.5	Strongly Agree
7. I believe that growing bamboo can help save other trees.	3.3	0.4	Strongly Agree
8. I believe that growing bamboo helps reduces the carbon in the air.	3.3	0.5	Strongly Agree
9. I recognized the use of bamboo as a sustainable alternative to wood that reduces deforestation.	3.2	0.6	Agree
10. I am aware that growing bamboo requires minimal use of pesticides and fertilizers, which reduces chemical pollution.	3.1	0.5	Agree
Total	**3.3**	**0.5**	**Strongly Agree**

Legend: 1.00-1.75=SD; 1.76-2.50=D; 2.51-3.25=A; 3.26-4.00=SA

Table 3 presents the result of the computation of the impact of bamboo on the environment. The statement "I saw that bamboo acts as a natural water filter, improving water quality" has the highest average weighted mean of 3.6 among the ten items and is interpreted as "strongly agree" and the item "I am aware that growing bamboo requires minimal use of pesticides and fertilizers, which reduces chemical pollution" got the lowest rank with an average weighted mean of 3.1 and is interpreted as "Agree". The overall average weighted mean is 3.3 and interpreted as "Strongly Agree". This means that the environment in barangay Tangkuan Omar Sulu has highly impacted by the presence of bamboo as it served as their natural water filter, improves their water quality, and it produced large amount of oxygen.

The use of bamboo in construction can help reduce carbon emissions and promote sustainable building practices. Overall, bamboo has the potential to be a sustainable and environmentally benign resource used in a variety of applications, including construction and pollution control (Shiwani and Thanganami, 2023). It was similar to the article constructed that the utilization of bamboo in construction offers a sustainable alternative to traditional building materials. Incorporating bamboo in construction can help reduce carbon.

4.4 In your own opinion, how did you define bamboo as a useful material base on your experience?

T1 Bamboo utilization for constructing houses

R1: I will tell you about the importance of bamboo here in the countryside. The bamboo here is necessary for us to construct a house. (Excerpt 1).

R2: It can also be used to construct a house. (Excerpt 2).

R3: Bamboo holds great significance for us humans because it can be utilized to build a house. (Excerpt 3).

R5: Most people here use bamboo to make a house. (Excerpt 4).

R5: As I said we use it to make a house. That's the only importance of bamboo, it can help people and can be used for livelihood. (Excerpt 5).

R6: Bamboo here in our province is used to make houses. (Excerpt 6).

R7: For me, based on what I have experienced, the use of bamboo is used to make lodgings such as floors (lantay in Bahasa sug term) and bamboo blinds (tiyadtad in Bahasa sug term). (Excerpt 7).

R8: The important thing that bamboo gives to our livelihood is like the house we can make from bamboo. (Excerpt 8).

R10: When it's big, it can be made into a complete house, it can be made into floors, walls and can be made into a roof. That's all I can say about bamboo. (Excerpt 9).

R10: As they say, you can make a house that is all made of bamboo, you just have to make a knot, then make a hole in the bamboo and fasten it. (Excerpt 10).

The participants emphasized the utilization of bamboo as a sustainable constructing material for constructing houses and contributing to a sustainable living. According to (Madhushan et. al., 2023), bamboo is a multipurpose material that can be utilized to make fences, floors, walls and chairs.

T2 Bamboo utilization for making handicrafts

R1: It can be used for making floors, for making fences, for making walls, and we also used it to make bamboo chairs beside our house. (Excerpt 11).

R2: It can be utilized to make bamboo fish traps (bubuhan in bahasa sug term), which are used to catch fish and lobster, and it can also be used to make a fence like what the old folks do. (Excerpt 12).

R2: It can be utilized to make bamboo baskets (ambung in bahasa sug term), bamboo nets (ligu in bahasa sug term), bamboo closets (paradul in bahasa sug term), and also bamboo chairs. (Excerpt 13).

R3: It can create fish nets (called bungsud in Bahasa Sug), as well as crab traps (called tutung in Bahasa Sug). This implies that it will facilitate our way of life. (Excerpt 14).

