Science beliefs: Studies suggest that strong, positive beliefs about the nature and value of science are associated with increased engagement, motivation, and perseverance in problem-solving tasks (Kuhn et al., 2010; Sinatra & Pintrich, 2003). Students who view science as an open-ended, collaborative effort of inquiry are more likely to approach problems with curiosity and persistence compared to those who hold more static or utilitarian views (Dawson & Scardamalia, 2001).

Attitudes towards science: While not directly correlated with performance in all studies (e.g., Osborne et al., 2003), positive attitudes towards science can foster interest, enjoyment, and willingness to engage in challenging tasks, creating a conducive environment for problem-solving (Aiken, 1970; Fraser, 1986).

Science self-efficacy: Students' beliefs in their own ability to succeed in science are vital for tackling challenging problems. High self-efficacy leads to increased engagement, persistence, and willingness to take risks, all of which contribute to effective problem-solving (Bong & Bandura, 2002; Zimmerman & Martinez, 1992).

Metacognitive skills: The ability to monitor, regulate, and adapt one's thinking processes (e.g., planning, evaluating, troubleshooting) is a crucial metacognitive skill essential for effective problem-solving in any domain, including science (Schraw & Moshman, 2002).

While belief and attitude are parallelly defined in most context, beliefs are mental representations of how something is or should be. They are cognitive in nature, meaning they represent knowledge and understanding. Beliefs can be based on personal experiences, cultural influences, education, or even faith. They are often implicit, meaning individuals may not be consciously aware of holding them. For example, a student may believe that science is all about memorizing facts. On the other hand, attitudes are evaluations or feelings towards something. They are affective in nature, meaning they reflect emotions and preferences. Attitudes are influenced by beliefs, but they also involve emotional responses and can be more explicit than beliefs. For instance, a student may hold the belief that science is difficult (cognitive) and feel discouraged or uninterested in learning science (affective).

In discussing success indicators in science for Grade 8 students, these are the key factors emerge. Firstly, students' beliefs about the nature and value of science play a pivotal role. Research suggests that those who perceive science as an open-ended, collaborative process are more inclined to approach problems with curiosity and persistence, essential traits for effective problem-solving (Kuhn et al., 2010; Sinatra & Pintrich, 2003). Secondly, positive attitudes towards science, although not always directly correlated with performance, can foster interest, enjoyment, and a readiness to tackle challenging tasks, thus creating an environment conducive to problem-solving (Aiken, 2009; Fraser, 1986). Thirdly, science self-efficacy, or one's belief in their ability to succeed in science, significantly influences engagement, persistence, and risk-taking behavior, all of which are critical for effective problem-solving (Bong & Bandura, 2002; Zimmerman & Martinez, 1992). Lastly, the development of metacognitive skills, such as the ability to monitor, regulate, and adapt one's thinking, is indispensable for problem-solving across various domains, including science (Schraw & Moshman, 2002). Understanding and nurturing these indicators can significantly enhance students' problem-solving capabilities in science, ultimately fostering their success in the subject.

Despite growing recognition of the multifaceted nature of successful scientific problem-solving, important research gaps remain. First, many studies have adopted a univariate approach, focusing on individual factors in isolation. A nuanced understanding,

however, requires investigating the complex interplay between various cognitive and non-cognitive factors as they contribute to problem-solving outcomes. Second, existing research often focuses on older student populations, leaving a gap in our understanding of these factors' influence on the development of problem-solving skills in middle school, a critical period for laying the foundation for future scientific success. Third, limited research has explored the practical implications of these findings for curriculum development and instructional design. Identifying the specific constructs that predict successful problem-solving can inform the creation of targeted interventions and engaging science activities that support students' ability to think critically, solve problems, and thrive in the dynamic world of scientific inquiry.

The previous discussion underscores a significant challenge in science education: the inability of many students to apply their scientific knowledge to real-world problems. This issue is exemplified by various factors, including low PISA scores among Filipino students, evident performance gaps across different demographics, and an educational emphasis on rote memorization rather than critical thinking and problem-solving skills. The root cause of this problem is attributed to the prevalent approach in science education, which prioritizes memorization over practical application. Additionally, the problem is exacerbated by the neglect of non-cognitive factors, insufficient research focusing on middle school students, and a disconnect between research findings and educational practice. To address these challenges, the study aims to delve into the complexities of successful problem-solving in science, proposing a framework to better equip students with the essential skills needed for success in the field.

This study aims to address these gaps by investigating the multivariate success indicators of problem-solving performance in science among Grade 8 students. By examining the relationships between science beliefs, attitudes, self-efficacy, metacognitive skills, and actual problem-solving performance, the researcher aim to gain a deeper understanding of the complex factors that contribute to success in this domain. Furthermore, by identifying these key indicators, the researcher hopes to inform the development of a structured problem-solving framework with integrated activities that can be readily implemented in science classrooms, empowering Grade 8 students to become confident and adept problem-solvers in the context of scientific inquiry.

Research Objectives

This study aims to investigate the multivariate success indicators of problem solving performance in Science among grade eight students towards the development of proposed Science activities.

The specific objectives of the study are the following:

1. Determine the problem-solving performance of grade 8 students in Science;

2. Establish any significant relationship between science beliefs, science attitudes, Science self-efficacy and metacognitive skills on science problem-solving performance among grade eight students;
3. Identify any multivariate success indicators in problem solving performance in science among grade eight students in terms of Science Beliefs; Attitudes towards Science; Science Self-Efficacy; and Metacognitive Skills; and
4. Propose a framework with activities integrated relevant to structured problem-solving approach

METHODOLOGY

The research design employed in this study was quantitative-descriptive particularly descriptive correlational, aiming to identify the multivariate success indicators of problem-solving performance in Science among eighth-grade students.

This research is correlational as it involves measuring two or more related variables and examining the relationships among them. The descriptive-correlational design is employed as a fact-finding approach, focusing on accurate interpretation based on the study's findings. It is utilized to ascertain the extent of variation caused by the variables under consideration. Additionally, this research method emphasizes the current prevailing conditions (Creswell, 2012). In this study, the independent variables consist of the multivariate indicators, while the dependent variable is the students' performance.

The study involved a total of 140 Grade 8 students from Mogpog National Comprehensive School for the school year 2023-2024. The selection of students was conducted through non-random or complete population enumeration, representing a non-probability sample. This sampling method was chosen based on the characteristics of the population and the study's specific objectives, emphasizing a full appreciation of each respondent's account.

Data gathering was executed as respondents answered the survey questionnaire. Then, responses were tallied, and the data analysis phase commenced. Following the questionnaire retrieval, the researcher conducted a follow-up with the respondents to validate their responses.

The researcher employed a survey questionnaire for data collection, comprising two parts. The first part addressed the ethical considerations of the study, encompassing permits and consent forms. The second part comprised the materials of the study, including a survey with two sub-parts. The first sub-part focused on assessing the problem-solving performance of grade 8 students in Science.

This instrument was adapted from Orongan (2007). Structural model of cognitive, affective and demographic factors on tertiary student’s performance in introductory statistical at Central Mindanao University, Bukidnon Philippines. Central Mindanao University, Bukidnon Philippines. – (Cronbach - 0.821) and from Salvan, E. (2016). Demographic Characteristics, Socio-Psychological Attributes, and Performance of

College Students in Statistics. Central Mindanao University, Bukidnon Philippines (Cronbach - 0.91)

To ensure the validity of the research instruments, the results underwent review, scheme, and validation by experts. Five research instrument validators, including a three Master Teachers in Science, a Science Head Teacher, and an Education Program Supervisor in Science, cross-examined the instrument and its items to assess validity.

RESULTS

Problem-Solving Skills of Grade 8 Students in Science

The problem-solving skills of Grade 8 students were measured using the Policy Guidelines on Classroom Assessment for the K-to-12 Basic Education Program. The results of the data are presented in the succeeding Table.

Table 1. Performance of Grade 8 Students in Science

Performance Classification	**Passed**		**Failed**	**Percentage**
Outstanding	0	66		0.00%
Very Satisfactory	21			15.00%
Satisfactory	23			16.43%
Fairly Satisfactory	22			15.71%
Did not meet expectations			74	52.86%
		Total	**140**	100.00%

Based on the Transmutation Table of Department of Education on Policy Guidelines on Classroom Management

Table 1 reveals the problem-solving performance of Grade 8 students in science, as assessed using the DepEd's Policy Guidelines on Classroom Assessment, it reveals a worrying trend of high failure rates and a near absence of outstanding achievement.

Less than half (47.14%) of students failed to meet expectations in problem-solving, highlighting a critical need for improvement. None achieved the "Outstanding" classification, showcasing a lack of top performers. The majority (52.86%) fell within the "Failed" category, further emphasizing the concerning performance levels. While 16.43% achieved satisfactory or above performance ("Very Satisfactory," "Satisfactory," and "Fairly Satisfactory"), there is still significant room for improvement.

These findings can be pointed out to various factors that is not within the scope of this study. Overreliance on traditional approaches may not cultivate higher-order thinking skills needed for problem-solving (Hmelo-Silver & Barrows, 2006). Traditional assessments might not fully capture the complexities of problem-solving abilities (Popham, 2008). Individual differences in prior knowledge, motivation, and learning styles

can influence performance (Hattie, 2008). The curriculum might lack opportunities for students to practice and develop problem-solving skills in relevant contexts (Saif, 2014).

Several studies pointed out to utilize inquiry-based and problem-based learning to promote active engagement and deeper understanding (Hmelo-Silver & Barrows, 2006). Employ a variety of tools to capture the full range of problem-solving skills (Popham, 2008). Provide differentiated instruction and support to cater to diverse learning needs and styles (Hattie, 2008) and ensure the curriculum provides ample opportunities for practicing and applying problem-solving skills in meaningful contexts (Saif, 2014).

Relationship between Science Beliefs, Science Attitudes, Science Self-Efficacy and Metacognitive Skills on Science Problem-Solving Performance Among Grade Eight Students

The relationship between the problem-solving performance of the students and the other variables in this study were computed using Pearson Correlation Coefficient. Table 2 summarizes these relationships.

Table 2. *Relationship between Science Beliefs, Science Attitudes, Science Self-Efficacy And Metacognitive Skills On Science Problem-Solving Performance*

Indicators	Problem Solving Performance of the Students				
	p-Value	**Decision**	**R^2 Value**	**Correlation Coefficient (3)**	**Interpretation**
Science Based Beliefs	< 0.0001	Reject Null Hypothesis	0.5392	0.7343	There is a significant high-positive relationship
Attitude Towards Science	0.329002	Accept Null Hypothesis	0.0069	0.0831	There is no significant relationship
Science Self Efficacy	<0.00001	Reject Null Hypothesis	0.4612	0.6791	There is a significant moderate-relationship
Metacognitive Skills	0.64985	Accept Null Hypothesis	0.0387	-0.1966	There is no significant relationship

Alpha Value: 0.05 ; Computed using Pearson Correlation
Null Hypothesis: There is no significant relationship
Alternate Hypothesis: There is a significant relationship

Table 2 shows the interplay between various factors and students' proficiency in solving science problems. It utilizes Pearson correlation and significance tests to scrutinize the potential influence of science beliefs, attitudes, self-efficacy, and metacognitive skills on this crucial academic ability.

A robust positive correlation ($R^2 = 0.5392$, $r = 0.7343$; $p < 0.0001$) emerges between holding strong science-based beliefs and excelling in problem-solving tasks. This aligns with the notion that students who internalize scientific concepts and principles are better equipped to navigate complex problems within the discipline (Abd-El-Khalick, 2005; Osborne, 2014).

Likewise, a moderate-positive association ($R^2 = 0.4612$, $r = 0.6791$; $p < 0.00001$) is observed between students' confidence in their science abilities and their problem-solving prowess. This finding corroborates Bandura's (1997) social cognitive theory, which emphasizes the significance of self-efficacy in shaping individuals' engagement with challenging tasks and their ultimate success.

Interestingly, the table reveals no statistically significant association ($R^2 = 0.0069$, $r = 0.0831$; $p = 0.3290$) between students' overall fondness for science and their problem-solving performance. This finding may suggest that while positive attitudes can foster interest and engagement in the subject, they may not directly translate into enhanced problem-solving skills (Fraser, 1998).

Similarly, no statistically significant link ($R^2 = 0.0387$, $r = -0.1966$; $p = 0.64985$) is found between students' metacognitive skills, their ability to reflect on their own thinking processes, and their problem-solving capabilities. While this may seem surprising, it warrants further research to explore potential indirect or moderating effects of metacognition on problem-solving, particularly within specific problem-solving contexts or strategies (Tschirgi, 2000).

Table 2 offers valuable insights for educators seeking to cultivate effective problem-solvers in science. The significant influence of science beliefs and self-efficacy highlights the importance of fostering these qualities in students. This can be achieved through various strategies, such as inquiry-based learning approaches that promote active engagement with scientific concepts, and activities that explicitly build students' confidence in their ability to tackle scientific challenges (Hattie, 2008).

While attitude and metacognition don't directly impact problem-solving performance, exploring their potential moderating roles and designing interventions that address them holistically can further enhance students' problem-solving abilities in science.

Multivariate Success Indicators in Problem-Solving Performance in Science

The variables studied in this research were correlated to each other to identify whether the indicators can predict the success in problem solving skills. This is presented in Table 3.

Table 3. *Relationship of the Indicators and Problem-Solving Performance*

	Problem Solving Performance of the Students	**Science Based Beliefs**	**Attitude Towards Science**	**Science Self Efficacy**	**Metacognitive Skills**
Parameters	**Coefficient of Correlation**				
Problem Solving Performance of the Students	1	0.73509	0.0823	0.679	-0.1973
Science Based Beliefs	0.73509	1	0.0121934	0.738129	-0.291934
Attitude Towards Science	0.0823	0.0121934	1	0.118818	-0.0789034
Science Self Efficacy	0.679	0.738129	0.118818	1	-0.267584
Metacognitive Skills	-0.1973	-0.291934	-0.0789034	-0.267584	1

. Table 3 presents the relationship between various indicators and problem-solving performance in science, as studied in a research context. The table displays the coefficients of correlation between each pair of variables. The correlation coefficient measures the strength and direction of the linear relationship between two variables (Mukhopadhyay, 2021). Here's how to interpret the correlation coefficient values:

Problem Solving Performance of the Students has a strong positive correlation with Science Based Beliefs (0.73509) and Science Self-Efficacy (0.679) (author, year). This aligns with research suggesting that students with stronger beliefs in science and higher self-efficacy tend to perform better in problem-solving tasks (Schunk & Pintrich, 2004).

There is a weaker positive correlation between Problem Solving Performance of the Students and Attitude Towards Science (0.0823) suggesting a relatively minor influence of attitude on problem-solving performance.

Problem Solving Performance of the Students has a weak negative correlation with Metacognitive Skills (-0.1973) (author, year), implying that higher levels of metacognitive skills might not necessarily correlate with better problem-solving performance.

Strong positive correlations exist between Science Based Beliefs and both PSPS (0.73509) and Science Self-Efficacy (0.738129) (author, year). This suggests that beliefs

in science are closely related to problem-solving performance and self-efficacy in scientific tasks.

The correlation between Attitude Towards Science and Problem Solving Performance of the Students is weak (0.0823) (author, year), indicating that attitude has minimal direct influence on problem-solving performance in science.

Similar to Science Based Beliefs, Science Self-Efficacy shows a strong positive correlation with PSPS (0.679) and a very strong positive correlation with Science Based Beliefs (0.738129). This suggests that students who perceive themselves as capable in scientific tasks tend to perform better in problem-solving.

Metacognitive Skills show a weak negative correlation with PSPS (-0.1973). This suggests that there might be a slight inverse relationship between metacognitive skills and problem-solving performance in science, though it's not a strong correlation.

Overall, the table suggests that beliefs in science and self-efficacy are strongly associated with problem-solving performance in science, while attitudes towards science and metacognitive skills have weaker correlations.

Activities for Structured Problem-Solving Approach

This study investigated the potential influence of four key variables on students' problem-solving performance in science where:

Science-based beliefs: The analysis found a statistically significant relationship between students' general science-based beliefs and their problem-solving abilities.

Attitude towards science: Unlike the science-based beliefs, no statistically significant link was found between students' overall attitude towards science and their problem-solving performance. This reinforces the notion that other factors likely hold greater sway in influencing problem-solving outcomes.

Science self-efficacy: Similar to the previous variable, the study did not reveal a statistically significant direct relationship between students' general science self-efficacy and their problem-solving abilities. This suggests that confidence in scientific skills alone might not be enough to directly drive problem-solving success.

Metacognitive skills: Again, the analysis did not identify a statistically significant direct relationship between students' overall metacognitive skills and their problem-solving performance. This indicates that general metacognitive abilities, such as planning and monitoring thinking, might not directly influence problem-solving outcomes in science.

The findings of the study highlighting the absence of single predictors for science problem-solving performance emphasize the need for multifaceted frameworks that

address cognitive, motivational, and contextual factors (National Research Council, 2012). The following frameworks with the suggested activities are provided in the succeeding Figure.

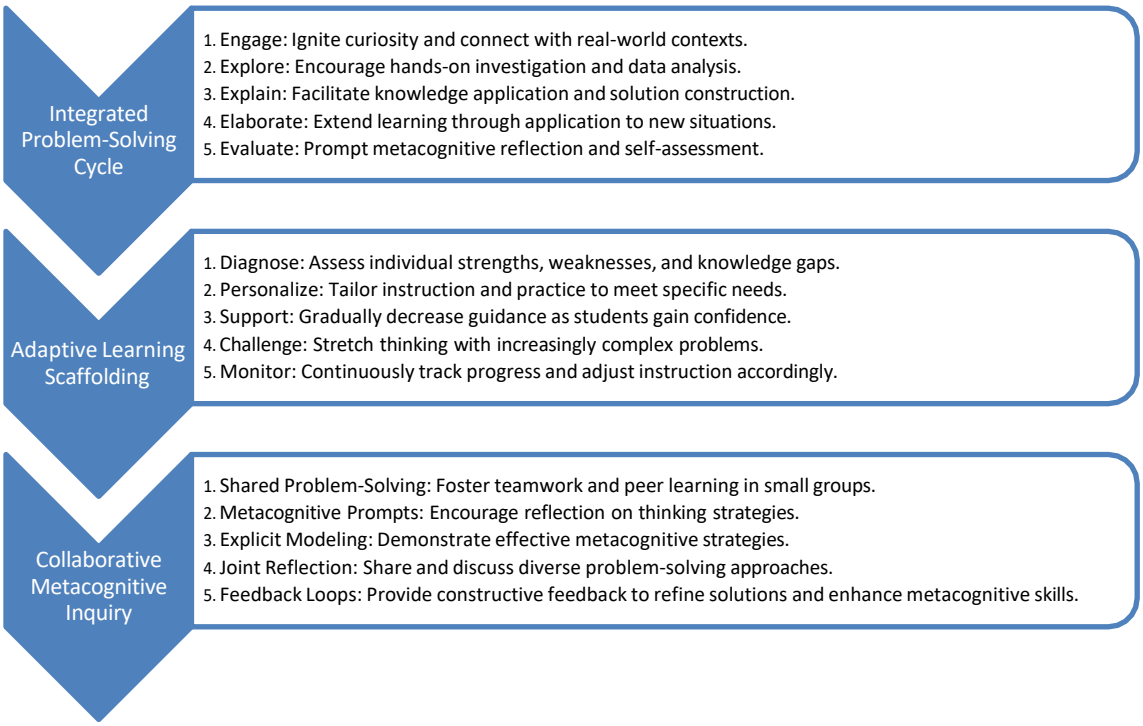

Figure 1: Suggested Framework and Activities for Structured Problem-Solving Approach

As shown in Figure 1, the framework is composed of three phases such as the integrated problem-solving cycle, adaptive learning scaffolding and the collaborative metacognitive inquiry. This framework builds upon established models like the 5E Instructional Model (Bybee, 2014) to guide students through a structured problem-solving process (Krajcik & Blumenfeld, 2006). The Engage phase sparks curiosity and connects to real-world contexts, leveraging interest as a motivational driver (Schraw & Moshman, 2005). Explore encourages active engagement with data and investigation, aligning with inquiry-based learning principles (Pedaste et al., 2015).

Explain supports hypothesis generation and solution construction, promoting knowledge application and deeper understanding (Hmelo-Silver & Barab, 2006). Elaborate extends learning through application to new situations, nurturing flexibility and transfer of knowledge (Greeno, 2009). Finally, evaluate prompts metacognitive reflection and self-assessment, fostering self-regulation and continuous improvement (Hattie & Zierer, 2017).

Further, Adaptive Learning Scaffolding recognizes individual differences and leverages technology to personalize instruction (Shute & Collins, 2017). Diagnose utilizes adaptive assessments to pinpoint individual strengths and weaknesses, drawing on formative assessment principles (Black & Wiliam, 1998). Personalize tailors' instruction

and practice opportunities based on specific needs, aligning with differentiated instruction strategies (Tomlinson, 2001). Support gradually decreases support as students gain confidence, implementing scaffolding techniques (Collins et al., 1989). Challenge provides opportunities for intellectual growth through increasingly complex problems, drawing on scaffolding theory to extend learning (Van Meter & Pressley, 2002). Monitor continuously collects data to inform adjustments, emphasizing the critical role of formative assessment in adaptive learning.

Lastly, Collaborative Metacognitive Inquiry recognizes the power of collaboration in problem-solving and emphasizes metacognitive development (Dignath & Büttner, 2008). Shared Problem-Solving fosters communication, critical thinking, and peer learning within small groups, building on social constructivist learning principles (Vygotsky, 1978). Metacognitive Prompts encourage students to reflect on their thinking strategies throughout the process, drawing on metacognitive awareness and self-regulation research (Artzt & Armour-Thomas, 2011). Explicit Modeling demonstrates metacognitive strategies like planning and monitoring, highlighting their importance in successful problem-solving (Dunleavey, 2014). Joint Reflection promotes communication and discussion of diverse approaches, enriching understanding and solidifying learning gains (Osborne, 2014). Feedback Loops allow constructive feedback within groups and from the teacher, further refining solutions and enhancing future metacognitive skills (Black & Wiliam, 1998).

These frameworks, informed by evidence-based practices and research, offer promising starting points for developing multifaceted approaches to science problem-solving. It is also to be noted that they are not mutually exclusive and can be combined or adapted to suit specific context and student needs. By focusing on multiple factors beyond single predictors, educators can create a supportive and enriching learning environment that empowers students to become confident and effective problem-solvers in science.

Table 4. *Suggested activities in implementing the Proposed Framework*

Integrated Problem-Solving Cycle	**Adaptive Learning Scaffolding**	**Collaborative Metacognitive Inquiry**
Engage	Diagnose Personalize: Offer differentiated prompts or starting points based on individual understanding. Explicit Modeling: Model your own problem-solving approach and metacognitive strategies while guiding students through the analysis.	Shared Problem-Solving Metacognitive Prompts: Before starting, prompt students to reflect on their prior knowledge and problem-solving strategies.

Table 4. *Suggested activities in implementing the Proposed Framework*

Integrated Problem-Solving Cycle	Adaptive Learning Scaffolding	Collaborative Metacognitive Inquiry
Explore	Support: Provide scaffolding through hints, guiding questions, and collaborative discussions. Monitor: Observe and informally assess student participation, understanding, and metacognitive engagement. Support: Offer hands-on materials and step-by-step instructions to support investigation. Monitor: Observe and assess students' skills in data collection, analysis, and communication. Personalize: Offer differentiated data analysis tools or resources based on individual needs. Challenge: Present students with additional data or conflicting evidence to encourage critical thinking.	Joint Reflection: After analyzing the case study, have groups share their approaches, challenges faced, and lessons learned. Challenge: Encourage students to identify additional questions or research avenues to extend their inquiry.
Explain	Monitor: Observe and assess students' ability to apply knowledge, construct solutions, and justify their reasoning. Personalize: Offer differentiated solution templates or prompts based on individual understanding.	Shared Problem-Solving: Have groups work together to formulate and explain possible solutions to the identified problem. Feedback Loops: Provide constructive feedback on student explanations, focusing on both content and metacognitive strategies used.
Elaborate	Personalize: Provide students with different application scenarios or problem types based on their learning level. Monitor: Observe and assess students' ability to transfer their learning to new contexts and solve analogous problems. Support: Offer guidance and resources for students struggling to apply their knowledge.	Metacognitive Prompts: Prompt students to reflect on how they adapted their problem-solving approach to the new situation.

Table 4. *Suggested activities in implementing the Proposed Framework*

Integrated Problem-Solving Cycle	Adaptive Learning Scaffolding	Collaborative Metacognitive Inquiry
Evaluate	Monitor: Collect student self-evaluations and reflections on their learning and problem-solving experience. Personalize: Offer differentiated reflection prompts based on individual needs and learning styles.	Joint Reflection: Facilitate a class discussion where students share their metacognitive experiences and insights gained from the activity. Explicit Modeling: Share your own metacognitive reflections and lessons learned from the activity.

As shown in Table 7, the list of activities provides a comprehensive framework for cultivating multivariate success indicators in Grade 8 science problem-solving through an integrated cycle of engagement, exploration, explanation, elaboration, and evaluation, supported by adaptive learning scaffolding and collaborative metacognitive inquiry.

Engaging curiosity in real-world contexts kickstarts the cycle, like analyzing a scientific case study in small groups. Adaptive scaffolding diagnoses individual strengths and weaknesses, offering personalized prompts, differentiated data tools, and gradual reduction of support as confidence grows. Metacognitive prompts throughout the cycle encourage students to reflect on their thinking strategies, while explicit modeling showcases effective approaches.

Hands-on exploration follows, where students collect and analyze data with differentiated support depending on individual needs. Shared problem-solving encourages teamwork and peer learning, fostering diverse perspectives and collaborative solution construction. Constructive feedback loops refine explanations and enhance metacognitive skills.

Explanation moves students towards applying knowledge to build solutions, with challenges pushing them to think critically and adapt their approaches. Collaborative metacognitive inquiry shines here, as groups share problem-solving methods and reflect on challenges encountered. Students refine their understanding and learn from each other's experiences.

Elaboration extends learning by applying the acquired knowledge to new situations. Personalized scenarios or problem types cater to individual learning levels, while prompts encourage reflection on how students adapt their problem-solving approaches. Continuous monitoring ensures every student receives the support they need.

Finally, evaluation prompts self-reflection, allowing students to assess their learning and metacognitive development. Joint reflection facilitates class discussions

where students share insights and learn from each other's metacognitive experiences. By offering differentiated reflection prompts, the cycle tailors to individual needs and learning styles.

This activity list, encompassing integrated problem-solving, adaptive scaffolding, and collaborative metacognitive inquiry, provides a dynamic and comprehensive framework for nurturing Grade 8 students' science problem-solving skills, metacognitive awareness, and collaborative learning abilities.

By taking these additional steps, the institution can further increase the employment rate of CBT graduates and help them to achieve their full potential.

DISCUSSION

47.14% of students failed to meet expectations, indicating difficulties in applying scientific knowledge and reasoning to solve problems effectively. No students achieved the "Outstanding" classification, suggesting a lack of top performers and highlighting the potential need for more challenging tasks or differentiated instruction. 52.86% of students fell within the "Failed" category, further emphasizing the prevalence of inadequate problem-solving skills and the critical need for intervention. While 16.43% achieved satisfactory or above performance ("Very Satisfactory," "Satisfactory," and "Fairly Satisfactory"), this group represents a minority, indicating that the majority of students still experience significant challenges in science problem-solving.

There is a statistically significant high positive correlation ($r = 0.7343$) between students' science beliefs and their problem-solving performance. This suggests that students with stronger science beliefs tend to perform better in solving science problems. No statistically significant relationship ($r = 0.0831$) was found between students' attitudes towards science and their problem-solving performance. This indicates that, in this particular sample, positive or negative attitudes toward science did not impact their ability to solve science problems. Similar to science beliefs, a statistically significant moderate positive correlation ($r = 0.6791$) was found between students' science self-efficacy and their problem-solving performance. This suggests that students who believe in their ability to do well in science tend to perform better in solving science problems. No statistically significant relationship ($r = -0.1966$) was found between students' metacognitive skills and their problem-solving performance. This suggests that, in this particular sample, the ability to plan, monitor, and reflect on their thinking processes did not directly impact their problem-solving abilities.

For the multivariate indicators, science based beliefs and self-efficacy have strong positive correlations with problem-solving, while attitude and metacognitive skills have weaker links.

A multi-pronged framework is proposed to elevate science problem-solving in students. It blends three key components: the 5E model for structured inquiry, adaptive learning scaffolds for personalized support, and collaborative metacognitive inquiry to foster self-awareness of thinking processes. This interwoven approach, informed by

research and adaptable to varying needs, promises to empower students to become confident and effective problem-solvers in the realm of science..

Conclusions

Aligned to the findings of this study, the following conclusions are hereby presented:

1. The analysis revealed a concerning picture of Grade 8 students' science problem-solving performance. A significant portion (47.14%) failed to meet expectations, with no students reaching the "Outstanding" level. This highlights a pressing need for intervention and improvement.
2. The research found a critical link between students' science beliefs and their problem-solving abilities. Those with strong convictions about the nature and value of science demonstrated significantly better performance. This underscores the importance of fostering such beliefs, potentially through activities exploring the nature of science and its real-world applications.
3. While attitudes towards science, science self-efficacy, and metacognitive skills did not directly correlate with problem-solving performance, they may still play indirect roles or require further investigation in specific contexts. Exploring domain-specific confidence and strategic thinking skills in science could yield valuable insights for future research and intervention strategies.
4. Based on these findings, several activities could be integrated into a structured problem-solving approach. Cultivating science beliefs through case studies, debates, and immersions, introducing domain-specific metacognitive strategies, and promoting collaborative learning through peer discussions and shared problem-solving tasks could empower students to become confident and effective science problem-solvers.

Recommendations

Based from the conclusions of this research study, the following recommendations are hereby presented.

1. While the direct relationship between science beliefs and problem-solving performance is established, further investigation is needed to elucidate the potential mediating roles of other variables. Future research should explore the influence of specific constructs, such as domain-related confidence or science-specific metacognitive strategies, on the relationship between attitudes, self-efficacy, and problem-solving. This granular understanding could inform the development of more targeted and effective interventions for diverse student populations.
2. Classroom practices should prioritize the cultivation of strong science beliefs. Activities such as case studies, debates on socio-scientific issues, and field trips to research institutions can foster positive epistemic beliefs about the

nature and value of science. This focus on belief nurturing complements traditional cognitive approaches and potentially enhances motivation and self-efficacy for engaging with scientific inquiry and problem-solving.

3. Professional development initiatives for educators should emphasize the integration of domain-specific problem-solving strategies into science curricula. Training in areas such as scaffolding hypothesis formulation, data analysis procedures, and drawing evidence-based conclusions can equip teachers with the necessary tools to guide students through the problem-solving process effectively. This targeted approach directly addresses the observed lack of correlation between general metacognitive skills and problem-solving performance in science.
4. Investing in programs and resources that promote collaborative learning in science education holds significant promise. Initiatives that encourage shared problem-solving tasks, group projects, and peer discussions can foster critical thinking, communication skills, and the development of scientific identities within a supportive social context. This shift towards a collaborative learning model aligns with current research on social constructivist learning and provides potential for enhancing collective problem-solving competencies, a crucial skill for future generations.
5. Future research directions could examine the interaction between science beliefs and other variables within specific contexts, such as cultural backgrounds, learning styles, or socioeconomic status. Additionally, longitudinal studies investigating the persistence of belief-based interventions and their impact on long-term academic achievement and career choices in science-related fields would be valuable contributions to the body of knowledge.

By implementing these recommendations and pursuing further research endeavors, stakeholders can collectively contribute to the development of effective strategies for enhancing science problem-solving abilities in students, ultimately fostering a generation of critical thinkers and confident problem-solvers equipped to tackle the challenges of the future.

Compliance with Ethical Standards

The study carefully protected participants' rights and privacy. They were fully informed about the research and could withdraw at any time. Researchers minimized risks and offered support if needed. They were also upfront about any conflicts of interest. To ensure accurate and unbiased findings, the study cited sources properly, secured

data, minimized researcher bias, and consulted with experts. Finally, the research was conducted solely to advance knowledge, not for personal gain.

Acknowledgments

The researcher would like to extend her heartfelt gratitude to everyone who, in some way or another, had contributed to the conception and completion of this work, especially to:

Dr. Marife S. Magpantay, her research adviser, for her valuable suggestions, ideas, comments and encouragements, untiring professional guidance and in-depth analysis which led to the completion of this study; Dr. Luis Miguel P. Saludez, for his untiring encouragements, guidance and continues follow ups to the researcher to complete the study; Dr. Vanessa C. Zubieta & Dr. Shiela M. Manzanilla her research panels, for their helpful insights on how to enhance the subjective aspect of the research's contents and credibility, for assessing the paper, for providing helpful feedback on how to improve the study and Dr. Teresita V. de la Cruz, and Dr. John C. Chua her external panel, for giving assistance and devoting valuable time to reviewing the paper and for insightful recommendations and comments that helped this study come to completion;

Jan Fern Historillo, her mentor and school's research program coordinator, for his valuable and untiring support to improve the research paper.

Senior Program Specialist, Kyle David V. Atienza and Master Teachers, Eileen S. Salcedo, Arnold T. Baldevia, Fristian Anthony Dormido, and Gueller V. Salazar her validators, who offered encouraging words and made an effort in sharing their expertise for the development of the researcher's instrument.

Dr. Ma. Corazon A. Borja, her School Principal for allowing the researcher to conduct her study; Mrs. Rizza V. Ebora, Mrs. Graciabelle Salumbides, Mrs. Nuela P. Panganiban, Mrs. Gemma J. Jandusay, Mrs. Imelda M. Laririt, Mrs. Elma M. Monroyo, Mrs. Creselda M. Paulo, Mr. Roy M. Merlin & Mr. Jobert M. Mogol for unsolicited advice and unwavering support, and encouragement which really helped the researcher to get through the study.

Her friends and sisters by heart, Mrs. Estrellita O. Limpiada, Mrs. Laiza Marie J. Pantoja and Mrs. Jenny M. Tatierra for their unwavering support to get through this study.

Her family, Papa Roberto, Mama Lucy, & her siblings for their unwavering support and sisters-in-law, Ate Allen, Ate Lorna, Ate Rhea, and Ate Erlinda for helping the researcher invaluable assistance during both the initial and final stages of this endeavor.

Her husband Salvador and daughter Lia Roziel for unwavering support and encouragement which have been instrumental in the completion of her study. Their belief and willingness to share the burden throughout the researcher academic journey provided her the strength and motivation to persevere.

Her Victory in Jesus Assembly of God Church for unwavering spiritual support and prayers she received throughout her studies.

ABSTRACT

Nilalayon ng pag-aaral na suriin ang epekto ng emosyon sa kalusugan ng tao. Upang matukoy ang target na kalahok, ginamit ang *purposive sampling,* gayundin nakatulong ang pagsasagawa ng FGD, pagre-rekord at pagta-transcribe ng mga salaysay/danas ukol sa bakas ng luha ng bawat kalahok. Batay sa naging resulta ng pag-aaral, may malalim na implikasyon sa kalusugan ang pagluha ng isang tao kabilang na rito ang mga pagbabago sa tibok ng puso, mga antas ng *stress* at iba pang mga tugon sa pisyolohikal at mental. Malaki ang ambag ng pag-aaral para sa mas malalim na pag-unawa sa ugnayan ng emosyon at kalusugan.

Mga susing salita: *naratibo, luha, epekto, emosyon, kalusugan*

INTRODUCTION

Ang pag-aaral na ito ay naglalayong mailahad ang epekto ng emosyon sa kalusugan ng tao. Sa ngayon, maraming tao ang nakakaranas ng emosyonal na mga problema tulad ng depresyon, pagkabalisa, at pag-aalala. Sa pamamagitan ng pananaliksik na ito, natutukoy kung paano nakakaapekto ang mga emosyon sa kalusugan ng tao, lalo na sa pisikal nitong antas.

Ang kakayahan ng tao na maipahayag ang kanilang mga damdamin ay isang mahalagang aspeto ng buhay. Sa paglipas ng mga dekada, mas lalo nating nauunawaan ang malalim na ugnayan ng emosyon sa kalusugan ng isang tao. Sa pag-aaral na ito, inuukit ang landas tungo sa pag-unawa sa epekto ng emosyon, na maaaring ipahayag sa pamamagitan ng pagluha, sa pangkalahatang kalusugan ng isang tao.

Ayon sa isang pag-aaral, ang emosyon ay may malaking epekto sa kalusugan ng tao. Ang mga taong may malalim na emosyonal na problema ay maaaring magkaroon ng sakit sa puso, kanser at iba pang pisikal na karamdaman. Sa pamamagitan ng pananaliksik na ito, matutukoy kung paano maiiwasan ang mga ganitong sakit sa pamamagitan ng pagkontrol sa emosyon.

Ang pag-iyak ay hindi lamang nagbibigay ng agarang lunas sa sakit ngunit nagbibigay din nang pangmatagalang benepisyo sa kalusugan. Hindi lingid sa kaalaman ng marami na ang pagsugpo/pagpigil ng luha ay itinuturing na mapanganib para sa ating pisikal na kalusugan. Gaya ng ipinakita ni Cornelius (1986), sa mass media sa loob ng 130 taon (mula 1850 hanggang 1985), ang nangingibabaw na paniniwala ay ang pag-iyak at emosyonal na pagpapahayag sa pangkalahatan ay itinuturing na kapaki-pakinabang para sa buhay ng isang tao samantalang ang pagpigil sa kanyang mga luha ay maaaring magdulot ng masamang epekto sa kalusugan. Ang pananakit ng ulo, ulser, hypertension at insomnia ay itinuturing na mga halimbawa ng mga sakit na itinuturing na resulta ng hindi pag-iyak.

Mayroon ding mga pag-aaral na sinusukat ang aktibidad ng cardiovascular bago, habang at pagkatapos ng pag-iyak, bagama't hindi madaling matukoy ang eksaktong simula at timing nito (Hendriks, Rottenberg & Vingerhoets, 2007). Ang mga nabanggit na pag-aaral ay malinaw na nagpapakita na mayroong isang paunang pagtaas sa rate ng puso at ang pag-iyak ay nauugnay sa pisikal na pagpapasigla.

Gayunpaman, mayroon ding katibayan na sa mga susunod na yugto, ang pag-iyak ay nauugnay sa pagtaas ng aktibidad ng parasympathetic nervous system, partikular na nauugnay sa pagbawi at pagpapahinga (ngunit may kawalan ng kapangyarihan at passive coping). Ayon kina Rottenberg, Wilhelm, Gross at Gotlib (2003), nag-ulat ng mga kagiliw-giliw na natuklasan na nagmumungkahi na ang pag-iyak ay maaaring pasiglahin ang parasympathetic physiological activity (tulad ng na-index ng respiratory sinus arrhythmia, RSA) sa mga malulusog na indibidwal, ngunit hindi sa mga nalulumbay na indibidwal.

Ayon kay French (1939), ang kanyang mga klinikal na obserbasyon ay humantong sa kanya upang maniwala na maraming mga pag-atake ng hika ang natapos nang magsimula ang pag-iyak. Iniulat ni Kepecs, Robin, at Brunner (1951) ang isang relasyon sa pagitan ng pag-iyak at ang pagtatago ng mga cantharides sa balat. Kapag nag-uudyok ng mga emosyonal na estado sa pamamagitan ng hipnosis, ipinakita ng mga may-akda na ang pagsugpo sa pag-iyak sa simula ay nabawasan ang rate ng pagtatago, na sinusundan ng pagtaas sa patuloy na pagsugpo.

Ang unang pag-aaral sa mga pasyente na may rheumatoid arthritis (RA), ay iminungkahi na ang daloy ng luha ay nagbawas ng mga negatibong epekto ng stress sa

neuroendocrine at immune response sa peripheral blood (Ishii, Nagashima, Tanno, Nakajima at Yoshino, 2003).

Sa pag-iisip na ito, ang pag-aaral ni Rottenberg et al. (2003) at Hendriks et al. (2007) ay nagpakita na ang pag-iyak ay talagang nauugnay sa parasympathetic restorative na mekanismo, ngunit hindi posible na tapusin kung ang parasympathetic na aktibidad na ito ay maaaring makamit o sinasamahan lamang ng mga luha kaysa sa kanilang mga kahihinatnan (Hendriks et al., 2007).

Ang pag-iyak ay itinuturing din na isang masakit na pag-uugali sa sistema ng pagmamarka ng sakit ng neonatal (Stevens, Johnston, at Gibbins, 2000). Sina Vingerhoets at Kirschbaum (1997) ay may mga babaeng paksa na nanonood ng mga romantikong pelikula at sinukat ang kanilang mood at mga antas ng salivary cortisol. Bagama't ipinakita ang isang katamtaman ngunit makabuluhang ugnayan sa pagitan ng naiulat sa sarili na intensity ng pag-iyak at pagbawas ng cortisol, walang nakitang pagkakaiba sa mga antas ng hormone ng mga umiiyak at hindi sumisigaw pagkatapos ng pelikula.

Napansin din ng iba pang mga may-akda na ang mga mas malubhang nalulumbay na mga pasyente ay bihirang umiyak (Kottler, 1996; Patel, 1993). Naiulat pa na ang mga taong may posttraumatic stress disorder ay nagpapakita ng emosyonal na pamamanhid, na pumipigil sa pagpapakita ng anumang emosyonal na reaksyon (Litz et al., 1997).

Isa rin itong ilustrasyon ng katotohanan na ang (hindi) pag-iyak ay dapat minsang ituring na resulta sa halip na isang determinant ng katayuan sa kalusugan. Sinuri ni Gross at Levenson (1993) ang mga epekto ng pagpigil sa kalungkutan at kaligayahan habang nanonood ng pelikula sa physiological functioning. Ang kanilang mga resulta ay nagpapahiwatig na sa parehong mga kondisyon ay may katibayan ng pagtaas ng nagkakasundo na pag-activate ng cardiovascular system.

Sa isang susunod na pag-aaral, ang mga katulad na resulta ay natagpuan tungkol sa pagkasuklam (Gross, 1998). Lumilitaw rin na ang pagsugpo sa anumang hilig na tumugon sa mga emosyon ay tila humahantong sa isang matalim na pagtaas sa pisyolohikal na makasalanang aktibidad na sa katagalan ay maaaring humantong sa pinsala sa kalusugan. Dahil sa ilalim ng normal na mga kalagayan ay bihirang maramdaman ng mga tao ang pagnanasang umiyak, malamang na ang pagsupil dito ay maaaring makaapekto nang malaki sa kalagayan ng kalusugan.

Gayunpaman, ang pag-aaral ni Labott at Martin (1987), na partikular na nakatutok sa hypothesis na ang pag-iyak ay maaaring kumilos bilang isang moderating variable, nagpakita ng positibong epekto nito sa mga sitwasyon ng conflict, stress at tensyon. Ang mga resulta ng pag-aaral na ito ay hindi sumusuporta sa hypothesis na ang pag-iyak ay nagpapadali sa mga proseso ng pagkaya, na humahantong sa mas mahusay na mood pagkatapos ng pagkakalantad sa isang stressor.

Bukod pa rito, dalawang pag-aaral ang tahasang nakatuon sa mga epekto ng pagpapahayag ng 13 emosyon sa mga sitwasyon ng pangungulila. Pinag-aralan ni Znoj (1997) ang kaligayahan ng mga babaeng nawalan ng asawa. Ang pag-iyak sa mga haka-

haka na pag-uusap sa kanilang namatay na asawa ay natagpuan na walang koneksyon sa kaligayahan sa hinaharap.

Gaya ng nabanggit sa itaas, hindi dapat kaligtaan na ang pag-iyak ay maaari ding magkaroon ng malakas na epekto sa panlipunang kapaligiran. Kung totoo na ang pag-iyak ay may malakas na potensyal na makakuha ng suporta sa lipunan at upang itaguyod ang kalakip, maaaring inaasahan na sa pamamagitan din ng rutang ito ang pag-iyak ay nagtataguyod ng kalusugan. Mayroong sapat na katibayan na ang suporta sa lipunan ay maaaring makaimpluwensya sa mga proseso ng psychobiological at kumilos bilang isang buffer laban sa mga negatibong epekto sa kalusugan ng mga nakababahalang kondisyon (e.g. Cobb, 1976; Uchino et al., 1996).

Ang pagkakaiba ay kadalasang ginagawa sa pagitan ng emosyonal na suporta (nag-aalok ng balikat at braso sa paligid mo, nakakaaliw na mga salita), impormasyonal na suporta (payo at kapaki-pakinabang na mga mungkahi kung paano haharapin ang mga problema) at instrumental na suporta (nag-aalok ng tulong, pagpapahiram ng pera o mga tool). Mahigpit na itinataguyod ni Bowlby (1972) sa kanyang tesis na ang pag-iyak ay pinakamahalaga sa pagpapadali ng attachment sa mga kabataan, kasama ang iba pang mga pag-uugali tulad ng pagngiti, pagsuso, at pagsunod.

Ipagpalagay na ang partikular na function ng pag-iyak ay hindi pa ganap na nawala sa adulthood, ito ay kagiliw-giliw na isaalang-alang ang mga resulta ng isang kamakailang pag-aaral ni Zachariah (1996) sa 118 primiparous na mga buntis na kababaihan. Sinuri ng may-akda na ito ang mga predictors ng psychological well-being sa espesyal na grupong ito at nalaman na ang pinakamahalaga ay ang attachment ng mag-asawa, stress sa buhay, at suporta sa lipunan. Nakatutukso na isipin na sa grupong ito ang pag-iyak ay nagpapadali ng pagkakadikit, na ginagawang mas functional na kahit isang minorya ng mga buntis na kababaihan ay may isang medyo mababang threshold upang lumuha, lalo na sa unang yugto ng pagbubuntis (Lutjens, 1998).

Ang neuroticism o negatibong epekto ay kilala na negatibong nauugnay sa subjective na kalusugan, ngunit sa pangkalahatan ay walang kaugnayan sa mas layunin na mga tagapagpahiwatig ng kalusugan (Watson & Pennebaker, 1989). Higit pa rito, ang mga kababaihan na nakakuha ng mataas na marka sa katatagan (na nauugnay sa kakayahang makatiis ng stress) ay tila hindi gaanong umiyak at hindi komportable pagkatapos ng pag-iyak kaysa sa mga kababaihan na mababa sa variable na ito (Schlosser, binanggit sa Goldberg (1987). Partikular, kilala ang pagsugpo sa negatibong kaugnayan nito sa kalagayang pangkalusugan (at maging pisikal) (Schwartz, 1990; Schwartz at Kline, 1995).

Sa kasalukuyan, maraming tao ang nakakaranas ng mga problema sa pag-iisip dahil sa mga pangyayari sa buhay tulad ng pandemya, krisis sa ekonomiya at iba pang personal na problema. Sa pamamagitan ng pananaliksik na ito, maaaring maibigay ang mga solusyon upang maibsan ang emosyonal na problema ng mga tao at mapanatili ang kanilang kalusugan.

Research Question

Ang pag-aaral na ito ay naglalayong masuri ang mga tema ukol sa naratibo ng luha at epekto nito sa emosyonal na kalusugan ng bawat kalahok. Espisipiko namang sasagutin ng pag-aaral ang tanong sa ibaba na;

Ano-anong temang nangingibabaw batay sa danas ukol sa pagluha at ang epekto sa emosyonal na estado ng kalusugan ng bawat kalahok?

METHODOLOGY

Research Design

Deskriptibo-kwalitatibong metodo ang ginamit sa pananaliksik na ito. *Case study* ang metodong ginamit ng mananaliksik. Upang maging mas balido at maaasahan ang mga datos, ginamit ang talatanungan at panayam sa pag-aaral upang makuha ang detalye ng epekto ng luha sa kanilang emosyonal na kalusugan at aanalisahin ito batay sa pagko-*coding*.

Locale of the Study

Ang pag-aaral ay isinagawa sa komunidad ng Barangay San Lorenzo, Kitaotao, Bukidnon sa taong 2023.

Respondents of the Study

Ang mga kalahok ng pag-aaral ay binubuo ng limang (5) lalaki at limang (5) babae, edad 18 hanggang 60, na may iba't ibang emosyonal na karanasan.

Sampling Procedure

Pinili ang mga kalahok mula sa mga komunidad at organisasyon sa pamamagitan ng *purposive sampling.* Ang mga kalahok ay hiniling na magbigay ng kaalamang pahintulot na lumahok sa pag-aaral.

Ginamit ang Focus Group Discussion (FGD) para tuklasin ang mga personal na karanasan ng mga kalahok sa epekto ng mga emosyon sa kanilang kalusugan. Ipinasulat din sa bawat kalahok ang kanilang sariling naratibo o kuwento ukol sa pagpapahayag ng kanilang emosyon at ang epekto nito sa kanilang emosyon. Ini-rekord lahat ng mananaliksik ang naging talakayan ng kanyang mga naging respondente.

Instrument of the Study

Sa pag-aaral na ito, ang instrumentong ginamit ay ang talatanungan na pinasagutan sa mga napiling kalahok at nagsagawa ng panayam na may edad 18 hanggang 60.

Data Gathering Procedure

Ang mananaliksik ay humingi ng pahintulot sa kapitan ng baranggay sa San Lorenzo, Kitaotao, Bukidnon at sa mga *Barangay Health Workers (BHW).* Ibinigay ng mananaliksik ang talatanungan sa mga taong natukoy para maging kalahok sa pananaliksik. Isinagawa ang pangangalap ng datos sa taong 2023.

Data Analysis

Para sa mas malinaw na interpretasyon ng mga datos na nakalap mula sa panayam at talatanungan, itinala ng mananaliksik ang mga tugon ng bawat kalahok batay sa paulit-ulit na tema. Matapos maitala ang mga paulit-ulit na tema, nagsagawa ng coding, pagkakategorya, at pagbibigay-kahulugan sa datos upang matuklasan ang mga umuulit na tema. Kasama rin dito ang pag-unawa sa mga pinagbabatayan na kahulugan, pattern, at tema sa loob ng nakolektang datos.

RESULTS AND DISCUSSION

Ang seksyong ito ay nagpapakita ng pagsusuri at interpretasyon ng mga datos. Ang tabular at tekstuwal na presentasyon ay ginagamit upang maipahayag ang pagsusuri ng pahid ng luha at epekto ng emosyon sa kalusugan.

Epekto ng Emosyon sa Kalusugan

Ang pagsusuri sa epekto ng emosyon sa kalusugan ay nakakuha ng mga tema na may kaugnayan sa positibo at negatibong epekto nito. Mula sa pananaw ng mga kalahok mayroong tatlong (3) tema na lumitaw: (a) emosyonal na kalusugan (b) pagbabago ng *mood* at *stress* (c) pamamahala ng emosyon. Ang mga koda at temang ito ay inilalarawan sa Talahanayan 1.

Emosyonal na Kalusugan

Ang unang tema, emosyonal na kalusugan, ay nagpapahayag tungkol sa mga epekto ng luha sa katawan ng tao, mga positibo at negatibong epekto sa kalusugan, at pisyolohikal na reaksyon. Sa mga kalahok, ang pahid ng luha ay nagbibigay ng iba’t ibang epekto sa katawan.

Sa pahayag ng mga kalahok na nakakaapekto ang pagpahid ng luha sa kanilang katawan sa pamamagitan ng pagiging malungkot at masakit ang ulo pagkatapos umiyak. Ang pag-iyak ay nakakawala ng sakit na nararamdaman. Minsan ay nakakapagod, nakapanghihina at gustong mapag-isa. Pinatunayan ng ikaapat na kalahok na, “Nakakaapekto ito sa pamamagitan ng paglabas ng aking emosyon na maaaring maging sanhi ng panghihina ng katawan, pagkakaroon ng sipon, pagkirot ng dibdib, at maaari ding mawalan ng ganang kumain at magkasakit bilang bunga nito.” Dagdag naman ng ikaanim na kalahok na, “Pagkatapos kong mapunasan ang luha ko sa tuwing umiiyak ako

ay gumagaan ito. Dahil sa pagpunas ko nito ay iniisip ko na kaya ko to! At pinapalakas nito ang loob ko."

Talahanayan 1. Presentasyon ng mga datos na may tema, kategorya at koda tungkol sa epekto ng luha sa emosyon ng kalusugan

TEMA	KATEGORYA	KODA
Emosyonal na Kalusugan	Pisyolohikal na Epekto	Epekto sa Katawan Positibong Epekto Negatibong Epekto Pisyolohikal na Reaksyon
Pagbabago ng Mood at Stress	Mental na Epekto	Resulta sa Kalusugan Pagbabago ng Mood at Stress Emosyon/Nararamdaman Dahilan ng Pagluha Implikasyon sa Antas ng Stress
Pamamahala ng Emosyon	Epektibong Paraan ng Pangangalaga sa Kalusugan	Estratehiya/Interbensyon Mapahusay ang Kalusugan

Mayroong mga positibong epekto ng luha sa kalusugan na nabanggit ng mga kalahok. Ayon sa unang kalahok, *"Ang positibo kay makagaan sa lawas kay makagawas ang gibati human ug hilak."* Sinang-ayonan naman ng ikalawang kalahok na *"Kung makahilak mawala ang sakit nga gibati sa dughan."* Pagkatapos mailabas ang emosyon, mas nagkakaroon ang isang tao ng lakas ng loob na harapin ang mga hamon ng buhay. Nagiging mas matatag ang isang tao dahil naipalabas niya ang kaniyang nararamdaman.

Sa kabilang banda, mayroon din itong mga negatibong epekto sa kalusugan ng tao. Ayon sa ikatlong kalahok, "Ang negatibong epekto sa aking katawan ay nanghihina ako." Sinabi naman ng ikasampung kalahok na, *"Pero, naa sad negatibo kay makakapoy sa lawas human ug hilak."* Binaggit naman ng ikaapat na kalahok na, "Sa negatibong epekto naman ay maaaring magkaroon ng depresyon ang isang tao kapag paulit-ulit niya iyong naramdaman o hindi mapigilan ang emosyon at hahantong sa pagkitil ng sariling buhay." Kaya, mas mainam na alam natin ang pagkontrol ng ating sariling emosyon para maiwasan ang mga masasamang pangyayari.

Mayroon ding mga pisyolohikal na reaksyon na naoobserbahan sa katawan pagkatapos punasan ang mga luha. Sa salaysay ng unang kalahok, "*Ang mabati nako kay kakapoy, dili ganahan mo lihok, ug bug-at sa lawas.*" Ayon naman sa ikaapat na kalahok, "Pagkatapos punasan ang mga luha ay makakaramdam ako ng pagod, antok, pananakit ng mata dahil sa pagluha. Magiging magaan din ang aking pakiramdam dahil sa luhang nailabas dahil sa sama ng loob o sa sakit na nararamdaman." Dagdag naman ng ikaanim na kalahok, "Pagkatapos kong punasan ang luha ko ay naging masigla ulit ang katawan ko, dahil kapag nagpunas ako ng luha ko, nilalakasan ko ang loob ko. Normal lang sa tao na maluha kapag nasaktan pero may katumbas naman ito na ngiti

pagkatapos.” Saad naman ng ikasiyam na kalahok, “Ang pagluha ay nakawala ng sakit sa damdamin at ito’y nakabawas sa stress at pananakit.”

Itinuturing ni Hamilton (1982) ang patuloy na pag-iyak bilang hindi gaanong epektibo para makapagbigay ng kaginhawahan. Inilalarawan ng may-akda na ito ang pag-iyak bilang isang tampok ng mas banayad na mga anyo ng depresyon, samantalang sa matinding depresyon, ang mga pasyente ay maaaring hindi na kayang umiyak.

Pagbabago ng *Mood* at *Stress*

Ang pangalawang tema na nabuo ay pagbabago ng *mood* at *stress*. Nababago ang *mood* at *stress* ng isang tao depende sa kaniyang pinagdaan. Nagsasaad ito na maaaring mabago ang *mood* kapag ang isang tao ay nakaramdam ng mga di kanais-nais na pangyayari sa buhay. Mayroong mga natuklasan na pagbabago sa mga aspekto ng kalusugan gaya na lamang ng pagkakaroon ng presyon ng dugo at tibok ng puso. Pinatutunayan sa pahayag ng unang kalahok na, *“Mabag-o kay kung mo hilak kay motaas ang dugo ug mo paspas ang pitik sa kasing-kasing.”* Bilang karagdagan, sinabi ng ikawalong kalahok na, “Maaaring mabago ang presyon ng dugo at tibok ng puso dahil sa iba’t ibang kadahilanan tulad ng pisikal na aktibidad, stress, pagkain, kapaligiran, hormonal na mga pagbabago, at iba pang mga kondisyon sa kalusugan.”

Pagkatapos magpunas ng luha, nagbabago rin ang mood at antas ng *stress* ng isang tao. Sa pahayag ng ikaapat na kalahok na, “Pagkatapos lumuha ay naiilang akong makipaghalubilo sa mga taong nakapaligid sa akin. Tinatamad din akong magsalita, dahilan kung bakit sumasama ang timpla ng mukha o tingin ko sa mga taong nakikita ko at mapagkakamalang galit ako sa kanila.” Sinabi naman ng ikalimang kalahok na, “Magbabago ang aking mood kapag pinalabas ko na lahat ang sakit sa aking damdamin.” Saad naman ng ikaanim na kalahok na, “Pagpahid ko ng luha ay iniisip ko natapos na ang sakit. Kaya umiisip nalang ako ng masaya para malibang. Ang tao naman ay may iba’t ibang paraan kung paano dalhin ang mood or stress.” Dagdag naman ng ikasampung kalahok na, *“Kahuman ug hilak, medyo okay ang pamati sa lawas. Ug makuha-kuhaan ang problema kay nakagawas ang gibati.”*

Mayroon ding mga emosyonal na nararamdaman pagkatapos punasan ang mga luha. Ayon sa ikalawang kalahok, *“Nigaan ang paminaw human nagpahid sa luha.”* Isinalaysay din ng ikaanim na kalahok ang kanyang nararamdaman, sabi niya na, “Matapos kung punasan ang luha ko ay masaya na ako ulit. Maiksi lang ang buhay ng tao kaya bawal ma *stress.* Happy lang, walang *ending.* Mayroon naman akong mahal sa buhay na nagbibigay lakas ng loob ko sa bawat sitwasyon.” Ipinahayag naman ng ikasiyam na kalahok ang kaniyang emosyon, “Nararamdaman ko ang magandang ginhawa pagkatapos lumuha dahil na ilabas ko ang sakit ng dinadala na problema. Ang pagluha ay isang solusyon para mawawala ang ‘yong stress at pighati ng damdamin. Ito’y nakakatulong sa ating kalusugan para mag iba ang ating pananaw sa buhay.”

Sa modernong teorya ng stress, ang pag-uugali sa pagkaya ay tumutukoy sa mga pagsisikap (pag-uugali at nagbibigay-malay) upang alisin ang mga stressor o bawasan ang emosyonal na pagkabalisa na dulot nito. Ang isang pangkalahatang pagkakaiba ay

maaaring gawin sa pagitan ng pagharap na nakatuon sa problema at pagharap na nakatuon sa emosyon (Lazarus & Folkman, 1984; Steptoe, 1991).

Ang pagharap na nakatuon sa problema ay tumutukoy sa mga pagsisikap na naglalayong alisin ang mga stressor o bawasan ang kanilang intensity. Sa kabilang banda, ang emotion-focused coping ay tumutukoy sa mga pagsisikap na naglalayong bawasan ang intensity ng mga emosyon at i-regulate ang mga ito nang tama.

Pamamahala ng Emosyon

Pamamahala ng emosyon ang pangatlong temang lumitaw sa pag-aaral. Mayroong mga natuklasang impormasyon na nagsilbing batayan para sa pagbuo ng mga estratehiya sa pamamahala ng emosyon at mga interbensyon upang mapabuti ang mga resulta sa kalusugan. Sa isang panayam, sinabi ng ikalawang kalahok na, *"Magpa check-up sa health center"* kapag nakaramdam ng kakaibang sakit. Upang maiwasan ang pag-iyak sa sitwasyong pinagdaanan, ang ikatlong kalahok ay naglalaro ng badminton at gumagamit ng *cellphone* saka manonood ng mga nakakaaliw na *videos*, at nakikinig ng mga musika para gumaan ang nararamdaman niya.

Ayon naman sa ikaapat na kalahok, "Kailangan sa buhay ng bawat tao ay mayroon tayong kahit isang taong mapagkakatiwalaan at masasandalan upang may masabihan o may makausap tao sa panahong kailangan natin ng tulong, gabay, alalay at malabasan ng problema o hinanakit sa buhay." Kinakailangan na ibahagi sa isang kaibigan o taong mapagkakatiwalaan upang maibsan ang sakit na nararamdaman ng isang tao. Binanggit ng ikawalong kalahok na kinakailangang konsultahin ang isang propesyonal sa kalusugan para sa tamang pangangalaga. Dagdag pa niya, "Huwag nating hayaan ang ating mga sarili na kimkimin ang sakit kahit alam nating hindi na natin kaya. Wala namang masama sa paglabas ng emosyon, mas masama ang pinipilit natin ang ating sarili na maging okay kahit hindi naman."

Para mas mapahusay ang kalusugan ng isang tao ay dapat mailabas ang kaniyang emosyon sa pamamagitan ng pag-iiyak dahil ang pag-iyak ay nakakatulong sa ating katawan. Ayon sa salaysay ng unang kalahok, *"Dili kaayo magpa stress ug ipagawas ang gibati pinaagi sa paghilak."* Sinabi naman ng ikaapat na kalahok na, "Natuklasan ko ito batay sa aking karanasan sa buhay na hindi pala nagiging batayan ang pagluha dahil mahina ka, kundi lumuha ka para mailabas mo 'yong sakit at emosyon na iyong kinikimkim upang gumaan ang iyong kalooban. Magagamit mo rin ito sa pang araw-araw upang maging malakas ka sa mga susunod na hamon sa iyong buhay." Nagbigay naman ng saloobin ang ikaanim na kalahok, "Naisip ko itong inspirasyon lalo na sa mga mahal ko sa buhay dahil minsan kapag nakita ka nilang malungkot ay naaapektuhan din sila. Positibo lang lagi. Bawat problema ay may solusyon." Dagdag ng ikapitong kalahok, *"Makagaan sa gibati kung mapagawas ang gibati pinaagi sa paghilak."*

Samakatuwid, may malakas na pagkakatulad sa mga estratehiya sa regulasyon ng emosyon na binanggit sa itaas. Iminungkahi pa ni Lipe (1980) na ang pag-iyak ay maaaring magbago ng physiological states upang mapadali ang pag-uugali sa paglutas ng problema. Kaya, ang pag-iyak ay maaaring potensyal na magsilbi sa parehong mga function at maaaring makatulong na baguhin ang hindi nakokontrol na mga sitwasyon sa

medyo mas nakokontrol na mga sitwasyon, sa gayon ay makabuluhang binabawasan ang stress.

Pisyolohikal na Epekto

Ipinakita ng mga pagsusuri na ang pagpahid ng luha ay nagdulot ng pansamantalang pagtaas ng presyon ng dugo, at may pagbabago sa tibok ng puso. Ito ay nagpapahiwatig na ang mga emosyonal na proseso at pisyolohikal na mga tugon ay maaaring maiugnay. Bilang suporta sa pag-aaral nina Labott at Martin (1987) nabanggit sa Bylsma, Croon, at Vingerhoets (2008) na isang coping mechanism ang pagluha ayon sa imbestigasyon. Batay sa naging resulta, ang isang indibidwal na may maraming stressor na umiiyak nang madalas hindi nakakaranas nang ginhawa bagkus mas lumala ang kanyang kondisyon.

Bilang susog sa kaisipan, sinuri din sa pag-aaral nina Rottenberg, Gross, at Gotlib (2005) ang emosyonal na konteksto ng mga taong nakaranas ng depresyon. Natuklasan sa pananaliksik na ito na ang mga taong may malalim na depresyon ay maaaring kulang sa sensibilidad sa mga emosyonal na sitwasyon. Ibig sabihin, ang kanilang mga reaksyon sa mga kaganapan at sitwasyon ay maaaring labis o hindi naaayon sa mga normal na emosyonal na tugon. Sa kasong ito, ang labis na pagluha ay maaaring dahil sa kakulangan ng pagiging sensitibo sa mga emosyonal na sitwasyon.

Sa pag-aaral na ito, sinisiyasat ng mga mananaliksik ang proseso ng klasikal na pagkondisyon ng mga ekspresyon ng mukha na nauugnay sa mga luha. Natuklasan sa pananaliksik na ang pagluha ay maaaring sanhi ng emosyonal na mga karanasan. Ibig sabihin, ang mga tao ay maaaring awtomatikong bumuo ng isang nakakaiyak na tugon sa mga sitwasyon kung saan sila ay nakakaranas ng isang emosyonal na pagkakataon (Vingerhoets, Van Tilburg, Boelhouwer, 2011).

Mental na Epekto

Ang mga ehersisyo at obserbasyon ng mga kalahok ay nagpakita ng pinabuting kalooban pagkatapos magpunas ng luha. Napansin din nila ang pagbaba ng antas ng *stress.* Ipinapahiwatig nito na ang mga bakas ng luha ay may positibong epekto sa sikolohikal.

Nalaman sa pag-aaral nina Rottenberg, Ray, at Gross (2007) na ang pag-iyak, kasama ng iba pang mga emosyon, ay maaaring makaapekto sa kalusugan ng isip ng isang tao. Itinatampok ng pag-aaral na ito ang kahalagahan ng mga emosyon sa pag-unawa sa estado ng isang indibidwal.

Natuklasan din ng isang pag-aaral nina Bylsma, Croon, at Vingerhoets (2008) na ang pag-iyak ay maaaring magdulot ng mga pagbabago sa pag-uugali sa ibang tao, na nakakaapekto sa mga relasyon at sa pangkalahatang kagalingan ng indibidwal. Ang pag-aaral na ito ay nakatuon sa epekto ng pag-iyak sa mga aspeto ng pang-araw-araw na buhay ng isang tao.

Conclusions

Batay sa mga natuklasan ng pag-aaral, narito ang mga sumusunod na kongklusyon:

May mga epektong pisyolohikal ang pagtatago/pagpigil ng luha na maaaring magbigay daan sa mas malalim na pag-unawa sa kaugnayan sa pagitan ng mga emosyon at kalusugan. Ang pagluha ay maaaring magdulot ng mga pansamantalang pagbabago sa ilang mga sintomas ng pisyolohikal, ngunit kailangan pa rin ang masusing pagsasaliksik upang matukoy ang kanilang kalikasan.

Ipinakita ng mga pag-aaral na maaaring makaapekto sa *mood* at *stress* pagkatapos maipalabas ang sakit ng nararamdaman sa pamamagitan ng pagluha. Ang pagbuo ng isang masusing pagsusuri ng mga emosyonal na aspekto ay maaaring makatulong sa masusing pagsasaliksik sa kalusugan ng isip at magbigay-daan para sa mga interbensyon.

Ang pag-aaral ay nagbibigay daan para sa pagbuo ng mga diskarte sa pamamahala ng emosyon at mga interbensyon para sa mas mabuting kalusugan. Ang impormasyong nakuha mula sa na pananaliksik ay maaaring magsilbing batayan para sa mga programang pangkalusugan upang itaguyod ang mental at pisikal na kalusugan.

Recommendations

Batay sa mga natuklasan, lubos na inirerekomenda ang masusing pagsisiyasat sa mga aspeto ng pisyolohikal na epekto ng pagpahid ng luha, kabilang ang presyon ng dugo, tibok ng puso, at iba pang mga tagapagpahiwatig ng kalusugan. Makakatulong ito na mas makita ang tunay na epekto sa iyong katawan.

Kinakailangan ang masusing pagsusuri sa mga aspetong sikolohikal tulad ng *mood* at *stress.* Ang isang mas detalyadong pagsusuri ay makakatulong na maunawaan kung paano nakakaapekto ang mga pahid ng luha sa kalusugan ng isip.

Inirerekomenda ang pagsasanay sa emosyonal na kaayusan bilang bahagi ng interbensyon. Maaaring kabilang dito ang mga diskarte sa pagpapahayag ng emosyonal at iba pang mga pagsasanay upang mas mahusay na pamahalaan ang mga emosyon.

Ang mga natuklasan sa pananaliksik ay maaaring magsilbing batayan para sa pampublikong edukasyon tungkol sa kahalagahan ng pakikipagtalastasan ng mga emosyon nang naaangkop. Mayroon itong mga benepisyo sa kalusugan at nagsisilbing pangunahing hakbang sa pangangalaga sa sarili.

Inirerekomenda ang karagdagang pananaliksik sa lugar na ito upang lubos na maunawaan ang epekto ng pahid ng luha sa iba't ibang sektor ng lipunan. Ang mas detalyadong pagsusuri ay maaaring makatulong na linawin ang iba't ibang mga relasyon at ang epekto nito sa kalusugan.

Acknowledgments

Nais kong ipahayag ang aking taos-pusong pasasalamat sa lahat ng sumuporta, nagbigay inspirasyon at nag-ambag sa pag-unlad at tagumpay ng pag-aaral na ito.

Sa aking tagapayo o guro, Dr. Freddielyn B. Pontemaryor, sa walang sawang payo at suporta sa buong proseso ng pagsasagawa ng pag-aaral. Ang iyong mga payo at rekomendasyon ay nagbigay ng liwanag at direksyon sa aking paghahanap ng impormasyon at sa pagpapahayag ng mensaheng sinusubukang ihatid ng aking pananaliksik.

Sa mga kalahok ng aking pananaliksik sa pakikilahok at pakikipagtulungan sa pagsasagawa ng panayam at sa pagpapahayag ng kanilang mga karanasan. Binigyan nila ng buhay at konteksto ang mga konsepto at isyung tinalakay sa pag-aaral na ito.

Sa mga may-akda ng mga sanggunian at literatura na aking ginamit upang ibahagi ang inyong kaalaman at pananaliksik. Ang inyong pagsulat ay nagbigay ng lakas at pundasyon sa aking mga pananaw at pahayag at naging batayan para sa isang mas mahusay at mas malalim na pag-unawa sa pananaliksik na ito.

Sa aking mga magulang at pamilya sa walang sawang suporta, pang-unawa at pagmamahal. Ang inyong pasensya at suporta ay nagbigay sa kanila ng lakas upang mapanatili ang aking determinasyon na isagawa ang pananaliksik na ito.

At sa Panginoon sa lahat ng mga biyayang patuloy niyang ibinibigay. Ang kanyang patnubay, lakas at pag-asa ang naghatid sa akin ng tagumpay sa pananaliksik na ito. Siya ang gabay at lakas sa bawat hakbang na aking ginagawa sa pananaliksik na ito.

Compliance with Ethical Standards

Pinahahalagahan ang etika ng pananaliksik sa pag-aaral na ito. Ang mananaliksik ay nagbigay ng *informed consent* at *data privacy consent* sa mga kalahok upang mabasa at mapag-aralan bago lagdaan ang panuntunan sa isinagawang pag-aaral. Sinisigurong mapoprotektahan sila sa anumang sensitibong impormasyon na kalakip sa isinagawang pag-aaral at magbibigay kamalayan sa kanila na tanging sa pananaliksik lamang ang layunin ng kanilang pakikilahok at sila ay may karapatang iurong ang pakikilahok sa pag-aaral. Ang kaligtasan, pagiging kumpidensyal, at mga karapatan ng mga kalahok ay pinananatili sa buong panahon ng pag-aaral at tanging mananaliksik lamang ang nakaalam. Kaya, walang pangalang ispesipiko sa papel bagkus mga tugon lamang mula sa kalahok ang isinama bilang pagpapatunay sa nasabing isinagawang pananaliksik.

NAVIGATING WASTE MANAGEMENT PRACTICES IN ISLAMIC PERSPECTIVE AMONG PUBLIC VENDORS IN JOLO MARKET

Al-Fadzri B. Moharrani, Andrea T. Amdani, Arwisa J. Aminulla, Arshada S. Hayudini, Nurmina A. Ayyah, Haniza M. Misaya, Tadzmahal S. Sahi

Islamic Studies Department, Sulu State College, Jolo, Sulu, Philippines

ABSTRACT

The research study was conducted to navigate the waste management practices in accordance with Islamic point of view among public vendors in Jolo Market. A qualitative, descriptive research design was employed in this study. A total of 30 respondents were taken from public vendors in the Jolo Market. A survey interview was discussed with the vendors. Thematic analysis on the responses were utilized. The results of the study revealed that majority of public vendors in Jolo Market were unaware of the proper segregation of biodegradable and non-biodegradable garbage. Furthermore, the findings also revealed the lack of equipment for disposal of wastes and the proper management within the area needs improvement. Moreover, aside from behavioral aspects, public vendors are unaware that waste management is considered to be a religious obligation. Hence, there is a need for mass orientation.

Keywords: *Islamic Perspective, Jolo Market, Public Vendors, Waste Management Practices*

INTRODUCTION

Waste management is crucial for maintaining a clean and healthy environment. According to Rahman N. Protecting and conserving the environment is the responsibility of every individual including religious people in the Islamic context. Religious people play an

important role in environmental conservation because they have the ability to cultivate public awareness on environmental conservation by linking the field of environmental conservation with religious knowledge (Rahman, 2021).

According to Muslim scholars, the universe is governed and regulated by the principles of unity, balance, and harmony that characterise the interactive unifying principle -tawhid. The Qur'an repeatedly quotes that the universe is characterised by proportion, harmony, and beauty, which are the hallmarks of Divine craftsmanship (Saniotis, 2012).

Saniotis further cited Idris 1990 and Khalid et.al 1992 that the second concept of Islamic environmental ethics is stewardship "khilafah". He stressed, The Qur'an declares that human beings are stewards of Allah's creation "Behold, the Lord said to the angels: "I will create a vicegerent on earth" (Qur'an 2:30). Furthermore, human beings need to refrain from mischief (actions leading to the corruption of the environment) (Saniotis, 2012).

Hence, incorporating Islamic perspective in waste management is important because Islam emphasizes the importance of caring for the environment and being responsible stewards of the earth. Additionally, the teachings of Islam regarding environmental stewardship, cleanliness, and waste management explores concepts such as "mizan" (balance), "amanah" (trust), and "khilafah" (stewardship), which emphasize the responsibility of Muslims to protect and preserve the environment.

The Qur'an and Hadiths contain numerous teachings that emphasize the importance of cleanliness, conservation and sustainability. By incorporating Islamic principles into waste management practices, individuals and communities can align their religious beliefs and contribute to a more sustainable and environmentally-friendly society. As stated by Mariyam, Cochrane, Zuhara, & McKay, (2022) a study conducted a survey targeting Muslim consumers in a university in Qatar and found that there is a sense of ethical consumption behavior The Islamic philosophy of moderation or "wastiya" encourages sharing resources rather than unnecessary wastage based on the Quranic quote [7:31], "Eat and drink but waste not by excess; Verily Allah loves not the excessive", which teaches Muslims to take heed of careless consumption.

The issue of protecting human health and the environment is the responsibility of the state and the experts, but it is evident that this problem is part of the teaching in Islam…An important point that needs to be underlined is that Islam prioritizes health, self, and the environment. This is very important because all the activities we do will run optimally if we are physically, spiritually, and mentally healthy. Likewise, without a healthy environment, it will hurt the Muslim community itself.

Therefore, Islam invites its people to maintain the health of both humans and their environment in every religious message (Mishbahuddin, et.al., 2021)

Furthermore, Incorporating Islamic principles in public awareness campaigns can effectively promote proper solid waste management behavior among Muslims. Studies

have shown that using Islamic education channels and expressions to address environmental issues has positive effects in raising awareness (Ismail, 2016).

Research Questions

This research aims to answer the following questions:

1. What are the Islamic perspectives on waste management among public vendors in Jolo?
2. What are the waste management practices of public vendors in Jolo market?
3. What challenges do public vendors face in implementing waste management practices in line with Islamic principles in Jolo market?
4. Does the Islamic perspective of waste management influence the waste management practices of public vendors in Jolo market?

METHODOLOGY

Research Design	: Descriptive research design, qualitative approach.
Research Locale	: Jolo Public Market in Serantes St., Walled City, Jolo, Sulu.
Respondents	: 30 vendors selected through random sampling.
Data Collection	: Survey questionnaire used to gather data on waste management practices.
Data Analysis:	Thematic analysis employed to analyze qualitative responses.

RESULTS

The results obtained from the survey shed light on the pressing issue of waste management within the study area. The majority of the respondents expressed their concerns and shared their insights regarding waste management practices, to wit:

Ignorance

A significant finding from the survey is that the respondents tend to dispose of their waste in a single container, without segregating biodegradable and non-biodegradable waste. This practice highlights a lack of awareness and adherence to proper waste disposal methods. It is imperative to know how waste properly disposed in order to attain the healthier and safe lifestyle.

Recognizing the difference between these types of waste is essential for effective recycling and waste management. It informs which materials can be safely composted, and which require recycling or special disposal methods to mitigate their environmental impact. Biodegradable waste comprises materials that decompose naturally under the action of microorganisms such as bacteria and fungi. This includes kitchen waste, garden waste, paper, and wood. In contrast, non-biodegradable waste consists of materials that

cannot be easily broken down by natural processes. This includes plastics, metals, glass, and certain types of chemicals (Rodrigues, 2024).

Lack of Tools Necessary for Waste Disposal

One crucial aspect that emerged from the respondents' feedback is the absence of suitable waste disposal systems and containers. Despite acknowledging the importance of proper waste disposal, the respondents face challenges in implementing it due to a lack of equipment. They expressed a need for composting facilities and the ability to determine whether their waste can be composted or not. Furthermore, the infrequency of garbage collection forces them to store their waste, leading to adverse consequences.

Proper Management

The accumulation of waste within the Jolo market area has resulted from these inadequate waste management practices. The presence of dirt and foul odors has not only compromised the aesthetic appeal of the area but has also had a detrimental impact on the quality of their products and the health of the community members.

Moreover, it was observed that some individuals resort to haphazard waste disposal methods, such as discarding waste in creeks or canals, further exacerbating the environmental degradation. Others opt to pile up waste in various locations, compounding the waste management challenges faced by the community.

It is inseparable from the problems faced, one of which is the cleanliness of market stalls and the health of the market environment. The problem of stall cleanliness and the health of the market environment tends to increase if it does not get special attention and high concern from the kiosk owner traders and market environmental cleaners. A good and correct waste management system will provide the advantage of reducing pollution caused by the accumulation of waste, by providing alternative efforts due to the generation of well-managed waste (Ariani, 2021).

Healthy, clean and comfortable environment also expected to exist a market, as well as traditional market. The goods in traditional market usually household daily needs… Creating a clean and healthy environment is a shared responsibility. Especially the people around the neighborhood. They have an important role in protecting the environment and creating a clean and healthy environment .Creating a clean and healthy environment in the market is a shared responsibility of all stakeholder (P.M.H., 2018).

Behavioral Aspects

Additionally, the findings highlight the importance of understanding local contexts and perceptions when developing waste management strategies. To align with the cultural and religious values of the target community that can increase their relevance and effectiveness. By leveraging the moral and spiritual dimensions of waste management found in Islamic teachings, future initiatives may be better positioned to drive behavioral

change and foster a sense of environmental stewardship among the public vendors in the Jolo market.

Moreover, it was stressed in a study that components of environmental awareness can be classified into two aspects: perception and behaviour, that is, the perception of environmental problems and the behavioural inclination to protect the environment. The perception of environmental problems involves people's objective knowledge, perception and environmental realities (Desa, Kadir, & Yusooff, (2011).

DISCUSSION

Both the literature and the study emphasize the importance of proper waste management practices in maintaining environmental health and cleanliness. The Islamic perspective on waste management, as discussed in the literature, aligns with the need for responsible waste disposal highlighted in the study findings. Both sources underscore the significance of avoiding wasteful behaviors, such as indiscriminate waste disposal and improper handling of resources.

The literature highlights Islamic teaching on environmental stewardship and waste management, while the study findings reveal a lack of awareness among public vendors in the Jolo market regarding the religious significance of waste management. While the literature discusses the rewards and prohibitions related to waste management in Islam, the study findings point out specific challenges faced by public vendors, such as the lack of necessary equipment and infrastructure for effective waste disposal.

The study extends the existing literature by providing insights into the practical challenges and perceptions of waste management among public vendors in specific market setting. By uncovering the gap in understanding Islamic teachings on waste management among vendors, the study contributes to the discourse on integrating religious principles into environmental practices.

The comparison highlights the needs for educational efforts to bridge the gap between Islamic teachings on waste management and the awareness of public vendors in the Jolo market. Understanding the divergence between literature and study findings underscores the importance of context-specific waste management strategies aligned with cultural and religious values. By comparing the literature with the study findings, it becomes evident that while the theoretical framework of Islamic waste management is well –established, practical implementation and awareness among public vendors present significant challenges that require targeted interventions and educational initiatives.

Conclusions

The importance of raising awareness about proper waste management practices and integrating Islamic teachings on cleanliness and resource conservation. By addressing

the gaps in knowledge and behavior, and leveraging religious values, initiatives can be tailored to promote sustainable waste management practices and foster a sense of environmental responsibility among public vendors in the Jolo market.

Recommendations

To address the challenges in waste management practices at Jolo market, several strategies can be implemented. Here are some recommendations for improving waste management in the market:

1. Public Awareness Campaigns: conducting educational programs and awareness campaigns to inform vendors, customers and the local community about the importance of proper waste disposal and recycling practices;
2. Infrastructure Improvement: investing in waste segregation bins, recycling facilities, and proper waste disposal infrastructure within the market area to encourage proper waste management;
3. Regular Waste Collection: establish a regular waste collection schedule to ensure that waste is collected and disposed of in a timely manner to prevent accumulation and littering;
4. Collaboration with Local Authorities: working closely with local government authorities to enforce waste management regulations, conduct inspections and implement penalties for non –compliance with waste disposal guidelines;
5. Promoting Sustainable Practices: encouraging the use of eco –friendly packaging materials, reusable containers and promoting sustainable practices among vendors and customers to reduce waste generation;
6. Community Engagement: involving the local community in waste management initiatives through volunteer clean –up drives, recycling programs, and community participation in keeping the market clean;
7. Monitoring and Evaluation: implementing a monitoring and evaluation system to track progress, measure the effectiveness of waste management initiatives, and make necessary adjustments to improve efficiency.

Compliance with Ethical Standards

In order to ensure informed consent, the researchers emphasized the importance of the respondents' understanding and willingness to participate in the study. Detailed information and assurances were provided to ensure that the respondents were fully informed and had the freedom to choose whether or not to participate. The researchers also guaranteed the confidentiality of any information shared, reassuring the respondents that their privacy would be protected and their responses would remain confidential.

Acknowledgments

The researchers wish to thank Almighty Allah for the guidance and perseverance He gave to fulfill this study, Alhamdulillah! To the stakeholders and participants who rendered their

time during the one one-on-one interview. And to those who are in one way or another to fulfill this effort.

ABSTRACT

This study investigated the awareness and perceptions of tertiary students regarding the term "nigga" and its relevance to their daily interactions. The research explored how these students acquired the term and their attitudes toward its usage, and determined whether the students felt permitted to use the word despite not being Black. A convenience sampling method was employed to collect data, integrating qualitative techniques by inquiring if participants were familiar with the term. The sample consisted of 20 students from the Higher Education Department at Christ the King College, Gingoog City. Participants who responded affirmatively were further engaged through survey questionnaires specifically designed by the researchers. The study revealed that many participants encountered the n-word through various media. They understood that "nigga" is a derogatory term targeting Black individuals, their race, and their culture. While most participants refrained from using the term to avoid causing offense, some reported using it for humor, entertainment, or as a term of endearment among friends, without any intention of racial insult. Data analysis was conducted through thematic analysis, clustering responses based on recurring themes. The study concluded that language usage and interpretation vary significantly. It emphasized the importance of incorporating respect and awareness of the word's historical and social impact when using such language. Understanding the historical context and potential for harm is crucial in ensuring respectful and considerate communication. The findings underscore the necessity for greater awareness and education regarding the implications of using racially charged terms, particularly in diverse social settings.

Keywords: *language socialization, media influence, nigga, racial sensitivity*

INTRODUCTION

The United States is one of the most influential countries globally with its products and culture widely patronized (Neufeld, 2022). This includes their expressions and slang, such as “a piece of cake” and “are you for real?” These phrases often sound appealing, especially when uttered in an Americanized manner. One such term is “nigga,” which can serve as both a salutation among African Americans and a derogatory expression used to discriminate (Jacobs, 2002). Additionally, some individuals use it as a term of endearment, signifying belonging to the "hood”, a slang term for African American communities (De Malsche, 2019). While the term was initially confined to American contexts, it has been appropriated by others, including whites who use it derogatorily. This raises questions about its appropriation by non-African Americans and how Filipinos perceive and utilize the term. This paper examines the etymology of the word "nigga" and the awareness and understanding of this word among college Filipino students.

Etymology of “Nigga”

The term “nigga” is a respelling of “nigger.” According to Merriam-Webster (2024), "nigga" is a racial slur, a variant of “nigger,” used among African Americans as a form of address within their community. It derives from the Latin word "niger” meaning black. Kennedy (2001) notes that the word did not originate as a racial slur but evolved to acquire racial connotations over time. The Washington Post (2001) reports that John Rolfe, Pocahontas's husband, referred to black individuals as "negars" in his journal in 1619. The term has various spellings, including nigguh, niggah, niggur, and niggar. African Americans generally perceive "nigga" as offensive when used by non-African Americans because it invokes historical traumas and negative connotations associated with slavery and racial discrimination.

Nigga as a Racial Slur

In the African American community, "nigga" is a variant of the racial slur “nigger,” referring to impoverished African Americans. Sinclair (2017) explains that slurs are degrading, with “nigga” referring to black people in derogatory contexts. Words such as "nigger-stick," "nigger work," "nigger luck," and "nigger rich" carry offensive connotations, reminding African Americans of their historical mistreatment. During slavery, African Americans endured harsh labor and punishment, fostering a deep-seated trauma that renders the term "nigga" highly offensive when used by those outside the African American community. It symbolizes an attempt to undermine their identity and ignore their historical struggles.

Nigga as Identity Representation

In the late 20th century, the word "nigga" began to acquire neutral and positive connotations among African Americans (Merriam-Webster, 2024). African Americans started using the term as part of African American Language (AAL), also known as Black English, to signify camaraderie and identity (De Malsche, 2019). While some euphemize the term as the “N-word,” it remains exclusive to African Americans, symbolizing a sense of belonging. Andrews (2013) argues that "nigga" should not be banned, as it reflects warmth and goodwill when used within the African American community, despite its offensive nature when used by others. Andrews (2013) contends that banning the term denies its positive connotation of “buddy” among African Americans, despite its origins as a racial slur. Although its usage varies among generations, with some older African Americans finding it offensive, the term has been integrated into African American identity.

Media and the “Nigga” Word

Globalization has facilitated the spread of various cultural elements, including language, through media. Media, encompassing print, broadcast, and online platforms, disseminates information globally (Oxford, 2024). This has popularized the term "nigga" worldwide. In music, African American rappers use "nigga" to refer to friends, often accompanied by hip-hop beats. In movies, the term is used to depict characters, sometimes reinforcing stereotypes. Social media also showcases diverse interpretations of the word. Despite its global reach, the term remains controversial when used by non-African Americans, as it invokes historical traumas and disrespects African Americans’ struggles. While some African Americans may be indifferent to its usage, others view it as a catalyst for arguments and criticism, particularly in mainstream media.

Filipino Perception Towards the Nigga Word

According to Braj Kachru’s concentric circles, the Philippines belongs to the outer circle, where English is used as a supplementary language for international communication. Filipinos often imitate American expressions without understanding their meanings. For instance, Filipino children may shout "nigga" at African Americans on the streets, and Filipinos might use the term jokingly or endearingly among friends, mimicking African American customs. This imitation, however, often lacks awareness of the term’s significance to African Americans. Meier (2018) explains that Filipinos were exposed to the term through American soldiers during the war and the popularity of hip-hop music. Despite enjoying the cultural elements brought by Americans, Filipinos often fail to grasp the term’s historical and racial implications. Consequently, Filipinos may perceive "nigga" as a neutral or friendly term, overlooking its offensive connotations and the importance of respecting African Americans' historical experiences.

Research Questions

This study focused on determining the perspectives on the word “Nigga” among Higher Education students of Christ the King College, Gingoog City. Specifically, it sought to answer the following questions:

1. What are the connotations and personal significances associated with the term “nigga” among tertiary students?
2. In which contexts and mediums do tertiary students most frequently encounter the term “nigga”?
3. How do tertiary students incorporate the term "nigga" into their linguistic interactions, and what are the underlying motivations for its usage?
4. How do Filipino tertiary students perceive the appropriateness of using the term "nigga," and what factors influence their perceptions?

METHODOLOGY

The research design of this study is a qualitative case study, focusing on the cultural awareness and perception of the term "nigga" among Filipino tertiary students. Qualitative research is ideal for exploring complex social phenomena, providing a deep understanding of participants' views and experiences. The case study method allows for an in-depth examination within the specific context of the Higher Education Department at Christ the King College in Gingoog City. This design helps uncover the students' awareness and perception of the term, offering rich, detailed insights. By concentrating on a particular group in a defined setting, the case study provides a thorough and nuanced understanding of the factors shaping the students' attitudes and behaviors.

Data collection involves structured interviews with open-ended questions and survey questionnaires, enabling participants to share their thoughts and experiences freely. This approach aligns with qualitative research principles, emphasizing the collection of detailed, descriptive data over numerical measurement. Thematic analysis is used to identify and analyze patterns and themes in the data, offering a structured yet flexible way to interpret complex social interactions. Convenient sampling was used to select 20 participants, ensuring the sample was accessible and manageable while still capturing a range of perspectives within the target group. This combination of qualitative methods and case study design effectively reveals the multifaceted nature of cultural awareness and the varied understandings and uses of the term "nigga" among Filipino tertiary students.

RESULTS

Research Question 1. What are the connotations and personal significances associated with the term “nigga” among tertiary students?

Table 1:
Connotations and personal significances associated with the term “nigga” among tertiary students

Responses	No. of Responses
“Black person/Black people”.	7
“Big insult related to black people’s history, race, and culture”.	6
“That is an offensive word for black Americans”.	4
“It discriminates dark color individuals”.	4
“For white people, they use it to bully”.	3

Table 1 provides an analysis of the connotations and personal significances ascribed to the term "nigga," as reported by tertiary students. This breakdown illuminates the diverse interpretations and emotional responses evoked by the term, unveiling its intricate nature within contemporary discourse. Notably, a prominent association identified by seven respondents is the term's straightforward reference to "Black person/Black people," reflecting a foundational acknowledgment of racial identity that resonates with broader societal norms and perceptions.

Moreover, six respondents articulated a perception of the term as a "significant insult linked to black people’s history, race, and culture." This assertion underscores the term's historical weight and its entanglement with systemic racism and oppression. Similarly, four respondents explicitly characterized "nigga" as "an offensive word for black Americans," aligning with scholarly discourse on racial slurs and their societal repercussions (Smith, 2019).

Furthermore, four respondents emphasized its role in "perpetuating discrimination against individuals with darker skin tones," highlighting its contribution to colorism and racial bias (Hunter, 2020). Additionally, three respondents noted its utilization by "white individuals as a tool for bullying," shedding light on power dynamics and racial harassment within social contexts (Davis, 2018).

In conclusion, these responses offer invaluable insights into the nuanced perceptions and ramifications of the term "nigga" among tertiary students, reflecting broader societal attitudes towards race and language. This analysis contributes to ongoing dialogues surrounding racial discourse and underscores the

imperative of comprehending the complexities of language in shaping social interactions and identity formation.

Research Question 2: **In which contexts and mediums do tertiary students most frequently encounter the term "nigga"?**

Table 2:
Contexts and mediums where tertiary students encounter the term "nigga

Responses	No. of Responses
"Social Media/Social Circle"	7
"Music/Movie/Novel/Videos/Tiktok"	5
"Friends"	4
"Classmates/At school"	4
"Internet" "Home"	2
"Western countries"	1
"Internet especially in American servers"	1

Moreover, five respondents identified "Music/Movie/Novel/Videos/TikTok" as a prominent medium for encountering the term, highlighting its prevalence in popular culture and entertainment media (Smith et al., 2020). This association underscores the role of mainstream media in perpetuating language and cultural norms, contributing to the normalization of certain linguistic expressions.

Additionally, four respondents mentioned "Friends" and "Classmates/At school" as common contexts for encountering the term, emphasizing its integration into personal relationships and social environments (Brown & Williams, 2019). Furthermore, two respondents cited "Internet" and "Home" as contexts of exposure, underscoring the ubiquity of the term across various online platforms and domestic settings.

One respondent noted encountering the term in "Western countries," highlighting its geographical dissemination and cross-cultural relevance. Another respondent specifically mentioned encountering the term on the "Internet, especially in American servers," emphasizing its prevalence within digital spaces dominated by American cultural influences.

In summary, Table 2 provides valuable insights into the diverse contexts and mediums in which tertiary students encounter the term "nigga," reflecting its multifaceted presence within contemporary society. These findings contribute to scholarly discussions on language usage, cultural transmission, and the intersection of race and media in shaping linguistic norms and practices.

Research Question 3: How do tertiary students incorporate the term "nigga" into their linguistic interactions, and what are the underlying motivations for its usage?

Table 3 examines the ways in which tertiary students incorporate the term "nigga" into their linguistic interactions and explores the underlying motivations for its usage. The responses highlight a range of attitudes and intentions, reflecting the complexity and sensitivity surrounding the term.

Responses	No. of Responses
“For entertainment purposes only	5
“Yes, as a joke”	3
“For entertainment purposes without the intention of insulting the race”	11
“It randomly just came out of my mouth”	2

The largest group of respondents, numbering eleven, indicated that they use the term "nigga" "for entertainment purposes without the intention of insulting the race." This suggests that a significant portion of students perceive the term as a casual, non-malicious expression within their social interactions, often influenced by its prevalent use in popular culture and media (Smith et al., 2020). This trend aligns with findings that demonstrate the normalization of potentially offensive language when detached from its historical and racial connotations (Andrews, 2013).

Conversely, five respondents admitted using the term "for entertainment purposes only," which further supports the notion that humor and entertainment are primary drivers behind its usage among tertiary students. This use underscores the impact of media portrayals in shaping linguistic behavior, where the term is often stripped of its derogatory context (Brown & Williams, 2019).

Three respondents acknowledged incorporating the term "as a joke," reflecting an awareness of its provocative nature and potential for humor. This usage points to a broader cultural phenomenon where offensive terms are recontextualized as comedic devices, although such practices can perpetuate harmful stereotypes and insensitivity (Hunter, 2020).

Lastly, one respondent indicated that the term "randomly just came out of my mouth," suggesting an unconscious or habitual use possibly influenced by frequent exposure in everyday interactions and media. This incidental usage highlights the pervasive nature of the term and the need for greater awareness and sensitivity in language use (Smith, 2019).

In conclusion, the responses in Table 3 provide valuable insights into the varied motivations and contexts in which tertiary students use the term "nigga," reflecting broader societal attitudes towards race and language. These findings contribute to

ongoing discussions about linguistic practices and the importance of understanding the implications of language in shaping social interactions and cultural identity.

Research Question 4: How do Filipino tertiary students perceive the appropriateness of using the term "nigga," and what factors influence their perceptions?

Table 4 explores the perceptions of Filipino tertiary students regarding the appropriateness of using the term "nigga" and the factors that influence these perceptions. The responses illustrate a range of understandings and attitudes towards the term, shaped significantly by media exposure and social narratives.

Table 4.
Perceptions of Filipino tertiary students regarding the appropriateness of using the term "nigga" and the factors that influence these perceptions.

Responses	No. of Responses
“It is offensive based on what I heard in the news”	6
“It is used to discriminate the African American as I have seen in social media platforms.”	12
“I am not fully aware of the term’s implication.”	2

The majority of respondents, totaling twelve, perceived the term "nigga" as a discriminatory term primarily based on their observations on social media platforms. This significant finding underscores the role of digital media in shaping public perceptions and awareness of racial issues. Social media, with its widespread dissemination of both personal and global narratives, serves as a critical source of information for many students, influencing their views on the appropriateness of certain language (Chen & Williams, 2019). This aligns with existing literature that highlights social media's impact on spreading awareness about racial discrimination and promoting social justice (Kim, 2020).

Six respondents deemed the term offensive based on reports and discussions they encountered in the news. This response indicates that traditional news media continue to play an essential role in informing public opinion and fostering an understanding of racial sensitivities. News outlets often serve as a primary source of information on social issues, providing context and analysis that help shape individuals' perceptions and attitudes (Smith, 2019). This reflects broader trends in media consumption where traditional news sources remain influential despite the rise of digital platforms.

Two respondents admitted to a lack of full awareness regarding the term's implications. This response highlights a gap in understanding that may result from

insufficient education on racial issues within certain educational or social contexts. It suggests a need for more comprehensive discussions and educational programs to enhance awareness and understanding of the historical and cultural significance of racially charged language (Williams & Brown, 2017).

In summary, the responses in Table 4 revealed that Filipino tertiary students' perceptions of the appropriateness of using the term "nigga" are significantly influenced by media exposure, both social and traditional. The findings emphasize the critical role that media plays in shaping societal attitudes and the importance of educational initiatives to address gaps in understanding. These insights contribute to the broader discourse on race, language, and media's role in influencing public perception.

DISCUSSION

Language is a powerful vehicle for communication, shaping our understanding of the world and influencing social interactions (Rabiah, n.d). Within the complex tapestry of language use, certain words carry profound historical and cultural significance, eliciting diverse reactions and perspectives. This study delved into the multifaceted discourse surrounding the term "nigga" among Filipino individuals, exploring themes of cultural awareness, respect, and historical context.

Theme 1: Cultural Awareness and Sensitivity

Cultural awareness and sensitivity are fundamental pillars in the discourse surrounding the usage of the word "nigga" in the Philippines. Many respondents emphasize the critical importance of understanding the historical and cultural contexts that envelop this loaded term. As noted by The Washington Post (2001), the word "nigga" roots back to the era of Black enslavement, underscoring the necessity for education and heightened awareness. Respondents highlight that while some Filipinos may use the term casually without fully grasping its weight, it remains imperative to acknowledge the sensitivity associated with words entrenched in oppression and discrimination. This theme accentuates the pivotal role of cultural competence in nurturing respectful communication, advocating for a deeper understanding of linguistic nuances, and emphasizing the significance of continual learning and dialogue in navigating linguistic diversity.

Respondents illuminate the necessity of contextual understanding when engaging with contentious language, emphasizing the need for nuanced comprehension beyond surface-level meanings. Their perspectives advocate for a more profound appreciation of the socio-political dynamics shaping language usage, underscoring the importance of fostering a culture of sensitivity and awareness. Furthermore, the discourse on cultural awareness and sensitivity underscores the evolving nature of language and its dynamic relationship with societal norms and values. Respondents advocate for ongoing dialogue that promotes introspection and critical engagement with language, recognizing that linguistic diversity reflects broader cultural landscapes. By acknowledging the sensitivity associated with certain words and recognizing the power dynamics inherent in language

usage, individuals can cultivate a more inclusive and respectful communicative environment that honors the complexities of cultural identity and historical context.

Theme 2: Respect and Empathy

Respect for others' experiences and perspectives stands out as a central theme in the discourse on language use, particularly concerning terms like "nigga." Most respondents stress the significance of employing language in a manner that cultivates empathy and understanding. Meier (2018) reiterates that using the term remains taboo in Filipino culture due to its derogatory nature, aligning with respondents' views on the ethical responsibility and conscientious word choice, especially regarding sensitive issues such as racial discrimination. By advocating for the avoidance of derogatory language and recognizing the lived experiences of marginalized communities, particularly the Black community, these respondents highlight the profound impact language can have in nurturing inclusive dialogue and fostering mutual respect.

Respondents emphasize the need to acknowledge and validate the experiences of those affected by discriminatory language and attitudes. Their commitment to dismantling harmful linguistic practices and creating inclusive spaces underscores the importance of fostering empathy in language use. This transformative discourse prioritizes understanding and solidarity, challenging entrenched systems of oppression and fostering a more equitable society. The theme of respect and empathy highlights the interconnectedness between language, power dynamics, and social justice, advocating for language as a tool for empowerment rather than harm. Respondents underscore the potential for language to catalyze positive change, prompting individuals to interrogate their linguistic habits and cultivate a deeper understanding of the impact of words on marginalized communities.

Theme 3: Historical Context and Social Awareness

Some respondents contribute valuable insights by focusing on the historical context surrounding the term "nigga" and its implications for contemporary society. They engage with the deep-rooted history of racial discrimination and oppression associated with the word, particularly within the context of Black American history. By acknowledging this historical trajectory, respondents invite critical reflection on the enduring legacies of colonialism and systemic racism, emphasizing the interconnectedness of diverse historical narratives and their impact on language usage. Their nuanced exploration of historical context illuminates the complex intersections of power, identity, and language, underscoring the imperative of understanding the broader social dynamics that shape linguistic norms and perceptions.

Respondents highlight the significance of social awareness in shaping perceptions of language and fostering empathy across cultural and historical divides. They draw attention to the shared struggles of marginalized communities worldwide and advocate for an intersectional approach to understanding linguistic dynamics. Their emphasis on solidarity underscores the importance of collective action in confronting systemic

injustices and advancing linguistic justice. Furthermore, the theme of historical context and social awareness underscores the dynamic nature of language as a reflection of evolving social landscapes. Respondents highlight the transformative potential of historical consciousness in challenging dominant narratives and promoting cultural sensitivity, fostering a deeper understanding of the power dynamics inherent in language.

Theme 4: Cultural Relativism and Linguistic Fluidity

A significant theme that emerges is the notion of cultural relativism and linguistic fluidity. Some respondents assert that within Filipino culture, the usage of the word "nigga" is normalized and does not carry the same offensive connotations as it might in other cultural contexts. This aligns with Andrews (2013), who suggests that the term's meaning is not solely limited to being a racial slur. Respondents' perspectives underscore the dynamic nature of language, suggesting that meanings can evolve and adapt within specific cultural frameworks. This recognition of linguistic fluidity highlights the complexity of interpreting language across diverse cultural settings, where words may hold different meanings and connotations depending on historical context and societal norms.

Respondents challenge the notion of linguistic universalism, suggesting that words like "nigga" can have varied interpretations depending on the cultural lens through which they are viewed. Their argument reflects a sensitivity to the nuanced ways language functions within different communities, recognizing that what may be offensive in one context may not necessarily hold the same weight in another. This theme underscores the importance of understanding language within its cultural context, acknowledging the diversity of linguistic practices, and promoting cross-cultural sensitivity in communication. By recognizing the diversity of linguistic practices and the fluidity of language within different cultural settings, individuals can foster greater understanding and respect in cross-cultural communication.

Conclusions

The word "nigga" is a racial slur with historical roots in the era of Black enslavement, often used derogatorily to address African American individuals (Merriam-Webster, 2024; Kennedy, 2001; The Washington Post, 2001). While its meaning has evolved over time, it remains offensive to many, even when used informally or in attempts at friendly communication. The majority of participants perceive the term as related to racial identity, while others view it as an insult primarily used by white Americans. Most participants encounter the term in social media and social circles, often using it humorously, though many avoid it due to its offensive nature. When considering its usage as Filipinos, most participants use it without integrating a disrespectful connotation while others use the term cautiously, acknowledging its historical connotations and the offensive impact on African American communities.

Recommendations

The following recommendations are drawn based on the findings, interpretations, and discussions from the data gathered:

Teachers: Foster an inclusive usage of language within educational settings and promote sensitivity and cultural awareness when addressing or adapting foreign slang and terms, while integra ting discussions on the historical and social contexts of racially charged language into the curriculum to enhance students' understanding and empathy.

Students: Engage in self-discovery and critical analysis of terms and languages propagated in media, develop a deeper understanding of the historical and cultural significance of the language they encounter, and practice mindful and respectful communication, particularly when using terms with complex racial connotations.

School Administrators: Develop and enforce policies that promote respectful and inclusive language use within the school environment, provide training and resources for teachers to handle sensitive language issues effectively, and organize workshops and seminars to raise awareness about the impact of racially charged language on the school community.

Language Experts: Conduct comprehensive studies on the evolution and social implications of racially charged language, offer guidance and resources to educational institutions on best practices for addressing sensitive language issues, and collaborate with educators to create materials that foster a deeper understanding of the cultural and historical contexts of language.

Future Researchers: Conduct further research on the implications of using language exclusive to specific racial or cultural groups, investigate the impact of racially charged terms on intergroup relations and individual identities, and explore strategies for fostering respectful and inclusive language practices in diverse social settings.

Compliance with Ethical Standards

Protection of Confidentiality

Ensures the confidentiality of participants' information. Data were anonymized and stored securely to protect participants' privacy and identity.

Informed Consent

The researchers obtain informed consent from participants, providing them with clear information about the purpose, procedures, potential risks, and benefits. The participants freely and voluntarily agreed to participate without any form of coercion.

Withdrawal from participation in the study

The decision to participate in this study was entirely up to the participant. They could refuse to take part in the study at any time without affecting the relationship with the researchers. Their decision to refuse would not result in any loss of benefits. The participant had the right not to answer any single question, as well as to withdraw completely at any point during the collection of data.

Risks

Participants were informed that some questions may be sensitive and potentially trigger some cultural and racial concerns. Participants were aware of any potentially distressing or emotional content, and they could have the option to skip or opt out of answering such questions.

Benefits

Participating in the study offered several significant benefits to the sample group, providing a platform for voicing their experiences and engaging in important discussions. Firstly, it enabled participants to actively contribute to the expansion of scientific knowledge. By sharing their thoughts, experiences, and opinions, they provided diverse perspectives that could lead to more comprehensive and accurate findings. This contribution is essential for enriching the understanding of complex issues and enhancing the robustness of research outcomes.

Secondly, their participation fostered self-awareness and introspection. The process of responding to questionnaires often prompts individuals to reflect on their beliefs, behaviors, and attitudes, encouraging personal growth and a deeper understanding of themselves. This reflective practice can lead to greater self-awareness and more informed personal and professional choices.

Moreover, engagement in the study provided a sense of fulfillment and purpose. Knowing that their input matters and has the potential to positively influence future decisions and policies can be highly rewarding. Participants could take pride in contributing to research that may have meaningful societal impacts.

Lastly, participation offered unique learning opportunities. Individuals had the chance to learn about new concepts, develop critical thinking skills, and stay updated on the latest research in their field of interest. This exposure not only enhanced their knowledge base but also encouraged continuous learning and intellectual curiosity, which are crucial for both personal and professional development.

Acknowledgments

The researchers would like to express sincere gratitude to the following individuals for their invaluable support and assistance in the completion of this discourse project:

First and foremost, the researchers would like to express the deepest appreciation to their adviser, Mr. John Louie P. Guimaras LPT MAEd- ELT (CAR), for his guidance, support, and encouragement throughout the entire study process. His insights and feedback have been instrumental in shaping the direction and scope of this study.

The researchers are also grateful to the institution, Christ the King College, for the chance to conduct this study. The completion of this study could not have been possible without the participation and assistance of the Christ the King College students whose names may not be enumerated, their contributions are sincerely appreciated and gratefully acknowledged.

In addition, the researchers would also like to acknowledge the support and encouragement of their family and friends, who have provided the researchers with emotional and moral support throughout this challenging journey.

Finally, to the Almighty God for His enduring grace, guidance, and protection that He has bestowed upon this whole journey.

Thank you all for your invaluable contributions to this study.

ABSTRACT

This research underscores the pressing need for establishing a nutrition information and audit submission portal for barangays of a certain municipality in Laguna, to rectify deficiencies in local nutritional assessment and supervision. This system empowers the community to make informed decisions and implement targeted interventions by providing a well-organized framework. The primary objective is to enhance health outcomes by examining current methods for gathering nutritional data, assessing the impact of manual data entry on the Operational Timbang Plus (OTP) system, devising strategies for effectively disseminating accurate nutritional information to citizens and officials, and implementing a uniform audit system to evaluate nutrition programs and monitor health trends in barangays. The research used quantitative research methodology, data were collected and analyzed through thematic analysis and weighted mean calculation. Non-probability purposive sampling was employed, involving interviews and questionnaires distributed across the city and barangays. The study findings highlight challenges with the OTP system, particularly regarding data accuracy due to human input errors. There is an evident need to establish a standardized audit system to enhance data quality and decision-making in nutrition initiatives. Utilizing technological solutions such as web-based systems or mobile apps can improve data collection efficiency.

Keywords: *Nutrition Information, Audit System, Portal Submission, Operation Timpbang Plus, Local Government Unit*

INTRODUCTION

Nature and Scope of the Problem Investigated

The incorporation of community health and nutrition was crucial for promoting the overall well-being of local populations. This research emphasized the necessity of establishing a robust portal system for nutrition audit, recognizing its pivotal role in addressing nutritional deficiencies. A key challenge identified was the absence of a structured information and audit system at the barangay level, impeding accurate assessment and monitoring of nutritional status. This limitation hindered barangay officials' ability to make informed decisions, implement targeted initiatives, and allocate resources effectively to tackle nutritional issues. To overcome this challenge, establishing a structured framework was deemed essential to equip officials and authorities with the necessary resources for informed decision-making on nutrition interventions, policies, and programs.

This systematic approach not only addressed existing shortcomings but also laid the groundwork for continuous assessment. By eliminating the lack of comprehensive data structure, it enabled efficient evaluation of ongoing nutrition initiatives and pinpointed areas requiring improvement. Regular assessments, based on accurate and up-to-date information, allowed for adaptable approaches to meet evolving community needs.

Furthermore, the study prioritized community empowerment alongside system development. It employed a collaborative methodology involving barangay officials, health experts, and community members in data collection and analysis, fostering a sense of ownership and ensuring the sustainability of the implemented system. Anticipated outcomes include establishing a basis for enhancing nutrition policies at the barangay and municipal levels, aligning with the overarching goal of improving public health and community well-being.

In essence, the implementation of the portal system addressed not only the lack of local nutrition data but also took proactive steps towards promoting a healthier and more resilient community. It aimed to facilitate informed decision-making and targeted interventions tailored to the specific dietary needs of the local population.

Research Objectives

1. Evaluate the present methods used for collecting nutritional data in relation to its accuracy, accessibility, and effectiveness.
2. Determine the assessment level of the nutritional-related data of residents in a certain municipality in Laguna
3. Identify how citizens and barangay officials can get more accurate and up-to-date nutritional information to build programs and initiatives in the field of nutrition.

Research Framework

The establishment of a comprehensive conceptual framework was crucial in creating the portal system, serving as the foundational structure for the study's objectives (Figure 1). This framework aimed to offer a thorough understanding of the interconnected components and crucial elements necessary for developing and implementing an efficient information and audit system. It was built upon established principles and considered the specific circumstances of the municipality's barangays. By effectively navigating the complex terrain of community nutrition, this strategy yielded a focused and substantial outcome. In delineating the essential aspects of the study, this conceptual framework provided the groundwork for the development of the innovative system, facilitating a comprehensive and tailored approach to addressing the nutritional challenges encountered.

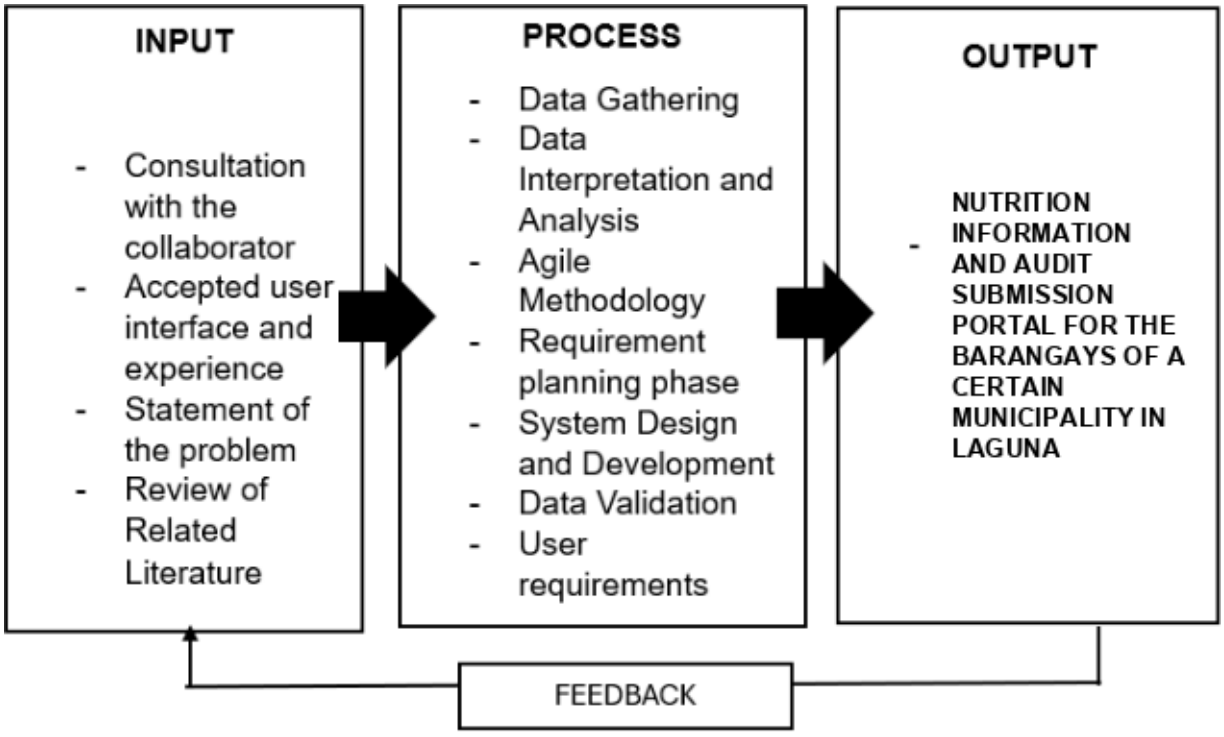

Figure 1: Research Framework

Scope and Limitation

The proposed nutrition information and audit submission portal for barangays aimed to modernize the conventional data input techniques, with a specific emphasis on enhancing the Operation Timbang Plus program. The system incorporated an easy user interface that facilitated smooth data entry, guaranteeing precision and effectiveness. The system integrated a centralized database capable of storing, categorizing, and retrieving nutrition-related information, thus optimizing the data management process. The

inclusion of real-time reporting capabilities allowed for the prompt monitoring of metrics and trends related to the Operation Timbang Plus program. This greatly assisted local officials in making decisions based on solid facts. Nevertheless, it was crucial to recognize certain limitations. The efficacy of the system may have relied on the presence of technological infrastructure, such as dependable internet connectivity and accessibility to digital devices, within the barangays. Furthermore, the efficiency of the system may have been impacted by the degree of technological proficiency of barangay personnel, thus requiring thorough training initiatives. To ensure the protection of sensitive information, it was imperative to address privacy and security issues by implementing strong data protection procedures. Moreover, the study was limited to the Operation Timbang Plus program, and it did not include a thorough evaluation of other nutritional factors. The system needed to be adaptive and scalable to enable future expansions or changes in the scope of nutrition-related efforts within the municipality. The research was limited to the development of an information and auditing system portal submission for the barangays o. The auditing process was restricted to the admin side, enabling assessment of the files submitted by the barangay nutrition scholars. On the other hand, any other aspects in the nutrition field outside the scope of Operation Timbang Plus were not addressed by the researchers as they fell outside the study's coverage.

Review of Pertinent Literature

The notion of an information system comprises the many tools, technologies, and procedures that businesses utilize to successfully manage and utilize data. These systems play a crucial role in the contemporary digital era, as they serve as the foundation for not only gathering and retaining data but also converting it into significant insights.

In the study conducted by Skagne and Dalipi (2022), entitled “Understanding the Importance of Information Systems Implementation in Organization’s Effectiveness: A Comparative Study on Two Swedish Organizations,” the purpose of information systems (IS) is to enhance the dissemination of information inside an organization, across all hierarchical levels. This facilitates the timely and accurate delivery of data to the intended recipient, in the appropriate format, resulting in a favorable and advantageous impact on the business. Hence, it is important to examine their intended objectives and the extent to which they impact the efficacy of the organization, specifically. The introduction of a new information system (IS) has a more significant influence on an organization's effectiveness in comparison to the updating and addition of features to an existing older system.

As mentioned by Markgraf (2019) in an article entitled “Importance of Information Systems in an Organization,” the significance of information systems lies in their ability to handle data derived from firm inputs, thus generating valuable information that facilitates effective management of operations. In order to enhance the efficacy of the information system, two approaches may be adopted: augmenting the existing data to enhance its accuracy or exploring novel applications of the available information. The article discusses two strategies aimed at increasing the effectiveness of information systems: the first involves enhancing current data to boost its accuracy, while the second involves discovering new ways to utilize the information that is already accessible. These techniques are relevant to the conduct of the study, as they pertain to the optimization

and usage of nutritional data within the barangays for improved management and decision-making. Furthermore, it serves to strengthen the notion that the implementation of a nutrition information and audit system has the potential to enhance the administration of nutrition-related data within these local bodies.

The implementation of every system is accompanied by an inherent propensity for failure, posing a significant challenge. It is important for those responsible for managing the system to possess a comprehensive understanding of their anticipated roles and responsibilities. The need must be explicitly and concisely articulated in written form, and subsequently, it should be efficiently conveyed to the relevant stakeholders via training. In order to achieve exemplary performance in system management, it is essential to secure the active involvement of not only engineers, designers, and managers, but also all staff members (Pain, 2023). In summary, the book elucidates the significance of effective administration of the proposed portal submission system. This entails effectively conveying explicit expectations to all individuals, delivering thorough training, and fostering active engagement from all staff members to avert system deterioration and sustain optimum performance in the long run.

Deane & Kraus (2021), want to challenge the prevailing idea that security specialists bear exclusive responsibility for upholding the security of systems and data in their scholarly investigation. This commonly held misunderstanding is often seen among those who are not affiliated with the security business. It is strongly advised that firms create unambiguous security roles and responsibilities within their policy governing the information security system. It is essential that these criteria be congruent with those delineated in other corporate regulations to maintain uniformity and facilitate efficient cooperation. Ensuring transparency, comprehension, and adherence to these duties and responsibilities is crucial for staff members at all levels within the company and across all business areas. Additionally, it is important for external entities, such as suppliers and contractors, to possess knowledge of these designated roles and corresponding obligations.

As per the study of Komalasari, et al. (2018), one primary focus of study in human behavior was to identify faults that arose inside information systems, leading to their inefficacy. The rapid advancement of information systems and information technology emerged as a necessary competitive advantage for companies to succeed in the competitive landscape. The effective implementation of information systems and information technology could have been determined by its ability to enhance employee performance. The accuracy of an information system might have been influenced by several variables, including user behavior, training, and usability. These factors might have had the potential to introduce errors and bugs into the system. The enhancement of the system's overall efficacy might have been achieved by addressing possible inefficiencies that were connected to human actors. The ongoing investigation being undertaken by the researchers might have included the provision of a comprehensive users' handbook, which aimed to facilitate the proper use of the information system. The implementation of a proficient nutrition information system might have had the potential to distinctly distinguish barangays in relation to the quality of service, efficiency, and results pertaining to public health. The proposed system aimed to be a user-friendly platform designed to enhance staff productivity and efficiency.

As mentioned by the study of Batoon, et al., (2022), the documentation of healthcare activities mostly relied on paper-based systems, resulting in a multitude of issues. The process of manually documenting patient information was characterized by time consumption and susceptibility to mistakes, resulting in inefficiencies in the retrieval and administration of health data. Moreover, the potential for data redundancy exacerbated the issue. The decentralized form of paper records presented challenges in effectively mapping health concerns across various geographical locations, such as barangays, and in promptly accessing an individual's medical history. With the continuous growth in patient data volume, the manual system had significant challenges in terms of maintenance.

According to the research study entitled “Data Security and Privacy Protection for Cloud Storage: A Survey,” the increasing prevalence of innovative phenomena such as the Internet of Things (IoT), smart cities, digital transformation inside organizations, and the global digital economy has generated a heightened need for effective data storage solutions. Cloud storage systems have become more essential in contemporary times, as governments, corporations, and people are actively engaged in the process of transferring their data to cloud-based platforms. Nevertheless, the huge increase in data volume presents both lucrative opportunities for wealth generation and serious concerns, including but not limited to unlawful access, data leaks, and breaches of privacy (Yang et al, 2020). In order to ensure the preservation and security of all healthcare unit data, it was essential for the Barangay Nutrition Information System to possess the advantages of convenient accessibility, scalability, and cost-effectiveness. The researchers ensured that the system would not only be efficient but also secure.

According to Tao, et al, (2020), the use of big data analysis significantly transformed decision-making procedures in several industries, as it enabled the conversion of vast datasets into valuable and informative insights. Previous research in the field of the food industry mostly focused on the analysis of data obtained from equipment. However, current advancements shed light on the significance of digital text data. The objective of this study was to provide a comprehensive comprehension of text data sources, computational methodologies, and their applications within the food sector. The system demonstrated the capability to rapidly analyze large volumes of textual data and extract valuable information about dietary trends and customer preferences via the use of advanced methods such as text classification and sentiment analysis. The provided information had the potential to enhance supply chain management, facilitate the creation of novel goods, and enhance the monitoring of food safety. By conducting an analysis of nutrition data, barangays could enhance their decision-making process on health interventions and planning, enabling them to make better-educated choices. The incorporation of analytical tools into the Barangay Nutrition Information System could also help evaluate resident input, local news stories, and other pertinent text-based sources related to nutrition.

In the study conducted by Garcia et al, (2021) despite the well-documented associations between diet and health, there continued to be a persistent issue of poor nutrition among Filipino homes. The development of the Virtual Dietitian (VD) system was undertaken as a reaction to tackle the public health risk. The beta review yielded significant information about user experience, which informed the improvements made to

the final version of VD. By incorporating expert feedback, the accuracy, usefulness, and validity of VD could be ensured in later stages, hence offering a possible solution to the current nutrition dilemma in Filipino families.

As per Moghaddasi (2019), the provision of high-quality food and nutrition in hospital settings has been shown to enhance patient care and increase overall quality of life. Undoubtedly, the task of catering to the diverse dietary needs of patients in a hospital setting posed challenges to achieving optimal nutrition. The integration of a nutrition information system inside the Hospital Information System (HIS) could facilitate hospitals in achieving their objective of providing superior healthcare services to enhance patient well-being. The present system had the capability to manage patient data pertaining to their medical condition through effective communication with their Electronic Medical Record (EMR). The Nutrition Information System played a significant role, particularly within hospital settings, with the potential for expansion to the Barangay level. This statement underscored the significance of delivering superior food and nutrition services within healthcare environments, as it had the potential to improve patient care and overall quality of life. The present idea could be modified to emphasize the potential advantages of guaranteeing nutrition services of superior quality at the barangay level in order to enhance the overall welfare of the inhabitants.

METHODOLOGY

Research Design

This study used quantitative research because it generates numerical data and allows rigorous statistical analysis. Researchers used surveys and statistical methods to assess nutritional indicators and audit measures for accurate measurement and evidence-based decision-making. This quantitative method provided a deep insight of existing situations, improving system development and execution. The study stressed the need for descriptive and quantitative research to understand the barangay's nutrition information and audit methods. Descriptive study employing interviews and surveys highlighted key features for a customized solution. Quantitative research, which used numerical data and statistical analysis, strengthened the intended information and audit system by supporting evidence-based decision-making.

Research Locale

The research was conducted at the Municipal Health Office of one of the municipalities in the province of Laguna, Philippines. The selection of this location was based on several factors, including its zoning classification, the implementation of procedures throughout all Barangays, and the information technology index. The research included various data collection methods, such as surveys and interviews, which were conducted at the respondents' convenience.

Population and Sampling Design

Researchers used non-probability and purposeful sampling for this investigation. In non-probability sampling, individuals are not picked randomly or equally. Using purposeful sampling, the researcher selects participants based on study-relevant traits.

Research Instrument

The researchers used several instruments that were utilized to collect data for this study; questionnaires, and interviews. This study targeted nutrition officials in several barangays. The questionnaire assessed the systems used by the Municipality Barangay Nutrition Officers, with adjustments restricted to adding a data collection and auditing system. The questionnaire explained barangay resident data collection. The researcher distributed a closed-ended Likert scale questionnaire. Five answer possibilities were provided in the questionnaire. The satisfaction scale included "Strongly Disagree," "Disagree," "Neutral," "Agree," and "Strongly Agree." The researcher was able to discover information system techniques, technology strategies, management approaches, resources, and implementation timetables by interviewing respondents. The main data source. To learn about data collection and protocols in each barangay in the municipality, the City Nutrition Officers were provided a set of questions. The Nutrition Officer was chosen because of their entire responsibility for municipal nutrition operations.

Data Gathering Procedure

The Data Gathering Procedure began with a formal client letter. This professional and courteous letter began data collecting. The study's goals and data collection methods were explained in the letter. The letter also requested customer agreement and assistance in the study mission. Being a collaborative framework, stressing the client's participation in study achievement. This email set the tone for data collection and emphasized ethical issues and study procedure adherence.

Two primary instruments, the questionnaire and interview, were used to gather relevant information. To promote systematic investigation, barangay respondents were given the questionnaire. The purpose was to quantify dietary habits, information demands, and audit methodologies. After comprehensive questionnaire analysis, numerical insights were intended to help identify patterns and connections and construct a full system. Interviews were also conducted to gather data to better understand the nutrition and audit background. Through semi-structured interviews with key actors, including local authorities, the study sought to understand cultural difficulties, issues, and aspirations related to nutrition information and audit processes. This interview data would augment the quantitative questionnaire findings' contextual knowledge. Using numerous varied but complementary data sources, the research intended to provide a thorough and well-informed foundation for the proposed system, ensuring its relevance and utility in the barangays.

RESULTS AND DISCUSSION

Objective 1. Evaluate the present methods used for collecting nutritional data in relation to its accuracy, accessibility, and effectiveness.

In this objective, the researchers employed various research tools, such as interviews, and questionnaires to assess the prevailing systems and processes implemented in the barangays. The focus of the assessment revolved around evaluating accuracy, accessibility, and effectiveness. The researchers conducted interviews with city nutrition officers and carried out surveys among barangay nutrition officers in five (5) barangays in the municipality. Three city nutrition officials were subjected to interviews, while a total of ten barangay nutrition officers participated in the study. The aim was to investigate and identify the and identify the current system implemented in the Operational Timbang Plus process. The transcribed audio underwent thematic analysis to present the results comprehensively. Some of the results of the study are presented in the following paragraphs

1. **Accuracy - Effects of Paper-Based Nutritional Data Recording.**

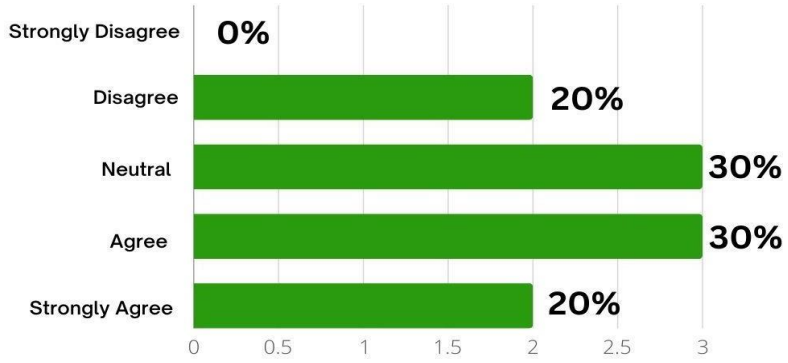

Figure 1. Accuracy of Data Amidst Human Errors (Questionnaire)

As shown in Figure 1, an equal number of respondents expressed agreement and neutrality when it came to the impact of manually recording nutritional data on paper. They believed that this method could lead to human mistakes or errors. In the questionnaire, a total of 3 out of 10 participants agreed with the statement, while another 3 respondents remained neutral. In addition, four (4) individuals also gave their responses, with two (2) expressing disagreement and two (2) strongly agreeing. It was interesting to observe that all the participants did not select the option "Strongly Disagree."

2. Accessibility - Current Nutritional Data Collection Methods

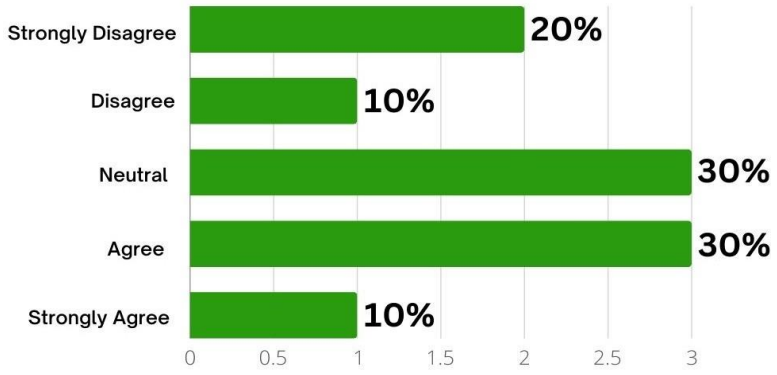

Figure 2. Preferences vs. Accessibility in Nutritional Data Collection (Questionnaire)

As shown in Figure 2, most participants expressed a "Neutral" or "Agree" response when rating the compatibility of the current methods for collecting nutritional data with their preferences. Two out of 10 respondents strongly disagreed, one out of 10 respondents disagreed, and finally, 1 out of 10 of the respondents strongly agreed that the accessibility for collecting nutritional data using the current method was in line with their preferences. The researchers calculated the weighted mean score to assess the level of agreement or disagreement among barangay nutrition scholars regarding the alignment of preferences with the current method for collecting nutrition-related data.

Objective 2. Determine the assessment level of the nutritional-related data of residents in a certain municipality in Laguna.

In pursuit of this objective, the researchers utilized various research tools, such as interviews and questionnaires, to evaluate the impact of manual entry of nutritional data on the OTP system and to propose potential enhancements. Interviews were conducted with three city nutrition officers, and surveys were administered to ten barangay nutrition officers across five barangays. The primary focus was to comprehensively assess how the manual entry of nutrition-related data in the municipality affected the OTP system. Thematic analysis was employed to derive meaningful insights from transcribed audio recordings, presenting the results in a comprehensive manner. Additionally, the responses gathered from the questionnaires were subjected to a weighted mean analysis to provide a quantitative measure of the participants' perspectives and contribute to a well-rounded understanding of the impact and potential improvements in the OTP system.

3. Assessing Manual Data Entry Impact on Operation Timbang Plus

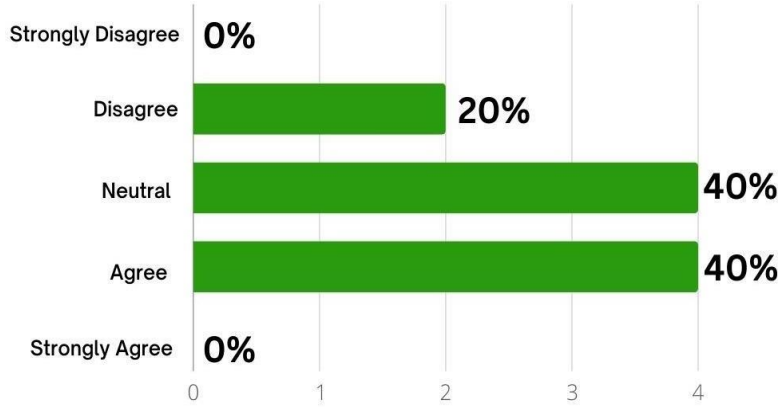

Figure 3. Effects of Manual Data Entry (Questionnaire)

As depicted in Figure 3, the majority of respondents provided responses falling within the "Neutral" and "Agree" categories when rating the impact of entering nutritional-related data by hand for Operation Timbang Plus. Specifically, 30% expressed agreement, while another 30% maintained a neutral stance. Contrarily, 20% of respondents disagreed with the impact on the OTP method of entering nutritional data. Notably, none of the respondents indicated "Strongly Disagree" or "Strongly Agree" with the given statement. To gauge the overall sentiment among barangay nutrition scholars, the researchers calculated the weighted mean, providing a quantitative measure to assess the collective agreement or disagreement regarding the impact on the OTP method of entering nutritional-related data by hand for the people

4. Exploring the Efficiency of a Website-Based Operation Timbang Plus System

All City Nutrition Officers in the municipality were in complete agreement that the implementation of a website-based system for Operation Timbang Plus (OTP) would greatly improve efficiency and effectiveness. Every officer expressed their support for implementing a website-based system for OTP, citing their own personal reasons. It was highlighted that implementing such a system would greatly improve data collection efficiency, provide instant updates on children's status, and reduce the chances of errors caused by manual input. The officers anticipated a decrease in errors compared to the traditional manual data inputting process and expected the Municipality Nutrition Department to have better data monitoring capabilities as an added benefit.

The respondents consistently emphasized the benefits of implementing a web-based system for Operation Timbang Plus (OTP), highlighting how it would improve the speed and accuracy of data collection. They emphasized the importance of minimizing errors caused by human factors, specifically focusing on the difficulties caused by unreadable writing among Barangay Nutrition Scholars (BNS). Through the insights of

the respondents, the researchers became aware of a significant problem with the manual OTP system. According to the majority of respondents, it seemed that developing a web-based system could tackle these challenges and provide a more efficient and precise method for collecting data.

Objective 3. Identify how citizens and barangay officials can get more accurate and up-to-date nutritional information to build programs and initiatives in the field of nutrition.

In this objective, the researchers employed various research tools, including interviews and questionnaires, to understand how citizens and barangay officials could obtain more precise and current nutritional data. This information would be used to develop programs and initiatives in the field of nutrition in the municipality. Interviews were conducted at the city nutrition office, with the participation of three available city nutrition officers. The survey questionnaire was administered by ten barangay nutrition officers across five barangays. The main objective was to thoroughly evaluate how citizens and barangay officials could access more precise and current nutritional information to develop programs and initiatives in the field of nutrition. An in-depth analysis was used to extract valuable insights from the transcribed audio recordings, presenting the findings in a thorough manner. Additionally, the responses collected from the questionnaires underwent a weighted mean analysis to offer a numerical measure of the participants' viewpoints and contribute to a comprehensive understanding of the impact and possible enhancements in the OTP system.

Conclusions

Ever since Operation Timbang Plus (OTP) was introduced, the system has faced numerous difficulties in terms of data accuracy, accessibility, and overall effectiveness. These challenges have arisen due to a range of errors and issues. OTP played a vital role in identifying children who were underweight, wasted, stunted, or obese, as well as finding families with malnourished children. Although the OTP system has proven to be effective, there is still room for improvement, especially when it comes to collecting nutritional data.

The research conducted on the nutrition information and audit portal submission for the municipality, offered valuable insights into the previous state of nutrition management and the OTP program within the community. After conducting interviews, surveys, and reviewing literature, it became clear that the accuracy of nutritional data was being compromised by manual data entry errors. These errors included inaccurate inputs and unreadable records, which presented significant challenges. In addition, city and barangay nutrition officers have reached a unanimous agreement on the urgent need to implement a standardized audit system. This system will improve data accuracy, improve operations, and strengthen evidence-based decision-making in nutrition initiatives.

The findings highlighted the crucial significance of precise and easily obtainable nutritional data for successful program planning and decision-making. The challenges that were identified have emphasized the need for technological solutions, like web-based

systems or mobile applications, to improve data collection and make the OTP process more efficient. In addition, the research highlighted the importance of offering sufficient training and support to barangay

nutrition scholars to ensure the successful implementation of the proposed Information and Audit system.

Finally, the research supported the idea of introducing a customized Information and Audit system to tackle the obstacles faced in nutrition management and improve the efficiency of the OTP program in the municipality. By harnessing the power of technology and ensuring accurate data, this system could completely transform the way nutrition management is done. It has the potential to enhance health outcomes and empower local communities to make informed choices about their nutritional well-being.

Recommendations

Implementation of a Tailored Information and Audit System.

Based on the findings, the researchers recommended the development and implementation of a full blown auditing system specifically tailored to the needs and context of the barangays of the municipality This system should have incorporated features such as user-friendly interfaces, standardized data entry protocols, and built-in quality control mechanisms to ensure accuracy and reliability of nutritional data.

Training for Barangay Nutrition Scholars in using the proposed system.

To facilitate a seamless transition to the proposed system, it was beneficial to offer thorough training sessions for Barangay Nutrition Scholars (BNS) on the optimal utilization of the proposed Barangay Nutrition Information and Audit System. These training sessions provided comprehensive coverage of the system, encompassing data entry, retrieval, analysis, and reporting functionalities. In addition, it was beneficial to create specialized training modules that effectively tackled the specific challenges that were discovered during the research. These challenges included dealing with difficult-to-read handwriting and ensuring the accuracy of the collected data. By equipping BNS with the essential skills and knowledge, they could have had a significant impact on guaranteeing the success and long-term viability of the system implementation, ultimately resulting in enhanced nutrition management

Continuous Monitoring and Evaluation.

Establishing a framework for ongoing monitoring and evaluation of the implemented system was crucial in assessing its effectiveness and identifying areas for improvement. It would have been beneficial to implement regular feedback mechanisms, user surveys, and performance metrics to monitor the usability of the system, the quality of the data, and the overall impact on nutrition management initiatives.

For Future Researchers.

Future researchers should conduct longitudinal studies to assess the long-term impact and effectiveness of the implemented portal submission system. Longitudinal research would allow for the observation of trends and changes over time, providing valuable insights into the system's sustainability and its contribution to improved nutrition management outcomes in the municipality. Additionally, future studies could explore the scalability of the system to other barangays or municipalities, as well as its adaptability to different contexts and settings. By conducting longitudinal research and exploring scalability, future researchers can further advance the researcher's understanding of nutrition management systems and contribute to ongoing efforts to improve community health and well-being.

Compliance with Ethical Standards

The researchers complied with the basic standards of research ethics and also followed the Data Privacy Act in the collection and process of data gathered.

ONLINE SHOPPING PLATFORMS' INFLUENCE IN CONSUMER BEHAVIOR

Dr. Daisy H. Estrada, CSE

College of Business Administration and Accountancy
AMA University, Quezon City, Philippines

https://doi.org/10.5281/zenodo.11628951

ABSTRACT

Online shopping has grown in importance as a means of conducting business and marketing. Indeed, many consumers are ditching conventional methods of exchanging things in favor of the online shopping trend. The Philippines is the third most populous country in the Asia Pacific that has been spotted using the internet shopping platforms. The convenience of online shopping has made it a popular trend among customers, particularly among Millennials and Gen Z. Online shopping is getting more popular among busy individuals, especially among the young and those who know how to browse and buy online. The study anticipated that fourth-year students from the Higher Education Institution's (HEI) in BSBA Financial Management program are more educated about buying and shopping online. As a result, the researcher felt compelled to perform this study to see if this presumption is correct, particularly among FM students. This study was carried out to see how online shopping influences their purchase behaviors. A valid response from thirty respondents from the given course and school was included in the study. The researcher decided to utilize a descriptive research strategy that included purposive sampling. When buying online, respondents examine factors such as sales promotion, advertisement, feedback, logistics, and payment process, according to the findings. The researchers discovered that there is a significant relationship between the respondents' assessments of the aspects of online shopping on the purchase decision process using the Pearson correlation coefficient or Pearson's R.

Keywords: *Online shopping, Shopping platforms, Consumer behavior*

INTRODUCTION

Online shopping and online stores are probably one of the oldest words or terms used to describe what we have all been doing over the years (Sajannavar, Dharwad, & Tandale, 2022). On the other hand, the terms “trade” or “exchange” and probably even “market” would have been used in ancient times (Hirth, 2020). However, the internet has opened up a broader and more exciting market for the new generation of consumers. This is now the way that consumers can buy goods or services directly from home. Online shopping is becoming more popular, whether for clothes, gadgets, or even pets. Every day, new websites are being launched to meet the growing need for comfort and convenience. Online shopping is quickly becoming the preferred method for making all purchases, whether you are at home, at work, or in another country. This is especially true in industrialized nations, where every store has its own website from which to purchase goods online. Tricks of the trade such as cash on delivery and special discounts on internet purchases have made it incredibly easy to communicate with customers.

The habit of shopping online from the comfort of one's own sofa has lately gained traction in the Asian area. The worldwide e-commerce sector has been classified into several areas, including apparel, electronics, cosmetics and personal care, and other items (Afridi et al., 2021). According to research from the United States Census Bureau, an estimated $222.5 billion was spent on retail e-commerce sales in the second quarter of 2021. In comparison, retail e-commerce sales were predicted to be $47.5 billion in 2011. Also, according to Statista research, the Philippines ranks third (3rd) among the world’s fastest-growing e-commerce economies, outlasting its Southeast Asia neighbor and according to Statista data from September 2019 (Marasigan, 2020), the Philippines has more than 69 million internet users, with Global Web Index reporting that three-quarters of these individuals are aged 16 to 64. Purchase behavior, on the other hand, is impacted by the consumer’s perspective (Tao et al., 2022). Because online shopping is a new medium, consumer behavior in the field of online shopping is rather different in character when compared to conventional consumer behavior; therefore, it is equally essential to understand what variables encourage customers to purchase online. It comprises of numerous elements that drive customers to buy online in order to achieve a purchasing choice.

Along these lines, the purpose of this research is to examine the influences of online shopping platforms on students’ purchasing behavior. To localize the issue, this study will dive into The National Teachers College students’ perception of online buying and their subsequent purchase behavior.

Research Questions

This study pointed out the influence of online shopping platforms on the purchasing behavior of students. Specifically, it is intended to answer the following questions:

1. What is the profile of the respondents in terms of:

1.1 Gender, and
1.2 Online shopping platform?

2. What is the assessment of the respondents on the influence of the online shopping platform in terms of:

2.1 Sales promotion,
2.2 Social environment,
2.3 Advertisement,
2.4 Feedback,
2.5 Logistics, and
2.6 Payment process?

3. What is the assessment of the respondents on their purchasing behavior in terms of:

3.1 Pre-Purchase behavior, and
3.2 Post-Purchase behavior?

4. Is there a significant relationship between the factors of online shopping platforms and the purchase decision process in the purchasing behavior of the respondents?

METHODOLOGY

Research Design

To further understand the impact of online shopping platforms on student purchase behavior, we conducted a descriptive study using a survey and a self-constructed questionnaire. According to Shona Siedlecki (2020), the goal of descriptive research is to correctly and thoroughly describe a population, situation, phenomena. It can answer the questions what, where, when, and how but not why. To explore one or more variables, a descriptive research design might employ a range of research methods. Although qualitative research can sometimes be utilized for descriptive purposes, descriptive research is typically characterized as a sort of quantitative study.

To ensure that the results are legitimate and dependable, the research should be properly constructed. This study used a quantitative way to determine what factors influence students' purchase behavior and how they are influenced by online shopping platforms. The descriptive research method used in the study is deemed the most appropriate as it involves collecting data to test the hypothesis and answer questions concerning the current status of the subject of the study. This study identifies the influence of the online shopping platforms on the purchasing behavior of the HEI's 4th year BSBA Financial Management students.

Research Locale

A selected Higher Education Institution is the locale of the research. It is an ideal location for the study because our respondents are students, and we all know that students are the ones that shop online these days. HEI students are well-versed in the online commerce business. Also, the number of online shopping platforms is increasing at such a rapid pace that online buyers or students are most likely to contemplate purchasing because they spend too much time on the internet. Specifically, it aims to gather data from the 4th year BSBA Financial Management students.

Respondents of the Study, Population, and Sample Size

The 30 respondents were students who are currently studying and taking BSBA Financial Management. The 4th-year students are chosen because the majority of them are aged 21 years old and above with a high preference for buying their needs and wants through online shopping.

Samples and Sampling Techniques Used

A sample is a subset of a population. Sampling is the process of picking a sample. In this work, we used a non-probability sampling method combined with a purposive sampling strategy. The researchers used purposive sampling to determine the reliable respondents who are capable of assessing the influence of online shopping platforms on purchasing behavior.

The respondents who were chosen to accomplish the survey/questionnaire were identified as follows:

1. Must be twenty-one (21 years) old and above,
2. Must be currently enrolled in SY 2023-2024,
3. Must be a 4th-year BSBA Financial Management student, and
4. At least had purchased ten (10) or more times in an online shopping platform.

The researchers surveyed thirty (30) respondents who qualified for the above-mentioned criteria. This is to ensure that the answers of the respondents and the results of the study are credible and reliable.

Research Instrumentation

Primary data will be gathered through the use of survey questionnaires designed to answer questions on the influence of online shopping platforms on purchasing behavior. The data will be acquired through the use of a practical and intentional sampling approach. This study's major data collection instrument is a self-created questionnaire used to address the research questions and objectives relevant to the study. In this study, those who are available to engage in the research are chosen to utilize the purposive sampling technique.

Validation of Instrument

To ensure the validity and reliability of the items in the survey questionnaire, the researchers sought assistance from their research adviser and statistician. The draft was submitted to check the words for further editing, the suggestions were adapted to enrich the statement questions in the survey questionnaire.

Data Gathering Procedure

The researchers will send a letter to the respondents informing them of the survey's completion.

The Likert Scale is the instrument that will be used to analyze the data Likert Scale scores are calculated by multiplying each frequency by the Likert Scale score, which ranges from 5 = Strongly Agree to 1 = Strongly Disagree.

To determine the response of the respondents, 5 points were devised with the relative weighting system as a reference point.

The table below will be used to verbally interpret the mean scores; Range Scale Value Verbal Interpretation:

The table below will be used to verbally interpret the mean scores; Range Scale Value Verbal Interpretation:

Range	Scale Value	Verbal Interpretation
4.21-5.00	5	Strongly Agree
3.41-4.20	4	Agree
2.61-3.40	3	Moderately Agree
1.81-2.60	2	Disagree
1.01-1.80	1	Strongly Disagree

Statistical Treatment of Data

The researchers used different methods which helped them in analyzing the gathered data.

Frequency.

This is a tabular arrangement where numerical data are grouped into different intervals and the number of observations from each interval is determined.

Percentage.

This is used to interpret the data of the respondents in terms of their profile; P = FN (100)

Where:

P= Percentage
F= Frequency for each category N= Total number of respondents
100= Constant multiplier

Weighted Mean.

The weighted average on the assessment of the respondents on the online shopping platforms and purchasing behavior was measured using the following formula; WM=ΣFWN

Where:

WM= Weighted mean
Σ= Summation symbol
F= Frequency
W= Assigned weight
N= Total number of Frequencies

Pearson Product Moment of Correlation (Pearson r)

This is necessary to find the degree of the association of the variables. This will use for the statement of problem number 4, to determine the correlation between online shopping platforms and purchasing behavior.

The formula is as follows:

$$r=n(\Sigma xy)-(\Sigma x)(\Sigma y)\sqrt{[n\Sigma x2-(\Sigma x)2][n\Sigma y2-(\Sigma y)2]}$$

Where:
Where:
Σ= Summation symbol
x = Values in the first set of data
y = Values in the second set of data n = total number of samples

RESULTS AND DISCUSSION

In this chapter, the gathered data along with its interpretation were presented in tabular form arranged chronologically considering the statement of the problem. These findings were the basis upon which the conclusions and recommendations were derived.

TABLE 1: PROFILE OF THE RESPONDENTS AS TO GENDER

Gender	Number
Male	9
Female	21
Total	30

Table 1 depicts the gender of the participants. There are 9 males that answered the survey, or around 30% of the entire population. When it comes to the entire population, female make about 70 % of the study's subjects. Studies developed by Meena (2018) show that from a young age one begins to have a preference for one product/service over another, as we are confronted with various commercial stimuli that shape our choices.

TABLE 2: Profile of the Respondents as to Types of Online Platforms Used

Types of Online Platforms used	F	%	Rank
1. Shopee	25	83%	1
2. Lazada	2	7%	2
3. Facebook Marketplace/Facebook	2	7%	2

4. Others	1	3%	3
Total	30	100%	

As shown in table 2, Rank 1 is the Shopee where it had the frequency of 25 or 83%. Followed by Rank 2 which is Lazada and Facebook marketplace/Facebook with the frequency of 2 or 7%. Rank 3 is other online shopping site with the frequency of 1 or 3%. The data shows that the majority of the respondents prefer to use Shopee for their online shopping needs. It also indicates that the respondents are more familiar with using Shopee than other online shopping platforms such Lazada and Facebook Marketplace/Facebook.

It can also be surmised that respondents are now really fond of doing online shopping due to their familiarity with the different online shopping platforms available in the market. All the applications or sites offer different products for different needs of their market that including apparel, accessories, gadgets, home products, and more. Social influences include reference groups, family, and social position. These elements also have an impact on the consumer's purchasing behavior. These elements, in turn, indicate an unending and strong influx through which individuals learn alternative values of consuming.

TABLE 3: **Assessment of the Respondents on the Factors of Online Shopping Platforms as to Sales Promotion**

Sales Promotion	Frequency					Total	Weighted Mean	Verbal Interpretation	Rank
	5	4	3	2	1				
1. A promotional offer like sales or reduced-price influences my purchasing decisions when buying through online shopping platforms	14	13	3	0	0	30	4.37	Strongly Agree	1
2. The promos enable me to make impulsive purchasing decisions	7	13	8	2	0	30	3.83	Agree	4
3. Coupons make me persuaded to make purchases online	8	11	9	2	0	30	3.83	Agree	4
4. The most effective promotional tactic is to buy having freebies from the online seller	11	13	6	0	0	30	4.17	Agree	3

5. Sales promotion is more effective and appealing than advertisements	14	11	5	0	0	30	4.30	Strongly Agree	2
Weighted Mean							**4.10**	**Agree**	

As shown in table 3, Rank 1 is the question “A promotional offer like sales or reduced-price influences my purchasing decisions when buying through online shopping platforms” with a weighted mean of 4.37 “Strongly Agree”; Rank 2 is the question “Sales promotion is more effective and appealing than advertisements” with a weighted mean of 4.30 “Strongly Agree”; Rank 3 is the question. “The most effective promotional tactic is to buy having freebies from the online seller” with a weighted mean 4.17 Agree, and Rank 4 are the questions “The promos enable me to make impulsive purchasing decisions” and “Coupons make me persuaded to make purchases online” with a weighted mean of 3.83 Agree. Overall, the assessment of the respondents on the factors of online shopping platforms as to sales promotion is equivalent to the weighted mean of 4.10 “Agree”.

This explains that respondents are more likely to buy when they see a reduction in the prices of the products seen on online shopping platforms. They are persuaded to buy products because of the discounts or sales. The advertisement also plays a vital role in the awareness of the customers about the variety of products available on the app or site.

This brings the customer to browse and do window shopping in the online shopping platform that makes them impulsive to buy products even though they don’t really need them. Promos are also relevant as seen in the result; this is also a factor that convinces the respondents that buying now because of the promo is important because of the limited time applicable in the promo. It creates thinking that buying now will save them money.

The sales promotion has become one of the most powerful tools to change the perception of buyers and has a significant impact on their purchase decision (Khan et al., 2019). The main factors affecting online buying were found as availability, cheap price, promotions, comparison, convenience, and customer service, perceived ease of use, attitude, time consciousness, trust, and variety seeking. (Jadhav and Khanna, 2016). Lastly, coupons are the least effective tool in sales promotion because people prefer other types of sales promotions than having coupons as seen in the results.

TABLE 4: Assessment of the Respondents on the Factors of Online Shopping Platforms as to Social Environment

Social Environment	Frequency					Total	Weighted Mean	Verbal Interpretation	Rank
	5	4	3	2	1				
1. My purchasing decisions are influenced by my family Members	3	9	12	5	1	30	3.27	Moderately Agree	3
2. My purchasing decisions are influenced by the culture of my society	3	9	13	4	1	30	3.30	Moderately Agree	2
3. My friends are the most influential persons in my purchasing decisions	3	9	14	2	2	30	3.30	Moderately Agree	2
4. I care about people opinions and suggestions when I buy things	10	11	5	2	2	30	3.83	Agree	1
5. My classmates and professors may, and do, have a significant impact on my purchase decisions	4	4	12	6	4	30	2.93	Moderately Agree	4
Weighted Mean							**3.33**	**Moderately Agree**	

As shown in table 4, Rank 1 is the question “I care about people opinions and suggestions when I buy things” with a weighted mean of 3.83 “Agree”; Rank 2 are the questions. “My purchasing decisions are influenced by the culture of my society” and “My friends are the most influential persons in my purchasing decisions” with a weighted mean of 3.30 “Moderately Agree”; Rank 3 is the question “My purchasing decisions are influenced by my family members” with a weighted mean of 3.27 “Moderately Agree”; Rank 4 is the question “My classmates and professors may and do, have a significant impact on my purchase decisions” with a weighted mean of 2.93 “Moderately Agree”. Overall, the assessment of the respondents on the factors of online shopping platforms as to social environment has resulted in a weighted mean of 3.33 “Moderately Agree”

It was really seen in the results that opinions and suggestions are relevant for the respondents when buying products from the online shopping platform. It gives them an idea of the possible advantages and disadvantages whenever they make a purchase. It also means that they listen to other peoples’ thoughts and points of view.

Culture and the friends of the respondents are also somehow important in their purchasing decision. Trends and norms of the community someway affect whether they will buy a certain product in an app or site, or not. Friends had also been creating an influence in the purchasing process of the respondents as seen in the results.

Family members are also a factor in the social environment that influences the respondents to buy in the shopping platform. It means that family members such as the

parents and siblings somehow have a say whether they agree or disagree over a purchasing decision. Lastly, the least that affects the purchasing of products through online shopping platforms is their classmates and professors. The results state clearly that the other people who purchased already the product in the app/site are more relevant to the respondents when making a purchase.

TABLE 5: Assessment of the Respondents on the Factors of Online Shopping Platforms as to Advertisement

Advertisement	Frequency					Total	Weighted Mean	Verbal Interpretation	Rank
	5	4	3	2	1				
1. Tiktok app, Blog posts, and Facebook and Instagram pages influence my purchasing behavior	9	12	5	4	0	30	3.87	Agree	3
2. social media is my primary source of information that affects my purchasing decisions	12	12	4	1	1	30	4.10	Agree	2
3. I search various online shopping websites just to find out more about the last products	12	11	6	1	0	30	4.13	Agree	1
4. I read online advertisements just out of my curiosity	8	13	6	2	1	30	3.83	Agree	4
5. Advertisements on television are more appealing than advertisements on social media	4	7	13	3	3	30	3.20	Moderately Agree	5
Weighted Mean							**3.83**	**Agree**	

As shown in table 5, Rank 1 is the question “I search various online shopping websites just to find out more about the last products” with a weighted mean of 4.13 “Agree”; Rank 2 is the question “social media is my primary source of information that affects my purchasing decisions” with a weighted mean of 4.10 “Agree”; Rank 3 is the question.

“Tiktok app, Blog posts, and Facebook and Instagram pages influence my purchasing behavior” with a weighted mean of 3.87 “Agree”; Rank 4 is the question “I read online advertisements just out of my curiosity” with a weighted mean of 3.83 “Agree”; Rank 5 is the question “Advertisements on television are more appealing than advertisements on social media” with a weighted mean of 3.20 “Moderately Agree”; Overall the assessment of the respondents on the factors of online shopping platforms as to advertisement gained a weighted mean of 3.83 “Agree”

The results show that comparing products from online shopping sites is important for the respondents before making a purchase. They really ensure that the product they will buy is worth their money. One thing to note, in the purchasing behavior of the respondents, is their habit of getting information about products through social media. This only proves that social media nowadays is not just essential in connecting people but also important in providing necessary information about products, that will convince the customer to make a purchase.

Online advertisement through other websites and blogs makes also a vital role to know more about products' specifications and features. It leads to a better understanding of the benefits that the buyer may get when they decided to make a purchase already. There is a significant link between social media and marketing. Alavi et al (2019) illustrate that social media marketing is seen as utilizing the "social" with the "media" for marketing enterprises and correctly executing them. It is clear that social media marketing is the process of encouraging individuals to promote their products or services through various social media platforms. This will allow you to reach a significant number of people who would not have been reachable through traditional advertising methods.

TABLE 6: Assessment of the Respondents on the Factors of Online Shopping Platforms as to Feedback

Feedback	Frequency					Total	Weighted Mean	Verbal Interpretation	Rank
	5	4	3	2	1				
1. Personal product review has become one of the most significant sources of information for me when making purchase Selections	15	10	5	0	0	30	4.33	Strongly Agree	2
2. When there are no product reviews, I am hesitant to make a purchase	15	12	3	0	0	30	4.40	Strongly Agree	1
3. A customer review of a product allows me to acquire a better understanding of the product before purchasing it	13	12	5	0	0	30	4.27	Strongly Agree	3
4. Feedback and suggestions assist me in determining whether or not a product is worth purchasing	16	8	6	0	0	30	4.33	Strongly Agree	2
5. When a product or an online store gets positive feedback, it is simpler to trust it	14	9	6	1	0	30	4.20	Agree	4
Weighted Mean							**4.31**	**Strongly Agree**	

As shown in table 6, Rank 1 is the question “When there are no product reviews, I am hesitant to make a purchase” with a weighted mean of 4.40 “Strongly Agree”; Rank 2 are the questions “Personal product review has become one of the most significant sources of information for me when making purchase selections” and “Feedback and suggestions assist me in determining whether or not a product is worth purchasing” with a weighted mean of 4.33 “Strongly Agree”; Rank 3 is the question “A customer review of a product allows me to acquire a better understanding of the product before purchasing it” with a weighted mean of 4.27 “Strongly Agree”; Rank 4 is the question “When a product or an online store gets positive feedback, it is simpler to trust it”; Overall, the assessment of the respondents on the factors of online shopping platforms as to feedback gained a weighted mean of 4.31 “Strongly Agree”. It was clear from the results that respondents are hesitant to make a purchase if they will not see any product review.

This is considered an essential part of the factors that affect the purchasing behavior of the respondents in an online shopping platform. One of the reasons why customers need to see a product review is because they don’t see the actual product, and just see it on the pictures posted in the shopping app or sites. This gives them thinking that pictures are from reality that’s why they really seek a product review before making any purchase.

It can also be surmised that they might already experience buying in an online shopping platform and getting a product they don’t expect. Or they know someone who bought a product in an online shop or site, who is disappointed with the actual product, which really eager the respondents to check first the product review prior to buying it. According to Putter (2017), more buyers are utilizing social media platforms than ever before. Customers have shown a desire to provide as much feedbacks and ideas as possible. Furthermore, according to recent surveys, 88% of individuals rely their shopping decisions on feedback on social media and search engines.

However, Hernández-Méndez & Muñoz-Leiva (2015) found no significant difference in their trust levels since they are as eager to embrace these reviews as they are to trust those of their close ones. In terms of statistics, it can be stated that many individuals pick their ecommerce platforms for buying based on the reviews of their loved ones or reviews on social media. More buyers than ever before are turning to social media sites like Facebook and Twitter, according to a study by Putter (2017). Customers have been shown to be looking for the most comments and ideas. As a result, it's critical to maintain an active social media presence. However, the emergence of social media is seen as the current marketing trend.

TABLE 7: Assessment of the Respondents on the Factors of Online Shopping Platforms as to Logistics

Logistics	Frequency					Total	Weighted Mean	Verbal Interpretation	Rank
	5	4	3	2	1				
1. A complete description of the product would make it easy for me to purchase	13	11	6	0	0	30	4.23	Strongly Agree	1
2. The online seller was quite helpful when doing queries on the products they sell	7	18	5	0	0	30	4.07	Agree	3
3. Before dispatching the orders, the majority of the merchants exercised quality and product Verification	7	16	6	1	0	30	3.97	Agree	5
4. All of the delivery riders I've encountered have been kind and cheerful	10	12	6	2	0	30	4.00	Agree	4
5. I'm fine with the delivery fee for the sort of shipment I choose	10	15	5	0	0	30	4.17	Agree	2
Weighted Mean							**4.09**	**Agree**	

As shown in table 7, Rank 1 is the question “A complete description of the product would make it easy for me to purchase” with a weighted mean of 4.23 “Strongly Agree”; Rank 2 is the question “I'm fine with the delivery fee for the sort of shipment I choose” with a weighted mean of “4.17” Agree”; Rank 3 is the question “The online seller was quite helpful when doing queries on the products they sell” with a weighted mean of 4.07 “Agree”; Rank 4 is the question “All of the delivery riders I've encountered have been kind and cheerful” with a weighted mean of

4.00 “Agree”; Rank 5 is the question “Before dispatching the orders, the majority of the merchant’s exercised quality and product verification” with a weighted mean of 3.97 “Agree”. Overall, the assessment of the respondents on the factors of online shopping platforms as to logistics resulted to a weighted mean of 4.09 “Agree”.

A detail about the product is the most important factor in terms of logistics as seen in the results. Product description really matters for the respondents when purchasing a product online. For the respondents, the delivery fee is not an issue anymore because it is just minimal and the convenience, they get over the delivery fee they will pay is far better.

TABLE 8: Assessment of the Respondents on the Factors of Online Shopping Platforms as to Payment

Payment Process	Frequency					Total	Weighted Mean	Verbal Interpretation	Rank
	5	4	3	2	1				
1. I prefer cash on delivery over online payment	20	6	3	1	0	30	4.50	Strongly Agree	1
2. The requirement to use online payment is difficult for me	3	8	8	8	3	30	3.00	Moderately Agree	5
3. As a customer, I must be aware of the safety and security concerns while utilizing e-payment systems	15	11	4	0	0	30	4.37	Strongly Agree	2
4. Online payment systems save me time and money	7	14	9	0	0	30	3.93	Agree	4
5. Online payments are simple to understand and use	7	21	2	0	0	30	4.17	Agree	3
Weighted Mean							**3.99**	**Agree**	

As shown in table 8, Rank 1 is the question “I prefer cash on delivery over online payment” with a weighted mean of 4.50 “Strongly Agree”; Rank 1 is the question “As a customer, I must be aware of the safety and security concerns while utilizing e-payment systems” with a weighted mean of 4.37 “Strongly Agree”; Rank 3 is the question “Online payments are simple to understand and use” with a weighted mean of 4.17 “Agree”; Rank 4 is the question “Online payment systems save me time and money” with a mean of 3.93 “Agree”; Rank 5 is the question. “The requirement to use online payment is difficult for me” with a weighted mean of 3.00 ‘Moderately Agree”. Overall, the assessment of the respondents on the factors of online shopping platforms as to payment resulted in a weighted mean of 3.99 “Agree”.

Paying on cash on a delivery basis remained to be the most preferred payment method of the respondents. They really want to pay in cash because of the other charges they need to pay before they can cash in their money in an e-wallet or in the online payment wallet of the shopping platform/s. It is also reflected in the results that safety and security had been one of the reasons why the respondents are hesitant to pay online. They are not also familiar with the process of using the online payment and it is not convenient for them to use it because of the required process prior to utilizing it.

The COD transactions are considered safe in this scenario as no sharing of private banking information is involved. According to Jana (2017), COD is a source of satisfaction for customers attributed to such reasons. Furthermore, COD is also an alternative for youngsters and those customers who do not have credit/debit cards or other e-payment facilities.

COD is a payment method in which clients choose to pay for the purchased item once it has been delivered. As a result, a buyer would have to pay for the merchandise only when it arrived at their door (Chiejina & Olamide, 2014). Customers that choose COD can make their purchase without having to pay cash. The store provides an invoice along with the consignment, and then a logistics business is brought in to handle goods delivery and payment collection.

As a result, this method offers the consumer with a sense of security and trust. COD also provides the opportunity for a product replacement if the purchase is not in excellent shape. As a result, buyers sense more control over the purchasing process since they must pay for the goods after personally seeing it. Additionally, when clients utilize e-payment methods to make purchases, more information about them is recorded. This information can be utilized at any moment to track the specifics and preferences of clients. Customers sense greater control over the purchasing process when using COD since there is less likelihood of recording personal information for future ads.

TABLE 9: Summary of the assessment of the Respondents on the Factors of Online Shopping Platforms

	Weighted Mean	**Verbal Interpretation**	**Rank**
Sales Promotion	4.10	Agree	2
Social Environment	3.33	Moderately Agree	6
Advertisement	3.83	Agree	5
Feedback	4.31	Strongly Agree	1
Logistics	4.09	Agree	3
Payment Process	3.99	Agree	4
Average Weighted Mean	**3.94**	**Agree**	

As seen in table 9, Rank 1 is the variable “Feedback” with a weighted mean of 4.31 “Strongly Agree”; Rank 2 is the variable “Sales Promotion” with a weighted mean of 4.10 “Agree”; Rank 2 is the variable “Logistics” with a weighted mean of 4.09 “Agree”; Rank 4 is the variable “Payment Process” with a weighted mean of 3.99 “Agree”; Rank 5 is the variable “Advertisement” with a weighted mean of 3.83 “Agree”; Rank 6 is the variable “Social Environment” with a weighted mean of 3.33 “Moderately Agree”; Overall, the summary of the assessment of the respondents on the factors of online shopping platforms had gained a weighted mean of 3.94 “Agree” These results reflected that Feedback is the most important factor among the variables indicated in the table.

This is a great result that gives the businesses an idea to maintain and even improve the feedback management system of the Online shopping platform/s. Sales Promotion, Advertisement, Logistics, and Payment Process became the second consideration of the respondents in making an online purchase, but it is worth noting that social environment

is the least important factor which gives an idea that online feedback and information is better than the feedback coming from the circle of a personal network of the respondents.

TABLE 10: College Students' Purchase Decision Process as to Pre-Purchase Stage

Pre-Purchase Stage	Frequency					Total	Weighted Mean	Verbal Interpretation	Rank
	5	4	3	2	1				
1. Product reviews are something I trust	16	13	1	0	0	30	4.50	Strongly Agree	1
2. The site or app is user-friendly	9	13	8	0	0	30	4.03	Agree	5
3. Product ratings assist me when making a purchase selection	17	9	4	0	0	30	4.43	Strongly Agree	2
4. Finalizing my order is easy	12	13	4	1	0	30	4.20	Agree	3
5. The variety of options in online stores is useful for me	10	16	3	1	0	30	4.17	Agree	4
Weighted Mean							**4.27**	**Strongly Agree**	

As shown in table 10, question number 1 received the highest score with a weighted mean of 4.50, indicating "Strongly Agree," followed by question number 3 with a weighted mean of 4.43, indicating "Strongly Agree," next is question number 4 with a weighted mean of 4.20, indicating “Agree," second to the last is question number 5 with a weighted mean of 4.17, indicating "Agree." and lastly, question 2 with a weighted mean of 4.03, indicating “Agree” Overall, the Pre-Purchase Stage has a weighted average of 4.27, indicating "Strongly Agree," implying that it can influence respondents' purchase behavior while using online shopping platforms.

It is essential to know that product review and product ratings are the two most essential factors in the pre- purchase decision of the respondents. They were really intended to see first the feedback of the buyers of the product and check how the former customers rate the store or the products they bought. This gives an impression that sellers of the online shopping platform should be sensitive to the concerns of the customers to avoid negative feedback and lower product ratings.

Furthermore, the adding to cart process is an essential part of the pre-purchase decision because they could able to select first their product prior to finalizing their online purchase. Shoppers are most likely to read reviews in the pre-purchase stage when they are researching products and trying to make a purchase decision. More than four in five (85%) shoppers read online reviews during online research as they decide what to buy. Reading online reviews during research is common among Millennials. Lastly, the variety of products were also seen in the results as essential because a customer wants to have many options and they really want to compare those products, until they already made their final decision.

TABLE 11: College Students' Purchase Decision Process as to Post-Purchase Stage

Post-Purchase Stage	Frequency					Total	Weighted Mean	Verbal Interpretation	Rank
	5	4	3	2	1				
1. Shopping online satisfied me with good quality products	11	14	5	0	0	30	4.20	Agree	2
2. Product availability satisfied me when I shopped online	9	19	2	0	0	30	4.23	Strongly Agree	1
3. I am pleased that I can readily change address data while buying online	12	12	6	0	0	30	4.20	Agree	2
4. When I ordered, the packing and product(s) arrived in good quality	7	16	7	0	0	30	4.00	Agree	3
5. I was usually able to receive the items within the estimated time of arrival	9	11	9	1	0	30	3.93	Agree	4
Weighted Mean							**4.11**	**Agree**	

As shown in table 11, question number 2 received the highest score with a weighted mean of 4.23, indicating "Strongly Agree," followed by question numbers 1 and 3 with a weighted mean of 4.20, indicating "Agree," next is question number 4 with a weighted mean of 4.00, indicating "Agree," and lastly is question number five with a weighted mean of 3.93 indicating "Agree." Overall, the Post-Purchase Stage has a weighted average of 4.11, indicating "Agree," implying that it can influence respondents' purchase behavior while using online shopping platforms.

The results indicate that product availability is important for the respondents in the post purchasing stage. They are confident that whenever they buy and ordered their product online, there are stocks available and it will be prepared for delivery. It can also be added that the respondents are familiar with some of the settings like changing their delivery address to ensure that they will receive their ordered products on their preferred location/site. It means that if a buyer is working or has multiple locations, he/she can able to customize his/her delivery address. The respondents are also satisfied with the products they received through purchasing online. They see that online products can now match, in terms of quality, with the products seen in the physical stores. Quality of packaging and the timely delivery of products were also rated as satisfactory by the respondents.

It means that online shopping companies are properly doing their job in taking care of the parcel or packages ordered by the customers. Social media has the ability to influence potential clients from the initial point of contact until the time of purchase, as well as post-

purchase behavior. To begin, clients must have a thorough awareness of the company and its services; but, when they begin to narrow down their preferences, they will need the assistance of a social media influencer to pursue their selections. It can be seen that a constant dialogue or negotiation between the customer and the brand is essential for keeping the relationship robust and stable.

TABLE 12: Significant Relationship of the Assessment of the Respondents on Online Shopping Platforms' Influence on Student Purchasing Behavior

Computed r	Degrees of Freedom	Critical r	level of Significance
0.617	28	0.349	0.05

Since the computed value of r which is .617 is greater than the critical r of .349 at a .05 level of significance with 28 degrees of freedom, the null hypothesis is rejected in favor of the alternative hypothesis. This means that there is a significant relationship on the assessment of the respondents on the factors of Online Shopping on the Purchase Decision Process of the College Students

This result indicates that if the online shopping platforms will improve more their products and services, the more likely the customers are to be satisfied and order more products through their apps or sites.

Conclusions

The results of the study revealed that majority of the respondents chose Shopee as their shopping platform online in terms of purchasing products. The gathered data also showed that consumer behavior of the respondents is greatly influenced by the offer they received. Next factor that influenced their consumer behavior is the advertisement that attracts the students to purchase the product online. Lastly, coupons and freebies offered online influenced their tendency to avail of the online products.
Ultimately, the researcher at the HEI came to a conclusion that online shopping platforms are successful in encouraging students to make better purchase decisions and feedback, thru product reviews, plays an important factor in their consumer behavior. Moreover, the results revealed that using online shopping platforms helps the students to make better decisions when it comes to their purchasing behavior.

Compliance with Ethical Standards

The author declares that there are no conflicts of interest. All procedures conducted in this research involving human participants were performed in compliance with the ethical standards of the institutional and/or national research committees and adhered to the 1964 Helsinki declaration and its subsequent amendments or comparable ethical guidelines. Informed consent was obtained from all individual participants involved in the study. This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors. The datasets generated and analyzed during the study are available from the corresponding author upon reasonable request.

Acknowledgements

My sincerest gratitude goes to a number of people to whom I am deeply indebted. Without them, this work might not have been accomplished.

To Tom for his practical and moral support not only during the conduct of this study but all through the years,

To Engr. Jeffrey Leonen, for generously sharing his time, knowledge and competence from the beginning until the completion of this undertaking,
To the HEI respondents, who actively participated in this study for providing all the necessary assistance,

To all those who are not mentioned but also have been part in the completion of this undertaking,

And with all sincerity, to our Almighty God for the strength and all.

OPTIMIZING QUEUING MANAGEMENT SYSTEMS FOR ENHANCED SERVICE EFFICIENCY IN A GOVERNMENT HEALTH INSURANCE AGENCY

Jasper Lance Amosco and Peter John Gamboa, Ph.D.

Industrial Engineering Department, School of Engineering and Architecture, Holy Angel University, Angeles City, Pampanga, Philippines

https://doi.org/10.5281/zenodo.11504918

ABSTRACT

Health insurance agencies play a crucial role in providing universal health coverage to people. Long queues and waiting times make it difficult for services to be efficient and for members to be satisfied. Research findings indicate significant issues with staffing allocation, process repetition, and inefficient break scheduling, contributing to long queues. This study addresses these challenges by employing queuing theory models, simulation software, and process flow chart analysis. An action research approach is utilized, involving stakeholders and employing tools such as time and motion study. Data is gathered through interviews, observations, and secondary sources. Proposed solutions include balanced break schedules, checklist implementation, and separate queuing systems. These strategies are shown to reduce waiting times, cost of waiting time, processing times, and travel distances, and an increase in members served, thereby improving service efficiency. Implementing these solutions can effectively address queuing challenges, leading to improved service delivery and member satisfaction at health insurance agencies. It is crucial to address staffing allocation, process repetition, and break scheduling issues to optimize service efficiency and ensure timely access to essential healthcare services for all stakeholders.

Keywords: *Queuing Theory, Process Flow Chart Analysis, Service Efficiency, Simulation Software*

INTRODUCTION

One of the most unpleasant but inevitable experiences in daily life is waiting for assistance. When we wait in line at banks, fast-food restaurants, hair salons, medical facilities, insurance agencies, or retail establishments, it immediately affects how we perceive the quality of the service (Obermeier et al., 2020). A well-designed queuing system reduces short queue lengths and waiting times, which enhances the service quality and customer satisfaction. There is also an increase in efficiency, leading to higher productivity and better utilization of resources (Amelia et al., 2021).

Customer dissatisfaction with the service has far-reaching consequences, affecting the entire industry. Prolonged wait times or long queue lines not only frustrate potential consumers to leave, but they may damage the company's brand image, encouraging negative opinions among current and future customers. Furthermore, the negative impacts aren't limited to consumers; long lineups may decrease employee morale, resulting in lower work satisfaction and productivity. So, the company needs to fix service problems and reduce wait times to keep customers happy and maintain a good reputation (Burodo et al., 2021).

An analytical method to problem-solving and decision-making that is effective in organizational management is operations research (OR). Mathematical analysis breaks issues down and delivers step-by-step answers. When it comes to decision-making OR is more effective than standard software and data analytics methodologies (Lewis, 2019). Queuing theory, a mathematical framework, serves as a crucial tool for examining varied system types and their performance regarding service quality. From complicated queues inside broad network systems to the investigation of service chains, queuing theory gives insights into system behavior. It permits the examination of numerous parameters such as waiting times, resource use, and system throughput (Jiang et al., 2019).

This study aims to address the issues of extended queue lengths and prolonged waiting times observed during Public Assistance and Complaints Desk (PACD)/screening, membership, and payment section at the government health insurance agency. To propose effective solutions to the problems associated with service planning and scheduling in this industry, data will be gathered utilizing the M/M/s queuing theory model and process flow chart analysis. Data collection occurred over a single day with a nine (9) hour operation. The researcher conducted a comparative analysis to assess the disparities between the current system and the proposed system, with the objective of determining their significance in enhancing efficiency and customer satisfaction levels.

Based on the research of Bahrami et al. (2020), shows that the use of queuing theory models improves the satisfaction of the patients in terms of receiving services in a healthcare facility. Many existing studies show how queuing theory and healthcare management have extensively explored strategies to reduce waiting times and improve efficiency in healthcare settings such as hospitals and clinics; however, there is a lack of studies addressing queue management in health insurance agencies. This study's

significance lies in its potential to enhance service delivery at the case company by reducing waiting times and queue lengths, thereby improving overall customer experience and satisfaction, particularly in healthcare insurance, where timely access to services is crucial. This study also contributes by extending the applicability of existing knowledge and recommendations relevant to this industry.

Research Questions

In the service industry, efficient queuing management systems are essential for ensuring customer satisfaction and operational efficiency. However, inadequate queuing strategies often result in prolonged wait times, dissatisfied customers, and subpar service delivery. Using Fishbone Diagram and 5 Why's Analysis, this research aims to uncover critical insights into the root causes of these issues. By identifying these root causes, the study seeks to develop and implement queuing strategies to reduce waiting time and long queue lengths, ultimately enhancing service efficiency, customer satisfaction, and ensuring timely access to essential healthcare services for all stakeholders. Specifically, this research tried to address subsequent inquiries:

1. What are the main factors contributing to prolonged waiting times and excessive queue lengths at the government health insurance agency?

    1.1. How do manpower availability, particularly during breaks and staff allocation, and management practices like break scheduling and frontliner allocation impact queue lengths during operational hours?
    1.2. How do process inefficiencies, such as repetition and inadequate transmission of information, prolong transaction times and elongate queues?

2. How can queuing strategies be developed and implemented to reduce waiting time and long queue lengths at the government health insurance agency, thereby enhancing service efficiency and customer satisfaction?

    2.1. What strategies can be employed to improve manpower allocation and deployment, as well as optimize methods to streamline processes and reduce transaction times, thereby minimizing queue lengths during operational hours?
    2.2. What managerial interventions are necessary to improve break scheduling and staff allocation, leading to more efficient frontline deployment and shorter queues?

METHODOLOGY

The study was conducted at a government health insurance agency, focusing on addressing issues related to extended queue lengths and prolonged waiting times observed during various operational phases, including Public Assistance and Complaints

Desk (PACD)/screening, membership, and payment sections. The sampling method involved purposive selection of participants directly involved in the operations of the government health insurance agency. Data were gathered through a combination of observation and interviews. Direct observation of the process flow from member application to the payment section provided insights into existing challenges. Interviews with personnel addressed issues related to long queues and service time. Various tools and methods were used for data collection. A phone and stopwatch combo recorded customer arrival and service times, offering insights into interaction durations. Additionally, a handheld tally counter tracked member arrivals per minute, systematically measuring entry flow.

The arrival time, service time, and transportation of members lacking qualifications were all determined using Industrial Engineering techniques including time and motion studies. Data analysis was conducted using the Queuing theory model (M/M/S): (FCFS/∞/∞) to calculate average arrival and service rates, with the mean statistical tool in Microsoft Excel used to compute necessary values. The analysis process involves comparing the present queuing system with the proposed one to reveal significant differences in waiting time, line length, and distance saved. The suggested queuing model demonstrates decreased waiting time and shorter lineups, highlighting potential advantages for service efficiency. Visual aids such as tables and charts facilitate thorough insights and comprehension. Design planning includes defining objectives, literature study, data assessment, and solution design, aiming to increase service efficiency by addressing waiting time and queue length issues through queuing theory concepts and process improvements. Testing involves comparative analysis, time study, motion analysis, simulation software, and sensitivity analysis to assess system efficiency.

RESULTS AND DISCUSSION

Frontliners' Break Scheduling

Table 1.

Current Frontliners' Break Scheduling

PACD/Screening Section						
Frontliner	Time	Average Arrival/hour	Mean Arrival Rate/min	Mean Service Rate	Utilization Factor	%
1	11:00 am - 12:00 pm	73	1.2167	0.7522	1.6175	161.75
1	12:00 pm - 1:00 pm	52	0.8667	0.7522	1.1522	115.22

Membership Section						
Frontliner	Time	Average Arrival/hour	Mean Arrival Rate/min	Mean Service Rate	Utilization Factor	%
2	11:00 am - 12:00 pm	33	0.5460	0.2316	1.1788	117.88
2	12:00 pm - 1:00 pm	18	0.3008	0.2316	0.6494	64.94

Payment Section						
Frontliner	Time	Average Arrival/hour	Mean Arrival Rate/min	Mean Service Rate	Utilization Factor	%
1	11:00 am - 12:00 pm	10	0.1722	0.2373	0.7258	72.58
1	12:00 pm - 1:00 pm	8	0.1317	0.2373	0.5552	55.52

The table 1 illustrates that the current scheduling of the frontliners' breaks results in long queues in both batches within the PACD/screening and membership sections, as the utilization factor of the frontliners exceeds 80%. In the payment section, one (1) frontliner is generally sufficient to assist members during those hours. However, since some members have numerous transactions that consume significant time, it is necessary to include two (2) frontliners to lessen the longer waiting time for members in the queue.

Comparative Analysis of Frontliners' Utilization Factor

Table 2.
Hourly Frontliner Utilization Comparison in PACD/Screening

Frontliners	Time	Utilization Factor (%)
3	8:00 am - 9:00 am	48.01
3	9:00 am - 10:00 am	40.62
3	10:00 am - 11:00 am	39.14
3	11:00 am - 12:00 pm	53.92
3	12:00 pm - 1:00 pm	38.41
3	1:00 pm - 2:00 pm	37.67
3	2:00 pm - 3:00 pm	45.79
3	3:00 pm - 4:00 pm	38.41
3	4:00 pm - 5:00 pm	15.51

Frontliners	Time	Utilization Factor (%)
2	8:00 am - 9:00 am	72.01
2	9:00 am - 10:00 am	60.93
2	10:00 am - 11:00 am	58.72
2	11:00 am - 12:00 pm	80.87
2	12:00 pm - 1:00 pm	57.61
2	1:00 pm - 2:00 pm	56.50
2	2:00 pm - 3:00 pm	68.69
2	3:00 pm - 4:00 pm	57.61
2	4:00 pm - 5:00 pm	23.26

Frontliners	Time	Utilization Factor (%)
1	8:00 am - 9:00 am	144.02
1	9:00 am - 10:00 am	121.86
1	10:00 am - 11:00 am	117.43
1	11:00 am - 12:00 pm	161.75
1	12:00 pm - 1:00 pm	115.22
1	1:00 pm - 2:00 pm	113.00
1	2:00 pm - 3:00 pm	137.37
1	3:00 pm - 4:00 pm	115.22
1	4:00 pm - 5:00 pm	46.53

Interpretation
Underutilized
Balanced
Overutilized
Balanced but causes long queues

Each group of frontliners has a color-coded usage factor, which helps balance their hourly availability. Table 2 shows that three frontliners on the PACD/screening sector is excessive owing to its low utilization factor, resulting in idle frontliners. This section may so have less frontliners. However, allocating just one frontliner exceeds the recommended utilization factor of 80%, resulting in long queues and waiting times for members. This may work in the last hour of the day when consumer arrival is low. Throughout the day, it is advisable to have two (2) counters open to minimize queues and waiting times for members.

Table 3.
Comparison of Utilization Factor of Frontliners/Hour in Membership Section

Frontliners	Time	Utilization Factor (%)
4	8:00 am - 9:00 am	42.06
4	9:00 am - 10:00 am	54.74
4	10:00 am - 11:00 am	66.39
4	11:00 am - 12:00 pm	58.94
4	12:00 pm - 1:00 pm	32.47
4	1:00 pm - 2:00 pm	52.43
4	2:00 pm - 3:00 pm	56.03
4	3:00 pm - 4:00 pm	48.83
4	4:00 pm - 5:00 pm	27.16

Frontliners	Time	Utilization Factor (%)
3	8:00 am - 9:00 am	56.09
3	9:00 am - 10:00 am	72.99
3	10:00 am - 11:00 am	88.53
3	11:00 am - 12:00 pm	78.59
3	12:00 pm - 1:00 pm	43.29
3	1:00 pm - 2:00 pm	69.91
3	2:00 pm - 3:00 pm	74.70
3	3:00 pm - 4:00 pm	65.11
3	4:00 pm - 5:00 pm	36.21

Frontliners	Time	Utilization Factor (%)
2	8:00 am - 9:00 am	84.13
2	9:00 am - 10:00 am	109.49
2	10:00 am - 11:00 am	132.79
2	11:00 am - 12:00 pm	117.88
2	12:00 pm - 1:00 pm	64.94
2	1:00 pm - 2:00 pm	104.86
2	2:00 pm - 3:00 pm	112.06
2	3:00 pm - 4:00 pm	97.66
2	4:00 pm - 5:00 pm	54.32

Frontliners	Time	Utilization Factor (%)
1	8:00 am - 9:00 am	168.26
1	9:00 am - 10:00 am	218.97
1	10:00 am - 11:00 am	265.58
1	11:00 am - 12:00 pm	235.77
1	12:00 pm - 1:00 pm	129.88
1	1:00 pm - 2:00 pm	209.72
1	2:00 pm - 3:00 pm	224.11
1	3:00 pm - 4:00 pm	195.33
1	4:00 pm - 5:00 pm	108.63

Interpretation
Underutilized
Balanced
Overutilized
Balanced but causes long queues

Table 3 illustrates that in the membership section, having four (4) frontliners is acceptable. There are certain hours, such as 10am-11am, where four (4) frontliners are necessary. However, similar to the PACD/screening section, where frontliners may be underutilized, optimization can be achieved by reducing the number of open counters. Operating with only one (1) or two (2) frontliners throughout the day results in a high utilization factor, contributing to longer waiting times and queues. Nevertheless, during off-peak hours like 12pm-1pm and 4pm-5pm, operating with two (2) frontliners is sufficient due to the lower volume of arriving members. To ensure a smooth flow of member assistance throughout the day, maintaining a balanced set of three (3) frontliners available is recommended.

Table 4.

Comparison of Utilization Factor of Frontliners/Hour in Payment Section

Frontliners	Time	Utilization Factor (%)
3	8:00 am - 9:00 am	19.51
3	9:00 am - 10:00 am	24.30
3	10:00 am - 11:00 am	26.20
3	11:00 am - 12:00 pm	24.19
3	12:00 pm - 1:00 pm	18.51
3	1:00 pm - 2:00 pm	21.40
3	2:00 pm - 3:00 pm	23.08
3	3:00 pm - 4:00 pm	19.73
3	4:00 pm - 5:00 pm	9.70

Frontliners	Time	Utilization Factor (%)
2	8:00 am - 9:00 am	29.26
2	9:00 am - 10:00 am	36.46
2	10:00 am - 11:00 am	39.30
2	11:00 am - 12:00 pm	36.29
2	12:00 pm - 1:00 pm	27.76
2	1:00 pm - 2:00 pm	32.11
2	2:00 pm - 3:00 pm	34.62
2	3:00 pm - 4:00 pm	29.60
2	4:00 pm - 5:00 pm	14.55

Frontliners	Time	Utilization Factor (%)
1	8:00 am - 9:00 am	58.53
1	9:00 am - 10:00 am	72.91
1	10:00 am - 11:00 am	78.60
1	11:00 am - 12:00 pm	72.58
1	12:00 pm - 1:00 pm	55.52
1	1:00 pm - 2:00 pm	64.21
1	2:00 pm - 3:00 pm	69.23
1	3:00 pm - 4:00 pm	59.20
1	4:00 pm - 5:00 pm	29.10

Interpretation
Underutilized
Balanced
Overutilized
Balanced but causes long queues

Table 4 shows that for the payment section, operating with three (3) frontliners throughout the day results in a low utilization factor. It is advisable not to add another frontliner unless there is a day with a high volume of arrivals in the future. Operating with only one (1) frontliner achieves a balanced utilization factor; However, some members have multiple transactions, which can lead to longer waiting times and queues for other members in line. Nevertheless, opening one counter during the last hour of the shift is acceptable. Maintaining two (2) frontliners throughout the entire day is the best approach to achieve service efficiency.

Table 5.

Proposed Hourly Staff Allocation

PACD/Screening Section						
Number of Counters Available per hour						
Frontliner	Time	Average Arrival/hour	Mean Arrival Rate/min	Mean Service Rate/min	Utilization Factor	%
2	8:00 am - 9:00 am	65	1.0833	0.7522	0.7201	72.01
2	9:00 am - 10:00 am	55	0.9167	0.7522	0.6093	60.93
2	10:00 am - 11:00 am	53	0.8833	0.7522	0.5872	58.72
2	11:00 am - 12:00 pm	73	1.2167	0.7522	0.8087	80.87
2	12:00 pm - 1:00 pm	52	0.8667	0.7522	0.5761	57.61
2	1:00 pm - 2:00 pm	51	0.8500	0.7522	0.5650	56.50
2	2:00 pm - 3:00 pm	62	1.0333	0.7522	0.6869	68.69
2	3:00 pm - 4:00 pm	52	0.8667	0.7522	0.5761	57.61
1	4:00 pm - 5:00 pm	21	0.3500	0.7522	0.4653	46.53

Membership Section

3	8:00 am - 9:00 am	23	0.3897	0.2316	0.5609	56.09
3	9:00 am - 10:00 am	30	0.5071	0.2316	0.7299	72.99
4	10:00 am - 11:00 am	37	0.6151	0.2316	0.6639	66.39
3	11:00 am - 12:00 pm	33	0.5460	0.2316	0.7859	78.59
2	12:00 pm - 1:00 pm	18	0.3008	0.2316	0.6494	64.94
3	1:00 pm - 2:00 pm	29	0.4857	0.2316	0.6991	69.91
3	2:00 pm - 3:00 pm	31	0.5190	0.2316	0.7470	74.70
3	3:00 pm - 4:00 pm	27	0.4524	0.2316	0.6511	65.11
2	4:00 pm - 5:00 pm	15	0.2516	0.2316	0.5432	54.32

Payment Section						
Number of Counters Available per hour						
Frontliner	Time	Average Arrival/hour	Mean Arrival Rate/min	Mean Service Rate/min	Utilization Factor	%
2	8:00 am - 9:00 am	8	0.1389	0.2373	0.2926	29.26
2	9:00 am - 10:00 am	10	0.1730	0.2373	0.3646	36.46
2	10:00 am - 11:00 am	11	0.1865	0.2373	0.3930	39.30
2	11:00 am - 12:00 pm	10	0.1722	0.2373	0.3629	36.29
2	12:00 pm - 1:00 pm	8	0.1317	0.2373	0.2776	27.76
2	1:00 pm - 2:00 pm	9	0.1524	0.2373	0.3211	32.11
2	2:00 pm - 3:00 pm	10	0.1643	0.2373	0.3462	34.62
2	3:00 pm - 4:00 pm	8	0.1405	0.2373	0.2960	29.60
1	4:00 pm - 5:00 pm	4	0.0690	0.2373	0.2910	29.10

Based on the comparison of the utilization factor of frontliners per hour in each section, table 5 illustrates the appropriate number of available counters to be opened hourly is determined. Ensuring that the number of available counters remains consistent throughout the day is essential to prevent the accumulation of long queues, particularly as the utilization factor of the frontliners remains below 80% (Rajagopalan, 2016).

Table 6.
Hourly Breaks' Performance Summary in PACD/Screening Section

Performance Rate	**11:00 am – 12:00 pm**		**12:00 pm – 1:00 pm**	
	Current	**Proposed**	**Current**	**Proposed**
Frontliner (s)	1	2	1	2
Mean Arrival Rate (λ)	1.2167 member/minute	1.2167 member/minute	0.8667 member/minute	0.8667 member/minute
Mean Service Rate (μ)	0.7522 member/minute	0.7522 member/minute	0.7522 member/minute	0.7522 member/minute
Utilization factor of the entire system (ρ)	161.75%	80.87%	115.22%	57.61%
Probability of zero member in the system (P_0)	-	10.57%	-	26.89%
Average number of members in the queue (L_q)	-	3.0587 members	-	0.5724 members
Average number of members in the system (L_s)	-	4.6762 members	-	1.7246 members

Average waiting time in the queue (W_q)	-	2.5139 minutes	-	0.6604 minutes
Average time a member spends in the system (W_s)	-	3.8433 minutes	-	1.99 minutes

Table 6 explains that for the PACD/screening section, it is essential to have at least two (2) frontliners available. This is because, based on the gathered data, some members take up to seven (7) minutes in asking questions, leading to longer waiting times for members in the queue. The table demonstrates that operating with two (2) frontliners during the first batch enhances the utilization rate from 161.75% to 80.87%, resulting in 3.0587 members in the queue and 4.6762 members in the system. The average waiting time for members in the queue is 2.5139 minutes, while the average time spent by members in the system is 3.8433 minutes. During the second batch, it is crucial to have two (2) counters open, as this improves the utilization rate from 115.22% to 57.61%. As a result, there are 0.5724 members in the queue and 1.7246 members in the system. The average waiting time for members in the queue is 0.6604 minutes, with members spending an average of 1.99 minutes in the system.

Table 7.
Hourly Breaks' Performance Summary in Membership Section

Performance Rate	**11:00 am – 12:00 pm**		**12:00 pm – 1:00 pm**	
	Current	**Proposed**	**Current**	**Proposed**
Frontliner (s)	2	3	2	2
Mean Arrival Rate (λ)	0.5460 member/minute	0.5460 member/minute	0.3008 member/minute	0.3008 member/minute
Mean Service Rate (μ)	0.2316 member/minute	0.2316 member/minute	0.2316 member/minute	0.2316 member/minute
Utilization factor of the entire system (ρ)	117.88%	78.58%	64.94%	64.94%
Probability of zero member in the system (P_0)	-	6.12%	21.26%	21.26%
Average number of members in the queue (L_q)	-	2.2908 members	0.9471 members	0.9471 members
Average number of members in the system (L_s)	-	4.6483 members	2.2459 members	2.2459 members
Average waiting time in the queue (W_q)	-	4.1956 minutes	3.1497 minutes	3.1497 minutes
Average time a member spends in the system (W_s)	-	8.5134 minutes	7.4665 minutes	7.4665 minutes

Table 7 interprets that for the membership section, it is advisable to have at least two (2) to four (4) frontliners available, depending on the time of day as indicated in the table above. Since three (3) frontliners suffice for efficient operation during most hours, the additional frontliner can assist other counters in different sections when extra help is required or in case of absences due to leaves or other activities. The table demonstrates

that operating with three (3) frontliners during the first batch enhances the utilization rate from 117.88% to 78.58%, resulting in 2.2908 members in the queue and 4.6483 members in the system. The average waiting time for members in the queue is 4.1956 minutes, while the average time spent by members in the system is 3.8433 minutes. During the second batch, both the current and proposed setups maintain two (2) counters open, as they can effectively operate without the need to add additional frontliners. With this allocation, the utilization rate is 64.94%. As a result, there are 0.9471 members in the queue and 2.2459 members in the system. The average waiting time for members in the queue is 3.1497 minutes, with members spending an average of 7.4665 minutes in the system.

Table 8.
Hourly Breaks' Performance Summary in Payment Section

Performance Rate	**11:00 am – 12:00 pm**		**12:00 pm – 1:00 pm**	
	Current	**Proposed**	**Current**	**Proposed**
Frontliner (s)	1	2	1	2
Mean Arrival Rate (λ)	0.1722 member/minute	0.1722 member/minute	0.1317 member/minute	0.1317 member/minute
Mean Service Rate (μ)	0.2373 member/minute	0.2373 member/minute	0.2373 member/minute	0.2373 member/minute
Utilization factor of the entire system (ρ)	72.57%	36.28%	55.50%	27.75%
Probability of zero member in the system (P_0)	27.43%	46.75%	44.50%	56.56%
Average number of members in the queue (L_q)	1.9195 members	0.1101 members	0.6922 members	0.0463 members
Average number of members in the system (L_s)	2.6452 members	0.8357 members	1.2472 members	0.6013 members
Average waiting time in the queue (W_q)	11.1469 minutes	0.6389 minutes	5.2556 minutes	0.3516 minutes
Average time a member spends in the system (W_s)	15.3610 minutes	4.854 minutes	9.4697 minutes	4.5657 minutes

Table 8 illustrates that for the payment section, it is essential to have at least two (2) frontliners available. This is based on the gathered data, which indicates that some members have numerous transactions lasting up to fourteen (14) minutes. This leads to longer waiting times for members in the queue. The table illustrates that operating with two (2) frontliners during the first batch increases the utilization rate from 72.57% to 36.28%, leading to 0.1101 members in the queue and 0.8357 members in the system. On average, members wait for 0.6389 minutes in the queue and spend 4.854 minutes in the system. During the second batch, maintaining two (2) counters open remains crucial, as this allocation raises the utilization rate from 55.50% to 27.75%. As a result, there are

0.0463 members in the queue and 0.6013 members in the system. On average, members wait for 0.3516 minutes in the queue and spend 4.5657 minutes in the system.

Proposed Frontliners' Schedule of Breaks

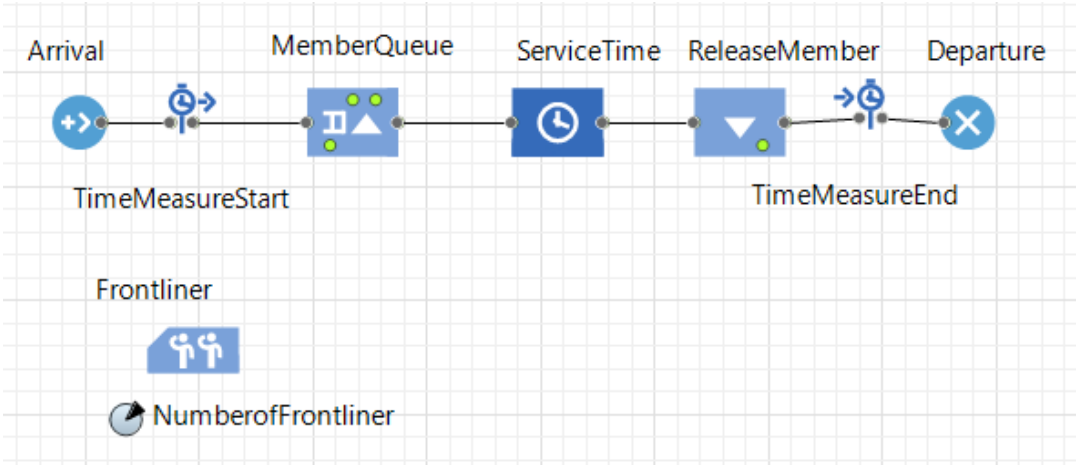

Table 9.
Proposed Third Batch Break's Performance Summary in Membership Section

Performance Rate	**1:00 pm – 2:00 pm**	
	Current	**Proposed**
Frontliner (s)	4	3
Mean Arrival Rate (λ)	0.4857 member/minute	0.4857 member/minute
Mean Service Rate (μ)	0.2316 member/minute	0.2316 member/minute
Utilization factor of the entire system (ρ)	52.43%	69.91%
Probability of zero member in the system (P_0)	11.73%	9.61%
Average number of members in the queue (L_q)	0.219 member	1.1404 members
Average number of members in the system (L_s)	2.3161 members	3.238 members
Average waiting time in the queue (W_q)	0.4508 minute	2.3479 minutes
Average time a member spends in the system (W_s)	4.7686 minutes	6.6657 minutes

Table 9 only focuses on the membership section due to a reduction in frontliners from four (4) to three (3) operating during the 1:00 pm – 2:00 pm shift, while the PACD/screening section and payment section continue to operate with two (2) frontliners during that time. The table illustrates that the proposed third batch and three (3) frontliners can still efficiently handle the service without forming long queues. The utilization factor increases from 52.43% to 69.91%, with 1.1494 members in the queue and 3.238 members in the system. The average waiting time per member is 2.3479 minutes, and 6.6657 minutes in the system.

Table 10.

Queuing System Comparison During Breaks: Discrete Event Simulation with AnyLogic Software Version 8.9

PACD/screeningsection											
Type	Frontliner	Time	Number of Arrivals	Member's Served	Member's time spent in the system (in mins)		Waiting Time (in mins)		Queue length		Utilization (%)
					Mean	Max	Mean	Max	Mean	Max

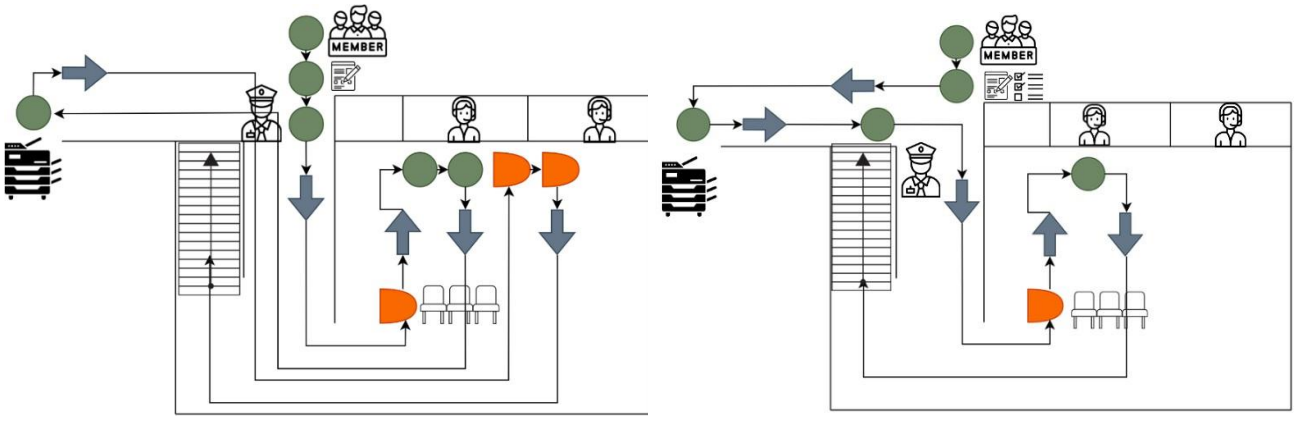
Proposed	2	11:00 am - 12:00 pm		11	5.61	13.71	0.97	6.815	0.1670	1	39%
Current	1	12:00 pm - 1:00 pm	7	5	9.89	20.81	4.14	13.916	1	2	52%
Proposed	2	12:00 pm - 1:00 pm		6	6.47	13.71	1.49	6.815	0.1960	1	29%

Discrete event simulation is utilized to optimize hourly break scheduling for frontliners by modeling event flows and analyzing different scenarios. Through simulating member arrivals, service times, and breaks, the impact of policies on queues and efficiency can be assessed. This method offers insights for achieving better resource balance and service quality. Table 10 presents real-life scenarios experienced by the agency, based on the number of available frontliners in each hour, comparing current and proposed schedules. The results indicate an increase in members served per hour, accompanied by reductions in member enrollment process duration, waiting time, and queue length. Moreover, there is a decrease in frontliner utilization, a critical factor in

preventing prolonged queues and waiting times. However, the results for the 1:00-2:00 pm period in the membership section differ from others due to a decrease in available counters by one to optimize scheduled breaks. This results in a slight increase in waiting time by one minute, which does not cause long queues or excessive waiting times and still adequately services members.

Table 11.
Proposed Frontliners' Schedule of Breaks

Sections	PACD/Screening		Membership				Payment	
Time/Frontliners	Frontliner 1	Frontliner 2	Frontliner 3	Frontliner 4	Frontliner 5	Frontliner 6	Frontliner 7	Frontliner 8
8:00 am - 9:00 am								
9:00 am - 10:00 am								
10:00 am - 11:00 am								
11:00 am - 12:00 pm								
12:00 pm - 1:00 pm								
1:00 pm - 2:00 pm								
2:00 pm - 3:00 pm								
3:00 pm - 4:00 pm								
4:00 pm - 5:00 pm								



Working
On Break
On Break, Operating by Backroom Employee 1
On Break, Operating by Backroom Employee 2
On Break, Operating by Backroom Employee 3
On Break, Operating by Backroom Employee 4

Table 10 illustrates the proposed scheduling of breaks for each frontliner operating in the agency. Since there are sixteen (16) backroom employees, with four (4) assigned to the membership section and twelve (12) to the Accounts Information Management Specialist, four (4) of them who are available and do not have a workload of tasks can be chosen to take over the shift while the frontliners are on breaks. Frontliner 1 will take his break at 1:00 pm, during which he will be substituted by backroom employee 1. Frontliner 2 will take a break at 12:00 pm, covered by backroom employee 2. Frontliner 3 will also take a break at 1:00 pm, while Frontliner 4 will do so at 11:00 am. Frontliners 5 and 6 will take their breaks at 12:00 pm. Frontliner 7 will have a break at 11:00 am, covered by backroom employee 3. Lastly, Frontliner 8 will take a break at 12:00 pm, and their responsibilities will be covered by backroom employee 4. This scheduling ensures that all frontliners have their breaks while maintaining a continuous flow of service with the appropriate number of counters available during these hours. Since the tasks of backliners are not overly burdensome, their breaks can still be accommodated during times when three frontliners can manage the workload.

Inadequate Requirements Dissemination in PACD/Screening Section

Figure .1

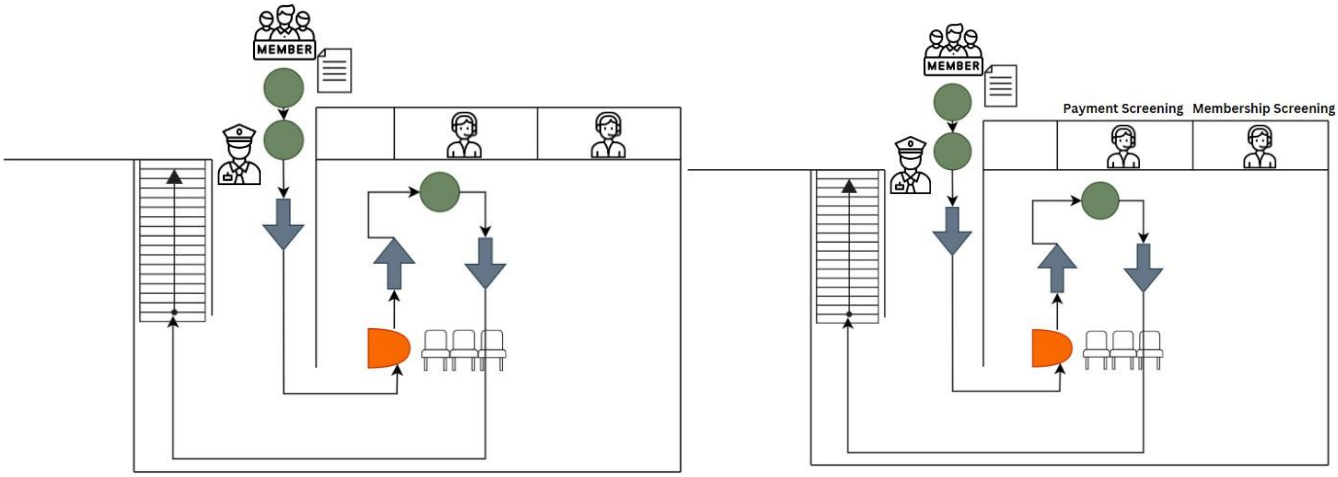
Comparison of Current and Proposed Flow Process Diagram: Membership Screening

Current Proposed

Figure 1 illustrates a recommended method by proposing a checklist of requirements necessary for enrolling in membership. Before entering the PACD/screening section, members must complete the required forms and obtain necessary photocopies, such as their birth certificate and valid ID, to avoid forming long queues and cutting through lines. Observations indicate that some customers return multiple times to fulfill requirements, leading to wasted time and a decrease in morale. This repetition not only affects customer morale but also impacts frontline staff morale, as some members fail to complete the necessary forms.

Table 12.

Summary of Process Improvement Utilizing Checklist



Current	Proposed
Time Spent = 14.74 minutes	Time Spent = 11.64 minutes Reduced Time by 3.1 minutes (21.03%)
Distance Travelled = 334.3 feet	Distance Travelled = 272.14 feet Reduced Distance Travelled by 62.16 feet (18.59%)

From the Table 11, the summary of Process improvement proposed methods demonstrates a reduction in operational processes by one (1) and two (2) delays, thereby minimizing the time consumed in the process by 3.1 minutes marking a difference of 21.03% to the current process and the distance travelled by the member by 62.16 feet with a difference of 18.59% to the current process as well. During the observation period, it was noted that 31.99% of the members, equating to 119 out of 372, had missing requirements. The total saved time and distance amounted to 368.9 minutes, and 7397.04 feet travelled throughout the whole day. As a result, the processing time per member is faster, and the number of members repeating the process is reduced.

Numbering System in PACD/Screening Section

Figure 2.

Comparison of Current and Proposed Flow Process Diagram: Payment Screening

Current Proposed

Figure 2 shows the recommended proposal is to establish separate queuing lines for the membership and payment sections. With two (2) frontliners operating throughout the day, each section can accommodate its own queue. Given that the number of members arriving for payment is lower compared to those applying for membership, the counter staff can also assist with payment transactions when there are no queues for payment.

Table 13.

Summary of Process Improvement Utilizing New Numbering System

Current	Proposed
Time Spent = 4.55 minutes	Time Spent = 3.09 minutes Reduced Time = 1.46 minutes (32.09%)

In Table 12 shows the summary of improvement, the recommended proposal of utilizing a new numbering queueing system demonstrates a reduction in time by 1.46 minutes, marking a difference of 32.09% to the current process, resulting in a total processing time of 3.09 minutes. This approach aims to prevent the formation of long queues, thereby providing a smoother flow of processing members.

Conclusions

The current queuing system at the case company, while generally effective, encounters challenges during specific periods, resulting in lengthy queues and increased wait times due to issues such as insufficient communication of requirements, inefficient frontliner break scheduling, and a lack of a streamlined numbering system. Analyzing frontliners' break scheduling and staff allocation underscores the importance of proper resource management for efficient service delivery. Proposing a balanced hourly staff allocation and a revised three-batch break schedule tailored to each department's needs aims to decrease wait times, optimize resource utilization, and enhance member satisfaction. Addressing the inadequate communication of requirements in the PACD/screening section is vital for improving the efficiency of the membership enrollment process. Implementing a checklist of necessary documents before entering the screening section reduces processing time and member travel distance, improving the overall enrollment process. Introducing a separate queuing system for the PACD/screening section aims to minimize wait times and enhance efficiency. By dedicating queue lines for each section and utilizing resources effectively, the proposed solution demonstrates significant improvements in processing time and overall service delivery.

Recommendations

The government health insurance agency is advised to implement a new queuing system in the Public Assistance and Complaints Desk (PACD)/Screening Section, developed by the Information Technology (IT) team, to improve member experience and alleviate confusion. This efficient system aims to streamline processes, reducing frustration and enhancing satisfaction. Furthermore, while considering the addition of another frontline counter in the payment section may seem beneficial for faster service,

careful consideration is needed due to the potential increase in costs. Technological enhancements, such as installing kiosk machines for payments, can significantly reduce waiting times, improving efficiency. Incorporating posters and clear instructions outside the agency can help potential members prepare, saving time and effort. Additionally, directional signage within the agency can minimize confusion and ensure an organized flow of individuals, further enhancing the overall member experience. These recommendations aim to optimize operational processes and improve customer satisfaction at the government health insurance agency.

Compliance with Ethical Standards

Ethical considerations were taken into account throughout the execution of this research. This encompasses the procedures of granting authorization and disclosing relevant data. The researcher addressed a letter to the corporation inquiring about their potential participation in the study, and the company gave their consent. To make the discussions accessible to the public, all names or personal identification were removed. To protect confidential information, the researchers have agreed to sign a non-disclosure agreement about the data obtained from the firm.

Acknowledgments

The researchers extend their heartfelt gratitude to the Almighty God for the wisdom, guidance, and strength bestowed upon them throughout the research endeavour. It is through His grace that they have been able to navigate the complexities of the study and emerge with valuable insights.

To their families and loved ones, they express their deepest appreciation for their unwavering support, understanding, and encouragement.

The researchers are immensely grateful to the case company for their cooperation and assistance, which allowed them to conduct the study effectively. The company's invaluable support and resources have been instrumental in the successful completion of the research.

Special thanks are also due to Holy Angel University and the esteemed panellists who dedicated their time and expertise to review and provide feedback on the paper. Their insightful comments and constructive criticism have significantly enriched the quality of the work.

ABSTRACT

Civic engagement is making a significant and positive difference. Through civic engagement, adolescents can increase community vitality, challenge injustices, and address social problems. This study attempted to identify the outcomes of the school roles in the development of civic engagement of graduates from public secondary school respondents. A self-made questionnaire was used, and data gathered from 293 public secondary school graduates was analyzed and interpreted using Chi- Squared and Spearman's Correlation Test. Results showed a significant relationship between the personal profile and the extent of school roles among the graduates of public secondary school respondents, Cooperative Learning, Academic Success, and Grading System was found to be significant with their profiles. Although none of the personal profiles was significant to discipline practices and social support in school. All the civic engagements participated in by the respondents have a relationship with their profile. In the test of relationship between the extent of school roles and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles orientation, almost all the variables tested were found to have a significant relationship with the other variable. This study also implies that the meaningful experience derived from school activities are life- long memories of the graduates which become their luminaries in accomplishing tasks, performing their duties, and achieving their dreams. It is recommended that the results of this study be presented to the top management of the Schools Division Office of Laguna to come up on a program intensifying civic engagements since it was found that these are significantly related to their previous school roles.

Keywords: *Civic Engagement, Civic Skill, Cooperative Learning, Disciplinary Practices, School Roles, Social Cohesion*

INTRODUCTION

In modern communities, the prejudice about the social differences of individuals and groups makes it difficult to think and act to create contexts of responsible ways of togetherness (Stornaiuolo and Thomas, 2017), in addition to this, a much critical matter is presented in a study that through collective civic engagement, a better and responsive community and government is produced. Indeed, civic engagement represents a key element in creating social relationships and developing a sense of responsible and responsive togetherness because it promotes prosocial values and increases active citizenship and sense of community (Procentese et al. 2019). In the sense of the value of producing civically engaged citizens comes the value of secondary schools' activities' parallelism towards this goal which means it is important to assess and properly respond to the goal of the curriculum in connection with the purpose of producing a civically engaged citizens.

Civic engagement refers to prosocial and political contributions to community and society (Wray- Lake et al, 2017). Civic engagement goes beyond behaviors and includes psychological dimensions such as values, beliefs, attitudes, skills, and knowledge (Wray-Lake and Abrams, 2020). It is an essential type of engagement as it is powered by the community itself and is most often a combination of marginalized and those elevated members of the community — an inclusive and diverse group that is serving a diverse group of goals relevant to the communities' needs. Citizens' civic engagement can represent a key issue and a solution to rely on to pursue this aim and promote what is here defined as the sense of responsible togetherness: it brings people of the community toward spaces wherein community relationships can be built and managed, and community dialogue and confrontation can be carried forward, thus becoming the basis for collective actions based on shared purposes.

On another note, how are civically engaged citizens produced? If this type of engagement is essential, it is also therefore vital to understand how civically engaged citizens are produced. Some among these are programs and training conducted by the government and community, another is the habits built from home and parenting, next is the different school activities and lessons taught at school (Blevins et. al., 2016). In much research, results show how significant the school roles are in producing civically engaged citizens and even while still spending their time at school, it is believed that students are already working in activities that makes them civically engaged. Research showed that the activism of 10th graders (ages 15–16) involved in a youth participatory action research (YPAR) project resulted in a clear need for interventions aiming to foster new ways of living together within local communities and rebuild individuals' sense of responsibility toward them (DeJaynes and Curmi-Hall, 2019). This research showed how students are

totally civically engaged in identifying needs and ways to resolve matters related to this issue in a civically engaged manner.

DeJaynes and Curmi (2015) described and believed that young people are culturally and intellectually engaged global citizens, or cosmopolitan intellectuals. Youth volunteers for numerous causes or organizations, help their neighbors informally, participate in political campaigns, advocate to improve their schools and communities, engage in protests, and work to protect the environment. These youthful activities will reveal how schools develop civic skills and their relationship with current career paths.

On the other hand, everyone focuses on one's own problems as they are solely private and tries to solve them with one's own resources (Doolittle and Faul, 2013). The citizens seem not interested in collective actions or social debates and delegate others to administer common things, with the development of low levels of civic engagement that makes it difficult to produce collective and volunteering actions within local communities.

Moreover, instances from research resulted on how civic engagement may have been giving important beneficence and is correlated with the education's activities and lessons, yet only few numbers of research presented rates and results of the presence of actual civic engagement in the community. In a study, by Dubow et. al. (2017), it shows how technology is now being integrated in developing training and activities related to producing civically engaged citizens as well as having actual civically engaged citizens. This proves that there might be disparity with the seeded activities for the development of behaviors and actions related to civic engagement and actual number of civically engaged citizens as well as the results of its benefactions.

Based on the above-mentioned studies and repercussions, this research aims to understand the contribution of school roles in the development of civic engagement, in terms of both attitudes and behaviors, which may help in promoting their sense of responsible togetherness, which can foster new ways of living together within local communities.

Research Questions

Specifically, the study seeks to answer the following questions:

1. What is the personal profile of the graduates of public secondary schools, in terms of:
   1.1 Age;
   1.2 Gender;
   1.3 Public Secondary School attended;
   1.4 Awards received, and
   1.5 Types of Civic Engagement?

2. What is the extent of school roles as perceived by graduates of public secondary school respondents, in terms of:
   2.1 Cooperative Learning;
   2.2 Disciplinary Practices;

2.3 Academic Success;
2.4 Grading System;
2.5 Social Support, and
2.6 Other School Activities?

3. What is the level of civic engagement of graduates of public secondary school respondents as outcomes of school roles with respect to civic engagements in terms of:
   3.1 Civic Action;
   3.2 Civic Commitment (Duty);
   3.3 Civic Skills, and
   3.4 Social Cohesions?

4. Is there a significant relationship between the personal profile and the extent of school roles among the graduates of public secondary school respondents?

5. Is there a significant relationship between the personal profile and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles?

6. Is there a significant relationship between the extent of school roles and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles?

7. What is the meaningful experience/experiences of the graduates of public secondary school respondents relevant to their civic engagement?

METHODOLOGY

This study utilized descriptive correlational method to find out the Outcomes of School Roles in the Development of Civic Engagement of Graduates from Public Secondary School. Respondents were the graduates of the public secondary schools in the Division of Laguna which includes sub-offices of Siniloan, Famy, Mabitac and Santa Maria. The respondents were purposively chosen. They were the secondary school graduates who are actively engaged and continuously taking part in civic engagements. The researcher developed a self-made questionnaire. On the validity and reliability of the questionnaire, it passed the evaluation of the experts.

For this study to arrive at the most valuable answers and analysis, the following statistical tools and treatment was used:

This study used frequency and percentage in answering the personal profile of the learners, in terms of age, gender, public secondary school that they attended, awards received and type of their civic engagement.

In answering the questions about the evaluation of the extent of school roles as experienced by the respondents during their high school. It includes aspects like cooperative learning, disciplinary practices, academic success, grading system, social support, and school activities. The last part was the level of civic engagement of the students as outcomes of school roles. It includes aspects of civic action, civic commitment or duty, social cohesion, and civic skills. The author used the Likert Scale and weighted mean.

Spearman Rank Order Correlation and Chi- Square Test was used in analyzing and interpreting the relationships between the following: personal profile and the extent of school roles among the graduates of public secondary school respondents, the personal profile and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles orientation, and the extent of school roles and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles.

The last part of the questionnaire focuses on the meaningful experience/experiences of the respondents. For a more detailed analysis, the author used thematic analysis to analyze and interpret the responses of the respondents.

RESULTS AND DISCUSSION

Personal Profile of the Respondents

The survey conducted resulted in the distribution of respondents in terms of age as shown in Table 1. Highest frequency is 120 (41.00%) out of 293 whose ages is between 18 to 25 years old. Female respondents have a total of 137 (46.80%), male respondents have a total of 149 (50.90%), and some respondents who preferred not to say their gender has a total of 7 (2.40%). Total number of 293 graduate respondents from different public secondary schools participated highest number of respondents were from Famy NIHS, Gaudencio Octavio IHS, Gov. F.T. San Luis Nat'l. Agro- Industrial IHS, J. Santiago IHS, Mabitac INHS, Paagahan INHS, Siniloan INHS, and Sta. Maria IHS. Least number of respondents were from PINHS San Miguel Extension.

Learners who engage in civic actions need not to be on top of the class. Civic engagements of learners through experiential learning helped them develop higher understanding and wisdom. This current study showed an almost equal participation of honor and non- honor students. On the participation to different types of civic engagement is presented and it significantly specified activities may vary in terms of intensity of participation. For instance, in this study, a notable number of participants has a combination of the type of civic engagement with a total of 129 out of 293 (44.00%). This means that people are engage in different types of civic engagement for diverse reasons, including personal interests, a sense of duty, desires for social change, community connection, personal growth, and response to immediate change. In the study of Baldasser and Ramakrishnan, (2004) In terms of demographic characteristics other than

race and ethnicity, the highest levels of participation in civic activities are those based on education, homeownership, gender, and income.

Table 1. Distribution of Personal Profiles of the Graduate Respondents

AGE	FREQUENCY	PERCENT
18 to 25	120	41.00
26 to 33	93	31.70
34 and above	80	27.30

	Total	**293**	**100.00**

Extent of School Roles as perceived by Graduates of Public Secondary School Respondents

In table 2, it was implied that listening and speaking skills have the highest extent and the lowest extent is collaborating with each other and giving constructive feedback. The computed average weighted mean was 4.52 and was interpreted as to a very high extent. This means that the respondents are very open to work on dialogue, listening skills, and debate, open to share ideas, knowledge, and points of view with classmates, willing to talk and give the same amount of time to explain. Willing to help each other to do the tasks, and prepared to talk about work to assess, correct, and improve it.

The very high extent interpretation was strengthened with the study of Malazonia et al., (2023) that stated collaborative learning process promotes both the democratic culture of the school and the social and civic competency of the students.

Table 2. Extent of School Roles in Terms of Cooperative Learning

Components of Cooperative Learning of the Respondents	Weighted Mean	Verbal Interpretation	Rank
1. work on dialogue, listening skills, and debate.	4.65	Very High Extent	1
2. share ideas, knowledge, and points of view with classmates.	4.53	Very High Extent	2
3. talk and give the same amount of time to explain.	4.52	Very High Extent	3
4. help each other to do the tasks.	4.45	High Extent	4.5
5. talk about work to assess, correct, and improve it.	4.45	High Extent	4.5
Average Weighted Mean	**4.52**	**Very High Extent**	

In Table 3, the extent of school roles in terms of disciplinary actions has an average weighted mean of 4.48 interpreted as having a high extent. This means that disciplinary

practices have a high extent on the respondents on the duration of their high school, these practices include disciplining, particularly giving advice, encouraging positively, understanding my point of view, expressing love, and enforcing punishment for wrong doings.

It is anchored in the study of Savitz et al., (2021) in which demonstrated that an increased focus of teachers on student-led learning through disciplinary practices, highlights how teachers made incremental changes that prioritized students' argumentation skills and comfort in sharing their voice throughout the debate process and beyond.

Table 3. Extent of School Roles in Terms of Disciplinary Practices

Components of Disciplinary Practices of the Respondents	Weighted Mean	Verbal Interpretation	Rank
1. Give advice	4.56	Very High Extent	1
2. Encourage positively	4.50	Very High Extent	2
3. Understands my point of view	4.48	High Extent	3
4. Express love	4.44	High Extent	4
5. Enforces punishment for wrong doings	4.40	High Extent	5
Average Weighted Mean	**4.48**	**High Extent**	

In table 4, the average weighted mean was 4.46 interpreted as high extent. This implied that the total school experiences were satisfying, allowed them to become persistent in completing the grade level, helped in acquiring critical thinking skills, engaged on affective outcomes, and academic success was attained.

In the study of Philippe et al., (2023) it was revealed that both civic and non-civic organized activities independently predicted increases in GPA over the school year, even after adjusting for all covariables.

Table 4. Extent of School Roles in Terms of Academic Success

Components of Academic Success of the Respondents	Weighted Mean	Verbal Interpretation	Rank
1. Satisfied with my over-all school experience.	4.52	Very High Extent	1
2. Persistent to complete the grade level.	4.46	High Extent	2.5

3. Able to acquire critical thinking skills.	4.45	High Extent	4
4. Able to engage on affective outcomes	4.41	High Extent	5
5. Able to attain academic success thru school.	4.46	High Extent	2.5
Average Weighted Mean	**4.46**	**High Extent**	

In table 5, the average weighted mean of 4.50 is interpreted to a very high extent. This implied a comprehensive, accurate, promotes growth and mastery of student learning and development, has a positive impact on learning, and include feedback that is a shared responsibility of the school, teachers, students, and parents of the grading system.

Based on Lee (2020), the development of such complex knowledge must be distributed across the K–12 public education sector: not limited to civics classes but distributed across all the disciplines taught in schools to promotes growth and mastery of student learning.

Table 5. Extent of School Roles in Terms of Grading System

Components of Grading System of the Respondents	Weighted Mean	Verbal Interpretation	Rank
1. is holistic (comprehensive).	4.58	Very High Extent	1
2. is authentic (accurate).	4.53	Very High Extent	2
3. promotes growth and mastery of student learning and development.	4.44	High Extent	5
4. has a positive impact on learning.	4.47	High Extent	4
5. include feedback that is a shared responsibility of the school, teachers, students, and parents.	4.49	High Extent	3
Average Weighted Mean	**4.50**	**Very High Extent**	

Table 6 shows that social support in school has an average weighted mean of 4.54 with an interpretation of very high extent. It implies that social support like showing appreciation, providing support, keeping communication lines open, supporting success affects, and respecting needs and limits, the students felt overwhelmed.

Based on (Chen et al., 2024) perceived social support and positive personality could mediate the chain between school climate and growth mindset of junior high school students.

Table 6. Extent of School Roles in Terms of Social Support in School

Components of Social Support in School of the Respondents	Weighted Mean	Verbal Interpretation	Rank
1. show appreciation.	4.65	Very High Extent	1
2. provide support when needed.	4.53	Very High Extent	2
3. keep communication lines open.	4.52	Very High Extent	3
4. supports success.	4.51	Very High Extent	4
5. respects needs and limits.	4.48	High Extent	5
Average Weighted Mean	**4.54**	**Very High Extent**	

In table 7 it reveals that the computed average weighted mean for this element is 4.58 with an interpretation of very high extent. This denotes those activities like election, festival of talents, sports competition, health, and wellness activities, also examinations and assessments were eagerly participated in by the respondents and influences them.

According to the study (Cahyono et al., 2023) leadership education in schools is an important strategy in building a generation of qualified leaders. To achieve this goal, a comprehensive and integrated programmed is needed in the school curriculum such as instilling leadership values early on, providing leadership training to students, creating mentoring and self-development programmed, and encouraging students to be involved in leadership activities at school.

Table 7. Extent of School Roles in Terms of Other School Activities

Components of Other School Activities of the Respondents	Weighted Mean	Verbal Interpretation	Rank
1. Election of officers for different student organizations.	4.70	Very High Extent	1
2. Festival of Talents.	4.51	Very High Extent	5
3. Sports Competitions.	4.56	Very High Extent	3

4. Activities related to health and wellness.	4.52	Very High Extent	4
5. National Examinations and Assessments.	4.61	Very High Extent	2
Average Weighted Mean	**4.58**	**Very High Extent**	

Level of Civic Engagement

The starting point of this current study is focused on the role of civic education and civic engagement. Civic engagement and civic action, as it led to youth empowerment and long-term positive effects on social issues, wellbeing's, creativity, intelligence, democratic behaviors, all of which contribute to civic development.

As the data gathered were computed, results of the level of civic engagement as outcomes of school roles orientation in terms of civic actions has an average weighted mean of 4.42 which was interpreted at a high level. Civic actions implies that community volunteerism has helped me know a lot about opportunities to become involved in the community and contribute to improving life in my community, thus increasing my motivation to participate in advocacy or political action groups, made me intend to be involved in volunteer service, made me want to dedicate my career to improving society, and lastly helped me develop a sense of who I am, which now includes a sincere desire to be of services to others.

According to (Panni et al., 2023) it is recommended to educate students about service learning, and formally train their students for undertaking community projects, with practical suggestions for promoting civic engagement through community service for a sustainable future.

Table 8. Level of Civic Engagement as Outcomes of School Roles in Terms of Civic Actions

Components of Civic Actions of the Respondents	Weighted Mean	Verbal Interpretation	Rank
(Community Volunteerism)			
1. Helped me know a lot about opportunities to become involved in the community and contribute to improving life in my community.	4.53	Very High Level	1
2. Increased my motivation to participate in advocacy or political action groups after I graduate.	4.40	High Level	3

3. Made me intend to be involved in volunteer service after I graduated.	4.43	High Level	2
4. Made me want to dedicate my career to improving society.	4.38	High Level	4
5. Helped me develop a sense of who I am, which now includes a sincere desire to be of services to others.	4.38	High Level	5
Average Weighted Mean	**4.42**	**High Level**	

Table 9 shows the level of civic engagement as outcomes of school roles in terms of civic commitment, particularly community improvement, participation, and voting have an average weighted mean of 4.34 and is interpreted having high level. This implies that through civic engagements respondents realized that it is important to vote and be politically involved. They also prefer staying updated with current with the local and national news. They also make initiatives that will improve the community, and to have a deep conviction in my career goals to achieve purposes beyond my own self-interest.

Based on the study of (Tzankova et al., 2023), the importance of opportunities for active involvement and critical reflection in fostering interest, efficacy, and all forms of participation activities. The Democratic school climate was found to positively impact institutional trust and efficacy, but not participation.

Table 9. Level of Civic Engagement as Outcomes of School Roles in Terms of Civic Commitment

Components of Civic Commitment of the Respondents	Weighted Mean	Verbal Interpretation	Rank
(Community Improvement, Participation, and Voting)			
1. Helped me realize that it is important for me to vote and be politically involved.	4.51	Very High Level	1
2. Made me plan to stay current with the local and national news after I graduate.	4.23	High Level	5
3. Enabled me to plan or help implement an initiative that improves the community.	4.32	High Level	3
4. Made me feel a deep conviction in my career goals to achieve purposes beyond my own self-interest.	4.28	High Level	4

5. Motivated me to stay up to date on the current political issues in the community.	4.35	High Level	2
Average Weighted Mean	**4.34**	**High Level**	

Table 10 reveals that this study also aimed at determining the level of civic engagement as outcomes of school roles in terms of civic skills, particularly involvement in the civil society and this was computed to have an average weighted mean of 4.39 with a verbal interpretation of high level. This implies that thru civic engagements respondents were able to discuss controversial social issues with civility and respect with others openly, sharing their own thoughts and ideas. It is way of realizing that when members do not agree on how to solve a problem, they will likely arrive at a compromise.

Civic education has focused on preparing students to influence politics and government policy. Less attention has been paid to the curricular implications of civil society. Schools should be acquainting students with the knowledge necessary to evaluate the work of such organizations, as well as providing students with experience in the kinds of collaborative deliberation that takes place there (Ho and Barton, 2020).

Table 10. Level of Civic Engagement as Outcomes of School Roles in Terms of Civic Skills

Components of Civic Skills of the Respondents	Weighted Mean	Verbal Interpretation	Rank
(Involvement in Civil Society)			
1. Helped me discuss controversial social issues with civility and respect.	4.48	High Level	1
2. Helped me realize that when members of my group disagree on how to solve a problem, I like to try to build consensus.	4.33	High Level	5
3. Made me believe that I have a responsibility to use the knowledge that I have gained at school to serve others.	4.41	High Level	2
4. Prepared me to listen to others and understand their perspective on controversial issues.	4.35	High Level	4
5. Made me feel confident that I will be able to apply what I have learned in my classes to solve real problems in society.	4.38	High Level	3

Average Weighted Mean	**4.39**	**High Level**

For the level of civic engagement as outcomes of school roles in terms of social cohesion, particularly in terms of cultural awareness, diversity and inclusion programming, the average weighted mean is 4.33 with an interpretation of high level. It only implies that community issues and concerns are dealt with professionally and accepts diverse ideas by the respondents and more likely made them to convince others to agree with their point of view.

Taken as a whole, civic engagement, at each analytical level, is usually regarded as a good, and necessary quality for making democracies stronger, strengthening the communities, and creating the sense of being felt. A positive role in the community can strengthen democracy, such as a vibrant civil society and fabric of fundamental societal values (Dawes et al., 2015).

Table 11. Level of Civic Engagement as Outcomes of School Roles in Terms of Social Cohesion

Components of Social Cohesion of the Respondents	Weighted Mean	Verbal Interpretation	Rank
(Cultural Awareness, Diversity, and Inclusion Programming)			
1. Has given me the professional knowledge and skills that I need to help address community issues	4.43	High Level	1
2. Helped make me a good listener, even when peoples' opinions are different from mine.	4.31	High Level	3

Relationship Between the Personal Profile and the Extent of School Roles among the Graduates of Public Secondary School Respondents

In table 12, relationship between the personal profile and the extent of school roles among the graduates of public secondary school respondents in terms of cooperative learning was tested using chi- square test. Significant relationships were established on profiles such as age, school attended, and type of civic engagements. Tailoring cooperative learning activities to the developmental stage and interests of the learners can significantly enhance the effectiveness and enjoyment of the learning process. It is also seen that school attended has a significant relationship with cooperative learning which implies that school create a supportive and well-resourced environment for cooperative learning can foster more effective and enriching educational experiences for their students. And lastly, in types of civic engagement it infers that integrating various types of civic engagement into cooperative learning it prepares students for both academic success, active and informed citizens.

In the article by Akhrif et al., (2020) cited key criteria that assess intelligent collaboration and that serve to improve collaboration performance and provide an effective way to create a collaborative learning environment, which mainly based on recommendation, and refers to learner profile and evaluations.

Table 12. Relationship Between the Personal Profile and the Extent of School Roles among the Graduates of Public Secondary School Respondents in terms of Cooperative Learning

Profile	Extent of Roles	x^2 Value	p- Value	Decision	Interpretation
Age	Cooperative Learning	11.040	0.026	Reject H_o	Significant
Gender		2.100	0.717	Failed to Reject H_o	Not Significant
School Attended		59.321	<0.001	Reject H_o	Significant
Awards		3.732	0.155	Failed to Reject H_o	Not Significant
Type of Civic Engagement		21.129	0.02	Reject H_o	Significant

In table 13, interpretation of not significant was evident in all aspects of the respondents' profiles. It implies that age, gender, school attended, awards, and type of civic engagement are not vital in the disciplining practices in the school.

In the study by Encina and Berger (2021), they focused on the moderating role of school climate to promote students' civic behaviors in their school. Their study followed the Authoritative School Climate Theory, where they proposed the two key dimension of school social climate namely, student support and disciplinary structure, which are relevant to explain students' civic engagement within their schools.

Table 13. Relationship Between the Personal Profile and the Extent of School Roles among the Graduates of Public Secondary School Respondents in terms of Discipline Practices

Profile	Extent of Roles	x^2 Value	p- Value	Decision	Interpretation
Age	Discipline Practices	2.901	0.574	Failed to Reject H_o	Not Significant
Gender		1.533	0.821	Failed to Reject H_o	Not Significant
School Attended		25.861	0.258	Failed to Reject H_o	Not Significant
Awards		0.619	0.734	Failed to Reject H_o	Not Significant
Type of Civic Engagement		10.826	0.371	Failed to Reject H_o	Not Significant

In table 14, relationship between the personal profile and the extent of school roles among the graduates of public secondary school respondents in terms of academic success was evident in components such as school attended and the type of civic engagement. It implies that the school a student attends can have profound implication for their academic success due to differences in resources, teaching quality, curriculum, peer environment, and community support. Significant relationship was also established between types of civic engagement and academic success which means types of civic engagement contribute to academic success by promoting the development of the practical skills, enhancing critical thinking, increasing motivation and engagement, and fostering a sense of responsibility and connection to the community.

This research article by Moleko and Arko-Achemfuor (2021) found out that the Supplementary Learner Support Program SLSP improved the performance of the learners who participated in the program and their schools significantly.

Table 14. Relationship Between the Personal Profile and the Extent of School Roles among the Graduates of Public Secondary School Respondents in terms of Academic Success

Profile	Extent of Roles	x^2 Value	p- Value	Decision	Interpretation
Age	Academic Success	8.947	0.062	Failed to Reject H_o	Not Significant
Gender		4.326	0.364	Failed to Reject H_o	Not Significant
School Attended		36.119	0.029	Reject H_o	Significant
Awards		3.884	0.143	Failed to Reject H_o	Not Significant
Type of Civic Engagement		26.039	0.004	Reject H_o	Significant

In table 15, the relationship between the personal profile and the extent of school roles among the graduates of public secondary school respondents in terms of grading system was evident in aspects such as age and school attended. This implies that the grading system of the school attended has a vital impact on the age of the respondents. The study tested the relative contribution of student support and disciplinary structure on students' civic behaviors, directly and interacting with their sense of belonging. A series of two-level hierarchical linear modeling analyses revealed that, after controlling for sex, school phase, school size, and school administrative dependency, student sense of belonging was positively related to civic engagement within their schools.

On the contrary, results from the study of Marohombsar (2021), disclosed that the there is a relationship between the learners' profile and perceived effect of modular approach and their profile showed that the learners' perceptions are not significantly related to their profile.

Table 15. Relationship Between the Personal Profile and the Extent of School Roles among the Graduates of Public Secondary School Respondents in terms of Grading System

Profile	Extent of Roles	x^2 Value	p- Value	Decision	Interpretation
Age	Grading System	11.076	0.026	Reject H_o	Significant
Gender		2.667	0.615	Failed to Reject H_o	Not Significant
School Attended		43.664	0.004	Reject H_o	Significant
Awards		2.405	0.300	Failed to Reject H_o	Not Significant

Type of Civic Engagement	10.068	0.435	Failed to Reject H_o	Not Significant

In table 16, relationship between the personal profile and the extent of school roles among the graduates of public secondary school respondents in terms of social support in school was not evident, implying that the profile of the respondents was not affected by the social support the school is giving them.

Parallel to the study of (Sabado et al., 2024) despite differences across strands, age, and gender, the study concludes that these demographics do not significantly affect the perceived factors influencing school roles.

Table 16. Relationship Between the Personal Profile and the Extent of School Roles among the Graduates of Public Secondary School Respondents in terms of Social Support in School

Profile	Extent of Roles	x^2 Value	p- Value	Decision	Interpretation
Age	Social Support in School	2.787	0.594	Failed to Reject H_o	Not Significant
Gender		4.885	0.299	Failed to Reject H_o	Not Significant
School Attended		27.596	0.189	Failed to Reject H_o	Not Significant
Awards		2.392	0.302	Failed to Reject H_o	Not Significant
Type of Civic Engagement		6.967	0.729	Failed to Reject H_o	Not Significant

Table 17 shows the relationship between the personal profile and the extent of school roles among the graduates of public secondary school respondents in terms of other school activities particularly in the school attended. This implies that the school attended by the students can shape the range, quality, and accessibility of extracurricular and co-curricular activities, thereby influencing their overall educational experience and personal development.

From the study of Latif et al., (2020) results showed that in almost all comparisons, out-of-school and in-school active learners exhibited similar engagement levels, but these were much higher than low engagers. In addition, the implications of the findings for the enhancement and effective integration into school activities were presented.

Table 17. Relationship Between the Personal Profile and the Extent of School Roles among the Graduates of Public Secondary School Respondents in terms of Other School Activities

Profile	Extent of Roles	x^2 Value	p- Value	Decision	Interpretation
Age	Other School Activities	5.444	0.245	Failed to Reject H_o	Not Significant
Gender		2.271	0.686	Failed to Reject H_o	Not Significant
School Attended		39.825	0.011	Reject H_o	Significant
Awards		1.996	0.369	Failed to Reject H_o	Not Significant
Type of Civic Engagement		11.103	0.35	Failed to Reject H_o	Not Significant

Relationship Between the Personal Profile and the Level of Civic Engagement among the Graduates of Public Secondary School Respondents as Outcomes of School Roles

There is a growing need for increased civic engagement in developing countries. It was argued that civic education has not met the needs because it is uncritical, but it can be reformed through critical consciousness theory. However, for civic education reforms, there is a relationship between sociodemographic factors and civic engagement.

On this juncture, Ajaps and Obiagu (2012) investigated the influence of six sociodemographic factors, namely, gender, location, age, income, education, and ethnicity, on two civic engagement constructs which are environmental civility and community volunteering. Results of their study revealed that community volunteerism is influenced by age, gender, and location, while environmental civility is influenced by location and education, and there is a low level of civic engagement. The implications of these findings for a critical civic education aimed at increasing critical consciousness and civic actions.

Table 18 showed a relationship between the personal profile and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles in terms of civic actions in aspects of school attended and awards. This implies that the civic actions have a great effect on the school attended where it can significantly shape their opportunities and experiences with civic action and the awards received of the learners plays a crucial role in honing the perception and impact of individual in the organization.

Table 18. Relationship Between the Personal Profile and the Level of Civic Engagement among the Graduates of Public Secondary School Respondents as Outcomes of School Roles in terms of Civic Actions

Profile	Extent of Roles	x^2 value	p- Value	Decision	Interpretation
Age	Civic Actions	7.046	0.133	Failed to Reject H_o	Not Significant
Gender		0.926	0.921	Failed to Reject H_o	Not Significant
School Attended		41.499	0.007	Reject H_o	Significant
Awards		6.373	0.041	Reject H_o	Significant
Type of Civic Engagement		9.821	0.456	Failed to Reject H_o	Not Significant

In table 19, the relationship between the personal profile and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles in terms of civic commitment is evident in the aspect of gender. This implies that gender influences individuals' levels of civic commitment, the issue that they prioritize, and the strategies they employ to effect change within their communities.

To strengthen the result of the study, evidence not only shows differences in the political preferences of males and females but also shows males have higher probabilities of participating in political activities than females (Schlozman, 2012). Alternatively, female adolescents value their involvement in noninstitutionalized forms of participation (e.g., promotion of human rights, care of the environment, community support; Hooghe et al., 2015). Similarly, findings from the International Civic and Citizenship Education Study's (ICCS) Chilean sample show significant differences between male (72%) and female (80%) expectations of participating in volunteer activities (Schulz, Ainley, Fraillon, Kerr, & Losito, 2010).

Table 19. Relationship Between the Personal Profile and the Level of Civic Engagement among the Graduates of Public Secondary School Respondents as Outcomes of School Roles in terms of Civic Commitment

Profile	Extent of Roles	x^2 value	p- Value	Decision	Interpretation
Age	Civic Commitment	8.481	0.205	Failed to Reject H_o	Not Significant
Age		4.306	0.635	Failed to Reject H_o	Not Significant
Gender		52.201	0.018	Reject H_o	Significant

School Attended	0.103	0.991	Failed to Reject H_o	Not Significant
Awards	7.843	0.930	Failed to Reject H_o	Not Significant

In table 20, the relationship between the personal profile and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles in terms of civic skills is evident in the aspect of the school attended. This implies that the school attended by the learners can create a supportive learning environment, empowering students to become informed, engaged, and responsible members of society.

According to the study of LeCompte et al., (2020) data analysis suggests that iEngage, an action civics summer school, was effective in increasing elements of students' civic competence, including their ability to get people to care about a problem, organize and run a meeting, write an opinion letter, or contact a media outlet to express their views, and contact an elected official or community leader to address an issue.

Table 20. Relationship Between the Personal Profile and the Level of Civic Engagement among the Graduates of Public Secondary School Respondents as Outcomes of School Roles in terms of Civic Skills

Profile	Extent of Roles	x^2 value	p- Value	Decision	Interpretation
Age	Civic Skills	9.039	0.171	Failed to Reject H_o	Not Significant
Gender		4.172	0.653	Failed to Reject H_o	Not Significant
School Attended		49.502	0.032	Reject H_o	Significant
Awards		1.737	0.629	Failed to Reject H_o	Not Significant
Type of Civic Engagement		9.128	0.866	Failed to Reject H_o	Not Significant

In table 21, the relationship between the personal profile and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles in terms of social cohesion is evident in the aspect of awards. This implies that by valuing and celebrating the achievement of individuals within the community, awards contribute to a sense of belonging, connectedness, and collective well-being that has a positive implication for social cohesion.

In the study of Delfgaauw et al., (2020) team incentives may lead to more coworker support or to higher peer pressure and thereby, can affect the team's social cohesion.

Table 21. Relationship Between the Personal Profile and the Level of Civic Engagement among the Graduates of Public Secondary School Respondents as Outcomes of School Roles in terms of Social Cohesion

Profile	Extent of Roles	x^2 value	p- Value	Decision	Interpretation
Age	Social Cohesion	9.923	0.128	Failed to Reject H_o	Not Significant
Gender		2.806	0.833	Failed to Reject H_o	Not Significant
School Attended		68.496	<0.001	Failed to Reject H_o	Not Significant
Awards		9.945	0.019	Reject H_o	Significant
Type of Civic Engagement		11.981	0.680	Failed to Reject H_o	Not Significant

Relationship Between the Extent of School Roles and the Level of Civic Engagement among the Graduates of Public Secondary School Respondents as Outcomes of School Roles

In table 22, the relationship between the extent of school roles and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles are tested and showed significant findings in all aspects except in other school activities. This implies that Cooperative Learning, Disciplinary Practices, Academic Success, Grading System, and Social Support in School has a vital role in performing civic actions.

In contradiction with result, findings in the study of Bauml (2022), revealed that participants who joined school activities like entering in camp believed that they are capable of making difference in their communities. Their ideas for youth civic action in schools and broader communities typically represented personally responsible and participatory notions of citizenship.

Table 22. Relationship Between the Extent of School Roles and the Level of Civic Engagement among the Graduates of Public Secondary School Respondents as Outcomes of School Roles in terms of Civic Actions

Extent of Roles	Civil Engagement	ρ value	p-Value	Decision	Interpretation
Cooperative Learning	Civic Actions	.215**	<.001	Reject H_o	Significant

Disciplinary Practices	.197**	<.001	Reject H_o	Significant
Academic Success	.269**	<.001	Reject H_o	Significant
Grading System	.322**	<.001	Reject H_o	Significant
Social Support in School	.257**	<.001	Reject H_o	Significant
Other School Activities	0.034	0.566	Failed to Reject H_o	Not Significant

In table 23, the relationship between the extent of school roles and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles in terms of civic commitment was tested and showed significant relationship on all components except for disciplinary practices. This implies that Cooperative Learning, Academic Success, Grading System, Social Support, and other school activities in School has a vital role in committing on civic engagements.

School roles can affect other important forms of political engagement. Civic education may affect civic norms, political knowledge, political efficacy, political attitudes, and political ambition (Torney-Purta & Wilkenfeld 2009, Gainous & Martens 2016, Green-Riley 2021, Kalla & Porter 2022).

Table 23. Relationship Between the Extent of School Roles and the Level of Civic Engagement among the Graduates of Public Secondary School Respondents as Outcomes of School Roles in terms of Civic Commitment

Extent of Roles	Civil Engagement	ρ value	p-Value	Decision	Interpretation
Cooperative Learning	Civic Commitment	.196**	<.001	Reject H_o	Significant
Disciplinary Practices		0.112	0.055	Failed to Reject H_o	Not Significant
Academic Success		.287**	<.001	Reject H_o	Significant
Grading System		.292**	<.001	Reject H_o	Significant
Social Support in School		.305**	<.001	Reject H_o	Significant
Other School Activities		.200**	<.001	Reject H_o	Significant

Table 24 shows the relationship between the extent of school roles and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles in terms of civic skills. All the school roles have a significant effect on the civic skills of the respondents implying that civic skills adopted were product of the school roles. It was stated that giving substantial promise to educational institutional leaders, educators, and their students when it emerges provides students with the best chance to gain skills and capacities enriched with ethics, empathy, and compassion in

becoming effective leaders of tomorrow. Moreover, teaching them the significance of accountability, the importance of service learning, and the necessity for demonstration of ethos, compassion, and empathy, cultivate the sense of belonging while building on awareness, interaction, and leadership mindsets (Grigoropoulos, 2020).

Table 24. Relationship Between the Extent of School Roles and the Level of Civic Engagement among the Graduates of Public Secondary School Respondents as Outcomes of School Roles in terms of Civic Skills

Extent of Roles	Civil Engagement	ρ value	p-Value	Decision	Interpretation
Cooperative Learning	Civic Skills	.163**	0.005	Reject H_o	Significant
Disciplinary Practices		.194**	<.001	Reject H_o	Significant
Academic Success		.309**	<.001	Reject H_o	Significant
Grading System		.293**	<.001	Reject H_o	Significant
Social Support in School		.292**	<.001	Reject H_o	Significant
Other School Activities		.164**	0.005	Reject H_o	Significant

In table 25, the relationship between the extent of school roles and the level of civic engagement among the graduates of public secondary school respondents as outcomes of school roles in terms of social cohesion is evident in all aspects. This implies that all the school roles are vital in engaging in social cohesions. The development of the knowledge and skills of students can only be complete when the tenets of civic engagement are inculcated in them to respond to the needs of society (Owusu- Agyeman and Fourie- Malherbe, 2021).

Table 25. Relationship Between the Extent of School Roles and the Level of Civic Engagement among the Graduates of Public Secondary School Respondents as Outcomes of School Roles in terms of Social Cohesion

Extent of Roles	Civil Engagement	ρ value	p-Value	Decision	Interpretation
Cooperative Learning	Social Cohesion	.238**	<.001	Reject H_o	Significant
Disciplinary Practices		.184**	0.002	Reject H_o	Significant
Academic Success		.261**	<.001	Reject H_o	Significant
Grading System		.351**	<.001	Reject H_o	Significant
Social Support in School		.277**	<.001	Reject H_o	Significant
Other School Activities		.125*	0.033	Reject H_o	Significant

Overall, the null hypothesis in this study was rejected and it was found that there were significant relationships that existed between and among variables that were taken into consideration in this study.

Meaningful Experiences of the Graduates of Public Secondary School Respondents Relevant to their Civic Engagement

Experiences of the graduates of public secondary school respondents which are relevant to their civic engagements varies differently for every respondent. Some might have combinations of the engagements which they point to have rooted from their high school experiences.

For a more detailed analysis, the author used thematic analysis. Thematic analysis is a method of qualitative data analysis. It is a useful and accessible tool for qualitative researchers. Thematic analysis is the method under a variety of epistemological frameworks. Codes and themes were used to describe the framework for conducting the analysis (Kiger and Varpio, 2020). In this part, each theme was highlighted using quoted responses of the respondents.

The researcher of the study used the types of civic engagement they are involved in as the themes. Upon carefully analyzing the answers, the highest number of responses were coded as activism and advocacy. Activism and advocacy focus on the things that the respondent is engaged in and is based on his current activities and routines. The succeeding statement is presented to strengthen respondents' civic engagement.

"Sa paaralan natutunan kong magplano at mag- isip ng sistematiko na nagagamit ko ngayon sa aking trababaho."

"Nagagamit ko ang mga natutuhan ko sa paaran lalo na pagdating sa pakikipag-usap at humarap ng ayos sa mga tao"

"Nagsusulong ako ng adbokasiya tungkol sa pataas na pagtingin sa mga kababaihan at kalalakihan. Pinapahalagahn ko rin ang mga miyembro ng LGBTQA."

"Nagsusulong ako ng mga adbokasiya tungkol sa pag-iingat at pagpepreserve ng aming kapaligiran, upang makilala rin ito bilang isang tourist spot. "

Another theme is Community Education and Awareness which is characterized by the activities and involvement to programs which promotes educating the community. The following are some statements from the respondents:

"Naituro sa akin ng paaralan kung paano makinig at magbahagi rin ng aking kaalaman sa aking mga ka-barangay."

“Nagsusulong ng mga adbokasiyang pangkabuhayan upang mas makilala pa ang aming produktong kape hindi lamang dito sa Laguna maging sa buong mundo.”

“Bilang isang guro sinisikap kong maturuan ang aking mga mag-aaral kung paano magiging mabuting mamamayan ng ating bansa.”

“Nagsasagawa kami ng mga trainings upang makatulong sa pagpapaunlad ng buhay ng mga taong nasasakupan namin.”

Another theme featured is Political Engagement. More than exercising the right to vote, this theme depicted activities of the respondents which showcased them as public servants. Political engagement is an application of what they have known during their high schools and was mostly widened by their own experiences. This were highlighted with these responses:

“Sa paaralan nahubog ang kakayahan kong maging isang mabuting leader, kaya naman nagagamit ko ito ngayon bilang isang lingkod bayan.”

“Malaki ang naitulong sa akin ng pag-aaral sa public school. Natulungan ako ng paaralan lalo na sa problem solving na nagagamit ko ngayon bilang isang lingkod bayan.”

“Noong ako ay high school pa mahilig ako sumali sa mga activity sa school. Kaya naman ngayon bilang barangay official, gusto ko na laging lumalahok sa mga programa ang aming barangay.”

“Suportahan ang mga programang isinusulong ng aming SK Chairman at maging mabuting modelo sa kapwa ko kabataan.”

“Pagboto ng tama ang pinakamakabuluhang nagawa ko para sa aking bansa.”

“Ang pagpili ng mga tamang tao na ihahalal.”

Community Service and Volunteerism sparked in many of the respondents. Their act of service to various activities, especially during calamities, is outstanding. Claims includes these statements:

“Ang aming kapatarin ay nagsasagawa ng mga medical missions at nag vo-volunteer din kami sa tuwing may mga Brigada Eskwela.”

“Bilang isang barangay volunteer ang hindi ko makakalimutang karanasan ko ay ang pakikiisa ko sa bayanihan tuwing mayroong mga sakuna o kalamidad.”

“Sa tuwing may mga sakuna o kalamidad ako ay nakikiisa bilang isang volunteer upang mag rescue dahil natutuhan ko sa paaralan ang tungkol sa mga first aid.”

“Bilang isang pulis ang pinakamakabuluhang karanasan ko ay pagsilbihan ang aking komunidad maging buhay ko man ang kapalit nito.”

The last theme is the Philanthropic Works and Fund-Raising Activities. These are some notable answers from the respondents who do not want to expose their identities as philanthropists, also those who are working for a good cause. Their responses are as follows:

"Nahubog ng paaralan ang aking pagkatao, naging bukas palad din ako sa lahat ng ngangailangan."

"As part of our requirement during our senior years, we conducted gift giving and feeding program. After we graduated, we are still doing it to serve/ help the community."

"I joined different fund-raising activities like fun run, food for a cause, zumba for a cause, which will benefit my community."

"Sa tuwing may programa ang aming community, ako ay nagdo- donate ng pera na abot ng aking kakayahan dahil alam ko na makakatulong ito upang mas mapaunlad pa ang aming komunidad."

These responses from the respondents strengthen the reliability and integrity that the school has well- established civic engagements to its learners through projects, programs, and activities.

Recommendations

The following recommendations were made after finding some essential disparities that can also be the basis of future researchers.

1. Other profiles can be used as variables in the study.
2. Since the school was the setting for this study, future researchers can conduct a study to members of civic organizations, with different setting like their current work.
3. Future researchers may opt to study cultural awareness as result of the school experiences.
4. Results of this study can be presented to the top management of the Schools Division Office of Laguna to come up on a program intensifying civic engagements since it was found that these are significantly related to their previous school roles.

Compliance with the Ethical Standards

This study was conducted in accordance with the ethical standards and guidelines for research involving human participants. All participants provided written informed consent prior to their inclusion in the study, ensuring their voluntary participation and understanding of the research objectives, procedures and potential risks, and benefits. To maintain confidentiality, all personal data were anonymized. The data collected was securely stored and accessible only to the researcher. No financial or personal conflicts of interest were identified by the researcher in relation to this study. The researcher also

acknowledged those people who helped her and whose support was instrumental in the completion of this research.

Acknowledgments

I am profoundly grateful to many people whose assistance and support have been indispensable throughout the course of my research writing. A special thanks goes to Laguna State Polytechnic University, whose resources and support have been crucial for my research. I would also like to extend my sincere thanks to the members of my thesis committee, for their constructive comments, suggestions, and for taking the time to review my study. Last but certainly not least, I would like to thank my family for their unwavering love, patience, and support.

PARENTAL PERCEPTIONS ON FACTORS INFLUENCING THE DECLINE IN PARTICIPATION FOR SCIENCE, TECHNOLOGY AND ENGINEERING ADMISSION SELECTION

Cherry Anne C. Jose, LPT, MAED

Graduate School, National Teachers College, Quiapo, Manila, Philippines
Pililla National High School, Pililla, Rizal, Philippines

https://doi.org/10.5281/zenodo.12478923

ABSTRACT

The educational landscape is undergoing a significant transformation. The study sought to determine the parental perception of the factors influencing the decline in participation in Science, Technology, and Engineering programs that concern household income and educational attainment. A quantitative questionnaire survey checklist was distributed to gather responses through an online platform. The responses were analyzed using frequency, standard deviation, and ANOVA. The study revealed that parental household income is less likely to affect their participation in the program which is reflected in significant values of 0.195, 0.511, and 0.947 respectively, which is all higher than the alpha value of 0.05. Likewise, the result revealed between the factors and parental education attainment with p = 0.441 > 0.05, p=0.707>0.05, and p=0.678>0.05 alpha value. These results presented that the family income and educational attainment of the respondents have not influenced the decline in participation of the students in the Science, Technology, and Engineering program admission selection.

Keywords: *STE program, decline, parental perception, admission*

INTRODUCTION

The educational landscape is undergoing a significant transformation. In the recent years, the integration of Science, Technology, and Engineering (STE) program have gained the prominence and trust in educational environment or institution nationwide

which is essential in critical thinking, problem-solving abilities, scientific literacy, and life application. In our 1987 Constitution, Article XIV, sec. 10 stated that “Science and technology are essential for national development and progress. The State shall give priority to research and development, invention, innovation, and their utilization; and to science and technology education, training, and services”. This become the basis of Department of Education Order, no.55, s. 2010, its goal is to strengthening science and mathematics education at the secondary level. The integration of Science, Technology, and Engineering (STE) programs has become more well-known and trusted in educational settings across the country in recent years and students’ career choice intention was influenced by this program (Tey, Moses, Cheah, 2020).

Gülhan (2023) revealed that parental involvement in their children's education can have a significant impact on their success and it plays a significant role in forming students' minds and experiences (Tran et al., 2020). According to Duxbury, et.al (2021), parents engaging in their child school events and supporting their children’s interest in STEM (Ballavaram,2023) matters on their child's education while also learning more about their child's academic progress and potential obstacles. The trust and harmonious relation of the parents and the school, create a good influence, source of motivate and success of their child.

The number of interested students from Pililla and neighboring towns' elementary schools who would like to be considered for the incoming grade 7 Science, Technology, and Engineering program has declined over the last three years. The school faces challenges in selecting qualified students to fill the 80 available slots for incoming Grade 7 in the said program. However, there are difficulties in motivating parents and students from the top classes to actively participate in the admission selection process.

This aim to analyze the factors influencing the decline in participation for Grade 7 STE admission selection as perceived by the parents. This proactive approach not only safeguards the integrity of the STE program but also fosters a culture of continuous improvement and innovation that help the students reach their full potential and success in science-driven world.

Research Questions

Given the foregoing discussion, the researcher undertakes on the study with the questions “What are the factors influencing the decline in participation in STE 7 admission selection as perceived by the parents?”, specifically, the study will aim to answer the following questions: 1. What is the profile of the respondents in terms of 1.1 household income and 1.2 Educational attainment? 2. What are the perceptions of the parents on the factors influencing the decline in participation in grade 7 Science, Technology and Engineering program admission selection with respect to the following factors: 2.1 academic performances, 2.2 awareness and information and 2.3 program reputation. 3. Is there a significant difference in the respondents’ perception on the factors that contribute to the declining participation in grade 7 STE program concerning the different aforementioned variables and the respondent’s profile? Thus, proving the null hypothesis that there is no significant difference in parental perceptions on the factors influencing the decline in participation in Science, Technology and Engineering 7 admission selection when considering the respondents’ profile and the specified factors.

METHODOLOGY

Research Design

The study was utilized a descriptive research design, focusing on collecting detailed quantitative data to achieve a comprehensive understanding of the parents' perceptions regarding the Science, Technology, and Engineering (STE) program. To achieve this, a structured questionnaire consisting of 30 closed-ended questions will be administered to the parents. These questions are carefully designed and validated to elicit information. By utilizing a quantitative approach, this research aims to systematically analyze and interpret the data to identify potential areas of improvement within the STE program.

Study Site and Respondents

The research will be conducted in two schools within town proper that has pilot sections and are primary feeder schools for Pililla National High School, District of Pililla in the Division of Rizal, Region IV -A, Philippines. This is one of the schools in Rizal Province that offering Science, Technology and Engineering (STE) program.

The study included 65 respondents out of 80 parents who were asked to participate in the study. These parents contributed their responses through either an online platform or by completing a printed questionnaire checklist. This ensured an accessible method for data gathering and allowing the participants to do it in their most convenient time. This aimed to maximize their participation rates and gather comprehensive insight from the respondents.

Research Instrumentation

The researcher will use a questionnaire survey to determine the parental perspective about the Science, Technology, and Engineering programs, with closed-ended questions and a Likert scale rating. The delivery of survey questionnaires will be administered online or personally. The demographic data of the respondents will also be collected to find out if it influences the decrease in participant rate.

The researcher seek help from expects to validate questionnaire to ensure it clarity, and conciseness. After the validation, the researcher asked permission to the Public School district Supervisor in the District office and the school principal of the school under the study before it was conducted. After the approval granted, the researcher informed the parents of incoming grade 7 students through their class adviser. To ensure that the parents had a clear understanding about the study, they were given ample time to respond and at their own convenience. The questionnaire was presented in both English and Filipino languages to ensure to accommodate broad spectrum of respondents. Parents were assured that their responses would be kept confidential and used solely for research purposes.

Furthermore, the result of this study would serve as the basis of development or enhancement for the betterment of the STE program that would benefit educators, students and educational community.

Data Analysis

For the study titled "Parents' perception on the factors influencing the decline of participation for STE Admission Selection," data analysis will involve rigorous quantitative methods. For question 1, frequency, percentage and rank distribution were utilized to analyze data while in question 2, mean and standard deviation were employed to determine the factors influencing the decline in participants rates. To ascertain whether the hypothesis is accepted or rejected One-way Analysis of Variance (ANOVA) was used. This comprehensive approach will provide a detailed understanding of the factors contributing to the decline in participation for STE admission selection. The proponent analyzed the data using SPSS software and provided a concise narrative interpretation.

RESULTS

Profile of the respondents

Table 1. Household income of the respondents

Household income	Frequency	Percentage	Rank
Below ₱ 15,000	18	27.7	2
₱15, 001 - ₱30, 000	34	52.3	1
₱30,001 - ₱60,000	8	12.3	3
₱60, 001 – 150, 000	4	6.2	4
Above ₱150,000	1	1.5	5
Total	65	100.00	

The profile of the respondents showed that there were 27.7% have household income of below ₱15, 000, 52.3% of them earned ₱15, 001 - ₱30, 000, 12.3% were earned ₱30,001 - ₱60, 000, 6.2% received an income of ₱60, 001 - ₱150, 000 and 1.5% earned above ₱150, 001 and above, respectively.

Table 2. Educational Attainment of the respondents

Educational level	Frequency	Percentage	Rank
Elementary	1	1.5	5
High School	17	26.2	2
Vocational	5	7.7	3
College degree	38	58.5	1
Post-graduate degree	4	6.2	4
Total	65	100.00	

The data of the respondent's educational attainment displays a diverse range of background. A majority of 38 (58.5%) were college graduates. Following this, 17 respondents (26.2%) have completed high school. Vocational certificates or short courses have been attained by 5 respondents (7.7%). Additionally, 4 respondents (6.2%) are pursuing post-graduate degrees while 1 respondent (1.5%) has graduated from elementary level. This data highlights the predominance of higher education among the surveyed group.

The parental perceptions on factors influencing decline in participation Science, Technology and Engineering program admission selection.

Table 3. Parental perceptions on factors influencing decline in participation in terms of Academic Performance

Statement	Mean	Standard deviation(±sd)	Adjectival Rating
1. My child's performance in science influenced our decision regarding the STE program	4.46	0.772	Strongly Agree
2. My child's performance in Math influenced our decision regarding the STE program	4.40	0.880	Strongly Agree
3. I believe my child needs strong grades in Science and Math to succeed in the STE program.	4.43	0.728	Strongly Agree
4. My child's overall academic performance was a major factor in our decision about STE program.	4.40	0.862	Strongly Agree
5. I consider my child's interest in science when deciding on the STE program	4.43	0.809	Strongly Agree
6. I consider my child's interest in Math when deciding on the STE program	4.40	0.880	Strongly Agree
7. I believe that the STE program offers significant benefits for my child.	4.77	0.523	Strongly Agree
8. I believe my child is academically ready for the challenges of the STE program.	4.52	0.589	Strongly Agree
9. Enrolling my child in the STE program would encourage them to improve their academic performances in science and math.	4.82	0.464	Strongly Agree
10. My child's current academic performance in science and math is a	3.43	0.984	Agree

good indicator of their potential success in STE fields.			
Overall	**4.41**	**0.749**	

The table presented that statements from 1 to 9 had an adjectival rating of “Strong Agree” indicating that the academic performances of the respondent’s children was the key factor in their participation in the STE program. Notably, statement 9 presented the highest weighted mean of 4.82 (±0.464), while the lowest was 3.43 (±0.984) of statement 10.

Table 4. Parental perceptions on factors influencing decline in participation in terms of Awareness and Information

Statement	Mean	Standard deviation(±sd)	Adjectival Rating
1. I am well-informed about the STE program offered at our school.	4.69	0.498	Strongly Agree
2. I am aware of STE grade 7 admission program.	4.75	0.434	Strongly Agree
3. My child’s school provide sufficient information about the STE program.	4.54	0.561	Strongly Agree
4. The information about STE program provided by the school is easy to understand.	4.52	0.640	Strongly Agree
5. The school conducts effective campaign program for the STE admission.	4.55	0.638	Strongly Agree
6. The STE admission process is straightforward.	4.57	0.558	Strongly Agree
7. I find the STE grade 7 admission accessible (school fb page, flyers and brochure).	4.49	0.590	Strongly Agree
8. The school effectively communicates updates and detailed about the STE program.	4.52	0.615	Strongly Agree
9. The school provides adequate opportunities for parents to ask questions and receive answer about the STE program.	4.46	0.792	Strongly Agree
10. The information provided by the school has positively influenced my decision to consider enrolling my child in the STE program.	4.49	0.687	Strongly Agree

Overall	**4.56**	**0.601**	

The table reveals that all the statements received a rating of “Strongly Agree”. Among these, statement 2 achieved the highest weighted mean of 4.75 (±0.434), indicating the strong consensus among respondents. Conversely, statement 9 had the lowest weighted mean of 4.46 (±0.792), though it still reflects a high level of agreement. Overall, the data suggests that respondents well well-informed about the admission process and selection criteria, as evidenced by their agreement across statements.

Table 5. Parental perceptions on factors influencing decline in participation in terms of Program Reputation

Statement	Mean	Standard deviation(±sd)	Adjectival Rating
1. I am aware of the success and achievement of students who have completed the STE program.	4.72	0.516	Strongly Agree
2. The STE programs offer valuable extracurricular and enrichment opportunities that enhance the educational experiences.	4.63	0.547	Strongly Agree
3. The STE program is known for being inclusive and welcoming to all students.	4.68	0.533	Strongly Agree
4. The STE program is well-regarded for preparing students for success in higher education.	4.68	0.533	Strongly Agree
5. The school administration strongly supports and invests in the STE programs.	4.66	0.477	Strongly Agree
6. Teachers involved in the STE program are well-regarded and respected for their expertise.	4.54	0.588	Strongly Agree
7. I believe that participation in the STE program aligns well with future educational and career opportunities for students.	4.82	0.391	Strongly Agree
8. I believe that the STE program positively impacts on students’ overall development.	4.78	0.414	Strongly Agree
9. The school actively collaborates with parents to ensure the success and well-being of students in STE program.	4.63	0.486	Strongly Agree

10. I believe that the teachers in STE program are highly qualified and possess the necessary credentials.	4.60	0.581	Strongly Agree
Overall	**4.67**	**0.507**	

In table 5 showed the respondents replied in all the statements with a remark “Strongly Agree”, with the highest weighted mean of 4.82 (±0.391) of statement 7 and lowest weighted mean of 4.54 (±0.588). It interpreted that the respondents were strongly agree on the program implementation.

Significant Difference of parental perceptions on Academic performance as factors influencing decline in participation and profile.

Table 6. Mean comparison between parental perceptions of factors influencing decline in participation (grouping variable: household income)

Factors	Mean	Standard deviation	f-value	Significant value	Interpretation	Decision
Academic Performance	45.31	5.626	1.565	0.195	Not Significant	Accepted
Awareness and Information	45.40	4.812	0.834	0.511	Not Significant	Accepted
Program Reputation	46.68	3.941	0.182	0.947	Not significant	Accepted

α = 0.05 level of significance

The table shows that there is no significant differences between these factors and variables as reflected in significant value of 0.195, 0.511 and 0.947 respectively, which is all higher than the alpha value of 0.05. Therefore, the null hypothesis is accepted. This is supported in the findings of Betancur, et.al (2018) that there are only moderate gaps related to family income. Instead, it is mathematics and reading achievement influence in science achievement. According to Machebe, Ezegbe, & Onuoha (2017), parent’s financial status less likely to affect the academic performance of students but the parental support and involvement matter most.

Table 7. Mean comparison between parental perceptions of factors influencing decline in participation (grouping variable: Educational Attainment)

Factors	Mean	Standard deviation	f-value	Significant value	Interpretation	Decision
Academic Performance	45.31	5.626	0.951	0.441	Not Significant	Accepted

Awareness and Information	45.40	4.812	0.540	0.707	Not Significant	Accepted
Program Reputation	46.68	3.941	0.580	0.678	Not significant	Accepted

α = 0.05 level of significance

The table shows that there is no significant differences between academic performance, awareness and information and program reputation as gleaned from the table. The p = 0.441 > 0.05, p=0.707>0.05 and p=0.678>0.05 alpha value respectively. Hence, the null hypothesis was all accepted. According to Betancur (2018), parental education has smaller and indirect effect to the study of their child in particular in the access in science learning. This is also supported in the study of Siregar, Rosli & Nite (2023) that parental educational attainment does not always contribute to the students' interest in STE program. Similarly, in the study of Idris, Hussain &Ahmad (2020) that parents' educational attainment has no significant correlation with son/daughter academic performance.

DISCUSSION

As revealed in the study, both household income and parental educational attainment were not major hindrances in the participation in the selection process in STE. Other factors that make the parent and the students hesitant to participate in the selection activity appear in the selection activity. The leaders and coordinators must think of a scheme to boost the interest of the students from elementary to achieve the criteria as requirement in the selection.

By proactively addressing these factors and fostering a supportive environment that encourages both students and parents to actively participate, educational institutions can effectively cultivate a more inclusive and diverse pool of participants in STE programs. This approach not only promotes equity and accessibility but also harnesses untapped potential among young learners, paving the way for a more robust future workforce in science, technology, and engineering.

Conclusions

Learning and interest of the students in the Science, Technology, and Engineering program vary among individual and are influenced by family support. The study's analysis revealed that the parental household income did not pose a barrier to participation in the STE program.

Furthermore, the study concluded that the respondents' educational attainment did not impact the participation rate in the STE admission selection. This indicates that parents' education levels were not concern in the decline of participation rate.

Recommendations

Recommendations were given on the basis of the above findings:

1. The study could be expanded to include more contexts and variables, involving a larger sample of STE community to provide a broader understanding of the factors influencing participation.
2. Conduct another study to further explore the challenges and conflicts experienced by the STE learners may help identify potential causes for the decline in participation rate.
3. Utilizing mixed-method research design could harvest more comprehensive responses and data, offering deeper insights into factors affecting STE program participation.

Compliance with Ethical Standards

The author declares that strict adherence to the ethics of research was maintained, no conflict of interest exists in the conduct of the study, plagiarism was strictly avoided and there was no bias in the interpretation of the findings.

Acknowledgments

The researcher would like to extend utmost appreciation to The National Teachers College for the trust in conducting the study. To all the respondents who wholeheartedly participated in the research process. Additionally, the researchers wish to thank all the individuals and parties involved for sharing their expertise, time and effort in the evaluation, give insightful feedback, and recommendations that have been instrumental in the completion of this study.

PARENTAL RESILIENCE: A PHENOMENOLOGICAL STUDY ON MOTHERS NURTURING CHILDREN 3 - 6 YEARS OLD WITH MENTAL HEALTH NEEDS

Paula Stephanie Eduria,
Johanna Bagacay RN, MAN,
Christian Emmanuel Enriquez RN, MAN, DPS-TM

Nursing Department, University of San Carlos, Cebu City, Philippines

https://doi.org/10.5281/zenodo.11424708

ABSTRACT

Parental resilience is crucial for children's overall development, especially in stressful situations. This study explores the experiences of mothers raising young children with mental health needs, focusing on the importance of mental health for overall well-being. The research, conducted using purposive and snowballing techniques, interviewed six mothers whose children aged 3-6 have mental health needs. The findings reveal that mothers' parenting is influenced by their acceptance of their children's disabilities and their knowledge about these conditions. Physical and mental well-being support for their children is emphasized, involving adherence to prescribed treatments and effective communication. The study also highlights the challenges faced by mothers, including financial constraints, adapting to a new normal due to medical challenges, and navigating educational challenges. Active listening to children's concerns is vital for their psychological security. The study recommends a collaborative educational approach, leveraging the experiences of mothers and teachers to design individualized support systems, fortifying parental resilience, and enhancing children's physical security during their developmental years. The study aims to understand the experiences of mothers in nurturing young children with mental health needs and how this can be applied to create a program that provides psychological security for children.

Keywords: *Parental resilience, Mental Health Needs, Well-being, Psychological Security, Child Development*

INTRODUCTION

This study focuses on the experiences of mothers nurturing children with mental health needs.

Up to 20% of children worldwide suffer from debilitating mental illnesses, including learning disorders, ADHD, depression, psychosis, developmental disorders, attachment disorders, anxiety disorders, conduct disorders, substance abuse, and eating disorders. Living with such children can be extremely stressful for family caregivers, and professional assistance, public awareness of mental illnesses in children, and social and financial support from the government, private sector, and NGOs are critical in addressing these challenges. (Ambikile & Outwater, 2012; Nikolaev et al., 2016).

Parental resilience is defined as a parent's internal resources and coping skills that assist them in dealing with stress and crises. Resilient coping skills enable a parent to solve problems, remain calm and collected when upset, and persevere during difficult times. Parental resilience plays an important role in the overall development of children, especially in stressful situations or circumstances. (Gmuca et al., 2019; Gavidia-Payne et al., 2015).

Mental health problems in young children manifest as emotional and behavioral disorders and are closely related to the negative factors of a discordant family environment for the child. A mother's maladaptive coping styles play a significant role in the formation of a discordant family. The findings suggest that mothers' coping patterns, in conjunction with their parenting styles, play a dysfunctional role in their children's mental health.

Co-occurring medical conditions are very common in children with autism spectrum disorder (ASD), and these conditions include speech, sleep, and gastrointestinal issues (including constipation and feeding problems), developmental delay, attention deficit/hyperactivity disorder, hypotonia, epilepsy, anxiety, disruptive behavior, pica, and eczema.

Several psychiatric disorders, particularly neurodevelopmental disorders, such as autism spectrum disorder (ASD), have been known to be interrelated with other medical conditions. To help in battling mental health concerns, it is essential to start at the roots and prioritize their mental health among other aspects of Early Childhood Development. This study aims to understand and explore the experiences of mothers in nurturing young children ages three to six and gearing them towards mental health, particularly mothers of children with mild to moderate psychosocial disabilities.

Research Questions

This study aims to explore the experiences of mothers in nurturing young children aged three to six, particularly those with mental health needs, and how this can be applied to create a program that provides psychological security for children.

Specifically, this study aims to answer the following questions:

1. What are the experiences of mothers in terms of nurturing young children with mental health needs?
2. What are the struggles and challenges faced while nurturing young children with mental health needs
3. What possible proposed health information dissemination scheme related to mental health can be established for Montessori pupils?

The study emphasizes the importance of focusing on the overall development of children during the early years, particularly in mental health.

METHODOLOGY

This qualitative descriptive study aimed to understand the experiences of mothers in nurturing young children aged three to six and focusing on mental health for children with mental health needs. The research methodology used included a phenomenological, descriptive, and qualitative approach. Phenomenological research is commonly used in nursing research methodology to understand human research. The study aimed to explore the experiences of mothers in terms of nurturing their children, particularly those with mild to moderate mental health needs.

The researcher used a mixture of purposive sampling and snowballing techniques to identify participants. Participants were mothers aged 23 years or older, who had children aged 3 to 6 years with mild to moderate disabilities related to psychosocial, learning, or chronic illnesses. The mothers were the primary caregivers for their children.

Inclusion criteria included mothers aged 23 years or older with children with mild to moderate disabilities related to psychosocial, learning, or chronic illnesses. The guidance office of the school aided in identifying these students based on readily available information. An assessment based on the World Health Organization Disability Assessment Schedule 2.0 (WHODAS 2.0) and Parent/Guardian Rated DSM-5 Level 1 Cross-Cutting Symptom Measure-Child Aged 6–17 questionnaires was used to assess whether the participants were included in the study.

Ethics and Human Rights Considerations were also considered in the research. The study aimed to provide additional information and resources, raise awareness about providing

long-term support and care for children's mental health and psychological security, and provide a comprehensive understanding of maternal nurturing experiences.

The study involved a pilot study to test the validity and reliability of interview questions. After obtaining permission from the partnered school, the researcher identified probable respondents based on set assessment criteria and gave informed consent. The researcher and respondents agreed on a time and schedule at their convenience for the interview after signing the consent form. Both face to face and google meet interview was provided as an option for the respondents. The interview lasted approximately 30 minutes to 1 hour, and the researcher confirmed whether the information provided was the same as the notes written during the interview.

Strategies to improve communication were used. Some participants opted to have someone accompany them in case they felt uncomfortable conducting the interview alone. Clarifications and probing questions were asked to ensure all information stated was factual and understood correctly. Due to the probable distress experienced by the respondents, a mental health professional was partnered with for debriefing after the interview had concluded.

Data was analysed according to the chosen method and disposed of appropriately through shredding physical paper notes used during the interview phase. Digital copies of recordings were deleted after collation and analysis, and no data collected and stored on a secure hard drive will be stored for more than one year after publication.

RESULTS

The researcher used Colaizzi's Method of Data Analysis to analyze data, uncovering essential themes and patterns. The findings provide insights into mothers' experiences in nurturing their children's mental health needs. The data was thoroughly read, offering insights into challenges, emotions, and perspectives. Significant statements were identified, capturing essential aspects of the respondents' experiences.

Theme I: Shaping Parenting

One's experiences have a profound effect on how they raise or parent their children. dividing the process of forming a parent's approach into two phases: first, accepting the disability (e.g., learning about the disease for the first time) and second, their understanding of the impairment (e.g., what they know then and now).

Subtheme #1: Coming to terms with the disability.

Accepting the disability—which is primarily addressed in the medical context—by first identifying the symptoms and learning about the ailment. The type and specific

manifestations of the children's disability determined the degree of recognition. Recognition occurred in response to advice from others in certain circumstances, and in other cases it was tinged with uncertainty due to a lack of trust in the diagnosis. Others emerged as a result of their own observation of specific indicators, which led them to take action. Certain disorders took longer to recognize than others, such as learning disabilities and health issues that presented as symptoms that people thought were typical. Other accounts did not initially understand what normal development included, which is why they took longer to recognize the handicap. Despite being aware that something was amiss, others choose not to consider the possibility that something might be off. In contrast, there were accounts which detailed their recognition of their child's disability based on what they know about development while others attribute the recognition of their son's disability to the oddities that she noticed and the shared experiences of other parents:

Respondent 1: He was an active boy, he loved to play around with the neighbour's so when we slept and he started snoring, I just thought "Ah he enjoyed his day playing with his friends". I did not think a lot about it.

Respondent 4: My son did not start speaking at two, his sister started early, but that still did not give me a lot of concern since he still has time, my brother did not start to speak until later.

Respondent 3: "I was always with my daughter; I bring her to daycare and stay with her until the session for the day is over. Once I brought her to a school, the moment I said bye, she would start crying and I end up staying near her room where she can see me. This went on for a while. I did not think much of it I just thought it was because she was a mama's girl."

Respondent 5: "So at 2 years old, I started to notice different signs that there was something wrong. So I talked to others about it, sharing inputs on whether or not I should be worried. His communication was delayed, and he was diagnosed with global developmental delay." While Mother 6 mentioned "So, we found out early on that there was something wrong with him. He was diagnosed with Global Developmental Delay, and Autism at 2 years old."

Subtheme #2: knowledge on the disability

When parents found out about their children's disabilities, their acceptance of it was based more on their understanding of the mental, emotional, and practical aspects of accepting the condition. The degree of information they possessed at the time of the diagnosis was primarily dependent on the reason why and how they happened to be concerned having them checked out. When it comes to helping moms accept the disabilities of their children, education plays a crucial role in influencing how they meet their needs on a physical and, more significantly, mental level. To effectively deal with the needs of children with mental health difficulties, providing care for them requires a certain level of proficiency (Hoogsteyns et al., 2023). Sometimes, especially with complicated medical conditions (such as tumours or chronic diseases), experts are quick to diagnose, but parents are

cautious to follow their advice. Many of them have admitted to obtaining consultation by calling upon a hospital in a different city for a second opinion.

Respondent 1 (Mother of a boy with a congenitally enlarged tonsils).

At the time that we found out about it, we did not really know what to feel about it. We were confused and scared about the prospect of him having a tumour. Honestly, at that time, we did not know that his snoring would lead to something like this. the only thing we knew about his illness was what the doctor explained. We tried to do research through google to ease our worries, but it only made the worrying worse because there was a large variation of causes and probable reasons why that happened and that made me overthink that things might get worse.

We decided that before we even did something about it, we would have a second opinion elsewhere. We were bound to transfer to Cebu because of my husband. So, we decided that we would have him checked up here.

Respondent 4 (Mother of a boy with Dyslexia)

Before we found out about his dyslexia, he was a sickly kid. He had fever that would last days and are always high. We did not what it was he was still an infant. We had him checked in our local hospital and the doctor said he had Kawasaki Disease. We did not know what it was, so before we decided to get him treated, we went to another city to have him checked to get a second opinion.

Respondent (mother of a boy with Autism Spectrum Disorder, Social Communication Disorder and G6PD Deficiency)

I did my own research by reading on research articles, attending seminars for parents of children with ASD.

Respondent (mother of a boy with autism spectrum disorder and Epilepsy)

The things we mainly did were getting advice from friends who also have children with ASD, but then every child with ASD is so different that even thought their the same in terms of diagnosis, their development can vary from one case to the next. Therapy wise, we also took to research, reading articles, about different treatment options.

Emerging Theme #2: Supporting their Children's Well-Being

Managing a disability may lead to a great deal of stress to both the child needing care and the nurturing mother. Children naturally seek to advance toward higher levels of psychosocial maturity as they grow older (Deci and Ryan 2000). To aid in their psychological development, parents can support the needs of their kids for relatedness, competence, and autonomy (Soenens et al., 2017). a hospital in a different city.

Subtheme #1: Physical Support

A child's physical well-being is something that is always given priority: their health. A mother's top priority is ensuring that her children have enough food and sleep. especially for children who require mental health support. distinct needs accompany distinct infirmities.

Respondent 1 and 2 concentrated on ensuring that all medical needs (such as medications) and physical activity based on medically founded advice are met; Respondent 6 highlighted the value of therapy for their children's physical support; v 5 stressed the significance of playtime; and v 4 believes that his son's pickiness is due to the food he was given when he was younger.

Respondent 1: We just followed what his doctor instructed us to do. The aftercare of the wound, the medicines he needs. Now, I support his physical well-being through encouraging his physical activity and encouraging him to eat a healthy diet. I make sure that he drinks his vitamins, he eats his vegetables and drinks his medicine. While he is still little, I want to encourage him to play outside more for physical activity.

Respondent 2: I make sure that he drinks his vitamins, he eats his vegetables and drinks his medicine. While he is still little, I want to encourage him to play outside more for physical activity.

Respondent 6: Apart from speech therapy, my son has occupational therapy, and until now he is on that therapy religiously. You can see some improvement in him in terms of his physique but there is still a long way to go. We do understand because he is on medication that can increase his appetite, he is a relatively big boy. So as much as possible, for us, any time physical activity through therapy is done, we really take an advantage of that for his sake.

Respondent 5: Playtime for us is important, especially for kuya, apart from his therapies, one of the more hands on approached we had to make sure that he gets some sort of physical activity is playtime, when he was younger through toys, now, we do encourage him from time to time to play basketball with his dad.

Respondent 4: When we started him on more solid foods, the first thing we introduced to him were apples, mangoes, chicken. As he grew, the food that he it’s are more predictable, does not like anything that he is not familiar with. He likes fruits but cannot stand avocados, he does not like sweets, and would choose bread over cake, or ice cream. That was something that shocked us a bit because a lot of kids, you think they like candies, but him, he really does not like it.

Respondent 6: My son has epilepsy apart from ASD so because he has epilepsy, he has certain meds which make him hungry so most of the time he loves to eat. He does not like durian, he hates it. He also does not like animal insides any, intestines, liver, brain. He does not like the smell of both especially. He loves adobo, anything if its adobo, it can be chicken or pork. He is okay with fruits; he is also okay with vegetables. The most

important to me is for him to be able to have a balanced meal, so I make sure that when he its, he also eats smart.

Subtheme #2: Mental and Emotional Support

As a child grows physically, they encounter new challenges that can either strengthen or weaken their sense of self. Fostering the physical development of young children contributes to their overall success (Maybery et al., 2005). This study aims to investigate how moms provide for their children who have mental health difficulties. This can take the shape of physical illnesses, learning challenges, or psychosocial disabilities, all of which have a big influence on how their kids grow up and their long-term psychological stability.

Respondent 1: I listen to him and his concerns, I go with him to his check-ups and encourage him to talk to me if he feels sad and overwhelmed.

Respondent 6: Apart from all the physical aspects, the therapy, the medications, the importance of physical activity and stimulation. It is for us ensuring that we get to make him understand that we do care for him. It is to make sure that he can take care of himself and learn to be more independent.

Frustration, fatigue, and other emotions might arise during mother-child interactions because of the difficulties these children deal with daily as a result of their disability. These children may be deficient in certain areas, but their senses are sharper in others. These children have a high degree of emotional sensitivity. They are capable of processing emotions since, even if they unable to articulate it in a way that others can comprehend.

When a child speaks, they communicate what they want you to understand; however, they are not always easily understood (De Schauwer et al., 2023). The significance of listening guarantees individuals' security and confidence that they are heard. They feel more secure knowing that, from a certain viewpoint, everything will work out. According to the respondents' testimonies, they make sure children are aware that they will always receive help when they need it.

Respondent 3: I always tell her that we are always there for her, but at the same time she has to learn and understand that we will not always be physically present.

Respondent 4: I can say that it is not that easy, you really need to patient with him, and you must make him feel that you are supportive of him. He can sense just by looking at you that something is wrong, and it makes him frustrated.

Respondent 5: One thing that I really learned from taking care of him is that you should not lt them know that you are tired. Even if you say "A gikapoy nako" (I am tired) he will know. He is a very sensitive child, and he is very sensitive to emotional cues so he will understand that you feel tired and that it is because of him, so you should not them know that you are tired.

Some children struggle more than others, and this might end up becoming a weakness. Due to their perceived uniqueness, individuals fall prey to many forms of mistreatment, such as bullying. Many of the respondents strive to ensure that their children realize that bullying constitutes offense, and they should learn how to protect themselves and gain self-reliance abilities.

Respondent 5: The most important thing for me is to make sure that he can learn to become independent and equip him with the necessary social and the basic skills. It is also important for us that he learns to defend himself because he will be bullied, and it will not be the only time, and it is not always that he will have someone to protect him.

Mothers' collective experiences have influenced the way they address the mental health needs of their children. Some mothers clarify that there are some things that parents need to be aware of before approaching their kids. By doing this, you may establish parameters with their children.

Respondent 5: There are 6 things that I always tell people especially for those who do not know him or those who just met him. … I tell them these things because (1) they really have to know that you cannot do this with them I am setting boundaries, (2) there is a tendency that you will not get along (3) you might get hurt, and (4) it is quite obvious that there would be differences between you and me and him and you, and not everyone knows how to approach him when something happens or just want to get to know him.

Respondent 6: The challenges are changing, but there are daily struggles that remain the same. When I get asked about what the struggles are when it comes to taking care of him, I always mention more or less 4 things. I tell this to people not to discourage them but to explain to them and just to answer their questions. There are times that my son can be manipulative in a way. So, I just want to explain to people especially his teacher now, that there are things that he does, a he does it to get a reaction out of you. Once he gets that reaction from you, he is satisfied.

Emerging theme #3: Living with Children's Disabilities.

Each participant in this research has a different background; there are mothers who work, mothers who remain at home with their children, and women who work part-time. Despite the disparities in their histories, they all express the same feeling, which is that their experiences with their children's disabilities transformed their lives beyond the early period of their diagnosis.

Subtheme #1: Financial Challenges

The first of many difficulties these moms have encountered in raising their children is running out of money and resources to ensure that their child receives the best care possible. Some employ alternative methods, such as quitting their job completely and having their spouse cover their expenses to make sure their children are properly taken care of. Others have made the decision to look for a different, more flexible career to care

for their child and yet work to make ends meet. These moms disclosed that their usual expenses are getting higher and finances became tighter.

Respondent 4: The biggest challenge we had was our finances. Since he was admitted, to his check-ups, to the medications. It got to a point where we would borrow money from my sister, and other relatives, we exhausted a lot of loans because of it. Now, because he is enrolled in a public school, our educational expenses are not that high but because of our financial difficulties, we are still trying to get it all together.

Respondent 5: Both me and my husband were working, but we both wanted to make sure that he was taken care of, that his therapies were done. Sacrifices had to be made, my son was 4 years old when I decided to retire from my job and permanently take care of him. I would take him to therapy, I would take him to school and fetch him, and once he got home instead of encouraging television, I encouraged him to play with toys more.

Respondent 6: When our son was younger, I was still able to work and take care of my son when I get home. We also hired a yaya that would take care of the kids when we were at work and would come home when we arrived. As he grew, it was growing difficult having to take him to his therapies, and holding a job that requires my physical presence. So I decided to quit the job that I had and look for another work which I could stay at home and work at the same time so I could take care of him. Financially, because of the therapies for all the conditions, because of the medications he is on, the expenses are pretty high, and we cannot avoid it, since it is a given because these treatments are expensive. Apart from that he has 2 other siblings so the budget is pretty tight, but sacrifices have to be made. I have to work and so does my husband. We have a yaya that works with us part time, most of the time takes care of the other children and the house.

Subtheme #2: Medical Challenges

The change in their concept of normal is the second adjustment that these women need to get used to. The numerous therapies, the frequent trips to the doctor, the medical advice, the prescription drugs, and so much more. Mothers are encountering challenges when navigating the healthcare system that has increased their financial strain.
Parents start to worry about their children in unfamiliar surroundings, when they are not there, and what would happen to them if no one knew what to do in the instance of a child emergency.

Another describes the psychological difficulties brought on by surgical operations, the scars they leave behind, and the physical and emotional effects on their kid.

Respondent 2: After the surgery, he had a difficult time voiding properly, he does not have full control of his bowel movement. Apart from that he has a huge scar in his stomach area. He became insecure of showing of his scar because according to him it looked like his butt. Apart from that, he still has trouble controlling his bowel movement so there is still a big risk that he could poop himself in school and people would tease him about it.

She went on to explain I always told him that if ever that happened, I was one phone call away. I always made sure that he always had extras in his bag incase that happened.

Respondent 2: We live far from the city; the hospitals are in the center. We do not have a car to transport us. The travel time takes so long that in case of an emergency it would be better at times to commute there. But that is not realistic at all. We need an ambulance to get us there, but even the ambulance with the newer equipment are in the city, and those that are farther don't have those. What are we supposed to do when something so urgent would happen?

Respondent 4: When we had him checked in the local hospital and were told that it might be Kawasaki Disease. We were extremely worried because we did not know what that was, we did not know how severe it would be, how it would affect him. We were shocked as to how they were able to determine it so quick. We feel like we are being scammed because we had little knowledge about the disease.

Respondent 6: The main struggle in all of this especially right now is his epilepsy, so he does have his medication, and we make sure that he does take these meds. But there is always that constant fear that he might have a seizure and we are not there and that the people around him don't know what to do. So we really want to ensure his safety above everything else.

Subtheme #3: Educational Challenges

Regardless of whether their child has a disability, many parents believe that education is crucial. For parents of children with disabilities (CWD), this is especially true. But there are additional difficulties associated with sending their child to school. There are those in the educational system who can handle the rigors of a traditional education as well as individuals who couldn't. Concerns should also be raised about the child's capacity to interact with other kids and the degree of their disabilities. Education sometimes entails therapy for those with impairments, which can add to the family's financial burden adding to the cost of education, which is already high.

Respondent 4: Because he has dyslexia, he has difficulty when it comes to his studies, especially in English, he still has difficulty in his alphabets, his b's and d's are exchanged, his p's are inverted. There are times that he would be frustrated because we could not understand what he was trying to say and because of that he would cause tantrums.

Respondent 5: Education wise, before he was being transferred from private school to public school in SPED because he was having trouble coping with the demands of regular classes. The pandemic did alter the way we approached things. Both me and my husband became more hands on, which honestly helped a lot. Now, he can cope with some but not all of the demands of regular class since we started to blend him with other kids. But we are introducing it to him slowly because we do not want to overwhelm him.

Respondent 6: The challenges are changing, but there are struggles that remain the same. So education wise, because my son has difficulty speaking, he is undergoing speech therapy, and occupational therapy there are a lot of barriers that might be in place, add in the epilepsy. Communicating with him is difficult so some special teaching methods need to be put in place.

Subtheme #4: Social Challenges

The study also revealed a topic that is strongly tied to educational challenges such as the occurrence of stigma, prejudice, and bullying against their children. Bullying is a problem that should be taken seriously, particularly if you have children with disabilities. As a result, mothers prioritize teaching their children how to defend themselves from bullies. The child's well-being is a reflection of the mother's love and care for them. Despite the challenges they may face in their various roles, most moms of children with mental health concerns want to continue instilling positive attitudes in their children.

Respondent 5: Bullying was really something that he struggled on since he started schooling because there were kids, some even older than him that would tease him, laugh at him, the worst was when he went to the bathroom and one of the kids playfully said that “hala ga linog” while he was peeing, so he ended up with wet pants. Which made me furious. It was a good thing that one of his classmates was there and told the teacher immediately. That was one of the reasons we switched him from private to public.

Respondent 6: The biggest fear we have is that we would be bullied, belittled because he is non-verbal so he cannot protect himself, and at the moment he heavily relies on us. So we really do have to teach him independence and to be patient with him.

Respondent 2: Because he is always absent and rather sickly, he is thin, and there have been times that he was called names like “tukog” or “masakiton.” Because of this we were concerned that he would take it personally and it would hurt him to the point that he might become discouraged. It was painful to hear children calling him names because he was sickly. On my side, it has been difficult because other people who are not really that close to us, always say that I did not take care of him that well because he always ended up in the hospital because of some sort of illness.

Respondent 5: incident I always tell him “Kuya if possible, you pee at home and not in school so you can avoid it happening again, if you really have to go, then use the close toilet.” Aside from that reminder, I always tell him that he should not initiate anything unless someone does it first. If someone hits you hit back, and only when it is necessary. To me it is more important to make sure that he can protect himself.

Subtheme #5: Mental Health Challenges

From the standpoint of a caregiver, in addition to all other challenges, the mothers also face the toll in caring for children with mental health needs as it takes on their own mental

health however, others, opted to focus on the brighter aspects of things while still admitting that there are difficulties inherent situation.

Respondent 4: It is physically, emotionally, and financially exhausting. You really need to have patience you must be able to in a way take a punch because, you must handle frustrations well. You have to make sure that you are helping him progress forward in the best possible way.

Respondent 5: It is draining in a lot of ways, it is mentally, physically draining to take care of him, but seeing the progress, it is honestly really rewarding. We had a lot of struggles with him from the moment we found out. The therapies are expensive. From a financial standpoint, there were challenges.

Emerging Theme #4: The Role of Support

The psychological well-being of the caregiver for the child that has mental health needs could be undermined because of attending to their needs. To remain strong for their children, parents, especially mothers, need the assistance of others. Support is provided by family members and other well-meaning individuals. Others even through prayers and spiritual support. Particularly in Filipino culture, the idea of a "bayanihan," or helping hand, is not new and encompasses all challenges that someone may encounter. They are also closer because of the support system that families provide.

Respondent 1: There has been people who have supported me from the moment that my son was diagnosed up until now. These were mothers who also had children admitted, the mothers of children admitted in the same ward as my son during my son's operation and recovery, mothers of my son's classmates and my neighbors. Because they helped me so much during my time of difficulty, I think it is now my turn to support them if they ever needed help.

Respondent 4: At that time my sister really came through and helped me especially with the finances. I got to save on transportation because she would take me and my son. My daughter, my sons ate also stepped up and took care of their little brother, while we focused on him. My mother-in-law also stepped-in and took care of the house, the children while we had away and really helped us anyway, she could.

Significant Statements	Formulated Meanings	Cluster themes
He was an active boy, he loved to play around with the neighbor's so when we slept and he started snoring, I just thought "Ah he enjoyed his day playing with his friends". I did not think a lot about it.	Defined the symptoms of his son's condition to normal human body reaction to becoming tired	Recognition of Illness and its signs

My son did not start speaking at two, his sister started early, but that still did not give me a lot of concern since he still has time, my brother did not start to speak until later.	Association of symptoms to normal delay in development	
I was always with my daughter; I bring her to daycare and stay with her until the session for the day is over. Once I brought her to a school, the moment I said bye, she would start crying and I end up staying near her room where she can see me. This went on for a while. So, at 2 years old, I started to notice different signs that there was something wrong. So, I talked to others about it, sharing inputs on whether or not I should be worried. His communication was delayed, and he was diagnosed with global developmental delay.	Early recognition attributed to experiences from other parents regarding development	
So, we found out early on that there was something wrong with him. He was diagnosed with Global Developmental Delay, and Autism at 2 years old.	Early recognition of signs of illness	
He was aggressive, my son, he displayed it with anyone, at first we were in denial, my sister-in-law, recognized it immediately, he was visibly showing signs of aggression, but we honestly thought it was just because there was something that was not to his liking	In denial, despite recognition of illness	
At the time that we found out about it, we did not really know what to feel about it. We were confused and scared about the prospect of him having a tumor. Honestly, at that time, we did not know that his snoring would lead to something like this. We decided that before we even did something about it, we would have a second opinion elsewhere. We were bound to transfer to Cebu because of my husband. So, we decided that we would have him checked up here.	To gain further sense of security, second opinion was sought	Knowledge on Illness/ Disorder
Before we found out about his dyslexia, he was a sickly kid. He had a fever that would last days and is always high. We did not know what it was when	Sought second opinion due to lack of knowledge on illness	

he was still an infant. We had him checked in our local hospital and the doctor said he had Kawasaki Disease. We did not know what it was, so before we decided to get him treated, we went to another city to have him checked to get a second opinion.		
I did my own research by reading on research articles, attending seminars for parents of children with ASD.	Researching on the disorder and its different treatments	
The things we mainly did were getting advice from friends who also have children with ASD, but then every child with ASD is so different that even though their the same in terms of diagnosis, their development can vary from one case to the next. Therapy wise, we also took to research, reading articles, about different treatment options.	Researching on the disorder along with information from other parents with the same disorder.	
My son both had behavioral and speech therapy. He was aggressive, we were in denial. When he was diagnosed at 3 years old, we were scared, because of the stigma associated with that was all we knew about. We had to have research, for a time after the diagnosis we had to home school him. He just started going to school so we had to make sure he can be well adjusted	Stigma present in association with illness and the knowledge of it.	
We just followed what his doctor instructed us to do. The aftercare of the wound, the medicines he needs. Now, I support his physical well-being through encouraging his physical activity and encouraging him to eat a healthy diet.	Medical Treatment, vital in physical support	Different types of physical support
I make sure that he drinks his vitamins, he eats his vegetables and drinks his medicine. While he is still little, I want to encourage him to play outside more for physical activity.	Importance of Supplementation	
Apart from speech therapy, my son has occupational therapy, and until now he is on that therapy religiously. You can see some improvement in him in terms of his physique but there is still a long way to go. We do understand because he is on medication that can increase his appetite, he is a relatively big boy. So as much as possible, for us, any time physical activity through therapy is done, we really take advantage of that for his sake.	Importance of therapy in physical activity	
My son has epilepsy apart from ASD so because he has epilepsy, he has certain meds which make him hungry so most of the time he loves to eat. He does not like durian, he hates it. He also does not	The Role of food in supplementing needed nutrients	

like animal insides any, intestines, liver, brain. He does not like the smell of both especially. He loves adobo, anything if its adobo, it can be chicken or pork. He is okay with fruits; he is also okay with vegetables. The most important thing to me is for him to be able to have a balanced meal, so I make sure that when he also eats smart.		
I listen to him and his concerns, I go with him to his check-ups and encourage him to talk to me if he feels sad and overwhelmed.	Listening and Reassuring	Different Types of Mental Support
I always tell her that we are always there for her, but at the same time she has to learn and understand that we will not always be physically present.	Reassurance as a key part of support	
The most important thing for me is to make sure that he can learn to become independent and equip him with the necessary social and basic skills. It is also important for us that he learns to defend himself because he will be bullied, and it will not be the only time, and it is not always that he will have someone to protect him.	Teaching independence and protection from certain social situations	
Apart from all the physical aspects, the therapy, the medications, the importance of physical activity and stimulation. It is for us to ensure that we get to make him understand that we do care for him. It is to make sure that he can take care of himself and learn to be more independent.	Making their children understand that they will always be there for them	
We, both his father and I, are in the field of science. His brother is a marine biologist, so he gets along with him well in comparison to our youngest. We noticed he is less aggressive when we show him marine related docuseries and things related to marine life. So most often, we take him Ocean Park a lot.	Identifying their likes and using them as calming factors	
The biggest challenge we had was our finances. Since he was admitted, to his check-ups, to the medications. It got to a point where we would borrow money from my sister, and other relatives, we exhausted a lot of loans because of it. Now, because he is enrolled in a public school, our educational expenses are not that high but because of our financial difficulties, we are still trying to get it all together.	Financial Exhaustion due to medical related expenses	Financial Challenges experienced by mothers
Both me and my husband were working, but we both wanted to make sure that he was taken care of, that his therapies were done. Sacrifices had to	Leaving their jobs to provide more hands-on care	

be made, my son was 4 years old when I decided to retire from my job and permanently take care of him. I would take him to therapy, I would take him to school and fetch him, and once he got home instead of encouraging him to watch television, I encouraged him to play with toys more.		
When our son was younger, I was still able to work and take care of my son when I got home. We also hired a yaya that would take care of the kids when we were at work and would come home when we arrived. As he grew, it was growing difficult having to take him to his therapies, and holding a job that requires my physical presence. So, I decided to quit the job that I had and look for another work which I could stay at home and work at the same time so I could take care of him.	Looking for other jobs which enable them to earn and provide hands on care	
Um, honestly, from a financial standpoint it is very difficult. Having to spend money for his therapies on top of his other needs. Both me and my husband must work, but my husband is pulling more weight than I am since I wanted to be more hands on.	Having a balance between work and care for their child	
We live far from the city; the hospitals are in the center. We do not have a car to transport us. The travel time takes so long that in case of an emergency it would be better at times to commute there. But that is not realistic at all. We need an ambulance to get us there, but even the ambulance with the newer equipment is in the city, and those that are farther don't have those. What are we supposed to do when something so urgent happens?	The difficulties brought by distance between home and hospital or clinic	Medical Challenges
The main struggle in all of this, especially right now is his epilepsy, so he does have his medication, and we make sure that he does take these meds. But there is always that constant fear that he might have a seizure and we are not there and that the people around him don't know what to do. So, we really want to ensure his safety above everything else.	The influence of the effects of medication in everyday activities.	
Education-wise, before he was being transferred from private school to public school in SPED because he was having trouble coping with the demands of regular classes. The pandemic did alter the way we approached things. Both me and my husband became more hands on, which	Difficulty in coping with demands in school	Different Challenges towards their child's education

honestly helped a lot. Now, he can cope with some but not all the demands of regular class since we started to blend him with other kids. But we are introducing it to him slowly because we do not want to overwhelm him.		
We previously enrolled him in regular school prior to the diagnosis, we were in denial that there was something wrong with him, so we thought nothing of it. But then he started becoming aggressive towards teachers and even his classmates. We had no choice but to pull him out of school and have him home schooled in addition to his therapies.	Fear of harm to others caused by the condition	
Bullying was really something that he struggled on since he started schooling because there were kids, some even older than him that would tease him, laugh at him, the worst was when he went to the bathroom and one of the kids playfully said that "hala ga linog" while he was peeing, so he ended up with wet pants. Which made me furious. It was a good thing that one of his classmates was there and told the teacher immediately. That was one of the reasons we switched him from private to public.	Difficulty in comprehending social conditions leading their children more vulnerable to social concerns.	Social Challenges for both mothers and their children
The biggest fear we have is that we would be bullied, belittled because he is non-verbal so he cannot protect himself, and at the moment he heavily relies on us. So, we really do have to teach him independence and to be patient with him.	Fear of being unable to protect themselves, thus advocating for their independence through teaching	
His aggressive nature has started to subside after putting him through therapy, but putting him through regular school, with regular children, sometimes they could not comprehend, with the situation, he ends up becoming the bully in some scenarios because of his aggressive and defensive nature.	The symptoms brought by the condition providing difficult decisions in different social concerns	
It is physically, emotionally, and financially exhausting. You really need to have patience, you must be able to in a way take a punch because, you must handle frustrations well. You have to make sure that you are helping him progress forward in the best possible way.	Physical and mental effects of caring for their children	Mental Toll on Mothers
It is draining in a lot of ways, it is mentally, physically draining to take care of him, but seeing the progress, it is honestly really rewarding. We had a lot of struggles with him from the moment we	The rewards that come with the equivalent mental toll on the mother	

found out. The therapies are expensive. From a financial standpoint, there were challenges.		
Throughout the early phases up until know, I have been through a lot of emotional roller coasters. It is difficult to have him interact with our youngest because 'mag-sumbagay' sila. We want them to be able to stick together and find comfort in each other they grow older, but it is difficult, and really emotional.	A variation of emotions in comprehending with condition	
Support from family and friends really did help get us through the more difficult times, there will be more, so we must really prepare ourselves for it. Of course, faith and prayers cannot really be excluded from this, especially during the times that he has severe seizures, it is enough to give you quite a big scare, he did end up in the hospital. His recovery really strengthened our faith, and his continued progress really solidifies it for us.	Familial support as the foundation to relationships with others.	The role of different types of support systems in coping
… when it came to healing, to us, especially me and my husband, we are spiritually inclined, so it was also important to us, not just to engage in the medical aspect of healing, that spiritual healing was also present. We had a family retreat there then we did confessions, this was not just for me or my husband but our entire family as well.	The importance of spirituality in coping and handling conditions	
Prayer, family, and friends. These three things are the most important for me. When it came to the understanding and navigating of the entire diagnosis to this very day. These are what got me through. Because it is an emotional roller coaster. It's very difficult to comprehend sometimes how difficult it is for me when it came to his condition.	Relationships with religion and family as significant factors in coping	

DISCUSSION

The parent's perspective highlights the significant hardship associated with having a disability, or in this case, caring for a child with mental health needs. These challenges are not just financial; they also have other causes. This covers the strain that it takes on their bodies physically as well as the emotional toll of having to endure it. However, the experience of disability is first held by the parents; the children do not share this experience until they have interacted with peers, become aware of their own impairment and perceived difference.

According to the lived experiences of mothers caring for children with mental health needs, these events have influenced the way the mothers raise their offspring. Resilience

and the availability of social support are important buffers that can help minimize the detrimental impacts of living with a kid who has mental health problems on their quality of life, according to a research by Migerode et al. (2012). Resilience is what helps families deal with the burdens, which raises the question of why resilience is so important in the field of disability studies. Heiman (2002) defined resilience as "successful adjustment in terms of self-esteem, social support, various aspects of social life, problem-solving, and coping strategies, notions of social integration, interdependence, and close relationships."

Their view of disability, which they frame positively (e.g., as a gift, blessing), is another factor included in the research. This source of resilience mentions a variety of spiritual and/or religious resources. This study's findings are in line with the body of research that links religion and disability, even though the issue of religion was only briefly discussed. "Religious support can be a stable coping strategy used throughout the family life cycle," according to the findings of one research (Bennett et al., 1995; Poston & Turnbull, 1985; Selway & Ashman, 1998) that was based on in-depth interviews with parents of children with developmental disabilities (CWDs). The availability or lack of support networks for overcoming their various obstacles is another aspect. Conversely,

The availability or lack of support networks for overcoming their various obstacles is another aspect. When mothers discussed their difficulties and the isolation they experienced from other mothers—especially those they did not even know personally—they were, on the one hand, at their most vulnerable. However, they expressed gratitude for the assistance they had gotten from others. Others mentioned how they use the assistance they receive from friends, family, and support groups to help others. Multinational literature affirms the benefits of support groups. For example, a mixed-methods research carried out in the United States found that parents who were part of these groups. (Lasco et al., 2017).

The medical implication of a disability is one of the highlighted challenges faced by mothers. Most mothers have implied the relationship between finances and medical concerns. Furthermore, although healthcare related gaps are not the objective of this study, their prominence in the narratives presented by these mothers is worth noting. The disparities between their experiences in the healthcare system seem to stem from different factors, which have not been explored as it is not within the study’s scope. It is very telling however, that while articles published by the Department of Health DOH on the health and wellness program for persons with disabilities, acknowledge the various gaps present in the treatment of those with disabilities, there are still little action done and/ or proposed to act upon on this regard (Lasco et al., 2021).

One of the issues that mothers encounter that is often overlooked is the medical implications of their disabilities. Most moms have made reference to the connection between health issues and money. Moreover, it is noteworthy that despite not being the study's focus, healthcare-related disparities are prominently included in the stories these moms tell. Since it is outside the purview of the study, the differences in how they experienced the healthcare system appear to be the result of distinct causes, which have not been investigated. Though the Department of Health's DOH articles on the health and

wellness program for people with disabilities acknowledge the many gaps in the way people with disabilities are treated, it is highly striking that little is being done or suggested to address these gaps. (Lasco et al., 2021).

Conclusions

The purpose of this study was to investigate how mothers' experiences caring for their children with mental health problems influenced the method in which they addressed such needs. This study also sought to comprehend the difficulties that these mothers encountered and how they overcame them to determine the best method to care for their children. This study focused on children with mental health needs, their mental health, and how their mothers' nurturing affects the way these children develop psychological stability. Six mothers of children in Cebu City with mental health issues provided data for the study using a descriptive phenomenological research approach.

The findings of the study herein presented to the order of the specific questions formulated in this study:

1. The respondents of the study showed that the experiences of mothers in caring for their children with mental health needs have shaped their way of parenting. Their pursuit for knowledge to continue to understand how to better tackle their children's growing needs. In addition, the importance of supporting their mental health needs, and how they supported them also emerged. Majority of the mothers spoke about the importance of listening to your children's concerns.

2. The respondents of the study have discussed that living with their children and their difficulties pose many challenges in different aspects which includes financial, medical, educational, social, and Mental Health challenges for the mothers. The importance of support systems was also highlighted in the interview as because of the mental toll that the struggles that they have face cause towards them, a strong support system is one important aspect in terms of ensuring that children's psychological security be secured.

3. From the findings of the study, an information dissemination scheme through means of a poster was created. The contents of the poster included the importance of support for both the mother and the child, what are the most common challenges from 2 different perspectives when caring for children with mental health needs.

The findings of the study suggest that the experience of disability is not only shared between caregiver and the child but with the entire family. The narratives presented by the participants all shared the role of their respective families in the entire process from the moment the child is diagnosed to all the individual struggles: the discrimination they receive to the exhaustion of resources (i.e., financial) is vital to the way they parent their children. The concept of resilience is often mentioned in the way people cope with certain pressures that they face in their lives. This concept is what grounds this study. The

amount of understanding that these mothers have towards their children, their individuality, their strengths and their weakness, are reflective of the way they adapt to the challenges that their needs present.

To meet each child's unique requirements, a more flexible strategy must be devised in terms of both schooling and mental health. According to this study, a child's mental requirements could differ from one child to the next even if they have the same diagnosis, depending on how severe the problem is. From an educational perspective, having a thorough grasp of the variations that these situations provide serves as a basis for guiding instructors in developing customized modes—the core idea of the Montessori Approach. The goal of both personalized teaching and Montessori education is to provide a learning environment that best suits the requirements, developmental stage, and interests of each individual student (Mavrič, 1999).

Finally, through understanding the experience from a maternal perspective, a collaborative approach to care between parents and their teachers, especially for those children with mental health needs, needs to be part of the overall learning experience. The learned experience of mothers when nurturing their children helps teachers to establish an individualized approach which is geared towards their psychological security.

Recommendations

Anchored on the findings of this study, the following recommendations are proposed:

1. There is still more to understand about parental resilience, particularly of the front of education and the challenges of caring for children with mental health needs. Exploring a larger sample size and utilizing focus groups would help to provide a larger variety of perspectives on the matter of care. Furthermore, a larger sample size will help provide additional grounds relating the maternal perspective of care towards their children’s mental health.

2. This study briefly touched on the use of positive reinforcement, as a means of support for children with mental health needs. Thus, a study on the impact of positive reinforcement as a means of support for children with mental health needs, should be further explored as this can help understand how it affects the overall mental well-being of children. In addition, exploring other means of support for these children can help create a model which would outline, how support not just for children with mental health needs, but for all children in general, must be executed.

3. There are other themes which this study has not explored but have been implicated in the study. One of which is the role of religion in resilience. A study on the role of spiritual and/or religious resources in parental resilience needs to be explored more to understand how spirituality has helped shape resiliency.

4. One focal point in the study, is the presence of doubt, particularly when it came to their children being diagnosed. Over the recent years, outside the health care system, trust in the health care workers is always shifting, most understand that they are important in ensuring that treatment is done and followed through. However, a study on the looming doubts of parents over the health care system should be explore further. This study could help in understanding how parents react when they are given medical related news, and how this shapes the way they navigate through these.

In actuality, a lot of work needs to be done to shed light on parents' actual experiences with children who have disabilities, but through the findings gathered in the study, it can be said that in order to provide psychological security for children, particularly those with mental health needs, a personalized approach based on collaborative effort between the caregiver (i.e., mother) and the teacher should be done, as lived experiences can teach one a lot about how to approach a particular scenario in different settings for different individuals.

Compliance with Ethical Standards

The researcher obtained approval from the Dean of the School of Healthcare Professions and obtained informed consent from respondents. The study's goals, beneficiaries, and risks were disclosed, and the collected information was used for educational purposes. Respondents were informed of their voluntary participation. Confidentiality was maintained.

The study may present minimal psychological risk but may cause distress due to sensitive questions. To mitigate this, measures like psychological debriefing were taken. Respondents were concerned about privacy and confidentiality, but the researcher assured them the data was secure. Prejudice was also a concern, but these were addressed through a communication restriction assessment to ensure the data's authenticity and reliability.

The interview data was kept confidential, with no responses or participant information released without written consent. Confidentiality was ensured through informed consent and a letter page. Participants were given a code number, and access to identifying data was restricted to a limited number. Data disposal was promptly after gathering information.

Incidental findings in a qualitative study were kept confidential and stored securely. The research adviser was involved in decision-making, including sensitive topics like child

mental health stories, ensuring the study's flexibility and adherence to confidentiality standards.

The study used the Four-Dimensions Criteria (FDC) to assess rigor and trustworthiness in qualitative research. Credibility was established through prolonged engagement with participants, while transferability was achieved through diverse experiences. Dependability was achieved through a detailed description of the study's purpose and research methods. Confirmability was achieved through audio recording and notes, with clarification provided through questions as needed. This approach ensures the study's credibility and trustworthiness.

The study ensured data security by securely storing and storing the collected data. The researcher and adviser only had access to the data, with hard copies stored in a locked cabinet and digital data on a USB with a password. The researcher assessed the importance of incidental findings and consulted with advisers. Data disposal involved shredded hard copies of transcribed records, deleted digital data, and the informed consent form. Participants had the right to withdraw or withhold information after consent, and non-participation was not considered against them or others. The study's data management was carefully managed to maintain confidentiality and privacy.

https://doi.org/10.5281/zenodo.11654312

ABSTRACT

Listening to music toward study habits has become a usual practice of most students. Generally, music plays a vital part when studying and it affects the students regarding their academic performance either negatively or positively. The purpose of this study is to answer the question: What is the perceived effect of listening to music toward study habits? The study determined the perceived effect of listening to music and how is it connected to study habits of the students, particularly the grade 11 students. This research was conducted in Mindanao State University – Sulu, Senior High School on the second semester academic year 2024 - 2025. The researchers utilized using the quantitative research under the method of descriptive correlation design to describe the characteristics, average, and trends of the respondents. The researchers used the 25% each of the total population of GAS and STEM strand of the grade 11 student where they were assessed by a conducted survey question. A survey method was used to evaluate the results for the study in a form of questionnaires. There were one hundred (100) respondents that has been randomly selected out of the total population of the grade 11 students and majority of the respondents agreed to the perceived effect of listening to music toward study habits. This means that the respondents are affected by the effect of listening to music toward study habits. However, there is no significant relationship between the two variables which are the: effect of listening to music and study habits, when categorized according to gender and strand. Therefore, listening to music is not bad at all. It is helpful to some students while studying their lesson. The researchers recommended to the readers, students, teachers that listening to music while studying, they just need to limit their time and exposure to music while studying.

Keywords: *Listening to Music, Perceived Effect, Study Habits, Academic Performance*

INTRODUCTION

Listening to music while studying became a usual practice in the student's population. This pattern raises concerns. How can music affect one's concentration and performance when studying, according to Dolegui (2013), there is a well-known expression The term 'The Mozart effect' was coined to describe how listening to classical music, such as Mozart, can aid boost intelligence. IQ in spatial reasoning. Even in today's time, listening to music whilst studying and completing assignments appear to be a worldwide phenomenon.

According to Pollard & Courage (2017), it is further suggested that students who can realistically gauge their multitasking skill will perform better across different multitasking activities. In addition, music is one of the great important things in the students.

Regardless of the student's perception towards the effect of listening to music among the Grade 11 students in Mindanao State University-Sulu Senior High School, evaluating the effects of listening to music towards study habits is essential for further analyzation if the music influences the students' study habits or not. Hence, listening to informational music serves as a way of learning for others and learning is an important aspect in education as uttered by Sabbaha et. al., (2024) cited by Jailani et. al., (2024) Abdulmajid et. al., (2024), Balla et. al., (2024) Jarak et. al., (2024), Sabbaha et. al., (2024), Sasapan et. al., (2024), Sabbaha et. al., (2024), Basir et. al., (2024) and Sakili et. al., (2024) With this, the researchers provided these statements; The demographic profile of the students according to gender and strand, the effects of listening to music towards study habits, and the significant differences between listening to music and study habits when categorized according to gender and strand.

Based on the researcher's initial review of related literature and considering the specific context, it has been observed that there is a lack of research on the topic Perceive Effect of Listening to Music Towards Study Habits. While there is existing literature on the perception of listening to music towards study habits, in various educational settings, there is a need to investigate its prevalence, impact, and unique factors specifically among senior high school students. The researcher may have learned from experience or through literature review that perception on listening to music while studying can have detrimental effects on students' academic performance, concentration, and overall well-being However, no study has been conducted to explore the specific manifestation. Addressing these perceptions and its research gap will provide valuable insights into the experiences of these students and contribute to the development of targeted interventions and support systems to alleviate studying with music and enhance students' ability on their cognitive performance.

Research Questions

The researchers were able to seek out the effects of listening to music towards study habits of the selected 100 Grade 11 students of both STEM and GAS strands of Mindanao State University-Sulu Senior High School.

With this, the researchers provided the following questions:
1. What is the demographic profile of the students according to gender and strand?
2. What are the effects of listening to music towards study habits?
3. Is there a significant difference between listening to music and study habits when categorized according to gender and strand?

METHODOLOGY

Research Locale

This study was conducted in Mindanao State University-Sulu specifically at Senior High School Department among grade 11 students of STEM and GAS strand where they were assessed by conducting survey questions. The Mindanao State University-Sulu Senior High School is located at Capitol Site, Patikul, Sulu. The study was conducted in the second semester of the academic year 2024-2025.

Sampling Method

The researcher used 25% each of the total population from GAS and STEM strand grade 11 students at Mindanao State University - Sulu Senior High School. Only 100 samples were used in the study. The researcher then used the stratified random sampling technique to determine the quantity of samples for each selected section.

Research Instrument

A questionnaire was used as the study's instrument. The questionnaire and data were gathered by conducting a survey. A survey method was used to evaluate the results for the study. The researchers choose questionnaire in a form of survey to assisted them in determining as well as evaluating the perceptions of 11th grade learners both from GAS and STEM strand of Mindanao State University- Sulu Senior High School regarding the perceive effect of listening to music towards study habit. The questionnaire was divided into three parts, the first part deals with respondent's demographic profile which includes their name, gender, strand, & section. The second part deals with the corresponding queries on Female and Male actors that evaluate their perception regarding the effect of listening to music toward study habit. Lastly, the third part consists of the differences between listening to music and study habits according to the genders of the respondents.

The main component of surveys is questionnaires/ checklists. These are lists of questions/statements to collect data from a large group. In survey research, the questions are primarily closed-ended or include rating scales to collect data in a unified fashion.

Statistical Treatment of Data

After data collection, the data was analyzed using appropriate statistical techniques. Descriptive statistics were used to summarize the data, such as frequencies, means, and standard deviations. Inferential statistics, such as t-tests or regression analysis, were used to examine relationships between variables and test hypotheses.

Data Gathering Procedure

The research instrument will be approved by the members of the panel. Once approved, the researchers will prepare a formal letter to the SHS director for his approval in the conduct of the survey, consequently, the questionnaire will then be reproduced and will be distributed to the research respondents respectively and will be retrieved immediately after they finish answering.

RESULTS AND DISCUSSION

The results of this research are presented coherently to facilitate a clear understanding of the findings. The data collected from students in Mindanao State University-Sulu provide insights to the Perceive Effect of Listening to Music Towards Study Habits of Grade 11 Students.

Table 1.1

Demographic Profile of the Students in terms of Gender

Gender	Frequency	Percentage
MALE	48	48%
FEMALE	52	52%
TOTAL	**100**	**100%**

Table 1.1 illustrates the frequency and percentage distribution of values in terms of gender. As shown in the table 48% of the respondents are males and 52% are females. This means that majority of the respondents are females.

Table 1.2

Demographic Profile of the Students in terms of Strand

Strand	Frequency	Percentage
STEM	50	50%
GAS	50	50%
TOTAL	**100**	**100%**

Table 1.2 illustrates the frequency and percentage distribution of values in terms of strand. The survey questionnaire was distributed equally to both strands. As shown in the table the STEM and GAS strand contains 50% each of the 100% respondents.

Table 2

Effect of Listening to Music Towards Study Habits

Statements	Mean	Sd	Description
1.Listening to music helps me feel relaxed.	1.7	.7	Strongly Agree
2. Listening to music helps me be energized.	1.8	.7	Agree
3. Listening to music helps me keep awake while studying.	2.0	.8	Agree
4.Listening to music motivates me while doing my assignments.	2.0	.8	Agree
5.Listening to music brings nothing but best ideas.	2.0	.7	Agree
6.Listening to music encourages me to finish my school task smoothly.	2.0	.8	Agree
7.Listening to music helps a lot in terms of retention.	2.1	.7	Agree
8.Listening to music keeps new information or innovates ideas.	2.1	.8	Agree
9.Listening to music boost my memorization skills.	2.3	.8	Agree
10.Listening to music helps me focus on the subject matter.	2.5	2.1	Disagree
GRAND MEAN	2.05	8.9	Agree

Legend: 1.00-1.75=SA;1.76-2.50=A;2.51-3.25=D;3.26-4.00=SD

Table 2 illustrates the effect of listening to music towards study habits of the students. The grand mean obtained 2.05 with the verbal description of Agree. This implies that listening to music is a positive effect to the students learning.

As shown in the table, the statement one obtained 1.7 with the verbal description of Strongly Agree. Which means that listening to music helps them feel relaxed while they're studying, and from statement number two until nine obtained a mean that falls under the verbal description of Agree ,which means the respondents agreed that listening to music helps them feel energized, keep them awake while studying, motivates them while doing their assignments, brings best ideas, encourages them toto finish their school task smoothly, helps in terms of retention, innovates new ideas, and boost their memorization skills. However, the statement ten obtained 2.5 with the verbal description of Disagree, which means that listening to music doesn't help them focus on the subject matter. But overall, the total of the verbal description is agreed. Which means that the students of Grade 11 both in STEM and GAS strand agreed to the effect of listening to music towards study habits. And it indicates that listening to music has a satisfaction to

the study habits of Grade 11 STEM and GAS strand.

This finding is related to the study of Pollard and Courage (2019) some other techniques that this study methodology agreed to the impact of listening to music on cognitive tests, they found out that listening to music has positive impact to the study habits of the students.

Table 3.1

Significant Difference Between Listening to Music and Study Habits when categorized according to Gender

Variable	Male		Female		t	p-value
	M	SD	M	SD		
Gender	2.1	0.7	2.0	0.5	.350	.730

**Significant at p<0.05*

Table 3.1. A t-test or independent sample was performed to determine the significant difference of the two variables and as shown in the table the findings showed that there is no significant difference in the mean scores of Male (2.0750) and Female (2.0327) respondents; t (.350) =98, the calculated P-value resulted. 730 which is higher above than the original P-value of 0.05 which means that there is no significant difference between the two variables when categorized according to gender and the null hypothesis is accepted which implies that there is no significant difference on the effect of listening to music towards study habits when categorized according to gender (Male and Female).

This study is related to the study of Alley & Greene 2008, Cauchard et al (2012) that tests under specific conditions had a greater effect on female participants who frequently listen to music when studying. It was conducted under subsequent conditions and nowadays, music is a constant and easily available alternative in daily life, particularly because it has the power to affect our feelings and emotions.

Table 3.2

Significant Difference Between Listening to Music and Study Habits when categorized according to Strand

Variable	STEM		GAS		t	p-value
	M	SD	M	SD		
Strand	2.0	0.7	2.1	0.5	.350	.730

**Significant at p<0.05*

Table 3.2 illustrates the significant relationship between the two variables; Effect of Listening to Music (Independent Variable) and Study Habits (Dependent Variable) when categorized according to strand. A T-test or independent sample was performed to determine the significant difference of the two variables and as shown in the table the findings showed that there is no significant difference in the mean scores of the strands; STEM (2.0200) and GAS (2.0860) ; t (.350)=98, the calculated P-value resulted. 730 which is higher above than the original P-value of 0.05 which means that there is no significant relationship between the two variables when categorized according to strand and the null hypothesis is accepted which implies that there is no significant difference on

the effect of listening to music towards study habits when categorized according to strand (STEM and GAS).

Conclusions

This study was conducted, and the result reveals the following findings that imply significant effect to the beneficiaries of this study. The demographic profile of the student's gained 48% of the respondents are males and 52% are females and the survey questionnaires distributed equally to both STEM and GAS strand that contains 50% each of the 100% respondents.

Majority of the respondents resulted agree to the effect of listening to music towards study habits that obtained the grand mean of 2.05. This indicates that listening to music had been proven a positive effect to the respondents.

However, the two variables signify that there is no significant difference between listening to music and study habits when categorized by gender and strands when it comes to their perception about listening to music toward study habits based on the result.

Recommendations

Based on the findings of this research, the followings are recommended:

1. For the School Administration: Since the respondents agreed that listening to music is effective. It was recommended to the school administrator to have speakers on the library, it would be helpful to the students to be energized and relaxed when doing their schoolwork.
2. For the teacher: Due to the positive effect of the music based on the study, it was recommended to the teachers to play soft music while conducting quizzes and exams.
3. For the students: Since listening to music while studying claimed to be effective based on the study, it was recommended to the students to play music while studying to help them stay awake and energized when studying.
4. For the future researchers: It was recommended to conduct a study and examine the significant differences between the integration of music in classroom activities and no music at all.

Compliance with Ethical Standards

Research ethics is a set of principles and guidelines that ensure the protection of human subjects in research studies. It is essential to consider ethical issues when conducting research, as the well-being of participants is of paramount importance. In this research study, the focus is on the effects of listening to music on the study habits of Grade 11 students at Mindanao State University-Sulu Senior High School.

The following are some of the ethical considerations that should be considered

when designing and conducting this research:

1. **Voluntary participation:** Participation in the study should be voluntary, and participants should have the right to withdraw from the study at any time without any consequences.
2. **Informed consent:** Participants should be informed about the purpose of the study, the procedures involved, and any potential risks or discomforts. They should also be given the opportunity to ask questions and express concerns.
3. **Confidentiality:** All personal information collected during the study should be kept confidential. This includes names, addresses, and any other identifying information.
4. **Privacy:** Participants should have their privacy respected during the study. This includes not being observed without their consent and having their personal space respected.
5. **Anonymity:** Whenever possible, participants should remain anonymous in the study. This means that their identities should not be linked to their data.
6. **Beneficence:** The research should be conducted in a way that is beneficial to the participants. This includes providing them with any necessary information, support, or resources.

Acknowledgements

In deep humility and gratitude, we acknowledge the Almighty God for His unending blessings and guidance throughout our research journey, leading us to its successful completion. We extend our deepest and most sincere appreciation to our research adviser, Ms. Nurlina M. Ahmad, LPT, MALTE for invaluable supervision, support, patience, and wealth of knowledge. We are immensely grateful to Prof. Norman A. Abdurahman, Ed.D, DPA, our esteemed school director, for granting us the opportunity to conduct our research. We also wish to acknowledge the countless others who have supported us throughout this journey, including our families, friends, and colleagues. Your encouragement and belief in our work have been a constant source of motivation.

PERCEIVED PUPILS' READINESS TO LEARN AND TEACHER EFFECTIVENESS: TWO KEY FACTORS IMPACTING MATHEMATICS ACHIEVEMENT

Cydelson G. Nicolas [1], and Alberto G. Calibo, MST[2]

[1] Cadu Elementary School, Department of Education, City of Ilagan, Isabela, Philippines
[2] Isabela State University-City of Ilagan, Campus, Philippines

https://doi.org/10.5281/zenodo.12068687

ABSTRACT

This study examined the perceived readiness to learn among Grade VI pupils and teacher effectiveness in teaching mathematics in Clusters 5 and 6 of the Schools Division of the City of Ilagan during the 2023-2024 school year. Using a descriptive research design and total enumeration technique, the study involved 36 mathematics teachers and 344 pupils. Data were collected using the Collective Efficacy Scale-Short Form and tailored survey questionnaires. Results showed that teachers generally believe pupils are ready to learn, despite concerns about motivation, safety, and substance abuse. Pupils perceive their teachers as effective, with high mean scores indicating strong agreement on teachers' ability to reach and motivate students. Academic performance data revealed that the majority of pupils achieved "*Outstanding*" or "Very Satisfactory" results in mathematics. Statistical analysis using Pearson's R demonstrated a significant positive relationship between pupils' perception of teacher effectiveness and their mathematics achievement ($r = 0.81$, $p < 0.05$), highlighting the importance of effective teaching. However, no significant correlation was found between teachers' perceptions of pupils' learning readiness and academic performance. These findings emphasize the critical role of teacher effectiveness in enhancing mathematics achievement and suggest areas for targeted interventions to improve educational outcomes.

Keywords: *Teacher effectiveness, Pupil Readiness, Mathematics Achievement, Perception, Educational outcomes, Motivation*

INTRODUCTION

Mathematics is foundational to everyday life, providing the framework for activities across diverse professions, including agriculture, cooking, mechanics, medicine, commerce, music, engineering, science, and even magic. Nature itself reveals mathematical patterns, fostering endless discoveries. Engaging with mathematics nurtures mental discipline, enhances logical reasoning, promotes critical analysis, sparks inventiveness, cultivates abstract and spatial thinking, sharpens problem-solving skills, and improves communication abilities (Burns, 1995; NCTM, 2000). Mastery of mathematics enables individuals to approach various challenges systematically, thereby enriching their lives.

However, recent educational assessments highlight significant challenges in mathematics education in the Philippines. The Trends in International Mathematics and Science Study (TIMSS) 2019 reported an average score of 297 in mathematics for Filipino students, placing the country among the lowest-performing out of 58 participants (Mullis et al., 2020). Similarly, the Program for International Student Assessment (PISA) ranked the Philippines second lowest in mathematics and science among 79 countries, with scores of 353 and 357, respectively. These results emphasize the urgent need for educational reforms to elevate standards and improve learning outcomes nationwide (OECD, 2020).

In response, the Department of Education launched the *"Sulong Edukalidad"* initiative, which outlines strategic reforms such as the K to 12 curriculum review, enhancement of learning facilities, improved professional development for teachers and school heads, and strengthened stakeholder engagement. These efforts aim to ensure no Filipino student is left behind, calling for national collaboration and commitment to advancing the quality of basic education (Department of Education, 2020).

Addressing these issues requires understanding the root causes of poor mathematics performance and implementing swift remedial actions. The primary level is crucial for developing mathematical proficiency, which serves as the cornerstone of education across all levels. Students with strong numeracy skills are more likely to excel in advanced mathematics, whereas those lacking foundational skills may lose interest and struggle (Dowker, 2005). Schools must recognize the factors influencing math learning, particularly readiness to learn and teacher effectiveness.

Mathematical readiness, influenced by a supportive home and community environment, is essential for future academic success. Mastery of prerequisite skills through consistent practice is necessary to build a strong foundation in mathematics. Without these skills, students may experience hindered learning and diminished interest in the subject (Boaler, 2008). Enhancing overall math proficiency requires addressing these challenges early on.

Teacher effectiveness is another critical factor impacting math learning outcomes. Research shows that effective teaching practices significantly influence student

achievement, surpassing the effects of financial investments, class sizes, and other educational initiatives. Teachers' sense of efficacy is directly linked to student engagement and academic success (Hattie, 2009; Marzano, 2003). Engaging teaching methods, strong teacher-student interactions, and teacher empowerment create a positive learning environment where students can thrive (Ferguson, 2012).

The theoretical framework for this study is grounded in Bandura's (1978) social cognitive theory, which posits that behavior, personal factors, and environmental influences interact in a reciprocal, cause-and-effect relationship. In an educational context, this means that teacher-student interactions and the learning environment significantly shape students' self-efficacy and academic outcomes. According to Bandura (1989), resilient self-efficacy develops through overcoming challenges with persistent effort. Students who encounter only easy successes may struggle with setbacks, whereas those who persevere through difficulties build stronger self-efficacy. This interaction highlights the importance of creating a supportive and challenging learning environment to foster student achievement (Bandura, 1989).

Edmonds (1979) identified five school properties that predict student achievement, including high expectations and an orderly environment, aligning with the principles of social cognitive theory. These findings suggest that fostering a positive school environment and involving students in their education can enhance engagement and academic success. Incorporating student feedback on teacher effectiveness can increase their voice in education, promoting a democratic partnership between students and educators (Doda, 2011; Lounsbury, 2017; Newton, 2014).

To enhance mathematics education, schools should integrate interactive activities, mathematical games, and peer teaching methods into the curriculum. These approaches promote active learning, clarity of concepts, and collaborative problem-solving skills among students (Van de Walle et al., 2010). Emphasizing a clear understanding of mathematical concepts from the early stages and fostering enthusiasm for math through engaging activities are crucial steps toward improving math education outcomes.

This study aimed to address the Department of Education's goal of enhancing math education by investigating the lower math performance in Clusters 5 and 6 compared to other clusters. It assessed learners' first and second-quarter math grades and gathered insights from students and their mathematics teachers on readiness to learn and teacher effectiveness—key factors influencing math achievement. By focusing on these clusters within the Schools Division City of Ilagan (SDCI), the research aims to strengthen student readiness and teacher effectiveness in math teaching, ultimately contributing to ongoing efforts to improve academic outcomes in mathematics.

Research Questions

This study looked into the teacher's perception of pupils' readiness to learn and pupils' perception of teachers' effectiveness in teaching Grade VI Mathematics in Clusters 5 and 6 of the Schools Division of the City of Ilagan during the school year 2023-2024.

Specifically, the study attempted to answer the following questions:

1. What is the perception of the teachers on pupils' readiness to learn?
2. What is the perception of the pupils on the teacher's effectiveness?
3. What is the academic achievement in mathematics of the pupils?
4. Is there a significant relationship between teachers' perception of pupils' readiness to learn and their mathematics achievement?
5. Is there a significant relationship between the pupils' perception of teacher effectiveness and their mathematics achievement?
6. Is there a significant relationship between the pupils' perception of the teachers' effectiveness and the teacher's perception of pupils?

METHODOLOGY

Research Design

The descriptive method of research was employed in this study. According to Williams (2007), this method involves a fact-finding approach with accurate and adequate interpretation of the findings. It emphasizes describing what exists, such as current conditions, practices, situations, or phenomena. Given that the study focused on the present status of teacher perceptions of pupil readiness to learn and pupil perceptions of teacher effectiveness, the descriptive method was deemed the most appropriate.

Respondents of the Study

The study included all members of the population using the Total Enumeration technique. In clusters 5 and 6, there are 18 schools, 36 teachers who teach grade 6 mathematics, and 344 grade 6 pupils. The study was conducted during the School Year 2023-2024.

Data Gathering Instruments

The Collective Efficacy Scale-Short Form, developed by Goddard (2002), was used in this study. This instrument is both valid and reliable for gauging teacher perceptions of faculty members' collective efficacy. It consists of 12 items across two factors, with responses measured on a six-point Likert scale ranging from 1 (strongly disagree) to 6 (strongly agree).

The study made use of survey questionnaires as the main instruments to gather the needed data. These are the following:

Collective Efficacy Short Form was used with pupils, and reliability and factor analyses were run to determine the feasibility. It was a 12- 12-item instrument composed of two factors. The first factor measured by this instrument was faculty group competence. The second factor measured by this instrument was task analysis. This variable measured pupil readiness to learn.

Teacher Survey. The first factor measured by this instrument was faculty group competence. There were six survey items total that measured group competence, half of which were reverse-scored. Sample statements include: “Teachers in the school can get through to the most difficult pupils,” and “Teachers here are confident they will be able to motivate their pupils.”

The second factor measured by this instrument is task analysis. This variable measured pupil readiness to learn. Six total survey items measured pupil readiness to learn, half of which were reverse-scored. Sample statements from this factor include: “These pupils come to school ready to learn,” and “Pupils here just are not motivated to learn” (reverse scored).

Pupil Survey. Statistical analysis of the factor structure and reliability analysis for this instrument, when used with pupils, were included in the results. Factor analysis yielded one reliable factor. All six items loaded into this variable were derived from the faculty group competence section of the original survey. Items from the task analysis section of the survey did not demonstrate a sufficient Cronbach’s alpha level to merit inclusion and accordingly were removed from the pupil version of this survey. The results yielded a single-factor six-item instrument measuring pupil perception of teacher effectiveness. Items from this factor were: teachers in the school can get through to the most difficult pupils; teachers here are confident they will be able to motivate their pupils; if a pupil does not want to learn teachers here give up (reverse scored); teachers here do not have the skills needed to produce meaningful pupil learning (reverse scored); teachers in this school believe that every pupil can learn; and teachers in this school do not have the skills to deal with pupil disciplinary problems (reverse scored).

Data Gathering Procedure

Permission to conduct the study was sought by the researcher from the office of the Schools Division Superintendent of the City Division of Ilagan, Isabela before the study started to ensure its approval.

When the request was granted, the researcher approached the heads of the selected respondent schools. He showed them the approval of the study and informed them of the objectives and process of the study. The questionnaires were personally distributed and explained to the teacher respondents by the researcher. The questionnaires for pupil-respondents were translated into Tagalog, which was widely used by respondents. They were assisted in answering the questionnaire. Contact with the teachers was made in their classrooms during convenient schedules (usually lunch breaks or in the afternoon after classes) in order not to disturb classroom sessions.

Retrieval of the questionnaire followed immediately after needed clarifications of responses were made to ensure the accuracy and completeness of needed data. The researcher reviewed the entire total of questionnaires to see that all instructions were followed accurately. The data were collated, then tabulated for interpretation and analysis, and statistical treatment.

Statistical Treatment of Data

The data gathered were analyzed and interpreted using the following statistical tools:

Mean and Standard Deviation were used to identify to identify pupils' academic performance using the following scales as follows: (based on K to 12 standards)

Grading Scale	Description
90-100	Outstanding
85-89	Very Satisfactory
80-84	Satisfactory
75-79	Fairly satisfactory
Below 75	Did not meet expectations

Pearson's R was used to explore the relationship between teacher perceptions of pupil readiness to learn and mathematics achievement; the relationship between the pupil perception of teacher effectiveness and school mathematics achievement; and the relationship between pupil's perception of teacher's effectiveness and teacher's perception of the pupil.

Weighted Mean was used to analyze the teacher perceptions of pupil readiness to learn and mathematics achievement and pupil perception of teacher effectiveness and middle school mathematics achievement. Responses were measured on a six-point Likert scale with responses ranging from 1 (strongly disagree) to 6 (strongly agree).

Weight	Range	Description
6	5.50-6.0	Strongly Agree
5	4.50-5.49	Agree
4	3.5-4.49	Slightly Agree
3	2.5-3.49	Slightly Disagree
2	1.5-2.49	Disagree
1	1.0-1.49	Strongly Disagree

RESULTS AND DISCUSSION

The Teachers' Perception of the Students' Readiness to Learn

As shown in Table 1, the majority of teachers express confidence in students' preparedness for learning, as evidenced by the high mean scores and low standard deviations associated with items one and four (Mean = 5.69, SD = 0.47, and Mean = 5.44, SD = 0.50 respectively). Additionally, there is a shared belief in the beneficial influence of community resources on student learning, as reflected in the responses to item two (Mean = 5.47, SD = 0.70).

Table 1. Teachers' perceptions regarding student readiness to learn

ITEM #	Statement	Mean	Standard Deviation	Description
1	These pupils come to school ready to learn.	5.69	0.47	Strongly Agree
2	Home life provides so many advantages that pupils here are bound to learn.	5.47	0.70	Agree
3	Pupils here just aren't motivated to learn.	2.44	1.32	Disagree
4	The opportunities in this community help ensure that these pupils will learn.	5.44	0.50	Agree
5	Learning is more difficult at this school because pupils are worried about their safety.	3.25	1.57	Slightly Disagree
6	Drug and alcohol abuse in the community makes learning difficult for pupils here.	5.14	0.80	Agree
	Overall Mean	**4.57**	**0.42**	**Agree**

However, the divergence in perceptions becomes apparent when considering student motivation, as highlighted in item three (Mean = 2.44, SD = 1.32). Here, teachers exhibit varied viewpoints, with some expressing concerns about student motivation levels. This discrepancy underscores the complexity of factors influencing student engagement and highlights the need for targeted interventions to foster motivation and enhance learning outcomes.

Furthermore, items five and six draw attention to external factors that may impede student learning, such as safety concerns and substance abuse. While there is some

acknowledgment of these challenges, there is also variability in the extent to which teachers perceive them as significant barriers to learning.

In summary, while teachers generally perceive students as ready to learn and acknowledge the supportive role of the community, there are nuanced challenges related to student motivation and external factors that warrant further investigation and intervention. Addressing these challenges is crucial for enhancing teacher effectiveness and ultimately improving student achievement in mathematics.

Table 2. Pupils' perception of teacher effectiveness along various dimensions of teaching practices and interactions within the educational context

Item #	Statement	Mean	Standard Deviation	Description
1	Teachers in the school can get through to the most difficult pupils.	5.89	0.35	Strongly Agree
2	Teachers here are confident they will be able to motivate their pupils	5.49	0.75	Agree
3	If a pupil doesn't want to learn teachers here give up (reverse scored).	3.37	1.53	Slightly Disagree
4	Teachers here don't have the skills needed to produce meaningful pupil learning (reverse scored)	3.41	1.53	Slightly Disagree
5	Teachers in this school believe that every pupil can learn	5.85	0.50	Strongly Agree
6	Teachers in this school do not have the skills to deal with pupil disciplinary problems (reverse scored).	3.54	1.54	Slightly Agree
	Overall mean	**4.59**	**0.71**	**Agree**

Based on the above table, firstly, item 1, "Teachers in the school can get through to the most difficult pupils," received a notably high mean score of 5.89, indicating strong agreement among pupils regarding teachers' effectiveness in reaching challenging students. This perception is reinforced by the low standard deviation of 0.35, suggesting a high level of consensus among respondents.

Similarly, item 2, "Teachers here are confident they will be able to motivate their pupils," garnered a favorable response from pupils, with a mean score of 5.49, indicative of agreement, albeit with a slightly higher standard deviation of 0.75, suggesting some variability in perceptions among respondents.

Conversely, items 3 and 4, which are reverse-scored, suggest a more nuanced perspective among pupils. While item 3, "If a pupil doesn't want to learn teachers here

give up," yielded a mean score of 3.37, indicating slight disagreement, the higher standard deviation of 1.53 suggests greater variability in perceptions regarding teacher persistence. Similarly, item 4, "Teachers here don't have the skills needed to produce meaningful pupil learning," also received a mean score of 3.41, suggesting slight disagreement among pupils, with a standard deviation of 1.53, indicating variability in perceptions regarding teacher competence.

Moreover, item 5, "Teachers in this school believe that every pupil can learn," garnered a high mean score of 5.85, indicating strong agreement among pupils, complemented by a low standard deviation of 0.50, indicating a high level of consensus. Finally, item 6, "Teachers in this school do not have the skills to deal with pupil disciplinary problems," received a mean score of 3.54, suggesting slight agreement among pupils, with a standard deviation of 1.54, indicating variability in perceptions regarding teacher proficiency in managing disciplinary issues.

In summary, while pupils generally perceive teachers as effective in reaching challenging students and fostering motivation, there are nuanced views regarding teacher persistence, competence, and disciplinary skills. These findings underscore the importance of understanding pupil perspectives to inform strategies aimed at enhancing teacher effectiveness and improving overall educational outcomes.

Table 3. Pupils' academic achievement in mathematics

Academic Performance	Frequency	Percent
Fairly Satisfactory	33	9.6
Satisfactory	56	16.3
Very Satisfactory	111	32.3
Outstanding	144	41.9
Total	344	100.0

	Mean	**Standard Deviation**	**Description**
Academic Achievement	85.00	4.73	Very Satisfactory

The academic achievement in mathematics among the pupils is predominantly high, with the majority of students achieving notable success. Specifically, the highest frequency of academic performance falls under the "Outstanding" category, with 144 pupils, accounting for 41.9% of the total. This indicates that nearly half of the pupils excelled in mathematics, demonstrating superior understanding and proficiency in the subject.

On the other end of the spectrum, the lowest frequency is observed in the "Fairly Satisfactory" category, with 33 pupils, representing 9.6% of the total. This suggests that a smaller portion of the student population is performing at a level that indicates a need for improvement.

The mean score of 85.00 suggests a very satisfactory level of academic achievement, with a relatively low standard deviation of 4.73, indicating a moderate degree of variability in individual achievement scores.

In summary, the data highlights a strong overall performance in mathematics, with a significant portion of students achieving “Outstanding” results, while only a small fraction falls into the “Fairly Satisfactory” range. This suggests a positive trend in academic achievement in mathematics among the pupils.

Table 4. Relationship between teachers' perception of pupils' readiness to learn and their mathematics achievement

Variables	Pearson r	ρ-value	Decision	Remark
Teacher’s Perception of pupil’s readiness to learn Vs. mathematics achievement	-0.052	0.76	Accept Ho	The relationship is not significant

The Pearson correlation coefficient (Pearson R) of -0.052 indicates a very weak negative correlation between these variables. The p-value of 0.76 suggests that this correlation is not statistically significant.

Based on the statistical analysis, the decision to "Accept Ho" (accept the null hypothesis) is made, indicating that there is no significant relationship between teachers' perception of pupils' readiness to learn and their mathematics achievement. This implies that the perceived readiness of pupils to learn, as perceived by teachers, does not have a meaningful impact on their actual academic achievement in mathematics.

In summary, the statistical analysis concludes that there is no significant relationship between teachers' perception of pupils' readiness to learn and their mathematics achievement. These findings provide valuable insights into the dynamics between teacher perceptions and student academic outcomes, informing future research and educational interventions aimed at enhancing student achievement in mathematics.

As discussed in the review of the literature, the results have contradicted the study of Lumpkin (2007), that there is no significant relationship between teachers' perception of pupils' readiness to learn and their mathematics achievement Students' and teachers' perceptions of one another influence student learning. Lumpkin (2007) discovered that pupils who see their teachers as caring are more motivated and perform better than their classmates who do not have a positive attitude toward their teachers. Competence and concern are especially crucial in primary schooling. "Effective teachers are adept educators who organize and conduct classes and evaluate pupil learning," Virtue (2007) stated. When teachers feel positive about their students, this makes the teacher more likely to be able to disseminate information effectively. Thus, the espousal of confidence in these students’ readiness to learn may positively impact the teacher’s ability to teach. It is also possible that students may be picking up on their teachers’ perceptions. If students perceive that their teachers believe they can learn, they may be more likely

actually to learn. This study adds to the extant literature by demonstrating that teacher perceptions of student readiness to learn are significantly related to the mathematics achievement of the pupils. Both new and experienced teachers agreed that pupils who felt comfortable turned in significantly greater work. Greater pupil aspirations and accomplishments are possible in safe environments when parents organize the neighborhood and support their children (Gaitan, 2012).

Also, the results have contradicted the study of that there is no significant relationship between teachers' perception of pupils' readiness to learn and their mathematics achievement Students' and teachers' perceptions of one another influence student learning. Boz and Boz (2010) discovered that teachers who exhibit high efficaciousness tend to exhibit higher levels of enthusiasm in the classroom. concluded that this enthusiasm translates to a teacher who works harder to assist struggling students. Conversely, those who exhibit low levels of teaching efficacy tend to be more teacher-centered and have a weak commitment to the profession (Boz & Boz, 2010). They further suggested that teachers need to be specifically taught to satisfy the academic, social, and emotional needs of their students. School administrators have the responsibility to observe classroom instruction regularly and to provide substantive feedback and support to their faculty (Goldhorn, Kearney, & Webb, 2013). Feedback becomes particularly important in pupils when pupils often struggle in the affective domain (Ross & Willson, 2012).

Table 5. Relationship between pupils' perception of teacher effectiveness and their mathematics achievement

Variables	Pearson R	ρ-value	Decision	Remark
Pupil's perception of teacher effectiveness Vs. mathematics achievement	0.81	0.00	Reject Ho	Relationship is significant

The Pearson correlation coefficient (r) of 0.81 indicates a very strong positive relationship between pupils' perception of teacher effectiveness and their mathematics achievement. This suggests that as pupils perceive their teachers to be more effective, their mathematics achievement tends to be higher.

The ρ-value of 0.00 (which is likely rounded from a very small number) indicates that this correlation is statistically significant. In statistical terms, a p-value less than the conventional significance level (typically 0.05) suggests strong evidence against the null hypothesis (Ho), leading to the rejection of the null hypothesis. In this case, it means there is sufficient evidence to conclude that there is a significant relationship between pupils' perception of teacher effectiveness and their mathematics achievement.

This finding underscores the importance of how pupils perceive their teachers in influencing their academic outcomes in mathematics. When students believe their

teachers are effective, they are likely to engage more deeply in learning, exhibit higher motivation, and achieve better results in mathematics.

The results affirm the study of (Lumpkin, 2007). The results demonstrated that when students perceive their mathematics teachers as being effective, their scores rise. Students perform well for their teachers when they have an affinity for their teachers, so it is possible those students who have an affinity for their teachers rated their teachers' effectiveness more highly and performed better for these teachers (Lumpkin, 2007). It is also possible that students accurately perceived their teachers' abilities. Those they perceived as effective in mathematics are competent. The perception students and teachers have about one another impacts student learning. Lumpkin (2007) found that students who perceive their teachers as caring tend to be more motivated and perform better than their peers who do not indicate an affinity for their teachers. Competence and care are particularly important in middle-level education. As Virtue (2007) noted, "Effective teachers are apt instructors who plan and implement lessons and evaluate student learning . . . [and] are also skilled at establishing and cultivating constructive human relationships" (Virtue, 2007, p. 243). Teachers who have high opinions of their students tend to get higher results. These student outcomes could be due, in part, to the Pygmalion effect which occurs when achievement rises for students about whom teachers are told their students are in the highest ability group when they are, in fact, previously low performing (Rosenthal & Jacobsen, 2003).

Also, another possibility is found in literacy studies and is known as the "Peter effect" (Applegate & Applegate, 2004). Essentially, teachers cannot give students what they do not have. If the teachers are not proficient in delivering pedagogy or in mathematics, they cannot engender proficiency in their students. Students tune into the competency levels of teachers and draw their conclusions.

By establishing motivational processes in the mathematics classroom—inclusive of self-efficacy, task interest, and school connectedness (Cleary & Kistantas, 2017)—educators can ameliorate some of the lack of preparation teachers may face. Motivational processes, coupled with professional development to increase teacher proficiency in mathematic strategies, can be an incredibly powerful tool that may yield significant increases in student mathematics achievement.

Table 6. Relationship between teachers' perception of pupils' readiness to learn and pupils' perception of teacher effectiveness

Variables	Pearson R	p-value	Decision	Remark
Teacher's Perception of pupil's readiness to learn Vs. pupils' perception of teacher effectiveness	-0.14	0.40	Accept Ho	The relationship is not significant

The analysis explores the relationship between teachers' perception of pupils' readiness to learn and pupils' perception of teacher effectiveness.

The Pearson correlation coefficient (Pearson R) between these variables is -0.14, indicating a weak negative correlation. However, the p-value associated with this correlation is 0.40, which exceeds the typical threshold for statistical significance (usually set at 0.05). Consequently, the decision is made to "Accept Ho" (accept the null hypothesis), suggesting that the observed difference is not significant.

In summary, based on the statistical analysis, there is no significant relationship between teachers' perception of pupils' readiness to learn and pupils' perception of teacher effectiveness. These findings suggest that, according to the data examined, there is no meaningful association between how teachers view students' readiness to learn and how students perceive teacher effectiveness

.

The results contradict the study of Yazzie-Mintz (2010) that there is no meaningful association between how teachers view student's readiness to learn and how students perceive teacher effectiveness. Yazzie-Mintz (2010) Student readiness to learn and teacher competence are linked. A survey of 42,754 high school students, reported a majority of students stated that the material presented in class was not interesting, which contributed to their disengagement in class. Further, 35 percent of the students surveyed stated their boredom stemmed from a lack of interaction with their teacher. Both the student's readiness to learn and the teacher's competence are essential to student learning.

It negates the study of Bandura (1978) and Edmonds (1979) which states that the relationships between teachers and students matter. Also, when students have a greater voice in their education, their level of engagement and academic success increases (Lounsbury, 2017; Newton, 2014). Asking students for feedback on teacher effectiveness is a useful way to increase student voices and involve them as democratic partners in their education (Doda, 2011). Kearney, Webb, Goldhorn, and Peters (2013) found a correlation between mathematics scores and critical feedback in a study of 87 mathematics classrooms in Texas. Specifically, teachers who received appraisal scores from their principals indicating high levels of critical feedback to students had higher mathematics achievement scores for their classrooms than their peers.

Naturally, teachers' professional competence has a demonstrable effect on students' ability to learn (Baumert et al., 2010). School principals play an important role in this process when they embrace the responsibility of instructional leadership to ensure that faculty are life-long learners perpetually refining their craft (George, 2000). Instructional leaders, "participate fully in training, care deeply about the results, and follow up with supervision that integrates teacher training and classroom observations" (George, 2000, p. 44). Efficacy also appears to play an important role in mathematics achievement. Students who espouse a high level of belief in their mathematics abilities tend to demonstrate high levels of mathematics achievement (Siegle & McCoach, 2007).

Similarly, Goddard and Goddard (2001) conducted a study of 438 teachers in 47 schools in a large urban school district in the United States and found that schools in which teachers espouse high levels of faculty members' collective efficacy have been shown to produce high student achievement scores. To be sure, many other factors have the potential to influence student achievement. One such factor is student readiness to learn.

Conclusions

This study investigated the impact of pupils' readiness to learn and teacher effectiveness on mathematics achievement in Clusters 5 and 6 within the Schools Division City of Ilagan. The findings indicated that while teachers generally perceive students as ready to learn and supported by their community, issues like student motivation, safety concerns, and substance abuse present significant challenges. A notable discovery was the strong positive correlation between pupils' perception of teacher effectiveness and their mathematics achievement, emphasizing the critical role of effective teaching in academic success. However, there was no significant relationship between teachers' perception of pupil readiness and students' actual performance, suggesting that teacher effectiveness plays a more pivotal role in influencing academic outcomes. These insights underscore the importance of enhancing teacher effectiveness and addressing external factors to improve mathematics achievement, highlighting areas for targeted interventions to foster better educational outcomes.

Recommendations

Based on the findings and conclusions of the study, the following recommendations are proposed:

1. School heads are strongly urged to implement comprehensive professional development programs focusing on effective teaching strategies, classroom management, and motivational techniques. These programs should equip teachers with the skills necessary to engage students, manage diverse classroom dynamics, and address challenges related to student motivation and external factors like substance abuse and safety concerns.

2. Schools and community organizations like the Parents and Teacher Associations (PTAs) should strengthen partnerships to create supportive environments for students. Community resources should be mobilized to address issues such as student safety and substance abuse, thereby removing external barriers to learning and enhancing the overall readiness of students to engage in their studies.

3. The School Guidance Office is encouraged to design and implement targeted interventions aimed at boosting student motivation. This could include mentorship programs, extracurricular activities, and motivational workshops. Encouraging a growth

mindset and providing positive reinforcement can help increase students' intrinsic motivation and engagement in their learning processes.

4. Schools are to establish mechanisms for regularly gathering and analyzing student feedback on teacher effectiveness. This feedback should be used to inform teacher evaluations and professional development, ensuring that teachers continuously refine their teaching practices based on the needs and perceptions of their students.

5. The schools should adopt a holistic approach to student development that goes beyond academic achievement. This involves addressing social-emotional learning, providing mental health support, and ensuring a safe and inclusive school environment. By fostering a well-rounded development, students are more likely to perform better academically and build resilience against external challenges.

Compliance with Ethical Standards

As the authors of this study, we hereby declare that all ethical considerations were meticulously observed throughout the research process. Informed consent was duly obtained from all respondents before their participation, ensuring that they were fully aware of the study's purpose and procedures. Respondents were granted the freedom to withdraw from the study at any time without any repercussions. The anonymity of all respondents was strictly maintained to protect their privacy, and their well-being was consistently safeguarded. Furthermore, we affirm that there is no conflict of interest in the conduct of this study. We have diligently avoided any form of plagiarism and ensured that the interpretation of findings was free from bias. The results obtained from this study have been used solely for research purposes, adhering to the highest standards of academic integrity.

Acknowledgments

I would like to extend my deepest gratitude to all those who contributed to the successful completion of this research study. I am profoundly grateful to my adviser for their invaluable guidance and support. Sincere appreciation goes to the respondents, school heads, and co-teachers for their cooperation and participation. I am also thankful to my friends, family, and relatives for their unwavering support and encouragement, which motivated me to persevere. Lastly, I acknowledge my friends for their continuous encouragement and understanding throughout this journey. Your collective support and belief in me have been instrumental in the success of this research study.

ABSTRACT

This study delved into the assessment of General Mathematics performance among Grade 11 learners in the College of Sciences, Technology and Communications, Inc., (CSTC) at Atimonan, Lucena, and Sariaya Campuses, Quezon Province, Philippines. A sample of two hundred ninety (290) learners were selected using stratified random sampling from a population of one thousand one hundred seventy-five (1,175) Grade 11 learners across various CSTC campuses. Seven (7) qualified educators provided insights and validation for Supplemental Instructional Materials (SIM). Analysis revealed persistent difficulties in mathematical modeling, function operations, and problem-solving involving rational, inverse, exponential, and logarithmic functions. The mean composite score for the least mastered competencies was 4.26, indicating a high difficulty level. The SIM's validity assessment yielded a mean score of 16.29 across various focuses, indicating strong validity. Recommendations include targeted Supplemental Instructional Materials, curriculum revision, utilization of validated SIM, and prioritizing the development of tailored SIM. Future research should focus on long-term effectiveness studies and alternative teaching methods.

Keywords: *General Mathematics, Performance Assessment, Supplemental Instructional Materials*

INTRODUCTION

The provision of quality education serves as a fundamental cornerstone for the progress and development of a nation. This unwavering commitment to education is deeply enshrined in the Constitution of the Philippines, which unequivocally affirms that "the State shall protect and promote the right of all citizens to quality education at all levels" (Constitution of the Philippines, 1987). In the Philippines, this relentless dedication to education is firmly embedded in the constitution. The Philippine government has embarked on an ambitious initiative to enhance the quality of education known as the K to 12 Basic Education Curriculum. This visionary endeavor seeks to prepare students for global competitiveness by providing a comprehensive curriculum that aligns with international standards (Republic Act No. 10533, 2013).

At the secondary education level, a crucial juncture in the academic journey, students lay the foundation for higher education and future career paths (Smith, 2019). Mathematics takes center stage during this critical phase, serving as an indispensable element for success in various professions, including science, engineering, business, and economics (Johnson & Lee, 2020). Given its pivotal role, the level of academic achievement in General Mathematics has risen to the status of a national concern. Recent data from the Department of Education (2021) indicates that only 45% of secondary students in the country achieve proficiency in mathematics. This statistic underscores the urgency of addressing performance gaps in General Mathematics for individual student success and the nation's overall competitiveness in critical sectors.

Over the past five years, from the school years 2019-2020 to 2023-2024, the item analysis data for General Mathematics has shown distinct trends in student mastery across various competencies. In the earlier years, such as 2019-2020 and 2020-2021, there were significant challenges, with many competencies falling into the "Very Low" and "Low" mastery categories. However, starting from 2021-2022, there have been notable improvements in certain areas, such as the representation of rational functions and the understanding of exponential functions, which reached "Mastered" and "Moving Toward Mastery" levels by 2023-2024. Despite these advancements, students have consistently struggled with solving problems involving functions and equations, as well as real-life applications of these concepts. Competencies in performing operations on functions and distinguishing between different types of functions have remained areas of low mastery throughout this period. The data over these years indicates a need for sustained and targeted interventions, including enhanced contextual learning, the integration of technology, and frequent low-stakes assessments, to build foundational skills and improve overall student performance in these critical areas.

Recognizing the profound impact of General Mathematics proficiency, stakeholders in education are prompted to collaborate and implement Supplemental Instructional Materials (SIM) to improve student outcomes in this subject. The imperative to address these difficulties is underscored by the understanding that proficiency in General Mathematics not only shapes individual educational trajectories but also has

broader implications for the nation's workforce and competitiveness. By focusing on targeted initiatives and fostering a comprehensive understanding of the significance of mathematics at the secondary level, educators and policymakers can work together to ensure a higher percentage of students acquire the essential mathematical skills needed for their future academic and professional pursuits.

Accurately constructing mathematical models to represent real-life situations using functions is crucial in various fields, including physics, engineering, economics, and social sciences. This ability allows us to analyze and predict outcomes, make informed decisions, and better understand complex phenomena.

Rational functions are essential in various domains because they can realistically describe and solve real-life situations. The difficulties associated with comprehending and implementing these functions, on the other hand, underscore the want for more efficient instructional methods and resources.

Inverse, exponential, and logarithmic functions form the bedrock of mathematical tools used in many real-world applications. Their diverse uses, from physics to finance and computer science to engineering, exemplify their instrumental role in advancing our ability to tackle complex problems with precision and accuracy. These mathematical concepts are pillars of scientific and technological progress, enabling us to navigate the intricate web of difficulties in an increasingly complex world.

The concern of learning gaps in mathematics performance is a prominent issue not only in the Philippines but on a global scale. Globally, studies such as the Program for International Student Assessment (PISA) have consistently highlighted significant disparities in mathematical abilities among 15-year-old students from different countries, indicating the presence of pronounced global learning gaps (OECD, 2019). These gaps often result from complex factors, including teaching practices, curriculum design, and socio-economic disparities (Mullis et al., 2016).

Within individual countries, the difficulties persist, leading to national and regional learning disparities. For instance, in the United States, the National Assessment of Educational Progress (NAEP) exposes variations in mathematical proficiency among students across different states, with some consistently outperforming others (NCES, 2019). Influential factors shaping these national and regional disparities include educational policies, teacher quality, and resource allocation (Loveless, 2016).

In the Philippine context, the issue of learning gaps in mathematics performance is also evident, as reflected in the National Achievement Test (NAT) results. These results reveal disparities in mathematics achievement among various regions and socio-economic backgrounds (DepEd, 2019). These gaps contribute to inadequate teacher training, limited access to educational resources, and cultural attitudes toward mathematics (Bautista, 2019; Sarmiento, 2017).

It is imperative to adopt a comprehensive approach to address these learning gaps. The literature suggests a range of strategies that can be applied, such as improving teacher quality through targeted professional development programs, enhancing curriculum design to foster conceptual understanding and critical thinking, ensuring equitable distribution of educational resources, promoting parental involvement in mathematics education, and addressing socio-economic disparities through targeted interventions (Darling-Hammond et al., 2017; Hiebert et al., 2018; UNESCO, 2017; Fan & Chen, 2020; OECD, 2021). It was implementing these strategies that can contribute to narrowing the learning gaps in mathematics performance, thereby creating a more equitable and inclusive educational environment.

These findings establish a significant gap in mathematics performance that threatens the prospects of students and the community's economic development. To address this pressing issue, it is imperative to conduct a comprehensive study to identify the specific difficulties and factors contributing to poor performance in mathematics (Davis, 2019). The study aims to assess the current state of mathematics education at the secondary level, investigate potential causes of underperformance, and propose effective interventions to help bridge the gap and empower students to succeed in their academic and future career pursuits (Anderson & Martinez, 2022).

In a separate context, Supplemental Instructional Materials (SIM) emerge as potent tools for educational settings. The Supplemental Instructional Materials (SIM) comprises a set of instructional resources meticulously designed to enhance teaching and learning by offering personalized support and interventions. SIM is grounded in pedagogical and instructional principles that have been thoroughly researched and developed to address the specific learning needs of students (Eskay, 2018), which enables students to grapple with complex concepts and enhance their performance in particular subjects. In General Mathematics, the development and implementation of SIM have emerged as potentially valuable means to bridge learning gaps and improve the overall academic experience.

Numerous studies have demonstrated the effectiveness of SIMs in improving student learning outcomes. A study conducted by Smith and Johnson (2017) found that students who used SIMs as supplementary materials achieved significantly higher test scores than those who did not. The researchers attributed this improvement to the targeted and focused nature of SIMs, which allowed students to concentrate on specific areas of weakness.

In addition, a meta-analysis by Davis and Thompson (2019) examined the impact of SIMs on student achievement across multiple studies. The analysis revealed a consistent positive effect of SIMs on learning outcomes, with students who used SIMs outperforming their peers who did not. The researchers concluded that SIMs significantly impact student learning and recommended their integration into instructional practices. While SIMs offers numerous benefits, there are some difficulties and considerations that educators should be aware of. One challenge is the development and availability of high-quality SIMs. Creating effective SIMs requires careful planning, research, and alignment

with curriculum standards. Educators need access to well-designed SIMs aligned with their instructional goals and meet the specific needs of their students.

General Mathematics is one of the core subjects of the senior high school curriculum. Mathematics contents include Numbers and Number Sense, Measurement, Geometry, Patterns & Algebra and Statistics and Probability. Numbers and Number Sense as a strand include concepts of numbers, properties, operations, estimations, and their applications. The Grade 11 learners demonstrate an understanding of critical concepts of functions, rational functions, inverse functions, exponential functions, and logarithmic functions.

The competency expected to develop in the learners is representing real-life situations using functions, including piecewise functions, evaluating a function, performing addition, subtraction, multiplication, division, composition of function, and solving problems involving functions. In addition, it represents real-life situations using rational functions and solves problems involving rational functions, equations, and inequalities. Lastly, it represents real-life situations using one-to-one functions, solves problems involving inverse functions, solves problems involving exponential functions, equations, and inequalities, represents real-life situations using logarithmic functions, and solves problems involving logarithmic functions, equations, and inequalities, respectively.

Supplemental Instructional Materials (SIM) serve as an academic aid and a dynamic tool capable of instilling genuine enthusiasm for the subject. Its role extends beyond conventional support, empowering teachers to guide students through academic difficulties, fostering success, and nurturing essential mathematical skills crucial for their future educational and professional journeys. The availability of additional assistance and resources through SIM has significantly simplified the process for educators to facilitate comprehensive learning experiences.

The evaluation of the academic accomplishments of Grade 11 learners studying general mathematics in private institutions holds paramount importance. It represents a pivotal stride towards ensuring the delivery of high-quality education mandated by the state. By conducting an in-depth examination of the performance of Grade 11 learners in General Mathematics within private schools in the College of Sciences, Technology and Communications, Inc., (CSTC) this study aspires to bridge the existing educational gap in the region.

The primary objective of this research is to contribute to developing Supplemental Instructional Materials designed to elevate the teaching and learning of Mathematics. This endeavor involves a thorough investigation into the current state of the learners, identifying their strengths, recognizing areas that require improvement, and pinpointing specific aspects that demand refinement. The overarching aim aligns with the broader goal of enhancing the overall quality of education and improving student outcomes in the private school at College of Sciences, Technology and Communications, Inc., (CSTC) Quezon Province, Philippines.

By undertaking this study, the researcher creates targeted intervention materials that address the learners' immediate educational needs and pave the way for sustained improvement. The rationale behind developing SIM is rooted in the commitment to understand, support, and enhances the educational experiences of Grade 11 learners in all College of Sciences, Technology and Communications, Inc., (CSTC) campuses.

Research Questions

This research aimed to determine the performance in General Mathematics of Grade 11 learners in College of Sciences, Technology and Communications, Inc., (CSTC) as basis for the development of Supplemental Instructional Materials (SIM).

It also sought to answer the following problems:

1. What are the least mastered competencies in General Mathematics of Grade 11 learners in College of Sciences, Technology and Communications, Inc., (CSTC) for the last five school years?
2. What are the difficulties encountered by the Grade 11 learners in learning competencies in General Mathematics in terms of:
   2.1 Accurately construct mathematical models to represent real-life situations using
   functions;
   2.2 Accurately formulate and solve real-life problems involving rational functions; and
   2.3 Apply the concepts of inverse functions, exponential functions, and logarithmic
   functions to formulate and solve real-life problems with precision and accuracy?
3. What Supplemental Instructional Materials (SIM) can be developed based on the least mastered competencies and difficulties encountered?
4. What is the validity of Supplemental Instructional Materials (SIM) in terms of:
   4.1 Content;
   4.2 Equity and Accessibility;
   4.3 Assessment;
   4.4 Presentation and Organization;
   4.5 Instructional Design and Support; and
   4.6 Replicability?
5. What are the recommendations given by the validators to improve the output and address the students' performance on the least mastered competencies in General Mathematics?
6. What enhancements in the developed Supplemental Instructional Materials (SIM) should be included as recommended by the validators?

METHODOLOGY

This chapter elucidated the methodologies and protocols that enable the researcher to carry out the study effectively. This chapter focused on various aspects of the research study, including the research design, research locale, research population and sampling, research instrument, data gathering procedure, and statistical treatment.

Research Design

This study employed a mixed-method approach, integrating both qualitative and quantitative methods for data collection and analysis to comprehensively understand students' experiences with difficulties in general mathematics (Creswell & Creswell, 2017). This mixed-methods design is preferred for its ability to provide a more nuanced and holistic perspective than relying solely on one method.

Concurrently, the quantitative component utilizes a survey to systematically analyze the validity of Supplemental Instructional Materials (SIM) for General Mathematics. This survey instrument collects quantitative data through standardized questions, enabling statistical analysis and comparison of results across a larger sample of respondents (Creswell & Creswell, 2017). The quantitative data gathered through the survey complements the in-depth qualitative exploration, providing statistical insights that reinforce and broaden the understanding of the research questions and allowing for identifying trends and patterns among participants. The researcher adopted a descriptive research design with a quantitative approach to data collection. According to Neuman (2020), a descriptive research design will be employed when the study focuses on the present condition and aims to discover new truths. It was beneficial when the data to be collected pertains to the current situation, providing factual information and emphasizing the most critical aspects to be reported.

Moreover, the descriptive research method was selected for this study due to its applicability to the research's nature. This method is believed to be the most effective in obtaining comprehensive information about the performance in General Mathematics of Grade 11 learners and identifying the least mastered competencies in College of Sciences, Technology and Communications, Inc., (CSTC).

The quantitative approach provided a structured framework for the study, enabling the researcher to systematically analyze and present the data. It was allowed for a detailed examination of learners' performance in General Mathematics and identifies specific areas needing improvement to inform the development of tailored SIM.

Research Locale

This study was conducted in the Province of Quezon, situated in the southern part of Luzon, the Philippines' largest island, and holds a prominent place in the country's geography and history. As one of the key provinces in the CALABARZON region, Quezon is recognized for its diverse landscapes, rich cultural heritage, and economic significance. Bordered by the provinces of Aurora to the north, Camarines Norte and Camarines Sur

to the east, and Batangas to the west, Quezon Province is uniquely positioned to contribute to the nation's cultural and economic tapestry.

One of the striking features of Quezon is its expansive coastal areas along the western coast, facing the South China Sea. This coastal region is not only a source of livelihood for many of its residents, particularly in the fishing industry, but it also offers picturesque beaches and scenic spots that attract tourists. The province is also characterized by lush forests, rolling hills, and agricultural landscapes. These diverse geographical features and tropical climates contribute to the province's agricultural productivity. Quezon is known for producing various farm products, including coconut, rice, corn, and fruit crops, contributing significantly to the country's agricultural sector.

Furthermore, Quezon Province boasts a rich cultural heritage, with a fusion of influences from its history of colonization and interactions with indigenous communities. The province is home to ethnic groups with traditions and practices. This cultural diversity is reflected in the local cuisine, festivals, and art, making Quezon a vibrant hub for artistic exploration. The Niyugyugan Festival, for example, celebrates the province's deep connection to coconuts and showcases various cultural performances and exhibits.

The private school included in the study is the College of Sciences, Technology and Communications, Inc., (CSTC) in Atimonan, Lucena, and Sariaya Campuses., and were selected as research sites due to their diverse characteristics and solid educational contributions to the institutions. Each institution offers a unique perspective on the research area, making it a suitable choice for gathering comprehensive data.

The selection of these schools is driven by the significance of assessing the performance in General Mathematics of Grade 11 learners. Moreover, developing tailored Supplemental Instructional Materials (SIM) for the specific needs of the district's learners is a critical aim. The research locale provides a valuable context for understanding the educational landscape in the area. It enhances mathematics education for the learners in Atimonan, Lucena, and Sariaya Quezon Province, Philippines.

Population and Sampling

The research was focused on the Grade 11 learners in General Mathematics from private school in CSTC Atimonan, Lucena, and Sariaya Campuses Quezon Province, Philippines. The research population consists of these specific learners essential to cater to the study's objectives.

The study population is one thousand one hundred seventy-five (1,175) Grade 11 learners from different campuses of CSTC. Using a stratified random sampling, two hundred ninety (290) were selected as the sample for this research to determine the difficulties experienced in general mathematics. Stratified random sampling involves dividing a population into school subgroups, selecting random samples from each subgroup, and combining them to create a representative sample, ensuring that each subset is represented enrolled in the private schools within the Atimonan, Lucena, and Sariaya Districts. The selected sample size is representative and manageable for data collection and analysis.

The inclusion criteria for the sample include Grade 11 learners currently enrolled in the CSTC Campuses and those taking the General Mathematics subject. Conversely, learners were not enrolled in private schools, and those not taking the General Mathematics subject are excluded from the study.

The Population of the Study

CSTC Campuses	The population of Grade 11 Learners	Percentage	Sample Size
Atimonan Campus	182	16	45
Lucena Campus	249	21	61
Sariaya Campus	744	63	184
	N = 1,175	**100**	**n = 290**

Moreover, the study's population comprises seven (7) qualified educators specializing in Mathematics, including Master Teachers, Mathematics Department Heads, and Regular Mathematics Teachers with expertise in Mathematics education. The purposive sampling method was selected representatives from each category, ensuring diversity in educational levels and school contexts. The validators are Master Teachers specializing in Mathematics from various schools. Department heads overseeing mathematics departments was purposefully chosen to provide administrative perspectives and regular mathematics teachers from secondary levels was sampled to capture a broad range of experiences. This targeted approach aims to gather insights from validators with the requisite expertise to assess the Enhancements of Supplemental Instructional Materials (SIM) validity.

Research Instrument

The primary research instrument utilized for this study is a Teacher-Constructed for Trend Analysis Data Retrieval and Secondary Data Analysis of five (5) five-year Item Analysis results to comprehensively evaluate the least mastered competencies of learners in General Mathematics of Grade 11 learners. A meticulous validation process has been employed to ensure the Item Analysis's validity and reliability.

It is important to emphasize that Trend Analysis Data Retrieval was used as a data for assessing the least mastered competencies. The number of hours allotted for a single quarter, as outlined in the curriculum guide, plays a pivotal role in shaping the test's structure and content. Each standard within the curriculum guide dictates the allocation of items in the examination, ensuring a thorough and competency-based assessment.

The second section focuses on capturing the diverse difficulties faced by Grade 11 learners in General Mathematics at College of Sciences, Technology and Communications, Inc., (CSTC) closed-ended questions encourage students to articulate

specific difficulties encountered and how these difficulties impact their overall learning experiences.

In the third section, learners are invited to contribute to developing potential Supplemental Instructional Materials (SIM) by suggesting additional learning materials or resources they believe would aid in overcoming the identified difficulties in General Mathematics. This section also seeks insights into the type of support or SIM deemed most effective by the students. By incorporating the learners' perspectives, this section enriches the study with valuable qualitative data, providing a basis for proposing targeted SIM that aligns with the students' perceived needs and preferences.

Five-point Likert Rating Scale Interpretation

Scale	Range Interval	Verbal Interpretation	Qualitative Description
5	4.20 – 5.00	Always Encountered (AE)	Learners are consistently encountered in their learning competencies in General Mathematics. They always encountered difficulties that lead to least mastered competencies of Grade 11 learners.
4	3.40 – 4.19	Often Encountered (OE)	Learners are regularly encountered in their learning competencies in General Mathematics. They often encountered difficulties that lead to least mastered competencies of Grade 11 learners.
3	2.60 – 3.39	Sometimes Encountered (SE)	Learners are frequently encountered in their learning competencies in General Mathematics. They sometimes encountered difficulties that lead to least mastered competencies of Grade 11 learners.
2	1.80 – 2.59	Rarely Encountered (RE)	Learners are seldom encountered in their learning competencies in General Mathematics. They rarely encountered difficulties that lead to least mastered competencies of Grade 11 learners.
1	1.00 – 1.79	Never Encountered (NE)	Learners are least encountered in their learning competencies in General Mathematics. They never encountered difficulties that lead to least mastered competencies of Grade 11 learners.

Data Gathering Procedures

The data-gathering procedure for this study unfolds through a systematic process encompassing various stages. First and foremost, identifying the least mastered competencies in General Mathematics among Grade 11 learners is initiated. This involves meticulously examining academic records, assessments, and teacher feedback spanning the last five years. Subsequently, a structured survey was administered to quantitatively assess the difficulties experienced by Grade 11 learners. The survey covers various aspects, including conceptual difficulties, problem-solving difficulties, and motivational or anxiety-related obstacles.

Following identifying difficulties, the study proposes Supplemental Instructional Materials (SIM). Collaborative efforts with educational experts, curriculum developers,

and Mathematics teachers aim to align these proposed materials with the identified least mastered competencies and the overall curriculum. Subsequently, the study shifted its focus to the validation of SIM validity. A comprehensive questionnaire and rating scale were crafted to assess the proposed SIM's validity, with a panel of Mathematics experts, including Master Teachers, Department Heads, and Regular Mathematics teachers serving as validators. This validation process scrutinizes content alignment, equity, accessibility, assessment effectiveness, presentation, organization clarity, instructional design, and support suitability.

Upon the completion of data collection, a robust analysis ensues, combining both quantitative and qualitative methods. Survey responses are quantitatively analyzed using statistical tools to discern trends and patterns in difficulties experienced by Grade 11 learners. Simultaneously, focus group discussions and expert feedback were qualitatively analyzed to glean in-depth insights into the nature of problems and the validity of the proposed SIM. This triangulation of data sources enhances the reliability and validity of the study's findings. The culminating step involves compiling the gathered data, analyzing the results, and meticulously documenting the comprehensive findings in a detailed research report. The report unequivocally presents the identified least mastered competencies, the spectrum of difficulties experienced by learners, the proposed SIM, and the results of the validity assessment across various dimensions.

Statistical Treatment of Data

The Teacher-Constructed Trend Analysis Data Retrieval results are conveyed to data users using Mean Percentage Scores (MPS) and descriptive equivalent for data utilization to create Supplemental Instructional Materials (SIM). Specified below is the mastery level:

Legend	Descriptive Equivalent
96% - 100%	Mastered
86% - 95%	Closely Approaching Mastery
66% - 85%	Moving Towards Mastery
35% - 65%	Average
15% - 34%	Low
5% - 14%	Very Low
0% - 4%	Absolutely No Mastery

For the validity assessment of the proposed SIM, a response from the panel of validators was quantitatively analyzed. The weighted mean was employed to summarize the ratings on content alignment, equity, accessibility, assessment effectiveness, presentation and organization clarity, instructional design and support suitability, and replicability.

Likert Scale for the Evaluation Criterion for SIM Validation

Mean Interval	Verbal Interpretation
4.20 – 5.00	Outstanding (O)
3.40 – 4.19	Very Satisfactory (VS)
2.60 – 3.39	Satisfactory (S)
1.80 – 2.59	Less Satisfactory (LS)
1.00 – 1.79	Unsatisfactory (U)

RESULTS

Part I. The Least Mastered Competencies in General Mathematics of Grade 11 Learners in College of Sciences, Technology and Communications, Inc., (CSTC).

Table 1

The Least Mastered Competencies in General Mathematics across Academic Years of 2019-2020 to 2023-2024.

Most Essential Learning Competencies with K to 12 Curriculum Guide Code	Mean Percentage Score	Descriptive Equivalent	School Year
Solve exponential equations and inequalities. **(M11GM-Ie-f-1)**	30	Low	2023-2024
Represent real-life situations using functions, including piece-wise functions. **(M11GM-Ia-1)**	24	Low	2023-2024
Solve problems involving functions. **(M11GM-Ia-4)**	18	Low	2023-2024
Solve rational equations and inequalities. **(M11GM-Ib-3)**	21	Low	2023-2024
Find the domain, and range of a logarithmic function. **(M11GM-Ii-3)**	21	Low	2023-2024
Solve exponential equations and inequalities. **(M11GM-Ie-f-1)**	12	Very Low	2022-2023
Solve problems involving logarithmic functions, equations, and inequalities. **(M11GM-Ij-2)**	12	Very Low	2022-2023
Solve rational equations and inequalities. **(M11GM-Ib-3)**	15	Low	2022-2023
Determines the intercepts, zeroes and asymptotes of a logarithmic function. **(M11GM-Ii-4)**	15	Low	2022-2023
Solve logarithmic equations and inequalities. **(M11GM-Ih-i-1)**	27	Low	2022-2023
Solve rational equations and inequalities. **(M11GM-Ib-3)**	6	Very Low	2021-2022
Solves exponential equations and inequalities. **(M11GM-Ie-f-1)**	6	Very Low	2021-2022
Solve problems involving exponential functions, equations, and inequalities. **(M11GM-Ig-2)**	9	Very Low	2021-2022
Find the domain, and range of an inverse function. **(M11GM-Id-4)**	12	Very Low	2021-2022
Solve logarithmic equations and inequalities. **(M11GM-Ih-i-1)**	36	Average	2021-2022
Solve problems involving exponential functions, equations, and inequalities. **(M11GM-Ig-2)**	16	Low	2020-2021
Solve problems involving inverse functions. **(M11GM-Ie-2)**	14	Very Low	2020-2021
Solves exponential equations and inequalities. **(M11GM-Ie-f-1)**	14	Very Low	2020-2021
Determines the intercepts, zeroes and asymptotes of an exponential function. **(M11GM-If-4)**	14	Very Low	2020-2021
Solves problems involving exponential functions, equations, and inequalities. **(M11GM-Ij-2)**	27	Low	2020-2021
Solve problems involving inverse functions. **(M11GM-Ie-2)**	3	Absolutely No Mastery	2019-2020
Solve problems involving exponential functions, equations, and inequalities. **(M11GM-Ig-2)**	3	Absolutely No Mastery	2019-2020
Performs addition, subtraction, multiplication, division, and composition of functions. **(M11GM-Ia-3)**	9	Very Low	2019-2020
Solves problems involving functions. **(M11GM-Ia-4)**	9	Very Low	2019-2020
Solve rational equations and inequalities. **(M11GM-Ib-3)**	6	Very Low	2019-2020

Across several academic years, the analysis of students' performance in General Mathematics reveals consistent difficulties in mastering specific competencies. Notably, competencies related to solving equations and inequalities, spanning exponential, rational, and logarithmic functions, persistently exhibit low mastery levels. These

findings suggest potential gaps in the teaching methods or coverage of these topics within the curriculum. Despite variations across years, competencies involving functions, such as representation and problem-solving, also demonstrate relatively low mastery levels. However, there are discernible trends of improvement in certain areas over time, particularly in competencies related to solving exponential equations and inequalities.

The recurring difficulties in mastering competencies involving equations and inequalities underscore the importance of addressing these topics with a more targeted instructional approach. Educators may need to adopt differentiated teaching strategies that cater to the diverse learning needs and paces of students. Incorporating real-life applications and hands-on activities can enhance student engagement and deepen their understanding of abstract mathematical concepts, particularly those related to exponential and logarithmic functions, which may pose higher cognitive demands. By breaking down complex concepts into smaller, more manageable parts, educators can scaffold instruction to facilitate better comprehension and retention among students.

To address these difficulties effectively, a multifaceted approach is necessary. This approach encompasses ongoing professional development for teachers, regular formative assessments coupled with constructive feedback mechanisms, and periodic review and alignment of the curriculum with learning outcomes. Professional development workshops can equip teachers with effective methodologies for teaching complex mathematical topics, while collaborative lesson planning sessions enable the sharing of best practices and innovative teaching strategies. Additionally, integrating interdisciplinary connections and real-world applications into the curriculum can enhance the relevance and applicability of mathematical concepts for students, ultimately fostering deeper understanding and higher mastery levels over time.

Table 2

The Least Mastered Competencies in General Mathematics of Grade 11 Learners in College of Sciences, Technology and Communications, Inc. (CSTC) for the Last Five School Years.

Quarter	Performance Standards	Identified Most Trend of Least Mastered Competencies in General Mathematics in First Quarter (SY: 2019-2020 to 2023-2024)
	Accurately construct mathematical models to represent real-life situations using functions.	Represents real-life situations using functions, including piece-wise functions. **(M11GM-Ia-1)**
		Performs addition, subtraction, multiplication, division, and composition of functions. **(M11GM-Ia-3)**
		Solve problems involving functions. **(M11GM-Ia-4)**
	Accurately formulate and solve real-life problems involving rational functions.	Solves rational equations and inequalities. **(M11GM-Ib-3)**
		Solves problems involving rational functions, equations, and inequalities. **(M11GM-Ic-3)**

Q1		Solves problems involving inverse functions. **(M11GM-Ie-2)**
	Apply the concepts of inverse functions, exponential functions, and logarithmic functions to formulate and solve real-life problems with precision and accuracy.	Solves exponential equations and inequalities. **(M11GM-Ie-f-1)**
		Solves problems involving exponential functions, equations, and inequalities. **(M11GM-Ig-2)**
		Solves problems involving logarithmic functions, equations, and inequalities. **(M11GM-Ij-2)**

The table presents the least mastered competencies in General Mathematics among Grade 11 learners at College of Sciences, Technology and Communications, Inc., (CSTC) over the last five (5) school years. The competencies are categorized based on specific performance standards, focusing on mathematical modeling, functions, rational equations, inverse functions, exponential functions, and logarithmic functions. Among these competencies, Grade 11 learners struggle the most with accurately constructing mathematical models to represent real-life situations using functions (M11GM-Ia-1). Additionally, they face difficulties in performing operations and solving problems involving functions (M11GM-Ia-3 and M11GM-Ia-4) and solving rational equations and inequalities (M11GM-Ib-3). Furthermore, difficulties arise in formulating and solving real-life problems involving rational functions (M11GM-Ic-3) and inverse functions (M11GM-Ie-2). Moreover, learners encounter obstacles in applying concepts related to exponential functions (M11GM-Ie-f-1 and M11GM-Ig-2) and logarithmic functions (M11GM-Ij-2) to solve real-life problems.

The identified competencies reflect areas where Grade 11 learners at College of Sciences, Technology and Communications, Inc., (CSTC) encounter difficulties in General Mathematics. These difficulties span various aspects of mathematical modeling, functions, and problem-solving techniques. The consistent trend of least mastered competencies over the past five years suggests persistent areas of weakness that require targeted interventions and instructional strategies. Applying mathematical concepts to real-life situations is crucial for developing practical problem-solving skills, and addressing these difficulties is essential for enhancing students' mathematical proficiency and overall academic achievement in General Mathematics.

The findings regarding the least mastered competencies in General Mathematics have several implications for curriculum development, instructional design, and educational support services. Educators should prioritize these areas of weakness in their teaching practices, employing differentiated instruction and scaffolding techniques to cater to diverse learning needs. Curriculum designers should revisit the sequencing and depth of coverage of mathematical topics to ensure sufficient mastery and understanding among students. Additionally, providing remedial support, supplementary resources, and targeted interventions can help address individual learning gaps and enhance students' proficiency in the identified competencies. Collaborative efforts

among teachers, administrators, and educational stakeholders are essential to implement effective strategies that support student learning and promote success in General Mathematics at College of Sciences, Technology, and Communications, Inc., (CSTC).

The results highlight the least mastered competencies in General Mathematics among Grade 11 learners at College of Sciences, Technology and Communications, Inc., (CSTC) over the past five years. Specifically, students face difficulties in accurately constructing mathematical models to represent real-life situations using functions, indicating a struggle with practical application and mathematical modeling (Anderson et al., 2018). Moreover, difficulties arise in performing operations and solving problems involving functions and rational equations, suggesting gaps in foundational understanding and problem-solving skills (Thompson & Silverman, 2022). The findings also underscore obstacles in formulating and solving real-life problems involving rational functions and inverse functions, emphasizing the need for improved comprehension and application of these concepts (Oppenheim & Schafer, 2013; Stewart, 2015).