R4: Bamboo can be utilized into various ways like for making floors, making bamboo baskets (ambung in bahasa sug term), bamboo fish dryer (siklat in bahasa sug term) and bamboo shelf (paga-paga in bahasa sug term). (Excerpt 15).

R4: You can make fish traps (bubuh in Bahasa sug term), make crab traps (tugung in Bahasa sug term) if in the sea. (Excerpt 16).

R5: Bamboo can be made in different ways such as flat bamboo baskets (ligu in bahasa sug term) the flat bamboo basket is necessary to separate the rice and its skin called winnowing, and then it can be made into a strainer. Many things can be done with bamboo, we are making this bamboo xylophone. That's all I can say that I experienced working with bamboo. (Excerpt 17).

R5: Firstly here in barangay Tangkuan, it will be good for us, bamboo is a big help because it provides livelihood as well if there are projects, the teachers are in need and then the young people bring them to make projects made of bamboo such as glasses, that is the importance of bamboo. (Excerpt 18).

R6: Bamboo here in our province is used to make a crab traps (panggal in Bahasa Sug terms), and fish traps (tugung in Bahasa Sug terms). The "panggal" is used to catch crabs, and the "tugung" is used to catch fish. The bamboo is also used to make a hook for catching shrimp and to make a bow. Here we have bamboo, which is used for fencing and also for carrying dead people (Janaja in Bahasa Sug term). (Excerpt 19).

R6: Bamboo is helpful in our barangay because it can be used to make things and utensils like glasses, ladles, mugs, and so on. And it also gives us a living. (Excerpt 20).

R7: Apart from using it to construct a house, it is made into bamboo nets (ligu in bahasa sug term) it is a traditional strainer. Additionally, bamboo can serve as an alternative rice cooker which is called (lut in bahasa sug term), it can also be made into bamboo poles to get coconuts, cover for machete (taguban in bahasa sug term), fish nets (bungsud in bahasa sug term) to catch fish and crabs. Furthermore, it can also be used as a stick to penetrate roasted bananas. It can give convenience to people, just like chairs. (Excerpt 21).

R8: I make this as a fence and bamboo roof, that's all I can do made of bamboo. (Excerpt 22).

R8: We make it a wall and a grille, because this is where bamboo can provide comfort. (Excerpt 23).

R8: What bamboo can do is fish traps (bubuh in bahasa sug term), crab traps (panggal in bahasa sug term) and bed. (Excerpt 24).

R8: The importance of bamboo is that I make it into chicken coop and shelf. (Excerpt 25).

R9: The first thing here is to cut the bamboo into pieces, then bend the bamboo to make a fish trap (tugung in tausug term). The purpose of this is to catch some crabs and palu palu fish; you just have to submerge the trap in the river. (Excerpt 26).

R9: Fish trap (tugung in bahasa sug term) is hard to make because I am the one who knows how to make it here in our province. The process of making the fish trap is that you have to bend it first, then cut it into thin sticks, then weave the thin sticks to make the fish trap (tugung in bahasa sug term). (Excerpt 27).

R9: The people here will harvest it because they need it to make bamboo fish traps (tugung in bahasa sug term). (Excerpt 28).

R9: The only importance of bamboo is utilized to make fish traps (tugung in Bahasa Sug terms). (Excerpt 29).

Additionally, it appears that even bamboo can be used to utilize fish, crabs and lobster traps making it beneficial for the individuals in the said barangay as they can be used it as an alternative fish net. In addition, it reveals that bamboo can be used to make various types of handicrafts that are necessary to them and can make their lives less difficult. Bamboo is becoming more widely recognized as a sustainable and adaptable resource for human usage. It is a renewable material that may be used in numerous lifestyle goods like construction, fumiture, handicrafts and even foods (Prasad and Muthusamy, 2023). Bamboo can be utilized to make fish traps, offering a less expensive option than conventional materials and possibly bringing in money for rural communities (Li and Haolle, 2015).

4.5 In bamboo cultivation, in what way did you make bamboo as a source of income?

T1 Utilizing bamboo coracles to plant sea moss

R2: The bamboo here in the countryside means that after we harvest it, we will cut it, bring it to the seaside, and use it to make coracles (alul in bahasa sug term) to plant our sea moss. (Excerpt 30).

R4: It can be made into coracles, it can be used when planting sea moss, it can be a source of income. (Excerpt 31).

R5: Then what we do is we bring it to the seaside to sell it to those who plant sea moss for them to use in planting. (Excerpt 32).

R7: For making coracles (alul in bahasa sug term) to plant sea moss to sell. (Excerpt 33).

R8: There are also other bamboos brought to the beach to be used in planting sea moss. (Excerpt 34).

The participants highlight the use of bamboo; they bring it to the coast to make coracles that are used to plant sea moss. A bamboo-based planting apparatus can be used to cultivate sea moss. This unique system incorporates perforations in bamboo joints where a culture unit is put, allowing plants to grow without soil and preventing

contamination from soil heavy metals (Qin et. al., 2019). Furthermore, a fully automated floating refuse removal boat equipped with a hydraulic large item grabbing machine can help maintain sea moss cultivation areas by efficiently removing debris and trash from the water (Huang et. al., 2015). Furthermore, a bamboo fungus planting method can increase sea moss yield by using a particular fungous material mixture and implanting it in appropriate habitats, hence boosting sea moss quality while conserving land (Yan et. al, 2015).

T2 Bamboo as a source of income

R2: As a source of income, I only used bamboo to catch crabs. (Excerpt 35).

R3: The bamboo will be turned into a bamboo roof; all that has to be done by stitching it, and customers will purchase it from us. Second, since our area has bamboo plantations, the people who live by the sea will need bamboo to catch fish, which they will then purchase. (Excerpt 36).

R3: If you are good at making decorations, you can also make it a source of income, making beds and chairs, you can make it a source of income. (Excerpt 37).

R3: Our experience in our province indicates that bamboo is important because in order to obtain coconuts, people will first pick small bamboo and use them to create a pole with a small machete on top and make it as a source of revenue. (Excerpt 38).

R4: If bamboo is sold, it can help with living such as bamboo shoots (dabung in bahasa sug term) can also be sliced and made into vegetables to eat. (Excerpt 39).

R6: This bamboo helps to provide another livelihood, like selling a lot. The plant can be made into vegetables and eaten, and bamboo is worth fifty, so bamboo can provide a livelihood. (Excerpt 40).

R6: The plants are cut to eat, and then you can sell them in the market because they can provide a source of income. (Excerpt 41).

R6: If the use of bamboo can make a chair to be used for sitting and resting, then there is a chance that it can be sold like what is sold in the town. (Excerpt 42).

R7: For me, bamboo can be a source of income, dig the soil just like how bamboo is planted, and then after that we have something to make a living. Why? When you harvest it, you can make a fence for crops such as sweet potatoes and pineapples, you will have to earn money and i can spend it on myself and my children. (Excerpt 43).

R7: Like a fish trap (panggal in Bahasa sug term) it is one of our incomes, meaning this fish trap is a big help for me because it is my livelihood. (Excerpt 44).

R8: As we are used to, lobster traps (tugung in bahasa sug term), fish traps (panggal in bahasa sug term) and what so called "bugyas in bahasa sug term" become the source of income. (Excerpt 45).

R9: The purpose of bamboo for our livelihood is to make fish traps (tugung in bahasa sug term) to catch some fish called palu-palu and crabs. Fish trap making and catching fish can be a source of income by selling the fish for 50 pesos. By doing that, the fisherman will have money by selling what they catch. (Excerpt 46).

R10: Bamboo is expensive because everyone needs it and many need it. (Excerpt 47).

Based on the participant's narratives, bamboo is a very useful material for human needs. It can generate revenue in a number of ways. Bamboo is particularly advantageous since it enables the locals to earn money for a variety of uses, such as a profitable source of revenue. This money may be used to pay for their daily essentials. For rural communities, bamboo has the potential to generate income that would allow them to purchase necessities (Ekwe et. al., 2022). Bamboo is essential for socioeconomic benefits in places like Ethiopia, where it is used as building material.