Furthermore, Grade 11 learners encountered difficulties in applying concepts related to exponential and logarithmic functions to solve real-life problems, reflecting challenges in understanding the practical applications of these mathematical concepts (Nelson et al., 2019). Addressing these persistent areas of weakness is crucial for enhancing students' mathematical proficiency and overall academic achievement in General Mathematics, emphasizing the importance of targeted interventions and instructional strategies (Alzubi, 2021).

The implications of these findings extend to curriculum development, instructional design, and educational support services at College of Sciences, Technology and Communications, Inc., (CSTC). Educators should prioritize these areas of weakness in their teaching practices, employing differentiated instruction and scaffolding techniques to cater to diverse learning needs (Bastida, 2020; Lim, 2017). Curriculum designers should revisit the sequencing and depth of coverage of mathematical topics to ensure sufficient mastery and understanding among students, aligning with the identified competencies (Santos, 2023; de Leon, 2019). Additionally, providing remedial support, supplementary resources, and targeted interventions can help address individual learning gaps and enhance students' proficiency in the identified competencies, emphasizing the importance of collaborative efforts among educational stakeholders (Thompson & Silverman, 2022).

Part II. Difficulties Encountered by the Grade 11 Learners in Learning Competencies in General Mathematics.

Table 3

Difficulties Encountered by the Grade 11 Learners in Learning Competencies in General Mathematics in Terms of Accurately Constructing Mathematical Models to Represent Real-Life Situations Using Functions.

	Indicators	5	4	3	2	1	Mean	Verbal Interpretation	Rank
1.	I found difficulty in identifying relevant variables and parameters to construct mathematical models for real-life situations.	190	78	15	3	4	4.54	AE	1
2.	I found difficulty in selecting appropriate functions to model various relationships observed in real-life scenarios.	181	55	45	5	4	4.39	AE	4
3.	I found difficulty in interpreting and translating real-world data into mathematical language.	200	48	36	5	1	4.52	AE	2
4.	I found difficulty in understanding of how to adjust and refine mathematical models based on feedback or new information from real-life situations.	125	100	44	11	10	4.10	OE	5
5.	I found difficulty in simplifying complex real-life situations to have accurate mathematical models.	198	50	32	8	2	4.50	AE	3
				Composite Mean			**4.41**	**AE**	

Legend:

4.20 - 5.00	*Always Encountered (AE)*
3.40 - 4.19	*Often Encountered (OE)*
2.60 - 3.39	*Sometimes Encountered (SE)*
1.80 - 2.59	*Rarely Encountered (RE)*
1.00 - 1.79	*Never Encountered (NE)*

The table provides insights into the difficulties encountered by Grade 11 learners in learning competencies related to accurately constructing mathematical models to represent real-life situations using functions in General Mathematics. The difficulties are categorized into five specific areas. The most consistently encountered challenge, with a mean score of 4.54, is identifying relevant variables and parameters to construct

mathematical models for real-life situations. Learners often struggle with this fundamental aspect of mathematical modeling, indicating a potential obstacle to understanding. Additionally, learners face difficulties in interpreting and translating real-world data into mathematical language (mean score: 4.52) and simplifying complex real-life situations to develop accurate mathematical models (mean score: 4.50). Selecting appropriate functions to model various types of relationships observed in real-life scenarios is another common challenge, although slightly less pronounced (mean score: 4.39). Understanding how to adjust and refine mathematical models based on feedback or new information from real-life situations appears to be the least difficult. However, it still presents a notable challenge for learners (mean score: 4.10).

The identified difficulties shed light on areas where Grade 11 learners struggle in learning competencies related to mathematical modeling in General Mathematics. These difficulties include identifying relevant variables, selecting appropriate functions, interpreting real-world data, simplifying complex situations, and refining mathematical models based on feedback. The consistently high scores across all difficulties suggest that learners encounter potential obstacles in accurately applying mathematical concepts to real-life contexts. Addressing these difficulties requires targeted instructional strategies and support mechanisms to enhance students' understanding and proficiency in mathematical modeling.

The findings regarding the difficulties encountered by Grade 11 learners in learning competencies in General Mathematics have implications for curriculum development, instructional practices, and student support services. Educators should design learning experiences that provide ample opportunities for students to practice identifying variables, selecting functions, interpreting data, simplifying situations, and refining models in real-life contexts. Instructional approaches should be scaffolded and differentiated to accommodate diverse learning needs and facilitate deeper conceptual understanding. Additionally, providing feedback and opportunities for reflection can help students develop metacognitive skills and refine their problem-solving strategies. Collaborative efforts among teachers, administrators, and educational stakeholders are essential to implement effective strategies that address the identified difficulties and support student learning and success in General Mathematics.

The findings provide insights into the difficulties faced by Grade 11 learners in mastering competencies related to accurately constructing mathematical models for real-life situations using functions in General Mathematics. These difficulties are categorized into five specific areas, with the most consistently encountered challenge being the identification of relevant variables and parameters for constructing mathematical models, indicating a fundamental obstacle to understanding (Anderson et al., 2018). Learners also struggle with interpreting real-world data into mathematical language and simplifying complex situations to develop accurate models, highlighting the complexity of translating real-life scenarios into mathematical representations (Thompson & Silverman, 2022). Selecting appropriate functions to model various relationships observed in real-life scenarios is another common challenge, albeit slightly less pronounced. Additionally, understanding how to adjust and refine mathematical

models based on feedback or new information from real-life situations presents a notable challenge for learners, indicating a need for improved metacognitive skills and problem-solving strategies (Oppenheim & Schafer, 2013; Stewart, 2015).

These identified difficulties shed light on areas where Grade 11 learners encounter obstacles in learning competencies related to mathematical modeling in General Mathematics. The consistently high scores across all difficulties suggest significant challenges in accurately applying mathematical concepts to real-life contexts, emphasizing the need for targeted instructional strategies and support mechanisms (Nelson et al., 2019). Addressing these challenges requires curriculum development that provides ample opportunities for students to practice and apply mathematical modeling skills in authentic contexts, supported by scaffolded and differentiated instructional approaches (Alzubi, 2021). Additionally, providing feedback and opportunities for reflection can help students develop metacognitive skills and refine their problem-solving strategies, ultimately promoting deeper conceptual understanding and proficiency in General Mathematics (Bastida, 2020; Lim, 2017). Collaborative efforts among educators, administrators, and stakeholders are essential to implement effective strategies that support student learning and success in General Mathematics at College of Sciences, Technology and Communications, Inc., (CSTC).

Table 4

Difficulties Encountered by the Grade 11 Learners in Learning Competencies in General Mathematics in Terms of Accurately Formulating and Solving Real-Life Problems Involving Rational Functions.

Indicators	5	4	3	2	1	Mean	Verbal Interpretation	Rank
1. I found difficulty in identifying and interpreting rational functions within real-life contexts.	124	59	60	25	22	3.82	OE	4
2. I found difficulty in understanding the behavior of rational functions, such as asymptotes and intercepts, and applying this knowledge to solve real-life problems accurately.	125	76	55	23	11	3.97	OE	5
3. I found difficulty in discerning when to use rational functions to model real-life phenomena versus other functions.	120	95	45	18	12	4.01	OE	3
4. I found difficulty in proficiency in manipulating rational expressions and equations.	187	46	32	14	11	4.32	AE	2
5. I found difficulty in Analyzing of restrictions on variables when	200	33	32	14	11	4.37	AE	1

formulating and solving real-life problems involving rational functions.			
	Composite Mean	**4.10**	**OE**

Legend:

4.20 - 5.00	*Always Encountered (AE)*
3.40 - 4.19	*Often Encountered (OE)*
2.60 - 3.39	*Sometimes Encountered (SE)*
1.80 - 2.59	*Rarely Encountered (RE)*
1.00 - 1.79	*Never Encountered (NE)*

The table presents the difficulties encountered by Grade 11 learners in learning competencies related to accurately formulating and solving real-life problems involving rational functions in General Mathematics. These difficulties are categorized into five specific areas. The most frequently encountered challenge, with a mean score of 4.37, is analyzing restrictions on variables when formulating and solving real-life problems involving rational functions. Learners consistently struggle with understanding and applying restrictions on variables in the context of rational functions. Proficiency in manipulating rational expressions and equations is another common difficulty, with a mean score of 4.32, indicating difficulties in working with rational functions. Discerning when to use rational functions to model real-life phenomena versus other functions presents another notable challenge, with a mean score of 4.01. Learners also encounter difficulties understanding the behavior of rational functions and identifying them within real-life contexts, with mean scores of 3.97 and 3.82, respectively.

The identified difficulties highlight areas where Grade 11 learners struggle to accurately formulate and solve real-life problems involving rational functions in General Mathematics. These difficulties include identifying and interpreting rational functions, understanding their behavior, discerning when to use them, manipulating expressions and equations, and analyzing restrictions on variables. The consistently high scores across all difficulties suggest that learners face potential obstacles in effectively applying rational functions to real-life scenarios. Addressing these difficulties requires targeted instructional strategies, differentiated support, and opportunities for practice and reinforcement.

The findings regarding the difficulties encountered by Grade 11 learners in learning competencies related to rational functions in General Mathematics have implications for curriculum design, instructional practices, and student support services. Educators should develop learning experiences that allow students to explore rational functions in various real-life contexts, emphasizing the interpretation of restrictions on variables and the manipulation of expressions and equations. Instructional approaches should be tailored to address the specific needs and difficulties identified in the table, incorporating scaffolding, modeling, and guided practice to support student learning. Additionally, providing feedback, formative assessments, and targeted interventions can help students develop proficiency and confidence in formulating and solving real-life problems involving rational functions. Collaborative efforts among teachers,

administrators, and educational stakeholders are essential to implement effective strategies that address the identified difficulties and promote student success in General Mathematics.

The findings present the difficulties Grade 11 learners face in mastering competencies related to accurately formulating and solving real-life problems involving rational functions in General Mathematics. These difficulties are categorized into five specific areas, with the most prevalent challenge being the analysis of restrictions on variables, indicating a consistent struggle to understand and apply restrictions within the context of rational functions (Thompson & Silverman, 2022). Another common difficulty is proficiency in manipulating rational expressions and equations, highlighting difficulties in working with these mathematical constructs effectively (Oppenheim & Schafer, 2013; Stewart, 2015). Additionally, discerning when to use rational functions to model real-life phenomena versus other functions presents a notable challenge, indicating a need for improved conceptual understanding and application skills (Nelson et al., 2019). Learners also encounter obstacles in understanding the behavior of rational functions and identifying them within real-life contexts, suggesting a need for enhanced comprehension and application of these mathematical concepts (Alzubi, 2021).

These identified difficulties underscore areas where Grade 11 learners struggle to accurately formulate and solve real-life problems involving rational functions in General Mathematics. To address these difficulties, educators should develop learning experiences that allow students to explore rational functions in various contexts, emphasizing the interpretation of restrictions on variables and the manipulation of expressions and equations (Bastida, 2020; Lim, 2017). Instructional approaches should be tailored to meet the specific needs identified in the findings, incorporating scaffolded instruction, modeling, and guided practice to support student learning (De Guzman, 2018). Additionally, providing feedback, formative assessments, and targeted interventions can help students develop proficiency and confidence in applying rational functions to real-life scenarios, ultimately promoting deeper conceptual understanding and mastery (Santos, 2023; de Leon, 2019). Collaborative efforts among educators, administrators, and stakeholders are essential to implement effective strategies that address the identified difficulties and foster student success in General Mathematics at College of Sciences, Technology and Communications, Inc., (CSTC).

Table 5

Difficulties Encountered by the Grade 11 Learners in Learning Competencies in General Mathematics in Terms of Applying the Concepts of Inverse Functions, Exponential Functions, and Logarithmic Functions to Formulate and Solve Real-Life Problems with Precision and Accuracy.

Indicators	5	4	3	2	1	Mean	Verbal Interpretation	Rank
1. I found difficulty in understanding the concept of inverse functions and their application in real-life situations.	123	78	45	24	20	3.90	OE	5
2. I found difficulty in recognizing and applying exponential and logarithmic functions appropriately to model real-life phenomena, resulting in inaccuracies.	189	45	24	12	20	4.28	AE	4
3. I found difficulty in interpreting exponential growth and decay rates, as well as logarithmic scales, within real-world problems.	175	76	21	14	4	4.39	AE	2
4. I found difficulty in proficiency in solving equations involving exponential and logarithmic functions accurately.	214	28	20	15	13	4.43	AE	1
5. I found difficulty in analyzing of the connection between exponential growth/decay and logarithmic functions when formulating and solving real-life problems, leading to conceptual misunderstandings.	189	47	35	12	7	4.38	AE	3
Composite Mean						**4.28**	**AE**	

Legend:

4.20 - 5.00	*Always Encountered (AE)*
3.40 - 4.19	*Often Encountered (OE)*
2.60 - 3.39	*Sometimes Encountered (SE)*
1.80 - 2.59	*Rarely Encountered (RE)*
1.00 - 1.79	*Never Encountered (NE)*

The table presents the difficulties encountered by Grade 11 learners in learning competencies related to applying the concepts of inverse functions, exponential functions, and logarithmic functions to formulate and solve real-life problems with precision and accuracy in General Mathematics. These difficulties are categorized into five specific areas. The most frequently encountered challenge, with a mean score of 4.43, is proficiency in accurately solving equations involving exponential and logarithmic functions. Learners struggle to solve equations in this context, indicating difficulties in applying mathematical techniques effectively. Interpreting exponential growth and decay rates, as well as logarithmic scales, within the context of real-world problems is

another common difficulty, with a mean score of 4.39. Learners also face difficulties in analyzing the connection between exponential growth/decay and logarithmic functions when formulating and solving real-life problems, resulting in conceptual misunderstandings (mean score: 4.38). Recognizing and applying exponential and logarithmic functions appropriately to model real-life phenomena without resulting inaccuracies presents another notable challenge (mean score: 4.28). Understanding the concept of inverse functions and their application in real-life situations is also identified as a difficulty, although slightly less pronounced (mean score: 3.90).

The identified difficulties highlight specific areas where Grade 11 learners struggle in applying concepts related to inverse functions, exponential functions, and logarithmic functions to real-life problems in General Mathematics. These difficulties include solving equations accurately, interpreting growth and decay rates, analyzing connections between functions, and recognizing appropriate applications in real-world contexts. The consistently high scores across all difficulties suggest that learners face potential obstacles in mastering and applying these concepts with precision and accuracy. Addressing these difficulties requires targeted instructional strategies, differentiated support, and opportunities for practice and reinforcement.

The findings regarding the difficulties encountered by Grade 11 learners in learning competencies related to inverse functions, exponential functions, and logarithmic functions in General Mathematics have implications for curriculum design, instructional practices, and student support services. Educators should develop learning experiences that allow students to explore these concepts in various real-life contexts, emphasizing problem-solving and critical-thinking skills. Instructional approaches should be tailored to address the specific needs and difficulties identified in the table, incorporating scaffolding, modeling, and guided practice to support student learning. Additionally, providing feedback, formative assessments, and targeted interventions can help students develop proficiency and confidence in applying these concepts accurately and effectively. Collaborative efforts among teachers, administrators, and educational stakeholders are essential to implement effective strategies that address the identified difficulties and promote student success in General Mathematics.

The findings elucidate the difficulties of Grade 11 learners encounter in mastering competencies related to applying concepts of inverse functions, exponential functions, and logarithmic functions to real-life problem-solving in General Mathematics. These difficulties are categorized into five specific areas, with the most prevalent challenge being proficiency in accurately solving equations involving exponential and logarithmic functions. Learners struggle to solve such equations effectively, indicating a need for enhanced mathematical techniques (Oppenheim & Schafer, 2013; Stewart, 2015). Additionally, interpreting exponential growth and decay rates, as well as logarithmic scales, within real-world problems, presents another common difficulty, highlighting challenges in applying these concepts in practical contexts (Anderson et al., 2018). Learners also face obstacles in analyzing the connection between exponential growth/decay and logarithmic functions, resulting in conceptual misunderstandings and inaccuracies in problem-solving (Thompson & Silverman, 2022). Recognizing and

applying exponential and logarithmic functions appropriately to model real-life phenomena without resulting inaccuracies presents another notable challenge, indicating a need for improved conceptual understanding and application skills (Nelson et al., 2019).

These identified difficulties underscore specific areas where Grade 11 learners struggle in applying concepts related to inverse functions, exponential functions, and logarithmic functions to real-life problems in General Mathematics. To address these challenges, educators should design learning experiences that allow students to explore these concepts in various contexts, emphasizing problem-solving and critical-thinking skills (Alzubi, 2021). Instructional approaches should be tailored to meet the specific needs and challenges identified, incorporating scaffolding, modeling, and guided practice to support student learning (Bastida, 2020; Lim, 2017). Additionally, providing feedback, formative assessments, and targeted interventions can help students develop proficiency and confidence in applying these concepts accurately and effectively, ultimately promoting deeper conceptual understanding and mastery (Santos, 2023; de Leon, 2019). Collaborative efforts among educators, administrators, and stakeholders are essential to implement effective strategies that address the identified difficulties and foster student success in General Mathematics.

Table 6

Summary Table of Difficulties Encountered by the Grade 11 Learners in Learning Competencies in General Mathematics in Terms of Performance Standards.

Performance Standards	Composite Mean	Verbal Interpretation	Rank
1. Accurately construct mathematical models to represent real-life situations using functions.	4.41	AE	1
2. Accurately formulate and solve real-life problems involving rational functions.	4.10	OE	3
3. Apply the concepts of inverse functions, exponential functions, and logarithmic functions to formulate and solve real-life problems with precision and accuracy.	4.28	AE	2
GRAND MEAN	**4.26**	**AE**	

Legend:

4.20 - 5.00	*Always Encountered (AE)*
3.40 - 4.19	*Often Encountered (OE)*
2.60 - 3.39	*Sometimes Encountered (SE)*
1.80 - 2.59	*Rarely Encountered (RE)*
1.00 - 1.79	*Never Encountered (NE)*

The table shows that Grade 11 learners encounter various difficulties in learning competencies in General Mathematics, particularly in three key areas: accurately constructing mathematical models using functions, formulating and solving real-life problems involving rational functions, and applying concepts of inverse, exponential, and logarithmic functions to real-life situations. Inaccurately constructing mathematical models using functions, learners consistently struggle, as indicated by the highest composite mean score of 4.41, corresponding to an "Always Encountered" rating. This

suggests that learners face potential difficulties in applying mathematical concepts to represent real-life scenarios, highlighting a need for further support and instruction in this area.

Similarly, learners encounter difficulties formulating and solving real-life problems involving rational functions, as reflected by a composite mean score of 4.10, corresponding to an "Often Encountered" rating. While this challenge is slightly less pronounced than constructing mathematical models, it still potential a notable difficulty for learners. Furthermore, applying inverse, exponential, and logarithmic function concepts to real-life situations presents another significant challenge, with a composite mean score of 4.28, also corresponding to an "Always Encountered" rating, which indicates that learners struggle to understand and apply advanced mathematical functions in practical contexts, highlighting a need for targeted intervention and support.

The findings suggest that Grade 11 learners in General Mathematics may benefit from focused instructional strategies and interventions to address these identified difficulties. Educators can help learners improve their mathematical proficiency and better prepare them for applying mathematical concepts in various real-life scenarios by providing targeted support and incorporating real-world applications into the curriculum.

The findings regarding the difficulties encountered by Grade 11 learners in General Mathematics closely aligns with the learning gaps identified in the literature review (Alzubi, 2021). Notably, students struggle with accurately constructing mathematical models using functions, reflecting a gap in understanding the complexities of mathematical modeling, mainly when applied to real-world scenarios. Similarly, difficulties in formulating and solving real-life problems involving rational functions and applying concepts of inverse, exponential, and logarithmic functions highlight gaps in comprehending these fundamental mathematical concepts' practical applications, hindering effective problem-solving skills in real-life contexts.

Furthermore, the difficulties encountered by Grade 11 learners underscore the need for a more holistic approach to teaching mathematics, integrating various mathematical concepts covered in the curriculum to help students better understand the connections between different topics. Additionally, addressing these difficulties requires ensuring equitable access to educational resources, as emphasized in the literature review. While valuable resources and textbooks are available, equitable access to these materials is essential to effectively bridge learning gaps and support all students' academic success in General Mathematics.

Part III. The Supplemental Instructional Materials (SIM) can be Developed based on the Least Mastered Competencies and Difficulties Encountered.

To effectively address the least mastered competencies and difficulties encountered by Grade 11 learners in General Mathematics, a supplemental approach involving the development of targeted Supplemental Instructional Materials (SIM) is

essential. The identified difficulties, ranging from mathematical modeling to problem-solving with exponential and logarithmic functions, underscore the need for tailored interventions that provide students with focused support.

One area of focus could be mathematical modeling, where learners struggle to identify relevant variables and parameters accurately. Interactive simulations or real-life scenarios could be developed to guide students through this process, offering step-by-step guidance and feedback to reinforce their understanding. Transitioning from mathematical modeling to function operations and problem-solving, students could benefit from interactive modules that contextualize functions within real-life scenarios, providing opportunities for hands-on application of their knowledge to solve practical problems.

Moving forward, particular attention could be directed toward rational functions, where students encounter difficulties in identifying, manipulating, and solving equations. Interactive tutorials or practice exercises could be designed to target these difficulties, offering clear explanations and visual aids to support student learning. These activities could involve problem-solving with real-life situations, such as modeling economic trends or population growth, to enhance the relevance and applicability of the taught concepts.

Additionally, exponential and logarithmic functions present another area of concern, particularly in interpreting growth rates and making connections between different functions. Interactive simulations or virtual labs could be developed to allow students to explore the behavior of exponential and logarithmic functions in real-life contexts, providing opportunities for hands-on experimentation and problem-solving.

SIMs could incorporate problem-solving strategies and formative assessment tools to consolidate understanding and foster problem-solving skills. These resources would empower students to confidently navigate complex mathematical problems, providing immediate feedback and guidance to address areas of weakness. By integrating these interventions seamlessly, educators can create a cohesive learning experience that addresses the diverse needs of Grade 11 learners in General Mathematics, ultimately promoting mastery and academic success in problem-solving with real-life situations.

Part IV. The Validity of Supplemental Instructional Materials (SIM).

Table 7

The Validity of Supplemental Instructional Materials (SIM) in terms of Content as validated by the SHS Master Teachers, Mathematics Department Heads, and Regular Mathematics Teachers.

	Indicators	Mean	Verbal Interpretation
1.	Material aligns with curriculum and standards and is current, valid, and reliable, with real-world examples.	4.57	O
2.	Material is age-appropriate and designed to meet individual learners' needs from various skill levels.	4.14	VS
3.	Material is in-depth, enhances conceptual understanding, and engages higher-order thinking skills.	3.86	VS
4.	Material is free from bias.	4.29	VS
	Total Score	**16.86**	**Passed**

Legend:

4.20 - 5.00	*Outstanding (O)*
3.40 - 4.19	*Very Satisfactory (VS)*
2.60 - 3.39	*Satisfactory (S)*
1.80 - 2.59	*Less Satisfactory (LS)*
1.00 - 1.79	*Unsatisfactory (U)*
12 - 20 as the total score	*Passed*

The table presents the Supplemental Instructional Materials (SIM) evaluation based on their content. Across the four focus areas, the materials demonstrate commendable strengths. The alignment with curriculum standards and relevance to real-world examples is particularly outstanding, as indicated by a mean score of 4.57. Additionally, the materials are deemed age-appropriate and accommodating to learners of varying skill levels, scoring 4.14, indicating a very satisfactory level. However, there are areas for improvement, such as the depth of content and its ability to foster higher-order thinking skills, which received a score of 3.86, falling slightly below the outstanding and very satisfactory benchmarks. Nevertheless, the materials are commendable bias-free, scoring 4.29, contributing to their overall quality. The materials have passed the evaluation with a total score of 16.86, reflecting their overall effectiveness.

The results suggest that the Supplemental Instructional Materials (SIM) is well-designed in terms of content, with strengths in their alignment with curriculum standards and relevance to real-world contexts. The high scores in these areas indicate that the materials effectively meet the educational validity and reliability criteria. However, the slightly lower score in depth of content and engagement of higher-order thinking skills indicates potential areas for enhancement. Despite this, the absence of bias is a notable positive aspect, ensuring that the materials provide equitable learning opportunities for all students. The overall passing score of 16.86 underscores the materials' effectiveness in meeting the evaluation criteria.

The analysis of the Supplemental Instructional Materials (SIM) underscores the importance of their alignment with curriculum standards and relevance to real-world contexts. These aspects contribute potential to their effectiveness in facilitating learning. However, the need to further deepen the content and foster higher-order thinking skills suggests potential areas for curriculum refinement and instructional strategies. Educators and curriculum developers can use these insights to make informed decisions about selecting and designing instructional materials, ensuring that they cater to the diverse needs of learners and promote equitable access to quality education. Additionally, the materials' passing score of 16.86 highlights their overall effectiveness, serving as a valuable resource for educators seeking evidence-based instructional materials for their classrooms.

The evaluation of the Supplemental Instructional Materials (SIM) reveals strengths and areas for improvement in their content. Notably, the materials excel in aligning with curriculum standards and providing real-world examples, indicating their relevance to students' educational needs and practical experiences. This alignment ensures that the materials meet educational validity and reliability criteria, fostering effective learning outcomes (Bastida, 2020; Lim, 2017). Furthermore, the SIM demonstrates age-appropriate content and accommodates learners of varying skill levels, enhancing their accessibility and usability in diverse educational settings. However, there is room for improvement in the depth of content and the promotion of higher-order thinking skills, suggesting opportunities for curriculum refinement and instructional strategies (Santos, 2023; de Leon, 2019).

Despite these areas for enhancement, the absence of bias within the materials is commendable, ensuring equitable learning opportunities for all students. This unbiased approach contributes to creating inclusive learning environments that support diverse learners' needs and experiences (Oppenheim & Schafer, 2013; Stewart, 2015). The overall passing score of 16.86 underscores the effectiveness of the SIM in meeting the evaluation criteria and serving as a valuable resource for educators. Educators and curriculum developers can utilize these insights to make informed decisions about selecting and designing instructional materials, thereby promoting equitable access to quality education for all students (Nelson et al., 2019).

Table 8

The validity of Supplemental Instructional Materials (SIM) in terms of Equity and Accessibility as validated by the SHS Master Teachers, Mathematics Department Heads, and Regular Mathematics Teachers.

	Indicators	Mean	Verbal Interpretation
1.	Material is durable, easily stored, transported, and universally accessible.	4.57	O
2.	Material is easily updated, adaptable, and customizable to match the resources of the school.	4.29	VS
3.	The material works appropriately without the purchase of additional components.	4.57	O
4.	All students can use material without extensive supervision or special assistance.	3.43	VS
	Total Score	**16.86**	**Passed**

Legend:

4.20 - 5.00	*Outstanding (O)*
3.40 - 4.19	*Very Satisfactory (VS)*
2.60 - 3.39	*Satisfactory (S)*
1.80 - 2.59	*Less Satisfactory (LS)*
1.00 - 1.79	*Unsatisfactory (U)*
12 - 20 as the total score	*Passed*

Supplemental Instructional Materials (SIM) evaluation in terms of equity and accessibility reveals notable strengths in several key areas. Firstly, the materials are lauded for their durability, ease of storage, and universal accessibility, earning an outstanding mean score of 4.57. Additionally, the materials' adaptability and compatibility with varying school resources contribute to their overall accessibility, reflected in a satisfactory score of 4.29. Furthermore, the requirement for minimal additional components enhances the materials' usability and practicality, resulting in another outstanding score of 4.57. However, while the materials generally enable independent student use, the score of 3.43 for the need for extensive supervision or special assistance suggests potential areas for improvement in ensuring equitable access for all students. With a total score of 16.86, the materials have passed the evaluation, affirming their effectiveness in promoting equity and accessibility.

The evaluation findings highlight the potential strides in ensuring equity and accessibility in Supplemental Instructional Materials (SIM). The outstanding scores in durability, universal accessibility, and minimal additional component requirements underscore the materials' practicality and user-friendliness, making them widely accessible across diverse educational settings. Moreover, the materials' adaptability and compatibility with varying school resources further enhance their accessibility and utility. However, the slightly lower score concerning the need for extensive supervision or special assistance suggests the importance of addressing potential barriers to ensure equitable access for all students, particularly those with diverse learning needs. The overall passing score of 16.86 confirms the materials' effectiveness in promoting equity and accessibility.

The evaluation results underscore the importance of designing and selecting instructional materials with equity and accessibility considerations in mind. The outstanding scores in several vital areas demonstrate potential progress, indicating that the Supplemental Instructional Materials (SIM) is well-suited for widespread use in diverse educational settings. However, the findings also highlight the need to address potential barriers, such as the requirement for extensive supervision or special assistance, to ensure that all students can fully benefit from the materials. Educators and curriculum developers can use these insights to prioritize equity and accessibility in designing and implementing instructional materials, thereby fostering inclusive learning environments where all students can thrive. Additionally, ongoing evaluation and refinement of materials are essential to continuously enhance their accessibility and effectiveness in meeting the diverse needs of learners.

The evaluation of Supplemental Instructional Materials (SIM) in terms of equity and accessibility aligns with existing research highlighting the importance of inclusive methodologies and resources in education. The outstanding scores in durability, universal accessibility, and minimal additional component requirements reflect the materials' practicality and user-friendliness, consistent with findings emphasizing the need for accessible educational resources (Oppenheim & Schafer, 2013; Stewart, 2015). Similarly, the commendable adaptability and compatibility with varying school resources echo recommendations for designing materials that cater to diverse educational settings and resource availability (Bastida, 2020; Lim, 2017).

However, the slightly lower score concerning the need for extensive supervision or special assistance resonates with research emphasizing the importance of addressing barriers to equitable access, particularly for students with diverse learning needs (Nelson et al., 2019). This finding underscores the ongoing challenge of ensuring that instructional materials are truly inclusive and accessible to all students. The overall passing score of 16.86 confirms the effectiveness of the SIM in promoting equity and accessibility, aligning to provide all students with equitable access to quality education resources (Santos, 2023; de Leon, 2019).

Table 9

The Validity of Supplemental Instructional Materials (SIM) in terms of Assessment as validated by the SHS Master Teachers, Mathematics Department Heads, and Regular Mathematics Teachers.

Indicators	Mean	Verbal Interpretation
1. There is an observable performance that is relevant to real-world experience, and that can be used to measure student engagement.	3.86	VS
2. Assessment methods are appropriate and suited to the learning objectives.	3.71	VS
3. Assessment is suited to goals and student ability and quickly assesses what has been learned.	4.00	VS
4. The Materials keep an ongoing record of students' progress and allow the teacher full access to individual student monitoring of activities.	4.57	O
Total Score	**16.14**	**Passed**

Legend:

4.20 - 5.00	*Outstanding (O)*
3.40 - 4.19	*Very Satisfactory (VS)*
2.60 - 3.39	*Satisfactory (S)*
1.80 - 2.59	*Less Satisfactory (LS)*
1.00 - 1.79	*Unsatisfactory (U)*
12 - 20 as the total score	*Passed*

The Supplemental Instructional Materials (SIM) evaluation in terms of assessment reveals a generally positive assessment framework, with strengths in several key areas. The materials demonstrate a very satisfactory level of performance in terms of relevance to real-world experiences and their ability to measure student engagement, as indicated by a mean score of 3.86. Furthermore, the appropriateness of assessment methods concerning learning objectives and the alignment of assessments with student abilities and goals also received very satisfactory scores of 3.71 and 4.00, respectively. Notably, the materials provide ongoing student progress monitoring and grant teachers full access to individual student activity tracking, earning an outstanding score of 4.57. However, while the overall assessment is positive, enhancement opportunities exist to ensure a more consistent alignment between assessment methods and learning objectives. With a total score of 16.14, the materials have passed the evaluation, reflecting their overall effectiveness in facilitating assessment practices.

The evaluation findings suggest that the Supplemental Instructional Materials (SIM) effectively incorporate assessment components that align with instructional goals and support student learning. The materials provide opportunities for observable performance related to real-world experiences, fostering student engagement and relevance. Additionally, the assessment methods are generally appropriate and suitably matched to the learning objectives, contributing to a comprehensive evaluation of student progress. The outstanding score for ongoing student progress monitoring and

teacher access to individual student activity tracking highlights the materials' commitment to facilitating informed instructional decision-making. However, the slightly lower scores in some areas suggest potential opportunities for further refining assessment methods to ensure consistent alignment with learning objectives. The overall passing score of 16.14 underscores the materials' effectiveness in promoting meaningful assessment practices.

The evaluation results underscore the importance of robust assessment practices within Supplemental Instructional Materials (SIM) to support effective teaching and learning. The positive assessment framework demonstrates the materials' commitment to facilitating meaningful and relevant learning experiences for students. Educators can leverage these assessment components to gauge student progress, identify areas of strength and growth, and tailor instruction accordingly. Furthermore, the outstanding score for ongoing student progress monitoring and teacher access to individual student activity tracking emphasizes the importance of data-informed instruction in promoting student success. Moving forward, educators and curriculum developers can continue to refine assessment methods to ensure optimal alignment with learning objectives and enhance the effectiveness of instructional materials in promoting student learning outcomes.

The evaluation of Supplemental Instructional Materials (SIM) in terms of assessment aligns with research emphasizing the importance of incorporating meaningful assessment practices into instructional materials. The materials demonstrate strengths in assessing relevance to real-world experiences and measuring student engagement, consistent with findings emphasizing the importance of authentic assessment methods (Anderson et al., 2018). Additionally, the appropriateness of assessment methods concerning learning objectives and the alignment with student abilities and goals echoes recommendations for designing assessments that accurately measure student progress (Thompson & Silverman, 2022).

The outstanding score for ongoing student progress monitoring and teacher access to individual student activity tracking reflects the materials' commitment to facilitating data-informed instruction, consistent with research highlighting the benefits of continuous assessment and feedback (Bastida, 2020; Lim, 2017). However, the opportunity for enhancement in aligning assessment methods with learning objectives suggests the importance of refining assessment practices to ensure consistent alignment and effectiveness (Oppenheim & Schafer, 2013; Stewart, 2015). The overall passing score of 16.14 affirms the materials' effectiveness in promoting meaningful assessment practices, contributing to informed instructional decision-making and student success (Santos, 2023; de Leon, 2019).

Table 10

The Validity of Supplemental Instructional Materials (SIM) in terms of Presentation and Organization as validated by the SHS Master Teachers, Mathematics Department Heads, and Regular Mathematics Teachers.

	Indicators	Mean	Verbal Interpretation
1.	Content and directions are clear and understandable and distinguish between critical and trivial information.	3.00	S
2.	Materials are easy to navigate through.	4.71	O
3.	There are provisions for the practice of old and new skills and for students to enter and exit materials easily.	3.29	VS
4.	Materials are interactive and provide a high-quality sensory experience for all users.	3.57	VS
	Total Score	**14.57**	**Passed**

Legend:

4.20 - 5.00	*Outstanding (O)*
3.40 - 4.19	*Very Satisfactory (VS)*
2.60 - 3.39	*Satisfactory (S)*
1.80 - 2.59	*Less Satisfactory (LS)*
1.00 - 1.79	*Unsatisfactory (L-U)*
12 - 20 as the total score	*Passed*

The evaluation of Supplemental Instructional Materials (SIM) in terms of presentation and organization reveals strengths in certain aspects but also identifies areas for improvement. While the clarity and understandability of content and directions are deemed satisfactory, with a mean score of 3.00, the materials excel in ease of navigation, scoring outstandingly high at 4.71. Additionally, the provision for the practice of both old and new skills and the ease of entry and exit for students is rated very satisfactory at 3.29. However, the materials fall slightly short in providing an interactive and high-quality sensory experience for all users, garnering a score of 3.57. Though the overall evaluation is positive, there is room for enhancement to ensure clarity of content and directions and improve sensory experiences. With a total score of 14.57, the materials have passed the evaluation, signifying their overall effectiveness in presentation and organization.

The evaluation highlights the importance of presentation and organization in Supplemental Instructional Materials (SIM). While the materials excel in navigability and provide adequate provisions for skill practice and accessibility, there are areas where improvements can be made. Clear and understandable content and directions are crucial for facilitating practical learning experiences, and efforts should be directed toward enhancing these aspects. Furthermore, including interactive elements and high-quality sensory experiences can significantly improve user engagement and retention. Despite these areas for improvement, the overall positive assessment underscores the materials' effectiveness in presenting content and organizing resources.

The evaluation results provide valuable insights for refining Supplemental Instructional Materials (SIM) to meet presentation and organization standards better.

Efforts should focus on enhancing the clarity and understandability of content and directions and incorporating interactive elements and sensory experiences to promote user engagement. Additionally, maintaining an outstanding level of navigability and ensuring easy entry and exit for students are essential to uphold. Educators and curriculum developers can use these insights to iteratively improve the design and implementation of instructional materials iteratively, ultimately enhancing students' learning experiences. The passing score of 14.57 affirms the materials' overall effectiveness while highlighting specific areas for enhancement in presentation and organization.

The evaluation findings regarding the presentation and organization of Supplemental Instructional Materials (SIM) align with research emphasizing the importance of clear and understandable content, interactive elements, and ease of navigation in educational materials. While the materials demonstrate strengths in navigability and accessibility, consistent with findings emphasizing the importance of user-friendly design (Oppenheim & Schafer, 2013; Stewart, 2015), there is room for improvement in clarity and sensory experiences to enhance user engagement (Bastida, 2020; Lim, 2017).

The positive assessment underscores the materials' effectiveness in presenting content and organizing resources, consistent with research highlighting the significance of well-organized and engaging instructional materials in facilitating learning experiences (Santos, 2023; de Leon, 2019). However, the identified areas for enhancement in clarity and sensory experiences underscore the importance of iterative refinement to ensure optimal effectiveness (Anderson et al., 2018; Thompson & Silverman, 2022).

Table 11

The Validity of Supplemental Instructional Materials (SIM) in terms of Instructional Design and Support as validated by the SHS Master Teachers, Mathematics Department Heads, and Regular Mathematics Teachers.

	Indicators	Mean	Verbal Interpretation
1.	The delivery method is used appropriately and successfully engages the students.	3.86	VS
2.	Technical procedures, such as installation and set-up, are easy and error-free.	3.43	VS
3.	Technical specifications and limitations are adequately described and noted.	3.86	VS
4.	Assistance is readily available at any point on the website, and many supplemental resources are available.	4.86	O
	Total Score	**16.00**	**Passed**

Legend:

4.20 - 5.00	*Outstanding (O)*
3.40 - 4.19	*Very Satisfactory (VS)*
2.60 - 3.39	*Satisfactory (S)*

1.80 - 2.59	*Less Satisfactory (LS)*
1.00 - 1.79	*Unsatisfactory (U)*
12 - 20 as the total score	*Passed*

The Supplemental Instructional Materials (SIM) evaluation in terms of instructional design and support indicates strengths in several key areas. The delivery method is deemed very satisfactory, scoring 3.86, marking the successful engagement of students. Additionally, technical procedures such as installation and set-up are rated very satisfactory at 3.43, suggesting ease and minimal errors in implementation. Moreover, technical specifications and limitations are adequately described and noted, receiving a score of 3.86, contributing to the effective utilization of the materials. Notably, assistance availability and the provision of supplemental resources are outstanding, scoring 4.86. While the overall evaluation is positive, ensuring consistent ease of technical procedures and providing comprehensive descriptions of technical specifications could further enhance instructional support. With a total score of 16.00, the materials have passed the evaluation, demonstrating their effectiveness in instructional design and support.

The evaluation highlights the effectiveness of Supplemental Instructional Materials (SIM) in instructional design and support. The materials engage students through appropriate delivery methods, facilitating compelling learning experiences. Additionally, technical procedures are relatively easy to execute, minimizing errors and streamlining implementation. Adequate technical specifications and descriptions inform users about the materials' capabilities and limitations, contributing to their practical use. The outstanding provision of assistance and supplemental resources further enhances instructional support, fostering a conducive learning environment. However, efforts to ensure consistent ease of technical procedures and comprehensive description of technical specifications could further optimize instructional design and support.

The evaluation results provide valuable insights for refining Supplemental Instructional Materials' instructional design and support aspects (SIM). Efforts should focus on maintaining successful student engagement through appropriate delivery methods and ensuring ease of technical procedures for seamless implementation. A comprehensive description of technical specifications and readily available assistance can further enhance users' understanding and utilization of the materials. Additionally, ample supplemental resources can enrich the learning experience and cater to diverse learning needs. Educators and curriculum developers can use these insights to iteratively improve the design and implementation of instructional materials, ultimately enhancing student learning outcomes. The passing score of 16.00 affirms the materials' overall effectiveness while highlighting specific areas for instructional design and support enhancement.

The evaluation findings regarding the instructional design and support of Supplemental Instructional Materials (SIM) align with research emphasizing the importance of engaging delivery methods, ease of technical procedures, and comprehensive support mechanisms in educational materials (Giguere et al., 2020). The positive assessment of the delivery method and technical procedures reflects the

significance of user-friendly design and seamless implementation in facilitating effective learning experiences (Anderson et al., 2018; Santos, 2023).

Furthermore, the outstanding provision of assistance and supplemental resources aligns with research highlighting the importance of comprehensive support systems in promoting student success and engagement (de Leon, 2019; Thompson & Silverman, 2022). However, the identified areas for improvement in ensuring consistent ease of technical procedures and providing comprehensive descriptions of technical specifications underscore the ongoing need for refinement and optimization in instructional design and support (Lim, 2017; Bastida, 2020).

Table 12

The Validity of Supplemental Instructional Materials (SIM) in terms of Replicability as validated by the SHS Master Teachers, Mathematics Department Heads, and Regular Mathematics Teachers.

Indicators	Mean	Verbal Interpretation
1. The material was validated before classroom use.	4.57	O
2. Developed material is based on the least mastered skill.	4.57	O
3. The material used has improved the mastery level.	3.29	VS
4. The material is easy to copy, and the cost is less.	4.86	O
Total Score	**17.29**	**Passed**

Legend:

4.20 - 5.00	*Outstanding (O)*
3.40 - 4.19	*Very Satisfactory (VS)*
2.60 - 3.39	*Satisfactory (S)*
1.80 - 2.59	*Less Satisfactory (LS)*
1.00 - 1.79	*Unsatisfactory (U)*
12 - 20 as the total score	*Passed*

Supplemental Instructional Materials (SIM) evaluation of replicability indicates significant strengths across several critical criteria. Firstly, the materials are validated before classroom use, earning an outstanding score of 4.57, demonstrating a rigorous validation process. Additionally, the development of materials based on the least mastered skill also receives an impressive score of 4.57, highlighting a targeted approach to addressing student needs. While the material's effectiveness in improving mastery levels is rated very satisfactorily at 3.29, it still positively impacts student learning. Moreover, the ease of copying the material and its cost-effectiveness are outstanding, scoring 4.86, ensuring accessibility and affordability for replication. Overall, the evaluation yields a high total score of 17.29, affirming the materials' strong replicability.

The evaluation underscores the robust replicability of Supplemental Instructional Materials (SIM) due to their rigorous validation process, targeted approach to skill development, and cost-effective nature. The outstanding scores in material validation

and development based on the least mastered skills reflect a systematic and evidence-based approach to instructional design. Additionally, the ease of copying and cost-effectiveness ensure accessibility and affordability, facilitating widespread adoption and replication. Though the materials' impact on improving mastery levels is rated satisfactorily, they still positively contribute to student learning outcomes.

The evaluation results highlight the replicability of Supplemental Instructional Materials (SIM) as a valuable resource for educators seeking effective instructional materials. The outstanding scores in material validation and development underscore their reliability and effectiveness in addressing student needs. Moreover, the ease of copying and cost-effectiveness make the materials accessible to various educational settings, promoting their widespread adoption and replication. Educators and curriculum developers can leverage these insights to replicate and adapt the materials to suit their specific contexts and student populations, enhancing learning outcomes. Additionally, ongoing evaluation and refinement of the materials are essential to ensure their continued effectiveness and relevance in diverse educational settings.

The evaluation findings regarding the replicability of Supplemental Instructional Materials (SIM) align with research emphasizing the importance of rigorous validation processes and targeted skill development in educational materials (Wang et al., 2020). The outstanding scores in material validation and development based on the least mastered skills reflect a systematic and evidence-based approach to addressing student needs, contributing to the materials' effectiveness in improving learning outcomes.

Furthermore, the ease of copying and cost-effectiveness of the materials aligns with research highlighting the significance of accessibility and affordability in promoting widespread adoption and replication (Davis and Thompson, 2019). These strengths underscore the materials' potential as valuable resources for educators seeking effective instructional materials that can be easily replicated and adapted to diverse educational settings and student populations.

Table 13

Summary of the Validity of Supplemental Instructional Materials (SIM).

Criteria	Score	Verbal Interpretation
Content	16.86	Passed
Equity and Accessibility	16.86	Passed
Assessment	16.14	Passed
Presentation and Organization	14.57	Passed
Instructional Design and Support	16.00	Passed
Replicability	17.29	Passed
MEAN	**16.29**	**Passed**

The summary table presents the overall Supplemental Instructional Materials (SIM) evaluation across six key aspects. In terms of content, equity and accessibility, assessment, instructional design and support, and replicability, the materials have all received passing scores, indicating their effectiveness in these areas. Specifically, the materials excelled in replicability, with a mean score of 17.29, followed closely by content and equity/accessibility, scoring 16.86. Assessment, instructional design, and support also received commendable scores, with means of 16.14 and 16.00, respectively. However, presentation and organization scored slightly lower at 14.57. Nevertheless, the mean of 16.29 demonstrates that the Supplemental Instructional Materials have successfully passed the evaluation across all dimensions.

The summary evaluation underscores the comprehensive effectiveness of Supplemental Instructional Materials (SIM) across various dimensions. The high mean scores in content, equity and accessibility, assessment, instructional design and support, and replicability indicate the materials' robustness and alignment with educational objectives. While presentation and organization received a slightly lower mean score, it still reflects an overall positive evaluation. This holistic assessment suggests that the materials are well-designed, accessible, and supportive of diverse learning needs, facilitating effective teaching and learning experiences.

The summary evaluation provides valuable insights into the strengths and areas for improvement in Supplemental Instructional Materials (SIM). Educators and curriculum developers can leverage these insights to enhance the materials' effectiveness and relevance further. Specifically, efforts can be directed towards improving organization and presentation to ensure clarity and user-friendliness. Additionally, ongoing evaluation and refinement of the materials are essential to ensure their continued effectiveness and alignment with evolving educational standards and practices. Overall, the passing grand mean of 16.29, along with high mean scores across variables, affirms the quality and efficacy of the materials, positioning them as valuable resources for educators striving to promote student learning and success.

The summary evaluation of the Supplemental Instructional Materials (SIM) aligns with research emphasizing the importance of comprehensive evaluation frameworks in assessing the effectiveness of educational materials (Davis and Thompson, 2019). The high mean scores across various dimensions, particularly in content, equity and accessibility, assessment, instructional design and support, and replicability, reflect the robustness and alignment of the materials with educational objectives.

The strengths identified in the summary evaluation, such as the material's effectiveness in addressing diverse learning needs and their accessibility and replicability, resonate with findings in the literature highlighting the importance of inclusive and adaptable instructional materials (Eskay, 2018). Additionally, the areas for improvement identified in organization and presentation align with research emphasizing the significance of clarity and user-friendliness in instructional materials to enhance learning outcomes (Eskay, 2018).

Part V. The Recommendations Given by the Validators to Improve the Output and Address the Students' Performance on the Least Mastered Competencies in General Mathematics.

In the Supplemental Instructional Materials (SIM) evaluation process, multiple validators provided recommendations to enhance its effectiveness. Validator 6 emphasized the importance of localizing content by replacing the dollar sign with the peso sign to increase student engagement and ensure the originality of examples and exercises. Validator 7 suggested proper formatting of equations and functions, including step-by-step solutions and using indicators for clarity. Additionally, Validator 5 highlighted the significance of utilizing MS Word to encode equations and symbols for better presentation while recommending tables for organizing solutions to improve user understanding. Validator 4 stressed the importance of aligning activities with intended objectives, whereas Validator 3 suggested the inclusion of discussions to address misconceptions and allow for topic revisitation.

Furthermore, Validator 1 emphasized the necessity of adequately writing equations, using indicators for clarity, and formatting the content for improved readability. Validator 2 added the recommendation to localize examples and exercises and avoid using dollar signs about money. These recommendations aim to enhance the SIM's engagement, authenticity, clarity, organization, and presentation, ultimately improving its effectiveness as an instructional resource for struggling learners.

Part VI. Enhancements Supplemental Instructional Materials (SIM) can be Developed Based on the Recommendations by the Validators.

Based on the recommendations provided by the validators, an enhancement version of the Supplemental Instructional Materials (SIM) can be proposed. The enhancement SIM would feature localized content, utilizing the peso sign instead of the dollar sign, to better engage students and make the material more relatable to their context. Original examples and exercises would be incorporated to maintain authenticity and ensure the content is not directly lifted from other sources.

Equations and functions would be properly written, and clear step-by-step solutions would be provided, following the recommendations of Validator 7. Indicators such as "Let x be" or "Where y is the function" would be used throughout the material to enhance clarity, as suggested by Validator 1. Additionally, the content would be formatted using justified alignment for improved readability, aligning with the recommendation of Validator 1.

Equations and symbols would be encoded using MS Word, as recommended by Validator 5, to enhance presentation and clarity. Solutions to problems would be organized in tables to facilitate understanding, as suggested by Validator 5. Furthermore, discussions would be included within the material to address

misconceptions and allow learners to revisit topics, aligning with the recommendation of Validator 3.

The activities within the SIM would be carefully aligned with the intended objectives, ensuring that they effectively measure Essential Learning Competencies (MELCs), as emphasized by Validator 4. Additionally, the Enrichment Card would extend activities without including objective types such as fill-in-the-blanks or multiple-choice, as recommended by Validator 2.

DISCUSSION

The study yielded the following findings:

1. The least mastered competencies in General Mathematics of Grade 11 learners in College of Sciences, Technology and Communications, Inc., (CSTC) for the last five school years.

In examining the performance trends over the past five years, it becomes evident that specific competencies within General Mathematics have posed persistent difficulties for Grade 11 learners at College of Sciences, Technology and Communications, Inc., (CSTC). Across various areas, including mathematical modeling, function operations, and problem-solving involving rational, inverse, exponential, and logarithmic functions, students have exhibited difficulty in achieving mastery. Specifically, difficulties in accurately constructing mathematical models to represent real-life situations, performing operations with functions, and solving equations and inequalities have emerged as recurring themes. These difficulties highlight areas where students have struggled to demonstrate proficiency and underscore the need for targeted Supplemental Instructional Materials to address these persistent difficulties.

To effectively address these difficulties, educators and administrators at CSTC must adopt a multifaceted approach that combines targeted SIM, differentiated instruction, and enhanced support mechanisms. Educators can tailor their teaching methods to provide additional support and practice opportunities by identifying specific competencies where students have historically struggled. Moreover, incorporating real-life contexts and applications into the curriculum can help students better understand the relevance of mathematical concepts and enhance their problem-solving abilities. Through collaborative efforts and a commitment to continuous improvement, CSTC can work towards improving students' mastery of General Mathematics and fostering a culture of academic excellence.

2. The difficulties encountered by the Grade 11 learners in learning competencies in General Mathematics.

The difficulties encountered by Grade 11 learners in General Mathematics, as analyzed in terms of three performance standards:

2.1 Accurately construct mathematical models to represent real-life situations using functions: This standard pertains to the ability of students to create mathematical models that accurately depict real-world scenarios. The composite mean of 4.41 indicates that learners encounter significant challenges in this aspect, with an adjectival rating of "AE," denoting a high level of difficulty. This standard ranks first among the performance standards, highlighting the importance and complexity of accurately representing real-life situations mathematically.

2.2 Accurately formulate and solve real-life problems involving rational functions: This standard focuses on the proficiency of students in formulating and solving real-world problems that involve rational functions. The composite mean of 4.10 suggests that learners face obstacles in achieving precision and accuracy in this area, as indicated by the adjectival rating of "OE," signifying a moderate level of difficulty. Despite ranking third among the performance standards, this competency remains crucial for applying mathematical concepts to practical situations.

2.3 Apply the concepts of inverse functions, exponential functions, and logarithmic functions to formulate and solve real-life problems with precision and accuracy: This standard relates to students' capability to apply various mathematical functions, such as inverse, exponential, and logarithmic functions, to solve real-life problems accurately. With a composite mean of 4.28 and an adjectival rating of "AE," this standard ranks second in terms of difficulty. Learners may encounter challenges in comprehending and applying these complex functions effectively, highlighting the need for targeted support and instruction in this area.

The grand mean of 4.26, also rated as "AE," reflects the overall level of difficulty across the three performance standards. This comprehensive analysis underscores the multifaceted nature of the challenges faced by Grade 11 learners in General Mathematics and emphasizes the importance of addressing these difficulties through targeted SIM.

3. The Supplemental Instructional Materials (SIM) can be developed based on the least mastered competencies and difficulties encountered.

To effectively address the least mastered competencies and difficulties encountered by Grade 11 learners in General Mathematics, a supplemental approach involving the development of targeted Supplemental Instructional Materials (SIM) is essential. The identified difficulties, ranging from mathematical modeling to problem-solving with exponential and logarithmic functions, underscore the need for tailored interventions that provide students with focused support. One approach could involve the creation of interactive tutorials and simulations that guide students through constructing mathematical models and manipulating functions. These materials can

offer step-by-step guidance and hands-on practice to reinforce key concepts and skills, helping students build confidence and proficiency.

Additionally, real-life problem-solving scenarios can be developed to allow students to apply their knowledge in practical contexts, enhancing the relevance and applicability of the concepts being taught. By incorporating a variety of resources and activities, educators can create a cohesive learning experience that effectively addresses the specific needs of Grade 11 learners in General Mathematics. These interventions aim to improve students' understanding and proficiency in the subject, foster critical thinking skills, and promote more profound engagement with mathematical concepts.

4. The validity of Supplemental Instructional Materials (SIM).

4.1 Content: With a score of 16.86, the Content focus passed the validity assessment. This indicates that the content of the SIM is comprehensive, relevant, and aligned with educational standards and learning objectives, ensuring its effectiveness in supporting teaching and learning.

4.2 Equity and Accessibility: Similarly, the Equity and Accessibility focus scored 16.86, passing the validity assessment. This suggests that the SIM is designed to accommodate diverse learners, including those with disabilities or limited resources, promoting inclusivity and equitable access to educational materials.

4.3 Assessment: The Assessment focus scored 16.14, indicating that the SIM incorporates effective assessment mechanisms to monitor learning progress and inform instructional adaptations. This ensures that students' comprehension and skill mastery are adequately evaluated, enhancing the overall efficacy of SIM implementation.

4.4 Presentation and Organization: With a score of 14.57, the Presentation and Organization focus passed the validity assessment. This suggests that the SIM is designed with clear instructional design, logical sequencing, and navigational aids to enhance usability and engagement, facilitating content comprehension and retention.

4.5 Instructional Design and Support: The Instructional Design and Support focus scored 16.00, indicating that the SIM incorporates effective instructional design principles and support mechanisms. This ensures that learning experiences are scaffolded and supported, promoting student autonomy and knowledge construction.

4.6 Replicability: Scoring 17.29, the Replicability focus passed the validity assessment, indicating that the SIM is designed to be adaptable, customizable, and easily replicable across diverse educational contexts. This enhances scalability and sustainability, ensuring the widespread adoption and implementation of effective educational practices.

The mean score of 16.29 indicates that the SIM successfully passed the validity assessment across all focuses. This suggests that the SIM demonstrates strong validity, ensuring its suitability and effectiveness in enhancing teaching and learning outcomes.

5. The recommendations given by the validators to improve the output and address the students' performance on the least mastered competencies in General Mathematics.

Multiple validators recommended enhancing the Supplemental Instructional Materials (SIM) during the evaluation process. Validator 6 emphasized localizing content using the peso sign instead of the dollar sign to engage students and ensure original examples and exercises. Validator 7 suggested proper formatting of equations and step-by-step solutions, with indicators for clarity. Validator 5 highlighted the importance of using MS Word for encoding equations and organizing table solutions. Validator 4 stressed aligning activities with objectives, while Validator 3 recommended including discussions to address misconceptions. Validator 1 emphasized writing equations clearly and using indicators, and Validator 2 suggested localizing examples and avoiding dollar signs. These recommendations collectively aim to improve engagement, authenticity, clarity, organization, and presentation of the SIM, benefiting struggling learners.

6. Enhancements Supplemental Instructional Materials (SIM) can be developed based on the recommendations by the validators.

The enhancements version of the Supplemental Instructional Materials (SIM) developed based on the validators' recommendations would include several key improvements. First, the content would be localized using the peso sign instead of the dollar sign to make it more relatable to students. Original examples and exercises would be used to maintain authenticity.

Equations and functions would be written clearly, and step-by-step solutions would be provided, as suggested by Validator 7. Indicators like "Let x be" or "Where y is the function" would enhance clarity throughout the material, following Validator 1's recommendation. Formatting would be adjusted for better readability, aligning with Validator 1's suggestion.

Equations and symbols would be encoded using MS Word, as recommended by Validator 5, to improve presentation and clarity. Solutions to problems would be organized in tables to aid understanding, following Validator 5's advice. Discussions would be included to address misconceptions and allow for topic revisitation, as suggested by Validator 3.

Activities within the SIM would be aligned with the intended objectives, ensuring they effectively measure the Essential Learning Competencies (MELCs), per Validator 4's emphasis. Additionally, the Enrichment Card would extend activities without including objective types like fill-in-the-blanks or multiple-choice, aligning with Validator 2's recommendation.

These enhancements aim to improve engagement, authenticity, clarity, organization, and presentation of the SIM, benefiting struggling learners.

Conclusions

Based on the findings of the study, the following conclusions are drawn:

1. Examining the least mastered competencies in General Mathematics among Grade 11 learners at CSTC reveals persistent difficulties in mathematical modeling, function operations, and problem-solving involving rational, inverse, exponential, and logarithmic functions. Identifying these difficulties underscores the importance of addressing specific competencies where students struggle to demonstrate proficiency. By targeting interventions and instructional strategies to address these persistent difficulties, educators can effectively enhance students' understanding and mastery of General Mathematics.

2. The analysis of difficulties encountered by Grade 11 learners in General Mathematics highlights various difficulties, including accurately constructing mathematical models, manipulating functions and equations, and applying concepts to real-life problems. These difficulties and conceptual misunderstandings underscore the complexity of mastering mathematical concepts in General Mathematics. By recognizing and addressing these obstacles, educators can create a supportive learning environment that fosters students' understanding and proficiency.

3. Developing targeted Supplemental Instructional Materials (SIM) based on the identified least mastered competencies and encountered difficulties are essential for effectively addressing the needs of Grade 11 learners in General Mathematics. By incorporating interactive tutorials, real-life problem-solving scenarios, and a variety of resources and activities, educators can provide students with focused support and opportunities for practice and application. These interventions aim to improve students' understanding, proficiency, and critical thinking skills in General Mathematics, ultimately fostering a culture of academic excellence and ensuring the success of all learners at CSTC.

4. In terms of content, equity and accessibility, assessment, instructional design and support, and replicability, the Supplemental Instructional Materials (SIM) have all received passing scores, indicating their effectiveness in these areas. Specifically, the materials excelled in replicability, with a mean score of 17.29, followed closely by content and equity/accessibility, both scoring 16.86. Assessment, instructional design, and support also received commendable scores, with means of 16.14 and 16.00, respectively. However, organization and presentation scored slightly lower at 14.57. Nevertheless, the overall score of 97.71 demonstrates that the Supplemental Instructional Materials have successfully passed the evaluation across all dimensions.

5. Multiple validators recommended enhancing the Supplemental Instructional Materials (SIM) during the evaluation process. Validator 6 emphasized localizing content using the peso sign instead of the dollar sign to engage students and ensure original examples and exercises. Validator 7 suggested proper formatting of equations and step-by-step solutions, with indicators for clarity. Validator 5 highlighted the importance of using MS Word for encoding equations and organizing table solutions. Validator 4 stressed aligning activities with objectives, while Validator 3 recommended including discussions to address misconceptions. Validator 1 emphasized writing equations clearly and using indicators, and Validator 2 suggested localizing examples and avoiding dollar signs. These recommendations collectively aim to improve engagement, authenticity, clarity, organization, and presentation of the SIM, benefiting struggling learners.

6. The enhancements version of the Supplemental Instructional Materials (SIM) developed based on the validators' recommendations would include several key improvements. First, the content would be localized using the peso sign instead of the dollar sign to make it more relatable to students. Original examples and exercises would be used to maintain authenticity. Equations and functions would be written clearly, and step-by-step solutions would be provided, as suggested by Validator 7. Indicators like "Let x be" or "Where y is the function" would enhance clarity throughout the material, following Validator 1's recommendation. Formatting would be adjusted for better readability, aligning with Validator 1's suggestion. Equations and symbols would be encoded using MS Word, as recommended by Validator 5, to improve presentation and clarity. Solutions to problems would be organized in tables to aid understanding, following Validator 5's advice. Discussions would be included to address misconceptions and allow for topic revisitation, as suggested by Validator 3. Activities within the SIM would be aligned with the intended objectives, ensuring they effectively measure the Essential Learning Competencies (MELCs), per Validator 4's emphasis. Additionally, the Enrichment Card would extend activities without including objective types like fill-in-the-blanks or multiple-choice, aligning with Validator 2's recommendation. These enhancements aim to improve engagement, authenticity, clarity, organization, and presentation of the SIM, benefiting struggling learners.

Recommendations

Because the identified variables, the least mastered competencies in General Mathematics, the difficulties encountered, developing Supplemental Instructional Materials (SIM), the validity of Supplemental Instructional Materials (SIM), recommendations of the validators, and enhanced Supplemental Instructional Materials (SIM), the following recommendations were drawn:

1. School administrators and teachers may address the persistent difficulties in General Mathematics for Grade 11 learners at College of Sciences, Technology and Communications, Inc., (CSTC) by implementing targeted SIM. Firstly, they may develop focused Supplemental Instructional Materials programs concentrating on problematic competencies like mathematical modeling and function operations. Secondly, they may employ differentiated instruction methods to accommodate diverse learning styles and abilities. Thirdly, they may strengthen support mechanisms such as peer tutoring and academic support centers. Fourthly, they may integrate real-life applications into the curriculum to enhance engagement and relevance. Lastly, they may foster collaborative efforts among educators, administrators, students, and parents to implement effective strategies for improving student performance in mathematics.

2. DepEd officials and teachers may collaborate closely to address the difficulties encountered by Grade 11 learners in General Mathematics. This collaboration may involve a comprehensive review and revision of the curriculum to ensure it adequately addresses the identified difficulties. Professional development workshops and training sessions may be organized to enhance teachers' pedagogical skills and content knowledge, focusing on effective strategies for teaching complex mathematical concepts. Resource allocation may prioritize providing schools with the necessary tools and materials to support effective teaching and learning. Additionally, mechanisms for monitoring and support may be established to ensure the successful implementation of SIM. Furthermore, involving parents and the broader community in supporting students' learning can enhance the effectiveness of Supplemental Instructional Materials aimed at improving students' understanding and mastery of mathematical concepts.

3. Teachers may consider utilizing the validated Supplemental Instructional Materials (SIM) for General Mathematics, as they have undergone thorough evaluation and validation by experts across key aspects. With passing scores in content, equity/accessibility, assessment, presentation and organization, instructional design and support, and replicability, these materials have demonstrated their effectiveness and suitability for classroom use. By incorporating these SIM into their teaching practices, teachers can enhance instruction, provide additional support to students, and improve learning outcomes in General Mathematics. The endorsement of these materials by institutions or private associations of schools further validates their quality and reliability, providing teachers with confidence in their utilization.

4. Educators and teachers may consider to prioritize the development of targeted Supplemental Instructional Materials (SIM) to effectively address the least mastered competencies and difficulties encountered by Grade 11 learners in General Mathematics. This approach acknowledges the identified difficulties, including mathematical modeling and problem-solving with exponential and logarithmic functions, and emphasizes the need for tailored interventions. One effective strategy is the creation of interactive tutorials and simulations that provide step-by-step guidance and hands-on practice for learners. These

materials can offer support in constructing mathematical models and manipulating functions, ultimately boosting students' confidence and proficiency. Additionally, educators may consider developing real-life problem-solving scenarios to enhancement the relevance and applicability of mathematical concepts. By incorporating a variety of resources and activities, educators may create a cohesive learning experience that addresses the specific needs of Grade 11 learners in General Mathematics, fostering deeper engagement and improving overall understanding and proficiency.

5. It is recommended to the school heads that the Supplemental Instructional Materials (SIM) resulting from the study undergo periodic evaluation to assess their effectiveness in addressing identified difficulties in General Mathematics and improving student mastery. Establishing a formal mechanism for ongoing evaluation will ensure that the SIM remains relevant and responsive to the evolving needs of Grade 11 learners.

6. Future researchers may conduct long-term studies to track the effectiveness of SIM targeting the identified least mastered competencies in General Mathematics among Grade 11 learners. They may also explore alternative teaching methods tailored to address specific difficulties encountered by learners. Additionally, researchers may focus on developing and validating innovative assessment tools aligned with identified difficulties. Understanding how contextual factors impact students' learning experiences will inform the development of effective Supplemental Instructional Materials and support mechanisms.

Compliance with Ethical Standards

The study ensured the informed consent was given to the following respondents. Freedom to withdraw from the study at any time, anonymity of the respondents was maintained, the respondents' well-being was safeguarded, no conflict of interests exists in the conduct of the study, plagiarism was strictly avoided, there was no bias in the interpretation of the findings and that the results were used purely for research.

Acknowledgments

The researcher wishes to express his heartfelt gratitude to the persons with wholehearted cooperation, support and guidance, especially to all who extended contribution and assistance in various ways towards the completion of this study and make this a reality.

Foremost, our GOD ALMIGHTY, the provider and source of all enlightenment and power, for giving his knowledge, perseverance, hope and determination to make his study possible.

To Marinduque State College President Dr. Diosdado P. Zulueta, for his leadership and selfless assistance when needed;

Dr. Leodegario M. Jalos, Jr., Chairperson of Extended Graduate Programs of Marinduque State College, for his untiring support, technical assistance and continuous guidance to the researcher in order for this study to be a success;

Dean of Graduate Studies of Quezonian Educational College, Inc. Dr. Rizalie M. Lim, for her encouragement and moral support for seeing this research through the end;

Dr. Noel R. Palomares, his adviser, for his valuable suggestions, guidance and patience in checking this paper and for the enlightenment shared about the importance of this study;

Engr. Willer A. Dayahan and Mr. Renante S. Camay, for their generously contributing time and expertise of this study as statistician;

Dr. Annalyn J. Decena, for constructing the structure of research as a grammarian and editor;

Ms. Annie M. Ruiz, for constructing the structure of research as copy editor;

Members of the defense panel Dr. Diosdado P. Zulueta, Dr. Julieta Q. Nabos, and Dr. Rogel L. Limpiada for their pertinent comments and advice on how to make the study better;

Ms. Liezl M. Manoy; MSC's Support Staff, Graduate School, for her unending moral support;

Grade 11 learners of College of Sciences, Technology, and Communications, Inc., (CSTC) Atimonan, Lucena and Sariaya Campus, for actively participating in the conduct of study;

Mr. Czar Ciprian S. Lopez, Mr. Lexter R. Aliling, Mr. Aris A. Mendoza, and Dr. Nelson D. Mendoza, for their unending support and understanding to finish this study;

Mr. Gerardo C. Inoy and Mrs. Ana Marie T. Inoy, his parents, and his siblings Gerardo T. Inoy, Jr., and Jennylyn G. Taruc for their unending care and love that inspire him a lot to pursue this study;

To all great and wonderful people whose names do not appear above for whatever assistance extended with sincerity, a million thanks to each one of you.

ABSTRACT

The study focused on the performance of Teachers-In-Charge as School Heads and Classroom Teachers in the 3rd Congressional District of Quezon. The study employed the descriptive type of research utilizing (55) respondents with an adopted standardized performance evaluation instrument as the primary data gathering tool and a statistical tool as the results measuring and analysis device. The study revealed that typical respondents are described mainly as the ages 36 to 40, female-dominated, married, bachelor's degree holders, Teacher III in position, monograde classes handler, and TIC for 1-5 years. Moreover, the level of performance of the TIC as school head in terms of the Office Performance and Commitment Review based on the Results-Based Performance Management System – Philippine Professional Standards for School Heads has a very satisfactory rating. The level of performance of the TIC as a classroom teacher when measured based on KRAs of the Individual Performance and Commitment Review has also a very satisfactory rating. Despite the very satisfactory level of performance, the research findings revealed that TICs must improve their skills in the following areas: utilization of relevant research findings in leading strategically; assisting teachers in the review, contextualization, and implementation of learning standards; and, developing self and others, which serve as the basis for intervention.

Keywords: *Level of performance, Teachers-In-Charge, School Head, Classroom Teacher*

INTRODUCTION

The school is said to be the second home for all learners. Specifically, it is the venue for all the learnings of the schoolchildren substantial to their everyday lives. According to Republic Act No. 9155, Governance of Basic Education Act of 2001, “The school shall be the heart of the formal education system.” Schools must have a single goal: to provide the greatest possible primary education for all students. According to Section 6.1, Rule VI of the Implementing Rules and Regulations of RA 9155, all public elementary and secondary schools, or a cluster thereof, must have a school head. A school head is defined under this act as "a person who is responsible for the administrative and instructional supervision of a school or cluster of schools." They serve as key leaders in the country’s education system and are indispensable in achieving the government’s aim of providing quality primary education. The primary functions of the school head, as defined in the act mentioned above, are administrative management and instructional leadership.

In the international scene, several authors from different research describe the functions and roles of the school head such as principal or any other equivalent position as the chief executive of schools who has multifarious tasks to accomplish for successful administration of the school system. Ezeocha (2000) views the roles of school head as supervision of instruction, curriculum development and evaluation, school-community relationship, staff-personnel administration, student personnel administration, management of school finance and school physical facilities. This further expounds the same extent of responsibilities given to teachers-in-charge who are designated to manage the schools without a principal.

In the Philippines, the preparation for being a full-time school head, such as a head teacher or principal, begins when a teacher becomes the teacher-in-charge of the school. Given, DepEd Order No. 85, series 2003, this states that the Schools Division Superintendent shall designate Teachers-In-Charge (TIC) in schools without principal items. A teacher-in-charge must have at least three (3) years of experience and undergo a screening process conducted by the Division Office. This was reiterated in DepEd Order No. 42, series 2007. Aside from being a classroom teacher, he or she performs the work being done by full-pledged school leaders. The current situation in the country tells us that TICs are regular teachers who serve the school with two different roles. This results in conflicts in their line of work as a classroom teacher and as a school administrator which affects both their performances.

DepEd Quezon is one of the largest divisions in Region IV-A that has many teachers-in-charge. There are four congressional districts, but they have only a few full-time school heads. Likewise, in this division, particularly in Macalelon District, out of eighteen (18) public elementary schools, fourteen (14) schools are being managed by teachers-in-charge. Most of them were in the Teacher I position. In previous years, they

were designated upon the recommendation of the school head before them and the district supervisor to the Schools Division Superintendent. At the present time, qualified teachers may apply for a TIC designation as needed. Further, they had no training as school leaders before they were designated as ones. There are different administrative and instructional supervision tasks given to them.

Role theory posits that different roles people perform and how expectations and interpretations of these roles affect people's experiences both at work and personally. A person may have competing responsibilities that take up their time, making it impossible for them to dedicate the same amount of time to activities in one role and activities in another (Greenhaus & Beutell, 1985). According to Lobel (1991), the utilitarian perspective on role investment contends that roles are compared to each other, resulting in a win-lose situation where time spent on one job reduces time spent on another. There are two ways that this could happen. First, it could be physically difficult to fulfill the demands of one function due to time constraints in another. Time constraints might sometimes lead to a preoccupation with one role while trying to fulfill the requirements of another role (Evans and Bartolome, 1979). In relation to the dual roles of the TICs, who has administrative and classroom teaching functions, this theory relates with the idea that TICs perform two different roles that might affect their performance in doing such. This may also give the context to look for its relationship because it is imperative to know what significance it may bring to make necessary intervention to improve their performances.

The researcher was motivated to conduct the study because of the problems encountered by the TICs in the locality concerning their functions as school heads and classroom teachers, which may affect their performance in doing such roles. The relationship between role overload and productivity at work stays little comprehended. Since work performance is the foundation of an organization's success, it has been established as the primary criterion for employee evaluation and reward. Understanding how and when role overload affects work performance is crucial for management scholars and practitioners. Boundary circumstances most certainly exist because the relationship between role overload and performance has been found to be beneficial in some research but negative in others (LePine et al., 2004; Gilboa et al., 2008; Bowling et al., 2015).

Research Questions

This study aims to determine the level of performance of teachers-in-charge as school heads and classroom teachers.

Specifically, it aims to answer the following questions:

1. What is the level of performance of the teachers-in-charge as school heads based on the Office Performance and Commitment Review?
    1.1 Leading Strategically
    1.2 Managing School Operations and Resources
    1.3 Focusing on Teaching and Learning
    1.4 Developing Self and Others
    1.5 Building Connections
2. What is the level of performance of the teachers-in-charge as classroom teachers

based on the Individual Performance and Commitment Review?

2.1 Content Knowledge and Pedagogy

2.2 Learning Environment

2.3 Diversity of Learners, Curriculum and Planning, & Assessment and Reporting

2.4 Community Linkages and Professional Engagement, & Professional Growth and Professional Development

3. Is there a significant difference between the performance of TIC as school head and classroom teacher when group according to?

3.1 Teaching position

3.2 Type of school handled

4. Is there a significant relationship between the performance of TIC as school head and classroom teacher?

5. What intervention could be proposed based on the result of the study?

METHODOLOGY

Research Design

This study utilized a quantitative descriptive research design method. It suited to this type of research since it aimed to describe and determine the performance of TICs as school heads and classroom teachers and its relationship to their demographic profiles. A descriptive type of research aims to gather information, present conditions, and describe the nature of the situation. It was used to describe the characteristics of a population studied. It does not answer questions about how, when, and why the characteristics occurred (Wikipedia).

Research Locale

The study was conducted in the Third Congressional District of Quezon Province. This is one of the four congressional districts of Quezon, originally known as Tayabas, referred to as the Bondoc Peninsula. Since 1987, it has been represented in the House of Representatives. The municipalities that make up the district are Agdangan, Buenavista, Catanauan, General Luna, Macalelon, Mulanay, Padre Burgos, Pitogo, San Andres, San Francisco, San Narciso, and Unisan. These municipalities are located on the southern portion of the Tayabas Isthmus, and the southwest shore of the Ragay Gulf.

DepEd Quezon is one of the largest divisions in Region IV-A CALABARZON that has many teachers-in-charge. It is indeed important to help them to improve their performance as a school head and address the issues related to their roles as classroom teachers.

Since most of the school heads in the third congressional district were teachers designated as TICs, the researcher chose this locale to be her respondents. These school heads were ordinary classroom teachers that needed help in terms of performing two different roles.

Research Population and Sample

In choosing the population and sample, the researcher applied purposive sampling, where the researcher purposely selected the TICs as respondents of this study due to the challenges met in the locality when performing the tasks of a school head and a classroom teacher at the same time. The conduct of the study utilized a combination of in-person and online platform, so the internet access of the desired number of respondents was considered.

Table 1

List of Respondents in the Third Congressional District of Quezon

Municipality	School District	Total No. of Schools with TICs	Total No. of Respondents
Agdangan	Agdangan	3	3
Buenavista	Buenavista 1	3	3
	Buenavista 2	4	3
Catanauan	Catanauan 1	4	3
	Catanauan 2	3	3
General Luna	General Luna	7	6
Macalelon	Macalelon	14	12
Mulanay	Mulanay 1	3	3
	Mulanay 2	3	2
Padre Burgos	Padre Burgos	4	3
Pitogo	Pitogo	4	3
San Andres	San Andres	4	3
San Francisco	San Francisco	4	3
San Narciso	San Narciso 1	4	3
	San Narciso 2	2	2
Unisan	Unisan	0	0
Total		**66**	**55**

Table 1 shows the study's population which was made up of TICs in the Third Congressional District in the Division of Quezon and computed with the statistician's help. The appropriate sample size, given the population size and specified combination of precision, confidence, and variability, is 55. (This represents the count or number of TICs in the selected district.)

Research Instrument

A survey questionnaire used a standardized performance evaluation tool to gather the necessary information. It was divided into three parts, with the *first* dealing with the

questions that determine the demographic profile of the respondents. The *second* part contained indicators that evaluated the performance of the school heads using the OPCR, initiated by the Division of Quezon. The *third* part contained indicators that determine their performance as classroom teachers based on the KRAs of their IPCR. The study's respondents were the TICs in the third congressional district of Quezon.

Since the study used standardized performance evaluation tools, validation was not a requirement. Pilot testing was done with several TICs outside the research locale to rehearse the research study and test the research approach with a few test participants before conducting the main study (Wright & So, 2022). The researcher prepared several letters addressed to the Division Superintendent and all district supervisors concerned to ask permission to conduct the study. A cover letter was prepared to inform respondents in the purpose of the questionnaire and to assure them that their responses would be treated with utmost confidentiality.

Data Gathering Procedure

Moreover, the researcher requests a letter to the Superintendent of the Schools Division of Quezon to approve the distribution of survey questionnaires to ensure the maximum cooperation of the target respondents. The distributions, and the retrieval, were personally conducted by the researcher using online forms and, or in-person methods. After the retrieval, the gathered data were generated by the statistician for statistical treatment and data analysis.

Statistical Treatment of Data

The data gathered through the questionnaire were classified, tabulated, and analyzed. The data that answered the specific problems were treated as follows:
The scale below was used for the analysis of the data gathered.

Weight	Range Scale	Verbal Interpretation
5	4.51-5.00	Outstanding (O)
4	3.51-4.50	Very Satisfactory (VS)
3	2.51-3.50	Satisfactory (S)
2	1.51-2.50	Unsatisfactory (US)
1	1.00-1.50	Poor (P)

A mean score was used to determine the level of performance of TICs as school heads and classroom teachers.

Mean Score

$M = \Sigma fw/n$

Where: M is the mean
f is the frequency
w is the weight
n is the number of cases

The Kruskal-Wallis H-Test was used to determine the significance of the difference.

One-Way ANOVA

Source of Variation	Sum of Squares	Degrees of Freedom	Mean Squares (MS)	F
Within	$SSW = \sum_{j=1}^{k}\sum_{j=1}^{l}(x-\bar{x}_j)^2$	$df_w = k-1$	$MSW = \frac{SSW}{df_w}$	$F = \frac{MSB}{MSW}$
Between	$SSB = \sum_{j=1}^{k}(\bar{x}_j - \bar{x})^2$	$df_b = n-k$	$MSB = \frac{SSB}{df_b}$	
Total	$SST = \sum_{j=1}^{n}(\bar{x}_j - \bar{x})^2$	$df_t = n-1$		

Sp

$$\rho = 1 - \frac{6\sum d^2}{n(n^2-1)}$$

To interpret the results of Spearman Rho Correlation, the following continuum was used:

Size of Correlation	Interpretation
±1.00	Perfectly positive/ negative correlation
±0.90 – 0.99	Very high positive/ negative correlation
±0.70 – 0.89	High positive/ negative correlation
±0.50 – 0.69	Moderately positive/ negative correlation
±0.30 – 0.49	Low positive/ negative correlation
±0.01 – 0.29	Negligible correlation
0.00	No correlation at all

RESULTS

Part I. Level of Performance of the TIC as School Head in terms of the Office Performance and Commitment Review Form based on the RPMS-PPSSH

Table 2

Mean Scores of the Level of Performance of the TIC as School Head using Office Performance and Commitment Review based on the RPMS-PPSSH for Leading Strategically

Indicators	Mean	Verbal Interpretation
1. Develop with the planning team school plans aligned with institutional goals and policies	4.24	Very Satisfactory
2. Implement programs in the school that support the development of learners	4.40	Very Satisfactory
3. Utilize available monitoring and evaluation processes and tools to promote learner achievement	4.18	Very Satisfactory
4. Utilize relevant research findings from reliable sources in facilitating data-driven and evidence-based innovations to improve school Performance	3.91	Very Satisfactory
5. Manage school data and information using technology, to ensure efficient and effective school operation	4.38	Very Satisfactory
Grand Mean:	**4.22**	**Very Satisfactory**

Legend: *"Outstanding (4.51 – 5.00)"*, *"Very Satisfactory (3.51 – 4.50)", "Satisfactory (2.51 – 3.50)", "Unsatisfactory (1.51 – 2.50)", "Poor (1.00 – 1.50)"*

Table 3

Mean Scores of the Level of Performance of the TIC as School Head using Office Performance and Commitment Review Form based on the RPMS-PPSSH for Managing School Operations and Resources

Indicators	Mean	Verbal Interpretation
1. Manage school data and information using technology, to ensure efficient and effective school operation	4.29	Very Satisfactory
2. Exhibit efficient and effective practices in the management of finances consistently adhering to policies, guidelines and issuances in allocation, procurement, disbursement and liquidation aligned with the school plan.	4.31	Very Satisfactory
3. Establish shared accountability in managing school facilities and equipment in adherence to policies, guidelines and issuances on acquisition, recording, utilization, repair and maintenance, storage and disposal.	4.24	Very Satisfactory
4. Manage staffing such as teaching load distribution and grade level and subject area assignment in adherence to laws, policies, guidelines and issuances based on the needs of the school	4.25	Very Satisfactory
5. Manage school safety for disaster preparedness, mitigation and resiliency to ensure continuous delivery of instruction	4.31	Very Satisfactory
Grand Mean:	**4.28**	**Very Satisfactory**

Legend: *"Outstanding (4.51 – 5.00)"*, *"Very Satisfactory (3.51 – 4.50)", "Satisfactory (2.51 – 3.50)", "Unsatisfactory (1.51 – 2.50)", "Poor (1.00 – 1.50)"*

Table 4

Mean Scores of the Level of Performance of the TIC as School using Office Performance and Commitment Review based on the RPMS-PPSSH for Focusing on Teaching and Learning

Indicators	Mean	Verbal Interpretation
1. Assist teachers in the review, contextualization, and implementation of learning standards to make the curriculum relevant for learners	3.98	Very Satisfactory
2. Provide technical assistance to teachers on teaching standards and pedagogies within and across curriculum areas to improve their teaching practice and ensure integration of career awareness and opportunities in the provision of learning experiences aligned with the curriculum.	4.02	Very Satisfactory
3. Use validated feedback obtained from learners, parents, and other stakeholders to help teachers improve their performance and implement learner discipline policies that are developed collaboratively with stakeholders including parents, school personnel and the community.	4.00	Very Satisfactory
4. Manage a learner-friendly inclusive and healthy learning environment and utilize learning outcomes in developing data-based interventions to maintain learner achievement and attain other performance indicators.	4.15	Very Satisfactory
5. Provide technical assistance to teachers in using learning assessment tools, strategies and results consistent with curriculum requirements to ensure accountability in achieving higher learning outcomes.	4.05	Very Satisfactory
Grand Mean:	**4.04**	**Very Satisfactory**

Legend: *"Outstanding (4.51 – 5.00)"*, *"Very Satisfactory (3.51 – 4.50)", "Satisfactory (2.51 – 3.50)",* "*Unsatisfactory (1.51 – 2.50)", "Poor (1.00 – 1.50)"*

Table 5

Mean Scores of the Level of Performance of the TIC as School Head using Office Performance and Commitment Review Form based on the RPMS-PPSSH for Developing Self and Others

Indicators	Mean	Verbal Interpretation
1. Set personal and professional development goals based on self-assessment aligned with the Philippine Professional Standards for School Heads	4.22	Very Satisfactory
2. Participate in professional networks to upgrade knowledge and skills and to enhance practice	4.25	Very Satisfactory
3. Implement professional development initiatives to enhance strengths and address performance gaps among school personnel	4.13	Very Satisfactory
4. Implement the performance management system with a team to support the career advancement of school personnel, and to improve office performance	4.00	Very Satisfactory
5. Implement a school rewards system to recognize and motivate learners, school personnel and other stakeholders for exemplary performance and/or continued support	4.15	Very Satisfactory
Grand Mean:	**4.15**	**Very Satisfactory**

Legend: *"Outstanding (4.51 – 5.00)"*, *"Very Satisfactory (3.51 – 4.50)", "Satisfactory (2.51 – 3.50)",* "*Unsatisfactory (1.51 – 2.50)", "Poor (1.00 – 1.50)"*

Indicators	Mean	Verbal Interpretation
1. Manage diverse relationships with authorities, colleagues, parents and other stakeholders to encourage an enabling and supportive environment for learners.	4.18	Very Satisfactory
2. Manage school organizations, such as learner organizations, faculty clubs and parent-teacher associations, in support of the attainment of institutional goals.	4.27	Very Satisfactory
3. Implement inclusive practices, such as gender sensitivity, physical and mental health awareness, and culture responsiveness, to foster awareness, acceptance and respect.	4.25	Very Satisfactory
4. Communicate effectively in speaking and in writing to teachers, learners, parents and other stakeholders, through positive use of communication platforms, to facilitate information sharing, collaboration andsupport.	4.25	Very Satisfactory
5. Establish partnerships with the community, such as parents, alumni, authorities, industries, and other stakeholders, to strengthen support for learner development, as well as school and community improvement.	4.25	Very Satisfactory
Grand Mean:	**4.24**	**Very Satisfactory**

Legend: *"Outstanding (4.51 – 5.00)"*, *"Very Satisfactory (3.51 – 4.50)", "Satisfactory (2.51 – 3.50)",* "*Unsatisfactory (1.51 – 2.50)", "Poor (1.00 – 1.50)"*

Part II. Level of Performance of the TIC as Classroom Teacher based on KRAs of the Individual Performance and Commit Review Form

Table 7

Mean Scores of the Level of Performance of the TIC as Classroom Teacher based on KRAs of the Individual Performance and Commit Review Form in terms of Content Knowledge and Pedagogy

Indicators	Mean	Verbal Interpretation
1. Applied knowledge of content within and across curriculum teaching areas.	4.11	Very Satisfactory
2. Used research-based knowledge and principles of teaching and learning to enhance professional practice.	4.31	Very Satisfactory
3. Displayed proficient use of Mother Tongue, Filipino, and English to facilitate teaching and learning.	4.40	Very Satisfactory
4.Used effective verbal and non-verbal classroom strategies to support learner understanding, participation, engagement, and achievement.	4.25	Very Satisfactory
Grand Mean:	**4.27**	**Very Satisfactory**

Legend: *"Outstanding (4.51 – 5.00)"*, *"Very Satisfactory (3.51 – 4.50)", "Satisfactory (2.51 – 3.50)",* "*Unsatisfactory (1.51 – 2.50)", "Poor (1.00 – 1.50)"*

Table 8

Mean Scores of the Level of Performance of the TIC as Classroom Teacher based on KRAs of the Individual Performance and Commit Review Form in terms of Learning Environment

Indicators	Mean	Verbal Interpretation
1. Established safe and secure learning environments to enhance learning through the consistent implementation of policies, guidelines, and procedures.	4.58	Outstanding
2. Maintained learning environments that promote fairness, respect, and care to encourage learning.	4.58	Outstanding
3. Maintained learning environments that nurture and inspire learners to participate, cooperate and collaborate in continued learning.	4.38	Very Satisfactory
4. Applied a range of successful strategies that maintain learning environments to motivate learners to work productively by assuming responsibility for their own learning.	4.13	Very Satisfactory
Grand Mean:	**4.42**	**Very Satisfactory**

Legend: *"Outstanding (4.51 – 5.00)"*, *"Very Satisfactory (3.51 – 4.50)", "Satisfactory (2.51 – 3.50)", "Unsatisfactory (1.51 – 2.50)", "Poor (1.00 – 1.50)"*

Table 9

Mean Scores of the Level of Performance of the TIC as Classroom Teacher based on KRAs of the Individual Performance and Commit Review Form for Diversity of Learners, Curriculum and Planning & Assessment and Reporting

Indicators	Mean	Verbal Interpretation
1. Designed, adapted, and implemented teaching strategies that are responsive to learners with disabilities, giftedness, and talents	4.24	Very Satisfactory
2. Adapted and used culturally-appropriate teaching strategies to address effectively the needs of learners from indigenous groups	4.22	Very Satisfactory
3. Adapted and implemented learning programs that ensure relevance and responsiveness to the needs of all learners.	4.25	Very Satisfactory
4. Utilized assessment data to inform the modification of teaching and learning practices and programs.	4.42	Very Satisfactory
Grand Mean:	**4.28**	**Very Satisfactory**

Legend: *"Outstanding (4.51 – 5.00)", "Very Satisfactory (3.51 – 4.50)", "Satisfactory (2.51 – 3.50)", "Unsatisfactory (1.51 – 2.50)", "Poor (1.00 – 1.50)"*

Table 10

Mean Scores of the Level of Performance of the TIC as Classroom Teacher based on KRAs of the Individual Performance and Commit Review Form in terms of Community Linkages and Professional Engagement & Personal Growth and Professional Development

Indicators	Mean	Verbal Interpretation
1. Maintained learning environments that are responsive to community contexts.	4.16	Very Satisfactory
2. Reviewed regularly personal teaching practice using existing laws and regulations that apply to the teaching profession, and the responsibilities specified in the Code of Ethics for Professional Teachers	4.11	Very Satisfactory
3. Complied with and implemented school policies and procedures to foster harmonious relationships with learners, parents, and other stakeholders	4.18	Very Satisfactory

4. Applied a personal philosophy of teaching that is learner-centered	4.16	Very Satisfactory
5. Adopted practices that uphold the dignity of teaching as a profession by exhibiting qualities such as caring attitude, respect, and integrity.	4.16	Very Satisfactory
6. Set professional development goals based on the Philippine Professional Standards for Teachers	4.15	Very Satisfactory
Grand Mean:	**4.15**	**Very Satisfactory**

Legend: *"Outstanding (4.51 – 5.00)", "Very Satisfactory (3.51 – 4.50)", "Satisfactory (2.51 – 3.50)", "Unsatisfactory (1.51 – 2.50)", "Poor (1.00 – 1.50)"*

Part III. Test for Significant Difference Between the Performance of TIC as School Head and Classroom Teacher when grouped according to: Teaching Position and Type of School Handled

Table 11

DISCUSSION

Table 2 shows the mean scores of the level of performance of the TIC as school head using Office Performance and Commitment Review based on the RPMS-PPSSH for Leading Strategically. The grand mean was 4.22 with a verbal interpretation of "Very

Satisfactory." This implied that the level of performance of the TIC as school head has a very satisfactory rating in terms of the OPCR anchored to the PPSSH.

The top scorer showed that "the respondents implement programs in the school that support the development of learners", with a mean of 4.40. The data showed that even though the findings revealed that TICs are very satisfactory in leading strategically, they are still lacking in some of what they are expected to perform as a school head. Implementing programs in the school that support the development of the learners is one of the significant roles of the teacher-in-charge to fulfill as a school leader. The result implies that the respondents' level of performance pertaining to the indicators mentioned above is parallel with Muring (2014), which according to him, the school heads hold the position of leadership and are accountable for overseeing the creation and execution of all educational programs and initiatives inside the school.

The bottom scorer stated that "the respondents facilitate data-driven and evidence-based innovations to enhance school performance by utilizing pertinent research findings from dependable sources." This entails the respondents' performance in the conduct of action research in their schools is a bit lower in terms of means, which tells that TICs has a lot more rooms for improvement when it comes to facilitating data-driven and evidence-based innovations. As school leaders, they must seek to ensure that teachers' instructional content and techniques are informed by relevant research and demonstrated experiences. Utilization of credible research findings in promoting data-driven and evidence-based solutions to improve school performance is one of the things that support how school heads are leading strategically. One way a school administrator can address the challenges that education faces today is through the knowledge and application of action research. Sagor (2000) believes that leaders who engage in action research find the process to be an empowering experience. He states that relevance is guaranteed because the research focus was determined by the researcher, who utilizes the findings to enhance professional practice. TICs has displayed little engagement in terms of doing relevant research in the pursuit of enhanced school performance. This conforms with the article of Lundqvist & Westerlund (2022), which cited that research has found that delivering research-based education poses great challenges for school leaders, as well as revealing substantial variations in engagement in practice (Bryan & Burstow, 2017; Cochran-Smith & Lytle, 2009; Schenke, 2015; Schenke et al., 2016).

In contrast, TICs also utilize their knowledge and comprehension of the advancements in education policy and changes in schooling, social dynamics, and environmental trends to enhance educational opportunities within the school. They also possess up-to-date knowledge and comprehension of research about teaching, learning, and child development. They know how to apply this research to meet the needs of students within the school. This encompasses overseeing performance management in the school and implementing strategies to enhance teaching methods (AITSL, 2019).

In addition, these findings agreed to Day et al. (2020), which found that principals used data, research, inspection evidence, and observation as tools to enhance teaching and learning and thus to support school improvement. Also, for teachers-in-charge who

assumed office as full-pledged school heads, effective leaders of the school should be able to improve school vision and make changes in educational programs with a strong understanding of school reform (Martineau, 2012).

Table 3 shows the mean scores of the level of performance of the TIC as school head using the Office Performance and Commitment Review Form based on the RPMS-PPSSH for Managing School Operations and Resources. The grand mean was 4.28 with a verbal interpretation of "Very Satisfactory." The result implied that the level of performance of the TIC as school head in terms of the Office Performance and Commitment Review Form based on the RPMS–PPSSH, has a very satisfactory rating.

The highest rater indicated that "the respondents demonstrate efficient and successful financial management procedures, consistently adhering to announcements, policies, and guidelines for allocation, purchase, payment, and liquidation in line with the school plan," and "the responders manage school safety to ensure ongoing instruction delivery by preparing for, mitigating, and building resilience to disasters," with the same mean of 4.31. In these areas, TICs manifested well performance when it comes to management of resources and planning for the school's safety. This conforms in the previous studies which indicate that all the given competencies in managing school operations and resources have a significant relationship between school leaders' management competencies and school performance in terms of quality and efficiency (Valenzuela & Buenvinida, 2021). It was also found that in their study, school heads are very knowledgeable and skilled in financial management in terms of knowledge, adherence to guidelines, policies, and issuances, ensuring that funding allocation and procurement were coordinated with the school plan, which is required for efficient and effective school operations.

These findings are parallel to the national standards of excellence for headteachers in England which state that school leaders prioritize and allocate financial resources appropriately, ensuring efficiency, effectiveness, and integrity of public funds (Department for Education, UK, 2020).

The TICs also serve as the school's DRRM coordinator. They lead the school in the planning and management of school safety among others. Appointing an alternate among other school personnel to assist in implementing DRRM is hereby permitted. To maintain ongoing delivery of teaching, and manage school safety for disaster preparedness, mitigation, and resiliency. DepEd Order No. 21, s. 2015 stipulated the roles and responsibilities of school heads to establish a safety culture in the school.

The lowest rater showed that "the respondents establish shared accountability in managing school facilities and equipment in adherence to policies, guidelines, and issuances on the acquisition, recording, utilization, repair and maintenance, storage, and disposal," with a mean of 4.24. As the head of the school, TICs responsible for the management of school facilities. In this regard, the results are in relation to Day et. al (2020), which revealed that the school administrators recognized the importance of enhancing the learning environment and maximizing the effectiveness of teaching. They devised plans to upgrade the school infrastructure and facilities. Through improvements

in classrooms and overall school facilities they acknowledged the correlation between conditions for teaching and learning as well as the overall well-being and success of both teachers and students.

Also, principals work with others to produce and implement clear, evidence-based improvement plans and policies for the development of the school and its facilities. They recognize that a crucial part of the role is to lead and manage innovation and change to ensure the vision and strategic plan is put into action across the school and that its goals and intentions are realized (AITSL, 2019).

The results are related to the literature from Mpondo (2005), who claimed that the vital function of heads of schools is to secure and operate effective allocation, monitor, and control the use of resources. A school head is expected to prepare the school budget that covers different responsible areas for fulfilling education objectives, specifically teaching and learning processes.

Moreover, on the job performance of school heads, Regala (2020) found that school heads have exhibited commendable job performance that encourages and inspires the teachers to cooperate with their school heads to achieve the goals and objectives of the school. The result explains that school heads were very good at performing their duties and responsibilities efficiently, including submitting progress reports to the Division Superintendent of Schools, implementing the project and MOOE program of the school, holding faculty meetings at the appropriate time, directing and guiding the teachers to accomplish assigned work, supervising and managing the teachers using their hearts, heads, and hands, making a program plan for faculty development, and preparing a budget for physical facilities.

Table 4 shows the mean scores of the level of performance of the TIC as school head using Office Performance and Commitment Review Form based on the RPMS-PPSSH for focusing on teaching and learning. The grand mean was 4.04 with a verbal interpretation of "Very Satisfactory." The result implied that the level of performance of the TIC as school head in terms of the Office Performance and Commitment Review Form, based on the RPMS–PPSSH, has a very satisfactory rating.

The highest indicator elicited that "the respondents maintain learner achievement and meet other performance indicators by creating a learner-friendly, inclusive, and healthy learning environment, as well as use learning outcomes to inform the development of data-driven interventions," with a mean of 4.15.

The result indicated that the respondents have time for school supervision in the school to promote the vision and mission of the school. As cited in the work of Valenzuela and Buenvinida (2021), contrary to the work of Ampofo et al. (2019), they found that school heads devote very little time to supervision, especially in lesson planning and the delivery of learning by teachers. The study was able to establish that instructional supervision has a significant influence on teachers' performance. As a result of this, the

study recommends that the school heads perform direct supervision as well as a reduction in the teaching load of the heads of departments.

Successful educational leaders foster a school community that's inclusive nurturing and supportive with a focus on promoting the academic achievement and overall well-being of every student (NPBEA, 2015).

The lowest indicator stated that "the respondents help teachers create a curriculum that is meaningful for students by reviewing, contextualizing, and implementing learning standards," with a mean of 3.98.

The role of the school head to effectively manage the LAC organization and ensure the hosting of LAC sessions that it is important for school leaders to take turns supporting teachers, in reviewing adapting and implementing learning standards to make the curriculum more meaningful, for students. As stated in this directive, curriculum contextualization involves aligning the curriculum content and instructional approaches to better meet the needs of learners, which teachers should also consider. (D.O. 36, s. 2015) The result also showed that the respondents assisted teachers in the technicalities of school administration. The study of Lashway (2009) supported such a claim, who opines that principals today should likewise serve as pioneers for students learning. They should know the program's content and pedagogical procedures. They should know, collect, and analyze data in a way that fuels excellence. As an instructional leader, the school head creates a school environment conducive to learning and becomes accountable for learning outcomes. The main components of an efficient and effective instructional system are to diagnose or set targets, plan, modify, or improve instruction, teach, assess (formatively), modify or improve instruction, assess (summative), and report to stakeholders (RA 9155, 2001).

Table 5 shows the mean scores of the level of performance of the TIC as school head in terms of their Office Performance and Commitment Review Form based on the RPMS-PPSSH for Developing Self and Others. The grand mean was 4.15, with a verbal interpretation of "very satisfactory." The result implied that the level of performance of the TIC as school head in terms of the Office Performance and Commitment Review Form, based on the RPMS–PPSSH, has a very satisfactory rating.

The top indicator stated that "the respondents engage in professional networks to improve practice and advance knowledge and skills.," with a mean of 4.25. The result entails understanding laws, policies, guidelines, and issuances in the school. In contrast to the study of Valenzuela & Buenvinida (2021), they found out that, school administrators nonetheless try to assist and encourage their staff members' aspirations to better themselves, even though they are less able to demonstrate and apply their knowledge of laws, policies, guidelines, and issuances.

Moreover, D.O. 36, s. 2015 states the role of the school head to effectively manage the Learning Action Cell organization and ensure the hosting of LAC sessions that it is important for school leaders to take turns supporting teachers, in reviewing adapting and

implementing learning standards to make the curriculum more meaningful, for students. This also confirms participation in professional networks to upgrade one's knowledge and skills as well as enhancement of practice.

Similarly, school heads must utilize learning outcomes in the development of data-based interventions to maintain learner achievement and attain other performance indicators. Learning Action Cell could reach an agreement to investigate initiatives and meet the stated need. Interventions may take the shape of learning resources, instructional materials, equipment, facilities, or teaching styles, modes of teaching, programs, and others.

The bottom indicator stated that "the respondents assist school staff in advancing their careers and enhancing office performance by implementing the performance management system with a team," with a mean of 4.00.

According to Day et. al (2020), the five key Professional Practices which are specified, through which the Leadership Requirements includes managing performance, effective continuing professional learning, and feedback.

Alar's 2016 study (as cited in Cañete, 2020) disclosed that whatever the school's image, it reflects on the administrators' performance. So, the lower the performance of the school heads, the lower the impact on the school.

The Department of Education issued DepEd Order No. 2, Series 2015, these are guidelines on the Results-Based Performance Management System (RPMS) establishment and implementation in the Department of Education. Its goal is to provide detailed instructions for implementing the Civil Service Commission's (CSC) Strategic Performance Management System (SPMS) in DepEd. These guidelines stipulate the specific mechanisms, criteria, and processes for the performance target setting, monitoring, evaluation, and development planning for schools and offices, covering all officials and employees, school-based and non-school-based, in the Department holding regular plantilla positions.

For the department order mentioned above, the Individual Performance Commitment and Review Form (IPCRF) is vigorously implemented. As defined in this mandate, it is a form that should reflect the individual commitments and performance of personnel covered by these regulations, such as teachers and master teachers. It must be accomplished by the individual personnel to reflect the agreed-upon individual key result areas (KRAs), objectives, and performance indicators. DepEd released DepEd Memorandum No. 004, s. 2022 or the Implementation of the Results-Based Performance Management System—Philippine Professional Standards for Teachers for School Year 2021–2022. This memorandum provides guidelines for the performance management and appraisal of teachers using the remaining 18 indicators in their RPMS, chosen as objectives for this school year. Creation of two kinds of objectives was constructed for regular teachers, such as classroom-observable and non-classroom-observable objectives. There are nine (9) classroom observable objectives for proficient teachers and

seven (7) for highly proficient teachers, whose performance indicators were identified as quality indicators. A total of thirteen (13) non-classroom observable objectives for both proficient and highly proficient teachers were made.

The evaluation of teacher work performance has served a variety of goals in recent years, one of which is to pinpoint areas of instruction deficiency and devise solutions. Because of this, gathering data that will be helpful in creating strategies that will improve instruction should be one of the objectives of assessing instructors' job performance. (Iwuagwu et al., 2016).

Furthermore, D.O. No. 42, s. 2017, aims to " use a standard measurement to evaluate teacher effectiveness, pinpoint areas of need, and offer assistance with professional development." The development of the Classroom Observation Tool (COT), based on the PPST's developmental framework, helps DepEd's initiative to provide a single tool to measure teachers' classroom performance. In this account, one of the primary means of verification (MOV) during the accomplishment of the IPCRF is the Classroom Observation Tool (D.M. No. 004, s. 2022).

On the other hand, The Office Performance Commitment and Review Form (OPCRF) is a form that is to be completed by the head of an office to represent the office's commitments and performance. The office KRAs, objectives, and performance indicators are reflected in this form. The OPCRF is equal to the IPCRF of the office's head. DepEd Quezon issued Division Memorandum No. 478, Series 2022, about the conduct of the year-end performance management review and the submission of the OPCRF for school-Table 6 shows the mean scores of the level of performance of the TIC as school head in terms of their Office Performance and Commitment Review Form based on the RPMS-PPSSH for Building Connections. The grand mean was 4.24 with a verbal interpretation of "Very Satisfactory." The result implied that the level of performance of the TIC as school head in terms of the Office Performance and Commitment Review Form, based on the RPMS–PPSSH, has a very satisfactory rating.

The highest rater elicited that “the respondents oversee educational groups including parent-teacher associations, faculty clubs, and learner organizations to help the institution achieve its objectives”, with a mean of 4.27.

The results generated are about the findings in the study of Cañete (2020). Community partnership is very significant in sustaining the needs of the school in academics and extra-curricular activities. Such claim supports the study of Carpio (2014) entitled “Stakeholders Participation and School Improvement”, where he emphasized the importance of communication while getting the best and appropriate partners in school improvement. Thus, if it happens, the school will likely have a significant improvement. The lowest rater stated that "the respondents maintain a variety of relationships with parents, teachers, coworkers, and other stakeholders to promote a welcoming and encouraging atmosphere for students", with a mean of 4.18. These findings also agree with the study of Day et al (2020), states the five essential professional practices through which leadership requirements enact that include developing and maintaining positive

partnerships with students, families and carers and the wider school community. Building and maintaining excellent relationships with staff members at all levels allowed school leaders to make them feel important and engaged. They showed concern for the workers' personal and professional welfare. Trust and mutual respect were evident in the connection between senior leadership teams (SLTs) and school leaders. Achieving long-term success was viewed as dependent on enhancing the school's reputation and interacting with the community. Together with their SLTs, school administrators cultivated strong ties with local authorities and established a network of connections between the school and other institutions and people. It was believed that the school would benefit from having close ties to important local stakeholders.

The result concurs with that of Motowidlo (2012), who found that job training offers an excellent opportunity to school heads since it reinforces knowledge and skills in supervising and managing the teachers and the school organization. Job training enables school heads to be more creative in making the program's action plan.

Part II. Level of Performance of the TIC as Classroom Teacher based on KRAs of the Individual Performance and Commit Review Form

Table 7 shows the mean scores about the level of performance of the TIC as a classroom teacher based on KRAs of the Individual Performance and Commitment Review Form for Content Knowledge and Pedagogy. The grand mean was 4.27 with a verbal interpretation of "Very Satisfactory." The result implied that the level of performance of the TIC as a classroom teacher, based on KRAs in terms of the Individual Performance and Commitment Review, has a very satisfactory rating.

The highest indicator exemplified that “the respondents displayed proficient use of Mother Tongue, Filipino, and English to facilitate teaching and learning” with a mean rating of 4.40. This elucidated that the curriculum may be contextualized to the language and culture of the learners. This explained how the curriculum could be tailored to the language and cultural preferences of the learners. In addition, curriculum contextualization refers to the process of aligning curriculum content with learner-relevant instructional strategies, which teachers should also consider. In this account, the TICs showed that they are reliable when it comes to the usage of language in the teaching-learning process.

The lowest indicator stated that “the respondents applied knowledge of content within and across curriculum teaching areas” with a mean of 4.11. This indicated that the respondents may give mastery to the content knowledge within and across curriculum areas regardless of what subject matter they are teaching. This acknowledges how crucial it is for educators to have a solid grasp of the theories and concepts of teaching and learning, as well as how those ideas relate to one another and to other curriculum areas. Teachers' capacity to implement relevant and developmentally appropriate teaching based on current research and subject matter expertise is included in this context.

Table 8 shows the mean scores about the level of performance of the TIC as a classroom teacher based on KRAs of the Individual Performance and Commit Review Form for learning environment. The grand mean was 4.42 with a verbal interpretation of "Very Satisfactory". The result implied that the level of performance of the TIC as a classroom teacher, based on KRAs in terms of the Individual Performance and Commitment Review Form, has a very satisfactory rating.

The highest rater stated that "the respondents may establish safe and secure learning environments to enhance learning through the consistent implementation of policies, guidelines, and procedures" and "the respondents maintained learning environments that promote fairness, respect, and care to encourage learning" with the same means of 4.58. Its findings go counter to the PPST's, which indicates that respondents may guarantee a secure and comfortable learning environment for students. It emphasizes how important it is for educators to create safe, secure, equitable, and encouraging learning environments to encourage student responsibility and success. The domain focuses on setting up an atmosphere that is learning-focused and allows teachers to effectively control student conduct both in real and virtual spaces. It also emphasizes how important it is for teachers to make use of a variety of tools and offer mentally demanding and engaging exercises to foster positive classroom interactions that lead to the achievement of high learning standards. The lowest rater elicited that "the respondents applied a range of successful strategies that maintain learning environments to motivate learners to work productively by assuming responsibility for their own learning" with a mean of 4.39.

Table 9 shows the mean scores on the level of performance of the TIC as a classroom teacher based on the KRAs in the Individual Performance and Commit Review for Diversity of Learners, Curriculum, and Planning and Assessment and Reporting. The grand mean was 4.28 with a verbal interpretation of "Very Satisfactory". Commitment Review at the level of performance of the TIC as a classroom teacher, based on KRAs in the Individual Performance and Commitment Review, has a very satisfactory rating.

The top scorer indicated that "the respondents utilized assessment data to inform the modification of teaching and learning practices and programs" with a mean of 4.42. This demonstrated how educators and school administrators use learner-centered assessment to guarantee high-quality learning results. Additionally, all teachers must to be familiar with how to carry out the learner-centered assessment rules for the K–12 curriculum. Teachers and students receive the essential input regarding learning outcomes through assessment. Teachers can consistently choose, arrange, and employ sound assessment procedures with the help of this feedback, which also informs the reporting cycle (D.O. 35, s. 2016).

The bottom scorer showed that, "the respondents may adapt and use culturally-appropriate teaching strategies to address effectively the needs of learners from indigenous groups", with a mean of 4.22. This would suggest that during the teaching-learning process, lessons could be tailored to the cultural background of the students. Lesson planning is an essential part of a productive teaching and learning process since

it gives the teacher a clear structure for instruction and helps the class run more smoothly. It functions as a teacher's road map for what the students should learn and how it will be accomplished in the classroom. (Sehweil, 2022).

Table 10 shows the mean scores of the level of performance of the TIC as a classroom teacher based on KRAs in terms of the Individual Performance and Commit Review in terms of Community Linkages and Professional Engagement and Personal Growth and Professional Development. The grand mean was 4.15 with a verbal interpretation of "Very Satisfactory." This implied that the level of performance of the TIC as a classroom teacher, based on KRAs of the Individual Performance and Commitment Review, has a very satisfactory rating.

The highest indicator stated that "the respondents obeyed and carried out the rules and regulations of the school to promote good relations with students, parents, and other stakeholders," with a mean of 4.18. This suggested that the responders get along well with the various school stakeholders. This necessitates community engagement in educational settings. It emphasizes the part teachers play in building ties between the school and the community to enhance the learning environment and the community's involvement in the educational process. It is required of teachers in this area to identify and seize opportunities that link classroom education to the interests, aspirations, and experiences of other important stakeholders as well as the greater school community. It has to do with how important it is for teachers to understand and fulfill their obligations to uphold professional ethics, responsibility, and transparency to promote constructive and friendly relationships with students, parents, schools, and the greater school community.

In addition, it agrees with AITSL (2022) which states that teachers welcome opportunities to engage with their school communities both within and outside of the classroom to enhance the educational experience for learners. They understand the significance of relationships between the community, the family, and the classroom for students' intellectual and social development.

Part III. Test for Significant Difference Between the Performance of TIC as School Head and Classroom Teacher when grouped according to: Teaching Position and Type of School Handled

Table 11 shows the Kruskal Wallis H-Test of the comparison between the performance of TIC as school head when grouped according to teaching position which is not statistically significant ($p = 0.696, 0.436, 0.420, 0.873, 0.854, > 0.05$). These findings illustrate that the responses do not differ when grouped according to teaching position.

The results revealed that no matter what position they are in, they can still perform their duties very satisfactorily. This means that TICs having Teacher I Position can perform the way Teacher II and Teacher III do. Contrasting to the study of Sarabia and Collantes (2020), teaching position was found to be a positive predictor of teaching

performance, meaning that teachers with higher positions were probably going to do better in the classroom. In addition, TICs are still capable of carrying out their responsibilities admirably despite the variations in teaching positions.

Table 12 shows the Kruskal Wallis H-Test of the comparison between the performance of TIC as classroom teacher when grouped according to teaching position which is not statistically significant (p = 0.526, 0.645, 0.129, 0.327 > 0.05). These findings demonstrate that there is no variation in the responses when they are categorized based on teaching position. The result is consistent with the study of Sumanga et al. (2022) which found to be insignificant in teaching performance as far as teaching position is concerned.

Table 13 shows the Kruskal Wallis H-Test of the comparison between the performance of TIC as school head when grouped according to type of school handled which is significantly not different (p = 0.584, 0.747, 0.661, 0.844, 0.365 > 0.05). TICs perform well regardless of the type of school handled. Handling multigrade and monograde school provides a wide range of duties. In addition to shaping the vision and guaranteeing the academic success of every learner, TICs also cultivate leadership in both learners and faculty, supervises daily operations, prepares programs in accordance with the needs of the school, and fosters an environment that is conducive to learning. This implies that both type of schools does not differ when it comes to performing their roles as school head in terms of the PPSSH (D.O. 24, s. 2020).

Table 14 shows the Kruskal Wallis H-Test of the comparison between the performance of TIC as classroom teacher when grouped according to type of school handled which found to be significantly different (p = .004 < 0.05) and not significantly different (p = .444, .614, .402 > 0.05). Thus, the null hypothesis was rejected. There is no significant difference between the performance of TIC as classroom teachers when grouped according to the type of school handled. The results showed that, in terms of content knowledge and pedagogy, teachers teaching multi-grade classes outperform teachers teaching mono-grade classes since they are more involved in a variety of learning areas that span diverse grade levels.

Part IV. Test for Significant Relationship Between the Performance of TIC as School Head and as Classroom Teacher

Table 15 shows the Spearman Rank on the significant relationship between the Performance of TIC as School Head and as Classroom Teacher in terms of Content Knowledge and Pedagogy and Focusing on Teaching and Learning which found to be significant (p = 0.182 > 0.05). The rest of the indicators revealed the following result (p = 0.122, 0.183, 0.050 >/= 0.05). Thus, the null hypothesis was rejected. There is no significant relationship between the performance of TIC as School Head and as Classroom Teacher. Based on the findings, being a school head has nothing to do with the teaching-learning process. Role overload is a factor in this circumstance. Administrative tasks occupy the time spent as a classroom teacher. In contrast, as to RA

9155, a school head is person who is responsible for the administrative and instructional supervision of a school or cluster of schools. In addition, as an instructional leader, a school head is responsible for what goes on inside the classroom and how the instructional time was utilized to make the teaching-learning process meaningful. Leadership and instructional supervision should meet the expectation that the school head and the teachers are open to suggestions and recommendations to improve classroom instruction for better learning outcomes. This rather crucial responsibility needs a broad understanding and know-how of the nitty-gritty of supervision so that a higher quality of learning is achieved (D.O. 85, s. 2003).

Table 16 shows the Spearman Rank on the significant relationship between the Performance of TIC as School Head and as Classroom Teacher in terms of Learning Environment ($p = 0.686, 0.578, 0.854, 0.854, 0.890 > 0.05$) which found to be not significant. Performing the role as a school head does not affect the learning environment. This demonstrates that TICs are exempt from having to consider how their decisions as school administrators may affect the learning environment.

Table 17 shows the Spearman Rank of the significant relationship between the Performance of TIC as School Head and as Classroom Teacher in terms of Diversity of Learners, Curriculum and Planning and Assessment and Reporting. In terms of Leading Strategically ($p = 0.985, 0.458, 0.782, 0.878, 0.523 > 0.05$) which is more than the 0.05 level of significance. Thus, the null hypothesis was accepted. There is no significant relationship between the performance of TIC as School Head and as Classroom Teacher in terms of diversity of learners, curriculum and planning, and assessment and reporting. According to Taylor (2023), Parkinson's Law emphasizes how time constraints, and a sense of urgency can enhance productivity. Individuals can consciously decrease their deadlines, improve their concentration, efficiency, and productivity, and complete tasks more quickly. More so, the findings show that good time management can lead to the attainment of a certain task without compromising other duties.

Table 18 shows the Spearman Rank on the significant relationship between the Performance of TIC as School Head and as Classroom Teacher in terms of Community Linkages and Professional Engagement and Personal Growth and Professional Development which has a significant relationship ($p = 0.000 < 0.05$) in all areas. These results state that in as much as the TICs performs higher in her role as a school head, his/her performance in community linkages professional engagement and personal growth and professional development gives a positive effect on her as a teacher.

Part V. Proposed Intervention

In response to the result of the study on Performance of Teachers-In-Charge as School Head and Classroom Teachers in the Third Congressional District of Quezon: Basis for Intervention, the conceptualization of PROJECT SIBAY SYSTEM for TICs was made possible. It stands for Strong Initiative to Build Assistance Yielding System for TICs. The scope of the intervention aims to address the level of performance of a TIC as School Head and as Classroom Teacher. This also addresses the variances of the responses on

the performance as School Head and Classroom Teacher with the degree of relationship to one another. The focus of the proposed intervention is mainly on creating activities on the areas with identified lower rating of performances leaning towards satisfactory level (3.51-4.00) that will support the teachers who are designated as TICs.

The intervention aims to provide activities that will help enhance the TIC's capabilities in the following areas: (a) utilization of relevant research findings in leading strategically; (b) assisting teachers in the review, contextualization, and implementation of learning standards; and (c) Developing self and others. The program design comprises a timeline that guides the implementation of various activities at the district or division level. Following implementation, the intervention's effectiveness will be assessed by monitoring and evaluation.

Conclusions

Based on the findings derived, the following conclusions were drawn:

1. The level of performance of the TIC as school head based on the Office Performance and Commitment Review has a very satisfactory rating.
2. The level of performance of the TIC as a classroom teacher based on the Individual Performance and Commitment Review has a very satisfactory level.
3. There is no significant difference in all KRAs of the performance of TIC as a School Head and Classroom Teacher when grouped according to teaching position and the type of school handled. Hence, the research hypothesis is accepted.
4. There is significant relationship and no significant relationship in some KRAs of the performance of TIC as a School Head and Classroom Teacher. Hence, the research hypothesis is partially accepted and partially rejected.
5. The researcher proposed an intervention program on the areas with identified lower rating of performances leaning towards satisfactory level.

Recommendations

Based on the findings and conclusions drawn, the following were recommended:

1. Teachers-in-Charge manifested very satisfactory level on their performance as they have shown good performance of their roles but on the other hand, this does not mean that they have achieved the standards set by the Department that are expected of them. There were few performance indicators which need to be improved to better perform their roles as school leader. They still need to strive to meet the prescribed standards by attending trainings related to PPSSH domains most specially those who are new in this designation/position.
2. TICs as a classroom teacher also displayed a very satisfactory rating on their performance while some indicators still need to be improved to achieve higher level of performance. More so, in line with the Role Theory, TICs might encounter challenges due to the dual functions they are dealing with every day. In this account, it is recommended that higher authorities may consider looking

for the necessary actions that will readily give assistance to the TICs' undertaking pertaining to their performance as classroom teacher specifically the number of teaching loads given to them to improve their performance mentioned above and to give an order of priority to their tasks.

3. As far as the results indicate, there is no significant difference in all the performance indicators of TIC as a School Head and Classroom Teacher when grouped according to teaching position and type of school handled, however, the TICs may be given the opportunity to obtain at least higher school head position to augment the time focusing on the administrative tasks and lessen the actual class encounter. In this way, He will be able to manage the two duties more skillfully and fulfill his duty as head of the school more effectively.
4. As the findings suggest, there is a significant relationship between the Performance of TIC as School Head and as Classroom Teacher when talking about Content Knowledge and Pedagogy and Focusing on Teaching and Learning. TICs may attend trainings focusing on the pedagogical approaches in teaching as well as relevant educational engagements in Focusing on Teaching and Learning to capacitate School Heads. Moreover, reduced the number of actual class encounters to alleviate the teaching loads of the TICs.
5. The proposed intervention program of this study may be used by the recipient teachers who are designated as teacher-in-charge in the Division of Quezon to improve their performance in the areas with identified lower rating of performances leaning towards satisfactory level.
6. In as much as the findings reveal, future researchers may investigate further the problems met while performing their roles as school head and classroom teacher and correlate their performance to other factors.

Compliance with Ethical Standards

Anonymity, consent, and beneficence are the three research ethics that were upheld in this study. Data privacy was given the highest concern during the research process to guarantee that the data were securely collected. The research did not reveal any personal data that the participants submitted. Furthermore, copies of the consent form were given to the teachers who supplied the student data, making sure the teachers-in-charge knew about their involvement. The researcher guaranteed that the information would be handled with the highest confidentially and went into detail about the procedure for collecting it. Additionally, if they felt it was necessary, the TICs had the choice to not participate at all. The researcher concluded by telling the respondents that there would be no advantages.

Acknowledgments

This manuscript could not have been possible without the people herewith addressed. Thus, the researcher expresses her heartfelt gratitude and appreciation to those who helped her in this study.

To the Board of Panel, Dr. Diosdado P. Zulueta, Dr. Julieta Q. Nabos, and Dr. Leodegario M. Jalos, Jr., for the advice, comprehensive suggestions, and professional assistance.

I am also grateful to the Dean of Graduate Studies Extension Program, Dr. Leodegario M. Jalos, Jr., for being hands-on, considerate, and organized in disseminating updates about the conduct of the studies.

To Dr. Melchor B. Espiritu, the dean of EQCI, for always guiding and encouraging us to finish this MAED journey. To my thesis adviser, Dr. Romulo H. Malvar, my Editor/Copy Editor, Dr. Ernesto L. Largado, and my Statistician, Dr. Rogel L. Limpiada, for helping me in finalizing this thesis within the limited time frame.

I would like to express my gratitude to all the TIC respondents and their District Supervisors for allowing me to have them as part of my study.

To Ms. Liezl M. Manoy, for assisting me in many ways in carrying out the manuscript from printing to the submission to my adviser and to the board of panel.

To Mr. and Mrs. Nestor N. Sandoval, for serving as my personal statistician and supportive friends. To my TES Solid Friendchers, Kabudolz, AREDEDEPAOR Family and Sisterettes, for always reminding me that I can finish this study.

And to my best half, Sgt. Nelson S. Pascual, Jr., for the emotional, moral, and financial support, and for always believing in me and pushing me to take steps forward.

ABSTRACT

This research focuses on the effect of macro plastics on the environment of Maubuh Beach. Macro plastics are larger plastic wastes than can be seen with the naked eye. It is becoming an increasingly serious problem in our community. Macro plastic pollution can cause harm to the surrounding area where it is located; it can affect the health of every individual as well as the animal habitat. This study employed survey and interview methods. This study used the mean for data analysis to the effect of macro plastics on the environment of Maubuh Beach. Random sampling was used to select 70 beachgoers to be the research respondents to the effect of macro plastic and 10 local officials to answer the possible interventions to avoid the presence of macro plastic in the environment of Maubuh Beach. A questionnaire and guided question interview are prepared by the researchers and used as the research instruments in this study. The finding shows that macro plastics are the major problem of distraction in the environment of Maubuh Beach. Beachgoers must dispose of their waste in the appropriate receptacle located nearby under the solid waste management policy. By understanding the effects of macro plastics on the environment of Maubuh Beach, local officials may take action about the crisis in waste pollution as soon as possible for future generations, as they need to upgrade garbage disposal systems, have a proper sanitary landfill, implement rules and regulations, form partnerships with relevant parties, and organize regular clean-up drives.

Keywords: *Environment, Effect, Macro plastic, Maubuh Beach*

INTRODUCTION

Maubuh Beach is located in Patikul Sulu, Philippines. There are numerous establishments and beachgoers that can be sources of macro plastics. There is growing concern over the impact of plastics on natural surroundings and the ecosystem. The focus of the study is on macro plastics, which are larger plastic wastes that can be seen with the naked eye. While there has been some research on the movement of small plastics, there is a lack of information on the distribution of macro plastics on beaches, particularly in the upper and middle zones. By reducing the amount of plastic waste that ends up in the ocean, it can minimize the impact on the ecosystem and protect the species that depend on it. The study's findings can inform policymakers and stakeholders about developing effective strategies for managing plastic pollution and promoting sustainable practices.

In aquatic habitats, plastics are becoming an increasingly serious problem, affecting human health as well as the ecosystem. While some research has been done on the general movement of small plastics, observations of large plastics, or micro-plastics, on beaches have not been well documented in the literature. While the majority of studies have concentrated on the movement of plastics along the lower portion of the beach, there has been little research done in the upper and middle zones. This could have an impact on the movement of plastics to the sea, providing information about the origin and source of macro plastics. Here, we sought to provide an overview of the distribution of macro plastics along the sea. First, we examined and discussed the bibliometric analysis of macro plastics on beaches, which offers a framework for managing plastic pollution (Gallitelli, Scalici 2022). Policymakers, corporations, and scientists are placing an increased emphasis on understanding and controlling plastic pollution as a matter of environmental concern (Winton et al., 2020).

Macro plastics may have an impact on the species inside the ecosystem. The effects of climate change are possible. Macro plastics are recyclable and reusable, helping to keep natural habitats undisturbed. Macro plastics are primarily caused by human activities. Hence, a research with regards to this should be conducted as it serves as a way of learning for human and learning is an important aspect in education as uttered by Sabbaha et. al., (2024) cited by Abdulmajid et. al., (2024), Mading et. al., (2024), Balla et. al., (2024) Jarak et. al., (2024) and Sakili et. al., (2024) Indeed, learning is the soul of education that eliminates ignorance within an individual's mind, so even often times, people forget the effects of litter on the environment, surely through a continuous study, there will be people who will be responsible enough when it comes to this kind of matter. Nevertheless, macro-plastic pollution can cause harm to the surrounding area where it is located; it can affect the health of every individual in there as well as the animal habitat. Furthermore, micro- and macro plastics pollution is a growing threat to ecosystem functioning and, consequently, human well-being.

Macro plastics have an impact on the economic environment; they cause the destruction of ecosystems. There are so many people that are affected by this problem because some people cannot control their attitude and always dispose of their plastic waste at sea, which destroys ecosystems. Macro-plastics have an effect on the habitat of aquatic

fisheries; they can destroy their proper home, so we can't see the fish that we had in the past. Plastic can be used again through recycling; people should practice this in order to achieve a better life in this world. Also, people should always practice proper waste disposal because this problem can be avoided by the people themselves.

This study aims to fill the gap by providing an overview of the distribution of macro plastics along the sea, which can help identify the origin and source of macro plastics and inform strategies for managing plastic pollution.

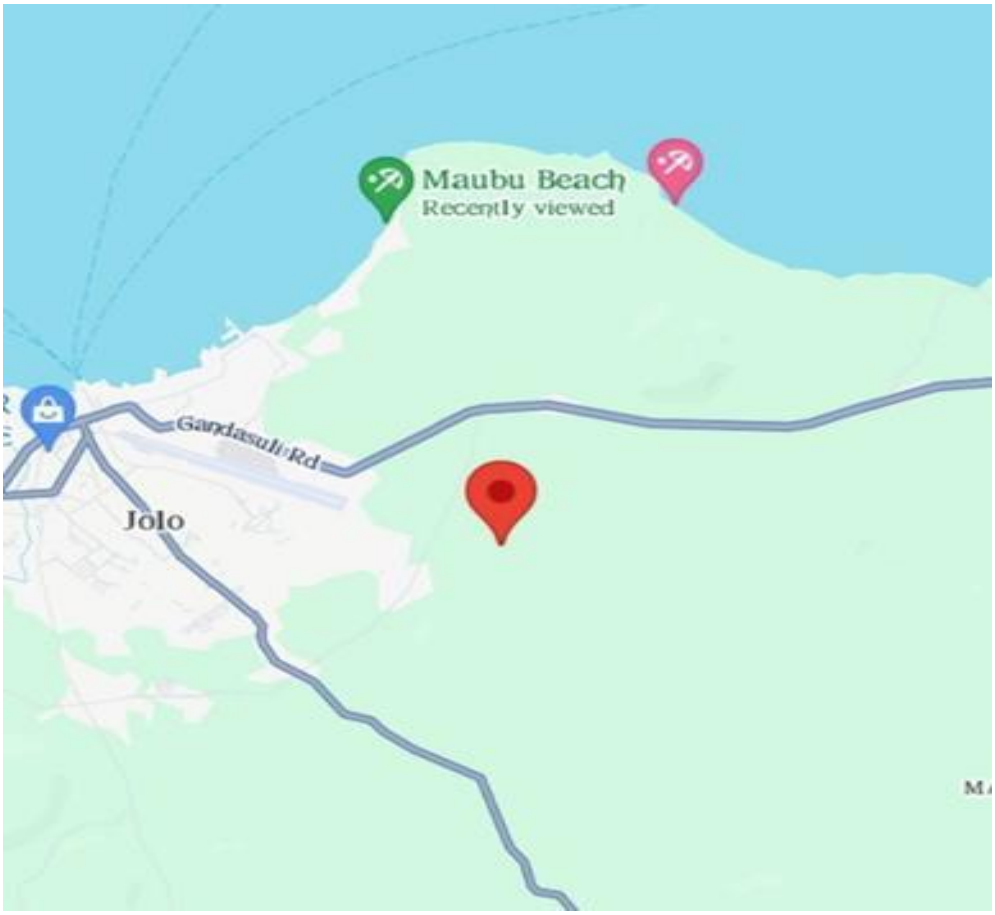
RESEARCH QUESTIONS

The researchers sought to answer the following questions:

1. What are the common macro plastic that can be found in Maubuh beach Patikul Sulu, Philippines?

2. What is the effect of macro plastics to the environment of Maubuh Beach Patikul Sulu Philippines?

3. What are the possible interventions to avoid the presence macro plastic at Maubuh Beach Patikul Sulu Philippines?



RESEARCH METHODOLOGY

Research Locale

This study was conducted at Maubuh Beach, which was located in Patikul, Sulu. Its approximate geographical coordinates were 6° 4’ North Latitude and 121° 1’ East Longitude. The study focused on an area approximately 1 kilometer within the vicinity of Maubuh Beach.

Sampling Method

The participants of this study are the vendors, local officials and random beach goer of Maubuh Beach Patikul Sulu, Philippines. The researchers selected 70 respondents for random beach goers to answer the survey questionnaire and 10 participants for the vendors and local officials to answer the interview for the total of 80 participants.

In this study, the researchers used Purposive Sampling or Judgement sampling to select the participant of the study. According to Crossman (2020), as cited by Jailani A. et al. (2024), Sasapan et. al. (2024) and Sabbaha et. al. (2024) Purposive Sampling is a non-probability sample that is selected based on characteristics of a population and the objective of the study.

Research Instrument

In this study, the researchers used survey questionnaires, interviews, and observations to identify the plastics in Maubuh Beach Patikul Sulu, Philippines. By using a systematic series of questions, questionnaire surveys were a strategy for collecting statistical data about the characteristics, attitudes, or behaviors of a community (Preston 2009) According to EaswarMoorthy and Zarinpoush, an interview was a conversation intended to obtain data. An interviewer conducted a research interview and arranged the interview

process, posed questions, and received answers from the interviewee.

Statistical Treatment of Data

In this research, the researchers used mean and frequency counting. To calculate the mean, each data point in the set was multiplied by a value that was derived from a feature of the input that produced the data point (Carter 2010). According to (Wright 2013) frequency count is the tally of the instances in which you participated in an activity during a given duration.

Data Gathering Procedure

The researchers submitted a request letter to the Director of Mindanao State University- Sulu Senior High School, seeking permission to conduct the study at Maubuh Beach and to involve at least 70 respondents and 10 participants. Additionally, the researchers reached out to the local officials of Maubuh Beach, requesting the approval to proceed with the research in the area.

RESULTS AND DISCUSSION

Table 1 Common Macro plastic that can be found in Maubuh Beach Patikul Sulu

Classification	No. of items
Glass	2
Used sacks	2
Metal	4
Used Diapers	9
Plastic bottles	57
Drinking straws	73
Cellophane	81
Plastic cups	113
Others (cigarettes, cloth, plastic spoon, paper plates, etc.)	132

Table 1 illustrates the classifications of macro plastics that can be found in Maubuh Beach, Patikul, Sulu, Philippines. The most abundant classification plastics at Maubuh beach was plastic cups (113) - followed by cellophane (81), drinking straws (73), plastic bottles (57), used diapers (9), metal (4), used sacks (2), and glass (2) and others (132) are the common macro plastics can be found at Maubuh Beach. Plastic has accumulated in the marine environment as a result of modern society's exponential increase in plastic consumption and poor waste management (Gómez et al., 2018). Global beaches and coasts are impacted by this serious environmental problem (Williams et al., 2019). The presence of plastics may raise the us by absorbing chemical contaminants from the substance in the water (Superio, Abreo 2020).

Table 2 Effect of Macro plastic to the environment

Statement	Mean	SD	Description
1. Pollution of water.	3.6	.5	Strongly Agree
2. Harms the natural habitat of the sea creatures.	3.6	.6	Strongly Agree
3. Deterioration of environment.	3.5	.5	Strongly Agree
4. Improper sanitary landfills.	3.5	.5	Strongly Agree
5. Destruction an aesthetic appeal of natural setting	3.5	.8	Strongly Agree
6. Destruction of environment.	3.4	.7	Strongly Agree
7. Damage the natural scenery.	3.4	.8	Strongly Agree
8. Increasingly serious danger contamination in the area.	3.4	.7	Strongly Agree
puhxo9. Contributing to climate change.	3.2	.7	Agree
10. Global warming.	3.1	.7	Agree
Grand Mean	**3.4**	**.7**	**Strongly Agree**

Legend: (3.26 – 4.00) Strongly Agree, (2.51 – 3.25) Agree, (1.76 – 2.50) Disagree, (1.00 – 1.75) Strongly Disagree.

Table 2 shows the effect of macro plastics to the environment of Maubuh Beach Patikul Sulu. The total mean obtained 3.4 with the verbal description of strongly agree. This means that the respondents strongly agreed to the effects of Maubuh Beach. This implied that macro plastic can negatively affect the environment according to the perceptions of the respondents.

Majority the respondents of this study strongly agree to the following statements that macro plastics can pollute the water, harms the natural habitat of the 9sea creatures, deterioration of environment, improper sanitary landfill, destruction an aesthetic appeal of natural setting, destruction of environment, damage the natural scenery, increase serious danger contamination that macro plastic can affect to the environment of Maubuh beach. Which is related to the study of Pietz et al (2021) that macro plastics are an increasingly common and harmful environmental contaminant that affects both terrestrial and marine systems.

4.3 Interventions to avoid the presence of macroplastics at Maubuh beach Patikul Sulu

Plastics disposal can be separated into legitimate and illicit categories. Different national laws have different definitions of what is and is not legal. Since illicit disposal provides a direct channel to the oceans that the government cannot control, this split in the effect pathway is significant. Alpizar et al. (2020). Moreover, Zhu et al (2018) has stated that plastic pollution is becoming a quickly rising global issue. Environmental awareness and the numerous risks its poser to nature.

Yes, we have an ordinance that posted in this area that throwing any trash in this place is prohibited (LO1, excerpt 1).

This place don't have truck to pick the trash of the beach goers particular in the residents of Maubuh (LO5, excerpt 2).

The conservation of freshwater and marine habitats depends on efforts to lessen the amount of macroplastics found along seashores; at this point, the understanding of possible pollution sources, vectors, and storage is still lacking. Moreover, Winton et al.,(2020) stated for companies, scientists, and policy makers, managing plastic pollution is becoming a top environmental priority. Though freshwater ecosystems are receiving less attention, awareness of the potential harm to the world's seas has increased. Additionally, UNEP (2018) stated plastics end up in the trash because of wasteful manufacture, improper landfill disposal, and poor recycling management.

There are permanent cleaners who clean every day in this area.
(LO3, excerpt 3)

There are permanent cleaners in this Beach, including the members of the tanod and BPAT of the barangay. (LO4, excerpt 4)

The legislation that we have is including the signage posted here, also we have an ordinance that throwing trash in this Beach is prohibited (LO2, excerpt 5).

We don't have the place that intended for our waste, because there's no enough space for that in this place (LO4, excerpt 47).

These responses stated that the Maubuh Beach has lack of facilities. Alpizar et al., (2020) has stated that landfills and dumpsites, wastewater treatment, and beneficiation (i.e., recycling or incineration) are the three legal disposal methods. Even with these appropriate disposal methods, leaks may still occur during collection and transit into the maritime environment. Recycling, which focuses on gathering plastic trash to be treated and reused in another way, is a significant component of waste beneficiation.

Conclusions

Overall, the researchers determined the presence of macro plastic in Maubuh beach. Maubuh Beach is one of the top tourist spots in Sulu, it showed few of plastics items that can be found along the shore. The result showed that throwing of plastics will continue if the interventions of different factors will not properly take.

Macro plastics are the major problem in every community not just in the chosen area. It has an impact on the economic environment, it causes the destruction of ecosystems and

the effect of climate change are possible. The respondents strongly agree to the statement that macro plastics can negatively affect the environment of Maubuh Beach. People who lived or visiting the beach should be aware by the cause and effect of plastic to the environment.

Waste management strategies are implemented through policies in the area. The abundance of macro plastic is primarily caused by human activities, only human can manage it well. Although there are still some people who are responsible when it comes to this kind of matter.

Recommendations

Based on the findings of this research, the following are recommended:

1. For local officials they must upgrade garbage disposal systems, Having a proper sanitary landfill. Authorities should consider enhancing the systems for handling waste to lessen the amount of plastic litter that ends up harming our environment could involve better garbage collection, more recycling programs, and advocating for the use of plastic substitutes. Local officials shall have a proper place for macro plastics in the area because, through this initiative, people in the area will have proper waste disposal in order to make the environment clean.

2. For vendors operating at Maubuh Beach should establish and maintain proper sanitary landfills or trash cans for waste disposal. By implementing effective waste management practices, vendors can contribute to maintaining cleanliness and minimizing the presence of macro plastics in the area.

3. For beachgoers. Beachgoers play a significant role in preserving the cleanliness of Maubuh Beach. It is essential for beachgoers to raise their awareness and exercise discipline when disposing of plastic waste. They should refrain from littering and ensure that their plastic waste is properly disposed of in designated bins to prevent environmental degradation.

4. To the residence of the Maubuh beach they need to organize regular clean-up drives. Regular clean-up drives involving local communities can be effective in minimizing the amount of macro plastic at Maubuh Beach. These initiatives not only help to get rid of existing waste but also cultivate a sense of community ownership of the environment.

Compliance with Ethical Standards

This study used openness to ensure that every participant participated in any data gathering. Also, this study upheld honesty for every result of data in order for us to publish fair research without causing any harm to others. Additionally, we used proper data gathering without forcing the participants to provide ideas about our topic. The researchers ensured to follow those general guidelines to conduct this study. Without any other concerns, this research used sharing ideas with others and socializing with other participants to participate

and give their ideas and suggestions to help us finish this research.

Acknowledgements

The authors of this study entitled “Presence of Macro-plastic: Its Effect to the Environment of Maubuh Beach Patikul, Sulu” would like to express their gratitude to those who, or are in one way or the others, have enormously contributed to the success of this exploration endeavor.

PROJECT FLOR (FAMILIARIZE, LEARN, OBTAIN, AND RELIVE): THE DEVELOPED ARALING PANLIPUNAN 7 STRATEGIC INTERVENTION MATERIALS

Mariflor S. Navales

School of Graduate Studies, Laguna College of Business and Arts, City of Calamba, Laguna, Philippines

https://doi.org/10.5281/zenodo.12215378

ABSTRACT

The main thrust of this study was to develop and validate Grade 7 Araling Panlipunan. This study followed the design and development research method. The respondents of the study, who were chosen through a simple stratified random sampling technique, were 78 Grade 7 learners from St. Vincent College of Cabuyao, and 16 Araling Panlipunan secondary teachers from St. Vincent College of Cabuyao and Liceo de Los Banos. Using a four-point Likert Scale, simple mean, and t-test for independent samples, the findings revealed that the developed of Grade 7 Araling Panlipunan Strategic Intervention Materials based on the assessment of the Araling Panlipunan teachers in terms of objectives, content, language, and presentation were all highly valid. Meanwhile, the level of acceptability of the developed Strategic Intervention Materials of Grade 7 Araling Panlipunan was also highly accepted based on the assessment of the Araling Panlipunan teachers in terms of functionality, accuracy, suitability, and usability. There was a significant difference in the academic performance level of the learners comparing the mean scores of the learners during the pretest and posttest. It can be concluded that the developed strategic intervention materials of Grade 7 Araling Panlipunan increased the acquisition of learning of Grade 7 learners based on the difference in their performance in the pretest and posttest.

Keywords: *developed, contextualized, instructional materials*

INTRODUCTION

History provides insight into the past, including triumphs, failures, and pivotal moments that shaped humanity. It taught students about various cultures, civilizations, and ideologies, promoting empathy and global awareness. It fostered critical thinking as students analyze events, identify patterns, and draw conclusions. Learning history taught students how to think critically, reason logically, and express their ideas coherently. It taught them about the context of current events and the interconnectedness of global affairs. Furthermore, history motivated students by demonstrating examples of human resilience, innovation, and achievement (Dan, 2022).

With reference to the article in MOOC.Org (2021), it was mentioned that learning about history aided students in understanding how historical occurrences shaped modern society. They learned about themselves and how they came to be, but they also gained the ability to avoid mistakes and forge better paths for their societies by using the lessons from the past. Events in the past uprooted families and groups, altering the demographics of areas and frequently igniting conflict. These occurrences produced political structures that have persisted for generations after their inception. And it all had an impact on every person alive today.

In the Philippines, the Araling Panlipunan class is considered a boring subject by the students due to the overwhelming information that learners need to absorb and remember.

Sometimes teachers need to do something excessive just to get the interest and attention of their students. In the new normal education, AP teachers opt to think of strategies that help them to make AP subjects as interesting as possible without compromising the quality of education that the students need to possess.

To strengthen the patriotism and nationalism of Filipino teachers and learners through learning, understanding, and appreciating history, the Department of Education initiated a program called *Balik Kasaysayan* Program. The main goal of the said project was to deepen awareness of the local (national and international if possible) history, culture, and arts that contribute to strengthening Filipino learners' patriotism and nationalism. With this program, DepEd achieved its vision where "We dream of Filipinos who passionately love their country and whose values and competencies enable them to realize their full potential and contribute meaningfully to building the nation" and therefore rewarding and making education redeeming. The expected outcome of the said project would be for schools to be able to produce functional teaching and learning resources and reference materials focusing on the history, culture, and arts that are based on primary sources and are accessible to all teachers and learners.

Since history is not integrated into Araling Panlipunan subject in the implementation of the K-to-12 Curriculum, various groups advocate for the reinstatement of Philippine history as a separate subject in grades K-12, rather than integrating it with

other subjects. In his write-up, veteran Filipino writer Isagani Cruz noted that "because the curriculum is so comprehensive, it is very difficult for a casual reader to identify the various strands that unify the content and performance standards of the different learning areas and grade levels" (Tumapon, 2022).

The reality that history is taken for granted in teaching Araling Panlipunan is the entry point of the researcher to conduct this study. Likewise, the learning competencies in Araling Panlipunan such as *Naipapaliwanag ang konsepto ng Asya tungo sa paghahating heograpiko*: Silangang Asya, TimogSilangang Asya, Timog-Asya, Kanlurang Asya, Hilagang Asya at Hilaga/ Gitnang Asya are needed to be enhanced, for the learners to be more prepared when the time comes that they encounter challenges in learning the subject, particularly in the higher level of Junior High School.

This study focused on the development of strategic intervention materials to scaffold the learning of Araling Panlipunan among Grade 7 learners. It was found out that St. Vincent College of Cabuyao lacked in the teaching and learning materials that were contextualized and localized. Through this initiative, strategic intervention materials that focused on contextualizing and localizing the lessons in Araling Panlipunan were provided.

Strategic Intervention Materials or SIM in the Philippine educational system, are instructional materials designed to reteach concepts or topics that the students believe they have not yet mastered. Guide cards, activity cards, assessment cards, enrichment cards, answer cards, and reference cards are the basic components of this. The mandate that no learner will be left behind is one of the Department of Education's goals. This makes sure that every student has an equal chance to succeed. to improve their schoolwork and gain proficiency in their least developed skills. Because of this, competency-based strategic intervention materials help learners develop their least-mastered skills, which is where they perform very poorly.

Research Questions

Purpose Statements

The purpose of this study was to develop and evaluate a strategic intervention material in Araling Panlipunan intended for Grade 7 learners. Furthermore, it aimed to:

1. Design and develop Strategic Intervention Materials in Araling Panlipunan 7 in consideration of the Most Essential Learning Competencies or MELCs.
2. Determine the validity and acceptability level of the Grade 7 Strategic Intervention Materials.
3. Identify if there is a significant difference between the pretest and posttest in the use of Grade 7 Strategic Intervention Materials.

METHODOLOGY

The Design and Development Research Method was employed. Design and Development Research (DDR) provides an avenue for instructional designers to test theory, models, and frameworks, as well as validate practice. The usage, design, development, implementation, and assessment of products, tools, programs, and models employing instructional design models and frameworks is the emphasis of DDR.

According to Radcliffe (2023), the purpose of developmental research design was to determine how the researcher would collect data for the study. This design helped to focus on what changed and what remained constant while aging. It determined what information would be collected and how it would be obtained. The Design and Development Research approach was utilized in this study to improve the objects that were used and created. Furthermore, it was a way of creating or developing new resources as well as verifying current ones that helped students. The utilization of this design was appropriate for the conduct of this study since the study focused on developing a supplemental teaching material and further determining the effectiveness of the said material.

This research endeavor was conducted at St. Vincent College of Cabuyao since it was found that there was a need to develop supplemental material in teaching Araling Panlipunan Grade 7. Likewise, the academic performance of the learners in Araling Panlipunan was not that high the same as their engagement during class discussion.

Total enumeration was employed by the researcher for Araling Panlipunan teachers at St. Vincent College of Cabuyao and Liceo de Los Banos. Teachers who are teaching Araling Panlipunan served as respondents. Moreover, two sections with 78 learners from grade 7 served as learner participants. The learners were chosen through match-pairing. A matched pairs design is an experimental design that is used when there are just two treatment conditions in an experiment. The volunteers in the experiment are paired up based on some criteria that they "match" on, such as age or gender. The individuals are then randomly randomized to various treatments within each pair (Bobbitt, 2020).

The primary goal was to determine the effectiveness of the SIM in the academic performance of the learners in Araling Panlipunan.

The study was comprised of two sections learner-respondents who were matched. Both of them took the pretest and post-test.

Table A

Respondents of the Study

Respondents	Frequency	Percent
Teachers	16	17.02
Students	78	82.73
Total	94	100.00

As shown in the table, the study had 94 respondents, 16 (17.02%) were teachers, and 78 (82.73) were students. These students were those who were enrolled at St. Vincent College of Cabuyao for the school year 2022-2023

13	6	BSED
14	5	BSED
15	5	BSED
16	8	BSED

Another group of the study was the 16 teacher-validators that assessed the Grade 7 Araling Panlipunan materials. Most of them were BSED graduates, and two (2) of them were MAEd graduates. Three validators were teaching AP 7 for eight years, Two (2) validators have been teaching for seven (7) years, five (5) validators, for six (6) years, and six (6) validators, for five (5) years.

The study utilized an adopted instrument from Angay (2023) from her study. The research instrument was composed of two parts for experts' evaluation. Part 1 assessed the validity of the strategic intervention materials for Grade 7 Araling Panlipunan based on the objectives, content, language, and presentation. Part 2 assessed the acceptability of the strategic intervention materials for Araling Panlipunan in 4 terms of functionality,

accuracy, suitability, and usability with a four-point Likert scale will be applied and interpreted as follows:

Level of Validity and Acceptability
Four-point Likert Scale

	Scale	Level of Validity	Level of Acceptability
4	3.25-4.00	Highly Valid (HV)	Highly Accepted (HA)
3	2.50-3.24	Valid (V)	Accepted (A)
2	1.75-2.49	Slightly Valid (SV)	Slightly Acceptable (SA)
1	1.00-1.74	Not Valid (NV)	Not Acceptable (NA

Moreover, the pretest and posttest for the first quarter were administered to the learner-respondents to determine the significant difference between the pretest and posttest. The results of the performance were interpreted using the levels of proficiency.

Levels of Proficiency

Level	Percentage
Outstanding	90-100
Very Satisfactory	85-89
Satisfactory	80-84
Fairly Satisfactory	75-79
Did not meet Expectations	Below 75

Source: DepEd Order No. 8, S. 2015 (Policy Guidelines on Classroom Assessment for the K to 12 Basic Education Program)

This study utilized an adopted survey questionnaire to validate the Developed Strategic Intervention Material in Grade 7 Araling Panlipunan. There were teacher raters who validated the instruments. These validators were master teachers and head teachers in Araling Panlipunan who were serving at public schools. To further check the validity of the questionnaire, the researcher asked the assistance of a statistician, and the questionnaire underwent a Reliability Test through Cronbach's Alpha. The Cronbach's Alpha coefficient result of the instrument was 0.940 for validity and 0.884 for acceptability (Frost, 2023).

First, the concerned parents, school principal, and district supervisor were given a letter of request. It was stipulated in the letter the goal of the study and the procedure for how the study would be conducted. Next, the intervention materials were evaluated by the teacher assessors, and with their recommendation, the materials were reproduced and given to the learners. That signaled the start of the intervention or experiment. Once the proposal and materials were approved by the school principal and district supervisor, orientation was done. There was a physical orientation conducted among the parents of the participants and this was done during the distribution of the materials. Since in-person

classes were being implemented, the researcher was provided printed intervention materials that learners can use. Lastly, the researcher got the data needed for the study, analysis, and interpretation of the data followed.

In the conduct of the study, the Data Privacy Act was strictly followed, and there was confidentiality particularly in the data of the learners as the main respondents.

This research followed the ethical requirements outlined in the DPA 2012 Manual when conducting the study. The importance and objectives of the study were conveyed to the participants. Full consent was solicited and obtained from the study's subjects. The information supplied by the participants was kept confidential, and their privacy was protected. The authors of the literature and research utilized to establish the rationale, and background of the investigation, and to support the study's conclusions were properly cited.

The following were the statistical treatments applied to the study using Statistical Package for Social Sciences (SPSS).

1. Mean and Likert scale were used to present the performance of the students in the pre and post-test.
2. Simple mean was used to determine the level of validity and acceptability of the developed strategic intervention materials for Grade 7 Araling Panlipunan.
3. T-test was used to identify if there was a significant difference in the performance of Grade 7 learners in their pretest and posttest.

RESULTS AND DISCUSSION

Purpose Statement Number 1: Design and develop Strategic Intervention Materials in Araling Panlipunan 7.

The developed instructional materials in Grade 7 Araling Panlipunan were contextualized modules for the second quarter which discussed the basic concept and topics in Araling Panlipunan. In addition, the instructional material had information and practical exercises based on their everyday lives and current situation. Developed instructional modules made use of the IDEA format making it more interesting, easy to understand topics and application of the lesson to their day-to-day situation. Further, the Most Essential Learning Competencies were the bases in crafting strategic intervention materials. In crafting the materials, there was integration of localization and contextualization. Strategic Intervention Materials in Araling Panlipunan 7 in consideration of the Most Essential Learning Competencies or MELCs for the second quarter. Discusses the concept of Civilization and its characteristics, Comparing Ancient Asian Civilization (Sumer, Indus, China) and Assessing the influence of Asian thoughts on Social and Cultural Situation in Asia.

According to Paña's (2021) research, using the S.I.M. affected improving students' academic performance. Additionally, he suggested that conducting research would aid teachers in enhancing their students' learning.

Purpose Statement Number 2: Determine the validity and acceptability level of the Grade 7 Strategic Intervention Materials.

2.1 Content Validity

Table 1.1.1

Content Validity Level of Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Objectives

Indicators	X	VI
1. The objectives are clearly stated in behavioral form.	4.00	HV
2. The objectives are well-planned, formulated, and organized.	4.00	HV
3. The objectives stated are specific, measurable, and attainable.	3.94	HV
4. The objectives are relevant to the topics of each lesson of the worksheets.	3.94	HV
5. The objectives consider the needs of the students.	3.81	HV
General Assessment	3.90	HV

Legend: 3.25-4.00 Highly Valid (HV) 2.50-3.24 Valid (V) 1.75-2.49 Partially Valid (PV) 1.00-1.74 Not Valid (NV)

Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Objectives was **Highly Valid** (**3.90).** "The objectives are clearly stated in behavioral form and well-planned, formulated, and organized" yielded the highest mean score of **4.00** interpreted as **Highly Valid**. On the other hand, "The objectives consider the needs of the students" received the lowest mean score of **3.81** interpreted as **Highly Valid.**

It implies that the objectives are relevant to the topic and are aligned with the most essential learning competencies. Learning objectives are used to direct learners as they go through the class and to evaluate their educational progress. In addition, exceptional objectives serve as a guide to learners upon examining the materials and getting ready for evaluations. Lastly, learning objectives are the most effective if they are specific, actionable, clearly stated, and measurable.

Contextualization was an instructional innovation that was developed at the turn of the 21st century. Montalbo and Villanueva (2020), defined contextualization as something related to the local environment, such as home, community, or workplace; contextualizing means creating a connection between the lessons taught in the classroom and what was happening in the real world outside. In this approach, the learners were given an "experience" of the lesson, not just pure thinking and imagination while seated in the classroom. In addition, Calimlim (2020) mentioned that contextualizing can significantly

support teaching and learning results. Thus, learners were expected to easily relate to the lesson, understand it better, and remember it more.

Table 1.1.2

Content Validity Level of Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Content

Indicators	X	VI
1. The content of each lesson is directly relevant to the defined objectives.	3.94	HV
2. The content of each lesson is simple and easy to understand.	4.00	HV
3. The topics of each lesson are fully discussed.	3.94	HV
4. The topics are supported by illustrative examples, and the practice tasks are suited to the level of the students.	3.94	HV
5. Each topic is given equal emphasis in the lesson	3.88	HV
General Assessment	3.94	HV

Legend: 3.25-4.00 Highly Valid (HV) 2.50-3.24 Valid (V) 1.75-2.49 Partially Valid (PV) 1.00-1.74 Not Valid (NV)

Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Content was **Highly Valid** (3.94**)**. All indicators were verbally interpreted as **Highly Valid**. Moreover, the indicator “The content of each lesson is simple and easy to understand” had the highest computed mean of **4.00,** while the indicator “Each topic is given equal emphasis in the lesson” had the lowest computed mean of **3.88** which was also **Highly Valid**. It can be concluded that the Strategic Intervention Material in Grade 7 Araling Panlipunan in terms of Content has high validity.

It implies that the content is relevant to the topic The content topic of each lesson is simple and easy to understand, the lessons are fully discussed, the topic is supported by illustrative examples, and the practice tasks are suited to the level of the students.

Marshall and Rossman (2018, as cited in Catuday, 2019) added that a valid development procedure should always be observed. Content validation was the most crucial and preliminary step towards material or instrument development. Content validation set the pace for succeeding validity and reliability measures. Careful planning, determination of objectives, and review of literature should be made at this point to be provided with comprehensive knowledge of the nature of the decision to be measured by the material or instrument.

Table 1.1.3

Content Validity Level of Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Language

Indicators	X	VI
1. The format/layout is well-organized, which makes the lessons more interesting.	4.00	HV
2. The language used is easy to understand.	4.00	HV
3. The language used is clear, concise, and motivating.	3.88	HV
4. The instructions in the worksheets are concise and easy to follow.	3.94	HV
General Assessment	3.92	HV

Legend: 3.25-4.00 Highly Valid (HV) 2.50-3.24 Valid (V) 1.75-2.49 Partially Valid (PV) 1.00-1.74 Not Valid (NV)

Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Language was **Highly Valid (3.92).** Furthermore, the indicators "The format/layout is well-organized, which makes the lessons more interesting" and "The language used is easy to understand" had the highest computed mean of **4.00** interpreted as **Highly Valid,** while the indicator "The language used is clear, concise, and motivating" had the lowest computed mean of **3.**88 interpreted as **Highly Valid.**

As stated in the study by Espiritu and Ogerio (2020), Araling Panlipunan was one of the subjects that learners took seriously during high school. Although Araling Panlipunan explored the daily activities of people and the right decision-making, when the lessons and activities were discussed in a foreign language, understanding the terms and meanings of words was quite difficult for junior high school learners. Thus, the emergence of a contextualized and localized curriculum was needed.

Table 1.1.4

Content Validity Level of Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Presentations

Indicators	X	VI
1. The topics are presented in a logical and sequential order.	3.94	HV
2. The lessons of the worksheets are presented in a unique and original form.	3.94	HV
3. The learning activities are presented clearly.	3.88	HV
4. The presentation of each lesson is attractive and interesting to the students.	4.00	HV
5. Adequate examples are given to each topic.	3.88	HV
General Assessment	3.93	HV

Legend: 3.25-4.00 Highly Valid (HV) 2.50-3.24 Valid (V) 1.75-2.49 Partially Valid (PV) 1.00-1.74 Not Valid (NV)

Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Presentations were **Highly Valid** (**3.93)**. Moreover, the indicator “The presentation of each lesson is attractive and interesting to the students” had the highest computed mean of **4.00** while the indicators “The learning activities are presented clearly” and “Adequate examples are given to each topic” had the lowest computed mean of **3.88** interpreted as **Highly Valid**.

It affirms that the content and lessons of SIM are presented well. Moreover, the presentation is motivating for the learners because it is attractive and interesting. Additionally, the well-presented lessons and activities will make the learners engage more in the discussion while using the SIM.

In the study by Hasibuan (2019), he stated that the development and validation of learning materials should be practical and effective to improve the problem-solving skills and learning independence of the learners. Further, Lee (2021) emphasized that for instructional interventions to be effective, they must be: 1) intentional, focused on a specific challenge; 2) specific and formalized, addressing the learners' specific issues and concerns; and 3) flexible, applicable, and adaptable to the learners, given that each

learner has unique needs and preferences. Based on the characteristics, it is possible to conclude that interventions should be developed with the goal of serving as a successful tool for improving learners' skills. As a result, teachers have a critical role in developing the interventions that will be implemented.

1.2 Acceptability

Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Functionality were **Very Acceptable (3.94)**. Furthermore, the indicator "Worksheets serve their purpose" had the highest computed mean of **4.00** interpreted as **Very Acceptable**, while the indicator "Worksheets are self-instructed" had a computed mean of **3.88** which was still **Very Acceptable.**

Table 1.2.1

Acceptability Level of Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Functionality

Indicators	X	VI
1. Worksheets are free of errors.	3.94	VA
2. Worksheets are self-instructed.	3.88	VA
3. Graphics and color increase the instructional value of the worksheets.	3.94	VA
4. Worksheets serve their purpose.	4.00	VA
5. Worksheets provide authorized easy access.	3.94	VA
General Assessment	3.94	VA

Legend: 3.25-4.00 Very Acceptable (VA) 2.50-3.24 Acceptable (A) 1.75-2.49 Partially Acceptable (PA) 1.00-1.74 Not Acceptable (NA)

The contextualized instructional material is clear, simple, and can be easily understood by the learners. Moreover, the information in the contextualized instructional materials stimulates learners' interest. Instructional materials are essential tools in learning and they also permit the learners to express their ideas with symbols, words, and images in manners that foster their capacities in thinking, talking, listening, composing, utilizing media, reading, solving, and innovation.

Instructional or learning materials as mentioned by Lewis (2018, as cited in Lorbis, 2019), referred to a selection of teaching materials that teachers used in teaching inside the classroom. These could be games, videos, flashcards, project supplies, and many more. Instructional materials were extremely fundamental in conveying directions since they helped the teaching and learning process. Moreover, students turned out to be more charmed and energized by the perception or assumption that they had materials to use to acquire knowledge. Educational material must also be aligned to the degree of progress of understanding to match the degree of cognizance.

Table 1.2.2

Acceptability Level of Grade 7 Araling Strategic Intervention Materials in terms of Accuracy

Indicators	X	VI
1. Worksheets contain correct information about the topic.	4.00	VA
2. Worksheets provide learners with the best choices for their answers.	3.94	VA
3. Choices reflect a certain degree of similarity in meaning but have distinct syntactic uses.	3.88	VA
General Assessment	3.94	VA

Legend: 3.25-4.00 Very Acceptable (VA) 2.50-3.24 Acceptable (A) 1.75-2.49 Partially Acceptable (PA) 1.00-1.74 Not Acceptable (NA)

Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Accuracy were **Very Acceptable (3.94)**. Moreover, the indicator “Worksheets contain correct information about the topic” had the highest computed mean of **4.00** while the “Choices reflects a certain degree of similarity in meaning but have distinct syntactic uses” had the lowest computed mean **3.88.** Both were interpreted as **Very Acceptable.**

It reveals that the SIM has contents that are concise and accurate. The very goal of instructional materials is to provide information that is based on facts and that may allow learners to learn more about the subject matter. Likewise, the veracity of the material is a good component of its acceptability.

According to the article in Eduedify (2022), instructional materials were critical for effective teaching and learning. They can be used to help students learn new concepts and provide practice opportunities, as well as to support and supplement the lesson material. When selecting instructional materials, consider the students' ages and ability levels, as well as the lesson objectives. Teachers used instructional materials to pique their students' interest in learning. They included textbooks, workbooks, software, apps, games, videos, and other materials. When used correctly, instructional materials can accelerate students' acquisition of knowledge and skills.

Table 1.2.3

Acceptability Level of Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Suitability

Indicators	X	VI
1. Activities consider the varying attitudes and capabilities of the learner.	3.94	VA
2. Activities are appropriate to the subject matter.	3.88	VA
3. Activities are relevant, interesting, and self - motivating to the learner.	3.94	VA
4. Use of enrichment activity is adaptable to classes with large number of learners.	3.88	VA
5. The language of the worksheets is within the vocabulary range of the target learners.	4.00	VA
General Assessment	3.93	VA

Legend: 3.25-4.00 Very Acceptable (VA) 2.50-3.24 Acceptable (A) 1.75-2.49 Partially Acceptable (PA) 1.00-1.74 Not Acceptable (NA)

Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Suitability were **Very Acceptable (3.93)**. All indicators were verbally interpreted as **Very Acceptable**. Moreover, the indicator “The language of the worksheets is within the vocabulary range of the target learners” had the highest computed mean of **4.00** while the indicators “Activities are appropriate to the subject matter” and “Use of enrichment activity is adaptable to classes with large number of learners” had the lowest computed mean of **3.88.**

The Developed Contextualized Learning Activity Sheets in terms of Suitability are appropriate to the subject matter, and activities are relevant, interesting, and self-motivating to the learners. Moreover, the language is within the vocabulary range of learners. It only means that the activities in this instructional material are suited to the learners and provide teachable activities. The success of achieving what they mean to achieve in an instructional situation depends on the suitability of the instructional materials, adequacy, and effective utilization of the materials.

It was a greater method for finding new data to guarantee that the learning materials applied to what learners required. In addition, Mamais (2018) commented that instructional materials could increase the internal motivation of the learners to learn and sustain their interest. Instructional material made links that were valuable for the retention, inspiration, imagination, and innovation of learners.

Table 1.2.4

Acceptability Level of Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Usability

Indicators	X	VI
1. The worksheets prepare the learners to think logically and critically.	3.94	VA
2. The concepts in the worksheets are simple and comprehensible.	4.00	VA
3. The worksheets enhance the learners' comprehension and reading skills.	3.88	VA
4. The worksheets provide the opportunity for the development of language skills.	3.94	VA
5. The learning contents provide adequate information on the topics presented.	3.88	VA
6. The worksheets encourage the learners to become actively involved in intellectual activities.	3.94	VA
7. Activities seek to relate new concepts from previous learning.	3.94	VA
8. As a whole, activities are teachable.	3.94	VA
General Assessment	3.93	VA

Legend: 3.25-4.00 Very Acceptable (VA) 2.50-3.24 Acceptable (A) 1.75-2.49 Partially Acceptable (PA) 1.00-1.74 Not Acceptable (NA)

Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Usability were **Very Acceptable 3.93**. Furthermore, the indicator "The concepts in the worksheets are simple and comprehensible" had the highest computed mean of **4.00** interpreted as **Very Acceptable** while the indicators "The worksheets enhance the learners' comprehension and reading skills" and "The learning contents provide adequate information on the topics presented" both had the lowest computed mean of **3.88** interpreted as **Very Acceptable**.

It can be concluded that the Acceptability Level of Grade 7 Araling Panlipunan Strategic Intervention Materials in terms of Usability is very Acceptable. Additionally, localization helped learners foster the knowledge, abilities, and traits of good citizens by recognizing and following up on concerns and matters that involve the people in their community.

In the study by Macarubbo (2018), he said that the promotion of localized materials empowered the importance of neighborhood, social and socio-economic context. Therefore, the localization of material allowed learning to become meaningful and purposeful.

Purpose Statement Number 3: Identify if there is a significant difference between pretest and posttest in the use of Grade 7 Strategic Intervention Materials.

Table 2.1

Pretest Results of the Grade 7 Pretest Scores of Grade 7 Students in Using Strategic Intervention Materials

Indicators	Frequency	Percent
Outstanding	0	0.00
Very Satisfactory	1	1.28
Satisfactory	1	1.28
Fairly Satisfactory	24	30.77
Did not meet Expectations	52	66.67
Total	78.0	100.00
Average	72.88	

Legend : 90 - 100 Outstanding 85- 89 Very Satisfactory 80 - 84 Satisfactory
75 - 79 Fairly Satisfactory 74 below Did not Meet Expectations

The evaluation of Grade 7 Araling Panlipunan Strategic Intervention Materials yielded an average of 72.88 interpreted as **Did not Meet Expectations**. There were (0) Outstanding, 1 (1.28%) Very Satisfactory, 1 (1.28%), Satisfactory, 24 (30.77%) Fairly Satisfactory and 52 (66.67 %) Did not Meet Expectation.

It implies that students do not have enough knowledge yet in using strategic intervention materials. They may not have experienced such types of materials in their previous years. Their previous teachers might have used other types of intervention materials.

Furthermore, Lazo and De Guzman (2021) in their study suggested the consideration of the preparation of SIM for improving the advancement of desirable values and traits and free from biased content; more active learning activities aimed at increasing motivation and understanding and for the development of critical and higher-order thinking; and better efficiency of its assessment tools and techniques.

Table 2.2

Posttest Results of Grade 7 Students after Using Strategic Intervention Materials

Indicators	Frequency	Percent
Outstanding	0	0.00
Very Satisfactory	6	7.69
Satisfactory	11	14.10
Fairly Satisfactory	31	39.74
Did not meet Expectations	30	38.46
Total	78	100.00

Legend : 90 - 100 Outstanding 85- 89 Very Satisfactory 80 - 84 Satisfactory
75 - 79 Fairly Satisfactory 74 below Did not meet expectations

The evaluation of Grade 7 Araling Panlipunan Strategic Intervention Materials yielded an average of 78 interpreted as Fairly Satisfactory. There were (0) Outstanding, 6 (7.69%) Very Satisfactory, 11 (14.10%), Satisfactory, 31 (39.74%) Fairly Satisfactory and 30 (38.46%) Did not meet expectations.

It implies that the teacher used SIM. However, she utilized it for only two weeks, hence, her expectation of a better result did not happen.

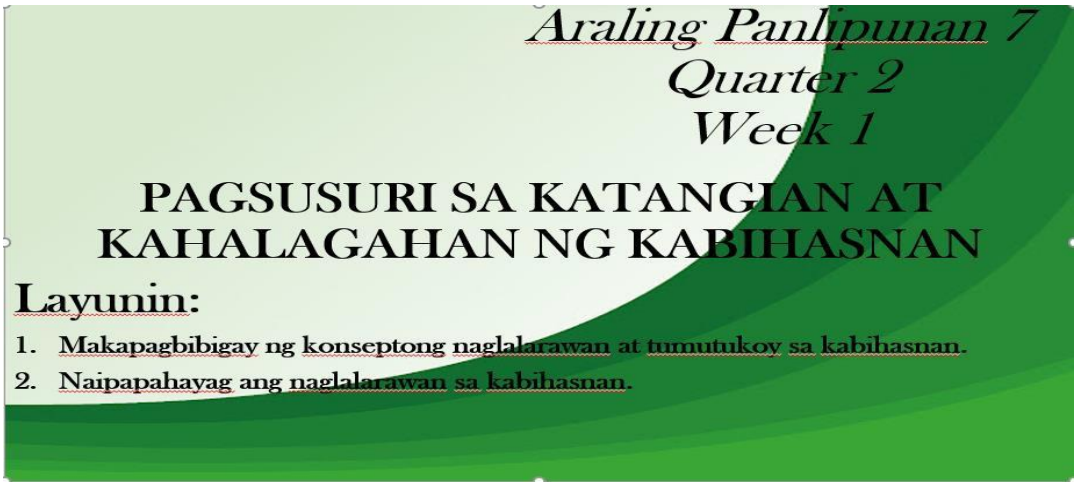
In the study conducted by Bonitez (2021), the results showed that using SIM significantly improved the respondents' performance levels. This demonstrated how using SIM had a significant impact on how well students understood the lesson. To facilitate learning and enhance student performance, SIM should be modified as an "aid" for instructional materials. Teachers can re-teach the concepts and skills using the researcher's SIM. It was strongly advised that SIM be implemented and developed to improve student learning across the board, not just in the Philippines.

Table 2.3

Test of Significant Difference between the Pretest and Posttest Summary among the Grade 7 using the SIM

		Paired Differences					
Indicators	Test	Mean	SD	T	P value	Remarks	Decision
Grade 7 Araling Panlipunan Strategic Intervention Materials	Pre &Post	- 3.23	2.66	-10.71	.000	Significant	Reject ho

There was a significant difference between the performance of the students in the pretest and posttest. The probability value was .000 which was less than the level of significance at .05. Hence, the null hypothesis was rejected. The improvement in the posttest results is attributed to the utilization of the Grade 7 Araling Panlipunan Strategic Intervention Materials.



The improvement in the post-test results is attributed to the utilization of the grade 7 Araling Panlipunan Strategic Intervention materials.

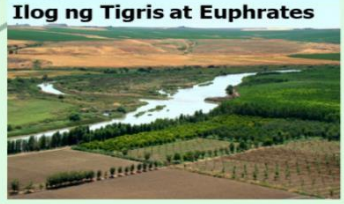
According to Sta. Rosa (2021), S.I.M. used among Araling Panlipunan students in Junior High School aided in improving and developing mastery skills and addressing the varied learning progress of each student. Furthermore, it met the needs of the students in terms of least-mastered competencies and aided teachers in making teaching easier.

Conclusions

Purpose of Strategic Intervention Materials

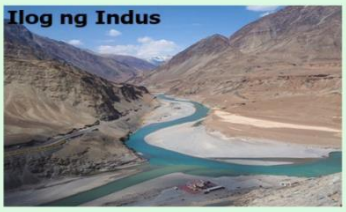
Strategic Intervention Material (SIM) is used in remedial sessions to focus on developing the learners' least mastered skills. It is a learning tool that assists students in mastering competency-based abilities that they may not have been able to develop in a traditional classroom setting.

Guide Card 1



Konsepto ng Kabihasnan

- Orihinal na tumutukoy sa kahulugan ng "sibilisasyon" o "paninirahan sa lungsod"
- Isang maunlad na kalagayan ng mga tao sa isang lipunan na pinangangasiwaan ng isang sistematikong pamamahala at may maunlad na ekonomiya or kalakalan
- Ang unang kabihasnan ay nalinang sa mga ilog-lambak
- Sa Asya, ang mga ilog-lambak ng Tigris, Euphrates, Huang He at Indus Basin ay ang mga lugar na pinagmulan ng mga sinaunang kabihasnan sa mundo
- Sa isang kabihasnan, makikita ang isang maunlad na uri ng pamumuhay ng mga tao na may ugnayan sa iba't ibang larangan ng panlipunang pamumuhay
- Mayroon silang sistema ng pamamahala, kultura, lalakalan, at relihiyon



Guide Card 2

Pinagmulan ng Sinaunang Kabihasnan sa Mundo

Ilog ng Tigris at Euphrates

Ilog ng Indus

Ilog ng Huang He

Ang sibilisasyon ay tumutukoy sa isang lungsod, samantalang ang kabihasnan ay may kaugnayan sa pagiging bihasa o eksperto sa pamumuhay ng mga tao.

Sinasabi na ang sibilisasyon at kabihasnan ay nagaganap kapag ang mga tao ay nagsisimulang matuto ng kanilang pagsulat at pagbasa na nakapagpapatalas ng kanilang talino at humuhubog sa kanilang kakayahang mamuhay bilang isang pamayanan. Kaakibat ng pagyabong ng kanilang talino at kakayanan at pag unlad ng kanilang pagkatao.

Activity Card 1

Mula sa iyong natutuhan sa kabilang pahina,magbigay ng limang (5) konseptong naglalarawan sa isang kabihasnan.

Kabihasnan

Activity Card 2

Tukuyin kung anong katangian ang binibigyang kahulugan ng mga pangungusap sa loob ng kahon:

Naisasalin ang kanilang karunungan at natutunan sa isa paglipas ng panahon para sa susunod na henerasyon.	Natututunang maiangkop ang kanilang sarili at gawain na naaayon sa hinihinging pagkakataon.
Nagkakaroon ng maayos na pamamalakad sa bawat paggawa at pakikipag-ugnayan ng mga tao sa isa't-isa.	Nagiging sandigan ng pag-unlad ng lipunan upang marating ang estado ng pagiging kabihasnan.

Guide Card 3

- Matatag na Pamahalaang may Maunlad na Batas at Alituntunin
- Dalubhasang Manggagawa
- Maunlad na Kaisipan
- May Sistema ng Pagtatala

Katangian ng Kabihasnan

Enrichment Card 1

Base sa iyong mga karaniwang nararanasan sa kasalukuyan at sa mga natutuhan mo tungkol sa konsepto at katangian ng kabihasnan, magbigay ng pagpapakahulugan sa mga letrang bumubuo sa salitang kabihasnan.

K Kaisipan ay yumayabong ayon sa nararanasan .
A _____
B _____
I _____
H _____
A _____
S _____
N _____
A _____
N _____

Assessment Card 1

Basahing mabuti ang mga pangungusap. Isulat ang salitang TAMA kung wasto ang ipinapahayag ng pangungusap at MALI kung di-wasto.

_____1. Sa isang kabihasnan, makikita ang isang progresibong uri ng pamumuhay ng mga tao na may ugnayan sa iba't ibang larangan ng panlipunang pamumuhay.
_____2. Ang ilog Jordan ay isa sa mga pangunahing ilog na pinagsimulaan ng isang kabihasnan.
_____3. Habang umuunlad ang pamumuhay ng mga tao, yumayabong din ang kanilang kaisipan.
_____4. Sa pamamagitan ng pagsulat ng kanilang kaalaman, nananatiling bahagi ng kanilang kabihasnan ang kanilang natutuhan, kasaysayan at mga napagtagumpayan ng kanilang mamamayan.
_____5. Ang kabihasnan ay tumutukoy sa isang lungsod, samantalang ang sibilisasyon ay may kaugnayan sa pagiging bihasa o eksperto sa pamumuhay ng mga tao.

Araling Panlipunan 7
Quarter 2
Week 2-3

SINAUNANG KABIHASNAN SA ASYA: SUMER, INDUS, AT TSINA

Layunin:

1. Napaghahambing at naitatala ang mga katangiang pisikal ng mga sinaunang kabihasnan sa Asya.
2. Naibibigay ang pagbabago at pag-unlad ng pamumuhay ng kabihasnang umunlad sa Asya.

Guide Card

Sinaunang Kabihasnan sa Asya: Sumer, Indus at Tsina (Shang)

KABIHASNANG SUMER

KABIHASNANG INDUS

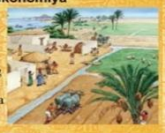
KABIHASNANG SHANG

Guide Card

KABIHASNANG SUMER

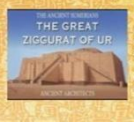
(3500 BCE - 3000 BCE)

KABIHASNANG SUMER



Ang Mesopotamia ang kinilala bilang *cradle of civilization* dahil dito umusbong ang unang sibilisadong lipunan ng tao.

Matatagpuan ang Mesopotamia sa Gitnang Silangan na tinawag na *Fertile Crescent* kung saan matatagpuan ang kambal-ilog na *Tigris* at *Euprates*.



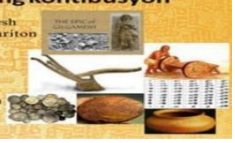
Sistemang Pampulitika at Pang-ekonomiya

Pagtatanim, pangangalakal, pangangaso at pag-aalaga ng hayop ang pangunahing hanapbuhay ng mga Sumerian.

Sistemang Panrelihiyon

Ang pinakamalaking gusali sa Sumer ay ang templo na tinatawag na **Ziggurat**.

Pinamunuan ng mga haring pari ang mga lungsod dito.



Mga Ambag ng Sumerian

Isa sa mga ambag ng mga Sumerian ay ang sistema ng pagsulat na tinawag ba ***cuneiform*** kung saan naitala ng mga ***scribe*** sa mga ***clay tablet*** ang mga mahahalagang pangyayaring naganap.

Iba pang kontibusyon

Guide Card

KABIHASNANG INDUS

(2500 BCE - 1600 BCE)

KABIHASNANG INDUS

Sa Timog Asya makikita ang lambak-ilog ng Indus at Ganges. Dito umusbong ang kabihasnang Indus.

KABIHASNANG INDUS

Naging mahiwaga ang paglaho ng kabihasnang Indus . May paliwanag ang iskolar dito. Ayon sa kanilang teorya :

1. Kalamidad
2. Pananakop

Ngunit walalang matibay na ebidensyang naipakita sa mga paliwanag na ito.

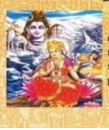
Mga Ambag

Ang mga Dravidian ay gumamit ng mga pictogram bilang sistema ng pagsulat, ngunit hanggang ngayon ay wala paring nakakaalam kung ano ang kahulugan ng mga ito.

Sistemang Pampulitika at Pang-ekonomiya

May dalawang importanteng lungsod ang umusbong dito, ang **Harappa** at **Mohenjo-Daro**. Planado at organisado ang mga lungsod na ito na ipinakita sa mga lansangang nakadisensyo sa kuwadrado (grid-patterned) at pare-pareho ang sukat ng bloke ng kabahayan.

Sistemang Pampulitika at Pang-ekonomiya



- ✓ Pinalagay na ang mga Dravidian ang bumuo ng kabihasnang Indus.
- ✓ Pinamunuan ang kabihasnang ito ng mga haring pari.
- ✓ Pagsasaka ang ikinabuhay ng mga tao dito.
- ✓ Natuto rin silang makipag-kalakalan sa mga karatig lungsod.

Sistemang Pampulitika at Pang-ekonomiya

Mohenjo-Daro at Harappa

Sistemang Panrelihiyon

Sinasamba ng mga Dravidian ang maraming Diyos na sumisimbolo sa pwersa ng kalikasan.

Guide Card

KABIHASNANG SHANG / TSINA

(1700 BCE - 1200 BCE)

KABIHASNANG SHANG

Ito ang kabihasnang nagsimula sa lambak ng Huang Ho sa China na tinawag ding *Yellow River* dahil pagkatapos ng pagbaha ang tubig nito ay nag-iiwan ng *loess* o dilaw na lupa na nagsisilbing pataba sa lupaing agrikultural na malapit dito.

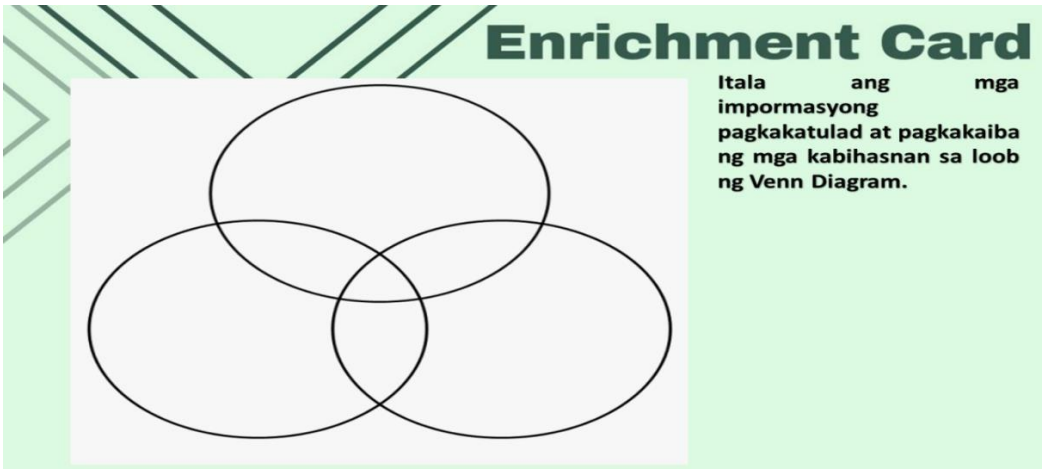
Mga Ambag

Caligraphy ang sistema ng kanilang pagsulat na nagsilbing taga pag-isa sa mga Tsino. Gianamit na simbolo ng pagsulat ang mga oracle bone

Sistemang Pampulitika at Pang-ekonomiya

Ang Lungshan ay naging transisyon tungo sa Kabihasnang Shang. May hinalang may naunang dinastiya na natatag dito, ang Xia subalit wala itong matibay na basehan ebidensyang arkeolohikal.

Sistemang Pampulitika at Pang-ekonomiya



May mga pamayanan ng umusbong dito bago ang Shang. Ito ang kalinangan ng Yanshao (3000 BCE – 1500 BCE) at Lungshan (2500 BCE – 2000 BCE). Pagtatanim ang pangunahing gawain sa panahong ito.

Assessment Card

Punan ang mga hinihinging impormasyon tungkol sa nagging pagbabago at pag-unlad ng pamumuhay ng mga kabihasnang umunlad sa Asya.

PAGSUSURI SA KAISIPANG ASYANO SA IMPLUWENSYA NITO LIPUNAN AT KULTURA

Layunin:

1. Natataya ang impluwensya ng mga kaisipang Asyano sa kalagayang panlipunan at kultura sa Asya.
2. Naibibigay ang katangiang pagkakakilanlan ng kaisipang Asyano.

Guide Card

Sinocentrism ng China

- ❑ Ang kabihasnang Tsino ay isa sa mga pinagmulan ng mga kaisipang Asyano lalo na sa larangan ng pilosopiya, pamamahala at imbensiyon.
- ❑ Itinuturing ng mga Tsino ang kanilang bansa bilang "Gitnang Kaharian" o "Zongguo" na ang ibig ipakahulugan ay ang Tsina ang sentro ng daigdig.
- ❑ Naniniwala rin sila na ang kanilang kultura at lipunan ay namumukodtangi sa lahat kung kayat ang tingin nila sa ibang lahi sa daigdig ay mga barbaro.
- ❑ Hindi maaring palitan ang lahi o pamilyang pinagmulan ng kanilang pinuno o Emperor.
- ❑ Hindi rin sila maaaring tanggalan ng tungkulin sa pamumuno ng bansa dahil sa pinaniniwalaang Divine Origin ng kanilang pamilya.
- ❑ Ang kanilang Emperor ay may "mandate of heaven" na nagiging basehan ng pagpapalit ng dinastiya sa Tsina.

Guide Card

Divine Origin ng Emperor sa Japan

Ayon sa tala sa Kojiki noong 712 CE, ang Japan ay nabuo sa pagtatalik ng diyos na si Izanagi at diyosa na si Izanami. Samantalang sa pagbubukas ng kaliwang mata ni Izanami nanggaling ang araw na kinilala ng mga Hapones na diyos na si Amaterasu Omikami. Si Amaterasu ay may apo na nagngangalang Ninigi na nanirahan sa Kyushu.

Ayon sa tradisyon, itong si Ninigi-no-Mikoto ay may kaapu-apuhan na ang pangalan ay Jimmu Tenno na naging kauna-unahang Emperor ng Japan. Magmula noon, sa lahi ng Tenno nanggagaling ang mga susunod na emperor ng Japan.

Dahil dito, ang kanilang Emperor ay hindi maaaring palitan ang lahing pagmumulan ng pinuno o kaya ay tanggalan ng tunkulin sa pamumuno ng bansa, sa pagkat naniniwala sila na may Divine Origin ang kanilang pinuno. Bagamat sa kasalukuyan hindi na itinuturing ng mga Hapones ang kanilang Emperor bilang diyos, nananatiling mataas ang pagtingin nila sa kanilang emperador.

Assessment Card

Tukuyin at isulat ang mga katangiang pagkakakilanlan ng bawat kaisipang Asyano.

Kaisipang Asyano	Katangian/Pagkakakilanlan
Sinocentrism	1._____ 2._____ 3._____
Divine Origin	1._____ 2._____ 3._____
Devaraja	1._____ 2._____ 3._____
Cakravartin	1._____ 2._____ 3._____

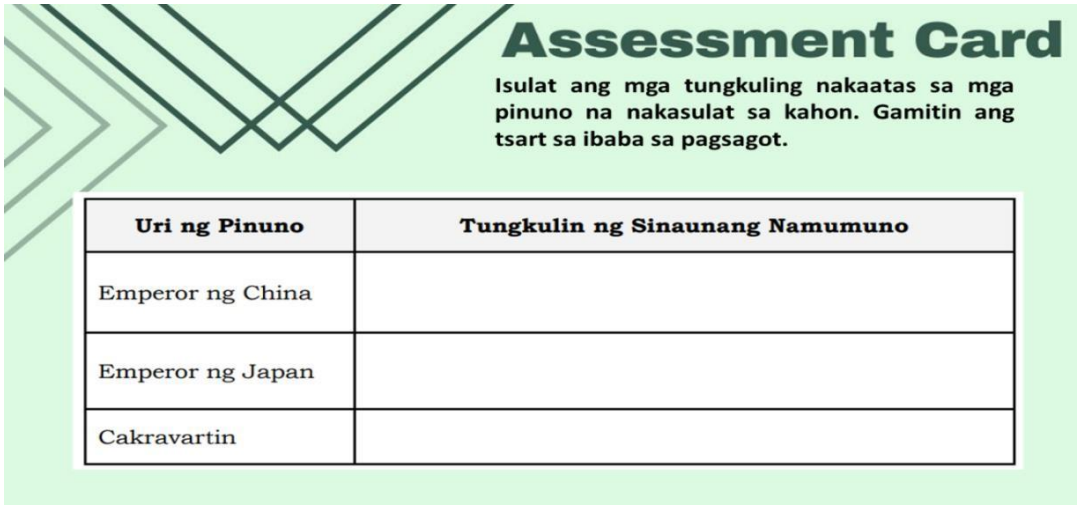
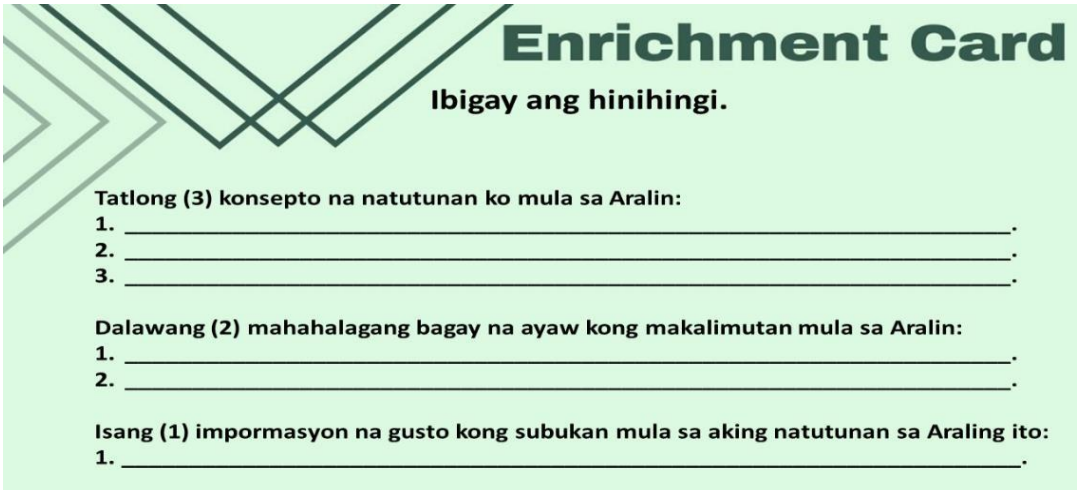
PAGTATAYA AT PAGPAPAHALAGA SA KAISIPANG ASYANO AT SINAUANANG KABIHASNAN SA ASYA

Layunin:

1. Naibibigay ang mga nakaatas na tungkulin sa mga sinaunang namumuno sa Asya.

Guide Card





Sa konteksto ng Hinduism at Buddhism, ang cakravartin ay tumutukoy sa hari ng sansinukob. Sinasabi na ang haring ito ay nagtataglay ng pangakong pamumuno na may katuwiran at pagkalinga sa mga mamamayan at sa kanilang relihiyon. Ang mga halimbawa nito ay sina: Haring Asoka na dating mandirigma na tumalikod sa karahasan at sumuporta sa Buddhism at ang hari ng Khmer na si Jayavarman II na nasa pagkalinga at pag-iingat ni Shiva, ang isa sa mga diyos sa Hinduism.

Activity Card

Sagutin ang mga sumusunod na tanong. Isulat ang TAMA kung wasto ang tinatalakay na pangungusap at MALI kung hindi.

_____1. Ang Emperor ng Japan ay hindi maaaring alisan ng kapangyarihan sa pamumuno.
_____2. Ang Son of Heaven ay hindi rin maaring alisin sa kapangyarihan at pamumuno.
_____3. Ang Devaraja is tumutukoy sa iisang diyos lamang subalit maraming kapangyarihan.
_____4. Ang Cakravartin ay tumutukoy sa hari ng sansinukob.
_____5. Ang Emperor ng Tsina ay nanggaling sa lahi ng diyos.

Compliance with Ethical Standards

In the conduct of the study, the Data Privacy Act was strictly followed, and there was confidentiality particularly in the data of the learners as the main respondents. This research followed the ethical requirements outlined in the DPA 2012 Manual when conducting the study. The importance and objectives of the study were conveyed to the participants. Full consent was solicited and obtained from the study's subjects. The information supplied by the participants was kept confidential, and their privacy was protected. The authors of the literature and research utilized to establish the rationale, and background of the investigation, and to support the study's conclusions were properly cited.

Acknowledgments

The researcher wants to offer her sincerest gratitude to the people who added to the progress of this research endeavor. With adoration, regard, and honor, she would like to recognize the help given to her.

Dr. Eulalia M. Javier her research adviser, for her determination in giving an adequate number of thoughts on how she would carry out the study. For her persistence in each discussion and giving her sufficient opportunity to oblige and for really looking at the research study. For the help in the drafting of all the communication letters, for being the research statistician, and for the ethical help for her abilities in finishing and completing the thesis paper;

Dr. Alfredo G. Perez Jr. and Dr. Ma. Lorena M. Tagala, present and previous deans of LCBA School of Graduate Studies, respectively, for their constant assistance and guidance;

Dr. Enrico Jocson, Dr. Ma. Lorena M. Tagala, and Dr. Alfredo G. Perez Jr., as the panelists throughout the thesis defense and for assisting her in improving the study;

Mrs. Marina A. Chavez, for her permission to carry out the study;

The Validators, for validating the research instruments;

Ate Verna and *Bunso*, for their love, support, prayers, advice, and encouragement. They have made the researcher feel the true meaning of having an older sister and a younger brother;

Nanay Poyay, for her love, support, and all the sacrifices she has given to them;

Tatay Mario, for being a good father and an inspiration, for the love, and for all the sacrifices he has made for them, even though he is in heaven already*;*

Those individuals who were not mentioned, for playing a big role in achieving and fulfilling this research;

And above all these accomplishments, her sincerest gratitude to the Father Almighty who created me, to the Christ the Son who saved me, and to the Holy Spirit who sanctified me.

PROMOTING ACADEMIC HEALTH USING WELLNESS AND YOUTHFULNESS (PAHUWAY) FOR SECONDARY SCHOOL HEADS OF SULTAN KUDARAT

Salvador D. Bacaoco, Jr.

Laguilayan National High School, Division of Sultan Kudarat, Region XII, Philippines

https://doi.org/10.5281/zenodo.12097787

ABSTRACT

This study evaluated the stress management practices and determined the challenges of the secondary school heads in the Division of Sultan Kudarat. The study employed the mixed methods research design wherein the survey and individual interviews were conducted. The survey checklist was adapted and administered to 27 randomly selected schools. Findings showed that the secondary school heads in the Division of Sultan Kudarat prefer to plan the job they want to perform ahead of time to manage time better in situations where they feel stressed as *Always*. They encountered challenges in managing workplace stressors: multi-tasking, the issue of power playing for new items, and the percentages on projects. A seminar/workshop will be done to bring solutions to these challenges.

Keywords: *Academic Health, Wellness, Youthfulness, Secondary School Heads, Sultan Kudarat, Philippines*

INTRODUCTION

By incorporating the Ilonggo term "PAHUWAY," which means "rest," the title implies that the research will explore ways for school leaders to find balance, rejuvenation, and stress relief in their high-pressure positions.

This study aims to promote the overall well-being and stress management strategies for school leaders, including both heads and administrators. The focus is on using

wellness practices and maintaining a youthful mindset to cope with the demands of their roles.

Stress management in a worldwide setting picture out an organization as to how resources flow within the practice of supervision. It creates a culture of productivity, positivity, and upgrading of skills among members once it is well handled. Strategies are identified and applied by leaders and managers in all workplace which psychologically, emotionally, and physically affects every employee regardless of position if stress is not properly controlled. If not given attention, it changes behavior, perceptions, and practices among employees, which affects the performance and hampers the production as desired by every organization.

School heads' management of stress varies from one's creativity and efficiency. School leaders are challenged to think about what is best for the teachers, learners, and other employees and apply interventions creating an environment that change the effect on the workers. School heads' positivity brings good results in withstanding any challenges amid adversities. Aomo & Ogolla (2018), concluded that secondary school directors with a high sense of self-efficacy have better ways to handle challenging conditions than those with poor self-efficacy. Principals with high efficiency may handle stress better than leaders with principals who have low-esteem. This was because extremely self-efficient secondary school directors were able to handle any stressful situation. While Suleman et al. (2018), revealed that leaders with problems could produce numerous disagreeable and unpleasant results for the organization and its workforce, which pessimistically and undesirably affect the organization's overall performance. Accordingly, until stress is treated, various feelings of discomfort, struggles, challenges, and disease will take place. Stress is inevitable. Sahoo (2016) posits that where stress is not identified and addressed promptly, it will have an effect on organization and community soon. The organizational effects of stress can have a significant negative impact on the organization, in a wide range of areas such as: high personnel turnovers and recruitment costs, high levels of absenteeism and presenteeism, lower productivity levels such as stress exposure, increased health and safety issues, litigation organizations, reputational damage and increased training costs.

A rejoinder by Hartney (2020) that if stress is properly bring various diseases as a cause or precipitating factor, ranging from general health concerns such as cold and wound healing to life-threatening conditions such as coronary heart disease and cancer. Exposure to stress is indicated in most physical and mental conditions in the longer term. The impact of stress is generally negative it leads to problems such as unsatisfactory results, family issues, poor social relationships, health concerns, and unproductive organization. While the effects of stress are different depending on the situations and characteristics of the individuals concerned, the outcomes for the individuals are generally unpredictable. Depression, anxiety, downheartedness, stress, and deceit may be described as outcomes. Stress has disadvantageous effects on employees' productivity, (Benoliel & Barth, 2017).