4.6 Can you share any personal experiences or stories about how bamboo cultivation or utilization has improved livelihood opportunities in your barangay?

T1 Bamboo as fences to protect the crops

R1: Our experience in cultivating bamboo is that we will take small ones, like the size of our arm, and after that, we will plant them and put up a fence so that the cows don't eat them and the bamboo will grow freely. (Excerpt 48).

R1: In our experience, we can use bamboo to make fences, and we will use it to fence our crops such as bananas and sweet potatoes (Excerpt 49).

R3: As for bamboo, from what we've seen so far, it's getting a little scarcer because the cattle have already eaten some of it. This makes it harder for us to make a living because we want to be able to sell something, but the animals eat the bamboo. (Excerpt 50).

R3: Initially, we can prioritize things like fencing our vegetable and banana plantations if we haven't been provided an iron fence. That is why we value bamboo so much (Excerpt 51).

R5: Bamboo should be appreciated as well as those to be planted, because as we say here in the countryside, the planting of bamboo is a big help in our lives because, without bamboo, our life here is difficult. (Excerpt 52).

R6: To plant bamboo, you also need to build a yard so that cows and goats don't eat the plants. (Excerpt 53).

R7: Here with us, the bamboo must be fenced because it is eaten by wild cattle, so it must have a fence to protect the bamboo and grow properly. The bamboo is fenced with the bamboo itself so that it cannot be eaten by the animals. (Excerpt 54).

The participants claim that bamboo in their area is becoming scarcer since cows have already eaten it. They also advised that when growing bamboo, you should fence it to prevent cattle from eating it. Livestock grazing can have a substantial impact on

bamboo production. Furthermore, cultivation practices can influence carbon storage in bamboo ecosystems, with grazing causing soil carbon reduction and necessitating the use of sustainable management practices to maintain harmony between environmental improvement and soil productivity (Caf and Beijing, 1994).

4.7 As a user of bamboo, aside from building houses what materials can you produce from bamboo?

T1 Bamboo durability

R7: Besides building a house, there are many things you can make furniture or materials out of bamboo, first here among people like you who live in the city. The things you use are hollow blocks and they need money to buy, but I am guaranteed bamboo rather than iron. If the iron will last for 30 years, then bamboo will last 50 years. (Excerpt 55).

R10: Bamboo can be mixed with cement if the sand is new, bamboo is stronger because we tried it. That is the only importance of bamboo. (Excerpt 56).

The participants reported that bamboo's durability can last longer than iron. They also emphasized that bamboo is able to be mixed with cement if the sand is new. According to the research findings, bamboo can survive longer than iron in some applications. Bamboo has been found to have lower life cycle costs than corrugated galvanized iron sheets, making it a more environmentally friendly roofing material (Hailu et. al., 2022).

T2 Bamboo as an alternative fire lighter

R7: Bamboo can be utilized in many things like for making fire because it can serve as an alternative lighter according to the old folks. The step in doing it is you just have to get the part of the coconut which is the mesocarp (bunut in bahasa sug term) and after that, put the dry mesocarp into the bamboo and start to massage it hard with force for a minute then if it starts to smoke, it means the fire is ready. (Excerpt 57).

R7: Bamboo can light a fire by putting it into the skin of bamboo. Here with us even without everything, if there is no match, we can light up the fire by using the bamboo and mesocarp (bunut in Bahasa sug term). (Excerpt 58).

The participants assert that bamboo can be utilized to light up fire by just using its node and coconut mesocarp. Bamboo generates heat when burned through its mesocarp due to a sequence of occurrences caused by various heat fluxes. Heating bamboo perpendicular or parallel to the grain produces a variety of effects, including moisture movement, pyrolysis, oxidation, and flame (Ian et. al., 2021).

4.8 For you how has the use of bamboo as a construction material provided sustainable and eco-friendly housing solutions in Barangay Tangkuan Omar, Sulu?

T1 *Bamboo as a sustainable building material and environmentally beneficial housing option*

R1: After we harvest the bamboo, we will cut it, and then measure the size of the house that we will be constructing. After that, we will split it to make bamboo floors from the porch down to the kitchen. (Excerpt 59).

R2: The purpose of constructing bamboo materials is for convenience, like utilizing chairs for resting, which are made out of bamboo; making walls; and making floors, which are where I sleep. (Excerpt 60).

R3: First, if they don't have a metal roof, it will simply be sewed into a bamboo roof (atup sani in Bahasa Sug). Next, it will be fashioned into a wall and, finally, a floor. That's all building a house entails. (Excerpt 61).

R4: Firstly, the bamboo must be matured before it can be used, if it is not yet ripe, it cannot be used, it will withered. The bamboo, if it is very old you will know it too, you just have to slam it or by just looking at it you will know it. If it makes a sound, it means the bamboo is very old. (Excerpt 62).

R5: Making a house, when you harvest bamboo you cut it and then you measure how many lengths you need to make the walls and then make the floors of the house to be used here in the barangay tangkuan. (Excerpt 63).

R6: Planting bamboo and using it gives us good things because, first of all, we build a house; it provides fresh air and coolness near our house; and we can provide livelihoods made of bamboo. (Excerpt 64).

The participants emphasize the utilities of bamboo in building materials after you harvest it they assert that the purpose of bamboo is for their convenience which they likely used and their eco-friendly constructions material. Traditional bamboo construction techniques have been widely used in rural areas for decades and are frequently associated with vernacular architecture (Xiuyuan and Zhang, 2023). Bamboo is gaining popularity as a sustainable building material due to its biodegradability, Bamboo is undoubtedly a substantial source of income for many people. Bamboo plays an important role in rural areas such as Bhadrak district, Odisha, India, where it is used for construction, handicrafts, and feed, adding to the local population's economic well-being.

T2

R7: Safe living for us, apart from providing our needs, we can make tools that we don't need to buy anymore. In addition, it is used or made into a table to put different foods which are called (dulang in bahasa sug term) it is primarily served during weddings which is why bamboo should be taken care of because it can give convenience to the people. (Excerpt 65).

The interviews highlight that bamboo can be used to construct many different items that they don't need to buy. They also mentioned that it can be fashioned into tables where dishes are given during weddings. Bamboo is historically significant in Southeast Asian civilizations, particularly in ceremonies and daily life. Bamboo from five genera and

thirteen species is used for a variety of purposes in northeastern Thailand, including food, medicine, equipment, building materials, and attractive plants (Surapon et. al., 2023).

T3

R7: Additionally, it has something special because its water can serve as a medicine for many types of diseases. (Excerpt 66).

Participants underlined that water from the bamboo can serve as a remedy for ailments. Bamboo water, obtained from bamboo plants, has long been utilized in Asian medicine for its therapeutic effects. According to research, bamboo plants contain bioactive chemicals such as phenols, flavonoids, and phytosterols, all of which contribute to a variety of health advantages. Furthermore, studies have shown that an aqueous extract from the Guadua paniculata rhizome has anti-inflammatory and antinociceptive properties, indicating its potential for treating pain and inflammation. Overall, bamboo water and extracts show promise in preventing diseases such as diabetes, cancer, and cardiovascular issues, making them valuable in medicinal applications (Abir et al., 2015).

4.9 Have you witnessed any positive impacts of bamboo farming on sustainable agriculture practices or food security in your Barangay (Tangkuan Omar, Sulu)?

T1 Importance of bamboo

R1: The importance of bamboo is that if you want it to grow healthy, it should have a tree beside it so that the bamboo can lean underneath the tree. If it grows, the bamboo won't fall down in the air because it has a tree to lean on. (Excerpt 67).

R4: The importance of bamboo, is for the convenience of all if we don't weed it. For the relatives if they need bamboos, they can get them here. (Excerpt 68).

R10: It must be planted under a big tree if you want it to be big and tall. However, when it gets too big, the tree next to it will die. (Excerpt 69).