Stress management practices used by the school head greatly affect the educational system, which introduces either positive or negative change in culture. Failure

to solve stress within the system will surely cause low productivity and less effective strategies, less participation, and lack of engagement during meetings and on coping with standards for school performance. Each school is an independent entity and has its own peculiarity, that this particular organizational culture had existed in the past before the school head came (Cabigao 2019). Organizational culture generally involves the belief that staff can learn what to do and what not to do, including practices, values, and assumptions about their job, in which the organization's core values begin with its leadership, which then translates into a leadership style. Which means that organizational culture was part of the school community, even from time immemorial, of what their previous school leaders and colleagues had learned. The school group has its definition of what's or isn't successful with this concept (Tsai 2019).

The various stress management practices that school heads need to adapt and apply to suppress stress to come up with a productive institution. It is, therefore, the intent of this study to cascade options that best suited for the school heads' physical, mental, emotional, and psychological stresses.

Research Question

Specifically, this research aimed to answer the following question:

What is the level of stress management practices of Secondary school heads, in terms of:

a. Proactive Stress Management;
b. Avoidance and Solitude, and

Distraction and Social Interaction?

METHODOLOGY

The study employs a quantitative approach to investigate the stress management practices of public secondary school heads. A survey is administered to a sample of school heads to gather numerical data on their stress management strategies, coping mechanisms, and perceived stress levels. The survey includes standardized scales and questionnaires to quantify the variables of interest. Descriptive statistics and inferential statistical tests are used to analyze the data, and the results are presented in the form of means, standard deviations, and correlations. It was conducted among twenty-seven (27) secondary school heads in the Division of Sultan Kudarat for the school year 2023-2024.

RESULTS AND DISCUSSION

On the level of stress management practices of secondary school heads in terms of proactive stress management was revealed as “Often”, in terms of Avoidance and Solitude it was found out as “sometimes, and in terms of Distraction and Social Interaction it was revealed as ‘Seldom”.

On the level of Stress Management Practices of Secondary School Heads in terms of Proactive Stress Management

Stress management practices used by the school head greatly affect the educational system, which introduces either positive or negative change in culture. Failure to solve stress within the system will surely cause low productivity and less effective strategies, less participation, and lack of engagement during meetings and on coping with standards for school performance.

Table 1. Stress Management Practices of Secondary School Heads in terms of Proactive Stress Management

As a secondary school administrator, I…	n	Mean	Std. Deviation	Description
1. Plan the job I want to perform ahead of time in order to manage time better in situations that I feel stressful.	27	4.63	0.56	Always
2. Pray in situations that I feel stressful.	27	4.48	0.8	Always
3. Create an environment to cope with my stress in situations that I feel stressful.	27	4.37	0.84	Always
4. Positively talk with myself (I look at things from a positive side).	27	4.15	0.91	Often
5. Spare time for my hobbies in situations that feel stressful.	27	4.04	0.85	Often
6. Share the situation causing stress with people I trust in order to cope with my stress.	27	3.89	1.19	Often
7. Spend time with my beloved ones in situations that I feel stressful.	27	3.85	1.17	Often
OVER-ALL MEAN	27	4.20	0.20	Often

The table presents that *I plan the job I want to perform ahead of time to manage time better in a situation that I feel stressful* as *Always*. This result means that the school head practiced stress management *all the time*. This outcome implies that school heads are already aware that working ahead of time would help lessen stress due to deadlines and records it may give once not on time submitted a report.

This stipulates the findings of Holman et al. (2018) and Hassard et al. (2017), that making blue print s for the task is part of the strategic planning process and includes being clear about goals and outcomes to create plans to achieve them. The disposal as well as any roadblocks to be prepared for should take into account the resources to the process, minimalized the delays, and the school head as well as the teachers. Working the plan is the execution process. It involves a series of milestones, strategies, and actions to make plans a reality. That varied methods to lessen the worry and promote employee wellness

and job restructuring is at the fingertips of the school heads having a variety of skills and procedures.

On the level of Stress Management Practices of Secondary School Heads in terms of Avoidance and Solitude

. Each school is an independent entity and has its own peculiarity, that this particular organizational culture had existed in the past before the school head came (Cabigao 2019). Organizational culture generally involves the belief that staff can learn what to do and what not to do, including practices, values, and assumptions about their job, in which the organization's core values begin with its leadership, which then translates into a leadership style.

Table 2. Stress Management Practices of Secondary School Heads in terms of Avoidance and Solitude

As a secondary school administrator, I…	n	Mean	Std. Deviation	Description
1. avoid situations reminding things causing a stress	27	3.85	1.03	Often
2. confront with the person causing a stress in order to cope with my stress	27	3.78	0.85	Often
3. do sport in situations that I feel stressful	27	3.52	0.94	Often
4. use relaxation methods (meditation yoga, muscle relaxation, deep breathing exercises)	27	3.37	1.11	Sometimes
5. receive support from experts in order to cope with my stress	27	3.26	1.23	Sometimes
6. keep silent in any problem	27	3.11	1.09	Sometimes
7. go shopping	27	2.70	0.99	Sometimes
OVER-ALL MEAN		3.37	0.11	Sometimes

Secondary school administrators use various coping mechanisms to manage stress. They often avoid situations that remind them of stressful events and confront the source of stress. Physical activity, such as sports, is also a common method. While relaxation techniques and seeking expert support are less common, they are still used sometimes. Keeping silent in the face of a problem and going shopping are the least common coping mechanisms. The overall mean score 3.37 indicates that these methods are used sometimes, suggesting that administrators may not be as effective or consistent in managing stress as they could be.

Table 3. Stress Management Practices of Secondary School Heads in terms of Distraction and Social Interaction

As a secondary school administrator, I…	n	Mean	Std. Deviation	Description
1. wanted to be alone	27	2.52	0.98	Seldom
2. do video calls with loved ones/confidantes	27	2.37	1.21	Seldom
3. drink coffee/alcoholic beverages	27	2.26	1.2	Seldom
4. chat in social media	27	2.11	1.25	Seldom
5. do selfie	27	1.96	1.13	Seldom
6. play cyber games (Candy Crash, Plants and Zombies)	27	1.74	1.09	Never
7. take stress tablets	27	1.56	0.85	Never
OVER-ALL MEAN		2.07	0.13	Seldom

The least used stress management practices, as presented in the table, are play cyber games (Candy Crash, Plants and Zombies; take stress tablets; qualitatively described as Never is post emotions in social media which. This realization means, school heads did not practice and find it as not significant in the exercise of their role.

This result was in line with the thoughts of Chen & Leung, L.(2016), described as lonely, quietly bored were persons playing candy crush, and inspired by the mobile games. Frequent players have had a higher tendency to become addicted as predicted. Isolation and self-control were essential predictors of addiction to mobile social games, while leisure boredom was related to game intensity. Mobile games are played primarily for brief periods, between events, and as a way of combating boredom. Giving credence to the notion of being able to experience mobile game play as a casual activity. Results have shown potentially beneficial effects, including improved mood and well-being, better mental concentration, and focus; this was postulated by DaCosta & Seok 2017.

The result also reinforced Vermeulen et al. (2018) that the introduction of social media gave individuals a feeling of varied emotions. While it provides new possibilities for controlling emotions, little is known about how adolescents use various channels for this purpose. The literature on emotion control and the affordances-of-technologies offered insight by explaining how and how adolescents use different uses. Social media platforms (Facebook, Instagram, Snapchat, Twitter, Tumblr, YouTube, 9Gag, and blogs) for sharing of emotions and how technical, social, and contextual factors affect these practices; It also reveals that on multiple of those platforms, adolescents share sentiments.

Conclusions

The following conclusions are drawn based on the findings of the study.

The research findings indicate that secondary school administrators employ a variety of stress management practices, with some being used more frequently than others:

Secondary school administrators often plan their work ahead of time, pray, and create an environment to cope with stress. They also positively talk to themselves and make time for hobbies to manage stress.

Administrators often avoid situations that remind them of stress and confront the source of stress directly. They sometimes use physical activity, relaxation techniques, and seek expert support to cope with stress. Keeping silent and going shopping are less common coping mechanisms.

The least used stress management practices include wanting to be alone, doing video calls, drinking coffee/alcohol, using social media, taking selfies, playing video games, and taking stress tablets.

Recommendations

From the conclusion of the study the following recommendations were crafted. Provide training and resources to school administrators on effective stress management techniques, with a focus on proactive strategies like time management, mindfulness, and work-life balance. Encourage administrators to regularly engage in physical activity, relaxation practices, and seek social support to better manage stress.

Implement organizational policies and practices that help reduce workplace stressors, such as reasonable workloads, clear communication, and opportunities for professional development. Offer counseling and mental health services to school administrators to help them cope with the unique challenges of their role.

Foster a school culture that prioritizes employee well-being and provides avenues for administrators to address workplace stress in a healthy manner.

Compliance with Ethical Standards

The researcher declares that there was strict compliance with obtaining informed consent, the respondents were given the freedom to withdraw from the study at any time, the anonymity of the respondents was maintained, the respondents' well-being was safeguarded, no conflict of interest exists in the conduct of the study, plagiarism was

strictly avoided, there was no bias in the interpretation of the findings and that the results were used purely for research.

Acknowledgments

The acknowledgment goes to the participants for their shared time and contribution to the researchers whose work has been referenced in this paper and most especially to Leodie D. Mones, PhD for his technical assistance in completing this paper. Their valuable insights and findings have substantially contributed to the analysis of this study.

ABSTRACT

This study investigates the development, preparation, analysis, and acceptability of guava and bilimbi Condiment with Cassava Based-Sagip Nutri-Pack as an innovative condiment. The research showcases a systematic approach from harvesting to packaging, emphasizing nutritional benefits and suitability for a healthy diet regimen. Sensory evaluations across different treatments reveal varying consumer perceptions in appearance, aroma, taste, and texture. Cost and return analysis demonstrate the economic feasibility of the products, with a consistent return on investment. Shelf-life observations suggest room for improvement in storage strategies to extend product freshness. The study concludes by providing recommendations to enhance product development, marketing, and distribution strategies, emphasizing the importance of continuous recipe innovation, consumer education on nutritional benefits, and sensory optimization. By leveraging these recommendations, the research aims to drive the market adoption of guava and bilimbi Condiments with Cassava Based-Sagip Nutri-Pack, catering to diverse consumer preferences and contributing to the creation of innovative, nutritious condiments.

Keywords: *condiment, guava, bilimbi, sensory evaluation, shelf-life, product development*

INTRODUCTION

In Barangay San Felipe, City of Ilagan, Isabela, guavas, and bilimbi trees flourish abundantly. However, these fruits often go to waste, rotting, and ignored. This underutilization is concerning given their potential health benefits. The local community can benefit significantly by transforming these fruits into innovative condiments, enhancing their nutritional value, and providing a healthier alternative to traditional sauces.

Condiments play a vital role in enhancing the flavor of food across various cultures. According to Aster et al. (2023), condiments can be found globally in liquid, semisolid, and solid forms. In the Philippines, common condiments include calamansi (Philippine lime), patis (fish sauce), suka (vinegar), and toyo (soy sauce). These condiments, often used as dipping sauces (sawsawan), enhance the flavor of dishes by balancing and complementing their taste profiles. Filipino cuisine is particularly noted for its concept of "linamnam," a term that signifies deep and rich flavors, adding a unique dimension to the culinary experience (Zappia, 2015).

There is a growing trend in the food industry towards enhancing the nutritional profile of foods by utilizing parts of fruits and vegetables that are typically discarded. Belović et al. (2018) highlighted the potential of food science to make these parts useful, transforming them into value-added products. Similarly, the study by Kour et al. (2018) discusses the incorporation of fruit and vegetable by-products in the development of functional foods, underscoring their potential to improve nutritional quality and reduce food waste.

In response to these findings, efforts are being made to enhance standard condiments used in community street foods, particularly for students at Isabela School of Arts and Trades-Main. In collaboration with ISU, Echague-Main Campus, the aim is to enrich condiments by incorporating a Sagip Nutri-Pack, thus enhancing their nutritional value.

The proposed condiment recipe will include guava and bilimbi combined with a Cassava-Based Sagip Nutri-Pack Powder, which consists of cassava, mung beans, sesame, cacao pod husk, malunggay, and turmeric powder. This initiative aligns with SDG 3 (Good Health and Well-being), utilizing the nutritional benefits of the Sagip Nutri-Pack powder to provide essential macro and micronutrients necessary for maintaining body functions.

The findings from this research will be beneficial not only to food manufacturers but also to consumers seeking unique and nutritious condiment options. Additionally, transforming underutilized fruits into marketable products can address local waste issues and support SDG 8 (Decent Work and Economic Growth) by creating income opportunities for local households. An extension program in partnership with local barangays and LGUs in Ilagan, Isabela, will be implemented to disseminate knowledge and skills related to this project, contributing to SDG 1 (Zero Poverty).

Guava (Psidium guajava L.) is revered as a "superfruit" due to its rich nutrient profile and medicinal benefits (Praveena et al., 2022). Belonging to the Myrtaceae family, guava is renowned for its savory taste and health-promoting properties. It is used in traditional medicine for its leaves, roots, bark, and fruit. Research by Manikandan et al. (2020) highlights the antimicrobial and antioxidant properties of guava, emphasizing its potential in health-promoting applications.

Averrhoa *bilimbi*, or *bilimbi*, commonly found in Philippine and Southeast Asian forests, is a traditional cooking ingredient (Geetha et al., 2011). Despite being often overlooked, bilimbi is rich in iron, vitamins B and C, antioxidants, and phosphorus. Its juice is used for cleaning and bleaching, while its leaves are known for their medicinal properties, such as alleviating coughs, bleeding disorders, bee sting irritation, and skin issues (Valencia & Bismark, 2015). Recent studies by Rosnah et al. (2012) have also explored the potential of bilimbi as a natural preservative in food products, highlighting its antimicrobial properties.

The increasing interest in innovative condiment ingredients has led to the exploration of tropical fruits like guava and bilimbi. These fruits offer tangy flavors, high nutritional value, and natural preservatives, potentially enhancing condiments' taste and nutritional value. However, their acceptability and development in condiment production remain understudied. Investigating the process and acceptability of incorporating guava and bilimbi with Sagip Nutri-Pack in condiments is essential for assessing their feasibility and market impact.

This study aims to investigate consumer acceptance of guava and bilimbi in condiments, optimize proportions, and formulation parameters, and conduct sensory evaluations. The results will offer valuable insights for the food industry, highlighting the potential of guava and bilimbi as innovative condiment ingredients.

Research Questions

Generally, the study aimed to determine the acceptability and nutritive value of Guava and Bilimbi with Cassava Based-Cassava Based-Sagip Nutri-Pack as Innovative ingredients in condiment production.

Specifically, it sought to address the following questions:

1. What are the processes involved in making guava and bilimbi with Cassava Based-Sagip Nutri-Pack for innovative condiments?
2. What is the proximate chemical nutrient analysis of guava and bilimbi with Cassava cassava-based-sagip Nutri-pack for innovative condiments?
3. What is the level of acceptability of the guava and bilimbi with Cassava Based-Sagip Nutri-Pack for innovative condiments with proportions of 1,150g, 1,100g, 1,050g, and the original (TI to T4) in terms of (a) appearance (b) aroma (c) taste, and (d) texture
4. Is there a significant difference in the evaluation of the food experts, food technology students, and consumers on the prepared guava and bilimbi with Cassava Based-Sagip Nutri-Pack as a condiment?
5. What is the cost analysis computed for the different treatments?

6. What is the shelf-life of guava and bilimbi with Cassava Based-Sagip Nutri-Pack as a condiment at cold and warm room temperatures?

METHODOLOGY

A. Materials

1. Ingredient

Table 1 shows the ingredients and their proportions in the preparation of Guava and Bilimbi Enhanced with Cassava Based-Sagip Nutri-Pack for Innovative Condiment. Which will be used in the study.

Table 1. Proportions of Ingredients Used in Making Innovative Condiment

Ingredients	T1 Bilimbi	T1 Guava	T 2	T3	T 4
Cassava Based Nutri-pack Powder			120g	120g	120g
Ripe Guavas		2400g	1150g	1100g	1050g
Bilimbi	2400 g		1150g	1100g	1050g
Sugar	170grams	170grams	170grams	170grams	170grams
Salt	11.4grams	11.4grams	11.4grams	11.4grams	11.4grams
Pepper	2.8grams	2.8grams	2.8grams	2.8grams	2.8grams
Citric Acid	3 grams	3 grams	3 grams	3 grams	3 grams
Garlic	5 grams	5 grams	5 grams	5 grams	5 grams
Xanthan Gum	1 gram	1 gram	1 gram	1 gram	1 gram
Artificial Lemon Flavor	5 grams	5 grams	5 grams	5 grams	5 grams
Artificial Food Color	1 g	1 g	1 g	1 g	1 g
Sodium Benzoate (Food Grade)	1 g	1 g	1 g	1 g	1 g

2. Equipment Tools and Utensils

To carry out the study, some equipment, materials, and components were utilized. These were used for measurement, mixing, cooking, packaging, and cutting. They are described in the following table.

Table 2. Equipment and tools to be used in the preparation of Guava and Bilimbi Enhanced with Cassava Based-Sagip Nutri Pack for Innovative Condiment

PREPARATION TOOLS	MEASURING TOOLS	CUTTING TOOLS	PACKAGING AND LABELING	EQUIPMENT
Stainless Steel Mixing Bowls (2-3)	Measuring cup	Sharp Kitchen Knife	Sterilized Glass with Lids	Blender or Food Processor
Colander	Measuring spoon	Peeler	Plastic sealer	Gas range
Saucepan or Cooking Pot	Digital Weighing Scale			Heat blower
Wooden Spoon				
Chopping boards				
Disposable gloves				
Spoons				
Funnel				

Table 2, contd.

B. Procedure

The preparation of Guava and Bilimbi Enhanced with Casava Based-Sagip Nutri-Pack for Innovative Condiment involves a meticulous process to harness the unique flavors and nutritional benefits of these tropical fruits. Cassava-Based-Sagip Nutri-Pack Powder will be bought at Isabela State University-Echague Campus, and all other ingredients were bought From the City of Ilagan Public Market, before measuring the different proportions for the treatments. The flowchart for making condiments is shown in Figure 1 below.

C. Treatment of the Study

The proportion of ingredients of Guava and Bilimbi Enhanced with Cassava Based-Sagip Nutri Pack for Innovative Condiment shows the different ratios in making a model for Condiment used as treatment in this study.

T1 = Guava Condiment

TI = Bilimbi Condiment

T2 = Cassava Based Sagip Nutri-pack (120g), Ripe Guava (1150g), Bilimbi (1150)

T3 = Cassava Based Sagip Nutri-pack (120g), Ripe Guava (1100g), Bilimbi (1100)
T4 = Cassava Based Sagip Nutri-pack (120g), Ripe Guava (1050g), Bilimbi (1050)

Analysis

The treatment products of Guava and Bilimbi Enhanced with Cassava Sagip Nutri Pack for Innovative Condiment samples were subjected to proximate chemical and nutrient analysis to be conducted at the SGS Philippines, Inc. 2F Alegria Building, 2229 Chino Roses Avenue, Bangkal, Makati City.

E. Sensory Evaluation

Sensory Evaluation was conducted at Isabela School of Arts and Trades – Main, and ISAT-TESDA, City of Ilagan, Isabela to determine the consumers' acceptability of the experimental product in terms of color/appearance, taste/flavor, texture, and odor/aroma, of model recipe for Guava and Bilimbi Enhanced with Cassava Based-Sagip Nutri-Pack for Innovative Condiment as a nutritious saucing agent. The instrument for data gathering is the 9-Point-Hedonic Scale.

` The range of scale is interpreted as follows:

Scale	Range	Descriptive Rating
9	8.50 – 9.00	Like Extremely
8	7.50 – 8.49	Like Very Much
7	6.50 – 7.49	Like Moderately
6	5.50 – 6.49	Like Slightly
5	4.50 – 5.49	Neither Like nor Dislike
4	3.50 - 4. 49	Dislike Slightly
3	2.50 - 3.49	Dislike Moderately
2	1.50 - 2.49	Dislike Very Much
1	1.50 - 1.49	Dislike Extremely

A sensory panel was composed of sixty (60) individuals randomly selected among the (20) food experts, (20) food technology students, and (20) consumers. The qualification of the panelists in terms of age should be 12 to 60 years old. They were screened to be non-smokers, not liquor drinkers, and in good health during the sensory evaluation. They were purposely selected and properly oriented on what and how to evaluate the products using evaluation instruments.

The evaluators were given treatment samples they were subjected to evaluate carefully and rate each sample according to their color/appearance, taste/flavor, texture, odor/aroma, and general acceptability. They were asked to rinse their mouth before tasting each sample. This was strictly observed as a standard procedure to ensure the credibility and validity of the results of the study.

F. Experimental Design

There were five treatments used in the study, which were assigned randomly to the experimental units within a block (BLK1.1, BLK1.2 BLK2, BLK3, and BLK4). Each treatments have a code (GT1-110, BTI-110, T2-220, T3-330, and T4-440) to eliminate bias when doing the sensory evaluation.

All the score sheets were gathered, tabulated, analyzed, and interpreted. The sensory evaluation of the data was collected and analyzed through the following randomized complete block design (RCBD).

The grouping of experimental units per block is as follows:

BLOCK	**1.1**	**$110^{1.1}$**	**$110^{1.2}$**	**220^{2}**	**330^{3}**	**440^{4}**
	1.2	**$110^{1.2}$**	**330^{3}**	**440^{4}**	**$110^{1.1}$**	**220^{2}**
	2	**220^{2}**	**440^{4}**	**330^{3}**	**$110^{1.2}$**	**$110^{1.1}$**
	3	**330^{3}**	**220^{2}**	**$110^{1.1}$**	**440^{4}**	**$110^{1.2}$**
	4	**440^{4}**	**$110^{1.1}$**	**$110^{1.2}$**	**220^{2}**	**330^{3}**

Figure 1. Arrangement of 5 treatments

G. Cost and Return Analysis

Cost analysis was performed to determine the economic feasibility of the product if it would be sold in the market. This was done by listing down all the cost, labor, and other expenses incurred in producing the different proportions of Guava and Bilimbi Enhanced with Sagip Nutri Pack for Innovative Condiment and computing the unit cost and return on investment (ROI) per treatment.

H. Statistical Data Analysis

The results of the sensory evaluation were statistically analyzed using the one-way classification of the analysis of Variance (ANOVA). F-test, mean, and descriptive statistics were used to determine if there is a significant difference among the treatments in terms of color/appearance, texture, taste/flavor, and odor/aroma.

Statistical Tools Used

All data were gathered from the questionnaire/evaluation form given to the evaluators. The variables shall be analyzed and interpreted based on the output of the Statistic Package for Social Science Software (SPSS).

1. Mean (M) was utilized to gauge the level of acceptability of the level of nutritional characteristics and sensorial properties of Guava and Bilimbi Enhanced with Cassava Based-Sagip Nutri-Pack for Innovative Condiment to respondents' age groups and criteria.

2. One Way Between Groups Analysis of Variance (ANOVA) was used to determine the difference in the level of acceptability of the level of nutritional characteristics and sensorial properties of Guava and Bilimbi Enhanced with Cassava Based-Sagip Nutri-Pack for Innovative Condiment across the four age groups.

Scale	Range	Descriptive Rating
9	8.50 – 9.00	Like Extremely
8	7.50 – 8.49	Like Very Much
7	6.50 – 7.49	Like Moderately
6	5.50 – 6.49	Like Slightly
5	4.50 – 5.49	Neither Like nor Dislike
4	3.50 - 4. 49	Dislike Slightly
3	2.50 - 3.49	Dislike Moderately
2	1.50 - 2.49	Dislike Very Much
1	1.50 - 1.49	Dislike Extremely

3. Post Hoc Analysis using Scheffe Test. This was conducted only when the ANOVA revealed a significant difference between and among levels of general acceptability of the level of nutritional characteristics and sensorial properties of Guava and Bilimbi Enhanced with Cassava Based-Sagip Nutri-Pack for Innovative Condiment production across the three age groups. This will be utilized to determine which among the pairs of groups have significantly different levels of acceptability of the level of nutritional characteristics and sensorial properties of Guava and Bilimbi Enhanced with Cassava Based-Sagip Nutri-Pack for Innovative Condiment.

RESULTS AND DISCUSSION

Product Development

The guava and bilimbi Condiment with cassava-based Based-Sagip Nutri-Pack underwent different stages of development starting from harvesting, washing, seed extraction, chopping, grinding, sifting, measuring, mixing, cooking, packaging, and labeling. Through these stages of development, careful observation and analysis were done to come up with guava and bilimbi with Cassava Based-Sagip Nutri-Pack as an innovative condiment.

Preparation of Guava and Bilimbi Condiment in Five Treatments

The development process started with the creation of guava and bilimbi Condiment with Cassava Based-Sagip Nutri-Pack in four different treatments. The procedure began with washing the guava and bilimbi and extracting the fruit seeds separately, chopping with a knife to easily grind the fruits with a blender then sifting to surely check their fine texture. To present the measurements and ingredients systematically, a table is provided.

Table 3. Measurements and ingredients in the preparation of Guava Condiment

Measurements	Ingredients
2400 g	Ripe Guavas
170 g	Granulated Sugar
11.4 g	Salt
2.8 g	Ground White Pepper
3 g	Citric Acid
10 g	Powdered White Garlic
1 g	Xanthan Gum
5 g	Artificial food lemon flavor
1 g	Sodium benzoate

Procedure

The process of making guava condiments begins with measuring all required ingredients, washing, chopping, and deseeding the guavas. The guava pulp is then blended to a smooth consistency and cooked on medium heat. Once it reaches a boil, the heat is reduced, and the mixture is simmered for about 16-18 minutes, with frequent stirring. Natural sweeteners, spices, and seasonings are added to taste, and the flavors are adjusted for balance. After achieving the desired consistency, the mixture is removed from the heat and allowed to cool completely. Finally, the cooled condiment is transferred to sterilized jars, which are then sealed and labeled. Proper jar sterilization is crucial to prevent contamination and extend shelf life. The proportions of ingredients can be adjusted to create a unique flavor profile, and gentle cooking helps preserve the nutritional content of the guava and other components.

Table 4. Measurements and ingredients in the preparation of Bilimbi Condiment

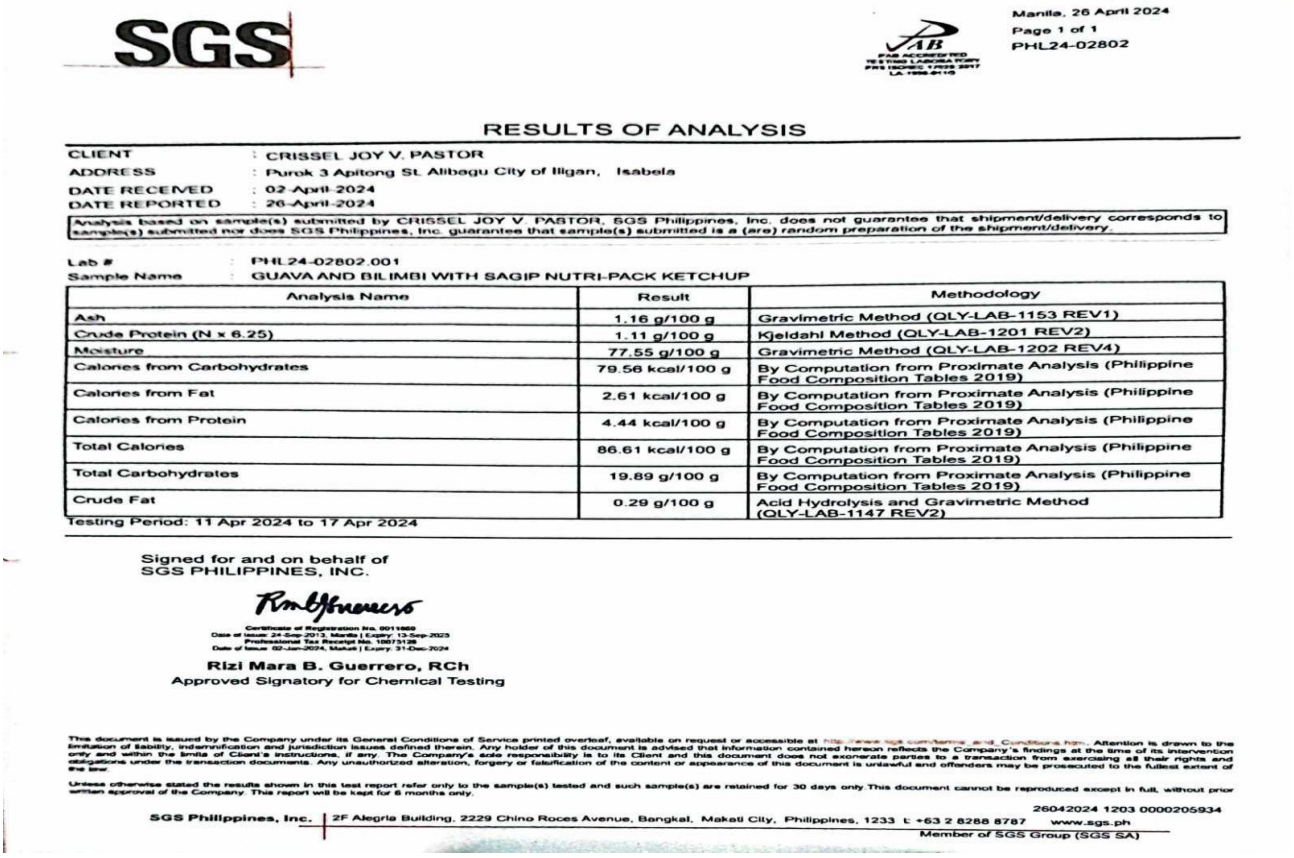
Measurements	Ingredients
2400 g	Ripe Bilimbi
170 g	Granulated Sugar
11.4 g	Salt

2.8 g	Ground White Pepper
3 g	Citric Acid
10 g	Powdered White Garlic
1 g	Xanthan Gum
5 g	Artificial food lemon flavor
1 g	Sodium benzoate

Procedure

The process of making a bilimbi condiment begins with measuring all required ingredients, washing, chopping, and deseeding the bilimbi. The bilimbi pulp is then blended to achieve a smooth consistency. This blended pulp is mixed well and cooked on medium heat. Once it reaches a boil, the heat is reduced and the mixture is simmered for about 16-18 minutes, with frequent stirring. Natural sweeteners, spices, and seasonings are added to taste, with flavors adjusted as needed for balance. After achieving the desired consistency, the mixture is removed from the heat and allowed to cool completely. Finally, the cooled condiment is transferred to sterilized jars, which are then sealed and labeled. Proper jar sterilization is crucial to prevent contamination and extend shelf life. The proportions of ingredients can be adjusted to create a unique flavor profile, and gentle cooking helps preserve the nutritional content of the bilimbi and other components

Table 5. Measurements and ingredients in the preparation of three different Treatments of Guava and Bilimbi Condiment with Cassava Based-Cassava Based-Sagip Nutri-Pack.



Measurements			**Ingredients**
T2	T3	T4	
120 g	120 g	120 g	Cassava Based Nutri-pack Powder
1150 g	1100 g	1050 g	Ripe Guava
1150 g	1100 g	1050 g	Ripe Kamias
170 g	170 g	170 g	Granulated Sugar
11.4 g	11.4 g	11.4 g	Salt
2.8 g	2.8 g	2.8 g	Ground White Pepper
3 g	3 g	3 g	Citric Acid
10 g	10 g	10 g	Powdered White Garlic
1 g	1 g	1 g	Xantan Gum
5 g	5 g	5 g	Artificial food lemon flavor
1 g	1 g	1 g	Sodium benzoate

Procedures

The process of making the Guava and Bilimbi Condiment involves several steps to ensure a flavorful and nutritious end product. First, measure all required ingredients and separately wash and chop guava and bilimbi for each treatment, ensuring removal of their seeds. Next, grind the fruit pulps using a blender until smooth, incorporating the Cassava Based-Sagip Nutri-Pack powder into the mixture during blending. Mix the blended ingredients thoroughly and cook on medium heat. Once the mixture reaches a boil, reduce the heat and simmer for 16-18 minutes, stirring intermittently to prevent sticking. Add natural sweeteners, spices, and seasonings to taste, adjusting flavors for a balanced profile. Once the condiment reaches the desired consistency, remove it from heat and allow it to cool completely in the pan. Finally, transfer the cooled mixture into sterilized jars, ensuring they cool before sealing and labeling for storage.

Report of Analysis on the Nutritive Value of Guava and Bilimbi Enhanced with Cassava-Based Sagip Nutri Pack for Innovative Condiment

The report analysis on the nutritive value of Guava and Bilimbi Enhanced with Cassava-based Sagip Nutri Pack for Innovative Condiment is shown in Figure 1 below.

Figure 2. Report of analysis on the nutritive value of Guava and Bilimbi Enhanced with Cassava Sagip Nutri Pack for Innovative Condiment

As a result, there was little difference found between the crude fat that was produced and the usual Condiment crude fat. Therefore, no proof eating guava with bilimbi Condiment increases the risk of obesity or other related conditions, including high blood pressure and heart disease. Based on the results, which are displayed in the table, this guava and bilimbi Condiment has a low trans fat content and is acceptable for consumption by those following a healthy diet regimen. Its crude fat level is 0.29 g/100 g, and its total carbohydrate content is 19.89 g/100 g. Because the cassava-based-Cassava-based-Sagip Nutri-Pack enriched guava and bilimbi Condiment contains carbohydrates, it can provide customers with additional energy to allow their bodies to function as intended.

Additionally, the analysis report indicates the presence of a trace amount of protein (1.11 g/100 g). Furthermore, protein contains amino acids, which the body requires to rebuild some of its bones and muscles. Protein is essential for overall health and plays a crucial role in repairing tissues and building enzymes and hormones. Adequate protein intake is necessary to support various bodily functions and maintain muscle mass.

The Level of Acceptability of Guava and Bilimbi Condiment with Cassava Based-Sagip Nutri-Pack

The following table shows the level of acceptability of the guava and bilimbi with Cassava Based-Sagip Nutri-Pack for innovative Condiments with proportions of 1,200, 900, 600, and the original (TI to T4) in terms of appearance/color, aroma, taste, and texture.

Table 6. The level of acceptability of the original recipe of Treatment I (Guava Condiment) in terms of appearance/color, aroma, taste, and texture

TREATMENT I GUAVA CONDIMENT	Mean	Standard Deviation	Description
110[1.1]			
Appearance/Color			
a. How visually appealing do you find the color of the guava Condiment	6.90	1.70	Like Moderately
b. Does the color of the guava Condiment make it appetizing to you?	7.10	1.53	Like Moderately
c.Does the color of the guava Condiment affect your overall impression of its quality?	6.95	1.63	Like Moderately
Average	6.98	1.51	Like Moderately
Odor/Aroma			
a. How well does the aroma of the guava Condiment complement its flavor?	7.05	1.86	Like Moderately

b. How unique is the aroma of the guava Condiment compared to other condiments?	6.75	2.05	Like Moderately
c. Does the aroma of the guava Condiment influence your overall satisfaction with the product?	7.08	2.04	Like Moderately
Average	6.96	1.89	Like Moderately
Taste/Flavor			
a. How do you like the sweetness of the guava Condiment?	6.43	2.25	Like slightly
b. How do you like the sourness of the guava Condiment?	6.45	2.18	Like slightly
c. Does the taste of guava Condiment linger pleasantly on your palate?	6.55	2.36	Like Moderately
Average	6.48	2.09	Like Slightly
Texture			
a. Does the texture of the guava Condiment feel grainy or gritty to you?	6.90	2.06	Like Moderately
b. Does the texture of the guava Condiment contribute positively to your eating experience?	6.85	2.09	Like Moderately
c. Does the texture of the guava Condiment contribute positively to your eating experience?	6.73	2.02	Like Moderately
Average	6.83	1.89	Like Moderately

The table presents the findings of a study examining the acceptability of guava condiments with different proportions and the Cassava-Based-Sagip Nutri-Pack additive across various sensory attributes: appearance/color, odor/aroma, taste/flavor, and texture.

For Treatment I, which focuses on guava Condiment, the mean ratings and standard deviations reveal moderate likeness across the board. In terms of appearance, participants generally found the color moderately appealing (Mean: 6.98, SD: 1.51), appetizing, and impacting their overall impression of quality.

Similarly, for odor/aroma, the aroma of the guava Condiment was perceived as moderately complementing its flavor (Mean: 6.96, SD: 1.89), somewhat unique compared

to other condiments, and influencing overall satisfaction. When it came to taste/flavor, participants slightly favored the sweetness (Mean: 6.48, SD: 2.09) and sourness of the guava Condiment, with the taste moderately lingering on the palate. Regarding texture, participants found the guava Condiment to be moderately free from graininess or grittiness (Mean: 6.83, SD: 1.89), contributing positively to their eating experience.

Overall, the guava Condiment with the Cassava Based-Sagip Nutri-Pack additive demonstrated moderately positive ratings across appearance, aroma, taste, and texture, with slight variations in likability observed for taste compared to the other attributes.

c. Does the texture of the bilimbi Condiment contribute positively to your eating experience?	7.03	1.96	Like Moderately
Average	7.12	1.79	Like Moderately

The table presents the findings of a study examining the acceptability of Bilimbi Condiment across various sensory attributes: appearance/color, odor/aroma, taste/flavor, and texture.

The results for Treatment I, focusing on bilimbi Condiment, indicate a generally positive reception across the sensory attributes assessed. In terms of appearance/color, participants rated the bilimbi Condiment as visually appealing (Mean: 7.35, SD: 1.29), moderately appetizing, and affecting their overall impression of its quality moderately. Regarding odor/aroma, the aroma of the bilimbi Condiment was perceived as moderately complementing its flavor (Mean: 7.28, SD: 1.41), somewhat unique compared to other condiments, and influencing overall satisfaction moderately. When evaluating taste/flavor, participants moderately liked the sweetness (Mean: 6.98, SD: 2.11) and sourness of the bilimbi Condiment, with the taste moderately lingering on the palate. Texture-wise, participants found the bilimbi Condiment to be moderately free from graininess or grittiness (Mean: 7.12, SD: 1.79), contributing positively to their eating experience.

Overall, bilimbi Condiment with the Cassava Based-Sagip Nutri-Pack additive received moderately positive ratings across appearance, aroma, taste, and texture, suggesting its acceptability among participants.

c. Does the texture of the guava and bilimbi with Cassava Based-Sagip Nutri-Pack Condiment? contribute positively to your eating experience?	7.72	1.43	Like Very Much
Average	7.80	1.26	Like Very Much

The table shows the findings of a study examining the acceptability of guava and bilimbi with different proportions and the Cassava Based-Sagip Nutri-Pack additive across various sensory attributes: appearance/color, odor/aroma, taste/flavor, and texture.

Treatment II, which involves guava and bilimbi with Cassava Based-Sagip Nutri-Pack Condiment, received highly favorable ratings across all sensory attributes assessed. Participants found the color of the guava and bilimbi Condiment with Cassava Based-Sagip Nutri-Pack to be very visually appealing (Mean: 7.68, SD: 1.38), highly appetizing, and significantly impacting their overall impression of its quality. Similarly, the aroma of this Condiment blend was perceived to complement its flavor moderately well (Mean: 7.64, SD: 1.46), with a high level of uniqueness compared to other condiments, and significantly influencing overall satisfaction. When evaluating taste/flavor, participants highly favored both the sweetness (Mean: 7.67, SD: 1.61) and sourness of the guava and bilimbi Condiment with Cassava Based-Sagip Nutri-Pack, with the taste lingering

pleasantly on the palate. Regarding texture, participants found the Condiment to be very free from graininess or grittiness (Mean: 7.80, SD: 1.26), significantly contributing positively to their eating experience. 60

Overall, the guava and bilimbi Condiment with cassava-based sagip Nutri-pack received highly positive ratings across appearance, aroma, taste, and texture, suggesting strong acceptability and preference among participants.

c. Does the texture of the guava and bilimbi with Cassava Based-Sagip Nutri-Pack Condiment? contribute positively to your eating experience?	7.58	1.38	Like Very Much
Average	7.56	1.48	Like Very Much

The table presents the findings of a study examining the acceptability of guava and bilimbi with different proportions and the Cassava Based-Sagip Nutri-Pack additive across various sensory attributes: appearance/color, odor/aroma, taste/flavor, and texture.

Treatment III, which involves guava and bilimbi with Cassava Based-Sagip Nutri-Pack Condiment, garnered positive ratings across most sensory attributes evaluated. Participants found the color of this Condiment blend to be highly visually appealing (Mean: 7.70, SD: 1.30), significantly appetizing, and greatly affecting their overall impression of its quality. Regarding odor/aroma, the aroma was perceived to complement its flavor well (Mean: 7.53, SD: 1.40), significantly influencing overall satisfaction, although it was rated slightly lower in terms of uniqueness compared to other condiments. In terms of taste/flavor, while participants moderately liked the sweetness (Mean: 7.41, SD: 1.76) and sourness of the guava and bilimbi Condiment with Cassava Based-Sagip Nutri-Pack, the taste was not as highly favored as the other treatments, with a slightly lower average

rating. As for texture, participants found the Condiment to be moderately free from graininess or grittiness (Mean: v7.56, SD: 1.48), significantly contributing positively to their eating experience.

Overall, Treatment III received positive ratings across appearance, aroma, and texture, although taste/flavor was rated slightly lower compared to the other attributes, suggesting a slightly lower level of acceptability for taste in comparison to appearance and texture.

Table 10. The level of acceptability of the original recipe of Treatment IV (Guava and Bilimbi with Cassava-Based Condiment) in terms of appearance/color, aroma, taste, and texture

c. Does the texture of the guava and bilimbi with Cassava Based-Sagip Nutri-Pack Condiment? contribute positively to your eating experience?	7.72	1.68	Like Very Much
Average	7.69	1.45	Like Very Much

The table shows the findings of a study examining the acceptability of guava and bilimbi with different proportions and the Cassava Based-Sagip Nutri-Pack additive across various sensory attributes: appearance/color, odor/aroma, taste/flavor, and texture.

Treatment IV, featuring guava and bilimbi with Cassava-Based-Sagip Nutri-Pack Condiment, received highly positive ratings across all evaluated sensory attributes. Participants overwhelmingly found the color of this Condiment blend to be extremely visually appealing (Mean: 7.87, SD: 1.11), significantly appetizing, and greatly influencing their overall impression of its quality. Regarding odor/aroma, the aroma was perceived to complement its flavor exceptionally well (Mean: 7.62, SD: 1.43), significantly influencing overall satisfaction, and was also rated highly unique compared to other condiments. In terms of taste/flavor, participants highly favored both the sweetness (Mean: 7.58, SD: 1.51) and sourness of the guava and bilimbi Condiment with Cassava Based-Sagip Nutri-

Pack, although the taste was slightly less favored compared to appearance and aroma. Texture-wise, participants found the Condiment to be highly free from graininess or grittiness (Mean: 7.69, SD: 1.45), significantly contributing positively to their eating experience.

Overall, Treatment IV received exceptionally positive ratings across appearance, aroma, taste, and texture, indicating strong acceptability and preference among participants.

65

The table presents the analysis of the differences in the respondents' evaluation of guava and bilimbi with Cassava-Based-Sagip Nutri-Pack Condiment.

The statistical analysis reveals differences in the evaluation of guava and bilimbi with Cassava Based-Cassava Based-Sagip Nutri-Pack Condiment among food experts, food technology students, and consumers, particularly in terms of aroma, taste, and texture across different treatments.

For Treatment 1 (Guava), the taste was found to be significantly different among the groups (F-value: 3.75, p-value: 0.03), indicating notable disparity in how they perceived the taste of guava Condiment with Cassava Based-Sagip Nutri-Pack. Similarly, for bilimbi, both taste (F-value: 4.94, p-value: 0.01) and texture (F-value: 5.74, p-value: 0.00) evaluations yielded significant differences, suggesting distinct perceptions among the evaluators.

Moving to Treatment 2 (Guava and Bilimbi), significant differences were observed in the evaluation of aroma (F-value: 3.36, p-value: 0.04) and texture (F-value: 3.89, p-value: 0.03) for guava and bilimbi Condiment, indicating varying perceptions among the groups regarding these attributes.

However, for Treatment 3 (Guava and Bilimbi) and Treatment 4 (Guava and Bilimbi), no significant differences were found in the evaluation of appearance, aroma, taste, or texture among the groups. In summary, while some treatments showed significant differences in certain sensory attributes across the groups, others did not, suggesting that perceptions of guava and bilimbi with Cassava Based-Sagip Nutri-Pack Condiment can vary among food experts, food technology students, and consumers, particularly in terms of taste, aroma, and texture.

66

In summary, while some treatments showed significant differences in certain sensory attributes across the groups, others did not. These findings suggest that perceptions of guava and bilimbi with Cassava Based-Sagip Nutri-Pack Condiment can vary among food experts, food technology students, and consumers, particularly in terms of taste, aroma, and texture. Further research or exploration may be needed to understand the underlying factors contributing to these differences and to optimize the sensory attributes of the Condiment blend to better meet the preferences of the target audience.

Cost and Return Analysis of Guava and Bilimbi with Cassava Based-Sagip Nutri-Pack Condiment

Table 12. Summary of Cost and Return Analysis of Guava and Bilimbi with Cassava Based-Sagip Nutri-Pack Condiment

Ingredients	**Measurement**	**TREATMENTS**				
		GT1	**BTI**	**T2**	**T3**	**T4**

Soduim Benzoate	1 g	0.83	0.83	0.83	0.83	0.

Table 6. cont

Additional Expenses						
Bottle with seal and lid		76	76	76	76	76
Electricity		20	20	20	20	20
Label		4.5	4.5	4.5	4.5	4.5
TOTAL UNIT COST(Php)		215.97	215.97	201.47	198.97	196.47

As shown in Table 6, the costed and estimated recipe was 1/2 ratio of the original recipe, and the cost of the Cassava Based-Sagip Nutri-Pack used in fortifying the treatments differed. The amount of Cassava Based-Sagip Nutri-Pack Powder in treatments 2, 3, and 4 is Php 30.

The same amount of the other ingredients was allowed for the 3 treatments White Sugar Php 19.38, Salt Php 0.57, Ground White Pepper Php 1.45, Garlic Powder Php 1.3, Citric Acid Php 2.94, Xanthan Gum Php 1.052, added Artificial food color Php 2.2, Lemon Flavor Php 13.75, and, Preservative added Sodium Benzoate Php 0.83.

Treatment 1 based on ingredients for the standard recipe of Guava Condiment and Bilimbi Condiment cost for Php 37.79, each treatment, while Treatment 2, used a combination of Guava and Bilimbi with a Sagip Nutri Pack costing Php 35.25, for treatment 3 the amount costing is Php 34.81 and for treatment 4 the amount costing is Php 34.38.

Additional Expenses

Additional expenses for all treatments amounted to Php 76.00 which includes a Bottle with seal and lid; and Label at Php 5.00. In addition, other operating expenses such as Electricity at Php 20.00.

Summing up all of the above expenses, the cost incurred in producing the products amounted to Php 215.97, Php 201.47, Php 198.97, and Php 196.47, for T1; T2, T3, and T4 respectively.

Table 7 presents the summary computation of return on investment. It reveals that the ROI for all treatments was nearly identical, at 40%.

Table 13. Summary Computation of Return and Investment

PARTICULARS	Treatments				
	GT1	BT1	T2	T3	T4
Total Production Cost (Php)	215.97	215.97	201.47	198.97	196.47

Shelf-life of the Guava and Bilimbi with Cassava Based-Sagip Nutri-Pack Condiment Production in Room Temperature

After production, the *Condiment* food products were stored at room temperature between 25°C and 30°C. Furthermore, the following table displays the observation:

a. Shelf-Life of treatment 1 guava Condiment at room temperature

Table 14. Shelf-Life of treatment 1 guava Condiment

Days of Observation	Observation Results
First day	The guava Condiment was visually appealing, sourly flavored, and sweet, and had a creamy, soft, and thick texture.
Second day	The guava Condiment, as seen on the first day, was brightly colored, sour, sweet, and vinegary, with a thick and creamy soft feel.
Third day	The second day's observations were the same: the guava had the same observations as the first day: it was nicely colored, smelled sour, tasted sweet and sour, and had a texture that was creamy, soft, and thick.
Fourth day	Similar observations were made on the third day: the guava Condiment had the same observations as the first day: it was nicely colored, smelled sour, tasted sweet and sour, and had a texture that was creamy, soft, and thick.
Fifth day	The guava Condiment had a pleasant appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture. The observations were made on the fourth day.
Sixth day	The guava Condiment had a good appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture.
Seventh day	The guava Condiment had the same observations on the sixth day: it had a good appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture.

b. Shelf-Life of treatment 1 bilimbi Condiment at room temperature

Table 15. Shelf-Life of treatment 1 bilimbi Condiment

Days of Observation	Observation Results
First day	The bilimbi Condiment was visually appealing, sourly flavored, and sweet, and had a creamy, soft, and thick texture.
Second day	The bilimbi Condiment, as seen on the first day, was brightly colored, sour, sweet, and vinegary, with a thick and creamy soft feel.
Third day	The second day's observations were the same: the bilimbi Condiment had the same observations as the first day: it was nicely colored, smelled sour, tasted sweet and sour, and had a texture that was creamy, soft, and thick.
Fourth day	Similar observations were made on the third day: bilimbi Condiment had the same observations as the first day: it was nicely colored, smelled sour, tasted sweet and sour, and had a texture that was creamy, soft, and thick.
Fifth day	The bilimbi Condiment had a pleasant appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture. The observations were made on the fourth day.
Sixth day	The bilimbi Condiment had a good appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture.
Seventh day	The bilimbi Condiment had the same observations on the sixth day: it had a good appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture.

Second day	The guava and bilimbi Condiment, as seen on the first day, was brightly colored, sour, sweet, and vinegary, with a thick and creamy soft feel.

Third day	The second day's observations were the same: the guava and bilimbi Condiment had the same observations as the first day: it was nicely colored, smelled sour, tasted sweet and sour, and had a texture that was creamy, soft, and thick.
Fourth day	Similar observations were made on the third day: the guava and bilimbi Condiment had the same observations as the first day: it was nicely colored, smelled sour, tasted sweet and sour, and had a texture that was creamy, soft, and thick.
Fifth day	The guava and bilimbi Condiment had a pleasant appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture. The observations were made on the fourth day.
Sixth day	The guava and bilimbi Condiment had a good appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture.
Seventh day	The guava and bilimbi Condiment had the same observations on the sixth day: it had a good appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture.

d. Shelf-Life of treatment 3 guava and bilimbi with Cassava Based-Sagip Nutri-Pack for innovative Condiment

Table 17. Shelf-life of treatment 3 guava and bilimbi with Cassava Based-Sagip Nutri-Pack for innovative Condiment

Days of Observation	Observation Results
First day	The guava and bilimbi condiments were visually appealing, sourly flavored, and sweet, and had a creamy, soft, and thick texture.
Second day	The guava and bilimbi Condiment, as seen on the first day, was brightly colored, sour, sweet, and vinegary, with a thick and creamy soft feel.
Third day	The second day's observations were the same: the guava and bilimbi Condiment had the same observations as the first day: it was nicely colored, smelled sour, tasted sweet and sour, and had a texture that was creamy, soft, and thick.
Fourth day	Similar observations were made on the third day: the guava and bilimbi Condiment had the same observations as the first day: it was nicely colored, smelled sour, tasted sweet and sour, and had a texture that was creamy, soft, and thick.

Fifth day	The guava and bilimbi Condiment had a pleasant appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture. The observations were made on the fourth day.
Sixth day	The guava and bilimbi Condiment had a good appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture.
Seventh day	The guava and bilimbi Condiment had the same observations on the sixth day: it had a good appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture.

e. Shelf-Life of treatment 4 guava and bilimbi with Cassava Based-Cassava Based-Sagip Nutri-Pack for innovative Condiment

72

Table 18. Shelf-life of treatment 4 guava and bilimbi with Cassava Based-Cassava Based-Sagip Nutri-Pack for innovative Condiment

Days of Observation	Observation Results
First day	The guava and bilimbi condiments were visually appealing, sourly flavored, and sweet, and had a creamy, soft, and thick texture.
Second day	The guava and bilimbi Condiment, as seen on the first day, was brightly colored, sour, sweet, and vinegary, with a thick and creamy soft feel.
Third day	The second day's observations were the same: the guava and bilimbi Condiment had the same observations as the first day: it was nicely colored, smelled sour, tasted sweet and sour, and had a texture that was creamy, soft, and thick.
Fourth day	Similar observations were made on the third day: the guava and bilimbi Condiment had the same observations as the first day: it was nicely colored, smelled sour, tasted sweet and sour, and had a texture that was creamy, soft, and thick.
Fifth day	The guava and bilimbi Condiment had a pleasant appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture. The observations were made on the fourth day.
Sixth day	The guava and bilimbi Condiment had a good appearance and color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture.
Seventh day	The guava and bilimbi Condiment had the same observations on the sixth day: it had a good appearance and

	color, a sour aroma, a sweet and sour flavor, and a creamy, soft, and thick texture.

The shelf-life of treatment 1 guava, treatment 1 bilimbi as well as treatment 2, 3, and 4 guavas and bilimbi with Cassava Based-Cassava Based-Sagip Nutri-Pack for innovative Condiments at room temperature will last for seven (7) days and at Refrigerated chiller temperature will lasted for one month or thirty (30) days. Refrigerated guava and bilimbi Condiments will have a longer shelf-life than room temperature.

Conclusions

In conclusion, the comprehensive study on the development, preparation, analysis, and acceptability of guava and bilimbi Condiment with Cassava Based-Sagip Nutri-Pack has provided valuable insights into creating an innovative and nutritious condiment. The meticulous process from harvesting to packaging, coupled with detailed measurements and ingredient lists, demonstrates a systematic approach to product development. The analysis of the nutritive value showcased the nutritional benefits of the condiments, emphasizing their suitability for a healthy diet regimen. The evaluation of acceptability among different treatments highlighted varying sensory perceptions, indicating the importance of considering consumer preferences. The cost and return analysis revealed the economic feasibility of the products, while the shelf-life observations offered practical guidance on storage recommendations. Overall, this study contributes significantly to the understanding of guava and bilimbi condiments with Cassava Based-Sagip Nutri-Pack, paving the way for further exploration and optimization of these innovative culinary offerings.

Recommendations

Based on the result of the study, several recommendations can be made to further enhance the development, marketing, and distribution of Proximate Nutrient Analysis of Guava and Bilimbi with Sagip Nutri-Pack as Innovative Condiments:

1. It is recommended that new items be created. To adapt to shifting dietary needs and customer tastes, the recipes for guava and bilimbi with cassava-based-sagip Nutri-pack as an Innovative Condiment must be constantly developed and improved. To grow the product range and draw in more customers, it could be required to experiment with different tastes, textures, and nutritional profiles.

2. Marketing efforts and educational materials should be used to explicitly educate customers about the nutritional advantages and adaptability of Guava and Bilimbi with cassava-based-sagip Nutri-pack as an Innovative Condiment. It is important to highlight the unique nutritional profiles of Guava and Bilimbi condiments with cassava-based-sagip Nutri-pack during production so that consumers may make educated choices based on their dietary requirements.

3. Further work must be done on improving the sensory features of Guava and Bilimbi with cassava-based-sagip Nutri-pack as Innovative condiments, such as look, scent, taste, and texture, to boost consumer satisfaction and acceptability. To identify issue areas and make necessary formula adjustments for products, sensory assessments, and consumer feedback sessions are highly recommended.

4. To cater to diverse consumer preferences, adapted marketing tactics and product offers should be developed. For example, highlighting the nutritional benefits and visual appeal of Guava and Bilimbi Condiment with cassava-based-sagip nutri-pack, a generic message should be incorporated. Collaboration with government organizations is necessary such as the Department of Agriculture, the Department of Science and Technology (DOST), and the Department of Trade and Industry (DTI) is required.

5. The use of Guava and Bilimbi with Sagip Nutri-pack as a novel Condiment is highly recommended, as it provides a greater return on investment than the food industry's marketed condiment.
6. It is advised to make use of efficient distribution and storage techniques to lengthen the shelf life of guava and bilimbi with Sagip Nutri-pack as novel condiments and reduce waste. Managing storage conditions, creating effective distribution networks, and investing in packaging technologies that increase shelf life may all be necessary to guarantee that items reach customers in the best possible shape. It is advised to work in conjunction with the Department of Trade and Industry (DTI). It is recommended that funds be set aside for further research and development projects that will investigate the possible uses of guava and bilimbi in the creation of this product. Working together with dietitians, food scientists, and culinary specialists, new guava and bilimbi cater to changing customer tastes and trends that may result from this. It is necessary to work with the DOST, the DTI, and the school's Research and Development unit.

Compliance with Ethical Standards

We, the authors, declare that informed consent was obtained from all respondents, who were also informed of their right to withdraw at any time. Anonymity and confidentiality were strictly maintained, and respondents' well-being was safeguarded throughout the study. There is no conflict of interest in this research. We strictly avoided plagiarism and ensured an unbiased interpretation of the findings. The results are intended solely for research purposes.

Acknowledgments

We would like to express our deepest gratitude to our research adviser for her invaluable guidance and support throughout this study. We extend our sincere thanks to

our respondents for their participation and cooperation. Our appreciation also goes to our colleagues and friends for their encouragement and assistance. We are grateful to our relatives for their unwavering support and understanding. Lastly, we give our heartfelt thanks to God for providing us with the strength and wisdom to complete this research.

ROUTE FOR UNDERSTANDING: EMPLOYING BEFORE, DURING AND AFTER ACTIVITIES IN READING

Ismael C. Casquejo, Ed. D.

Senior High School, Tanauan City Integrated High School, Tanauan City, Batangas, Philippines

https://doi.org/10.5281/zenodo.11638798

ABSTRACT

This study transpired in Tanauan City National High School with Grade 7 STEM (Science, Technology, Engineering, and Mathematics) students. The select students of the STEM class were the subjects because of their appropriate number in the classroom and their reading and comprehension were already diagnosed as they underwent tests and interviews to be able to be a part of the STEM class. The study made use of qualitative and quantitative methods to gather data. The proponent introduced scaffolding for reading (Alber, 2014). A reading text was prepared. The intention was to have the students get a pre-test. Simple instructions were given to accomplish this first assessment. After the initial test, an intervention was given, and a post-test was administered. The reading text for the post-assessment was the same as the pre-test. Subsequently, the scores of the two tests were tabulated. These two data were compared to know the effectiveness of the intervention.

Keywords: *Comprehension, Idea, Reading, STEM, Understanding*

INTRODUCTION

English is a global language (Barker, 2024). Many consider it the second language of Filipinos (Tirosh, 2021). But, among other countries that do not speak it as a first language, Filipinos are commendable to have control of the language. In view of becoming globally at par with the rest of the world, aspired by the K-12 Curriculum,

competency in the language is vital because of its worldwide influence. Taking this into consideration, it is no surprise that the Department of Education encourages programs and projects relating to the facility of the language. Among the orders and memoranda, educators can relate to DepEd Order No. 33 s. 2016 which is about the utilization of funds for early language development. True enough, the younger a person begins to learn a language, the easier it is to acquire (Galatro, 2022). It is a directive like this that underlines the importance of the English language in education and the international aspirations the education sector wants the learners to fulfill which can be hastened if a global language like English is mastered.

Among the skills in learning a language, reading, and comprehension plays a fundamental role (Dong, 2019). Though Filipinos are quite admirable in the use of the language, there is a struggle among students nowadays with regard to reading and comprehension (Nowak, 2022). Due to the advent of many internet activities that can replace reading (Taylor, 2020), it has become a burdensome activity compared to the one click-of-a-button activity the technology offers. However, one cannot have a shortcut when learning a language, reading and comprehension are not negotiable (Bostock, 2024). It should be practiced and experienced to have any mastery of the language.

Because of the importance of reading, the researcher, who is an English language teacher, focused on the topic. This study transpired in Tanauan City National High School with Grade 7 STEM (Science, Technology, Engineering, and Mathematics) students. The select students of the STEM class were the subjects because of their appropriate number in the classroom and their reading and comprehension were already diagnosed as they underwent tests and interviews to be able to be a part of the STEM class.

The study made use of qualitative and quantitative methods to gather data. The proponent introduced scaffolding for reading. A reading text was prepared. The intention was to have the students get a pre-test. Simple instructions were given to accomplish this first assessment. After the initial test, an intervention was given, and a post-test was administered. The reading text for the post-assessment was the same as the pre-test. Subsequently, the scores of the two tests were tabulated. These two data were compared to know the effectiveness of the intervention.

Worth emphasizing is that the research does not intend to end with the STEM students, but only the beginning of introducing a reading strategy. This is not a new strategy but one that is probably overlooked. Regular classes in Tanauan City National High School exceed the regular class size due to the dense student population, so the researcher decided to start with the smaller class so the result could easily be gathered. Provided the established result of this study, it should be applied to other sections and grade levels in the school, even in the whole Division, for the improvement of comprehension or understanding of students.

Research Questions

This study specifically seeks to answer the following questions:
1. How familiar are the students with the before, during, and after reading strategies?
2. Is there any difference in comprehension level when activities are given before, during, and after reading?
3. What interventions/activities can be developed to enhance reading comprehension capacity?

METHODOLOGY

This study is a combination of qualitative and quantitative research. The respondents were given a pre-test and a post-test. This was in the form of a reading comprehension test. A prepared reading text from the internet was given and after reading, they were given a ten-item test. For the pre-test, a simple instruction was given. But for the post-test, they were given scaffolding, that is, instructions were provided before reading, during reading, and after reading. The after-reading activity was answering a graphic organizer.

After the scaffolding was done, the students were given a post-test. The two results were compared, and it indicated a difference in result for the two tests. The results of the pre-test and post-test were statistically treated to verify the difference.

For the qualitative part, students were interviewed about the test and the difference the scaffolding made in the post-test. There was also a focus group discussion to further verify the result and confirm the individual interview. The interview and focus group discussion were deemed completed when the responses of the students reached a saturation point, that is, they were already the same answers and there were no novel ideas already in their responses.

The population of Grade 7 STEM Banzon students participated in this study. There are 29 students in all. They are select group of students because unlike the regular class, they underwent interview and entrance examination to be able to be a part of the STEM class. They have the same K-12 curriculum, but they have added elective subjects geared to Science and Mathematics.

The quantitative data came from the reading comprehension assessment, which was in the form of a pre-test and post-test. They took the pre-test, after which, they underwent a post-test. In the post-test, the before, during, and after activities were implemented. The pre and post-test results were compared using appropriate statistical tools. A T-test was used to identify the differences in the result of the assessments.

Qualitative data were also used for this research. Interviews and focus group discussions among the students were done. Data from these methods were recorded and documented. Certain themes were deduced from these methods to establish valid

premises significant to the nature of the study. The main focus of the discussion was the difference the intervention can give in their reading capacity.

RESULTS

Pre-Test and Post-Test Result

Learner	Pre-Test	Post-Test	Gain/Gap
1	3	3	0

TOTAL	174	208	34
Mean	6.00	7.17	1.17
Std Dev	1.488048	1.649003	1.582696
T-Test	2.837		
T-Tab	0.0063		

DISCUSSION

1. During the focus discussion, the students were asked if they were familiar with employing before, during, and after reading activity strategies. The unanimous reply was that they were not familiar with such a strategy. This can be interpreted that they truly did not have any experience of such or they had, but, the process was not clear to them or it was called differently by their previous teachers.

2. The result indicated the scores of the respondents on the reading passage. The result was individually taken before and after the intervention. The gap or gain was determined by getting the difference between the scores on before and after.

As shown, the mean score of the ten-point assessment was 6.00 (before) which later increased to 7.17 (after) with a mean gain of 1.17. A gain or positive difference implies that the intervention improved the score in reading comprehension. The standard deviation of the scores was 1.488048 (before) and increased to 1.649003 (after).

The t-test value (2.837) was higher than the t-tab (o. 0063). It can be construed that there is a significant difference between the scores before and after the intervention of the passage, thereby, proving that there is increase in understanding or comprehension.

3. The employing of before, during, and after reading strategies made a difference in the scores of the students (Linde, 2022). This strategy may be developed to be used in reading sessions. There are a lot of strategies of this kind available in books and online. The teachers must be resourceful in researching this kind of activities so that students may increase their comprehension capacity.

Conclusions

1. The students are not familiar with the before, during, and after reading strategies but based on the interview conducted with them, the strategy helped make them understand the reading passages given to them. Only one strategy was used during this study. Many others can be helpful to improve the comprehension and understanding of the students.

2. There is a significant difference between the pre-test and post-test. The strategy helped improve their comprehension.

3. This strategy was used with STEM students and the test results and interview indicated that they were helped to understand more the reading passage. Hence, this should be applied and incorporated into reading sessions. Also, such a strategy may be helpful to students who are in the regular curriculum.

Recommendations

1. Many strategies are available in books or online that can help students improve their reading and comprehension.

2. For the strategy in the post-test, this research utilized the Main Idea and Details Map. There are other strategies concerning before, during, and after reading activities, but for the intent and purpose of the study, this particular approach was used. The following are the instructions for this strategy. The website where this came from is provided after this strategy is laid out.

Main Idea and Details Map

Before Reading

1. Tell students that it is important that they are able to remember and tell about the most important part or main idea of a passage. They also need to be able to list details about the main idea. These skills help them understand and remember what they have read.
2. Remind the students of a recent passage that they all know. Or you may read a short passage to the class. Make transparency of the graphic organizer. Tell the students that they are going to help you fill in the important part of the passage and list details that support the main idea.
3. Have the students help you put information from the passage in the boxes on the graphic organizer.
4. Tell the students that they will be listening to or reading a passage and looking for the main idea and details that support the main idea.

During Reding

1. Read the passage out loud to the students or have the students read the passage themselves. You may pair the students and have them read it out loud to each other. They are to be listening for or looking for the main idea and supporting details.
2. You may want to have the students write them down as they find them. They may write them on paper or a marker board.

After Reading

1. Main Idea and Details Map – Have students complete the “Main Idea and Details Map” graphic organizer.
2. Have students share their results with the rest of the class. (https://readinginterventionstrategy.weebly.com/main-idea-maps.html)
3. The key intervention used in this study was the Main Idea and Details Map. There are other interventions like this, namely, Prior Knowledge Map, Events Map, Favorite Part, Fact and Opinion Chart, Timeline, and K-W-L Chart.

Resourcefulness and creativity are important to engage students in reading. There are sources in books and online that can help.

Compliance with Ethical Standards

Proper authorization was sought to conduct this study. Parents of the students were given informed consent to ask permission to conduct research with their children. Likewise, the anonymity of the participants was observed to safeguard their identity. The school head was informed of the research. Concerned teachers, especially the adviser, were notified about the study.

The students were briefed about the procedures of the research. They were informed that their test result would be used for a study. The interview and focus group discussion session were given enough preparation so the students would be at ease during the interaction.

Acknowledgments

The author would like to acknowledge Mr. Nazario P. Casquejo, Mrs. Teresita C. Casquejo, and Dr. Florinda Casquejo-Gagasa for their continuous love, support, and guidance.

To the respondents of this study;

And above all, to Our Lord Jesus Christ through the intercession of His Mother Mary for the grace and gift of life and talent.

ABSTRACT

The purpose of this study was to explore the school organizational climate of Patikul East District, MBHTE-Sulu. This further investigated the areas of administrative dimension, teachers' dimension and school dimension. Meanwhile, descripted survey method was used to describe the different dimensions of school climate. The respondents were the elementary school teachers of the selected schools of the same district. Meanwhile Self- constructed questionnaire extracted from literatures was used. Moreover, Frequency and percentage, mean, t-test for independent sample and analysis of variance (ANOVA) were utilized in the analysis of data. This study that majority of the respondents were female, belonging to 34 years and above; 11-15 years teaching experience; and with bachelor's degree. Likewise, the teachers have strongly agreed the school climate in terms of administrative dimension were conducive; they further strongly agreed that the school climate pertaining to teacher's dimension is characterized with high teacher's morale, good working relationship, highly motivated, and with high spirit of collaboration. And they strongly agreed to that the school climate pertaining to school dimension was characterized by conducive learning environment, have strong link with parents and Local Government Units officials, have a very friendly atmosphere and the like. Moreover , there was no significant difference on teacher's perception on school climate in the areas of administrative dimension, teacher's dimension and school dimension according to the respondent's profile. Finally, significant difference was found in administrator's dimension according to the respondents' length of service.

Keywords: *School Climate, Administrative Dimension, Teachers Dimension, School Dimension, Organizational Climate*

INTRODUCTION

Today, more than ever before, education is considered to be a societal investment and a commodity for consumption. As such, there is much needs for educationists alike to amplify educational outcomes if only compensate the financial resources invested in education (Bergen, 2014; Abdurahman & Omar, 2021; Abdurahman et al, 2024). Besides, the school is the home of educators and learners. In order to realize one's potential, it is important to feel safe and accepted in one's working and learning environment. The climate in a school therefore should be of such a nature that individuals could prosper in all areas of their lives.

Adeogun and Olisaemeka (2011) and Isa et al (2024) define school climate as an aggregate measure of school characteristics such as relationship between parents, teachers, administrators as well as physical facilities on the ground. According to Mariita (2012), Nyamosi (2013) and Balla et al (2024) have as well asserted that school climate factors such as social economic status, parent involvement, attendance, school size teaching–learning resources and interpersonal relationships affect teachers' job satisfaction and this can affect student academic performance.

Many school organizations, however, struggle to cultivate the climate they need to succeed. Hellriegel and Slocum (2006) explain that organizations can take steps to build a more positive climate through: communication, values expectations, norms, policies and rules, programs and leadership which require a rich organizational structure, reward systems, technology, or tasks (Datnow, Hubbard, & Mehan, 2002; Jupakkal et al, 2024).

Further, it is a part of administration in an educational system is to provide working conditions favorable to good teaching and effective learning. Sensible administration provides teachers and pupils with adequate facilities and favorable environment for work. To be operative, school principals need to possess educational leadership. Their role is to motivate their teacher to achieve the aims of the educational enterprise.

Relatively, there has been increasing attention on the relationship between management and employees especially in the academic world for decades now. Attitudes of the employees towards their organization, as a result of their work environment, are important issues in organizational behavior literature. Employee behavior in organizations is a result of their personal characteristics as well as the environment, which they work in. In this regard, organizational climate is an important aspect in order to understand employee's work-related behavior and it has been discussed in organizational behavior literature for decades (Bergren, 2014).

Moreover, this study endeavors to empirically determine the dimensionality of school climate towards organizational performance construct in the context of public elementary education particularly in Patikul East District, Patikul, Sulu. Most Elementary schools in Sulu still follow archaic narrative essay type performance appraisal methods. Hence, it would be interesting to study the perception of elementary school teachers in Patikul District as to their school organizational climate based on three dimensions: administrative dimension, teachers dimension and school dimension.

METHODOLOGY

This section discusses the research methodology of the study which includes the research locale, respondents of the study, data collection, research instrument, and data gathering procedure and statistical techniques and scope and delimitation of the study.

Research Locale

This study was conducted at the selected schools of Patikul District under the supervision of the MBHTE-Sulu. This schools includes Don Jose Godinez Elementary School, Kawmpang Elementary School and Latih elementary School The researchers has decided to choose these schools because she felt that there is much need for the district to improve the school climate if only to promote quality standard. Besides, the result of this study could serve as baselined data for some program interventions of the said district. Additionally, the researchers herself is presently employed in the same district. Hence, it is quite accessible for her to undergo the investigation.

Respondents of the Study

The respondents of this study were the elementary school teachers who are currently teaching at Patikul East District, MBHTE-Sulu school year 2022-2023. They are distributed as follows:

Table 3.1 : Distribution of respondents according to school

	Patikul East District	**Employees**
1	Don Jose Godinez elementary School	13
2	Kawmpang Elementary School	10
3	Latih Elementary School	7
	Total	30

Data Collection

After the validation of the instrument, the researchers asked the approval of the graduate school dean, the then Dr. Magna Anisa Hayudini, through the recommendation of her thesis adviser for launching of the study. Then, the researcherss secured a written

permission from the District Supervisor of Patikul East District to allow her to conduct the study. Once approved, the researchers to sent the letter to the school principal, attached with the approved permit from the supervisor, informing them for the administration of the questionnaire in their respective schools. The questionnaire was administered in the third week of April 2023 and was retrieved a day after.

Research Instrument

In this study, the researchers used survey-questionnaire to obtain data from the respondents. Questionnaire is simply a set of questions which, when answered properly by the required number of properly selected respondents supplied the necessary information to complete a research study (Calderon & Gonzales, 1993). In this study, the researchers' prepared questionnaire on the school climate of selected schools in Patikul East District. Said Questionnaire has two parts. The first part deals with the respondent's demographic profile; and the second part pertains to the school climate which also composed of three sub categories namely: administrative dimension, teachers' dimension and school dimension.

Statistical Techniques

To analyze the raw data gathered from the investigation, statistical tool is necessary. In this study, the researchers used frequency and percentage, weighted mean, t-test for independent variable, and one-way ANOVA. The frequency and percentage were used to analyzed the profile of the respondents. While, mean was utilized to assessed the school climates in respect to administrative dimension, teachers' dimension and school dimension. In like manner, t-test for independent variables was used to test the significant difference of school climate according to gender; and one-way ANOVA was used to test the difference of school climate according to age, length of service, and educational qualification.

Scope and Delimitation of the Study

This investigation aims to describe the school organizational climate in Patikul East District. The variables include administrative dimension, teachers' dimension and school dimension. Other dimensions such as technical dimension, human relation dimension and rational goal dimension are not included in this investigation. The respondents of the study are the selected elementary school teachers from three schools in Patikul District namely: Don Jose Godinez Elementary School, Kawmpang Elementary school, Latih Elementary School. Self- constructed questionnaire will be utilized. Meanwhile, time constraint is projected to be the limitation of the study.

RESULTS

This sections discusses the profile of the respondents in the context of gender, age, length of service, and educational qualification. This also tackles the school climate of Patikul East District selected schools, MBHTE, Sulu that include three dimensions: Administrative dimension, teachers' dimension and school dimensions.

Profile of the Respondents

Table 1 presents the profile of the elementary school teachers in the selected elementary schools in Patikul East District with respect to their gender, age, length of service and educational qualification. The distribution are as follows: As to gender, the majority (80%) were female; As to age, the majority (73.3%) were 34 years and above; in terms of length of service, the majority (30%) of the respondents have already served 11-15 years in teaching; And as to educational qualification, the majority (60%) have just finished their baccalaureate degree.

Table 1: The profile of the respondents

Gender	Frequency	Percent
Male	6	20
Female	24	80
Age		
23 years old below	1	3.3
24-27 Yrs. Old	0	0.0
28- 33 Old	7	23.3
34 years old and above	22	73.3
Length of Service		
5 Yrs. and below	5	16.7
6-10 yrs.	8	26.7
11-15 yrs.	9	30.0
16 years and above	8	26.7
Educational Qualification		
Bachelor's degree	18	60.0
With master's units	7	23.3
With master's degree	5	16.7
With Doctoral units	0	0.0
With Doctoral degree	0	0.0

School Climate

This section discusses the three dimensions of school climate which covers the administrator's dimension, teacher's dimension and school dimension based on the perception of the respondents.

A. School Climate on Administrator's Dimension

Table 2 reveals the administrator's dimension od school climate of Selected Schools in Patikul East District. The overall mean is 3.54 which has a verbal description of Strongly Agree. Meanwhile, the highest individual mean is 3.70; and the lowest individual mean is 3.37.

Table 2 : School climate Administrator's dimension

School climate's Administrators Dimension	mean	
1. The School administrator helps solve any school relevant concern of teachers	3.43	Agree
2. The school administrators helps settle minor differences of teachers and staff	3.60	Strongly Agree
3. The school administrator always arrive at the school early	3.40	Agree
4. The school administrator help solve individual conflict among teachers	3.37	Agree
5. The school administrator helps solve group conflict within the school	3.47	Agree
6. The school administrator sets an example by working hard for himself/herself	3.67	Strongly Agree
7. The school administrator keeps the teachers' be informed of the new DepEd thrusts	3.57	Strongly Agree
8. The school administrator is always speaking at the school functions	3.70	Strongly Agree
9. The principal schedules the teachers' work and activities timely	3.50	Strongly Agree
10. The school administrator treats everyone justly	3.54	Strongly Agree
Overall mean	3.54	Strongly Agree

Legend : 1.00-1.49 = Strongly disagree ; 1.50- 2.49 = Disagree; 2.50-3.49= Agree; 3.50-4.00= Strongly Agree

B. School Climate on Teacher's Dimension

Table 4.3 tackles the school climate based on teachers' Dimension of selected elementary school in Patikul East District. The overall mean is 3.62 which has a verbal description of strongly agree. While the highest individual mean is 3.83 and the lowest mean is 3.57.

Table 3 : School Climate teachers' dimension

School Climate Teachers' Dimension	mean	Verbal Description
1. The morale of the teachers are high	3.83	Strongly Agree
2. Teachers accomplish their work with vigour and enthusiasm	3.74	Strongly Agree
3. Teachers are high satisfied with their working relationship	3.57	Strongly Agree
4. Teachers have a smooth relationship with colleagues and school administrators	3.47	Agree

5. Teachers are willing to share their problems with colleagues and the school administrators	3.37	Agree
6. Teachers are socializing with each other	3.64	Strongly Agree
7. Teachers find works as highly motivating	3.64	Strongly Agree
8. Teachers are highly motivated to perform the tasks	3.57	Strongly Agree
9. Teachers invite other faculty members to their house for any special occasion	3.64	Strongly Agree
10. Teachers are willing to collaborate with colleagues to accomplish certain tasks	3.74	Strongly Agree
Overall mean	3.62	Strongly Agree

Legend : 1.00-1.49 = Strongly disagree ; 1.50- 2.49 = Disagree; 2.50-3.49= Agree; 3.50-4.00= Strongly Agree

C. School Climate on School Dimension

Table 4 exposes the school climate in an area of school dimension as rated by the elementary school teachers of Patikul East District. The overall mean is 3.59 which has a verbal description of strongly agree. The highest individual mean is 3.74 and the lowest is 3.40.

Table 4: School Climate School dimension

School climates' School Dimension	Mean	Verbal Description
1. The school has very conducive environment for teaching and learning	3.50	Strongly Agree
2. The school establishes a strong link with the parents.	3.54	Strongly Agree
3. The school establishes a strong link with other schools.	3.50	Strongly Agree
4. The school has a warmth welcoming environment for its guests.	3.74	Strongly Agree
5. The school establishes a strong link with the Local Government Units officials.	3.40	Agree
6. The school has a very encouraging environment to work	3.47	Agree
7. The school has set a very clear goal for the students.	3.74	Strongly Agree
8. The school has a very democratic environment for everyone.	3.70	Strongly Agree
9. The school has set its own standard for learning	3.74	Strongly Agree
10. The school has a friendly atmosphere for students and parents	3.67	Strongly Agree
Overall mean	3.59	Strongly Agree

Profile and School Climate

This Section presents the significant difference of school climate with the teacher's demographic profile as to gender, age, educational qualification and length of service.

A. School Climate and Gender

Table 5 depicts the significant difference of school climate in terms of administrator's dimension, Teacher's Dimension and School's dimension according to respondent's gender. The following were found: For administrator's dimension, the sig. value is 5.92; As to Techer's dimension, the sig. value is .883; and as to School's dimension, the sig. value is .922.

Table 5: Significant difference of school climate according to gender.

Group Statistics						
	Gender	N	Mean Diff.	Sig 2-tailed	Decision	Interpretation
Administrator's Dimension	male	6	208	5.92	Accept Ho	No Significant Relationship
	female	24	208			
Teacher's Dimension	male	6	058	.836	Accept Ho	No Significant Relationship
	female	24	058			
School's Dimension	male	6	025	.922	Accept Ho	No Significant Relationship
	female	24	025			

B. School Climate and Length of Service

Table 6 presents the significant difference of school climate in terms of administrator's dimension, Teacher's Dimension and School's dimension according to respondent's length of service The following were found: For administrator's dimension, the sig. value is .005; As to Techer's dimension, the sig. value is .017; and as to School's dimension, the sig. value is .118.

Table 6: Significant Difference of School climate according to length of service

		Sum of Squares	df	Mean Square	F	Sig.
Administrator's Dimension	Between Groups	3.485	3	1.162	5.412	.005

	Within Groups	5.581	26	.215		
	Total	9.067	29			
Teacher's Dimension	Between Groups	1.613	3	.538	4.052	.017
	Within Groups	3.450	26	.133		
	Total	5.063	29			
School Dimension	Between Groups	1.171	3	.390	2.150	.118
	Within Groups	4.719	26	.181		
	Total	5.890	29			

C. School Climate and Educational Qualification

Table depicts the significant difference of school climate in terms of administrator's dimension, Teacher's Dimension and School's dimension according to respondent's gender. The following were found: For administrator's dimension, the sig. value is .071; As to Techer's dimension, the sig. value is .460; and as to School's dimension, the sig. value is .233.

Table 7: Significant Difference of School climate according to educational qualification

		Sum of Squares	df	Mean Square	F	Sig.
Administrator's Dimension	Between Groups	1.613	2	.807	2.922	.071
	Within Groups	7.453	27	.276		
	Total	9.067	29			
Teacher's Dimension	Between Groups	.283	2	.142	.800	.460
	Within Groups	4.780	27	.177		
	Total	5.063	29			
School Dimension	Between Groups	.603	2	.301	1.540	.233
	Within Groups	5.287	27	.196		
	Total	5.890	29			

DISCUSSION

This section discusses the profile of the respondents; the school climate of selected schools of Patikul East District, MBHTE-Sulu according to administrative dimensions, teachers' dimension and school dimension.

A. Profile of the Respondents

Based from table 1, of the 30 teacher respondents from the selected elementary school of Patikul East District, the majority 24 (80 %) were female and only 6 (20%) were male. This indicates the female teachers remain dominant in the educational playing field.

As to respondents' age, the majority 22 (73.3%) were 34 years and above; while 7 (23.3%) were at the age bracket of 28-33 years old; and only one (3.3%) is belonging to 23 years old and below. The data pointed out that majority of the elementary school teachers in Patikul East District are at the middle age already and about to reach the peak of their career. This suggests that there is a need for the MBHTE-Sulu to hire more younger faculty members to carry out the most complex teaching responsibilities.

As to their length of service, the majority nine (30%) of the respondents are already in the service from 11-15 years; while eight (26.7%) are serving 6-10 years and other eight (26.7%) have rendered the same; and only five (16.7%) have been serving five years and below. Meanwhile, in terms of their educational qualification, 18 (60%) of the faculty members have finished their bachelor's degree; while seven (23.3%) of them have their master's units; and only five (16.7%) have already finished their masteral degree. This data clearly suggests that there is an urgent need for the faculty members to upgrade themselves through professional advancement if only to cope with the current explosion of information and technology in the landscape of education.

B. School Climate's Administrative Dimension

Gleaning from Table 2, as attested by an overall mean of 3.54 which has a verbal description of strongly agree, this indicates that the elementary school teachers of selected elementary schools in Patikul East District have strongly agreed that their school administrators have performed the administrative responsibilities emanates from their position as reflected in the same table. This means the school climate pertaining to administrative dimension is relatively very conducive.

When it is taken individually, the teachers have strongly agreed (mean=3.70) that the school administrators are always speaking at the school functions; that they set an example by working hard for themselves (mean=3.67); and they too help settle minor differences of teachers and staff (mean=3.67). Further, the respondents have strongly agreed (mean=3.57) that their school administrators have kept the teachers informed of the new DepEd thrusts; treats everyone justly (mean=3.54; and schedules the teachers' work and activities timely (mean=3.50).

On the other hand, the respondents agreed (mean=3.47) that their school administrators help them solve group conflict within the school; help solve any school relevant concern of teachers (m=3.43); always arrive at the school early (m=3.40); and they always help solve individual conflict among teachers (mean=3.370).

Corollary, effective leaders must ensure continuity in the school instructional program (Leithwood & Riehl, 2003) and must spend time to monitor instructional programs, curriculum implementation, and the quality of instructional practices (Fink & Resnick, 2001). Hoy, Sabo, & Barnes, (1996) and Abu-Saad & Hendrix, (1995) affirmed that the principal is the single most important individual in the development of a school's climate. In schools, therefore, school administrators can become effective change agents who are responsible for creating change and healthy school climate (Abdurahman N., Abdurahman N., et al.,2024).

In the same vein, Several quantitative studies (Hallinger & Heck, 1998; Hoy, Tarter, & Bliss, 1990; Kelley, Thornton, & Daughtery, 2005) have confirmed that school principals have the potential to the climate within the school building. A smoothly functioning school requires a leader's focused time and effort to effectuate change in the school setting. More than anything else, the school must first be a safe and has a positive learning environment for all. School leaders are charged to ensure this (Cotton, 2003). Schools showing academic improvement are more likely to have strong organizational managers who amplified their creativity and innovation in the workplace(Horng & Loeb, 2010; Danielson, 2002).

C. School Climate's Teachers Dimension

Gleaning from Table 3, with an overall mean of 3.62 which has a verbal description of strongly agree, this indicates that the elementary school teachers of selected elementary schools in Patikul East District have strongly agreed that the school climate pertaining to teacher's dimension is characterized with high teacher's morale, good working relationship , highly motivated, and with high spirit of collaboration and the like.

When taking singly, the teachers have strongly agreed (mean=3.87) that their morale is high; that they have accomplish their work with vigor and enthusiasm (mean=3.74); and that they are willing to collaborate with colleagues to accomplish certain tasks (mean=3.74); likewise, they strongly agreed (mean=3.64) that teachers are socializing with each other; find their works motivating; and even inviting each other to their own house. More so, teachers have strongly agreed (mean= 3.57) that they are highly satisfied with their working relationship and highly motivated to perform their own tasks.

Anent this findings, Farrant (1980) contends that the professional skills of the teachers establish a productive classroom atmosphere through a carefully planned teaching structures. He further asserts that professional competence often transforms into high quality of teaching that has consequential impact on the learning of the pupils. Also in Asanji et al (2024) in their study on Job Satisfaction of Teachers in selected

elementary school in Pangutaran District that if teachers morale is high, they are highly motivated to perform their daily tasks which thereby contributed much to their inner satisfaction in the workplace.

Meanwhile, researchers such as Goldhaber (2002), Greenwald, Hedges, and Laine (1996), Nye, Konstantopoulos, and Hedges (2004), Wenglinsky (2001), and Wilson and Floden (2003) however, found credentials such as graduate degrees to be weakly related to teacher performance, during their first and second year of their teaching career. Agyeman (1993) and Abdurahman (2024) reported that teachers, lacking of both the academic and the professional teacher qualification, would undoubtedly have a negative influence on the teaching and learning of the students. However, he further stated that a teacher who is academically and professionally qualified, but works under unfavorable conditions would be less dedicated to his work and thus be less productive in the work place than a teacher who is unqualified but works under favorable school climate.

D. School Climate's School Dimension

As exposed in Table 4, the elementary school teachers have strongly agreed, with an overall mean of 3.59, that the school climate under school dimensions have conducive learning environment, have strong link with parents and Local Government Units officials, have a very friendly atmosphere and the like.

Specifically, the teachers have strongly agreed (mean=3.74) that the school has a warmth welcoming environment for its guests ; has set a very clear goal for the students ; and has set its own standard for learning; They too strongly agreed (mean = 3.70) that the school has a very democratic environment for everyone; has a friendly atmosphere for students and parents (mean=3.67); and has establishes a strong link with the parents (mean 3.54). meanwhile, the teachers have also strong agreed (mean = 3.50) that the school has very conducive environment for teaching and learning and has establishes a strong link with other schools. Moreover, they further agreed (mean=3.47) that the school has a very encouraging environment to work; and ha establishes a strong link with the Local Government Units officials (mean=3.40).

Relative to the findings, Kuperminc et al. (1997) and Abdurahman and Abdurahman et al. (2024) observed that a positive school climate can yield best educational outcomes for students and personnel; whereas a negative climate can hinder optimal learning and development. Hence, it can be stated that school climate, if possible can provide an enriching environment, both for personal growth and academic success. According to Cohen et al. (2009) that Effective school improvement efforts involve the students, parents, and guardians, school personnel, and community leaders .

Meanwhile, a school environment or climate may indicate a great deal of cooperation among the various groups in the school setting while another might reveal a climate of tension, friction and even lack of cooperation among the groups. That is to say that the school climate of school could influence the performance of both teachers and

students positively or negatively as the case might be (Facunle & Ale, 2018). Moreover, Leithwood & Riehl, (2003) stated that principals of high achieving schools are clear about the school's vision and goals . While, Kearney & Harrington (2010) affirmed that school leaders must buy-in to both the vision and the learning goals and they must further seek commitment from the various stakeholders where the school is operated.

E. School Climate and Gender

Based on Table 5, there was no significant difference could be found in school climate in terms of administrator's dimension with the corresponding sig. value of 5.92; teacher's dimension with sig. value of .836; and school dimension with sig. value of .922 when grouped according to gender. All the sig. values were above the .05 alpha level and found to be insignificant. Therefore, the null hypothesis which state that " There is no significant difference of school climate according to age: was accepted. This means the perception of male and female teachers on the school climate as to administrator's dimension, teacher's dimension and school's dimension is almost the same.

F. School Climate and Length of Service

Gleaning from the Table 6, there was significant difference could be found in school climate in terms of administrator's dimension with respect to length of service as seen in the corresponding sig. value of .005 which is below the 0.05 alpha level; Hence, the null hypothesis is rejected. While there was no significant difference found on teacher's dimension with sig. value of .817; and school's dimension with sig. value of .118 which are above the 0.05 alpha level and the null hypothesis was accepted. This finding demonstrates that there exists a difference on the perception of the respondents in the area of administrative dimension. This means that the performance of the administrators with more than 10 years in service is better than those who were only serving five years and below.

G. School Climate and Educational Qualification

Based on Table 7, there was no significant difference could be found in school climate in terms of administrator's dimension with the corresponding sig. value of 0.71; teacher's dimension with sig. value of .460; and school dimension with sig. value of .233 when grouped according to educational qualification. All the sig. values were above the .05 alpha level and found to be insignificant. Therefore, the null hypothesis which state that "There is significant difference of school climate according to educational qualification was accepted. This means that regardless of educational qualification, the perception of the teachers on the school climate as to administrator's dimension, teacher's dimension and school's dimension is almost the same. This further implies that whether the administrator is a doctoral holder, master' s holder of a mere bachelor's degree holder, their performance as to managing the school climate do not vary significantly.

Compliance with Ethical Standards

Throughout the conduct of this study, the researchers have always safeguard the respondents' right to privacy and confidentiality in the pursuit of gathering the data of this investigation. Firstly, the researchers have sent a letter to the respondents that clearly explains the study's objectives, procedures, potential risks and benefits of the study. Teacher-respondents were also informed of their rights to-and-not to participate in the investigation. In respect to the privacy of the participants, data collection occurred in a private place and collected data were secured in an archive to ensure that no individual can access except the researchers themselves. Likewise, all participants were treated with high respect regardless of their different views and opinions. Moreover, the researchers created a comfortable space for the respondents to give them the freedom to express their free will during the course of the investigation.

Acknowledgements

The researchers wish to express their profound gratitude to those, who in one way or the others, who have immensely contributed to the success of this educational undertakings. To the Chancellor of the Mindanao State University-Sulu for his moral supports, encouragement and motivation that boost the morale of the researchers in accomplishing this laudable works. Likewise, to the faculty respondents of Patikul District for their voluntary participation that paved way for the completion of this investigation. Above all, to the Almighty Allah for showering the researches His strengths, guidance and mercy. Without His blessings, this humble works would not have been made possible.

ABSTRACT

This study aimed to reveal and analyze the difference in the level of management practices in the implementation of School Improvement Plan among the selected public elementary schools in the Third Congressional District of Quezon, with the aim of developing a management framework. This study also sought to answer the following questions: the profile of the schools in terms of the following: school size (small, medium, large); geographic location (central, non-central) and title of the school head (teacher-in-charge, head teacher, principal).The level of management practices of school heads in the implementation of School Improvement Plan as assessed by the teachers and the school heads themselves in the following phases: planning; implementing, monitoring and evaluation; and adjusting plans. The significant difference in the level of management practices in the SIP of school heads when grouped according to school profile. The challenges were encountered by the school heads in the implementation of management practices, the coping strategies employed by the school heads to address the challenges encountered. The SIP management framework can be proposed the schools in the districts were headed by full-fledged school principals. Data revealed that the SIP in the congressional district was distinctively to have a high level of practice among school heads. Hence, the School heads have different level of their management practices based from their school size, geographic location, and their current designation. However, challenges occur due to conflict of time, coordinating then collect feedback, and limited funds and resources. On the other hand, the way of coping strategies is to have quality, efficiency, and timeliness, creating localized monitoring and evaluation

tools, and solving difficulties in the plan and adjustments. A management framework that was made based from the results can be applied for school heads challenges in management practices

Keywords: *Management practice, School Improvement Plan, public elementary schools, Third Congressional District of Quezon*

INTRODUCTION

Governments worldwide are focused on improving and enhancing their educational systems to make them more significant and efficient. Education is the foundation for the knowledge and skill development of learners and is intended to help the institution accomplish its aims and objectives. As education is ought to be a priority, effective school leadership, exhibited by school administrators in collaboration with educators and other pertinent parties, must make a school successful.

With the onset of the Department of Education's new curriculum, transformation is a must for the entire educational community. The threat of declining quality education has prompted education architects to formulate innovations in educational management in the hope of improving student achievement and school performance. One of these innovations is empowering school heads and giving them the freedom to decide for their institution; thus, programs and projects associated with school improvement lie in their hand.

As stated in Republic Act 9155 or the Governance of Basic Education Act, a school must be managed by a school head who has “the authority, responsibility, and accountability for achieving higher learning outcomes.” Their roles include, but are not limited to, leadership, management, teacher evaluation, and enforcement. School heads are agents of change who significantly impact the educational milieu through their information-sharing methods, creating supportive social connections, participating in mentoring programs, and fostering progress. Their practices positively affect school performance (Aquino et al., 2021).

Thus, this study was undertaken to address several pivotal aspects, each with its compelling rationale. Firstly, in the evolving landscape of educational systems, ensuring that school heads are well-equipped to lead their institutions effectively is paramount. As educational paradigms shift, this study recognized the imperative for school heads to be adept leaders. By meticulously examining their management practices, the study sought to unearth areas primed for improvement, thereby contributing to the overarching advancement of education. Secondly, school heads play a pivotal role in nurturing elevated learning outcomes. Thus, the study's intent to assess the alignment between their responsibilities and actual practices holds significance. Such an evaluation becomes pivotal in maintaining a culture of accountability and raising the bar of educational quality. Moreover, the study's recognition of the distinct management practices across varying school profiles underscores the development of precisely tailored interventions. This personalized approach could effectively target specific challenges, catalyzing refining practices where necessary.

Furthermore, the study's spotlight on school heads as transformative agents within the educational landscape is well-aligned with the broader aspiration of cultivating transformational leadership in education. By unraveling effective practices, the study hopes to contribute to a positive transformational impact on the educational milieu. Lastly, the study's commitment to sustainable progress was realized through its intervention program. By arming school heads with strategies to optimize their School Improvement Plan practices, the study not only enhanced immediate outcomes but also set the stage for enduring advancements in school performance and student achievements.

Regardless of empowering school heads and through the implementation of the School Improvement Plan in the Division of Quezon, some institutions continue to face difficulties in achieving low school achievements. For this reason, there was a need to look into the school heads' management practices in the School Improvement Plan and reveal any significant difference in the level of training when categorized according to school profile. Through this, the strengths and weaknesses of each group toward becoming an integral part of the school and school transformation would be revealed. Hence, an intervention program as the output of the study is needed to enhance the management practices in SIP among school heads.

Research Questions

This study aimed to reveal and analyze the difference in the level of management practices in the implementation of School Improvement Plan among the selected public elementary schools in the Third Congressional District of Quezon, with the aim of developing a SIP Management Framework. This study also sought to answer the following questions:

1. What is the profile of the schools in terms of the following:
   1.1 school size (small, medium, large);
   1.2 geographic location (central, non-central);
   1.3 title of the school head (teacher-in-charge, head teacher, principal)?
2. What is the level of management practices of school heads in the implementation of School Improvement Plan as assessed by the teachers and the school heads themselves in the following phases:
   2.1 planning;
   2.2 implementing;
   2.3 monitoring and evaluation; and
   2.4 adjusting plans?
3. Is there a significant difference in the level of management practices in the implementation of School Improvement Plan of school heads when grouped according to school profile?
4. What challenges were encountered by the school heads in the implementation of management practices?
5. What are the coping strategies employed by the school heads to address the challenges encountered?

6. What SIP Management Framework can be proposed?

METHODOLOGY

Research Design

The descriptive research method employed in the study aimed to provide a thorough and systematic depiction and examination of both qualitative and quantitative data, ensuring the accuracy, validity, and reliability of the results (McCombes, 2019). In the context of the research on School Improvement Plan (SIP) management practices of school heads, this approach involved a comprehensive exploration and understanding of various aspects related to planning, implementing, monitoring and evaluation, and adjusting plans within the SIP framework.

A checklist questionnaire was utilized as a measurement tool to gauge the SIP management practices of school heads. This questionnaire was designed to systematically collect information and responses from school heads regarding their approaches and actions concerning planning, implementing, monitoring, evaluating, and adjusting the SIP. The questionnaire likely contained a series of items or statements related to each of these aspects, and participants were asked to indicate their level of agreement or disagreement, frequency of practice, or other relevant information for each item.

Based on the responses gathered through the questionnaire, the researchers obtained data that quantitatively assessed the school heads' practices in terms of SIP management. The results of this assessment served as the foundation for the intervention program proposed in the study. These results could provide insights into the strengths and weaknesses of the current SIP management practices, enabling the researchers to identify areas that require improvement, enhancement, or adjustment.

The management framework, as an output of the study, is a set of activities tailored to address the specific areas of SIP management that were identified as challenges or needing improvement. It would draw from the research findings and aim to guide school heads in enhancing their planning, implementing, monitoring, evaluation, and adjusting plans practices within the context of SIP. This framework, derived from the analysis of the questionnaire responses, could provide actionable strategies and guidelines to support school heads in their efforts to manage SIPs and achieve improved educational outcomes effectively.

The descriptive research method employed in the study involved systematically collecting and analyzing data related to SIP management practices. Using a checklist questionnaire, the researcher was able to quantitatively measure school heads' practices and subsequently develop a management framework based on the findings to enhance these practices and achieve better educational outcomes.

Research Locale

This study was conducted in the 12 selected public elementary schools from 4 different clusters in the Third Congressional District of Region IV-A, CALABARZON. One district per cluster was chosen as the respondent school. Using a fishbowl technique, the researcher chose three respondent schools, preferably one large, one medium, and one small school, totaling 12 schools as the respondent.

The researcher selected these schools to help future school heads and current school leaders become more proficient in planning, implementing, monitoring and evaluating, and adjusting plans. Also, this would help them develop the skills necessary to carry out the School Implementation Plan in their district. Further, this will enable school administrators to carry out their responsibilities with more efficiency and effectiveness.

Research Population and Sample

The respondents of this study were the 225 teachers and 12 school heads in the selected schools in the Third Congressional District of Quezon using grouping techniques according to cluster. They were chosen as the respondents of the study because they are the primary implementors of the school programs and activities. The teachers are knowledgeable about the four aspects of the SIP process, especially the planning stage in which they are involved. In monitoring and evaluation, they are also aware of the needs to be evaluated, the status of implementation, and the need for plans and future adjustments. In addition to that, teachers, as part of the team members in SIP, can provide concrete and current practices for their school in SIP.

The school heads were also included as respondents since they are the leaders and the managers of the SIP in their respective stations. They are known to forecast, be hands-on during the process, observe and monitor, conduct evaluations, and make plans. With their expertise and strategic planning, they would come out into an efficient SIP.

Research Instrument

This study used a comprehensive checklist questionnaire to determine the school heads' level of management practices on SIP in terms of planning, implementing, monitoring and evaluation, and adjusting plans. Each parameter in the SIP management practices comprised eight to fourteen self-made statements based on readings. The researcher also included all the current practices made in SIP, which is also based on the different kinds of literature and studies gathered.

Part I of the questionnaire includes the profile of the respondents in terms of size (small, medium, large), location (central, non-central), and title of the school heads (teacher-in-charge, head teacher, principal). Meanwhile, part II includes the level of management practices in the SIP in terms of planning, implementing, monitoring and evaluation, and adjusting plans of school heads as assessed by the teachers and the school heads themselves.

Another set of questionnaires for school heads includes the qualitative part. Five sets of questions were asked regarding the challenges encountered in implementing management practices and the coping strategies they employed to address these challenges. This was done through an interview guide. The research consists of questions dealing with planning, implementing, monitoring, and evaluation, as well as plan adjustments for crafting the questions.

Since the instrument was a self-made questionnaire, it underwent validation by three education program supervisors. Their suggestions were considered for modification, rephrasing, and deletion of some items. For content validation, 20 non-participant teachers from Macalelon District were asked to pilot test the instrument. The participants identified the words that were challenging to understand, so the researcher replaced these vocabularies with laypeople's terms. To ensure comprehensibility, the perceived unfamiliar words were modified, and complex sentence structures were rephrased and made concise. Likewise, the questionnaire underwent further validation. Thus, the responses were considered to confirm that the questionnaire was valid and ready for actual administration.

Data Gathering Procedure

The researcher sought permission first by sending letters to the public-school district supervisors of selected districts in the Third Congressional District of Quezon asking for their consent to conduct surveys, administer the questionnaire to the respondents, and obtain the data and information needed to conduct this research. Upon approval of the request, questionnaires on SIP management practices were distributed to the chosen respondents for their assessment and answers. After retrieving the questionnaire, the researcher tabulated, analyzed, solved, and interpreted the data with the help of the researcher's statistician, adviser, and other experts in the field.

Statistical Treatment of Data

The collected data from the respondents were tallied and presented in a matrix. The variables for evaluation of SIP management practices were computed and analyzed using frequency, percentage, mean, and standard deviation.

The scale below was used for the analysis of the data gathered.

Weight	Range Scale	Qualitative Description
5	4.21-5.00	Very Highly Practiced (VHP)
4	3.41-4.20	Highly Practiced (HP)
3	2.61-3.40	Moderately Practiced (P)
2	1.81-2.60	Minimally Practiced (MP)
1	1.00-1.80	Not Practiced (NP)

To find out the significant difference in the level of management practice in the school improvement plan when the respondents were grouped according to their school profile, T-Test and One-Way ANOVA were used.

Scope and Delimitations of the Study

The study was confined to the management practices of school heads in the implementation of School Improvement Plan, which was limited to planning, implementing, monitoring, evaluation, and adjusting plans. Also, the study revealed and analyzed the significant difference in management practices when respondents were grouped according to their school profile. Further, the results gathered would serve as the basis for SIP Management Framework as the output of the study. The study was conducted in public elementary schools in the third Congressional district of Quezon Province, where the respondents were teachers and school heads of 12 selected schools. The timeframe of the study was the School Year 2022-2023. It further assessed the current implementation of SIP and the school's plan for SIP.

RESULTS

Part I. Profile of the School

Profile of the School in Terms of School Size, Geographic Location, and Title of the School Head

Profile	Category	Frequency	Percent
School SIze	Large	4	33.33
	Medium	4	33.33
	Small	4	33.33
Total		12	99.9%
Geographic Location	Central	4	33.33
	Non-Central	8	66.66
Total		12	99.9%
Title of the School Head	Principal	4	33.33
	Head Teacher	4	33.33
	Teacher-in-Charge	4	33.33
Total		12	99.9%

Part II. Level of Management Practices in the Implementation of School Improvement Plan as Assessed by the School Heads and Teachers

Table 3 shows the level of management practices in the implementation of the School Improvement Plan (SIP) of school heads in terms of planning.

Table 3

Level of Management Practices in the implementation of School Improvement Plan in Terms of Planning

Figure 11
SIP Management Framework

DISCUSSION

Part I. Profile of the School

Table 2

Profile of the School in Terms of Size, Location, and Title of the School Head

Table 2 shows the school profile of the respondents in terms of the size, location, and title of the school heads. In terms of size, the schools represent an equal population for each school size with a frequency of 4 or 33.33% per category. This is aligned with the DepEd Memorandum No. 47, series 2017, which states that schools shall be categorized as small, medium, large, and mega based on the number of teachers.

Meanwhile, the data for location shows that 4 or 33.33% belong to central schools, while 8 or 66.66% belong to non-central schools. This implies that most of the schools are in metropolitan areas of the town.

In terms of the title of the school heads, there is an equal number of principals, head teachers, and teachers-in-charge.

Part II. Level of Management Practices in the Implementation of School Improvement Plan as Assessed by the School Heads and Teachers

Table 3
Level of Management Practices in the Implementation of School Improvement Plan in Terms of Planning

Table 3 shows the level of management practices in the implementation of School Improvement Plan (SIP) of school heads in terms of planning. The general mean of 3.98 from school heads and 4.0 from teachers reveal that the school heads' management practices in planning are highly practiced. These data indicate a commendably high level of engagement in planning within the context of the SIP. It suggests that, on average, the surveyed administrators are actively and effectively participating in various planning activities to enhance the overall functioning of the school.

Planning is paramount in managing SIPs. It encompasses systematic processes, involves collaborative efforts, and aligns with assessment practices. Effective planning, backed by thorough assessment, sets the stage for strategic initiatives that drive educational institutions toward optimal outcomes. Collaboration among stakeholders and careful consideration of both content and process lenses enhance the efficacy of planning within the context of school improvement. Further, commencement planning empowers educational establishments to define their objectives and aspirations for enhancement with precision. By pinpointing specific benchmarks, schools channel their energies toward targeted domains requiring amelioration, such as academic performance, student engagement, or infrastructural advancement (Smith, 2018).

Table 4
Level of Management Practices in the Implementation of School Improvement Plan in Terms of Implementing

Table 4 presents the level of management practices in implementing of School Improvement Plan (SIP) of school heads in terms of implementing. With an average mean score of 3.92 from school heads and 3.4 from teachers, the level of management practices in terms of implementing is described as "highly practiced". This infers that the administrators demonstrate a solid commitment to effectively implementing the SIP and associated activities for continuous school improvement.

Among the statements, it is notable that statements 1, 3, and 8, respectively, fall within the "moderately practiced". This indicates a proactive approach to involving policies, delivery, and pilot testing in program implementation and adhering to formulated school-based policies, rules, and procedures to enhance the school's continuous growth. Moreover, this means that the administrators are effectively translating planning into practice. This level of management practice underscores the commitment to executing the SIP and engaging stakeholders during the implementation. This dedication lays a strong foundation for actualizing school improvement strategies. Overall, the administrators' engagement demonstrates a robust commitment to implementing the SIP, fostering continuous improvement within the school community.

These findings are in consonance with the study of Jasul (2013), which stated that program implementation is converged to direct and monitor the conduct of various activities. It can be done by providing guidance and directions to work teams in the performance of assigned tasks, ensuring work programs are accomplished as planned, and monitoring actual accomplishments vis-a-vis identified needs and planned activities.

Table 5

Level of Management Practices in the Implementation of School Improvement Plan in Terms of Monitoring and Evaluation

Table 5 displays data on the level of management practices in the implementation of School Improvement Plan (SIP) of school heads in terms of monitoring and evaluation. With an average mean score of 3.94 from the school heads and 3.35 from the teachers, the level of management practices in terms of monitoring and evaluation is categorized as "highly practiced" and "moderately practiced" respectively. This means that administrators demonstrate a solid commitment to effectively monitoring and evaluating the SIP's implementation and outcomes. Moreover, these data underscore administrators' dedication to involving teachers, pupil representatives, school planning teams, and stakeholders in the monitoring and evaluation process, as well as revising programs and projects based on reliable data to improve effectiveness. In addition, these reflect administrators' commitment to providing valuable feedback to the school community, making necessary adjustments to meet targets, and informing stakeholders about the school's status through report cards.

Despite this level of management practice, Statements 1, 2, 4, 8, and 9 show slightly lower mean scores from teachers, which fall under "moderately practiced". These scores indicate administrators' dedication to identifying hindrances, listening to the perspectives of pupils, parents, and stakeholders, and conducting comprehensive reviews to ensure the effectiveness of implemented strategies. This also implies that administrators have a solid commitment to monitoring and evaluating aspects of the SIP.

Although there were differing levels of management practices from school heads and teachers, the data still highlight their dedication to continuously assessing and enhancing the implementation of programs and projects. This commitment establishes a solid foundation for measuring the success of the SIP and ensuring ongoing improvement within the school community.

This aligns with the study of Williams (2021), who argued that monitoring and evaluation catalyze continuous improvement in school management. Their findings indicate that schools that actively monitor and evaluate their improvement plans are more likely to engage in reflective practices, adapt strategies, and foster a culture of learning and accountability.

Table 6

Level of Management Practices in the Implementation of School Improvement Plan in Terms of Adjusting Plans

Table 6 presents data on the level of management practices in the implementation of School Improvement Plan (SIP) of school heads in terms of adjusting plans. With an average mean score of 3.95 from school heads and 3.45 from teachers, the level of management practices in terms of plan adjustment is categorized as “highly practiced". This means that administrators demonstrate a solid commitment to effectively adjusting plans for continuous improvement. This also indicates their proactive approach to assessing existing data to identify priority improvement areas and regularly checking the progress of school programs, projects, and activities for effective plan adjustments. These data reflect administrators' consistent commitment to identifying the root causes of problems through listening to learners' perspectives, incorporating existing data into crafting adjusted annual implementation plans, using collected data to formulate new programs, and making necessary adjustments to strategies and techniques.

Moreover, the findings suggest that administrators are dedicated to the process of plan adjustments within the SIP framework. The "highly practiced” category across the statements underscore their commitment to continuously improving and adapting plans based on data and stakeholder input. This proactive approach establishes a solid foundation for flexibility and responsiveness within the school's improvement initiatives, ultimately contributing to a more effective and dynamic school environment.

Part III. Level of Management Practices in the Implementation of School Improvement Plan When Grouped According to School Profile

The following statistical table shows a significant difference in the level of management practices in the SIP of school heads when grouped according to profile.

Table 7

Significant Difference in the Level of Management Practices in the Implementation of School Improvement Plan When Grouped According to School Profile

Table 7 shows that the difference in the level of management practices in the implementation of School Improvement Plan when the respondents are grouped into profiles is not statistically significant (p = .894, .990, .742, .681, .785, .681, .878, .878, .822, .878,

.655, .778, .655 > .05). These findings illustrate that the respondents' responses do not differ when grouped according to school size, geographic location, and title of the school head.

School heads are mandated by policies and memoranda, which they follow from the top management down to the schools and school managers. Republic Act 9155 established the School Improvement Plan (SIP) as an integral part of the DepEd's School-Based Management approach. SIP is a strategic roadmap for educational change, focusing on improving student achievement through curriculum enhancement, positive learning environments, and increased parental involvement. SIP follows three phases—Assess, Plan, and Act—and involves collaboration among school personnel, the community, and stakeholders. Implementing SIP practices has been shown to contribute significantly to better student and school performance.

The effective execution of a School Improvement Plan (SIP) holds considerable significance for the success of educational institutions, with the implementation process playing a vital role in influencing the level of management practice within SIP management. Implementation involves translating the plan's goals into actionable steps, and its efficacy directly affects the achievement of intended outcomes and overall school performance. Effective leadership, resource availability, collaboration among stakeholders, and communication channels influence successful implementation. The alignment of management practices with the SIP's strategies, evidenced-based decision-making, progress monitoring, feedback provision, and adaptive adjustments contribute to refined management practices. This, in turn, enhances student achievement and school standing, creating a symbiotic relationship between successful implementation and improved management practices (Spillane et al., 2004)

Part IV. Challenges Encountered in the Implementation of Management Practices.
Figure 3
Challenges in Planning School Improvement Plan

Theme 1. Conflict of Time

Based on the interview with the school heads, they all claimed that one of the challenges they face is conflict of time. This is because of the different school programs and activities held in their school.

Theme 2. Unclear Goals

The school heads also admitted that identifying or measuring goals is the top most challenge. This is because they see rising challenges in SIP.

Theme 3. Lack of Training

The school heads also admitted during the interview that lack of training for teachers and other stakeholders is one of the challenges they experience.

This implies that most school heads consider involving people, the community, and stakeholders to be their main challenge. Planning with difficulty in involvement may lead to problems in crafting a good SIP.

Dabesa et al (2021) the studied on the SIP and some of the cited challenges were the there is a shortage of financial support, lack of awareness and lack of training among stakeholders. The results also indicate that there is lack of learning facilities and poor community participation. The study revealed poor management, poor community mobilization, and poor collaboration in SIP implementation**.**

Figure 4
Challenges in Implementing a School Improvement Plan

Theme 1. Lack of Coordination

Most of the school heads admitted that one of the challenges they encounter in implementing SIP is the lack of coordination among teachers. It is clear that most of them have the same level of agreement on how they encounter coordination as difficult to the internal and external partners since they need to tap different agencies.

Theme 2. Lack of Resources

Another challenge that they encounter is the lack of resources and overlapping of activities in school. This is because of the different programs that need to be administered. Meanwhile, they believe that overlapping reports also hinder their ability to outsource and have more efficient time.

This is aligned with the challenges in the implementing the SIP. Coburn and Penuel (2016), claimed to accentuate the pivotal role of robust collaborative cultures and effective communication channels in nurturing successful implementation. Effective implementation necessitates aligning management practices with the goals and strategies enshrined in the SIP. Lack of coordination with the stakeholders and problems on resources affects the SIP implementation. However different activities or overlapping of Activities could also affect the implementing activities, programs and projects in SIP.

Figure 5
Challenges in Monitoring and Evaluation of School Improvement Plan

Theme 1. Unavailability for Meetings and Feedback

According to the interview, most school heads acknowledged that their biggest difficulty in monitoring and evaluating SIP is gathering feedback from stakeholders through meetings. This implies that getting together with internal and external partners to get their input and program results could be challenging or may take a longer period.

Theme 2. No Data Collected

Gathering and processing data also presented difficulties for a few of the school administrators. For some of the school heads, gathering the data required for reporting and documentation presented additional difficulties. Compiling all the necessary information might have taken a while.

In terms of monitoring and evaluation Blackstein (2020) several factors can affect its effectiveness but M& E is highly influence by unavailability for meetings and feedback among the stakeholders. Lack of meetings and feedback during the M&E leads to no data collection for evaluation.

Figure 6

Challenges in Adjusting Plans of School Improvement Plan.

Theme 1. Limited Funds and Resources

Most of the school heads claimed that there were limited funds and resources to implement the adjusted plan. Aspects of SIP is resource generation. Most school heads struggle to decide where to get funds for the activities and programs. Because of targeted plans and programs, some other factors might not have been possible to anticipate during the planning. This may lead to challenges and difficulties that need plans and adjustments.

Theme 2. Limited Time to Go Over

Another challenge that most of the school heads mentioned was the limited time to go over the adjusted plan. This suggests that school heads may fail to consider certain demands while planning, resulting in plans and modifications that are crucial components of SIP.

Agra (2023) the Department of Education may provide training to school personnel as well as representatives from its stakeholders for effective adjusting of plans the SIP in all schools may form a school improvement committee, which will begin the process of developing a school improvement plan in which the major challenges are the availability of resources or limited resources and school heads limited time to go over and create strategies to attract stakeholders to extend appropriate financial support and generate income-generating projects to finance the school projects and programs, and all schools may encourage practical involvement of all stakeholders by raising awareness of the importance of SIP implementation.

Part V. Coping Strategies Employed by the Respondents to Address the Challenges Encountered

Figure 7
Coping Strategies in Planning School Improvement Plan

Theme 1. Conduct Vision Sharing

To cope up with the challenges encountered in planning SIP, most school heads conduct vision sharing with the stakeholders**.**

Theme 2. Conduct of Programs for the Improvement of SIP

Some of the school heads also claimed that they conduct programs for the improvement of SIP.

Theme 3. Organize SIP Committee

Some of the school heads also organize SIP committee to cope up with the challenges in the planning stage.

Theme 4. Allow Everyone to Participate

Some of the school heads believed that letting them be part of the programs and committee would help them cope also with the challenges.

Brown and Johnson (2020) claimed that implementing effective management practices within school improvement plans is crucial for achieving successful educational outcomes. As various studies have demonstrated, leadership qualities like vision sharing, conduct different programs for SIP and communication skills significantly impact the execution of improvement plans

Figure 8
Coping Strategies in the Implementation of School Improvement Plan

Theme 1. Ensure Quality, Efficiency, and Timeliness

The school heads believe that their coping strategies mainly ensure the quality, efficiency, and timeliness of the implementation of SIP.

Theme 2. Dissemination of the Student's Performance

Based on the interview, some of the school heads claimed that the dissemination of students' performance is essential.

Theme 3. Increase the Extent of the Involvement

During the interview, one school head claimed that increasing the extent of involvement is their way of coping.

The school head, alongside the project team, crafts an annual implementation plan derived from the SIP. This plan outlines strategies, learning activities, time frames,

responsible individuals, and resources needed to achieve set objectives for the school year (Luistro, 2015).

Figure 9
Coping Strategies in Monitoring and Evaluating the School Improvement Plan

Theme 1. Create Tools

The school heads were able to create tools to help with the programs and activities to cope with the needs and challenges in the SIP.

Theme 2. Consult with the Team

The school heads believe that they should conduct a consultation with the team.

Theme 3. Consider Suggestions

Some of the school heads consider suggestions.

In Monitoring and Evaluation Brown (2018) emphasized that in monitoring and evaluation it is a must to create tools that would help greatly the monitoring of SIP. They also need to consult with the team every time they needed and lastly all the suggestions of the members must consider.

Figure 10
Coping Strategies in Adjusting Plans of the School Improvement Plan

Theme 1. Develop Plan and Activities

For plan adjustment, the school heads mentioned that they try to cope with the challenges by developing plans and activities.

Theme 2. Attend Postgraduate and Attend Seminars

Meanwhile, some school heads claimed that they attend postgraduate and seminars to cope with the plan adjustments in SIP.

Theme 3. Solicit by Tapping

School heads admitted that some of them solicit ideas from stakeholders. Plans and adjustments are necessary for the implementation. These involve translating the plan's goals into actionable steps. Their efficacy directly affects the achievement of intended outcomes and overall school performance. Effective leadership, resource availability, collaboration among stakeholders, and communication channels influence successful implementation.

Adjusting plans according to Vangronigen (2023) emphasized that SIP focused more on developing SIPs plan and activities, SIP team should attend seminar to raising concerns about SIPs continuing to be enacted out of compliance by soliciting by tapping to the

stakeholders rather than as a mechanism for spurring and sustaining improvement efforts in schools

Part V. Proposed SIP Management Framework

The results presented in the previous parts serve as input for developing the SIP Management Framework. The framework deals with four areas: planning, implementing, monitoring and evaluation, and adjusting plans. The management framework will guide school heads, the school planning team, and teachers in developing SIPs for planning, implementing, monitoring, evaluating, and adjusting school activities for the whole school year. It is also intended to resolve issues or challenges encountered during the project's planning, implementation, monitoring, evaluation, and plan adjustment phases.

Summary of Findings

This part presents the summary of findings which provides a gist of the significant results of the study.

1. On the Profile of the School

1.1 In terms of School Size, the school represents an equal population for each school size with a frequency of 4 or 33.33% per category.

1.2 In terms of Geographic Location, it shows that 4 or 33.33% belong to central schools, while 8 or 66.66% belong to non-central schools. This implies that most of the school are in urban areas of the town.

1.3 In terms of Title of the School Head, there is an equal number of principals, head teachers and teachers-in-charge with a frequency of 4 or 33.33%.

2. *On the Level of management practices of School Heads in the implementation of School Improvement Plan as assessed by the teachers and the school heads.*

2.1 The findings showed that the level of management practices in the implementation of School Improvement Plan of school heads in terms planning was 3.98 from school heads and 4.0 from teachers reveal that the school head’s management practices are highly practiced. These data indicate a commendably high level of engagement in planning.

2.2 As to level of management practices in the implementation of school improvement plan of school heads in terms of implementing is describe as highly practiced with an average mean score of 3.92 from school heads and 3. 4 from teachers. This infers that administrators demonstrated a solid commitment to effectively implementing the SIP.

2.3 With regards to the level of management practices in the implementation of School Improvement Plan of school heads the monitoring and evaluation is categorized as highly practiced with an average mean score of 3.94 from the school heads and moderately practiced from the teachers with 3.35 with an average mean score. The administrators demonstrate a solid commitment to effectively monitors and evaluates the SIP's implementation and outcomes.

2.4 Concerning the level of management practices in the implementation of School Improvement Plan of school heads in adjusting plans the average mean scores of 3.95 from school heads and 3.45 from teachers it is categorized as highly practiced that administrators demonstrate solid commitment into effectively adjusting plans.

3. *On the Level of Management practices of School Heads in the Implementation of School Improvement Plan as assessed by the teachers and the school heads.*

The significant difference in the level of management practices in the implementation of SIP of school heads when grouped according to school profile is not statistically significant. The respondents' responses do not differ when grouped according to school size, geographic location, and title of the school heads variables.

4. *On the challenges encountered by the school heads in the Implementation of Management Practices*

The challenges encountered in the implementation of management practices were gathering persons involved in planning due to conflict of time, coordinating with the internal and external stakeholders to create a plan for priority of improvement, meeting with the stakeholders to collect feedback, and limited funds and resources to implement the adjusted plan.

5. *On the coping strategies employed by the school heads to address Challenges Encountered*

Teachers and School heads coping strategies to address the challenges encountered included conducting vision sharing with the stakeholders, ensuring quality, efficiency, and timeliness, creating localized monitoring and evaluation tools, and solving difficulties in the plan and adjustments. They claimed that they develop plans and activities to attract stakeholders.

6. A SIP Management Framework was proposed based on the findings of the study that is intended to resolve issues or challenges encountered during the project's planning, implementing, monitoring, evaluation, and adjusting plans phases.

Conclusions

1. The school profile of the respondents in terms of school size and title of the school heads are the same while in geographic location most of the respondents came from non-central schools.

2. The level of management practices of school heads in the implementation of School Improvement Plan assessed by the teachers and school heads in the congressional district in phases of planning, implementing, monitoring and evaluation; and adjusting plans was distinctively to have a high level of practice.
3. There is no significant difference in the level of management practices in the implementation of SIP of school heads when grouped according to school profile, thus the hypothesis is accepted.
4. However, challenges occur due to conflict of time, coordinating then collect feedback, and limited funds and resources.
5. On the other hand, the way of coping strategies is to have quality, efficiency, and timeliness, creating localized monitoring and evaluation tools, and solving difficulties in the plan and adjustments.
6. A SIP Management Framework that was made based from the results can be applied for school heads challenges in management practices.

Recommendations

Based on the conclusions drawn, the following are recommended:

1. Since then, the profile of the schools is coming from non-central schools with head teachers leading the schools. The head teacher may continue to intensify collaborations with stakeholders on their needs and weaknesses to improve their current skills.
2. The implementation of School Improvement Plan (SIP) management practices of school heads are highly practiced. They may intensively help the teachers and students through consistent communication and provide training designs that will further improve the school.
3. Continuous coordination of schools and school stakeholders must be practiced for the improvement of the SIP implementation.
4. School heads may create a learning atmosphere conducive to building a collaborative environment and setting shared goals to achieve a comprehensive and inclusive approach to instruction. School heads may prioritize monitoring and evaluation as components of technical assistance practices. Through monitoring tools, school heads can utilize regular observations, documented progress, and timely teacher feedback.
5. Future researchers may conduct further research and investigation to pinpoint strategies to enhance practices related to consistent technical assistance/staffing scheduling, creating a hospitable setting for teachers and students, designing activities that encourage project flow, and planning training for teacher development.
6. Other schools can apply, use, and benchmark a SIP management framework plan to improve the implementation of the SIP.

Compliance with Ethical Standards

The study applied ethical consideration primarily to protect the respondents. To adhere to promote the aims of the research imparting authentic knowledge, truth and prevention of error. Furthermore, following ethics enables to deal collaborative approach towards the study with the assistance of their peers, mentors and other contributors to the study (Chetty, 2016). The researcher assures to protect the respondents by maintaining kept the identity of the respondents and use only the data for the data gathering only.

Acknowledgments

My sincere gratitude goes to the Almighty God, the Creator of heaven and earth for making this study possible.

To Marinduque State College Extension of Graduate Programs to Quezonian Educational College, Inc. (QECI) faculty and staff under the leadership of Dr. Diosdado P. Zulueta;

To Dr. Leodegario M. Jalos, Jr., the Chair of Graduate Studies Extension Programs for being hands-on considerate, and organized in disseminating about the studies.

To Dr. Rizalie M. Lim, the Dean of Graduate Studies for always guiding and reminding us to finish our study.

To Dr. Walter F. Galarosa, for his patience, understanding and direction during this write-up. His guidance helped a great deal during this research work.

To Dr. Diosdado P. Zulueta, Dr. Julieta Q. Nabos and Dr. Noel R. Palomares, her panelists, for their advices, suggestions, encouragement, and professional assistance.

To Dr. Angelo SJ. Villanueva, who serve as the researcher's statistician.

To Ms. Annie M. Ruiz, her editor, and Ms. Cristina M. Atienza, copy editor, for their consideration and hard work.

To the respondents of this study who gave their precious time to answer the questionnaires.

To Mrs. Diadema P. Forbes, the School Head of Vista Hermosa Elementary School, for letting me finish this research.

To my family, co- teachers and friends for their moral support and encouragement.

Above all to Almighty God, for sending all the people she needs to realize this study.

SCIENCE TEACHERS AS DESIGN THINKERS: THE CASE OF PUBLIC HIGH SCHOOL LEARNING RESOURCE WRITERS

Mikhail D. Capili, LPT, MASEd
Luis Miguel P. Saludez, Ph.D.

Southern Luzon State University, College of Teacher Education, Graduate School, Lucban, Quezon, Philippines

https://doi.org/10.5281/zenodo.11547295

ABSTRACT

This study explores the integration of design thinking in the creation of science learning resources in public high schools, emphasizing a user-centric approach for innovative solutions to educational challenges. Through qualitative research, including interviews with science learning resource creators, the study identifies the processes, opportunities, and challenges of implementing design thinking. Findings suggest that design thinking fosters creativity, empathy, and an iterative process, enhancing the quality of science instruction and promoting 21st-century skills among students. However, challenges such as a lack of a well-articulated pedagogical framework and the need for teacher training in design thinking principles persist. The research contributes to educational discourse by offering insights into effective design-thinking applications and developing a design-thinking-based learning module as a practical tool for educators. This study holds significance for science learning resource writers, educators, policymakers, and students, highlighting the transformative potential of design thinking in science education amidst evolving educational landscapes.

Keywords: *21st-century skills, design thinking, educational challenges, educational policy, empathy in education, innovative solutions, iterative process, learning resources, pedagogical framework, science education, stakeholder feedback, teacher training, user-centric approach*

INTRODUCTION

Over the last two decades, the scholarly interest in Design Thinking has notably increased, with the Web of Knowledge database now listing over 180 articles on the subject (Fleury, 2016). Initially rooted in the practices of engineers and designers, Design Thinking has evolved into a critical educational focus (Hynes, 2012; Koh & Chai, 2016; Blundell, 2022). Its appeal lies in its user-centric approach, prioritizing the needs and viewpoints of individuals to foster innovative solutions for complex global issues (Razzouk & Shute, 2012; Fleury et al., 2016; Yurkofsky et al., 2020; Blundell, 2022). This emphasis on understanding and addressing user needs has broadened its application beyond traditional fields (Sun, Wang, & Hu, 2023).

For educators, design thinking emerges as a conduit for ceaseless professional enhancement (Henriksen, Richardson, & Mehta, 2017; Kyza & Nicolaidou, 2017; Noh & Karim, 2021; DeLuca et al., 2015; Koh, Chai & Lim, 2017; Lor, 2018; Arrington & Willox, 2021; Chai, 2018, 2021; Chiu et al., 2021; Blundell, 2022). This method posits that a medley of astute observation, empathy, brainstorming, and prototyping can beget innovative ideas finely tuned to both the contextual nuance and broader educational sphere (Aksela, M. 2019; Andino, C.I., 2017; Yurkofsky et al., 2020; Blundell, 2022).

A surplus of models and versions of design thinking has been intertwined into the broader scope of educational research (McFadden & Roehrig, 2017; Kelly, N., et al., 2019; English, Adams & King, 2020; Spoon et al., 2020; Yeh, Chan, & Hsu, 2021; Kim, 2021; Georgiev, 2012). Proponents argue that the approach leverages the inherent dynamic and complex relational facets of educational settings, thereby enabling educators to engage in sustained self-betterment (Chai, 2018; Stevenson et al., 2019; Yeh et al., 2021; Tualaulelei & Halse, 2021; Noh & Karim, 2021; Blundell, 2022). Nonetheless, design thinking still lacks a well-articulated pedagogical framework (Spoon, 2020).

This study sheds light on science learning resource creators in public high schools, a group that has been overlooked thus far. The aim is to contribute meaningful insights to the conversation on design thinking in pedagogical circles. The results of this study could provide valuable insights into how design thinking can be more effectively incorporated into the creation of learning resources, enhancing science instruction and promoting the development of 21st-century skills among students. Moreover, the resulting design-thinking-based learning module could be a practical tool for other educators aiming to integrate design thinking into their work.

Research Questions

This study focuses on science teachers who make learning materials in public high schools. This research looks at how these teachers can use design thinking, a way of solving problems by really understanding what people need, to improve what they are doing. With that said, the main goals for this study are as follows:

1. Describe the design thinking processes of science learning resource writers,

2. Identify the opportunities and challenges they encounter in implementing design thinking, and
3. Develop a learning module informed by the principles of design thinking.

METHODOLOGY

Research Design

The qualitative methodology underpinning this study is designed to gain a deep understanding of the complex nature of design thinking as it applies to science learning resource creation. This approach, suited for exploring rich, detailed insights into the participants' interpretations and interactions within their social contexts (Creswell, 2007), is interpretative and centered on the phenomenon it seeks to understand (Braun & Clarke, 2006). Qualitative research design is particularly adept at exploring "how" or "what" questions (Creswell, 2007), allowing for a broad, in-depth exploration into how design thinking is operationalized by science learning resource writers and how this impacts both pedagogical approaches and learning outcomes.

This study employs a qualitative design that does not seek to generalize findings but to provide a detailed understanding of a central phenomenon within a bounded context. As such, it aligns with the tradition of qualitative case studies, which prioritize the depth of understanding over breadth and are tailored to investigate the nuances and complexities of a specific instance or setting (Creswell, 2007). The chosen design facilitates an exploration into the lived experiences, challenges, and successes of individuals deeply engaged with design thinking in the creation of learning resources. By delving into these experiences, the study aims to uncover the intricacies of design thinking as it intersects with educational practices within the Junior High School science context.

Research Locale

The Department of Education’s Schools Division Office (DepEd SDO) in Quezon Province serves as a critical component of the local education system, dedicated to upholding and improving the standards of pedagogy and student learning. The researcher chose this division as the setting for the study due to its notable cadre of skilled learning resource writers who play a crucial role in developing educational content. The researcher’s location within the same province further influenced the choice, facilitating an immersive and thorough comprehension of the division's operations. These writers form an integral part o’ the research. Their significant contributions and experiences provide valuable insights into the educational landscape, thus enhancing the depth and quality of the study overall.

Population and Sampling

The study follows a case study strategy of inquiry, which typically involves an in-depth exploration of a central phenomenon within a bounded system or with a defined set of participants (Creswell, 2007). In this study, a purposive sampling strategy was

employed to select a focused group of participants who are uniquely positioned to provide in-depth insights into the use of design thinking in the creation of science learning resources. Five experienced science teachers and learning resource writers from the Schools Division Office in Quezon Province were chosen due to their extensive involvement in curriculum development and their practical experience with innovative educational strategies.

The choice to include only five participants aligns with the qualitative case study's emphasis on depth over breadth. Creswell (2007) suggests that qualitative research should include language that delimits the scope of participation, helping to define the parameters of the research study. In this case, the limitation to five participants allows for a comprehensive exploration of each participant's unique contributions and experiences as both science teachers and learning resource writers. This focused approach facilitates a detailed and nuanced understanding of the central phenomenon—design thinking in learning module development—within the specific context of Junior High School science education.

The selected participants represent a diverse range of experiences and backgrounds in science education. Each participant brings a unique perspective to the study, having been involved in various capacities ranging from classroom teaching to the development of educational resources. Their experiences are particularly relevant as they align closely with the study's aim to explore the application and impact of design thinking in educational resource development. The participants' direct involvement in these areas provides valuable practical insights, making their contributions critical to the depth and richness of the study. The choice of five participants is based on the qualitative nature of the study, where depth rather than breadth is prioritized. This number allows for comprehensive and detailed data collection from each participant, ensuring that the study can delve deeply into individual experiences and perspectives while remaining manageable and focused. The small sample size is conducive to a detailed thematic analysis, allowing for a thorough exploration of complex themes and nuances in the data.

It is acknowledged that the small sample size and the specific context of the study may limit the generalizability of the findings. However, the depth and richness of the data gathered from this purposive sample offer significant insights into the topic. Future research could expand on these findings by including a broader and more varied sample, potentially enhancing the generalizability of the results.

The sampling strategy is directly aligned with the research questions of the study. By focusing on participants who are actively engaged in both teaching and resource development, the study ensures that the data collected is directly relevant to understanding how design thinking is operationalized in the development of science learning resources and its potential impact on teaching and learning.

Instrumentation

The Interview Guide Questionnaire for Learning Resource Writers was developed and utilized by the researcher as part of the data collection process in this study. The researcher carefully designed this tool to align with the study's objectives. It aims to elicit

detailed responses on design thinking process, challenges, opportunities, and developing a learning module within the context of science learning resource creation. As a self-designed instrument, it allows the researcher to tailor the questions to the specific research context, thereby enhancing the relevance and depth of the data collected. This semi-structured questionnaire provides a framework for conducting the interviews while allowing participants to share their thoughts and experiences beyond the provided prompts, ensuring nuanced understanding of the research topic. Being the interviewer, the researcher can also clarify any uncertainties during the interview, allowing for more accurate and comprehensive data.

For Objective 1: Describe science learning resource writers' design thinking. The researcher designed questions 1.1 and 1.2 to probe into the participants' creative processes when they develop new learning resources. It includes how they identify student needs, iterate and refine their ideas, and handle changes or revisions. The answers to these questions will provide insights into their design thinking process and practices.

Under Objective 2: Elicit opportunities and challenges for science learning resource writers in design thinking, questions 2.1 and 2.2 explore the participants' experiences with the obstacles and advantages they encounter when applying design thinking in their work. Their responses will reveal the challenges they face, the opportunities they recognize, and their suggestions for improving the process of creating learning resources.

Finally, to address Objective 3: Develop a learning module following the design thinking process, the researcher formulated questions 3.1 and 3.2 to seek the participants' insights on the essential elements, techniques, or methods to include in a training module on resource creation. Their responses will be crucial in developing a learning module that is grounded in the real-world experiences of science learning resource writers.

To ensure reliability and validity of the instrument, it underwent a comprehensive validation process. The questionnaire was reviewed and validated by a panel of experts consisting of three Science Master Teachers, recognized for their extensive experience and expertise in the field of science education. Additionally, a Master Teacher specializing in Applied Linguistics evaluated the instrument to ensure the clarity, appropriateness, and linguistic precision of the questions. Furthermore, a Teacher-III, who is also a Registered Guidance Counselor, reviewed questionnaire. This inclusion added a valuable perspective on the instrument's ability to effectively capture the psychological and behavioral aspects relevant to the study. Their collective insights and feedback were instrumental in refining questionnaire, ensuring that it is robust, comprehensive, and aligned with the study's goals.

Based on the feedback received from these experts, revisions were made to the questionnaire to enhance its clarity, relevance, and effectiveness. The final version of the instrument thus represented well-considered balance between scientific rigor and practical applicability, tailored to capture the nuanced complexities of the research topic.

Data Gathering Procedure

Upon obtaining the approval of the research adviser, the researcher initiated the data-gathering procedure, which was rooted in ethical research practices. The process began with the researcher securing signed consent forms from the participants, who were identified through purposive sampling. The sample consisted of five learning resource writers from the DepEd Schools Division Office in Quezon, chosen for their relevant experience and expertise in science education and resource development.

The researcher conducted interviews online to accommodate convenience and accessibility for all participants while ensuring a conducive environment for open and detailed discussion. The semi-structured interview guide served as a roadmap during these interactions, promoting a focused yet flexible exploration of the study's objectives. With the participants' consent, all interviews were recorded to maintain the integrity and authenticity of the data.

After completing interviews, the researcher diligently transcribed the recordings, paying attention to capturing the nuances of the responses. While meticulous and time-consuming, this task ensured that the data was accurately documented for the next stage of the research process - data analysis. Through these steps, the researcher gathered rich, qualitative data necessary for the study while upholding the principles of research ethics and participant confidentiality.

Adhering to the highest ethical standards was paramount in this research, guided by the principles outlined in the American Psychological Association's Publication Manual (2019). Central to our approach was informed consent, ensuring that all participants were fully aware of the study's purpose, procedures, and their rights as participants. Participation was voluntary, with participants informed of their right to withdraw from the study at any point without facing any consequences. Confidentiality was rigorously maintained, with all identifiable information anonymized in the study's findings and data securely stored, accessible only to the research team. Moreover, the well-being and comfort of participants were prioritized throughout the research process, particularly during the data collection phase. This ethical framework not only safeguarded the participants but also reinforced the integrity and credibility of the research findings.

Data Analysis

In line with that of Creswell's recommendations for qualitative research, this study employed NVivo, a specialized software that supports the systematic qualitative data evaluation and interpretation (Creswell, 2007). Following the thematic analysis framework outlined by Braun & Clarke (2006), the study utilized NVivo to organize, code, and map out concepts, thereby facilitating a comprehensive understanding of the collected data.

At the outset, all interview transcriptions were imported into NVivo. This initial step allowed for an organized review of the data, enabling the researcher to become intimately familiar with the depth and breadth of the content. Creswell highlights the importance of such systematic organization of data in qualitative research, and NVivo provided the necessary tools for this phase of analysis (Creswell, 2007).

The generation of initial codes was then conducted within NVivo, allowing the researcher to tag meaningful sections of text systematically. Creswell notes that software like NVivo is crucial for coding, retrieving, building theories, and conducting analyses of the data in a qualitative study (Creswell, 2007). This coding process within NVivo aided in preliminary themes identification that captured intricacies of participants' experiences.

NVivo's advanced analysis capabilities were leveraged to refine these themes, ensuring they accurately represented participants' perspectives. This aligns with Creswell's (2007) approach to qualitative data analysis, where the researcher iteratively revisits and refines the data to ensure the themes' robustness and relevance.

The final stage of the analysis involved using NVivo to define and name the themes, with the software's modeling features helping to establish connections between them. The result was a set of clearly articulated themes that were both representative of the data and reflective of the central phenomenon under study.

To conclude the analysis, NVivo's reporting the features were used to extract, summarize, and present the data findings. These findings, rich with detailed descriptions and direct quotations from participants, were synthesized into the final report, providing an insightful narrative of the experiences of science learning resource writers engaged in design thinking. This thematic analysis, enhanced using NVivo and informed by Creswell's methodological guidance, offered a nuanced understanding of qualitative data, illuminating the complex dynamics at play in the context of the study.

RESULTS

Table 1: Design Process of Science Learning Resource

Question	Excerpt from Response	Themes
1.1 Can you describe the process you typically follow when creating a new science learning resource?	*P1: "I start by thinking about the learning goals and understanding the learner's needs..."*	Understanding Learner's Needs, Learning Goals Orientation
	P2: "Brainstorming is the first step, then I do research on how to make the topic interesting..."	Brainstorming, Research, Making Learning Engaging
	P3: "I start with identifying the key concepts, then designing activities..."	Key Concepts Identification, Activity Design
	P4: "I begin by identifying the specific learning objectives for the topic..."	Learning Objectives Focus

	P5: "I consider first the Most Essential Learning Competency (MELC)..."	Importance of Learning Competencies

Table 2: Dealing with Changes or Revisions

Question	Excerpt from Response	Themes
1.2 How do you deal with changes or revisions during the development of your resources?	*P1: "I try to be open to feedback and understand where it is coming from..."*	Openness to Feedback
	P2: "I usually get a lot of feedback, which I use to make changes..."	Use of Feedback for Revisions
	P3: "Revisions are inevitable. I ensure I have a systematic process for addressing them..."	Systematic Revision Process
	P4: "I'm very systematic when it comes to revisions. I divide the whole content into smaller parts..."	Partitioned Approach to Revisions
	P5: "I revise the module by part from beginning to end..."	Strategic Revision Process

Table 3: Challenges in Resource Creation

Question	Excerpt from Response	Themes
2.1 What are the main challenges you face when trying to innovate in your resource creation?	*P1: "Sometimes the curriculum can be a limitation..."*	Curriculum Limitations
	P2: "The biggest challenge is to make the resources interesting and engaging..."	Engaging Resource Creation Challenge
	P3: "One of the main challenges is incorporating technology..."	Incorporation of Technology
	P4: "The challenge lies in designing learning resources that align with both the learning objectives and students' needs..."	Aligning Learning Objectives and Students' Needs
	P5: "The main challenge I encounter during my resource creation was	Home-based Learning Challenge

	formulating activities for the lesson that is applicable at home setting..."	

Table 4: Opportunities and Benefits in Design Thinking

Question	Excerpt from Response	Themes
2.2 Can you share any opportunities or benefits you've experienced when applying design thinking in your work?	*P1: "Design thinking allows for greater creativity and innovation..."*	Greater Creativity, Innovation
	P2: "Design thinking helps me to put myself in the student's shoes..."	Empathy, Student-centric Approach
	P3: "Applying design thinking allows me to explore multiple possibilities..."	Exploration of Possibilities
	P4: "I've been able to create more personalized and effective learning resources..."	Personalized and Effective Learning Resources
	P5: "By applying design thinking, you are able to test your ideas and enables to generate more ideas beneficial to the learning process..."	Idea Testing, Generation of Beneficial Ideas

Table 5: Key Elements in Resource Creation Training

Question	Excerpt from Response	Themes
3.1 If you were to train other science teachers on resource creation, what key elements or steps would you include in that training?	*P1: "Understanding the students, brainstorming ideas, creating a draft, testing the resource, and making revisions..."*	Understanding Students, Brainstorming, Testing, Revisions
	P2: "Identifying learning objectives, doing research, creating a detailed plan..."	Learning Objectives Identification, Research, Planning
	P3: "The training should cover learning theory, understanding the learners' needs..."	Learning Theory, Understanding Learners' Needs
	P4: "The key elements I would focus on are needs assessment, understanding the curriculum..."	Needs Assessment, Understanding the Curriculum

	P5: "Brainstorming, Look for Reliable Resources, Planning Stage, Formulating modules with Higher Order Thinking Skills Questions..."	Brainstorming, Resource Reliability, Planning, Higher Order Thinking Skills

Table 6: Techniques or Methods for Resource Creation

Question	Excerpt from Response	Themes
3.2 Can you suggest any specific techniques or methods that should be part of a learning module on resource creation?	*P1: "Use of visual aids, simulations, and interactive elements..."*	Visual Aids, Simulations, Interactivity
	P2: "Interactive activities, assessments, use of multimedia..."	Interactive Activities, Assessments, Multimedia Use
	P3: "The learning module should include active learning strategies..."	Active Learning Strategies
	P4: "Methods like problem-based learning, case studies, and project-based learning..."	Problem-based Learning, Case Studies, Project-based Learning
	P5: "With the use of different activities and assessments, the students will have a deepening of their understanding..."	Variety of Activities, Assessments, Deep Understanding

DISCUSSION

Table1

Participant 1's approach to prioritizing learning goals and understanding learners' needs is pivotal to the design thinking process in education, reflecting a user-centered approach that aligns with principles outlined by Brown (2009). This is supported by recent findings suggesting that understanding the student perspective is a critical aspect of successful learning resource creation (Auditor & Mutya, 2022).

The brainstorming and research stages emphasized by Participant 2 are in line with the iterative nature of design thinking, where multiple ideas are generated and explored. This approach to making learning engaging is crucial, especially in the digital era where student engagement is a significant challenge (Lake et al., 2021).

Participant 3's method of identifying key concepts and designing activities resonates with the principles of active learning, a core component of design thinking in

education. The focus on activity design underscores the necessity of interactive and engaging educational materials (Lake et al., 2021).

Participant 4's focus on identifying specific learning objectives echoes the need for aligning educational resources with desired outcomes, a principle supported by the design thinking approach (Auditor & Mutya, 2022). This focus on learning objectives ensures that the resources are purposeful and meet educational standards.

The emphasis on learning competencies by Participant 5 aligns with the broader educational trend towards competency-based learning, a fundamental aspect of design thinking education, preparing students for complex real-world challenges (Lake et al., 2021).

The processes described by the participants illustrate a strong alignment with the principles of design thinking in education, wherein understanding the user, iterating on ideas, and creating engaging, competency-focused resources are paramount. This approach not only serves immediate educational needs but also prepares students for future challenges, thereby fulfilling education's dual role as a means of knowledge dissemination and a platform for skill development.

Table 2

Participant 1's embrace of feedback is a symbol of the creative and iterative process outlined by both previous discussion and the design thinking framework. This openness to feedback is a critical mechanism for *improvement*, reflecting the pedagogical commitment to fostering creativity and personalization in education (Barber et al., 2013; Liedtka & Ogilvie, 2011).

Participant 2's application of feedback for making changes is aligned with the responsive and adaptive approach advocated by Christensen et al. (2008), and the principle of iteration that lies at the heart of both design thinking and the active engagement of learners (Dam & Siang, 2020).

Participant 3's systematic revision process, Participant 4's partitioned approach to revisions, and Participant 5's end-to-end strategic revision process collectively embody the methodical, detail-oriented quality assurance and adaptability necessary for modern educational resource development. These methods reflect the iterative principles of design thinking and constructivist perspective, ensuring that learning resources remain relevant and responsive to the dynamic educational landscape (Carlgren, Rauth, & Elmquist, 2016; Luchs, Swan, & Griffin, 2016; Beckman & Barry, 2007).

Table 2 highlights the participants' dedication to quality and innovation in resource development. Their strategies are informed by both the principles of design thinking and the constructivist approach to education, demonstrating a commitment to continuous improvement, learner engagement, and preparation of students for a globalized and technologically advanced world. The integration of feedback, active learner involvement, and an iterative, non-linear approach to resource creation encapsulates the dynamism required in today's educational landscape, as participants act as "creative creators" within evolving framework of 21st-century skills and innovation (ACTRC, 2015; Serrat, 2010).

Table 3

Participant 1 finds curriculum limitations a significant barrier to innovation. The strictness and prescriptive nature of many curricular structures can impede incorporation of novel teaching methods and content, necessitating a balance between adhering to educational standards and embracing pedagogical innovation. Such constraints require educators to seek flexible and creative solutions to foster meaningful learning experiences, highlighting the need for curricular reform to accommodate contemporary educational demands (Schneider & Preckel, 2017; UNESCO, 2021).

Participant 2 stressed that creating resources engaging and interesting remains a central challenge, particularly in an era filled with digital distractions. Engaging students requires innovative educational resources that leverage both pedagogical insights and technological advancements. Research underscores the crucial role of digital innovation in transforming education by enhancing the quality and relevance of learning and improving educational governance (Herrington, Reeves, & Oliver, 2010; UNESCO, 2024).

For Participant 3, the COVID-19 pandemic has highlighted both opportunities and challenges in incorporating technology into educational settings. Educators have had to rapidly adapt to using various technologies, often without prior training, emphasizing the need for ongoing professional development in technological pedagogy. This adaptation underscores broader challenge of integrating technology in a way that enhances learning without overshadowing educational content (Bond et al., 2021; Kirkwood & Price, 2014).

Participant 4 said aligning learning objectives with students' needs is essential for successful educational innovation. This challenge involves designing resources that not only adhere to curricular goals but also cater to diverse student profiles and learning preferences. The alignment ensures that educational innovations are both pedagogically sound and personally relevant to students, highlighting the need for personalized education (Darling-Hammond, Zielezinski, & Goldman, 2014; UNESCO, 2021).

Lastly, Participant 5 shared that rapid shift to home-based learning has introduced new challenges in educational resource development. Educators have had to innovate to create resources suitable for at-home learning, which requires considering the unique contexts and constraints of the home environments. This shift underscores the growing importance of flexibility in educational resource creation to support remote learning (Bond et al., 2021; Trust & Whalen, 2020).

Table 4

Participant 1's experience that design thinking fosters greater creativity and innovation is supported by recent literature, which underscores the method's potential to unlock creative potential and drive innovative solutions in educational settings. Design thinking's iterative process, with its emphasis on ideation and prototyping, encourages educators to develop novel approaches to teaching and learning.

The emphasis on empathy and a student-centric approach, as Participant 2 claimed, aligns with the core principles of design thinking. This approach helps educators to understand the needs and perspectives of students, leading to the development of

resources that are more aligned with student needs (Henriksen, Richardson, & Mehta, 2017).

Participant 3's ability to explore multiple possibilities through design thinking is a testament to the methodology's capacity for fostering open-ended exploration of solutions. This flexible and explorative approach is essential for adapting to the complex and ever-changing landscape of education (Razzouk & Shute, 2012).

The creation of personalized and effective learning resources by Participant 4 through design thinking underscores the approach's potential for tailoring education to individual learner needs. This personalized approach is increasingly recognized as a crucial factor in effective education (Schneider & Preckel, 2017).

Participant 5's experience with testing ideas and generating beneficial ideas is reflective of design thinking's iterative nature. This process allows educators to prototype and refine ideas continuously, enhancing the learning process by ensuring that the final resources are both innovative and effective.

Table 5

Participant 1 emphasized training should begin with understanding students' needs and perspectives, followed by brainstorming ideas, creating drafts, testing resources, and making necessary revisions. This process is reflective of iterative and empathetic approach central to design thinking in education (Ladachart, Khamlarsai, & Phothong, 2022).

Participant 2 believed that identifying the clear learning objectives, conducting research, and creating detailed plans are crucial for resource creation. This structured approach aligns with the principles of backward design, ensuring that resources are goal-oriented and effective (Wiggins & McTighe, 1999).

Participant 3 shared that training must cover various learning theories and focus on understanding learners' needs, which is essential for developing pedagogically sound resources and tailored to diverse learners (Hattie & Donoghue, 2021).

Participant 4 said key elements should include a needs assessment and a thorough understanding of the curriculum. Training should emphasize the alignment of resources with curricular goals while also addressing the specific needs of the student population (Darling-Hammond et al., 2020).

Participant 5 reiterated that training should also include brainstorming sessions, strategies for finding reliable resources, planning stages, and formulating modules that incorporate higher-order thinking skills questions to promote deep learning (Anderson & Krathwohl, 2001).

In essence, participants' resource creation approach embodies the dual nature of Design Thinking, blending a mindset shift with a dynamic process (Carrol, 2014). This blend underpins the development of the learning resources, stimulating innovation, and enhancing teaching effectiveness.

Table 6

A learning module on resource creation should incorporate visual aids, simulations, and interactive elements to facilitate an immersive learning experience according to Participant 1. Visual aids can help conceptualize complex ideas, while simulations and interactive elements offer hands-on practice and engagement, aligning with the principles of multimedia learning (Mayer, 2020).

However, Participant 2 stated that techniques such as interactive activities, varied assessments, and the use of multimedia can significantly enhance the learning process. These methods cater to different learning styles and ensure that assessment is ongoing and multifaceted (Clark & Mayer, 2021).

Participant 3 believed that active learning strategies are crucial for resource creation module as they involve learners directly and encourage critical thinking and problem-solving. The techniques such as collaborative discussions, peer teaching, and reflective exercises can be particularly effective (Freeman et al., 2014).

Moreover, Participant 4 specified that incorporating problem-based learning, case studies, and project-based learning into resource creation modules can provide practical and contextual learning experiences. These methods encourage learners to apply theoretical knowledge to real-world problems (Bell, 2010).

Participant 5 said that a diverse range of activities and assessments can lead to a deeper understanding of the subject matter. By engaging students with various methods, they are more likely to internalize content and apply it effectively (Ambrose et al., 2010).

Therefore, the development and innovation of educational resources through design thinking offer a multifaceted approach that can significantly enhance teaching and learning experiences. From understanding and empathizing with students' needs to the practical application of brainstorming, testing, and revision processes, educators are empowered to create resources that are not only tailored to educational objectives but also resonate with diverse learner profiles. The integration of interactive elements, multimedia, and active learning strategies further underscores the shift towards a more dynamic, student-centered approach to education. Moreover, by incorporating methodologies such as problem-based learning and embedding higher-order thinking skills into resource creation, educators can foster deeper understanding and engagement among students. Collectively, these elements reflect a comprehensive model for teacher training in resource creation that is grounded in creativity, innovation, and a commitment to continuous improvement and adaptability in response to the evolving educational landscape.

Conclusions

The conclusion of this research study offers a nuanced synthesis of the design thinking process's significant implications within the realm of science education. It clarifies the challenges educators face, the iterative refinement essential for resource effectiveness, the manifold benefits of design thinking, and crucial recommendations for both training and resource creation techniques. This comprehensive analysis not only

mirrors the study's objectives but also projects a pathway for future educational practices and inquiries.

- **Educational Policy Implications:**

The identified challenges and the transformative potential of design thinking underscore the need for educational policies that foster innovation and adaptability. Policy changes should aim to provide educators with the flexibility to integrate design thinking principles, such as by enabling curriculum adjustments that accommodate new teaching methodologies and by supporting incorporation of technology in the classroom. Initiatives could include funding for design thinking training programs, incentives for schools that implement innovative teaching practices, and the development of platforms for sharing resources created through design thinking processes.

- **Connections to Educational Theories and Frameworks:**

The findings of this study align with constructivist learning theories, which posit that learners construct knowledge through experiences. Design thinking, with its emphasis on empathy and iterative learning, complements this by offering a structured yet flexible approach to creating educational experiences. Furthermore, SAMR model (Substitution, Augmentation, Modification, Redefinition) and the TPACK framework (Technological Pedagogical Content Knowledge), which guide technology integration in education, are enriched by design thinking's focus on creative problem-solving and user-centered design. This suggests that these frameworks can serve as a theoretical foundation for integrating design thinking into educational resource development (Puentedura, 2006; Mishra & Koehler, 2006).

- **The Role of Collaboration:**

While this study focused on individual experiences, the potential for collaboration in the design thinking process cannot be overstated. Collaboration among educators, administrators, and students can significantly enhance the resource creation process, fostering a culture of shared innovation and continuous improvement. This collective approach can lead to more diverse and effective educational resources, aligning with the collaborative nature of design thinking itself.

- **Long-term Implications for Teacher Training:**

Long-term implications for teacher education programs are profound. Integrating design thinking principles into teacher training curricula can prepare future educators to meet the challenges of modern classrooms with agility and creativity. Such training should not only focus on the mechanics of design thinking but also emphasize its philosophical underpinnings—creativity, empathy, and a willingness to embrace failure as a step towards innovation.

- **The Impact of Technology:**

The importance of technology integration identified in this study highlights the role of emerging technologies, such as artificial intelligence (AI), virtual and augmented reality (VR/AR), and educational apps, in facilitating design thinking process. These technologies can provide immersive and personalized learning experiences, further

advancing the capabilities of educators to create resources that are engaging, effective, and tailored to students' needs.

This study highlights the crucial role of design thinking in the development of educational practices, specifically in the creation of the science learning resources. By advocating for policy changes, fostering collaborative environments, improving teacher training programs, and utilizing technology, the education sector can incorporate the principles of design thinking to better navigate the complexities of modern-day education. These findings not only address the immediate results of the research but also set the foundation for future studies on the vast potential of design thinking in education.

Recommendations

Based on the thematic analysis and conclusions, the following recommendations are proposed:

1. **Refinement and Validation of the Learning Module:** The developed learning module, aiming to enhance teachers' abilities to employ Design Thinking in resource creation, represents a promising tool based on the study's findings. However, it's recommended that this module undergo further refinement and validation. The efficacy, acceptability, and utility of the module should be systematically assessed through pilot implementation, feedback collection, and subsequent iterations to improve its quality and relevance.
2. **Adopting Design Thinking in Resource Creation:** Encouraging the use of Design Thinking in the development of educational resources could foster creativity and innovation. It would also promote a learner-centric approach that could significantly improve learning materials engagement and effectiveness.
3. **Fostering Flexibility and Adaptability:** The educational context and learners' needs are continually evolving. As such, it is crucial to foster flexibility and adaptability in resource creation, allowing for the continual adjustments and refinement based on feedback and shifts in educational environment and needs.
4. **Nurturing Creativity and Innovation in Learners:** As the demand for these skills is high in modern workplace, educational resources should be designed to nurture creativity and innovation in learners. Nurturing could be achieved by incorporating problem-solving tasks and creative exercises in the learning materials.
5. **Emphasizing the Integration of Theory and Practice:** Incorporating experiential learning activities that integrate theory and practice could enhance the learning experience. These activities would also provide students with an opportunity to apply theoretical knowledge in practical contexts.
6. **Strengthening Alignment with 21st-Century Skills:** Educational resources should be designed to align with the 21st-Century Skills model, emphasizing critical thinking, creativity, problem-solving, and innovation. This alignment

would ensure the relevance of learning materials in an increasingly globalized and technologically advanced society.

7. **Creating Supportive Environment for Innovation:** Schools and educational institutions should create environment that encourages and supports innovative practices in resource creation. This environment could include providing the training, resources, and time for teachers to experiment and innovate.
8. **Embracing Technological Advancements:** Given rapid growth of technology and its integration into education, teachers should be encouraged and trained to leverage various technological tools in resource creation. This leverage could enhance the interactivity and engagement of learning materials.
9. **Training and Professional Development:** Training programs for teachers should be developed to equip them with the necessary skills and knowledge to create effective learning resources. These programs should cover Design Thinking principles, modern pedagogical approaches, and the use of technology in education.
10. **Collaboration and Sharing of Best Practices:** Encouraging collaboration among teachers and the sharing of best practices could enhance the quality and effectiveness of educational resources. Collaboration platforms could be established to facilitate this sharing and learning process.

It is strongly suggested that contemporary teaching techniques be employed in order to enhance educational materials, put learners' requirements first, and foster originality and inventiveness.

For future research in the area of resource creation and educational practices, the following recommendations are proposed:

1. **Evaluation of the Learning Module:** Future research should conduct a thorough evaluation of the learning module, focusing on its effectiveness in enhancing teachers' abilities to create innovative and engaging resources using Design Thinking. The assessment could be based on various factors such as teachers' feedback, students' engagement, learning outcomes, and usability and adaptability of the module in different educational contexts.
2. **Longitudinal Studies on Design Thinking Implementation:** In order to fully comprehend the effects of Design Thinking on educational resource development, further research could be conducted through longitudinal studies. These studies would allow for a deeper understanding of how this approach develops and changes in response to different contexts and needs over time.
3. **Comparative Studies across Different Education Systems:** Researchers could conduct comparative studies across different education systems or countries to gain insights into how cultural and systemic factors influence the application of Design Thinking and other innovative practices in resource creation.
4. **Impact of Technological Advancements:** Given the rapid technological advancements in the field of education, future studies could explore how emerging technologies, like artificial intelligence and augmented reality, can be integrated

into resource creation and how they influence student engagement and learning outcomes.

5. **Role of Teacher Training in Resource Creation:** Research could be conducted to understand the impact of teacher training programs on the quality of resources developed and the pedagogical practices employed. The effectiveness of different training approaches could also be evaluated.
6. **Student-Centric Approaches:** Further research could delve into the effectiveness of student-centric approaches in resource creation. Studies could assess the impact on student engagement, understanding, and learning outcomes when students are placed at the heart of resource design.
7. **Collaboration in Resource Creation:** Future research could explore the impact of collaboration among teachers, and possibly students, in resource creation. It would be valuable to understand how sharing ideas and practices influence the innovation and effectiveness of resources developed.
8. **Exploring Alternative Pedagogical Approaches:** Beyond Design Thinking, there are other pedagogical approaches, like Inquiry-Based Learning, that can influence resource creation. Future research could compare the effects of these different methodologies.

As the world rapidly evolves with new technologies and ways of learning, it is crucial for researchers to continuously explore and experiment with innovative methods for creating educational resources. By doing so, they can better understand how to cater to the dynamic needs of learners in today's fast-paced educational landscape. With a focus on efficiency and effectiveness, such research can lead to the development of more engaging and impactful learning materials, ultimately benefiting students and educators alike.

Compliance with Ethical Standards

Adhering to the highest ethical standards was paramount in this research, guided by the principles outlined in the American Psychological Association's Publication Manual (2019). Central to our approach was informed consent, ensuring that all participants were fully aware of the study's purpose, procedures, and their rights as participants. Participation was voluntary, with participants informed of their right to withdraw from the study at any point without facing any consequences. Confidentiality was rigorously maintained, with all identifiable information anonymized in the study's findings and data securely stored, accessible only to the research team. Moreover, the well-being and comfort of participants were prioritized throughout the research process, particularly during the data collection phase. This ethical framework not only safeguarded the participants but also reinforced the integrity and credibility of the research findings.

Acknowledgments

The researcher stands at the completion of this journey with a heart full of gratitude and humility. At the forefront of the acknowledgment is his esteemed research adviser, Dr. LUIS MIGUEL P. SALUDEZ. His excellence, patience, expertise, and trustworthiness

have been the guiding lights through the complexities of this research. His unwavering support and insightful guidance have been instrumental in shaping both the trajectory of his thesis and personal growth as a scholar;

He likewise extends his deepest appreciation to Prof. LORENA S. SALES, chair of the oral examination committee; Dr. VANESSA C. ZUBIETA and Prof. RONEL R. ALDAY, the distinguished members of the oral examination members. Their expertise, knowledge, and constructive critiques have significantly contributed to the development and completion of this thesis. Their willingness to share wisdom and their commitment to academic excellence have been invaluable;

A special note of thanks goes to the participants of this study. Their willingness to devote time, and effort, and share fruitful insights has enriched this research immeasurably. Their contributions have been essential in adding depth and perspective to my study;

The researcher is also deeply grateful to Mr. JOHN RAFAEL M. ALCANTARA for his boundless creativity, kindness, and unwavering dedication, which were instrumental in shaping the thesis. His tireless persistence and commitment have been an endless source of inspiration and motivation for the researcher. The researcher is truly touched by his determination to go above and beyond in helping achieve his goals. Additionally, the researcher extends heartfelt thanks to Dr. KAREN P. EDAÑO for her invaluable assistance, particularly in crafting the research instrument. Her expertise and guidance were crucial to the success of this work;

To his friends, both within and outside the workplace for their encouragement, understanding, and camaraderie have been a source of strength and motivation. Their unwavering support has been a pillar of resilience throughout this endeavor;

To his family, whose love and belief in him have been unfaltering, he owes an immeasurable debt of gratitude. Their sacrifices, support, and encouragement have been the bedrock of his achievements. They are his constant source of love and motivation;

Above all, he offers sincerest gratitude to the LORD GOD, for it is through His grace that all things are possible. His guidance and blessings have been his compass throughout this journey.

This thesis is not merely a reflection of his efforts but a testament to the collective support, wisdom, and encouragement of those mentioned. To each of them, the researcher extends his sincerest thanks and appreciation.

SECURITY AND EMPLOYEE ENGAGEMENT: PREDICTORS OF THEIR LOYALTY IN THE LODGING INDUSTRY

Aila May Z. Samson
Raquel J. Dael

Lourdes College, Cagayan de Oro City, Philippines

https://doi.org/10.5281/zenodo.11517650

ABSTRACT

Understanding the interplay of security measures and employee engagement is vital for enhancing employee loyalty in the lodging industry. This study examines the influence of security and engagement on employee loyalty within Bukidnon's lodging establishments. Security is categorized into management, operational, and physical security, while employee loyalty includes both behavioral and attitudinal loyalty. A descriptive correlational research design was used to analyze data from 120 employees, employing a survey questionnaire based on the previous studies: Torralba and Ylagan (2021), Anichiti et al. (2021), and Ahla and Osac (2014) for hotel security, Narciso and Narciso (2022) for engagement, Dede and Sazkaya (2018) and Kolomiets (2016) for employee loyalty. Regression analysis assessed the influence of lodging security and engagement on employee loyalty. Findings reveal that employees generally rate security measures positively across various dimensions, including management, operational, and physical security. They also demonstrate very high levels of engagement in maintaining a secure environment, and behavioral and attitudinal loyalty. The analysis indicates that employees' positive assessment of security and engagement significantly influences their loyalty. Specifically, management and physical security have the strongest positive influence on employee loyalty, while operational security and employee engagement have less impact. The study recommends enhancing management, operational, and physical security and implementing initiatives to foster engagement to create a safer and more committed workforce. By implementing these recommendations, lodging establishments can create a more secure environment, enhancing employee loyalty. This contributes to the sustained success and competitiveness of Bukidnon's lodging industry.

Keywords: *Employee Engagement, Lodging Industry, Loyalty, Security*

INTRODUCTION

In the lodging industry, fostering employee loyalty is essential and is linked to two key factors: security and the level of engagement among employees. When the establishment implements effective security measures, it ensures everyone's safety and cultivates a positive workplace atmosphere. Employees who feel safe, engaged, and valued tend to be happier in their jobs, leading to better performance and directly impacting the service guests receive. Creating a work environment where security and engagement go hand in hand builds a strong team and fosters employee loyalty.

Ensuring safety among employees fosters a positive workplace atmosphere, enhancing their sense of security, engagement, and commitment to their work. Clifton (2023) noted that intensified security concerns must be addressed by proactively initiating and implementing safety and security planning as important parts of their operations. This proactive approach is essential for stimulating overall security measures and ensuring the well-being of both employees and guests, thereby promoting loyalty to the organization. Supporting this concept, Mazzetti and Schaufeli (2022) suggest that when employees feel secure and engaged, they exhibit greater job satisfaction and performance, resulting in enhanced service quality for guests. This emphasizes the critical connection between security and engagement, fostering a collaborative work environment that cultivates strong relationships among team members and nurtures long-term employee loyalty within the lodging industry.

There are several security issues encountered by the lodging industry within global, national, and even local contexts, that shed light on the critical importance of the conduct of this study. This is demonstrated by two recent high-profile security incidents: the Ivory Coast hotel hostage crisis 2023 of Ivory Coast, West Africa, in which terrorists kidnapped numerous guests before their capture by local police forces (BBC NEWS, 2016), and the Davao City, Philippines, bombing event in 2022 that attacked a hotel, caused multiple injuries, and heightened regional security concerns (BBC NEWS, 2016). In the local context of this study, incidents ranging from theft and vandalism to terrorism and cyber-attacks highlight the need for vigilance and effective security measures. These events serve as reminders of the challenges lodging industry faces at all levels (Visnov, 2024).

Numerous studies have examined the connection between security and employee engagement and their effect on loyalty in the lodging sector (Agaku et al., 2020). Nonetheless, a substantial gap exists in the literature, especially when it comes to investigating the connection between several security facets—operational, physical, and managerial security—and employee engagement. However, very little is known about how these variables affect behavioral and attitudinal loyalty in the specific setting of Bukidnon's lodging sector. To respond to this gap, this study will look into how, in this particular regional context, extensive security and employee engagement measures influence loyalty.

Framework

This study assumed that lodging establishments with strong security protocols—which include management, operational, and physical security—as well as a focus on employee engagement, would exhibit significantly higher levels of employee loyalty. Furthermore, by ensuring a secure and engaging work environment, these establishments are likely to foster trust and commitment among their employees, leading to increased employee loyalty. This assumption is anchored on the Theory of Social Exchange by George Homans (1961).

Social Exchange Theory suggests that when people interact, they aim to gain mutual benefits. In the context of the lodging industry, there's an implicit agreement between the establishment and its employees. When an establishment puts effort into strengthening its security and fostering positive employee engagement, employees perceive this as a distinct advantage. This sense of security not only makes employees feel safer but also instills a greater desire to work, thereby enhancing their loyalty towards the organization. This sense of security not only makes employees feel safer but also instills a greater desire to work, thereby enhancing their loyalty towards the establishment.

The studies of Abdul Majid and Samsudin (2017) have underscored that strengthening security measures in the lodging sector increases employees' sense of safety and fosters loyalty to the organization. Employees gain from this sense of stability, which fosters commitment and loyalty. The mutually reinforcing nature of these exchanges, based on SET principles, provides the foundation for comprehending how security and employee engagement work together to foster organizational loyalty in the hotel sector. The investigation of how these categories interact and affect employee attitudes and behaviors—which in turn shape the performance and atmosphere of the organization—is guided by this theoretical framework. The findings from Srinivasan's study add to the ongoing discussions about security in lodging establishments, confirming that addressing security concerns is essential for keeping employees loyal. These studies highlight that both physical and psychological security play a big role in making employees feel loyal.

Within the hospitality industry, lodging security has a big impact on employee loyalty. Employees are immediately affected by the security measures in their everyday work environment in addition to being in charge of putting them into place. According to research, when employees feel valued and engaged at work, they are more likely to feel safe and secure, which raises job satisfaction and loyalty levels. Successful security procedures may provide employees confidence and trust by assuring them that the organization values their safety. According to Morch (2022), one important thing is that security should cover more than just protecting things like equipment. Now, employees see security measures as essential not only for keeping physical things safe but also for ensuring their own safety and well-being at work.

Several security measures substantially influence employee loyalty, such as management, operational, and physical security. Management security has a significant influence on employee loyalty. Elphick (2024) highlights that control protection is a key and vital part of the hospitality industry. Lodging establishments pay a lot of attention to

dealing with safety issues. Control safety is important for employee safety and property security, creating a secure and welcoming atmosphere that improves the overall work experience. Moreover, it shields the establishment's valuable assets, reducing financial risks and disruptions in operations.

Operational security is another dimension influencing employee commitment and loyalty. Conrad (2011) describes it as the application of controls to reduce threats and vulnerabilities, including the security of confidential information. This intricate area includes various procedures, guidelines, and methods to keep guests, employees, and property safe. Roar (2023) provides an essential insight into efficiently managing and implementing operational security in the lodging industry. Finally, physical security represents another crucial facet of security. Devoteam (2023) highlights the critical role of physical security as a safeguard for employees, facilities, and assets against real-world threats, whether internal or external. Cobb (2022) found that by implementing physical security measures, lodging establishments protect their employees and assets, from unauthorized access or physical actions that could result in damage or substantial losses, serving as a preventive measure against security breaches and threats in the physical space.

Employee engagement is another dynamic variable affecting employee loyalty. In security, employee engagement refers to the enthusiasm, devotion, and commitment of employees in maintaining a safe environment. This includes adherence to security procedures, alertness to risks, and participation in security awareness programs. According to Smith (2023), employee engagement encompasses not only the mental and emotional commitment of workers to their jobs but also their readiness to make contributions toward the organization's overall security objectives. Employees that are actively involved in security are more likely to display actions that improve security protocols, like promptly reporting suspicious activity, adhering to established protocols, and cooperating with security staff members. For this reason, employee engagement in security is essential to guaranteeing the effectiveness of security protocols and protecting both the safety of guests and employees.

The dependent variable, employee loyalty, refers to the steadfast commitment of hotel employees to their workplace. Employee loyalty is essential for maintaining an engaged and effective workforce, which influences service quality and guest satisfaction. Recent studies (Henry, 2023) indicate that employment satisfaction, organizational culture, and leadership effectiveness significantly influence employee loyalty. Workers who feel supported, respected, and valued by their employer are more likely to develop strong loyalty. Research by Cornell (2019) shows that employee loyalty can be divided into two key aspects: attitudinal loyalty and behavioral loyalty. It is crucial to understand how security and employee engagement contribute to both attitudinal and behavioral loyalty in the lodging industry.

Training employees is crucial for improving their behavior, particularly in security. Attitudinal loyalty, focusing on emotional commitment, highlights the role of trust in fostering positive attitudes toward security measures (Halbusi et al., 2023). Garcia et al. (2022) explore how job satisfaction relates to attitudinal loyalty.

Figure 1, on the next page, illustrates the intricate relationship among the variables examined in this study. The independent variable consists of two components: the first one includes the level of security, encompassing dimensions such as management security, operational security, and physical security. The second independent variable is employee engagement. Meanwhile, the dependent variable involves employee loyalty, covering both behavioral loyalty and attitudinal loyalty. The central argument suggested in this study is that employee loyalty is significantly influenced by the level of security and employee engagement.

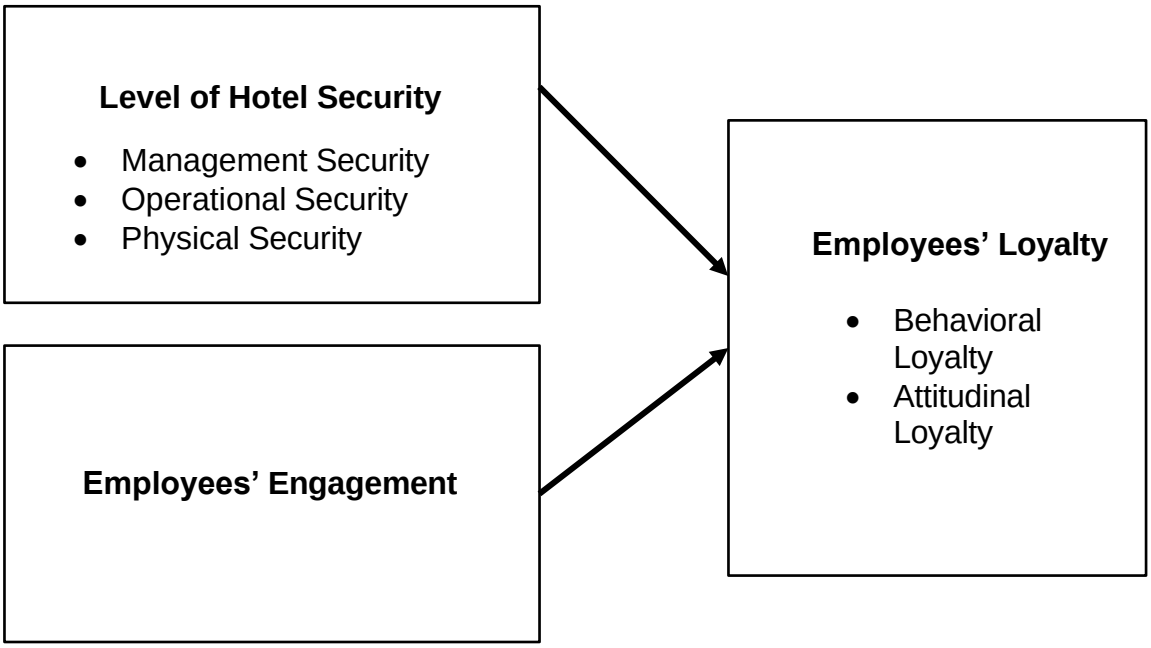

Figure 1. Schematic Diagram of the Study

Research Objective

This study aimed to determine the influence of security and employee engagement on employee loyalty among lodging establishments in the province of Bukidnon

METHODOLOGY

The participants of this study were employees from five DOT-accredited lodging establishments in Bukidnon regardless of contract, with a minimum of one year of experience were considered eligible to participate. There were 120 participants who responded to the study. Participants were chosen based on their availability and willingness to join the study. The researcher employed accessible population sampling.

Smith & Jones (2018) defined accessible population sampling as the inclusion of individuals or subjects who are readily available and easily accessible for research purposes. The selected hospitality establishments were chosen from the Department of Tourism's (DOT) official list.

The selected lodging establishments were situated in Bukidnon and are varied in size, ranging from small to medium-sized establishments accommodating between 20 to 100 guests. Annually, they cater to approximately 200 to 500 guests, depending on the season. The establishments, categorized as business and resort hotels, have been operational since the early 2000s. They offer a wide range of amenities and facilities, including accommodations, business and meeting facilities, recreation and leisure facilities, entertainment options, kids' clubs, and family amenities, as well as 24-hour front desk and security services, among others.

RESULTS AND DISCUSSION

Table 1 summarizes the assessment of hotel security. The data show that hotel security is generally rated as "Very Good," with an overall mean rating of 4.30. This indicates a positive perception of hotel security among the participants. A stable and secure environment is facilitated by the hotels' strong administrative protocols, well-defined security rules, regular staff training, and proactive risk management. The average ratings for various aspects of lodging security, such as management security (M=4.41), operational security (M=4.24), and physical security (M=4.25), also reflect a positive perception among the participants. These results are consistent with research conducted by Bertulino (2022), highlighting the importance of management, operational, and physical security as an investment that not only protects employees but also enhances their well-being, productivity, and loyalty to the organization. The variation in assessments underscores the critical necessity of consistently evaluating and adapting hotel security measures to maintain a safe and secure workplace environment for employees.

Table 1.
Summary Table of Assessment of Hotel Security

Dimensions	Mean	Interpretation	SD
Management Security	**4.41**	**Very Good**	**0.57**
Operational Security	**4.24**	**Very Good**	**0.61**
Physical Security	**4.25**	**Very Good**	**0.56**
Overall Assessment	**4.30**	**Very Good**	**0.54**

Management security received the highest mean rating of 4.41, indicating employees' strong confidence in the lodging's management practices and their effectiveness in ensuring security. This high rating suggests that the lodging operations have established security policies and procedures on security staff training, guest information management, emergency response planning, access control systems, reporting security incidents, and updating security equipment. However, the lower rating for operational security (M=4.24), although still rated as very good, indicates areas for

improvement, such as enhancing staff training programs, implementing advanced security technologies, and streamlining operational procedures for increased efficiency and effectiveness. Lodging security is crucial for providing peace of mind and reducing theft risks, particularly for valuable items like jewelry and electronics. Kumar (2023) emphasizes the importance of protecting lodging employees, guests, and assets. A proper security system is essential for safeguarding staff, guests, and physical resources, including equipment, buildings, gardens, and guest belongings.

Table 2 presents the frequency, percentage, and mean distribution of participants' assessment of employee engagement. The data show that employees assessed their engagement as very high, as indicated by the overall mean of 4.67. This reflects a very high level of perceived effectiveness in responding to employee engagement through the provision of positive workplace factors such as supportive management, good working conditions, effective communication, and opportunities for professional growth. This overall assessment is supported by the frequency and percentage distribution indicated in the table, where the majority of employees rated engagement as "Very High" (70.0%). These factors show that employees in the selected hotels in Bukidnon generally feel highly engaged in their work.

Table 2.
Frequency, Percentage and Mean Distribution of Participants' Level of Engagement in the Selected Hotels in Bukidnon

Range	Interpretation	Frequency	Percentage
4.51-5.00	Very High	84	70.0
3.51-4.50	High	36	30.0
2.51-3.50	Moderate	0	0.0
1.51-2.50	Low	0	0.0
1.00-1.50	Very Low	0	0.0
	Total	**120**	**100.0**
	Overall Mean	**4.67**	
	Interpretation	**Very High**	
	SD	**0.28**	

However, it is also noteworthy that 30% of the participants rated their engagement as "High." While this designation still reflects a positive assessment of employees' engagement, it indicates that there is room for improvement. These factors show that employees in the selected hotels in Bukidnon generally feel highly engaged in their work. This high level of engagement could be attributed to various positive workplace factors such as supportive management, good working conditions, effective communication, and opportunities for professional growth. Although the high rating represents a favorable evaluation, specific areas like communication and feedback need improvement. Engaged employees contribute positively to productivity and a positive work environment. Security training is crucial for maintaining safety for both employees and guests. Management should focus on improving communication channels, encouraging participation, and providing feedback opportunities to enhance security measures and ensure a safe

working environment. Overall, the results show that employees have a high opinion of the security measures and engagement practices in place. This positive perception underscores the importance of continuing to develop and refine these areas to maintain and further enhance employee satisfaction and loyalty. By addressing the identified areas for improvement, hotels can foster an even more secure and engaging environment for their staff, leading to sustained success and competitiveness in the industry.

Table 3 presents a summary of employee loyalty across two dimensions: behavioral and attitudinal loyalty. With an overall mean of 4.13 and a "High" interpretation, this emphasizes a strong demonstration of employees' loyalty. These findings are particularly remarkable in the hotel industry, where maintaining high levels of employee loyalty is important for delivering consistent service quality and enhancing satisfaction. These findings underscore a positive workplace culture where employees maintain favorable attitudes towards their work, colleagues, and supervisors, fostering a cohesive and supportive environment. Overall, these results highlight the high level of employee loyalty demonstrated by hotel employees.

Table 3.
Summary Table of Employee Loyalty

Dimensions	Mean	Interpretation	SD
Behavioral Loyalty	4.22	High	0.54
Attitudinal Loyalty	4.03	High	0.56
Overall Employee Loyalty	**4.13**	**High**	**0.52**

Among the two dimensions, behavioral loyalty shows the highest mean score of M=4.22. This is associated with employees demonstrating consistent and committed behaviors in their roles within the hotel establishment. This implies that when employees feel valued, engaged, and empowered, they are more likely to demonstrate dedication and consistency in their work. As supported by Henry (2023), loyal employees are more engaged, productive, and committed to achieving organizational goals.

On the other hand, attitudinal loyalty, which receives a mean score of 4.03 and is also considered "High," is defined as employees' emotional attachment, commitment, and alignment with the goals, values, and objectives of the hotel organization. This shows that employees encompass positive attitudes, beliefs, and feelings towards their work, colleagues, supervisors, and the overall hotel environment, which promotes a cohesive and positive workplace culture.

These findings indicate that the observed high levels of employee loyalty, both behavioral and attitudinal, are crucial for the hotel industry's success. Employees are likely to exhibit consistent and committed behaviors in their roles, contributing to the delivery of consistent service quality and heightened guest satisfaction. These findings underscore the importance of nurturing and maintaining employee loyalty as a key factor in achieving operational excellence and a competitive advantage within the hotel industry (Ogbeide & Isokpan, 2020).

Table 4 presents the regression analysis which provides valuable insights into the participants' assessment of hotel security and engagement on their loyalty. Findings reveal that the whole model is significant (F=33.22 p = .000), indicating that the null hypothesis can be rejected. Participants who gave high ratings to the hotel security also tend to have higher loyalty.

As for their engagement, even though this variable alone does not significantly influence their loyalty, it contributes to the variability of their loyalty when combined with their assessment of hotel security. This underscores the interconnected nature of factors influencing employee loyalty.

Among the specific indicators, physical security has the highest influence on employee loyalty, indicating that for every unit increase in their assessment of physical security, there is a corresponding
0.280 increase in their loyalty (B=0.280, t=2.39, p=0.019). This indicates that employees place significant importance on physical security measures when evaluating their loyalty to the hotel. As attested by Agaku et al. (2020), the singular power of words underscores the paramount importance of safety and security in the hospitality industry, particularly for employees and guests. To attract, retain, and remain competitive, hoteliers must prioritize creating a safe and conducive environment for both guests and employees. This factor also significantly contributes to fostering loyalty among employees.

Table 4.
Regression Table on the Influence of Participants' Assessment of Hotel Security and Engagement on their Loyalty

	Unstandardized Coefficients		Standardized Coefficients	t	Sig.
	B	Std. Error	Beta		
(Constant)	1.06	.217		4.89	.000
Management Security	-.037	.077	-.041	-.486	.628
Operational Security	.057	.084	.071	.681	.498
Physical Security	.233	.097	.268	2.41*	.018
Engagement	.216	.084	.265	2.58*	.011
Model Summary					
R =.732	R^2 = .536	Adjusted R^2 = .520	F = 33.22**	p = .000	

**significant at 0.01 level *significant at 0.05 level

Furthermore, the findings suggest that while operational security and engagement individually do not significantly impact loyalty, they still play a role in contributing to the overall variability in loyalty when combined with other factors. This highlights the complex nature of employee loyalty, which is influenced by various aspects of their experience at the hotel. These results align with existing literature on the subject which emphasizes the importance of security measures in shaping employee perceptions and loyalty. Studies have shown that lack of adequate security measures can negatively impact their loyalty and overall satisfaction. Given that these actions may increase employee loyalty, hotels may want to prioritize fortifying their operational security procedures and improving their

physical security infrastructure.

Conclusions and Recommendations

This study reveals valuable insights into the effect of employees' assessments of hotel security and engagement on their loyalty in the lodging industry. Among the specific indicators, physical security has the highest influence on their loyalty, The findings support the assumption that employees in hotel establishments with high security measures and high engagement levels are more likely to feel happy and loyal to their establishment.

Additionally, the findings provide empirical evidence for the application of Social Exchange Theory (SET) in the context of this study. SET posits that when hotel employees receive positive security measures and heightened employee engagement, they are more likely to exhibit increased loyalty and commitment to the organization. In this study, positive treatment is exemplified through factors security, employee engagement, and loyalty.

Further analysis of the findings emphasizes that management and physical security have the strongest positive influence on employee loyalty. This suggests that lodging establishments should enhance existing programs supporting security measures, such as security awareness training, leadership development workshops, customer service training, and technical skills enhancement, to promote a safe and supportive work environment. While employee engagement and operational security are significant factors in overall loyalty, this study suggests they may not be perceived as primary drivers of loyalty by the employees. Instead, the provision of operational and security measures alone may not suffice to instill a deep sense of commitment to the organization.

Compliance with Ethical Standards

The researcher ensured that proper protocols were observed in the gathering of data. First, approval from the The school’s Research and Ethics Committee was sought. Once the ethical clearance was granted, permission from the management of the five identified hotel establishments was sought. Then, participants were asked to sign a consent form before the study commenced. Upon approval, the researcher physically administered the survey questionnaire to the participants during their breaks or off-duty hours. Additionally, health protocols such as wearing masks and physical distancing were strictly observed. Participants in this study were thoroughly informed about the purpose and details of the research, ensuring transparency throughout. They were given the option to refrain from answering questions or discontinue their participation if they felt uncomfortable or offended. Research ethics aims to protect people's rights in research and ensure fairness. Researchers should be transparent, and honest, and avoid exploiting participants when seeking ethical approval (Nchasi, 2021). As a gesture of appreciation for their involvement, participants received tokens of gratitude. It was

emphasized that all data collected during this research would be treated with complete confidentiality.

Furthermore, participants were assured that their privacy and confidentiality were safeguarded through adequate measures. The study's results did not include any personal identifiers, preserving the anonymity of individuals. Participants also were informed that they had the right to withdraw from the study for personal reasons, and their test results became part of Lourdes College. Any release of such information occurred only with the explicit approval of the Department Chairperson or College Dean, reinforcing the commitment to the ethical handling of participant data.

To safeguard the privacy of participants and comply with the Data Privacy Act, the researcher implemented the Belmont Report specifically on respect for persons, beneficiaries, and justice. Access to the research data was restricted to the researcher and authorized personnel only, ensuring that participants' information remained confidential throughout the study and beyond. Furthermore, participants received tokens as a gesture of appreciation for their valuable contribution to the research.

ABSTRACT

This study explored the incorporation of lemongrass and wiregrass into Filipino confections, evaluating their nutritional profiles, sensory attributes, and shelf life. Nutritional analysis revealed diverse profiles, with pastillas high in protein and polvoron higher in fat. Sensory evaluation showed the confections were *"Liked Extremely"* across all attributes, with adults and teenagers providing the highest ratings, though aroma characteristics exhibited statistically significant differences between variants. Shelf-life studies indicated one month for powdered ingredients and 10-11 days for the confections. The findings demonstrate strong consumer acceptance, highlighting the market potential of these botanically-infused treats, and provide recommendations to enhance aroma further, extend shelf life, and target specific consumer groups for product development and commercialization.

Keywords: *Lemongrass, Wiregrass, Filipino confections, Sensory evaluation, Shelf life*

INTRODUCTION

The Philippines boasts a rich culinary heritage characterized by a diverse array of traditional sweets and confections that have delighted the palates of generations. Pastillas and polvoron have gained popularity among these cherished treats for their unique flavors, textures, and cultural significance. Despite their enduring presence in

Filipino cuisine, these confections have remained relatively conventional, with little innovation in flavor profiles (De Leon, 2018; Fernandez, 2019).

Filipino cuisine is known for its fusion of flavors, blending indigenous ingredients with influences from various Asian cultures and the Spanish colonial era. Within this culinary landscape, Filipino confections hold a special place. These confections, typically composed of coconut and rice flour, are often infused with regional ingredients such as jackfruit, pandan, and yam, resulting in a delightful interplay of flavors and textures (Garcia, 2020). While beloved for their cultural significance, these treats remain traditional, lacking the innovative touches seen in other culinary domains. To innovate Filipino confections, it is essential to consider sensory science and consumer perception. The culinary world is increasingly exploring unique and indigenous flavors, and the confectionery domain is no exception (Sanchez, 2021).

Lemongrass, known for its citrusy aroma and refreshing taste, has long been cherished in Filipino cooking for its aromatic essence and subtle tanginess. Traditionally used in soups, stews, and teas, lemongrass imparts a distinctively bright and zesty flavor that enhances savory and sweet dishes (Smith, 2016). Similarly, wiregrass, though often overlooked, possesses a unique flavor profile characterized by subtle earthiness and herbal notes. Widely used in local delicacies and herbal remedies, wiregrass adds depth and complexity to traditional Filipino recipes (Torres, 2022).

Incorporating lemongrass and wiregrass into confections represents a novel and innovative approach to flavor exploration. By harnessing the aromatic qualities and healthful properties of these indigenous ingredients, Filipino confectioners can create a new wave of treats that celebrate the country's rich cultural heritage while captivating the modern palate (Lee & Bautista, 2023).

This study focuses on the sensory description and consumer hedonic perception of Filipino confections infused with lemongrass and wiregrass. While there is growing interest in sensory analysis in the food industry, a noticeable gap exists in understanding the specific characteristics and consumer preferences associated with these distinctively Filipino ingredients. Previous research has delved into sensory analysis and consumer hedonic perception in various food studies, emphasizing the importance of flavor profiling in consumer acceptance. However, within the confectionery realm, there is a relative dearth of studies specifically exploring the sensory attributes of lemongrass and wiregrass. Most existing literature tends to focus on more common flavor profiles, neglecting the potential richness these ingredients could bring to confections (Garcia, 2020; Smith, 2016).

The research gap identified in this study highlights the need for a more comprehensive exploration of lemongrass and wiregrass in the context of Filipino confections. Lemongrass is documented for its numerous biological properties, including antibacterial, antifungal, antiprotozoal, anti-inflammatory, antioxidant, anti-carcinogenic, cardio-protective, and anti-rheumatic activities (Ekpenyong et al., 2015). Wiregrass offers various benefits, such as anti-inflammatory, antibacterial, anti-diabetic, and antioxidant

properties, although it is not recognized as a medicinal plant by the Department of Health (Eslit, 2018).

Given the array of benefits associated with these ingredients, it becomes essential to subject the developed products to sensory evaluation and assess the hedonic perception of consumers. This is particularly crucial given that lemongrass and wiregrass are not conventionally utilized in the production of pastillas and polvoron. Investigating consumers' hedonic perceptions of these confections will offer insights into the factors that influence their overall enjoyment, thus contributing to a broader discourse on food preferences and cultural foodways (Jun & Lee, 2019; Methven, 2014).

Finally, the results of this study may not only increase our appreciation of Filipino confections made with lemongrass and wiregrass but may also inform chefs, food producers, and decision-makers about the potential for innovation and preservation in this cherished area of Filipino cuisine. Moreover, it may contribute to a broader understanding of the intricate interplay between sensory experiences and cultural food preferences, shedding light on the multifaceted nature of culinary heritage in the Philippines and elsewhere (Ares & Varela, 2017; Fiorentini, 2020).

Research Questions

This study aimed to develop Filipino confections such as ***pastillas*** and ***polvoron*** with lemongrass and wiregrass as primary ingredients. Specifically, the study shall answer the following questions:

1. What is the nutritive content of lemongrass and wiregrass confections?
2. What are the processes involved in the formulation of each type of confection?
3. What are the sensory attributes (taste, aroma, texture, etc.) of the confections with lemongrass and wiregrass as perceived by the evaluators in terms of the following:
    a. flavor profile;
    b. aroma characteristics;
    c. texture and mouthfeel; and
    d. visual appeal?
4. Is there a significant difference between the sensory attributes of the confections with lemongrass and wiregrass as perceived by the evaluators?
5. What is the general level of acceptability of the confections with lemongrass and wiregrass as evaluated by the different age groups of respondents?
6. What is the shelf life of the lemongrass and wiregrass confections?

METHODOLOGY

Materials

The following tools, equipment, and ingredients were used during the conduct of the study.

Table 1. Tools and Equipment for the Recipes and Formulations

Preparatory Tools	Measuring Tools	Cutting Tools	Equipment
Bowls	Measuring Cup	Knife	Gas range
Casserole	Measuring Spoon	Kitchen Scissor	Pulverizing Machine
Laddle			Oven
Mixing Bowl			
Non-stick pan			
Polvoron Molders			
Rubber Scraper			
Mortar and Pestle			
Transparent Microwavable Food Container			
Transparent Glass Container			

Ingredients

Powdered Lemongrass and Wiregrass

Table 2. Ingredients to be Used for the Preparation of Pastillas.

Ingredients	Measurement
Lemon grass powder	3 grams
Wiregrass powder	3 grams
Condensed milk	178 ml
Refined Sugar (for dusting)	64 grams
Skim milk	270 grams
Powdered milk	220 grams
Vanilla	2.84 grams

Table 3. Ingredients to be Used for the Preparation of Polvoron

Ingredients	Measurement
Wiregrass powder	3 grams
Lemon grass powder	3 grams
All-purpose flour	250 grams
Skim milk	135 grams
Powdered milk	110 grams
Refined sugar	190 grams
Margarine	95 grams
Vanilla	2.84 grams

Lemon grass and Wiregrass Extract

Table 4. Ingredients to be Used for the Preparation of Pastillas.

Ingredients	Measurement
Lemon grass extract	20 ml
Wiregrass extract	20 ml
Condensed milk	178 ml
Refined Sugar (for dusting)	64 grams
Skim milk	270 grams
Powdered milk	220 grams
Vanilla	2.84 grams

Table 5. Ingredients to be Used for the Preparation of Polvoron

Ingredients	Measurement

Lemon grass extract	20 ml
All-purpose flour	250 grams
Skim milk	135 grams
Powdered milk	110 grams
Refined sugar	190 grams
Margarine	95 grams
Vanilla	2.84 grams

Table 6. Ingredients to be Used for the Preparation of Lemon Grass and Wiregrass Extract.

Ingredients	Measurement
Lemon grass/ Wiregrass Extract	236 ml
Sugar	190 grams
Water	59 ml

Developmental Procedures

The developmental procedures consisted of two stages (1) the process of making powdered and extracted wire grass and lemon grass, and (2) the development of pastillas and polvoron.

A. Process of Extracting Wire Grass and Lemon Grass Juice

1. Washing

Start by washing the wire grass and lemon grass thoroughly to remove any dirt, dust, or impurities. Use clean, cold water to rinse them properly. For lemongrass, peel off any dry or damaged outer layers.