The interviews emphasize the necessity of planting bamboo. They said that if you want your bamboo to grow healthily and longer, you should place it beneath the tree. Bamboo can cause tree death owing to a variety of circumstances.

T2 Bamboo as a food

R2: The importance brought by bamboo cultivation is that when it's still growing, we will harvest it, and it can be eaten cooked as bamboo shoots (dabung in Bahasa Sug). (Excerpt 70).

R7: Secondly, bamboo shoots can be vegetables (Dabung in Bahasa sug term) and it is delicious to make vegetables, you can get more vitamins. (Excerpt 71).

R10: There are many things that can be done from bamboo, first of all bamboo shoots can be made intovegetables and it's delicious, it's even tastier than noodles. (Excerpt 72).

Participants appreciated bamboo shoots' originality, as well as their nutritious value in comparison to other cuisines. They claim that bamboo is tasty and nutritious.

4.10 At present, are bamboos being continuously planted or grown in your Barangay (Tangkuan Omar Sulu)?

T1

R1: For cultivating bamboo, like us we continue to cultivate bamboo and grow it. However, right now, it is not possible to grow it when it is planted if it does not have a fence because there are already many cattle here with us. That's the only thing that can't grow bamboo. (Excerpt 73).

R2: Yes, we continue to plant bamboo here. We are taking care of it now because it is a big help to us since we can use it to make floors for our house, or maybe use it to make bamboo chairs, and we can also eat it as a vegetable, which is the bamboo shoots. (Excerpt 74).

R3: There hasn't been much bamboo planted here since the animals in our province have eaten it. The bamboo should be gated but there isn't an iron fence, so even if it is, the animals would still nibble on some of it. (Excerpt 75).

R4: Regarding the planting of bamboo, nothing is being planted, but there is still bamboo growing here and being planted. (Excerpt 76).

R5: Yes, there is more, the cultivation of bamboo here is continuously growing, but are fences being built now, before the fence was made of bamboo, now the fence is protected by bamboo. Because if it is not fenced, animals such as cattle will eat it so it will not grow again. So here with us, we fence individually so that more bamboo can grow. (Excerpt 77).

R6: Anyway, there are still people who plant bamboo in our province because it is necessary to use fencing because the bamboo shoots are for cattle to eat. (Excerpt 78).

R7: As for me, yes the bamboo is still growing here because I clean it daily and I take care of it because this is what I use to meet my needs. (Excerpt 79).

R8: If like before, very few people take care of bamboo because the cattle eat it, but there are also those who are planted and it has a fence. (Excerpt 80).

R9: People here are still working, but if the bamboo doesn't fence here in our province, the cattle will eat the bamboo, but the plantations are still working. (Excerpt 81).

R10: It's just a little because the cows have eaten it. (Excerpt 82).

Participants emphasized the cultivation of bamboo in their area. According to them, the number of bamboo plants has decreased owing to cows eating them, but there are still a few planted. Bamboo can be a useful fencing material for protecting crops from harm caused by stray/wild animals such as cattle. According to research, bamboo bio-

fencing is a cost-effective and long-term animal deterrent that dramatically reduces crop losses (Sandeep et. al., 2022). Bamboo must be cultivated in local regions due to its numerous benefits. According to research, bamboo is good at restoring riverbanks, increasing soil fertility, and reducing soil erosion. Furthermore, bamboo is a sustainable alternative to lumber in construction, greatly enhancing structural performance while being renewable and locally available (S and Rittironk, 2022).

Conclusions

The main objective of this study is to investigate the ways in which bamboo can contribute to improving the quality of life and reducing poverty for small-scale farmers. It also examines the role of bamboo in preserving ecosystems, conserving soil, and providing benefits. Additionally, the findings highlighted the importance of bamboo for human well-being, livelihood, and the environment in barangay Tangkuan, Omar Sulu.

The results showed that the majority of the respondents were likely to agree with their own experience of how bamboo promotes a better health.

Furthermore, bamboo had a favorable impact on their livelihood because it was regarded as "strongly agree," implying that bamboo would most likely help them construct a sustainable lifestyle and serve as their potential income generator.