2. Pat Drying

After washing the lemon grass and wire grass thoroughly to remove any dirt and impurities, lay out a paper towel or a clean kitchen towel on a clean and dry surface. Spread the washed lemon grass and wire grass in a single layer on the towel, ensuring they are not stacked on top of each other to allow proper drying. Gently pat the lemon grass and wire grass with another kitchen towel or paper towel to absorb excess moisture.

3. Cutting

Using a pair of scissors, cut the lemongrass and wire grass into small pieces. Make sure to cut the ingredients uniformly to ensure even extraction during pounding.

4. Pounding

Put the lemon grass and wire grass in a bowl. Pound thoroughly to break down their cellular structure and release the extract. Once you have pounded the leaves thoroughly, strain the mixture to separate the extract from any solid remnants of the leaves. Collect the strained extract in a bowl.

5. Sugar Concentration

Simmer the extract for 1 minute. In a saucepan, combine equal measurements of extracted lemon grass or wire grass and sugar (1 cup of extract to 1 cup of refined sugar). Add ¼ cup of water for every 1 cup of extract. Place the saucepan over medium heat and stir the mixture until the sugar is completely dissolved, ensuring it doesn't stick to the bottom of the pan. Reduce the heat to low and let the syrup simmer gently for about 3-5 minutes to thicken slightly and ensure it is fully combined. Remove the saucepan from the heat and let the syrup cool to room temperature. As it cools, it will thicken slightly.

6. Storing

Select transparent glass containers that are airtight and made of materials suitable for storing powdered products. Ensure that the containers are clean and completely dry, as any moisture can lead to clumping or spoilage of the powder. Clearly label each container with the name of the powdered product and the date

of storage. Store the powdered products in a cool, dry place away from direct sunlight and sources of heat.

Development of Pastillas and Polvoron

1. Pastillas with powdered lemon grass and wire grass

In a bowl, combine skim milk, powdered milk, wire grass, and lemongrass. Mix until well combined. Gradually pour the condensed milk into the mixture, mixing until a dough-like texture is formed. Scoop 1 teaspoon to 1 tablespoon of the mixture and roll it with your hand to form a sphere shape. Repeat for the rest of the mixture and coat each sphere with sugar.

2. Polvoron with powdered lemon grass and wire grass

In a frying pan over medium heat, put in the flour. Toast it until the color turns light brown and it becomes aromatic, stirring regularly to prevent the flour from burning. Once the flour is toasted, turn off the heat. Add skim milk, powdered milk, sugar, lemon grass, and wire grass, and toast the mixture for 1 minute or until well combined. Transfer the mixture to a mixing bowl. Pour in the melted margarine and mix well. Let it cool for at least 5 minutes. Using a polvoron molder, scoop the mixture and place it on top of individual cellophane or Japanese paper to wrap.

3. Pastillas with lemon grass and wire grass extract

In a bowl, combine skim milk, powdered milk, wire grass, and lemongrass extract. Mix thoroughly until well combined. Gradually pour the condensed milk into the mixture, stirring continuously until a dough-like texture is formed. Next, scoop 1 teaspoon to 1 tablespoon of the mixture and roll it between your hands to form sphere shapes. Repeat this process for the remaining mixture. Once formed, coat each sphere generously with sugar.

4. Polvoron with lemon grass and wire grass extract.

In a frying pan over medium heat, toast flour until it turns light brown and aromatic, stirring constantly to prevent burning. Once toasted, remove from heat and add skim milk, powdered milk, sugar, lemon grass extract, and wire grass extract, toasting for about a minute until well combined. Transfer the mixture to a bowl, then pour in melted margarine and mix thoroughly. Let the mixture cool for 5 minutes before using a polvoron molder to shape portions onto individual pieces of cellophane or Japanese paper for wrapping. These treats combine the aromatic flavors of lemongrass and wire grass with a sweet, buttery texture, ideal for sharing or gifting.

Hedonic Perception

Eighty (80) individuals were randomly selected from the groups of children, teenagers, adults, and experts who were requested to evaluate the finished products. Twenty respondents from each group were randomly selected. Using a 9-point hedonic scale, the evaluators rated each Filipino confection using four (4) samples.

The following scale was utilized:

Scale	Descriptive Rating
9	Like extremely
8	Like very much
7	Like moderately
6	Like slightly
5	Neither like nor dislike
4	Dislike slightly
3	Dislike moderately
2	Dislike very much
1	Dislike extremely

RESULT AND DISCUSSION

A. Nutritive Content of Lemongrass and Wiregrass Confections

Table 7. Report of Analysis on the Nutritive Value of Lemongrass and Wiregrass Confections

Sample	Sample Description	Crude Protein %	Crude Fiber %	Crude Fat %	Moisture %	Ash %
FT-24-0057	Pastillas *(Powdered Lemongrass and Wiregrass)*	11.45	0.54	1.71	10.11	3.35
FT-24-0058	Pastillas *(Lemongrass and Wiregrass Extracts)*	11.27	0.68	1.53	10.89	3.31
FT-24-0059	Polvoron (Powdered Lemongrass and Wiregrass)	9.12	0.90	11.18	5.41	2.17
FT-24-0060	Polvoron *(Lemongrass and Wiregrass Extracts)*	8.95	0.98	11.63	9.44	1.87

The table exhibits the report analysis on the nutritive content of the lemongrass and wiregrass confections. As shown in the table, the confections offer diverse nutritional profiles, catering to different dietary needs.

The Pastillas with powdered lemongrass and wiregrass are high in protein (11.45%), moderate moisture (10.11%) and minerals (3.35%), low fat (1.71%), and fiber (0.54%). This means that it is suitable for those seeking a protein-rich treatment.

The Pastillas with lemongrass and wiregrass extracts are also high in protein (11.27%) and moisture (10.89%), higher fiber (0.68%), and low fat (1.53%). This indicates that it is ideal for a balanced, digestible option.

The Polvoron with Powdered Lemongrass and Wiregrass are high in fat (11.18%), moderate protein (9.12%), high fiber (0.90%), low moisture (5.41%), and minerals (2.17%). An indulgent option with digestive benefits.

The Polvoron with Lemongrass and Wiregrass Extracts is very high in fat (11.63%), low protein (8.95%), highest fiber (0.98%), higher moisture (9.44%), lowest minerals (1.87%). This suggests that it is best for those seeking a rich, flavorful treat with digestive benefits.

The above findings highlight the nutritional benefits of integrating lemongrass and wiregrass into confections, offering a range of options from protein-rich to high-fiber and indulgent treats. These indicate further that integrating lemongrass and wiregrass into confections not only diversifies the nutritional profiles of these treats but also opens up new avenues for product innovation, market segmentation, and consumer education. This can lead to the development of confections that not only satisfy taste but also provide various health benefits, thereby aligning with modern dietary trends and preferences.

Based on the data provided by the Nutritionist and Dietitian of the Provincial Hospital of the City of Ilagan, crude protein is an unnatural protein which means the protein found in the product is not the natural protein that is found in fish, eggs, etc. but it is safe to consume. The crude protein found in the product is based on the ingredients that were used. Meanwhile, the crude fiber found was the result of lemon grass and wiregrass inclusion in the confectioners. On the other hand, the crude fat in the confections was not usually the same as the fats found in pork; rather, it is frequently a result of the components the researcher utilized, such as margarine or butter. In the meantime, the product's moisture content refers to its moist content. Its ash content is determined by the food products' alkalinity. For example, if you heat lemon grass and wiregrass to a high temperature, ash will be the result. However, this has no bearing on how safe it is to consume these products.

Table 8. Nutritive Value of the Confections with Lemongrass and Wiregrass

** Certified by the Department of Agriculture*

Table 8 presents the nutritive value of the products with lemongrass and wiregrass as certified by the Department of Science and Technology. The analysis covers four (4) types of confectionery products. Each product has lemongrass and wiregrass in different forms namely: Pastillas with powdered lemongrass and wiregrass, Pastillas with lemongrass and wiregrass extract, Polvoron with powdered lemongrass and wiregrass, and Polvoron with lemongrass and wiregrass extract. Each product offers 9.3 servings per container, with a serving size of 27 grams.

As shown in the table, it is evident that the energy content ranges from 95 to 115 kcal per serving. Polvoron varieties have a higher caloric value compared to pastillas, largely due to their higher fat content. Also, for Fat Content. the pastilla varieties have no fat content, while the polvoron varieties have 3 grams of fat per serving, contributing significantly to the higher caloric content of polvoron. In terms of its Carbohydrate Content, the carbohydrate content is relatively similar across all products, ranging from 18 to 20 grams per serving. This suggests that the carbohydrate source is consistent and not significantly affected by the form of lemongrass and wiregrass used.

As to its Protein Content, Pastillas varieties contain slightly more protein (3 grams per serving) compared to polvoron varieties (2 grams per serving). This minor difference indicates that pastillas may be slightly better for those looking to increase their protein intake.

About its Fiber Content, all products contain 0 grams of crude fiber, indicating that these confections are not significant sources of dietary fiber.

Results show that for its Energy and Macronutrients, the Pastillas have lower calories and fat, making them a lighter option compared to polvoron. This is suitable for those looking to manage their fat intake. On the other hand, the Polvoron has higher calories and fat, providing a richer and more energy-dense option. This is suitable for those needing higher energy intake or preferring a more indulgent treat. As to its Protein, the pastilla varieties offer a slight advantage in protein content, which could be beneficial for those looking to increase their protein intake even with sweets. In terms of Carbohydrates and Fiber, all products have similar carbohydrate content and lack fiber, indicating they are primarily sources of quick energy without much benefit for digestive health.

The above findings underline the importance of understanding the nutritional profiles of different confections incorporating lemongrass and wiregrass. For consumers, these insights facilitate more informed dietary choices, catering to their specific needs, whether it is lower calorie intake or higher energy and protein needs. For manufacturers, the findings offer opportunities for targeted product development and marketing, ensuring that a diverse range of consumer preferences and dietary requirements are met. Educating consumers about these nutritional aspects further supports healthier eating habits and overall well-being.

B. Development of the Products

Table 9. Preparation of Powdered Lemongrass and Wiregrass

Product/s	Process	Observation/ Remarks	Result/Photo
Powdered Wiregrass	• Washing • Mechanical Drying • Pulverizing • Shifting • Storing	- has a smooth and powdery texture with a light-green color. - has a lemony flavor with subtle hints of ginger and mint.	
Powdered Wiregrass	• Washing • Mechanical Drying • Pulverizing • Shifting • Storing	- has a smooth and powdery texture. - has a light green color. - has a mild, earthy flavor with subtle grassy undertones.	

Table 9 presents the preparation of powdered lemongrass and wiregrass. It starts with washing the raw materials to guarantee cleanliness, followed by mechanical drying to remove moisture to a temperature of about 15 to 20 °F. Pulverize them into a smooth

powder, shifting them to achieve uniform particle size, removing larger or unwanted particles, and storing them at room temperature (20 to 30 °C) to extend their shelf life.

As a result, the lemon grass powder has a smooth and powdery texture with a light-green color and lemony flavor with subtle hints of ginger and mint. While the wiregrass powder also has a smooth and powdery texture. Moreover, the powder has a light green color, has a mild, earthy flavor with subtle grassy undertones.

Table 10. Preparation of Lemon Grass and Wire Grass Extract

Product/s	Process	Observation/ Remarks	Result/Photo
Lemon grass Extract	• Washing • Pat Drying • Cutting • Pounding • Sugar Concentration • Storing	- has a brown to dark color. - exudes a fresh lemon flavor with subtle hints of ginger and mint. - has a sweet fragrance and taste.	
Wiregrass Extract	• Washing • Pat Drying • Cutting • Pounding • Sugar Concentration • Storing	- has a light brown color. - has a mild earthy flavor with subtle grassy undertones. - has a sweet fragrance and taste.	

Table 10 displays the preparation of lemon grass and wire grass extract. It starts with washing the raw materials to guarantee cleanliness, followed by pat drying to remove moisture content, cutting to ensure uniformity when extracting, pounding to break and release the extract, sugar concentration to prolong the life span of the raw materials, and storing them in a cool dry place.

As a result, the Lemon grass extract has a brown to dark color and exudes a fresh lemony flavor with subtle hints of ginger and mint. While wiregrass extract has a light brown color and a mild earthy flavor with subtle grassy undertones. Both have a sweet fragrance and taste.

Table 11. Preparation of Pastillas with Powdered Lemon grass and Wiregrass

Product	Process	Measurement/Ingredients	No. of Yields	Observation/s
Pastillas with Powdered Lemon grass and Wiregrass	• Mise–en–place • Measuring • Mixing • Portioning • Packing	- 3 grams of Lemon grass Powder - 3 grams Wiregrass Powder - 178 ml Condensed Milk - 270 grams of Skim Milk - 220 grams of Powdered Milk - 64 grams of Refined Sugar - (for dusting) - 2.84 grams Vanilla	- 250 grams - Approximately 26-30 pieces. - No. of serving per container 9.3 - Serving size:27 grams	- exhibited herbaceous notes from Lemon grass and Wiregrass - has a vibrant green color - has a smooth and firm texture coated with sugar.

Table 11 presents the development product of pastillas with powdered lemon grass and wiregrass involves careful preparation and highlights accurate measurement of ingredients to generate a product with a consistent texture, flavor, and appearance of the product. Also, this recipe produced approximately 26-30 pieces with a serving size of 9.3 per container. Finally, the pastillas exhibited herbaceous notes from lemon grass and wiregrass with a vibrant green color and a smooth and firm texture coated with sugar.

Table 12. Preparation of Pastillas with Lemon grass and Wiregrass Extract

Product	Process	Measurement/Ingredients	No. of Yields	Observation
Pastillas with Lemon grass and Wiregrass Extract	• Mise-en - Place • Measuring • Mixing • Portioning • Packing	- 20 ml Lemon grass Powder - 20 ml Wiregrass Powder - 178 ml Condensed Milk - 270 grams of Skim Milk - 220 grams of Powdered Milk - 64 grams Refined Sugar(for dusting) - 2.84 grams Vanilla	250 grams Approximately 26-30 pieces. No. of servings per container 9.3 Serving size:27 grams	- has the citrusy aroma of lemon grass - has a mild earthly scent of wiregrass with a hint of creamy aroma - has a smooth and velvety touch and is coated

				with sugar.

Table 12 shows the preparation of pastillas with lemon grass and wiregrass extract. It requires meticulous preparation and precise measuring of materials to produce a product with a consistent texture, flavor, and appearance. Additionally, this recipe yielded about 26–30 pieces, or 9.3 servings per container. The product has the citrusy aroma of lemon grass and a mild earthly scent of wiregrass with a hint of creamy aroma with a smooth and velvety touch and is coated with sugar.

Table 13. Preparation of Polvoron with Powdered Lemon grass and Wiregrass

Product	Process	Measurement/Ingredients	No. of Yields	Observation/s
Polvoron with Powdered Lemon grass and Wiregrass	• Mise-en–Place • Measuring • Mixing • Portioning • Packing	- 3 grams of Lemon grass Powder - 3 grams Wiregrass Powder - 250 grams All Purpose Flour - 135 grams of Skim Milk - 110 grams of Powdered Milk - 190 grams of Refined Sugar - 95 grams Margarine - 2.84 grams Vanilla	- 250 grams - Approximately 26-30 pieces. - No. of serving per container 9.3 - Serving size:27 grams	- has a herbal scent of lemon grass and wiregrass - has smooth edges, perfect shape, and consistent size.

Table 13 displays the development product for pastillas with lemon grass and wiregrass extract. Precise component measurement and meticulous preparation are required to produce a product with a consistent texture, flavor, and appearance. Additionally, 26–30 pieces, or 9.3 servings per container, were made by this recipe. This confection has an herbal scent of Lemon grass and wiregrass with smooth edges, perfect shape, and consistent size.

Table 14. Preparation of Polvoron with Lemon grass and Wiregrass Extract

Product	Process	Measurement/ Ingredients	No. of Yields	Observation/s
Polvoron with Lemon grass and Wiregrass Extract	• Mise-en – Place • Measuring • Mixing • Portioning • Packing	- 20 ml Lemon grass Extract - 20 ml Wiregrass Extract - 178 ml Condensed Milk - 270 grams of Skim Milk	- 250 grams - Approximately 26-30 pieces. - No. of serving per container 9.3	- has a sweet fragrance and a taste notes of lemon grass and Wiregrass

	- 220 grams of Powdered Milk - 64 grams of Refined Sugar (for dusting) - 2.84 grams Vanilla	- Serving size:27 grams	- Each piece is perfectly shaped, with smooth edges and consistent size.

Table 14 shows that the development product for pastillas infused with lemon grass and wiregrass extract requires careful preparation, and exact components of measurements to produce a product with a consistent texture, flavor, and appearance. Moreover, this dish yielded 26–30 pieces or 9.3 servings of each container. The polvoron has a sweet fragrance and a taste note of Lemon grass and Wiregrass. Each piece is perfectly shaped, with smooth edges and consistent size.

C. Sensory Attributes of the Confections

Table 15 exhibits the analysis and interpretation of the sensory attributes of confections with lemongrass and wiregrass as perceived by various groups of evaluators (children, teenagers, adults, and food experts). The attributes evaluated include flavor profile, aroma characteristics, texture and mouthfeel, and visual appeal. Each group rated these attributes on a scale where a higher mean indicates a higher level of liking.

As shown in the table, the *pastillas with powdered lemongrass and wiregrass* were highly rated by all groups, with adults giving the highest rating of 8.76. The aroma characteristics received high ratings, with adults providing the highest score mean of 8.81. The texture and mouthfeel were also highly liked, with adults rating it the highest. The visual appeal was highly liked, particularly among teenagers and adults. Adults had the highest overall mean score equal to 8.76, followed by food experts with a mean score of 8.66, teenagers with a mean of 8.61, and children having a mean of 8.41.

Results indicate that the confections with lemongrass and wiregrass were extremely well-received across all age groups and food experts. The high ratings in all sensory attributes (flavor profile, aroma characteristics, texture, mouthfeel, and visual appeal) suggest that these confections are highly appealing to a broad audience. The slightly higher ratings by adults and food experts may indicate a greater appreciation for the nuanced flavors and overall quality of the product.

It can be gleaned from the table that the *pastillas with lemongrass and wiregrass extract* were liked extremely across all groups. The pastillas with lemongrass and wiregrass extract were highly favored by all groups, with adults rating the flavor profile the highest with a mean score of 8.88. Food experts also gave a high rating, indicating professional approval. The aroma characteristics were well-received across all age groups, with adults rating this attribute the highest with a mean score of 8.84. The texture and mouthfeel were appreciated by all groups, and the visual appeal was highly rated by adults having mean scores of 8.70 and 8.78, respectively.

Findings indicate that the confections are highly regarded by all evaluators, with adults scoring the highest and food experts confirming their quality and appeal. They have an excellent flavor, aroma, texture, mouthfeel, and visual appeal. Additionally, the confections are perceived as having an excellent flavor profile, aroma, texture, mouthfeel, and visual appeal, making them highly desirable to consumers of all ages.

As presented in the table, the flavor profile, aroma, texture, mouthfeel, and visual appeal of lemongrass and wiregrass confections were highly rated by all groups, with adults and food experts receiving the highest scores. The aroma was particularly appealing to adults, with a mean of 8.80 and 8.79 respectively. The texture and mouthfeel were highly appreciated by teenagers and adults, with a mean of 8.75. The visual appeal was highly rated by adults, with a mean of 8.70. Overall, the sensory attributes of the confections were highly liked by all evaluators, regardless of age or expertise.

The overall mean scores reflect a strong positive reception across all groups, with teenagers and adults rating the confections the highest with a mean = 8.75. Food experts, while slightly more critical, still provided an extremely favorable overall mean score of 8.65. Therefore, the sensory attributes of the confections with lemongrass and wiregrass are universally liked extremely by all evaluators, regardless of age or expertise. The flavor profile, aroma, texture mouthfeel, and visual appeal all received very high ratings, with the overall mean scores reflecting a consistently positive perception. This indicates that the combination of lemongrass and wiregrass in confections is highly successful in appealing to a broad audience, including children, teenagers, adults, and food experts. The highest ratings were consistently given by teenagers and adults, suggesting a particular resonance with these age groups.

Data revealed that despite slight variations, all groups rated the *polvoron* with lemongrass and wiregrass extract as "*Like Extremely*", with a mean score of 8.78 given by the adults suggesting that the lemongrass and wiregrass extracts created a universally appealing product.

Specifically, all groups rated the flavor profile very high, with adults giving the highest mean score of 8.75. This suggests that the flavor was universally appealing across all age groups. Likewise, the aroma was *liked extremely* by adults with a mean = 8.81, indicating that the olfactory experience was an important factor for this group. Although children rated it slightly lower with a mean = 8.41 than the other groups, the rating shows that the product was liked extremely by the children.

Teenagers and adults rated texture and mouthfeel the highest, suggesting these attributes significantly enhanced their enjoyment of the confections. Also, teenagers gave the highest score for visual appeal (8.81), indicating that the visual aspect was particularly important for them. Children and adults also rated visual appeal highly, underscoring its overall importance.

D. General Level of Acceptability of the Confections

Table 16. General Level of Acceptability of the Confections with Lemongrass and Wiregrass as Evaluated by the Different Age Groups of Respondents

Variant	Respondents	Mean	Sd	Description
Pastillas with Powdered	Children	8.41	0.2872	Like Extremely
	Teenagers	8.78	0.4365	Like Extremely

Lemongrass and Wiregrass	Adults	8.76	0.1316	Like Extremely
	Food Experts	8.66	0.5198	Like Extremely
Overall Mean		**8.65**		**Like Extremely**
Pastillas with Lemongrass and Wiregrass Extracts	Children	8.35	0.5930	Like Extremely
	Teenagers	8.64	0.3918	Like Extremely
	Adults	8.80	0.3570	Like Extremely
	Food Experts	8.65	0.5347	Like Extremely
Overall Mean		**8.61**		**Like Extremely**
Polvoron with Powdered Lemongrass and Wiregrass	Children	8.46	0.3340	Like Extremely
	Teenagers	8.75	0.2430	Like Extremely
	Adults	8.75	0.4314	Like Extremely
	Food Experts	8.65	0.5203	Like Extremely
Overall Mean		**8.65**		**Like Extremely**
Polvoron with Lemongras and Wiregrass Extracts	Children	8.49	0.3302	Like Extremely
	Teenagers	8.67	0.2173	Like Extremely
	Adults	8.78	0.4285	Like Extremely
	Food Experts	8.60	0.5820	Like Extremely
Overall Mean		**8.64**		**Like Extremely**

The above shows the general acceptability of different confection variants containing lemongrass and wiregrass among various age groups: children, teenagers, adults, and food experts. The confections tested include pastillas and polvoron, with two variations each—using powdered ingredients and extracts. Each group's responses are rated on a scale presumably from 1 to 9, where higher means indicate greater acceptability.

For Pastillas with Powdered Lemongrass and Wiregrass, all the respondents' groups rated this variant highly, with means indicating they "*Like Extremely*". Teenagers and adults gave slightly higher ratings compared to children and food experts. The small standard deviations (Sd) indicate consistent preferences within groups, especially among adults.

Pastillas with lemongrass and wiregrass extracts also received high ratings, with adults showing the highest acceptability with 8.35 being the lowest coming from the children and the highest mean of 8.80 coming from the adults. This indicates that all groups of respondents found this variant to be "*Liked Extremely".* The slightly higher SD among children and food experts suggests a wider range of opinions in these groups.

With the Polvoron with Powdered Lemongrass and Wiregrass variant, an overall mean of 8.65 which was also "*liked Extremely"* by all the groups of respondents. Similar to pastillas, this variant is highly acceptable across all groups. Children rated this slightly higher than pastillas with extracts, but teenagers and adults showed consistently high ratings. Again, small SD values indicate uniformity in ratings.

Additionally, the Polvoron with Lemongrass and Wiregrass Extracts variant was also "*Liked Extremely"* by the different groups of respondents and was rated a mean score of 8.64. This variant is also rated very high. Children and adults provided slightly higher ratings compared to powdered variants, with teenagers showing the lowest SD, indicating a very consistent liking within this group.

Based on the data, it can be concluded that the confection variants were well-received by all respondent groups, with mean ratings consistently above 8, indicating that the confections were "Like Extremely". Adults consistently provided high ratings across all variants, showing a strong preference. Teenagers and children also showed strong liking but with slightly lower and more varied ratings compared to adults. Food experts, while also rating the confections highly, showed the most variability, possibly reflecting their critical approach to food tasting. The uniformity of high ratings across all groups suggests that the use of lemongrass and wiregrass, whether powdered or in extracts, is a broadly acceptable and well-received addition to these confections.

E. Significant Difference Between the Sensory Attributes of the Confections

Table 17. Comparison in the Sensory Attributes of the Confections with Lemon Grass and Wiregrass as Perceived by the Evaluators

Confections	F-Value	ρ-Value	Decision	Remarks
Pastillas with Powdered Lemongrass and Wiregrass				
Flavor Profile	2.6885	0.0523	Accept H_0	Not Significant
Aroma Characteristics	2.8415	0.0434	Reject H_0	Significant
Texture and Mouthfeel	1.4850	0.2254	Accept H_0	Not Significant
Visual Appeal	1.4004	0.2492	Accept H_0	Not Significant
Pastillas with Lemongrass and Wiregrass Extract				
Flavor Profile	3.7056	0.0152	Reject H_0	Significant
Aroma Characteristics	3.2560	0.0262	Reject H_0	Significant
Texture and Mouthfeel	1.2837	0.2861	Accept H_0	Not Significant
Visual Appeal	2.4477	0.0712	Accept H_0	Not Significant
Polvoron with Powdered Lemongrass and Wiregrass				
Flavor Profile	2.4950	0.0662	Accept H_0	Not Significant
Aroma Characteristics	4.4166	0.0064	Reject H_0	Significant
Texture and Mouthfeel	0.8007	0.4973	Accept H_0	Not Significant
Visual Appeal	0.6529	0.5836	Accept H_0	Not Significant
Polvoron with Lemongrass and Wiregrass Extract				
Flavor Profile	0.9386	0.4264	Accept H_0	Not Significant

Aroma Characteristics	2.1862	0.0965	Accept H_0	Not Significant
Texture and Mouthfeel	0.9512	0.4203	Accept H_0	Not Significant
Visual Appeal	.6258	0.1904	Accept H_0	Not Significant

Table 17 displays the comparison in the sensory attributes of the confections with lemon grass and wiregrass as perceived by the evaluators.

As presented in the table, the sensory evaluation of pastillas made with powdered lemongrass and wiregrass revealed no significant difference in flavor profile, aroma characteristics, texture, mouthfeel, or visual appeal between the two types. The ρ-value for the flavor profile is 0.0523, suggesting no significant difference in perceptions. The ρ-value for texture and mouthfeel is 0.2254, well above the 0.05 threshold, indicating no significant difference in texture and mouthfeel. The ρ-value for visual appeal is 0.2492, also above the 0.05 threshold, indicating no significant difference in visual appeal. Therefore, we accept the null hypothesis (H_0), indicating that evaluators did not perceive a significant difference in the flavor profiles of the product. However, in terms of aroma, data reveal that the ρ-value for aroma characteristics is 0.0434, which is below the 0.05 threshold for statistical significance. This means that there is a statistically significant difference in the aroma characteristics of pastillas made with powdered lemongrass and wiregrass as perceived by the evaluators.

Findings suggest that the sensory evaluation of pastillas with powdered lemongrass and wiregrass shows that there is a statistically significant difference only in the aroma characteristics. The differences in flavor profile, texture mouthfeel, and visual appeal are not statistically significant, meaning that evaluators did not perceive these attributes differently between the two types of pastillas.

Regarding pastillas with lemongrass and wiregrass extract, the table shows that the ρ-value for texture and mouthfeel is 0.2861, which is well above the 0.05 threshold for statistical significance. This means that there is no significant difference in the texture and mouthfeel of pastillas made with lemongrass extract versus those made with wiregrass extract. Therefore, we accept the null hypothesis (H_0), indicating that evaluators did not perceive a significant difference in the texture and mouthfeel of the produced product. Similarly, the ρ-value for visual appeal is 0.0712, which is above the 0.05 threshold for statistical significance. This means that there is no significant difference in the visual appeal of pastillas made with lemongrass and wiregrass extract Thus, we accept the null hypothesis (H_0), indicating that evaluators did not perceive a significant difference in the visual appeal of the product. On the contrary, the ρ-value flavor profile and aroma are 0.0152 and 0.0262, respectively, which are below the 0.05 threshold for statistical significance. This means that there is a statistically significant difference in the flavor profiles and aroma of the pastillas made with lemongrass and wiregrass extract as perceived by the evaluators. Therefore, we reject the null hypothesis (H_0), indicating that the evaluators perceived notable differences in the flavor and aroma of pastillas with lemongrass and wiregrass extracts.

The table also shows that the sensory evaluation of polvoron with powdered lemongrass and wiregrass shows that there is a statistically significant difference only in the aroma characteristics with a ρ-value = 0.0064 which is less than 0.05, thus the null hypothesis is rejected. This indicates that the evaluators perceived a significant difference in terms of the aromas of the polvoron. In contrast, the differences in flavor profile, texture mouthfeel, and visual appeal are not statistically significant, meaning that evaluators did not perceive these attributes differently in the produced polvoron.

Lastly, it is evident from the presented data that the ρ-values for the flavor profile, aroma characteristic, texture and mouthfeel, and visual profile are all higher than the conventional threshold of 0.05 for statistical significance. Therefore, we accept the null hypothesis (H_0), suggesting that there is no statistically significant difference in all the abovementioned sensory attributes of the polvoron made with lemongrass and wiregrass extract as perceived by the evaluators.

F. Shelf life of the Products

Table 18. Shelf Life of Powdered Wiregrass

Weeks of Observation	Observation Results
First week	The Powdered Wiregrass had a perfect green color, smelled herbaceous with sweet notes, and had a perfectly fine texture.
Second week	Same observations as the first week, there was a perfect green color, no foul smell, and perfect texture.
Third week	Same observation as the 2nd week, it had a perfect green color, no foul smell, no molds, no pest, and a perfect texture.
Fourth week	Same observation as the 3rd week, it had a perfect green color, no foul smell, no molds, no pest, and a perfect texture.
Fifth week	The powder did not change its color, no sign of molds, the smell did not change, and there were no pests observed.
Sixth week	Same observation as the 5th week, The powder did not change its color, no sign of molds, the smell did not change, and there were no pests observed.
Seventh week	Same observation as the 6th week, The powder did not change its color, no sign of molds, the smell did not change, and there were no pests observed.
Eight week	The powder was still fine, with no sign of spoilage, the texture was still good, no change in color, and no strong nor foul smell.
Ninth week	Same observation as the 8th week. The powder was still fine, with no sign of spoilage, the texture was still good, no change in color, and no strong nor foul smell.

Tenth week	Same observation as the 9th week. The powder was still fine, with no sign of spoilage, the texture was still good, no change in color, no strong nor foul smell, and can be stored for up to 1 month at room temperature.

Observation of the shelf-life of the produced powdered Wiregrass is shown in Table 18. From the First week up to the Tenth week, the powdered Wiregrass did not show signs of spoilage. The powdered Wiregrass had a perfect green color, smelled herbaceous with sweet notes, and had a perfectly fine texture

Table 19. Shelf Life of Powdered Lemongrass

Weeks of Observation	Observation Results
First week	The Powdered Lemon grass had a perfect green color, smelled like fresh citrus, and had a perfectly fine texture.
Second week	Same observations as the first week, there was a perfect green color, no foul smell, and perfect texture.
Third week	Same observation as the 2nd week, it had a perfect green color, no foul smell, no molds, no pest, and a perfect texture.
Fourth week	Same observation as the 3rd week, it had a perfect green color, no foul smell, no molds, no pest, and a perfect texture.
Fifth week	The powder did not change its color, no sign of molds, the smell did not change, and there were no pests observed.
Sixth week	Same observation as the 5th week, The powder did not change its color, no sign of molds, the smell did not change, and there were no pests observed.
Seventh week	Same observation as the 6th week, The powder did not change its color, no sign of molds, the smell did not change, and there were no pests observed.
Eight week	The powder was still fine, with no sign of spoilage, the texture was still good, no change in color, and no strong nor foul smell.
Ninth week	Same observation as the 8th week. The powder was still fine, with no sign of spoilage, the texture was still good, with no change in color, and no strong nor foul smell.
Tenth week	Same observation as the 9th week. The powder was still fine, with no sign of spoilage, the texture was still good, no change in color, no strong nor foul smell, and can be stored for up to 1 month at room temperature.

Table 19 presents the shelf-life of the powdered lemon grass. From the First week up to the Tenth week, the product did not show any signs of spoilage. The Powdered Lemon grass still had a perfect green color, and the aroma of fresh citrus remained and had a perfectly fine texture.

Table 20. Shelf-life of the Pastillas with Powdered Lemon Grass and Wiregrass

Days of Observation	Observation of Results
Day 1	The pastillas had a uniform shape and vibrant green color. It has a citrusy smell of Lemon grass and a mild early scent of wiregrass.
Day 2	Same observation in First Day. It had a perfect vibrant green color and a hint of sweet fragrance.
Day 3	The pastillas remain fresh with no visible sign of spoilage.
Day 4	The visual appearance of Pastillas did not change their color and shape. No sign of molds or foul smell.
Day 5	The same observation in the Fourth Day. The Pastillas did not change their color and shape. No sign of molds or foul smell.
Day 6	The Texture of the Pastillas did not change. It had a smooth texture and has a sweet aroma and taste.
Day 7	. Same observation on the Sixth Day. The Texture of the Pastillas did not change. It had a smooth texture and has a sweet aroma and taste.
Day 8	The texture of the pasta was still firm and good. No change in color or foul smell.
Day 9	The same observation in Eighth Day. Pastillas texture was still firm and good. No change in color or foul smell.
Day 10	The Pastillas were still fine, and the texture was still good, with no strong or foul smell.
Day 11	Same observation in Tenth Day. The pastillas were still fine, the texture was still good, no strong nor foul smell.
Day 12	The Pastillas started to show slight changes in color and appearance, aroma was still good. Visible molds and any discoloration indicated spoilage and were no longer safe for consumption.

The table above shows that during day 1 to day 6 of observation, the Pastillas with Powdered Lemon grass and Wiregrass visually had a uniform shape, vibrant green color

and had a citrusy smell of Lemon grass and a mild early scent of wiregrass. Additionally, from Day 7 to Day 11 of observation, the pastillas were still fine, texture was still firm and good. However, the pastillas began to show slight changes in color and appearance on day 12 of observation. Visible molds and any discoloration indicate spoilage and are no longer safe for consumption.

Table 21. Shelf-life of the Pastillas with Lemongrass and Wiregrass Extract

Days of Observation	Observation Results
Day 1	The pastillas have a uniform shape and color. It has a citrusy smell of Lemon grass and a mild early scent of wiregrass.
Day 2	Same observation in First Day. It has a perfect color and has a hint of sweet fragrance.
Day 3	The pastillas remained fresh with no visible sign of spoilage.
Day 4	The visual appearance of Pastillas did not change their color and shape. No sign of molds or foul smell.
Day 5	Same observation on the Fourth Day. The Pastillas did not change their color and shape. No sign of molds or foul smell.
Day 6	The Texture of the Pastillas did not change. It had a smooth texture and has a sweet aroma and taste.
Day 7	Same observation on the Sixth Day. The Texture of the Pastillas did not change. It had a smooth texture and has a sweet aroma and taste.
Day 8	The texture of the pasta was still firm and good. No change in color or foul smell.
Day 9	The same observation on the Eighth Day. Pastillas texture was still firm and good. No change in color or foul smell.
Day 10	The Pastillas were still fine, and the texture was still good, with no strong or foul smell.
Day 11	The Pastillas started to show slight changes in color and appearance, aroma was still good. Visible molds and any discoloration indicated spoilage and were no longer safe for consumption.

The table above presents that the pastillas with lemon grass and wiregrass extract observed from Day 1 to Day 7 were visually uniform in shape and color, the citrusy smell of Lemon grass, and a mild early scent of wiregrass are noticeable. Furthermore, the pastillas maintained their good quality, sweet aroma, and texture from Day 8 to Day 10 of observation. However, on Day 11 of observation, the pastillas started to exhibit minor color and appearance alterations. Any discoloration, including visible mold, indicates spoiling and renders food unfit for ingestion.

Table 22. Polvoron with Powdered Lemon Grass and Wiregrass

Days of Observation	Observation Results
Day 1	The polvoron had a perfect shape, uniform green color, fine and smooth texture, and a sweet aroma and taste.
Day 2	Same observation in First Day. It had a uniform shape, fine and smooth texture, and had a sweet aroma and taste.
Day 3	The polvoron remained fresh with no visible sign of spoilage.
Day 4	Same observation on the Third Day. polvoron remained fresh with no visible sign of spoilage.
Day 5	The texture of polvoron was still compact and firm. No change in color or foul smell.
Day 6	Same observation in Fifth Day. The texture of polvoron was still compact and firm. No change in color or foul smell.
Day 7	The Polvoron started to show signs of deterioration, the Texture became softer and it was no longer firm. Visible molds and any discoloration indicated spoilage and were no longer safe for consumption

The table demonstrates that the Polvoron with Powdered Lemon Grass and Wiregrass during day 1 to day 5 of observation had a uniform green color, perfect shape, fine and smooth texture, and a sweet aroma and taste. Furthermore, the polvoron on day 6 of observation, maintained its aroma and texture. However, on day 7 of observation, the Polvoron started to show signs of deterioration, the Texture became softer and it was no longer firm. Visible molds and any discoloration indicated spoilage and were no longer safe for consumption.

Table 23. Polvoron with Lemongrass and Wiregrass Extract

Days of Observation	Observation Results
Day 1	The polvoron had a perfect shape, uniform white color, fine and smooth texture, and a sweet aroma and taste.
Day 2	Same observation on the First Day. It had a uniform shape, fine and smooth texture, and a sweet aroma and taste.

Day 3	Same observation on the Third Day. polvoron remained fresh with no visible sign of spoilage.
Day 4	The texture of polvoron was still compact and firm. No change in color or foul smell.
Day 5	The polvoron started to show a slight change in color and appearance. Texture became softer. Visible molds and any discoloration indicated spoilage and were no longer safe for consumption.

The table indicates that the Polvoron containing lemon grass and wiregrass extract during day 1 to day 3 of observation had a perfect shape, was uniform in color, fine and smooth texture, and had a sweet aroma and taste. Additionally, during day 4 of observation, the polvoron texture remained firm. Yet on the fifth observation day, a minor alteration in appearance, and hue began to exhibit, and the texture softened. Any discoloration or visible mold signals spoiling and makes the food unsafe to eat.

Conclusions

The findings of this study reveal the potential of lemongrass and wiregrass as novel ingredients in Filipino confections, offering a unique flavor profile and nutritional benefits. The high acceptability across all age groups and food experts suggests a strong market potential for these innovative treats. The study's findings highlight the importance of understanding consumer preferences and the impact of different processing methods on the sensory attributes and shelf life of the products. The significant difference observed in the aroma characteristics of some variants suggests the need for further investigation into the optimal processing techniques to enhance the sensory appeal of these confections. Furthermore, the relatively short shelf-life of the confections, particularly those made with extracts, requires the development of strategies to extend their shelf life, potentially through the use of stabilizers or other preservation methods. This research provides valuable insights for confectionery manufacturers and researchers seeking to develop innovative and marketable products that cater to diverse consumer preferences and meet the growing demand for healthier and more palatable treats.

Recommendations

In view of the findings and conclusions of the study, the following recommendations are offered:

1. Food technology experts are encouraged to promote lemongrass and wiregrass confections as a healthy and flavorful alternative, highlighting the study's positive consumer response to these ingredients, and suggesting a strong market potential.
2. Focus should be placed on enhancing the aroma characteristics. That is, further research and development should concentrate on maximizing the desirable aroma of lemongrass and wiregrass in confections.

3. Methods to extend the shelf life of the confections be explored. The use of stabilizers or other preservation techniques to increase the shelf life of confections, particularly those made with extracts should be looked into.
4. Specific consumer groups should be targeted. The researcher should tailor marketing strategies to different age groups, recognizing the strong preference for these confections among teenagers and adults.
5. Consumers should be made aware of the nutritional benefits of lemongrass and wiregrass so that they can have informed choices and expand the market appeal of these innovative treats.

Compliance with Ethical Standards

The author declares that this research was conducted with strict adherence to ethical guidelines. Informed consent was obtained from all participants before their involvement in the study, ensuring they were fully aware of the research objectives, procedures, and potential risks. Respondents were informed of their right to withdraw from the study at any time without penalty. The anonymity of all participants was maintained throughout the research process, and their well-being was safeguarded. No conflict of interest exists in the conduct of this study. The authors have strictly avoided plagiarism, ensuring that all sources are properly cited and acknowledged. Furthermore, the interpretation of the findings was conducted without bias, and the results were used solely for research purposes.

Acknowledgments

The author would like to express her sincere gratitude to all those who contributed to the success of this study. She is deeply indebted to her esteemed adviser, Dr. R.G. Torres, for his invaluable guidance, encouragement, and unwavering support throughout the research process. Her heartfelt thanks go to the respondents for their generous participation and willingness to share their insights. Also, she is grateful to her workmates, friends, and family for their constant encouragement and understanding during this endeavor. Finally, she acknowledges the guiding hand of God for His blessings and grace, which made this research possible.

STRENGTHENING THE TEACHING AND LEARNING OF CONTEMPORARY ISSUES IN PUBLIC SECONDARY SCHOOLS

Melody Legion Berdan

Sta. Maria Integrated High School, Santa Maria, Laguna, Philippines
Laguna State Polytechnic University, Siniloan, Laguna, Philippines

https://doi.org/10.5281/zenodo.12182412

ABSTRACT

This study aims to enhance the teaching and learning of contemporary issues in public secondary schools by equipping educators with evidence-based strategies for engaging students with complex societal challenges. Using a Mixed Methods Research approach, specifically Concurrent Triangulation, it integrated qualitative and quantitative data collection and analysis to improve the validity and reliability of findings. The study revealed that curriculum content and teaching methods significantly impact learning outcomes, while the school attended and gender do not. It highlighted the importance of engaging students through problem-solving, interactive activities, and instructional support, noting that family profiles influence understanding of various issues. Innovative teaching practices that connect theory with real-life examples and emphasize civic education effectively foster critical thinking and social responsibility. Significant correlations were found between students' age, family profile factors, and learning outcomes, with student-centered methods notably enhancing engagement and achievement in Araling Panlipunan 10 – Contemporary Issues.

Keywords: *contemporary issues, teaching methods, mixed methods research*

INTRODUCTION

Education, as a fundamental pillar of societal development, plays a crucial role in shaping individuals' intellectual and social capacities. Studies highlight the multifaceted

benefits of education, emphasizing its impact on economic growth, social cohesion, and individual well-being. Hanushek and Woessmann (2015) discuss that educational quality, rather than merely educational attainment, significantly influences economic development, linking cognitive skills to individual earnings and national growth. Educational institutions provide stability, routine, and consistency essential for effective learning and emotional well-being (Gershoff et al., 2014). The structure and effectiveness of education systems vary widely around the world. The OECD (2019) provides a comparative analysis, noting that successful systems often share characteristics such as high expectations for students, professional development for teachers, and robust accountability mechanisms. Finland's education system is praised for its emphasis on teacher autonomy and student-centered learning, contributing to its students' high performance in international assessments (Sahlberg, 2011).

Reforms and policies on education are crucial in addressing inequalities and ensuring inclusive education. UNESCO (2020) emphasizes inclusive education policies addressing marginalized groups, ensuring every child has access to quality education. Policies aimed at reducing disparities, such as providing additional resources to low-income schools or implementing special education programs, are essential for creating an equitable education system.

These education systems are complex and dynamic, influenced by various factors, including economic conditions, social policies, and technological advances. Continued research and policy development are required to address emerging challenges and opportunities, ensuring education remains a driving force for individual and societal development. Several suggestions can be proposed: (1) educators should utilize a learning model emphasizing the process of constructing knowledge to enhance students' conceptual understanding. Contextual Teaching and Learning (CTL) models focus on providing direct experiences, helping students better understand and engage with the subject matter (Johnson, 2019; Berns & Erickson, 2020); (2) teachers are advised to maximize the use of learning modules by incorporating CTL in their lessons. This method requires teachers to actively engage students, especially those demonstrating lower understanding. Applying the CTL learning model helps students relate lessons to real-life situations, enhancing their involvement and comprehension (Vygotsky, 2018; Alsubaie, 2016).

Educational research emphasizes the importance of a relevant and dynamic curriculum that adapts to contemporary issues to prepare students for modern society's complexities. In Social Studies (Araling Panlipunan) 10, which focuses on contemporary issues in the Philippines, the curriculum aims to develop critical thinking, civic awareness, and social responsibility (Magno & De Guzman, 2016). By addressing contemporary issues like environmental sustainability, political dynamics, and social justice, the curriculum engages students in meaningful discussions and projects, developing a deeper understanding of their social context (Bruner, 1960; Dewey, 1938).

Integrating contemporary issues into the curriculum responds to the rapidly changing global landscape. Reyes (2018) notes that a curriculum incorporating current

social, economic, and political issues helps students develop a global perspective. Understanding these connections helps students appreciate global cooperation's complexities and the importance of active citizenship.

Theories on education suggest using social media in teaching for three potential reasons: exposing students to practices, extending the learning environment, and promoting learning through social interaction and collaboration. Six distinct factors align with these reasons: facilitating student engagement, organizing for teaching, engaging with outside resources, enhancing attention to content, building communities of practice, and resource discovery. These studies depict different teaching and learning techniques, showing the various effects of factors considered and how they affect student learning.

The author wishes to highlight the teaching and learning process in Cluster 1 of the Division of Laguna post-pandemic. Integrating contemporary issues into the Araling Panlipunan 10 curriculum enhances students' critical thinking and engagement, preparing them for modern world challenges (Dewi & Primayana, 2019). Education refines individuals, preparing them to solve daily life problems and improve their quality of life (Primayana, 2016).

Building on the cited studies, this research investigates the relationship between teaching, learning, and students' personal and family backgrounds, aiming to identify effective strategies for staying informed about current trends and contemporary issues through diverse learning practices.

Research Questions

The main objective of this research is to aid the students in public secondary schools to stay informed on contemporary issues. Particularly, it aims to answer the following questions:

1. Is there a significant relationship between the personal profile of the learners (school, age, and gender) and the extent of learning contemporary issues among Grade 10 students in public schools?
2. Is there a significant relationship between the family profile of the learners and the extent of learning contemporary issues among Grade 10 students in public schools in terms of:
    - 2.1 Environment and Economic issues;
    - 2.2 Political and Peace Issues; and
    - 2.3 Human Rights and Gender issues?
3. Is there a significant relationship between extent of teaching and extent of learning Contemporary Issues among Grade 10 Students in Public Secondary Schools through Different Learning Practices?
4. What are the best practices of Araling Panlipunan 10 teachers in teaching Contemporary Issues?
5. What benefits do Grade 10 students derive from the teachings in Araling Panlipunan 10 Contemporary Issues according to teachers' perceptions?

METHODOLOGY

This study assessed the teaching and learning of Araling Panlipunan 10 Contemporary Issues among Grade 10 students in public secondary schools in Cluster I of the Division of Laguna. It analyzed teaching methods for various contemporary issues, gathered insights from teachers on best practices, and evaluated student perceptions of the subject's value using surveys and interviews. Necessary permits and documents were obtained, and strict confidentiality and ethical principles were followed. Limitations include potential non-generalizability beyond Cluster I, a restricted timeframe to the 2022-2023 school year, and reliance on self-reported data. Despite these, the study provided valuable insights and recommendations for improving pedagogy in public secondary education.

A Mixed Methods Research (MMR) approach was employed in this study, specifically using Concurrent Triangulation design. This method integrates qualitative and quantitative research concurrently to provide a comprehensive understanding of the research topic (Almeida, 2018; Creswell & Plano Clark, 2018; Johnson & Onwuegbuzie, 2004). By collecting and analyzing qualitative and quantitative data separately, the study compared and integrated the findings to enhance validity and reliability (Creswell & Creswell, 2017). The quantitative aspect focused on collecting numerical data to explore relationships and patterns within the Grade 10 student population, emphasizing measurement, control, and statistical analysis for objective results (Creswell & Creswell, 2017; Trochim & Donnelly, 2008). Additionally, the study used a Narrative Research design for the qualitative part, focusing on individual stories and experiences to uncover core themes and meanings (Riessman, 2008). This involved face-to-face interviews with teacher participants to gather valid and reliable information on their best practices in teaching Araling Panlipunan 10 Contemporary Issues. Through these interviews, the study aimed to understand unique perspectives and interpretations, shedding light on the complexities of human existence and socio-cultural contexts in teaching contemporary.

A self-made questionnaire was developed, which underwent both internal and external validation and pilot testing. The pilot test involved thirty mixed-gender students from a public secondary school, leading to minor revisions to enhance the instrument's reliability and validity. The Likert scale, widely used in surveys to measure respondents' attitudes, was employed with interpretations ranging from "To a Great Extent" (4) to "Not at all" (1), encouraging definitive opinions for clearer insights (Joshi et al., 2015). Two separate questionnaires were created for teachers and students. The student questionnaire had three parts: personal profile (name, school, age, gender), family profile (residence, parents' civil status, educational attainment, number of children, income, occupation), and the extent of learning contemporary issues (environmental, economic, political, peace, human rights, and gender issues). The teacher questionnaire also had two parts: personal profile (name, age, gender, civil status, education, position, service length, teaching hours) and questions on instructional practices in teaching contemporary issues.

The author conducted interviews with teacher participants, and Araling Panlipunan 10 teachers and class advisers assisted in distributing and retrieving data via Google Forms from students. Student data were analyzed with statistical tools for valid interpretations. Learners' and teachers' personal and family profiles were analyzed using frequency and mean statistics, with frequency measuring occurrences and mean providing average values.

The extent of teaching and learning contemporary issues was assessed using a Likert scale to measure respondents' attitudes. Significant relationships between the profiles of teachers and learners and the extent of teaching and learning were tested using the chi-square test, a method for testing relationships between categorical variables (Alavi et al., 2020). Interview questions were designed to elicit detailed responses from teachers, with each interview recorded and notes taken, ensuring privacy and consent. Turner (2020) emphasized best practices in qualitative interviews, including effective question creation and data confidentiality. Cohen, Manion, and Morrison (2018) discussed various data collection methods, highlighting ethical considerations and methodological rigor. Post-interview, responses were thematically coded, a process essential for categorizing data into themes for analysis. Castleberry and Nolen (2018) noted that thematic coding enhances clarity and organization in qualitative research. Kuya Doc Adz (2021) provided a detailed overview of the thematic analysis process, ensuring reliability and validity.

RESULTS

1. Relationship between the Personal Profile of Learners and Extent of Learning Contemporary Issues among Grade 10 Students in Public Secondary Schools

PERSONAL PROFILE	EXTENT OF LEARNING	STATISTICAL TREATMENT	COMPUTED VALUE	P-VALUE	DECISION	INTERPRE - TATION
School	Environmental and Economic Issues	Chi-square Test	35.205	0.065	Failed to Reject Ho	Not Significant
Age		Chi-square Test	4.247	0.894	Failed to Reject Ho	Not Significant
Gender		Chi-square Test	2.946	0.400	Failed to Reject Ho	Not Significant
School	Political and Peace Issues	Chi-square Test	28.528	0.238	Failed to Reject Ho	Not Significant
Age		Chi-square Test	47.901	<0.001	Reject Ho	Significant
Gender		Chi-square Test	4.61	0.203	Failed to Reject Ho	Not Significant
School	Human Rights and Gender Issues	Chi-square Test	31.654	0.136	Failed to Reject Ho	Not Significant
Age		Chi-square Test	27.945	<0.001	Reject Ho	Significant
Gender		Chi-square Test	7.284	0.063	Failed to Reject Ho	Not Significant

2. Relationship between Family Profile of Learners and Extent of Contemporary Issues among Grade 10 Students in Public Secondary Schools in Terms of Environmental and Economic Issues

FAMILY PROFILE	EXTENT OF LEARNING	x^2 VALUE	P-VALUE	DECISION	INTER-PRETATION
Location of Residence	Environ-mental and Economic Issues	20.76	0.002	Reject H_0	Significant
Civil Status of Parents		30.214	0.003	Reject H_0	Significant
Educational Attainment of Parents		33.076	0.045	Reject H_0	Significant
Number of Children		9.893	0.935	Failed to Reject H_0	Not Significant
Average Monthly Income		14.381	0.497	Failed to Reject H_0	Not Significant
Occupation		11.231	0.081	Failed to Reject H_0	Not Significant
Occupation (Private)		11.063	0.086	Failed to Reject H_0	Not Significant
Occupation (Public)		1.371	0.968	Failed to Reject H_0	Not Significant

3. Relationship between Family Profile of Learners and Extent of Learning Contemporary Issues Among Grade 10 Students in Public Secondary Schools in Terms of Political and Peace Issues

FAMILY PROFILE	EXTENT OF LEARNING	x^2 VALUE	P-VALUE	DECISION	INTERPRETATION
Location of Residence	Political and Peace Issues	11.602	0.071	Failed to Reject H_0	Not Significant
Civil Status of Parents		45.97	<0.001	Reject H_0	Significant
Educational Attainment of Parents		21.208	0.446	Failed to Reject H_0	Not Significant
Number of Children		10.189	0.926	Failed to Reject H_0	Not Significant
Average Monthly Income		15.253	0.433	Failed to Reject H_0	Not Significant
Occupation		2.261	0.894	Failed to Reject H_0	Not Significant
Occupation (Private)		10.862	0.028	Reject H_0	Significant
Occupation (Public)		10.519	0.104	Failed to Reject H_0	Not Significant

4. Relationship between Family Profile of Learners and Extent of Learning Contemporary Issues among Grade 10 Students in Public Secondary Schools in Terms of Human Rights and Gender Issues

TEACHER'S PERSONAL PROFILE	EXTENT OF LEARNING	STATISTICAL TREATMENT	COM-PUTED VALUE	P-VALUE	DECISION	INTER-PRETATION
Location of Residence	Human Rights and Gender Issues	Chi-square Test	17.346	0.008	Reject Ho	Significant
Civil Status of Parents		Chi-square Test	37.053	<0.001	Reject Ho	Significant
Educational Attainment of Parents		Chi-square Test	36.19	0.021	Reject Ho	Significant
Number of Children		Chi-square Test	11.831	0.856	Failed to Reject Ho	Not Significant
Average Monthly Income		Chi-square Test	18.516	0.237	Failed to Reject Ho	Not Significant
Occupation		Chi-square Test	4.999	0.544	Failed to Reject Ho	Not Significant
Occupation (Private)		Chi-square Test	7.165	0.028	Reject Ho	Significant
Occupation (Public)		Chi-square Test	4.285	0.638	Failed to Reject Ho	Not Significant

5. Relationship between Extent of Teaching and Extent of Learning Contemporary Issues among Grade 10 Students in Public Secondary Schools through Different Learning Practices

EXTENT OF LEARNING	EXTENT OF TEACHING CONTEMPORARY ISSUES THROUGH DIFFERENT LEARNING PRACTICES								
	The students learn through…	student leadership	idea presentation and feedback	in-depth learning and organizational guidance	procedural question answering and task assistance	engagement with open-ended ideas	exploring alternative problem-solving methods	modeling problem-solving apporachers	using localized and real-life examples
Environ-mental and Economic Issues	Value	.444**	.377**	.500**	.275**	.336**	.177**	.166**	.237**

8. Thematic Map for Best Teaching Practices

DISCUSSION

Table 1 shows that the school attended by the students, does not significantly affect their learning outcomes on their understanding about Environment and Economic issues, Political and Peace issues, and Human Rights and Gender issues as indicated by p-values of 0.065, 0.238, and 0.136, respectively. These are above the conventional threshold of 0.05, which leads to a decision to fail to reject the null hypothesis (Ho) in each case, suggesting no significant relationship between the school attended and the extent of learning in these areas.

Parallel to the Doe (2020) indicated no significant differences in students' understanding of environmental and economic issues across various school types, suggesting that school type has minimal impact on these educational outcomes. Similarly, Smith and Jones (2018) and Johnson (2019) found no significant variations in political and peace education outcomes based on school type. Moreover, the study emphasizes the importance of equitable resource distribution across schools, evidenced by similar educational outcomes across different institutions. This highlights the necessity for fair access to resources, opportunities, and services regardless of individuals' backgrounds or circumstances, aligning with the emphasis by Smith (2019) on equity in education. Lastly, the study underscores the significance of pedagogical approaches, suggesting that innovative teaching methods, teacher training, and inclusive educational practices may be more impactful in enhancing students' understanding of these issues than the

specific school environment. Implementing diverse pedagogical approaches fosters inclusive learning environments and promotes equitable opportunities for all students to succeed, as noted by Sánchez and Salinas (2020).

As for Age, it shows a significant correlation with comprehension of Political and Peace issues, as well as Human Rights and Gender issues, with Chi-square values of 47.901 and 27.945 and p-values below 0.001, rejecting the null hypothesis. This highlights the need for tailored educational interventions to address the age-learning relationship in critical social and political issues, supported by Sánchez and Salinas (2020) and Smith (2019), emphasizing diverse pedagogical approaches and equitable resource distribution. However, age does not significantly influence comprehension of Environmental and Economic issues, with a p-value of 0.894, suggesting that as students age, their involvement with Political and Peace issues, as well as Human Rights and Gender issues, notably escalates. This aligns with Smith's (2020) findings that older students exhibit heightened grasp of political systems and gender equality compared to younger counterparts.

In terms of Gender, it does not significantly impact learning extent in any evaluated contemporary issues, with p-values above 0.05 for environmental and economic issues, political and peace issues, and human rights and gender issues, resulting in a decision not to reject the null hypothesis in all cases (Doe et al., 2021).
These results underscore the importance of broader societal interventions in education, suggesting policymakers and educators prioritize addressing external influences like family environment, community involvement, and media exposure alongside school-related factors to improve learning outcomes.

Table 2 unveiled both significant and non-significant relationships concerning Environmental and Economic issues. Specifically, factors such as location of residence, civil status, and educational attainment were found to significantly influence students' learning outcomes in these domains, leading to the rejection of the null hypothesis. These findings underscore the crucial role of family background in shaping academic achievement, echoing previous research highlighting the impact of socio-demographic factors on students' educational attainment (Johnson et al., 2018; Smith and Brown, 2017). Thus, interventions targeting educational disparities should consider socio-economic challenges and provide tailored support to affected students. However, variables like the number of children, average monthly income, and parental occupations did not exhibit significant impacts on learning extent. While factors such as location of residence, civil status, and educational attainment emerged as significant predictors of learning outcomes, the non-significant relationships highlight the complexity of influences on academic achievement. Previous studies have shown mixed findings regarding the effects of family size on educational achievement (Lee and Smith, 2019), and the relationship between parental occupation and academic performance remains debatable.

In Table 3, it is evident that various aspects of family profiles exhibit differing levels of significance in relation to students' learning outcomes in the domain of political and peace issues. Specifically, the civil status of parents emerges as a statistically significant

predictor, with a p-value of less than 0.001, leading to the rejection of the null hypothesis (H_0) and indicating its significance in influencing learning extent. This finding corroborates previous research emphasizing the impact of family structure on educational achievement (Smith & Brown, 2017). In contrast, factors such as the location of residence, educational attainment of parents, number of children, average monthly income, and parental occupations do not demonstrate a significant influence, as indicated by their higher p-values and failure to reject H0. While these results may seem unexpected, they are consistent with prior studies that have yielded mixed findings regarding the effects of these variables on academic performance (Johnson et al., 2018; Lee & Smith, 2019). However, it is noteworthy that the occupation of parents in the private sector emerges as statistically significant, with a p-value of 0.028, suggesting its importance in shaping students' learning outcomes. To conclude, the varying significance of family profile aspects in students' learning outcomes regarding political and peace issues was highlighted. While the civil status of parents emerges as a significant predictor, other factors like location of residence, parental education, number of children, income, and parental occupations show no significant influence, aligning with previous studies' mixed findings. A notable significance of parental occupation in the private sector underscores its role in shaping learning outcomes.

In Table 4, factors like location of residence, civil status, parents' educational attainment, and parents' occupation in private sectors show significant relationships with learning extent, leading to the rejection of the null hypothesis. However, the number of children, average monthly income, and parents' occupation in public sectors have no significant impacts, failing to reject the null hypothesis for these factors. These findings imply: (1) Residence location may influence information access and topic emphasis, indicating potential disparities in resources or cultural attitudes (Smith et al., 2019; Garcia, 2019). (2) Family structure may impact students' engagement with Human Rights and Gender issues (Jones & Brown, 2017). (3) Parental education likely shapes students' comprehension of these topics (Jones & Brown, 2017). (4) The professional settings and networks associated with private sector employment may offer additional perspectives on Human Rights and Gender issues (David, 2018). Conversely, the lack of significant impacts from certain factors yields different implications: (1) The insignificance of family size suggests sibling dynamics have minimal influence on understanding Human Rights and Gender issues, with broader environmental factors like school and community environments being more influential (Howe, Recchia, & Kinsley, 2023). (2) The absence of a significant relationship between income and learning implies financial resources alone don't determine learning extent about these issues, with other factors like resource allocation being more significant (The World Bank, 2013). (3) The negligible impact of public sector occupations suggests they don't offer a distinctive advantage or disadvantage regarding learning about these issues, potentially indicating a uniform approach compared to the private sector (The World Bank, 2013).

Table 5 analyzes the correlation between teaching methods and student learning outcomes in Grade 10 public secondary schools, focusing on Environmental and Economic issues. The results consistently show that effective teaching practices significantly improve students' understanding of these topics, aligning with research

emphasizing active learning approaches. Rodriguez and Garcia (2018) found that inquiry-based tasks enhance critical thinking in environmental science, while Johnson and Smith (2019) observed similar benefits in environmental studies. Brown et al. (2020) also noted positive effects on economic understanding through problem-solving tasks. These findings extend to Political and Peace, and Human Rights and Gender issues, highlighting the importance of incorporating cognitive tasks for holistic learning.

After a careful analysis of the tabulated participants' responses in Table 6, addressing the question, 'What are the best practices of Araling Panlipunan 10 teachers in teaching Contemporary Issues?", accurate descriptions of the participants' experiences were elicited by asking appropriate questions, focusing on identifying the main essence of the central theme to expand knowledge. Through narrative analysis, one predominant theme emerged: "Dynamic Learning Environments by Bridging Theory and Practice," as reflected in direct quotes from the participants. Subthemes such as Experiential Learning, Civic Education and Awareness, Student Engagement and Learning, and Learning Enhancement and Innovation were identified within this overarching theme. These were labeled using direct quotations from the participants to express their original ideas. Some responses were translated into English, and pseudonyms were used for each teacher participant to protect their identities.

Theme: Dynamic Learning Environments by Bridging Theory and Practice

Subtheme 1. Experiential Learning

The students' engagement and learning retention is being impacted by how teachers implement their innovative teaching practices. One particular effective method is experiential learning, which emphasizes learning through hands-on experience and immersion. In fact, participants stated that:

> *"It is important for them to participate in the discussion so that they understand the current issues. To keep them interested, I use stories and scenes from life that are related to what we have discussed once, or often they have experienced it themselves. So, it seems that they understand what I am saying more easily because they have experienced it themselves." – Teacher 1*

> *" When I give examples, I share real-life stories, and students often share their own related experiences. This helps me assess their understanding. For instance, during the pandemic, they shared how barangay leaders distributed relief goods and their ways of coping with COVID-19." – Teacher 2*

> *" As you may have noticed, I often take the children out of the classroom. When our topic is related to the environment, we go to places like the market, plaza, court, or road. I want them to experience real life. They interview tricycle drivers, salespeople, and even hang out, giving them a practical understanding of the topics we discuss. " – Teacher 8*

Teachers' testimonials highlight the profound impact of experiential learning on student engagement and retention. Incorporating real-life experiences and practical examples into teaching practices not only fosters active participation but also cultivates a deeper understanding among students. Relating discussions to relatable stories facilitates students' comprehension of complex concepts. It is highlighted that using real-life anecdotes aids in assessing students' understanding while enhancing their connection to the material. Moreover, immersive approach in real-world settings provides students with invaluable hands-on experiences, thereby enhancing their practical understanding of the subject matter. These methods enable students to not only understand theoretical knowledge but also apply it in practical contexts, leading to long-lasting retention. Supported by Teunissen and Dornan (2017), these findings highlight experiential learning's pivotal role in promoting active engagement and skill development. Ultimately, by bridging classroom content with real-world applications, experiential strategies enrich the learning experience and contribute to enhanced academic achievement.

Subtheme 2. Civic Education and Awareness

Students develop critical thinking skills and stayed informed about what is happening in the world when current events are incorporated into the curriculum. Some of the participants' statements are:

> *"Integrating current events and real-life situations, accompanied by multimedia presentations and online resources, engages students more and facilitates their understanding." – Teacher 2*

> *"I believe using real-life examples and current events is one of the best ways to show students how it affects their lives. I encourage them to watch the news but caution them about "fake news" and recommend relying on credible sources. The next day, we discuss their views on the news, helping them stay informed and develop critical thinking skills." – Teacher 3*

> *"I encourage students to search and read the news to stay informed about current issues. Analyzing real-world situations expands their imagination and critical thinking skills more effectively than the unrealistic scenarios often portrayed in movies or TV series. Engaging with actual events allows students to develop a deeper understanding of the complexities and nuances of real-life problems, fostering a more informed and thoughtful perspective." – Teacher 11*

> *"Active participation makes them analyze multiple perspectives and formulate opinions on contemporary issues. To keep them engaged, I incorporate current events and news articles relevant to the topics." – Teacher 12*

The incorporation of current events into the curriculum under the subtheme of Civic Education and Awareness has been highlighted by participants as crucial for developing critical thinking skills and staying informed about global affairs. As noted, integrating current events alongside multimedia presentations and online resources not only enhances student engagement but also facilitates their understanding of real-world issues. It stresses the importance of using real-life examples and cautioning students about the credibility of news sources to foster critical thinking skills and informed perspectives. Moreover, it also emphasizes the significance of encouraging students to engage with news articles and real-world situations to broaden their understanding and develop nuanced perspectives on complex issues. Furthermore, highlighted the role of active participation in analyzing multiple perspectives on contemporary issues, emphasizing the incorporation of current events to keep students engaged. These testimonies affirm the value of integrating current events into the curriculum to enhance critical thinking skills and promote civic awareness among students.

Subtheme 3. Student Engagement and Learning

Engaging students in dialogic learning and discussion-based activities enhances their learning by promoting critical thinking, active listening, and effective communication. Dialogic learning fosters collaboration and deeper engagement, allowing students to understand diverse perspectives. Studies by Boyd and Markarian (2015) show that dialogic teaching improves cognitive outcomes and motivates students. When combined with role-playing, this approach immerses students in realistic scenarios, improving empathy and perspective-taking. These methods enhance engagement and help students apply concepts in real-world situations, as supported by participant testimonials.

> *“It's important for learners to engage in discussions to deepen their understanding and perspectives. To keep them interested, I often start with thought-provoking questions or real-life examples that relate to their experiences.” – Teacher 1*

> *"It is important for them to participate in the discussion so that they understand the current issues. To keep them interested, I use stories and real-life scenes that relate to what we are discussing." – Teacher 4*

> *“I often use discussion-based activities and dialogues to emphasize real-world events and explore possible solutions to contemporary problems. Students tend to express their thoughts and ideas more effectively when they can articulate them verbally. Many find it challenging to express themselves through writing and are happier when given the opportunity to speak and explain their viewpoints. This approach not only enhances their communication skills but also brings a diverse range of perspectives to the discussion, enriching the learning experience for everyone." – Teacher 6*

> *“I encourage active participation through open discussions and debates. When we engage in debates, the time flies, often missing an hour, as*

students delve deeply into their own reasoning. The beauty of this approach is that we receive a wide array of ideas and perspectives from the students, offering learning opportunities from viewpoints we might not have considered." – Teacher 9

The insights provided by the teachers underscore the significance of student engagement and active participation in fostering meaningful learning experiences. This accentuates the use of thought-provoking questions and real-life examples to stimulate students' interest and deepen their understanding. This aligns with research suggesting that incorporating real-world contexts and relevant examples can enhance student engagement and learning outcomes (Gee, 2014). Similarly, it emphasizes the importance of using stories and real-life scenarios to maintain students' interest and help them grasp current issues, a strategy supported by literature on the effectiveness of narrative-based teaching methods in promoting engagement and comprehension (Johnson & Ponessa, 2008).

Data clearly demonstrates the value of discussion-based activities and dialogues in linking classroom learning to real-world events and contemporary issues. By providing opportunities for verbal expression, this approach not only enhances students' communication skills but also fosters a diverse exchange of perspectives, enriching the learning experience for all participants. Additionally, such activities promote active engagement, critical thinking, and deeper understanding among students, preparing them to navigate complex societal challenges effectively. Moreover, incorporating dialogues and discussions into the curriculum nurtures a culture of inquiry and curiosity, empowering students to become lifelong learners and informed citizens.

This aligns with research highlighting the benefits of dialogic learning approaches in promoting critical thinking, communication skills, and collaborative problem-solving abilities (Littleton & Mercer, 2013). Furthermore, it shows the role of open discussions and debates in fostering active participation and deepening students' reasoning skills. Engaging in debates not only captivates students' interest but also exposes them to a range of viewpoints, fostering a deeper understanding of complex issues (Van Eemeren & Grootendorst, 2004).

Subtheme 4. Learning Enhancement and Innovation

Represents an epitome of effective teaching strategies, showcasing educators' dedication to improving learning encounters through inventive approaches, teachers utilize novel methods and technological advancements to promote active participation and equip students to thrive in various learning environments. Some of strategies based from the teachers are as follows:

"I once asked an external resource speaker, an expert in leadership and community service, to enhance our lesson. I invited a graduate of Political Science and a current member of the Sangguniang Bayan to speak on the topic. The students were captivated, and the lesson was explained more

effectively. It was a win-win situation where we all learned something new beyond the textbook." – Teacher 2

"Today's kids are passionate about multimedia presentations and find the traditional chalkboard approach boring. To engage them, I incorporate their names and pictures into my PowerPoints and other presentations, making them the characters in the lesson. This strategy keeps students interested and eager to see their role. Additionally, I use diverse methods like debates, movie analysis, role-playing, and interviews to avoid the monotony of usual teaching methods and keep learning exciting and varied." – Teacher 5

"When necessary, I use activities and objects around; varied teaching approaches so that students can better apply what they have learned in different situations. The use of localized materials is important to me. For example, I make examples of establishments, real shops around and local personalities, the ones they often see, not famous artists." – Teacher 10

"I give them opportunities to share their opinions and views on issues through debates and group discussions. There are often interactive and collaborative lectures, where I teach while talking to the students." – Teacher 11

The teaching methods advocated by Teachers 2, 5, 10, and 11 exemplify innovative pedagogical approaches geared towards enriching learning experiences and stimulating student involvement. The utilization of external resource speakers, particularly an expert in leadership and community service, illustrates the significance of integrating real-world expertise into classroom instruction. This strategy not only deepens comprehension but also motivates students to bridge theoretical knowledge with practical applications, as supported by research emphasizing the benefits of incorporating real-world contexts in education (Hattie & Anderman, 2013). Similarly, incorporation of multimedia presentations, customized with students' personal details, acknowledges contemporary learners' preferences and the effectiveness of multimedia in engagement (Kuhlthau et al., 2015). By employing various interactive methods like debates and role-playing, it fosters a dynamic learning environment that accommodates diverse learning styles, aligning with research advocating for varied instructional approaches to cater to students' individual needs (Hattie & Anderman, 2013). Emphasis on adapting the curriculum to students' local context highlights the importance of relevance and applicability in learning, promoting deeper understanding and practical application of concepts (Kuhlthau et al., 2015). Lastly, focus on interactive lectures and collaborative discussions nurtures critical thinking and encourages active student participation, aligning with research on the benefits of student-centered learning environments (Hattie & Anderman, 2013).

Teachers enhance learning by connecting classroom lessons to real-world experiences, creating dynamic environments that bridge theory and practice. Hands-on

activities like field trips and real-life stories help students grasp and retain concepts. Current events sharpen critical thinking, while discussion-based activities boost participation and communication skills. Innovative methods like multimedia presentations and role-playing engage diverse learning styles, enriching the learning experience and improving academic performance.

After carefully studying responses in Table 5 about what Grade 10 students gain from Araling Panlipunan 10 Contemporary Issues, we focused on getting clear descriptions of their experiences. We asked specific questions to understand the main idea better. Eventually, we found that the main theme is "Empowering Learners for Social Responsibility and Critical Engagement," supported by subthemes like Civic and Citizenship Education, Social Awareness and Participation, and Cognitive Development. Moreover, including discussion-based activities in the curriculum not only helps students feel socially responsible but also helps them think critically about different views, preparing them to make meaningful contributions to society.

Theme: Empowering Learners for Social Responsibility and Critical Engagement

Subtheme 1. Civic and Citizenship Education

Teachers have found that Civic and Citizenship Education is clearly propelled by several factors, including awareness of civic duties, social and environmental consciousness, and comprehension of citizens' rights and responsibilities.

> *"Grade 10 students appreciate Contemporary Issues teaching as it offers them the chance to engage and voice their opinions, particularly on political topics. This exposure provides them with a clearer understanding of candidates' platforms." – Teacher 1*

> *"Modern students are increasingly well-informed about legal compliance, particularly regarding regulations and the rights of individuals. They hold many ideas and opinions about current events in their environment, yet they may benefit from guidance to refine some of their perspectives." – Teacher 2*

Students enjoy discussing current political topics, which helps them express their views and understand political platforms better. This shows that encouraging open discussions on civic matters can boost students' awareness and comprehension of politics. It is also observed that today's students are aware of legal rights but may need guidance to refine their perspectives on current events. This highlights the need for structured support to help students analyze societal issues and form informed opinions. These findings support past research indicating that civic education enhances critical thinking and engagement. Smith and Johnson (2018) discovered that discussing political issues boosts students' civic attitudes, while Doe et al. (2020) emphasized the role of guidance in fostering informed decision-making in civic matters. As well, providing students with opportunities for hands-on civic engagement activities can further solidify

their understanding of societal issues and their capacity to contribute positively to their communities. Additionally, facilitating immersive experiences such as volunteering in local initiatives or participating in community-based research projects not only deepens students' comprehension of societal complexities but also nurtures their ability to proactively address challenges and effect meaningful change within their communities.

Subtheme 2. Social Awareness and Participation

The result also shows that teachers perceive an enhanced understanding of societal issues and practical knowledge acquisition as key outcomes of integrating contemporary issues into teaching.

> *"They become more "informed" and understanding of what is happening around them." – Teacher 3*

> *"Based on what I see and hear, it's evident that Grade 10 learners value lessons on Contemporary Issues because it inspires hope and motivates them to reflect and initiate change in society. They often comment on the events occurring around them." – Teacher 4*

> *"For me, lessons from Contemporary Issues are important to Grade 10 learners because it gives them the opportunity to become more responsible and meaningful citizens." – Teacher 8*

Particularly, these responses from the participants reveals significant insights into Grade 10 students' perspectives on contemporary issues. An increase in students' awareness and understanding of societal events, suggests that engaging with such topics enriches their comprehension of the world. Similarly, students find value in these lessons as they inspire hope and motivate them to drive societal change. It also emphasizes the role of contemporary issue lessons in cultivating responsible citizenship among students. These findings echo prior research emphasizing education's role in fostering social awareness, civic engagement, and responsible citizenship. Garcia and Smith (2019) found that socially aware students exhibit higher levels of civic participation and responsibility. Similarly, Brown et al. (2020) stressed the importance of meaningful discussions and activities on contemporary issues in nurturing civic duty and social consciousness among students.

Subtheme 3. Cognitive Development

Diamond (2015) defined cognitive development by emphasizing the importance of executive functions such as inhibitory control and working memory, which are crucial for learning and adaptation. These functions contribute to academic success across various age groups. Based on teachers' perceptions, Grade 10 students' cognitive abilities and engagement are evident.

"It gives them the opportunity to participate in expressing their opinions in a wider and deeper way. They have many ideas that have been inputted into the discussion." – Teacher 7

"Acceptance and recognition of interest in environmental discussions and activities." - Teacher 11

"They understand more deeply now the things that are being taught to them. They appreciate the context of the lessons." – Teacher 9

"Their increased participation in local community activities stems from their enhanced understanding, similar to their stronger connections with school programs and involvement in Sangguniang Kabataan (SK) and Sangguniang Baranggay (SB) activities in their respective barangays." – Teacher 12

Teachers observe students actively engaging in problem-solving tasks and concept mapping, indicating understanding of the material. Students show a growing interest in real-world issues through embracing environmental discussions. Additionally, they demonstrate improved critical thinking and application of knowledge by grasping lessons more deeply. Furthermore, students exhibit a broader understanding of societal issues and a sense of civic responsibility as they become more involved in local community activities. These findings provide evidence for the notion that actively engaging in classroom activities leads to enhancements in cognitive skills, as demonstrated in studies by Rodriguez and Garcia (2018) and Smith and Brown (2017). Moreover, research conducted by Johnson and Smith (2019) indicates that students who participate in debates and discussions exhibit superior critical thinking abilities, further highlighting the beneficial impact of interactive learning experiences on cognitive development.

This thematic map harmoniously fuses qualitative and quantitative data, presenting a holistic perspective on the best practices in teaching Araling Panlipunan 10. Its overarching aim is to elevate student-learning outcomes through a multifaceted approach.

Conclusions

After a comprehensive analysis, the following results have been identified. (1)There is a significant link between students' age and their understanding of contemporary issues, contradicting H01, while no notable connections were found between the school attended, gender, and learning extent; (2) The results for H02 reveal significant connections between different family profile factors—such as location of residence, civil status of parents, and parental occupation—and students' understanding of contemporary issues among Grade 10 students. Likewise, there are significant relationships between family profile elements like location of residence, civil status of parents, and educational attainment of parents, and the extent to which students learn

about human rights and gender issues; (3) Null hypotheses in H03 are consistently rejected across various contemporary issues, indicating a significant relationship between the extent of teaching and learning among Grade 10 students in public schools, irrespective of different learning practices employed; (4) Innovative teaching methods, particularly those integrated into Dynamic Learning Environments by Connecting Theory and Practice, notably enhance student involvement and academic achievements in Araling Panlipunan 10. These approaches prepare students with essential practical skills, critical thinking capabilities, and a sense of social responsibility vital for their future pursuits; and (5) Teachers view student engagement and interest in learning Araling Panlipunan 10 Contemporary Issues as highly advantageous. They stress innovative, student-centered methods to deepen engagement and ready students for social responsibility and critical thinking, empowering them for social responsibility and critical engagement.

Recommendations

Since teachers are the facilitators of learning and the agent and means of best classroom experiences, more training will enhance their capabilities to help broaden the knowledge of students and support ideas that will bridge the gap between theoretical knowledge and practical application.

Learners are observed to be of great value and are profound advocates of civic engagements. Their awareness should be brought to light through different channels with the help of the LGUs and other NGOs. This act will not just strengthen the teaching and learning process but also broaden the knowledge and skills of the youth.

Compliance with Ethical Standards

The author declare her commitment to ethical standards in this study. Informed consent was obtained from all respondents and participants, ensuring they were fully aware of the study's purpose and their rights. Respondents were given the freedom to withdraw from the study at any point without consequence. Anonymity was rigorously maintained to safeguard the privacy and confidentiality of the respondents. Measures were taken to ensure the well-being of the participants throughout the research process. The author affirm that no conflict of interest influenced the conduct of the study, and plagiarism was diligently avoided. Furthermore, the interpretation of findings was unbiased, and the results were solely utilized for research purposes, upholding the integrity and credibility of the study.

Acknowledgments

I am thankful to my family for always supporting me in my studies. My Inay Irene and Tatay Rufo (+) for the inspiration; Aldrin, Grant and Ace, my family, for the support, understanding, and inspiration as well during my crucial days; and my brothers, Mat and Andro, and Yana for cheering me up. Your love and encouragement have helped me face challenges and pursue my passions. To my mentors and professors, I am grateful for

your guidance and patience. You have helped shape my intellect and research skills. Thanks to my panel members for their feedback and evaluation of my work. Your expertise has influenced this thesis greatly. Lastly, to all the respondents and participants, thank you for sharing your insights. To all of you, I appreciate your presence in my academic journey.

TEACHERS' DIGITAL LITERACY AND PEDAGOGICAL INTEGRATION OF INFORMATION AND COMMUNICATION TECHNOLOGY IN TEACHING: BASIS FOR A TRAINING PROGRAM

Alvin M. Orivida, Julieta Q. Nabos, Ph.D.

Marinduque State College Graduate School Extension Programs to Eastern Quezon College, Inc. Gumaca, Quezon, Philippines

https://doi.org/10.5281/zenodo.11503539

ABSTRACT

This study aimed to determine the relationship between teachers' digital literacy and pedagogical integration of Information Communication and Technology in teaching that could lead to an outcome of a training enhancement program in the North Bondoc Peninsula, Quezon Province. Based on the findings, the level of teachers' pedagogical integration of ICT was generally high. The level of pedagogical integration of Information and Communication Technology in terms of Lesson Planning, Preparation of Instructional Materials, Delivery of Instruction, and Assessment of Learning were all often integrated by the teachers. There is a significant relationship between digital literacy and information and communication technology in lesson planning and online-based conferences and assessment of learning to productivity of software tools. The problems met in information and communication technology in teaching were claimed to be sometimes encountered. The coping mechanisms of teachers to address challenges in pedagogical integration of information and communication technology in their teaching were claimed to be sometimes. A training program is designed for the enhancement of ICT Pedagogical Integration in teaching.

Keywords: *Digital Literacy, Integration, Information Communication and Technology and Teaching*

INTRODUCTION

Information and Communication Technology in education allows for new education for both teachers and students. Online or e-learning is increasingly growing in popularity with various unprecedented events taking place in our lives. It not only chances for schools to ensure that learners have access to instructional resources in the classroom, but it also enables them to ensure pupils in settings other than the classroom, like homes.

Information may be received in numerous formats, including text, video, sound, and images, so in considering that there is technology available that generates these kinds of data and when any of these are combined, it refers to technology that is mobile. For instance, cellphones, digital cameras, and video cameras. The need to enhance the digital literacy of teachers, especially in the Province of Quezon, North Bondoc Peninsula, may be considered as the top priority of DepEd as many technological advancements are already available such as training and seminars for ICT Pedagogical Integration are already in place for the betterment of digital literacy.

When ICT is integrated into lessons, teachers and learners become more engaged in their work. It is because technology provides different opportunities to make it more fun to teach the same things in many ways. In this increased engagement, learners retain knowledge more effectively and efficiently. One of the skills for the 21st century includes evaluating, planning, monitoring, and reflecting. Effective use of ICT in education requires the ability to justify and explain how ICT is used to solve problems. Students must debate, take tests, and think about the different strategies they might employ. Education aims to prepare a labor force that will meet the demands of the society.

In education, information and communication technology has received enough attention. ICT has been integrated into the development plans of the United Nations and other international education partners. Teachers must be prepared with new pedagogical competencies and new approaches to teacher education in order to effectively use technology in the classroom. Instructors ought to learn about the objectives of policy and be able to recognize the different facets of education reform that are connected to these goals.

In the Schools Division of Quezon, Evardome et al. (2019) stated that most of the teachers in DepEd Quezon have basic competence in demonstrating continual growth in technology knowledge and stay abreast of current and emerging technologies who can select and use the correct terminology to describe functions of current and emerging hardware, software, and network-related resources used for classroom settings. Either old or new have insufficient time whenever they prepare technology-based lessons. It could be attributed to a lack of technological and pedagogical content knowledge in technology-integrated lessons. Lack of proper equipment may also be the reason since only a few teachers have personal laptops.

As DepEd Order No. 31, s. 2012 Grades 1 to 10 of the K to 12 Basic Education Curriculum and DepEd Order No. 021 s. 2019 Policy Guidelines on the K to 12 Basic Education Program, which mandate and core objectives include incorporating a

comprehensive and strategic digital literacy plan in Philippine education match with the K-12 curriculum. Further, this research study would establish a better outlook on ICT Pedagogical integration as digital literacy is already a need. ICT will continue to be a significant part of our future as it connects to more and more parts of our lives. It will continually evolve and change because consumers like a choice.

The Theory of Connectivism by Siemens G. (2005) acknowledged that technology is a major factor in the educational process and that being always linked offers possibilities for selecting the source of the teachers who will do its role. Also, it promotes participation in group activities and conversation, allowing for a variety of viewpoints and points of view when it comes to making decisions, resolving issues, and comprehending information. Connectivism encourages learning that takes place external to an individual,, specifically through social media, online networks, blogs, or information databases. It relies heavily on technology, introducing more opportunities for digital learning to the learners.

The theory of Task Technology Fit by Goodhue D. & Thompson R. (1995) discussed a holistic understanding of how the user, particularly the teacher, chooses the information technology that affects its performance, assesses usage impacts, and matches the task to the technology characteristics. The appropriateness of task technology and task characteristics can be affected, which determines user performance and usage, behavioral intention to use, and actual media use, specifically in practicing the integration of ICT during teaching and learning. It relates that if the technology fits the user's tasks and workflow, the user will use technology during these tasks and vice versa. If the technology interrupts the user's workflow and tasks, the user will not use it or try to avoid it.

It discussed how the user and the teacher choose the information technology that affects performance, evaluates usage effects, and matches the task to the technological characteristics. The appropriateness of task technology and task characteristics can be affected, which determines user performance and usage, behavioral intention to use, and actual media use, specifically in practicing the integration of ICT during teaching and learning.

In assumption, the teacher must be technologically informed to improve digital literacy abilities of learners. They are expected to provide students with relevant and current experiences that will enable them to engage effectively with digital technology and prepare them for 21st-century skilled life after school. As a result, to meet the current demands of 21st-century learners and have an enhanced teaching-learning process, teachers must be digitally upgraded.

Every digitally literate teacher helps to provide the learner with the abilities and technically innovative skills needed to achieve K-12 standards. In connection with this, the researcher however observed that the lack of study on the level of digital literacy of teachers and the level of integration of information and communication technology (ICT) and its relation, particularly in the Province of Quezon, North Bondoc Peninsula, despite the increasing technological innovations and rapid advancement in education as thru

integrating information and communication technology in teaching barrier have seen challenging in the teacher's role in education. The researcher is prompted to conduct this study on the Teachers' Digital Literacy and Pedagogical Integration of Information and Communication Technology in Teaching: Basis for a Training Program.

Research Questions

This study aimed to determine the relationship between Teachers' Digital Literacy and Pedagogical Integration of Information and Communication Technology in Teaching that could lead to an outcome of a Training Program in the North Bondoc Peninsula.

Specifically, this study looks for the answer to the following questions:

1. What is the level of teachers' digital literacy in terms of:
    1.1 Productivity Software Tools,
    1.2 Website Browsing,
    1.3 Social Media Platforms,
    1.4 Learning Resource Management System,
    1.5. Online-Based Conference Platforms?

2. What is the level of pedagogical integration of Information and Communication Technology in terms of:
    2.1 Lesson Planning,
    2.2 Preparation of Instructional Materials,
    2.3 Delivery of Instruction,
    2.4 Assessment of Learning?

3. Is there a significant relationship between digital literacy and pedagogical integration of information and communication technology integration in teaching?

4. What are the problems met by the teachers in pedagogical integration of information and communication technology in teaching?

5. What are the coping mechanisms of the teachers to address the problems met in the pedagogical integration of information and communication technology in their teaching tasks?

6. What training program could be proposed for the enhancement of pedagogical integration of ICT in teaching?

METHODOLOGY

Research Locale

The study was conducted at the North Bondoc Peninsula, located in the Quezon Province, Philippines, encompassing 102 schools, 82 elementary and 20 secondary schools. These schools are distributed in six districts, Padre Burgos, Agdangan, Unisan,

Pitogo, Macalelon, and General Luna, situated in the Quezon Province. The researcher selected the North Bondoc Peninsula as the research locale to benefit more from the output in this paper. This study was inclusive of those districts as they are all in the Quezon Province.

Teachers in public schools were the study's target population in the North Bondoc Peninsula. Information and communication technology is taught to learners, so teachers are more interactive and innovative in their teaching approach. The result of their teaching was correlated with the school heads as respondents. The study used simple random sampling conducted in the North Bondoc Peninsula.

Since the entire population represents the data set with an equal probability of being chosen, the respondents chose samples through the wheel of names or the random name picker. It would provide a fair representation of a group. Deperso G. (2024) stated that simple random sampling culls a smaller size from a larger population and uses it to research and generalize the group. All respondents answered the self-made questionnaire and ensured its confidentiality.

Table 1

Respondents of the Study

North Bondoc Peninsula Municipalities	No. of School Heads		No. of Teachers	
	Population	Sample Size	Population	Sample Size
Padre Burgos	17	14	203	49
Agdangan	8	7	116	28
Unisan	19	15	226	54
Pitogo	19	15	219	53
Macalelon	20	17	228	55
General Luna	19	15	219	53
Total	**102**	**83**	**1211**	**292**

Table 1 shows the Population and Sample of the respondents. The researcher used Slovin's Formula to determine the sample size derived from the population. Ellen S. (2020) stated that it allows for the sampling of the population by a researcher with a desired degree of accuracy and provides guidance on the required sample size to guarantee a respectable level of result accuracy.

Research Instrument

The researcher used a self-made survey questionnaire to gather data from the respondents consisting of two Parts.

Part I of the research instrument consists of the item that gathers the data for a statement of the problem number 1 level of teachers' digital literacy in Productivity Software Tools, Website Browsing, Social Media Platforms, Learning Resource Management Systems, and Online-Based Conference Platforms. Statement of problem number 4 was the problems met in information and communication technology in teaching. Statement of problem number 5 was the coping mechanisms of the teachers integrating information and communication technology in their teaching tasks.

This questionnaire contained the Likert scale to measure the level of teachers' digital literacy challenges met in information and communication technology in teaching and coping mechanisms of the teachers integrating information and communication technology in their teaching tasks. The respondents of Instrument number 1 are the teachers through the following descriptive scale:

Table 2
Descriptive Scale for Digital Literacy

Point Scale	Verbal Interpretation	Qualitative Description
5	Very High (VH)	The teacher has a very high level of literacy ranging from 76% to 100%.
4	High (H)	The teacher has a high extent of literacy ranging from 51% to 75%.
3	Moderately (M)	The teacher has a moderate extent of literacy ranging 26% to 50%.
2	Low (L)	The teacher has a low extent of literacy ranging 1% to 25%.
1	None (N)	The teacher has no literacy.

This study used a descriptive scale for the teachers' digital literacy. A point scale of 5 is interpreted as Very High with the qualitative description of teacher has a very high extent of literacy ranging from 76% to 100%, scale of 4 is interpreted as High with the qualitative description of teacher has a high extent of literacy ranging from 51% to 75%, point scale of 3 are interpreted as Moderately with the qualitative description of teacher has a moderate extent of teacher has a literacy ranging 26% to 50%, teacher has a low extent of literacy ranging 1% to 25%, and point scale of 1 are interpreted as None with the qualitative description of teacher has no literacy to 0%.

Table 3
Descriptive Scale for Problems Met

Point Scale	Verbal Interpretation	Qualitative Description
5	Always (A)	The teacher frequently encountered problems to an extent equivalent to 5 to 7 days a week.
4	Often (O)	The teacher frequently encountered problems to an extent equivalent to 4 days a week.
3	Sometimes (S)	The teacher frequently encountered problems to an extent equivalent to 3 days a week.
2	Rarely (R)	The teacher frequently encountered problems to an extent equivalent 1 to 2 days a week.
1	Never (N)	The teacher does not encounter problems at all.

This study used a descriptive scale for the Problems Met. A point scale of 5 is interpreted as Always Encountered with the description of a teacher is frequently encountered problems to always extent equivalent to 5 to 7 days in a week, scale of 4 is interpreted as Often Encountered with the description of teacher is frequently encountered problems to often extent equivalent to 4 days in a week, point scale of 3 are interpreted as Sometimes Encountered with the description of the teacher is frequently encountered problems to sometimes extent equivalent to 3 days in a week, point scale of 2 are interpreted as Rarely Encountered with the description of the teacher is frequently encountered problems to sometimes extent equivalent 1 to 2 days in a week, and point scale of 1 are interpreted as Never Encountered with the description of The teacher do not encountered problems at all.

Table 4
Descriptive Scale for Coping Mechanism

Point Scale	Verbal Interpretation	Qualitative Description
5	Always (A)	The teacher frequently copes with the problems using the mechanism 20 or more times a month.
4	Often (O)	The teacher frequently copes with the problems using the mechanism 15 to 19 times a month.
3	Sometimes (S)	The teacher frequently copes with the problems using the mechanism 10 to 14 times a month.

2	Rarely (R)	The teacher frequently copes with the problems using the mechanism 5 to 10 times a month.
1	Never (N)	The teacher does not use the copes mechanism.

Descriptive scale for coping mechanisms of the teachers to address the problems met in the pedagogical integration of information and communication technology in their teaching tasks. The point scale of 5 is interpreted as Always with the qualitative description of teachers frequently copes with the problems using the mechanism 20 or more times a month. Point scale of 4 is interpreted as often meant copes the problems using the mechanism 15 to 19 times a month. Point scale of 3 is interpreted as sometimes copes with the problems using the mechanism 10 to 14 times in a month. Point scale of 2 is interpreted as rarely coping with the problems using the mechanism 5 to 9 times a month, and point scale of 1 is interpreted as Never, which meant teachers do not use the coping mechanism.

Part II of the research instrument consists of the items that gathers the level of integration of information and communication technology in teaching in terms of Lesson Planning, Preparation of Instructional Materials, Delivery of Instruction, and Assessment of Learning.

This questionnaire used the Likert scale to measure the level of teachers' digital literacy, problems met by the teachers in the integration of information and communication technology in teaching, and coping mechanisms of the teachers to address the problems met in the pedagogical integration of information and communication technology in their teaching tasks. The respondents of Instrument number 2 were the School Heads through the following descriptive scale:

Table 5
Descriptive Scale for Level of Integration of ICT

Point Scale	Verbal Interpretation	Qualitative Description
5	Always (A)	The teacher frequently integrates ICT to constant extent equivalent to 5 to 7 days in a week.
4	Often (O)	The teacher frequently integrates ICT to often extent equivalent to 4 days in a week.
3	Sometimes (S)	The teacher frequently integrates ICT to sometimes extent equivalent to 3 days in a week.
2	Rarely (R)	The teacher frequently integrates ICT to rarely extent equivalent 1 to 2 days in a week.
1	Never (N)	The teacher do not integrate ICT at all.

The descriptive scale for information and communication technology in teaching in Lesson Planning, Preparation of Instructional Materials, Delivery of Instruction, and Assessment of Learning:

The point scale of 5 is interpreted as Always with the qualitative description of frequently integrates ICT to a constant extent equivalent to 5 to 7 days in a week, point scale of 4 is interpreted as Often with the qualitative description of frequently integrates ICT to often extent equivalent to 4 days in a week, point scale of 3 is interpreted as sometimes with the description of frequently integrates ICT to sometimes extent equivalent to 3 days in a week, point scale of 2 is interpreted as rarely with the qualitative description of frequently integrate ICT to rarely extent equivalent to 1 to 2 days in a week, and point scale of 1 is interpreted as never with the qualitative description of frequently integrates ICT to never extent equivalent to do not integrate ICT at all.

- In terms of validation purposes, the researcher identified three experts from different fields and professions to test the validity of the research instrument. For Research Instrument 1, the validators were composed of experts, mainly an ICT coordinator, a School Principal, and a Master Teacher. For Research Instrument 2, the validators were composed of a School Principal and a Master Teacher.

Data Gathering Procedure

In this study, the researcher asked permission to conduct study through sending letter to the Office of Schools Division Superintendent, after the approval, the researcher communicated with Public Schools District Supervisors in the North Bondoc Peninsula of Third Congressional District of Province of Quezon for their consent to conduct surveys and administer the questionnaire to the respondents. The researcher used a self-made survey questionnaire as an instrument to collect the data with a 5-point Likert Scale. For Part 1, the respondents are teachers and master teachers, and the data collected are the level of digital literacy in terms of productivity software tools, website browsing, social media platforms, learning resource management system, and online-based conference platforms, frequently of problems met by the teachers and coping mechanisms of the teachers. For Part 2, the respondents are the school heads, and the data collected are the Level of ICT Pedagogical Integration in terms of Lesson Planning, Preparation of Instructional Materials, Delivery of Instruction, and Assessment of Learning.

Upon approval of the request, the researcher gave a written orientation to the respondents in the 6 districts, with the supervision of the Public Schools District Supervisors, Google Form and Survey Form was disseminated and used to collect the data. After retrieving the raw data, the researcher tabulated using spreadsheet. Afterwards, it was forwarded to statistician to analyzed and interpreted.

The result of this study is a Training Program designed based on the analysis of the results. The output entitled Training Program for Enhancement of ICT Integration will be provided to the Master Teachers and Teachers.

Statistical Treatment of Data

The researcher used statistical measures to treat the collected data. Data were tallied and encoded into a master list of the data collection sheet using Microsoft Excel.

The researcher used means to describe the level of teachers' digital literacy in terms of Productivity Software Tools, Website Browsing, Social Media Platforms, Learning Resource Management Systems, and Online-Based Conference Platforms, Likewise, level of integration of information and communication technology in teaching in terms of Lesson Planning, Preparation of Instructional materials, Delivery of Instruction, Assessment of Learning was used to describe the mean. Meanwhile, Spearman Rho was used to determine the relationship between the level of teachers' digital literacy and pedagogical integration of ICT, the mean scores were interpreted using the scale in Table 6.

For Statement of Problems 4 and 5, mean scores were used to determine problems met by the teachers in the integration of information and communication technology in teaching and coping mechanisms of the teachers to address the problems met in the pedagogical integration of information and communication technology in their teaching tasks it was verbally interpreted using the 5-point Likert scale.

RESULTS

Part 1. Level of Teachers' Digital Literacy

Table 7
Respondents' Ratings on the Level of Teachers' Digital Literacy in terms of using Word Processing Tools.

Indicators	Mean	Verbal Interpretation
Teacher…		
can type using capitals and lowercase text.	4.87	Very High
can delete both ways using the backspace and delete keys	4.80	Very High
can use undo and redo	4.84	Very High
can change font type, size of the font & color of the font and know when to use these	4.90	Very High
can align text left, right, center, and justify and know when these are used	4.85	Very High
can move a word or section of text within the document by cutting and pasting	4.80	Very High
can check spelling and grammar	4.78	Very High
can orient the page view and page size and print on different sizes of paper	4.82	Very High
can insert a picture, word art or clipart	4.86	Very High

can save a copy of the document as a pdf file	4.76	Very High
General Mean	**4.83**	**Very High**

Legend: *"Very High (4.51 - 5.00)", "High (3.51 - 4.50)", "Moderate (2.51 - 3.50)", "Low (1.51 - 2.50)", "None (1.00 -1.50)"*

Table 8

Indicators	Mean	Verbal Interpretation
Teacher…		
can identify a cell reference	4.39	High
can enter, edit, or delete data into a cell	4.61	Very High
can select a cell or a range of cells	4.46	High
can modify column width and row height	4.57	Very High
can format data: font, size, color, and style	4.55	Very High
can merge and center data	4.62	Very High
can apply number formats to data	4.43	High
can alter the number of decimal places	4.38	High
can calculate the total number using the auto-sum	4.28	High
can cut, copy and paste a selection of cells	4.54	Very High
General Mean	**4.48**	**High**

Legend: *"Very High (4.51 - 5.00)", "High (3.51 - 4.50)", "Moderate (2.51 - 3.50)", "Low (1.51 - 2.50)", "None (1.00 -1.50)"*

Table 9

Respondents' Ratings on the Level of Teachers' Digital Literacy in terms of using Presentation Tools.

Indicators	Mean	Verbal Interpretation
Teacher…		
can open and create a presentation	4.73	Very High
can insert and format slides	4.75	Very High
can configure a presentation for print	4.70	Very High
can insert and format shapes and text boxes	4.68	Very High
can insert and format images	4.74	Very High
can insert and format tables	4.71	Very High
can insert and format charts	4.59	Very High
can apply slide transitions	4.68	Very High
can set the timing for transitions and animations	4.58	Very High
can finalize presentations	4.62	Very High

General Mean	4.68	Very High

Legend: *"Very High (4.51 - 5.00)", "High (3.51 - 4.50)", "Moderate (2.51 - 3.50)", "Low (1.51 - 2.50)", "None (1.00 -1.50)"*

Table 10

Respondents' Ratings on the Level of Teachers' Digital Literacy in terms of Website Browsing

Indicators	Mean	Verbal Interpretation
Teacher…		
can access the internet	4.78	Very High
can use navigational buttons: back, home, go, refresh, history	4.64	Very High
can enter URL by typing or pasting	4.65	Very High
can perform basic internet search	4.76	Very High
can know email address and password	4.66	Very High
can compose, send, open, read, reply to, and forward messages	4.66	Very High
can store and retrieve email messages	4.58	Very High
can add, use, and manage bookmarks/favorites	4.40	High
can access and use blogs, wikis, discussion boards, and similar interactive sites	4.29	High
can download and save files from the internet including image, audio and video	4.58	Very High
General Mean	**4.60**	**Very High**

Legend: *"Very High (4.51 - 5.00)", "High (3.51 - 4.50)", "Moderate (2.51 - 3.50)", "Low (1.51 - 2.50)", "None (1.00 -1.50)"*

Table 11
Respondents' Ratings on the Level of Teachers' Digital Literacy in terms of Social Media Platforms

Indicators	Mean	Verbal Interpretation
Teacher…		
can use social media to communicate information to students.	4.55	Very High
can use social media to do research work.	4.42	High
can use social media for content delivery in teaching.	4.54	Very High
can use social media for online academic group discussions.	4.34	High
can use social networking sites to seek information.	4.39	High
can use social media as a platform for engaging with your learners for educational purposes.	4.36	High
can integrates the use of social media in lessons if needed.	4.46	High
can encourage interaction with students through social media platforms.	4.31	High
can encourage collaboration among students through social media platforms.	4.36	High
can use social media to share learning resource materials among students.	4.43	High
General Mean	**4.42**	**High**

Legend: *"Very High (4.51 - 5.00)", "High (3.51 - 4.50)", "Moderate (2.51 - 3.50)", "Low (1.51 - 2.50)", "None (1.00 -1.50)"*

Table 12
Respondents' Ratings on the Level of Teachers' Digital Literacy in terms of Learning Resource Management System

Indicators	Mean	Verbal Interpretation
Teacher…		
can use DepEd learning resource system.	4.26	High
can access DepEd learning resource portal.	4.16	High
can navigate interface features in learning resource website.	3.97	High
can upload and organize learning resources into website.	3.98	High

can create illustrations and other materials useful for developing a localized material using learning resource.	4.07	High
can download materials teaching resource in the portal.	4.29	High
can publish teaching materials that are appropriate for the learners.	3.93	High
can create teaching materials and learning resource using embedded tools.	3.93	High
can integrates the use of learning resource management system in lesson if needed.	4.10	High
can search appropriate materials to provide the learner's needs.	4.26	High
General Mean	**4.09**	**High**

Legend: *"Very High (4.51 - 5.00)", "High (3.51 - 4.50)", "Moderate (2.51 - 3.50)", "Low (1.51 - 2.50)", "None (1.00 -1.50)"*

Table 13

Respondents' Ratings on the Level of Teachers' Digital Literacy in terms of Online-Based Conference Platforms

Indicators	Mean	Verbal Interpretation
Teacher…		
can utilize different online-based conference platforms	4.02	High
can easily navigate the different online-based conference platforms	4.03	High
can use many applications and as an instructional aid during video conferencing	3.98	High
can schedule and launch video lectures	3.86	High
can share files and slide shows, exchange messages in chat, or share their screens with students.	4.07	High
can host webinars that significantly help in attracting more students to engage	3.78	High
can guide learners in need using online-based conference platforms.	3.93	High
can choose appropriate online-based conference platforms that will use to deliver instruction.	3.84	High
can online-based conference platforms in assessing the learners.	3.81	High
can provide feedback to learners using online-based conference platforms.	3.93	High
General Mean	**3.93**	**High**

Legend: *"Very High (4.51 – 5.00)", "High (3.51 – 4.50)", "Moderate (2.51 – 3.50)", "Low (1.51 – 2.50)", "None (1.00 – 1.50)"*

Part 2. Level of Pedagogical Integration of Information and Communication Technology

Table 14

Respondents' Ratings on the Level of Pedagogical Integration of Information and Communication Technology in terms of Lesson Planning

Indicators	Mean	Verbal Interpretation
Teacher…		
integrates the word processing in lesson planning	4.16	Often
integrates desktop publishers in lesson planning	3.75	Often
integrates web search engines for references	3.95	Often
integrates download resources from the internet	4.25	Often
integrates ICT in drills in lesson planning	4.24	Often
integrates ICT in the review of the lesson in lesson planning	4.11	Often
integrates ICT in motivation in lesson planning	4.06	Often
integrates ICT in a presentation in lesson planning	4.11	Often
integrates ICT in application in lesson planning	4.05	Often
integrates ICT in evaluation in lesson planning	4.00	Often
General Mean	**4.07**	**Often**

Legend: *"Very High (4.51 – 5.00)", "High (3.51 – 4.50)", "Moderate (2.51 – 3.50)", "Low (1.51 – 2.50)", "None (1.00 – 1.50)"*

Table 15

Respondents' Ratings on the Level of Pedagogical Integration of Information and Communication Technology in terms of Preparation of Instructional Materials

Indicators	Mean	Verbal Interpretation
Teachers…		
integrates Word processors (Word etc.)	4.12	Often
integrates Spreadsheets (Excel etc.)	3.93	Often
integrates Presentation Software (PowerPoint, Canva etc.)	3.95	Often
integrates Databases (Access etc.)	3.71	Often
integrates Web Browsers (Google etc.)	4.14	Often
integrates Search Engines (Chrome, Firefox etc.)	3.99	Often
integrates Electronic Mail (e-mail)	4.00	Often
integrates Learning Resource Management System (LMDS)/ Learning Portals	3.87	Often
integrates video editing software (e.g. Adobe Premiere Pro, Kinemaster, Capcut etc.)	3.86	Often
integrates graphics editing software (e.g. Adobe Illustrator, Photoshop)	3.72	Often
General Mean	**3.93**	**Often**

Legend: *"Very High (4.51 – 5.00)", "High (3.51 – 4.50)", "Moderate (2.51 – 3.50)", "Low (1.51 – 2.50)", "None (1.00 – 1.50)"*

Table 16

Respondents' Ratings on the Level of Pedagogical Integration of Information and Communication Technology in terms of Delivery of Instruction

Indicators	Mean	Verbal Interpretation
Teacher…		
integrates presentation tools for the delivery of lesson (Powerpoint etc.)	4.23	Often
integrates live stream videos/images in presentation of lesson	4.02	Often
integrates downloaded videos/images in presentation of lesson	4.04	Often
integrates E-books/articles in presentation of lesson	3.53	Often
integrates online video conferencing in lesson	3.40	Sometimes
integrates online group discussion for his/her lesson	3.53	Often
integrates offline interactive games during class session	3.82	Often
integrates online interactive games during class session	3.82	Often
integrates audio-based instruction during the delivery of lesson	3.88	Often
integrates infographic during the delivery of lesson	3.66	Often
General Mean	**3.79**	**Often**

Legend: *"Very High (4.51 – 5.00)", "High (3.51 – 4.50)", "Moderate (2.51 – 3.50)", "Low (1.51 – 2.50)", "None (1.00 – 1.50)"*

Table 17

Respondents' Ratings on the Level of Pedagogical Integration of Information and Communication Technology in terms of Assessment of Learning

Indicators	Mean	Verbal Interpretation
Teacher…		
integrates Word Processing tool in assessment (Microsoft Word etc.)	3.95	Often
integrates Presentation tool in assessment (Powerpoint etc.)	3.87	Often
integrates Spreadsheet tool in assessment (Google sheet, excel, etc.)	3.90	Often
integrates Online based quiz game in assessment (Kahoot, Quizzer, Mentimeter, etc.)	3.54	Often
integrates google classroom in assessment	3.42	Sometimes
integrates online survey forms in assessment (Google Forms, Microsoft Forms)	3.58	Often
integrates cloud drive (e.g. Google Drive, Dropbox) for submission of outputs	3.69	Often
integrates interactive Name picker (The Hat, Duck Race, Wheels of Names etc.)	3.43	Sometimes

integrates Automated QR Code to evaluate the learners performance	3.41	Sometimes
integrates data derived from the result assessment integrated by ICT Tools	3.64	Often
General Mean	**3.64**	**Often**

Legend: *"Very High (4.51 – 5.00)", "High (3.51 – 4.50)", "Moderate (2.51 – 3.50)", "Low (1.51 – 2.50)", "None (1.00 – 1.50)"*

Part 3. Test for Significant Relationship Between Digital Literacy and Integration of Information and Communication Technology in Teaching

Table 18

Spearman Rank Significant Relationship Between Digital Literacy and Pedagogical Integration of ICT in Teaching in terms of Lesson Planning

Lesson Planning					
Indicators	**Correlation Coefficient**	**Interpretation**	**p-value**	**Decision**	**Remarks**
Productivity Software Tools	-0.144	Weak Negative Correlation	0.195	Failed to Reject Ho	Not Significant
Website Browsing	-0.188	Weak Negative Correlation	0.090	Failed to Reject Ho	Not Significant
Social Media Platforms	0.075	Weak Positive Correlation	0.502	Failed to Reject Ho	Not Significant
Learning Resource Management System	0.009	Weak Positive Correlation	0.936	Failed to Reject Ho	Not Significant
Online-Based Conference Platforms	-0.279	Weak Negative Correlation	0.011	Reject Ho	Significant

Note: *"If the p-value is less than or equal to the level of significance (0.05), reject Ho; otherwise, fail to reject Ho."*

Online-Based Conference Platforms	-0.066	Weak Negative Correlation	0.553	Failed to Reject Ho	Not Significant

Note: *"If the p value is less than or equal to the level of significance (0.05), reject Ho; otherwise, fail to reject Ho."*

Part 4. Problems Met in the Integration of Information and Communication Technology in Teaching

Table 22

Respondents' Ratings on the Problems Met in the Integration of Information and Communication Technology in Teaching

Indicators	Mean	Verbal Interpretation
Teacher…		
lacks expertise in integrating ICTs	2.91	Sometimes
lacks technical support	2.96	Sometimes
lacks genuine/licensed ICT Software tools	3.17	Sometimes

lacks a stable internet connection	3.22	Sometimes
lacks internet connection	3.25	Sometimes
lacks time to integrate ICT into classroom teaching	3.10	Sometimes
lacks confidence in using ICT in classroom teaching	2.84	Sometimes
lacks training in using ICT in classroom teaching	2.98	Sometimes
lacks interest in using ICT in the classroom	2.70	Sometimes
lacks availability of access to computer hardware	2.83	Sometimes
General Mean	**2.99**	**Sometimes**

Legend: *"Never Encountered (1.00 – 1.50)", "Rarely Encountered (1.51 – 2.50)", "Sometimes Encountered (2.51 – 3.50)", "Often Encountered (3.51 – 4.50)", "Always Encountered (4.51 – 5.00)"*

Part 5. Coping Mechanisms of the Teachers' Integration of Information and Communication Technology in their Teaching Task

Table 23

Respondents' Ratings on the Coping Mechanisms of the Teacher's Integrating Information and Communication Technology in their Teaching Task

Indicators	Indicators	Mean	Verbal Interpretation
Teacher….	Teacher….		
lacks expertise in integrating ICTs.	learns independently	3.71	Often
lacks technical support	seeks technical support to software used in teaching	3.42	Sometimes
lacks genuine/ licensed ICT Software tools.	purchase genuine/licensed ICT Software tools.	3.19	Sometimes
lacks a stable internet connection	seeks technical support from internet providers	3.36	Sometimes
lacks internet connection	seeks administration support from internet connectivity	3.16	Sometimes
lacks time to integrate ICT into classroom teaching	seeks allotted time for preparation for integrating ICT in classroom teaching	3.37	Sometimes
lacks confidence in using ICT in classroom teaching.	seeks motivation to peers in using ICT in the classroom teaching	3.49	Sometimes
lacks training of using ICT in the classroom teaching.	seeks training of using ICT in the classroom teaching.	3.54	Often

lacks interest using ICT in the classroom.	seeks goals in using ICT in the classroom.	3.62	Often
lacks access to computer hardware	requests administration support for computer hardware	3.54	Often
	General Mean	**3.44**	**Sometimes**

Legend: *"Never (1.00 – 1.50)", "Rarely (1.51 – 2.50)", "Sometimes (2.51 – 3.50)", "Often (3.51 – 4.50)", "Always (4.51 – 5.00)"*

DISCUSSION

Table 7 presents the teacher's ratings on their Level of Digital Literacy regarding Productivity Software Tools, specifically in word processing. Generally, teachers claim that their literacy in word processing tools is very high, with a general mean of 4.83. In all the indicators, they reported that they are very highly literate. This implies that teachers always use word processing tools in their daily tasks in school, although sometimes, they encounter challenges.

Additionally, they have been trained in using these tools since college, and DepEd also provides related training. Another reason is the continued integrating and training given by the school and ICT coordinators to ensure teachers can cope with the 21st-century teacher's need for digitalization.

In terms of mastery in using Microsoft Word, the study by Bayucca (2020) they were revealed that teachers displayed a proficient extent of knowledge in basic computer commands and word processors. However, some of the skills enumerated in each group have a low mean and were close to the adjacent group scale of the lower level of knowledge, such as Google Apps and other advanced computer applications, which are also necessary for the constructing of instructional materials. While the teachers' self-assessment showed they are proficient in the basic skills enumerated under Microsoft Word, there is still a further need for training.

Table 8 reveals the data showing teachers' ratings on the Level of Teachers' Digital Literacy regarding Spreadsheet tools. They claimed that they are highly proficient in this kind of productivity tool.

Analyzing the results, teachers' literacy ranges from high to very high. This affected the frequency of their use of the spread tools, which is only during the preparation of grades.

It can noted that the lowest rating calculated with a mean rating of 4.28. It may show that teachers have difficulties using formulas in the spreadsheet. These results agree with the findings of the study by Obenita et al. (2019) that teachers MS Excel adopt

different commands, especially when computing or consolidating the grades of students. The teachers described it as accurate with less time and effort.

The teachers were also perceived as effective and helpful in their use of spreadsheets; however, there are still factors to be considered to increase their efficacy, especially in terms of their expertise with the Excel program. There are still some points that they need plausible assistance to strengthen their expertise on the use of the program. Table 9 presents the surveyed responses of teachers about the Level of Teachers' Digital Literacy in terms of the Presentation tool. As teachers claimed, they have very high literacy in all indicators, with a general mean of 4.68.

This may conclude that teachers are competent in creating and presenting using presentation tools due to their frequent use of the teaching task. It is noted that teachers constantly undergo different training and LAC sessions relating to the utilization of tools.

Along with the teachers' skills in creating presentation tools, teachers integrate highly int creating different presentation tools. It was aligned with the study of Boonmoh et al. (2022), which also revealed that teachers feel free and easy to use to create learning content. Further, most of the teachers knew of technological tools and had integrated technologies into their classes. Meanwhile, certain types of tools were already used by all the teachers while Networked educational technology tools were only being integrated in some classrooms. It may be concluded that why the teachers, creating presentation tools, mainly were very highly literate.

Table 10 presents the Teacher's Ratings on the Level of Teachers Digital Literacy in terms of Website Browsing. The survey claimed that browsing websites demonstrate a very high level of literacy, with a general weighted mean of 4.60.

It is due to their frequent use of websites in their daily work, creating, preparing, and utilizing different strategies and techniques in teaching involving browsing websites. Moreover, teachers who are highly literate in accessing and using blogs, wikis, discussion boards, and similar interactive sites and adding, using, and managing bookmarks and favorites have less frequent use than the other indicators.

Parallel to the result of the study of Kurebay et al. (2023), they revealed in the study that primary school teachers essentially utilize the Internet for information access, academic information sharing (homework, projects, and others.), and professional and personal development. Academic, research, and educational sites, web browsers (Google, Yandex, etc.), dictionary sites, social networking sites (Facebook, MySpace, Friendfeed, Google Plus, etc.)," "wikis," and "video and photo sharing sites" were among the resources that Kazakh teachers utilized most frequently. Another study finding indicated that while primary school teachers' perceptions of their efficacy in using the Internet were at a medium level, their perceptions of their teaching efficacy were at a high level.

Table 11 reveals the level of teachers' digital literacy in terms of social media platforms. The above presents the tabulated data illustrating generally Highly Literate as claimed by the teachers with a 4.42 mean.

Teachers have social media applications on their mobile phones and laptops. It is also a part of their daily activity to connect and communicate through social media. Aguilar et al. (2021) study supported the study's result of how teachers nowadays use social media platforms in teaching. They revealed in their study that teachers' social media was personal, despite the uptake of social media platforms and their purposes. Additionally, teachers' use of social media changed noticeably after the pandemic began; multilevel models showed that teachers were more likely to connect and share on social media.

Table 12 presents data that revealed teachers' responses on the Level of Teachers' Digital Literacy in the Learning Resource Management System. They claimed that they are highly literate, based on the results of the general weighted mean score of 4.09.

In conclusion, it demonstrates that teachers are digitally literate based on learning resource management. Teachers value access to the learning resource portal.

The data above show that, despite teachers' extensive use of the Learning Resource Management System, they do not use it to its full potential. The study of Endozo et al. (2020) was parallel with the general results of the study in terms of the use of Learning Resource Management. Their study revealed that in terms of learning Resource Management System, teachers do not maximize the use of it.

Based on the study results, they encourage teachers to maximize the use of technology since they found significant results, and information was obtained for administrators, instructors, and students on how to improve usage of the system for teaching and learning.

Table 13 presents the tabulated data illustrating the teachers' ratings on the level of digital literacy in terms of online-based conference platforms, as claimed by the teachers, with a general mean of 3.93.

Due to the pandemic, teachers are now literate in the different online platforms used for conferencing. Teachers and school principals are especially interested in webinars and MS Teams for conferences at most meetings and focus group discussions.

Parallel to the study of Ramos and Soliven (2020), which revealed how teachers highly practice of online platforms for teachers. He even emphasized that experience, which showed a significant development, particularly in the use of video conferences. The findings revealed that webinar platforms helped respondents grow academically and personally. Furthermore, the researchers found that speakers' interactions with participants via visual and audiovisual presentations are valuable tools for teaching and learning.

Table 14 shows the survey responses regarding the level of pedagogical integration of information and communication technology in lesson planning. The data

show that teachers frequently incorporate ICT into lesson planning. That applies to all indicators of ICT Pedagogical Integration in lesson planning.

DO. 42, s. 2016 emphasizes that the daily lesson planning process can speed up using computers. Lesson plans can be written by hand or by computer. Schools use ICTs to store lesson plans prepared by their instructors. They can organize excellent lesson plans into a database or databank, post them on the school's website, or upload them to the LRMDS portal. Subsequently, teachers can utilize the portal as a tool to prepare their daily lessons. By having a library of lesson plans at their disposal to use when getting ready for their daily classes, teachers can help one another in this way.

To conclude, the Level of Pedagogical Integration of Information and Communication Technology of the teachers in lesson planning is often integrated. Teachers are aware that creating lesson plans is affected by the use of technology. These findings form the basis for a more intensive exploration of the strategies employed by school heads in the delivery of technical assistance to teachers in creating lesson plans.

The study of Konig et al. (2021) is connected with the result of the study on the importance of ICT in creating lesson plans. As revealed by Konig et al. in their study, they highlight the use of ICT Pedagogical Integration in lesson plans as a situation-specific skill of teachers, being predicted by teacher knowledge and beliefs, and predicting observable teacher performance in class. Moreover, ICT Pedagogical Integration in lesson plans is affected by learning opportunities both in initial teacher education and in teacher professional development.

Table 15 reveals the data illustrating the level of pedagogical integration of information and communication technology regarding the preparation of instructional materials. Teachers frequently incorporate ICT into their instructional materials. Teachers demonstrate integration in the development of instructional materials by using digital tools. It may not seem surprising given that teachers have participated in numerous IM-related trainings and courses in undergraduate courses.

Overall, the data highlights the importance of technology and digital tools for teachers. These findings aid in understanding the significance of such integration in providing quality technical assistance and provide a basis for research and recommendations for future improvement of the teachers' skills.

Table 16 reveals that the teachers' pedagogical integration of information and communication technology in terms of the delivery of instruction is often 3.79.

Since the teachers are encouraged by the school heads to integrate ICT into the delivery of the lessons, it sheds light on the teachers' use of ICT in the delivery of instructions. The importance of instructional leadership, ongoing reinforcement, collaboration, monitoring, and evaluation in providing effective technical assistance when implementing ICT in the classroom.

In his study, Gragg R. (2021) emphasized the vital of use ICT in instruction delivery. His study revealed that using ICT in education contributes to the teaching and learning process by making learning more efficient or by giving it a previously unattainable dimension. ICT can encourage students to participate in collaborative learning and may be a significant motivating factor in their education. ICT is unquestionably the way for organizations to grow directly aligned with technology, and the field of education is no exception.

Table 17 presents the data illustrating the pedagogical integration of information and communication technology in terms of assessment of learning and finds that teachers often integrate with a 3.64 mean. Analyses of the data highlight teachers' agreement on essential topics, exemplifying the value placed on the importance of these in the assessment of learning. Teachers often use ICT in assessment because it provides prompt feedback, and information to guide education, teacher-made evaluation and differentiation based on the requirements of students.

The statement that the teacher used an automated QR code to evaluate the learner's performance (3.41) was notably the lowest integration level recorded. These findings may have affected on the frequent use of the teacher's strategy involving automated QR code the assessment.

The study by Kumar A. (2020), which mainly studied the effectiveness of ICT in the assessment of learning, revealed how teachers often use ICT as a tool in assessing learning. The study by Kumar likewise revealed the optimistic impact of integrating ICT in assessing learning. The optimistic view he mentioned in the conclusion of his study revealed that the teachers who successfully implement ICT will lead change, which is more about influencing and empowering teachers and supporting them in their engagement with students in learning. It may also help them with a better assessment of learning.

Table 18 shows between teachers' digital literacy on online conference platforms and pedagogical integration in lesson planning. However, the relationship is a weak negative correlation. It implies that even though there is a high level of literacy an online-based conference platform has nothing to do with or does not have a connection with ICT Pedagogical Integration in lesson planning.

Productivity Software Tools and Lesson Planning have a Weak Negative Correlation, it implies that even if teachers are highly literate in productivity software tools it has less Pedagogical Integration in Lesson Planning. Website Browsing to Lesson Planning was also found to be a weak positive correlation, it implies that even teachers can navigate and utilize Website browsing, it was only sometimes used in pedagogical integration of ICT.

Social Media and Learning Resource Management Systems to Pedagogical Integration in Lesson Planning were found Weak Positive Correlation, It means that teachers are highly literate in Social Media and Learning Resource Management Systems the frequent Pedagogical Integration of ICT in terms of Lesson Planning.

The results of the relationship between lesson planning and online-based conferences using platforms are similar to the results of the study by Edi et al. (2021), in which they studied lesson planning. They revealed in the study that using online-based conference platforms is significantly related to lesson planning based on their conclusion from their research that, to address the demands of designing learning programs in the modern age, online-based lesson plans can occur as a development.

Teachers can use multimedia devices remotely to have a balanced ratio of classroom and online-based face-to-face classes. With school funding, new learning resources, Teachers abilities to operate digital platforms, and student needs, online-based lesson plans will occur. The primary elements of online-based learning programs are the capability and ability of teachers to create a plan that would greatly benefit learning.

Table 19 shows that the level of digital literacy in terms of productivity software tools, website browsing, social media platforms, learning resource management, and online-based conference platforms has a weak relationship to the integration of ICT in the preparation of instructional materials.

Instructional materials are important tools for the growth and advancement of learning. The use of ICT in its preparation may not require extensive ICT literacy. However, based on the results, there is still a weak positive correlation that may somehow affect, although it may not directly impact, ICT in the preparation of instructional materials.

Based on the study of Aziz et al. (2019), some points of integration of ICT in teaching content, such as the preparation of instructional materials, will enable the teachers to offer a learner-centered learning environment, depending on the learners' interests and needs. The use of ICT for differentiating instruction allows teachers to provide more appropriate, authentic, and personalized learning activities that are most relevant to the learner's learning style. This may explain why using software tools, web browsing, learning resource management, and social media platforms has little correlation with the preparing of instructional materials.

Table 20 presents the correlation between digital literacy and the integration of ICT in teaching in terms of the delivery of instruction. This shows that a weak positive correlation has little impact, but it could not be enough to claim that it is correlated with the delivery of instruction.

However, It implies that teachers are digitally literate in Productivity Software Tools, Social Media, and Learning Resource Management System and frequently integrate ICT in the Delivery of Instructions.

On the other hand, there is a weak negative correlation between website browsing and online-based conference platforms and the delivery of instruction, It suggest that even teachers are highly literate, the Pedagogical Integration of ICT decreases. However, in the study of Kagyera et al. (2024), there is a strong interdependence linking ICT tools and lecturers' teaching practices, which portrays the essence of integrating ICT tools in

teaching. The implication is that adopting ICT for teacher education improves lecturers' teaching methodology and, eventually, their learners' attitudes towards teaching.

Table 21 presents the Level of Digital Literacy in terms Productivity Software Tools have significant relation to Pedagogical Integration in terms of Assessment of Learning but does have weak positive correlation. This may imply that teachers consistently use software tools for fast learning assessment. Teachers often use Excel and other tools to make assessing more efficient.

On the other hand, website browsing, social media platforms, learning resource management systems, and online-based conference platforms were all found to be not significantly correlated. This implies that they are not enough to claim that they have a significant relationship. It implies that even teachers are digitally literate the less frequency on pedagogical integration in ICT.

Majid (2020) presented the results of his study, and everybody agrees that assessment is an essential part of the teaching and learning process. ICT plays a significant part in simplifying the assessment process for educators. With the growing use of ICT, assessments are conducted in novel and creative ways. Is also how the recording and grading made it easy. Not only this, the students are being empowered to use online or web-based assessments, which helps the students.

Table 22 depicts the various challenges that teachers face when integrating information and communication technology into their instruction. According to teachers, the above statements were all encountered at least once, with a mean of 2.99.

Nonetheless, teachers faced obstacles in integrating ICT. Teachers must take advantage of available ICT resources because they may face the issues on occasion.

Teachers face a significant challenge in integrating information and communication technology (ICT) into their teaching. This barrier can manifest in various ways, each leading to a lack of pedagogical integration. By addressing these challenges, teachers, with the help of school heads, can develop the steps needed to effectively integrate ICT into teaching, resulting in increased student engagement.

Lack of teacher expertise or technical support for integrating ICT needs a multi-approach that includes funding for professional development, access to top-notch training programs, the supply of continuing resources and support, and the promotion of an innovative and collaborative culture within educational communities. Giving teachers the tools, resources, and encouragement, they require to incorporate ICT into the teaching task successfully.

Unavailability of genuine/licensed ICT Software tools hinders the integration into the teaching task. It will lead to performance issues, functionality limitations, and compatibility problems that hinder their ability to integrate technology into teaching effectively.

The unstable internet connectivity can challenge teachers when administering online assessments, quizzes, or exams. Technical glitches, network disruptions, or slow loading times may compromise the integrity and fairness of assessments, leading to inaccuracies in grading and assessment results. Moreover, delayed or inconsistent internet connectivity can hinder teachers' ability to provide timely feedback to students and affect their teaching tasks.

Absence of internet connection affects Interactive online activities, collaborative projects, and virtual discussions. However, unstable internet connectivity can hinder students' ability to participation in these activities, leading to disengagement, frustration, and reduced learning outcomes. Students may experience difficulties submitting assignments or participating in online discussions, which can negatively impacting their academic performance and motivation.

Teachers frequently have a limited amount of time available for each lesson or instructional period, and they must cover a wide range of curriculum content and learning goals. As a result, integrating ICT into teaching may be perceived as an additional task that competes with other instructional priorities. Teachers may struggle to find sufficient time to plan, prepare, and implement ICT-enhanced lessons while ensuring that meet curriculum requirements.

When teachers lack confidence in using ICT, they may be hesitate to incorporate technology into their teaching tasks. It may lead to opportunities to improve lessons with multimedia content, interactive activities, and online resources. As a result, students may not benefit from the full range of learning experiences that ICT can provide.

Without adequate training, teachers may lack the knowledge to integrate ICT into their teaching task effectively. It can result in underutilization of technology in the classroom, with teachers sticking to traditional teaching methods instead of exploring the potential benefits of ICT for enhancing learning experiences.

When teachers are uninterested in using ICT, they may be less likely to investigate and integrate technology tools and resources into their teaching task. This can lead to reluctance to incorporate technology into lessons, resulting in missed opportunities to enhance learning experiences and engage students with interactive and multimedia-rich content.

Access to computer hardware is essential for effectively integrating technology into classroom teaching. Without access to computers, teachers may struggle with digital tools, software applications, and online resources to enhance teaching and learning experiences. It can result in a reliance on traditional teaching methods and missed opportunities to engage students through interactive and multimedia-rich content.

Table 23 revealed the teachers’ coping mechanisms for integrating pedagogical information and communication technology into their teaching tasks. Teachers claimed that in terms of coping mechanisms they use to overcome such challenges.

However, teachers claimed that they use coping mechanisms sometimes. It may imply that those challenges were experienced sometimes as well. Teachers, despite experiencing different challenges continuously, overcome the challenges.

When integrating information and communication technologies (ICTs), it enhances the teaching experience and benefits the learners. However, many teachers face challenges due to a lack of knowledge in effectively integrating ICTs. Without the opportunity to attend the trainings and workshops, an individual is results in independent learning.

Teachers who struggle to incorporate information and communication technologies (ICT) into their lessons due to a lack of technical support turn to their peers, institutional leaders, and specialists for assistance in troubleshooting technical issues.

Addressing the lack of genuine or licensed ICT software tools is crucial for ensuring the optimal data performance that teachers need when integrating ICT. Pirated software may lack the reliability, stability, and performance of genuine or licensed versions. Teachers may encounter bugs, glitches, and compatibility issues that hinder productivity and disrupt workflows. To cope with this, institutional heads and teachers determine the specific ICT software tools that are essential for their teaching tasks and then purchase genuine or licensed ICT software tools to effectively maximize the benefits of the software.

Teachers who are having difficulty incorporating information and communication technologies (ICT) into their lessons due to a lack of technical support seek assistance in troubleshooting technical issues from their peers, institutional leaders, and specialists. To cope with this problem, seek technical support from internet providers and address connectivity issues that result in minimizing disruptions to teaching caused by unstable internet connections.

Without internet access, teachers are unable to access online resources such as educational websites, digital libraries, and multimedia content. It limits access to information, interactive learning materials, and supplementary resources that can enrich the learning experience. To cope with this problem, teachers seek administrative support for internet connectivity, which prioritizing reliable internet infrastructure and technology within the school.

Effective ICT Pedagogical Integration requires a mindful analysis of pedagogical strategies that use technology to improve instruction. A lack of time could result in unreliable technological integration. Rather than just using technology for its own sake, teachers take time to think about integrating it in ways that improve teaching and learning. To fill this gap, teachers seek allotted time for preparation for integrating ICT in classroom teaching; this leads to more effective pedagogical approaches, instructional strategies, and assessment procedures.

When utilizing ICT in the classroom, teachers could be afraid of making mistakes or running into technical difficulties, which could make them doubt their abilities. One of

the biggest challenges to trying out and innovating with technology-enhanced teaching methods is the fear of failure. To manage, teachers seek motivation from peers to use ICT in classroom teaching, which helps build confidence and the knowledge needed to integrate ICT into their teaching.

When teachers face a lack of training in using information and communication technologies (ICT) in classroom teaching, it can create barriers to effective technology integration. In order to cope, teachers seek professional development opportunities focused on ICT Pedagogical Integration. They request workshops, LAC sessions, or training from school administrators or seek external training resources themselves.

Some teachers may believe that their preferred teaching methods or pedagogical approaches are incompatible with ICT Pedagogical Integration. To cope with this problem, teachers seek goals in using ICT in the classroom where flexible and adaptable ICT tools are shown that can be incorporating into teaching styles and instructional strategies.

Without access to computer hardware, teachers may struggle to prepare digital materials, lesson plans, and instructional resources that incorporating technology. By implementing solutions such as requesting administration support for computer hardware, schools can help address the challenge of limited access to computer hardware for teachers, enabling them to maximize the use of technology more effectively in classroom teaching and enriching learning experiences for all students.

Conclusions

1. Even though teachers sometimes run into difficulties, they always use word processing software for their everyday teaching tasks in the classroom. They frequently use spreadsheet tools, which are more often used in the preparation of grades. Teachers are digitally literate at creating and presenting using presentation tools due to their regular use for their teaching task. Integrating different strategies and techniques in teaching involves browsing websites with high frequency.

It also concludes that the frequent use of social media for teaching-related tasks has a high literacy rate in its utilization. Teachers should have access to the learning resource portal. It shows how digitally literate teachers are by frequently accessing the learning resource portal. It also comes to the conclusion that teachers are now literate with the different video conferencing online platforms.

In most cases of meetings and even focus group discussions, teachers and school heads are particularly familiar with the use of webinars and MS Teams for conferences. Furthermore, it concludes that there is a high and very high literacy rate as a result of continued utilization and training provided by the school and ICT coordinators to ensure

teachers can cope with the digitalization needs of the twenty-first century. The use of digital literacy in teaching tasks can increase with frequent use.

2. Based on the analysis, the level of teachers' pedagogical integration of ICT was high. The level of pedagogical integration of information and communication technology in terms of lesson planning, preparation of instructional materials, delivery of instruction, and assessment of learning were all often used by the teachers.

3. Furthermore, it concludes that there is a significant relationship between digital literacy and information and communication technology in lesson planning, as teachers integrate ICT in the planning of lessons and frequently use it in the teaching task. This concludes that teachers are more likely to successfully integrate ICT tools and resources into their lesson plans if they have high levels of digital literacy.

Moreover, it concludes that online-based conferences and assessments of learning to productivity of software tools have also significant relationship. Online conferences provide dynamic platforms for teachers to gather and share knowledge, experiences, and insights through the use of productivity software tools. Assessment of learning enables teachers to assess students' proficiency and understanding using productivity software tools.

4. The problems met in information and communication technology in teaching claimed sometimes encountered. Teachers continued to face obstacles when integrating ICT. However, they make use of the available ICT resources. Digital literacy among teachers can lead to the successful integration of ICT into teaching and learning activities.

5. Furthermore, it concludes that the coping mechanisms of the teachers' integrating information and communication technology into their teaching tasks were sometimes integrated. While it helps teachers navigate challenges in integrating ICT into their teaching tasks, it is essential to recognize that individual circumstances may vary. Providing ongoing support, resources, and professional development opportunities tailored to teachers' needs can facilitate successful ICT Pedagogical Integration and enhance teaching effectiveness. Based on the outcomes, the training program might be suggested to enhance ICT Pedagogical Integration in the classroom.

Recommendations

Based on the conclusion drawn, the following are recommended:

1. Since most respondents are found to be digitally high and highly literate, teachers are recommended to continue innovation and updates on current trends in productivity software tools, website browsing, social media platforms, learning resource management systems, and online-based conference platforms, as technology is constantly evolving. This can be achieved through a training program focusing on the latest technological advancements and best practices. Ensuring teachers remain at the forefront of

educational technology and can effectively leverage these tools to enhance student learning outcomes.

2. According to the findings of the study, most respondents claimed they often integrate ICT. Teachers may continuously improve and enhance their skills through different trainings. Continuous support and capacity building for professional development for teachers are essential to attain Technologically Advanced Classroom Instruction. Additionally, commitment to continuous improvement and professional development will lead to more effective and engaging instruction, that better prepares students for the demands of the digital age.

3. Based on the results of the study, no significant relationship or weak correlation between Digital literacy and Pedagogical Integration, it was found that given the generally high level of teachers' digital literacy and often to sometimes frequent integration of ICT in the teaching task, it is suggested that teachers may intensify and continue the pedagogical integration of ICT to be able to help the school with the development and improvement of the learners. Systematic monitoring and evaluations are necessary to guarantee the quality of technical assistance. Training programs should be updated continuously to include the latest technological advancements and pedagogical strategies, ensuring that teachers are well-prepared to leverage new tools and methods.

4. In line with the results, problems met by the teachers that are sometimes encountered, school heads may also continue to provide technical assistance and supervision to teachers to improve their integration through different programs to help the teachers and learners. These programs can include ongoing professional development workshops that focus on the latest educational technologies and effective pedagogical strategies using ICT in the classroom. Additionally, schools can establish dedicated technology support teams to assist teachers with troubleshooting and implementing new tools. Creating a resource center with up-to-date materials and guides on ICT integration can also serve as a valuable asset for educators seeking to enhance their technical skills.

5. In connection to the results of the study, the coping mechanism of the teachers in integrating information and communication technology into their teaching tasks were all sometimes, School heads are recommended to provide effective instructional leadership support to Teachers. Strategic resource allocation, management of instructional programs, promotion of positive learning environments, development of leadership skills and knowledge, and provision of technical assistance can significantly affect professional growth and school success in integrating ICT.

6. In line with the findings of the study that ICT integration is often, it is suggested that educational practitioners, policymakers, and researchers understand the need to enrich instructional leadership and improve the delivery of technical assistance to help teachers cope with their challenges in integrating ICT. This enhancement involves providing school leaders with the necessary training and resources to guide and support their staff effectively. Instructional leaders should be well-versed in the latest educational

technologies and pedagogical strategies to mentor teachers in their ICT integration efforts.

7. Relevant to the findings of the study, it is suggested that Teachers may apply the training program to enhance the integration of ICT into their pedagogical practices. By leveraging the training, educators can develop more interactive and engaging teaching methods that utilize digital tools and resources effectively. This integration can lead to improved student outcomes, as technology can provide diverse and innovative ways to present information, facilitate collaboration, and assess learning. This continuous enhancement of pedagogical skills through ICT integration will not only enrich the learning experience but also prepare students for a digitally driven world.

8. Since digitalization and technology are continuously developing and emerging, the research may not seem applicable in the next ten years. However, it is recommended to design a parallel or comparative study to ascertain the degree of digital literacy among teachers in integrating ICT into the classroom and other relevant tasks. This future-oriented research should involve regular intervals of data collection to track changes and trends over time.

Compliance with Ethical Standards

In this study, the researcher first secured consent from all participants, including school heads, master teachers, and teachers, prior to their participation. Respondents were given clear information about the research's purpose, procedures, potential risks, and benefits, and they were free to withdraw from the study at any time without consequence.

Confidentiality and anonymity were also maintained to protect participants' privacy, ensuring that their responses and personal information were secure and not disclosed without their express consent. Furthermore, the research was carried out with integrity, honesty, and transparency, without any form of deception or manipulation.

The researchers followed the ethical guidelines and standards established by relevant institutions and regulatory bodies, such as the university and DepEd, including seeking approval from ethics committees or review boards.

Finally, the study's findings was reported accurately and objectively, without bias or distortion and promote the welfare of the participants without causing harm, while also ensuring that the respondents are safe and secure throughout the study.

Acknowledgments

The researcher would like to express his heartfelt gratitude and appreciation to the following good-hearted people, who in one way or another, helped in the completion of this research undertaking.

President Dr. Diosdado P. Zulueta, Marinduque State College President, for his leadership and selfless assistance when needed.

Dr. Leodegario M. Jalos, Jr., Associate Professor V and Designated Chair, Extended Graduate Programs, for supporting the program and for the betterment of the skills of the students and the institution.

Dr. Melchor B. Espiritu, Dean of Graduate Studies, for the proper guardian, patience and support to make this research study successful.

Dr. Julieta Q. Nabos, his thesis adviser for the guidance and unceasing support to partially finish the manuscript with better feedback.

Dr. Rogel L. Limpiada, his statistician, generously shared his knowledge on the statistical component of his work;

Dr. Joy R. Profugo, his editor for her assistance in the editing of the manuscript.

Ms. Cherie Ann M. Luna, his copy editor, for providing help and support during the copy editing of the manuscript.

President Dr. Diosdado P. Zulueta, Dr. Leodegario M. Jalos, Jr., and Dr. Peter Andrew G. Regencia, his panelists during the oral presentation, for their insightful feedback and recommendations, which substantially enhanced the study.

Rommel C. Bautista, CESO V, Schools Division Superintendent of Division of Quezon, for allowing to conduct and distribution of the survey questionnaire.

Reyvi C. Faraon, Marilyn N. Permejo, Edna L. Cabrera, Dr. Meriam C. Camposano, Nolan L. Santoalla, and Anabelle F. Empleo, Public Schools District Supervisors of North Bondoc Peninsula, Quezon Province, for granting permission to administer and complete the study survey.

Teachers, Master Teachers, and School Head of North Bondoc Peninsula, Quezon Province, for actively participating in the conduct of the study.

Elda B. Avila, his school head, for her unwavering support throughout the thesis journey.

The researcher would also like to thank his family, relatives, friends, and love ones for their unending moral, and financial support, and for the inspiration and motivation to finish this study.

And all glory is Yours, Oh Lord, Dear Almighty God, who gave life, excellent, health, intellect, and wisdom.

ABSTRACT

This study develops the perception of the teachers in relation to the benefits of using online resources in their educational activities, the impact of the Online Educational Resources (OER) in Schools Division of Quezon in the teaching and learning process. This was longitudinal research and it included teachers of various subjects. The key research instrument tends to address the teachers' insight for the benefits of using online resources. Taking into research that the nature of this study is of the evaluative character of teachers has been implemented by using questionnaires. The results show that teachers have a positive attitude towards usage of the online platform in their teaching, which also influences for their lessons to become more efficient and attractive for the learners and also for the teachers. As far as the usage of online resources for the learners' learning concerns, the findings of this research study indicate a positive attitude of the respondents in Schools Division of Quezon for the affirmative impact that the usage of online educational resources has for the learners' learning. This research study also indicated that there are still technical problems present which in many cases hindered present which the utilization of the online resources.

Keywords: *Teaching, Learning, Platforms, Online Resources*

INTRODUCTION

As a teacher working in an elementary or a secondary school, you likely need to face a crucial reality - having limited time to deal with all kinds of school duties, including developing lesson plans, creating teaching materials, and documenting student learning progress, etc. This reality in K-12 educational settings could be particularly overwhelming if you are a beginning teacher. Luckily, with the advent of technology and the emergence of K-12 Open Educational Resources (OER) more free and quality resources become available for K-12 teachers. OER allow teachers to save the time creating teaching materials from scratch, yet still have access to materials that support student learning engagement. OER have created an extra ordinary opportunity for educators to customize teaching and learning as well as sharing knowledge in various forms across communities, states, and even countries.

The DepEd Open Educational Resources (OER) is an innovative pathway to connect the disconnected schools with its prime role to support the requirements of the K-12 Curriculum. It focuses on the ICT Assisted Teaching and ICT Assisted Learning whereas the customization of localized materials is made possible to deliver quality, accessible, relevant and liberating education for all even for schools without strong internet facilities. The OERs are designed in such a way to cater the needs for interactivity, digitization and delivery of 21st Century Skills to make learners future ready. This is the beginning of revolutionizing education in the Philippines to teach minds, touch hearts and transform lives of learners. Welcome to the new era of learning. This is Digital Rise.

Embracing the use of OER will solve the challenges encountered by the public school system, especially the so-called Last Mile Schools or those schools in the far-flung areas in terms of access to learning materials and skills to create or reuse contents.

This scenario is true in the public elementary schools in Macalelon District, Division of Quezon. As a teacher-researcher, this issue is interesting to study to be able to determine the experiences of teachers in transitioning from textbooks to online instructional materials so as to apply in everyday teaching.

Research Questions

For the purpose of this study, data was gathered in order to address each of the following research questions:

1. What is the demographic profile of the respondents in terms of:
    1.1 Age;
    1.2 Sex;
    1.3 Educational Attainment; and
    1.4 Length of Service?

2. What are the teachers' experiences in using open educational resources in terms of following when grouped into demographic profile:
    2.1. Existence of online platforms;
    2.2 Online platforms as Instructional Materials;
    2.3 Advantages of Open Educational Resources; and
    2.4 Disadvantages of Open Educational Resources?
3. Is there a significant difference on the teachers' experiences using open educational resources when grouped into profile?
4. What are the problems encountered by teachers in using Online Instructional Materials?
5. What are the coping strategies of teachers in addressing the challenges?
6. What sample of open educational resources instructional material could be developed by the researcher?

METHODOLOGY

Research Design

The researcher chose will use a survey research design because it is best served to answer the questions and the purposes of the study. The survey research is one in which a group of people or items is studied by collecting and analyzing data from only a few people or items considered to be representative of the entire group. In other words, only a part of the population is studied, and findings from this are expected to be generalized to the entire population (Nworgu 1991:68).

Research Locale

The map into next page illustrated the Division of Quezon which considered as one of the four very large schools divisions in the Philippines. The Division of Quezon is headed by Dr. Merthel M. Evardome, CESO VI. She started her journey as Assistant Schools Division Superintendent in 2013, she assumed SDS post in the Division of Antipolo in January 2014, transferred to the Division of Laguna in July 2015. After six months January 6, 2016, she was appointed back to Schools Division of Quezon as Schools Division Superintendent. During her term, the Schools Division Office of Quezon continues to flourish and excel in many areas of governance. DepEd Quezon was hailed as the second-Best Performing Division in Region IV-A in 2017 and the first Best Performing Division in Region IV-A in 2018. The Division's Brigada Eskwela was also awarded twice as Hall of Fame Award in the National Brigada Eskwela. Lots of awards and recognitions were received by the division in sports, journalism, research and others. Facilities and physical improvements are noticeable and most importantly quality of service of all personnel are gearing towards excellence.

Figure 5 *Map of the Division of Quezon*

Quezon is a province of the Philippines in the CALABARZON Region located in the south of Luzon Island. Its capital is Lucena. Quezon province was named after former President Manuel L. Quezon who was born in Baler, a town which was then part of Tayabas. Quezon is famous for coconut-based cuisines, lambanog, longganisang Lucban, and pansit habhab.

The Quezon province is divided into 39 Municipalities, 1 Independent City, and 1 Component City: Agdangan, Alabat, Atimonan, Buenavista, Burdeos, Calauag, Candelaria, Catanauan, Dolores, General Luna, General Nakar, Guinayangan, Gumaca, Infanta, Jomalig, Lopez, Lucban, Lucena, Macalelon, Mauban, Mulanay, Padre Burgos, Pagbilao, Panukulan, Patnanungan, Perez, Pitogo, Plaridel, Polillo, Quezon, Real, Sampaloc, San Andres, San Antonio, San Francisco, San Narciso, Sariaya, Tagkawayan, Tayabas, Tiaong, Unisan.

DepEd Quezon encompassing of 953 schools; 771 Elementary and 182 Secondary Schools. 166 out of 182 are offering Senior High School Program. These schools are distributed in four congressional districts of Quezon. Quezon Province is composed of 1,543 barangays. The 953 schools are headed by a Schools' Division Superintendent and three Assistant Schools Division Superintendent serving with him in the field are 57 Public Schools District Supervisors, 271 Elementary School Principals, 107 Secondary School Principals, 45 Head Teachers and 310 Teacher-In-Charge.

The Division of Quezon, a winner on Innovations in Leadership, Governance and Management - Institutional Leadership and Direction Setting during the 6th Excellence in Educational Transformation Awards given by Bayan Academy in cooperation with ABS-CBN Foundation, Rex Bookstore, Knowledge Channel and DepEd, Garden Ballroom, Edsa Shangri-La Hotel, Mandaluyong last November 19, 2019.

Research Population and Sample

The respondents of this study were divided into Four (4) Congressional Districts in the Division of Quezon. Simple Random Sampling will be used where every element has an equal chance of getting selected to be part of the sample. The researcher first identified the population. Before a sample is chosen randomly, it is necessary to have a complete list of the population from which to select. After a list of population members has been constructed, the researcher prepared for a draw lots.

Table 1 shows the distribution of respondents for the study. In the 1st Congressional District, 8 teachers will be from the large schools, 4 teachers form the medium schools and 1 from a small school. Meanwhile, from the 2nd Congressional District, there are 7 teachers from large schools, 4 from medium schools and 1 from a small school. From the 3rd Congressional District, there are 5 teachers from large schools, 2 from medium schools and 1 from a small school. From the 4th Congressional District, there are 9 teachers coming from large schools, 8 from medium schools and 2 teachers from small schools.

Table 1

Distribution of Population

Congressional District	School size	Teachers	
		Number	%
First	Large	8	15.38
	Medium	4	7.69
	Small	1	1.92
Second	Large	7	13.46
	Medium	4	7.69
	Small	1	1.92
Third	Large	5	9.62
	Medium	2	3.85
	Small	1	1.92
Fourth	Large	9	17.31
	Medium	8	15.38
	Small	2	3.85
Total		52	100

Research Instrument

A questionnaire designed by the researcher were used in the study. The questionnaire has eight sections: A, B, C, D, E, F, G, and H. Section "A" is about the respondents' profile, section "B", level of experiences; section "C", is there a significant difference on the teachers' experiences using open educational resources; section "D" is on the online platforms used, section "E" contains questions on the advantages with 12 indicators, Section "F" is on the disadvantages of using OER with 8 indicators; Section "G" is on the problems encountered. It has 6 indicators; section "H", on the other hand is on the coping strategies to be used to address the problems on using OER, which has 5 indicators. The instrument was structured in the modified Likert fashion, on a 5 – point scale, ranging from "highly experienced" (HE), "experienced" (E), to "moderately experienced" (ME) to "least experienced" (LE), and "not experienced" (NE). Subjects were then instructed to respond to their degree of agreement with the statements contained in the instrument.

Point Scale	*Mean Interval*		*Verbal Interpretation*	*Qualitative Description*
5	*4.20 5.00*	–	*Highly Experienced (HE)*	*The level of experiences is 81% to 100% in using OER.*
4	*3.40 4.19*	–	*Experienced (E)*	*The level of experiences is 61% to 80% in using OER.*
3	*2.60 3.39*	–	*Moderately Experienced (ME)*	*The level of experiences is 41% to 60% in using OER.*
2	*1.80 2.59*	–	*Least Experienced (LE)*	*The level of experiences is 21% to 40% in using OER.*
1	*1.00 1.79*	–	*Not Experienced (NE)*	*The level of experiences is less than 20% in using OER*

The instruments were validated the following teachers in Macalelon Central Elementary School, Macalelon District. There are (2) two Master Teachers, Mrs. Elaine A. Delos Santos, Master Teacher II -English Coordinator, and Mrs. Maria Concepcion L. Edaugal, Master Teacher I-Mathematics Coordinator, and (1) one Macalelon District ICT Coordinator Mr. Rey E. Mallari. The certification of validation of research instrument were issued on 10th day of February 2023 at Macalelon Central Elementary School, Macalelon District.

Data Gathering Procedure

Questionnaires are the most common way of gathering data from a sample of individuals. Questionnaire is a list of questions each with a range of answers. It is also a format that enables standardized, relatively structured, data to be gathered about each of a large number of cases. Questionnaires are now commonly used at all levels of social research, from small scale students and community projects through to large-scale international surveys. The main common things between those surveys are the formulation of a set of questions sometimes and answers which are going to help the researcher to answer his research question or test his hypothesis

For this study, self-made questionnaire would be designed in the way that all types of questions except multiple choice questions will be used. For instance, open-ended questions will be given to receive the respondents' opinion about the level of experiences and online platforms used. Likert Scale will be used to answer the advantages, disadvantages, problems encountered and coping strategies in using OER questions for the respondents.

Ethical Considerations

The study adhered to the research ethics of anonymity, consent, and beneficence. the research ensured that the data gathered were secured and observed with the utmost consideration of data privacy. no personal information provided by the respondents was divulged in the study. in addition, the teachers who provided the data of learners were given a copy of the consent form to ensure they were aware of their participation. The

researcher explained in full detail the process of data gathering and assured that the data shall be treated with the utmost confidentiality. The teachers were also given the option to withdraw their participation if they felt there was a need for them to do so. Finally, the researcher informed the respondents that no benefits shall be provided to the respondents but the data they will be providing shall be helpful for the realizations and completion of the study.

Statistical Treatment of Data

Various statistical tools such as frequency count, weighted mean, percentage, and rank is used to determine the profile of the respondents.

To determine the significance of agreement, the statistical analysis of the data in assessing the advantages and disadvantages of using OER in the Division of Quezon, Kendall Coefficient of Concordance W is employed (Siegel, 1988).
Where:

$$W = \frac{S}{1/2\ k^2\ (N^3 - N)}$$

S	**=**	the numeration of square
½	=	is constant
R	=	refers to the number of groups
N	=	the number of items

The corresponding x^2 formula will be used to determine the significance of agreement (Siegel, 1988).

$$X^2 = K\ (N\text{-}1)\ W$$

Significance level is set at 0.05.

Scope and Delimitation

The study is confined to the teachers' experiences in using online educational resources in the schools Division of Quezon: basis for the development of sample online educational resources instructional materials; online platforms being used, advantages and disadvantages, problems encountered, and coping strategies would be discussed in this study.

The study was conducted in the Schools Division of Quezon Province during the School Year 2023-2024. Respondents of the study are teachers. In addition, the profile of teachers was also gathered in terms of age, sex, educational attainment and length of service.

The respondents of the study are delimited to public elementary teachers in selected public elementary schools in the Division of Quezon.

RESULTS

Part I. The Demographic Profile of the Respondents in Terms of Age, Sex, Educational Attainment and Length of Service.

Table 1

The Demographic Profile of the Respondents in Terms of Age, Sex, Educational Attainment and Length of Service

Profile	Frequency	Percentage
Age		
26-35 years old	30	33.3
36-45 years old	24	26.7
46-55 years old	26	28.9
56-65 years old	10	11.1
Total	**90**	**100.0**
Sex

Part VI. Development of Sample Online Educational Resources Instructional Materials

DISCUSSION

Part I. The Demographic Profile of the Respondents in Terms of Age, Sex, Educational Attainment and Length of Service.

Table 1 shows the profile of the respondents. Most of the respondents fall within the age range of 26-45, accounting for 60% of the total respondents. Specifically, the age group of 26-35 comprises 33.3% of the respondents, followed by the age group of 36-45 with 26.7%. The age groups of 46-55 and 56-65 account for 28.9% and 11.1% of the respondents, respectively.

The respondents are predominantly female, representing 88.9% of the total participants. Male respondents constitute a relatively smaller percentage, making up 11.1% of the total respondents. For educational Attainment, majority of the participants have a "Masters with units" educational background, representing 88.9% of the respondents. A smaller percentage, 11.1%, are college graduates. The length of service distribution among the respondents are around 13.3% have 1-5 years of service, 23.3% have 6-10 years, another 13.3% have 11-15 years, approximately 24.4% have 16-20 years, around 11.1% have 21-25 years, and finally, about 14.4% have 26-30 years.

Relating these demographic insights to existing literature reveals their relevance across various educational contexts and research domains. In studies investigating the adoption of Open Educational Resources (OERs), such as those by Villanueva & Dolom (2018), understanding demographic factors like educators' age and educational background can

illuminate potential influences on OER adoption rates. Similarly, in examinations of technology integration in education, as Alenezi (2020) explored, demographic variables like age and length of service among educators may shape attitudes and behaviors towards electronic learning platforms. This underscores the multifaceted impact of demographic factors on educational practices and underscores the importance of considering them in research design and analysis.

Part II. The Teachers' Experiences in Terms of Existence of Online Platforms; Online Platforms Used as Instructional Materials; Advantages of Open Educational Resources; and Disadvantages of Open Educational Resources

Table 2.1.1 data represents the mean scores for different statements related to teachers experienced of online platforms, categorized by different age groups (26-35, 36-45, 46-55, and 56-65). The computed means are 4.18, 4.02, 4.28, and 4.08, respectively. The overall standard deviation is 0.695 with a total mean of 4.15 which is verbally interpreted as experienced.

Teachers across different age groups generally have a positive perception of Open Educational Resources (OER) in terms of convenience, flexibility, and the ability to supplement existing curriculum resources. The mean scores for statements related to convenience and flexibility range from 4.10 to 4.35, indicating a generally positive perception. Similarly, teachers perceive OER to varying degrees as meeting high-quality student-Tutor interactions, with mean scores ranging from 3.80 to 4.27. There is also a positive perception of OER's potential in improving retention rates, as indicated by mean scores ranging from 3.90 to 4.23.

The preference for free access and sharing of OER is evident, with mean scores ranging from 4.00 to 4.31. Additionally, there is recognition of OER's potential in reducing the cost of education for students, as indicated by mean scores ranging from 3.83 to 4.19. Teachers also perceive OER as a means to expose students to a wider range of digital learning opportunities, with mean scores ranging from 4.04 to 4.35. Regarding learner benefits, teachers acknowledge the enhanced quality and flexibility of OER resources, with mean scores ranging from 4.08 to 4.35. Furthermore, there is a positive perception of OER's impact on knowledge application and support for learner-centered, self-directed, peer-to-peer, and social-informal learning approaches, as indicated by mean scores ranging from 4.04 to 4.27.

This suggests that teachers, regardless of age, have a positive perception of OER in terms of convenience, flexibility, quality interactions, supplementing curriculum resources, cost reduction, diverse learning opportunities, and learner benefits. the positive perception of OER among teachers suggests potential benefits such as increased adoption, flexibility, enhanced quality, cost reduction, diverse learning opportunities, and learner-centered approaches.

These implications have the potential to transform teaching and learning practices, promoting innovation, accessibility, and student engagement in education. The result of the study is relevant to the statement of Liao et.al. (2018) where OER provides teachers with the flexibility to customize the content according to their teaching and students' learning needs, allowing for differentiation and addressing diverse language proficiencies. Teachers, like Mrs. Harrison, can easily modify and remix OER resources, creating personalized learning materials and adapting them over time to meet the specific requirements and preferences of their students.

Table 2.1.2

The Teachers' Experiences on the Existence of Online Platforms When Grouped in Terms of Sex

The data represents the mean scores for different statements related to teachers' experiences of online platforms, categorized by different sex groups (male and female). The computed means are 3.97 and 4.18, respectively. The overall standard deviation is 0.695 with a total mean of 4.15 which is verbally interpreted as experienced.

The Open Educational Resources offer convenience and flexibility for teachers: Both males (4.40) and females (4.26) perceive OER as providing convenience and flexibility. OER meets high-quality student-Tutor interactions: Females (4.13) have a higher mean score compared to males (4.00). Retention rates are higher in Open Educational Resources: Both males (3.90) and females (4.06). OER can supplement and add value to existing curriculum resources: Females (4.18) have a higher mean score compared to males (3.80). OER must be free: Both males (3.90) and females (4.18). OER can reduce the cost of education for students: Females (4.09) have a slightly higher mean score compared to males (3.90). OER can expose students to a wider range of digital learning opportunities: Females (4.24) have a higher mean score compared to males (4.10), Learner can benefit from OER's enhanced quality and flexibility of resources: Females (4.28) have a higher mean score compared to males (4.00), OER helps learners apply knowledge in a wider context: Females (4.16) have a higher mean score compared to males (3.80). OER supports learner-centered, self-directed, peer-to-peer, and social-informal learning approaches: Females (4.23) have a higher mean score compared to males (3.90).

Overall, females tend to have slightly higher mean scores than males in their perception of OER, suggesting that they may have a slightly more positive experiences of online platforms in terms of the provided statements. The findings indicate that females generally have a slightly more positive perception of Open Educational Resources (OER) compared to males in terms of convenience, high-quality interactions, supplementing curriculum resources, cost reduction, and supporting various learning approaches. These results highlight the importance of considering gender differences when promoting and implementing OER initiatives to ensure equitable access and engagement for all learners.

This finding is relative to the findings of n a study by Cooney (2016), students were assigned an Open Educational Resource (OER) developed by their instructor as part of a library-funded pilot initiative. Through surveys and interviews, students provided feedback on the OER's organization, accessibility, benefits, challenges, and comparison to traditional textbooks. They showed that most students found the OER easily accessible, preferred it over traditional textbooks, and expressed willingness to enroll in future courses utilizing similar resources.

Table 2.1.3

The Teachers' Experiences on the Existence of Online Platforms When Grouped in Terms of Educational Attainment

The data signifies the mean scores for different statements related to teachers experienced of online platforms in terms of educational attainment. The computed for college is 3.97 and for respondents with master is 4.18. The overall standard deviation is 0.695 with a total mean of 4.15 which is verbally interpreted as experienced.

The mean ratings for all the statements range from 3.80 to 4.40, suggesting that teachers generally perceive OER to be beneficial. The highest-rated statement is the convenience and flexibility offered by OER, with a mean of 4.40 among college graduates and 4.28 among master's degree holders. This indicates that teachers recognize the advantages of OER in terms of flexibility and adaptability to different learning needs. Furthermore, teachers believe that OER can enhance student-tutor interactions (mean of 4.11) and contribute to higher retention rates (mean of 4.04). This implies that educators acknowledge the potential of OER to improve engagement and learning outcomes for students. They also see OER as a valuable supplement to existing curriculum resources (mean of 4.13) and emphasize the importance of free access and sharing of OER materials (mean of 4.14). Teachers perceive OER as a means to reduce the cost of education for students (mean of 4.07) and expose them to a wider range of digital learning opportunities (mean of 4.22). This highlights the recognition of OER's potential in creating more affordable and inclusive educational experiences. Moreover, teachers believe that OER can enhance the quality and flexibility of resources (mean of 4.24) and enable learners to apply knowledge in broader contexts (mean of 4.12). They also recognize the supportive role of OER in learner-centered, self-directed, peer-to-peer, and social-informal learning approaches (mean of 4.19).

This suggest that teachers demonstrate a positive experienced and perception of OER's existence and its potential impact on educational attainment. They recognize the convenience, flexibility, and quality benefits of OER, as well as its capacity to enhance student-tutor interactions, retention rates, and learner-centered approaches. These findings suggest that teachers are receptive to incorporating online platforms such as OER into their teaching practices to support effective and engaging learning experiences. The findings of the study are relevant to the results of Villanueva and Dolom (2018) that conducted a study on rural public high school teachers in the Philippines, finding that teachers generally had a positive perception of Open Educational Resources (OER)

adoption, influenced by their attitude and perceived behavioral control, including self-efficacy and learning autonomy. The study's recommendations aim to assist scholars and practitioners in ensuring that secondary education institutions in the Philippines can effectively utilize the benefits offered by OER.

Table 2.1.4
The Teachers' Experiences on the Existence of Online Platforms When Grouped in Terms of Length of Service

The table 2.1.4 shows the mean scores for different statements about teachers experienced of online platforms in terms of length in service (1-5, 6-10, 11-15, 16-20, 21-25 and 26-30). The computed means are 4.48, 4.06, 4.19, 3.97, 4.20 and 4.26, respectively. The overall standard deviation is 0.695 with a total mean of 4.15 which is verbally interpreted as experienced.

The mean ratings for all the statements range from 3.97 to 4.48, indicating a generally positive perception of OER among teachers with different lengths of service. Notably, the highest-rated statement is the convenience and flexibility offered by OER, with a mean rating ranging from 4.09 to 4.42 across different length-of-service groups. This suggests that teachers, regardless of their experience, value the convenience and flexibility provided by OER in their teaching practices.

Additionally, teachers with varying lengths of service perceive OER as a means to supplement and add value to existing curriculum resources (mean rating of 4.13) and acknowledge the importance of free access and sharing of OER materials (mean rating of 4.14). This indicates a recognition of the potential of OER to enhance teaching and learning experiences. Furthermore, teachers believe that OER can expose students to a wider range of digital learning opportunities (mean rating of 4.22) and that learners can benefit from the enhanced quality and flexibility of OER resources (mean rating of 4.24). These findings highlight the experienced among teachers, regardless of their length of service, regarding the potential of OER to provide enriched learning experiences for students.

In conclusion, the data suggest that teachers across different lengths of service demonstrate a positive experienced of online platforms, particularly Open Educational Resources. Teacher’s value OER's convenience, flexibility, and supplementary nature, recognizing its potential to enhance teaching and learning experiences. These findings indicate a promising outlook for integrating and adopting online platforms in education, benefiting teachers and students, irrespective of their years of service.

Table 2.2
Online Platforms Used as Instructional Materials

The data provided showcases the usage of various online platforms as instructional materials. Among the listed platforms, Messenger is the most frequently used, with a significant percentage of 62.2%, making it the top-ranked platform. YouTube follows closely behind with 58.9%, securing the second position. Google stands at the third rank

with 44.4% usage. Other platforms utilized include Google Meet (32.2%), Google Classroom (27.8%), Instagram (10.0%), Skill share (11.1%), LinkedIn Learning (8.9%), Skype (3.3%), and Twitter (3.3%), all with relatively lower frequencies and percentages.

The findings indicate that Messenger, YouTube, and Google are the preferred online platforms for instructional purposes. This suggests that teachers and educators are leveraging these platforms for various educational activities, such as communication, video content, and general online resources. Google Meet and Google Classroom also contribute significantly to the instructional materials landscape, albeit with slightly lower usage percentages. The lower usage percentages for platforms like Skype, Twitter, Instagram, Skill share, and LinkedIn Learning suggest that they are less commonly employed as instructional materials. However, it's worth noting that these platforms may still play specific roles in certain educational contexts or subjects.

The result implies that the diverse range of online platforms is utilized as instructional materials, with Messenger, YouTube, and Google being the most prominent choices. These platforms likely offer features and resources that align well with educators' needs and enhance students' learning experiences. The result is relevant to the study conducted by Alshahrani, Ahmed, and Ward (2019) found that students' academic self-confidence and self-reliance have improved due to the internet as an information provider, with high levels of agreement ranging from 83% to 90%. Students have become more independent in searching for information online, with levels of agreement ranging from 66% to 79%. Additionally, the World Wide Web (WWW) has facilitated improved student-lecturer connectedness, allowing for easier communication without the need for face-to-face contact.

Table 2.3.1

Teachers' Experiences on the Advantages of Open Educational Resources When Grouped in Terms of Age

The table 2.3.1 shows the mean scores for different statements about Teachers experiences on the advantages of Open Educational Resources in terms of age (26-35, 36-45, 46-55 and 56-65). The computed means are 4.38, 4.21, 4.30 and 4.29, respectively. The overall standard deviation is 0.536 with a total mean of 4.31 which is verbally interpreted as highly experienced. The mean ratings for all the statements range from 4.21 to 4.38, indicating a consistent positive perception of OER advantages among teachers across different age groups. The highest-rated statement is "It helps me get pupils excited about a topic" with a mean rating of 4.41, suggesting that teachers, regardless of their age, recognize the ability of OER to engage students and generate enthusiasm for learning. Other statements that received high ratings include "It enhances course material" (mean rating of 4.38) and "It helps me improve my pupils' learning" (mean rating of 4.32). These results highlight the perceived benefits of using OER in terms of enriching course materials and enhancing student learning outcomes.

Additionally, teachers of different age groups appreciate the convenience and cost-saving aspect of OER, as indicated by high ratings for statements such as "It is cost-saving"

(mean rating of 4.27) and "Course materials can be modified and narrowed down to topics that are relevant to my topic" (mean rating of 4.32). Furthermore, the data suggests that OER enables teachers to stay up-to-date with their colleagues (mean rating of 4.29) and feel comfortable with new technology (mean rating of 4.34). This indicates that OER contributes to professional growth and technological competence among teachers of various age groups.

This suggest that teachers across different age groups have positive experienced with the advantages of Open Educational Resources. They appreciate the ability of OER to engage students, enhance course materials, improve learning outcomes, and provide cost-saving benefits. Moreover, OER fosters collaboration among teachers and promotes technological proficiency.

These findings highlight the overall acceptance and appreciation of OER as a valuable resource among teachers, irrespective of their age. The result is relative to the study conducted by A. Alenezi (2020) on the role of e-learning materials in enhancing teaching and learning behaviors, it was found that many students in the Saudi academic environment face challenges in adapting to e-learning strategies due to the complexities and lack of strict regulations regarding learning durations. The study highlights the need for proper preparation and commitment to effectively utilize IT as a learning tool to overcome these challenges.

Table 2.3.2
Teachers' Experiences on the Advantages of Open Educational Resources When Grouped in Terms of Sex

The table 2.3.2 shows the mean scores for different statements about teachers' experiences on the advantages of Open Educational Resources in terms of sex (male and female). The computed means are 4.24 and 4.32, respectively. The overall standard deviation is 0.536 with a total mean of 4.31 which is verbally interpreted as strongly agree.

The mean ratings for all the statements range from 4.20 to 4.44, with the grand mean being 4.31. These ratings suggest that both male and female teachers highly value the advantages offered by OER in terms of enhancing teaching and learning experiences. Notably, the highest-rated statement among both male and female teachers is "It helps me get pupils excited about a topic" with mean ratings of 4.20 and 4.44 respectively. This indicates that OER is seen as a valuable tool for engaging students, regardless of gender. Other statements that received high ratings include "It enhances course material" (mean rating of 4.38), "It helps me improve my pupils' learning" (mean rating of 4.32), and "It makes me feel comfortable with new technology" (mean rating of 4.34). These findings demonstrate the shared perception of OER's ability to enrich course content, enhance student learning outcomes, and promote technological proficiency among both male and female teachers. Additionally, both male and female teachers recognize the cost-saving aspect of OER, as indicated by high ratings for the statement "It is cost-saving" (mean rating of 4.27). This suggests that both genders appreciate the benefits of OER in terms of saving time, effort, and money in accessing learning resources.

This suggest that both male and female teachers have positive experiences with the advantages of Open Educational Resources. They recognize the value of OER in terms of engaging students, improving teaching and learning practices, promoting technological competence, and providing cost-saving benefits. These findings emphasize the universal acceptance and appreciation of OER among teachers, regardless of gender.

Table 2.3.3
Teachers' Experiences on the Advantages of Open Educational Resources When Grouped in Terms of Educational Attainment

The table shows 2.3.3 the mean scores for different statements about Teachers experiences on the advantages of Open Educational Resources in terms of educational attainment (college and master). The computed means are 4.24 and 4.32, respectively. The overall standard deviation is 0.536 with a total mean of 4.31 which is verbally interpreted as strongly agree. The mean ratings for all the statements range from 4.10 to 4.44, with the grand mean being 4.31. These ratings suggest that both college graduates and individuals with master's units highly value OER's advantages in enhancing teaching and learning experiences.

Among the highest-rated statements for both groups are "It helps me get pupils excited about a topic" and "It enhances course material," indicating that both college graduates and individuals with master's units recognize the potential of OER in engaging students and enriching course content. Additionally, both groups of teachers acknowledge the cost-saving aspect of OER, as indicated by high ratings for the statement "It is cost-saving." This suggests that both college graduates and individuals with master's units appreciate the benefits of OER in terms of saving time, effort, and resources. Furthermore, both groups of teachers recognize the value of OER in integrating primary source material into their courses, providing context for topics, improving student learning, and staying up-to-date with colleagues. These findings demonstrate that the advantages of OER are perceived similarly by teachers across different educational attainment levels.

The result implies that college graduates and individuals with master's units have positive experiences with the advantages of Open Educational Resources. They recognize OER's value in engaging students, enhancing course material, providing cost-saving benefits, and improving teaching and learning practices. These findings emphasize the universal acceptance and appreciation of OER among teachers, regardless of their educational background.

The findings underscore the unanimous recognition among educators, regardless of their educational attainment, of the manifold advantages offered by Open Educational Resources (OER) (Villanueva & Dolom, 2018). High mean ratings across statements such as engaging students, enriching course material, and cost-saving benefits reveal a widespread acknowledgment of OER's potential to enhance teaching and learning experiences. This aligns seamlessly with existing literature discussing the transformative impact of OER on pedagogical practices, emphasizing its role in fostering student engagement and enriching curriculum content.

Furthermore, the study's revelation that educators with varying levels of educational background perceive similar benefits of OER echoes prior research, suggesting that attitudes towards OER adoption remain consistent across diverse demographics (Villanueva & Dolom, 2018). This consistency underlines the universal acceptance of OER among educators and reinforces the notion that its advantages transcend educational qualifications. As such, these findings serve to validate the ongoing discourse surrounding the pivotal role of OER in modern education, emphasizing its capacity to democratize access to quality educational resources and empower educators to innovate in their teaching practices.

Table 2.3.4
Teachers' Experiences on the Advantages of Open Educational Resources When Grouped in Terms of Length of Service

The table 2.3.4 shows the mean scores for different statements about Teachers experiences on the advantages of Open Educational Resources in terms of length of service (1-5, 6-10, 11-15, 16-20, 21-25 and 26-30). The computed means are 4.73, 4.21, 4.20, 4.15, 4.28, and 4.44, respectively. The overall standard deviation is 0.536 with a total mean of 4.31, which is verbally interpreted as strongly agree. The mean ratings for all the statements range from 4.05 to 4.83, with the grand mean being 4.31. These high ratings indicate that teachers with varying service lengths perceive OER's advantages positively, regardless of their experience in the field.

Among the highest-rated statements for all groups are "It helps me let my pupils know the most up-to-date developments in the subject" and "It enhances course material." These findings suggest that OER is perceived as a valuable tool for keeping students informed about the latest developments and enriching their courses' content. Furthermore, teachers with different lengths of service recognize the cost-saving aspect of OER, as indicated by high ratings for the statement "It is cost-saving." This indicates that teachers perceive the benefits of OER in terms of saving time, effort, and financial resources, while still gaining new knowledge. Additionally, the data reveals that teachers across different lengths of service appreciate the flexibility offered by OER, as indicated by high ratings for the statement "Course materials can be modified and narrowed down to topics that are relevant to my topic." This suggests that OER allows teachers to adapt and tailor the resources to meet the specific needs of their teaching.

The findings suggest that teachers with varying lengths of service have positive experiences and perceptions of the advantages of Open Educational Resources. They value the ability of OER to provide up-to-date information, enhance course materials, save costs, and offer flexibility in instructional design. These results highlight the widespread acceptance and recognition of OER as a valuable resource for teachers at different stages of their careers. Agree
The findings revealed that teachers with diverse lengths of service hold positive perceptions regarding the advantages of Open Educational Resources (OER) (Villanueva & Dolom, 2018). With mean ratings ranging from 4.05 to 4.83, teachers across different service lengths demonstrated a high level of agreement in recognizing the benefits of

OER, as indicated by the overall mean score of 4.31, which falls under the category of "strongly agree." Particularly noteworthy is the consistent recognition among teachers of OER's role in facilitating access to the latest developments in the subject matter and enriching course content, regardless of their tenure in the field.

Moreover, the data highlighted teachers' collective acknowledgment of the cost-saving benefits associated with OER, indicating a widespread appreciation for the resource's potential to streamline teaching efforts and optimize resource allocation (Bliss & Hilton, 2019). Additionally, the findings underscored teachers' recognition of the flexibility afforded by OER, allowing them to tailor course materials to meet the specific needs of their teaching contexts. Overall, these results underscore the universal acceptance of OER as a valuable resource among teachers at different career stages, emphasizing its role in supporting effective teaching practices and enhancing student learning experiences.

Table 2.4.1
Teachers' Experiences on the Disadvantages of Open Educational Resources When Grouped in Terms of Age

The table 2.4.1 shows the mean scores for different statements about teachers experiences on the disadvantages of Open Educational Resources in terms of age (26-35, 36-45, 46-55 and 56-65). The computed means are 3.01, 3.17, 3.59 and 3.19, respectively. The overall standard deviation is 1.042 with a total mean of 3.24, which is verbally interpreted as neither agree nor disagree. The mean ratings for the statements range from 2.50 to 3.77, with a grand mean of 3.24. These ratings suggest that teachers express mixed opinions when it comes to perceiving the disadvantages of OER, influenced by their age group.

One prominent concern expressed by teachers across all age groups is the belief that OER cannot fully substitute for their preferred teaching approaches. This statement received relatively high mean ratings, indicating that many teachers, regardless of age, see limitations in the ability of OER to replace their established instructional methods. The availability of internet connection in schools is another area of concern raised by teachers. The statement "There is no internet connection in our school" received moderate mean ratings across all age groups. This suggests that the lack of internet connectivity negatively affects the utilization of OER as an educational resource. The difficulty in accessing digital resources is another concern highlighted by teachers. The statement "Digital resources are difficult for me to access" received moderate mean ratings across all age groups, indicating that teachers face challenges in accessing the necessary digital materials for their teaching.

The age groups of 46-55 and 56-65 show higher mean ratings for statements related to digital materials being presented outside their original context and the concern of students lacking information literacy skills to assess the credibility of digital resources. These findings suggest that older teachers may have more reservations about the contextual integrity of digital materials and students' ability to evaluate online information critically.

On the other hand, statements such as "They are irrelevant to my field" and "Using them distracts from the core goals of my teaching" received relatively lower mean ratings across all age groups. The results indicate that regardless of age, teachers do not perceive OER as significantly irrelevant or distracting from their teaching objectives.

The findings imply that age plays a role in shaping teachers' perceptions of the disadvantages of OER. While concerns about substituting teaching approaches are prevalent across all age groups, specific problems such as internet connectivity, difficulty accessing digital resources, and student information literacy skills vary based on age. These results highlight the need to address infrastructure issues, provide better access to digital resources, and support teachers in adapting their teaching methods to incorporate OER effectively.

The study's findings regarding teachers' perceptions of Open Educational Resources (OER) disadvantages underscore the multifaceted nature of their concerns, influenced by age dynamics. While all age groups express worries about OER's potential inability to fully substitute their preferred teaching approaches, specific challenges such as internet connectivity and access to digital resources resonate universally. These concerns mirror the literature's discussion on the technological shortcomings and accessibility issues associated with OER adoption. Moreover, the study reveals that older teachers, particularly those aged 46-55 and 56-65, exhibit heightened apprehensions regarding the contextual integrity of digital materials and students' information literacy skills. This aligns with prior research highlighting age as a factor shaping teachers' perceptions and underscores the importance of tailored support mechanisms to address varying needs across different age cohorts (Alenezi, 2020).

Table 2.4.2
Teachers' Experiences on the Disadvantages of Open Educational Resources When Grouped in Terms of Sex

The table 2.4.2 shows the mean scores for different statements about teachers experiences on the disadvantages of Open Educational Resources in terms of sex (male and female). The computed means are 2.95 and 3.28, respectively. The overall standard deviation is 1.042 with a total mean of 3.24, which is verbally interpreted as neither agree nor disagree.

One common concern among both male and female teachers is the belief that OER cannot fully substitute for their preferred teaching approaches. This statement received relatively high mean ratings for both genders, suggesting that many teachers perceive limitations in the ability of OER to replace their established instructional methods. Regarding the issue of limited internet connection in schools, both male and female teachers expressed similar mean ratings, indicating that this problem affects both genders equally. The statement "There is no internet connection in our school" received a moderate mean rating for both males and females, highlighting the impact of limited internet access on the effective use of OER as an educational resource. Female teachers

reported slightly higher mean ratings for the statement "Digital resources are difficult for me to access" compared to their male counterparts. This suggests that female teachers may perceive accessing digital resources as relatively more challenging, indicating a potential gender difference in technology access and proficiency. Regarding the statement, "Digital materials can be presented outside their original context," female teachers gave higher mean ratings than male teachers. This indicates that female teachers may have stronger concerns about maintaining the contextual integrity of digital materials when utilizing them in their teaching. Additionally, female teachers expressed higher mean ratings for the statement "I don't want my students to copy or plagiarize material from the Web," indicating a greater concern about potential plagiarism when using online resources. This highlights their emphasis on promoting academic integrity among their students.

The findings suggest that while male and female teachers share some common concerns about the disadvantages of OER, there are subtle differences in their perceptions. Female teachers show slightly greater concerns about accessing digital resources, maintaining contextual integrity, and preventing plagiarism. These insights underscore the importance of addressing gender-specific concerns and providing appropriate support and training to help teachers effectively integrate OER into their teaching practices.

The findings are related to existing literature and studies that explore teachers' experiences and perceptions of Open Educational Resources (OER), particularly concerning gender differences in technology access and proficiency. The observation that female teachers reported slightly higher mean ratings for the statement "Digital resources are difficult for me to access" resonates with prior research highlighting gender discrepancies in technology literacy and access. This aligns with studies emphasizing the need for targeted support to address such disparities (Alenezi, 2020). Additionally, the higher mean ratings among female teachers for concerns related to maintaining contextual integrity and preventing plagiarism reflect their emphasis on academic integrity and ethical considerations in teaching practices, which echoes findings from studies emphasizing the importance of promoting ethical behavior and integrity in online learning environments (Bliss & Hilton, et.al., 2012). Therefore, these findings underscore the importance of tailored interventions and training programs that address gender-specific concerns and promote equitable access to resources and support for male and female teachers

The findings regarding teachers' experiences with Open Educational Resources (OER) in terms of educational attainment align with existing literature and studies on teachers' perceptions and challenges in utilizing digital resources. The observation that individuals with master's degrees express slightly higher concerns about accessing digital resources resonates with prior research emphasizing the importance of addressing technological proficiency and familiarity among educators, particularly those with higher levels of educational attainment (Alenezi, 2020). Similarly, the higher mean ratings among individuals with master's degrees for concerns related to maintaining contextual integrity and preventing plagiarism echo findings from studies emphasizing the importance of promoting academic integrity and ethical behavior in online learning environments (Bliss & Hilton, et.al., 2012).

Table 2.4.3
Teachers' Experiences on the Disadvantages of Open Educational Resources When Grouped in Terms of Educational Attainment

The table 2.4.3 shows the mean scores for different statements about teachers experiences on the disadvantages of Open Educational Resources in terms of educational attainment (male and female). The computed means are 2.95 and 3.28, respectively. The overall standard deviation is 1.042 with a total mean of 3.24, which is verbally interpreted as neither agree nor disagree.

Both groups of teachers expressed agreement with the statement "They cannot substitute for the teaching approaches I use." This suggests that both college graduates and individuals with master's degrees perceive limitations in the ability of OER to fully replace their preferred teaching methods. The mean ratings for this statement were relatively high for both groups, indicating a shared concern. Regarding the issue of limited internet connection in schools, both groups of teachers provided similar mean ratings, indicating that this challenge affects both college graduates and individuals with master's degrees equally. The statement "There is no internet connection in our school" received a moderate mean rating for both groups, highlighting the impact of limited internet access on the effective use of OER. When it comes to accessing digital resources, individuals with master's degrees (with units) gave slightly higher mean ratings compared to college graduates.

This suggests that those with higher educational attainment may perceive accessing digital resources as relatively more challenging, indicating a potential difference in their familiarity and comfort with technology. In terms of the statement "Digital materials can be presented outside their original context," individuals with master's degrees (with units) provided higher mean ratings compared to college graduates. This indicates that individuals with higher educational attainment may have stronger concerns about maintaining the contextual integrity of digital materials when utilizing them in their teaching. Additionally, individuals with master's degrees (with units) expressed higher mean ratings for the statement "I don't want my students to copy or plagiarize material from the Web," indicating a greater concern about potential plagiarism when using online resources. This highlights their emphasis on promoting academic integrity among their students.

The findings suggest that while both college graduates and individuals with master's degrees share some common concerns about the disadvantages of OER, there are slight differences in their perceptions. Individuals with higher educational attainment demonstrate slightly higher concerns about accessing digital resources, maintaining contextual integrity, and preventing plagiarism. These insights underscore the importance of providing appropriate support and training to help teachers at different educational levels effectively integrate OER into their teaching practices.

The findings regarding teachers' experiences with Open Educational Resources (OER) in terms of their educational attainment resonate with existing literature on OER adoption

and teacher perceptions (Villanueva & Dolom, 2018). Both college graduates and individuals with master's degrees express concerns about the limitations of OER in fully substituting their preferred teaching methods, echoing previous studies emphasizing the importance of OER customization and flexibility to accommodate diverse instructional approaches (Bliss & Hilton, 2012). Moreover, the similar mean ratings provided by both groups regarding challenges such as limited internet access in schools underscore the critical role of addressing infrastructure issues to ensure equitable access to digital resources, as highlighted in prior research on OER implementation barriers (Alshahrani, Ahmed, & Ward, 2017).

However, differences emerge in perceptions regarding accessing digital resources and concerns about contextual integrity and plagiarism. Individuals with higher educational attainment demonstrate slightly higher concerns about accessing digital resources and maintaining contextual integrity, suggesting the need for targeted support and training to address varying levels of technological proficiency among educators (Arinto, 2016). Additionally, their heightened concern about preventing plagiarism underscores the importance of promoting digital literacy skills and ethical use of online resources among both teachers and students, aligning with literature on intellectual property concerns and academic integrity in the context of OER adoption (Cooney, 2016).

Table 2.4.4
Teachers' Experiences on the Disadvantages of Open Educational Resources When Grouped in Terms of Length of Service

The table 2.4.4 shows the mean scores for different statements about teachers experiences on the disadvantages of Open Educational Resources in terms of length of service (1-5, 6-10, 11-15, 16-20, 21-25 and 26-30). The computed means are 3.34, 2.86, 3.23, 3.29, 3.68 and 3.36, respectively. The overall standard deviation is 1.042 with a total mean of 3.24, which is verbally interpreted as neither agree nor disagree.

Teachers with 1-5 years of service provided the highest mean rating for the statement "I don't want my students to copy or plagiarize material from the Web." This suggests that teachers in the early years of their career place a significant emphasis on preventing plagiarism when using OER in their teaching. On the other hand, teachers with 6-10 years of service gave the lowest mean rating for the same statement, indicating a relatively lower concern about plagiarism compared to their less-experienced counterparts. The report "They cannot substitute for the teaching approaches I use" received relatively high mean ratings across all groups, indicating a shared concern among teachers about the limitations of OER in entirely replacing their preferred teaching methods. However, teachers with 1-5 years and 16-20 years of service provided the highest mean ratings for this statement, suggesting that teachers in these groups feel particular strongly about the challenges of substituting their teaching approaches with OER. Regarding the availability of internet connection in schools, teachers with 21-25 years of service provided the highest mean rating, indicating a greater concern about limited internet access affecting

the use of OER. This group of teachers may have witnessed the evolution of digital resources and the importance of internet connectivity in educational settings.

The findings imply that teachers' length of service plays a role in shaping their perceptions of the disadvantages of OER. Teachers in the early years of their careers demonstrate a strong emphasis on preventing plagiarism and may be more cautious about using OER. In contrast, teachers with more years of service may have experienced the evolution of digital resources and have a heightened awareness of the challenges related to limited internet connectivity. The findings regarding teachers' experiences with Open Educational Resources (OER) in relation to their length of service align with existing literature on teacher perceptions and OER adoption (Villanueva & Dolom, 2019). The emphasis placed by teachers with 1-5 years of service on preventing plagiarism when using OER reflects a common concern among early-career educators about academic integrity and ethical use of online resources (Cooney, 2016). Conversely, the relatively lower concern about plagiarism among teachers with 6-10 years of service may indicate a shift in priorities or a growing familiarity with digital pedagogy over time, echoing studies on the evolving perceptions of technology integration among educators (Alshahrani, Ahmed, & Ward, 2017).

Moreover, the shared concern among teachers across all groups about the limitations of OER in fully substituting their preferred teaching methods resonates with literature emphasizing the need for customizable and adaptable OER to accommodate diverse instructional approaches (Bliss & Hilton, 2012). The heightened concern among teachers with 21-25 years of service regarding limited internet access underscores the significance of addressing infrastructure issues to facilitate effective OER use, consistent with prior research highlighting barriers related to technological accessibility in educational settings (Arinto, 2016). Overall, these findings emphasize the dynamic nature of teacher perceptions regarding OER adoption and highlight the importance of tailored professional development initiatives to support educators at different career stages in effectively integrating OER into their teaching practices.

Part III. The Test of Significant Difference on the Teachers' Experiences Using Open Educational Resources When Grouped in Profile Variables

Table 3

The Test of Significant Difference on the Teachers' Experiences Using Open Educational Resources When Grouped in Profile Variables

The table 3 indicates that there is a statistically significant difference in teachers' experiences in using Open Educational Resources (OER) when the respondents are grouped by district and length of service. Specifically, the p-value of .024 for districts suggests a significant variation, implying that teachers' experiences with OER differ considerably depending on their geographical location. For instance, teachers in District

2, with a mean rank of 55.10, might have better access to OER training or resources compared to those in District 3, which has a mean rank of 32.10.

Similarly, the length of service also shows a significant difference, with a p-value of .003. This indicates that teachers' perceptions and utilization of OER vary with their years of experience. Teachers with 1-5 years and 21-25 years of service, both having a mean rank of 66.67, significantly differ in their experiences compared to those with 6-10 years, who have a mean rank of 31.86. This disparity might be due to newer teachers being more adaptable to technological changes and seasoned teachers having more exposure to various teaching methods, including OER.

Conversely, there is no statistically significant difference in teachers' experiences with OER when grouped by age, school category, educational attainment, and sex. The p-values for these variables (.179, .131, .113, and .113, respectively) suggest that these factors do not critically influence how teachers perceive and use OER. This indicates that regardless of their age, whether they teach in small, medium, or large schools, their level of educational attainment, or their gender, teachers have similar experiences with OER.

These findings align with previous studies that highlight the influence of contextual factors such as location and experience on the adoption and use of OER. For instance, Villanueva & Dolom (2019) emphasized the importance of contextual and individual factors in the adoption of OER. Additionally, Alenezi (2020) pointed out the varying readiness and capacity of different regions in adopting e-learning technologies, which can be extrapolated to OER. The significant impact of length of service on teachers' experiences with OER also correlates with Cooney's (2016) observation of varying engagement levels based on familiarity and comfort with technology. Therefore, while demographic factors may not significantly influence OER experiences, contextual variables like district and length of service are crucial, highlighting the need for tailored interventions and support systems to optimize OER adoption and use.

Part IV. The Problems Encountered by Teachers in Using Online Educational Resources Instructional Materials.

Table 4
The Problems Encountered by Teachers in Using Online Educational Resources Instructional Materials

The table 4 provided presents the problems encountered by teachers in using online educational resources instructional materials. The standard deviation is 0.938 with a mean rating of 3.32which is verbally interpreted as neither agree or disagree.

Among the listed problems, "Technical difficulties with online teaching tools" received the highest mean rating of 3.80, falling under the interpretation of "Agree" (A). This indicates that a significant number of teachers encountered technical issues while using online teaching tools. These challenges may include difficulties with video conferencing platforms, file sharing, or other technical aspects of online instruction. The problem of

"Time consuming resources" received a mean rating of 3.32, also falling under the interpretation of "Neither agree nor disagree" (N). This suggests that teachers perceived online instructional materials as requiring considerable time and effort to use effectively. The time-consuming nature of these resources may include adapting and modifying materials for online delivery, creating engaging multimedia content, or providing additional support to students in virtual environments. "Lack of Computer literacy" and "Lack of technical/software knowledge" both received mean ratings of 3.32 and 3.46, respectively, falling under the interpretation of "Neither agree nor disagree" (N) and "Agree" (A). These ratings indicate that teachers faced challenges related to their own computer literacy and technical/software knowledge when using online instructional materials. These difficulties may involve navigating digital platforms, troubleshooting software issues, or effectively integrating technology into their teaching practice. The problems of "Difficult to motivate pupils" and "Lack of pupils' interest" received mean ratings of 3.07 and 2.94, respectively, falling under the interpretation of "Neither agree nor disagree" (N). This suggests that while some teachers encountered challenges in motivating students and generating interest in online instruction, the overall perception was more neutral. These challenges may stem from the limitations of online environments in fostering student engagement and interaction.

The findings imply that teachers faced several challenges when using online instructional materials. Technical difficulties, the time-consuming nature of resources, and lack of computer literacy and technical/software knowledge were identified as prominent issues. However, difficulties in motivating pupils and capturing their interest were perceived to be slightly less problematic. These findings highlight the importance of providing support, training, and resources to help teachers overcome the challenges associated with online instruction and optimize the use of online instructional materials.

The findings regarding the challenges encountered by teachers in using online instructional materials align with existing literature on technology integration in education and teacher perceptions of digital tools (Alenezi, 2020). The high mean rating for "Technical difficulties with online teaching tools" reflects a common concern among educators about the reliability and usability of digital platforms, consistent with previous research highlighting technical challenges as barriers to effective online instruction (Richardson et al., 2019). Similarly, the perceived time-consuming nature of online instructional materials resonates with literature emphasizing the importance of adequate time and resources for educators to develop and implement technology-enhanced teaching strategies (Cooney, 2016).

Moreover, the challenges related to teachers' computer literacy and technical/software knowledge are consistent with studies highlighting the need for ongoing professional development to support educators in building digital competencies and navigating technology-rich learning environments (Arinto, 2016). The findings also underscore the importance of addressing student motivation and engagement in online instruction, echoing research on the impact of technology on student motivation and learning outcomes (Hilton et al., 2012). Overall, these findings emphasize the multifaceted nature of challenges associated with online instruction and highlight the importance of

comprehensive support mechanisms to empower teachers in effectively leveraging digital tools for teaching and learning.

Part V. The Coping Strategies of Teachers in Addressing the Challenges

Table 5
The Coping Strategies of Teachers in Addressing the Challenges

The table 5 provided presents the coping strategies of teachers in addressing the challenges. The standard deviation is 0.770 with a mean rating of 4.11 verbally interpreted as agree.

"I keep my pupils engaged" received the highest mean rating of 4.14, falling under the interpretation of "Strongly Agree" (SA). This indicates that a significant number of teachers actively focus on keeping their students engaged in the learning process. By employing various instructional techniques, such as interactive activities, multimedia resources, and collaborative projects, teachers strive to enhance student engagement and participation in online instruction. “I let my pupils choose their learning way" also received a high mean rating of 3.97, falling under the interpretation of "Agree" (A). This suggests that teachers recognize the importance of providing students with autonomy in their learning. By allowing students to choose their learning paths and customize their learning experiences, teachers aim to foster a sense of ownership and motivation among students in the online environment.

"I invite my pupils to contribute to teachings" received a mean rating of 4.07, falling under the interpretation of "Agree" (A). This indicates that teachers actively encourage student contributions and participation in the instructional process. By involving students in discussions, collaborative projects, and decision-making, teachers create opportunities for active student engagement and promote a student-centered approach to online instruction. "I encourage peer evaluation" received a high mean rating of 4.16, falling under the interpretation of "Strongly Agree" (SA). This suggests that teachers emphasize the importance of peer evaluation as a valuable learning strategy. By incorporating peer assessment and feedback, teachers promote student collaboration, self-reflection, and the development of critical evaluation skills within the online learning environment. "I engage myself in ICT training" received the highest mean rating of 4.19, falling under the interpretation of "Strongly Agree" (SA). The result indicates that teachers actively participate in ICT (Information and Communication Technology) training to enhance their digital skills and pedagogical practices. Teachers strive to improve their instructional delivery and effectively integrate online instructional materials by continuously updating their knowledge and skills in utilizing educational technology tools.

The findings imply that teachers employ various coping strategies to address the challenges associated with online instructional materials. Strategies such as keeping students engaged, allowing student choice, inviting student contributions, encouraging peer evaluation, and engaging in ICT trainings are widely adopted by teachers. These strategies reflect a proactive approach to enhancing student engagement, promoting

student-centered learning, and improving the teachers' digital competencies within the online learning environment.

Moreover, the coping strategies that teachers employ to overcome challenges associated with online instructional materials. The data offers valuable insights into the adaptations made by educators within the context of online education.

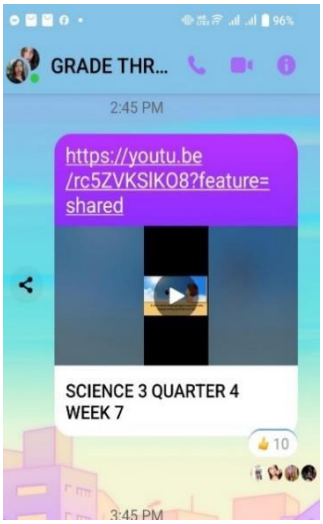
The findings reveal several key observations. Firstly, teachers are deeply committed to maintaining high levels of student engagement which underscores their dedication to enhancing student participation and interaction in online learning environments. Secondly, teachers recognize the importance of providing students with autonomy in their learning journeys where in this strategy aims to empower students by granting them a sense of control over their learning experiences. Additionally, the practice of inviting students to actively contribute to teaching is prevalent which emphasizes the shift towards a more student-centered approach in online instruction, fostering greater participation and collaboration.

Furthermore, teachers place a strong emphasis on encouraging peer evaluation which promotes collaborative learning, self-reflection, and the development of critical evaluation skills among students. Lastly, teachers are actively investing in their professional development by participating in ICT (Information and Communication Technology) training where in underscores their commitment to enhancing digital skills and pedagogical practices for effective technology integration in teaching.

The teachers are collectively adopting proactive coping strategies to address the challenges posed by online instructional materials. These findings indicate a strong commitment to delivering high-quality online learning experiences. The proactive measures taken by teachers to navigate the complexities of online education. These strategies prioritize student engagement, autonomy, and participation, while also enhancing teachers' digital competencies. Educators are demonstrating a steadfast dedication to the advancement of online education, ensuring its continued effectiveness and success.

The findings regarding the coping strategies of teachers in addressing the challenges of online instructional materials resonate with existing literature on effective teaching practices in digital learning environments (Alenezi, 2020). The emphasis on keeping students engaged aligns with research highlighting the importance of active student participation and interaction for meaningful learning outcomes in online education. By employing strategies such as interactive activities and multimedia resources, teachers aim to create dynamic learning experiences that enhance student engagement and motivation, consistent with recommendations for effective online teaching.

Moreover, the focus on providing students with autonomy in their learning echoes literature on learner-centered approaches to online instruction, which emphasize the importance of empowering students to take ownership of their learning process. By allowing students to choose their learning paths and contribute to the instructional process, teachers promote a sense of autonomy and self-directed learning, which has



been associated with increased motivation and academic achievement in online settings.

Part VI. Development of Sample Online Educational Resources Instructional Materials

Open Educational Resources (OER) are learning, teaching and research materials in any format and medium that reside in the public domain or are under copyright that have been released under an open license, that permit no-cost access, re-use, re-purpose, adaptation and redistribution by others.

Any resource available on the internet in an online educational environment. It might be audio or video lessons, interactive exercises or exams, or documents providing links to other Web sites.

This is the examples of online educational resources instructional materials could be developed by the researcher the subject is about the Science 3 quarter 4 Week 7.

CONCLUSIONS

Summary

This study was aimed to the experiences of teachers in transitioning from textbooks to online instructional materials, basis for Open Education Resources utilization plan in selected public elementary schools in the Division of Quezon, School Year 2022-2023; awareness, online platforms being used, advantages and disadvantages, problems encountered, and coping strategies will be discussed in this study.

The respondents of the study were delimited to public elementary teachers in selected public elementary schools in the Division of Quezon**.**

Summary of Findings

From the thorough analysis of the data gathered and the results obtained in the previous discussion, the following significant findings are hereby summarized.

1. Demographic profile of the respondents in terms of:

1.1 Age

The profile of the respondents. Most of the respondents fall within the age range of 26-45, accounting for 60% of the total respondents. Specifically, the age group of 26-35 comprises 33.3% of the respondents, followed by the age group of 36-45 with 26.7%. The age groups of 46-55 and 56-65 account for 28.9% and 11.1% of the respondents, respectively.

1.2 Sex

The respondents are predominantly female, representing 88.9% of the total participants. Male respondents constitute a relatively smaller percentage, making up 11.1% of the total respondents.

1.3 Educational Attainment

For educational Attainment, majority of the participants have a "College Graduate with masters units" educational background, representing 88.9% of the respondents. A smaller percentage, 11.1%, are college graduates.

1.4 Length of Service

The length of service distribution among the respondents are around 13.3% have 1-5 years of service, 23.3% have 6-10 years, another 13.3% have 11-15 years, approximately 24.4% have 16-20 years, around 11.1% have 21-25 years, and finally, about 14.4% have 26-30 years.

2. The teachers' experiences in using online educational resources (OER) in terms of following when grouped into demographic profile:

2.1.1 Experienced of the Existence of Online platforms based on the gathered data, the mean scores for different statements related to teachers' experiences of online platforms, categorized by different age groups (26-35, 36-45, 46-55, and 56-65). The computed means are 4.18, 4.02, 4.28, and 4.08, respectively. The overall standard deviation is 0.695 with a total mean of 4.15 which is verbally interpreted as experienced.

2.1.2 The mean scores for different statements related to teachers' experiences of online platforms, categorized by different sex groups (male and female). The computed means of male group is 3.97 and for female group is 4.18, respectively. The overall standard deviation is 0.695 with a total mean of 4.15 which is verbally interpreted as experienced.

2.1.3 Additionally, the data signifies the mean scores for different statements related to teachers experiences of online platforms in terms of educational attainment. The weighted mean for college graduate is 3.97 and for respondents with master is 4.18. The overall standard deviation is 0.695 with a total mean of 4.15 which is verbally interpreted as agree.

2.1.4 Moreover, the mean scores for different statements about teachers' experiences of online platforms in terms of length in service (1-5, 6-10, 11-15, 16-20, 21-25 and 26-30). The computed means are 4.48, 4.06, 4.19, 3.97, 4.20 and 4.26, respectively. The overall standard deviation is 0.695 with a total mean of 4.15 which is verbally interpreted as agree.

2.2 The usage of various online platforms as instructional materials. Among the listed platforms, Messenger is the most frequently used, with a significant percentage of 62.2, making it the top-ranked platform. YouTube follows closely behind with 58.9, securing the second position. Google stands at the third rank with 44.4 usage. Other platforms utilized include Google Meet (32.2%), Google Classroom (27.8%), Instagram (10.0%), Skill share (11.1%), LinkedIn Learning (8.9%), Skype (3.3%), and Twitter (3.3%), all with relatively lower frequencies and percentages.

2.3 .1 Advantages of Open Educational Resources;

Based on the gathered data, the mean scores for different statements about Teachers experiences on the advantages of Open Educational Resources in terms of age (26-35, 36-45, 46-55 and 56-65). The computed means are 4.38, 4.21, 4.30 and 4.29, respectively. The overall standard deviation is 0.536 with a total mean of 4.31 which is verbally interpreted as strongly agree. The mean ratings for all the statements range from 4.21 to 4.38, indicating a consistent positive perception of OER advantages among teachers across different age groups. The highest-rated statement is "It helps me get pupils excited about a topic" with a total mean rating of 4.41, suggesting that teachers, regardless of their age, recognize the ability of OER to engage students and generate enthusiasm for learning. Other statements that received high ratings include "It enhances course material" (mean rating of 4.38) and "It helps me improve my pupils' learning" (mean rating of 4.32). These results highlight the perceived benefits of using OER in terms of enriching course materials and enhancing student learning outcomes.

2.3.2 The mean scores for different statements about teachers' experiences on the advantages of Open Educational Resources in terms of sex (male and female). The computed means are 4.24 and 4.32, respectively. The overall standard deviation is 0.536 with a total mean of 4.31 which is verbally interpreted as strongly agree.

2.3.3 The mean scores for different statements about Teachers experiences on the advantages of Open Educational Resources in terms of educational attainment (college and master with units). The computed means are 4.24 and 4.32, respectively. The overall standard deviation is 0.536 with a total mean of 4.31 which is verbally interpreted as strongly agree. The mean ratings for all the statements range from 4.10 to 4.44, with the grand mean being 4.31. These ratings suggest that both college graduates and individuals with master's units highly value OER's advantages in enhancing teaching and learning experiences.

2.3.4 The mean scores for different statements about Teachers experiences on the advantages of Open Educational Resources in terms of length of service (1-5, 6-10, 11-15, 16-20, 21-25 and 26-30). The computed means are 4.73, 4.21, 4.20, 4.15, 4.28, and 4.44, respectively. The overall standard deviation is 0.536 with a total mean of 4.31, which is verbally interpreted as strongly agree. The mean ratings for all the statements range from 4.05 to 4.83, with the grand mean being 4.31. These high ratings indicate that

teachers with varying service lengths perceive OER's advantages positively, regardless of their experience in the field.

2.4.1 The mean scores for different statements about teachers experience on the disadvantages of Open Educational Resources in terms of age (26-35, 36-45, 46-55 and 56-65). The computed means are 3.01, 3.17, 3.59 and 3.19, respectively. The overall standard deviation is 1.042 with a total mean of 3.24, which is verbally interpreted as neither agree nor disagree. The mean ratings for the statements range from 2.50 to 3.77, with a grand mean of 3.24. These ratings suggest that teachers express mixed opinions when it comes to perceiving the disadvantages of OER, influenced by their age group.

2.4.2 The mean scores for different statements about teachers experiences on the disadvantages of Open Educational Resources in terms of sex (male and female). The computed means are 2.95 and 3.28, respectively. The overall standard deviation is 1.042 with a total mean of 3.24, which is verbally interpreted as neither agree nor disagree.

2.4.3 The mean scores for different statements about teachers experiences on the disadvantages of Open Educational Resources in terms of educational attainment (college and female). The computed means are 2.95 and 3.28, respectively. The overall standard deviation is 1.042 with a total mean of 3.24, which is verbally interpreted as neither agree nor disagree.

2.4.4 The mean scores for different statements about teachers experience on the disadvantages of Open Educational Resources in terms of length of service (1-5, 6-10, 11-15, 16-20, 21-25 and 26-30). The computed means are 3.34 , 2.86, 3.23, 3.29, 3.68 and 3.36, respectively. The overall standard deviation is 1.042 with a total mean of 3.24, which is verbally interpreted as neither agree nor disagree.

3. The result of the study about the test of standard deviation of the teachers' experiences using open educational resources when grouped into profile variables revealed that there is a significant difference between teachers' experiences when it comes to their district and length of service. And there is no significant difference between teachers' experiences when grouped into their age, sex, school category, educational attainment and length of service.

4. Based on the gathered data, the problems encountered by teachers in using online instructional materials with the standard deviation is 0.938 and mean rating of 3.32 which is verbally interpreted as neither agree or disagree.

The problems faced by teachers when using online instructional materials. The highest mean rating was for "Technical difficulties with online teaching tools with 3.80, indicating that many teachers encountered issues with the functionality of online tools. "Time consuming resources" received a mean rating of 3.32, suggesting that teachers perceived online materials as requiring significant time and effort. "Lack of Computer literacy with 3.32 and "Lack of technical/software knowledge with 3.46 with mean. Indicates challenges related to teachers' own skills in using technology. "Difficult to motivate pupils" with 3.07 and "Lack of pupils' interest 2.94 highlight challenges in engaging students in online learning, although the perception was more neutral.

5. The coping strategies of teachers in addressing the challenges.

The standard deviation is 0.770 with a mean rating of 4.11 verbally interpreted as agree. The highest mean rating was for "I keep my pupils engaged" (4.14), indicating that teachers make a significant effort to ensure student engagement in the learning process. While the lowest mean is "I let my pupils choose their learning way" received a mean rating of 3.97, suggesting that teachers value student autonomy in online learning. "I invite my pupils to contribute to teachings" (4.07) highlights teachers' encouragement of student participation and contributions. "I encourage peer evaluation" (4.16) indicates that teachers emphasize peer assessment as a valuable learning strategy. Lastly, "I engage myself in ICT training" received the highest mean rating of 4.19, illustrating that teachers actively seek professional development to improve their digital skills and pedagogical practices.

Conclusions

Based on the findings of the study, the following conclusions are drawn:

1. The demographic profile of the respondents indicates that the majority of participants are in the age range of 26-45, predominantly female, have a "Masters with units" educational background, and have varying lengths of service.
2. Teachers' experiences regarding online platforms show that they have a generally positive perception and awareness of these platforms, regardless of their age, gender, educational attainment, or length of service.
3. Regarding Open Educational Resources (OER), teachers perceive significant advantages in terms of engaging students, enhancing course materials, and improving learning outcomes. These positive perceptions remain consistent across different age groups, genders, educational backgrounds, and lengths of service. However, when it comes to the disadvantages of OER, teachers express mixed opinions, indicating that their perceptions may be influenced by various factors, including age.
4. Teachers face several challenges in using online instructional materials, including technical difficulties, time-consuming resources, lack of computer literacy, lack of technical/software knowledge, and difficulties in motivating students and generating student interest. These challenges highlight the need for support in terms of technical assistance, training, and strategies to foster student engagement and motivation. Overall, these findings emphasize the need for support in addressing technical issues, saving time, enhancing computer literacy, and promoting student motivation
5. To address these challenges, teachers employ coping strategies such as keeping students engaged, allowing student choice in learning, encouraging student contributions, emphasizing peer evaluation, and actively participating in ICT training. These strategies reflect the commitment of teachers to enhance student engagement, collaboration, and their own professional development in the online learning environment. However, it is equally clear that teachers employ coping strategies and have positive experiences with online platforms in open educational resources.

6. Provide teachers with necessary support, resources, and training to effectively navigate online instruction and maximize student learning outcomes. By addressing the challenges and leveraging the coping strategies employed by teachers, educational institutions can foster a conducive online learning environment and ensure quality education for students. The researcher could develop of sample online educational resources instructional material that the researcher would use during blended modular distant learning caused of heat wave of extremely heat that experienced of the student.

Recommendations

Based on the conclusion drawn from the analysis, the following recommendations can be made to support teachers in addressing the challenges of online instruction and maximizing the benefits of technology in education:

1. The findings revealed that the most of the respondents predominantly have a master with units' educational background and the college graduate have a smaller percentage. Consequently, the school administrators may provide comprehensive and ongoing professional development programs that focus on enhancing teachers' digital skills, pedagogical strategies, and familiarity with online teaching tools. This training should cover areas such as effective use of online platforms, multimedia resources, and student engagement techniques in the virtual classroom.
2. Based on the gathered data teachers' experiences regarding online platforms show that they have a generally positive perception and awareness of these platforms. The school may establish a dedicated technical support system to assist teachers in resolving technical issues and overcoming challenges related to online teaching tools.
3. The significant differences revealed the teachers' experiences using open educational resources that there is a significant difference between teachers' experiences. The school may foster the development and sharing of high-quality online instructional materials, including Open Educational Resources (OER). Encourage teachers to collaborate and create engaging and interactive content that aligns with the curriculum objectives and meets the diverse learning needs of students in the online environment.
4. Based on the gathered data these findings emphasize the need for support in addressing technical issues and promoting student motivation. Recommendation includes the encouragement of teachers to adopt a variety of student engagement strategies, such as interactive activities, collaborative projects, and multimedia resources.
5. Based on the comprehensive analysis of the gathered data that teachers face the coping strategies of teachers in addressing the challenges, the school as a community may create a supportive and inclusive online learning environment that values student contributions and encourages active participation. Establish channels for communication and collaboration among students, teachers, and

parents to promote a sense of belonging and provide opportunities for ongoing support and feedback.

The future researcher promotes peer collaboration and evaluation as valuable learning strategies. Encourage teachers to facilitate peer assessment and feedback to foster student collaboration, critical thinking, and self-reflection.

6. Further study on challenges of online instruction and maximizing the benefits of technology in education, the future researcher could develop of sample online educational resources instructional materials that uses as online educational resources during the modular distant learning caused of extremely heat of climate.

Compliance with Ethical Standards

The study adhered to the research ethics of anonymity, consent, and beneficence. the research ensured that the data gathered were secured and observed with the utmost consideration of data privacy. no personal information provided by the respondents was divulged in the study. in addition, the teachers who provided the data of learners were given a copy of the consent form to ensure they were aware of their participation. The researcher explained in full detail the process of data gathering and assured that the data shall be treated with the utmost confidentiality. The teachers were also given the option to withdraw their participation if they felt there was a need for them to do so. Finally, the researcher informed the respondents that no benefits shall be provided to the respondents but the data they will be providing shall be helpful for the realizations and completion of the study.

Acknowledgments

The researcher would like to acknowledge the invaluable help and support given by the following persons, for without them this study would not have been possible:

Marinduque State College President Dr. Diosdado P. Zuleta, for his leadership and assistance when needed;

Eastern Quezon College, Inc. President Dr. Arnel Pedro V. Rodelas (+), for providing the institution with a fantastic opportunity to follow her dreams;

Dr. Leodegario M. Jalos, Jr., Chair of Extended Graduate Programs of Marinduque State College for his valuable insight and constructive criticism in clarifying and improving the researcher manuscript;

Dean of Graduate Studies of Eastern Quezon College, Inc. Dr. Melchor B. Espiritu, for showing expertise in all activities to finish her study;

Dr. Susan B. Pineda, her research adviser, for her patience in reading and revising my papers to come up with a better and more organized idea;

Her panelist, Dr. Diosdado P. Zulueta, Dr. Leodegario M. Jalos, Jr. and Dr. Melchor B. Espiritu, for providing their significant input and suggestions to further enhance the research study;

Dr. Elias A. Alicaya, Jr., the Schools Division Superintendent of the DepEd Division of Quezon, for his approval to conduct this study in the Division of Quezon;

Her statistician, Mrs. Maria Teresa C. Chavez, who served as the study's statistician by the sustained support and patience in treating the data;

Her editor, Dr. Joy R. Profugo, and copy editor Dr. Melchor B. Espiritu, for helping her in checking of the research contents and editing of final research manuscript;

Ms. Liezl M. Manoy, for her unending moral support and helping to bound the researcher manuscript;

To Mr. Danilo A. Dela Cruz, Principal II of Macalelon Central Elementary School who always approved the researcher form 6 and for understanding to finished her research study;

To my friends, who lend a hand in providing information and sharing ideas in the writing process especially to Jenny R. Sister, Principal I, of Olongtao Ibaba Elementary School Macalelon, Quezon;

Public Elementary School Heads, and Teachers of the Schools Division of the Division of Quezon, for serving the respondents of this study and for sharing their time and efforts during the administration of the questionnaire;

Her husband, Benjamin P. Musca, Daughters Brenda, and Rebecca for the untiring encouragement, support, valuable assistance, inspiration, love, and encouragement;

Her family, especially her mother Rosita O. Balane, who taking care of their children, for their support, and help while the researcher finishes their study, and

To God, the highest honor, for the countless blessings showered that enabled the researcher to bring this piece of work, and guide in every step of the way for without him this study will not be possible.

TEACHER'S MONITORING OF LEARNERS ON MODULAR DISTANCE LEARNING AND ITS EFFECT ON ACADEMIC PERFORMANCE OF GRADE THREE PUPILS IN SANTA CRUZ NORTH DISTRICT, DIVISION OF MARINDUQUE

Ernelita D. Zulueta

Marinduque State College, Marinduque, Philippines

https://doi.org/10.5281/zenodo.12069791

ABSTRACT

The study focused on monitoring learners and its effects on the academic performance of Grade 3 pupils in the Santa Cruz North District, Division of Marinduque. It aimed to determine the monitoring process, assess academic performance through the General Scholastic Average (GSA), identify problems and challenges in the monitoring process, explore experience-based solutions to these problems, and examine the interplay among various variables. Three groups of respondents were involved in the study: 19 Grade 3 teachers, 17 school heads, and 55 selected parents. A mixed method of research was utilized, incorporating both statistical and thematic analysis of data. Major findings revealed that the frequency of monitoring was at least thrice a week, typically on Mondays, aligned with the schedule of the Weekly Home Learning Plan. Onsite monitoring was the predominant strategy used. The academic performance of the Grade 3 pupils, based on their GSA, was described as fairly satisfactory. The test for significant differences indicated no significant difference in the interplay between academic performance and the monitoring process, thus failing to reject the null hypothesis set in the study. However, several problems were encountered. The primary issues related to technology, the threat of the pandemic, and the content of the learning modules, including the bulk of activities and confusing directions. Experience-based solutions proposed included regular monitoring, differentiated instruction, and open and distance education.

Keywords: *monitoring process, academic performance, problems and challenges*

INTRODUCTION

The outbreak of COVID-19 placed the education system in its extreme transition of delivering learning through Alternative Delivery Modalities to replace the traditional face-to-face set-up. Currently, the Department of Education is implementing Modular Delivery Learning (MDL), either one-way print, which uses Self-Learning Materials (SLMs), or two-way, which uses Self-Learning Materials and other available online platforms, phone calls, and home visitations based on schedule. This model is an offshoot of Learning Delivery Modality Course 1 for School Leaders under the Basic Education Learning Continuity Plan (DepEd Order No. 012, 2020; DepEd Memorandum OSEC-NEAP-OD-2020-0618).

During the pilot implementation of modular delivery learning, different issues and concerns as well as challenges and problems were encountered and were documented in the 2020 Division Kumustahan as follows: lack of interest of children in answering bulk of learning activities, poor development of reading skill of pupils in the primary level that impede them from reading and understanding the content of Self-Learning Materials, lack of comprehensive and illustrative examples to support learning, biased in the assessment, unworthiness of learners' assessment, difficulty in monitoring, and holding limited classes via available online. Several years back, the news about online cheating bombarded DepEd. According to the news report of the Philippine Daily Inquirer, the set-up of blended learning due to the pandemic had resorted the students to online cheating via social media, specifically Facebook groups, where learners shared notes and test answers (Bautista, 2021).

Researchers claimed that one of the challenges in distance learning modality is the complexity of assessment (Manalo & De Villa, 2020). It seemed to be a question of the validity and trustworthiness, whether the learners could answer their learning assessments. In this sense, the performance of the learners is at stake.

Moreover, some researchers asserted that the success and effectiveness of distance learning depend on the learning materials given to the learners (Jayaram & Dorababu, 2020). Consequently, to cater to the needs and abilities of each learner, DepEd has focused on self-study modules that can be combined with other modalities to deliver learning that learners may access. In addition, modules or Self-Learning Materials without a teacher or learning buddy may have affected the learners, and a hard time answering the learning tasks in their modules and the lack or limited academic knowledge of the parents to guide their children will place the learners in a situation. Thus, this remains one of the challenges that emerged in modular distance learning (Dangle & Sumaoang, 2020).

Nevertheless, teachers made a concerted effort to reach out to learners. These were hindered by localized lockdowns and other protocols and orders implemented due to the growing cases of COVID-19 in some towns and their localities. Also, striking a balance in conducting on-site monitoring while staying safe. The scenarios affect the

academic performance of the learners. Specifically, the Grade 3 pupils need explicit teaching and constant monitoring of teachers during modular distance learning.

These scenarios require instructional intervention to effectively sustain the continuous delivery of modular distance learning to address the problems and challenges in monitoring learning progress. It would affect academic performance if unresolved and prompt the researcher to conduct the study.

Research Questions

1. How is the teacher's monitoring process of Grade 3 pupils done in modular distance learning (MDL) in Santa Cruz North District concerning the following aspects:
    1.1 frequency of monitoring;
    1.2 time of monitoring;
    1.3 day of monitoring;
    1.4 mode of monitoring; and
    1.5 strategies of monitoring?
2. What is the Academic performance of the grade three learners on the modular Distance Learning?
3. Is there a significant effect of teacher's monitoring of learners on the Modular Distance Learning to academic performance of Grade three pupils?
4. What are the encountered problems and challenges in monitoring Grade three pupils during modular distance learning
5. What are the suggestions of the respondents to address the problems and challenges?
6. What intervention program can be proposed to improve academic performance through the monitoring process?

METHODOLOGY

The researcher employed a mixed method approach for this study. According to George (2022), mixed methods research integrates elements of both quantitative and qualitative research to address research inquiries comprehensively. Consequently, this research design is well-suited for this study as it delved into the monitoring process in modular distance learning, exploring aspects such as the frequency, timing, mode, and strategies of monitoring. Additionally, it assessed the academic performance of Grade 3 pupils using the General Scholastic Grade (GSA) and examined the challenges encountered in monitoring, drawing insights from observations of three key groups: teachers, school heads, and parents. Furthermore, the study analyzed significant differences among the variables under investigation.

Meanwhile, the qualitative part dealt with the experienced-based suggestions of the three groups of respondents, which would yield to the intervention.

Research Locale

Generally, the study was conducted in Santa Cruz, Marinduque. It is one of the six municipalities in the province of Marinduque. It is the biggest municipality in terms of land area and population. Specifically, it was conducted in the 17 elementary schools, including one (1) primary school in Santa Cruz North District, which is in the 17 barangays in the said municipality.

Figure 2 Presents the locale of the study.

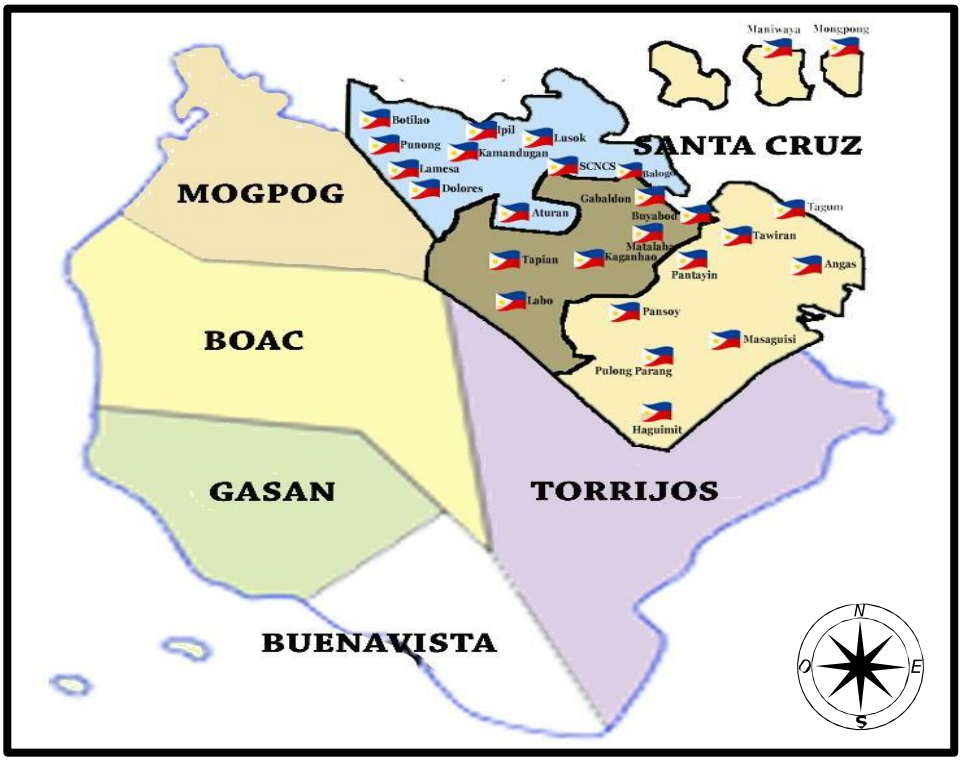

Figure 2. Map of the Research Locale

Figure 2 shows the province of Marinduque, in which Santa Cruz is one of the municipalities. In this municipality, located are the 17 schools in Santa Cruz North District.

Sampling Technique

Total enumeration was used in choosing the teachers and school head respondents. This means, all the 19 Grade 3 teachers and 17 school heads were considered as respondents due to the limited number of teachers in Santa Cruz North District. Meanwhile, random sampling was used in getting 324 respondents from a total of 1584 parents. Below is the distribution of participants.

Table 1 *Distribution of the Respondents.*

No.	Name of Elementary Schools	School Heads	Samples Grade 3 Teachers	Parents	Samples (Parents of the Grade 3 Class)
1	Aturan Elementary School	Principal I	1	102	20
2	Baliis Elementary School	Principal I	1	97	20
3	Balogo Elementary School	Principal I	1	97	10
4	Bangcuangan Primary School	TIC	1	20	5
5	Botilao Elementary School	Principal I	1	136	27
6	Dating Bayan Elementary School	HTIII	1	48	10
7	Dolores Elementary School	Principal II	1	138	20
8	Hupi Elementary School	Principal I	1	75	15
9	Ipil Elementary School	Principal II	2	182	37
10	Kalangkang Elementary School	TIC	1	26	5
11	Kamandugan Elementary School	Principal II	1	89	18
12	Kasily Elementary School	Principal II	1	92	19
13	Lamesa Elementary School	Principal I	1	96	20
14	Lusok Elementary School	HT III	1	95	19

Research Instrument

The research-made questionnaire was the primary tool for gathering data. It has several parts. Part 1 contains the monitoring as to frequency, time, day, mode, and strategies of conducting or holding monitoring. Part 2 determines the General Scholastic Average (GSA) as a determinant of the level of academic performance of the Grade 3 pupils in respective schools. Part 3 contains the problems and challenges in the monitoring as observed by the three groups of respondents, namely teachers, school heads, and parents. It is a multiple-response questionnaire. Part 4 identifies the experienced-based suggestions of the Grade 3 teachers to address the problems and challenges in monitoring Grade 3 pupils. It is an open-ended question.

The questionnaire underwent a test of reliability and validation. The reliability test was administered among elementary teachers in Santa Cruz South District, specifically in the Grade 3 classes these schools: Lipa Elementary School, Gabaldon Elementary School, and Santa Cruz Central School as the pilot schools. Suggestions from the respondents were incorporated in the final draft of the research question. For validation, the final draft of the research instrument was validated by the research experts, namely the education program supervisor, public school district supervisor, principals, and language critic. It ensured that questionnaires were free from inconsistencies and errors.

Ethical Considerations

This study prioritized several considerations to safeguard the privacy and confidentiality of both respondents and subjects, aiming to forestall any potential issues during the research process. Key concerns included obtaining informed consent, ensuring confidentiality, maintaining the anonymity of subjects, and safeguarding data protection. Throughout the research, the researcher meticulously devised indicators for the survey form and questionnaire to mitigate any potential confusion among participants. Adequate time was afforded to respondents to respond to questions, reducing the likelihood of errors or inaccuracies in their responses. Additionally, respondents were provided with a waiver concerning the confidentiality of their identity and any information they preferred not to disclose.

The cooperation of respondents was actively sought, with assurances that all data collected would be handled with the utmost confidentiality. Ultimately, the researcher aimed to cultivate trust between themselves and the respondents through the conduct of the study.

Data Gathering Procedure

Several steps were undertaken to gather data. *First, the researcher sought* permission from the Schools Division Superintendent at the Schools Division Office of Marinduque for her approval to conduct the study. *Second,* upon approval, the researcher handed the endorsement letter to the Public Schools District Supervisor of Santa Cruz North District for her second endorsement. *Third,* upon approval, the researcher hand-carried the endorsement letter to the different School Principals of Santa Cruz North District. *Fourth*, the researcher oriented the respondents to explain the purpose of the research. *Fifth,* the researcher personally sent the research-made questionnaire to the email address of the respondents. Another way was to send the link to the Google form questionnaire and share it with the Group Chats of the teachers in Santa Cruz District. For the parent respondents, the distribution and administration were coordinated with the teachers and school heads of respective schools. Collected data were subject to statistical treatment.

Statistical Treatment of Data

Descriptive statistics such as frequency and percentage were used to statistically analyze the frequency, time of monitoring, mode of monitoring, and strategies of monitoring MDL. Mean and a five-point Likert Scale were used to analyze the level of academic performance of the Grade 3 pupils based on their GSA during the first and second quarters and the frequency of observation of the problems and challenges. Paired Test was used to statistically analyze significant differences in the academic performance of the Grade 3 pupils during the first and second quarters.

Meanwhile, thematic analysis was used to present the experienced-based suggestions of the respondents in addressing the problems and challenges observed in the monitoring process of the Grade 3 pupils during modular distance learning.

RESULTS AND DISCUSSION

This chapter unveils the data meticulously collected, systematically organized, diligently processed, and thoughtfully interpreted to extract insights that address the issues delineated in Chapter 1.

Part I: Teacher's Monitoring process of Grade 3 pupils done in modular distance learning (MDL) in Santa Cruz North District with respect to the following.

Table 2 presents the frequency of monitoring of MDL across schools for Grade 3 pupils. From the responses, 29 out of 91, or 31.86% observed the "Thrice a week" monitoring of the Grade 3 pupils. It was followed by "Once a week" monitoring with 28.57%, then "Everyday" monitoring with 23 or 25.27%. Meanwhile, only 10 had responded to have done "Twice a week monitoring. On the other hand, 3 out of 91 did not indicate their responses on the frequency of monitoring of grade 3 pupils.

Table 2 *Frequency of Monitoring of Modular Distance Learning among Grade 3 Pupils*

Frequency of Monitoring	Frequency	Percentage (%)
Everyday	23	25.27
Once a week	26	28.57
Twice a weak	10	10.98
Thrice a week	29	31.86
Others: No responses	3	3.29
Total	91	100

Data revealed that the frequency of monitoring ranges from every day to weekly. It means there were no specific dates of monitoring during the pandemic time. Consequently, the schedule was based on the issuance of higher officials and relative to the mandates of the Inter-Agency Task Force, which relies heavily on the active cases of

COVID-19 in a particular locality where the school is located and the community is situated. It goes to schools that the pandemic and the monitoring of classes strictly adhered to various offices, not only in the Schools Division Office but the Department of Education in general and the provincial government of Marinduque. The reason was to protect the children from the spread of the COVID-19 virus during that time.

The findings were remarkably good. The Grade 3 teachers could monitor their respective classes despite the remote learning and modular distance learning. The frequency of monitoring ranges from thrice a week to a daily basis, which means that teachers were making ways to reach out to their pupils. In a follow-up interview with the teachers, they were able to monitor classes through phone calls, group chats, and onsite monitoring (See Table 2).

On the other hand, the frequency of monitoring is not constant or not only daily because teachers need to prepare things that require more time, like printing modules, sorting modules, packing modules, and delivering modules. Nevertheless, teachers were able to monitor remote classes despite too much work. Meanwhile, teachers who monitor daily have small class sizes, and preparations do not consume their time and are remarkably good. Hence, the end goal of monitoring is to respond to the difficulties encountered by the pupils during modular distance learning. The teachers need to assess the academic progress of their pupils through monitoring (Young, 2018) because it is the basis of giving intervention. Intervention is essential to improve performance (Molloy & Bound, 2013).

Table 3 indicates the time of monitoring of MDL among Grade 3 pupils in Santa Cruz North District. The monitoring of classes was usually done during the morning from 7:30 to 11:30, as revealed by 65 responses, and sometimes, it was based on the Class Home Program, as disclosed by 24 respondents. Meanwhile, only 2 responses were about an afternoon monitoring of classes from 1:00 to 4:30.

Table 3 *Time of Monitoring of Modular Distance Learning among Grade 3 Pupils*

Time of Monitoring	Frequency	Percentage (%)
Every Morning (7:30-11:30)	65	71.43
Every Afternoon (1:00-4:30)	2	2.20
Based on Class Home Program	24	26.37
Total	91	100

Findings showed that teachers monitored the MDL classes. The schedule of the Class Home Program was the basis of the monitoring of MDL classes and every morning on-site monitoring. In other words, despite the pandemic, the school has monitoring mechanisms to track the activities of the pupils. For instance, parents disclosed that teachers were holding online classes as an alternative mode for MDL. They also made phone calls to help the learners who had difficulty understanding the contents of the modules. These were also the same responses of the teachers during a follow-up interview with them.

Also, in a follow-up interview with the teachers, they said that they usually monitor classes every Monday since it is the start of the class in their Weekly Home Learning Plan. In contrast, no teacher monitored classes on Friday because it was the assessment day. In addition, the teachers said that it is good to start the monitoring during the first day of the classes because they feel and believe that children have fresh minds at the start of the week and also to inspire the pupils to become productive in the days ahead. Likewise, they believed that it has to be at the start of the week so they can do follow-up lessons and provide scaffolding activities for difficult lessons (Cooper-Kahn & Foster, 2013).

Summing up, during MDL, schools have done all the necessary mechanisms to monitor classes at the onset of the pandemic. Teachers used the available channels of communication, such as phone calls, personal messenger, and other online platforms, to monitor the learners, aside from the onsite monitoring, which was usually done in the morning to instruct the pupils on how they were going to answer the learning activities in their modules. The rest of the afternoon was intended for accomplishing and answering the learning activities.

Likewise, the delivery of the modules in the designated areas was also done in the morning. Thus, most of the time, monitoring was done in the morning during the pandemic setup.

Table 4 shows the day of monitoring of MDL among Grade 3 pupils in the Santa Cruz North District. Data indicated that the usual monitoring schedule was MWF or every other day, with 39 out of 91 responses or 42.86%. Others have observed every day or daily monitoring, with 16 out of 91 responses or 17.58. But looking closely at the data, the day of monitoring varies from Monday to Friday and daily to every other day. The variations of monitoring day were associated with the frequency of monitoring, based on the onset schedule from the issuance of the Schools Division Office and mandates of IATF during the onset of the pandemic, the Wednesday and Friday morning response was the observed online monitoring of MDL.

Table 4 *Day of Monitoring of Modular Distance Learning among Grade 3 Pupils*

Day of Monitoring	Frequency	Percentage (%)
Monday	4	4.40
Tuesday	2	2.20
Wednesday	7	7.69
Thursday	12	13.18
Friday	7	7.69
MWF/Every other day	39	42.86
Daily	16	17.58
TTH	4	4.40
Total	91	100

The data presented in Table 4 reflects the monitoring frequency of Grade 3 pupils engaged in modular distance learning. Key observations and interpretations include:
Varied Monitoring Days

The most common monitoring schedule is "MWF/Every other day," account for 42.86% of the total, suggesting a strategy to provide consistent but not daily oversight Daily" monitoring is the second most common at 17.58%, indicating a significant commitment to continuous engagement with students. Weekly Monitoring. Monitoring on specific days like Monday (4.40%), Thursday (13.18%), "TTH" (Tuesday and Thursday), (4.40%), Wednesday (7.69%), and Friday (7.69%) shows a spread across the week, ensuring that students receive support regularly, albeit not daily. The least frequent schedule is (Tuesday), making up only 2.20%.

These monitoring patterns indicate that schools have adapted their monitoring schedules to ensure continued learning despite the challenges posed by the pandemic. The presence of various monitoring frequencies implies flexibility and responsiveness to the diverse needs of students and the realities of remote learning environments. Despite the inconsistency in daily monitoring compared to traditional classroom settings, teachers have implemented mechanisms to reach out to their pupils effectively. The efforts of teachers to use multiple monitoring strategies illustrate their commitment to maintaining educational services and supporting students during the pandemic. The structured monitoring schedules reflect that schools have contingency plans to address the disruptions caused by the pandemic, ensuring that learning continues. The data underscores that learning persisted under adverse conditions, demonstrating the resilience and dedication of the education sector. The diverse monitoring schedules provided by teachers highlight their adaptability and commitment to ensuring that students' educational needs are met during challenging times. These efforts contribute significantly to mitigating the adverse effects of the pandemic on education, ensuring that basic education services remain accessible to all learners.

In summary, the table and corresponding analysis reveal that teachers and schools have employed various strategies to monitor and support Grade 3 pupils' learning in a modular distance learning setup, ensuring the continuity of education during the pandemic.

Table 5 reveals the various modes of monitoring of MDL during the pandemic among Grade 3 pupils. Data enumerated three modes of monitoring name onsite with 50 responses, phone calls with 40 and group chat with only 1 response based on the observations of the three groups of respondents.

Table 5 *Mode of Monitoring of Modular Distance Learning among Grade 3 Pupils*

Modes of Monitoring	**Frequency**	**Percentage (%)**
Onsite	50	54.95
Via Phone Call	40	43.96
Through Group Chat	1	1.09

Total	91	100

Analysis of the findings signifies that onsite monitoring was very evident during the pandemic. Despite being modular in nature, schools have given authority to the teachers to hold onsite monitoring. The COVID-19 pandemic has significantly disrupted traditional educational practices worldwide, necessitating the adoption of alternative methods such as Modular Distance Learning (MDL) to ensure the continuity of education. Various modes of monitoring have emerged to facilitate effective learning outcomes for young students, particularly those in early elementary grades like Grade 3.

Onsite monitoring has been identified as a prevalent method, with 50 responses indicating its use. This approach involves direct, physical interaction between educators and students, albeit within the constraints of health protocols. Research by Kim et al. (2021) suggests that onsite monitoring, even in a limited capacity, provides critical support to students who may struggle with self-directed learning at home. It allows for immediate feedback and personal interaction, which are essential for young learners who require more guidance and reassurance (Kim, 2021).

The second most common method, with 40 responses, is monitoring through phone calls. According to a study by Xiao (2020), phone calls serve as a viable communication channel, especially in areas with limited internet access. They enable teachers to provide personalized support, address student queries, and offer encouragement. The personal nature of phone calls can also help maintain a connection between students and teachers, fostering a sense of continuity and normalcy (Xiao, 2020).

The least utilized method, with only 1 response, is group chats. Despite their lower usage, group chats have been shown to be effective in creating a collaborative learning environment. According to research, group chats on platforms like WhatsApp or Messenger allow for the sharing of resources, peer support, and group discussions, which can enhance learning outcomes. However, the effectiveness of this method can be hindered by factors such as digital literacy, access to devices, and internet connectivity

The disparity in the utilization of these monitoring methods can be attributed to various factors including technological accessibility, socio-economic status, and the preparedness of both educators and families to adapt to new forms of communication and monitoring. Onsite monitoring, while most effective in ensuring direct oversight, is limited by public health guidelines and logistical challenges. Phone calls, while more accessible than internet-based solutions, can be time-consuming for teachers. Group chats, although innovative and collaborative, face significant barriers in terms of digital divide and user familiarity

The data from Table 5 underscores the adaptive strategies employed by educators to monitor MDL during the pandemic. The reliance on diverse modes of monitoring highlights the need for flexible, inclusive approaches to ensure all students receive adequate support. Future efforts should focus on enhancing the effectiveness of these

methods through training, infrastructure development, and continuous evaluation to address the challenges faced during the pandemic and beyond. This literature review situates your data within the broader context of research on MDL monitoring methods during the pandemic, highlighting both the practical and theoretical implications of these findings.

Table 6. *Strategies of Monitoring the Modular Distance Learning among Grade 3 Pupils*

Strategies of Monitoring	**Frequency**	**Percentage (%)**	**Rank**
1. Bringing and using teaching materials during onsite monitoring or home visitation such as laptop, manipulative materials, pentel pen, manila paper, LCD projector, books, activity sheets, and the like.	31	34.07	7
2. Using online resource like Facebook Messenger to monitor learners and their learning progress (e.g. activities which the learners had already answered or finished as well as activities which are not yet answered or finished.	69	75.82	2
3. Using phone calls to monitoring learners and their learning progress (e.g. activities which the learners had already answered or finished as well as activities which are not yet answered or finished.	75	82.42	1
4. Using Facebook Messenger to answer queries of the learners and the parents.	53	58.24	3
5. Using online resource like Google Classroom to supplement lessons/topics in the learning modules.	36	39.56	5
6. Using online resource like Facebook Messenger to supplement lessons/topics in the learning modules.	34	37.36	6
7. Providing worksheets to supplement difficult lessons on specified topics.	41	45.05	4

Table 6 highlights the strategies for monitoring MDL during the pandemic for Grade 3 pupils in Santa Cruz District. The top strategy was Using Phone calls to supplement , with 75 responses, followed by “Using online resource like Facebook Messenger …” with 69, then “Using online resources” like messenger and facebook with responses. Teachers were also using teaching materials, which happened during onsite monitoring.

From the multiple responses , data revealed that teachers monitored classes using various strategies to deliver basic education services based on the contingency

plan of the teachers during the pandemic time. Despite the situation, learning has continued and made possible through the joint efforts of the school and the parents.

Preference for Digital Communication , Phone calls and Facebook Messenger are the top methods, indicating a strong preference for immediate and accessible digital communication. Supportive Tools: Online resources like Google Classroom and providing worksheets are also significant, though not as prevalent as direct communication methods. Traditional Materials Less Used: Physical teaching materials are less frequently employed, reflecting a shift towards digital tools in monitoring and supplementing learning. The data reflects a trend towards leveraging digital communication tools for monitoring and supporting learners, likely driven by the ease of access and the immediacy these tools provide. Traditional methods, while still in use, are less dominant compared to these modern approaches.

Teachers affirmed that they made all these strategies, which depend on the Alert Level, signal, connectivity, and remoteness. But the good and remarkable deed was that teachers can reach out to their pupils. If there is no physical interaction, the teachers make extra effort to reach out to learners even in far-flung areas. It shows that teachers are effective and concerned and understand learning brought by modular distance learning. Teachers disclosed that even. The success and effectiveness of distance learning depend on the learning materials given to the learners (Jayaram & Dorababu, 2020).

Part II: Academic performance of Grade 3 pupils on Modular Distance Learning

Table 7 listed the academic performance of the Grade 3 pupils across subjects and GSA during the first and second quarters of Modular Distance Learning. As indicated in the data, only on Edukasyon sa Pagpapakatao the pupils had a high performance of “Very Satisfactory” with an obtained GSA of 87.22 during the first quarter. Conversely, most subjects received a GSA, which ranged from 82.89 to 84.61, interpreted as “Very Satisfactory” based on the existing guidelines for Report for Assessment of DepEd.

Table 7. *The academic achievement of Grade 3 students in the initial and subsequent quarters across various subjects, as determined by their General Scholastic Average (GSA).*

Subject Areas	First Quarter GSA	Level of Academic Performance	Second Quarter GSA	Level of Academic Performance	Gain
English	83.17	Satisfactory	83.72	Satisfactory	0.55
Filipino	84.56	Satisfactory	85.56	Very Satisfactory	1.00
Mathematics	82.89	Satisfactory	83.94	Satisfactory	1.05
Science	84.44	Satisfactory	85.17	Very Satisfactory	0.73
Araling Panlipunan	83.89	Satisfactory	84.67	Satisfactory	0.78
Mother-Tongue	84.78	Satisfactory	85.94	Very Satisfactory	1.16

Edukasyon Sa Pagpapakatao	87.22	Very Satisfactory	88.06	Very Satisfactory	0.84
MAPEH	84.61	Satisfactory	85.17	Very Satisfactory	0.56
Average	84.44	Satisfactory	85.28	Very Satisfactory	0.84

96-100- Outstanding 90-95 - Very Satisfactory 86-89- Satisfactory
80-85 Fairly Satisfactory 75-79 Poor - 74 and below- Needs Improvement

The satisfactory General Scholastic Average (GSA) of the children during quarter 1 reflects that pupils' performance does not improve much. It depicts that some children encounter difficulties that hinder them from performing better. They struggled because they were adjusting to the new modality of teaching and learning. It was new to them, and it was difficult for them to adjust themselves easily to the remote way of teaching. Besides, children do not all learn the same way, which is essential to provide feedback based on each student's specific needs (McFadzien, 2015).

During the second quarter, there was an increase in the GSA of Grade 3 pupils across subjects. The academic level of performance based on the GSA for the second quarter had moved to a Very Satisfactory level in most subjects except for English and Mathematics, but with little increase in their GSA for the second quarter.

Looking closely at the data, the grade 3 pupils had the highest academic performance based on their GSA in ESP with 88.06. Meanwhile, comparing the GSA of the grade 3 pupils for the first and second quarters, the highest gain was noted in the mother tongue subject. But all in all, pupils had better performance and gained their scholastic average during the second quarter. Findings could be attributed to adjustments that teachers and pupils had already made, compared to the first year of implementation of modular distance learning. Also, teachers had already seen some consequences and disadvantages of the MDL. Thus, necessary adjustments had been made, like frequent monitoring and provisions of activity sheets and making activities easier to facilitate better understanding on the part of the learners. Likewise, the most valuable competencies were selected for MDL during the pandemic. As the lessons progress and take place in a sophisticated manner, the teachers extend help to the learners through the provision of activity sheets and localized materials to aid the learners.

The findings may also indicate how learner monitoring effect the practices employed by teachers, including how often they monitor, the timing and days of monitoring, as well as the modes and strategies used. Therefore, if teachers are unable to effectively monitor their classes in any format of distance learning, they cannot offer timely feedback and formative guidance, potentially resulting in poor learner performance (United Nations Children's Fund, 2020). The performance of the Grade 3 pupils may not be as good as the performance compared to the face-to-face set-up, yet still, the performance was satisfactory during the onset of the pandemic. It gradually changed during the second quarter as the learners and teachers adjusted to the pandemic.

Part III. Significant Effect of Teacher's Monitoring of learners on the Modular Distance Learning to the Academic Performance of Grade Three Pupils

The table presents the results of a statistical test examining the relationship between the "Process of Monitoring" and "Academic Performance During First Grading and Second Grading

Table 8. *Significant Effect of Teacher's Monitoring of learners on the Modular Distance Learning to the Academic Performance of Grade Three Pupils*

Variables	**p-value**	**Verbal Interpretation.**
Process of Monitoring Vs. Academic Performance	0.034	Significant

The analysis shows a statistically significant relationship between the process of monitoring and academic performance, indicated by the p-value of 0.034. This suggests that effective monitoring is associated with improved academic outcomes. The findings emphasize the importance of implementing and maintaining strong monitoring practices as a means to enhance academic performance, supporting the notion that how learners are monitored plays a vital role in their educational success. Schools and educators are encouraged to refine their monitoring processes to leverage their positive impact on learner achievement.

Part IV: Encountered Problems and Challenges in Monitoring of Grade Three Pupils during Modular Distance Learning

Table 9 enumerates that some problems and challenges hinder the monitoring of MDL during the pandemic. The most frequently observed was localized quarantine prevents home visitation, with 4.18, while the least was "Learners were not available during monitoring.

Table 9. *Encountered Problems and Challenges in Monitoring of Grade Three Pupils during Modular Distance Learning.*

Problems and Challenges	**Average Mean**	**Verbal Interpretation**
1. Learners do not follow the Class-Home Program	3.52	FO
2. Learners are not available during monitoring of classes.	3.50	FO
3. Learners do not cooperate during monitoring of classes.	3.90	FO
4. Technological problem occur during monitoring of classes	4.16	FO
5. Localized quarantine that prevents home visitation as part of monitoring.	4.18	FO

6. Threats of pandemic limits teachers home visitation	4.09	FO
7. Learners do not follow instruction/directions in the learning modules	3.68	FO
8. Learners do not complete their answers in the learning modules	3.54	FO
9. Learners choose only those which they wanted to answer.	3.50	FO
10. It seems that someone else (parent or a sibling) answered the learning assessment or learning activities.	3.62	FO
11. Bulk of learning activities to answer that prevents the learners to answer.	3.62	FO
12. Confusion on some directions in the assessment	3.61	FO
13. Worthiness of learners' answers in the assessment part.	3.5	FO

Legend: *"Always Observed (4.51 – 5.00)", "Frequently Observed (3.51 – 4.50)", "Moderately Observed (2.51 – 3.50)", "Occasionally Observed (1.51 – 2.50)", "Never Observed (1.00 – 1.50)"*

Data only affirmed that the lockdown had prevented the teachers or the school in general from conducting monitoring. In this regard, the issuance of the Schools Division Office and the mandates of the Inter-Agency Task Force were the basis of the schedule of monitoring classes. It was made to contain the spread of the COVID-19 virus.

On a good point, parents had been so involved in the MDL. Thus, they ensured that their children were at home during the MDL. It was the least problem encountered. In other words, parents and learners knew the setup of the MDL. So, they made themselves available at home during their MDL and followed the Home-Based Schedule.

Moreover, data from the monitoring affirm that very few uses online platforms to monitor classes due to technological issues like no high-end gadgets on the part of the learners or weak signals if there are gadgets. There were also locations without any signal. Also, frequent power interruption affects the monitoring. In addition to the localized quarantine, which the school heads, the parents, and the teachers themselves see as a factor that hinders the continuity of the monitoring process. Another problem with the pandemic is that school heads think of the safety of the teachers and the learners, and this limits the frequency of monitoring. Also, the respondents observed that learners do not follow the classes based on weekly-home schedules. Other factors are related to the content of learning modules, like confusion on some activities and too many activities to answer, which learners failed to finish, which resulted in poor performance. It was identified during "Kumustahan" with the teachers regarding feedback on modular distance learning.

Data revealed that three groups of respondents have similar observations regarding the problems during modular distance learning. Researchers affirm that technology plays a vital role in distance learning. Thus, policymakers, the highest officials, must put great concern on technology (Wesley, 2017; Ajmal & Ahmad, 2019) to support

education. Problems in the local setting include the availability of gadgets for use but more of the internet connection, signal, and frequent power interruption. Nevertheless, if there is available technology for learners and teachers, at least occasionally or as needed, there are technological gadgets for use.

Other concerns related to the schedule of weekly home classes and the contents of the modules can be addressed through constant monitoring of the flexibility of teachers and the cooperation of the parents to help their children during modular distance learning. Besides, according to DepEd, parents play vital roles during MDL.

Part V: The experienced-based suggestions of the three groups of respondents to address the problems and challenges in the monitoring process of the Grade 3 pupils in the modular distance learning.

There are experience-based suggestions to address the problems encountered, like the schedule of weekly home classes and the contents of the modules. Respondents suggest having regular monitoring and providing engaging activities. Hence, most of the activities seem hard to answer and too many in terms of content. Thus, this needs modification and revision to suit the learning needs of the learners. According to the respondents, monitoring should be done daily and as much as possible during the morning.

Table 10. *Responses of the Key Informants on the Experienced-Based Suggestions of the Three Groups of Respondents to Address the Problems and Challenges in the Monitoring Process of the Grade 3 Pupils in Modular Distance Learning*

Codes/Categories	Transcriptions
Regular Monitoring	A1: *Teachers should keep a record of the pupils who were monitored on a specific day/date.* A2: *Monitoring should be done regularly to address the learners' needs and provide them with activities for reinforcement.* A3: *Provide more activity sheets/worksheets during onsite monitoring.* A4: *Provide more engaging activities to the learners.*
Regular Monitoring	B1: *daily monitoring should be done.* B2: *Provide more activity sheets for reinforcement.* B3: *See to it* B4: *Monitoring should be done the soonest time possible preferably 7:30 Am*
Differentiated Instruction	*C1: It is recommended to utilize a blend of on-site and online monitoring approaches.* *C2: Modular distance learning poses significant challenges for teachers but also offers valuable opportunities for growth.* *C3: Proposed methods and strategies for enhancing Modular Distance Learning include reducing module activities, providing additional subject examples, conducting weekly home visits, and implementing limited face-to-face classes or a Blended Learning approach.*

	C4: While it provides students with increased flexibility and autonomy, it also demands greater self-discipline, which may be challenging for children to adapt to.
Open and Distance Education	D1: *Modular learning entails the option for students to engage in studying individual modules or units of learning, rather than committing to the entire course at once. However, courses typically comprised of multiple modules often require students to enroll in the entire course and fulfill its requirements within a specified timeframe.* D2: *Some of which have bad impact or cause negative impact if they are using the online modular distance learning due to net inconsistency connection problems.* D3: *One of the biggest difficulties with distance learning is that it really requires a shift in focus to keep students engaged and to be successful. What works in-person does not necessarily translate online. For one, large classes pose a huge challenge online. Depending on the platform, you must scroll to see everyone, and you might miss questions, facial expressions, and feedback.* D4: *Strictly follow the schedule.*

To break the monotony of answering modules, teachers may employ differentiated instruction, vary strategies on the needs of the learners, reduce activities, and provide more examples instead of too many activities to comprehend. Open and distance education is another suggestion.

6. Proposed Instructional Intervention Program Using Strategic Intervention Materials to improve the Academic Performance of the Learners.

Instructional Intervention Program

From the data of General Scholastic Average as the measure of Academic Performance of the Grade 3 pupils, the researcher found that among the subjects, Science has the lowest GSA based on the computed Mean Percentage Scores, consistent in Quarter 1 and Quarter 2. Thus, Science seems difficult to comprehend for Grade 3 pupils during Modular Instruction. The study by Recto (2020) affirmed the findings. In this regard, the researcher proposes an instructional intervention program using Strategic Intervention Materials to improve the academic performance of the learners.

Compliance with Ethical Standards

This study prioritized several considerations to safeguard the privacy and confidentiality of both respondents and subjects, aiming to forestall any potential issues during the research process. Key concerns included obtaining informed consent, ensuring confidentiality, maintaining the anonymity of subjects, and safeguarding data protection. Throughout the research, the researcher meticulously devised indicators for the survey form and questionnaire to mitigate any potential confusion among participants. Adequate

time was afforded to respondents to respond to questions, reducing the likelihood of errors or inaccuracies in their responses. Additionally, respondents were provided with a waiver concerning the confidentiality of their identity and any information they preferred not to disclose.

The cooperation of respondents was actively sought, with assurances that all data collected would be handled with the utmost confidentiality. Ultimately, the researcher aimed to cultivate trust between themselves and the respondents through the conduct of the study.

Acknowledgments

The researcher would like to give thanks and praise to Almighty God and express her heartfelt gratitude for allowing her to continuously discover herself through good health and balance to complete this study.

She also expresses her gratitude to those persons who have extended their most valuable assistance for the realization of this study:

Dr. Diosdado P. Zulueta, College President; the Dean of the Graduate School,

Dr. Julieta Q. Nabos; and the members of the Oral Examination Committee for their suggestions to improve this manuscript.

Dr. Joy R. Profugo, her adviser, who embodies the attitude and substance of a genius, continually and convincingly conveying a spirit of adventure regarding research and excitement regarding teaching. Without her guidance and persistent help, this research would not have been possible

Dr. Regel L. Limpiada, her statistician, for his skill in checking and evaluating the data in her manuscript.

Dr. Elsie T. Barrios, Schools Division Superintendent, for her permission to conduct a research study in the Santa Cruz North District, specifically in Area II.

Mrs. Constancia R. Vasco, Public Schools District Supervisor, for allowing her to conduct her study in her district.

Mrs. Arlene R. Diaz, the school head of her current school, for letting her conduct a study and for the words of encouragement.

Her family and friends for their support

Her respondents for their cooperation.

The researcher will never forget the tireless support, understanding, love, wisdom, and patience of all people who pushed her farther than she thought she could go.

TEACHING COMPETENCE OF SENIOR HIGH SCHOOL TEACHERS AND ITS INFLUENCE ON STUDENTS' ACADEMIC PERFORMANCE

Jane Consejo C. Pinuto, MAEd

Negros Oriental High School, Dumaguete City, Negros Oriental, Philippines

https://doi.org/10.5281/zenodo.12671359

ABSTRACT

This study sought to establish the competence of Senior High School teachers in relation to learners' academic performance in Negros Oriental High School for the first and second quarters of school year 2019-2020. It utilized descriptive research design and employed the stratified random sampling technique using Slovin's formula in identifying the 255 respondents (Grade 11 and 12) from the total population of 702. To analyze the data, the study employed a validated questionnaire. It utilized a range of statistical methods, including frequency counts, percentages, means, and non-parametric tests such as the Mann-Whitney U test, Kruskal-Wallis H test, and Spearman's rho. The significant findings revealed that the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery and assessment delivery are both at "great extent". In contrast, the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management is at a "moderate extent". On the other hand, the extent of teaching competence in instructional delivery and assessment delivery when grouped according to age, sex, and track are at "great extent". However, in classroom management, competence varied by group. Furthermore, it was found that there is a significant difference in the extent of teaching competence of senior high school teachers when grouped and compared according to age, and there is no significant difference when grouped according to sex and track. Lastly, it was found that there is a significant relationship between the extent of teaching competence and the level of learners' academic performance.

Keywords: *teaching competence, academic performance, instructional delivery, classroom management, assessment delivery*

INTRODUCTION

Teachers' skills and knowledge, often referred to as competencies, are fundamental to their effectiveness. To maximize student learning in today's complex classrooms, teachers need expertise in areas like curriculum development, differentiated instruction, and classroom management, requiring them to make hundreds of crucial decisions daily (Naz, 2016). However, simply recognizing the importance of these skills isn't enough. To ensure quality education for all, we need to establish a clear link between a teacher's competency and student achievement through solid evidence (Bilasa, 2017).

This highlights the need to examine how teacher competencies may be impacting student achievement, particularly in schools facing achievement gaps.

Negros Oriental High School serves as a case study for this concern. In School Year 2018-2019, the grade summary revealed a significant disparity in knowledge distribution among senior high school students. This data exposes a concerning achievement gap that needs to be addressed. A key factor in tackling this gap is the ability of secondary teachers to effectively guide students. A study by Goldhaber et al. (2015) highlights a crucial point: disadvantaged students are more likely to have less qualified teachers. This lack of access to skilled educators can hinder academic progress and exacerbate existing achievement gaps.

Based on School Form 9, or the Learners' Report for the first grading period of the school year 2019-2020, a significant number of students fell below proficiency level, with average grades ranging from 78 to 82 percent. If education is delivered on an equal footing, what keeps these students lagging? These observations prompted the researcher to conduct this study.

Research Questions

The study aimed to determine the extent of the teaching competence of senior high school teachers and their influence on the students' academic performance of Negros Oriental High School for the first and second quarters of School Year 2019-2020.
Specifically, this study sought to answer the following questions:

1. What is the profile of the respondents in terms of the following variables:
    - 1.1. Age;
    - 1.2. Sex; and
    - 1.3. Track?

2. What is the extent of teaching competence of senior high school teachers as assessed by the students in terms of the following areas:
    - 2.1. Instructional Delivery;
    - 2.2. Classroom Management; and
    - 2.3. Assessment Delivery?

3. What is the extent of teaching competence of senior high school teachers as assessed by the students and when they are grouped according to the aforementioned variables?

4. What is the level of students' academic performance when they are grouped according to the aforementioned variables?

5. Is there a significant difference in the extent of teaching competence of senior high school teachers as assessed by the students and when they are grouped and compared according to the aforementioned variables?

6. Is there a significant difference in the level of students' academic performance when they are grouped and compared to the aforementioned variables?

7. Is there a significant relationship between the extent of teaching competence and the level of students' academic performance?

METHODOLOGY

Research Design

This study employed a descriptive research design to investigate the relationship between the teaching competence of secondary school teachers and the academic performance of senior high school students at Negros Oriental High School during the first and second quarters of the 2019-2020 school year.

Locale of the Study

This study was conducted at Negros Oriental High School (NOHS) in Dumaguete City, Philippines. Founded in 1902, NOHS is a cornerstone of the city's educational landscape. With over a century of experience, it has played a significant role in shaping the lives of countless students from Dumaguete City and the surrounding Negros Oriental province. The school's central location within Dumaguete City makes it readily accessible to students from various backgrounds, fostering a diverse student body.

Respondents of the Study

The respondents of the study were 255 from the total population of 702 Grade 11 and 12 Senior High School students enrolled at Negros Oriental High School (NOHS) for School Year 2019-2020. Since the total number of respondents is too large to handle, stratified random sampling using Slovin's formula was employed.

The selection of respondents was done through the lottery method, specifically the fishbowl technique wherein the researcher picked the corresponding number of samples from a bowl containing the complete list of students in the aforementioned tracks of offerings.

Table 1 shows the distribution of respondents according to their grade level and track.

Table 1
Distribution of Respondents

Grade Level	Track	Population (N)	Percentage (%)	Sample (n)
11	GAS	31	4.42	11
	HUMSS	135	19.23	49
	ABM	48	6.84	17
	STEM	31	4.42	11
	TVL	134	19.09	49
	Arts & Design	25	3.56	9
	Sports	15	2.14	6
12	GAS	48	6.84	17
	HUMSS	83	11.82	30
	ABM	51	7.26	19
	STEM	24	3.42	9
	TVL	50	7.12	18
	Arts & Design	13	1.85	5
	Sports	14	1.99	5
	Total	**702**	**100.00**	**255**

Data Gathering Instruments

In this study, the researcher used a self-made questionnaire to gather all the data, mainly from student respondents. The questionnaire consisted of 2 parts: Part 1 contains queries on respondents' profiles such as age, sex, grade level, and track, while Part 2 contains the questionnaire proper consisting of 30 items on teaching competencies of secondary school teachers, 10-line items per area.

The questionnaires were gathered and the results were recorded, analyzed, and treated. The respondents were asked to rate each item using the five-point Likert scale which contains the following scores: 5 – Very High; 4 – High; 3 – Moderate; 2 – Low and 1 – Very Low.

Validity

A research instrument's effectiveness hinges on its ability to measure what it's designed to assess accurately. This concept, known as validity, ensures the interpretations drawn from the data are well-founded. While achieving perfect validity is uncommon, researchers employ various techniques to evaluate the instrument's strength in different aspects.

This study implemented face and content validation to ensure the instrument captured the intended information. Face validity involved presenting the questionnaire to three education experts: one holding a Master's degree and two with a doctorate. These experts evaluated the clarity, relevance, and appropriateness of the questions. Their feedback and suggestions, particularly regarding the alignment of questions with the targeted construct, were incorporated into the final version of the instrument. Following this initial assessment, we conducted a content validation process to ensure the instrument aligned with the targeted construct in a more comprehensive manner.

The instrument validation for content validity was anchored from those developed by Oducado (2020), built upon the eight criteria set forth by Carter V. Good and Douglas V. Scates. This validation process confirms that the average rating of the three jurors was 4.77, which falls within the "excellent" range (4.04 – 5.00) on the established scale. This high rating suggests that the survey instrument possesses strong face and content validity.

Reliability

A research instrument's effectiveness relies on its ability to produce consistent results. This concept, known as reliability, ensures the instrument measures the same construct stably. Internal consistency, a key aspect of reliability, reflects how closely related individual items within an instrument are to the overall construct being measured.

This study assessed the internal consistency of the self-developed instrument using Cronbach's alpha, which provides a value between 0 and 1, with higher values indicating stronger internal consistency. While it remains a widely used measure, it's crucial to acknowledge its limitations, such as sensitivity to the number of items (Clark & Watson, 2019).

To assess the instrument's internal consistency in this regard, a pilot test was conducted with 30 senior high school students from the same school, excluding them from the final sample population. The Cronbach's Alpha coefficient for the pilot test was 0.932, which suggests a high level of internal consistency for the instrument.

Data Gathering Procedure

The data gathered from the responses of the respondents were tallied and tabulated using the appropriate statistical tools. The raw data was transformed into

numerical code guided by a coding manual. This allows computer processing, statistical derivations, and tabular presentation. The Statistical Package for Social Sciences (SPSS) was used in the computer processing of the encoded data.

Analytical Schemes

In the analysis of the data, various procedures will be employed per the objectives of the study.

Objective No. 1 which aimed to determine the profile of the respondents in terms of the following variables: age, sex, and track, the descriptive analytical scheme was used.

Objective No. 2 which aimed to determine the extent of teaching competence of secondary school teachers as assessed by the students in the following areas: instructional delivery, classroom management, and assessment delivery, the descriptive analytical scheme was used.

Objective No. 3 which aimed to determine the extent of teaching competence of secondary school teachers as assessed by the students and when they are grouped according to the aforementioned variables, the descriptive analytical scheme was used.

Objective No. 4 which aimed to determine the level of student academic performance of senior high school teachers as assessed by the students and when they were grouped according to the aforementioned variables, the descriptive analytical scheme was used.

Objective No. 5 which aimed to determine the significant difference in the extent of teaching competence of secondary school teachers as assessed by the students and when grouped and compared according to the aforementioned variables, the comparative analytical scheme was used.

Objective No. 6 which aimed to determine the significant difference in the level of students' academic performance when they are grouped and compared according to the aforementioned variables, the comparative analytical scheme was used.

Objective No. 7 which aimed to determine the relationship between the extent of teaching competence and the level of students' academic performance, the relational analytical scheme was used.

Statistical Tools

In the analysis of the data, various statistical tools will be employed per the objectives of the study.

Objective No. 1 which aimed to determine the profile of the respondents in terms of the following variables: age, sex and track, frequency count, and percentage was used. This approach is suitable for establishing the typical characteristics of the study's respondent group.

Categorical data are best described by counting how many of the subjects' responses fall within each category in a frequency distribution and by calculating their percentages or proportions, that is the number of times each response was given by the total number (Mellinger and Hanson, 2017).

Objective No. 2 which aimed to determine the extent of teaching competence of secondary school teachers as assessed by the students in the following areas: instructional delivery, classroom management, and assessment delivery, mean was used.

The mean, often referred to as the average, is a widely used statistic for summarizing a dataset by calculating the sum of all values divided by the number of observations (Gravetter and Wallnau, 2017).

The mean scores were interpreted as follows:

Mean Range	Score Description	Verbal Interpretation
4.50 - 5.00	Always	Very Great Extent
3.50 - 4.49	Oftentimes	Great Extent
2.50 - 3.49	Frequent	Moderate Extent
1.50 - 2.49	Sometimes	Low Extent
1.00 - 1.49	Almost never	Very Low Extent

Objective No. 3 which aimed to determine the extent of teaching competence of secondary school teachers as assessed by the students and when they are grouped according to the aforementioned variables, mean was used.

Objective No. 4 which aimed to determine the level of students' academic performance of senior high school teachers as assessed by the students and when they are grouped according to the aforementioned variables, mean was used.

The mean scores were interpreted as follows based on the DepEd Standard on Learning Progress and Achievement Report:

Mean Score	Verbal Interpretation
90 - 100%	Outstanding
85 - 89%	Very Satisfactory
80 - 84%	Satisfactory
75 - 79%	Fairly Satisfactory
74% and below	Did not meet the expectation

Objective No. 5 which aimed to determine the significant difference in the extent of teaching competence of secondary school teachers as assessed by the students and

when grouped and compared according to age and sex, the Mann-Whitney U test was used and for the variable track, Kruskal Wallis H test was used.

The Mann-Whitney U test is particularly useful when the data is ordinal (ranked data) or when the assumptions of normality (normal distribution) for the t-test are not met (Ferguson, 2016)

The Kruskal-Wallis H test, also known as the “one-way analysis of variance (ANOVA) on ranks”, is a non-parametric statistical test based on ranks. It is used to assess whether statistically significant differences exist among two or more independent groups in a continuous or ordinal dependent variable.

Objective No. 6 which aimed to determine the significant difference in the level of students’ academic performance when they are grouped and compared according to age and sex, Mann-Whitney U test was used and for the variable track, Kruskal Wallis H test was used.

Objective No. 7 which aimed to determine the significant relationship between the extent of teaching competence and the level of students’ academic performance, Spearman Rho was used.

Spearman's rank-order correlation, often denoted by the Greek letter rho (ρ) or rs, is a non-parametric alternative to the Pearson product-moment correlation coefficient (Pallant, 2016). It measures the strength and direction of association between two ranked variables.

In Spearman's rank-order correlation, the null hypothesis states that there is no monotonic association between the ranks of the two variables. This means that a change in the rank of one variable does not necessarily correspond to a change (increase or decrease) in the rank of the other variable.

Finally, the computation of the p-values was interpreted using the following guide. Reject null hypothesis if the p-value is equal to or less than 0.05 level of significance. Accept the null hypothesis if the p-value is greater than 0.05 level of significance

RESULTS

Table 2
Profile of the Respondents

Variable	Category	Frequency	Percentage
Age	younger (below 18 years old)	123	48.2
	older (18 years old and above)	132	51.8

	Total	**255**	**100.00**
Sex	male	101	39.6
	female	154	60.4
	Total	**269**	**100.00**
Track	GAS	28	11.0
	HUMSS	79	31.0
	ABM	36	14.1
	STEM	20	7.8
	TVL	67	26.3
	Arts & Design	14	5.5
	Sports	11	4.3
	Total	**255**	**100.00**

Table 2 shows the profile of the respondents. In terms of age, 123, or 48.2% were younger (below 18 years old) and 132, or 51.8% were older (18 years and above) respondents. In terms of sex, 101, or 39.6% were male, and 154, or 60.4 were female respondents. In terms of track, 28, or 11.0% belonged to GAS, 79 or 31.0% belonged to HUMSS, 36, or 14.1% belonged to STEM, 67, or 26.3% belonged to TVL, 14, or 5.5% belonged to Arts, and Design, and 11 or 4.3% belonged to Sports.

Table 3
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery

	Items	**Mean**	**Interpretation**
1	Lesson contents are delivered with corresponding visual aids or video clips.	3.90	Great Extent
2	Teachers always ask students if they have questions before proceeding to the next topic.	4.68	Very Great Extent
3	One day before discussing the topic, the teacher assigns students to read in advance - at home or the library.	3.75	Great Extent
4	The teacher always encourages students to throw more questions to clarify some unclear points.	4.14	Great Extent
5	Sometimes, our teacher employs group dynamics in the class for us to understand better the lessons she delivers.	3.93	Great Extent
6	The teacher can manage to provide anecdotes to ease tension and boredom.	3.83	Great Extent
7	In general, the teacher is very effective in delivering lesson content	4.26	Great Extent
8	Even if some of the class projects are done in groups, our teacher manages to make sure that everyone is participating.	4.42	Great Extent

9	Compliments are always given to those who volunteer to provide good answers during class discussions.	4.03	Great Extent
10	Our teacher knows how to empower her students by delegating some tasks to them.	4.10	Great Extent
	Overall Mean	**4.10**	**Great Extent**

Legend	Mean Range	Score Description	Verbal Interpretation
	4.50 - 5.00	Always	Very Great Extent
	3.50 - 4.49	Oftentimes	Great Extent
	2.50 - 3.49	Frequent	Moderate Extent
	1.50 - 2.49	Sometimes	Low Extent
	1.00 - 1.49	Almost never	Very Low Extent

Table 3 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery. Item No. 2 which states, “Teacher always ask students if they have questions before proceeding to the next topic” got the highest mean score of 4.68, interpreted as “very great extent”. Meanwhile, Item No. 3 which states “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest mean score of 3.75, interpreted as “great extent”. The overall mean score was 4.10, interpreted as a great extent.

Table 4
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management

	Items	Mean	Interpretation
1	The room is very conducive to learning.	4.25	Great Extent
2	Our classroom has a homey atmosphere – curtains, tables, etc.	4.36	Great Extent
3	The cleanliness of the classroom is properly maintained	4.36	Great Extent
4	Noisy students are being called out during class	3.60	Great Extent
5	Blackboards, bulletin boards, and the teachers’ tables and chairs are always clean and in place	4.31	Great Extent
6	We have a clean CR inside the classroom	2.21	Low Extent
7	Soap, tissue paper, and others are available inside our classroom toilet	1.96	Low Extent
8	The room is maintained clean every day, floor and walls are dusted.	4.07	Great Extent
9	We have a storage cabinet for our raincoats, umbrellas, or boots during the rainy season.	1.97	Low Extent
10	The room has a clean trash bin	3.66	Great Extent
	Overall Mean	**3.48**	**Moderate Extent**

Legend	Mean Range	Score Description	Verbal Interpretation
	4.50 - 5.00	Always	Very Great Extent

3.50 - 4.49	Oftentimes	Great Extent
2.50 - 3.49	Frequent	Moderate Extent
1.50 - 2.49	Sometimes	Low Extent
1.00 - 1.49	Almost never	Very Low Extent

Table 4 shows the extent of the teaching competence of senior high school teachers as assessed by students in the area of classroom management. Item Nos. 2 and 3 which state, “Our classroom has a homey atmosphere – curtains, tables, etc.” and “Cleanliness of the classroom is properly maintained” got the highest mean score of 4.36, interpreted as “great extent”. Meanwhile, Item No. 7 which states, “Soap, tissue papers and others are available inside our classroom toilet” got the lowest mean score of 1.96, interpreted as “low extent”. The overall mean score was 3.48, interpreted as “moderate extent”.

Table 5
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery

	Items	Mean	Interpretation
1	Short and long quizzes are consistently given after each lesson	4.05	Great Extent
2	Pointers are provided before the exams	4.42	Great Extent
3	The results of our tests are being discussed with us individually	3.74	Great Extent
4	Exams and long quizzes are being discussed in the class.	4.24	Great Extent
5	Students who score low on long quizzes and exams are being called to be given coaching sessions.	3.54	Great Extent
6	If students are unable to take a test, makeup tests are given	3.91	Great Extent
7	The teacher always asks what part of the exam is difficult.	4.23	Great Extent
8	The teacher maintains total silence during exam days.	4.52	Very Great Extent
9	The students are given the option to tell the teacher what test type they like.	2.96	Moderate Extent
10	Everything that comes out of the exams is from our daily lessons	4.36	Great Extent
	Overall Mean	**4.00**	**Great Extent**

Legend	Mean Range	Score Description	Verbal Interpretation
	4.50 - 5.00	Always	Very Great Extent
	3.50 - 4.49	Oftentimes	Great Extent
	2.50 - 3.49	Frequent	Moderate Extent
	1.50 - 2.49	Sometimes	Low Extent
	1.00 - 1.49	Almost never	Very Low Extent

Table 5 shows the extent of the teaching competence of senior high school teachers as assessed by students in the area of assessment delivery. Item No. 8 which states, “The teacher maintains total silence during exam days” got the highest mean score of 4.52, interpreted as “very great extent”. Meanwhile, Item No. 9 which states, “The students are given the option to tell the teacher what test type they like” got the lowest mean score of 2.96, interpreted as “moderate extent”. The overall mean score was 4.00, interpreted as “great extent”.

Table 6
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery According to Age

	Items	Younger		Older	
		Mean	Interpretation	Mean	Interpretation
1	Lesson contents are delivered with corresponding visual aids or video clips.	3.88	Great Extent	3.92	Great Extent
2	Teachers always ask students if they have questions before proceeding to the next topic.	4.67	Very Great Extent	4.69	Very Great Extent
3	One day before discussing the topic, the teacher assigns students to read in advance - at home or the library.	3.55	Great Extent	3.94	Great Extent
4	The teacher always encourages students to throw more questions to clarify some unclear points.	4.01	Great Extent	4.27	Great Extent
5	Sometimes, our teacher employs group dynamics in the class for us to understand better the lessons she delivers.	3.80	Great Extent	4.05	Great Extent
6	The teacher can manage to provide anecdotes to ease tension and boredom.	3.74	Great Extent	3.91	Great Extent
7	In general, the teacher is very effective in delivering lesson content	4.25	Great Extent	4.27	Great Extent
8	Even if some of the class projects are done in groups, our teacher manages to make sure that everyone is participating.	4.38	Great Extent	4.46	Great Extent
9	Compliments are always given to those who volunteer to provide good answers during class discussions.	3.97	Great Extent	4.08	Great Extent

10	Our teacher knows how to empower her students by delegating some tasks to them.	4.05	Great Extent	4.14	Great Extent
	Overall Mean	**4.03**	**Great Extent**	**4.17**	**Great Extent**

Legend	**Mean Range**	**Score Description**	**Verbal Interpretation**
	4.50 - 5.00	Always	Very Great Extent
	3.50 - 4.49	Oftentimes	Great Extent
	2.50 - 3.49	Frequent	Moderate Extent
	1.50 - 2.49	Sometimes	Low Extent
	1.00 - 1.49	Almost never	Very Low Extent

Table 6 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to age. Item No. 2 which states, “Teacher always ask students if they have questions before proceeding to the next topic” got the highest mean score of 4.67 for younger respondents and 4.69 for older respondents, both were interpreted as “very great extent”. Meanwhile, Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest mean score of 3.55 for younger respondents interpreted it as “great extent”, while Item No. 6 which states,” the teacher can manage to provide anecdotes to ease tension and boredom” got the lowest mean score of 3.91 for older respondents interpreted as “great extent”. The overall mean scores were 4.03 for younger and 4.17 for older respondents, both were interpreted as “great extent”.

Table 7
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery According to Sex

	Items	**Male**		**Female**	
		Mean	Interpretation	Mean	Interpretation
1	Lesson contents are delivered with corresponding visual aids or video clips.	3.78	Great Extent	3.97	Great Extent
2	Teachers always ask students if they have questions before proceeding to the next topic.	4.63	Very Great Extent	4.71	Very Great Extent
3	One day before discussing the topic, the teacher assigns students to read in advance - at home or the library.	3.75	Great Extent	3.75	Great Extent

	1.50 - 2.49	Sometimes	Low Extent
	1.00 - 1.49	Almost never	Very Low Extent

Table 7 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to sex. Item No. 2 which states, “Teacher always ask students if they have questions before” got the highest mean score of 4.63 for male respondents and 4.71 for female respondents, both were interpreted as “very great extent”. Meanwhile, Item No. 6 which states, “the teacher can manage to provide anecdotes to ease tension and boredom” got the lowest mean score of 3.71 for male respondents, interpreted as “great extent”, while Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest mean score of 3.75 for male respondents were both interpreted as “great extent”, while Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest mean score of 3.75 for female respondents interpreted as “great extent”. The overall mean scores were 4.06 for male and 4.13 for female respondents, both were interpreted as “great extent”.

Table 8
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery According to GAS and HUMSS

	Items	GAS		HUMSS	
		Mean	Interpretation	Mean	Interpretation
1	Lesson contents are delivered with corresponding visual aids or video clips.	3.82	Great Extent	3.86	Great Extent
2	Teachers always ask students if they have questions before proceeding to the next topic.	4.89	Very Great Extent	4.70	Very Great Extent
3	One day before discussing the topic, the teacher assigns students to read in advance - at home or the library.	3.64	Great Extent	3.85	Great Extent
4	The teacher always encourages students to throw more questions to clarify some unclear points.	4.00	Great Extent	4.11	Great Extent
5	Sometimes, our teacher employs group dynamics in the class for us to understand better the lessons she delivers.	3.79	Great Extent	4.05	Great Extent
6	The teacher can manage to provide anecdotes to ease tension and boredom.	3.61	Great Extent	3.89	Great Extent
7	In general, the teacher is very effective in delivering lesson content	4.07	Great Extent	4.39	Great Extent
8	Even if some of the class projects are done in groups, our teacher manages to make sure that everyone is participating.	4.32	Great Extent	4.54	Great Extent
9	Compliments are always given to those who volunteer to provide good answers during class discussions.	4.14	Great Extent	4.04	Great Extent
10	Our teacher knows how to empower her students by delegating some tasks to them.	4.14	Great Extent	4.19	Great Extent
	Overall Mean	**4.04**	**Great Extent**	**4.16**	**Great Extent**

Legend	Mean Range	Score Description	Verbal Interpretation
	4.50 - 5.00	Always	Very Great Extent
	3.50 - 4.49	Oftentimes	Great Extent
	2.50 - 3.49	Frequent	Moderate Extent

1.50 - 2.49	Sometimes	Low Extent
1.00 - 1.49	Almost never	Very Low Extent

Table 8 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to GAS and HUMSS. Item No. 2 which states, “Teacher always ask students if they have questions before proceeding to the next topic” got the highest mean score of 4.89 for GAS and 4.70 for HUMSS respondents, both were interpreted as “very great extent”. Meanwhile, Item No. 6 which states “The teacher can manage to provide anecdotes to ease tension and boredom” got the lowest mean score of 3.61 for the GAS group, interpreted as “great extent”, while Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest score of 3.85 for HUMSS group, interpreted as “great extent”. The overall mean scores were 4.04 for the GAS group and 4.16 for the HUMSS group, both were interpreted as “great extent”.

Table 9
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery According to ABM and STEM

	Items	ABM		STEM	
		Mean	Interpretation	Mean	Interpretation
1	Lesson contents are delivered with corresponding visual aids or video clips.	3.97	Great Extent	3.75	Great Extent
2	Teachers always ask students if they have questions before proceeding to the next topic.	4.69	Very Great Extent	4.45	Great Extent
3	One day before discussing the topic, the teacher assigns students to read in advance - at home or the library.	3.86	Great Extent	3.50	Great Extent
4	The teacher always encourages students to throw more questions to clarify some unclear points.	4.22	Great Extent	4.30	Great Extent
5	Sometimes, our teacher employs group dynamics in the class for us to understand better the lessons she delivers.	3.89	Great Extent	3.65	Great Extent
6	The teacher can manage to provide anecdotes to ease tension and boredom.	3.83	Great Extent	3.65	Great Extent
7	In general, the teacher is very effective in delivering lesson content	4.17	Great Extent	4.40	Great Extent

8	Even if some of the class projects are done in groups, our teacher manages to make sure that everyone is participating.	4.42	Great Extent	4.20	Great Extent
9	Compliments are always given to those who volunteer to provide good answers during class discussions.	4.22	Great Extent	3.95	Great Extent
10	Our teacher knows how to empower her students by delegating some tasks to them.	4.08	Great Extent	3.90	Great Extent
	Overall Mean	**4.14**	**Great Extent**	**3.98**	**Great Extent**

Legend	**Mean Range**	**Score Description**	**Verbal Interpretation**

Table 10 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to TVL, Arts & Design, and Sports. Item No. 2 which states. “Teacher always asks students if they have questions before proceeding to the next topic” got the highest mean score of 4.66 for the TVL group and 4.64 for both the Arts & Design and Sports group, all were interpreted as “very great extent”. Meanwhile. Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest 3.91 for the TVL group, interpreted as “great extent” and 2.45 for the Sports group, interpreted as “low extent”, while Item No. 1 which states, “Lesson contents are delivered with corresponding visual aids or video clips” got the lowest mean score of 3.36 for Arts & Design group, interpreted as “moderate extent. The overall mean scores were 4.20 for TVL, 4.03 for Arts and Design, and 3.51 for Sports group, all were interpreted as “great extent”.

Table 11
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management According to Age

	Items	Younger		Older	
		Mean	Interpretation	Mean	Interpretation
1	The room is very conducive to learning.	4.27	Great Extent	4.24	Great Extent
2	Our classroom has a homey atmosphere – curtains, tables, etc.	4.42	Great Extent	4.30	Great Extent
3	The cleanliness of the classroom is properly maintained	4.33	Great Extent	4.39	Great Extent
4	Noisy students are being called out during class	3.59	Great Extent	3.61	Great Extent
5	Blackboards, bulletin boards, and the teachers' tables and chairs are always clean and in place	4.33	Great Extent	4.30	Great Extent
6	We have a clean CR inside the classroom	2.02	Low Extent	2.38	Low Extent
7	Soap, tissue paper, and others are available inside our classroom toilet	1.87	Low Extent	2.08	Low Extent
8	The room is maintained clean every day, floor and walls are dusted.	3.93	Great Extent	4.19	Great Extent
9	We have a storage cabinet for our raincoats, umbrellas, or boots during the rainy season.	1.73	Low Extent	2.19	Low Extent
10	The room has a clean trash bin	3.64	Great Extent	3.68	Great Extent
	Overall Mean	**3.41**	**Moderate Extent**	**3.54**	**Great Extent**

Legend	Mean Range	Score Description	Verbal Interpretation
	4.50 - 5.00	Always	Very Great Extent
	3.50 - 4.49	Oftentimes	Great Extent
	2.50 - 3.49	Frequent	Moderate Extent
	1.50 - 2.49	Sometimes	Low Extent
	1.00 - 1.49	Almost never	Very Low Extent

Table 11 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management according to age. Item No. 2 which states, "Our classroom has a homey atmosphere – curtains, tables, etc." got the highest mean score of 4.42 for the younger group, interpreted as "great extent", while Item No. 3 which states, "Cleanliness of the classroom is properly maintained" got the highest mean score of 4.39 for the older group, interpreted as "great extent". Meanwhile,

Item No. 9 which states, “We have a storage cabinet for our raincoats, umbrellas or boots during the rainy season” got the lowest mean score of 1.73 for the younger group, interpreted as “low extent”, while Item No. 7 which states, “Soap, tissue papers, and others are available inside our classroom toilet” got the lowest mean score of 2.08 for the older group, interpreted as “low extent”. The overall mean scores were 3.41 for the younger group, interpreted as “moderate extent” and 3.54 for the older group, interpreted as “great extent”.

Table 12
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management According to Sex

	Items	Male		Female	
		Mean	Interpretation	Mean	Interpretation
1	The room is very conducive to learning.	4.29	Great Extent	4.23	Great Extent
2	Our classroom has a homey atmosphere – curtains, tables, etc.	4.30	Great Extent	4.40	Great Extent

	Overall Mean	**4.06**	**Great Extent**	**3.96**	**Great Extent**

Legend	**Mean Range**	**Score Description**	**Verbal Interpretation**
	4.50 - 5.00	Always	Very Great Extent
	3.50 - 4.49	Oftentimes	Great Extent
	2.50 - 3.49	Frequent	Moderate Extent
	1.50 - 2.49	Sometimes	Low Extent
	1.00 - 1.49	Almost never	Very Low Extent

Table 17 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to sex. Item No. 8 which states, “The teacher maintains total silence during exam days” got the highest mean score of 4.51 for the male group and 4.52 for the female group, both were interpreted as “very great extent”. Meanwhile, Item No. 9 which states, “The students are given the option to tell the teacher what test type they like” got the lowest mean score of 3.27 for the male group and 2.76 for the older group, both were interpreted as “moderate extent”. The overall mean scores were 4.06 for the male group and 3.96 for the female group, both were interpreted as “great extent”.

Table 18
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery According to GAS and HUMSS

	Items	GAS		HUMSS	
		Mean	Interpretation	Mean	Interpretation
1	Short and long quizzes are consistently given after each lesson	4.11	Great Extent	4.05	Great Extent
2	Pointers are provided before the exams	4.61	Very Great Extent	4.51	Very Great Extent
3	The results of our tests are being discussed with us individually	4.21	Great Extent	3.63	Great Extent
4	Exams and long quizzes are being discussed in the class.	4.50	Very Great Extent	4.10	Great Extent
5	Students who score low on long quizzes and exams are being called to be given coaching sessions.	4.04	Great Extent	3.57	Great Extent
6	If students are unable to take a test, makeup tests are given	4.21	Great Extent	3.63	Great Extent
7	The teacher always asks what part of the exam is difficult.	4.32	Great Extent	4.23	Great Extent
8	The teacher maintains total silence during exam days.	4.68	Very Great Extent	4.57	Very Great Extent
9	The students are given the option to tell the teacher what test type they like.	3.18	Moderate Extent	2.87	Moderate Extent
10	Everything that comes out of the exams is from our daily lessons	4.43	Great Extent	4.32	Great Extent
	Overall Mean	**4.23**	**Great Extent**	**3.95**	**Great Extent**

Legend	Mean Range	Score Description	Verbal Interpretation
	4.50 - 5.00	Always	Very Great Extent
	3.50 - 4.49	Oftentimes	Great Extent
	2.50 - 3.49	Frequent	Moderate Extent
	1.50 - 2.49	Sometimes	Low Extent
	1.00 - 1.49	Almost never	Very Low Extent

Table 18 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to GAS and HUMMS. Item No. 8 which states, “The teacher maintains total silence during exam days” got the highest mean score of 4.68 for the GAS group and 4.57 for the HUMSS group, both were interpreted as “very great extent”. Meanwhile, Item No. 9 which states, “The students are given the option to tell the teacher what test type they like” got the lowest mean score of 3.18 for the GAS group and 2.87 for the HUMMS group, both were

interpreted as “moderate extent”. The overall mean scores were 4.23 for the GAS group and 3.95 for the HUMSS group, both were interpreted as “great extent”.

Table 19
Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery According to ABM and STEM

	Items	GAS		HUMSS	
		Mean	Interpretation	Mean	Interpretation
1	Short and long quizzes are consistently given after each lesson	4.14	Great Extent	3.80	Great Extent
2	Pointers are provided before the exams	4.31	Great Extent	4.35	Great Extent
3	The results of our tests are being discussed with us individually	3.78	Great Extent	3.15	Great Extent
4	Exams and long quizzes are being discussed in the class.	4.28	Great Extent	4.55	Very Great Extent
5	Students who score low on long quizzes and exams are being called to be given coaching sessions.	3.72	Great Extent	3.55	Great Extent
6	If students are unable to take a test, makeup tests are given	3.97	Great Extent	4.50	Very Great Extent
7	The teacher always asks what part of the exam is difficult.	4.31	Great Extent	4.35	Great Extent
8	The teacher maintains total silence during exam days.	4.39	Great Extent	4.45	Great Extent
9	The students are given the option to tell the teacher what test type they like.	3.33	Moderate Extent	2.65	Moderate Extent
10	Everything that comes out of the exams is from our daily lessons	4.33	Great Extent	4.40	Great Extent
	Overall Mean	**4.06**	**Great Extent**	**3.98**	**Great Extent**

Legend	Mean Range	Score Description	Verbal Interpretation
	4.50 - 5.00	Always	Very Great Extent

	1.50 - 2.49	Sometimes	Low Extent
	1.00 - 1.49	Almost never	Very Low Extent

Table 20 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to TVL, Arts & Design, and Sports. Item No. 8 which states, “The teacher maintains total silence during exam days” got the highest mean score of 4.60 for the TVL group, interpreted as “very great extent”; 4.36 for Arts & Design and 4.18 for Sports, both were interpreted as “great extent”. Meanwhile, Item No. 9 which states, “The students are given the option to tell the teacher what test type they like” got the lowest mean score of 2.91 for the TVL group, 2.64 for the Arts & Design group, and 3.09 for the Sports group, all were interpreted as “moderate extent”. The overall mean scores were 4.03 for the TVL group, 3.81 for the Arts & Design group, and 3.66 for the Sports group, all were interpreted as “great extent”.

Table 21
Level of Students’ Academic Performance when They Are Grouped According to Variables

Variable	Category	Mean	Interpretation
Age	Younger	86.28	Very Satisfactory
	Older	86.51	Very Satisfactory
Sex	Male	86.81	Very Satisfactory
	Female	86.13	Very Satisfactory

	GAS	87.14	Very Satisfactory
	HUMSS	87.15	Very Satisfactory
	ABM	86.67	Very Satisfactory
Track	STEM	92.30	Outstanding
	TVL	84.22	Satisfactory
	Arts & Design	84.43	Satisfactory
	Sports	83.27	Satisfactory
Overall Mean		**86.45**	**Very Satisfactory**

Legend	**Mean Score**	**Verbal Interpretation**
	90 - 100%	Outstanding
	85 - 89%	Very Satisfactory
	80 - 84%	Satisfactory
	75 - 79%	Fairly Satisfactory
	74% and below	Did not meet the expectation

Table 21 shows the level of students' performance when grouped according to variables. When grouped according to age, the younger group has a mean score of 86.28 and 86.51 for the older group, both were interpreted as "very satisfactory". When grouped according to sex, the male group has a mean score of 86.81 and 86.13 for the female group, both were interpreted as "very satisfactory". When grouped according to track, the STEM group obtained a mean score of 92.30, interpreted as "outstanding" while the Sports group had a mean score of 83.27, interpreted as "satisfactory".

Table 22
Difference in the Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery When they are Grouped and Compared According to Age, Sex, and Track

Variable	**Category**	**Mean**	**Mann Whitney U**	**Kruskal Wallis H**	***p*-value**	**Sig level**	**Interpretation**
Age	Younger	115.01	6520.00		0.006		Significant
	Older	140.11					
Sex	Male	120.66	7036.00		0.197		Not Significant
	Female	132.81					
Track	GAS	118.66		16.43	0.012	0.05	Significant
	HUMSS	136.99					
	ABM	133.51					
	STEM	106.40					
	TVL	139.75					
	Arts & Design	113.18					
	Sports	55.77					

Level of significance = 0.05

Table 22 shows the comparative analysis if the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to variables. When grouped according to sex, the male group has a mean score of 120.66 and 132.81 for the female group, the computed U-test was 7036.00 and the p-value was 0.197, which is higher than the significance level of 0.05, interpreted as “not significant”.

Table 23
Difference in the Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management When they are Grouped and Compared According to Age, Sex, and Track

Variable	Category	Mean	Mann Whitney U	Kruskal Wallis H	*p*-value	Sig level	Interpretation
Age	Younger	118.31	6926.50		0.042		Significant
	Older	137.03					
Sex	Male	132.71	7301.00		0.408		Not Significant
	Female	124.91					
Track	GAS	119.23		6.32	0.388	0.05	Not Significant
	HUMSS	122.97					
	ABM	129.47					
	STEM	160.60					
	TVL	130.20					
	Arts & Design	134.11					
	Sports	101.18					

Level of significance = 0.05

Table 23 shows the comparative analysis if the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management according to variables. When grouped according to sex, the male group has a mean score of 132.71 and 124.91 for the female group, the computed U-test was 7301.00 and the p-value was 0.408, it is higher than the significance level of 0.05, interpreted as “not significant”. When grouped according to track, the GAS group has a mean score of 119.23; 122.97 for HUMMS; 129.47 for ABM; 160.60 for STEM; 130.20 for TVL; 134.11 for Arts & Design, and 101.18 for SPORTS, the computed H-test was 6.32 and the p-value was 0.388, it is higher than the significance level of 0.05, interpreted as “not significant”.

Table 24
Difference in the Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery When they are Grouped and Compared According to Age, Sex, and Track

Variable	Category	Mean	Mann Whitney U	Kruskal Wallis H	*p*-value	Sig level	Interpretation
Age	Younger	117.19	6788.50		0.024		Significant
	Older	138.07					
Sex	Male	137.51	6816.00		0.095		Not Significant
	Female	121.76					
Track	GAS	118.66		12.38	0.054	0.05	Not Significant
	HUMSS	136.99					
	ABM	133.51					
	STEM	106.40					
	TVL	139.75					
	Arts & Design	113.18					
	Sports	55.77					

Level of significance = 0.05

Table 24 shows the comparative analysis if the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to variables. When grouped according to sex, the male group has a mean score of 137.51 and 121.76 for the female group, the computed U-test was 6816.00 and the p-value was 0.095, which is higher than the significance level of 0.05, interpreted as “not significant”. When grouped according to track, the GAS group has a mean score of 118.66; 136.99 for HUMMS; 133.51 for ABM; 106.40 for STEM; 139.75 for TVL; 133.18 for Arts & Design, and 55.77 for Sports, the computed H-test was 12.38 and the p-value was 0.054, it is higher than the significance level of 0.05, interpreted as “not significant”.

Table 25
Differences in the Level of Students’ Academic Performance when they are Grouped and Compared According to Age, Sex, and Track

Variable	Category	Mean	Mann Whitney U	Kruskal Wallis H	*p*-value	Sig level	Interpretation
Age	Younger	125.57	7819.50		0.611	0.05	Not Significant
	Older	130.26					
Sex	Male	135.72	6997.00		0.174		Not Significant
	Female	122.94					

Track	GAS	143.30	75.34	0.000	Significant
	HUMSS	141.35			
	ABM	133.69			
	STEM	234.08			
	TVL	87.93			
	Arts & Design	91.43			
	Sports	72.32			

Level of significance = 0.05

Table 25 shows the comparative analysis of the level of academic performance of senior high school teachers as assessed by students when they are grouped and compared according to variables. When grouped according to age, the younger group has a mean score of 125.57 and 130.26 for the older group, the computed U-test was 7819.50 and the p-value was 0.611, which is higher than the significance level of 0.05, interpreted as “not significant”. When grouped according to sex, the male group has a mean score of 13.72 and 122.94 for the female group, the computed U-test was 6997.00 and the p-value was 0.174, it is higher than the significance level of 0.05, interpreted as “not significant”.

Table 26
Relationship Between the Extent of Teaching Competence and the Level of Students’ Academic Performance

Variables	**rho**	***Sig. level***	***p*-value**	**Interpretation**
Extent of Teaching Competence Level of Students’ Academic Performance	0.020	0.05	0.756	Not Significant

Level of significance = 0.05

Table 26 shows the relational analysis between the extent of teaching competence and the level of students’ academic performance. The extent of teaching competence and the level of student’s academic performance has a computed rho-value of 0.020 and a p-value of 0.756, it is higher than the level of significance of 0.05, interpreted as “not significant”.

DISCUSSION

Profile of the Respondents

Table 2 shows the profile of the respondents. In terms of age, 123, or 48.2% were younger (below 18 years old) and 132, or 51.8% were older (18 years and above) respondents. In terms of sex, 101, or 39.6% were male, and 154, or 60.4 were female respondents. In terms of track, 28, or 11.0% belonged to GAS, 79 or 31.0% belonged to HUMSS, 36, or 14.1% belonged to STEM, 67, or 26.3% belonged to TVL, 14, or 5.5% belonged to Arts, and Design, and 11 or 4.3% belonged to Sports.

The findings of the study showed that the majority of the respondents belong to the younger group. A little over half of the total number of respondents were female. The majority of the respondents came from HUMSS Track.

In surveys, demographics like age, education, and income describe the population being studied (De Franzo, 2015). This information is crucial for crafting an effective survey. It guides who gets surveyed (target population) and how the collected data is analyzed. By segmenting responses based on demographics, researchers can uncover variations in how different groups answer the survey questions, leading to a more nuanced understanding of the results.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery

Table 3 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery.

Item No. 2 which states, “Teacher always ask students if they have questions before proceeding to the next topic” got the highest mean score of 4.68, interpreted as “very great extent”. Meanwhile, Item No. 3 which states “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest mean score of 3.75, interpreted as “great extent”. The overall mean score was 4.10, interpreted as a great extent.

The findings showed that in terms of instructional delivery, the strength of the teachers lies in the fact that they are able to ask back the learners if there are things that they don’t understand before proceeding to another topic. On the other hand, the result of the study showed the inability of some teachers to assign advanced reading materials for the next day’s topic.

Sickler (2017) confirmed that students seem to direct the majority of their energy to learning the material after class, which causes an unnecessary cycle of complications. Many fall into the trap of trying to copy down every word during lectures, leading to a frantic struggle to keep up. To break this unproductive cycle, students should prioritize

coming to class prepared. A brief preview of the day's material beforehand can save them hours of ineffective studying later.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management

Table 4 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management.

Item Nos. 2 and 3 which state, “Our classroom has a homey atmosphere – curtains, tables, etc.” and “Cleanliness of the classroom is properly maintained” got the highest mean score of 4.36, interpreted as “great extent”. Meanwhile, Item No. 7 which states, “Soap, tissue papers and others are available inside our classroom toilet” got the lowest mean score of 1.96, interpreted as “low extent”. The overall mean score was 3.48, interpreted as “moderate extent”.

The study identified strengths and weaknesses in classroom cleanliness. Teachers were praised for creating a clean and welcoming atmosphere in the classrooms. However, a recurring issue was the lack of consistent supplies like soap, toilet paper, and other essentials in the restrooms. This inconsistency between the well-maintained classrooms and potentially unmaintained restrooms could negatively impact the overall perception of the school environment.

Research suggests that cleanliness perception goes beyond physical conditions. A study (Liu, 2017) found that people rated public washrooms as cleaner when they knew the recent cleaning time, even if they hadn't witnessed the cleaning itself. This highlights the psychological aspect of cleanliness perception. In a school setting, chronically neglected restrooms could lead students and staff to infer a generally less cared-for environment, potentially affecting their well-being.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery

Table 5 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery.

Item No. 8 which states, “The teacher maintains total silence during exam days” got the highest mean score of 4.52, interpreted as “very great extent”. Meanwhile, Item No. 9 which states, “The students are given the option to tell the teacher what test type they like” got the lowest mean score of 2.96, interpreted as “moderate extent”. The overall mean score was 4.00, interpreted as “great extent”.

The result of the study implies that maintaining silence during exams is a teacher's strength, however, student involvement in choosing assessments needs improvement. While considering student preferences can be beneficial, limitations beyond teachers'

control, such as standardized testing, may dictate test formats. This reinforces the importance of effective assessment practices, as highlighted in various studies.

Furthermore, research by Xu and Brown (2016) emphasizes the need to move beyond a basic understanding of assessment and integrate it with real-world teaching situations. Their work highlights the importance of considering factors like educational policies and cultural values that can influence assessment practices. This broader perspective on teacher assessment literacy (TALiP) acknowledges the complexities teachers face and aims to equip them with the knowledge and skills to navigate these challenges effectively.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery According to Age

Table 6 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to age.

Item No. 2 which states, “Teacher always ask students if they have questions before proceeding to the next topic” got the highest mean score of 4.67 for younger respondents and 4.69 for older respondents, both were interpreted as “very great extent”. Meanwhile, Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest mean score of 3.55 for younger respondents interpreted it as “great extent”, while Item No. 6 which states,” the teacher can manage to provide anecdotes to ease tension and boredom” got the lowest mean score of 3.91 for older respondents interpreted as “great extent”. The overall mean scores were 4.03 for younger and 4.17 for older respondents, both were interpreted as “great extent”.

The result of the study showed that the younger respondents were greatly concerned that some teachers were not giving advance reading assignments for the next topic while the older group were concerned with the teachers’ inability to inject anecdotes to break the ice during classes.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery According to Sex

Table 7 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to sex.

Item No. 2 which states, “Teacher always ask students if they have questions before” got the highest mean score of 4.63 for male respondents and 4.71 for female respondents, both were interpreted as “very great extent”. Meanwhile, Item No. 6 which states, “the teacher can manage to provide anecdotes to ease tension and boredom” got the lowest mean score of 3.71 for male respondents, interpreted as “great extent”, while Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest mean score of 3.75

for male respondents were both interpreted as “great extent”, while Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest mean score of 3.75 for female respondents interpreted as “great extent”. The overall mean scores were 4.06 for male and 4.13 for female respondents, both were interpreted as “great extent”.

The result of the study showed that some teachers are unable to crack jokes to break the usual boredom in the classroom, according to the male group while the female group was mostly concerned that some teachers are unable to provide advanced reading materials for the next day’s lesson.

When teachers share a laugh or a smile with students, they help students feel more comfortable and open to learning. Using humor brings enthusiasm, positive feelings, and optimism to the classroom (McNeely, 2017).

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery According to GAS and HUMSS

Table 8 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to GAS and HUMSS.

Item No. 2 which states, “Teacher always ask students if they have questions before proceeding to the next topic” got the highest mean score of 4.89 for GAS and 4.70 for HUMSS respondents, both were interpreted as “very great extent”. Meanwhile, Item No. 6 which states “The teacher can manage to provide anecdotes to ease tension and boredom” got the lowest mean score of 3.61 for the GAS group, interpreted as “great extent”, while Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest score of 3.85 for HUMSS group, interpreted as “great extent”. The overall mean scores were 4.04 for the GAS group and 4.16 for the HUMSS group, both were interpreted as “great extent”.

The results showed that across all tracks, the respondents were concerned that some of their teachers could not crack a joke to break the monotony of the usual classroom routine. At times, there is a need to inject some humor into the class, no matter how serious the discussion, to allow learners to breathe fresh air. Breaking the usual monotony of class discussion keeps the class more engaged.

According to McNeely (2017), humor can be a valuable tool for teachers to create a more enthusiastic, positive, and optimistic learning environment in the classroom.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery According to ABM and STEM

Table 9 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to ABM and STEM.

Item No. 2 which states, “Teacher always ask students if they have questions before proceeding to the next topic” got the highest mean score of 4.69 for ABM, interpreted as “great extent” and 4.45 for STEM respondents, interpreted as “great extent”. Meanwhile, Item No. 6 which states “The teacher can manage to provide anecdotes to ease tension and boredom” got the lowest mean score of 3.83 for ABM, interpreted as “great extent”. In contrast, Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest 3.50 for STEM, interpreted as “great extent”. The overall mean scores were 4.14 for the ABM group and 3.98 for the STEM group, both were interpreted as “great extent”.

The results showed that respondents across all tracks expressed a desire for more humor in their teachers' instructional styles. They felt that incorporating humor, even during serious discussions, could provide a welcome break for learners and improve engagement by alleviating the monotony of classroom routines.

Every teacher’s goal is to be effective in the classroom and help students learn. Educators want their students to be eager and engaged. Humor has the power to fuel that engagement (Aranda and Zamora, 2016).

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery According to TVL, Arts & Design, and Sports

Table 10 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to TVL, Arts & Design, and Sports.

Item No. 2 which states. “Teacher always asks students if they have questions before proceeding to the next topic” got the highest mean score of 4.66 for the TVL group and 4.64 for both Arts & Design and Sports group, all were interpreted as “very great extent”. Meanwhile. Item No. 3 which states, “One day before discussing the topic, the teacher assigns students to read in advance - at home or the library” got the lowest 3.91 for the TVL group, interpreted as “great extent” and 2.45 for the Sports group, interpreted as “low extent”, while Item No. 1 which states, “Lesson contents are delivered with corresponding visual aids or video clips” got the lowest mean score of 3.36 for Arts & Design group, interpreted as “moderate extent. The overall mean scores were 4.20 for TVL, 4.03 for Arts and Design, and 3.51 for Sports group, all were interpreted as “great extent”.

The findings revealed a common concern among students across all tracks regarding instructional delivery. Many students expressed dissatisfaction with the lack of advanced reading guides or assignments for upcoming topics. This finding suggests that students value knowing what to expect for future lessons, potentially to prepare more effectively. This highlights the importance of effective lesson planning, as emphasized by Naade & Okwelle (2018). Effective lesson plans can include providing students with

advance notice of upcoming topics and learning objectives. A well-prepared teacher can create engaging experiences that promote student understanding. However, developing these lessons requires a significant investment of time and effort. This is particularly true for new teachers who are still honing their pedagogical skills. New teachers should be committed to dedicating the necessary time to crafting effective lesson plans, which will ultimately benefit their students' learning journey.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management According to Age

Table 11 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management according to age.

Item No. 2 which states, “Our classroom has a homey atmosphere – curtains, tables, etc.” got the highest mean score of 4.42 for the younger group, interpreted as “great extent”, while Item No. 3 which states, “Cleanliness of the classroom is properly maintained” got the highest mean score of 4.39 for the older group, interpreted as “great extent”. Meanwhile, Item No. 9 which states, “We have a storage cabinet for our raincoats, umbrellas or boots during the rainy season” got the lowest mean score of 1.73 for the younger group, interpreted as “low extent”, while Item No. 7 which states, “Soap, tissue papers, and others are available inside our classroom toilet” got the lowest mean score of 2.08 for the older group, interpreted as “low extent”. The overall mean scores were 3.41 for the younger group, interpreted as “moderate extent” and 3.54 for the older group, interpreted as “great extent”.

In terms of classroom management, the respondents were concerned that tissue papers, soaps, and the like are not available all the time and also the older respondents indicated that there is no available cabinet or rack for their raincoats and umbrellas during the rainy season. These can be easily corrected with proper coordination with the parents.

Teachers often find that building strong relationships with students helps prevent classroom disruptions. The study found that classrooms where teachers focused on building and maintaining good relationships with students had a big improvement. Students were 33% more engaged in lessons, and there were 75% fewer disruptions. (Terada, 2019).

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management According to Sex

Table 12 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management according to sex.

Item No. 3 which states, “Cleanliness of the classroom is properly maintained” got the highest mean score of 4.31 for the male group, interpreted as “great extent”, while Items No. 2 and 3 which states, “Our classroom has a homey atmosphere – curtains, tables, etc.” and “Cleanliness of the classroom is properly maintained” got the highest

mean score of 4.40 for the female group, interpreted as “great extent”. Meanwhile, Item No. 7 which states, “Soap, tissue papers, and others are available inside our classroom toilet” got the lowest mean score of 2.02 for the male group, interpreted as “low extent”, while Item No. 9 which states, “We have a storage cabinet for our raincoats, umbrellas or boots during the rainy season” got the lowest mean score of 1.87 for the female group, interpreted as “low extent”. The overall mean scores were 3.50 for the male group, interpreted as “great extent” and 3.46 for the female group, interpreted as “moderate extent”.

This implies that regardless of their gender, the respondents indicated concern for the lack of the necessary toiletries in their toilets and the lack of storage cabinets for raincoats, umbrellas, or boots during the rainy season. Supply must have been affected by the availability of funds, in this part, PTA support may be needed.

Effective teaching and learning process is directly or indirectly influenced by organized classroom management. By establishing clear routines and minimizing disruptions, teachers can create a more structured learning environment, which paves the way for deeper student engagement (Mastul and Hajilan, 2017).

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management According to GAS and HUMSS

Table 13 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management according to GAS and HUMSS.

Item No. 5 which states, “Blackboards, bulletin boards, and the teachers’ table and chair are always clean and in place” got the highest mean score of 4.29 for the GAS group, interpreted as “great extent”, while Item No. 2 which states, “Our classroom has a homey atmosphere – curtains, tables, etc.” got the highest mean score of 4.46 for HUMSS, interpreted as “great extent”. Meanwhile, Item No. 7 which states, “Soap, tissue papers, and others are available inside our classroom toilet” got the lowest mean score of 1.75 for the GAS group, interpreted as “low extent”, while Item No. 9 which states, “We have a storage cabinet for our raincoats, umbrellas or boots during the rainy season” got the lowest mean score of 1.53 for HUMSS group, interpreted as “low extent”. The overall mean scores were 3.43 for GAS and 3.42 for the HUMSS group, both were interpreted as “moderate extent”.

This implies that regardless of their tracks, the respondents have the same concern over the lack of toiletries in their toilets. These needs could critically affect hygiene and sanitation and they must be addressed on time.

The complexities of classroom management demand awareness, patience, good timing, the ability to set clear boundaries, and a touch of intuition. Guiding a diverse group of students with varying interests and attention spans on a path to meaningful learning is a challenging, yet rewarding endeavor. (Rabadi and Ray, 2017).

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management According to ABM and STEM

Table 14 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management according to ABM and STEM.

Item No. 3 which states, “Cleanliness of the classroom is properly maintained” got the highest mean score of 4.44 for the ABM group, interpreted as “great extent”, while Item No 2 which states, “Our classroom has a homey atmosphere - curtains, tables, etc.” got the highest mean score of 4.60 for STEM, interpreted as “great extent”. Meanwhile, Item No. 7 which states, “Soap, tissue papers, and others are available inside our classroom toilet” got the lowest mean score of 2.00 for the ABM group, interpreted as “low extent” and 2.50 for the STEM group, interpreted as “moderate extent”. The overall mean scores were 3.48 for ABM, interpreted as “moderate extent” and 3.69 for the STEM group, interpreted as “great extent”.

This implies that regardless of their tracks, the respondents have the same concern over the lack of toiletries in their toilets. These needs could critically affect hygiene and sanitation and they must be addressed on time.

Schools hold a central role in a child's life, shaping their intellectual development and social skills. Beyond academics, student health and safety remain paramount concerns for both parents and school administrators. Germs and bacteria can readily spread in classrooms, cafeterias, restrooms, libraries, playgrounds, and other school spaces, highlighting the importance of consistent cleaning and sanitation practices. A growing body of research underscores the significant influence of the school environment on student outcomes. Studies suggest that factors like cleanliness, safety, and overall atmosphere can positively or negatively impact both academic performance and student well-being (Lawson et al., 2017).

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management According to TVL, Arts & Design, and Sports

Table 15 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management according to TVL, Arts & Design, and Sports.

Item No. 1 which states, “The room is very conducive for learning” got the highest mean score of 4.48 for the TVL group, interpreted as “great extent”, while Item No 3 which states, “Cleanliness of the classroom is properly maintained” got the highest mean score of 4.64 for Arts & Design group, interpreted as “very great extent” and Item No. 5 which states, “Blackboards, bulletin boards, and the teacher’s table and chair are always clean and in place” got the highest mean score of 4.27 for Sports group, interpreted as “great extent”. Meanwhile, Item No. 9 which states, “We have a storage cabinet for our raincoats,

umbrellas or boots during the rainy season” got the lowest mean score of 1.73 for the TVL group, interpreted as “low extent”; Item No. 7 which states, “Soap, tissue papers, and others are available inside our classroom toilet” got the lowest mean score of 1.50 for Arts & Design group, interpreted as “low extent” and Item No. 6 which states, “We have a clean CR inside the classroom” 2.09 for Sport group, interpreted as “low extent”. The overall mean scores were 3.52 for TVL, interpreted as “great extent”, while 3.49 for the Arts & Design group and 3.35 for the Sports group, both were interpreted as “moderate extent”.

This implies that a core concern for the respondents is ensuring proper health and sanitation within classrooms. Equipping students with the necessary toiletries, like soap, toilet paper, and others, is fundamental. Without these supplies, it's akin to lacking a clear sanitation plan for the students. They wouldn't have the means to maintain good hygiene throughout the day, potentially compromising their health and the overall classroom environment.

In a study conducted in Botswana's Ngamiland district, researchers supported this notion (Thakadu et al., 2018). Their findings highlighted the importance of hygiene education in primary schools for preventing the spread of diseases. However, the study also revealed that a lack of proper sanitation facilities and supplies can hinder hygiene practices. This reinforces the importance of providing essential toiletries in classrooms.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery According to Age

Table 16 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to age.

Item No. 8 which states, “The teacher maintains total silence during exam days” got the highest mean score of 4.45 for the younger group, interpreted as “great extent” and 4.58 for the older group, interpreted as “very great extent”. Meanwhile, Item No. 9 which states, “The students are given the option to tell the teacher what test type they like” got the lowest mean score of 2.76 for the younger group and 3.14 for the older group, both were interpreted as “moderate extent”. The overall mean scores were 3.92 for the younger group and 4.06 for the older group, both were interpreted as “great extent”.

With regards to assessment delivery, the main concern of the respondents across age groups is that they are not truly given the option to suggest what type of exam is best for them. For short quizzes and daily tasks, this concern may be valid. However, for long tests and other exams, teachers may not have the option to accommodate learners' requests regarding assessment types. Regardless of the assessment format, providing students with effective feedback is crucial for their learning.

Students become actively involved in evaluating their learning when they receive descriptive feedback throughout the learning process. A study by Garrison and Ehringhaus (2019) highlights this type of feedback as one of the most effective tools for

advancing student progress. Effective descriptive feedback goes beyond just grades, stickers, or generic praise like "good job!" Instead, it offers specific details about what students are doing well in relation to the learning objectives. This feedback also provides clear guidance for improvement, outlining the next steps students can take to move forward. By receiving such focused and actionable feedback, students gain valuable insights into their learning journey, allowing them to understand their current level and propelling them toward future growth.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery According to Sex

Table 17 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to sex.

Item No. 8 which states, “The teacher maintains total silence during exam days” got the highest mean score of 4.51 for the male group and 4.52 for the female group, both were interpreted as “very great extent”. Meanwhile, Item No. 9 which states, “The students are given the option to tell the teacher what test type they like” got the lowest mean score of 3.27 for the male group and 2.76 for the older group, both were interpreted as “moderate extent”. The overall mean scores were 4.06 for the male group and 3.96 for the female group, both were interpreted as “great extent”.

The study revealed that learners are still looking at the possibility that they will be given the chance to suggest or pick their exam types but unfortunately, teachers have limited options as to the kind of assessment to be administered.

Formative assessment isn't something teachers tack onto instruction; it's the very foundation of effective teaching. It's about continuously gathering information on student learning, but more importantly, what teachers do with that information. The key lies in how they use this valuable insight to improve their teaching and actively engage students in their learning journey. This might involve adapting teaching methods based on student needs or sharing feedback in a way that empowers students to take ownership of their progress (Garrison and Ehringhaus, 2019).

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery According to GAS and HUMSS

Table 18 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to GAS and HUMMS.

Item No. 8 which states, “The teacher maintains total silence during exam days” got the highest mean score of 4.68 for the GAS group and 4.57 for the HUMSS group, both were interpreted as “very great extent”. Meanwhile, Item No. 9 which states, “The students are given the option to tell the teacher what test type they like” got the lowest

mean score of 3.18 for the GAS group and 2.87 for the HUMMS group, both were interpreted as “moderate extent”. The overall mean scores were 4.23 for the GAS group and 3.95 for the HUMSS group, both were interpreted as “great extent”.

This indicates that learners are not given a free hand to pick what options they prefer with the assessments. The option for students to pick their assessment type is not a traditional practice, but in some private universities, it is an open practice. With public schools in the Philippines, particularly with long tests, it is the SDO that decides on the kind of assessments that must be administered.

However, the world of education is filled with various types of assessment, from standardized state tests to classroom quizzes. While concerns exist about potential testing overuse, a crucial shift in perspective is needed (Garrison and Ehringhaus, 2019). Effective assessment goes beyond simply measuring achievement; it's about gathering valuable information on student learning. The more comprehensive this data is, the clearer picture educators gain of student strengths, weaknesses, and areas needing further support. This allows educators to tailor instruction and interventions to meet individual student needs, ultimately promoting deeper learning.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery According to ABM and STEM

Table 19 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to ABM and STEM.

Item No. 8 which states, “The teacher maintains total silence during exam days” got the highest mean score of 4.39 for the ABM group, interpreted as “great extent”, while Item No. 4 which states, “Exams and long quizzes are being discussed in the class” got the highest mean score of 4.55 for STEM group, interpreted as “very great extent”. Meanwhile, Item No. 9 which states, “The students are given the option to tell the teacher what test type they like” got the lowest mean score of 3.33 for the ABM group and 2.65 for the STEM group, both were interpreted as “moderate extent”. The overall mean scores were 4.06 for the ABM group and 3.98 for the STEM group, both were interpreted as “great extent”.

Across all tracks, the learners indicated that they are having some issues with their inability to choose or suggest what exam types they prefer. On one hand, it has not been established that learners' preferred type can guarantee higher exam results.

Garrison and Ehringhaus (2019) believe that most successful middle schools engage students in all aspects of their learning. There are many strategies for accomplishing this. One such strategy is student-led conferences. To ensure student-led conferences present a balanced view of strengths and weaknesses, educators can leverage a combination of summative and formative assessment data alongside student self-reflection.

Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery According to TVL, Arts & Design, and Sports

Table 20 shows the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to TVL, Arts & Design, and Sports.

Item No. 8 which states, “The teacher maintains total silence during exam days” got the highest mean score of 4.60 for the TVL group, interpreted as “very great extent”; 4.36 for Arts & Design and 4.18 for Sports, both were interpreted as “great extent”. Meanwhile, Item No. 9 which states, “The students are given the option to tell the teacher what test type they like” got the lowest mean score of 2.91 for the TVL group, 2.64 for the Arts & Design group, and 3.09 for Sports group, all were interpreted as “moderate extent”. The overall mean scores were 4.03 for the TVL group, 3.81 for the Arts & Design group, and 3.66 for the Sports group, all were interpreted as “great extent”.

The results showed that across all tracks students are aiming to have their exam type considered but it appeared that none of their options could be followed.

According to Anderson (2017), a study investigated the impact of formative assessment training on student achievement. The study involved 22 Year 4 mathematics teachers from a Swedish municipality who participated in a professional development program focused on formative assessment. This program emphasized a unified approach incorporating various strategies. The research examined how changes in teachers' classroom practices following the program affected student achievement. Results showed that, after controlling for pretest scores, classes in the intervention group significantly outperformed the control group in a post-test administered one school year later. This study contributes to our understanding of the under-studied areas of professional development in formative assessment and the impact of teacher practice based on a unified approach to formative assessment strategies.

Level of Students’ Academic Performance when They Are Grouped According to Variables

Table 21 shows the level of students’ performance when grouped according to variables.

When grouped according to age, the younger group has a mean score of 86.28 and 86.51 for the older group, both were interpreted as “very satisfactory”. When grouped according to sex, the male group has a mean score of 86.81 and 86.13 for the female group, both were interpreted as “very satisfactory”. When grouped according to track, the STEM group obtained a mean score of 92.30, interpreted as “outstanding” while the Sports group had a mean score of 83.27, interpreted as “satisfactory”.

STEM appeared to have garnered the best academic performance from amongst, as they reached the “outstanding” level. When grouped according to aforementioned variables, the results of the study showed that each track fairly had the same effort as they all showed a “very satisfactory” level.

Difference in the Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Instructional Delivery When they are Grouped and Compared According to Age, Sex, and Track

Table 22 shows the comparative analysis in the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to variables.

When grouped according to sex, the male group has a mean score of 120.66 and 132.81 for the female group, the computed U-test was 7036.00 and the p-value was 0.197, which is higher than the significance level of 0.05, interpreted as “not significant”.

Thus, the hypothesis that states, “there is no significant difference in the extent of teaching competence of senior high school teachers as assessed by students’ in the area of instructional delivery according to sex” was therefore “accepted”.

This implies that sex does not significantly affect the opinion of the respondents in assessing the teaching competence of senior high school teachers as assessed by students in the area of instructional delivery.

When grouped according to age, the younger group has a mean score of 114.01 and 140.11 for the older group, the computed U-test was 6250.00 and the p-value was 0.006, which is lower than the significance level of 0.05, interpreted as “significant”. When grouped according to track, the GAS group has a mean score of 118.66; 136.99 for HUMSS; 133.51 for ABM; 106.40 for STEM; 139.75 for TVL; 113.18 for Arts & Design, and 55.77 for Sports, the computed H-test was 16.43 and the p-value was 0.012, it is lower than the significance level of 0.05, interpreted as “significant”.

Thus, the hypothesis that states, “there is no significant difference in the extent of teaching competence of senior high school teachers as assessed by students in the area of instructional delivery according to age and track” was therefore “rejected”.

This implies that age and track significantly affect the opinion of the respondents in assessing the teaching competence of senior high school teachers as assessed by students in the area of instructional delivery. As the results revealed, the older respondents appeared to have a higher expectation of their teacher for them to consider the latter as truly competent. On the other hand, the respondents belonging to TVL were highly expectant of their teacher's specialized skills.

According to Aranda and Zamora (2016), a study explored the use of differentiated instruction to improve student academic performance in a Filipino language class at the

National University. The researchers highlighted the challenge educators face in creating environments that cater to diverse learning styles within a classroom. They proposed that differentiated instruction, tailored to individual student needs, could address this challenge. The study's purpose was to investigate the effectiveness of differentiated instruction on the academic performance of grade ten students.

Difference in the Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Classroom Management When they are Grouped and Compared According to Age, Sex, and Track

Table 23 shows the comparative analysis in the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management according to variables.

When grouped according to sex, the male group has a mean score of 132.71 and 124.91 for the female group, the computed U-test was 7301.00 and the p-value was 0.408, it is higher than the significance level of 0.05, interpreted as “not significant”. When grouped according to track, the GAS group has a mean score of 119.23; 122.97 for HUMMS; 129.47 for ABM; 160.60 for STEM; 130.20 for TVL; 134.11 for Arts & Design, and 101.18 for SPORTS, the computed H-test was 6.32 and the p-value was 0.388, it is higher than the significance level of 0.05, interpreted as “not significant”.

Thus, the hypothesis that states, “there is no significant difference in the extent of teaching competence of senior high school teachers as assessed by students in the area of classroom management according to sex and track” was therefore “accepted”.

This implies that sex and track do not significantly affect the opinion of the respondents in assessing the teaching competence of senior high school teachers as assessed by students in the area of classroom management.

When grouped according to age, the younger group has a mean score of 118.31 and 137.03 for the older group, the computed U-test was 6926.50 and the p-value was 0.042, which is lower than the significance level of 0.05, interpreted as “significant”.

Thus, the hypothesis that states, “there is no significant difference in the extent of teaching competence of senior high school teachers as assessed by the student in the area of classroom management according to age and track” was therefore “rejected”.

This implies that age significantly affects how respondents assess their senior high school teachers' classroom management skills. As learners get older, they become more sensitive to the classroom environment. What might be acceptable to younger students might not be for older ones.

This heightened sensitivity aligns with research on healthy classroom systems. Studies like the one by Barrett et al. (2017) emphasize the importance of factors like indoor air quality, lighting, and acoustics. This research delves deeper by investigating

how design principles can influence these aspects of the classroom environment. Their findings suggest that optimizing design features like lighting, temperature, and air quality can significantly contribute to a healthy learning environment, ultimately impacting learning outcomes.

Difference in the Extent of Teaching Competence of Senior High School Teachers as Assessed by Students in the Area of Assessment Delivery When they are Grouped and Compared According to Age, Sex, and Track

Table 24 shows the comparative analysis in the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to variables.

When grouped according to sex, the male group has a mean score of 137.51 and 121.76 for the female group, the computed U-test was 6816.00 and the p-value was 0.095, which is higher than the significance level of 0.05, interpreted as “not significant”. When grouped according to track, the GAS group has a mean score of 118.66; 136.99 for HUMMS; 133.51 for ABM; 106.40 for STEM; 139.75 for TVL; 133.18 for Arts & Design, and 55.77 for Sports, the computed H-test was 12.38 and the p-value was 0.054, it is higher than the significance level of 0.05, interpreted as “not significant”.

Thus, the hypothesis that states, “there is no significant difference in the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to sex and track” was therefore “accepted”.

This implies that sex and track do not significantly affect the opinion of the respondents in assessing the teaching competence of senior high school teachers as assessed by students in the area of assessment delivery.

When grouped according to age, the younger group has a mean score of 117.19 and 138.07 for the older group, the computed U-test was 6788.50 and the p-value was 0.024, which is lower than the significance level of 0.05, interpreted as “significant”.

Thus, the hypothesis that states, “there is no significant difference in the extent of teaching competence of senior high school teachers as assessed by students in the area of assessment delivery according to age and track” was therefore “rejected”.

This implies that age significantly affects the opinion of the respondents in assessing the teaching competence of senior high school teachers as assessed by students in the area of assessment delivery.

The term "assessment" encompasses a wide range of practices, from large-scale standardized tests to informal classroom checks. This broad use can lead to concerns about over-testing. To address this, educators can shift their perspective by viewing all testing as a form of assessment, and ultimately, as a way to gather information. The

more comprehensive this information is, the clearer picture we gain of student achievement and areas needing improvement (Garrison & Ehringhaus, 2019).

Difference on the Level of Students' Academic Performance when they are Grouped and Compared According to Age, Sex, and Track

Table 25 shows the comparative analysis in the level of academic performance of senior high school teachers as assessed by students when they are grouped and compared according to variables.

When grouped according to age, the younger group has a mean score of 125.57 and 130.26 for the older group, the computed U-test was 7819.50 and the p-value was 0.611, which is higher than the significance level of 0.05, interpreted as "not significant". When grouped according to sex, the male group has a mean score of 13.72 and 122.94 for the female group, the computed U-test was 6997.00 and the p-value was 0.174, it is higher than the significance level of 0.05, interpreted as "not significant".

Thus, the hypothesis that states, "there is no significant difference in the level of academic performance of senior high school teachers as assessed by students when they are grouped and compared according to sex and age" was therefore "accepted".

This implies that age and sex do not significantly affect the level of academic performance of senior high school students.

When grouped according to track, the GAS group has a mean score of 143.30; 141.35 for HUMSS; 133.69 for ABM; 234.68 for STEM; 87.93 for TVL; 91.43 for Arts & Design, and 72.32 for Sports, the computed H-test was 75.34 and the p-value was 0.000, it is lower than the significance level of 0.05, interpreted as "significant".

Thus, the hypothesis that states, "there is no significant difference in the level of academic performance of senior high school teachers as assessed by students when they are grouped and compared according to track" was therefore "rejected".

This implies that track significantly affects the level of academic performance of senior high school students.

According to Gbollie and Keamu (2017), students' motivation, learning strategies, and academic performance are interconnected. Their study found that students placed the most value on motivational beliefs associated with extrinsic goals, meaning they were most motivated by external rewards. Interestingly, students also reported the lowest levels of test anxiety. When it came to learning strategies, rehearsal techniques, like memorization, were the most commonly used. In contrast, seeking help from teachers or peers was the least frequently employed strategy. The research also revealed significant correlations between motivation and learning strategies. Furthermore, the study identified factors that hinder learning and concluded with recommendations for improving student performance.

Relationship Between the Extent of Teaching Competence and the Level of Students' Academic Performance

Table 26 shows the relational analysis between the extent of teaching competence and the level of students' academic performance.

The extent of teaching competence and the level of student's academic performance has a computed rho-value of 0.020 and a p-value of 0.756, it is higher than the level of significance of 0.05, interpreted as "not significant".

Hence, the hypothesis that states, "there is no significant relationship between the extent of teaching competence of senior high school teachers and students' academic performance" was therefore "accepted".

This implies that the extent of teaching competence does not significantly affect the student's academic performance. This could be due to the fact that today's learners are mostly digitally inclined and even with their sedentary lifestyle, their access to the internet and some advanced gadgets allows them to do self-studying. This means that learners' dependence on teachers to facilitate learning may have been reduced.

Naz (2016), conducted a study to see the "Effects of Teachers Professional Competence on Students Academic Achievements at Secondary School level in Muzzafarabad District" in the light of National Professional Standards for Teachers. It was found that male and female teachers were competent. There was a significant difference between male teachers' professional competence scores and female teachers' professional competence scores. It was found that there was a difference between male students' achievement scores and female students' achievement scores. It was recommended that teachers might be trained according to professional standards. IT facilities, libraries, books, helping material, etc. might be provided to teachers.

Conclusions

The extent of teaching competence of senior high school teachers when grouped and compared according to the aforementioned variables showed that (a) Some teachers are not giving advance reading guides or materials for the next day's topic. It can be concluded that some teachers are not readily prepared to provide pre-discussion reading assignments to learners. (b) Soaps and toiletries are not available in the classroom's toilet. It can be drawn out of this result that funds for the supply of the said toiletries is an issue.

To establish the extent of teaching competence of senior high school teachers as assessed by the students when grouped according to the aforementioned variables showed the same set of concerns as follows: (a) Teachers are not giving advance reading materials or clues for the next days' lessons. It can be concluded that the learners are

mostly preparing for the next day's lessons and their anticipatory moves may not have been sensed by their teachers. (b) Toiletries are not available in the classroom's toilet. It can be concluded that there is no consistent source of funding for these toiletries to be supplied as needed.

The results of the learner's performance are indicative of their academic capabilities but based on the results, it can be drawn that tracks like TVL, Sports, and Arts need more study time to keep up and get through a satisfactory level.

There was a significant difference in the extent of teacher's competence of senior high school teachers when grouped according to age. This means that the opinion of the younger respondents differs largely from the opinion of older respondents. The older respondents take into account the competence of their teachers in almost all teaching aspects and they believe in their competence while the younger respondents take things lightly. As such, competence among their teachers is like any other ordinary thing teachers do.

There was a significant relationship between the extent of teaching competence and the level of student academic performance. This means that the more competent the teachers, the academic performance of learners is expected to be higher as well.

Recommendations

The findings of the study indicated that some teachers are not providing advanced reading materials/assignments to learners for them to study for the next day's discussion. It is recommended that teachers provide an advanced course guide at the onset of the class each year to provide students with a heads-up on what to prepare or read.

The finding also showed that soap and tissue paper are not regularly available inside the toilet. It is recommended that teachers and the classroom PTA officers collaborate to discuss funding sources. The PTA may decide to provide the funds for toiletries to the homeroom teacher or supply directly the said needs. There is also an option for the teachers or parents to tap additional donors who can help provide the toiletries.

The results also showed that the performance of TVL, Sports, and Arts tracks were all at the bottom with satisfactory levels. It is recommended that teachers' competence in handling these specialized subjects be measured through a calibration test. A course-specific training may then be provided for teachers handling these subjects.

There was a significant difference extent of teaching competence when respondents were grouped according to age across all areas. It can be recommended that yearly in-service training focusing on teaching styles and instructional delivery be given to teachers.

There was a significant relationship between the extent of teachers' competence and the level of learners' academic performance. This means there is a need to ensure that teaching skills and instructional competence are at their highest level because learners' performance could be greatly affected. There is a need for teachers to be regularly trained and there is also a need to make sure that teachers can pursue their postgraduate studies to remain on top of the game.

Compliance with Ethical Standards

The researcher prioritized ethical considerations throughout the study. As human respondents were involved, the research ensured the confidentiality of their information and respected their dignity. Additionally, the study minimized any potential risks to the respondents.

Acknowledgments

The researcher would like to extend her enormous appreciation and gratitude to the people who unselfishly shared their time, effort, and support in the realization of this scholarly work.

TECHNOSTRESS INHIBITORS AND WORK-LIFE BALANCE: INFLUENCE ON LIBRARY STAFF'S WELL-BEING IN THE DIGITAL AGE

Johanisa Limgas Etado and Annabelle P. Acedera

Lourdes College Inc., Cagayan de Oro City, Philippines

https://doi.org/10.5281/zenodo.11514929

ABSTRACT

In an era of increasing reliance on technology, understanding the influence of technostress and the importance of work-life balance on staff well-being is crucial for creating a supportive work environment. This study aimed to investigate the relationship among technostress inhibitors, work-life balance, and the well-being of library staff. Work-life balance plays a vital role in determining the overall well-being of employees. There were 97 library staff who participated in the study. Total enumeration was employed as sampling method. A survey questionnaire was utilized to collect the data. Data were analyzed using descriptive and inferential statistics. The findings revealed that the library staff assessment of the technostress inhibitors in terms of literacy facilitation, technical support provision, and involvement facilitation was high; the library staff's work-life balance was high; and the level of the library staff's well-being in terms of job satisfaction, living satisfaction, and psychological well-being is generally high. Moreover, the library staff's assessment of technostress inhibitors in terms of literacy facilitation, technical support provision, and involvement facilitation and their work-life balance significantly influence their well-being. These findings confirm the conceptual model of Ragu-Nathan et al. (2019). Drawing the inference, effective technostress management practices and supportive work-life balance initiatives contribute to higher job satisfaction, living satisfaction, psychological well-being and the overall well-being among library staff. It is recommended that the librarians may take advantage of the available training and support resources to become proficient in the latest technologies used in the library.

Keywords: *Work-Life Balance, Technostress Inhibitors, Psychological Well-Being, Library Staff*

INTRODUCTION

As a result, people are experiencing information overload due to the overwhelming amount of data that is readily available to them, a consequence of the rapid proliferation of digital information. Because of their line of work, library employees are among the people who are constantly inundated with information. They have the difficult responsibility of sorting through enormous volumes of digital content while making sure that it is accurate and relevant for their customers. Library employees may experience cognitive overload, lower productivity, and higher stress levels as a result of this ongoing exposure to information overload (Abowha, 2022).

The usage of electronic resources and novel search tactics has made it necessary for library employees to continuously learn and adapt in order to keep up with the most recent tools and approaches. This ongoing desire to learn and up skilling can cause worry and anxiety, particularly for employees who might feel unprepared or unable to handle e demands of new technological improvement.

Technostress has resulted from the library's digital transition, information expansion, changing resources, and new search techniques, which may have an impact on worker welfare. On the other hand, personnel may have less harmful consequences from technostress if they take inhibitors of technostress. Technostress inhibitors are methods, approaches, or resources that people can use to lessen and manage the consequences of technological strain. Brennan, M. (2020) described that technostress, a prevalent issue in the digital age, can negatively impact employees' mental and physical well-being. To mitigate this, implementing technostress inhibitors like setting boundaries, practicing digital detoxes, and seeking social support is imperative.

Considering the aforementioned viewpoint, preserving a healthy balance between Personal and professional lives can enhance wellbeing. The failure to keep oneself in a healthy. A person may experience low psychological well-being as a result of work-life balance. Not succeeding failing to achieve the required balance has a detrimental effect on mental health, which can cause family strife, despair, and burnout (Yang, 2018). Prasad and According to Saraswati, K. and Lie, D. (2020), psychological wellness is impacted by work-life balance.

This study assumes that technostress inhibitors and work-life balance influence individual well-being. This assumption draws upon the theoretical framework established. Technostress Creators and Inhibitors, which lays the foundation for understanding how work-life balance and technostress inhibitors can both improve well-being in a technologically advanced society. According to Tarafdar et al. (2019), technostress is the stress that people experience as a result of using information and communication technology and systems. Technostress producing variables include things like job uncertainty and overload related to information and communications technology, and other ICT complexities associated to ICT usage. Technostress inhibitors are the mechanisms that might reduce overall technostress (Rangu-Nathan, 2019). This study focused on the conceptual model of Technostress Inhibitors. In effect, the conceptual model of technostress creators and inhibitors may provide a valuable framework in

understanding the influence of technology on work-life balance and well-being. By examining both the positive influences surrounding technology use, in a world where technology is pervasive, this approach can direct actions to support healthier and more balanced lives. Furthermore, resources that can lower employee ICT usage and results connected to job stress are referred to as technostress inhibitors. In the same way, organizational procedures and mechanisms that assist in reducing the adverse impacts of ICT use are known as inhibitors.

Theoretical/Conceptual Framework

This study makes the assumption that work-life balance and technological stress reducers have an impact on people's wellbeing. This presumption is based on the theoretical framework developed by Ragu-Nathan et al.'s (2008) model, Technostress Creators and Inhibitors, which establishes the knowledge of how work-life balance enhances well-being in a technologically advanced world and how technostress inhibitors can reduce technostress.

According to Tarafdar et al. (2019), technostress is the stress that people experience as a result of using information and communication technologies and systems. Technostress creators include things like job insecurity related to technology, overload related to technology, and other technical difficulties arising from the use of technology. The mechanisms that could lessen overall technostress are known as technostress inhibitors (Tarafdar, Tu, & Ragu-Nathan, 2011) The Technostress Inhibitors conceptual model was the main focus of this investigation. Essentially, the theoretical construct of technostress generators and deterrents could offer a useful structure for comprehending how technology impacts well-being and work-life equilibrium. Through an analysis of the advantages and disadvantages of technology use, this model can direct efforts to support more balanced and healthy lifestyles in a world where technology permeates every aspect of daily life. Furthermore, resources that can lower employee ICT usage and outcomes related to job stress are referred to as technostress inhibitors.

In the same way, organizational procedures and mechanisms that assist in reducing the adverse effects of ICT use are known as inhibitors. These mechanisms include end-user training, technical assistance, and user involvement in the development and deployment of new ICT solutions. Organizational mechanisms that lower technostress foster communication, fortify a culture of support, and increase innovation, claim Tarafdar et al. (2019). Richardson (2017). Conceptualized technostress inhibitors as consisting of three main categories or components: literacy facilitation, technical support and involvement facilitation. Each of these three mechanisms has the potential to reduce the effect of technostress creators on strain-related ICT outcomes for employees.

The first inhibitor of stress is ***Literacy facilitation***. This inhibitor refers to mechanisms that increase employee levels of ICT literacy (e.g., establishment of a close relationship with the IS department and encouragement of ICT knowledge sharing among co-workers). According to Aktan & Toraman (2022), literacy facilitation describes mechanisms that encourage and foster the sharing of ICTs related knowledge between individuals, where it enables them to cope with the demand of learning new ICTs programs. Literacy facilitation reduces technostress because it helps users to understand

the ICTs programs. Literacy facilitation involves improving individuals' knowledge and understanding of technology. By enhancing their digital literacy skills, they can feel more confident and competent when using technology, thereby, reducing the stress and anxiety associated with technological challenge through training programs, workshops, or online resources that provide guidance on using technology effectively (Tarafdar et al., 2019).

One way to implement literacy involvement in the library setting is to offer staff workshops and training sessions to help them improve their literacy skills. This could involve workshops on writing, research, and other literacy-related subjects in addition to instruction on new software or tools. Another would be to provide a range of reading materials, such as books, magazines, and newspapers, and create an atmosphere that highlights the value of literacy. They can also design areas like writing centers and quiet study spaces that are good for reading and writing. This could give the employees greater self-assurance and technological competence.

This is an additional technostress inhibitor. This inhibitor alludes to assistance mechanisms in the sense of formalized assistance. Initiatives for end-user assistance and technical support are offered to users to address their ICT problems and mitigate the effects of technostress. According to Stana, R., & Nicolajsen, H. W. (2021). IT workers should encourage users to experiment with new ICTs and offer helpdesk and technical support to address end-user issues. Having dependable technical support at hand can make it easier for people to diagnose and fix technical problems, which will lessen their stress and frustration. Tarafdar et al. (2019) state that by offering an easily accessible help desk manned by IT professionals, such support can reduce techno-uncertainty and techno-complexity. Organizations can provide help desks, IT support teams, or online for a where people can seek assistance with technology-related problems.

In a library setting, this could include providing access to a wide range of digital resources, such as e-books, audiobooks, and online databases, to support literacy development. . These resources can be accessed through library websites, mobile apps, and other digital platforms, making it easier for patrons to access and engage with reading materials. In order to support their patrons' literacy development, libraries can also provide online tutorials, webinars, and interactive exercises. These resources are available via the library's website or via collaborations with organizations and educational institutions. All of these could lessen the stress brought on by technical difficulties and problems, allowing library employees to feel supported and less overburdened by the demands of technology.

Moreover, the third inhibitor of technostress is ***Involvement facilitation*** referring to mechanisms that strengthen employee ‘s engagement in new technology (e.g., incentive systems connected to usage and participation in process changes). Roskova and Cova (2022) opined that involvement facilitation helps alleviate technostress by keeping users informed about the rationale for introducing new ICTs and by letting them know about the effects of such introduction, and by encouraging them to use and experiment with new ICTs. Organizations can empower people to feel more in control of how they use technology by involving them in decision-making processes, offering

opportunities for feedback and input, and fostering an inclusive and supportive technological environment. Encouraging people to actively participate in technology-related activities can help lower technostress and improve people's general well-being (Walton, 2019). This is also consistent with research conducted by Lorrain (2020) and Singh et al. (2022) showing the relationship and impact of technostress inhibitors on employees' personal and professional well-being.

Including library employees in the development, selection, and application of new technologies increases their sense of empowerment and engagement. Employees can participate in focus groups, feedback sessions, or project teams to offer their opinions and suggestions on the new technologies. Moreover, fostering a collaborative and knowledge-sharing atmosphere within the workplace can aid in the decrease of technostress. Staff members will feel more supported and less overwhelmed by the demands of new technologies if regular team meetings, knowledge-sharing sessions, and collaborative projects are implemented.

Through the implementation of literacy facilitation, technical support, and involvement facilitation, people can effectively handle and overcome the stressors that are linked to technology use. These stress-reduction technologies seek to enhance people's understanding, offer the assistance they require, and cultivate a feeling of empowerment and engagement, ultimately lowering technological stress and enhancing wellbeing. These inhibitors of technological stress can help lower technological stress and improve participants' general well-being (Walton, 2019).

By leveraging technology through literacy facilitation, technical support, and involvement facilitation, individuals can better manage and cope with the stressors associated with the use of technology. These technostress inhibitors aim to improve individuals' knowledge, provide necessary support, and foster a sense of control and involvement, ultimately reducing technostress and promoting well-being. These technostress inhibitors can help reduce technostress and enhance overall well-being of the participants (Walton, 2019). This study adopted two meanings of The first is the definition given by Adisa, T.A., Gbadamosi, and Mordi, C.(2019) which refer to WLB as encompassing several initiatives design to help employees to balance the competing demands of paid work and private lives. The second meaning is the one developed by Lewis and Beauregard (2018) relating WLB to the complex and dynamic interaction between paid employment and non- work life domains. This study focuses on the work-life balance (WLB) of library staff, highlighting the importance of maintaining balance between professional activities and personal life to ensure a balanced relationship.

While work-life balance guarantees that people have time and energy for their personal lives outside of work, technostress inhibitors help people cope with the stresses associated with technology. By taking these things into consideration, businesses can a nurturing workplace that improves psychological health and cultivates employee well-being. People who have access to technology-enhanced stress relievers and manage their work and personal lives well are likely to report feeling less stressed, more satisfied with their jobs, having better mental health, and feeling better overall. Increased

engagement, productivity, and general job performance may follow from this. It is imperative that organizations acknowledge the importance of these variables and put strategies in place to assist staff in balancing work and personal life and managing technostress. By putting employees' well-being first, businesses can foster a positive workplace culture that improves psychological health and boosts overall business success.

In the context of technostress inhibitors, psychological well-being can be affected by these inhibitors on organizational resources that help reduce the negative effects of techno-stressors on employees. Technostress inhibitors, which act as a buffer against the negative effects of techno-stressors, have been linked to employees' psychological well-being, according to a number of studies (Dai et al., 2021; Tement et al. 2020; & Trafadar et al., 2019). For instance, a study by Hang et al. (2023) discovered that technostress inhibitors are anticipated to have a dual function, as they are positively correlated with the psychological well-being of employees and act as a buffer against the detrimental effects of technological stressors. This suggests that the presence of technostress inhibitors in the workplace can enhance employees' psychological health. Thus, the emphasis in the context of technostress inhibitors is on comprehending how The organizational resources of the technostress inhibitors can protect workers' psychological health from the negative effects of technostress.

Regarding the library, it is widely recognized that librarians are the frontline staff who maintain the vitality and functionality of libraries. They do, however, frequently deal with particular technostress issues that may be detrimental to their mental health. Libraries can prioritize the psychological well-being of their staff and create a supportive environment by implementing technostress inhibitors. By fostering a supportive atmosphere, lowering technological stress, and boosting positive user experiences, libraries can support the psychological well-being of their staff members and build a stronger, more resilient library community.

Meanwhile, the harmony between our personal and professional lives is greatly influenced by the strong and complex relationship between psychological well-being and work-life balance (Saraswati & Lie, 2020). A more harmonious balance between work and personal life can directly result from improved psychological well-being, and vice versa. The relationship is a two-way street. Improved emotional regulation abilities are directly related to psychological well-being. Resilience is fostered by a solid psychological foundation, which enables people to overcome obstacles at work without feeling overwhelmed. This makes it possible for them to establish sound boundaries and uphold them in the face of adversity.

It's critical to keep in mind that there is reciprocal influence between psychological health and work-life balance. Achieving a healthy work-life balance requires psychological well-being. People can develop the abilities and resources necessary to more easily manage the demands of both work and personal life by fostering mental health and emotional resilience. contentment, resulting in a life that is more balanced and meaningful (Saraswati & Lie, 2020).

Psychological well-being can be promoted in the context of technology by addressing technostress and promoting the inhibitors. The development of technostress has been linked to employees' psychological health. Previous studies have indicated that the demands placed on employees' jobs by technology in the workplace can have a detrimental effect on their psychological health (Borowiec et. al.,2022). According to the study, employees who are unable to effectively manage their work using the latest technological advancements may experience technostress creators. Technostress inhibitors have the ability to reduce the adverse effects of technology while safeguarding psychological health.

It is possible to preserve and improve the psychological health of library staff members in the workplace by encouraging literacy facilitation, offering technical assistance, and easing participation in digital activities. Putting policies in place to the psychological health of library employees can be considerably enhanced by addressing technostress and realizing its significance (Delmo & Dequito, 2023).

Additionally, this helps to establish a favorable workplace that encourages efficiency and productivity, guaranteeing the survival of library services in the digital. Particularly in the context of technology use, the conceptual model of technostress inhibitors provides a useful framework for comprehending how psychological well-being can influence and be influenced by work-life balance. These links develop as follows. Misuse and overuse of technology can result in Technostress is defined as weariness, frustration, and anxiety associated with using technology.

The following are some ways that this technostress can impair psychological health: first, because work demands and continuous connectivity can invade personal time, making it challenging to switch off and relax; second, the pressure to be available and responsive to technology at all times can result in work overload; and third, feeling overpowered by technology can reduce one's sense of control over one's personal and professional lives, which affects both. Mitigating these negative impacts of technology are the technostress inhibitors that protect psychological wellbeing. By addressing technostress and promoting these inhibitors, individuals can ultimately achieve psychological well-being. This positive mental state then plays a crucial role in maintaining work-life balance.

Work-life balance refers to an ideal condition in which an employee can divide their time, energy, or attention between work and other vital elements of their life (Greenhaus, J. H., et. al., 2023) It is associated with psychological well-being as it has a profound impact on how individuals navigate the often-demanding juggling act of work and personal life (Borowiec & Drygas, 2022). Good psychological well-being equips individuals with better tools to manage stress, anxiety, and negativity arising from work. It has been pointed out that a strong psychological foundation makes individuals more resilient in the face of work challenges (Delmo & Dequito, 2023).
Furthermore, in the digital age, the connection between librarians' psychological health and work-life balance becomes even more nuanced. Their equilibrium and general well-being may also be jeopardized by technostress, which is defined as the physical and

mental strain brought on by using technology. The presence of technostress inhibitors can act as countermeasures, creating a healthier work environment. While some studies may show that there may not be a direct correlation between work-life balance and librarians' psychological well-being, maintaining a healthy work-life balance is still crucial for overall well-being. Employers and employees in various professions can benefit from implementing strategies that promote work-life balance, stress management, and wellness programs to support librarians' well-being From the foregoing discussion, this study focused on exploring the relationship between technostress inhibitors (literacy facilitation, technical support provision, and involvement facilitation) and the library staff's well-being (job satisfaction, living satisfaction, and psychological well-being) in the digital age.

The theory, concepts, and studies discussed provided new and valuable insights and essential ideas that helped the researcher arrive at the assumption that techno with that technostress inhibitors and work-life balance influence library staff well-being. It is within this framework that this study has been conceptualized, and Figure 1 shows the interplay of the variables.

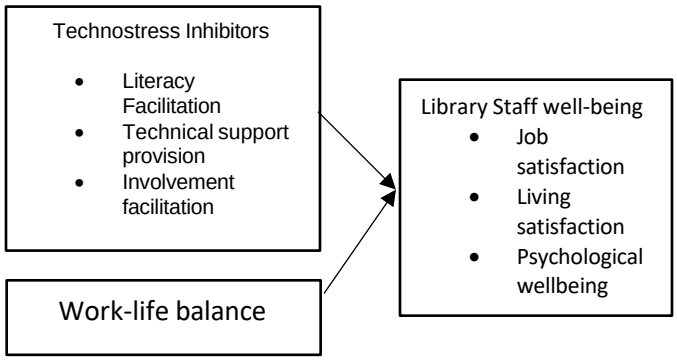

Figure 1. Schematic Presentation of the Study

Research Objective

This study aimed to explore how factors such as technostress inhibitors, which are strategies or interventions to mitigate the negative effects of technology-related stress, and work-life balance, which refers to the equilibrium between work responsibilities and personal life, influence the overall well-being of library staff members.

METHODOLOGY

This study utilized a descriptive correlational research design. The correlational methods are commonly used to assess the relationship between variables (Darshini et. Al (2021). Additionally, correlational studies are examined to determine descriptive or predictive

relationships. In this study, the researcher will be investigating the relationship between technostress inhibitors and work-life balance as predictors of library staff's wellbeing in the digital age. This study was participated by 97 library staff,70 from Marawi city,7 from MSU IIT, 3 from MSU Naawan and 17 from Bangsamoro Library and Archives. Convince sampling was used in the study often used to assess how well variables are correlated (Darshini et. Al. ,2021). Further, descriptive and predictive relationship are sought after via correlational research. Who are willing and able to take in the study.

Table 1. Summary Table of Assessment of the Technostress Inhibitor

Dimensions	**Mean**	**Interpretation**	**SD**
Literacy Facilitation	3.97	High	0.70
Technical Support Provision	3.70	High	0.69
Involvement Facilitation	3.83	High	0.74
Overall Assessment	3.83	High	0.62

RESULTS AND DISCUSSION

Table 2 shows the summary table of well-being in terms of Job satisfaction, Living satisfaction and Psychological well-being. The data show that the well-being of the participants considering the Job satisfaction, Living satisfaction and Psychological well-being were generally rated as “high”.

Range	Description	Frequency	Percentage
4.51-5.00	Very High	31	31.96
3.51-4.50	High	32	32.99
3.51-3.50	Moderate	34	35.05
1.51-2.50	Low	0	0.0
1.00-1.50	Very Low	0	0.0
	Total	97	100.0
	Overall Mean	3.97	
	Interpretation	High	
	SD	0.70	

The three aspects of literacy facilitation, technical support provision, and involvement facilitation work together to create a supportive environment that empowers library staff to navigate technology effectively. Literacy facilitation refers to programs and resources that help employees develop the skills and knowledge needed to use technology

effectively. It can include training, workshops, user guides, and readily available resources. By increasing digital literacy, employees feel more confident and competent in using technology, reducing anxiety and frustration associated with technostress. Technical support provision refers to readily available technical support, whether through dedicated IT staff, online resources, or peer-to-peer troubleshooting channels. Knowing that help is readily available reduces feelings of helplessness and isolation when facing technical difficulties. Efficient support minimizes downtime and frustrations associated with technostress.

Involvement facilitation: refers to practices that encourage employee participation in decisions and discussions regarding technology implementation. Feeling involved fosters a sense of control and ownership. When employees understand the "why" behind technology adoption and have a say in "how" it's implemented, they are more likely to embrace it, reducing resistance and technostress. The studies of Brennan (2020) showcase the effectiveness of a multi-faceted approach that combines literacy facilitation, technical support provision, and involvement facilitation. By addressing both technical skills and user experience, organizations can significantly reduce technostress and foster a more positive and productive work environment for employees using new technologies

Table 2. Summary Table of well-being.

Dimensions of Well-being	Mean	Interpretation	SD
Job Satisfaction	3.82	High	0.71
Living Satisfaction	3.65	High	0.74
Psychological Well-being	3.92	High	0.71
Overall	**3.80**	**High**	**0.61**

The summary table of well-being in terms of Job satisfaction, Living satisfaction and Psychological well-being. The data show that the well-being of the participants considering the Job satisfaction, Living satisfaction and Psychological well-being were generally rated as "*high"*. This findings reflect a positive work environment and supportive organizational culture within the library, which contributes to the overall well-being of the staff. Daluma (2022) points out that it is important for library management to continue fostering a supportive work environment, recognizing the achievements and contributions of staff, and providing opportunities for growth and development. By prioritizing staff well-being, libraries can cultivate a positive and effective workforce, leading to enhanced service delivery and overall organizational success.

Table 3. *Regression Analysis of the Influence of Participants' Assessment of Technostress Inhibitors and their Work-life Balance on their Well-being*

Table 3 presents the regression analysis of the influence of participants' assessment of technostress inhibitors and their work-life balance towards their well-being. Data revealed that the whole model is significant (F = 43.83, p =.000), implying that participants who highly assessed the technostress inhibitors and whose work-life balance are high, also have high level of well-being. Thus, the null hypothesis is rejected.

Furthermore, 47.2 percent of the variability in their well-being can be accounted for by a combination of their assessment of technostress inhibitors and work-life balance. The remaining 52.8 percent can be attributed to additional factors not included in this study, such as social support, a strong network of friends and family, and support systems in both the personal and professional spheres. Additionally, the balance between job demands and available resources can have an impact on well-being. Greater well-being is a result of sufficient resources and reasonable expectations.

	Unstandardized Coefficients		Standardized Coefficients		
	B	Std. Error	Beta	t	Sig.
(Constant)	.579	.361		1.60	.112
Assessment of Technostress Inhibitors	.423	.094	.430	4.50**	.000
Work-life Balance	.460	.130	.338	3.53**	.001
Model Summary					
R = .695	R^2 = .483	Adjusted R^2 = .472	F = 43.83**	p =.000	

In terms of the individual independent variables, their assessment of technostress inhibitors came out as having the highest influence on their well-being, showing that for every unit increase in their assessment of these inhibitors, there is a corresponding .423 increase in their well-being (B=.423, t= 4.50, p=.000).

As indicated by the unstandardized coefficient (B = 0.423), for every unit increase in the assessment of technostress inhibitors, there is a corresponding increase of 0.423 in the participants' well-being. This suggests that the more participants recognize and utilize technostress inhibitors, the higher they rate their well-being. Moreover, work-life balance also significantly influences their well-being. To support the claim that the assessment of technostress inhibitors has the highest influence on well-being. Tarafdar et al. (2019) explored technostress's negative effects on well-being, emphasizing the need for inhibitors to mitigate its detrimental effects.

Conclusions

The present study was centered on exploring the relationship between technostress inhibitors and the library staff's well-being in the digital age. Evidently, the study reveals that technology has become a crucial part of library services as technostress inhibitors positively impact staff well-being.

This finding confirms the conceptual model of Rangu-Nathan et al. (2019) that guided this study, where both technostress creators and inhibitors, as a conceptual model, offered the hypothesis on how work-life balance and technostress inhibitors affect wellbeing. This

study emphasized the significance of work-life balance and technostress inhibitors in predicting the well-being of library employees. Moreover, technostress inhibitors helped in enhancing library staff's knowledge, support, and control, thereby reducing technostress and promoting overall well-being. It can be inferred that effective technostress management practices and supportive work-life balance initiatives can contribute to higher job satisfaction, living satisfaction, psychological well-being and the overall well-being among library staff. Librarians who have a good WLB are less likely to experience stress and burnout, which can contribute to higher levels of job satisfaction. Also, librarians who have clear communication about technology-related expectations and goals are more likely to experience higher levels of job satisfaction. Recognizing the importance of these factors and implementing appropriate measures to address technostress benefits the psychological well-being of the library staff. This enables them to set healthy boundaries and maintain personal boundaries even under pressure.

Recommendations

Based on the findings and conclusion derived from the study, the following recommendations are offered for considerations:

1. For **Library Administrators.** The current initiatives that offer technical support (consistent help with tech concerns), literacy facilitation (training on new technologies), and engagement facilitation (opportunities for staff input on tech deployment) may be kept and strengthened. They might also think about doing recurring staff polls to find out where technostress inhibitors could be improved.

2. For **Librarians.** They can learn how to use the newest technology in the library by making use of the training and assistance materials that are offered. This will enable the support of colleagues who are under technostress and serve as an example of the usefulness of these services. Furthermore, they might encourage candid communication and teamwork among the relevant departments, which can aid in fostering a feeling of support and belonging, lowering stress levels, and enhancing general wellbeing.

3. For **Faculty**. It is possible for them to contemplate their pivotal function in upholding a favorable work milieu through the promotion of cooperation, candid communication, and gratitude towards peers. Additionally, they can leverage existing resources to effectively handle technological stress and preserve a salubrious work-life equilibrium.

4. For **future Researchers**. They might investigate how these work-life balance programs and technostress inhibitors affect employees' well-being in the long run. Examine the particular features of each inhibitor that have the biggest impact on lowering technostress. Further investigation into the particular requirements of various library staff roles may be necessary to further customize tech-stress reduction techniques.

Compliance with Ethical Standards

In accordance with research protocol, the paper was submitted, reviewed and approved by the College's Research and Ethics Committee.

This study adhered to the Republic Act No. 10173 of the Philippines, also known as the Data Privacy Act of 2012, which mandates that all participants' information and data were treated with utmost confidentiality. Information was coded and did not have a direct correlation identifying the participants. Only the researcher knew the participant code number. The data collected was kept in an encrypted computer file. It was also made clear data would be used for research purpose only. The participants' informed consent were taken with a confidentiality guarantee of protection against unauthorized use of their data.

This research had minimal risks. No personal and confidential information were asked and participation was voluntary and anonymous. Participants could withdraw their participation at any time if a question made them uncomfortable and they did not have to give any reason for not responding to any question.

Only eligible participants were selected and in compliance with this, inclusion criteria was not based on race, ethnicity, and socioeconomic class but ensured that only qualified persons were selected as participants and in this study only the library staff of the institution were selected. The potential benefits of participating include contributing valuable knowledge on technostress and work-life balance, which can ultimately lead to improved workplace practices and employee well-being.

ABSTRACT

This study aims to determine the effectiveness of ICT integration in the classroom, exploring various strategies for incorporating ICT procedures into teaching and learning. Technology in education today is largely equated with the use of computers, enabling the storage and playback of diverse media such as textbooks, presentations, images, audio recordings, and videos on computers and mobile devices. Traditional computer education typically focuses on the history, parts, functions, and programming of these machines, often leaving students with skills limited to basic word processing and simple file management. There is a notable gap in emphasizing the use of technology to support teaching and learning. The study involves 96 respondents, comprising 36 teachers and 60 students. The demographic profiles of the respondents include their educational attainment, age, sex, civil status, and number of years in service for teachers and grade level for students. Statistical tools such as percentage, weighted mean, and ranking were used to analyze the data and identify differences in the perceptions of the respondents regarding the effectiveness and improvement of ICT integration. The findings of this study explicitly identify problems, descriptions, perceptions, and recommendations for both teachers and students to improve ICT integration at Manado Independent School. The results reveal a significant difference between teacher and student respondents in the perceived effectiveness of ICT as an educational tool of instruction.

Keywords: *Information Communication Technology, Integration of ICT in Education, Educational Tool of Instruction*

INTRODUCTION

The integration of Information and Communication Technologies (ICT) into education is increasingly vital for enhancing teaching and learning processes. ICT encompasses a broad range of technologies, including computers, the internet, multimedia tools, and mobile devices, which are utilized to transmit, process, and store information electronically (Bates, 2015). These technologies provide diverse and immediate responses to educational needs, making them essential for modern pedagogy (Smith, & Anderson, 2018).

Recent studies have highlighted the benefits of ICT in education, such as improved student engagement, enhanced collaborative learning, and the development of critical thinking skills (Higgins et al., 2012). However, despite substantial investments in ICT by Southeast Asian governments, there remains a gap in understanding how teachers effectively integrate these technologies into their teaching practices. This gap underscores the need for empirical research focusing on teachers' perspectives and the factors influencing their ICT adoption.

The rapid technological advancements necessitate ongoing adaptation by educators to ensure the effective use of these tools. Teachers use ICT not only for delivering content but also for monitoring student progress and facilitating communication (Ertmer & Ottenbreit-Leftwich, 2010). As technology evolves, so too must the methods for integrating it into the classroom to maximize its educational benefits.

This study aims to address the observed gap by exploring the factors that influence teachers' decisions to integrate ICT in teaching and learning. It seeks to provide a model that enhances understanding and offers practical guidance for educators. By focusing on ICT as a mediational tool to engage students in higher-order thinking skills such as analyzing, evaluating, and synthesizing, this study will contribute to the development of effective ICT integration strategies in education (Mishra & Koehler, 2006).

The effective integration of ICT in education holds the potential to transform teaching and learning processes, making them more interactive, collaborative, and student-centered. This study is timely and relevant, as it seeks to bridge the gap in current research and offer practical solutions to optimize the use of ICT in educational settings.

The quality of teaching and learning significantly impacts student outcomes, necessitating the enhancement of teachers' skills and the provision of ICT resources to foster new instructional methods (Olutola, 2015). In Indonesia, teacher education is a critical area of reform. According to the Levin Institute, computers have accelerated the evolution of the global economy, workforce, and education system, fostering international interaction and integration. Teaching and learning resources, such as visual aids, audio aids, and animated pictures, facilitate instruction.

Recent technological advancements have impacted nearly every sector, including education. Enhancing the quality of teaching and learning has become a priority, with governments ensuring that policy documents guide the implementation of significant educational projects. The integration of ICT in education is a crucial aspect of this reform, aimed at improving instructional methods and student engagement. These efforts reflect a global trend towards leveraging technology to create more effective and interactive learning environments.

According to Bonk (2015), ICT integration offers educational opportunities where learners actively engage in acquiring and sharing knowledge, often through social networking and resources like Massive Open Online Courses (MOOCs). This approach values learning outside the classroom as much as inside, utilizing a wide range of digital resources. Establishing guidelines for ICT integration is crucial, as they set clear expectations for student knowledge and abilities, providing a framework for national testing, curriculum development, instructional programs, and assessments. These guidelines help teachers plan and deliver effective instruction and make learning objectives clear to students, enhancing their educational experience.

Over the past two decades, the rapid growth of ICT has become a key topic in education due to its potential to create dynamic and proactive learning environments (Ghavifekr, et al, 2014). In the digital era, teachers are encouraged to integrate ICT into their daily teaching, replacing traditional methods with modern tools. This paper focuses on the effectiveness of ICT integration in education, particularly the computer skills and knowledge of primary school teachers, and the extent of ICT use in classrooms. Suat Çapuk (2015) emphasizes that to prepare students for the information society, ICT should be integrated into all levels and subjects of the curriculum. Teachers need to be equipped with skills and knowledge in both ICT and pedagogy to effectively incorporate technology into their teaching, providing opportunities for learners to enjoy and enhance their educational experiences.

Research Questions

This study aimed to find the effect of integrating Information Communication Technology (ICT) in the educational tool of instruction in the Secondary school of Manado Independent School. Specifically, it answers the following questions:

1. What ICT electronic devices promote effective teaching and learning?
2. How often do you use ICT integration in your classroom?
3. How may the benefits of integrating ICT in terms of teaching and learning be described?
4. How may the challenges of using ICT in teaching and learning be described?
5. How can ICT be improved in teaching and learning?

METHODOLOGY

The study focused on the effect of integrating Information and Communication Technology (ICT) into the educational tools at Manado Independent School, specifically aiming to determine the effectiveness of ICT integration in the teaching and learning processes of high school students. Conducted from July to September 2019, the research targeted high school students and faculty members. A total of 96 respondents participated, including all 36 high school teachers and 60 randomly selected students from grades 10 to 12. The primary data collection tool was a questionnaire designed to capture the respondents' perspectives on ICT utilization in their educational experiences.

Utilizing a descriptive-causal research design, the study adopted a quantitative approach with a descriptive survey design. This design is appropriate for systematically describing and testing relationships and examining cause-and-effect interactions among variables. The descriptive survey method is particularly suitable for collecting original data from large populations that cannot be observed directly, providing a comprehensive picture of the characteristics under study. Data were organized and analyzed using simple descriptive statistics, including frequency tables, weighted means, percentages, and rankings. The research was conducted at Manado Independent School Parkville Estate, Jl. Walanda Maramis, Kolongan, Manado North Sulawesi, Indonesia, specifically involving high school teachers and students. The findings aimed to offer insights into the current utilization and impact of ICT tools on enhancing the educational experiences at the school.

RESULTS

Respondents of the Study

The study's respondents were Manado Independent School's high school students and teachers. The researchers obtained data directly from 36 high school teachers and 60 selected high school students.

Profile distribution of respondents who were high school instructors and students.

Table 1. Respondents' Distribution

Groups	f	%
Teachers	36	38
Students	60	62
Total	96	100

Table 1 illustrates the distribution of respondents. Thirty-six (36) teachers, or 38%, participated in this study, whereas 60 students, or 62%, were picked from the student population.

Demographic Background of Respondents

The demographic features of high school teacher respondents demonstrated the distribution of groups based on age, gender, duration of teaching experience, civil status, and educational achievement. The following table shows the profiles of the teachers and students who responded.

Profile Distribution of the Teacher Respondents According to their highest educational attainment.

Table 2. Highest Educational Attainment of the Teacher

Degree	f	%	Rank
Doctorate	2	6	3
Masters	20	55	1
Bachelor	14	39	2
Total	36	100	

As shown in table 2, the majority of instructor responses had a master's degree, with a frequency of 20 or 55%, and ranked first. Fourteen (14) or 39% had a bachelor's degree and were rated second, while only two (2) or 6% of the 36 total teacher responders held a doctoral degree and were ranked third.

Profile Distribution of the Teacher Respondents According to Civil Status

Table 3. Civil Status of the Teacher Respondents

Civil Status	f	%	Rank
Married	25	69	1
Single	11	31	2
Total	36	100	

According to table 3, married teachers accounted for 25 or 69% of respondents, followed by single respondents, who accounted for 11 or 31% of the 36 respondents. The majority of respondents were married teachers.

Profile Distribution of the Teacher Respondents according to Gender

Table 4. Gender of the Teacher Respondents

Gender	f	%	Rank
Male	17	47	1
Female	19	53	2
Total	36	100	

As seen in Table 4, the majority of the teacher respondents are female, with 19 or 53%, while male teachers account for 17 or 47% of the total respondents. It appears that female respondents outnumbered male respondents.

Profile Distribution of the Teacher Respondents According to Age

Table 5. Age of the Teacher Respondents

Age	f	%	Rank
25 - 29	10	28	2
30 - 34	20	55	1
35 - 39	4	11	3
40 - 44	2	6	4
Total	36	100	

Table 4 shows the results for the age of the teacher responders who teach in the high school portion of Manado Independent School, which ranges from 20 to 44 years old and up.

According to the data, 20 or 55% of the teachers who responded were between the ages of 30 and 34, ranking first, followed by 10 or 28% who were between the ages of 25 and 29, ranking second. Out of 36 total teacher responders, only 4 (11%) were between the ages of 35 and 39, and only 2 (6%) were between the ages of 40 and 44. The data also shows that the majority of teachers reacted as to age were in the range of 30 to 34 years old.

Profile Distribution of the Teacher Respondents According to Length of Service

Table 6. Length of Service the Teacher Respondents

Length of Service (years)	f	%	Rank
1 – 3	23	64	1
4 – 6	10	28	2
7 – 9	1	3	4
10 and above	2	5	3
Total	36	100	

Table 6 shows the number of years the teacher responses worked in the high school section of Manado Independent School. According to the data, the bulk of teacher respondents' lengths of service varied from one to three years, or 64%, and they placed first. Following that were ten teacher respondents aged four to six years old, with 28%, ranking second. Only 2 or 6% of the instructor respondents were between the ages of 10 and 12, and only 1 or 3% were between the ages of 7 and 9 years old.

Profile distribution of the Student Respondents according to Educational Attainment

Table 7. Grade Level of Student Respondents

Grade	f	%	Rank
10	10	17	3
11	35	58	1
12	15	25	2
Total	60	100	

Table 7 shows the statistical analysis of the grades 10, 11, and 12. The data shows that the majority of the respondents are in grade 11, with a frequency of 35 or 58% and ranked first, followed by grade 12 with 15 or 25% student respondents and ranked second, and grade 10 with a frequency of 10 or 17% out of the 60 total number of student respondents and ranked third.

Profile Distribution of the Student Respondents according to Gender

Table 8. Gender of the Student Respondents

Gender	f	%	Rank
Male	26	43	2
Female	34	57	1
Total	60	100	

Table 8 presents the data as a statistical analysis of the gender of student respondents. This analysis showed that females were the majority of the student respondents with 34 or 57% while the male students were only 26 or 43% out of 60 total number of respondents. It also showed that female responses outweighed male ones.

Profile Distribution of the Student Respondents According to Age

Table 9. Age Summary of the Student Respondents

Age	f	%	Rank
15 -16	45	75	1
17 – 18	13	22	2
19 and above	2	3	3
Total	60	100	

Table 9 shows the statistical analysis of student respondents based on their age. The majority of the students were between the ages of 15 and 16 years old, accounting for 45 or 75% of the total and ranking first. Next in rank was 17 to 18 years of age (22%), with only 2 or 3% of student responses aged 19 and above.

DISCUSSION

A. ICT devices that promote effective teaching and learning in Manado Independent School

Table 10. ICT Devices that Promote Effective Teaching and Learning

Indicators	f	%	Rank
Desktop Computer	72	75	3
Mobile phone	58	60	4
Tablet	30	31	6
Laptop	86	90	2
Scanner	26	27	7
Projector	91	95	1
Smart Board	4	4	8
Printer	46	48	5
Flash Disk Drive	72	75	3

Note: Multiple Responses

Table 10 illustrates the survey results for the most often used and successful devices for ICT integration in the learning process, as reported by teachers and students. The 'Projector' was named the most effective ICT device by 91 respondents (95%). The 'Laptop' came in second, with 86 (90%) respondents believing it useful for teaching and studying. 'Desktop Computer' and 'Flash Disc Memory' tied for third place, with 72 each (75%). The 'Mobile Phone' followed, with 58 respondents (60%) rating it as effective. Next came the 'Printer' (46 respondents, 48%), 'Tablet' (30 respondents, 31%), and 'Scanner' (26 respondents, 27%). The 'Smart Board' was the least-priority device, with only four (4%) respondents calling it effective.

These results show that various ICT devices play a significant role in enhancing the teaching and learning process.

B. How often is the use of ICT integration in the classroom?

Table 11. ICT Integration in the Classroom

Indicators	WM	VI	R
E - book reference	3.80	VO	3
Internet to retrieve information, MS Office PowerPoint, word processing, Spreadsheets, use of email, and flash disks for storage of data.	4.65	A	1
Online learning management system (Schoology, Edmodo, Google Classroom, etc..)	3.81	VO	2
Online social media for communication (Skype, WhatsApp, Messenger, etc..)	2.51	S	4
Average	3.69		

Legend:

Weight	Interval	Verbal Interpretation	Symbol
5	4.51 – 5.00	Always	A
4	3.51 – 4.50	Very – Often	VO
3	2.51 – 3.50	Sometimes	S
2	1.51 – 2.50	Rarely	R
1	1.00 – 1.50	Never	N

Table 11 provides the weighted mean for ICT integration in the classroom. The instructors and students at Manado Independent School stated that the Internet was the primary method for retrieving information, followed by MS Office PowerPoint, word processing, spreadsheets, email, and flash discs for data storage, with a weighted mean of 4.65 verbally interpreted as 'Always'. The 'Online learning management system like Schoology, Edmodo, Google Classroom' ranked second with a weighted mean of 3.81 and was verbally translated as 'Very Often'. The 'Electronic Book (E-Book)', weighted 3.80 and orally rendered as 'Very Often', came in third place. While 'Online social media for communication like Skype, WhatsApp, Messenger' was ranked fourth with a weighted mean of 2.51 and audibly interpreted.

The results also revealed that teachers usually saw the incorporation of ICT as having a beneficial impact on the delivery of modern education. It boosted teachers' confidence because the use of ICT infused their teaching with vigor and raised pupils' interest and enthusiasm to learn.

C. The Benefits of Integrating ICT in terms of Teaching and Learning Process

Table 12. Benefits of ICT Integration in Teaching and Learning

Indicators	WM	VI	R
Makes learning easier	4.41	A	1
Enhances students' critical thinking	4.18	A	5
Promotes innovation and problem-solving skills of students.	4.23	A	2
Enhances collaborative learning among learners and teachers	4.21	A	3
Promotes research-based teaching and learning.	4.19	A	4
Average	4.24		

Legend:

Weight	Interval	Verbal Interpretation	Symbol
5	4.51 – 5.00	Strongly Agree	SA
4	3.51 – 4.50	Agree	A
3	2.51 – 3.50	Moderately Agree	MA
2	1.51 – 2.50	Disagree	D
1	1.00 – 1.50	Strongly Disagree	SD

To assess how teachers and students respond to the benefits of ICT integration, all respondents provide a verbal interpretation of 'Agree'. It demonstrates that teachers and students reaped the most benefits from ICT integration. The variable 'Makes Learning Easier' received the highest rank, with a weighted mean of 4.41. Next was 'Promotes Student Innovation and Problem-Solving Skills', which had a weighted mean of 4.23 and ranked second. 'Enhances Collaborative Learning among Learners and Teachers' came in second with a weighted mean and rank of 4.21. Next in rank was 'Promotes Research-Based Teaching and Learning', with a weighted mean of 4.19, and 'Enhances Students Critical Thinking' was fifth, with a weighted mean of 4.19. Teachers' opinions on the value of ICT integration were also explored.

The majority of teachers stated that they found ICT integration to be more useful because it allowed them to innovate by accessing digital formats and improving their skills using computer applications, as well as the fact that internet research improved their lesson notes and provided them with computer information. In general, most teachers and students provided good feedback and enthusiasm for ICT integration.

D. The challenges of using ICT in teaching and learning

Table 13. Challenges of ICT Integration in Teaching and Learning

Indicators	WM	VI	R
Difficult to keep up with the current trends in education	3.04	MA	2
Time-consuming *(ICT teaching requires a lot of time for preparation)*	3.59	A	1
Problem-based – learning (Lack of proper information for ICT integration in teaching/learning skills.)	2.72	MA	3
Poor school-administrator support (*Limited resources for ICT integration in teaching/learning skills.)*	2.31	D	4
Lack of knowledge on how to integrate ICT into teaching.	1.69	D	5
Average	2.67		

Legend:

Weight	Interval	Verbal Interpretation	Symbol
5	4.51 – 5.00	Strongly Agree	SA
4	3.51 – 4.50	Agree	A
3	2.51 – 3.50	Moderately Agree	MA
2	1.51 – 2.50	Disagree	D
1	1.00 – 1.50	Strongly Disagree	SD

As indicated in Table 13, ICT instruction takes a significant amount of time to prepare. The respondents scored 'Time Consuming' first, with a weighted mean of 3.59 and a verbal interpretation of 'Agree'. The weighted mean for 'Difficult to keep up with the current developments in schooling' was 3.04, which was orally interpreted as 'Moderately Agree'. The next category was 'Problem-based - learning', which had a weighted mean of 2.72 and was verbally interpreted as 'Moderately Agree'. 'Poor school-administrator support' was ranked fourth with a weighted mean of 2.31 and orally translated as 'Disagree,' while 'Lack of understanding on how to integrate ICT into teaching' was ranked fifth with a weighted mean of 1.69 and verbally interpreted as 'Disagree'.

E. ICT Integration that Can Improve Teaching and Learning

Table 14. ICT Integration to Improve Teaching and Learning

Indicators	WM	VI	R
Integrate ICTs in the learning process, as a key competence and contributing to the acquisition of the target foreign language.	4.68	SA	1
Use ICTs in the classroom to work on information processing, authentic communication, and learner autonomy, as the builder of his or her learning process.	3.90	A	2
Give ICTs a role to help young people be able to arrange, evaluate, and decide on the information that comes to them.	3.76	A	3
Challenge students with different types of supports and formats and, therefore, a great variety of activities in which they pass from receivers to makers.	3.50	MA	4
Average	3.95		

Legend:

Weight	Interval	Verbal Interpretation	Symbol
5	4.51 – 5.00	Strongly Agree	SA
4	3.51 – 4.50	Agree	A
3	2.51 – 3.50	Moderately Agree	MA
2	1.51 – 2.50	Disagree	D
1	1.00 – 1.50	Strongly Disagree	SD

Table 13 shows how teachers and students assess the potential for improved teaching and learning when ICT is integrated. The variable 'ICT integration in the teaching and learning process, as a key ability and contributing to the acquisition of the target foreign language' was ranked first, with a verbal interpretation of 'Strongly Agree' and a weighted average of 4.6. Next came 'The use of ICT in the classroom to focus on information processing, authentic communication, and learner autonomy, as the builder of his or her learning process', which had a weighted mean of 3.90 and was verbally interpreted as 'Agree'. 'ICT has a role to help young people be able to arrange, assess, and decide on the information that comes to them' ranked third, with an overall weighted mean of 3.76 and translated as 'Agree'. While 'The problem of students with varied types of assistance and formats' was ranked fourth with a weighted mean of 3.5 and verbally defined as 'Moderately Agree'.

According to the respondents' feedback, ICT integration resulted in an important growth for both teachers and students.

Conclusions

Based on the findings which study yielded the following conclusions were drawn:

1. The statistics presented, as well as the replies of the respondents, demonstrated that the majority of teachers at Manado Independent School used ICT in the classroom. The incorporation of ICT in the classroom had a significant impact on teachers' and students' adoption of the teaching and learning processes. Furthermore, it increased self-motivation to enhance their talents and perform better in all classroom-related duties.
2. Despite the hurdles connected with ICT integration at Manado Independent School, teachers and students have indicated a willingness to become more acquainted with ICT to stay current with educational trends. Furthermore, teachers and students use a variety of ICT tools for teaching and learning.
3. Teachers and students observed that the incorporation of ICT to enhance teaching and learning in the classroom was superior to the traditional approach to teaching and learning.
4. Technology plays an important role in making education more inclusive since it has the potential to increase student academic achievement. However, respondents reported that the curricula used lacked ICT integration.
5. Access to information through ICT integration helped to minimize communication barriers, particularly during the teaching and learning process. Teachers and students were confronted with several forms of assistance, such as having limited resources for ICT integration in teaching/learning skills, and for teachers, how to properly implement ICT into teaching.

Recommendations

Given the above findings and conclusions, hereunder are the recommendations:

1. Teachers and students can be proactive in implementing ICT as an effective teaching and learning aid in the classroom.
2. Teachers and students may be exposed to ICT-related training/seminars that can increase their skills in integrating ICT in the classroom and eventually upgrade the implementation by employing virtual e-learning such as Google Class, Edmodo, Schoology, and other e-learning portals.
3. Administrators and principals of the school may examine the critical needs of the academic community, particularly students and teachers, for the availability of computer peripherals in the classroom to supplement, enhance, and sustain their computer abilities.
4. The management can meet the demands of the learners by providing them with updated IT-based curricula that can identify the students' learning demands, such as the rigorous use of internet websites and any other ICT learning enhancements that can promote critical thinking skills and collaborative learning practice among students and teachers.
5. There were numerous ways of teaching called education that might be applied. This paper provided an assessment to demonstrate that through ICT integration, teachers and students will easily be inspired to learn and create better learning environments if school administrators fully support the provision of adequate ICT

resources that may help the teachers and students meet their needs as preparation for noteworthy future tasks.

Compliance with Ethical Standards

The authors declare that there are no conflicts of interest in the publication of this research. They maintained the highest ethical standards throughout the study. All respondents gave informed consent and understood they could withdraw at any moment without penalty. The respondents' identities were kept anonymous, and their safety was guaranteed throughout the research process. The study was carried out without any conflicts of interest. Plagiarism was completely prohibited, ensuring the research's originality and integrity. The data were assessed objectively, and the findings were only used for research reasons.

Acknowledgments

The researchers express their deepest appreciation to everyone who contributed to this research. Special thanks to Manado Independent School for the opportunity to conduct the study, Mr. Billy Komulontang, MBA, the School Director, Dr. Vijaya Kollabathula, the High School Principal, and Mr. Imanuel Touwelly, M.Ed., the Vice-Principal for Academic Affairs, for their support and permission to survey teachers and students.

THE FILIPINO SISYPHUS: AN ALLEGORY ON THE EXISTENTIAL CONDITION OF POVERTY AND FILIPINO RESILIENCY AN INVESTIGATION ON ALBERT CAMUS' ABSURDITY

R Jay D. Pangan

Saint Louis University, School of Advanced Studies, Baguio City, Philippines

https://doi.org/10.5281/zenodo.11479582

ABSTRACT

This research study explores the profound impact of poverty on Filipino society and individuals, delving into the existential crisis that arises from being trapped in a never-ending cycle of poverty. By examining Albert Camus' concept of absurdity, this study aims to shed light on the struggles of those experiencing poverty and their persistent efforts to find meaning and purpose in a seemingly meaningless existence. Using Camus' absurdist philosophy as a framework, this research paper explores the parallelism between the myth of Sisyphus and the experiences of impoverished Filipinos. The relentless struggle for survival mirrors Sisyphus' endless task of rolling a boulder uphill, yet Filipinos demonstrate remarkable resilience, embodying their defiance against the absurd. This research study through descriptive analysis of cultural narratives, personal accounts, and socio-economic data aims to; understand how the existential implications of poverty affect the totality of the human person, beyond traditional economic definitions. By investigating Camus' philosophical project on absurdity, the study offers new perspectives on the relationship between poverty, existential crises, and the enduring spirit of resilience among Filipinos.

Keywords: *Absurdity, existentialism, existential crisis, poverty, resilience,*

INTRODUCTION

This research study explores the profound impact of poverty on Filipino society and individuals, delving into the existential crisis that arises when individuals are trapped

in a never-ending cycle of poverty. By examining Albert Camus' concept of absurdity, this study seeks to illuminate the struggles of people experiencing poverty and their persistent efforts to find meaning and purpose in a seemingly meaningless existence. By investigating the existential implications of poverty, this research study aspires to a deeper understanding of poverty's challenges that go beyond the traditional economic definition, viewing it as a phenomenon that affects the totality of the human person.

Existentialism is a philosophical movement that emphasizes individual freedom, choice, and responsibility. It focuses on the individual's subjective experience and the search for meaning and purpose in life (White, 2023). Poverty, as an existential crisis, profoundly impacts individuals by depriving them of basic needs and necessary opportunities for meaningful living. When individuals struggle to meet these basic needs, it becomes challenging to pursue dreams or find purpose. According to Abraham Maslow’s hierarchy of needs, physiological needs form the foundational level, including air, water, food, shelter, sleep, and other necessities. The need for self-actualization arises only after these basic needs are met (Maslow, 1943).

Jean-Paul Sartre, a key figure in existentialism, emphasized the importance of human freedom and the responsibility of individuals to define their essence through their choices and actions. His seminal work, "Being and Nothingness," explores existentialist principles, shedding light on human existence, freedom, responsibility, and the individual's confrontation with life's absurdity. Sartre's philosophy indirectly raises questions about the influence of external factors, such as poverty, on human existence (Sartre, 2003).

Albert Camus, another significant existentialist figure, is known for his contributions to absurdism. His works, including "The Stranger," "The Myth of Sisyphus," and "The Stranger," explore themes of the human condition, meaninglessness, and the search for purpose in an indifferent universe. In "The Myth of Sisyphus," Camus examines the existential dilemma of the human desire for meaning in a seemingly indifferent universe. Despite acknowledging the futility of this search, Camus suggests embracing life's absurdity and finding value in the act of rebellion against it.

An existential crisis arises when an individual questions the meaning and purpose of their existence, often accompanied by despair and anxiety (Foley, 2008). For Camus, this crisis emerges from the realization that life has no inherent meaning or purpose: "The absurd is born out of this confrontation between the human need and the unreasonable silence of the world” (Camus, 1942). Poverty can trigger such an existential crisis, leading to a sense of meaninglessness and despair as individuals struggle to meet basic needs. Sartre (1943) argues that poverty can reduce existence to mere survival, causing anxiety and despair. Similarly, in the study of Kruks, (1987) “Simone de Beauvoir and the Limits of Freedom,” contends that poverty restricts freedom and limits the ability to create meaning, leading to a sense of powerlessness.

Globally, an estimated 9.2% of the population lived in extreme poverty on less than $1.90 per day in 2020 World Bank, (2021). In the Philippines, the poverty incidence in 2020 was 21.1%, affecting around 23.5 million people, with significant regional variations Philippine Statistics Authority, (2021). Understanding poverty as an existential crisis involves recognizing it as a condition that profoundly affects individuals' existence, prohibiting authentic living.

Filipino resiliency, defined as the ability to adapt to and recover from difficult situations through social support systems, cultural values, and faith, plays a crucial role in coping with the existential crisis of poverty (Abella and De Guzman, 2017). However, this resilience can be ambivalent. While it is a positive trait, it can also be romanticized, masking the real issues surrounding poverty and perpetuating a culture of acceptance and resignation (Lasco, 2018).

By exploring these themes, this research aims to offer new perspectives on the relationship between poverty, existential crises, and the enduring spirit of resilience among Filipinos, providing valuable insights into the human condition and its manifestations in a specific cultural context.

Research Questions

Main Problem

This research study endeavors to redefine the concept of Filipino resiliency, analyzing its conventional understanding, investigating the impact of romanticization and ambivalence, and proposing a new perspective that sees resilience as a form of metaphysical revolt.

By adopting Camus' absurdist philosophy as a framework, this study seeks to answer the following;

1. What is Albert Camus' notion of absurdity and his proposed response to it?
2. Why poverty is an existential condition of human existence?
3. What is the proper response to poverty's existential condition, and how can it redefine the meaning of Filipino resiliency?

METHODOLOGY

This research study will employ existential investigation and descriptive analysis as its methodology.

Existentialism is a philosophical movement that emphasizes individual freedom, choice, and responsibility, focusing on personal subjective experiences and the search for meaning in life. It explores fundamental questions about human existence, such as its

meaning, purpose, and value, with key concepts including existential crisis, despair, and anxiety (Macquarrie, 1973).

Existential investigation, rooted in this tradition, aims to understand these aspects of human existence through individuals' subjective experiences (Guntman & Pincus, 2003). This research study applies Albert Camus' existentialist absurdist philosophy to understand the existential condition of poverty and Filipino resiliency. It critically analyzes Camus' major works—The Myth of Sisyphus, The Stranger, and The Rebel: An Essay on Man in Revolt—and adopts his notion of "The Metaphysical Revolt" as the appropriate human response to absurdity and poverty. This approach ultimately seeks to redefine the essence of Filipino resiliency.

Descriptive Analysis deals with describing a phenomenon and how we think something is. It attempts to examine the situations to explain the norm. (Baha, 2016). Descriptive analysis as a research method involves gathering data using various methods. In this research study, the primary method of collecting data is through content analysis and careful scrutinization and explanation of the existing records, documents, and literature related to the subject. The data gathered are presented by summarizing the key themes, patterns, and narratives that emerge in the data collected. Though descriptive analysis as a research method is commonly used in quantitative research, the researcher believes that it can be applied in qualitative research design through careful and thoughtful description and analysis of the phenomenon being investigated through textual analysis.

Scope and Delimination

This research study delves into Albert Camus' absurdist philosophy, connecting it with the existential challenges of poverty and the resilience of Filipinos. The study involves a meticulous review of pertinent literature and a comprehensive analysis of relevant primary and secondary references. It is important to note that the scope of this study is limited to the Filipino context, and the findings may not broadly apply to other cultural or societal settings. The research adopts a qualitative approach, drawing insights from scholarly literature and academic journals. Notably, this qualitative methodology refrains from direct engagement with participants through surveys, interviews, or focus groups, relying instead on the wealth of existing knowledge and expert analyses available in the academic realm.

RESULTS AND DISCUSSION

Camus Notion of Absurdity and His Proposed Response to It

Albert Camus' notion of absurdity revolves around the idea that life is inherently devoid of meaning or purpose because of the fundamental tension between the human desire for meaning and the indifference of the universe. Absurdity is an ontological reality of human existence that individuals must confront. “At this point of his effort, a man stands face to face with the irrational. He feels within him his longing for happiness and reason. The absurd is born of this confrontation between the human need and the unreasonable silence of the world.” (Camus, The Myth of Sisyphus, 1942). Responding to the problem

of absurdity, Camus proposes the concept of “revolt,” which involves a conscious and active engagement with life’s inherent absurdity, embracing freedom and authenticity, rejection of despair and nihilism and the quest for illusory meaning.

The Conflict Between Human Desire and the Universe

> At this point of his effort, a man stands face to face with the irrational. He feels within him his longing for happiness and reason. The absurd is born of this confrontation between human needs and the unreasonable silence of the world (Camus, 1942, MS: 25; E: 173).

Desire is a fundamental aspect of human nature that encompasses human needs, wants, cravings, and aspirations. It is an inclination or longing for something perceived as lacking and, once fulfilled, becomes a source of fulfillment (Standford Encyclopedia of Philosophy, 2009). From the perspective of existentialism, desire is the emphasis on human freedom. The emphasis on freedom could be seen in the works of prominent existentialists like Sartre, Camus, and Nietzsche. In “Being and Nothingness,” Sartre (1943) famously stated, “Man is condemned to be free,” understanding this statement means that humans are free to choose their actions without any interference, but freedom, however, comes with the burden of responsibility. Camus’ understanding of desire stems from humans' innate longing for reason and understanding. “At this point of his effort, a man stands face to face with the irrational. He feels within him his longing for happiness and reason. p.25” (Camus, The Myth of Sisyphus, 1942). According to Camus, the origin of the absurd was from the conflict of man not being able to rationalize and explain his existence in human terms. He holds that reality poses a peculiar problem for humans, whose rationality cannot help searching, looking, struggling, and critically looking at life. So, he said, “... that odd state of the sour in which the chain of daily gestures is broken, in which the heart vainly seeks the link that will connect it again, it is, as it were, the first sign of absurdity” (Arinze & Onwuatuegwu, 2020).

Camus’ philosophy pictured the universe as indifferent to the needs and desires of humans, though meaningful on its own; for humans, its utter meaninglessness poses a significant threat to human existence. One real-life illustration of this absurdity can be seen in the face of natural disasters. Consider a devastating earthquake that struck a populated city. In an instant, lives are lost, families are shattered, properties are destroyed, and homes are reduced to rubble. The earthquake itself is indifferent to human needs and the suffering it causes. An earthquake has no inherent meaning; it is a force of nature that cannot be avoided. The least humans can do is blindly anticipate that it may happen at any time. In the aftermath of such a catastrophe, humans grapple with the profound silence of the universe and ask why such a catastrophe occurred, seeking meaning or reason behind man’s suffering. However, the universe remains silent, offering no explanations or justification for the pain and loss of man.