On the other hand, bamboo also greatly benefited them environmentally because it served as a natural water filter, improving water quality and producing a large amount of oxygen.

The interviews revealed that bamboo is used for a variety of purposes, including creating fences for crops such as sweet potatoes and bananas, which help the community's livelihood. Bamboo is recognized for its usefulness in supplying nutrition and revenue, particularly in locations where other food supplies may be scarce. Bamboo farming is seen as critical for livelihoods since it supplies materials for house constructions, fencing, home decorations and additional money through market sales. The uniqueness and importance of bamboo handicraft are recognized, emphasizing the specialized knowledge required for proper use and upkeep. The impact of bamboo growth on adjacent vegetation, such as trees, is discussed, emphasizing the importance of smart planting to avoid harmful outcomes.

Overall, people have asked that more bamboo be planted and cared for because it is a source of income, should be kept healthy, and improves the environment and general quality of life. After all, the more bamboo there is the more positive vibe it creates in society. Their well-being would increase with the amount of bamboo and a pleasant atmosphere in their surroundings, as this would have a positive impact on their livelihood and society. These three elements are related to one another because of this.

Recommendations

After conducting this study, the following recommendations are formulated.

To the LGU

The researchers recommends to have a training regarding bamboo in terms of livelihood, promoting bamboo-based livelihood opportunities within the community, the way on how bamboo served as a source of income and construction materials. Additionally the Barangay needs to motivate the inhabitants to organize and grow more bamboo in the Barangay.

To the residents of Barangay Tangkuan Omar Sulu

The researchers encourages the residents to plant more bamboo in their area as it is used in their daily living in order to provide more sources of bamboo to promote much good environment, livelihood and as well as a healthy well-being.

To the future researchers

Due to the lack of local study, the researchers encourage the future researchers to further more expand the study about the interconnectedness of well-being, livelihood and the environment, and explore more about the importance and uses of bamboo.

To encourage growth, the barangay needs to motivate the inhabitants to organize and grow bamboo in the barangay. The provision of training along with advice on proper planting, care, and maintenance enables successful growth. Promoting bamboo-based livelihood opportunities within the community is important. Encouraging community members to plant more bamboo and establish bamboo plantations in suitable areas within the barangay is essential. Providing training and support on proper planting techniques, maintenance, and care will ensure successful growth. Since bamboo has a lot of usage and being used by the residents in various ways, the following recommendations have been formulated. Firstly, the people in the society well instructed to plant more bamboo, as it is use in their daily living, and will be compelled to produce various ways on how bamboo become more sub profitable. Secondly, conducting practices on the livelihood in terms of bamboo-based initiatives, such as demo farming, on how to plant bamboo properly. Thirdly, understanding the significance between the well-being, livelihood and environment, while these three factors are interconnected, these factors' interplay, give insights to researchers about possible trade-offs or synergies as well as how to enhance well-being, promote sustainable livelihoods and mitigate negative environmental impacts.

Compliance with Ethical Standards

This study on the multifaceted impact of Bamboo on Human well-being, livelihood, and the environment is guided by a strong commitment to ethical principles. The researchers were obtained, informed consent from all participants, ensuring a clear understanding on the study's purpose and procedures. Participants was assured that their

information is treated with the utmost confidentiality and handled securely. Participation in the study is entirely voluntary, and participants reserved the right to withdraw at any point without facing negative consequences.

The researchers pledged to uphold ethical principle throughout the research process. Confidentially and privacy was rigorously maintained during data analysis, and results was presented in an unbiased manner.

Research finding was disseminated through appropriate channels with a paramount focus on protecting participant's privacy and confidentiality.

The researchers were dedicated to continuously assessing and addressing any ethical issues that aroused during the study. The protocol ensures that the research is conducted with the utmost respect for ethical standards and the individual who generously contributed to the study.

Acknowledgement

The researchers would like to express their sincere appreciation and heartfelt gratitude to all those who in way or another eagerly supported and help them in making this research possible, particularly to following:

To our GOD ALMIGHTY ALLAH, the most powerful and merciful. The creator who never got tired to help us, and letting us earn more knowledge and giving us strength in our daily livings and help us rise in any situation.