Humans desire to make the world intelligible; however, reality strikes that no matter how hard humans try, there are questions that cannot be answered and events that cannot be explained. The human being is divorced from his dwelling place.

The Problem of Suicide

> There is but one truly serious philosophical problem and that is suicide. Judging whether life is or is not worth living amounts to answering the fundamental question of philosophy. All the rest— whether or not the world has three dimensions, whether the mind has nine or twelve categories—comes afterward. (Camus, 1942, The Myth of Sisyphus, p. 84)

Questioning the value and meaning of human existence is the core of philosophical inquiry. With the discovery of the absurd, two alternatives are open to the man “who lives based on what he knows" and "does not cheat." Man must choose suicide or recovery. The question is, can man find life absurd and still go on living (Caraway, 1992).

In the Myth of Sisyphus, Camus elaborated on two forms of suicide: physical and philosophical. Physical suicide is the act of intentionally ending one's life. It is a direct response to the perceived absurdity of existence. Individuals contemplating physical suicide often do so because they cannot find meaning or purpose in life, and ending their lives seems like the only way to escape the existential pain and despair. Camus does not advocate for physical suicide; instead, he encourages individuals to confront the absurdity of life and find a reason to live despite its inherent meaninglessness.

Philosophical suicide, according to Camus, is a subtler form of suicide. It occurs when someone embraces religious or ideological beliefs that provide comforting, absolute meanings or explanations for existence. In this case, individuals "philosophically" commit suicide by escaping the absurd through faith or dogma. “The leap in all its forms, rushing into the divine or the eternal, surrendering to the illusion of the everyday or of the idea - all these screens and hide the absurd” (Camus, 1942, MS p. 35). By accepting a ready-made belief system that promises an ultimate purpose or an afterlife, people avoid confrontation with the inherent meaninglessness of life. Camus criticizes this form of suicide because it involves a deliberate intellectual evasion of the absurd, replacing it with false certainties. Caraway, (2002) suggests that, while the existential philosophers have realized the absurdity that links man and the world, according to Camus, "all of them without exception suggest escape." For example, Jaspers and Chestov (Myth of Sisyphus, 24, 25), realizing nothing in experience to infer any satisfactory principle that would negate the absurd and man's impotence, posit God as the only true solution. Camus’ response to any attempt to go beyond human experience and reason is unequivocal; in the Myth of Sisyphus, he wrote:

> “I don't know whether this world has a meaning that transcends it. But I know that I do not know = that meaning and that it is impossible for me just now to know it. What can a meaning outside my condition mean to me? I can understand only in human terms” (Camus, 1942).

The Absurd Heroes

In Albert Camus' philosophy, the "absurd hero" is exemplified by Sisyphus, a figure from Greek mythology condemned to eternally push a boulder up a mountain only to have it roll back down each time he reaches the summit. Camus uses Sisyphus to illustrate the human condition, marked by a perpetual search for meaning in an indifferent universe. Despite the futility of his task, Sisyphus continues with determination, embodying the essence of the absurd hero. By accepting the absurdity of his situation and finding contentment in the struggle itself, Sisyphus achieves a form of freedom and defiance, demonstrating that meaning and happiness can be found in the act of perseverance itself

Two of the Absurd heroes in Camus' absurdist philosophy are Sisyphus and Meursault. These absurd heroes show different responses to the Absurd: The former is through active defiance and perseverance, and the latter is through passive acceptance and authenticity. Both characters exemplify Absurd heroism by confronting the meaninglessness of existence in their ways, reflecting Camus' exploration of the diverse human responses to the Absurdity of the human condition. By presenting these two contrasting characters, Camus provides a distinct understanding of the Absurd and how individuals navigate their existence in an indifferent universe.

While Sisyphus's victory is profound on an individual level, it does not extend to the collective or historical sphere. As Camus describes, the Absurd is an inherent conflict between human beings' search for meaning and the indifferent, chaotic universe. Sisyphus's victory does not alter the universe's nature or the human condition's absurdity for others. It remains a personal triumph, applicable to his own experience, but not something that fundamentally transforms the more significant human struggle with the Absurd.

Meursault, the protagonist of Camus' novel "The Stranger," embodies the Absurd Hero differently. Meursault is detached and indifferent to the world around him. He shows little emotion, even in the face of significant events such as his mother's death or his trial. He accepts the universe's indifference and lives according to his desires and impulses.

Meursault's rebellion against the Absurd is rooted in his refusal to conform to societal expectations. He did not grieve at his mother's funeral and did not show remorse during his trial. Instead, he embraces his nature, living authentically without the constraints of social norms and moral judgments. This nonconformity grants him a sense of freedom, even though it leads to tragic consequences. His indifference, acceptance of the Absurd, and genuine authenticity make him a symbol of the Absurd Hero. Meursault's story challenges traditional concepts of morality and meaning, illustrating the complexities of human existence in a universe devoid of inherent purpose.

Sisyphus and Meursault differ in their attitudes and responses to the Absurd. Sisyphus finds meaning in the act of defiance, in the repetitive task itself. His rebellion is active and continuous. On the other hand, Meursault rebels by embracing his nature and living authentically. His rebellion is passive, a refusal to conform to the expectations and norms imposed by society. Though they differ in their attitude and response to the absurd, Sisyphus and Meursault display courage in confronting the absurd. This courage lies in

their conscious choice to live authentically by recognizing the meaninglessness of human existence and constantly and actively rejecting it through revolt.

The Rebel an Essay on Man in Revolt: A Philosophical Response to the Absurd

> "What is a rebel? A man who says no, but whose refusal does not imply a renunciation. He is also a man who says yes, from the moment he makes his first gesture of rebellion Rebellion cannot exist without the feeling that, somewhere and somehow, one is right. It is in this way that the rebel slave says yes and no simultaneously" (Camus, 1956).

Camus' depiction of the rebel is someone who says "no" and simultaneously says "yes" in the face of the inherent meaninglessness of human existence. The "yes" signifies the acceptance of the reality of the absurd, and the "no" signifies the active rejection and repulsion that life amidst the reality of absurdity is devoid of meaning. The reality of the absurd did not negate human existence and meaning but affirmed it! The absurdity arising from man's irrational relationship to the universe negated not the meaning of human existence but the meaning attributed to it. The dialectical encapsulates the human condition. It reflects the constant struggle and negotiation between affirming life and rejecting its absurd aspects. This tension embodies the complexity of human existence, where individuals navigate between finding meaning and confronting meaninglessness. It illustrates the ongoing battle between hope and despair, creation and destruction, affirmation and negation. This dialectical response underscores the richness and depth of human experience, acknowledging the coexistence of moments of joy, love, and purpose with moments of suffering, absurdity, and despair (Caraway, 1992).

In contrast to the traditional understanding of a "rebel" as someone who openly opposes, resists, and defies authority as well as social norms and established beliefs, the "rebel" as portrayed by Camus is someone who engages in philosophical contemplation, questioning the fundamental aspects of existence while exploring the meaning of life given the existential condition of the human person. The rebel's rebellion is rooted not in violence but in recognizing the absurd as a fundamental aspect of human existence and condition and courageously resisting it. Its rebellion is a courageous act against the inherent meaninglessness of life, refusing to succumb to despair and nihilism. Further, the rebel values autonomy and freedom by rejecting imposed societal norms, dogmas, and ideologies, blatantly asserting independence in thought and action, making the act of rebellion not influenced by external influences but something that arises from one's convictions and reasoning. The Rebel understands that life lacks inherent meaning yet engages in creative endeavors and meaningful actions because its rebellion involves the discovery of personal meaning and significance in a universe devoid of meaning. This is possible due to the freedom discovered in the realization and dialectic response to the absurd.

"The rebel, then, is the absurd man." The absurd man, the rebel, lives only based on personal experience. It does not scorn reason. Instead, it uses reason but admits the irrational. He is little inclined to leap before knowing. "He sees no further place for hope beyond this life. However, most importantly, he sees that only this life has value. He rebels against death and for life" (Caraway, 1992). The rebel does not conform to the norms of

the society or any form of ideologies, acknowledges the irrational aspects of human existence, and uses reason to understand the world while simultaneously recognizing its limitations, but chooses not to succumb to take the “leap.” The rebel embraces the irrational, signifying acceptance of human existence's inexplicable reality. The “no” to the absurdity and the “yes” to life highlights the rebel’s clinging and love for being and existing. For this reason, Sisyphus's condemnation of the absurd task, contrary to the belief of the gods as the greatest punishment, is Sisyphus's greatest reward to live among the gods and be eternal like them. The rebel’s love for being and existing amidst the absurdity of his existence makes the rebel the “absurd man. An examination of man's relation to the world reveals that the only knowledge that man has is that he now has his present life, but that he is, to use Heidegger's phrase "a being-to ward-death." Thus, the only value that man knows is life. The rebel, therefore, rebels against death and for life” (Caraway, 1992).

The human person’s external defiance against the absurd and internal philosophical stance distinguished the rebel from the rest. The rebel confronts the absurd with unwavering courage, a creative spirit, and authenticity.

The Metaphysical Revolt

> “Revolt is the ongoing struggle with the absurd, a struggle which maintains the tension between man's desires and what the world offers without allowing man to negate either pole by escaping through suicide on the one hand or hope which does not conform to man's experience on the other hand” (Caraway, 1992).

In Albert Camus' philosophy, metaphysical revolt refers to the inherent human resistance against the absurdity of existence. It is a rebellion not against specific injustices or societal oppressions but against the universe's very nature, which Camus characterizes as inherently devoid of meaning or purpose (Hanna, 1958). This existential crisis paved the way for the metaphysical revolt against the fundamental aspect of reality and the human condition that appears devoid of inherent meaning or value. Metaphysical revolt is not the same as political or social rebellion, which results from injustice and oppression experienced by individuals or groups. Metaphysical revolt transcends the notion of rebellion underscored in societal concerns; it is not a rebellion against an unjust government but a rebellion against the universe and its inherent meaninglessness (Caraway, 1992). In the silence of the universe, metaphysical revolt signifies the human person’s refusal to accept that life is absurd. It is the resistance and insistence of the human spirit to seek meaning and purpose in an indifferent universe. In the face of a universe that does not offer inherent meaning or values, human beings experience a profound sense of disorientation and absurdity. Metaphysical revolt is the response to this existential crisis. It is a rebellion against the silence of the cosmos, the lack of answers to fundamental questions, and the absence of any ultimate purpose in life (Foley, 2008).

Understanding Poverty as an Existential Condition of Human Existence

Poverty is a significant issue in the Philippines, affecting a large portion of the population. According to the latest data, the poverty incidence among Filipinos in 2020 was 21.1%, or around 23.5 million people (Philippine Statistics Authority, 2021). When existence is consumed by "the daily struggle for survival," the pursuit of authentic and

meaningful existence becomes distant. An existential approach to poverty examines how this deprivation of meaning and purpose affects the overall well-being of an individual. Adopting an existential lens in understanding poverty becomes a profound philosophical inquiry that prompts questions about the human condition, societal values, and the ethical responsibilities of individuals and communities in addressing the issue. It, therefore, unravels the more profound implications of poverty, moving beyond economic terminologies and statistical data. Traditionally, poverty is often perceived in economic terms, and it is a state wherein a person lacks the material resources to survive, such as food, shelter, and clothing. Economic aspects are undeniably crucial in living a happy and authentic existence. However, this perspective reduces the impact of poverty on biological and physical needs. Poverty is not just about an individual's economic capabilities; it is an existential condition of human beings that consequently causes an existential crisis, forcing one to question the meaning attributed to life. When examined through the existential lenses, poverty challenges an individual at a fundamental level, making one question their identity and self-worth. A person's identity and self-worth cannot be reduced to economic capabilities and how much money they possess, but also through their beliefs and aspirations, which give life meaning.

Camus' analysis of the absurdity of the human condition and existence can be extended to understand poverty as an existential condition of man. In this context, poverty exists because of man's irrational relationship with fellow human beings. The struggle for necessities and the social injustices, coupled with the inability of the social structures to respond to people's needs, exemplify the clash between the human desire for dignity, purpose, and meaning. The blatant contradiction between the human desire for meaning and the irrationality of human societal structures and relationships perpetuates the existence of poverty, which stresses the absurdity of the human condition.

An Absurd Human Relationship

According to Aristotle, humans are social beings, thriving in social interactions and forming societies. Conflict naturally arises in societies due to individual uniqueness and differences (Dixon, 2010). To mitigate this, humans enter social contracts. Thomas Hobbes argued in "Leviathan" that without societal structures, life in the "state of nature" would be nasty, brutish, and short, leading to barbarism in resolving conflicts. He posited that individuals willingly surrender some freedom to governing authorities for security and order (Martinich, 2003). John Locke, in his social contract theory, believed individuals enter into social contracts to secure their rights to liberty and property, and if the government fails to protect these rights, the people have the right to overthrow it (Jos, 2006). Societal conventions are established to address conflicts from human interactions, creating a structured environment with shared norms, beliefs, culture, and systems to maintain order and define individual roles, rights, and responsibilities (Martinich, 2003). As rational beings, humans can discern the potential consequences of their actions, knowing what constitutes acceptable behavior in society. Despite this knowledge, individuals may choose to act otherwise. To be considered a "good man" in society, one must often perform actions benefiting others, sometimes at the expense of personal happiness, while doing the opposite may label one as selfish or a "bad person," illustrating that "being good" often requires suspending personal gratification..

Desire, which is inherent in humans, urges man to act. Desire, commonly understood as having a strong feeling of wanting or having something, compels humans to act and satisfy wants and needs; it catalyzes human actions (Anderson, 2015). It implies that wants and needs play a significant role in motivating humans to pursue goals. According to Bertrand Russel in his acceptance speech for the Nobel Prize in Literature in 1950, “All human activity is prompted by desire.

> “Some earnest moralist advances a wholly fallacious theory to the effect that it is possible to resist desire in the interest of duty and moral principle. I say this is fallacious, not because no man ever acts from a sense of duty, but because duty has no hold on him unless he desires to be dutiful. If you wish to know what men will do, you must know not only, or principally, their material circumstances, but rather the whole system of their desires with their relative strength” (Russell, 1950).

All human action is driven by desire, and if knowing is the first step in doing, it implies that in the performance of any human act, an individual is capable of knowing if an action will cause harm to others and if acted to do so, it only shows that the satisfaction of desire comes first. It is what causes the conflict in human relationships. Even if an act is performed because of a sense of duty, the satisfaction of desires still comes first. Bertrand Russell labeled this kind of desire as vanity. “Vanity is a motive of immense potency; “look at me” is one of the most fundamental desires of the human heart. It can take innumerable forms, from buffoonery to posthumous fame” (Russell, 1950). This means that the action, because of a sense of duty, is driven by the desire to be known to be famous.

Russell further elaborates in his speech that human desire is insatiable, “but man differs from other animals, that is so to speak man’s desire is infinite, which can never be fully gratified and would keep him restless even in paradise. Russell labels four human desires: acquisitiveness, rivalry, vanity, and love of power” (Russell, 1950). Acquisitiveness is the desire to possess as much as possible of goods. Despite having enough to survive, man desires to retain more. Russell briefly recounted his experience of the two little girls whom he saved from starvation in Estonia. The girls in his family have more than enough food to survive, but despite this, “they spent their leisure visiting neighboring farms stealing potatoes which they hoarded.” It shows that man will always desire to acquire more, no matter how much he/she possesses.

Rivalry, according to Russel, (1950) is the desire to outdo the others because man's perception of the other is not a comrade but a rival. Economically, man sees others as a rival over scarce resources; for this reason, man, due to acquisitive desire, will do everything to possess the resources.

“But great as is the influence of the motives we have been considering, there is one which outweighs them all. I mean the love of power. Love of power is closely akin to vanity, but it is not the same thing. Vanity needs glory for satisfaction, and it is easy to have glory without power” (Russell, 1950). The desire for power outweighs acquisitiveness, rivalry, and vanity. Vanity desires fame, glory, and recognition; rivalry desires the destruction of the other, and acquisitiveness desires possessions; the love of power desires dominion and control. It drives an individual to pursue positions of authority

and leadership, which grant an individual dominion and power over others. Possessing such power means easy access to resources, destruction of rivals, and fame and glory.

Ideally, human relationships should be characterized by mutual respect, empathy, and compassion, equity and fairness, shared values, and goals. However, as long as human desire exists, such ideal relationships will not exist, and man will continue to harm fellow man in the process of satisfying desire. It is for this reason that human relationships are irrational and absurd. Human reason dictated what human relationships should be, but the very heart of human experience tells otherwise. Human relationships are absurd!

Poverty as a Condition of Human Existence

Applying Albert Camus' framework of absurdity to understand poverty as an existential condition involves recognizing the tension between the human desire for a meaningful existence and societal relationships. Humans seek peaceful coexistence but are driven by insatiable desires, which often lead to conflict. Bertrand Russell noted that humans, unlike animals, have infinite desires that can never be fully satisfied, causing restlessness even in ideal conditions (Russell, 1950). This insatiability leads to indifference toward others' needs.

Ideally, societal conventions should guide actions toward justice and harmony. However, individual autonomy allows people to transcend these norms and pursue their desires, often at the expense of others. In the context of poverty, societal norms suggest that excessive wealth leads to greed and inequality. Although reason should temper human desire, it often supports systems like capitalism that protect individual wealth and control resources, exacerbating poverty (Smith, 2002). Capitalism fuels the human drive for possessions and power, making individuals blind to others' needs.

This tension between desire and relationships suggests that poverty is a condition of human existence. It persists not due to actual scarcity but to justify acquisitive desires. Humanity has the resources to eradicate poverty; what is needed is the equitable distribution of these resources to allow everyone opportunities for self-realization rather than mere subsistence. Karl Marx proposed communism as a solution, advocating for the equal distribution of resources, which he believed required a revolution to achieve (Raekstad, 2018).

The Resilience of the Filipino Sisyphus

This study establishes that poverty is an existential condition resulting from the tension between the human desire for meaning and the irrationality of human relationships. The Filipino absurd hero, in the context of poverty, acknowledges this condition but revolts against it through resilience, a unique Filipino trait. Resiliency is Filipinos' act of defiance against poverty's absurdity, allowing them to find meaning despite challenges.

According to the Philippine Statistic Association (PSA), 16.7% of Filipinos lived below the poverty line in 2021, with fisherfolk, farmers, and rural residents most affected (Philippine Statistic Authority, 2021). A 2023 Social Weather Station survey revealed that 51% of Filipino families consider themselves poor (CNN, 2023). The World Bank's global poverty threshold is $2.15 daily, while the PSA sets it at P80.02, criticized for being too

low (Dela Peña, 2023). Poverty impacts various life aspects, including healthcare, education, employment, and overall well-being (Adler & Newman, 2002; Duncan, 2010; World Bank, 2019).

Studies show that poverty also brings social stigmas, associating the poor with criminality, dirtiness, and laziness (Rosales, 2013; Bernardo, 2013). Media often romanticizes poverty, portraying it as noble, which can lead to exploitation and marginalization (Ehrenreich, 2001). Filipinos' coping mechanisms, such as reliance on faith and communal support (Bayanihan), highlight their resilience (Rilveria, 2018).

Resilience, defined by the American Psychological Association as the ability to bounce back from adversity, is deeply rooted in Filipino cultural values and social support systems. This includes family bonds and community solidarity (Umbal & Salanga, 2018). Filipino resilience is also characterized by positivity and humor, which help navigate difficult situations (Salazar, 2010).

However, reliance on faith and religiosity can be seen as evasion of the existential condition, which Camus termed "philosophical suicide" (Foley, 2008). Yet, this study acknowledges that faith and religiosity provide Filipinos with strength and endurance, a departure from Camus' strict rejection of transcendental meaning.

This research diverges from Camus by recognizing the unique cultural context of Filipino resilience, which combines existential awareness with faith. While Camus emphasized confronting the absurd without external frameworks, this study argues that, for Filipinos, faith is a vital source of strength.

On the other hand, redefining Filipino resilience within Camus' framework encourages a self-reliant approach, emphasizing human agency and rationality. This perspective suggests that true resilience can emerge without divine assurance, encouraging critical thinking and empirical reasoning (Garnham, 1967; Foley, 2008).

Ultimately, Filipino resilience is diverse, drawing strength from both existential awareness and faith. This study promotes an inclusive perspective, recognizing that individuals can find strength and meaning in various ways when confronting existential challenges. This approach respects individual choices and cultural backgrounds, fostering collective resilience grounded in Filipino existential experiences.

Metaphysical Revolt, Towards Authentic Resilience

Metaphysical rebellion, as described by Camus, is the act of defiance against the inherent condition of human existence and the universe's lack of meaning. This form of rebellion is not against societal injustices but against the absurdity of life itself (Camus, 1956). Camus acknowledges life's absurdity but rejects nihilism and religious transcendence as responses. Instead, he proposes metaphysical revolt, which is a rebellion against the universe's meaninglessness and an assertion of human spirit seeking meaning (Caraway, 1992).

In the context of poverty, metaphysical revolt involves recognizing poverty as a fundamental human condition arising from irrational human relationships. The insatiable

human desire, as noted by Bertrand Russell, drives individuals to indifference and societal conventions often fail to temper this desire, leading to injustice and inequality (Russell, 1950).

The plight of the poor parallels Sisyphus' struggle. Despite their cyclical and seemingly endless struggles against poverty, the poor continue to hope and live, manifesting their reluctance to accept life's meaninglessness. Their daily perseverance against economic challenges and stigmatization is a form of revolt against their absurd condition. This is encapsulated in the Filipino tagline, "Para kanino ka bumabangon?" which highlights living for others, especially family, as a source of meaning (Filipino coffee brand tagline).

Conclusions

Resiliency Redefined

Traditional resilience suggests "bouncing back" to a prior state after adversity, similar to a rubber band returning to its shape. This notion is flawed as it implies reverting to pre-challenge conditions, overlooking the personal growth that should accompany overcoming difficulties. For instance, after natural disasters, affected individuals are expected to rebuild and return to normalcy. This expectation often masks governmental and institutional failures, as resilience becomes an excuse for inaction.

Breaking Point and Transformation

Human resilience, like a rubber band, has a breaking point. Excessive stress can lead to despair and self-destructive behaviors, evidenced by the link between poverty, crime, and substance abuse. Thus, resilience should be seen not merely as recovery but as a transformative process involving reflection, learning, and growth. Individuals should not only survive challenges but also adapt and thrive, gaining strength and insight from adversity.

Bouncing Forward

Patricia Longstaff's concept of "bouncing forward" emphasizes growth and improvement post-adversity. "Bouncing forward" is a concept that emphasizes an individual's or a community's ability not only to bounce back from adversity or difficult circumstances but also to grow and thrive as a result of those challenges. Rather than simply returning to the previous state, resilient individuals and communities undergo a transformative process that enables them to adapt, learn, and improve their situation (Hynes et al., 2020). Resilience involves not just overcoming but harnessing adversity to emerge stronger and wiser. This process requires reflection, adaptability, and the willingness to learn and change. Michaela Haas's book, "Bouncing Forward: Transforming Bad Breaks into Breakthroughs," illustrates how individuals can turn hardships into opportunities for personal growth (Haas, 2015).

Pagpupunyagi

"Pagpupunyagi," a Filipino term, encapsulates the essence of true resilience. It goes beyond mere survival, signifying continuous effort, perseverance, and the quest for meaning despite challenges. It reflects an active pursuit of growth and development, acknowledging the absurdity of life yet finding purpose through persistent effort. *Pagpupunyagi* goes beyond survival, working, and consuming oneself for physical sustenance. It encompasses an active pursuit that will give meaning to existence; despite the challenges an individual may encounter, it signifies their commitment to personal growth and development. The inherent optimism of *pagpupunyagi* acknowledges the absurdity of the human condition, but at the same time, it also embraces the transformative power of such a condition. An individual now has the power to create meaning imposed not by society nor the pre-established meaning offered by religion but a meaning generated through the individual's effort to thrive and find meaning amidst the absurdity.

The Filipino Sisyphus

The Filipino Sisyphus symbolizes the relentless Filipino spirit, striving for meaning amidst the absurdity of poverty and existential challenges. This symbolic figure represents ordinary Filipinos, like workers, street vendors, slum dwellers, and teachers, who persist daily despite daunting circumstances. These individuals embody "pagpupunyagi," accepting and revolting against life's absurdity through their dedication and perseverance.

The Filipino Sisyphus reflects the resilience and determination of Filipinos who, despite acknowledging the absurdity of their condition, persistently strive to find and create meaning in their lives. This relentless pursuit, embodied in "pagpupunyagi," signifies the true essence of resilience, transforming adversity into a source of strength and purpose. Tuloy pa rin ang laban ng buhay!!!

Recommendations

In light of the findings of this research, "The Filipino Sisyphus: An Allegory on the Existential Crisis of Poverty and Filipino Resiliency—an Investigation on Albert Camus' Absurdity," several recommendations emerge to enrich our understanding of Filipino resilience and its intersection with existential philosophy

1. Expand the investigation and improve the findings of this research by delving into other existentialist and nihilist philosophies that can contribute to a much more profound understanding of Filipino resilience.

2. Conduct qualitative studies that delve into the personal narratives of individuals who have experienced poverty, exploring the factors contributing to their resilience.

3. Conduct cross-cultural analyses of resilience in poverty to extend the research beyond the Filipino context.

Compliance with Ethical Standards

This research study employs a qualitative research design. The study involves a meticulous review of pertinent literature and a comprehensive analysis of relevant primary and secondary references. By rigorously examining existing scholarly works, and articles, the study ensures a clear understanding of the topic under investigation while upholding ethical standards for resource utilization. As such, it refrains from direct engagement with participants through surveys, interviews, or focus groups. This decision aligns with ethical considerations, aiming to respect the autonomy and privacy of individuals while avoiding potential biases or undue influence on the findings of this research. Instead, the study relies solely on the wealth of existing knowledge and resources available to ensure the integrity and validity of its conclusions. Further, there is no conflict of interest in the conduct of the study, plagiarism was strictly avoided, there was no bias in the interpretation of the findings, and the results were used purely for research.

Acknowledgments

The researcher would like to express sincere gratitude to all those who contributed to the completion of this research. To the researcher's adviser for his invaluable guidance, support, and encouragement in the completion of this research study. To the unwavering support and boundless love of my wife, whose encouragement and understanding have been the pillars of strength sustaining me through this journey. Your belief in my abilities has been my constant inspiration. This accomplishment is as much yours as it is mine, may this work be a symbol of our shared aspirations and commitment to achieving our goals together.

To the Almighty God, for providing the knowledge and wisdom to complete this research study.

THE IMPACT OF IMPLEMENTING A HEALTHY SCHOOL POLICY ON LEARNERS' ACADEMIC PERFORMANCE AND WELL-BEING: A STUDY ON THE SIX PILLARS OF HEALTH-PROMOTING SCHOOL

Ronel D. Oseña[1], Shiela May M. Gonzales [2]

[1] *Dep Ed Quezon ,Yugno Elementary School , San Andres District, Philippines*

https://doi.org/10.5281/zenodo.12599569

ABSTRACT

This study conducted at Yugno Elementary School investigates the impact of implementing a healthy school policy on learners' academic performance and well-being. Employing a total enumeration technique, data was gathered from 65 parents and 89 learners using test questionnaire and survey utilizing a 5-point Likert scale. Pilot testing ensured validity and reliability of instruments. Descriptive quantitative methods were employed for data analysis. Results indicate significant enhancements in academic performance, particularly in cognitive skills and motivation, with slightly less emphasis on mental health compared to other health-promoting initiatives. Improved academic outcomes were noted across all grade levels, notably in Grade 6, alongside enhancements in physical health through healthier lifestyle choices. The study underscores the effectiveness of health-promoting policies in fostering supportive school environments conducive to student well-being. Recommendations include strategies to enhance parental involvement, proactive stakeholder communication, and tailored policy implementation to diverse cultural contexts, aiming to optimize policy impact and sustainability.

Keywords: *healthy school policy, academic performance, student well-being, six pillars*

INTRODUCTION

In recent years, the importance of creating health-promoting school environments has gained significant attention to improve both academic performance and overall well-being of learners. Schools are not only centers for academic learning but also crucial settings for fostering the physical, mental, and social health of students. The concept of Health-Promoting Schools is built around the integration of health into all aspects of school life, grounded in the understanding that healthy students are better learners.

The World Health Organization (WHO) (2022) defines a Health-Promoting School as one that constantly strengthens its capacity as a healthy setting for living, learning, and working. This holistic approach encompasses various dimensions of health and well-being, aiming to create a supportive environment that enables students to thrive academically and personally. Research indicates that implementing health-promoting policies within schools can lead to significant improvements in students' health behaviours, academic outcomes, and social skills (Lee et al., 2022, McHugh et al., 2022).

This study focuses on the impact of implementing a healthy school policy on learners' academic performance and well-being, structured around the six pillars of health-promoting schools as defined by WHO: school health services, healthy school environment, health education, physical education, nutrition services, and counselling, psychological, and social services. Each pillar plays a vital role in creating a comprehensive and sustainable approach to student health and academic success. According to Memorandum Order No. 31, series of 2024, these pillars are (1) healthy school policies; (2) healthy physical school environments; (3) healthy school social environments; (4) health skills and education; (5) links with parents and school community; and (6) access to school health services.

Healthy school policies are critical for establishing a foundation for health-promoting schools. The Universal Health Care Act (R.A. No. 11223) mandates the support and implementation of clinical care standards by the Department of Health (DOH), ensuring that schools are designated as healthy settings based on these standards (Oseña, Gonzales, & Jorda, 2024). Similarly, the Legal Education Reform Act (R.A. No. 7662) emphasizes the importance of uplifting educational standards, which can also extend to health promotion within educational settings (Saniel, Parcutilo, & Mariquit, 2022).

Creating healthy physical school environments is essential for promoting student health and well-being. Paraguya-Agang (2023, 2024) has explored the challenges and related studies on child-friendly school-health environments, emphasizing the need for supportive physical conditions in schools.

Health skills and education are foundational for equipping students with the knowledge and abilities to maintain their health. Tolentino et al. (2020) developed and evaluated localized digital learning modules for indigenous peoples' health education, highlighting the importance of culturally relevant health education. Similarly, Tiwari et al. (2020)

demonstrated the effectiveness of life skills health education programs, and Thakur (2021) provided theoretical foundations for health education and promotion.

Links with parents and the school community are vital for creating a supportive network for students. Epstein (2019) discussed how school and family partnerships lead to school improvement and student success. Kelty and Wakabayashi (2020) provided perspectives on family engagement in schools, while Herrera, Porter, and Barko-Alva (2020) focused on cultivating trust in culturally diverse classrooms.

Access to school health services is crucial for addressing students' mental and physical health needs. Moroz, Moroz, and D'Angelo (2020) discussed barriers and solutions to increasing access to mental health services in Canada, while Duong et al. (2021) conducted a systematic review and meta-analysis on rates of mental health service utilization by children and adolescents in schools and other common service settings.

Previous studies have shown that health-promoting interventions in schools can result in improved attendance, better concentration, enhanced academic performance, and a reduction in health-related issues among students (McHugh et al., 2022). However, there is a need for more specific and localized research to understand the contextual challenges and benefits of such policies in diverse educational settings.

This research aims to fill this gap by investigating the specific effects of a healthy school policy on academic performance and well-being among learners in a selected educational setting. Examining each of the six pillars, this study seeks to provide a detailed analysis of how comprehensive health-promoting strategies can be effectively implemented and sustained, ultimately contributing to the academic and personal development of students.

Research Questions

This study aims to investigate the impact of implementing a healthy school policy on learners' academic performance and well-being, focusing on the six pillars of Health-Promoting Schools. Specifically, it sought the following questions :

1. How does the implementation of a healthy school policy influence learners' academic performance?
2. Is there a significant difference in test scores before and after the policy implementation?
3. What is the impact of a healthy school policy on learners' physical health?
4. How does the implementation of a healthy school policy affect learners' mental health and well-being?
5. What role do the six pillars of Health-Promoting Schools?
6. What are the challenges in implementing the healthy school policy of Health-Promoting Schools?

METHODOLOGY

The study was conducted at Yugno Elementary School to evaluate the impact of implementing a healthy school policy on learners' academic performance and well-being. A total enumeration technique was used, involving 65 parents and 89 learners. Data was collected through test questionnaire and survey, with a 5-point Likert scale designed to measure the policy's implementation and impact. Pilot testing was conducted to ensure validity and reliability. Descriptive quantitative methods were used to analysed the collected data. Although the findings may not be generalizable to other schools, the study provides a comprehensive analysis of the impact of a healthy school policy on learners' academic performance and well-being within the defined scope.

RESULTS AND DISCUSSION

Table 1

Implementation of a Healthy School Policy Influence Learners' Academic Performance

Indicators	**WM**	**VI**
1. A healthy school policy helps my child concentrate better in class, leading to improved academic performance.	4.76	*SA*
2. With a healthier school environment, my child gets sick less often and misses fewer days of school, which positively impacts their learning.	4.54	*SA*
3. Access to nutritious meals at school ensures my child has the energy needed for learning and participating actively in class.	4.74	*SA*
4. Regular physical education and activity breaks provided by the school keep my child physically fit and mentally alert, boosting their academic performance.	4.59	*SA*
5. Programs that address mental health and well-being reduce my child's stress levels, allowing them to focus more on their studies.	4.50	*SA*
6. A healthy school environment promotes positive behavior, which translates into a better learning atmosphere and improved academic outcomes for my child.	4.78	*SA*
7. Activities and lessons that promote health also enhance my child's cognitive skills such as memory, problem-solving, and critical thinking.	4.80	*SA*
8. Learning about healthy habits at school encourages my child to adopt these practices, which support their overall academic success.	4.74	*SA*
9. Health-promoting initiatives make school a more enjoyable place for my child, increasing their motivation to participate and succeed academically.	4.80	*SA*
10. A comprehensive health policy creates a supportive environment that helps my child feel safe and valued, contributing to better academic performance.	4.74	*SA*
Overall Weighted Mean	**4.69**	***SA***

Legend: *4.20 - 5.00-Strongly Agree (SA), 3.40 - 4.19-Agree(A), 2.60 - 3.39- Neutral(N) -1.80 - 2.59 Disagree(DA) , 1.00 - 1.79 -Strongly Disagree(SD)*

The table shows the influence of implementing a healthy school policy on learners' academic performance, with various indicators reflecting different aspects of the policy. The weighted mean (WM) and verbal interpretation (VI) indicate the level of agreement among respondents for each statement. The indicators with the highest mean (WM = 4.80) are Indicator 7 “Enhancement of Cognitive Skills” this statement posits that activities and lessons promoting health also enhance cognitive skills such as memory, problem-solving, and critical thinking. Respondents strongly agree that these health-promoting activities significantly benefit their children's cognitive development, thus improving their academic performance.

Moreover, Indicator 9 “Increased Enjoyment and Motivation (Indicator 9) this statement asserts that health-promoting initiatives make school a more enjoyable place for children, thereby increasing their motivation to participate and succeed academically. Respondents strongly agree that creating a pleasant and health-focused school environment boosts their children's enthusiasm and drive for academic success. These highest-rated indicators emphasize the critical role of cognitive and motivational enhancements stemming from a healthy school policy, underscoring how such initiatives can lead to notable improvements in academic outcomes.

Conversely, the indicator with the lowest mean (WM = 4.50) is indicator 5, “Mental Health and Stress Reduction” this statement suggests that programs addressing mental health and well-being reduce stress levels, allowing children to focus more on their studies. While respondents still strongly agree, this aspect received the lowest weighted mean among the indicators. This indicates that although mental health programs are deemed beneficial, they may be perceived as slightly less impactful on academic performance compared to other health-related initiatives.

Overall, the table highlights that implementing a comprehensive healthy school policy is strongly associated with improved academic performance across various dimensions, from cognitive skills and physical health to emotional well-being and overall enjoyment of the school environment.

These findings align with the efforts by the Department of Health (DOH) to ensure schools are designated as healthy settings based on established standards (Oseña, Gonzales, & Jorda, 2024). Creating environments that prioritize health, these standards support the overall well-being and academic performance of students. Additionally, the Legal Education Reform Act (R.A. No. 7662) emphasizes the importance of uplifting educational standards, which includes the promotion of health within educational settings (Saniel, Parcutilo, & Mariquit, 2022). The act recognizes that fostering a healthy school environment is integral to enhancing academic performance, thus reinforcing the necessity of integrating health-promoting initiatives into the educational framework.

Table 2

Testing of Significant Difference in Test Scores before and after the Policy Implementation.

Grade Level	Pre-test		Post-test		Difference (Posttest-Pretest)
	Mean Percentage Score	Descriptive Interpretation	Mean Percentage Score	Descriptive Interpretation	
Kindergarten	65.00	DNME	80.50	Satisfactory	15.5
Grade 1	72.00	DNME	88.79	Very Satisfactory	16.79
Grade 2	67.00	DNME	85.70	Very Satisfactory	18.7
Grade 3	71.00	DNME	87.80	Very Satisfactory	16.8
Grade 4	69.00	DNME	84.80	Satisfactory	15.8
Grade 5	74.00	DNME	89.40	Very Satisfactory	15.4
Grade 6	66.00	DNME	86.70	Very Satisfactory	20.7
Grand Mean	**69.14**	DNME	**86.24**	**Very Satisfactory**	**17.1**

Legend: *90%-100% -Outstanding (O) , 85%-89%- Very Satisfactory (VS), 80%-84%- Satisfactory (S), 75%-79%-Fairly Satisfactory (FS), 74% Below -Did Not Meet Expectations (DNME)*

Table 2 highlights the significant differences in test scores before and after the implementation of the healthy school policy across various grade levels. The data presents the pre-test and post-test mean percentage scores, along with their descriptive interpretations and the differences between post-test and pre-test scores.

The highest mean difference is observed in Grade 6, where the pre-test mean percentage score was 66.00 (Did Not Meet Expectations), and the post-test mean percentage score increased to 86.70 (Very Satisfactory), resulting in a substantial improvement of 20.7 points. This notable increase suggests that Grade 6 students greatly benefited from the policy, likely due to enhanced health initiatives and a more supportive learning environment.

Conversely, the lowest mean difference is found in Grade 5, where the pre-test mean percentage score was 74.00 (Did Not Meet Expectations), and the post-test mean percentage score rose to 89.40 (Very Satisfactory), with a difference of 15.4 points. While this still represents a positive change, the improvement is the smallest among the grade levels. Despite this, the transition from "Did Not Meet Expectations" to "Very Satisfactory" demonstrates a significant impact, reflecting the overall effectiveness of the healthy school policy.

The grand mean scores reveal that, on average, students' scores improved from 69.14 (Did Not Meet Expectations) in the pre-test to 86.24 (Very Satisfactory) in the post-test, with an average difference of 17.1 points. These findings align with the standards set by the Department of Health (DOH) for healthy settings in schools (Oseña, Gonzales, & Jorda, 2024), emphasizing the importance of a health-focused school environment in

enhancing academic performance. The pilot implementation of the Healthy Learning Institution highlighted in the study demonstrates the positive impact of such policies on learners' academic outcomes.

Table 3

Impact of a Healthy School Policy on Learners' Physical Health.

Indicators	**WM**	**VI**
1. The healthy school policy has led to fewer illnesses for my child, as they are exposed to a cleaner and safer environment.	4.45	*SA*
2. Regular physical activities and structured PE classes at school have significantly improved my child's physical fitness.	4.34	*SA*
3. Access to balanced and nutritious meals at school ensures my child receives the essential nutrients needed for their growth and development.	4.74	*SA*
4. With better dietary options and regular exercise, my child maintains a healthy weight, reducing the risk of obesity and related health issues.	4.70	*SA*
5. The focus on health and wellness at school has strengthened my child's immune system, making them more resilient to common illnesses.	4.50	*SA*
6. Initiatives like regular dental check-ups and oral health education at school have improved my child's dental hygiene and overall oral health.	4.76	*SA*
7. The emphasis on physical activity and well-being at school has helped regulate my child's sleep patterns, contributing to their overall health.	4.54	*SA*
8. The education on health and wellness has encouraged my child to make healthier lifestyle choices, such as choosing water over sugary drinks.	4.84	*SA*
9. The school's efforts to promote physical safety and teach proper techniques in sports and activities have reduced the risk of injuries for my child.	4.60	*SA*
10. A holistic approach to health at school ensures my child's mental well-being is supported alongside their physical health, creating a balanced and healthy lifestyle.	4.55	*SA*
Overall Weighted Mean	**4.60**	***SA***

Legend: *4.20 - 5.00-Strongly Agree (SA), 3.40 - 4.19-Agree(A), 2.60 - 3.39- Neutral(N) -1.80 - 2.59 Disagree(DA) , 1.00 - 1.79 -Strongly Disagree(SD)*

Table 3 evaluates the impact of a healthy school policy on learners' physical health through various indicators. Each indicator's weighted mean (WM) and verbal interpretation (VI) reflect the level of agreement among respondents regarding the policy's effectiveness.

The highest mean in Table 3 is observed for the indicator on encouraging healthier lifestyle choices (Indicator 8), with a weighted mean (WM) of 4.84 (Strongly Agree). This

suggests that the education on health and wellness provided at school has significantly encouraged children to make healthier lifestyle choices, such as choosing water over sugary drinks. Respondents strongly agree that this aspect of the policy has had a substantial positive impact on their children's health. This high rating underscores the effectiveness of health education in promoting long-term healthy habits among students.

Conversely, the lowest mean is found for the indicator on improving physical fitness through regular physical activities and structured PE classes (Indicator 2), with a WM of 4.34 (Strongly Agree). Although respondents still strongly agree that regular physical activities and PE classes have significantly improved their children's physical fitness, this indicator received the lowest rating among the set. This suggests that while physical fitness improvements are recognized, they may be perceived as slightly less impactful compared to other health benefits facilitated by the policy.

The overall weighted mean of 4.60 indicates that respondents strongly agree with the positive impact of the healthy school policy on various aspects of their children's physical health. These findings align with the research by Paraguya-Agang (2023, 2024), which highlights the importance of creating supportive physical environments in schools to promote student health and well-being. A holistic approach that integrates health education, physical activities, nutritious meals, and mental well-being support contributes to a balanced and healthy lifestyle for students.

Table 4

Implementation of a healthy school policy affects learners' mental health and well-being.

Indicators	**WM**	**VI**
1. The healthy school policy has helped reduce my child's stress levels by promoting a balanced and supportive school environment.	4.55	*SA*
2. Through mental health education and resources, my child has developed better emotional resilience and coping skills.	4.45	*SA*
3. With a focus on mental well-being, my child is more focused and better able to concentrate on their studies.	4.70	*SA*
4. The healthy school policy has created a positive school atmosphere, leading to increased happiness and satisfaction for my child.	4.86	*SA*
5. Programs that promote mental health have helped my child develop better social skills and relationships with peers.	4.66	*SA*
6. Access to counseling and psychological services at school has significantly decreased my child's anxiety levels.	4.55	*SA*
7. The emphasis on mental health and well-being has boosted my child's self-esteem and confidence.	4.59	*SA*
8. The policy has fostered a supportive peer environment where my child feels understood and accepted.	4.78	*SA*
9. My child has learned healthy coping mechanisms to deal with life's challenges, thanks to the mental health programs at school.	4.70	*SA*

10. The holistic approach to health in the school policy ensures that my child's overall well-being, both mental and physical, is prioritized and nurtured.	4.59	*SA*
Overall Weighted Mean	**4.64**	***SA***

Legend: *4.20 - 5.00-Strongly Agree (SA), 3.40 - 4.19-Agree(A), 2.60 - 3.39- Neutral(N) -1.80 - 2.59 Disagree(DA) , 1.00 - 1.79 -Strongly Disagree(SD)*

Table 4 provides insights into the impact of a healthy school policy on learners' mental health and well-being through various indicators, each assessed by its weighted mean (WM) and verbal interpretation (VI) based on respondent feedback.

The indicator with the highest mean, related to creating a positive school atmosphere (Indicator 4), received a WM of 4.86 (Strongly Agree). This indicator underscores that the implementation of the healthy school policy has successfully fostered a positive school environment, significantly enhancing children's happiness and satisfaction. Respondents strongly agree that this aspect of the policy has profoundly influenced their children's well-being, highlighting the critical role of a supportive and uplifting school atmosphere in promoting mental health.

Conversely, the indicator focusing on mental health education and resources for developing emotional resilience (Indicator 2) received the lowest mean with a WM of 4.45 (Strongly Agree). While respondents still strongly agree that these resources have contributed to their children's emotional resilience and coping skills, this indicator's slightly lower rating suggests that its impact may be perceived as slightly less pronounced compared to other aspects of the policy. This does not diminish its effectiveness but indicates that direct environmental factors such as a positive school atmosphere may be seen as having a more immediate and tangible influence on students' well-being.

Overall, the data from Table 4 underscores the positive effects of implementing comprehensive health policies in schools, particularly in fostering supportive environments that enhance mental health and well-being. These findings align with research emphasizing the importance of school environments in shaping students' emotional health and resilience, supporting broader educational goals (Lee et al., 2022; McHugh et al., 2022).

Table 5

The Role of the Six Pillars of Health-Promoting Schools in terms of Pillar 1-Healthy School Policies

Indicators	**WM**	**VI**
1. These services ensure that students have access to basic health care, promoting early intervention and supporting students' overall well-being.	4.70	*SA*
2. Creating a safe and supportive physical environment that includes clean air, water, and adequate sanitation contributes to students' health and academic performance.	4.80	*SA*

3. Providing comprehensive health education equips students with knowledge and skills to make informed decisions about their health behaviors and lifestyles.	4.89	*SA*
4. Regular physical activity through structured PE classes and extracurricular sports promotes physical fitness, reduces sedentary behavior, and enhances learning readiness.	4.75	*SA*
5. Offering nutritious meals and snacks helps students maintain healthy eating habits, supporting their growth, development, and academic performance.	4.80	*SA*
6. These services provide mental health support, counseling, and social-emotional learning opportunities, fostering resilience and emotional well-being among students.	4.75	*SA*
7. The integration of these pillars ensures a holistic approach to student health, addressing physical, mental, and social aspects simultaneously.	4.65	*SA*
8. Engaging parents in promoting health behaviors at home and supporting school initiatives strengthens the impact of health-promoting strategies.	4.90	*SA*
9. Collaborating with community organizations enhances resources and support for health-promoting activities, extending the benefits beyond the school environment.	4.85	*SA*
10. Implementing these pillars establishes a foundation for lifelong health habits, preparing students to thrive academically and lead healthy lives into adulthood.	4.60	*SA*
Overall Weighted Mean	**4.76**	***SA***

Legend: *4.20 - 5.00-Strongly Agree (SA), 3.40 - 4.19-Agree(A), 2.60 - 3.39- Neutral(N) -1.80 - 2.59 Disagree(DA) , 1.00 - 1.79 -Strongly Disagree(SD)*

Table 5 presents a comprehensive overview of the impact of health-promoting school policies, focusing on various indicators related to the Six Pillars of Health-Promoting Schools. Among these indicators, the highest mean score (WM = 4.89) is attributed to providing comprehensive health education (Indicator 3). This indicator underscores the critical role of education in equipping students with essential knowledge and skills necessary to make informed decisions about their health behaviors and lifestyles. Respondents strongly agree that such education significantly enhances health literacy among students, emphasizing its pivotal role in promoting overall well-being and academic success. The high rating reflects the widespread recognition of educational initiatives as pivotal in empowering students to take proactive steps towards maintaining their health.

Conversely, the indicator with the lowest mean score (WM = 4.60) concerns establishing a foundation for lifelong health habits (Indicator 10). While still strongly endorsed, this indicator received the lowest rating among the set, suggesting that its perceived impact on long-term health outcomes may be viewed as slightly less immediate compared to other pillars. This does not diminish its significance; rather, it indicates that the establishment of lifelong health habits, aimed at preparing students for healthy lives into adulthood, may require more time to manifest observable effects compared to more direct interventions like health education or mental health support. The rating highlights the complexity and long-term nature of fostering sustained health behaviors among students,

underscoring the ongoing efforts needed in promoting health-promoting strategies within school environments.

Overall, the weighted mean of 4.76 (Strongly Agree) across all indicators in Table 5 reflects broad consensus among respondents regarding the effectiveness of health-promoting school policies. These findings align with Lee et al., (2022) indicating that such policies not only enhance students' health behaviors but also contribute significantly to their academic achievements and social well-being. Integrating the Six Pillars of Health-Promoting Schools, educational institutions can create nurturing environments that support students' holistic development and equip them with lifelong skills for maintaining optimal health throughout their lives.

Table 6

The Role of the Six Pillars of Health-Promoting Schools in terms of Pillar 2-Healthy Physical School Environments

Indicators	**WM**	**VI**
1. Health-Promoting Schools ensure that school buildings and facilities are structurally sound, safe, and conducive to learning and physical activity.	4.65	*SA*
2. Providing clean air ventilation systems and safe drinking water sources contributes to a healthier learning environment, reducing the risk of respiratory issues and dehydration.	4.67	*SA*
3. Properly maintained restrooms and hygiene facilities promote good sanitation practices among students, reducing the spread of illnesses and fostering a clean environment.	4.65	*SA*
4. Implementing safety protocols and equipment, such as fire exits, emergency drills, and playground safety guidelines, ensures the physical safety of students during school hours.	4.45	*SA*
5. Designating and maintaining green spaces, playgrounds, and sports fields encourage physical activity and outdoor play among students, promoting fitness and overall health.	4.55	*SA*
6. Maximizing natural light exposure and regulating indoor temperatures create a comfortable and stimulating environment that supports students' physical and mental well-being.	4.59	*SA*
7. Providing ergonomic desks, chairs, and equipment supports proper posture and reduces physical strain among students, enhancing comfort and focus during learning activities.	4.60	*SA*
8. Promoting eco-friendly practices, such as recycling programs and energy-efficient initiatives, teaches students the importance of environmental stewardship and sustainability.	4.67	*SA*
9. Regular maintenance schedules for school facilities ensure that they remain in optimal condition, promoting longevity and safety for students and staff.	4.67	*SA*
10. Engaging parents and local communities in maintaining and improving school environments fosters a sense of ownership and pride, ensuring ongoing support for healthy physical school environments.	4.67	*SA*
Overall Weighted Mean	**4.61**	***SA***

Legend: *4.20 - 5.00-Strongly Agree (SA), 3.40 - 4.19-Agree(A), 2.60 - 3.39- Neutral(N) -1.80 - 2.59 Disagree(DA) , 1.00 - 1.79 -Strongly Disagree(SD)*

The findings from Table 6 highlight the effectiveness of health-promoting strategies in creating healthy physical school environments. The indicators with the highest mean scores emphasize crucial aspects such as clean air ventilation, safe drinking water, eco-friendly practices, and regular facility maintenance. These measures not only contribute to a healthier learning environment but also support students' overall well-being by ensuring safety, sustainability, and comfort.Conversely, while still strongly supported, the indicator focusing on implementing safety protocols and equipment received a slightly lower rating. This suggests that while safety measures are essential, their perceived impact on creating a healthy physical school environment may be considered marginally less influential compared to other pillars like environmental sustainability and facility maintenance.

Overall, the weighted mean score of 4.61 (Strongly Agree) across all indicators underscores a broad consensus on the importance of structurally sound and supportive physical environments in schools. These findings align with the notion that creating such environments is essential for promoting student health and well-being, as emphasized by Paraguya-Agang's exploration of child-friendly school-health environments. This research underscores the critical role of supportive physical conditions in schools, advocating for environments that prioritize both physical health and conducive learning atmospheres (Paraguya-Agang, 2023).

Table 7

The Role of the Six Pillars of Health-Promoting Schools in terms of Pillar 3-Healthy School Social Environments

Indicators	**WM**	**VI**
1. Health-Promoting Schools emphasize building positive relationships among students, teachers, and parents, creating a supportive and inclusive social atmosphere.	4.56	*SA*
2. Implementing anti-bullying policies and peer support programs ensures a safe and respectful environment where all students feel valued and accepted.	4.50	*SA*
3. Teaching students conflict resolution skills and promoting open communication channels help in resolving conflicts peacefully, fostering a harmonious school community.	4.59	*SA*
4. Celebrating cultural diversity through events, activities, and inclusive curriculum promotes understanding, empathy, and respect among students from different backgrounds.	4.55	*SA*
5. Establishing peer mentoring and support groups helps students develop social skills, resilience, and emotional well-being through positive peer interactions.	4.50	*SA*
6. Encouraging parent involvement in school activities, decision-making processes, and parent-teacher associations strengthens the school community and supports student success.	4.55	*SA*

7. Providing opportunities for teamwork, collaboration, and leadership roles helps students develop essential social skills and enhances their sense of belonging.	4.75	*SA*
8. Creating inclusive policies and practices ensures that all students, including those with disabilities or special needs, feel included and supported in the school environment.	4.60	*SA*
9. Teaching and modeling respectful communication among students, teachers, and parents fosters a culture of trust, empathy, and effective interpersonal relationships.	4.45	*SA*
10. Designating safe and welcoming social spaces within the school encourages positive interactions and friendships among students, promoting a supportive social environment.	4.45	*SA*
Overall Weighted Mean	**4.55**	***SA***

Legend: *4.20 - 5.00-Strongly Agree (SA), 3.40 - 4.19-Agree(A), 2.60 - 3.39- Neutral(N) -1.80 - 2.59 Disagree(DA) , 1.00 - 1.79 -Strongly Disagree(SD)*

Table 7 provides an insightful analysis of the Six Pillars of Health-Promoting Schools with a focus on fostering healthy social environments. Among the indicators, the highest mean score (WM = 4.75) is attributed to providing opportunities for teamwork, collaboration, and leadership roles (Indicator 7). This indicator suggests that encouraging such activities is highly effective in helping students develop essential social skills and enhancing their sense of belonging. Respondents strongly agree that these opportunities are crucial for promoting a cohesive and supportive social atmosphere within schools.

Conversely, the indicators with the lowest mean scores (WM = 4.45) pertain to teaching and modeling respectful communication (Indicator 9) and designating safe and welcoming social spaces (Indicator 10). Although still strongly agreed upon, these indicators received slightly lower ratings. This suggests that while these aspects are important, their perceived impact on creating a healthy social school environment might be viewed as marginally less significant compared to the opportunities for teamwork and collaboration. These indicators emphasize the necessity of fostering trust, empathy, and effective interpersonal relationships through respectful communication and providing spaces that encourage positive interactions and friendships among students.

Overall, the weighted mean score of 4.55 (Strongly Agree) indicates a strong consensus on the effectiveness of health-promoting strategies in fostering healthy social environments within schools. These findings align with Herrera, Porter, and Barko-Alva's (2020) focus on cultivating trust in culturally diverse classrooms, underscoring the importance of building inclusive and supportive social atmospheres. Promoting teamwork, collaboration, and leadership roles not only enhances students' social skills but also reinforces their sense of community and belonging, which are critical for their overall well-being and academic success.

Table 8

The Role of the Six Pillars of Health-Promoting Schools in terms of Pillar 4-Links with Parents and School Community

Indicators	**WM**	**VI**
1. Health-Promoting Schools establish effective communication channels to keep parents informed about health-related activities, policies, and resources available at the school.	4.76	*SA*
2. Schools encourage parents to actively participate in health-related events, workshops, and committees to foster collaboration between home and school in promoting student well-being.	4.78	*SA*
3. Health-Promoting Schools offer family education programs that provide parents with information and skills to support their child's physical, emotional, and social health at home.	4.90	*SA*
4. Schools facilitate regular communication between parents and teachers to discuss students' health needs, progress, and any concerns related to their well-being.	4.78	*SA*
5. Schools engage the broader community, including local businesses, organizations, and health professionals, to support health initiatives and provide additional resources for students and families.	4.87	*SA*
6. Health-Promoting Schools establish parent advisory groups or councils where parents can provide input on health policies, programs, and initiatives to ensure they meet the needs of the school community.	4.67	*SA*
7. Schools organize health promotion campaigns that involve parents and the community, promoting collective responsibility for creating a healthy school environment.	4.70	*SA*
8. Schools involve parents in decision-making processes related to health policies, curriculum development, and school environment improvements to ensure inclusivity and transparency.	4.45	*SA*
9. Health-Promoting Schools foster supportive networks among parents, encouraging peer support and sharing of resources related to health and well-being.	4.58	*SA*
10. Schools celebrate cultural diversity and family traditions within the school community, recognizing that health promotion strategies should be inclusive and respectful of different backgrounds and beliefs.	4.65	*SA*
Overall Weighted Mean	**4.71**	***SA***

Legend: *4.20 - 5.00-Strongly Agree (SA), 3.40 - 4.19-Agree(A), 2.60 - 3.39- Neutral(N) -1.80 - 2.59 Disagree(DA) , 1.00 - 1.79 -Strongly Disagree(SD)*

Table 8 assesses the role of the Six Pillars of Health-Promoting Schools in fostering links with parents and the school community. The highest mean score (WM = 4.90) is attributed to Indicator 3, which focuses on offering family education programs that provide parents with the information and skills needed to support their child's physical, emotional, and social health at home. This indicator underscores the critical role of equipping parents with knowledge and resources, which respondents strongly agree is essential for

promoting comprehensive student well-being. The high rating reflects the importance of empowering parents to actively contribute to their children's health and development.

Conversely, the lowest mean score (WM = 4.45) pertains to Indicator 8, which involves involving parents in decision-making processes related to health policies, curriculum development, and school environment improvements. While still strongly agreed upon, this indicator received a slightly lower rating compared to others. This suggests that while parental involvement in decision-making is valued, its perceived impact on fostering a healthy school environment may be viewed as marginally less critical compared to direct family education programs or effective communication channels. This does not diminish its significance but indicates that its effects may be perceived as less immediate compared to other initiatives.

Overall, the weighted mean score of 4.71 (Strongly Agree) indicates a strong consensus on the importance of establishing robust links between schools, parents, and the broader community to support student health. These findings align with the works of Epstein (2019), Kelty and Wakabayashi (2020), and Herrera, Porter, and Barko-Alva (2020), who highlight the importance of school-family partnerships, family engagement, and cultivating trust in diverse school environments. By integrating effective communication channels, family education programs, and community involvement, schools can create a supportive network that enhances student well-being and academic success. The high ratings across most indicators highlight the critical role of engaging parents and the community in promoting a holistic and inclusive approach to health education and support

Table 9

The Role of the Six Pillars of Health-Promoting Schools in terms of Pillar 5-Health Skills and Education

Indicators	WM	VI
1. Health-Promoting Schools provide structured health education programs that cover topics such as nutrition, physical activity, mental health, and hygiene to equip students with essential health knowledge.	4.68	*SA*
2. Through health education, students learn practical life skills such as decision-making, problem-solving, communication, and stress management, which are crucial for maintaining overall well-being.	4.67	*SA*
3. Schools conduct regular health assessments to monitor students' physical, emotional, and social well-being, identifying areas where additional support may be needed.	4.70	*SA*
4. The curriculum encourages healthy behaviors such as regular physical activity, balanced nutrition, adequate sleep, and substance abuse prevention to promote lifelong wellness.	4.68	*SA*
5. Peer-led initiatives empower students to educate their peers on health topics, promoting a peer-to-peer learning environment that enhances understanding and acceptance of health-related issues.	4.56	*SA*
6. Health-Promoting Schools emphasize the importance of health literacy, equipping students with the skills to access, understand, evaluate, and apply health information to make informed decisions.	4.67	*SA*

7. Health concepts are integrated into various academic subjects, demonstrating the interconnectedness of health with other areas of learning and reinforcing the importance of holistic education.	4.69	*SA*
8. Schools collaborate with community health organizations and professionals to provide students with access to resources, workshops, and guest speakers that enhance health education and skills development.	4.78	*SA*
9. Students learn to set health-related goals and develop action plans to achieve them, fostering self-efficacy and motivation towards maintaining and improving their health.	4.90	*SA*
10. Health-Promoting Schools support ongoing learning about health issues through workshops, seminars, and ongoing communication with parents, ensuring that health education remains a priority throughout a student's education journey.	4.78	*SA*
Overall Weighted Mean	**4.71**	***SA***

Legend: *4.20 - 5.00-Strongly Agree (SA), 3.40 - 4.19-Agree(A), 2.60 - 3.39- Neutral(N) -1.80 - 2.59 Disagree(DA) , 1.00 - 1.79 -Strongly Disagree(SD)*

Table 9 assesses the role of the Six Pillars of Health-Promoting Schools in enhancing health skills and education. The highest mean score (WM = 4.90) is attributed to Indicator 9, which focuses on teaching students to set health-related goals and develop action plans to achieve them. This indicator underscores the effectiveness of fostering self-efficacy and motivation in students, empowering them to take proactive steps towards maintaining and improving their health. Respondents strongly agree that goal setting and action planning are crucial components of health education, as they help students build practical skills for lifelong wellness.

Conversely, the lowest mean score (WM = 4.56) pertains to Indicator 5, which involves peer-led initiatives that empower students to educate their peers on health topics. Although still strongly agreed upon, this indicator received a slightly lower rating compared to others. This suggests that while peer-led initiatives are valued, their perceived impact may be slightly less pronounced than more structured health education programs or direct goal-setting activities. This does not diminish the importance of peer-to-peer learning environments, which play a significant role in enhancing understanding and acceptance of health-related issues among students.

Overall, the weighted mean score of 4.71 (Strongly Agree) indicates a strong consensus on the effectiveness of health-promoting strategies in equipping students with essential health knowledge and skills. These findings align with the works of Tolentino et al. (2020), Tiwari et al. (2020), and Thakur (2021), emphasizing the importance of culturally relevant and practical health education. Integrating comprehensive health education programs, practical life skills training, and community collaborations, schools can create a holistic learning environment that supports students' physical, mental, and social well-being. The high ratings across most indicators highlight the critical role of structured health education in promoting lifelong wellness and fostering a supportive school community.

Table 10

The Role of the Six Pillars of Health-Promoting Schools in terms of Pillar 6-Access to School Health Services

Indicators	WM	VI
1. Health-Promoting Schools ensure access to a range of health services within the school, including preventive care, screenings, vaccinations, and treatment for common health issues.	4.82	*SA*
2. Schools promote regular health check-ups and screenings for students, ensuring early detection and intervention for health concerns.	4.71	*SA*
3. Schools provide health education programs that inform parents about available health services, empowering them to utilize these resources effectively for their child's well-being.	4.72	*SA*
4. Health-Promoting Schools have protocols in place for emergency health situations, ensuring quick and efficient responses to medical emergencies on campus.	4.67	*SA*
5. Schools collaborate with health professionals, including nurses, doctors, and counselors, to provide specialized health services and support tailored to students' needs.	4.56	*SA*
6. Schools ensure access to mental health services, including counseling and support programs, to address emotional and psychological well-being issues among students.	4.49	*SA*
7. Schools maintain accurate health records for students, ensuring confidentiality and accessibility of information to authorized personnel and parents as needed.	4.50	*SA*
8. Schools promote healthy lifestyles and behaviors among students and families through workshops, seminars, and resources on nutrition, physical activity, and mental wellness.	4.44	*SA*
9. Schools establish partnerships with community health providers to extend health services beyond the campus, facilitating continuity of care and access to specialized treatments.	4.78	*SA*
10. Health-Promoting Schools advocate for policies that support access to comprehensive health services, advocating for resources and funding to enhance health outcomes for students.	4.67	*SA*
Overall Weighted Mean	**4.63**	***SA***

Legend: *4.20 - 5.00-Strongly Agree (SA), 3.40 - 4.19-Agree(A), 2.60 - 3.39- Neutral(N) -1.80 - 2.59 Disagree(DA) , 1.00 - 1.79 -Strongly Disagree(SD)*

Table 10 assesses the role of the Six Pillars of Health-Promoting Schools in ensuring access to school health services. The highest mean score (WM = 4.82) is attributed to Indicator 1, which focuses on ensuring access to a range of health services within the

school, including preventive care, screenings, vaccinations, and treatment for common health issues. This high rating highlights the critical importance placed on providing comprehensive health services directly within the school environment. Respondents strongly agree that access to these services is essential for maintaining student health and supporting their overall well-being.

Conversely, the lowest mean score (WM = 4.44) pertains to Indicator 8, which involves promoting healthy lifestyles and behaviors among students and families through workshops, seminars, and resources on nutrition, physical activity, and mental wellness. While respondents still strongly agree on the importance of these initiatives, this indicator received a slightly lower rating compared to others. This suggests that while promoting healthy behaviors is valued, its perceived impact may be seen as slightly less immediate or direct compared to the provision of health services and emergency protocols.

Overall, the weighted mean score of 4.63 (Strongly Agree) indicates a strong consensus on the importance of access to school health services. These findings align with the research of Moroz, Moroz, and D'Angelo (2020) and Duong et al. (2021), which emphasize the need to address barriers to accessing mental and physical health services in school settings. By ensuring a comprehensive range of health services, promoting regular health check-ups, and establishing partnerships with community health providers, schools can significantly enhance health outcomes for students. The high ratings across most indicators underscore the essential role of accessible health services in fostering a supportive and healthy school environment.

Table 11

Challenges in Implementing the Healthy School Policy of Health-Promoting Schools

Indicators	**WM**	**VI**
1. Ensuring adequate funding and resources for implementing health-promoting initiatives in schools can be a significant challenge.	4.50	*SA*
2. Some stakeholders may resist changes to existing policies and practices, hindering the adoption of new health-promoting measures.	4.20	*SA*
3. Providing comprehensive training and raising awareness among school staff about the importance of health-promoting practices can be challenging.	4.85	*SA*
4. Maintaining momentum and sustaining health-promoting efforts over the long term requires ongoing commitment and support.	4.60	*SA*
5. Encouraging active participation and engagement from parents in supporting health initiatives at school can be difficult.	4.90	*SA*
6. Integrating health-promoting policies with existing academic and administrative policies within the school framework poses challenges.	4.70	*SA*

7. Adapting health-promoting strategies to fit diverse cultural backgrounds and community contexts requires careful consideration and sensitivity.	4.70	*SA*
8. Inadequate physical facilities or infrastructure within schools may impede the effective implementation of health-promoting initiatives.	4.55	*SA*
9. Establishing strong systems for monitoring progress and evaluating the impact of health-promoting policies can be complex.	4.50	*SA*
10. Ensuring adherence to health-promoting guidelines and policies among all stakeholders, including students, staff, and parents, presents ongoing challenges.	4.55	*SA*
Overall Weighted Mean	**4.60**	***SA***

Legend: *4.20 - 5.00-Strongly Agree (SA), 3.40 - 4.19-Agree(A), 2.60 - 3.39- Neutral(N) -1.80 - 2.59 Disagree(DA) , 1.00 - 1.79 -Strongly Disagree(SD)*

Table 11 highlights various challenges in implementing the Healthy School Policy of Health-Promoting Schools. The indicator with the highest mean score (WM = 4.90) pertains to encouraging active participation and engagement from parents in supporting health initiatives at school (Indicator 5). This high rating underscores the critical importance and difficulty of gaining parental involvement, which is essential for the successful implementation of health-promoting activities. Respondents strongly agree that without active parent participation, it can be challenging to foster a comprehensive and effective health-promoting school environment.

Conversely, the indicator with the lowest mean score (WM = 4.20) relates to some stakeholders resisting changes to existing policies and practices, hindering the adoption of new health-promoting measures (Indicator 2). While still strongly agreed upon, this indicator received the lowest rating, suggesting that stakeholder resistance is perceived as a challenge, but possibly less so compared to other logistical and engagement-related issues. This indicates that while change resistance exists, it may be more manageable than the ongoing need for resources, training, and sustained efforts.

The overall weighted mean score of 4.60 (Strongly Agree) reflects a strong consensus on the significant challenges faced in implementing health-promoting policies. These findings align with the research of McHugh et al. (2022), which emphasizes the positive outcomes of health-promoting interventions in schools, such as improved attendance, better concentration, enhanced academic performance, and a reduction in health-related issues among students. However, the challenges highlighted in Table 11 underscore the need for more specific and localized research to address the contextual hurdles and optimize the benefits of these policies in diverse educational settings.

In summary, ensuring active parental engagement and overcoming resistance to change are among the key challenges in implementing health-promoting school policies. Addressing these issues, along with securing adequate resources, providing

comprehensive staff training, and adapting strategies to fit diverse cultural contexts, are crucial for the successful and sustained implementation of health-promoting initiatives in schools.

Conclusions

1. The findings in implementing a healthy school policy significantly enhances learners' academic performance, with a strong emphasis on cognitive skill enhancement and increased enjoyment and motivation as key contributors. While all indicators are positively rated, the emphasis on mental health and stress reduction, though important, is perceived as slightly less impactful compared to other health-promoting initiatives.

2. The implementation of a healthy school policy significantly improved students' academic performance across all grade levels, with the most substantial gain observed in Grade 6. The overall improvement from "Did Not Meet Expectations" to "Very Satisfactory" underscores the critical role of a health-focused school environment in fostering better academic outcomes.

3. The healthy school policy has significantly improved various aspects of learners' physical health, with the most notable impact on encouraging healthier lifestyle choices. Despite the slightly lower rating for physical fitness improvements, the overall strong agreement among respondents emphasizes the policy's effectiveness in fostering a healthier and balanced lifestyle for students.

4. The implementation of a healthy school policy has significantly enhanced learners' mental health and well-being, with the creation of a positive school atmosphere being the most impactful. Despite the slightly lower rating for mental health education and resources, the overall strong agreement highlights the policy's effectiveness in fostering a supportive and nurturing environment for students.

5. The comprehensive analysis across Tables 5 to 10 highlights the multifaceted impact of health-promoting school policies on student well-being. Consistently high weighted mean scores, often surpassing 4.70 (Strongly Agree), underscore broad agreement on the effectiveness of these policies in various domains, from physical environments and social dynamics to health education and access to services. These findings reinforce the critical role of schools in not only educating students but also fostering environments that support their physical, mental, and social health. Integrating the Six Pillars of Health-Promoting Schools, educational institutions can continue to enhance student outcomes and cultivate lifelong health habits essential for thriving in academic and personal pursuits.

6. In conclusion, the challenges identified in Table 11 underscore the complex landscape of implementing health-promoting school policies, with active parental engagement and stakeholder resistance posing significant hurdles. Addressing these challenges alongside securing resources, providing training, and adapting

strategies to diverse contexts is crucial for effectively fostering healthy school environments that benefit student well-being and academic outcomes.

Recommendations

Recommendations for further enhancing the implementation and impact of health-promoting school policies:

1. Develop targeted strategies to increase parental involvement in health initiatives, recognizing its pivotal role in sustaining and amplifying the benefits of these policies. This could include workshops, outreach programs, and integrating health education into parent-teacher communications.

2. Implement proactive communication strategies to address concerns and build consensus among stakeholders, emphasizing the evidence-based benefits of health-promoting initiatives on academic performance and overall student well-being.

3. Provide professional development for school staff to ensure they are equipped to implement and sustain health-promoting practices effectively. This should encompass training on health education, creating supportive environments, and utilizing resources efficiently.

4. Tailor health-promoting policies to fit the cultural backgrounds and community contexts of individual schools, fostering inclusivity and relevance. This adaptation can enhance engagement and compliance among students, staff, and parents.

5. Conduct longitudinal studies to track the long-term impact of health-promoting school policies on student outcomes, including academic performance, mental health, and lifestyle choices. Such research can provide deeper insights into the sustained benefits and areas needing refinement.

6. Identify and disseminate best practices from schools that have successfully implemented health-promoting policies, facilitating peer learning and replication across educational settings. This approach can accelerate the adoption and effectiveness of these initiatives on a broader scale.

7. Foster collaboration between educators, health professionals, policymakers, and community stakeholders to leverage resources and expertise in designing and implementing holistic health-promoting strategies. This interdisciplinary approach can enrich program development and sustainability.

8. Explore additional samples or larger-scale studies to validate the current findings and investigate factors influencing the differential impacts of health-promoting policies across diverse student populations and school environments. This could

include comparative studies across different regions or educational systems to capture broader insights

Compliance with Ethical Standards

In conducting this study, the authors affirm their adherence to rigorous ethical standards. Prior to data collection, informed consent was obtained from all participants, ensuring they were fully informed about the study's objectives, procedures, and their rights, including the freedom to withdraw at any stage without penalty. Anonymity of respondents was strictly maintained throughout the research process, safeguarding their privacy and confidentiality. Measures were implemented to ensure the well-being of participants, with protocols in place to minimize any potential risks associated with participation.

The authors declare no conflicts of interest that could influence the conduct or outcomes of this study. All efforts were made to prevent plagiarism, with proper citations and acknowledgments given for all sources used. The interpretation of findings was conducted objectively, without bias or undue influence, to accurately reflect the data collected. The results of this study are intended solely for research purposes, contributing to the scholarly understanding of health-promoting school policies and their impacts. These ethical considerations underscore our commitment to conducting responsible research and upholding the integrity of scientific inquiry in all phases of this study.

Acknowledgments

The authors would like to express their sincere gratitude to all individuals and organizations who contributed to the successful completion of this study. Special thanks are extended to the respondents who generously shared their insights and experiences, essential for enriching this research. The authors also acknowledge the invaluable support and guidance received from colleagues, mentors, and experts in the field, whose expertise and feedback were instrumental in shaping this work.

Furthermore, appreciation is extended to the developers of the research instruments used in this study, whose meticulous design facilitated the collection of data. Their dedication to advancing research methodologies has greatly benefited this project.

Lastly, the authors are grateful for the institutional support provided throughout this research endeavour, which enabled the exploration of significant insights into health-

promoting school policies. Their commitment to academic excellence and research innovation has been pivotal in the successful completion of this study.

ABSTRACT

Most children who were ardent users of social media sites were of school-age (6 to 12 years old) and considered to be in their formative years. With that, this paper aims to explore the strength of social media's influence on health behaviors and the lifestyle of school-aged children in a selected school in San Juan, with sleep, nutrition/diet, activity, and mental health being the main factors focused on. This quantitative research utilized the stratified random sampling method to collect data. It has been noted that among sleep, activity, nutrition/diet, and mental health, activity has been impacted by the use of social media (weighted mean of 2.52), and it did not obstruct the children from having a fulfilling social life outside of their homes; the rest have been less impacted — Impact to sleep (weighted mean of 2.22), Impact to Nutrition/diet (weighted mean of 2.37), and Impact to Mental health (weighted mean of 2.49). In terms of significance, only the impacts of activity and nutrition/diet had no correlation to each other while the rest of the factors were correlated. Therefore, school-aged children's lifestyles and behaviors were not affected by social media platforms, however, appropriate advice and education should still be provided to support the child's optimal overall growth and development and to prevent any dangers that could be harmful to their health. Furthermore, future researchers are encouraged to engage in this kind of studies so as to further elucidate on how too much exposure to social media could alter one's health.

Keywords: *Social Media, Lifestyle, Behavior, and School-age Children*

INTRODUCTION

Children experience different effects in using social media with the positive effects outweighing the negative one (Bizieff, 2021). It has shown to enhance communication, engagement, and in improving learning experience (Chassiakos et al, 2016). However, the longer-term impacts of social media on growing children's brains have been found to be more detrimental with violence and aggression, sexual content, low body image and self-esteem, physical health, and poor academic achievement to name a few (Bizieff, 2021).

Social media is used significantly more by younger people than older people. The utilization of these platforms became rampant in the pediatric population especially by school-aged children; social media platforms namely Facebook, YouTube, and Tiktok are commonly utilized by this age group. In this modern age, the convenience of social media and the internet has been widely incorporated in daily lives. Since the brains of school-aged children are still developing, they are more receptive to their environment including data coming from these social media sites. This eventually influences brain activity including their behavioral patterns and responses as they get used to these social media's dopamine-like effects on their brain. Prioritizing social media use over healthy practices like getting enough sleep, exercising, and eating right could lead to compromising a child's overall development and growth. Filipino pediatricians acknowledge the negative effects of social media use, however, these are not often discussed during consultations. Therefore, enhanced media training in residency programs is necessary through addressing obstacles and social media education during anticipatory guidance to improve counseling. (Orduna et al., 2019).

This study aims to determine if social media platforms have an influence on the health behavior and lifestyle of school-aged children in a selected school in San Juan City. The results of this study, titled "The Impact of Social Media Platforms on School-Aged Children's Lifestyle and Health Behavior in a Selected School in San Juan City," will be shared with the selected school with the aim of informing the administration and faculty of the impacts of social media to their elementary student's behaviors and lifestyle. With the rampant use of social media by school-aged children, knowing the degree of strength social media has on these children may serve as a stepping stone for better behavioral and lifestyle management with the help of their guardians and enhanced nursing care, especially that of nurses whose line of work directly affects children.

Research Questions

Nowadays, social media usage is significantly high by younger people than older people. The utilization of these platforms became rampant in the pediatric population especially by school-aged children. In this modern age, the convenience of social media and the internet has been widely incorporated in daily lives. Thus, this research aims to determine the Impact of Social Media Platforms on School-age Children's Lifestyle and Health Behavior. This also sought to find the answers to these questions:

1. What is the profile of the respondents in terms of:
    - 1.1 Sex of the parent/guardian
    - 1.2 Sex of the child
    - 1.3 Age of the child
    - 1.4 Grade level of the child

2. What are the Children Social Media Platforms involvement in the following:
    - 2.1 Own gadget
    - 2.2 Type of gadget being used
    - 2.3 Social Media account
    - 2.4 Access to social media platform
    - 2.5 Type/s of social media platforms

3. What is the frequency of the Children's usage of Social Media Platforms on a daily basis in terms of:
    - 3.1 Time
    - 3.2 Hours

4. What exposure to social media platforms affect the lifestyle of those school age children in a selected school in San Juan City in terms of:
    - 4.1 Impact to sleep
    - 4.2 Impact to activity

5. What effect does daily use of social media platforms like Facebook, YouTube, and Tiktok on the health behavior of school-age children in a selected school in San Juan City in terms of:
    - 5.1 Nutrition/Diet
    - 5.2 Mental Health

6. Is there a significant relationship between the impact of social media platforms on school-age children's lifestyle and health behavior in a selected school in San Juan City?

METHODOLOGY

The Quantitative research method was used to investigate this study. Quantitative approach collects quantifiable information from a larger number of participants to be used for statistical analysis. This method was delivered through survey and questionnaire. This research was based on the analysis and findings of gathered data in this area. Therefore, a descriptive research methodology was used to gain accurate and factual profiling.

The population were parents of School-age Children in a selected School in San Juan, both male and female. The used sampling method in this study was stratified random sampling due to the respondents being divided into a smaller scope which were based on a specific age-range and grade level which was 6 to 12 years old, grades 1 to 6 children.

The respondents who answered our google form surveys were the parents or guardians of the school-age children in San Juan City. The said respondents should meet the criteria in order for their answers to be valid and accepted. First, parents/ guardians should be 18 - 59 years old. Should be able to read and understand English. Should be able to give informed consent and must be living with the child. However, those who have serious physical and mental disabilities were excluded.

The researchers constructed a 24-item questionnaire entitled "The Impact of Social Media Platforms on School-Aged Children's Lifestyle and Health Behavior in a Selected School in San Juan". It contained one cover letter with a consent form and guidelines explaining to the respondents the importance of their response to the study. The questionnaire was designed with a scale format, with a rating of 1 being no impact and a rating of 4 with high impact. It was further validated by a pediatrician and then distributed once approval had been granted. To test the reliability of the study, Cronbach alpha was utilized and had a value of 0.76 which is interpreted as acceptable. The questionnaire divided in profile of the respondents, information on the types of social media platforms the school-age children were engaged into, exposure to social media platforms which affected the lifestyle those school-aged children in a selected school in San Juan City in terms of impact to sleep and activity and effect of daily use of social media platforms on the health behavior of school-age children in a selected school in San Juan City in terms of impact to nutrition/diet and mental health. It was transferred to google forms to have easy access to the respondents. It used an arbitrary scale to help interpret and determine the impact

of social media platforms on school-age children's lifestyle and health behavior in a selected school in San Juan City.

Arbitrary Scale used to interpret the gathered data:

Scale	Range	Verbal Interpretations	Adjectival Description
4	3.26 - 4.00	Strongly Agree	With High Impact
3	2.51 – 3.25	Agree	With Impact
2	1.76 – 2.50	Disagree	With Less Impact
1	1.00 – 1.75	Strongly Disagree	With No Impact

RESULTS

A formal permission coursed through a letter was secured to the selected school in San Juan City. The researchers then constructed a 24-item questionnaire checklist entitled "The Impact of Social Media Platforms on School-Aged Children's Lifestyle and Health Behavior in a Selected School in San Juan", and had it validated by an expert. Upon distribution, all of the participants were informed of the purpose, expectations and research methodology, and they were asked to sign consent forms explaining that the survey was strictly confidential and voluntary. The questionnaire was disseminated via Google Form. The data gathered were then collected, tallied and tabulated.

Table 1: Profile of the Parents / Guardian in terms of sex

Sex	Frequency	Percentage
Male	12	24
Female	38	76
Total	**50**	**100%**

Table 1 shows that most of the guardians/parents of the school-aged children who answered the questionnaire were 38 females (76%) followed by 12 males (24%).

Table 2: Profile of the Child in terms of sex

Sex	Frequency	Percentage
Male	39	58
Female	21	42
Total	**50**	**100%**

Table 2 shows the sex of school-age children; respondents were 39 boys (58%) and 21 girls (42%).

Table 3: Profile of the Child in terms of Age

Age	Frequency	Percentage
12	11	22
11	4	8
10	7	14
9	2	4
8	9	18
6	17	34
Total	**50**	**100%**

Table 3 indicates the Age of School-age Children; respondents include 17 children under 6 years old (34%), 9 children under 8 years old (18%), 2 children under 9 years old (4%), 7 children under 10 years old (14%), 4 children under 11 years old (8%), and 11 children under 12 years old (22%).

Table 4: Profile of the Child in terms of Grade Level

Grade Level	Frequency	Percentage
6	13	26
5	4	8
4	6	12
3	8	16
2	3	6
1	16	32
Total	**50**	**100%**

Table 4 shows the Grade level of School-aged Children; respondents included 16 children from Grade 1 (32%), 3 children were in Grade 2 (6%), 8 children were in Grade 3 (16%), 6 children were in Grade 4 (12%), 4 children were in Grade 5 (8%) and 13 children were in Grade 6 (26%).

Table 5: School-age Children own a gadget/s

Children	Frequency	Percentage
Yes	44	88
No	6	12
Total	**50**	**100%**

As shown in table 5, 88% of the school-age children owned a gadget/s and 12% did not own any gadget/s.

Table 6: School-age Children Type of Gadget/s

Gadgets	Frequency	Percentage
Mobile Phone	26	52
Tablet/Ipad	19	38
Laptop	2.5	5
Laptop/tablet	2.5	5
Total	**50**	**100%**

Table 6 described the types of gadgets used by the school-age children to access social media platforms. Majority which was 52% respondents used Mobile Phones to access social media. Followed by 38% respondents who used Tablet/Ipad, 5% respondents used Laptop and 5% respondents used both Laptop/Tablet and Cellphone/Ipad.

Table 7: School-aged Children have Social Media Account

Children	Frequency	Percentage
Yes	32	64
No	18	36
Total	**50**	**100%**

Table 7 shows that about 64% of the parents/guardians answered that their children had social media accounts and 36% had answered that their children did not have any social media accounts.

Table 8: School-age Children have access to Social Media Account

Children	Frequency	Percentage
Have access	43	86
Do not have access	7	14
Total	**50**	**100%**

Table 8 shows 86% percent responded that their children do not have their own gadget/s but still had access to any social media platforms. While 14% responded that they did not have neither their own gadget nor access to any social media platforms.

Table 9: School-age Children Type Social Media Platforms

Gadgets	Frequency	Percentage
Youtube	35	43
Tiktok	24	29
Facebook	23	28
Total	**82**	**100%**

Table 9 indicates that *YouTube* was found to be the most frequent social media platform among the school-aged children based on their parents/guardians (70%), followed by *Tiktok* (48%), and *Facebook* (46%) respectively. This shows that the simultaneous oral-based interactions made possible by platforms like YouTube and Tiktok were more prevalent on the social media sites frequented by school-age children.

Table 10: School-age Children Daily usage of Social Media Platforms in terms of times

Times	Frequency	Percentage
more than 5	15	30
4-5	6	12
3-4	16	32
1-2	13	26
Total	**50**	**100%**

Table 10 shows how related to the daily frequency usage of social media platforms. Almost 32% of the respondents acknowledged that they used these platforms at least 3 to 4 times daily. In particular, 30% of them reported that they used it more than 5 times daily, 26% of them used it 1 to 2 times daily and 12% used it 4 to 5 times daily.

Table 11: School-aged Children Daily usage of Social Media Platforms in terms of Hours

Hours	Frequency	Percentage
more than 5	10	20
4-5	6	12
3-4	16	32
1-2	18	36
Total	**50**	**100%**

Table 11 shows the hours' children spent in a day in using social media platforms. Around 36% responded that their children used social media in a day for about 1 to 2 hours. While 32% answered that their usage of social media lasted for about 3 to 4 hours. 12% of them

voted for 4 to 5 hours. Lastly, 20% had more than 5 hours of usage of social media in a day.

Table 12: Exposure to Social Media Platforms Affect the Lifestyle those School aged Children in a Selected School in San Juan City in terms of Impact to Sleep

Impact to Sleep	Weighted Mean	Verbal Interpretation
1. My child has had a hard time sleeping after consistently using social media before bedtime.	2.46	Agree
2. Social media use before bedtime helps my child relax better.	2.20	Disagree
3. My child prefers to stay up all night to use social media than to rest.	2.24	Disagree
4. My child uses social media to help him/her sleep.	2.18	Disagree
5. My child's energy levels are low the morning after using social media.	2.14	Disagree
6. My child wakes up refreshed when he/she uses social media before bedtime.	2.10	Disagree
Overall Weighted Mean	**2.22**	**Disagree (With Less Impact)**
Standard Deviation	**.12712**	

Table 12 shows the exposure to social media platforms affect the lifestyle of those school-age children in a selected school in San Juan City in terms of Impact to Sleep. The highest computed weighted mean of 2.46 was found in the statement number 1, "My child has had a hard time sleeping after consistently using social media before bedtime" with verbal interpretation. This implied that the parents agreed that their child had a hard time sleeping after using social media like Facebook before going to bed.

Based on the finding of Arora et al. (2013) using cell phones, playing video games, watching TV, or browsing the internet all shorten or worsen sleep. While it could be noticed that the lowest computed weighted mean of 2.10 was found in statement number 6, "My child wakes up refreshed when he/she uses social media before bedtime". This meant that parents disagreed with this statement. This implies that even if their child used social media before going to bed, parents still observed their child woke up refreshed and rested.

The over-all computed weighted mean was 2.22 with verbal interpretation of disagree. This meant that the exposure to social media platforms affected the lifestyle of those school-aged children in a selected school in San Juan City in terms of Impact to sleep had ***Less Impact.***

Table 13: Exposure to Social Media Platforms Affect the Lifestyle those School-aged Children in a Selected School in San Juan City in terms of Impact to Activity

Impact to Activity	Weighted Mean	Verbal Interpretation
1. My child still has the time to go outside and play with friends.	3.22	Agree
2. My child prefers to stay at home rather than engaging in social activities.	2.06	Disagree
3. Social media platforms help my child to perform exercises (watching videos about exercise)	2.30	Disagree
4. Utilization of social media platforms persuades my child to become lazy.	2.40	Disagree
5. He/She still has the time to engage in exercising activities.	2.66	Agree
6. My child prefers to play/use gadgets rather than playing outside.	2.50	Disagree
Overall Weighted Mean	**2.52**	**Agree (With Impact)**
Standard Deviation	**.39606**	

Table 13 shows exposure to social media platforms affected the lifestyle of those school-age children in a selected school in San Juan City in terms of Impact to Activity. The highest computed weighted mean of 3.22 was found in the statement number 1, “My child still has time to go outside and play with friends” with verbal interpretation, agree. This meant that even when kids were into social media platforms they still found time to mingle with their friends as observed by the parents especially during the pandemic when they were not allowed to go out with their friends.

While the lowest computed mean of 2.06 was found in statement number 2, “My child prefers to stay at home rather than engaging in social activities. This validated the

response of the parents that their children still would like to go out with their friend instead of just staying at home.

The over-all computed weighted mean was 2.52 with verbal interpretation, agree. This meant that exposure to social media platforms affected the lifestyle of those school-age children in a selected school in San Juan City in terms of impact to activity ***With Impact*.**

Promoting smart media use, technology could become a beneficial aspect of childhood. On public television, preschoolers could learn the alphabet, grade schoolers could use educational apps and games, and teenagers could conduct online research (Ben-Joseph, 2022).

Table 14: Effect of Daily use of Social Media Platforms on the Health Behavior of School-aged Children in a Selected School in San Juan City in terms of Impact to Nutrition/Diet

Impact to Nutrition /Diet	Weighted Mean	Verbal Interpretation
1. My child focuses on eating without the distraction of social media platforms.	2.76	Agree
2. Social media influences my child to eat unhealthy foods.	2.38	Disagree
3. Social media positively affects my child's food choices.	2.30	Disagree
4. My child refuses to eat while watching social media platforms.	2.26	Disagree
5. Social media influences my child to eat healthy foods.	2.32	Disagree
6. My child loses his/her appetite due to usage of social media platforms.	2.22	Disagree
Overall Weighted Mean	**2.37**	**Disagree (With Less Impact)**
Standard Deviation	**.19704**	

Table 14 shows the effect of daily use of social media platforms on the health behavior of school-aged children in a selected school in San Juan City in terms of Impact to Nutrition/Diet. The highest computed weighted mean of 2.76 was found in the statement number 1, "My child focuses on eating without the distraction of social media platforms"

verbally interpreted, agree. This implied that guidance of the parents was an important factor to discipline their child when it comes to eating time.

Parents sitting together with their children at the dining table was a positive implication. The lowest computed weighted mean of 2.22 was found in the statement number 6, “My child loses his/her appetite due to usage of social media platforms” with verbal interpretation disagree. This validated the highest computed weighted mean. This implied the discipline/rules had to be communicated in terms of breakfast/lunch/dinner. This would be a great help so nutrition/diet would not be affected.

The overall weighted mean of 2.37 with verbal interpretation disagree This implied that there was ***Less Impact*** on the daily use of social media platforms on the health behavior of school-age children in a selected school in San Juan City in terms of Impact to Nutrition/Diet.

Stamatiou et al. (2021), study on social media constructs opportunities and challenges for public health promotion. Social media users habitually come up with nutrition and body-related information shared by health and non-health professionals. In this study, social media were found to be the preferred nutrition information source; Instagram, YouTube and Facebook were said to be the most used platforms. Healthcare professionals like Dieticians’ social media accounts were said to be the most trusted source. However, user’s dietary options appeared affected by social media; in terms of their feeling about food consumption and seeing delicious images of food yet less nutritious food.

Table 15 shows the effect of daily use of social media platforms on the health behavior of school-age children in a selected school in San Juan City in terms of impact to mental health. The highest computed weighted mean of 3.12 was found in the statement number 3, "Social Media platforms have helped my child in his/her schoolworks” with verbal interpretation, agree. This implied that social media helped students in finding resources in their schoolworks. This meant social media had positive uses in the studies of children. There are available applications that can be helpful.

While the lowest computed weighted mean of 2.08 was found in the statement number 2, “My child prefers to stay at home rather than socializing with other kids outside our house” with verbal interpretation, disagree. This meant kids still wanted to play outside with their friends.

Table 15: Effect of Daily use of Social Media Platforms on the Health Behavior of School-aged Children in a Selected School in San Juan City in terms of Impact to Mental Health

Impact to Mental Health	Weighted Mean	Verbal Interpretation
1. Social media has helped in boosting my child's confidence.	2.64	Agree
2. My child prefers to stay at home rather than socializing with other kids outside our house.	2.08	Disagree
3. Social media platforms have helped my child in his/her schoolworks.	3.12	Agree
4. Social media has decreased my child's confidence and self-esteem.	2.14	Disagree
5. My child remains calm and attentive while using social media platforms.	2.62	Agree
6. My child has been more aggressive since his/her exposure to social media.	2.32	Disagree
Overall Weighted Mean	**2.49**	**Disagree (With Less Impact)**
Standard Deviation	**.38878**	

The over-all computed weighted mean was 2.49 verbally interpreted disagree. This implied that there was ***Less Impact*** on the effect of daily use of social media platforms on the health behavior of school-age children in a selected school in San Juan City in terms of impact to mental health.

Excessive use of social media indeed affects one's health like being addicted to smartphones because of the fear of missing out. Social media usage has been correlated with anxiety, loneliness, depression and social isolation (Ostic et al, 2021).

Bizieff (2021) discovered that while social media can have a variety of effects on kids, the bad effects much exceed the good ones. It has been discovered that social media and its long-term effects on children's developing brains have a greater impact.

Table 16: Test of Relationship between Impact of Social Media Platforms on School-aged Children's Lifestyle and Health Behavior in a Selected School in San Juan City in terms of Impact to Sleep

Health Behavior	Pearson r Value	Sig-Value	Decision	Verbal Interpretation
Nutrition/Diet	0.272	0.028	Reject	Significant
Mental Health	0.673	0.000	Reject	Significant

Table 16 shows the relationship between the impact of social media platforms on school-age children's lifestyle and health behavior in a selected school in San Juan City in terms of impact to sleep. The computed Pearson r value for health behavior in terms of nutrition was 0.272 with a significant value of 0.028 which was less than the level of significance 0.05. Therefore, the decision was to reject the hypothesis, there was a significant relationship between the impact of social media platforms on the school-age children's lifestyle and health behavior in terms of impact to sleep. This implied that children's sleeping habits affected their nutrition/diet since most of their time was spent on social media platforms.

While in terms of impact of sleep and mental health the computed Pearson r value was 0.673 with significant value of 0.000 which was less than the level of significance 0.05. Therefore, the decision hypothesis was rejected. Khare et al. (2021) stated in his study that half of the population of the respondents claimed that they encountered sleep problems during the pandemic and that their screen time using electronic gadgets have also increased, putting them at risk of sleep deprivation and other sleeping problems.

Table 17: Test of Relationship between Impact of Social Media Platforms on School-aged Children's Lifestyle and Health Behavior in a Selected School in San Juan City in terms of Impact to Activity

Health Behavior	Pearson r Value	Sig-Value	Decision	Verbal Interpretation
Nutrition/Diet	0.108	0.229	Accept	Not Significant
Mental Health	0.410	0.002	Reject	Significant

Table 17 shows the test of relationship between impact of social media platforms on School-age Children's Lifestyle and Health Behavior in a Selected School in San Juan City in terms of Impact to Activity. The computed Pearson r value in terms of nutrition/diet was 0.108 with significant value of 0.229 which was greater than 0.05, therefore there was no significant relationship between the impact of activity and nutrition/diet. The decision was to accept the hypothesis not significant.

This implied that in terms of the impact of activity in social media platforms of children did not affect their nutrition/diet.

While the computed Pearson r value in terms of impact of activity and mental was 0.410 with significant value of 0.002 which was less than the level of significance 0.05, therefore the hypothesis was rejected there was significant relationship between the impact of activity and mental health.

HelpGuide.com (2022) pointed out that social media plays a huge role in one's mental health. Being able to connect with others through social media can ease stress, anxiety, depression, boost self-worth, provide comfort and joy, prevent loneliness, and even add years to one's life. However, on the other hand, everything that is too much can lead to serious risk to one's mental and emotional health. Indicators that social media adversely affects one's health include; spending more time on social media than with real world friends.

DISCUSSION

The aim of this study is to identify the Impact of Social Media platforms on School-aged Children's Lifestyle and Health Behavior in selected School in San Juan City, by considering their personal background profiles, lifestyles, involvement in social media, and knowledge in utilizing these platforms. The researchers utilized a questionnaire validated by an expert and utilized it as the main instrument for data collection.

In promoting smart media use, technology can become a beneficial aspect of childhood. Preschoolers can gain the understanding of the alphabet through public television, grade schoolers can utilize educational apps and games, and teenagers can conduct online research on the internet. However, there are some disadvantages to media use as well such as the obesity link, watching violence, sleep & mental health disorders, and exposure to commercials. Children who engage in social media use in their bedrooms frequently have trouble falling asleep at night. Those exposed to cyberbullying through media may develop depression and consider suicide, and those who excessively use media are more likely to be overweight. The inactivity of the children will increase their

likelihood of snacking when glued to screens. They are also exposed to a number of advertisements that promote the intake of commercial foods like potato chips and sugary drinks, which immediately become their snacks of convenience. It has also been recommended that parents encourage children to moderately use smart media by controlling their screen time. (Ben-Joseph, 2022).

The first research question focuses on the profile of the respondent. Most of the guardians/parents of the school-age children who answered the questionnaire were female, which ended up to 38 participants or 76% of the respondents. The sex of school-aged children; respondents were boys, resulting in 39 boys (58%). Age of School-age Children were mostly 6 years old (34%) and in terms of Grade level, 32% of the population came from Grade 1.

Although social media use is demonstrated to be of utility, an excessive or non-correct use may be a risk factor for mental health, including depression, anxiety, and addiction. Excessive use can also increase physical problems due to sedentary lifestyle and may also correlate to inadequate nutrition leading to weight gain, obesity, dental caries and unhealthy eating behavior. Social media can also cause problems with body image and acceptance especially with younger girls with lower self-esteem. Children and adolescents who use social media for several hours a day are also at higher risk of developing behavioral problems, cyberbullying, online grooming, sleep difficulties, eye problems (ex are blurry vision, irritation, burning sensation, conjunctival infection and dry eye disease), headache. Moreover, uncontrolled social media use can also lead to sexting and exposure to pornography, unwanted sexual material online and early sexual activity. The public and medical awareness must rise above this topic. There should be new prevention that must be developed. The Pediatricians should be reminded to have a screening for social media exposure including the amount of time and content, during visits. They can also advise parents on how to steer their children towards suitable content and warn them about the possibility that digital commerce could encourage the consumption of junk food, unhealthy diets and sweetened foods, contributing to obesity and overweight. On the other hand, it is necessary to advise in favor of a good diet, enough exercise, and sleep. Additionally, they want to encourage face-to face interaction and restrict social media use for online conversation. Pediatricians may advise parents to establish guidelines and plans for social media and media device use at home and during the day. (Bozzola et al. 2022)

The second research question highlights the social media platforms involvement. 44 children or 88% of the population owns a gadget. The types of gadgets used by the school-age children to access social media platforms, majority of them used Mobile Phones resulting in 52% of the respondents. In terms of social media accounts, 32 of

them or 64% responded that their children have their own account. In connection, 86% responded that their children did not have their own gadget/s but still had access to any social media platforms. Lastly, YouTube was found to be the most frequently used social media platform among school-aged children, having 43% of the population.

Gagalang (2022) explored the social media use of Filipino learners and its impact on their reading attitudes and competence. He also mentioned that social media use in the Philippines was highly active with an average time of 3 hours and 53 minutes while the country ranked last among the 79 participating countries in reading comprehension in the 2018 Program for International Student Assessment (PISA). This has led to the discovery that university students' reading skills are negatively impacted by the widespread usage of social media. And although social media platforms do occasionally disseminate information, pique students' interest and analytical capacity, and offer a space for information dissemination and outputs submission, but they typically perform less educational functions.

The third research question features the frequency of the Children's usage of Social Media Platforms on a daily basis in terms of time and hours. The daily frequency usage of social media platforms of the respondents acknowledged that they used these platforms at least 3 to 4 times daily (32%) and around 36% responded that their children used social media in a day for about 1 to 2 hours.

The fourth research question explains the impact of social media platforms in Sleep and Activity of the School-age Children. In terms of Impact to activity, the exposure to social media platforms resulted in having ***Less Impact*** compared to Impact to Sleep which ended up having ***More Impact***.

Rote et al. (2015) conducted a randomized trial to examine the efficacy of walking intervention using social media to increase physical activity. Social media platforms facilitate social networks. The most popular of which is Facebook and can be an effective way to increase physical activity among the users. The final result of the study demonstrated the potential effectiveness of using Facebook to offer a social support group to increase physical activity, specifically in young women. According to them “women in the Facebook Social Support Group increased walking by approximately 1.5 miles/day more than women in the Standard Walking Intervention which, if maintained, could have a profound impact on their future health.” Also, users who are friends or a part of the same group can have common grounds/interest which makes it easier to promote such healthy behavior. These physical activities include walking, exercising and running. Summing this up, the use of social media can also be beneficial to several aspects of health (eg, weight loss, healthy eating habits, and reproductive health).

The fifth research question pointed out the effect of social media platforms on the health behavior of school-age children in a selected school in San Juan City in terms of Nutrition/ Diet which resulted in ***Less Impact*** and in Mental Health with ***Less Impact*** as well.

Utilization of these platforms has escalated in the past few years. Websites and other online tools that facilitate user interactions by allowing users to exchange information, opinions, and interests are referred to as social media. People use these for various reasons such as enjoyment, creating connections, and for further knowledge. Above all, the study found out that adolescent and young adults allocate increased time on online platforms. Moreover, the study mentioned that there are increased concerns with regards to potential adverse effects connected with excessive usage of these platforms especially on cognitive health. Excessive utilization indeed affects one's health like being addicted to smartphones because of the fear of missing out. Social media usage has been correlated with worry, depression and social isolation. (Ostic et al, 2021).

The sixth research question emphasizes the significant relationship between the impact of social media platforms on school-age children's lifestyle and health behavior in a selected school in San Juan City. Tests of the relationship between impact to sleep and nutrition/diet ended up to have a significant relationship. In terms of impact to sleep and mental health also have a significant relationship. Test of relationship between impact to activity and nutrition/diet was brought to not have a significant relationship. Lastly, the impact to activity and mental health was caused to have a significant relationship.

You et al. (2021) reported that the study's findings indicated that a sizable portion of kids utilize social media by the time they are nine years old. Their findings indicate that kids from families with one parent and kids whose moms have little formal schooling spend longer on the internet. Children who had fathers with low levels of education or from low-income backgrounds were more likely to be exposed to social networking sites. It is important for health practitioners to understand how often youngsters access social media. The results of this study provide evidence in favor of the necessity for intervention designers to create strategies for responsible social media use. Future studies in young children are advised to assess their exposure to instant messaging and social networking sites, factors influencing usage, and correlations with relevant health outcomes.

Conclusions

Children in school had experienced several changes as an outcome of the internet. Based on the gathered data. In the questionnaire, many female parents responded. Boys who were six years old and in grade one were more active on social media platforms. Even those without their own gadgets, most school-aged children had access to social media

networks. On the online applications that school-aged children frequent most, YouTube, Tiktok, and Facebook were more prevalent. The respondents stated that their children utilized these platforms for 1- 2 hours every day, at least three to four times per day. Even though the parents acknowledged that their child struggled to sleep after using social media before bedtime, such as Facebook, it did not have an impact on the child's behavior in general. In addition, parents had noticed that even when children were using social media platforms, they still found time to interact with their friends. This showed that even though school-age children used social media platforms, it did not obstruct them from having a fulfilling social life outside of their homes. The parents also confirmed that rules and regulations must be explained in terms of breakfast, lunch, and dinner. In addition, research on children has shown useful applications for social media. The fact that the parents and guardians said that social media had aided their kids in completing their homework and academics suggested that social media might offer some advantages to school-age kids, but excessive usage of the platform could still harm kids' mental health. Despite spending a greater amount of their time on online platforms while eating, the children's use of these platforms had no impact on how they eat. Sometimes kids might feel anxious, worn out, or unhappy, but what they really needed was adequate sleep. School-age children's lifestyles and behaviors were not affected by social media platforms, but appropriate advice and education should still be provided to support the child's optimal overall growth and development and to prevent any dangers that could be harmful to their health.

Recommendations

In particular, with other research studies, there is still need to improve in terms of data, design, and interpretation. To further improve this study, the researchers recommend the future researchers and nursing students;

1. Encourage the parents/ guardians to have a healthy media use like limitation in engaging with social media platforms.
2. Conduct a seminar with parents / guardians educating them about having a family media use plan for their children.
3. Research for other aspects or situations that prolonged exposure in social media could affect one’s health.
4. Encourage more students to engage with this kind of studies and elucidate further how too much exposure to social media could alter health.
5. Explore other social media platforms that can influence and further improve one’s health, lifestyle, and behavior.
6.

Compliance with Ethical Standards

In conducting the study, ensuring the protection, rights, dignity, and welfare of the respondents were prioritized. A formal permission was submitted to the selected school in San Juan City for approval. The researchers then constructed a 50-item questionnaire checklist entitled “The Impact of Social Media Platforms on School-Aged Children’s Lifestyle and Health Behavior in a Selected School in San Juan”, and had it validated by experts. Upon distribution, all of the participants were informed of the purpose, expectations and research methodology, and they will be asked to sign consent forms explaining that the survey is strictly confidential and voluntary. The questionnaires will be disseminated via Google Forms. The data gathered will then be collected, tallied and tabulated. Confidentiality and Right to Decline were proposed to all the respondents; they were informed that all personal information gathered will be used only for the purpose of acquiring details useful for the research.

Moreover, by participating in our nursing research as a respondent, any information given to us will be used for the purposes of nursing research and any other healthcare related things.

The personal data provided relating to the child will be retained by the researchers for the purposes of school related activities and be able to provide such interventions relating to this kind of problem. This may also require the personal data as well as your child’s data including relevant details in their daily lives to be shared with the researchers. The researchers assured its respondents that confidential information would not be discussed to anyone unless they authorize the researchers to do so.

Acknowledgements

This nursing research is a product of hardwork and knowledge, with constant engagement and contributions of remarkable individuals. The following individuals have helped and assisted the researchers, and for that the researchers are very pleased.

Above all, the researchers would want to give praise to our Almighty God, for the grace and enlightenment that He has vested upon us throughout our nursing research entitled “The Impact of Social Media Platforms on School-Aged Children's Lifestyle and Health Behavior in a Selected School in San Juan City.”

To our dearest parents and family members, we are extremely grateful for all the love, prayers, and sacrifices. The profound understanding, the money matters, the never-ending reassurance and those heartening speeches you have given us, we appreciate all of it. It gave us strength while spending countless nights finishing this research.

To our thesis adviser, Prof. Elwyn Brian Javier, for providing us invaluable supervision and support during the course of our research study. We would also like to thank him for his immense knowledge, empathy and patience that he imparted to us. It was a great

privilege and honor to work and study under his guidance, who is willing to go above and beyond to help his students achieve such great success.

We would also like to show our appreciation by reaching out to the school principal, Mrs. Rojan Llarena, for giving us the chance to oversee our paper among the parents/guardians of school-aged children. Additionally, we thank all of the participants who voluntarily contributed and cooperated fully. Our Research paper would not be possible without them.

We would also like to extend our acknowledgment to our research panelist, Dr. Lersan Del Mundo, Dr. Romeo Mostoles Jr., Prof. Kevin De Vera and our beloved Dean Josery Cariño, who provided encouragement, constructive criticism, insightful remarks, and recommendations on how to make our research better. Also, to Dr. Marilyn Obod, the head of World Citi Colleges (WCC) – Research and Development and Publication Office.

To our thesis lecturer, Prof. Walter Cabale, for sharing his knowledge to us for the improvement of our thesis. We are grateful for his guidance and persistently checking on us.

And last but not least, congratulations to ourselves for persevering through it all while working hard as a team. We give ourselves credit for sticking with it despite all the obstacles, disappointments, and frustrations we have faced. Without the confidence we have in one another and the diligence we have put into our paper, it would not be as successful as it is. These experiences will be very beneficial as we move forward in chasing our objectives in life.

THE LEARNING LANDSCAPE: MAPPING EMERGING PEDAGOGIES TO DIVERSE STUDENT STYLES FOR ENHANCED ACHIEVEMENT

Lyrissa Jane M. Carpina

Madalunot Elementary School, Pinbacdao, Samar, Philippines

https://doi.org/10.5281/zenodo.12216851

ABSTRACT

Effective education hinges on aligning teaching methods (pedagogies) with students' preferred learning styles. This dynamic interplay between diverse teaching styles and student learning preferences ultimately impacts academic performance. This study determined the teaching pedagogies and students' learning styles: their emerging realities to the academic performance of the District of Daram II, Schools Division of Samar, during the school year 2022-2023. Utilizing a quantitative approach and a survey questionnaire, it was revealed that some students learn best by doing, others by seeing, and some through reading or listening; thus, they seem aware of what helps them learn best. Meanwhile, teachers who use lots of different teaching methods will help most students succeed. Teachers who know how their students learn best can tailor how they teach. Students should think about how they learn best and let their teachers know. Teachers need support to learn lots of different ways to teach. It was concluded that students demonstrate unique learning style preferences, highlighting the need for teachers to differentiate their instruction. Most students show adaptability and awareness of how they learn best. This self-knowledge can be a powerful tool if students are empowered to use it. Varied teaching approaches and awareness of students' learning styles seem positively correlated with academic performance. This underscores the importance of teacher adaptability and diverse instructional methods and recognize the complexity of student achievement. Factors like motivation, engagement, undiagnosed learning challenges, and access to support systems all play a role and need to be considered along with learning styles.

Keywords: *Learning Styles, Teaching Pedagogy, Auditory, Tactile, Visual*

INTRODUCTION

Teaching pedagogies and learning styles play a crucial role in this academic world. Diverse styles of teaching and learning occur due to the reaction among students in relation to the teaching styles that are demonstrated by the teachers in the classroom, and this could affect the students' learning styles preferences that lead to their academic performance in school. Moreover, the diversity in teaching and learning styles preferences would result in matches and mismatches between the teachers' teaching pedagogies and students' learning styles. Teachers know that no two students are the same and that there is a spectrum of different learning styles. Teaching styles, therefore, have great impact to students' ability to learn and comprehend. This is why knowledge of different students' learning styles is essential for teachers.

Individuals learn in different ways using several learning styles, but lecturers may not always share material and learning experiences that match students' learning preferences. Mismatches between learning and teaching styles can lead to disappointment with students are taking, and lead to underperformance among them (Subramaniam,2019). Teaching profession requires intelligence, skills, insights, and diligence in succeeding different way to fulfill the challenge of classrooms (Kardia & Wright, 2004). Teaching style is a multitask phenomenon that illuminates how teachers teach knowledge; accomplish classroom work, and supervision of students (Sheikh & Mahmood, 2014). However, learning style refers to an individual's preferred way of processing new information for efficient learning. Rita Dunn described the concept of learning style as "a unique way developed by students when he was learning new and difficult knowledge. Learning style is about how students learn rather than what they learn. The learning process is different for each individual; even in the same educational environment, learning does not occur in all students at the same level and quality (İlçin,2018).

According to Ariola (2012), "Learning style is the composite of characteristics of cognitive, affective and psychological factors that serve as relatively stable indicators of how a learner perceives, interacts with, and responds to the learning environment." According to Stewart and Felicetti (1992), learning is influenced by the educational conditions under which a student learns. Therefore, learning style is not just concerned about what students need to learn but rather how they want to learn in the most effective way. One of the most significant challenges in learning is for individuals to take responsibility for their own learning. When learners take responsibility for their own learning, they attribute meaning to the process of learning, leading to effective learning (Nzesei, 2015).

Teachers need to understand the process of individual learning. In the learning process, individuals are interacting with the environment uniquely processing the information and requiring a unique environment for learning. Thus, addressing the challenge in facilitating learning conditions while organizing such interactions should

be taken into consideration to help individuals to optimize their learning (Sighn, 2017). In the past decades, many educators widely applied teacher-centered strategies to impart knowledge to learners' comparative to student-centered strategies. Until today, questions about the effectiveness of teaching strategies on student learning have consistently raised considerable interest in the thematic field of educational research (Hightower et al., 2011).

Moreover, research on teaching and learning constantly endeavor to examine the extent to which different teaching strategies enhance growth in student learning. Effective teaching requires flexibility, creativity, and responsibility to provide an instructional environment able to respond to the learner's individual needs. Tomlinson (2001) puts it beyond the experiential evidence that pervasive uniformity in teaching fails many learners. There is a reason in both theory and research to support a movement towards an instruction attentive to students' variance manifested in at least three areas: the student's readiness, interest, and learning profile. Nowadays, one of the challenges in teaching-learning process is knowing the most effective teaching approach and strategies that are also in line with the learning styles of the students.

Furthermore, aside from learning styles and teaching strategies, academic achievement is also considered as the center of interest in educational research. Studying the issue of achievement has extended beyond simple to complex issues of intelligence and prior academic achievement into how learners interact with the learning material and teaching strategies.

A good teacher must change his behavior towards or the development of skills and good character that help obtain their purpose for themselves and the community as well. The students will obtain more information, retain more knowledge and perform better when students' learning styles are aligned with teachers' teaching styles. Damavandi (2011) stated that students understand and recall better when the teachers' teaching styles match the learning styles of the students. To do this, the faculty members need to review continuously their teaching styles based on learning styles of the students to ensure that students are actively participating in class to further improve their students' academic performance. Good academic performance can also be obtained based on the learning styles of the students. Several recent studies stated that learning styles of the students influence their academic performance and in relation to that, several authors assert that it is important to understand their learning styles so as to improve students' academic performance.

Staiger and Rockoff (2010) discovered large differences in student achievement in different teachers' classrooms, even after controlling for students' prior achievement and characteristics. Especially following the No Child Left Behind (NCLB) Act which ensures that all children have a fair, equal, and significant opportunity to obtain a high-quality education and reach proficiency in academic achievement standards. This approach is likewise consistent with DepEd's mission to protect and promote the right of every Filipino to quality, equitable, culture-based, and complete basic education.

The law emphasizes that educational institutions must acknowledge, appreciate, and respect the students' differences in intelligence, talents, skills, interest, and background. Thus. researchers believe that by understanding the influence of learning styles and teaching strategies, educators will find effective ways to improve academic performance. This also tried to fill in the gap in terms of the research that look closely into the contribution of these key variables on the students' performance (Cardino,2020).

In the District of Daram II, Schools Division of Samar, teachers experience the same plight with the foregoing situation in other countries. In fact, they are confronted with the issue on how to be effective in the delivery of education. Despite exerting efforts in utilizing and devising teaching pedagogies, still the academic performance of the students is not at par. Based on the trends in the grade ranges in the past three school years, the students posted 77 percent untransmuted grade range during the School Year 2019-2020 while during the School Year 2020-2021, the untransmuted grade range is posted 77.8 percent and during the School Year 2021-2022, the untransmuted grade range is posted at 78 percent, which may redound to the students' learning styles.

The foregoing served as a challenge for the teachers in as much as the demand for an exemplary performance is expected from them by the DepEd. Thus, the researcher was motivated to conduct the study to determine the teaching pedagogies and students' learning styles in the District of Daram II, Schools Division of Samar during the School Year 2022-2023.

Research Questions

This study determined the teaching pedagogies and students' learning styles in the District of Daram II, Schools Division of Samar during the School Year 2022-2023. Specifically, it sought answers to the following questions:

1. What is the profile of the teacher-respondents in terms of the following personal characteristics:
    - 1.1 age and sex;
    - 1.2 civil status;
    - 1.3 highest educational attainment;
    - 1.4 number of years in teaching;
    - 1.5 gross monthly family income;
    - 1.6 performance rating based on the latest IPCRF;
    - 1.7 relevant in-service training; and
    - 1.8 attitude toward teaching?

2. What is the profile of the student-respondents in terms of the following personal characteristics:
    - 2.1 age and sex;

2.2 nutritional status;
2.3 parents' highest educational attainment;
2.4 parents' occupation;
2.5 gross monthly family income; and
2.6 attitude toward schooling?

3. What are the teaching pedagogies adapted by the teacher-respondents in teaching the subjects to the students?

4. Is there a significant relationship between the teaching pedagogies adapted by the teacher-respondents in teaching and their profile variates?

5. What are the learning styles of the student-respondents in assimilating the lessons taught to them?

6. Is there a significant relationship between the student-respondents' learning styles and their profile variates?

7. What is the academic performance of the student-respondents based on the mean grade during the first and second quarters?

8. Is there a significant relationship between the academic performance of the student-respondents and the following:
8.1 student-related profile variates;
8.2 teacher-related variates;
8.3 teachers' teaching pedagogies; and
8.4 students' learning styles?

9. What intervention program may be developed based on the findings of the study?

METHODOLOGY

This research employed a quantitative approach to investigate teaching methods and student learning styles in the District of Daram II, Schools Division of Samar, during the 2022-2023 school year. The study involved all 168 teachers and a sample of 226 grade 5 and 6 students from the public elementary schools in the district. Questionnaires were used to collect data from both teachers and students, and these questionnaires were validated by experts in education. Researcher collected data on teacher-respondents' profiles, including age, sex, education, teaching experience, income, performance ratings, training, and attitude towards teaching. Student-respondents' profiles included age, sex, nutritional status, parents' education and occupations, family income, and attitude towards schooling. Moreover, the study examined the teaching methods used by teachers and the learning styles of the students. Additionally, researchers looked at student academic performance based on their first and second quarter grades. Furthermore, the researcher used a mix of descriptive and inferential statistics to analyze

the data, including measures like frequency, percentages, and means. They also employed statistical tests like chi-square and Spearman's rank correlation. The study employed correlation analysis to explore the relationships between student academic performance and various factors, including student characteristics, teacher characteristics, teaching methods, and student learning styles. Before collecting data, the researchers obtained approval from the appropriate authorities in the school district. Data collection faced challenges due to geographical factors, but the researcher enlisted the help of school personnel to overcome these obstacles.

RESULTS AND DISCUSSION

This chapter presents the findings of this study through the presentation, analysis, and interpretation of the data gathered. The following were the salient findings of the study:

1. Some kids learn best by doing, others by seeing, and some through reading or listening.

2. They seem aware of what helps them learn best, which is a great advantage.

3. Whether a student is a boy or girl, comes from a rich or poor family, or is in any situation, it does not strongly affect how they learn or how well they do in school.

4. Having a good attitude toward school helps, but it does not automatically lead to better grades.

5. Teachers who used lots of different teaching methods (doing activities, showing pictures, explaining things, having discussions) would help most students succeed.

6. Teachers who know how their students learn best can tailor how to teach individual students or groups.

7. Surprisingly, teachers with higher ratings seemed to have students with slightly lower grades; this needs more investigation.

8. Students should think about how they learn best and let their teachers know.

9. Teachers need support to learn lots of different ways to teach.

10. Maybe the current rating system does not measure how well teachers help students learn.

11. Interviews and watching classrooms can give us better insights into why this happens.

12. Lots of other things affect how well a student does in school, like how motivated they are or if they have any learning difficulties.

13. Students show preferences for various learning styles. Some indicators were stronger (e.g., hands-on activities, visual aids, reading or written explanations, skill with charts and graphs), but no single style dominated. Most students are adaptable, indicating awareness of their preferences.

14. Teachers should use a variety of approaches (hands-on, visual, lectures, discussions, reading, and writing) to meet the diverse learning styles in the classroom.

15. Unsurprisingly, even a slightly positive attitude towards school doesn't directly translate to better academic performance.

16. Teachers with higher performance ratings seem to be slightly associated with lower student academic performance. This warrants further investigation.

17. Both pedagogies and learning styles showed a positive correlation with academic performance. This indicates that varying teaching methods and understanding students' learning styles can positively influence academic outcomes.

18. Encourage students to recognize their strengths in various learning styles to advocate for their needs and maximize their potential.

19. Since some learning styles are less represented, help students identify their strongest styles for the best results. Consider sharing student preferences with teachers to personalize instruction.

20. Explore the surprising negative correlation between teacher performance ratings and student outcomes.

21. Help teachers expand their teaching toolkit to include varied approaches. Investigate which specific pedagogies correlate most strongly to improved student outcomes.

22. This study may have a limited sample size or scope. It's helpful, but it shouldn't be overgeneralized.

23. Statistical correlations give numbers, but interviews or observations could provide richer insights into why these connections exist and how to improve learning experiences.

24. There are many factors beyond the measured one’s impact on learning. Consider

also motivation, engagement, study habits, and individual learning challenges for a holistic approach.

25. These factors have a negligible or weak correlation to learning style preference or academic performance in this study. This suggests a potentially equitable environment where background plays a lesser role.

Pedagogies Adapted by Teachers in Teaching the Subject

There was a weak, but statistically significant, positive correlation between the teachers' use of diverse pedagogies and their students' academic performance.

Table 1

Relationship Between the Students' Academic Performance and Their Pedagogies Adapted by the Teachers in Teaching the Subject

Variate	Association		Fisher's t-Value	p-Value @ α=.05	Evaluation/ Decision
	Coefficient	Degree			
Pedagogies	Spearman's Rho = 0.241	Weak	2.765	0.009	S / Reject Ho.

ω=*p*=<.001<.05 pairwise normality deviated from the norm S = Significant
Fisher's t-Critical = ±1.982, df = 124 NS = Not Significant

This suggests that teachers who incorporate a variety of teaching approaches (constructivist, collaborative, etc.) tend to have students who perform somewhat better academically. Diverse pedagogies might better cater to different learning styles, making learning more engaging and effective for more students, leading to improved outcomes. While the correlation is weak, it's encouraging because it indicates that teachers' pedagogical choices do have a measurable impact on student performance. It cannot be definitively said that using more pedagogies causes better performance. Other factors were likely at play. Specific pedagogies that were most beneficial were not known. Further research on the impact of individual teaching approaches might be valuable. Successfully implementing a range of pedagogies requires skill and effort. This variable might also be influencing student success.

Support teachers in learning about and experimenting with different teaching approaches. Professional development in this area could be beneficial. Help teachers identify suitable pedagogies based on their subject area, specific student needs, and their teaching styles. Investigate: which specific pedagogies have the strongest association with improved academic outcomes and how teachers' skills in implementing those pedagogies influence the relationship.

Learning Styles Adapted by Students.

There was a moderate, statistically significant relationship between students' learning styles and their academic performance.

This finding suggests that students who are aware of and utilize their preferred learning styles (visual, auditory, kinesthetic, etc.) tend to demonstrate better academic outcomes. Understanding students' learning styles provides a potential avenue for teachers to personalize their instruction, potentially leading to improved performance for many students. Encouraging students to reflect on how they learn best could empower them to take ownership of their learning process and advocate for their needs.

Table 2

Relationship Between the Students' Academic Performance and Their Learning Styles

Variate	Association		Fisher's t-Value	p-Value @ α=.05	Evaluation/ Decision
	Coefficient	Degree			
Learning Styles	Spearman's Rho = 0.461	Very Weak	6.813	0.000	S / Reject Ho.

ω=*p*=<.001<.05 pairwise normality deviated from the norm S = Significant
Fisher's t-Critical = ±1.982, df = 224 NS = Not Significant

In summary, the correlation is not extremely strong. This indicates that learning styles are one influential factor among many in determining academic performance. Learning is complex. Over-reliance on the concept of learning styles alone risks oversimplifying the factors that contribute to academic success.

Conclusions

The following were the conclusions drawn from the findings of the study:

1. Students demonstrated unique learning style preferences, highlighting the need for teachers to differentiate their instruction.

2. Most students showed adaptability and awareness of how they learned best. This self-knowledge can be a powerful tool if students are empowered to use it.

3. The negligible impact of factors like age, sex, and socioeconomic background on learning style and performance suggested a potentially equitable learning environment. This is a positive finding to build upon.

4. Varied teaching approaches and awareness of students' learning styles seemed positively correlated with academic performance. This underscores the importance of teacher adaptability and diverse instructional methods.

5. The surprising negative correlation between teacher performance ratings and student outcomes required further investigation. Current evaluation systems (like IPCRF) might need revision to ensure they holistically measure true teaching effectiveness.

Recommendations

Anchored on the conclusions drawn from the findings of the study, the following recommendations are offered:

1. Use formal or informal assessments to help students identify their preferred learning styles. Adapt instruction accordingly (provide choices, offer materials in different formats, and vary activity types).

2. Participate in professional development to learn new teaching strategies that cater to different learning styles (hands-on activities, collaborative projects, multimedia presentations, etc.).

3. Regularly consider the variety of methods teachers' use. Create lessons that cater to a wider range of learners.

4. Openly discuss learning styles with the class. Invite students to share what helps them learn best and involve them in designing activities that support their preferences.

5. Budget for and actively encourage teachers to expand their knowledge of learning styles and diverse teaching strategies. Offer workshops, conferences, and collaborative mentoring opportunities.

6. Review teacher performance metrics. Develop a more holistic evaluation system that includes observations, student feedback, and measures of student growth over time.

7. Create mechanisms for students to share their learning preferences with teachers and administrators. Provide resources and training to help students understand and advocate for their learning styles.

8. Encourage a balanced use of quantitative and qualitative research within the school. Support teachers with collecting classroom data about student learning styles and preferences to enhance personalized instruction.

9. Parents share insights about their children's learning preferences with their teachers. Encourage open communication to support a collaborative approach to the child's education.

10. Reinforce learning styles discovered at school. If they're a visual learner, provide colorful study aids. If they're hands-on, turn homework into interactive activities.

11. Conduct in-depth research to understand why higher teacher ratings were associated with slightly lower student performance. Use a mixed-methods approach (quantitative and qualitative) to uncover potential reasons.

12. Study which specific teaching strategies have the strongest positive impact on student outcomes, particularly in relation to diverse learning styles.

13. Investigate how students' self-awareness of their learning styles and their belief in their ability to learn (growth mindset) influences their academic performance and motivation.

14. Encourage students to reflect on their learning styles and communicate them to teachers. This can foster better student-teacher collaboration and self-advocacy for personalized learning.

15. Provide opportunities for teachers to expand their repertoire of teaching strategies (visuals, hands-on, discussion-based, etc.) and learn how to identify and support different learning styles.

16. Explore alternative evaluation models that go beyond standardized test scores and encompass student growth, classroom environment, and diverse measures of teaching excellence.

17. Supplement statistical findings with interviews and classroom observations. This will provide a richer understanding of why learning environments are equitable, and how students and teachers utilize this to their advantage.

18. Recognize the complexity of student achievement. Factors like motivation, engagement, undiagnosed learning challenges, and access to support systems all play a role and need to be considered along with learning styles.

19. Design lessons that cater to a variety of learning styles (visual aids, discussions, hands-on activities) to benefit a broader range of students.

20. Consider using informal or formal assessments to help students identify their learning preferences.

21. Encourage students to communicate their preferred learning styles to their teachers to facilitate better personalization of instruction. Remember that learning

styles are just one piece of the puzzle. Combine this knowledge with other strategies that promote motivation, engagement, and effective study habits.

22. Strengthen the conduct of SLAC to improve teaching pedagogies.

23. Conduct reward and recognition to deserving teachers and students during the quarterly Portfolio Day.

24. Further study may be conducted focusing on other areas on pedagogies adopted by teachers and the learning styles of students.

Compliance with Ethical Standards

Ethical approval for the study was obtained before the conduct of this study. All respondents received written and oral information about the aim of the study and the possibility of withdrawing their participation at any time without the need to give reasons for doing so. Confidentiality was assured according to ethical research guidelines. Moreover, informed consent was obtained from all participants.

Acknowledgments

The researcher would like to express her utmost gratitude and appreciation to all those who gave her the possibility to complete this research.

First and foremost, to the Almighty God, who is the highest of all, given the researcher the strength and encouragement throughout all the challenging moments of completing this research. The researcher is truly grateful for His unconditional and endless love, mercy, and grace.

The researcher extends heartfelt gratitude to Dr. Imelda M. Uy, Public Schools District Supervisor of the Schools Division of Catbalogan City, for her invaluable expertise and unwavering support throughout this research journey. Her patience, motivation, and enthusiasm were instrumental, and her immense knowledge provided crucial guidance at every step of the way.

The researcher expresses her sincere gratitude to Dr. Nimfa Torremoro, Dean of the College of Graduate Studies. Dr. Torremoro's expertise was invaluable in navigating the research process, particularly when tackling seemingly insurmountable challenges. Her insightful suggestions and willingness to dedicate her time proved instrumental in acquiring necessary information and maintaining the researcher's motivation throughout the paper.

Dr. Guillermo D. Lagbo, Director of Institutional Research & Extension at Samar Colleges, Inc., who was also the statistician of this research, for his work on the

quantitative examination of data with his expertise and knowledge that was given in this study. Also, to Dr. Natalia B. Uy, Dean of the College of Business Management at Samar Colleges Inc., and Dr. Michelle L. Mustacisa, Public Schools District Supervisor of the Schools Division of Catbalogan City, for their constructive criticisms and insightful comments, suggestions, and recommendations for the improvement of this paper.

To Ma'am Janice R. Colebra, my deepest gratitude for her unwavering support and expert guidance, especially during the publication process of this research paper. Her vast knowledge of academic publishing was invaluable as I navigated the complexities of submitting my work for publication. Her insights on selecting an appropriate journal, tailoring the manuscript to specific requirements, and addressing reviewer feedback were instrumental in bringing this paper to a wider audience.

The researcher also appreciates Mrs. Salvacion C. Planea, Schools District-In-Charge in the District of Daram II, Schools Division of Samar, for allowing the researcher to conduct and give full support to finish the study.

Special recognition is given to all the Teacher-and Student - Respondents in the District of Daram II, Schools Division of Samar, for their cooperation and willingness to share their experiences and perspectives.

In addition, the researcher expresses appreciation to her parents, Mr. Bonifacio O. Carpina and Mrs. Dindin M. Carpina, also to her siblings, Andrew Cris M. Carpina and Ace M. Carpina, for their contribution to by taking good care of her son while working in this endeavor.

And lastly, the researcher expresses profound gratitude for her husband, Rey M. Bacalan and son, Zane Brion C. Bacalan, her loving family, and inspiration, for their unending support and motivation to pursue this study.

ABSTRACT

This study is intended to determine the level of understanding and compliance of school officials on campus journalism program of public elementary schools in the district of Buenavista I, Division of Quezon in terms of DepEd roles in campus journalism, student publication, school paper adviser, and press conferences/trainings/seminars. The study utilized a descriptive-correlational research design. The data were statistically analyzed using percentage, frequency, mean, and ranking. The significant relationship between the level of understanding and compliance of school officials with the campus journalism program was statistically analyzed using the Pearson correlation coefficient (Pearson's r). The study has a total of 53 respondents: (1) public school district supervisor, 11 school heads, and 41 school paper advisers who answered the multiple-choice test and questionnaire. Findings revealed that in the level of understanding of school officials on campus journalism programs, they highly understood the indicators, with an overall mean frequency of correct answers of 33.52 and a percentage of 75.85. When it comes to compliance, it was found that the four (4) indicators were all moderately complied. Furthermore, the correlation analysis between the level of understanding and compliance of school officials revealed that there is no significant relationship, and the null hypothesis is accepted. Lastly, the proposed implementation strategies for the campus journalism program cater all the least understood and least complied indicators regarding the level of understanding and compliance of school officials with the said program.

Keywords: *Campus Journalism, Student Publication, Press Conference, School Paper Adviser*

INTRODUCTION

Campus journalism has been practiced in schools for decades, and it has had a tremendous impact on students' lives. Campus publications are considered essential since they have a big impact on students' opinions, behavior, and political status—especially in light of the shifting social landscape (Asperga, 2017). Journalism, in the opinion of Harcup (2015), fills in the gaps in society's knowledge by defining public interest and educating the public about itself. Campus journalists are empowered by RA 7079 to defend press freedom at the academic level while simultaneously growing as individuals and fostering moral development, critical thinking, and self-discipline (Destacamento, 2012). Campus Journalism Act of 1991 focuses on oral and written communication skills coupled with the principles of truth, fairness, and patriotism. Campus journalism is an integral key in nation- building. The campus press is the concrete manifestation of the students' democratic rights and a tangible expression of press freedom. Some well-known and noteworthy people in Philippine politics, media, art, and literature that have made substantial contributions to their respective disciplines in one way, or another were brought to light by the university press. The campus press instilled in many of them the higher for truth and social change that was the first stirring of their nationalist consciousness (Senate S. No. 1204).

The Buenavista I, one of the well-known districts to compete in Division Schools Press Conferences and Regional Schools Press Conferences has already lost its spotlight. The researcher, who is serving as school paper adviser of Buenavista I, expressed concern on the understanding and compliance of the schools in the implementation of campus journalism program. The inactive status of Buenavista I in school publication, schools should make an emphasis on the implementation of campus journalism program. Some schools comply to the said program but lack of understanding and compliance. The researcher believes that to have an operative campus journalism program, there should be a strong connection between understanding and compliance with campus journalism program. Hence, this study determined the level of understanding and compliance of school officials (school heads, school paper advisers, and public schools district supervisor) on campus journalism program of public elementary schools in the District of Buenavista I, Division of Quezon. The findings of this study were used as a basis to introduce management implementation strategies on campus journalism program.

Research Questions

This study determined the level of understanding and compliance on campus journalism program of school officials of public elementary schools in the District of Buenavista I, Division of Quezon as basis for management implementation strategies.

Specifically, this study attempted to answer the following questions:

1. What is the level of understanding on campus journalism program of school officials of public elementary schools in terms of:
    1.1. DepEd Roles in Campus Journalism;
    1.2. Student Publication;
    1.3. School Paper Adviser;
    1.4. Student Publication Funds; and
    1.5. Press Conferences/Trainings/Seminars?
2. What is the level of compliance on campus journalism program of school officials of public elementary schools in terms of:
    1.1. DepEd Roles in Campus Journalism;
    1.2. Student Publication;
    1.3. School Paper Adviser;
    1.4. Student Publication Funds; and
    1.5. Press Conferences/Trainings/Seminars?
3. Is there a significant relationship between the level of understanding and compliance of school officials of selected public elementary schools in the District of Buenavista I, Division of Quezon?
4. Based on the findings of the study, what management implementation strategies may be developed?

METHODOLOGY

This chapter elucidated the methodologies and protocols that enable the researcher to carry out the study effectively. This chapter focused on various aspects of the research study, including the research design, research locale, research population and sampling, research instrument, data gathering procedure, and statistical treatment.

Research Design

This study utilized descriptive-correlational research design to determine the correlation between the level of understanding and compliance of school officials with the campus journalism program of public elementary schools in the District of Buenavista I, Division of Quezon. Descriptive-correlational research design is used in research studies that aim to present still images of scenarios and demonstrate how certain variables relate to one another (McBurney and White, 2009). This design is appropriate for the study since the goal is to determine how participant variables can influence one another.

Research Locale

This study was conducted in the District of Buenavista I, Division of Quezon. The District of Buenavista I is composed of 11 public elementary schools, namely: Bagong Silang Elementary School, Buenavista Central Elementary School, Batabat Elementary School, Cabong Elementary School, Dela Paz Elementary School, Del Rosario Elementary School, Mabutag Elementary School, Magallanes Elementary School, Sabang Elementary School, San Isidro Elementary School, and San Vicente Elementary School. The District of Buenavista I is headed by the public schools district supervisor and 11 school heads. There are -133 public elementary school teachers in total as of writing this study. This location was chosen in order to gauge school officials' understanding and compliance with the campus journalism program and, subsequently, to carry out management implementation strategies throughout the district's public primary schools.

Population and Sampling

A total of 53 respondents, (one (1) public schools district supervisor, 11 school heads, and 41 school paper advisers) were the respondents in this study, as shown in Table 1.

These public schools district supervisor, school heads, and school paper advisers were taken from the public elementary schools in the District of Buenavista I, Division of Quezon.

Respondents	Frequency
I. Public Schools District Supervisor of the District of Buenavista 1	1
II. School Heads of Public Elementary Schools in the District of Buenavista 1	
Bagong Silang Elementary School	1
Buenavista Central Elementary School	1
Batabat Elementary School	1
Cabong Elementary School	1
Dela Paz Elementary School	1
Del Rosario Elementary School	1
Mabutag Elementary School	1
Magallanes Elementary School	1
Sabang Elementary School	1
San Isidro Elementary School	1
San Vicente Elementary School	1
III. School Paper Advisers of Public Elementary Schools in the District of Buenavista 1	
Bagong Silang Elementary School	7
Buenavista Central Elementary School	7

Batabat Elementary School	3
Cabong Elementary School	3
Dela Paz Elementary School	3
Del Rosario Elementary School	3
Mabutag Elementary School	3
Magallanes Elementary School	3
Sabang Elementary School	3
San Isidro Elementary School	3
San Vicente Elementary School	3
Total	**53**

Research Instrument

The researcher used a researcher-made questionnaire and test as data gathering tools for the study. The two parts of the instrument are the following: (1) level of understanding on campus journalism of school officials and (2) level of compliance on campus journalism of school officials. The researcher will use a test to measure the level of understanding and questionnaire for compliance of schools district supervisor, school heads, and school paper advisers in the campus journalism program. The test is consisted of 25 items, and the questionnaire is consisted of 50 items. These are the parts of the test and questionnaire (Part 1: DepEd Roles in Campus Journalism, Part 2: Student Publication, Part 3: School Paper Advisers, Part 4: School Publication Funds, and Part 5: Press Conferences, Trainings, and Seminars). The researcher used the following scales in the test and questionnaire as shown in the tables below.

Frequency	Percentage	Verbal Interpretation
45-50	81-100%	Very Highly Understood
36-44	61-80%	Highly Understood
23-33	41-60%	Moderately Understood
12-22	21-40%	Less Understood
1-11	1-20%	Misunderstood

The researcher used the measurement scales above to interpret the numerical scores of the respondents in the given test.

Scale	Weigh Assigned	Verbal Interpretation
5	4.50-5.00	Very Highly Complied
4	3.50-4.49	Highly Complied
3	2.50-3.49	Moderately Complied
2	1.50-2.49	Less Complied
1	1.00-1.49	Not Complied

The researcher used the measurement scales above to interpret the numerical scores of the respondents in the questionnaire.

Data Gathering Procedures

The instrument underwent validation to ensure that the test and questionnaire contained statements and questions that truly measure the issues of importance in the study. In this regard, the researcher asked for validation from her school head and research adviser. The researcher-made questionnaire also underwent face validation, which included the comments, suggestions, and approvals of the school head, district campus publication coordinator, and school paper adviser from the university.

Final copies of the test and questionnaire were distributed to the respondents after the pilot testing. To ensure that the research instrument was given to the target respondents of the study, the researcher personally distributed test and questionnaire. The respondents were reminded that participating in the study is voluntary, and withdrawal from the study on any grounds will be allowed. Five days were given to the respondents to finalize their responses.

After the given time for the respondents to finalize their responses, the researcher ensured that the test and questionnaire were retrieved. The responses of the participants were confidential, test and questionnaire, the researcher analyzed and interpreted the information gathered from the respondents.

Statistical Treatment of Data

The researcher used percentage, frequency, ranking, mean, and Pearson correlation coefficient (Pearson's r) as statistical tools in analyzing the gathered data in this study.

The statements in the multiple-choice test were analyzed using frequency and ranking, while the questionnaire was analyzed using mean and ranking.

The consolidated result of the multiple-choice test on the level of understanding of school officials on campus journalism was statistically treated using the average frequency of correct answers, the average frequency of percentages, and verbally interpreted. Lastly, the significant relationship between the level of understanding and compliance of school officials with campus journalism was analyzed using the Pearson Correlation Coefficient (Pearson's r).

RESULTS

Part 1. The Level of Understanding on Campus Journalism Program of School Officials of Public Elementary Schools in the District of Buenavista I, Division of Quezon

Table 1. *The Level of Understanding of School Officials on Campus Journalism Program in terms of DepEd Roles in Campus Journalism*

Statements	Frequency of Correct Answers	Percentage of Correct Answers	Verbal Interpretation	Rank
1. Best description of campus journalism.	7	13.2	Misunderstood	5
2. Offered trainings of DepEd on campus journalism.	49	92.5	Very Highly Understood	1
3. Main objective of campus journalism.	32	60.4	Moderately Understood	4
4. Memorandum that aims to promulgate the rules and regulations necessary for the effective implementation of RA 7079 otherwise known as the "Campus Journalism Act of 1991".	36	67.9	Highly Understood	3
5. Effects of the new normal education in the role of campus journalism.	42	79.2	Highly Understood	2
OVERALL MEAN	**33.2**	**62.64**	**Highly Understood**	

Legend:

45-50	*81-100%*	*Very Highly Understood*
36-44	*61-80%*	*Highly Understood*
23-33	*41-60%*	*Moderately Understood*
12-22	*21-40%*	*Less Understood*
1-11	*1-20%*	*Misunderstood*

Table 1 presents the level of understanding of school officials on campus journalism program in terms of DepEd roles in campus journalism. It shows the overall mean frequency of correct answers, which is 33.2 with a percentage of 62.64, and is verbally interpreted as highly understood. The majority of respondents got the correct answer in statement 2, which has a frequency of 49 and a percentage of 92.5. On the other hand, the respondents' lowest score and ranking 5th reflect statement 1, which has a frequency of 7 and a percentage of 13.2.

It can be seen from the table that the respondents very highly understood the offer trainings of DepEd on campus journalism which include the district, division, regional, and national schools press conferences. However, the respondents were somehow confused

with the accurate meaning of campus journalism which is to enables campus journalists to exercise their press freedom. T

The notion above is contrary to the study of Estella (2015), in which it was asserted that most of the teachers who act as school paper advisers lack preparedness. The study proved that most of the teachers are not qualified to act as advisers due to a lack of knowledge about journalism. Teachers assigned to handle journalism are clearly under-skilled. Estella's study found that "the primary factors for the current state of teachers are a lack of formal training, as journalism is not incorporated into the basic education curriculum.".

Table 2. *The Level of Understanding of School Officials on Campus Journalism Program in terms of Student Publication*

Statements	Frequency of Correct Answers	Percentage of Correct Answers	Verbal Interpretation	Rank
6. Publishing of student publication.	36	66.0	Highly Understood	3.5
7. Meaning of student publication.	18	34.0	Less Understood	5
8. Relevance of school publication.	36	66.0	Highly Moderately Understood	3.5
9. Best time to publish a school publication.	47	88.7	Very Highly Understood	2
10. Responsible in editing all articles preparatory to submission to the adviser for final editing and approval for publication.	48	90.6	Very Highly Understood	1
OVERALL MEAN	**37**	**69.06**	**Highly Understood**	

Legend:

45-50	*81-100%*	*Very Highly Understood*
36-44	*61-80%*	*Highly Understood*
23-33	*41-60%*	*Moderately Understood*
12-22	*21-40%*	*Less Understood*
1-11	*1-20%*	*Misunderstood*

Table 2 presents the level of understanding of school officials about the campus journalism program in terms of student publication. It shows the overall mean frequency of correct answers, which is 37 with a percentage of 69.06 and is verbally interpreted as highly understood. The respondents answered statement 10 correctly with a frequency of 48 and a percentage of 90.6 and ranked first. Statement 7 has the lowest frequency of 18 with a percentage of 34.0 and is ranked 5th. Meanwhile, statements 6 and 8 were ranked 3rd; they have the same frequency of 36 with a percentage of 66.0.

In the published blog of Yellowbrick (2023), it emphasized the essential duties of the editor-in-chief in campus journalism. It is said that the editor-in-chief is the highest-ranking editorial position within a news organization, responsible for overseeing the entire editorial process, ensuring the quality and integrity of the content, and shaping the overall direction of the publication.

The result shows that the respondent highly understood the indicator. They understood that school publications serve as 'boundary objects' which can potentially help teachers achieve and develop their professionalism by disseminating individual knowledge into the public knowledge domain with transformative learning. Students serve as a watchdog to uncover problems at the respective institution.

Table 3. *The Level of Understanding of School Officials on Campus Journalism Program in terms of School Paper Adviser*

Statements	Frequency of Correct Answers	Percentage of Correct Answers	Verbal Interpretation	Rank
11. Process in selecting school paper adviser.	47	88.7	Highly Understood	2
12. Functions of school paper adviser.	38	71.7	Highly Understood	3
13. Difficult role of school paper adviser.	48	90.6	Very Highly Understood	1
14. School paper advisers need to make sure in writing articles for school publication.	32	60.4	Moderately Understood	4
15. Impact of journalistic competence of the school paper advisers on the overall success of the school publication.	31	58.5	Moderately Understood	5
OVERALL MEAN	**39.2**	**73.98**	**Highly Understood**	

Legend:

45-50	*81-100%*	*Very Highly Understood*
36-44	*61-80%*	*Highly Understood*
23-33	*41-60%*	*Moderately Understood*
12-22	*21-40%*	*Less Understood*
1-11	*1-20%*	*Misunderstood*

Table 3 presents the level of understanding of school officials on the campus journalism program in terms of the school paper adviser. It shows the overall mean frequency of correct answers, which is 39.02 with a percentage of 73.98, and is verbally interpreted as highly understood. Statement 13 is ranked first; it has a frequency of 48

and a percentage of 88.7. Statement 5 is ranked 5th with a frequency of 31 and a percentage of 58.5.

In the study conducted by Hester, Bridges, and Rollins (2020), when teachers are stressed and overworked, they may struggle to maintain their focus and motivation. This can negatively impact their efficiency and their ability to provide quality education to their students.

Furthermore, a high workload can also lead to teacher burnout, which can have long-term effects on their health and well-being. When teachers are burned out, they may become disengaged from their work, leading to lower levels of job satisfaction and increased turnover (Mullen, Backer, Chae, & Li, 2020).

The studies above are connected to the result of the table because they point out that teachers who have a heavy workload can affect their teaching performance. This also applies to the role of school paper adviser; their duties and responsibilities may be affected by a heavy workload, which can lead to poor management of school publications and the coaching of student journalists.

Table 4. *The Level of Understanding of School Officials on Campus Journalism Program in terms of Student Publication Funds*

Statements	Frequency of Correct Answers	Percentage of Correct Answers	Verbal Interpretation	Rank
16. School publication source of funds.	6	11.3	Highly Understood	5
17. Responsible in preparing the budget of school publication.	39	73.6	Highly Understood	1
18. Things to remember about collecting the publication fee.	26	49.1	Very Highly Understood	3.5
19. Inclusion of student publication funds.	32	60.4	Moderately Understood	2
20. Monitoring of financial report of campus journalism expenses.	26	49.1	Moderately Understood	3.5
OVERALL MEAN	**25.8**	**48.7**	**Highly Understood**	

Legend:

45-50	*81-100%*	*Very Highly Understood*
36-44	*61-80%*	*Highly Understood*
23-33	*41-60%*	*Moderately Understood*
12-22	*21-40%*	*Less Understood*
1-11	*1-20%*	*Misunderstood*

Table 4 presents the level of understanding of school officials on campus journalism program in terms of student publication funds. It shows the overall mean frequency of correct answers, which is 25.8 with a percentage of 48.7. The majority of respondents got the correct answer in statement 17 with a frequency of 39 and a percentage of 73.6. Statement 16 is ranked 5th with a frequency of 6 and a percentage of 11.3. Meanwhile, statements 18 and 20 were ranked 3rd with a frequency of 26 and a percentage of 49.1.

According to RA 7079 Section 4, which is relevant to the table's outcome, a student publication is produced by the student body via an editorial board and publication staff made up of students chosen through open and competitive tests. After the journal is founded, its editorial board will independently decide on its editorial stance and oversee its financial operations.

In every school's project and program implementation, source of fund is always considered as hindrance. Likewise, in campus journalism program implementation, problems regarding with school publication funding can't be deny. Though it is important to have a school publication, the school still need to look for ways on how to maximize the source of funds for campus journalism program.

Table 5. *The Level of Understanding of School Officials on Campus Journalism Program in terms of Press Conferences/Trainings/Seminars*

Statements	Frequency of Correct Answers	Percentage of Correct Answers	Verbal Interpretation	Rank
21. Main objective of the press conferences on campus journalism.	40	75.5	Highly Understood	1.5
22. Highest level of competition in campus journalism.	40	75.5	Highly Understood	1.5
23. People allowed to attend the trainings and seminars on campus journalism.	39	73.6	Highly Understood	3
24. Source of funds for trainings and seminars.	20	37.7	Less Understood	4
25. Common topics on campus journalism seminars.	24	45.3	Moderately Understood	5
OVERALL MEAN	**32.6**	**61.52**	**Highly Understood**	

Legend:

45-50	*81-100%*	*Very Highly Understood*
36-44	*61-80%*	*Highly Understood*
23-33	*41-60%*	*Moderately Understood*
12-22	*21-40%*	*Less Understood*
1-11	*1-20%*	*Misunderstood*

Table 5 presents the level of understanding of school officials on campus journalism program in terms of press conferences, trainings, and seminars. It shows the overall mean frequency of correct answers, which is 32.6 with a percentage of 61.52, and is verbally interpreted as highly understood. Statements 21 and 22 got the same frequency of 40 and percentage of 75.5, both ranked first. On the other hand, statement 25 ranked 5th with a frequency of 24 and a percentage of 45.3.

Press conferences/trainings/seminars on campus journalism mainly focus on the implementation of campus journalism programs, whether they are at the district, division, regional, or national level. Based on the results of the table, school paper advisers were aware that attending press conferences, trainings, and seminars together with student journalists will enhance their knowledge not only in the implementation of the program but also their journalistic writing skills.

However, in the study conducted by Cabaniza (2023), she revealed that budget is not enough in terms of attendance at seminars and trainings; administration determines the budget; there is no budget hearing conducted; there is a lack of scholarship grants; there is a lack of training and seminars for the improvement of writing skills; and there is a lack of attendance at budget management seminars and workshops

Likewise, Cervantes (2017) noted that because of the dearth of funds, pupil-journalists and even their advisers struggle to financially support their participation in activities such as trainings, workshops, and seminars.

Table 6. *The Consolidated Result the Level of Understanding of School Officials on Campus Journalism Program (Multiple-Choice Test)*

Indicators	Average Frequency of Correct Answers	Average Percentage of Correct Answers	Verbal Interpretation
1. DepEd Roles in Campus Journalism	33.02	62.64	Highly Understood
2. Student Publication	37	69.06	Highly Understood
3. School Paper Adviser	39.2	73.98	Highly Understood
4. Student Publication Fund	25.8	48.7	Understood
5. Press Conferences/ Trainings/Seminars	32.6	61.52	Highly Understood
OVERALL MEAN	**33.52**	**75.85**	**Highly Understood**

Legend:

45-50	*81-100%*	*Very Highly Understood*
36-44	*61-80%*	*Highly Understood*
23-33	*41-60%*	*Moderately Understood*
12-22	*21-40%*	*Less Understood*
1-11	*1-20%*	*Misunderstood*

Table 6 shows the consolidated result of the level of understanding of school officials about the campus journalism program. It registered an overall mean of average frequency of correct answers, which is 33.52, with an average percentage of correct answers of 75.85, and was verbally interpreted as highly understood.

The result of the table clearly shows that the school officials of the district of Buenavista I are well-equipped with the knowledge and skills of the campus journalism program. This also proves that they can train the campus journalists with the fundamentals of writing journalistic articles. Though it can be observed that the school paper advisers came from elementary schools, they have background in campus journalism and have undergone different trainings, workshops, and seminars that have updated their awareness and understanding of the campus journalism program.

Part 2. The Level of Compliance on Campus Journalism Program of School Officials of Public Elementary Schools in the District of Buenavista I, Division of Quezon

Table 7. *The Level of Compliance of School Officials on Campus Journalism Program in terms of DepEd Roles in Campus Journalism*

Statements	Weighted Mean	Verbal Interpretation	Rank
1. The school is obediently complying on the DepEd/Division/Regional/National Memorandum on campus journalism program.	2.51	Moderately Complied	8
2. The school is regularly competing in press conferences offered by DepEd.	2.45	Less Complied	9
3. The school complies to DepEd's implementation of campus journalism program policies.	2.49	Less Complied	10
4. The school complies with the objectives on campus journalism implementation under the RA 7079 (Campus Journalism Act of 1991).	2.68	Moderately Complied	1
5. The school paper adviser of the school attends seminars and training offered by DepEd.	2.55	Moderately Complied	7
6. The school conducts school-based trainings for student journalists.	2.62	Moderately Complied	4
7. The school selects the editorial board based in the provisions of RA 7079 (Campus Journalism Act of 1991).	2.60	Moderately Complied	5

8. The school provides learners opportunities to use the skills learned in campus journalism for their future careers.	2.58	Moderately Complied	6
9. The school recognizes the role of journalism in advocating for social consciousness and environmental awareness.	2.66	Moderately Complied	2.5
10. The school teaches the student journalists to enrich learning experiences through healthy and friendly competitions.	2.66	Moderately Complied	2.5
AVERAGE	**2.58**	**Moderately Complied**	

Legend:

4.50-5.00	*Very Highly Complied*	*1.50-2.49*	*Less Complied*
3.50-4.49	*Highly Complied*	*1.00-1.49*	*Not Complied*
2.50-3.49	*Moderately Complied*		

Table 7 shows the level of compliance of school officials on campus journalism program in terms of DepEd roles in campus journalism. The result from the table revealed that the school officials moderately complied with the DepEd roles in campus journalism, as it registered an average weighted mean of 2.58.

Statements 1 and 4-6 have a verbal interpretation of moderately complied. Meanwhile, statement 2 (The school is regularly competing in press conferences offered by DepEd.) has a weighted mean of 2.45, and statement 3 (The school complies with DepEd's implementation of campus journalism program policies.) has a weighted mean of 2.49, and they are verbally interpreted as less complied.

Joining or competing regularly in press conferences offered by DepEd enables campus journalists to develop their journalistic writing skills. Likewise, the coaches developed their interpersonal skills by conducting small interactions with other coaches they met during the competition. Further, competitions set a framework for practicing and facilitating a growth mindset (Paguirigan, 2023).

Nonetheless, problems with competing regularly in press conferences offered by DepEd are still a big hindrance to schools, especially given the limited resources and funding of the said activity. This notion is supported by the study of Cervantes (2017), where he revealed that, because of the dearth of funds, pupil-journalists and even their advisers struggle to financially support their participation in activities such as trainings, workshops, and seminars.

Table 8. *The Level of Compliance of School Officials on Campus Journalism Program in terms of Student Publication*

Statements	Weighted Mean	Verbal Interpretation	Rank
11. The school has student publication that published by the student body through editorial board.	2.74	Moderately Complied	4.5
12. The school has publication staff composed of students selected by fair and competitive examinations.	2.77	Moderately Complied	3
13. The editorial policies and publication funds were determined once the student publication is published.	2.85	Moderately Complied	1.5
14. The student publication informs students about campus events.	2.85	Moderately Complied	1.5
15. The school practices freedom of the press to deliver relevant information	2.74	Moderately Complied	4.5
16. The school uses the student publication as an avenue for students' self-expression.	2.47	Less Complied	7
17. The school publication serves as an opportunity in harnessing students' talents in creative and literary writing.	2.55	Moderately Complied	6
18. The school publication applies communication arts in journalism.	1.83	Less Complied	10
19. The school publication develops students' journalistic investigation.	2.28	Less Complied	9
20. The student publication provides an avenue for ethical use of thoughts.	2.43	Less Complied	8
AVERAGE	**2.55**	**Moderately Complied**	

Legend:

4.50-5.00	*Very Highly Complied*	*1.50-2.49*	*Less Complied*
3.50-4.49	*Highly Complied*	*1.00-1.49*	*Not Complied*
2.50-3.49	*Moderately Complied*		

Table 8 shows the level of compliance of school officials with the campus journalism program in terms of student publication. It also revealed that the school officials also complied with the implementation of student publication, as it registered an average weighted mean of 2.55 and was verbally interpreted as moderately complied.

As seen from the table, the less complied indicators are statement 16 (The school uses the student publication as an avenue for students' self-expression.) with a weighted mean of 2.55, statement 18 (The school publication applies communication arts in journalism.) with a weighted mean of 1.83, statement 19 (The school publication develops students' journalistic investigation.) with a weighted mean of 2.28, and statement 20 (The

student publication provides an avenue for ethical use of thoughts.) with a weighted mean of 2.43. The result from the table shows that the application of communication arts ranked 10th (statement 14). Communication arts are vital in making student publications engaging to audiences. It has a wide scope for designing information as well as the use of multimedia.

Mangompit, Flores, and Jaca (2023) concluded in their study that there were five identified themes that affect the implementation of student publication, such as health-related issues, ICT-related issues, connectivity-related issues, adaptability-related issues, and journalism-related issues.

Also, considering the Knowledge Gap Theory, mass media information in a society increases; those with higher socio-economic status acquire this information faster than those with lower socio-economic status. Since most of the schools in the District of Buenavista have students of low socioeconomic status, they cannot adapt quickly to the new means of communication and the delivery of information in student publications. In this challenge, it can be inferred that the socio-economic status of the student journalists is one of the reasons why they acquire the information slowly since they do not have the resources to access it (Qi, An, Zhang, & Wang, 2020).

Table 9. *The Level of Compliance of School Officials on Campus Journalism Program in terms of School Paper Adviser*

Statements	Weighted Mean	Verbal Interpretation	Rank
21. The school paper advisers of the school are selected by the administration from the list of recommendees submitted by the publication staff.	2.53	Moderately Complied	9.5
22. The school paper advisers of the school know the purpose of a student newspaper which is to deliver fair and unbiased information.	2.53	Moderately Complied	9.5
23. The school paper advisers of the school teach responsible journalism.	2.55	Moderately Complied	8
24. The school paper advisers of the schools provide effective technical assistance to student publication.	2.68	Moderately Complied	3
25. The school paper advisers of the school teach journalistic writing competence on student journalists.	2.64	Complied	5.5
26. The school paper advisers of the school set a journalistically professional	2.58	Moderately Complied	7

learning atmosphere and experience for the students.			
27. The school paper advisers of the school discern and analyze the newsworthy news and issues.	2.64	Moderately Complied	5.5
28. The school paper advisers of the school practice the freedom of the press.	2.66	Moderately Complied	4
29. The school paper advisers of the school serve as the motivator and catalyst for ideas.	2.72	Moderately Complied	2
30. The school paper advisers of the school display special parental authority.	2.85	Moderately Complied	1
AVERAGE	**2.67**	**Moderately Complied**	

Legend:

4.50-5.00	*Very Highly Complied*	*1.50-2.49*	*Less Complied*
3.50-4.49	*Highly Complied*	*1.00-1.49*	*Not Complied*
2.50-3.49	*Moderately Complied*		

Table 9 presents the level of compliance of school officials on campus journalism program in terms of the school paper adviser. The result shows an average weighted mean of 2.67 and is verbally interpreted as moderately complied.

Aside from that, the table shows that all indicators were met by the respondents. Statement 30 (The school paper advisers of the school display special parentals.) with a weighted mean of 2.85 ranked first. Statement 21 (The school paper advisers of the school are selected by the administration from the list of recommendees submitted by the publication staff.) and Statement 22 (The school paper advisers of the school know the purpose of a student newspaper, which is to deliver fair and unbiased information.) have the same weighted mean of 2.53 and rank 9th.

In connection with the result of statement 21, the study of Espadero (2022) revealed in her findings that issues regarding qualifications, relevant training, security, and tenure surfaced in the selection of school paper advisers. As teachers were, from time to time, transferred from one coordinatorship to another, this was supported by the issue of the transfer of accountability from one school head to the next school head, and that reorganization of teaching staff happened as well. This means that some schools qualified a school paper adviser without considering the set of standards in RA 7079.

Additionally, he stated that administrators need to realize that assigning advisers to handle the task undermines the goal of student media and is bad for students' education. Teachers of journalism need to be able to concentrate more on the learners and their process of learning than on the final output.

Table 10. *The Level of Compliance of School Officials on Campus Journalism Program in terms of Student Publication Funds*

Statements	Weighted Mean	Verbal Interpretation	Rank
21. The school funding for the student publication includes the savings of the respective school's appropriations.	2.51	Moderately Complied	6
22. The school funding for the student publication includes the student subscriptions.	2.64	Moderately Complied	2
23. The school funding for the student publication includes the donations.	2.70	Moderately Complied	1
24. The editorial board of the school provides mechanism in collecting publication fees from students.	2.60	Moderately Complied	4
25. The school legalizes the non-mandatory collection of public fees for school publication as stated in the Section 7 of the RA 7079 (Campus Journalism Act of 1991).	2.62	Moderately Complied	3
26. The school provides a transparency of funding of student publication.	2.36	Less Complied	8
27. The school budget supports the funding of student publication.	2.28	Less Complied	9
28. The budget of school publication is posted in school's bulletin board.	2.09	Less Complied	10
29. The budget of school publication is prepared year-round.	2.49	Less Complied	7
30. The editorial board of the school manages the budget of school publication.	2.58	Moderately Complied	5
AVERAGE	**2.48**	**Less Complied**	

Legend:

4.50-5.00	*Very Highly Complied*	*1.50-2.49*	*Less Complied*
3.50-4.49	*Highly Complied*	*1.00-1.49*	*Not Complied*
2.50-3.49	*Moderately Complied*		

Table 10 shows the level of compliance of school officials with the campus journalism program in terms of student publication funds. The result indicates an average weighted mean of 2.48 and is verbally interpreted as less complied.

Statement 33 was supported by RA 7079 Section 7; it is stated that funding for the student publication shall be sourced primarily from student publication fees collected by the school administration. It shall be mandatory for the school administration to collect reasonable student publication and subscription fees during the enrollment period. For public schools, publication funds shall be included in the budgets of the institutions. Secondary sources of publication funds shall include the savings of the respective school's appropriations and donations.

On the other hand, the table shows statement 10 (The budget of school publication is posted on the school's bulletin board.) is the least complied indicator. In the study of Talikan (2021), it was concluded that if the schools want to improve the quality of

education, then posting the liquidation report on the transparency board is necessary. This also attracts investors, philanthropists, and other stakeholders to extend services to the school.

Table 11. *The Level of Compliance of School Officials on Campus Journalism Program in terms of Press Conferences/Trainings/Seminars*

Statements	Weighted Mean	Verbal Interpretation	Rank
21. The school trains the student writers to be responsible writers in the exercise of press freedom.	2.75	Moderately Complied	1
22. The school paper advisers of the school give effective and efficient technical assistance for student writers.	2.57	Moderately Complied	8
23. Advancing the school paper advisers and student writers' knowledge about the new trends on campus journalism.	2.64	Moderately Complied	2
24. Attend seminars/press conferences/trainings that upskills the school paper advisers and student writers' journalistic competence.	2.57	Moderately Complied	8
25. The school ensures the student writers to write information that is fair, balanced, and truthful.	2.57	Moderately Complied	8
26. Expenses of school paper advisers and student writers in seminars/trainings/workshops/and press conferences attended is covered by the student publication funds.	2.53	Moderately Complied	10
27. Attend seminars/trainings/workshops/and press conferences that provoke student writers' curiosity.	2.60	Moderately Complied	4.5
28. Attend seminars/trainings/workshops/and press conferences that provoke student writers' communication skills.	2.58	Moderately Complied	6
29. Attend seminars/trainings/workshops/and press conferences that strengthen school paper advisers and student writers' journalistic values.	2.60	Moderately Complied	4.5
30. Attend seminars/trainings/workshops/and press conferences on campus journalism implementation.	2.62	Moderately Complied	3
AVERAGE	**2.60**	**Moderately Complied**	

Legend:

4.50-5.00	*Very Highly Complied*	*1.50-2.49*	*Less Complied*
3.50-4.49	*Highly Complied*	*1.00-1.49*	*Not Complied*
2.50-3.49	*Moderately Complied*		

Table 11 shows the level of compliance of school officials with the campus journalism program in terms of press conferences/trainings/seminars. The result revealed an average weighted mean of 2.60 and was verbally interpreted as moderately complied.

Based on the result, all the indicators were met by the respondents. Statement 41 (The school trains the student writers to be responsible writers in the exercise of press freedom.) ranked 1st with a weighted mean of 2.75, and Statement 46 (Expenses of school paper advisers and student writers in seminars, trainings, workshops, and press conferences attended are covered by the student publication funds) ranked 10th with a weighted mean of 2.53. RA 7079 was established for several reasons, one of which is to protect press freedom on college campuses and to encourage the growth of campus journalism as a way to reinforce moral principles, foster critical and creative thinking, and help young Filipinos develop their moral character and self-discipline.

As mentioned in the news written by Caling (2020), one of the interviewees said that the workshops and training for campus journalism were funded by themselves a lot of the time, the school is under budget, and their school paper advisers pay for the remaining balances, which they directly source from their own income.

In addition, in the study of Natividad and Gapasin (2021), it was revealed that there is no budget allotted for press conferences, trainings, or seminars for campus journalists and teachers. SPAs stated that if there are DepEd-offered trainings, only the big schools can attend because they have the budget.

Since the law (RA 7079) mandates no mandatory collection of publication fees, this leaves the schools to rely solely on voluntary contributions, donations, and the school's local funds.

Part 3. The Test of Significant Relationship between the Level of Understanding and Compliance of School Officials of Public Elementary Schools in the District of Buenavista I, Division of Quezon

Table 12. *Correlation Analysis between the Level of Understanding and Compliance of School Officials on Campus Journalism Program*

Indicators	R-value	P-value	Decision	Verbal Interpretation
DepEd Roles in Campus Journalism	-0.02	2.73E-05	Accept Ho	Not Significant
Student Publication	0.15	4.54E-07	Accept Ho	Not Significant
School Paper Adviser	-0.81	1.43E-09	Accept Ho	Not Significant
School Publication Fund	0.69	3.03E-05	Reject Ho	Significant
Press Conferences/ Trainings/Seminars	0.58	1.63E-07	Reject Ho	Significant
OVERALL TOTAL	**0.236**	**2.21E-30**	**Accept Ho**	**Not Significant**

Table 12 shows the correlation analysis between the level of understanding and compliance of school officials on campus journalism program, with an overall total of an R-value of 0.236 and a P-value of 2.21E-30. It can be gleaned from the data that there is no significant relationship between the level of understanding and compliance of school officials with the campus journalism program. Thus, the null hypothesis is accepted. The result implies that the high understanding of school officials on different indicators of the campus journalism program doesn't affect the level of compliance of school officials on different indicators of the campus journalism program, and vice versa. This suggests that there is no linear relationship between the level of understanding and the level of compliance of school officials with the campus journalism program.

Part 4. The Proposed Management Implementation Strategies

The proposed management implementation strategies were based on the findings of the study. All the least understood, misunderstood, least complied, and not complied indicators from statement of the problem 1 and 2 were highlighted. Its primary objectives are to elevate the management implementation strategies of public elementary schools in the district of Buenavista I, Division of Quezon on campus journalism program, to develop instructional skills of school paper advisers in coaching campus journalists, and to address the problems of the schools in understanding and compliance with campus journalism program. The researcher crafted an action plan for the proposed management implementation strategies. The priorities of action, objectives, strategies, actions to be taken, time frame, person/s involved, source of funds, and expected outcomes were the contents of the action plan. Furthermore, the researcher believed that through the research output, the implementation of campus journalism program will have clear direction and set appropriate and achievable objectives.

DISCUSSION

Summary of Findings

The significant findings of the study are summarized below:

1. The Level of Understanding on Campus Journalism Program of School Officials of Public Elementary Schools in the District of Buenavista I, Division of Quezon

1.1. The level of understanding of school officials on campus journalism programs in terms of DepEd roles in campus journalism shows that the majority of respondents answered statement 2 (Not included in the offer of training for DepEd on campus journalism).

1.2. In terms of student publication, the level of understanding of school officials in the campus journalism program shows that the respondents correctly answered statement 10 (Responsible for editing all articles preparatory for submission to the adviser for final editing and approval for publication).

1.3. The level of understanding of school officials on campus journalism program in terms of school paper advisers shows that the majority of respondents correctly answered statement 13 (Difficult roles of school paper adviser).

1.4. In terms of student publication, the level of understanding of school officials in the campus journalism program shows that the respondents correctly answered statement 17 (Responsible for preparing the budget for school publication).

1.5. In terms of press conferences/trainings/seminars, the level of understanding of school officials on the campus journalism program showed that most respondents correctly answered statement 21 (Main objective of the press conferences on campus journalism) and 22 (Highest level of competition in campus journalism).

Consolidated Result of the Level of Understanding of School Officials on Campus Journalism Program (Multiple-Choice Test)

The result revealed that the respondents highly understood the campus journalism program and its four (4) indicators (DepEd Roles in Campus Journalism, Student Publication, School Paper Advisers, Student Publication Funds, and Press Conferences/ Trainings/Seminars).

2. The Level of Compliance on Campus Journalism Program of School Officials of Public Elementary Schools in the District of Buenavista I, Division of Quezon

2.1. The school officials moderately complied with the campus journalism program in terms of DepEd roles in campus journalism.

2.2. The school officials moderately complied on campus journalism program in terms of student publication.

2.3. The school officials moderately complied on campus journalism program in terms of school paper advisers.

2.4. The school officials lowly complied on campus journalism program in terms of student publication funds.

2.5. The school officials moderately complied on campus journalism program in terms of press conferences, trainings, and seminars.

3. The Test of Significant Relationship between the Level of Understanding and Compliance of School Officials of Public Elementary Schools in the District of Buenavista I, Division of Quezon

3.1. The result of the correlation analysis between the level of understanding and compliance of school officials with the on-campus journalism program shows no significant relationship.

4. The Proposed Management Intervention Strategies

4.1. The proposed management implementation strategies were based on the indicators of multiple-choice test and questionnaire with the least understood and complied indicators.

Conclusions

Based on the findings of the study, the following conclusions are presented:

1. Based on the result of the multiple-choice test on the level of understanding of school officials on campus journalism program, it was found that the indicator DepEd Roles in Campus Journalism got the highest frequency of correct answers.

2. Based on the result of the survey questionnaire on the level of compliance of school officials with the campus journalism program, it was found that the four (4) indicators (DepEd Roles in Campus Journalism, Student Publication, School Paper Advisers, Student Publication Funds, and Press Conferences/Trainings/ Seminars) were all moderately complied except for the Student Publication Funds, wherein it was verbally interpreted as less complied.

3. Based on the consolidated result of the multiple-choice test on the level of understanding of school officials in the campus journalism program, it was found that the respondent highly understood the indicators.

4. The result of the correlation analysis between the level of understanding and compliance of school officials revealed that there is no significant relationship between the level of understanding and compliance of school officials with the campus journalism program. Thus, the null hypothesis is accepted.

Recommendations

Based on the conclusions, the following recommendations are suggested:

1. Since the result of the level of understanding of school officials on campus journalism programs in terms of DepEd roles in campus journalism shows a low frequency of correct answers in statement 1 (Best describes campus journalism), school officials may reconsider RA 7079, (Section 1) and review the meaning of campus journalism.

2. Because the result of the level of understanding of school officials on campus journalism programs in terms of student publication shows a low average frequency of correct answers in statement 7 (Meaning of school publication), school officials may also revisit RA 7079, specifically Section 4 of the law where the meaning of school publication was explained.

3. Because the result of the level of understanding of school officials on campus journalism program in terms of school paper adviser shows a low frequency of correct answers in statement 15 (Impact of journalistic competence of school paper advisers on the overall success of the school publication.) school officials may reflect on their performance as school paper advisers and how it affects the success of school publication.

4. Since the result of the level of understanding of school officials on campus journalism programs in terms of student publication funds shows a low frequency of correct answers in statement 6 (Source of funds for school publication.) school officials should assess the source of funds for school publication, e.g., savings of the respective school's appropriations, student subscriptions, donations, and other sources of funds.

5. Since the result of the level of understanding of school officials on campus journalism program in terms of press conferences, trainings, and seminars shows a low frequency of correct answers in statement 25 (Common topics on campus journalism seminars.), we may review DepEd memoranda that issued press conferences, trainings, and seminars for school paper advisers and campus journalists and analyze the objectives.

6. Based on the results of the level of compliance of school officials with the campus journalism program in terms of DepEd roles in campus journalism, it shows that the schools' compliance with DepEd's implementation of campus journalism program policies is the least complied statement: therefore, the school officials must consider the implementation of RA 7079 since it serves as the mother law of campus journalism.

7. The result of the level of compliance of school officials with the campus journalism program in terms of student publication shows that the least complied statement is the application of communication arts in journalism. The school officials may start to integrate the use of multimedia in delivering newsworthy articles.

8. The result of the level of compliance of school officials on campus journalism program in terms of school paper advisers shows that the least complied statement are the selection of school paper advisers and the awareness of the school paper advisers with the purpose of student newspaper which is to deliver fair and unbiased information, the school administrators may refrain from selecting school paper advisers which are solely based on the length of teaching experience and not by their teaching performance specially those teachers with journalism background, and lastly, school paper advisers should always give effective technical assistance to campus journalists to make sure that they publish fair and unbiased information.

9. Since the result of the level of compliance of school officials on campus journalism program in terms of student publication funds shows least compliance in posting of school publication budget in school's bulletin board, school officials should always uphold transparency and accountability, they need to post in school's bulletin board all the expenses and sources of funds for student publication.

10. Because the results of the level of compliance of school officials with the campus journalism program in terms of press conferences, trainings, and seminars show the least compliance with the expenses of school paper advisers and student

writers in seminars, trainings, workshops, and press conferences covered by publication funds, the school may raise funds by being open to donations, maximizing the school's local funds, and funding support from LGU.

11. Since the result of the correlation analysis between the level of understanding and compliance of school officials with the campus journalism program shows no significant relationship, the school officials should align the high level of understanding with how they comply with the different aspects of campus journalism.

12. Since the limitation only concerns the understanding and compliance of school officials on campus journalism program, future researchers may also conduct study about the school paper advisers and campus journalists' journalistic competence. This study may also serve as their reference into further studying the implementation of campus journalism program in public elementary schools.

Compliance with Ethical Standards

The study ensured the informed consent was given to the following respondents. Freedom to withdraw from the study at any time, anonymity of the respondents was maintained, the respondents well-being was safeguarded, no conflict of interests exists in the conduct of the study, plagiarism was strictly avoided, there was no bias in the interpretation of the findings and that the results were used purely for research.

Acknowledgments

This work would not have materialized without the help of the following persons who generously contributed, in one way or another, in making it reality. My sincerest gratitude to all who made this endeavor possible:

Dr. Rogel L. Limpiada, the researcher's adviser who patiently shared her professional expertise, encouragement, prayers and constructive criticism for the improvement of study;

Dr. Leodegario M. Jalos, Jr., Associate Dean of Graduate School for the guidance and persistent help on the progress and accomplishment of the manuscript;

Her panelists, Dr. Diosdado P. Zulueta, Dr. Julieta Q. Nabos, and Dr. Rizalie M. Lim, for providing significant inputs and recommendations to further improve the research work;

Her statistician, Dr. Liza Marie Manoos-Pacia, for guiding the researcher in the preparation of the research methodology and statistical treatment of data;

Her editor, Ms. Cherie Ann M. Luna and copy editor Mr. Jerome L. Lingon, for helping the researcher in checking the research format and editing of the final research manuscript;

Dr. Rommel C. Bautista, the Schools Division Superintendent of DepEd Division of Quezon, for his approval to conduct this study in the Division of Quezon;

Public Schools District Supervisors and Principals, for their approval to conduct this study in their respective schools;

Public Schools District Supervisor of the District of Buenavista I, Principals, School Paper Advisers who served as respondents of this study, for sharing their time during the administration of the research instrument;

The researcher's parents and siblings, for their never-ending encouragement, support and prayers;

Above all, to Almighty God, who grants the blessing for bestowing his gift of life and spiritual guidance.

THE LIVED EXPERIENCES OF TEACHERS USING ENGLISH AS A MEDIUM OF INSTRUCTIONS

Dadang A. Ramsani, MALTE

Sulu State College, School of Graduate Studies
Sulu, Mindanao, Philippines

https://doi.org/10.5281/zenodo.11638096

ABSTRACT

This study investigated the lived experiences of teachers using English as a medium of instruction. It specifically explored the perceptions, challenges encountered, and benefits of using English as a medium of instruction in the classroom. T his study employed a phenomenological research design. A semi-structured interview was used to gather the phenomenological data from the ten (10) purposively chosen Pangutaran National High School Main teacher participants. The 8-item open-ended interview question was modified to fit in the context of the present study and was validated by the expert. The study's findings revealed that English as a medium of instruction is defined as a way of communication. It is used to aid the teaching and learning processes. It is also revealed that teachers have encountered many challenges in a class wherein English is used to communicate. However, the study found that even though using English as a medium of instruction is very challenging, many benefits can be gained from its utilization.

Keywords: *English as Medium of Instruction, English language, Lived experiences, Perceptions, Challenges, Phenomenological research design*

INTRODUCTION

The increasing interest in English as a medium of instruction has heightened the need to study teachers' lived experiences. English as a medium of instruction is the use of the English language in all learning areas except Filipino, Araling Panlipunan, and Edukasyon sa Pagpapakatao. This is following the DepEd Order No. 36. S. 2006,

"Implementing Rules and Regulations on Executive Order No. 210," stated that the English language shall be used as the primary medium of instruction in all public and private schools at the secondary level. The purpose of Executive Order No. 210 is to strengthen the use of the English Language as a Medium of Instruction in the Educational System. However, teachers need to be better equipped with using the English language or the students. Thus, it is essential to consider this when implementing the rules.

As observed, teachers need help using English as a medium of instruction. Some students need help understanding them whenever they speak English inside the classroom. The content explained in the English language may seem impractical to the student. Conversely, students find it very advantageous when their teacher uses L1 in the explanation of the content. Using English as a medium of instruction requires considerable effort from teachers and students. Therefore, both teacher and student must work together for the success of EMI in the teaching-learning process.

The notion of English as a Medium of instruction refers to the use of the English language in classroom instruction where the content of various subjects is taught and delivered in English (Khatri, 2019). Dearden (2014) defines EMI as "the use of the English language to teach academic subjects in countries or jurisdictions where the first language (L1) of the majority of the population is not English."

A study on English as a Medium of Instruction focuses on the teachers' attitudes. Khatri (2019) conducted a study entitled Teacher's Attitudes Towards English as a Medium of Instruction. This is where the current researcher adapts the instrument. The result of the study revealed that teachers at public schools were found to be aware of the basic concept of the notion of English as a Medium of Instruction. The study also showed that teachers at the secondary level have faced different challenges in adopting EMI in the classroom, such as students' weak exposure to English, mother tongue interference, inadequate school resources, and linguistic diversity in the class. Using EMI is quite arduous.

Another study, entitled English as a Medium of Instruction: A Survey on Lecturers' Attitudes, was conducted and authored by Allo et al. (2023). This study aimed to investigate the lecturers' attitudes towards English as a medium of instruction. The findings confirmed that the younger lecturers and the lecturers with a higher teaching load in English are more positive towards the increase in English as a Medium of Instruction. This study showed that individual attitudes regarding EMI are different from each other

.

Research Questions

Given that the authority stipulates that the English language should be used as a medium of instruction, teachers should promptly adhere to this rule. This instance aroused the curiosity of the researcher to conduct the study. Hence, this recent study aims to explore the lived experiences of teachers using English as a medium of instruction. In this study, the researcher is sought to address the following research questions:

1. What is English as a medium of instruction for teachers handling subjects using EMI?
2. What are the challenges teachers encounter when using English as a medium of instruction? And.
3. What are the benefits of using English as a medium of instruction?

METHODOLOGY

Research Design

This study employed a qualitative research design, specifically the phenomenological research design, to explore the teachers' lived experiences using English as a medium of instruction in Pangutaran National High School. Creswell (2009) defined phenomenological research design as a qualitative strategy in which the researcher identifies the essence of human experiences about a phenomenon described by participants in a study. Moustakas (1994) posited that the respondents' responses should focus on the wholeness of experiences and a search for the essence of experiences. He viewed experience and behavior as an integrated and inseparable relationship of phenomenology with the person experiencing it.

Participants

The study participants were 10 teachers of Pangutaran National High School who were handling a subject that used English as a medium of instruction. Purposive sampling was used to select participants. Only those teachers who used English as a medium of instruction served as participants in the study. Purposively select means that qualitative researchers select individuals who will best help them understand the research problem and questions (Creswell, 2009).

Data Gathering Procedures

The researcher followed the proper protocol when gathering the data. The researcher also asked permission from the school principal before the conduct of the study. Then, the researcher met with the participants and discussed their participation in the study. During the discussion, the researcher reiterated that their data would be treated with utmost confidentiality. After the discussion, the researcher began with the interview. Due to the hectic schedule of some of the participants, the researcher was asked to give the participants a copy of the interview questionnaire. This made the data a combination of spoken and written interviews. Afterward, the data gathered from the participants were analyzed.

Instruments

This study utilized semi-structured interviews. Few questions are often followed by why or how questions. According to Adams (2015), as cited by Hongsa et al. (2023), semi-

structured interviews are appropriate for various tasks, especially where a further probe is needed. Moreover, semi-structured interviews help gain in-depth information from the participants and permit the researcher to gather unstructured information and investigate participants' thoughts, feelings, and beliefs regarding a specific subject (Hongsa et al., 2023). Thus, the researcher used semi-structured interviews, which included eight questions to explore the lived experiences of the teachers using English as a medium of instruction in Pangutaran National High School. This instrument was adapted from Khatri (2019) with minor revisions to fit the context of the present study. It was validated by the experts.

Limitations and Scope of the Study

This study focused on exploring the teachers' lived experiences using English as a medium of instruction. A phenomenological research design was used at Pangutaran National High School, Simbahan, Pangutaran Sulu. Semi-structured interviews were used to collect the data needed for the study. This SSI comprises Five (8) combinations of open-ended and closed-ended adapted questions. However, this study has limited to ten (10) teachers handling subjects with English as a medium. The researcher was only able to include some teachers in that school.

Data Analysis

The phenomenological data were analyzed using thematic analysis. It is defined as identifying patterns within qualitative data (Maguire & Delahunt, 2017). Braun and Clarke (2006) suggest that it is the first qualitative method to be learned as '…it provides core skills that will be useful for conducting many other kinds of analysis' (p.78). The qualitative data gathered from the interview were analyzed using semantic thematic analysis. In this manner, the themes were concluded from the explicit or surface meanings of the data. The researcher was not looking for anything beyond what a participant had said.

RESULTS AND DISCUSSION

To explore the teacher-participant's definition of English as a medium of instruction, an open-ended question was asked to them. The question was, "What is English as a medium of instruction?" In response to this question, teacher-participants came up with different answers based on their daily English language encounters. However, about sixty percent of the participants responded with the same perspective, pointing to the English language being used in teaching-learning processes. To validate their responses to the question, careful analysis was done to develop significant data.

Regarding the definition of English as a medium of instruction, six participants shared their definitions as a way of communication, and they stressed that the English language is being used in the classroom with subject areas taught in English to give instructions and explain the lesson's content. Moreover, some participants defined

English as a medium of instruction to help enhance learners' communication skills and develop learners' critical thinking skills. On the contrary, two participants defined it as challenging to use since learners are not native speakers of the English language, which makes it difficult for them to interact or participate in the class discussion.

Based on the discussion above, though participants defined English as a medium of instruction differently, it can be concluded that the English language is used as a way of communication. This, in return, will guide the students to be proficient and effective. However, not all of them defined it positively.

According to Yessenbekova (2023), participants had a positive LI towards EMI, which is helpful for language development, although many of them encountered challenges during LP due to their low mastery of English.

On the use of English language in the classroom

To learn about using the English language in the classroom, the participants were asked: "Do you use the English language in your class? The follow-up question, "Why or why not?" justified whether they employed the English language in their class. All the participants responded yes to the question, meaning the English language is utilized in their class. The utilization of this language, based on their responses, has different purposes. One participant who is teaching Mathematics found it appropriate to use the language as it was described as a practical approach to explaining the concept in Mathematics.

Moreover, another participant highlighted that using English encourages the students to learn the language and enhance their grammar and pronunciation. However, participants contextualized the use of English in their class, mixing it with the student's first language and often having to translate the terms into their mother tongue to avoid confusion and misinterpretation. To sum up, the utilization of English language in the classroom depends on the level of students we are teaching.

Similarly, Karim et al. (2023) strongly suggest a bilingual curriculum in which instruction is delivered in both English and Bangla to impart knowledge to the students and to produce knowledgeable and skilled graduates.

On the students' reactions to using English language in the classroom

To determine the students' reactions to using the English language in the classroom, the teacher-participants were asked this question: "How do students react to you when you are using the English language in the classroom?" In response to this question, varied answers were drawn from the participants. Confusion is one of the distinguished answers given by some of the participants. Some students, especially those who came from the lower sections, found it challenging when their teachers spoke the English language. Though they appreciated it, they still felt they needed to be more relaxed and satisfied with their learning.

On the contrary, students in the pilot section are delighted to be in this class and eager to participate in class discussions as they can relate to their teacher's words. To conclude, using the English language in the classroom can sometimes be confusing to academically challenged students and attractive to more advanced students. So, the teachers must adjust their level to the students.

Teachers from Eastern Indonesia positively perceive English as a medium of instruction as they believe it could improve students' proficiency. However, some are hesitant and would rather have classes taught in a blend of their native language and English (Nur et al., 2022).

On the students' participation in the class using English as a medium of Instructions

To disclose the students' participation in the class using English as a medium of instruction. Continuing the previous question, the participants were asked, "How about the student's participation in the class using English as a medium of instruction?" Almost all the participants answered similarly. Based on their responses, most students needed to be more participative, and some of them needed to familiarize themselves with the language.

Additionally, some students need more confidence in speaking the language because they are afraid of making mistakes and anxious about being discriminated against by their classmates. Only a few students participated sufficiently in the classroom discussion. These more advanced students felt that speaking English in the classroom challenged them to improve. In summary, using English as a medium of instruction hinders the students' participation; though some students are accustomed to it, the majority became less participative.

Similarly, Lai (2023) revealed that students were inclined to produce extensive and substantial verbal output and expressed the importance of teacher-student interaction for learning the course content.

On the students' learning outcome in the class using English as a medium of instructions

This section of the paper will uncover the learning outcome of the students in the class using English as a medium of instruction. About fifty percent of participants responded that they needed improvement or were very low on it. One of the participants said that when she used purely English language in her explanation, only a few students passed the written evaluation. These students must be translated into English to comprehend the words and phrases well. Another participant concluded that most of the students needed to meet expectations. He stated that fast learners can meet the learning competencies. However, slow learners obtain only a small proportion of the learning outcome. He further concluded that only about a quarter of learning competencies exist, with approximately twenty-five percent of the learners combined from all the sections who can cope with the learning competencies. These conclude that the student's learning outcome could be more encouraging in a class using English as a medium of instruction.

In consonance, inadequate language proficiency among learners has been found to impact them in different ways, including difficulties in understanding lectures, problems communicating disciplinary content and requiring more time to complete a course (Galloway et al. 2017).

Using the English language to boost Students' confidence

This part of the paper deals with the benefits of using English. The open-ended question was used to collect the phenomenon. The question was, "How can using) English language boosts students' confidence?" Most participants answered that it depends on the level of students and their persistence in enhancing their confidence in speaking the language. Accordingly, some students can boost their confidence if motivated and try to imitate their teacher.

Moreover, being familiar with and knowing enough about the language will significantly influence their confidence. Furthermore, practicing the English language in the classroom can normalize the students' anxiety. Hence, if we want to enhance our students' communication skills, we should train them to speak English confidently.

This result is supported by Miranda and Wahyudin (2023), who stated that there are factors that contribute to neither success nor failure in the process of acquiring language, which the teachers must understand if they are to assist their students in learning English more successfully. Further, teachers must provide numerous turns in communication to improve students' abilities to communicate more fluently, ask, respond to, and answer questions, and change their thoughts about topics.

On using the English language to enhance students' learning performance

In this part, the participants were asked: Can English language enhance students' learning performance?" In response to this, participants responded differently. Despite the differences, using the English language in the classroom can enhance the student's learning performance. This was exemplified in the statements of the participants, such as using the English language helped the students express and organize their ideas, made them actively participate, developed their critical thinking skills, and served as an opportunity for the students to practice and apply their English language skills in various activities. In addition to that, one of the participants said that it is convenient. Since it would be easy for them to read, comprehend, analyze, synthesize, and evaluate the reading texts. In this regard, their learning performance is enhanced as they understand everything in the reading texts. However, one participant said that using English can only enhance learning performance if the students can understand the sentences or phrases they have read; if not, it can only discourage the students and affect their learning performance. Using the English language in the classroom will not always affect performance positively but also negatively.

Alhamami (2023) stated that using students' mother tongue is related to robust IC, leading to better cognition, positive effects, and more robust performance in the learning environment.

On using the English language to help students become globally competitive

To investigate whether using the English language can help students become globally competitive, the participants were asked to share their perceptions on this question: "How can using) English language help students become globally competitive?" Mostly, they answered that it helped students become globally competitive learners. One participant stated that if the students learned to speak English effectively, they could globally communicate with other people. Considering that English is an international language, it will be easy for students to cope with everything concerning the English language. Moreover, using the English language in the classroom can develop a creative and potential student who can utilize their higher thinking skills since they have the potential to do it in English. In summary, to be globally competitive, we should train our students to speak the language, as speaking English is one of the characteristics of being a globally competitive individual.

According to Ly (2023), English is regarded as a prevalent international language. He further stated that the two main reasons Vietnamese students learn English are better job opportunities and gaining competitive advantages. Although participants experienced different emotional reactions to EMI, including frustration over teaching practices, anxiety about the quality of their learning, and pride at their accomplishment, it contributes to the role of EMI on students' well-being and graduate outcomes (Sahan & Sahan, 2023)

Conclusions

The results of this study explored the lived experiences of the teachers using English as a medium of instruction at Pangutaran National High School. Specifically, it investigated the teachers' insight, challenges encountered, and benefits of using English as a medium of instruction. The study's findings revealed that English as a medium of instruction is defined as a way of communication. It is used to aid the teaching and learning processes. It has also been revealed that teachers have encountered many challenges in a class where English is used to communicate. However, the study found that even though using English as a medium of instruction is very challenging, many benefits can be gained from its utilization.

Recommendations

Based on the findings and conclusions of this study, it is recommended that.

1. The school administration should strengthen the use of English in the classroom to develop and train students to be globally competitive.
2. The teachers concerned should continue to develop student English language communication skills by utilizing the language as much as possible in class discussions and encouraging the students to be more participative.

3. The students should cooperate and work hard in developing their speaking skills. They should change their mentality about the English language.
4. Future researchers may undertake and replicate similar studies involving all English teachers in the school (main) and annex to further validate the study's results.

Compliance with Ethical Standards

The researcher informed the participants about the purpose and nature of the research. Also, the processes to be executed, the data utilization, and the benefits they might have. The participants were free to choose whether or not they would participate in the study. No names were mentioned in the study to protect the participants' privacy. In addition, the participants were not forcibly asked to answer positively, which means they could answer the interview questions based on their interpretations and feelings.
Moreover, the data collected were treated confidentially, and only the researcher had access to them. The data collection and analysis were appropriate and valid, which helped the researcher complete the data needed for the research. Finally, the researcher ensured that the study's findings were exclusive and would not affect institutions.

Acknowledgments

The researcher would like to take this opportunity to express her gratitude to everyone who has helped her in this endeavor to fulfill her requirements.

First and foremost, the researcher would like to thank ALMIGHTY ALLAH for his guidance, strength, protection, and skills and for giving her a healthy life.

The researcher owes so much to her whole family—her supportive and loving parents and her considerate siblings—for their undying support, encouragement, motivation, and unconditional love, which inspired her to finish this research the most.

The researcher was incredibly grateful to her course director, Professor Sar-ana M. Misuari-Abdurasul, Ph.D., for her consideration, expertise, guidance, and assistance in accomplishing this research in a timely manner.

https://doi.org/10.5281/zenodo.11421381

ABSTRACT

This study examined the level of perceived servant leadership dimensions such as love, service, empowerment, trust, and altruism on the employee performance of Company Z. A quantitative research method was used on a sample of 250 regular employees from various departments for Company Z. A structured Likert scale questionnaire consists of several statements measuring scales was used and administered to the respondents. A follow-up questionnaire for key informant interviews was done to support the proposed programs that Company Z may adopt in managing employee performance and turnover. The data were analyzed using descriptive statistics (mean), Cronbach's alpha (reliability), and Spearman correlation for testing the hypothesis. The results of descriptive analysis on the servant leadership variable exhibited that generally, respondents agreed that the dimensions of servant leadership influenced their performance. Specifically, the higher the mean, the more employees perceived that their leaders foster servant leadership style and made them feel empowered and eager to perform and deliver what is expected of them at work. Furthermore, the results of Spearman correlation through hypothesis testing revealed that servant leadership dimensions: love, service, empowerment, trust, and altruism had a low to moderate significant relationship with employee performance. Given the overall results, the researcher recommends that the programs or policies formulated be adopted by Company Z; conduct a study that focuses on how leaders perceived themselves as a servant leader and cover other dimensions or mediators as predictor variables for more extensive findings.

Keywords: *Servant Leadership, Love, Service, Empowerment, Trust, Altruism, and Employee Performance*

INTRODUCTION

Leadership plays a vital role in managing the people and the organization. Managers or leaders are responsible for ensuring the team's success, creating a positive and conducive environment, and solving complex problems while still encouraging employees to participate. However, once these responsibilities of leaders have been neglected and have drawn their attention away from the team members, then it can lead to a drop in productivity (Wilde, 2019), particularly in today's world that is constantly changing with a volatile, uncertain, complex, and ambiguous (VUCA) environment wherein things seem hard to understand and become unpredictable. It is important that today's leaders have the capability and willingness to serve their people while contributing not only to the success of the organization, but also to empowering. employees toward growth.

In addition, managing employee performance is an organizational effort to assist employees in achieving their goals in the context of increasing performance contributions to the organization especially in times of challenges or crisis. Managing performance requires quality management because quality management practices had a positive impact on quality performance (Sundar and Prabhu, 2019). Singh et al. (2019) revealed that top management support, workforce commitment, people management, and workplace organization are directly related to organizational (business) performance. One of the aspects of organizational management that plays an essential role in this process is the practice of organizational leadership. It is the key to organizational success since the leader is the entity that influences the performance of subordinates to achieve organizational goals. Leadership style influences the total quality management of an organization (Hermanto and Srimulyani, 2022) Further, many studies proved that leadership styles have an implication not only for organizational performance, but also for employees or individual performance. One of which is the study of Muzira et.al. (2020) which shows how servant leadership promotes team spirit; if workers know that their leaders care for their needs, they get a sense of belongingness that motivates them to work even more and produce high performance.

Research Objectives

This research aimed to determine the perceived level of the servant leadership style of Company Z in terms of the following dimensions such as love, service, empowerment, trust, and altruism; to evaluate the relationship between servant leadership dimensions and employee performance and to propose programs that will help Company Z in managing employee performance and turnover.

Research Framework

Servant leaders create a positive working environment which leads to increased employee engagement, active participation at work, and most importantly a higher level of performance (Karl & Jon 2016). For this study, figure 1 showed the independent and dependent variables which helped the researcher analyze and organize the results of the study. Anchored this study with the social exchange theory, the researcher assessed the impact of dimensions of servant leadership such as love, altruism, empowerment, trust, and service towards employee performance of Company Z. These dimensions of servant leadership may be used as a tool to offer to the whole organization in order to address turnover and manage employee performance towards achieving the organizational goals.