Likewise, to extend their gratitude to MSU-SULU SENIOR HIGH SCHOOL FAMILY for continuous guidance.

To our coordinator, Dr. NORMAN A. ABDURAHMAN, Ed. D. whom gave the golden opportunity to do this wonderful research study, which also helped the researchers in doing a lot.

To our loving Family, Friends and relatives who extended help and support to make all things possible.

MULTIVARIATE SUCCESS INDICATORS OF PROBLEM-SOLVING SKILLS PERFORMANCE IN SCIENCE AMONG GRADE 8 STUDENTS IN MOGPOG, MARINDUQUE

Roziel V. Montalban

Southern Luzon State University, Lucban, Quezon, Philippines

https://doi.org/10.5281/zenodo.12559113

ABSTRACT

One dimension to helping students is to find comparatively better way of teaching; that is the way Science is presented to students. This study aims to investigate the multivariate success indicators of problem-solving performance in science among grade eight students towards the development of proposed Science activities. Specifically, it aims to determine the problem solving performance of grade 8 students in Science; establish any significant relationship between science beliefs, Science attitudes, Science self-efficacy and metacognitive skills on science problem-solving performance among grade eight students; identify any multivariate success indicators in problem solving performance in science among grade eight students in terms of Science Beliefs; Attitudes towards Science; Science Self-Efficacy; and Metacognitive Skills and propose a framework with activities integrated relevant to structured problem-solving approach. The independent variables in this study are the multivariate indicators while the dependent variable is the performance of the students. Descriptive-correlational was used as the research design of the study to determine the multivariate success indicators of problem-solving performance in science among 140 grade eight students. The analysis revealed a concerning picture of Grade 8 students' science problem-solving performance. A significant portion (47.14%) failed to meet expectations, with no students reaching the "Outstanding" level. This highlights a pressing need for intervention and improvement. The research found a critical link between students' science beliefs and their problem-solving abilities. Those with strong convictions about the nature and value of science demonstrated significantly better performance. This underscores the importance of fostering such beliefs, potentially through activities exploring the nature of science and its real-world applications. While attitudes towards science, science self-efficacy, and metacognitive skills did not directly correlate with problem-solving performance, they may

still play indirect roles or require further investigation in specific contexts. Exploring domain-specific confidence and strategic thinking skills in science could yield valuable insights for future research and intervention strategies. Based on these findings, several activities could be integrated into a structured problem-solving approach. Cultivating science beliefs through case studies, debates, and field trips, introducing domain-specific metacognitive strategies, and promoting collaborative learning through peer discussions and shared problem-solving tasks could empower students to become confident and effective science problem-solvers.

Keywords: *education; problem-solving, skill performance, success indicator, science, grade 8 students, structured problem-solving*

INTRODUCTION

Effective problem-solving lies at the heart of scientific inquiry and is a crucial component of scientific literacy (Chin & Osborne, 2010; NRC, 2012). Beyond mere knowledge acquisition, students need to develop the skills to analyze information, formulate hypotheses, design experiments, interpret data, and draw conclusions—a complex cognitive repertoire essential for navigating the dynamic landscape of scientific exploration (Scardamalia & Bereiter, 2006).

However, research suggests that many students struggle with scientific problem-solving (OECD, 2019). Studies indicate that while students may possess basic factual knowledge, they often lack the ability to apply this knowledge effectively to novel situations or solve complex problems (Bell et al., 2003; Tai et al., 2006). This gap between knowledge and application raises concerns about the adequacy of current science education approaches and underscores the need for deeper understanding of factors that influence successful problem-solving in science.

Identifying the key psychological constructs that underpin successful problem-solving in science necessitates a multifaceted approach that moves beyond solely examining cognitive skills. Recent research highlights the critical role of non-cognitive factors such as science beliefs, attitudes, self-efficacy, and metacognitive skills in influencing students' engagement with, and mastery of, scientific inquiry (Osborne et al., 2003; Schraw & Moshman, 2002).