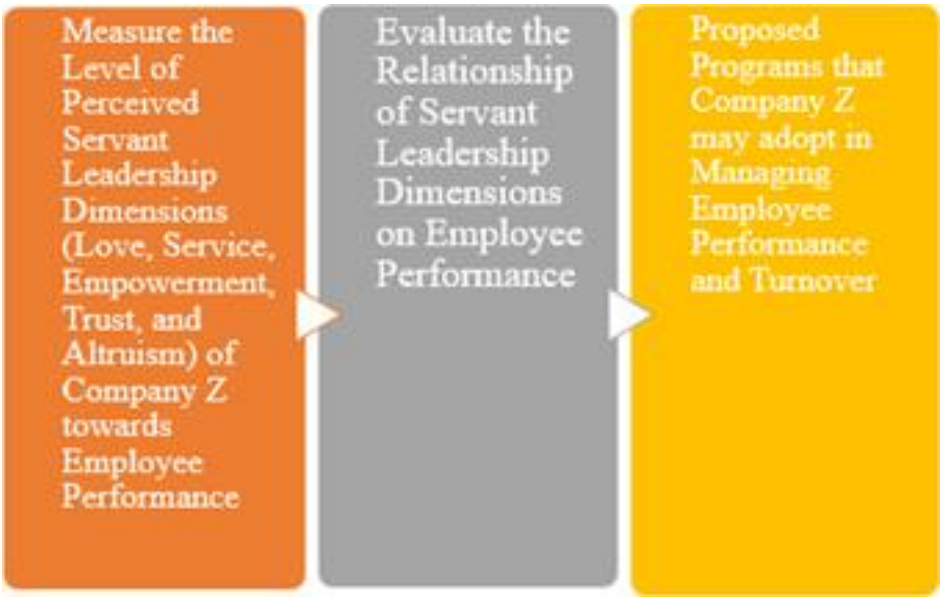

Figure 1. Conceptual Framework

Significance of the Study

The results of the study will be of great benefit to the following:

Theory

This research assessed the suitability of the Social Exchange Theory that was developed by George Homans in 1958 which explains how social interactions are determined by the benefits of service exchange or reciprocity (Tulane University, 2018). This research will help reveal the significance of this theory in unleashing the covert behavior of employees in delivering their performance at work. Also, to evaluate whether the servant leadership style of Company Z may affect how employees react or perform

using these dimensions: love, service, empowerment, trust, and altruism. It is said that people used to look at the potential reward before engaging in any activities or endeavor, hence, the result of this study may construe how leaders influence the employee's behavior or performance. Therefore, when employees display positive behavior or performance at work, the more satisfaction employees are getting from the company or their leaders.

Policy

This research will be beneficial to Company Z in its quest to increase employee performance and increase retention in the organization. While evaluating the dimensions of servant leadership, the management of Company Z may formulate programs to upskill and train its set of officers on how to be genuine servant leaders which is timely and useful in this time of uncertainty or crisis (Walker, 2020). The company may use the results of this study to influence and motivate the roster of officers to jump and adopt this leadership style which will help them realize how valuable and influential a management style is in delivering success to the individual and organizational goals.

Practice

With the results of this study, company Z may be able to attain its desired outcomes wherein employees will be encouraged to imbibe ownership and motivate to perform their duties without anyone coercing or forcing them to perform. This study will enlighten companies that are ready to take on the challenge of delivering performance by grooming their officers to be servant leaders. Also, to focus on hiring and developing leaders that possess better qualities of serving others and give value in cultivating employees' potential. Managers may establish a conducive and supportive environment promoting empowerment, learning opportunities, and personal development of employees which contributes to their level of engagement and performance. In this environment, managers can encourage their employees to learn through mistakes, practice blameless culture, and enhance their relationships with employees to influence organizational performance.

Social Action

This research study may be of use to some researchers or companies in their intentions to improve employee performance, provide empowerment, and alleviate the level of attrition by establishing policies, plans, and programs relevant to this study's results.

Scope and Limitation

This research study focused on examining the impact of servant leadership on the employee performance of Company Z. This study focused only on the five dimensions

of servant leadership such as love, service, empowerment, trust, and altruism to evaluate how these dimensions affect the employee's performance in Company Z. The researcher used quantitative research to analyze the data that were gathered in this study. The respondents for this study were the 250 regular employees randomly selected from various departments and divisions of Company Z to acquire their perspectives. The conduct of this study in Company Z limits the generalizability of the results as it focused only on the employee's perspective as to how they see their leaders observe the servant leadership behavior and cannot be generalized for other Japanese manufacturing companies.

Definition of Terms

The following terms were operationally defined as used in the study.

Altruism. This refers to a behavior of prioritizing and giving focus to other people's needs.

Employee Empowerment. This refers to the way how companies or management provide their employees with autonomy, opportunity, and motivation to contribute to decision-making activities.

Employee Engagement. This refers to the feeling of involvement and enthusiasm of employees towards their work and workplace.

Employee Performance. This refers to how employees behave and fulfill their assigned tasks or expectations in the workplace.

Employee Turnover. This refers to the total number or percentage of employees leaving the company in a certain period.

Leadership. This refers to the action of leading a group of people or an organization toward achieving individual and organizational goals.

Love. This refers to a genuine concern of the leaders to their employees in delivering and supporting their needs in the organization.

Organizational Commitment. This refers to the level of engagement and dedication team members feel toward their jobs and the organization.

Organizational Performance. This refers to the ability of the organization to achieve goals set forth by the management in a specific period.

Servant Leadership. This refers to serving others first and helping them to attain their maximum potential.

Review of Related Literature

As cited in the study of Liao and Zhu (2020), Greenleaf coined the term servant leadership in 1970 and believes that it is a leadership style that prioritizes other people's needs and emphasizes "serving others" and the interests of the employee. servant leadership is anchored in the human drive to bond with others and contribute to the betterment of society (Almutairi et al. 2020). An emphasis on service motivation, as demonstrated by empowering and developing employees with empathy and humility, differentiates servant leadership from other leadership frameworks (Harwiki, 2016). Kiker, Callahan, and Kiker (2019) indicated that servant leaders increase team potency and team effectiveness as servant leaders enhance the organization's goals. Servant leaders believe that it is their responsibility to assist others in learning and growing, feeling meaningful, inspired, energized, empowered, and contributing at their maximum level. People are encouraged to conduct good work that brings out the best in them when they are under the direction of servant leadership. Instead of teaching them how to do a better job, leaders are more likely to engage them by asking them how they can assist them in doing their jobs better. Leaders put the needs of their people ahead of their own. Establishing a supportive work atmosphere where employees feel valued and respected is a significant feature of servant leadership. Servant leadership can help create a more constructive professional atmosphere with a high level of enthusiasm and dedication. Businesses may develop, and workers can feel empowered if they show compassion, empathy, humility, and service. This, in turn, allows for more significant firm development (Khan et al., 2022b)

Farrington and Lillah (2019) studied the relationship between servant leadership and job satisfaction among healthcare workers. The findings showed a positive correlation between servant leadership and job satisfaction. In addition, Lee et al. (2018) also shared a positive correlation between the two constructs. Consequently, in every sector that researchers studied, the findings almost always showed a positive correlation between servant leadership and job satisfaction. Thus, these findings simply suggest that the application of servant leadership has a positive organizational outcome and improved job satisfaction among the employees working in the organization.

Here is the study by Bienkowska, et al. (2022) which showed the significance of servant leadership in influencing job performance. It is found that there is a direct relationship between servant leadership and employee turnover, where servant leadership supports the willingness of an employee to stay in the organization. A servant leader creates positive conditions for employee development and ensures employee autonomy, contributing to employee retention. There is also a relationship between servant leadership and job performance, which shows that a supporting leader can strengthen employee job performance. Furthermore, there is a direct relationship between employee turnover and job performance. The same results from the studies of Thakur and Verma (2020), Deconinck et al., (2017), Ng and Choi et al., (2016) also proved that servant leadership has a direct influence on the employee performance as well as the intention to leave the workplace. Therefore, if an employee is determined to leave the organization, their job performance is lower, and if the intention to stay in the organization is strong, their job performance is high.

METHODOLOGY

Research Design

A quantitative research design was selected in this study to determine the perceived level of servant leadership dimensions such as love, altruism, empowerment, trust, and service on employee performance. The response of the employees was measured through a validated survey questionnaire with a five-point Likert scale developed by the researcher. This survey questionnaire was the main tool for data collection and was distributed manually and online to investigate the impact of servant leadership dimensions on employee performance. The researcher sought expert advice from professionals to ensure the validity and reliability of the questionnaire.

Research Locale

The study was conducted in a Japanese manufacturing company engaged in the assembly and distribution of quality trucks, buses, and spare parts located at Laguna. In this research study, the researcher would be able to give aid to the challenges of company Z in managing employee performance and addressing its issues in turnover rate which impacted the operations and entails higher costs in hiring and training new employees onboard.

Population and Sampling Design

Company Z is a medium-sized manufacturing company; however, the focus of this research study was the 250 regular employees from various departments who had been with the company during the introduction of leadership training in 2018 up to 2021 implementation. The sampling design used was proportionate stratified sampling with employee category as a stratification variable (Manager, Supervisor, Rank & File), and the sample respondents for each employee category were determined by their number relative to the population.

Research Instrument

The data in the study were collected through a survey questionnaire with a 5-point Likert scale (1-Strongly Disagree, 2-Disagree, 3-Neutral, 4-Agree, 5-Strongly Agree). This survey questionnaire was a combination of self-constructed and modified statements generated from literature reviews which were tested by professionals to ensure validity and reliability.

Data Gathering Procedure

A 5-point Likert scale questionnaire was used in gathering the quantitative data for this research. Also, a key informant interview was facilitated with the selected employees to validate and support the results of this study. The data gathered were tabulated and analyzed to support and answer the research questions.

RESULTS AND DISCUSSION

This study revealed that the dimensions of servant leadership such as love, service, empowerment, trust, and altruism had an impact on employees' performance. Generally, all respondents conveyed their agreement on the impact of servant leadership on their performance. All these dimensions showed an acceptable weighted mean and were described as "Agree" with the following items: love (3.93), service (3.94), empowerment (4.12), trust (3.97), and altruism (3.92). As shown, empowerment received the highest weighted mean from the respondents while altruism had the lowest.

Table 1. Mean Ratings of Love on the Perceived Level Servant Leadership on Employee Performance

Indicators	Weighted Mean	Interpretation
1. My superior is genuinely interested in me as a person	3.82	Agree
2. My superior shows care/ concern for me through encouragement and affirmation.	3.98	Agree
3. My Superior shows compassion in his/her actions towards me.	3.95	Agree
4. My Superior accepts and appreciates me and my flaws as his/her member.	3.96	Agree
Overall Weighted Mean	**3.93**	**Agree**

Scale: Strongly Agree – 4.51 to 5.00, Agree – 3.51 to 4.50, Neutral –2.51 to 3.50, Disagree – 1.51 to 2.50, Strongly Disagree – 1.00-1.50

Table 1 presents the respondents' assessment on the level of impact of servant leadership dimensions on employee performance using weighted mean. Generally, the respondents agreed on all the items that pertain to love as a dimension of servant leadership with an overall weighted mean of 3.93. Specifically, the statement "My superior shows care/ concern for me through encouragement and affirmation" received the highest agreement level among the respondents with a weighted mean of 3.98. Meanwhile, the statement "My superior is genuinely interested in me as a person" obtained the lowest agreement level among the respondents with a weighted mean of 3.82.

Table 2. Mean Ratings of Service on the Perceived Level of Servant Leadership on Employee Performance

Indicators	Weighted Mean	Interpretation
1. My Superior makes my career development a priority.	3.86	Agree
2. My Superior is interested in making sure that I reach my career goals.	3.92	Agree
3. My Superior provides me with work experiences that enable me to develop new skills.	4.02	Agree
4. My Superior wants to know about my career goals and aspirations.	3.96	Agree
Overall Weighted Mean	**3.94**	**Agree**

Scale: Strongly Agree – 4.51 to 5.00, Agree – 3.51 to 4.50, Neutral –2.51 to 3.50, Disagree – 1.51 to 2.50, Strongly Disagree – 1.00-1.50

Table 2. shows that the statement "My Superior provides me with work experiences that enable me to develop new skills" had the highest weighted mean of 4.02 which described employee's agreement with this statement. On the other hand, the statement "My Superior makes my career development a priority" received the lowest response rate with a weighted mean of 3.86. However, the results presented a total of 3.94 weighted mean which respondents agreed to all its contents.

Table 3. Mean Ratings of Empowerment on the Perceived Level of Servant Leadership on Employee Performance

Indicators	Weighted Mean	Interpretation
1. My Superior encourages me to handle important work decisions on my own.	4.12	Agree
2. My Superior gives me freedom to handle difficult situations in the way they feel is best.	4.19	Agree
3. My Superior offers me abundant opportunities to learn new skills and competencies.	4.06	Agree
4. My Superior encourages me to come up and suggest innovative ideas.	4.12	Agree
Overall Weighted Mean	**4.12**	**Agree**

Scale: Strongly Agree – 4.51 to 5.00, Agree – 3.51 to 4.50, Neutral –2.51 to 3.50, Disagree – 1.51 to 2.50, Strongly Disagree – 1.00-1.50

Based on the results of the survey, respondents agreed on statements 1 and 4 "My Superior encourages me to handle important" and "My Superior encourages me to come up and suggest innovative ideas work decisions on my own" as both received a weighted mean of 4.12 which was the highest among the 4 statements. Meanwhile, the statement "My Superior offers me abundant opportunities to learn

new skills and competencies" got the lowest score or weighted mean of 4.06. However, in general, the results showed that employees agreed on empowerment as it received an overall weighted mean of 4.12.

Table 4. Mean Ratings of Trust on the Perceived Level of Servant Leadership on Employee Performance

Indicators	Weighted Mean	Interpretation
1. My manager shows his/her true feelings/emotions towards me and my team when giving performance feedback.	3.83	Agree
2. My Superior always communicates with me when there are work-related issues.	4.11	Agree
3. My Superior always makes time to talk to me on a personal level when he found out that I am struggling with my tasks.	3.86	Agree
4. My Superior honestly evaluates my performance in a fair and transparent manner.	4.08	Agree
Overall Weighted Mean	**3.97**	**Agree**

Scale: Strongly Agree – 4.51 to 5.00, Agree – 3.51 to 4.50, Neutral –2.51 to 3.50, Disagree – 1.51 to 2.50, Strongly Disagree – 1.00-1.50

For the trust, the employees believed that their superiors honestly evaluate their performance with a weighted mean of 4.08 which was the highest, while the lowest is 3.83 where they perceived that their managers show true feelings towards the team. Table 4 shows the overall mean results of 3.97 wherein employees convey their agreement.

Table 5. Mean Ratings of Altruism on the Perceived Level of Servant Leadership on the Employee Performance

Indicators	Weighted Mean	Interpretation
1. My Superior enjoys giving credit and celebrating the success of the team more than his own.	3.89	Agree
2. My Superior provides mentoring or coaching session even it affects his personal time to ensure that I grow professionally.	3.94	Agree
3. My Superior prioritizes my needs and my team ahead of his own.	3.80	Agree
4. My Superior always ask me of how he/she can be of help to ease or deliver my tasks rather than giving commands.	4.05	Agree
Overall Weighted Mean	**3.92**	**Agree**

Scale: Strongly Agree – 4.51 to 5.00, Agree – 3.51 to 4.50, Neutral –2.51 to 3.50, Disagree – 1.51 to 2.50, Strongly Disagree – 1.00-1.50

Results for mean ratings of altruism statements are demonstrated in Table 5. The results found that the employees agreed that their superiors always ask if they can help the team in delivering the tasks as it got 4.05 weighted mean while the statement “My Superior prioritizes my needs and my team ahead of his own” scored the lowest of 3.80 weighted mean. Overall, a weighted mean of 3.92 resulted from the agreements of all the respondents on the constructs of altruism.

Table 6. Mean Ratings of Individual/Employee Performance

Indicators	Weighted Mean	Interpretation
1. I can carry out my responsibilities effectively and efficiently.	4.42	Agree
2. I have mastered all phases of my job and the required skills to get everything delivered on time.	4.50	Agree
3. I execute my tasks with high regard for quality and productivity standards.	4.46	Agree
4. I am always open to new tasks and challenges even outside my scope.	4.46	Agree
Overall Weighted Mean	**4.46**	**Agree**

Scale: Strongly Agree – 4.51 to 5.00, Agree – 3.51 to 4.50, Neutral –2.51 to 3.50, Disagree – 1.51 to 2.50, Strongly Disagree – 1.00-1.50

Table 6 presents the data that the employees agreed that they have mastered all phases of their jobs and are able to deliver on time which received the highest weighted mean of 4.50. On the other hand, employees who believed that they could carry out their responsibilities effectively and efficiently received the lowest weighted mean of 4.42. Generally, employees were all in agreement on this individual performance construct as it received an overall weighted mean of 4.46.

The next finding was supported and proven by the precedent literature that indeed servant leadership had a significant relationship with the employee’s performance as the data showed a low to moderate positive correlation; thus, rejected the Ho. This study found that there was a low to moderate correlation between the dimensions and employee performance. Specifically, altruism is moderately correlated with employee performance ($\rho=0.422$, $p<0.01$). Meanwhile, employee performance has a low correlation with love ($\rho=0.294$ $p<0.01$), service ($\rho=0.372$, $p<0.01$), empowerment ($\rho=0.390$, $p<0.01$), and trust ($\rho=0.349$, $p<0.01$).

Table 7. Spearman Correlation: Significant Relationship between the Servant Leadership Dimensions and Employee Performance

Servant Leadership Dimensions	Factor	Spearman Rho (ρ)	p-value	Strength of Association	Decision	Relationship
Love	Employee Performance	0.294	0.000	Low	Reject Ho	Significant
Service		0.372	0.000	Low	Reject Ho	Significant
Empowerment		0.390	0.000	Low	Reject Ho	Significant
Trust		0.349	0.000	Low	Reject Ho	Significant
Altruism		0.422	0.000	Moderate	Reject Ho	Significant

Note: Correlation is computed at 5% level of significance. If p-value is less than 0.05, there is a significant relationship, thus reject Ho. If otherwise, there is no significant relationship, therefore accept Ho.

Lastly, the following proposed programs were summarized by the researcher that Company Z may adopt in addressing its challenges like turnover and supporting its best practices that affect how employees perceived servant leadership in the company.

Proposed Program 1: Employee Development Ladder – This will help Company Z develop and enhance employees' skills and competencies needed for their functions and succeed in current and future assignments; prioritizes the needs of its people by providing different employee development programs that will involve, engage, and empower them to perform at their best. Providing coaching or mentoring programs, continuous feedback, and recognition programs will boost employees' motivation to do good and even stay longer in the company in return.

Proposed Program 2: Leaders and Values Transformation – Revisiting the vision, mission, and values of the Company may help the management align its leaders and people with the culture and values of Servant Leadership. This will also help create an environment that promotes recognition and culture of "malasakit" for all the resources of the organization.

Proposed Program 3: Total Rewards and Recognition Programs – Organizing a robust program for recognizing the efforts and contributions of employees will motivate them to deliver their best. Moreso, will create an avenue to recognize and honor employees who are dedicated to driving the overall success of the organization.

Conclusions

Based on the indicated findings, the following conclusions were drawn:

1. All the mean ratings calculated for each dimension of servant leadership showed "Agree" which means that respondents perceived that those dimensions had an impact on their performance. Although the result may be positive and favorable to Company Z, still the management must conduct other programs or interventions to instill the true essence of servant leadership among its leaders and pass it on to the employees as clearly supported by the data that servant leadership influenced employee's performance.

2. The result of the study rejected the Ho and proved that all the dimensions included in the questionnaire on servant leadership had a low to moderate correlation with employee performance. It may seem to be good data to support that the company had shown and even practiced servant leadership, the Company Z still needs to work on improving the effectiveness of this leadership style in the organization. Company Z must help all its employees realize the importance of every dimension of servant leadership toward achieving individual and organizational performance.

3. The researcher formulated and proposed programs that Company Z may adopt in order to continue and improve the engagement of people in embracing servant leadership. Furthermore, Company Z should continue to empower and involve its people to ensure success in every area of the business as it is proven to be the highest weighted mean that drives employees to perform and deliver their best.

Recommendations

This study revealed that servant leadership had an impact on employee performance. Thus, the following recommendations are hereby presented:

1. The researcher suggests that Company Z may adopt the proposed programs formulated in this research to increase awareness and embrace the true meaning of servant leadership.

2. The study only focused on the employee's perception of their leaders in practicing servant leadership in the organization. Although the results showed a significant correlation between servant leadership and employee performance, the researcher recommends that future researchers indulge and evaluate the leader's perception of how they see themselves as servant leaders to strike a balance between the employee and leaders' perception and ensure that programs to be introduced are aligned with the company goals.

3. This research focused only on the five (5) dimensions of servant leadership; thus, future researchers may also look for other possible dimensions and even impart some mediators such as employee engagement, organizational commitment,

and other factors that influence employee performance and keep employees empowered and involved.

Compliance with Ethical Standards

The researcher ensured compliance with the ethical standards such as the identity and anonymity of the respondents were not disclosed and were dealt with in strict confidentiality. All respondents were oriented regarding the objectives of this study and informed consent was secured to ensure that the participants understand what they are getting into. The following ethical concerns were also considered in determining the results of this study i.e., risk of harm, conflict of interest, honesty, and confidentiality (Data Privacy Act 2012). While handling the data, the researcher ensured confidentiality and avoided any forms of misleading information and conflict of interest. Before the commencement of this study, the researcher sought approval from Colegio de San Juan de Letran – Calamba. Also, a letter of intent was presented to Company Z to get their approval and the data needed for this research. The data collection, processing, and interpretation of results were facilitated by the researcher. Any gestures associated with subjectiveness and conflict of interest were not entertained to ensure the validity and integrity of the results.

Acknowledgments

The researcher would like to dedicate the thesis to the Lord Jesus Christ who blessed her with all the strength, wisdom, and determination to complete the study. To all her family, friends, and colleagues who had helped her and contributed to this study, thank you. Heartfelt appreciation for all your support and effort to help her finish and make this research successful. To God be all the glory!

ABSTRACT

This study explored the relationship between reading comprehension skills, problem-solving skills, and academic achievement in Grade 10 students. Using stratified-random sampling, 70 participants were selected, and the data was analyzed using correlation, regression, and ANOVA. The study found a significant and moderate correlation between reading comprehension and problem-solving skills, indicating that as reading comprehension improves, so does problem-solving ability. There was also a strong correlation between reading comprehension skills, problem-solving skills towards the academic achievement, suggesting that better reading comprehension and problem-solving is linked to higher academic achievement. Age played a significant role, with older students demonstrating higher levels of both reading comprehension and problem-solving skills. Gender differences were observed in reading comprehension, with males outperforming females, but no significant gender differences were found in problem-solving skills. This concludes that reading comprehension is an indicator to the problem-solving skills and academic achievement of the students.

Keywords: *Reading Comprehension, Problem-solving, Academic Achievement*

INTRODUCTION

"The first stage in resolving an issue is to acknowledge its existence," says Zig Ziglar. This emphasizes the importance of identifying and accepting the existence of an issue before taking further action to address it. Everyday people encounter difficulties, challenges or problems wherein it calls for a solution and a need for improvement and intervention that depends to the areas the matter is concerned. In academics, students experience lots of problems such as having the hard time to comprehend and to get the right solution of the given mathematical word problems. In fact, the Philippine Star reports the Program for International Students Assessment (PISA) test results, revealed that Philippines was ranked 76th out of 81 countries participating in reading comprehension in 2022. Indicators of the test implies top-performing students in the country did not go up in percentage points, while low-performing students registered a 4.3 percent decline in reading comprehension proficiency levels with respect to the result of PISA in 2018 where Philippines ranked 79th place, (Servallos,2023). Furthermore, in the aspect of mathematics the Philippines ranked sixth lowest after ranked the second lowest in 2018 still in Program for International Assessment test.

Consequently, to better understand a text, reading is necessary since it exposes the real meaning of the hidden ideas or concepts that a text contains (Akyol, 2006; Akyol & Boyaci-Altinay, 2019). In addition, a study conducted by Pearce, Skinner, Brunn and Lopez-Mohler (2013) as cited by Moleko & Mosimege (2020) found that the teachers responded that the students have difficulty in solving word problems and reading ability affects it less particularly in the United States where the study is conducted. However, in a study of Nicolas and Emata (2018) stated that the students problem solving was developed with the aid of an integrative approach through reading comprehension. It can also be seen that the level of proficiency of a student in reading comprehension can influence how students understand or analyze a word problem especially in the field of mathematics. With these adequate contrasting findings, it is evident that reading comprehension skills may have or may not have a significant impact on problem solving skills of the students.

Similar situation has been observed among the students in the Saint Joseph College of Sindangan Incorporated which the students have encountered difficulty in extracting the right solution and answer to the given mathematical word problems. It is also observed that the students had a hard time in understanding and comprehending what the given mathematical text implies. With these, it is important to know the relationship between the reading comprehension to the problem-solving ability of the students would be.

Subsequently, with the context mentioned, the researchers would like to further determine the relationship of reading comprehension skills, problem-solving skills as well as the academic achievement of the Grade 10 students in the Saint Joseph College of Sindangan Incorporated S.Y. 2023-2024. Moreover, this research provides fulfillment for the benefits of the students, teachers, school administrators and etc. With the findings and recommendation of the study the above-mentioned beneficiaries will be guided on

the relationship of reading comprehension skill, problem-solving skills and academic achievement of the students.

Research Questions

This study aimed to determine the significant relationship between reading comprehension proficiency, problem-solving skills, and academic achievement of the Grade 10 students in the Saint Joseph College of Sindangan Incorporated S.Y.2023-2024.

Specifically, this sought to answer the following queries:

1. What is the profile of the respondents in terms of:
    1.1. Age
    1.2. Gender
2. What is the proficiency level of reading comprehension skills of the students?
3. What is the level of Problem-Solving skills of the students?
4. What is the Academic Achievement of the students?
5. Is there a significant relationship between reading comprehension skills and problem-solving skills of the students?
6. Is there a significant relationship between reading comprehension skills and the academic achievement of the students?
7. Is there a significant relationship between problem-solving skills and academic achievement of the students?
8. Is there a significant difference in the reading comprehension of the students across their profile in terms of age?
9. Is there a significant difference in the problem-solving of the students across their profile in terms of age?
10. Is there a significant difference in the reading comprehension of the students across their profile in terms of gender?
11. Is there a significant difference in the problem-solving of the students across their profile in terms of gender?

METHODOLOGY

Research Design

This study mainly used a quantitative design to determine the relationship between Reading Comprehension Proficiency, Problem-Solving Skills, and Academic Achievement of Grade 10 students. Typically, the variables in this study (independent and dependent variables) were measured using an instrument by means of survey questionnaires. The methods also involved description, recording, analysis, and interpretation of the data gathered. It usually entails the relationship between the variables under studied which are non-manipulative variables.

The researchers specifically used a correlational study to produce a valid result that would answer the objectives of conducting the study. Correlational design investigates relationships between variables without the researcher controlling or

manipulating any of them (Bhandari, 2022). The data gathered were integrated using statistical tools to determine or to discover relationships among variables involved in the research endeavor.

The information obtained from the study utilizing the quantitative method contingent on a better way on the relationship between the Reading Comprehension and Problem-Solving Skills of the students will yield to results thus, will be able to attain the goals of the study.

Research Instrument

The instrument used in the study is one set of questionnaires for the respondents. The questionnaire for the respondents is consists of three parts:

Part I.

Deal with the respondents' personal profile and identity. This part elicits data on name (optional), age, and gender.

Part II.

Deal on the proficiency level of the reading comprehension skills of the Grade 10 students. This part of test the researchers created a self-made multiple questions adapting some text or stories from the textbook and then formulate questions from it. There are 20 items for this part. Also, adapted and modified the scale for reading comprehension performance of Alieto and Buslon (2019) to set the description of the scores based on the questionnaires answered by the respondents.

Part III.

Deal on the level of problem-solving skills of the Grade 10 students. This part of questionnaire composed of 20 multiple choice items which are made by the researchers having some textbook and available online materials which the concepts were get. Moreover, the study adapted and modified the scaling of the level of problem-solving skills of the students by Alcantara and Bacsa (2017) to explicate the scores got by the respondents.

Before the set of questionnaires were distributed and administered to the 88 Grade 10 students, a pilot test was conducted with 18 students who are also Grade 10 but not included to the identified 70 participants of the study. In this way, the instrument will be validated and will ensure its reliability so that it would be aligned to the objectives of the study.

Data Gathering Procedure

*Preparation phase***.** In this stage, the participants needed in the study which is the Grade 10 students is identified by the researchers. The sampling used is stratified

sampling which was utilized to choose the number of respondents needed in the study. With this, the researchers have chosen the two sections of Grade 10 students S.Y. 2023-2024. The researchers sent a letter to the Junior High Principal, to ask permission to conduct the study among the chosen respondents.

*Quantitative Instrument***.** The researchers made a set of multiple-choice questions having 20 items in reading comprehension skills and another 20 items in problem-solving skills. In which the concepts are within the capacity of Grade 10 students. The reliability, validity and internal consistency of the test items was also ensured through a pilot test and consultation of the panel of experts in the College of Arts, Sciences and Teacher Education.

Pilot testing phase. The researchers conducted the pilot testing of the survey questionnaire to the 18 students, having 9 students in each section of Grade 10 and the researchers assessed and asked their comments about the survey administered to them. Beforehand, the researchers explained the research endeavor and ask the consent of these participants of the pilot testing. Then, the researchers would compute, analyze, and interpret the data gathered in this phase.

*Survey***.** The researchers made a formal letter addressed to the parents of the students asking their permission to let their child participate and answer the survey questionnaire. Another letter to the math teacher of the Grade 10 students to humbly asked for some allotted time to conduct the survey since it needs at least an hour to answer the questions in the survey. The researchers used the survey questionnaire to gather information from the chosen respondents of the study. Lastly, researchers followed the ethical way in getting the current test scores of the students in English and Math that will be served as the data for academic achievement.

Statistical Treatment

1. To test the reliability of the instrument (survey questionnaires) in the pilot testing phase, *Cronbach Alpha* was used.

2. To determine the answer to the research question number 1 which is concerned with the profile of the respondents in terms of their age, gender, and club affiliations, *Frequency Count and Percentage,* and *Mean* statistical tools were utilized.

3. To answer the research question number 2, 3 and 4 all about the proficiency level on reading comprehension skills and problem-solving skills as perceived by the respondents, the *Frequency Count and Percentage, Weighted Mean, Standard Deviation, Scale for reading comprehension performance* (Alieto & Buslon, 2019), *Scale for problem-solving performance* (Alcantara & Bacsa, 2017) and *Descriptor Baseline for the Academic Achievement* of the grading system implemented by the DepEd (Tadios, L.K.A., & et al., 2022) are utilized. Below are the tables which demonstrate the scaling, the range of scores and the interpretation or descriptor that researchers adapted and modified.

Table 1

Five Point Scale on the Level of reading comprehension performance

Range of Score	Description
17-20	Very Proficient
13-16	Proficient
9-12	Somehow Proficient
5-8	Less Proficient
0-4	Not Proficient

Table 2

Five Point Scale on the Level of problem-solving skills of the students

Range of Score	Level of Problem-Solving Skills
17-20	Superior
13-16	Above Average
9-12	Average
5-8	Below Average
0-4	Poor

Table 3

Descriptor Baseline of Academic Achievement of the students

Scale of Percentile Test Scores	Descriptor
90 – 100	Outstanding
85 – 89	Very Satisfactory
80 – 84	Satisfactory
75 – 79	Fairly Satisfactory
Below 75	Did not Meet the Expectations

4. To determine the significant relationship between the reading comprehension skills, problem-solving skills and academic achievement of the students which is reflected in the statement of the problem number 4,5, & 6 the researchers used the statistical tools such as *Pearson Product Momentum Correlation (PPMC), Regression* and *ANOVA*.

5. To answer the research question 7, 8, 9 & 10 regarding the significant difference between the profile of the respondents and their reading comprehension skills and problem-solving skills, *Analysis of Variance* and *Cohens' D* tool were utilized.

The assumptions of the parametric tests are tested by the researchers before utilizing it in the data analysis. Further, these assumptions are met in this research endeavor.

RESULTS

This research was intended for exploring the significant relationship of reading comprehension, problem-solving skills, and academic achievement of Grade 10 students. After the success of undertaking the methods specifically the data gathering phase, calculations were made by the researchers. This chapter demonstrates the answer to the problem of the study found in the first chapter that would yield to results and conclusions. This chapter also highlights the analysis and interpretation of data gathered.

Results of the Pilot Study

Table 1 presents the scores of the participants of the pilot study both in reading comprehension skills and problem-solving skills. In the reading comprehension column demonstrates that among eighteen participants, eleven (11) got scores ranging from 17 – 20, four (4) got scores ranging from 13 – 16, two (2) got scores ranging from 9 – 12, and one (1) got scores ranging from 5 – 8. On the other hand, in the column of problem-solving among eighteen participants, 3 three got scores ranging from 17 – 20, seven (7) got scores ranging from 13 – 16, six (6) got scores ranging from 9 – 12, and two (2) got scores ranging from 5 – 8.

Table 1

Distribution of Scores of the Participants of the Pilot Testing

Scores	Frequency	
	Reading Comprehension	Problem-solving
17 – 20	11	3
13 – 16	4	7
9 – 12	2	6
5 – 8	1	2
0 – 4	0	0
Total	18	18

Table 1 presents the results of the pilot testing that were calculated through using Cronbach Alpha to test the reliability and the consistency of the items in the survey questionnaire both the reading comprehension and problem-solving questions. Since, there are a lot of variation of Cronbach Alpha, the researchers utilized the formula from the video tutorial of Dr. Eugene O'Loughlin in the year 2020 $\alpha = \left(\frac{k}{k-1}\right)\left(\frac{s_y^2 - \sum s_i^2}{s_y^2}\right)$.

The internal consistency of the initial questionnaire is presented in Table 1 after it was administered to 18 student – participants. The reading comprehension and problem-solving items has equal alpha coefficient of 0.824 and 0.766 respectively which interpreted as good and acceptable. These indicate that the questionnaires' content is reliable and does not need further revisions. This means that the instrument used in this study is appropriate and valid.

Table 2
Cronbach Alpha Result

	Alpha Coefficient	Number of items	Internal Consistency
Reading Comprehension	0.824	20	good
Problem-Solving	0.766	20	acceptable

The result of the pilot test allowed the researchers to proceed to the conduct of the final survey. This survey was conducted to the sample which is the 70 respondents utilizing the same questionnaire used in the pilot test. With this, the researchers could gather enough data that would obtain comprehensive details which are essential to achieve the specific goals of the research endeavor.

Problem 1.1. What is the profile of the respondents in terms of age?

Table 2 presents the age of the 70 selected respondents. Based on the results, twenty-five (25) respondents have an age of 15 which corresponds to 35.72%, forty (40) have an age of 16 which corresponds to 57.14% and five (5) have an age of 17.
This only shows that most of the respondents' age is 15, which implies that majority of the Grade 10 students in SJCSI are ages 15.

Table 2
Age of the Respondents

Age	Frequency (f)	Percentage (%)
15	25	35.72
16	40	57.14
17	5	7.14
Total	70	100

Problem 1.2. What is the profile of the respondents in terms of gender?

Table 3 illustrates the gender identity of the respondents of the 70 selected participants of the study. Based on the data, forty (40) of the respondents is male which corresponds to 57.14% and out of 70 respondents there are thirty (30) who are female which is 42.86% of the sample size.

This only shows that there are more male respondents compare to female, which has a difference of 10 in frequency.

Table 3

Gender of the Respondents

Gender	Frequency (f)	Percentage %
Male	40	57.14
Female	30	42.86
Total	70	100

Problem 2. What is the level of reading comprehension skills of the students?

Table 4 shows that out of 70 participants of the study forty-one got the scores ranging from 17 – 20 equivalent to 58.57% of the sample size, which is very proficient in reading comprehension, twenty students got scores ranging from 13 – 16 equivalent to 28.57% which is considered as proficient, and five got scores ranging from 9 – 12 that corresponds to 7.14% that is considered as somehow proficient. Whilst one student got the score within the range of 5 – 8 that corresponds to the 1.43% which is identified as less proficient, and three out of seventy students got the score within the range of 0 – 4 that corresponds to 4.29% of the sample size which is identified as not proficient in terms of reading comprehension skills. Equally important, the table 8 illustrates the overall weighted mean is 16.17 or 16 which belongs to the ranging scores of 13 – 16 and identified as proficient in terms of reading comprehension; also, has a standard deviation of 3.83 which signifies that the scores of the students in reading comprehension varied and somehow spread out.

Table 4

Level of Reading Comprehension

Range of Score	Frequency (f)	Percentage (%)	Description
17 – 20	41	58. 57	Very Proficient
13 – 16	20	28.57	Proficient
9 – 12	5	7.14	Somehow Proficient
5 – 8	1	1.43	Less Proficient

0 – 4	3	4.29	Not Proficient
Total	70	100	

Overall weighted mean = ***16.17*** *SD =* ***3.83***

Problem 3. What is the level of reading comprehension skills of the students?

Table 5 demonstrates the performance of the problem-solving of the students with respect to the scores got from the test. Twenty-nine (29) students which corresponds to the 41.43% of the sample size performed well in the problem solving which got scores ranging from 17 – 20 and identified as superior, twenty (20) got scores ranging from 13 – 16 which is equivalent to 28.57% of the participants that can be classified as above average, sixteen (16) or 22.86% of the students got scores ranging from 9 – 12 which is described as average, four (4) students got the scores ranging from 5 – 8 which is described as below average, and one (1) out seventy participants got the scores ranging from 0 – 4 which is interpreted as poor in terms of problem-solving skills. Moreover, the overall weighted mean of the students is 14.61 which has level of problem-solving skills above average and the standard deviation is 3.91 which signifies that most students belong to proficient level which the test scores varied and somewhat spread out.

Table 5
Level of Problem-Solving Skills

Range of Score	Frequency (f)	Percentage (%)	Description
17 – 20	32	45.71	Superior
13 – 16	19	27.14	Above Average
9 – 12	14	20	Average
5 – 8	3	4.29	Below Average
0 – 4	2	2.86	Poor
Total	70	100	

Overall weighted mean = ***14.41*** *SD =* ***3.87***

Problem 4. What is the academic achievement of the students?

Table 6 illustrates the academic achievement of the students using the average of their test scores in the English and Math subject respectively. Out of 70 students twenty-nine (29) got scores ranging from 90 – 100 that corresponds to 41.43% which is interpreted as outstanding, eighteen (18) got scores ranging from 85 – 89 which corresponds to 25.71% which is very satisfactory, twelve (12) got scores grade ranging from 80 – 84 that corresponds to 17.14% which is satisfactory, nine (9) got scores ranging from 75 – 79 that corresponds to 12.86% which is fairly satisfactory and two (2) got scores below 75 which corresponds to 2.86% which classified as did not meet the expectations; with mean of 86.43 and standard deviation of 5.87. This implies that most students have a very satisfactory academic achievement which the percentile scores varied.

Table 6

Academic Achievement of the Students

Scale of Test Scores (percentile)	Frequency	Percentage	Descriptor
90 – 100	29	41.43	Outstanding
85 – 89	18	25.71	Very Satisfactory
80 – 84	12	17.14	Satisfactory
75 – 79	9	12.86	Fairly Satisfactory
Below 75	2	2.86	Did not meet the expectations
Total	70	100	
	Overall weighted mean = ***86.43***		*SD* = ***5.87***

Problem 5. Is there a significant relationship between reading comprehension skills and problem solving skills of the students?

Table 7 presents the result from the correlation test using the Pearson Product Momentum Correlation. The reading comprehension and problem-solving has correlation coefficient **[*r*]** of 0.63 which is between 0.5 and 0.7 which is classified and interpreted as moderate correlation.

Table 7

PPMC Test Result

Variables	reading comprehension	problem-solving	Interpretation
reading comprehension	1	0.63	Moderately
problem-solving	0.63	1	Correlated

Legend: 0.9> r <1 - very highly correlated, 0.7> r <0.9 - highly correlated, 0.5> r <0.7 - moderately correlated, 0.3> r < 0.5 - low correlation

Table 8 provides valuable insights into the strength of the relationship of reading comprehension skills and problem-solving skills in the regression model. The multiple R is 0.629 or 0.63 which has an equal value of correlation coefficient (table 10), this represents the strength and direction of the linear relationship between the two variables, since Multiple R is 0.629 it indicates a moderate positive correlation. R square is the coefficient of determination which has a value of 0.397, it signifies that approximately 39.7% of the variance of problem-solving is explained by the reading comprehension. Adjusted R Square is 0.388 which is slightly lower than the R Square due to the adjustment for the number of predictors, but it implies the same thing as R Square. Standard error of 3.07% signifies that the data in regression model's prediction are closer to the actual values, it is more likely to be accurate. For the number of observations which is 70 entails that there are total of 70 data points used in regression analysis.

Table 8

Regression Analysis Result

Regression Statistics Summary

Multiple R	0.629
R Square	0.397
Adjusted R Square	0.388
Standard Error	3.07
Observations	70

Table 9 reveals the summary of the Analysis of Variance test that gives an insights on the relationship and its significance. The degree of freedom (df) is 69. SS stands for the Sum of Squares, which indicates the variability explained by the regression model, in the regression SS is 421.945 and in residual is 641.4264 MS stands for Mean Square, which is calculated by dividing the sum of squares by the degrees of freedom, regression MS is 421.945 while the residual MS is 9.433. Moreover, the F value is 44.73 which is the test statistic for the ANOVA test; this indicates somewhat stronger relationship between the reading comprehension and problem-solving skills.

Consequently, the significance F is 5.15E-09 which is equivalent to 5.15 x 10^{-9} this indicates an extremely less value, suggesting strong evidence against the null hypothesis. This results suggests that the reading comprehension has a significant impact on the problem-solving skills of the students.

Table 9

ANOVA Test Result

ANOVA

	Df	SS	MS	F	Significance F
Regression	1	421.945	421.945	44.73196	5.15E-09
Residual	68	641.4264	9.433		
Total	69	1063.371			

Analysis and Interpretation of Results

Table 10 shows the summary of the results of the correlation and analysis of variance. The correlation coefficient is 0.63 which indicates a moderately positive correlation. Moreover, the Significance F is also referring to p-value, since 5.15 x 10^{-9} is an extremely low value. With this, since p-value is less than 0.05 (level of significance) this means that the null hypothesis is rejected. This suggests that there is a significant relationship between the reading comprehension skills and problem-solving skills. This yield result is supported by the related studies mentioned in the chapter II component of this research like the study of Auzar (2018) found out that the capability of students to understand the language of mathematical word problem is relayed to the ability to read for comprehension. Similarly, a study found that problem-solving skills of the students are dependent to their reading comprehension skills wherein it paved the way to the importance of vocabulary and the main idea in learning problem-solving, (Timario, 2020).

Table 10

Summary of the Result between reading comprehension and problem-solving

ANOVA & PPMC

Variables	Correlation Coefficient	Significance F	p-value	Interpretation
Reading Comprehension Problem-Solving	0.63	5.15 x 10^{-9}	< 0.05	significant

d.f.= 68 at 0.05 level of significance

Problem 6. Is there a significant relationship between reading comprehension skills and the academic achievement of the students?

Table 11 illustrates the result from the correlation test using the Pearson Product Momentum Correlation. The reading comprehension and academic achievement of students has correlation coefficient **[*r*]** of 0.73 which is between 0.7 and 0.9 which is classified and interpreted as high correlation.

Table 11

PPMC Test Result

Variables	reading comprehension	academic achievement	Interpretation
reading comprehension	1	0.73	Highly
academic achievement	0.73	1	Correlated

Legend: 0.9> r <1 - very highly correlated, 0.7> r <0.9 - highly correlated, 0.5> r <0.7 - moderately correlated, 0.3> r < 0.5 - low correlation

Table 12 provides valuable insights into the strength of the relationship of reading comprehension skills and academic achievement in the regression model. The multiple R is 0.727 which has an equal value of correlation coefficient, this represents the strength and direction of the linear relationship between the reading comprehension and academic achievement, since Multiple R is 0.727 it indicates a high positive correlation. R square is the coefficient of determination which has a value of 0.528, it signifies that approximately 52.8% of the variance of academic achievement is explained by the reading comprehension. Adjusted R Square is 0.521 which is slightly lower than the R Square due to the adjustment for the number of predictors, but it implies the same thing as R Square. Standard error of 4.065% signifies that the data in regression model's prediction are closer to the actual values, it is more likely to be accurate. For the number of observations which is 70 entails that there are total of 70 data points used in regression analysis.

Table 12

Regression Analysis Result

Regression Statistics Summary	
Multiple R	0.727
R Square	0.528
Adjusted R Square	0.521
Standard Error	4.065
Observations	70

Table 13 demonstrates the summary of the Analysis of Variance test that gives an insights on the relationship and its significance. The degree of freedom (df) is 69. SS stands for the Sum of Squares, which indicates the variability explained by the regression model; in the regression SS is 1256.795 and in residual is 1123.848. MS stands for Mean Square, which is calculated by dividing the sum of squares by the degrees of freedom, regression MS is 1256.795 while the residual MS is 16.527. In addition, the F value is 76.044 which is the test statistic for the ANOVA test; this indicates a stronger relationship between the reading comprehension and academic achievement.

Subsequently, the significance F is 1.08E-12 which is equivalent to 1.08×10^{-12} this indicates an extremely less value, suggesting very strong evidence against the null hypothesis. These results suggest that the reading comprehension has a significant impact on the academic achievement of the students.

Table 13

ANOVA Test Result of reading comprehension and academic achievement

ANOVA

	Df	SS	MS	F	Significance F
Regression	1	1256.795	1256.795	76.044	1.08E-12
Residual	68	1123.848	16.527		
Total	69	2380.643			

Analysis and Interpretation of Results

Table 14 shows the summary of the results of the correlation and analysis of variance. The correlation coefficient is 0.73 which indicates a highly positive correlation. Moreover, the Significance F which is 1.08×10^{-12} also refers to p-value is an extremely low value. With this, since p-value is less than 0.05 (level of significance) this means that the null hypothesis is hereby rejected. This is suggesting that there is a significant relationship between the reading comprehension skills and academic achievement. This implies that reading comprehension has a great impact in the academic achievement of the students. This is also supported by the study of Jala in 2020 which asserts that reading comprehension is a contributory factor to the development of the overall academic performance of the students.

Table 14

Summary of the Result between Reading Comprehension and Academic achievement

ANOVA & PPMC

Variables	Correlation Coefficient	Significance F	p-value	Interpretation
Reading Comprehension Academic achievement	0.73	1.08×10^{-12}	< 0.05	Significant

d.f.= 68 at 0.05 level of significance

Problem 7. Is there a significant relationship between problem-solving skills and academic achievement of the students?

Table 15 reveals the result from the correlation test using the Pearson Product Momentum Correlation. The problem-solving and academic achievement of students has correlation coefficient **[*r*]** of 0.72 which is between 0.7 and 0.9 which is classified and interpreted as high correlation. This signifies that problem-solving skills is highly correlated with the academic achievement of the students.

Table 15

PPMC Test Result

Variables	problem-solving	academic achievement	Interpretation
Problem-solving	1	0.72	Highly
academic achievement	0.72	1	Correlated

Legend: 0.9> r <1 - very highly correlated, 0.7> r <0.9 - highly correlated, 0.5> r <0.7 - moderately correlated, 0.3> r < 0.5 - low correlation

Table 15 gives valuable insights into the strength of the relationship of problem-solving skills and academic achievement in the regression model. The multiple R is 0.724 which has an equal value of correlation coefficient, this represents the strength and direction of the linear relationship between the problem-solving and academic achievement, since Multiple R is 0.724 it indicates a moderate positive correlation. R square is the coefficient of determination which has a value of 0.524, it signifies that approximately 52.4% of the variance of academic achievement is supported by the problem-solving. Adjusted R Square is 0.517 which is slightly lower than the R Square due to the adjustment for the number of predictors, but it implies the same thing as R Square. Standard error of 4.08% signifies that the data in regression model's prediction are more likely closer to the actual values, it appears to be accurate. For the number of observations which is 70 entails that there are total of 70 data points used in regression analysis.

Table 16

Regression Analysis Result between problem-solving and academic achievement

Regression Statistics Summary	
Multiple R	0.724
R Square	0.524
Adjusted R Square	0.517
Standard Error	4.08
Observations	70

Table 17 shows the summary of the Analysis of Variance test that gives an insights on the relationship of the variables involve and its significance. The degrees of freedom (df) is 69. SS stands for the Sum of Squares, which indicates the variability explained by the regression model; in the regression SS is 1248.48 and in residual is 1132.163. MS stands for Mean Square, which is calculated by dividing the sum of squares by the degrees of freedom, regression MS is 1248.48 while the residual MS is 16.649. In addition, the F value is 74.986 which is the test statistic for the ANOVA test; this indicates a strong relationship between the reading comprehension and academic achievement.

Equally important, the significance F is 1.392E-12 which is equal to 1.39×10^{-12} this indicates an extremely less value, implying very strong evidence against the null hypothesis. This results suggests that the problem-solving skills has a significant impact on the academic achievement of the students.

Table 17

ANOVA Test Result of problem-solving and academic achievement

ANOVA

	Df	SS	MS	F	Significance F
Regression	1	1248.48	1248.48	74.986	1.39E-12
Residual	68	1132.163	16.649		
Total	69	2380.643			

Analysis and Interpretation of Results

Table 18 reveals the summary of the results of the correlation and analysis of variance. The correlation coefficient is 0.72 which indicates a moderately positive correlation. Moreover, the Significance F which is 1.39×10^{-12} (also refers to p-value) is an extremely low value. With this, since p-value is less than 0.05 (level of significance) this means that the null hypothesis is rejected. This signifies that there is a significant

relationship between the problem-solving skills and academic achievement. This endures and emphasizes in the study of Jala in the year 2020 where it is found out that the overall academic performance or the academic achievement of the students is influenced on their skills which includes the problem-solving skills (stated in chapter 2).

Table 18

Summary of the Result between reading comprehension and academic achievement

ANOVA & PPMC

Variables	Correlation Coefficient	Significance F	p-value	Interpretation
Problem-solving Academic achievement	0.72	1.39×10^{-12}	< 0.05	significant

d.f.= 68 at 0.05 level of significance

Problem 8. Is there a significant difference in the reading comprehension of the students across their profile in terms of age?

Table 19 shows a medium significant difference (*d = 0.70*) between age groups of the students namely: 15, 16 and 17. Students who are 15 years old has an overall mean of 17.33 (very proficient in reading comprehension skills) and standard deviation of 2.19, students who are in the 16 years of age has an overall mean of 14.83 (proficient in reading comprehension) and standard deviation of 4.64, and students who are 17 years old has an overall mean of 18.6 (very proficient in reading comprehension) and standard deviation of 1.52; means that 17 years old performed significantly better or has a higher level of reading comprehension skills compared with 15 and 16 years old with mean difference of 1.27 and 3.77 respectively.

The results of the single-factor ANOVA are the following: F-value is 5.06, critical F-value (F crit) is 3.13 at a significance level of 0.05. Since, the F-value obtained (5.06) exceeds the critical value (3.13) this suggest that a significant difference exists between the age groups in terms of reading comprehension skills. Furthermore, the p-value associated with the F-test is equal to 0.00896 which is below the typical significance level of 0.05, this indicates strong evidence to reject the null hypothesis that there is no significant difference in reading comprehension skills across different age groups. Hence, there is a significant difference in reading comprehension skills among the age groups of 15, 16, and 17.

TABLE 19

ANOVA of Reading Comprehension in terms of Age

Age	Mean	SD	Observation	Df	F	F crit	p-value	Cohen's D
15	17.33	2.19	30					
16	14.83	4.64	35	67	5.06	3.13	0.008965353	0.70
17	18.6	1.52	5					

Problem 9. Is there a significant difference in the problem-solving of the students across their profile in terms of age?

Table 20 conveys a medium significant difference (*d = 0.58*) among the age groups of the students namely: 15,16 and 17. Students who are 15 years of age has an overall mean of 15.73 (above average in terms of problem-solving) and standard deviation of 3.31, students who are 16 years of age has an overall mean of 13.57 (above average in terms of problem-solving) and standard deviation of 4.24, and students who are 17 years of age has an overall mean of 17 (superior in terms of problem-solving) and standard deviation of 2.83. This means that 17 years old performed significantly better compared to 15 and 16 years old with mean difference of 1.27 and 3.43 respectively.

The results of the single factor ANOVA are the following: F value is 3.59 and critical F-value (F crit) is 3.13 at a significance level of 0.05. Since, the F value (3.59) obtained exceeds the critical value (3.13) this suggests that a significant difference exists between the age groups in terms of problem-solving skills. Moreover, the p-value associated with the F-test is equivalent to 0.033 which is below the typical significance level of 0.05, this implies a strong evidence to reject the null hypothesis that there is no significant difference in problem-solving skills across different age groups. Thus, there is a significant difference in problem-solving skills among the age groups of 15, 16, and 17.

TABLE 20

ANOVA of Problem-solving in terms of Age

Age	Mean	SD	Observation	df	*F*	*F crit*	p-value	Cohen's D
15	15.73	3.31	30					
16	13.57	4.24	35	69	3.59	3.13	0.033	0.58
17	17	2.83	5					

Problem 10. Is there a significant difference in the reading comprehension of the students across their profile in terms of gender?

Table 21 denotes a medium significant difference (*d = 0.54*) between female (M = 17.33, SD = 2.19) and male (M = 17.33, SD = 4.54) results of the reading comprehension with F- value = 5.111 and critical F-value = 3.982. Since, 5.111 > 3.982 F-value is greater than the critical F-value this indicate that there is a significant difference in the gender of students in terms of their reading comprehension skills. Additionally, the p-value is 0.02 or p < 0.05, since the p-value is less than the level of significance, this implies a strong evidence to reject the null hypothesis. This indicates that female students performed significantly better or has a higher level of reading comprehension skills compared with male students with mean difference of 2.03. Hence, the null hypothesis which states that there is no significant difference of the reading comprehension of the students in terms of gender is hereby rejected.

1.1. TABLE 21

ANOVA of Reading Comprehension in terms of Gender

Gender	Mean	SD	Observation	Df	*F*	*F crit*	p-value	Cohen's D
Female	17.33	4.54	30	69	5.111	3.982	0.0270	0.54
Male	15.3	2.19	40					

Problem 11. Is there a significant difference in the problem-solving of the students across their profile in terms of gender?

Table 22 exhibits no medium significant difference (*d = 0.47*) between female (M = 15.73, SD = 3.31) and male (M = 14, SD = 4.22) results of the problem-solving skills with F- value = 3.461 and critical F-value = 3.982. Since, 3.461 < 3.982 F-value is smaller than the critical F-value this indicate that there is no significant difference in the gender of students in terms of their problem-solving skills. Correspondingly, the p-value is 0.0671 or p > 0.05, since the p-value is greater than the level of significance, this implies strong evidence to support the null hypothesis. This indicates that both male and female students performed in problem-solving skills in some similar level. Hence, the null hypothesis which states that there is no significant difference of the problem-solving of the students in terms of gender is hereby accepted.

TABLE 22

ANOVA of Problem-solving in terms of Gender

Gender	Mean	SD	Observation	df	F	F crit	p-value	Cohen's D
Female	15.73	4.22	30	69	3.461	3.982	0.0671	0.47
Male	14	3.31	40					

DISCUSSION

The study aims to examine the relationship between reading comprehension, problem solving and academic achievement of the students in the Saint Joseph College of Sindangan Incorporated S.Y 2023-2024. Before proceeding to the data gathering, a pilot test is conducted to eighteen (18) students who are not included in the identified participants of the study in order to examine the reliability and consistency of the research instrument (multiple-choice survey questionnaire) which is a researchers-made instrument. A survey is then conducted to seventy (70) Grade 10 students to gather essential information to answer the series queries in the statement of the problem. The statistical tools used in the study were Frequency Count and Percentage, PPMC, Regression, ANOVA and Cohen's D in analyzing and calculating the data gathered. Definitely, the results indicates that there is a significant relationship between reading comprehension and problem solving with correlation coefficient *r 0.63* (moderately correlated); there is a significant relationship between reading comprehension and academic achievement with correlation coefficient *r 0.73* (highly correlated); and there is a significant relationship between problem-solving skills and academic achievement with correlation coefficient *r 0.72* (highly correlated). Moreover, the result reveals that there is a significant difference of reading comprehension in terms of the ages and gender of the students. Apart from that there is also a significant difference of problem-solving skills in terms of age, whereas results denotes that there is no significant difference in the problem-solving skills of students in terms of their gender.

Conclusions

This section summarizes the findings with regards to the connection between reading comprehension, problem-solving abilities, and academic performance and other insights that is related to the goals of the study. The conclusion is based on the answers to the following questions:

1. What is the profile of the respondents in terms of:
   1.1. Age

Out of seventy (70) participants of the study, twenty-five (25) have an age of 15 years old, forty (40) has an age of 16 years old, and five (5) has an age of 17 years old, having 15 years of age as a majority age of the students in Grade 10 in SJCSI.

1.2. Gender

Among seventy (70) students who participated in the study, forty (40) is male and thirty (30) is female, having male as the most numbered gender in the sample size and it might be true in the population of Grade 10 students in SJCSI.

2. What is the level of reading comprehension skills of the students?

Of the seventy (70) participants, forty-one (41) got scores ranging from 17 – 20 (very proficient), twenty (20) got scores ranging from 13 – 16 (proficient), five (5) got scores ranging from 9 – 12 (somehow proficient), one (1) got scores ranging from 5 – 8 (less proficient), and three (3) got scores ranging from 0 – 4 (not proficient); with mean score of 16.17 (SD = 3.83). This signifies that majority of the students is proficient in terms of reading comprehension skills.

3. What is the level of Problem-Solving Skills of the students?

Out of the seventy participants of the study, twenty-nine (29) got scores ranging from 17 – 20 (superior), nineteen (20) got scores ranging from 13 – 16 (above average), sixteen (16) got scores ranging from 9 – 12 (average), four (4) got scores ranging from 5 – 8 (below average), and one (1) got scores ranging from 0 – 4 (poor); with mean score of 14.61 and SD of 3.91. This denotes that the majority of the students belong to the above average level of problem-solving skills.

4. What is the academic achievement of the students?

Of the seventy (70) participants, twenty-nine (29) got percentile scores ranging from 90 – 100 (outstanding), eighteen (18) got percentile scores ranging from 85 – 89 (very satisfactory), twelve (12) got percentile scores ranging from 80 – 84 (satisfactory), nine (9) got percentile scores ranging from 75 – 79 (less proficient), and two (2) got scores below 75 (did not meet the expectations); with mean percentile score of 86.43 and SD of 5.87. This implies that majority of the students has a very satisfactory academic achievement in English and Mathematics subjects.

5. Is there a significant relationship between reading comprehension skills and problem-solving skills of the students?

There is a significant relationship between reading comprehension skills and problem-solving skills of the students with correlation coefficient (*r*) of 0.63 which indicates a moderate correlation, with p-value of 5.15×10^{-9} (< 0.05). This indicates that as reading comprehension improves, so does the ability to do problem-solving. In addition, this suggests that students who possess stronger reading comprehension skills tend to also have better problem-solving abilities.

6. Is there a significant relationship between reading comprehension skills and the academic achievement of the students?

   There is a significant relationship between reading comprehension skills and the academic achievement of the students with correlation coefficient (*r*) of 0.73 which indicates a high correlation, with p-value of 1.56×10^{-15} (< 0.05). This high correlation suggests that as students' reading comprehension abilities improve, their academic achievement tends to show a corresponding improvement.

7. Is there a significant relationship between problem-solving skills and academic achievement of the students?

   There is a significant relationship between problem-solving skills and the academic achievement of the students with correlation coefficient (*r*) of 0.72 which indicates a moderate correlation, with p-value of 5.12×10^{-7} (< 0.05). The implications of these highlight the importance of fostering and developing problem-solving skills as a means to positively enhance students' academic achievement.

8. Is there a significant difference in the reading comprehension of the students across their profile in terms of age?

   There is a medium significant difference (*d = 0.70*) between the age groups: 15 years old (*M* = 17.33, *SD* = 2.19), 16 years old (*M* = 14.83, *SD* = 4.64) and 17 years old (M = 18.6, *SD* = 1.52) of the students' reading comprehension skills results, F-value of 5.06, F critical value of 3.13 and p-value of 0.00896 (p-value < 0.05). This means that 17 years old performed significantly better than 15- and 16-years old students with mean differences of 1.27 and 3.77 respectively. Further, this finding denotes the importance of considering age as a factor in understanding and addressing variations in reading comprehension skills among students.

9. Is there a significant difference in the problem-solving of the students across their profile in terms of age?

   There is a medium significant difference (*d = 0.58*) between the age groups: 15 years old (*M* = 15.73, *SD* = 3.31), 16 years old (*M* = 13.57, *SD* = 4.24) and 17 years old (M = 17, *SD* = 2.83) of the students' problem-solving skills results, F-value of 3.59, F critical value of 3.14 and p-value of 0.033 (p-value < 0.05). This means that 17 years old performed significantly better than 15- and 16-years old students with mean differences of 1.27 and 3.43 respectively. Moreover, this signifies an importance of considering age as a factor in understanding and addressing the variations in problem-solving skills among students.

10. Is there a significant difference in the reading comprehension of the students across their profile in terms of gender?

    There is a medium significant difference (*d = 0.54*) between the gender of the students Female (*M* = 17.33, *SD* = 2.19) and male (*M* = 15.3, *SD* = 4.54) of the students' reading comprehension skills results, F-value of 5.11, F critical value of 3.98 and p-value of 0.027 (p-value < 0.05). This means that female students performed significantly better or has a higher level of reading comprehension skills

than male students with mean difference of 2.03. Furthermore, this implies an importance of considering gender as a factor in understanding and addressing variations in reading comprehension skills among students.

11. Is there a significant difference in the problem-solving of the students across their profile in terms of gender?

    There is no medium significant difference (*d = 0.47*) between the gender of the students Female (*M* = 15.73, *SD* = 3.31) and male (*M* = 14, *SD* = 4.22) of the students' problem-solving skills results, F-value of 3.46, F critical value of 3.98 and p-value of 0.067 (p-value > 0.05). This means that female students don't performed significantly better than male students, more likely they have similar level of performance in terms of problem-solving. Furthermore, this means that gender is not an important consideration to understand and address the variations in problem-solving skills among students.

Recommendations

In the light of the findings of the study, the researchers would like to recommend the following:

1. Incorporate age-specific strategies: Since there is a significant difference in reading comprehension skills and problem-solving skills across different age groups, it is recommended to design instructional approaches that cater to the unique needs and abilities of students at different ages. This can help optimize their reading comprehension and problem-solving development.
2. Promote gender-inclusive approaches: While there is a significant difference in reading comprehension skills between male and female students; it is important to create an inclusive learning environment that supports the development of reading comprehension skills for all genders. Implementing various teaching strategies and providing equal opportunities for participation can help address any differences and inequalities.

3. Foster reading comprehension through cross-curricular activities: Recognizing the high correlation between reading comprehension skills and academic achievement, educators should emphasize the integration of reading comprehension strategies across different subjects. This can be achieved by incorporating reading materials, discussions, activities, and assignments that require critical thinking and comprehension in all disciplines. For example, English proficiency, Read-A-Tone activity, story mapping and making inferences activities.

4. Integrate problem-solving skills into the curriculum: Given the high correlation between problem-solving skills and academic achievement, it is vital and necessary to incorporate explicit instruction and practice opportunities for problem-solving skills across various subjects. This will equip students with transferable skills which are necessary for their development that can enhance their overall academic performance as well as their ability to solve and handle real problems.

5. Encourage collaborative problem-solving activities: Given the high correlation between problem-solving skills and academic achievement, educators should promote collaborative problem-solving activities that foster teamwork, communication, and critical thinking. This can be achieved through group projects, discussions, and problem-based learning approaches, allowing students to learn from each other and develop their problem-solving abilities.

6. Provide targeted support for students with lower proficiency levels: Students who exhibit lower reading comprehension and problem-solving skills should be identified, and targeted interventions should be implemented to address their specific needs. This may include additional instructional support, individualized learning plans, or remedial programs to help them improve their skills and bridge any gaps associated with those essential skills.

7. The school should provide professional development for teachers: To effectively support students' reading comprehension and problem-solving skills, teachers should receive ongoing professional development since teacher plays a vital role in developing the essential skills of the students, teachers should embodied the knowledge and competency necessary for the better learning. This can include workshops, seminars, or training sessions focused on instructional strategies, assessment techniques, and differentiation methods that promote these skills in the classroom.

8. Students should prioritize the development of their reading comprehension and problem-solving skills: Students should actively engage in activities to improve these skills, seek support when needed, collaborate with peers, and practice self-assessment and reflection, since learning is the responsibility of the students, it is not just the job of the teacher. Additionally, students should dwell in varied reading materials, develop time management, and study skills, and maintain motivation and persistence in their learning journey. By focusing on these aspects, students can enhance their academic achievement and acquire valuable skills for their future endeavors.

9. Conduct further research: While this study gives light on the relationship between reading comprehension, problem-solving, and academic achievement, further research is encouraged in order to explore additional factors that may influence these skills, highly suggested to have enough time frame in order to focus on this matter and can possibly find more insights relevant to the study. This could include investigating the impact of socioeconomic status, instructional methodologies, or cultural influences and many more to gain a more comprehensive understanding of student performance in these areas.

By implementing these recommendations, administrators and educators can create a conducive learning environment that fosters the development of reading comprehension and problem-solving skills, basically enhancing students' academic achievement that will of necessity in the educational growth of the students. Further, these

are just some of the series of recommendations drawn from the findings of the study, the school, policymakers, administrators or even the educators like teachers might take into accounts these or might have any additional insights to implement in the educational context to shape a worthwhile learning experience of the students that will contribute to the academic success and well-being of every individuals – the students.

Compliance with Ethical Standards

The success of this research endeavor requires not only efforts, expertise, knowledge, and diligence but also being able to follow through the ethical way of conducting research with honesty and integrity. This is taken into consideration to organize, respect and protect human rights especially the rights of the participants of the study. To render these ethical ways, the rights to self-determination, anonymity, confidentiality, and informed consent were given emphasis and were carefully observed by the researchers. The researchers asked the permission of the school principal since the study will be conducted in the school itself and also the participants' consent was obtained before the data gathering session commences.

Acknowledgments

The authors would like to thank the anonymous reviewers and editors for their kind feedback and help with this manuscript.

THE RELATIONSHIP OF ORGANIZATIONAL CLIMATE TO PUPILS BEHAVIOR OF SELECTED ELEMENTARY SCHOOLS OF JOLO DISTRICT III

Suaiba L. Suaib, Ed.D.

Ministry of Basic, Higher and Technical Education, Division of Sulu, Philippines

https://doi.org/10.5281/zenodo.11639159

ABSTRACT

This study aimed to determine the relationship of organizational climate to pupils' behavior of selected of selected elementary schools of Jolo District III. Specifically to: 1) Determine the organizational climate of selected Schools of Jolo District III. 2) Identify the behavior of the pupils. Teachers comprised favorable organizational climate in Jolo District III in terms of esprit, intimacy. However the existence of hindrance and disengagement seemed insignificant Teachers were given free-time to strengthen their closeness and shared their experiences. On the same view, the principal dimensions were also favorable in terms of consideration, thrust, and production emphasis. Only in the aspect of aloofness seemed unfavorable. The performance of the principal had correspondent reactions and responses from the teachers primarily conformed to the existing theory on organizational climate. Besides, the pupils comprising the academic competitiveness, concern for individual pupils' school spirit and emphasis on social life behavior were favorable In other words pupils have commended the prevailing conditions in the school system. From the data gathered the following conclusions were derived: 1. that the organizational climates under teachers dimension is characterized by teachers quarrel and criticize each other is rejected. 2. That the pupils like their teachers are accepted. 3. That there exists a relationship between school climate and pupils behavior is accepted. Any study had always the loopholes to be strengthened. With these the following propositions are suggested: 1. The principal shall come up with activities and programs that the several memberships of the faculty members can socialize themselves to strengthen cohesiveness. 2. They shall also come up with strategic programs that there may create intimacy between the pupils and the principal. 3. Minority group specially expressing their sentiments, needs and demands shall be addressed to prevent the occurring of factionalism or strife among themselves. 4. Follow-up study especially on

correlating the pupils' behavior and the managerial performance shall be conducted. 5. Additional variables shall be added to the present study for further explorations.

Keywords: *Organizational Climate, Pupils Behavior, Descriptive Research, Jolo District*

INTRODUCTION

The atmosphere, tone or ambience of an organization permeates the entire organization Like the weather it is important to be considered in the lives of the individuals and so with the climate of organization in which there exists a web of interaction among individuals Thus school climate and student behavior must be considered as (Halpin and Croft) conceived of social climate of school as a blend of two dimensions the principal's leadership and interaction.

Climate of an institution has been found to relate to some aspects of students behavior, in spite of individual differences in the perception of school climate School climate as perceived by students and teachers, can be a significant predictor of student achievement. After controlling for student scholastic ability and community socioeconomic status, they found that climate retained significant predictive power, suggesting that school climate is related to student achievement

This component of school climate pertains to the leaders, style of interacting with the teachers. The way the principal behaves as has been noted, influences the ways in which the teacher interact with each other and thus has considerable impact on the general atmosphere of the school, influences the ways in which teachers interact with each other and thus has considerable impact on the general atmosphere of the school, Halpin (1966).

Psychological studies of human behaviors, which began in the late 19th and early 20th centuries in Europe and later in America, revealed a new paradigm of science known as Behaviorism through the establishment of experimental laboratories (Lunenburg & Ornstein, 2008). Behaviorism has explored behaviors that can always be observed and quantitatively measured in controlled laboratory conditions. While the behaviorist approach focuses on the behaviors that are observable in individuals, it has ignored possible internal factors such as motivation and mental mechanisms such as thinking. This approach has had implications for organizational structures of educational programs, students, teachers, teaching methods and educational institutions. Accordingly, educational objectives should be defined as behavior-oriented. In the 1900s, the existence of subliminal instincts in human behavior was discussed and it was stated that the motives of people are some of the reasons for behaviors. These theories later became the basis for scales developed for personality profiles (Lunenburg & Ornstein, 2008; Owens & Valesky, 2011; Woolfolk, 2014). The cognitive and social psychologies that emerged in the 1960s were considered as the primary components of the scientific foundations of education and had great impact on the concepts of learning and teaching. However, when describing an individual's behavior, one must focus on the interaction

between personal characteristics and the social characteristics of the group or organization in which that behavior occurs. When describing organizational behavior, it is necessary to consider the influence of the social circle in which the organization is located (Glisson & James, 2002; Owens & Valesky, 2011; Roeser, Urdan & Stephens, 2009).

The key administrative behavior patterns, thrust- the energy and drive the principal exhibits as a role model for teachers. Principals who are in evidence in their buildings, observing what transpires, offering helpful suggestions, and mentioning new techniques at appropriate times, can help teachers focus on their tasks and sharpen their professionals skills, Genuine consideration for teachers could help in resolving problems that might interfere with teaching, it might also help teachers feel secure enough to share their teaching problems and seek advice honestly rather than withholding such information for fear of reprisals Sharing of information in the form of ideas, suggestions advice and problems can help individuals learn how to resolve their own teaching problems and facilitate the dissemination of the best fosters or impede communication. Then, the climate of the school is related to the quality of instruction students receive, Silver (1983).

The climate of an institution has been found to relate to some aspects of students behavior. Despite of individual differences in the perception of school climate Schools do seem to have distinctive climates that relate to students achievement Because of the potential importance of the general tone of a school with respect to student outcomes further research of school climate should be energetically pursued. Hence, the researcher chosen the said study, since there was clearly demonstrated relationship between school climate and students behavior considering academic competitiveness, school spirit concern for individual pupils, emphasis on social life.

Bloom (2010) identified ten components of organizational climate in the light of the studies that she conducted for many years in early childhood centers. These components are collegiality, professional development, director support, clarity, reward system, decision-making, goal consensus, task orientation, physical environment and innovation.

The focus of this undertaking is to determine the relationship of the organizational climate and students' behavior among selected elementary schools of Jolo District III

Research Questions

This study drew attention to the following interrelated problems

1. What are the organizational climate of selected schools of Jolo district III?
2. What are the behaviors of the pupils?
3. Do the different climates have relationship to pupils' behavior?

METHODOLOGY

Research Design

This study adopted the causal descriptive because it sought to undergo research on the existing school climate and pupils behavior of Jolo District III. It delved with present phenomenon, then it is descriptive

On the other hand it established relationship of variables on the school climate and student behavior then it was causal

Sampling Procedure

Simple random sampling was used to get the ideal number of the respondents of this study. Besides, stratified random sampling was used so that there is equal distribution of respondents to be selected in every elementary school in Jolo District III would be observed

With this, selection of respondent was done scientifically so us to observe the ethical principles of research. In addition it also preserved the reliability and validity of data gathered. And 50 percent of the total population of the selected elementary schools were used as respondents.

Respondents of the Study

The respondents of the study were the elementary teachers handling any grade, regardless of their sex, length of service educational attainment and civil status There were (90) teachers considered as respondent with the following numbers respectively Tanjung Elementary Schools twenty nine (29), Bakud Elementary school thirty four (34), Jati Elementary School twenty seven (27). However respondents were classified to two major groups intermediate and primary level.

Research Locale

The study was conducted in three selected schools of Jolo District III which is considered having a densely enrollees, Bakud Elementary School located inside the Philippine Constabulary Compound adjacent to DXSM Radio Station which considered as one of the best schools in town as evident on the quality pupils they are producing has (34) thirty four teachers, Jati Elementary School Located near 477, Asturias, Jolo, Sulu has (27) twenty seven teachers and Tanjung Elementary school Located at Km 2 has (29) twenty nine teachers.

Research Instrument

The data gathering instrument used in this study was the survey questionnaire. The questionnaire checklist is divided into three parts. The first part covers the personal

data of the elementary school teachers. The second part comprises the checklist for organizational climate for both teacher and principal dimension. The last part deals with the pupils' behavior description questionnaire.

The researcher used "often" in the checklist choices and implied "conducive on the descriptive interpretation of the data.

Data Gathering Procedure

The researcher sought the approval from the District Supervisor of the selected school in Jolo District III prior to the approval from the respective principals. After which, the researcher proceeded immediately to the classroom adviser and the teacher respondent.

Statistical Treatment of Data

Two (2) statistical tools were used in the analysis of the responses of the respondents. Weighted mean was used to describe the climate dimensions and pupils behavior. Mean was computed by using this formula
This formula:

$$\bar{X} = \frac{X}{n}$$

Where $\bar{X}$ = mean
X = summation of all observations
n = number of total observations
On the other hand, Spearman Rank order correlation coefficient was used to determine the extent of relationship between organizational climate and pupil's behavior
The formula is:

$$r_s = 1 - \frac{6 \Sigma D2}{N (N^2 - 1)}$$

Where N = the number of pairs
r_s = the rank-order correlation coefficient

RESULTS AND DISCUSSION

Teacher Dimensions

The study revealed that, in esprit, the organizational climate was ranging from very conducive (Very favorable) to conducive (favorable) (Table la) This means that the following occur often in these selected schools of Jolo III District 1) The morale of teachers is high 2) Teachers accomplish their work with vigor and enthusiasm 3) Teachers spend

time after school with students who have individual problems 4) Teachers accept easily the faults of their colleagues.

As to the intimacy, the same result was obtained with the first dimension (esprit) (Table 4 la) The following also occur often in these district 1) Teacher's closest friends are other faculty members in this school 2) Teachers talk about their personal life to ether faculty members 3) Teachers have fun socializing together during school time 4) Teachers invite other faculty members to their homes That is, these are favorable in this selected schools

For the hindrance, the following cases oflen occur in the district 1) Teachers are involved in too many extra-curricular activities 2) Administrative paper work is burdensome in this school 3). Pupils' progress reports (grading sheets, report cards, summative tests, etc) require too much work. That is, organizational climate in terms of hindrance was found not conducive (Table 1a).

In terms of disengagement, the climate was fauly favorable in the following two cases 1). There is a minority group of teachers who always oppose the majority 2) Teachers socialize together in small select group 3). Teachers quarrel and criticize each other 4) Teachers talk about leaving the school, system Such two cases sometimes occur in this district However, there was a favorable climate in the sense that teachers rarely quarrel and criticize each other (table 4 la), which it was found not favorable in that teachers socialize together in small select group.

The data as revealed in this study implied that teacher's dimensions on organizational climate were complex Le a combination of classical and neo-classical principles Classical as exposed by Frederick Taylor gave emphasis on the strictness of work performance Teachers would be given various loads expecting to achieve high organization performance In other words, the teachers focused on work orientation Formal structure, thus, was observed

On the same view, informal organization structure was also observed. This is the focus of neo-classical approach where the teachers' needs, morale and leisure time were allowed Teachers, therefore, were given freedom to form association and establish rapport relationship among others.

In a nutshell, there existed a Hawthorm effect where in a bureaucratic or highly organized structures of school, informal organization was given due-recognition.

Jolo District III, in consequence, could predict stability and good performance considering that disengagement was fairly observed. Moreover, factionalism or professional jealousy, as it was called, was insignificant.

Table 1a. Organizational Climate of Selected Schools in Jolo District III in terms of Teacher Dimension, 2005 - 2006

Organizational Climate	Mean	Descriptive Interpretation	
Teacher Dimensions			
a. Esprit (+)	4.10	Often	Conducive
1. The morale of teachers is high.	4.79	Very Often	Very Conducive
2. Teachers accomplish their work with vigor and enthusiasm.	4.14	Often	Conducive
3. Teachers spend time after school with students who have individual problems.	3.73	Often	Conducive
4. Teachers accept easily the faults of their colleagues.	3.73	Often	Conducive
		Often	Conducive
B. Intimacy (+)	4.07	Very Often	Very Conducive
1. Teacher's closest friends are other faculty members in this school.	4.68	Often	Conducive
2. Teachers talk about their personal life to ether faculty members	3.85	Often	Conducive
3. Teachers have fun socializing together during school time	3.69	Often	Conducive
4. Teachers invite other faculty members to their homes.	4.07	Often	Not Conducive
		Often	Not Conducive
C. Hindrance (-)	3.60	Often	Not Conducive
1. Teachers are involved in too many extra-curricular activities.	3.55		
2. Administrative paper work is burdensome in this school.	3.55	Often	Not Conducive
		Sometimes	Fairly Conducive
3. Pupils progress reports (grading sheets, repon cards, summative tests, etc) require too much work.	3.71	Sometimes	Fairly Conducive
		Often	Not Conducive
D. Disengagement (-)	3.04	Rarely	Conducive
1. There is a minority group of teachers who always oppose the majority.	3.20	Sometimes	Fairly Conducive
2. Teachers socialize together in small select group.	3.60		
3. Teachers quarrel and criticize each other.	2.31		
4. Teachers talk about leaving the school; system.	3.03		

Legend

Means	**Occurrence**	**For Esprit and Intimacy Climate Status**	**For Hindrance and Disengagement**
1.00 – 1.49 =	Never Occurs	= Not Conducive at all	= Very Conducive
1.50 – 2.49 =	Rarely Occurs	= Not Conducive	= Conducive
2.50 – 3.49 =	Sometimes Occurs	= Fairly Conducive	= Fairly Conducive
3.50 – 4.49 =	Often Occurs	= Conducive	= Not Conducive

4.50 – 5.00 = Very often Occurs = Very Conducive = Not Conducive

Principal Dimension

Findings revealed that the organizational climate of selected schools in Jolo District III was found favorable (Conducive) in terms of principal dimension, especially on the aspects of consideration, thrust, and production emphasis. This was however, not favorable in the aspect of aloofness (Table 1 a) Consideration aspect includes 1) the principal helps teachers solve their personal problems 2) The principal helps staff members settle minor differences. 3) The principal helps stays after school, to help teachers finish their work. 4). the principal tries to get better salaries/incentive for teachers. On the aspect of thrust, these are: 1) The principal sets an example by working hard himself/herself 2) The principal is well-prepared when he speaks at school functions 3) The principal tells teachers of new ideas/thrust in education 4) The principal arrives early in school and stays late when needed. In the production Emphasis, these includes 1) the principal checks the subject matter ability of teachers. 2) The principal schedules the work for the teachers 3) the principal insures that the teachers work to their full capacity. All of those cases were found often in their occurrence. As to aloofness, which is a negative aspect, includes the following 1) The principal runs the faculty meetings like a business conference 2). The rules set by the principal are not questioned by subordinates 3) Faculty meeting are organized according to a tight agenda 4) Principal keeps from teachers' result of a supervisor's/superiors supervisory visits. Each of these cases in the aloofness occur "often" which indicates not favorable.

Table 1b. Organizational Climate of Selected Schools in Jolo District III in terms of Principal Dimensions.

Organizational Climate	Mean	Descriptive Interpretation	
Principal Dimensions		Often	Conducive
A. Consideration (+)	4.08	Often	Conducive
1. The principal helps teachers solve their personal problems	4.34	Often	Conducive
2. The principal helps staff members settle minor differences.	3.85	Often	Conducive
3. The principal helps stays after school, to help teachers finish their work.	4.18	Often	Conducive
		Often	Conducive
4. The principal tries to get better salaries/incentive for teachers.	3.96	Often	Conducive
B. Thrust (+)	4.26	Often	Conducive
1. The principal sets an example by working hard himself/herself	4.39	Often	Conducive
2. The principal is well-prepared when he speaks at school functions	4.19	Often	Conducive
		Often	Conducive
3. The principal tells teachers of new ideas/thrust in education	4.27	Often	Conducive
4. The principal arrives early in school and stays late when needed	4.21	Often	Conducive

C. Production Emphasis (+)	4.14	Often	Conducive
1. The principal checks the subject matter ability of teachers	4.27	Often	Conducive
2. The principal schedules the work for the teachers	3.97	Often	Not Conducive
3. The principal insures that the teachers work to their full capacity	4.18	Often	Not Conducive
D. Aloofnes (-)	3.74	Often	Not Conducive
1. The principal runs the faculty meetings like a business conference	4.18	Often	Not Conducive
2. The rules set by the principal are not questioned by subordinates	3.52		
3. Faculty meeting are organized according to a tight agenda	3.57		
4. Principal keeps from teachers' result of a supervisor's/superiors supervisory visits.	3.71		

Legend:

1.00 – 1.49 = Never Occurs
1.50 – 2.49 = Rarely Occurs
2.50 – 3.49 = Sometimes Occurs
3.50 – 4.49 = Often Occurs
4.50 – 5.00 = Very often Occurs

The school head concerned for people in such a way that he understood and supported his staff and the teachers. Similarly he emphasized also the concern for production where tasks were delegated and achieving the organizational goals the vision and mission of school system.

Davis and Newstrom in their book "Human Behavior in organization" expressed about supportive leadership where the executive is trying to understand the needs of their subordinates, provide leadership advancement and encourage his people for greater achievement. Similarly, koontz and Weihrich (1997) in "Essentials of Management called it Path-Goal Theory of leadership where people and production were harmonized in realizing the goals of the school. The goals are always the parameter and the direction of the school.

Chester Barnard in his book "The functions of Executive" as cited in the "Administrative Thinkers" by Prasad and Prasad (1997) pointed out that there is a need to recognize the informal organization like click and group work within the context of formal structure.

With the existence of aloofness which is not favorable to the organizational structure of the school, Jolo District III, therefore, was on its way to growth and

development. The school environment as demonstrated by the principal could be counted as necessary factor for the District III to develop within the content of its mandate.

Behavior of Pupils in Selected Schools of Jolo District III

Academic Competitiveness

Findings revealed that the behavior of pupils in selected schools in Jolo district III in terms of **academic competitiveness** was favorable with one aspect of very favorable which is pupils participate daily classroom activities (Table 2a) That is, the following activities on the part of the pupils occur "often" 1) Pupils attend their classes. 2) Pupils participate daily classroom activities 3) Pupils take time to study their lessons. 4) Pupils accomplish their homework or assignment. 5) Pupils express themselves correctly when speaking or writing. 6) Pupils participate in academic competitions like quiz bee, oratorical contests and other similar activities. 7) Pupils go to the library to read. 8) Pupils discuss current events or happenings on the local, national and international levels with other pupils and other people in school. 9) Pupils ask their teachers questions about their lessons.

Table 2a. Behavior of Pupils in Selected Schools of Jolo District III in terms of Academic Competitiveness.

Pupils Behavior	Mean	Descriptive Interpretation	
Academic Competitiveness	4.23	Often	
1. Pupils attend their classes.	4.69	Favorable	
2. Pupils participate daily classroom activities	4.33	Very Often	Very
3. Pupils take time to study their lessons.	4.18	Favorable	
4. Pupils accomplish their homework or assignment.	4.16	Often Favorable	
5. Pupils express themselves correctly when speaking or writing.	4.07	Often Favorable	
6. Pupils participate in academic competitions like quiz bee, oratorical contests and other similar activities.	4.26	Often Favorable	
7. Pupils go to the library to read.	3.89	Often	
8. Pupils discuss current events or happenings on the local, national and international levels with other pupils and other people in school	4.21	Favorable Often	
9. Pupils ask their teachers questions about their lessons.	4.34	Favorable Often Favorable Often Favorable Often Favorable	

Besides, attendance of the pupils in the classroom session really mattered. And, it is one of the contributing factors that develop children in the academic performance This is quite true to schools like ours where teachers are the usual source of knowledge, skills and values.

Concern for Individual Pupils

Concern for individual pupils as one aspect of pupils' behavior was found favorable in that the following cases occurred "often" in the district. 1) Pupils are friendly to their classmates/schoolmates. 2) Pupils listen to the problems of their classmates/schoolmates. 3). Pupils help their academically weak classmates / schoolmates with their lessons or homework/ assignments. 4) Pupils respect the religious beliefs and opinions of their classmates/schoolmates. 5) Pupils easily accept the mistakes of their classmates/schoolmates. 6) Pupils visit their sick classmates/ schoolmates. 7) Pupils offer their money to help their classmates/schoolmates who are in need.

Table 2b

Pupils Behavior	Mean	Descriptive Interpretation
Concern for Individual Pupils	4.19	Often
1. Pupils are friendly to their classmates/schoolmates.	4.56	Favorable
2. Pupils listen to the problems of their classmates/schoolmates.	4.18	Often Favorable
3. Pupils help their academically weak classmates / schoolmates with their lessons or homework/ assignments.	4.15	Often Favorable
4. Pupils respect the religious beliefs and opinions of their classmates/schoolmates.	4.25	Often Favorable
5. Pupils easily accept the mistakes of their classmates/schoolmates.	4.12	Often Favorable
6. Pupils visit their sick classmates/ schoolmates.	3.94	Often
7. Pupils offer their money to help their classmates/schoolmates who are in need.	4.11	Favorable
		Often Favorable Often Favorable

Naturally, most of the children in schools are friendly. This was also evident in Jolo III District where there was favorable school climate for the children to associate themselves, Kelly (1979).

Children, especially during the first day of the classes may look for their partners whom they can lean on Psychologists termed this as "peer".

And this concern for individual pupils is a venae for good, desirable classroom atmosphere where teachers can easily facilitate leaning especially in group work of in socialized recitation method of teaching. This is also a facilitating factor in the implementation of projects in such a way that an individual can lend his personal belongings or project paraphernalia to his classmates.

School Spirit

Table 2c showed the result of the study for the aspect of school spirit. This was found favorable in these selected schools in Jolo District III. That is, the following also occurred "often" the first case "very often" 1) Pupils like their teachers. 2) Pupils like their principal. 3) Pupils talk good about their school. 4) Pupils are happy whenever they do their assignment/homework. 5) Pupils defend their school when it's criticized by others 6) Pupils accept the limitations or weakness of their school 7) Pupils enjoy working with their classmates/schoolmates in making their school clean and beautiful.

Table 2c

Pupils Behavior	Mean	Descriptive Interpretation
School Spirit	4.28	Often
1. Pupils like their teachers.	4.63	Favorable
2. Pupils like their principal.	4.48	Very Often Very
3. Pupils talk good about their school	4.23	Favorable
4. Pupils are happy whenever they do their assignment/homework.	4.23	Often Favorable
5. Pupils defend their school when it's criticized by others	4.01	Often
6. Pupils accept the limitations or weakness of their school	4.11	Favorable Often
7. Pupils enjoy working with their classmates/schoolmates in making their school clean and beautiful.	4.22	Favorable Often Favorable Often Favorable Often Favorable

School spirit implies school identity of school synergy. In the school system especially in the elementary level, children treat their teachers as their second parent Because of this, sometimes the ideas, values and skills as demonstrated by their teachers become the dominant behavior of the children. Educators have substantiated this manifested behavior to the great extent of contact show between the children and the pupils.

Majority of them would imitate the manners of speaking, listening, writing dressing of their teachers As such, they really love their teacher. This was true to the Jolo District III where school spirit was favorable.

Through this, mutual respect would be observed. And, there would be an ease of instruction, legitimacy of orders like observance of monitoring, prompt submission of assignments and others. In short, there would be an orderly, well-managed class.

Emphasis on Social Life

The teacher in selected School of Jolo District III assured that the emphasis on social life was favorable (Table 2d) Each of the following activities were found "often" in the occurrence 1) Pupils join school organizations or clubs 2) Pupils attend programs and other cultural performances 3) Pupils behave properly during programs and other similar activities in school 4) Pupils look clean, neat, and orderly 5) Pupils work and study together with their classmates. 6) Pupils attend get together activities like acquaintance parties.

Pupils Behavior	Mean	Descriptive Interpretation
Emphasis on Social Life	4.12	Often
1. Pupils join school organizations or clubs	4.36	Favorable
2. Pupils attend programs and other cultural performances	4.19	Often Favorable
3. Pupils behave properly during programs and other similar activities in school	4.16	Often
4. Pupils look clean, neat, and orderly	3.93	Favorable
5. Pupils work and study together with their classmates.	4.01	Often Favorable
6. Pupils attend get together activities like acquaintance parties.	4.08	Often Favorable Often Favorable Often Favorable

Children profit from parallel and partnership activities which become the basis for more involved group activities in later grades. The outcomes of the group work are usually shared informally in the early grades.

More so, special attention needs to be given to the planning, carrying out, and evaluation of group work in each area of curriculum For example, group activities in reading and arithmetic provided in art and social studies.

Teacher Dimension and pupils Behavior

Table 6 includes the correlation matrix showing the various degrees of relationship between the different aspects of organizational climate and those of the pupils' behavior in the district III of Jolo. The values of r in various cells of the table were o0btained through Spearman Rho computation.

It was found that the positive teacher dimensions correlate with pupils behavior except the esprit and the school spirit which were not related to each other That is, spirit and intimacy significantly correlate with each of the four (4) aspects of pupils behavior such as academic competence, concern for individual pupil, school spirit, and emphasis on social life It was further found, therefore, that the overall positive teacher dimension were correlated with the overall pupils behavior The existence and degree of such relationship were indicated by asterisks (* and ** indicate significant relationship at the 0.05 and 0.01 levels of significance at 2-tailed tests respectively) This means that as these positive teacher dimensions occur very frequent or often, the more favorable are the pupils behavior.

Negative teacher dimensions hindrance and disengagement do not correlate with each of the four (4) aspects of pupil behavior That is, the strength or the weaknesses of hindrance and disengagement have nothing to do with the possibility of the change in the pupil behavior.

	Pupil Behavior				
Organizational Climate	**Academic Competition**	**Concern for Individual pupil**	**School Spirit**	**Emphasis on Social Life**	**Overall Pupil Behavior**
I – Teacher Dimension					
Positive Dimension	.261*	.326**			
A. Esprit (+)	.442**	.288*	.150	.336*	280*
B. Intimacy (+)			.298*	.365**	.355**
Negative Dimension	.143	.230			
C. Hindrance (-)	-.050	-.031	.063	.160	.131
D. Disengagement (-)			-.194	-.032	-.045
II – Principal Dimension					
Positive Dimension	.379**	.451**			
A. Consideration	.280*	.273*	.392**	.361**	.422**
B. Thrust	.345**	.230	.347**	.269*	.304**
C. Production Emphasis			.331**	.292*	.303**
Negative Dimension	.085	.073			
D. Aloofness (-)			.047	-.017	.017

Principal Dimension and Pupil Behavior

With reference to table 6 above, findings revealed that the positive principal consideration, thrust and production emphasis were correlated significantly (having significant relationship) with each of the four (4) pupil behavior- academic competence, concern for individual pupil, school spirit and emphasis on social life, except the production emphasis with the concern for individual pupil Consequently, the overall positive principal dimensions significantly correlate with the overall pupil behavior That is, as those positive aspects of principal dimension occur very frequently or often. The more favorable will be the pupil behavior. Aloofness, which is considered as a negative aspect, does not significantly correlate with each of the four (4) pupil behavior.

Managers believe that they are the most influential people in the organization Thinkers have unanimous approval on this statement.

It is actually the manager or the principal should initiate in advance over his subordinates His decisions, performance, evaluation do not only affect the teachers but as well as the pupils.

In a monocratic type of organization like school, policies and order emanate from above. The chain of command flows from the top. Hence, subordinates reliance rest to the top. And, accountability of the top management like the principal is not confined to his teachers but to the pupils alike.

This was proven in this study where there was a correlation of the principal aspect and pupils' behavior.

Conclusions

From the data gathered, the following were inferred:

1. That the organizational climate under teachers dimension is characterized by teachers quarrel and criticized each other is rejected.
2. That the pupils like their teachers is rejected.
3. That there is a relationship between school climate and pupils behavior is accepted.

Recommendations

1. The principals shall come-up with activities and programs that the several membership of the faculty members can socialize themselves to strengthen cohesiveness.
2. They shall also come-up with strategic programs that there may create intimacy between the pupils and the principal.
3. Minority group especially expressing their sentiments, needs, and demand shall be addressed to prevent the occurring of factionalism or strife among themselves.

4. Follow-up study especially on correlating the pupils' behavior and the managerial performance shall be conducted.
5. Additional variables shall be added to the present study for further explorations.

Compliance with Ethical Standards

Above all, a comprehensive informed consent form explaining the goals, methods, potential risks and benefits, and confidentiality policies was delivered to each participant. Furthermore, all trial data points were carefully anonymised in cases when the respondents' personal information had no bearing on the trial results. Data collection was conducted in a private environment to preserve participant privacy, and the collected data was kept in a secure archive that was only accessible by the researchers. Despite the differences in their thoughts and points of view, all members were respected in the same spirit. Additionally, the researchers made an effort to give the participants a welcoming and secure environment so they could talk openly about their experiences.

Acknowledgements

With the encouragement, help, prayers and inspiration of concerned personalities, this research study was a success, thus the researcher was deeply indebted to the following

Dr. Nagder J. Abdurahaman, her thesis adviser for the suggestions and untiring efforts.

The chairman and members of the Advisory Panel namely: Prof. Ibraham U. Ahmad, Prof. Muammar S. Sakili and Prof. Abdurajik Dansalan for their enriching ideas and constructive suggestions.

The District Supervisor, principals, and teachers by providing the writer access to relevant information and answering the questionnaire.

Mr. Benhasan B. Masuhud principal of Tanjung Elementary School for the encouragement and support.

To Ms. Elena T. Muhali, Ms. Nilima S. Tingkasan and Mr. Jeffrixon R. Lim for their precious time spent, moral support and understanding. Without them the study might not lead to its final completion.

To Mrs. Juairiya Jimlan and her husband Mr. Jilam Jimlan principal of Sali Ututalum Elementary School for their encouragement and advice.

To My co-teacher Wannur, Suzzete, Isniriya, Meriam, Josephine and Trishia Elum Alawi for their understanding, kindness that give inspiration to the researcher.

Most especially to my husband and my two angels who gave me hope and inspiration in accomplishing this educational endeavor Their encouragement moral, financial and spiritual support made this piece of work possible.

ABSTRACT

The use of Mother Tongue (MT) as the medium of instruction is assumed to be more effective than foreign languages especially in the low grade levels despite the challenges that teachers and learners met especially in the first stage of application. It is widely known that in China and Japan their MI is very important to them. Therefore, it is interesting to find out how this MT is used in teaching, its challenges and implication to quality education. Now, the k-12 curriculum gives high importance to the native language. The objectives of this study are therefore (1) to find out the strategies, steps, process, approach, and particular activities in the use of Mother Tongue as the medium of instruction, (2) to determine various problems, issues, difficulties encountered and the practical ways for providing solutions, and (3) to ascertain the impact of MT for quality learning, such as on reading comprehension, science learning and mathematics ability. The researcher used descriptive method which was proper and suitable for the researcher to collect data and information on the current performance of the pupils. The researcher employed a focus group discussion (FGD). The Mother Tongue is used in the explanation and discussion of the lesson. Also, it is used in drill or exercise and other activities in and outside the classroom. In lesson planning, only English and Filipino are used, and the native language is not used. There are challenges encountered by teachers, for example, to exert more effort in studying Tausug term. The parents and pupils also encountered challenges. Moreover, there are implications of the use of MT for quality learning as based on the opinions of teachers. One recommendation is that the DepEd should provide

enough textbooks and teachers manual to teachers and pupils as well as provide activity sheets and workbooks for pupils to ensure quality learning outputs in the use of MT.

Keywords: *Mother Tongue, Process, Challenges, Implications, Qualitative Research.*

INTRODUCTION

This study deals with the use of Mother Tongue (MT). For several years ago there are among the educators questioning the limitation of the medium of instruction to English and Filipino only. Before, the Philippines did not allow local dialects or the MT to be used in classroom instruction except for some and special cases. This restriction happened for almost hundred years up to the recent periods. The question is "was it very effective or very fruitful?" "Did the Philippines attain the genuine quality education?"

Nowadays, many educators, especially those who are curriculum makers, believe that it is advantageous to use the mother tongue especially in the elementary grades, more specifically for grade I to III. There are claims that mother language has a very powerful impact on the formation of the individual. She points out that a child's psychological and personality development will depend upon what has been conveyed through the mother tongue. The psychologists claim is that the mother tongue matters tremendously when language expressions and vocabulary are chosen with care as soon as adults talk to children In this claim, it means to use the mother tongue is recommended. In the low grade levels, the pupils need more clarifications about their local dialect or native language. That is why it seems very useful to expose first the children to this native expression.

A child's first comprehension of the world around him, learning of concepts and skills, and his perception of existence, starts with the language that is first taught to him. In the same manner, a child expresses his first feelings, his happiness, fears, and his first words through his mother tongue Mother language has such an important role in framing the thinking, emotions and spiritual world, because it is the most important stage of life A strong bond between a child and his parents (especially mother) is established by virtue of love, compassion, body language, and also through the most important one, which is the verbal language.

Making English and Tagalog the official languages of the Philippines is a practical move, seeing as there needs to be language that can be used to do business and trade as well as to communicate on both national and international levels Still, the constitutional declaration of these two languages as official and the other languages as auxiliary takes

a discriminatory tone when looking at how it resonates in other policies and in the public sphere.

The Philippine Department of Education is proving that DepEd is the new name for the Philippine government's education department Given this legacy, the reformed DepEd has sought to address the criticism of not providing a good enough base for those wishing to pursue a university education. To achieve this, they pushed a bill through Congress that completely overhauls the current educational system There are two major components of the bill that dramatically change the format of Philippine schools, starting in 2012.

Mother tongue plays an important role in functioning target language (see (Sinha et al., 2009) and (Yadav, 2014)). As previously known in Krashen's hypothesis that acquisition distinguished succeed in learning a second language (Castello, 2015), this hypothesis is also applicable in learning a foreign language. First language acquisition significantly affects EFL speakers in transferring the message into the target language (for further reading see Allard et. al. (2011); Lemhöfer et. al. (2010); and Maniam & Kesevan (2016)). Whether positively or negatively, the speaker's mother tongue will affect their second language acquisition (Erarslan & Hol, 2014). Moreover, the similarities between learners' mother tongue and language ease them in transferring the message positively and vice versa.

Cummins claims mother tongue provides the basis for learning another language. Jim Cummins also underscores the importance of preserving mother tongue "Children who come to school with a strong foundation in their mother tongue develop stronger literacy abilities in the language used at school When parents or caregivers are able to spend time with their children and tell stories or discuss issues with them in a way that develops their mother tongue vocabulary and concepts, children come to school well prepared to learn the language of their immigrant country and succeed educationally".

According to Luistro, Mas medaling matutunan yung konsepto pag ang ginagamit ay yung kanilang sariling wika. Kahit ano yung kanilang karunungan sa bahay, ito po yung ating tinatanggap, na ito ang kanilang initial na kaalaman at walang mali doon.

With this view, it is hoped that this study proves to be of encouragement on the use of mother tongue, particularly in Jolo III district where almost 100% of the learners h-belong to Tausug tribe. Now, the title of this study is "The Use of Mother Tongue Process, Challenges and Implications"

Research Questions

It is very timely that the use of Bahasa Sug as the medium of instruction especially in elementary grade level, particularly in grade 1 to III, can be given more attention as it

is assumed to be more effective than foreign languages. Parents and many educators claim that MT is more effective in the low grade level although there are challenges especially in the first stage of application. It is widely known that in China and Japan mother tongue is very important to them. It is therefore interesting to find out the challenges and the implication of the use of local language to quality education.

Now, the k-12 curriculum gives high importance to the native language, perhaps the curriculum makers through the strong motivation from the UN, feel that this is more effective than when children of the low grade level are forced to learn with the use of the English language In this view, this study might be of help and encouragement for educators to give high importance to Sulu local language. Hence, it is imperative to answer the following research questions

1. How is Mother Tongue used in grade 1 to 3?
2. What are the challenges in the use of Mother Tongue?
3. How does Mother Tongue contribute to quality learning?

METHODOLOGY

A. **Method**. The researcher used descriptive method, it was proper and suitable for the researcher to collect data and information on the current performance of the pupils. Known to many, descriptive method is to describe the present condition as it exists during the conduct of the research.

There was a survey of opinions of the teachers regarding how they use the Mother Tongue in their teaching implementation. With this method, challenges and implication could be discovered.

B. **Research Instrument**. The researcher employed a focus group discussion (FGD). The FGD was conducted at Tanjung Elementary School where the researcher is employed, with the participation of all science teachers. A well-planned set of questions which was based on the research outline was made available. The principal was interviewed in another session. This study employed FGD to Ten (10) teachers served as a participants in the study. The FGD were employed within two (2) days.

C. **Data Analysis**. After conducting the FGD and personal interview with the school principal the researcher organized and synthesized the opinions of the respondents She applied generative approach whereby she could find out the commonalities, comparison and contrast through careful scrutiny of all ideas with sound judgment of the researcher and the thesis adviser There were no statistical tools used in the process.

RESULTS AND DISCUSSION

Mother Tongue and Its Use in the Teaching-Learning Process

In this chapter, the names of the teacher respondents are mentioned In some instances, their words are only paraphrased and therefore with indirect quotation. There are four major sections in this chapter (1) The Mother Tongue, (2) Mother Tongue as used in Lesson Explanation, (3) Mother Tongue as used in Drill/Exercises, and (4) The use of Mother Tongue in Lesson Planning Besides, there are further clarification for each section and summary for the whole chapter Further clarification is the explanation, observation and practice of the researcher Having the mother tongue in school is important as it provides children a sense of familiarity, easing their transition from home to school. Learning to read and write in the mother tongue as a formal subject in the early years is, without doubt, important according the claim of the curriculum makers. In fact, they stress the importance of the use of this mother tongue.

3.1 The Mother Tongue

In the Philippines there are several spoken dialects or languages People in Sulu use Sinug (or Bahasa Sug) dialect or language, Chavacano in Zamboanga, Yakan in Basılan, Cebuano in Cebu, Tagalog in Manila, etc. The dialect or language mostly spoken in a specific province or city is said to be the Mother tongue of the province or the city. For example, the Mother tongue in Sulu is Sinug (or Bahasa Sug). However, there are provinces of which one or two specific towns or barangays are occupied mostly by Tausug. So, the Mother tongue in that certain town or barangays may also be Simug for the purpose of facilitating the learning of children.

The Mother tongue in Pangutaran, one municipality un Sulu, for example, may also be Sinama (or Siyamal), but the official one is Sinug since Pangutaran is in Sulu.

Mother tongue, therefore, is the language or dialect spoken mostly by the residents or occupants starting from the birth

3.2 Mother Tongue as used in the Explanation of Lessons/Lecture

Mother tongue is used in the lesson explanation such as in English, science, Araling Panlipunan, Mathematics, and MAPEH, as well in other subjects Its use in the explanation is based on the responses of the following personalities (in the following paragraphs) who are selected teacher respondents in the locale of the study.

According to Maria Luz T Carlos, it is required that teachers have to use mother tongue in the lesson explanation in all subjects but not to the extent of using it word for word because other children who are already exposed to English and Filipino find it hard

to understand. It goes to show that she uses this Mother Tongue to follow the requirement as she claimed

Armina S Bandahala states that, in the k-12 curriculum, the use and implementation of Mother Tongue is mandatory as the medium of instruction inside the classroom since it is the widely uttered language in the province of Sulu. Bahasa Sug is considered to be the mother tongue of People in Sulu. Teachers in this province use this dialect m teaching Edukasyon sa Pagpapakatao, Mother Tongue as a subject, Araling Panlipunan, Mathematics, and MAPEH.

Tarhata L. Mohammad says that as mandated in the K-12 curriculunt, mother tongue is widely used in the lesson explanation. Through-out the lesson period mother tongue is being used.

Carina A. Yusop said:

To facilitate learning the use of mother tongue in explaining the lesson is of great help. But as much as possible in subjects like English and Science and Health, the medium of instruction must be in English because there are terminologies that do not have an equrvalent terms in tausug Mother Tongue is strictly used only in Grades 1, 2 and 3 particularly in Mother Tongue, Araling Panlipunan, Mathematics and MAPEH.

In the opinion of Reckmar J. Abtong, the use of Sinug is now being practiced because of its relevance. He stressed:

Through Mother Tongue language the learning is easier and can expand well the lesson. The pupils had the chance of expressing themselves because they can communicate effectively to their teachers through the Mother Tongue Based Pupils are not hesitant to talk and they can explain more by using the mother tongue. So Personally I use it.

In addition, Mother Tongue is also a learning area and therefore it is really use in the explaining the lesson. Regina Abdurahman states:

Mother Tongue is not only used as a medium of instruction but as a learning area In my class 1 use multilingual education in the explanation of my lesson. I was able to experience that using LI (mother tongue) inside the classroom produce better and faster learners.

Likewise, teacher A (name not mentioned) says:

In every lesson to be taught, it must be well-explained to the learners for them to understand well. With this, I am using mother tongue in the discussion of the lesson

oftentimes. So they would be able to reflect and participate during the discussion. So, there is retention on the learner's part.

Nurdiya E. Jingon claims her using the mother tongue in the lesson explanation. She said "it helps pupils learn better. They are less hesitant to speak up in class since they are fluent in their mother tongue".

Similarly, Winnie Rose S. Dela Cruz states:

One of the most resilient features of k-12 is the Mother Tongue based. As we all know, mother tongue way just only introduced to us few years ago, though we are using it every day of our lives but still we are not 100 familiar of the right word which is what we say "mother tongue." Though, mother tongue is new to us still we strive more so that we could impart the right knowledge that we have had and of course to help our learners to express their selves without feeling ashamed Since class interaction is highly solicited to increase the grades of the learners so Mother Tongue is of great help in attaining quality education this is because learners are not ashamed to speak or express their feelings.

Further Clarification

In this section the researcher herself could freely present her own point of view on the use of Mother Tongue as used in the lesson explanation, in connection to the responses of the teacher respondents. In other words, her personal observation and practice as regards the Mother Tongue is herein presented in the following paragraphs.

On the basis of the teachers' responses, they use most of the times the Mother Tongue in the explanation of the lesson. They use this language to a great extent. The researcher thinks, mother tongue at an early age, is important It brings about easy reflection of what is being taught in class since it is within the learners context and vocabulary Pupils in primary levels would be able to grasp the concepts rather on the translation. Furthermore, if the language of instruction is the same as the child's mother tongue, there is a better chance for the child to fit in and continue with education. So, why do teachers make the life of the school children complicated since there is already a mandate to use mother tongue as medium of instruction. As educators all know most of the learners are not rich. Their parents could not afford for tutorial. Of 55 pupils in the class, only few can understand English well. That is why DepEd is now implementing the Mother Tongue as medium of instruction in primary levels for the learners to get easily involved in classroom discussion. And lastly, with the use of Mother Tongue, the learners could not feel hesitant to interact with their classmates or teachers because the language that they are using is the native language or their home language in which they were used to express in their everyday undertakings.

Communicating in any language, one needs his own ideas to convey his point, and medium is to help the other understand. If one does not have a point to convey, there is no point in learning. That is why mother tongue is being implemented as medium of instruction in the K-12 curriculum so that teachers could be able to convey to the learners the sea, and of course the main reason is to facilitate the learning process in primary levels.

Basically mother tongue is used through-out the lesson explanation it is for the sake of the school children for them to be able to understand well the lesson. It is also important to have a mother tongue education especially in primary levels to enable the Lids to easily grasp the course content as they are used to the vocabulary.

It is noted that most of the learners are coming from unfortunate kin whose parents are very busy in their daily works and do not have time to follow up at home with their children's lessons. Some studies show that the use of mother tongue as medium of instructions makes the school children feel easy and could easily understand with their lessons even without the follow up of their parents at home. Because the language is very common to them in which they don't need any tutorial for them to understand the words.

A child connects to his parents, family, relatives, culture, history, identity and religion through his mother tongue Native language links the child with the culture of the society the child comes from and shapes his identity When a child does not know his language well, he will not be nurtured with his culture properly for the fact that the relationship between language and culture is deeply rooted Mother tongue is one of the most powerful tools used to preserve and convey culture and cultural ties. The ability to converse in a language is developed through the mother tongue. The child will get familiarized with the nuances of a language, how to learn it and use it, and this will enable him or her to learn other languages as well. A strong foundation in their first language will contribute to learning another language and help them develop stronger literacy skills in the school language, because children's literacy knowledge and abilities transfer across languages from mother tongue to the language the child is learning at school. When children continue to develop their abilities in two or more languages throughout their primary school years they gain a deeper understanding of language and gradually acquire knowledge about how it can be manipulated and applied in different ways.

As mentioned above by teacher Regina, she uses multilingual in the explanation of her lesson. Maybe, because there are some terms that are hard to understand when it is written or spoken in Bahasa Sug (Sinug). She was also stated that using the LI or the mother tongue inside the classroom produced better understanding. This is because the school children could easily speak in the language because it is mother tongue. They are not hesitant to speak, since it is their home language. It also helps the learners adapt to learn easily the second language (Filipino) and the third language (English) if the school

children mastered already the first language. The researcher strongly agrees that mother tongue develops a strong foundation in a language they understand. Learners also develop their cognitive and reasoning skills through the use of mother tongue.

It is personally agreed that the use of mother tongue in the lesson explanation is indeed of great help not just on the part of the learners but of course on the teacher's part. In preparing the lessons for the day teachers can think of many ways to make it interesting for the learners and they could not feel bored since mother tongue is being used. In effect, everybody participates in the discussions and activities being prepared.

In using the mother tongue, learners are able to think easily, learned to communicate and acquire a spontaneous understanding of grammar.

The writer agrees with the statement of teacher Nurdiya that through the use of mother tongue in the lesson explanation the learners could easily understand what the teachers are telling them and are very eager to participate inside the classroom because they can easily formulate ideas in their minds.

3.3 Mother Tongue as used in Lesson Drill/Exercises

Mother Tongue is not only used in the lesson explanation but also in drill or exercises which are usually performed after explanation by the teacher. However, English is also used in some instances where learners are ready to understand or in case the teacher thinks that English in important especially in a one-word sentence or a simple sentence-drill. But this is also followed by the use of Mother Tongue, or vice versa.

The teacher respondents, upon interview with them, gave their responses regarding how they use Mother Tongue in drill. In the following paragraphs, the responses of teachers are taken.

Maria Luz T. Carlos pointed out:

It is just the same as in lesson explanation, some drills and exercises need to be said in English after its mother tongue because there are terms which are not common and difficult to understand.

According Armina S. Bandahala, the Mother Tongue, especially in drill instruction, is really used. She said:

In giving drill or exercises, all is the same except the instructions given are all written in Bahasa Sug. But in the new curriculum, there are a learner's materials where all of the exercises in every topic are written separately.

In support of this claim, Tarhata L. Mohammad Answer said: "In giving drill or exercises the instructions given are in mother tongue."

It is also observed that in case the subjects are English and Filipino, the English language or Filipino are used but with integration of the Mother Tongue Carina A Yusop stressed:

Again if the subjects are Mother Tongue, Araling Panlipunan, and Mathematics, drill/exercises must be stated explained in mother tongue. On other subjects, like Filipino and English, Filipino and English language are used, but if the pupils are not able to understand in these rwo languages, that is the right time to use mother tongue.

It is also noted from the response of Reckmar J. Abtong that the use of Mother Tongue is effective, and he usually uses it in drill. He claimed:

Likewise, through mother tongue-based, the activities prepared by the teacher can easily be conducted and easy on the part of the pupils to follow Teachers, on the other hand, can think more than one exercise because he she can create his/her own activity simply because they are using mother tongue-based.

Such a claim is also of that of Regina Abdurahman who stressed:

In giving drill exercises, I allow my learners to answer using language 1 to 3 (multilingual) especially the use of mother tongue in order for them to connect to their culture and heritage. I experience that using the LI (mother tongue) the learners were able to express share ideas of what they experience in real life situations and connect them to the outside world.

Mother Tongue is used in drill as well as in class discussion where pupils feel totally free to talk. In fact, Teacher A (name not mentioned) was quoted as saying

In drills exercises, mother tongue has been used in giving instruction for the learners to be guided what to do. Not only in giving instructions mother tongue is also used in answering and oral recitation. Which makes feel the school children welcoming and are not afraid to commit mistake.

In the words of Nurdiya E. Jingon, she said.

In giving drill exercises to my pupils I always give instructions in mother tongue because children learn faster and more effectively when instruction is done in the mother tongue.

However, there are times in which the use of Mother Tongue is accordingly difficult in the sense that pupils can hardly understand. Although it is used, it is in combination

with other very understandable words. This is the claim of Winnie Rose S. Dela Cruz who pointed out:

Honestly speaking, it is very hard on the part of the pupils to understand the mother tongue, if they are given exercises we need to expand further into the very words that they already understand in order for them to answer

Further Clarification

As based on the responses of the teacher respondents, it shows that the use the Mother Tongue in most cases and most of the times in lesson drill or exercises. But, it is noted that English and Filipino are also used in some instances. In other words, there is a fusion or combination of languages.

In the old practice, giving drills/exercises was expressed in English to formally state the instruction. Later, with k-12, it has to be translated to Mother Tongue to clearly understand. At some point, the dynamics of the learners must be given consideration to realize the objectives of the lesson because the exercises/drills depend on the instruction given.

Nowadays, the curriculum that we are applying is K-12 Hence, it has something to do with the instructions inside the classroom using Mother Tongue With this, the primary level that includes Kinder to Grade 3 is using Mother Tongue as medium of their instructions more often to let the learners express their feelings towards a certain topic and most especially to understand the lesson taught by the teachers, and must use. This has something to do with the Quality Education crisis that we are facing now in the field of education One of those is Poor Comprehension This curriculum is designed and implemented due to the needs of the learners that are to uplift the learning ability in order to become competitive globally and to mold a certain learner into a whole-being.

Using mother tongue in giving drills/exercises is undoubtedly important where in language plays a significant factor. Since the child's own language enables her/ him to express him/herself easily, then, there is no fear of making mistakes. It encourages active participation by children in the learning process because they understand what is being discussed and what is being asked of them. They can immediately use their mother tongue to construct and explain their world, articulate their thoughts and add new concepts to what they already know.

Being multi-lingual in the drills/exercises is highly appreciated. Hence, to become competitive globally the learners must be oriented and aware of the different languages, like Tagalog and English. The learners must know how to apprehend these languages, not in the case anymore of the Mother Tongue because they are expert already in this. Also, the two parties in this scenario both benefit and there is the realization of the

objectives of the lesson taught. It is important for the teachers to see that the drills/exercises are implemented correctly. Therefore, when using the Mother Tongue, it has to be in the appropriate dynamics of the learners and time.

Using Mother Tongue inside the classroom is indeed an effective way for the learners to learn. I agree with the above statement because, since they are used already with the mother tongue it has no longer reason for the learners not to interact or share their insights to their classmates From this, learning takes place and can be multiplied especially when the teacher knows how to facilitate the class discussion. So, it made for the learners reflect as to what they have experienced that would lead them into a fruitful discussion. Real life situations/experiences can be utilized in order for the discussion to become more meaningful.

3.3 Is Mother Tongue used in Lesson Planning?

Based on the gathered responses of the teacher interviewed by the researcher, Mother tongue is not used in lesson planning, instead teachers usually use English or Filipino. It is perhaps difficult to use the native language in writing a lesson plan because teachers so far have been trained to use English and not the mother tongue in the interview with the teacher respondents, the following information is based on the responses.

Maria Luz T Carlos said "in lesson planning we use the English language and not the Mother Tongue.” Tarhata L. Mohammad also stressed:

In lesson planning we do not use the mother tongue instead we make our lesson plan in English. This is due to the complexity of the dialect where most teachers are not well-verse.

This is also supported by Carina A. Yusop as saying:

Mother tongue is only use as medium of instruction in primary level (grades 1.2 and 3). But in preparing lesson plan English and Filipino are still the language to be used.

Armina S. Bandahala also pointed out:

As a newly hired teacher, I can say that the way how lesson plan is being made and written is almost nearly compared to the term "overhauled" due to the new terms used and some added part of the plan which will add complication in accomplishing a 1 day plan. But we still use English language in writing our lesson plan for those subjects that are using mother tongue as a medium of instruction, or if not-Filipino.

Regina Abdurahman gave her response as saying:

In making lesson plan, I use the Language 3 (English) because it's easy for me to follow the steps of the learning process, the activities and strategies to be used.

Teacher A supported response, he said:

For lesson planning we still use the 1.3 (English) in preparing for it because it is easy for us teachers to prepare it. Mother tongue is only used as medium of instruction but not in doing lesson planning.

Filipino and English are emphasized in lesson planning as Nurdiya E Jingon gave her observation: "in lesson planning we are not using mother tongue even in mother tongue subject. All lesson plans should be written either in Filipino or English." Winnie Rose S. Dela Cruz also gave the same response.

As far as lesson plan is concern, in the K-12 curriculum, the teacher will have to comply with the so-called DLL or Daily Lesson log, and in the preparation of lesson plan it is the same with what has been practice, the language used is in Filipino and English.

There is one point revealed by Reckmar J. Abtong. He said:

This is one reason why Educational System is being revised because of lesson planning. This time teachers will not find hard time making their lesson plans because we do have already modules and readymade lesson plan and one thing it's good the modules are translated already to Tausug language Teachers could expand and add many activities in doing their plans.

Challenges in the Use of Mother Tongue

In this chapter there are four major sections: (1) challenges faced by teachers, (2) challenges for pupils, (3) challenges encountered by parents, and (4) challenges faced by school heads. To explain further each section, there is a special section, Further Clarification, at the end of every section, which reflects the researcher's point of view including her observation, practice as a teacher, and a few recommendations. The last additional section is the summary of the whole chapter.

Challenges refer to those actions or effort which must be fulfilled by teachers for improving and sustaining quality of teaching and of learning. So, challenges emanate from the occurrence of problems or difficulties encountered by teachers amidst use of the Mother Tongue.

Languages matter in the quest to eliminate illiteracy and facilitate better learning, as emphasized in the global Education for All movement. They matter in fostering openness towards diversity and tolerance of other cultures, which is essential to building inclusive societies. They matter for peace and mutual understanding in areas of inter-

ethnic conflict. Indeed, the role of languages in the educational, cultural and economic fabric of our societies is too great to be ignored. Often, the most disadvantaged people in a country are those whose mother language is different from the national language. This creates problems in many areas such as education, health, income disparity, risks of exploitation, exposure to environmental hazards and access to the legal system.

4.1 Challenges Encountered by Teachers

In this section 4.1 are challenges faced by teachers in using the Mother Language as the medium of instruction. The individual teachers contributed ideas and revealed their actual observation.

One of the challenges on the part of the teachers is that the teachers are encouraged to look into difficult terms in the native language, especially those terms which are seldom used for expression of ideas, or which they do not even understand yet, or which they have not yet encountered. For this, Maria Luz T Carlos pointed out.

The Teacher is challenged more to learn many terms and remember them well specially those terms which are not familiar. So that he she can impart it well to the students.

Such an important challenge is also pointed out by Armina S. Bandahala as saying:

One of the challenges in using mother tongue is the terms words used in the book for classroom discussion. There are bunches of terms in Bahasa Sug which are seldom use or not actually in use in a day to day encounters and that is what complicates it.

The researcher agrees with Armina S. Bandahala. It is true although teachers are using their own dialect, it cannot be understood automatically because it is not the term that teachers usually hear and say. So, when the researcher explains, she does not honestly know, first she needs to undergo research on the terms.

The above views are again supported by the idea of Tarhata L. Mohammad when she said:

On the part of the teacher lies a very huge challenge when it comes to the use of Mother Tongue There are a lot of words terms which even 1, a teacher, do not understand or have never encountered. Using the appropriate word, unlocking the meanings and letting the pupils understand the word are some of the so many challenge I encountered in the use of Mother Tongue.

Also, the words of Nurdiya E. Jingon gave support to the above expression of observation. Jingon said:

On the part of the teacher we found some difficulties in giving definition or translating some hard words in mother tongue. We have to translate it into Filipino or English for the pupils to understand.

According to Winnie Rose S. Dela Cruz, teachers are challenged to be resourceful enough because of unfamiliar terms in Bahasa Sug used in teaching. In other words, teachers are encouraged to look deeper into the meaning of the terms Because of being resourcefulness, they may become aware afterwards. Dela Cruz said:

We become more aware of the words that we are going to teach, we need to be resourceful, to know deeply the lesson. It needs patience to let the pupils learn and understand more.

Another challenge on the part of the teacher is it that the teachers, because of unfamiliar terms in the native language that are already in use under K-12, are challenged to use various strategies or techniques just to explain or demonstrate the terms for pupils to understand. Carina A. Yusop revealed this challenge when she said:

On the part of the teachers, it is a challenge to explain unfamiliar mother tongue words to the pupils. We need to use devices to illustrate its meaning Teachers must double their effort to explain not only the concept but as well as the word itself.

In the words of Reckmar J. Abtong, he is accordingly challenged to study terminologies in native language because it seems some pupils are more aware than hum about many unfamiliar terms. Abtong said:

On my part as Grade 1 & 2 teachers, at first, I find it difficult because I am not familiar to other terminologies in Bahasa Sug. But then, I was challenged to study more because I did not only learn from the modules and textbooks, but I also learn from my pupils most especially my pupils who are living in a rural areas in which they commonly used Bahasa Sug at home.

The next is that of Regina Abdurahman, who pointed out that the use of native language would really be challenging, and it would also be advantageous. With it, the teaching becomes more effective because of the use of accompanied strategies. As part of the interview with her, she stressed:

As a teacher, the use of mother tongue is a great challenge but through the teachers training and preparation of the learning resources, my teaching becomes more effective and met in facing these challenges through resourcefulness and effective strategies and support of the school administrator and the DepEd.

In addition, it is a challenge and advantageous for teachers to use the native language, not more on English, because accordingly it has been noticed that even at

home the parents start using English in teaching their children about different colors. As an effect, their children can hardly identify colors in Bahasa Sug, although they can identify in English. So, Teacher 4 (name not mentioned) pointed out:

For Grades 1,2 & 3 teachers it is challengeable in using the mother tongue Because, nowadays, the parents are teaching now their child in English at home before they are sending their child to school, for instance the different colors, the numbers-how it is look like series of the numbers from 1-10 So, the teachers must double the effort in teaching the pupils using the mother tongue. They must be able to establish the relation of the concept of things to the pictures that would equal to learning.

Further Clarification

In addition to what Ma'am Maria Luz stated above, one of the most challenges in the use of mother tongue was that the teacher should be fluent in mother tongue, MT challenges the teachers who are not the native of Sulu, they find it very hard to teach because the language itself is new to them. There are also words in the MT which teachers found to be hard to understand. Another one is a challenge that calls for one to utilize various instructional materials that can be used by the teacher such as story books whose content must be written in Mother Tongue Poems, songs and nursery rhymes are very difficult for teachers to compose unlike Filipino and English.

It is very difficult or even impossible for one to teach what he/she does not have It is really a challenge to the teachers to let the pupils learn when the teachers do not also understand the word/s. The learning of the pupils really depends on teachers. So, the author of the book for the Mother Tongue must be very vigilant and considerate in proposing the different words to be used in the discussion because it is just useless when the pupils do not understand the definition for it to be applied/used in the dialogues.

Mother Tongue is helpful in a way that the learners would easily understand it but some words are hard to explain. The best way to do is to translate it either into Filipino or English in order to further expound the idea. In this case, full learning of the learners is maximized.

Using Mother Tongue is a great challenge now for most of the teachers because one needs more time in researching terms that are not familiar and are difficult to understand A teacher also needs to study hard every night and analyze deeper the topic that he/she is going to tackle in the next day Why do teachers need to study? The answer is simply, "in order that he/she become ready for his/her class, teaching them the right knowledge wherein he/she is paid by impart the school children.

It must always take into consideration when unlocking/explaining unfamiliar words, association of the pictures to the words are the best way. The pupils do not just hear the

words but they would be able to associate to the concept they have instilled in their minds. As a result, learning takes place.

Being determined and dedicated to the teaching can help the pupils' learn effectively. But of course, it is challengeable to the teachers because they are doing their best to let the learners learn from them. It is always a compliment on the teachers' part to see a certain learner learns. Also, leaning is a two-way process.

It is hard to translate Mother Tongue to English especially when the words are hard. But, letting the learners learn from it is a talent. Thus, this can be strengthened once the teachers are resourceful in doing the instructional materials in support to the teaching in the classroom and clever enough in applying the best strategies that suit to the dynamics of the learners. At the same time, the support of the school administrator and the DepEd must be consistent to realize the purpose at the end of the day.

Perseverance and diligence are the two qualities that the teachers must possess It is hard to instill an idea/concept to a learner when a certain topic had been learned already especially when using different process of teaching because at some point the learners are reluctant already in accepting idea.

This is now the challenge for the teachers to be resourceful enough to find ways on how to teach the children effectively using the Mother Tongue.

4.2 Challenges for Pupils

Just like teachers, learners are also facing challenges in the use of Mother Tongue as a medium of instruction Pupils have also met difficulties but these are challenges, and these can be considered advantageous.

There are terms in Baha Sug, which are new to pupils just as how new it is to the teachers. Both teachers and pupils met the challenge to learn the terms. Maria Luz T Dela Cruz pointed out:

On the part of the pupils, they are also challenged to learn the terms together with the teacher so that teaching and learning process will take place.

Such challenge is also pointed out by Armina S. Bandahala as saying:

Every tome new terms are heard by the pupils, they have a difficulty in making connections fast because they tend to forget the meaning of a certain word, maybe because they hardly say the words and that is what makes it a challenge for the pupils.

Accordingly, some pupils usually get confused in Bahasa Sug. But of course, people may get confused in any language. Upon confusion in using the native language,

pupils are challenged to listen very well to the teachers' explanation in bilingual In relation to this. Tarhata L. Mohammad had said some words:

My pupils can automatically respond to questions or instructions using the Mother Tongue. But, sometimes they tend to be confused with some terminologies.

In connection to the statements of Mohammad, Carına A. Yusop stressed out that pupils find it hard to understand concepts which are very new especially in English Also in Bahasa Sug they find it hard to comprehend because the ternis seem new. Consequently, pupils are challenged to listen and hear and listen and give much attention to the teachers' explanation.

In contrast, Reckmar J. Abtong claims that there are less challenges on the part of the pupils because pupils at the same time are learning Bahasa Sug, for they are new in this world In other words, pupils are still in the process of learning the native language at the same time. In this sense, there is less challenge on their part. Abtong said:

My pupils can easily to cope up, they can easily comprehend because most of the terms words are being used at home, so it is very easy on their part to learn, though there are some terms which are not familiar to them and difficult for them to understand. But as a teacher it is your task to simplify the words for the sake of the school children not yours I must say less challenge on the part of the pupils since Mother Tongue is their home language therefore they could not find it difficult to understand the concept.

Another point of less challenge on the part of the pupils is the claim of Regina Abdurahman as saying:

On the part of the pupils, Mother Tongue challenges them to improve and develop their creative and critical thinking and the learning process being introduced in the curriculum, und to become better and good future citizen of the country.

On the other hand, the idea of Teacher A is that the pupils are challenged to struggle to relate native language to English and vice-versa. He said:

On the part of pupils, it is also challengeable, if I may say. The learners would struggle in relating the concept idea of a thing being taught for they are not used to it-using English to Mother Tongue and vice versa.

The above words of Teacher A are supported by the words of Winnie Rose S. Dela Cruz saying:

They need to strive hard in understanding the lesson by using the Mother Tongue, because sometimes it can create confusions on the part of the learner. It might not meet

the objectives on the use of Mother Tongue because it seems to be a foreign language to the learner.

The next is in the words of Nurdiya E. Jingon as she stated below. Based on her view, it seems that there is no way for the learners to reject K-12. Pupils are therefore challenged to accept and take K-12 no matter what it is because this curriculum program has been mandated. K-12 is accordingly new to leaners Jingon said:

On the part of the pupils some words in Mother Tongue are new to them so sometimes they lost their interest in listening to their teacher. They are more interested in stories that are English or Filipino than stories written in Mother Tongue.

Further Clarification

It would take time to the learners to sink in the ideas taught by the teachers for they are new to them. In this case, the teachers must look into to the dynamics of the pupils so the learning process takes place. The learners must be provided with all the materials to be associated when teaching so they would get the full concept.

Law of apperception must be applied by the teachers. It is building/adding a new concept to the learners. Before proceeding to another one, it has to be practiced and learned first through the different activities given to the learners.

The pupils must be indulged in the different terminologies by practicing them every day At least, when time comes, they are already aware of the words that they can hear To learn something really takes times.

The pupils must be indulged to the different sight-words and let them read every day as practice. That could make the essence of familiarization.

The use of mother tongue is actually useful to the pupils especially if it is used in giving instructions, the pupils easily catch up what the teacher tries to say But the challenge is when they reach the 3 quarter, where English indulges to the teaching-learning-process in Grade 1. The pupils would hardly cope to the transition, like in the sense of common matters. There would be inconvenience on their part to understand the words taught in MT and be taught in English differently.

4.3 Challenges Encountered by Parents

In this section 4.3 challenges encountered by teachers in relation to the use of Mother tongue are presented. These are referring to what the parents must do to help their children achieve better learning under K-12. The challenges met by parents were viewed by the teachers as found in the succeeding paragraphs.

Maria Luz T. Carlos pointed out*, "The parents are also challenged to learn together with their kids for them to follow up teaching at home*." Based on this view, parents should get involved in a similar way as their children do. He parents should also act as teachers, only this is done at home. This is to augment the learning in school, specifically in the matter of using the Mother tongue, in the translation of many terms. This means the parents are at the same time learning just as how their kids learn.

The participation of parents as pointed out above by Carlos is supported by the implied meaning of the words of Carina A. Yusop. Her words imply that parents are challenged to help their children as regards uncommon terms in Tausug. Yusop said:

Parents usually keep on asking why teachers' m primary level use Tausug language throughout the session. They are not aware of the K-12 program in primary level and are hesitant to ask or approach the teachers for clarification of their doubts Parents also find problems if their children ask them the meaning of some uncommon Mother Tongue terms.

In case, the parents do not know the terms, they have to strive hard to look into these and find ways for them to understand also. This is because not all parents are aware of the some uncommon Tausug terms, as claimed by Tarhata L. Mohammad and her colleagues as saying, "Some parents do not understand the principles behind the use of Mother Tongue as a medium of instruction" So, the parents are also challenged to help the teachers as pointed out by Reckmar J. Abtong stating:

Parents on the other hand are supportive, why? Because even though most of them did not finish their studies, they facilitate to help their child by means of using the Bahasa Sug or in Mother Tongue Based, Sometimes, their parents help us teachers in doing and by means of follow up at home in teaching their child.

Such above statement of Abtong is supported by the words Regina Abdurahman claiming that the parents are supporters of teachers, and trying hard to learn uncommon terms Regina Abdurahman said, "On the part of the parents, they are challenged to serve support and follow-up their child in the teaching-learning process."

Another similar and perceived challenge for teachers is based on the words of Teacher A saying:

On the parent's part, it is easy for them to let their children know a certain concept using Mother Tongue. They would be able to establish smooth relation in expanding the idea learning aside from their vernacular.

Based on the foregoing words of Teacher A, the parents are challenged to continuously establish harmonious relationship with their children as regards matters

pertaining to learning of their children. Parents are challenged to encourage and motivate their children to learn Sinug, and evaluate their improvement. They are challenged to cooperate with their children to facilitate learning at home. They need to work together. Such claim of helping the children at home is also the view revealed by Winnie Rose S. Dela Cruz saying:

This is now the challenge of the parents, they need to find time so that they can follow-up their children at home in giving attention to their children's need especially in learning more the lesson with the use of Mother Tongue. The help of the parents are highly encouraged in the learning process of Mother Tongue, they are also expected to have knowledge of MT as one of the subjects of their children.

On the other hand, in the following statement of Nurdiya E. Jingon, the parents are accordingly not in need of Sinug However, upon analysis with the mandatory implementation of K-12 using the Mother tongue, the parents are challenged to accept the Mother tongue and challenged to also learn Simug. They could do nothing anymore but learn Mother tongue as K-12 is now in the implementation. Regarding the refusal of parents, Jingon said:

On the part of the parents, some of them were not in favor of using Mother Tongue as a medium of instruction because according to them they don't need the Mother Tongue language what they need is that their children would be able to speak English fluently.

Further Clarification

The reason why some parents at first do not understand why MT is included in the subject is because they are not aware of the implementation of the k-12 program. But, now, as far as the researcher observed, parents are now interested in MT in the sense that there are lots of terms that they should also know And also one of the parents said and the researcher quotes "sabab sin Mother Tongue imingat in anak ko nagbassa" Amazing right? Knowing that one of your pupils be able to read is because of the use of mother tongue.

Some parents said they do not need the mother tongue, what they need is English for their children to speak English fluently Maybe, because some of the parents belong to middle class of status and they trained already their children to speak English at home or they sent their children for tutorial classes so that their child could speak fluently English in preparation for the higher levels/tertiary levels. Here comes Mother Tongue being implemented as a subject, not just a subject but as a medium of instruction in some learning areas. Now, what happened is that they find it difficult to help their kids when it comes to teaching their kids at home for follow-ups of their lessons This is because there are lots of terms/words that are hard to understand that even parents could not

understand even it is already written in Mother Tongue There are also parents who do not use Bahasa Sug as their home language. What they use is either Filipino or English and that is what brings challenge to them. Sad to note, they tend to forget their own Mother Tongue.

4.4 Challenges Encountered by School Heads

One of the challenges encountered by the school heads is that they should also learn the Mother tongue just as how teachers, pupils and parents learn it. This is because the school head is a major part of the school forces. In case there are discussions, or dialogue pertaining to school operation and situations of the school, that school head can actively communicate. Maria Luz T. Carlos said:

Together with the teacher, students and parents the school head must also learn the Mother Tongue so that if there are queries in all parties he can guide and help.

The challenge for the school heads to learn the Mother tongue is also emphasized by Amina S. Bandabala claiming that they should be always be ready for questions raised by the community in relation to K-12 specifically on the use of Sinug.

For the school head, the challenge for them is how to address every query of the parents or guardian living in the community with regard to the use of Mother Tongue in the K-12 curriculum Although most parents ask the teacher about it, there are really some who blame the school head regarding the implementation of Mother Tongue due to lack of orientation on the new curriculum.

Such challenge for school heads is also emphasized by Reckmar J. Abtong as he said below, that is, if there were ceremonies, orientation or any school activities/programs, the school heads are ready to use the Sinug. Abtong said:

On the part of the school head, they will not find it hard to communicate because, like for example, in our district we conflicted a Learning Partners Program wherein our school head served as the facilitator They facilitate learning to us with new approaches in which we can address it to our pupils School head could also help a lot on this matter.

However, there is a claim that there is only little challenge for the school heads since they are not directly concerned with the teaching. Teachers are the ones directly affected. The only challenge for school heads as claimed Tarhata L. Mohammad is to motivate the faculty forces to adhere to the Mother tongue. She pointed out:

There is lesser challenge on the part of the school heads because they are not directly affected with the use of Mother Tongue. Their challenge is how to ask their teachers to follow or use the Mother Tongue in lesson explanation.

Another challenge for school heads is pointed out by Carina A. Yusop saying:

It is a challenge on the part of the school head to inform the stakeholders regarding the use of Mother Tongue in school. Some parents said that Mother Tongue are already used at home and they need their children to learn to speak other languages (English & Filipino) that is the primary reason they sent them to school. They could not see the rationale of the use of Mother Tongue.

Based on the above idea of Yusop, the school heads are challenged to respond to possible sentiments of many personalities who are doubtful of the use of Mother tongue. The need to update these people so that the latter may get informed of the significance of the curriculum, thereby, minimizing doubts

The next is that of the claim of Regina Abdurahman that the school heads should give support to the teachers. Abdurahman said:

On the part of the school head it is a challenge for them to serve as a role model and give support to the teachers in the implementation of the use of Mother Tongue in order to uplift the quality education of the learners in the 21" century.

As to the view of Nurdiya E. Jingon, the school beads are challenged to supervise and see to it that the faculty members really use the Mother tongue. This means the school beads should not go against the use of Smug, they should just bow to its use because it is now implemented. Jingon said:

On the part of the school head it's his her task to monitor of the teachers are really using mother tongue as a medium of instruction inside the classroom.

Another challenge for the school heads is for them to assure the necessary materials for teacher's guide in teaching Likewise, the school heads are challenged to assure the competencies of faculty members. This is emphasized by Winnie Rose S. Dela Cruz as saying:

School head should provide the teachers necessary materials such as teacher's guides, learning materials for the teacher to find it interesting and motivating in teaching mother tongue as a subject. School head should also look into the capabilities or competencies of the teacher who will teach the subject (MT). The teachers must be knowledgeable on correct pronunciation or enunciation, and meaning of words. And that's what makes a challenge of the school head!

Further Clarification

For the first year of implementation of the said Mother Tongue, some of the school heads encounter problems with this because not all had attended seminars/trainings on

how Mother Tongue is used. School heads do not know how to address some queries of his faculty members due to lack of orientations. There are changes in the new curriculum. In fact, there some who ask their subordinates on how and what to do with those newly revised school forms. Sad to say, some school heads cannot answer it directly, or they could not help their teachers because they are not fully equipped with it. Luckily, things changed. After a year, the researcher guesses, school beads are fully geared with regards to the use of Mother Tongue. Because the BEAM in partnership with DepEd ARMM sent all the school heads for trainings/seminars for them to be aware what to do and how to do it.

Almost of the respondents got the same answer, they said that there is less challenge on the part of the school head because they are not directly affected. Who were really affected with the use of mother tongue were the classroom teachers. For the school heads who are native of the land, it has no problem. But the challenge is on the school heads who are not born here in Sulu and have little knowledge of the language it would be hard for them to understand and check on the Mother Tongue-based. How could they check their teachers if they themselves are not fluent to it?

Contribution of Mother Tongue for Quality Learning

Does the use of Mother Tongue (MT) bring positive impact on the quality of education? There is a perception that the MT (Sinug in Sulu) contributes a lot to the attainment of quality in education specifically in learning of the pupils. Some claim that it is increasingly obvious that the language of instruction at the beginning of one's education at such a crucial moment for future learning should be the mother tongue. In this chapter the opinions/ideas and perception of teacher respondents on the contribution of Mother tongue to quality learning are presented.

In this chapter, at the end of the presentation of the respondents' responses, there is one section titled Further Clarification stating the words of the researcher based on her viewpoint, experience and observation.

Maria Luz T. Carlos claimed:

In some aspects the use of MT facilitates learning especially in the presentation and explanation of terms which needs to be given focus so that students will get the idea needed by them. However, this is not true in other areas like in Mathematics because some terms used in Mother Tongue give children confusion, and it is more understood when used in English.

Based on the above perception of Carlos the MI is effective in some cases-like discussion and explanation of some lessons, but accordingly it is not suitable in other areas like mathematics It seems that many pupils get confuse and become more

confused in learning as far as mathematics is concerned Armina S. Bandahala reinforced such view. She said:

Science and Health is not yet included in the subject area in grade 1 For Mathematics, it is not applicable. Numerical terms that are translated 10 Bahasa Sug could not be easily understood by the pupils. So, when I explain and sense that they are having times in comprehending I automatically change the numerical terms to English language in which they are very good.

As I observed, Mother Tongue as a medium of instruction helps the pupils in understanding the lesson in Araling Panlipunan. They are capable of explaining things because they know they are allowed to express themselves using Bahasa Sug Pupils also interact, with each other if they happen to disagree on something. So it helps

Almost the same views are emphasized by Bandahala as she pointed out above. The Mother tongue is not suitable for numerical terms. This means they agree that this Sinug is good for other subjects' areas like Araling Panlipunan and some parts in science subject. However, Tarhata L. Mohammad perceived that the Mother tongue is also good in Mathematics as she said, "When we teach Mathematics, using MT, learners are more confident in giving reasons because they express their selves in their own dialect. But, this view of Mohammad is again in contrast to the view of Carina Yusop who gave the same view as that of Bandahala in the above statement. Yusop said:

In some ways, yes, but not all science terms can be translated to vernacular. In Mathematics it is not really suitable because there are also terms that are difficult for the learners to understand if it they written in Mother Tongue.

For Araling Panlipunan I must say "yes" because society is being tackled Pupils can easily express when they were using Mother Tongue.

That the Mother tongue is good in science and Araling Panlipunan and therefore that it contributes to quality learning is also pointed out below by Tarhata L. Mohammad who said:

For Science and Health understanding and concepts-skills association are the core of teaching-learning teaching- process. With the use of Mother Tongue in which learners use in the daily conversation they are more given the opportunity to clearly understand what have been discussed thus, facilitating learning. Say, for example, they will be given experiments pupils will be more confident to do it because instructions are in MT.

Araling Panlipunan is a subject where society is being discussed Learners can express themselves with ease and confidence when they use Mother Tongue.

The next view is again similar in some respects but different is some respects. This is stressed by Reckmar J. Abtong who said:

For Science and Health, "yes" it helps and facilitates learning. We discover new terminologies here most especially in naming the parts of the body and others. Pupils would really participate in learning through the use of MT. But, sometimes it is not necessary that we can translate all terms to Bahasa Sug. What is important we can direct to the pupils the learning that is at their level?

In Mathematics, and Araling Panlipunan using Mother Tongue it really facilitates learning. My pupils enjoyed a lot when I'm teaching them these 2 subjects. They themselves are actually translating the words from Bahasa Sug to English. So it helps a lot.

Such claim was reinforced by Regina Abdurahman stressing that the Mother tongue is also good in Science, Araling Panlipunan and Mathematics. Abdurahman said:

Mother Tongue as a medium of instruction in Science and Health, Mathematics, and Araling Panlipunan facilitates learning because the learners could be able to participate actively in the different activities conducted, their communication skills are being developed, and they gain self-confidence.

Likewise, Teacher A pointed out that the MT contributes a lot to quality learning in Science, Araling Panlipunan and even in Mathematics. Teacher A said:

For Science and Health, partly, Mother tongue is "yes" because, it helps the learners understand the lesson discussed for the day. At some point, "no," because there are some terms that are difficult to translate into Mother Tongue, Only to relate it to the concept.

Yes! Mother Tongue really is applicable in teaching Mathematics, especially if it talks about the operation to he used and of course, when making a scenario for problem.

Yes! It also facilitates learning when teaching Araling Panlipunan, because the teachers would be able to express their ideas understandably especially when you will just tell story of the history.

In addition, very similar perception is that of Nurdiya E. Jingon emphasizing the good impact of the Mother tongue for science education and Mathematics. Jingon said:

The use of Mother Tongue as the medium of instruction in Science and Health facilitates learning. In Science education, the communication of science concepts demands linguistic and conceptual knowledge. Therefore, both teachers and students

should communicate in their mother tongue, the language wherein they are comfortable and at ease in clearly expressing their ideas.

Using Mother Tongue in Mathematics as a medium of instruction also facilitates learning. Native language we speak may determine how our brain solves mathematical puzzle. Our mother tongue may influence the way problem solving circuits in our brains development.

Sa Araling Panlipunan mas madaling matuto ang mga mag-aaral kung gamit nila ang Mother Tongue dotul naipapahayag nila ang kanilang mga saloobin a ideya nang walang pag-aalinlangan dahil alam nila na tama ang kanilang iminumungkahi.

Abdurahman, Abtong, Teacher A and Jingon, as they pointed out above, assert that the Mother tongue is appropriate for science and Health, Mathematics and Araling Panlipunan This is partly in contrast to the perception of Carlos and Bandahala who claimed that in Mathematics the Mother tongue is not effective.

The next is the observation of Winnie S. Dela Cruz who stressed:

For Science, I should say for some instances, the pupils will understand easily using mother tongue as a medium of instruction, they participate actively once they understand the lesson through the use of Mother Tongue but there are also scientific terms that have no equivalent meaning in M.T.

I think not all of the terms or words in Mathematics can or should be taught or explained in Mother Tongue, because it only adds problem on the part of the teachers and the pupils.

In Araling Panlipunan, Mother Tongue is a big help for the learners because the words used in the textbook or even in teaching is in Filipino, come of the words are almost the same or nearly the same with the Mother Tongue.

Based on the observation or perception of Dela Cruz, the Mother tongue also brings contribution to quality learning in many subject areas, except perhaps in Mathematics in which MT is good in special cases only because not all terms in Mathematics could easily be translated to Sinug.

Further Clarification

In practice in most cases as observed by the researcher especially in the school where she is employed, Science and Health is taught in English though the teacher would use MT for emphasis. In Grade 1, 2 & 3, Science and Health is integrated in English and other learning areas but still it should use English as medium of instruction For Mathematics and Araling Panlipunan the researcher can say that using MT is of great

help for the school children, because they could express their ideas and they are not hesitant to participate So, with the use of MT in Araling Panlipunan really can help students to understand better the lesson.

The use of MT is important because the different Science skills or thinking skills cannot be fully be sharpened unless one uses his/her MT. If the pupils keep on using a foreign language to understand Science concept, then, they can only be at the low level of cognition in Science not at the high level of cognition. In other words, they can communicate fast if they use the language they usually understand easily Learners learn the concept easily, transfer skills and knowledge in their own little way from L1 (Mother Tongue) to 12 (Filipino) and lean 13 (English).

The skills acquired in the first language or mother tongue can be transferred to the second language. So, for example, if your child has developed good reading skills in MT de is likely to be able to apply these skills when reading English. One useful reading skill is the ability to guess the meaning of unfamiliar words from context. Another one is the ability to decide which new words in a text are important to look up in the dictionary and which words can safely be ignored. For this reason, it helps if you can encourage your child to read good fiction and non-fiction in her own language Similarly, the skills of being able to plan out a piece of writing or develop an argument in a persuasive essay can be applied in the second language once they have been learned in the first and so it will be applied in all learning areas.

Personally, teachers can do to produce quality learning. As educators, they need to do and implement religiously what they have learned from the seminars and training we had attended.

The researcher personally conclude that using MT as medium of instruction in most of the learning areas could facilitate learning and definitely would contribute to quality learning.

Conclusions

This study deals with the mother tongue (MT) in relation to how it is used in the teaching process. This also tackles its challenges and implications. The implementation of the use of MT is actually anchored to the K-12 Curriculum wherein teachers play a vital role in the learning of pupils Teachers need to adopt a variety of strategies that would facilitate learning in the classroom In many small group teaching situations, the role of the teacher is that of facilitator of learning, leading discussions, asking open- ended questions, guiding process and task, and enabling active participation of learners and engagement with ideas. It is where teachers encountered challenges.

The Mother Tongue is used in the explanation and discussion of the lesson. Also, it is used in drill or exercise and other activities in and outside the classroom. The fact that this mother tongue is used does not necessarily mean avoiding the use of English and Filipino In fact, in lesson planning, only English and Filipino are used, and the native language is not used.

Two of the challenges encountered by teachers are: (1) to learn many Tausug terms, to study terminologies in native language because it seems that in some cases some pupils are more aware than them about many unfamiliar terms, to study more because some teachers did not only learn from the modules and textbooks, but learn from their pupils most especially those who are living in a rural areas in which they commonly use Bahasa Sug at home, and (2) to translate Bahasa Sug into Filipino or English for the pupils to understand. Similarly, in the first place, the pupils are also challenged to learn the terms together with the teacher, (2) to strive hard to get familiar with the strange words in the Mother tongue for them to easily remember concepts in Sinug.

Moreover, the first four challenges faced by parents are (1) to learn together with their kids for them to follow up teaching at home, (2) to get involved in a similar way as their children do, parents should also act as teachers, only this is done at home, parents are challenged to help their children as regards uncommon terms in Tausug, (3) to help the teachers, and (4) to continuously establish harmonious relationship with their children as regards matters pertaining to learning of their children.

As for school beads, the following are challenges:

(1) To also learn the Mother tongue. One of the challenges encountered by the school heads is that they should also learn the Mother tongue just as how teachers, pupils and parents learn it. This is because the school head is a major part of the school forces.

(2) It is also a challenge for them to address every query of the parents or guardian living in the community with regard to the use of Mother Tongue in the K-12 curriculum.

(3) To motivate the faculty forces to adhere to the Mother tongue.

(4) The school heads are challenged to respond to possible sentiments of many personalities who are doubtful of the use of Mother tongue. The need to update these people so that the latter may get informed of the significance of the curriculum, thereby, minimizing doubts.

(5) The school heads should give support to the teachers, the school head It is a challenge for them to serve as a role model and give support to the teachers in the implementation of the use of Mother Tongue in order to uplift the quality education of the learners in the 21" century.

(6) The school heads are challenged to supervise and see to it that the faculty members really use the Mother tongue. This means the school beads should not go against the use of Sinug, they should just bow to its use because it is now implemented.

(7) To assure the necessary materials for teacher's guide in teaching.

(8) The school heads are challenged to assure the competencies of faculty members.

From the findings and conclusions derived from the study, the following recommendations are suggested: (1) the DepEd should provide enough textbooks and teachers manual to teachers and pupils as well as provide activity sheets and workbooks for pupils to ensure quality learning outputs in the use of MT, (2) core subjects must be given more time in order for the pupils to gain mastery of the skills taught, and (3) in the use of MT in teaching most of the areas, every Division should be the one to craft the lesson guides and manuals of teachers to make certain that the language use in that particular place is the one use as medium of instruction in the classroom.

Likewise, the following are suggested areas of future research (1) The Use of Mother Tongue from Grade I-III Its Implication for Private Intermediate Schools, (2) K-12 A: Challenge for Curriculum Support System, and (3) K-12: Its Impact on the Senior High School Subjects.

Compliance with Ethical Standards

First, a thorough informed consent form explaining the trial's goals, methods, potential risks and benefits, and confidentiality regulations was sent to each participant. Furthermore, since the personal information of the responders had no effect on the trial's results, all trial data points were painstakingly anonymized. To preserve participant privacy, data collection was done in a private environment, and the gathered information was kept in a safe archive that the researchers alone could access. Notwithstanding the disparities in viewpoints and opinions, each participant was accorded respect.

Acknowledgments

Honor and Glory must be given to the Almighty ALLAH, Divine Creator and Provider of things, Love and mercy Thank you for everything.

The researcher wants to express her warmest thanks to the persons who rendered support, guidance and encouragement to make the study a successful one.

Dr. Muammar S Sakili, her thesis adviser and at the same time DEAN of Graduate School for his advice and effort in rectifying the manuscript.

The chairman and members of the Advisory Panel namely Dr. Nagder J. Abdurahman, Dr. Abdurajik S. Dansalan, and Dr. Rafael Regellana for their enriching ideas, corrections and valuable suggestions.

To Mrs. Suaiba L. Suaib and Ma'am Hadja Insih A. Asaari for their encouragement and advice.

To my co-mentor Alhadzkhan, Nurhıma, Dinwana, Carina, Septhearraine, Ma'am Hadja Bouzaina, Hadja Nersia, Hadja Adurna, Isniriya, Hadzna and ndah Monira for their understanding, kindness that give inspiration to the researcher.

To the respondents for their perseverance and cooperation in answering the questions during the interview.

Lastly, the researcher wishes to convey her grateful and warmest thanks to her beloved husband, Pundang A. Ahadani for his moral, spiritual and financial support. To her brothers, sisters, in-laws, and parents for their inspiration and guidance, thank you.

TITO: ANG NABUONG TASADONG INTERAKTIBONG TALAKAYANG OPLAN PARA SA BAITANG 11

Thomson L. Guianan, LPT

School of Graduate Studies, Laguna College of Business and Arts, City of Calamba, Laguna, Philippines

https://doi.org/10.5281/zenodo.11648473

ABSTRACT

Ang pangunahing nagtulak sa pag-aaral na ito ay ang pagbuo at pagpapatunay ng isang interaktibong biswal na kagamitang pampagtuturo para sa Asignaturang Filipino ang TITO: Ang Nabuong Tasadong Interaktibong Talakayang Oplan para sa baitang 11. Ang ginamit na pamamaraan ng pananaliksik na ito ay Descriptive Developmental at Design na naglalayong siyasatin ang balidasyon at pagpapatibay ng ginawang Interaktibong Biswal para sa mga mag-aaral ng baitang 11 sa asignaturang Filipino. Ang mga respondante ng pag-aaral, na pinili sa pamamagitan ng Purposive Random Sampling Technique, na mayroong dalawangdaang (200) mag-aaral sa baitang 11 at labing-anim (16) na guro mula sa Pagbilao National High School sa Dibisyon ng Pagbilao, lalawigan ng Quezon. Gamit ang standardized questionnaire na inangkop na instrumento, ang resulta ng Cronbach Alpha coefficient ay 0.940 para sa validity at 0.884 para sa acceptability. Gamit ang four-point Likert Scale, weighted mean, percentage distribution at correlated t-test. Ang mga natuklasan ay nagsiwalat na sa antas ng balidasyon na batay sa pagtatasa ng mga respondante sa mga layunin, konsepto, paksa, panuto, pagsasanay at ang repleksyon ay Napakabisa. Samantala, ang nakamit na antas ng pagtanggap ayon sa nagagamit, katumpakan, kaangkupan, kagamitan, at kahusayan ay Lubos na Katanggap-tanggap. Nagkaroon ng makabuluhang pagkakaiba sa antas ng akademikong pagganap ng mga mag- aaral sa paghahambing ng mga mean na marka ng mga mag-aaral sa panahon ng panimula at panapos na pagtataya. Mahihinuha na ang nabuong TITO: Tasadong Interaktibong Talakayang Oplan sa Filipino 11 ay maliwanag na nagpapataas ng pagkatuto ng mag-aaral mula sa Baitang 11 batay sa pagkakaiba ng kanilang pagganap sa panimula at panapos na pagtataya. Para sa awtput ng pag-aaral, ibinahagi ang nabuong interaktibong biswal para sa Baitang 11 upang higit

na mapahusay ang pagpapatupad ng kurikulum at magbigay-daan sa mas epektibong pagkatuto ng mga mag-aaral.

Susing Salita: *Nabuong Interaktibong Biswal, Filipino 11, Kagamitang Pampagtuturo*

PANIMULA

Dinamiko ang pagtuturo. Isa sa napakahalagang salik sa pagkatuto. Ito ay proseso ng pagpapadali ng pagkatuto. Sa modernong panahon ang pagtuturo ay maaaring mapadali o mas mapahirap datapwat karamihan sa mga kaguruan ay nagkakaroon ng kahirapan sa pagbuo ng interaktibong. Isang malaking Isang malaking hamon sa mga guro ang umisip at lumikha ng mga makabagong paraan o estratehiya sa pagtuturo ng Filipino upang mapukaw ang atensyon ng mga mag-aaral. Sa ika-21 siglo, ang mga metodo na ginagamit ng mga guro ay nagkaroon ng malaking pagbabago na umaangkla sa mga makabagong teknolohiya upang mas maging interaktibo at buhay ang talakayan.

Ang paggamit ng interaktibong biswal ay isang pinakamabisang kasanayan sa pagpapakita ng mga impormasyong malalawak ng sa ganoo'y ay masmaunawaan ng mabuti ang isang paksa. Sa pamamagitan nito nagiging aktibo ang mga makikinig sa talakayin isinasaad ng guro sa isang talakayan. Isa sa positibong adbentahe ng interaktibong biswal ay ang pagtuturo ng mga asignaturang literatura na magagamit sa pagtuturo ng Filipino. Ang interaktibong biswal ay isa sa mga pinakabagong teknolohiyang ginagamit upang magbigay ng mga impormasyon, mensahe, at karanasan sa mga tao. Ito ay nagbibigay-daan sa mga tao na mag-eksperimento, makisangkot, at magpakadalubhasa sa pamamagitan ng mga digital na interface.

Sa paglipas ng mga taon, lumago ang teknolohiya ng interaktibong biswal mula sa mga simpleng flash games at mga website, hanggang sa mga mas kumplikadong aplikasyon tulad ng mga immersive na virtual reality experiences at mga artificial intelligence-powered na chatbots. Sa ngayon, maraming mga kumpanya, organisasyon, at mga indibidwal ang gumagamit ng mga interaktibong biswal upang magbigay ng mga karanasan sa kanilang mga kliyente, tagasubaybay, at mga bisita. Halimbawa, ang mga museo at mga art exhibit ay naglalagay ng mga interaktibong biswal upang mapaganda ang karanasan ng kanilang mga bisita. Sa pamamagitan ng paggamit ng mga digital na teknolohiya, ang mga bisita ay maaaring mag-explore sa mga konsepto at karanasan na hindi magagawa sa tradisyonal na paraan. Ang interaktibong biswal ay hindi lamang limitado sa mga artistic na aplikasyon. Ito ay ginagamit din sa mga larangan ng edukasyon at negosyo. Halimbawa, sa mga eskuwelahan, ang mga guro ay maaaring gumamit ng mga interaktibong biswal upang magbigay ng mas immersive na karanasan sa kanilang mga estudyante, maging sa aspektong pagnenegosyo, ang mga interaktibong biswal ay ginagamit upang magpakita ng mga produkto at serbisyo sa mas engaging na paraan.

Bukod pa rito, ang edukasyon ay isang mahalagang sangay sa ating buhay. Ito ang nagbibigay daan upang maabot natin ang ating mga pangarap at magkaroon ng magandang kinabukasan. Ngunit hindi lamang sa tradisyunal na paraan ng pagtuturo na binabasa lamang ang mga teksto at pinaliit na larawan, ang edukasyon ay patuloy at patuloy na nagbabago at umaangkop sa mga teknolohiyang nagbabago sa ating lipunan. Isa sa mga pinakabago at popular na teknolohiya ay ang interaktibong biswal.

Ang interaktibong biswal ay isang uri ng teknolohiya na nagbibigay ng interaktibong karanasan sa mga mag-aaral sa pamamagitan ng mga larawan, bidyo, animeysyon at iba pa. Ang teknolohiyang ito ay hindi lamang makapagpapabago sa paraan ng pagtuturo, kundi nakapagpapabago rin sa paraan ng pagkatuto ng mga mag-aaral. Nakatutulong ito sa pagpapalawak ng kanilang kaisipan at pag-unawa sa mga konsepto at ideya. Isa sa mga benepisyo ng interaktibong biswal ay ang pagpapalawak ng kaalaman ng mga mag-aaral. Sa halip na puro pagsasabi lamang ng mga guro, may mga interaktibong biswal na nagbibigay ng mga larawan at bidyo upang mas maintindihan ng mga mag-aaral ang mga konsepto at ideya. Halimbawa, kung nagtuturo ang guro ng mga galaw sa pisikal na siyensya, maaaring magpakita ng bidyo ng mga halimbawa upang mas maintindihan ng mga mag-aaral kung paano gumagalaw ang mga bagay sa paligid nila. Sa ganitong paraan, mas nakapaglalaan sila ng oras at pansin sa pag-intindi sa mga kaisipan at hindi sa pagpakatapos ng mga salita na hindi nila naiintindihan. Batay sa isang tagapagbuo ng interaktibong biswal Datawrapper (2023), Nagbibigay ito ng mga tampok at tool na ginagamit sa pagbuo ng mga grap, tsart, mapa, at iba pang mga biswal. Mayroon din itong kakayahan na mag-import ng mga datos mula sa iba't ibang mga mapagkukunan. Kung saan nakatutulong sa paghihikayat ng mag-aaral sa talakayan.

Ayon kay Bock (2023), ang teknolohiyang biswal ay may napakalaking hatak sa pagbabago ng edukasyon ito ay nagpapataas ng karunungan sa impormasyon at datos sa mga talakayan na inihahatid sa pamamagitan ng biswal na kaparaanan para mga mag-aaral. Isa pang benepisyo ng interaktibong biswal ay ang pagpapaunlad ng kasanayan sa teknolohiya ng mga mag-aaral sa kasalukuyang panahon.

Ang teknolohiya ay hindi na lamang bahagi ng pang-araw-araw na buhay, kundi isa na rin itong pangangailangan upang makasabay sa pag-unlad ng ating lipunan. Sa pamamagitan ng paggamit ng interaktibong biswal, nagkakaroon ang mga mag-aaral ng pagkakataon upang masanay sa paggamit ng mga teknolohiyang ito at matuto ng mga kasanayan na nakatutulong sa kanilang hinaharap na propesyon. Gayunpaman, may mga pag-aalinlangan din sa paggamit ng biswal na teknolohiya sa edukasyon. Isa sa mga ito ay ang kalidad ng impormasyon na ibinibigay. Kailangang tiyakin ng mga guro na tama at makatotohanang impormasyon ang ibinibigay sa mga mag-aaral. Kailangan ding matukoy ng mga guro kung saan dapat gamitin ang biswal na teknolohiya sa pagtuturo. Ayon kay Asad et al. (2021), ang mga instruksyunal na pamamaraan at pamamaraan sa pagtuturo ay may pagkakatulad.

Ang istratehiya sa pagtuturo, sa praktikal na paraan ay magkatulad din, anuman ang mga gawain at ang takbo ng impormasyong nagmumula sa guro at mga mag-aaral.

Kahit na iba pang aspekto ay maaring magkaroon ng pagkakaiba, wala pa ring tutumbas sa proseso ng pagkatuto na binibigay ng guro. Kailangan ding maging handa ang mga guro na magturo nang may kaalaman sa paggamit ng mga biswal na teknolohiya.

Sa pamamagitan ng paggamit ng biswal na teknolohiya, ang mga guro rin ay nagbibigay ng mga makabagong instrumento sa mga mag-aaral upang magamit nila ito sa pag-aaral. Ang mga biswal na teknolohiya ay may kakayahang magbigay ng mas malinaw na konsepto sa mga mag-aaral. Sa kabuuan, ang biswal na teknolohiya ay isang magandang pagsasanay sa mga mag-aaral. Ito ay nakatutulong sa mga mag-aaral sa kasanayang pakikinig at pagbibigay pokus sa isang talakayan.

Paglalahad ng Layunin

Nilalayon ng pag-aaral na ito na makapaghanda at makapagtaya ng isang TITO: Tasadong interaktibong talakayang oplan na gagamitin ng mga mag-aaral para sa Baitang 11 ng Pagbilao National High School. Inaasahang makatutulong ang Interaktibong biswal na ito upang matugunan ang kasalatan sa mga kagamitang panturo na nakaangkla sa bagong kurikulum ng K to 12 at tumugon sa pangangailangan ng pagtuturo ng asignaturang Filipino.

Ang sumusunod na layunin ay pagsusumikapang makamit:

1. Makabuo ng Tasadong Interaktibong Talakayang Oplan sa ilang panitikan ng asignaturang Filipino ng Baitang 11 na umiiral sa kurikulum ng K-12.
2. Mapagtibay ang balidasyon sa kabisaan at pagtanggap sa Interaktibong Biswal na binuo.
3. Pagtataya sa pamamagitan ng pasimula at panapos na pagsusulit hinggil sa Interaktibong Biswal na nabuo.

METHODOLOGY

Ang pag-aaral na ito ay gumamit ng “Descriptive Developmental” na pamamaraan ng pananaliksik upang matukoy ang balidasyon at pagpapatibay ng ginawang Interaktibong Biswal para sa mga mag-aaral ng Baitang 11 sa asignaturang Filipino.

Ginamit din ng mananaliksik ang Design and Development Research Method. Ito ay binigyan kahulugan nina Jaya et. al (2021), ang DDR ay isang pangangailangan para sa mga guro upang mapabuti ang kanilang pagtuturo at magamit ang mga modernong teknolohiya sa pagtuturo. Ang DDR ay naglalayong magbigay ng mga solusyon sa mga suliraning pang-edukasyon sa pamamagitan ng paglikha ng mga bagong materyales at estratehiya sa pagtuturo.

Ang mga respondante ng pag-aaral, na pinili sa pamamagitan ng Purposive Random Sampling Technique, na mayroong dalawangdaang (200) mag-aaral sa baitang 11 at labing-anim (16) na guro mula sa Pagbilao National High School sa Dibisyon ng Pagbilao, lalawigan ng Quezon.

Ang pag-aaral ay gumamit ng isang pinagtibay na instrumento mula sa Opeña (2023) na pananaliksik na pag-aaral. Binubuo ng dalawang bahagi ang instrumento ng pananaliksik para sa pagsusuri ng mga eksperto. Sinuri ng Bahagi 1 ang bisa ng mga kagamitang panturo para sa Baitang 11 Filipino-Komunikasyon at Pananaliksik sa Wika at Kulturang Pilipino. Ginamit ng mananaliksik ang talatanungan para sa mga respondante, ito'y upang mataya ang kabisaan ng interaktibong biswal sa layunin, konsepto, paksa, panuto, pagsasanay, at repleksyon na nakapaloob ang paksang ginamit sa tulong ng pinakitang iskalang sa ibaba.

Puntos	Karampatang Puntos	Interpratasyon
4	3.50 – 4.00	Napakabisa (N)
3	2.50 – 3.49	Mabisa (M)
2	1.50 – 2.49	Di-gaanong Mabisa (DM)
1	1.00 – 1.49	Walang Bisa (WB)

Sinuri naman ng Bahagi 2 ang pagiging katanggap-tanggap ng mga materyales sa pagtuturo para sa Filipino 11. Ginamit ang iskala sa pag-aaral na ito upang maging ganap, katanggap-tanggap, at mailahad amg antas ng pagtanggap sa Interaktibong biswal batay sa Nagagamit, katumpakan, kaangkupan, kagamitan, at kahusayan ng nagawang interaktibong biswal nang sa ganoon ay magkaroon ng batayan sa pagpapakahulugan.

Puntos	Karampatang Puntos	Interpratasyon
4	3.50 – 4.00	Lubos na Katanggap-tanggap (LNK)
3	2.50 – 3.49	Mas Katanggap-tanggap (MK)
2	1.50 – 2.49	Katanggap-tanggap (K)
1	1.00 – 1.49	Hindi Katanggap-tanggap (HK)

Bukod rito, ang pretest at posttest para sa unang kwarter ay ibinigay sa mga tagatugon upang matukoy ang makabuluhang pagkakaiba sa pagitan ng panimula at panapos na pagtataya. Ang mga resulta ng pagganap ay binibigyang kahulugan gamit ang mga antas ng kasanayan.

Pinaghanguan: Kagawarang Pangkautusan Blg 8, S. 2015
(Panuntunan sa pansilid na pagtataya sa k-12 Kurikulum)

Level	Percentage
Lubhang Kalugod-lugod	90-100
Nakalulugod	85-89
Katamtaman/Bahagya	80-84
Maaari nang tanggapin	75-79
Hindi nakamit ang inaasahang produkto/resulta	Below 75

Sa pagpapaunlad at balidasyon ng kagamitang pangmag-aaral ng baitang 11 sa asignaturang Filipino sa Dibisyon ng Pagbilao, gumamit ang mananaliksik batay sa hinihingi ng pag-aaral ang istandardisadong talatanungan sa modelo ng ADDIE. Pagkatapos ipinasa ng mananaliksik ang pinaunlad na talatanungan sa tagapayo at mga dalubhasa sa asignaturang Filipino upang ihingi ng mungkahi para sa anumang pagbabago at pagwawasto muli ng mga katangungan. Ang wastong gamit ng mga salita, pangungusap at pagkakaakma ng mga tanong ay sisiyasatin na mabuti ng mga dalubhasa bago ipasagot ng mananaliksik. Sa pagpapatunay ng mga kagamitang panturo para sa Baitang 11 Filipino, ginamit ng mananaliksik ang isang standardized questionnaire para sa pagsusuri ng mga eksperto. Ang ginamit na standardized questionnaire ay inangkop na instrumento mula sa isang pag-aaral na ginawa ni Opeña (2023). Ang Cronbach Alpha coefficient na resulta ng instrumento ay 0.940 para sa validity at 0.884 para sa acceptability. Upang makasiguro na magagamit ang hiniram na talatanungan ay una, ang pagpasasabi sa may-ari ng tesis na si G. Nick Lester M. Opeña na may titulong “KOMU: Ang Nabuong Tunog-Biswal Modyul Sa Filipino 11” ang pagpapaalam na gagamitin ang ginawa at balidong talatanungan ng mga eksperto na magamit sa kasalukuyang pananaliksik at Pangalawa, ang pagbibigay ng liham sa tagapayo ng tesis at dekano ng School of Graduate Studies sa pag-aaprubado bilang paggamit ng hiniram na talatanungan.

Upang mapadali ang pagsusuri minabuti ng mananaliksik na bumuo ng isang sistimatikong pamamaraan tulad ng pagsasaayos ng hiniram na talatanungan at pagkatapos ay ipinakita sa kanyang tagapayo. Pinakamabisang paraan nang Balidasyon ng mga instrumento. Sa pamamahagi ng talatanungan ay nagtungo ang mananaliksik sa tanggapan ng punong guro ng Pagbilao National High School upang humingi ng pahintulot na gamiting tagatugon ang mga guro sa Filipino at mga mag-aaral sa ika-11 baitang. Pagkatapos nito muling kinuha ang pinasagutang na talatanungan sa mga mag-aaral. Ang mga datos na nakalap ay binaha-bahagi at pinag-aralang mabuti ayon sa istadistikong gagamitin. Maisasagawa nang mahusay ang pagtatally at pagkokompyut sa tulong ng istatistiko na mailalahad ng wasto ang resulta batay sa makakalap na datos at magagawa niyang malapatan ng tamang pagsusuri na sinuportahan ng mga makabuluhang ideya kaugnay sa interpretasyon o pagkahulugan kanyang nabuo.

Gamit ang four-point Likert Scale, weighted mean, percentage distribution at correlated t-test.

RESULTS AND DISCUSSION

Unang Layunin: Pagbuo ng Interaktibong biswal sa ilang panitikan ng asignaturang Filipino sa Baitang 11 baitang na umiiral sa kurikulum ng K-12.

Ang mga nabuong kagamitang panturo sa Baitang 11 sa Filipino ay ang interaktibong biswal para sa unang kwarter na tumatalakay sa batayang konsepto at paksa sa Komunikasyon at Pananaliksik sa Wika at Kulturang Pilipino. Bukod dito,

mayroon itong impormasyon at praktikal na mga pagsasanay batay sa kanilang pang-araw-araw na buhay at kasalukuyang sitwasyon. Sa huli, ginamit ang *Inclusion, Diversity, Equity, and Accessibility* (IDEA) format sa mga nailikhang mga modelong ito upang gawing mas interesado, madaling maintidihan ang mga paksa, at magamit ng mga mag-aaral sa kanilang pang-araw-araw na sitwasyon.

Tulad ng sinabi ni Hasibuan et al. (2019), mahalaga ang mga materyales sa pag-aaral sa kasalukuyang sitwasyon dahil nakatutulong din ito sa mga mag-aaral na maging praktikal, mapabuti ang kanilang mga kakayahan sa pagsasaayos ng mga problema, at maging malaya sa pag-aaral. Kaya't direkta nitong naaapektuhan ang pag-aaral ng mga mag-aaral.

Ikalawang Layunin: Pagtibayin ang balidasyon sa kabisaan at pagtanggap sa Interaktibong biswal na binuo.

Sinuri ng mga eksperto ang pangkalahatang bisa at pagtanggap ng mga nabuong kagamitang panturo sa Baitang 11 na binuo ng mananaliksik gamit ang paunang natukoy na pamantayan tulad ng sumusunod: Layunin, Konsepto, Paksa, Panuto, Pagsasanay, at Repleksyon para sa Balidasyon; at Nagagamit, Katumpakan, Kaangkupan, Kagamitan, at Kahusayan para sa Pagtanggap sa nabuong Kagamitang Pampagtuturo (Interaktibong biswal) sa Filipino 11 gamit ang panukat na 1 hanggang 4, na 1 ang pinakamababa at 4 naman ang pinakamataas.

2.1 Antas ng Balidasyon
2.1.1 Layunin

Talahanayan 2.1.1
Antas ng Balidasyon ng Interaktibong Biswal sa Asignaturang Filipino ng ika-11 Baitang ayon sa Layunin

Tagapagpahiwatig (Indicator) ayon sa Layunin		VI	Kaayusan
May kaugnayan sa paksa (Tiyak at malinaw)	3.72	N	1
Ispesipiko o Angkop at malinaw ang pahayag	3.22	M	6
Nasusukat	3.56	N	3.5
Nagagawa	3.61	N	2
Angkop ang kinalabasan	3.44	M	5
Natatapos sa itinakdang oras	3.56	N	3.5
Pangkalahatang Pagtatasa	**3.52**	**N**	

Legend: 3.50 – 4.00 Napakabisa (N) 1.50 – 2.49 Di-gaanong Mabisa (DM)
2.50 – 3.49 Mabisa (M) 1.00 – 1.49 Walang Bisa (WB)

Ang **Layunin** ay nakakuha ng **Napakabisa (3.52)** sa antas ng balidasyon ng interaktibong biswal sa asignaturang Filipino ng ika-11 Baitang. Sa karagdagan, ang mga tagapagpahiwatig na “May kaugnayan sa paksa (Tiyak at malinaw)” ang nakakuha ng pinakamataas na mean na **3.72** na may berbal na interpretasyon na **Napakabisa** habang

ang tagapagpahiwatig na “Ispesipiko o Angkop at malinaw ang pahayag” ang nakakuha ng pinakamababang mean na **3.22** at may berbal na interpretasyon na **Mabisa**.

Ipinahiwatig nito na ang Interaktibong biswal ng Baitang 11 ayon sa Layunin ay Lubhang mabisa. Ang mga resulta ay nagpakita na ang mga layunin ay may kaugnayan sa paksa at nakahanay sa mga pinakamahalagang kasanayan sa pag-aaral. Ang mga layunin sa pagkatuto ay ginamit upang gabayan ang mga mag-aaral habang ginagawa nila ang kurso, at upang masuri ang kanilang pag-unlad sa pag-aaral. Bilang karagdagan, ang mahusay na mga layunin sa pag-aaral ay nagbibigay ng gabay para sa mga mag-aaral kapag nag-aaral muli gamit ang mga materyales at naghahanda para sa mga pagtatasa. Panghuli, ang mga layunin sa pag-aaral ay ang pinakamakapangyarihang sangkap ng kagamitang panturo kung ang mga ito ay tiyak, malinaw na sinabi, naaaksyunan at nasusukat.

Gaya ng nakasaad sa pag-aaral nina Kristidhika et al. (2020), na may kontekstwal na pagtuturo at pagkatuto, ang layuning maayos ay nakatulong sa mga mag-aaral na maunawaan ang mga ideya, at malinaw sa mga mag-aaral ang layunin ng aralin. Higit pa rito, maaaring mapabuti ang pag-unawa sa konsepto ng mga mag-aaral sa pamamagitan ng pagtulong sa kanila na i-ugnay ang layunin sa mga aralin, kung saan matututo ang mga mag-aaral na i-ugnay ito sa konteksto ng kanilang totoong buhay. Ayon din sa pag-aaral nina Ojating (2022), ang pagkakaroon ng malinaw na mga layunin sa pagtuturo ay nagbibigay ng gabay at balangkas sa guro at mag-aaral para sa kanilang mga gawain sa loob ng klase. Ito ay nagpapakita ng direksyon ng pagtuturo at nagtatakda ng mga inaasahang tagumpay o kinalabasan. Kapag may malinaw na layunin, mas nagiging masigla at maayos ang proseso ng pagtuturo at pagkatuto.

Talahanayan 2.1.2

Antas ng Balidasyon ng Interaktibong Biswal sa Asignaturang Filipino ng Baitang 11 ayon sa Konsepto

Tagapagpahiwatig (Indicator) ayon sa Konsepto		VI	Rank
Nagbibigay ng saloobin at ideya tungkol sa mga Gawain.	3.44	M	5
Nagbibigay ng pagbabalik-tanaw sa konsepto at impormasyon tungkol sa paksa na kailangan solusyonan	3.56	N	2.5
Nakakapukaw sa atensiyon ng mga mag-aaral	3.72	N	1
Nagaganyak ang mga mag-aaral na sagutan ang mga gawain.	3.50	N	4
Nakakamit ang layunin ayon sa ginamit na aplikasyon	3.56	N	2.5
Pangkalahatang Pagtatasa	**3.56**	**N**	

Legend: 3.50 – 4.00 Napakabisa (N); 2.50 – 3.49 Mabisa (M); 1.50 – 2.49 Di-gaanong Mabisa (DM); 1.00 – 1.49 Walang Bisa (WB)

Ang **Konsepto** ay nakakuha ng **Napakabisa (3.56)** ang antas ng balidasyon ng interaktibong biswal sa asignaturang Filipino ng Baitang 11. Sa karagdagan, ang mga

tagapagpahiwatig na “Nakakapukaw sa atensiyon ng mga mag-aaral” ang nakakuha ng pinakamataas na mean na 3.72 na may berbal na interpretasyon na **Napakabisa** habang ang tagapagpahiwatig na “Nagbibigay ng saloobin at ideya tungkol sa mga Gawain” ang nakakuha ng pinakamababang mean na 3.44 at may berbal na interpretasyon na **Mabisa**.

Batay sa talahanayan ang Interaktibong biswal ng Baitang 11 ayon sa Konsepto ay may Mataas na Bisa. Ang resulta ay nagpakita na ang Konsepto ay may kaugnayan sa paksa, layunin at nakahanay sa mga pinakamahalagang kasanayan sa pag-aaral. Ang mga konsepto ay pundamental sa proseso ng pagkatuto dahil ito ang nagpapabukas daan sa malalim na pang-unawa, pagkakaugnay ng kaalaman, at pagsasanay sa kritikal na pag-iisip.

Ayon kina Kumpulainen et al. (2023), napatunayan nila na ang interaktibong biswal ay epektibong paraan sa pagtuturo ng kumplikadong konsepto sa agham at teknolohiya. Lumitaw na ang paggamit ng mga interaktibong biswal ay nakakapagpababa ng antas ng panghihina ng loob sa pag-aaral at nakatutulong sa mga mag-aaral na magkaroon nang mas malalim na pag-unawa sa mga konsepto. Bukod pa rito, ayon kina Akhvlediani, at Lataria (2021), ang mga konsepto na ito ay naglalaman ng mga ideya at impormasyon na mahalaga para sa mga mag-aaral, at ang pagpili ng tamang pamamaraan ng pagtuturo ay maaaring makatulong upang mapukaw ang kanilang atensyon at maitaguyod ang masiglang pakikipag-ugnayan sa kanilang pag-aaral.

Talahanayan 2.1.3
Antas ng Balidasyon ng Interaktibong Biswal sa Asignaturang Filipino ng Baitang 11 ayon sa Paksa

Tagapagpahiwatig (Indicator) ayon sa Paksa		**VI**	**Rank**
Pagkasunod-sunod ayon sa Gabay Pangkurikulum	3.56	N	1.5
Makatotohanang pagsasabuhay/pagsasatao	3.28	M	5
Nakatutugon sa pangangailangan ng mag-aaral	3.39	M	4
Naglalahad ng agad na pag-unawa at ideya sa mga gawaing pagkatuto.	3.50	N	3
Nagpapakita ng kaligirang pangkasaysayan ng paksang inilahad.	3.56	N	1.5
Pangkalahatang Pagtatasa	**3.46**	**M**	

Legend: 3.50 – 4.00 Napakabisa (N) 1.50 – 2.49 Di-gaanong Mabisa (DM)
2.50 – 3.49 Mabisa (M) 1.00 – 1.49 Walang Bisa (WB)

Ang **Paksa** ay nakakuha ng **Mabisa (3.46)** ang antas ng balidasyon ng interaktibong biswal sa asignaturang Filipino ng Baitang 11. Sa karagdagan, ang mga tagapagpahiwatig na “Pagkasunod-sunod ayon sa Gabay Pangkurikulum at Nagpapakita ng kaligirang pangkasaysayan ng paksang inilahad” ay parehas na nakakuha ng pinakamataas na mean na 3.56 na may berbal na interpretasyon na **Napakabisa** habang ang tagapagpahiwatig na “Makatotohanang pagsasabuhay/pagsasatao” ang nakakuha ng pinakamababang mean na 3.28 at may berbal na interpretasyon na **Mabisa**.

Ipinahihiwatig nito na ang Interaktibong biswal sa Baitang 11 ay may mataas na bisa sa usapin ng Paksa. Ipinahihiwatig ng mga resulta na ang mga paksang kasama sa kontekstwalisasyon ng mga materyales sa pagtuturo ay nakahanay sa kasalukuyang kurikulum at ang mga paksa ay ang pinakamahalagang kakayahan ng mag-aaral. Ang mga materyales sa pagtuturo ay nagbibigay ng pangunahing impormasyon na mararanasan, matututunan, at ilalapat ng mga mag-aaral sa kurso. Samakatuwid, ang mga naturang materyales ay dapat na maingat na pinaplano, pinipili, isinasaayos, pinipino, at ginagamit sa isang kurso para sa pinakamalaki na epekto. Ang pagpaplano at pagpili ng mga materyales sa pagtuturo ay dapat isaalang-alang ang lawak at lalim ng nilalaman upang ang pag-aaral ng mag-aaral ay mapabuti.

Binanggit nina Akhtar et al. (2022). ang pagkakahanay ng kurikulum at mga materyales sa pagtuturo ay isang kritikal na aspeto ng edukasyon na naglalayong mapabuti ang resulta ng pagkatuto ng mga mag-aaral. Ang pagkakaugnay ng mga ito ay nagbibigay- daan sa mas malalim na pang-unawa at mas mataas na antas ng pagganap ng mag-aaral. Kapag maayos na nakatugma ang kurikulum sa mga materyales sa pagtuturo, naihahatid nang mas epektibo ang mga pangunahing konsepto at kasanayan sa pag-aaral.

Talahanayan 2.1.4
Antas ng Balidasyon ng Interaktibong Biswal sa Asignaturang Filipino ng Baitang 11 ayon sa Panuto

Tagapagpahiwatig (Indicator) ayon sa Panuto		VI	Rank
Pangkaraniwan at malinaw	3.44	M	2.5
Madaling sundin ang panuto	3.44	M	2.5
Maayos ang pagkakasunod-sunod	3.33	M	4.5
Magagawa kahit mag-isa lang	3.33	M	4.5
Masusundan kahit hindi ginagamitan ng teknolohiya	3.56	N	1
Pangkalahatang Pagtatasa	**3.42**	**M**	

Legend: 3.50 – 4.00 Napakabisa (N) 1.50 – 2.49 Di-gaanong Mabisa (DM)
2.50 – 3.49 Mabisa (M) 1.00 – 1.49 Walang Bisa (WB)

Ang **Panuto** ay nakakuha ng **Mabisa (3.42)** sa antas ng balidasyon ng interaktibong biswal sa asignaturang Filipino ng Baitang 11. Ito ay nakakuha ng pangkalahatang pagtatasa na na may berbal na interpretasyon na. Sa karagdagan, ang mga tagapagpahiwatig na “Masusundan kahit hindi ginagamitan ng teknolohiya” ang nakakuha ng pinakamataas na mean na 3.56 na may berbal na interpretasyon na **Napakabisa**, habang ang tagapagpahiwatig na “Maayos ang pagkakasunod-sunod” at “Magagawa kahit mag-isa lang” ay parehas na nakakuha ng pinakamababang mean na 3.33 at may berbal na interpretasyon na **Mabisa**.

Makikita sa mga resulta na ang talakayang biswal ayon sa Panuto ay Mabisa. Ayon sa resulta, ang panuto ay may tiyak na adhikain ng aralin o asignatura. Ito ay tumpak, malinaw, makabuluhan, maayos ang pagkakasunod-sunod at may kaugnayan sa mga aralin sa Filipino. Nagbibigay ito ng karagdagang impormasyon at pag-unawa sa mga konsepto at kaganapan ng aralin. Bukod pa rito, ang panuto ay isang mahalagang

kasangkapan upang higit pang mahasa ang kritikal na pag-iisip at analitikal na kakayahan ng mga mag-aaral.

Ayon kina Pollock at Tolone (2020), ang panuto ay dapat na direktang nakadikit sa mga pamantayan; bawat guro ay may awtonomiya na magdisenyo ng mga aralin, pumili ng mga mapagkukuhanan at iba-iba ang mga paraan ng paggawa ng pagtataya. Ang pagbibigay ng malinaw na mga panuto sa mga mag-aaral ay maaaring matiyak na ganap nilang nauunawaan kung ano ang kailangan nilang gawin upang makamit sa iyong silid-aralan.

Talahanayan 2.1.5

Antas ng Balidasyon ng Interaktibong Biswal sa Asignaturang Filipino ng Baitang 11 ayon sa Pagsasanay

Tagapagpahiwatig (Indicator) ayon sa Pagsasanay		VI	Rank
May kaugnayan sa Layunin	3.39	M	5
Akma sa abilidad/kakayahan ng mag-aaral)	3.44	M	3.5
Gumamit ng dayalekto/salita na abot sa kaalaman at kakayahan ng mag-aaral	3.44	M	3.5
Angkop sa lebel nang kaalaman ng mag-aaral	3.56	N	1.5
Mapaunlad ang kasanayan ng mag-aaral sa pag-unawa at pagbasa.	3.56	N	1.5
Pangkalahatang Pagtatasa	**3.50**	**N**	

Legend: 3.50 – 4.00 Napakabisa (N) 1.50 – 2.49 Di-gaanong Mabisa (DM)
2.50 – 3.49 Mabisa (M) 1.00 – 1.49 Walang Bisa (WB)

Ang **Pagsasanay** ay nakakuha ng **Napakabisa** (**3.50)** sa antas ng balidasyon ng interaktibong biswal sa asignaturang Filipino ng Baitang 11. Ito ay nakakuha ng pangkalahatang pagtatasa na **3.50** na may berbal na interpretasyon na **Napakabisa**. Sa karagdagan, ang mga tagapagpahiwatig “Angkop sa lebel nang kaalaman ng mag-aaral” at “Mapaunlad ang kasanayan ng mag-aaral sa pag-unawa at pagbasa” ay parehas na nakakuha ng pinakamataas na mean na 3.56 na may berbal na interpretasyon na **Napakabisa** habang ang tagapagpahiwatig na “May kaugnayan sa Layunin” ang nakakuha ng pinakamababang mean na 3.39 at may berbal na interpretasyon na **Mabisa**.

Nahinuha na ang talakayang biswal ayon sa Pagsasanay ng Baitang 11 ay may mataas na bisa. Ang tagapagpahiwatig na “Naaayon sa mga layunin” ay may pinakamataas na kahulugan na nagpapahiwatig na ang mga pagsasanay na ginawa sa mga kontekstwal na materyales sa pagtuturo ay angkop sa paksa at kakayahan ng mga mag-aaral. Habang ang “Sapat upang matukoy ang antas ng karunungan ng mga mag-aaral” ay may pinakamababang mean dahil ang mga pagsasanay sa mga materyales sa pagtuturo ay hindi sapat na mastery ng aralin lamang. Ang mga materyales sa pagtuturo ay dapat hikayatin ang mga mag-aaral na gamitin ang mga kasanayan sa pag-iisip na may mataas na pagkakasunud-sunod at maging matalinong mga gumagawa ng desisyon, gamitin ang kalayaan sa pag-iisip, at gumawa ng mga pansariling paghuhusga

sa pamamagitan ng pagsusuri at pagsusuri ng mga nauugnay na impormasyon, ebidensya, at magkakaibang pananaw.

Binigyang-diin nina Delos Reyes et al. (2021), ang maganda at maayos na paggamit ng mga pagsasanay ay naglalaman ng malalim na pag-unawa, aktibong pakikilahok, at interaktibong mga elemento na nagbibigay ng mataas na kalidad na edukasyon. Ang paggamit ng iba't ibang pamamaraan ng pagsasanay at teknolohiya, tulad ng interaktibong biswal, na nagpapalawak ng mga pagkakataon para sa masusing pagkatuto. Ang interaktibong biswal ay nagbibigay daan sa mas mataas na antas ng pagsasanay, lalo na kung ito'y may kasamang mga elementong pampamulat tulad ng tunog, galaw, o interaktibong katugunan na nagbibigay daan sa pagpapabuti ng kanilang mga kasanayan.

Talahanayan 2.1.6
Antas ng Balidasyon ng Interaktibong Biswal sa Asignaturang Filipino ng Baitang 11 ayon sa Repleksiyon

Tagapagpahiwatig (Indicator) ayon sa Repleksiyon		VI	Rank
Mahihikayat ang mag-aaral para maibahagi ang karanasan ayon sa natutunan	3.39	M	5
Magbigay ng saloobin sa guro kung nangangailangan ng tulong sa pag-aaral	3.50	N	4
Maging inspirasyon sa pagbuo ng mga inobasyon at makagawa ng iba't ibang paraan ng pagsusulit para sa pagkatuto ng mag-aaral	3.61	N	1.5
Nakahihikayat ng mga mag-aaral na ipahayag ang saloobin kaugnay ng pagkatuto.	3.56	N	3
Nakapagninilay ang guro sa resulta ng gawain batay sa mga pamantayan o rubriks.	3.61	N	1.5
Pangkalahatang Pagtatasa	**3.53**	**N**	

Legend: 3.50 – 4.00 Napakabisa (N) 1.50 – 2.49 Di-gaanong Mabisa (DM)
2.50 – 3.49 Mabisa (M) 1.00 – 1.49 Walang Bisa (WB)

Ang **Repleksiyon** ay nakakuha ng **Napakabisa** (**3.53)** sa antas ng balidasyon ng interaktibong biswal sa asignaturang Filipino ng Baitang 11. Sa karagdagan, ang mga tagapagpahiwatig “Maging inspirasyon sa pagbuo ng mga inobasyon at makagawa ng iba’t ibang paraan ng pagsusulit para sa pagkatuto ng mag-aaral” at “Nakapagninilay ang guro sa resulta ng gawain batay sa mga pamantayan o rubriks” ay parehas na nakakuha ng pinakamataas na mean na **3.61** na may berbal na interpretasyon na **Napakabisa** habang ang tagapagpahiwatig “Mahihikayat ang mag-aaral para maibahagi ang karanasan ayon sa natutunan” ang nakakuha ng pinakamababang mean na **3.39** at may berbal na interpretasyon na **Mabisa**.

Upang masuri ang pagiging katanggap-tanggap ng binuong kontekstwalisasyon na materyal sa pagtuturo, kasama dito ang sumusunod na bahagi: kalinawan, pagiging kapakinabangan, presentasyon, at kaangkupan. Tiniyak ng mananaliksik na malinaw at simple ang mga impormasyon sa binuong kontekstwalisado na kagamitang panturo. Higit pa rito, ang kontekstwalisadong materyal sa pagtuturo ay nagbigay ng pagkakataon para

sa pag-unlad at pagpapayaman ng lokal na kamalayan. Panghuli, ang mga nabuong gawaing materyal sa pagtuturo ay angkop sa paksa.

Ayon kina Peitz et al. (2021), ang sistematikong repleksyon sa pagtuturo ay nagpabuti ng pansariling karanasan ng mga mag-aaral sa kakayahan at ang kanilang kakayahang pag-aralan ang mga proseso ng pagtuturo at pagkatuto. Itinatampok nina Whalen at Páez (2020) na ang repleksyon sa isang aralin ay nakatutulong sa pagbuo ng mga kasanayan sa pag-iisip nang mas mataas na antas ng kognitibo at sumusuporta sa pagpapanatili ng kaalaman at pagpapahusay ng mga kasanayan sa pagtuturo, at pagpapaunlad ng mga kasanayang nagbibigay-malay at metacognitive sa mga mag-aaral.

2.2 Antas ng Pagtanggap

Upang masuri ang pagiging katanggap-tanggap ng binuong interaktibong biswal na materyal sa pagtuturo, kasama dito ang sumusunod na bahagi: nagagamit, katumpakan, kaangkupan, kagamitan at kahusayan. Tiniyak ng mananaliksik na malinaw at maayos ang mga impormasyon sa binuong interaktibong biswal na kagamitang panturo. Higit pa rito, ang interaktibong biswal ay nagbigay ng pagkakataon para sa pagpapaunlad at pagpapayaman ng lokal na kamalayan. Panghuli, ang mga nabuong gawaing materyal sa pagtuturo ay angkop sa paksa.

2.2.1 Nagagamit

Talahanayan 2.2.1

Tagapagpahiwatig (Indicator) ayon sa Nagagamit		VI	Rank
Ang programa ay malaya sa teknolohiyang suliranin	3.50	LNK	2.5
Ang programa ay madaling maunawaan	3.39	MK	4
Ang mga larawan at kulay humuhubog sa pagpapakatao ayon sa programang itinakda.	3.67	LNK	1
Ang programa ay may kaakibat na layunin.	3.50	LNK	2.5
Ang programa ay nagpapabilis sa pagkakaroon nang agarang komunikasyon	3.33	MK	5
Pangkalahatang Pagtatasa	**3.48**	**MK**	

Legend: 3.50 – 4.00 Lubos na Katanggap-tanggap (LNK) 1.50 – 2.49 Katanggap-tanggap (K)
2.50 – 3.49 Mas Katanggap-tanggap (MK) 1.00 – 1.49 Hindi Katanggap-tanggap (HK)

Ang **Nagagamit** ay nakakuha ng **Mas Katanggap-tanggap (3.48)** sa antas ng pagtanggap ng interaktibong biswal sa asignaturang Filipino ng Baitang 11. Sa karagdagan, ang mga tagapagpahiwatig na “Ang mga larawan at kulay humuhubog sa pagpapakatao ayon sa programang itinakda” ang nakakuha ng pinakamataas na mean na **3.67** na may berbal na interpretasyon na **Lubos na katanggap-tanggap**, ang tagapagpahiwatig na “Ang programa ay nagpapabilis sa pagkakaroon nang agarang

komunikasyon” ang nakakuha ng pinakamababang mean na **3.33** at may berbal na interpretasyon na **Mas Katanggap-tanggap**.

Natuklasan na ang interaktibong biswal ayon sa Nagagamit ay nakakuha ng Mas Katanggap-tanggap sa mga mag-aaral sa Baitang 11 at guro sa Filipino. Ayon sa resulta na ang interaktibong biswal ay nagagamit nang maayos, malaya sa teknolohiyang suliranin, maayos ang mga larawang ginamit at napabibilis ang agarang komunikasyon ng mga mag-aaral. Pinapakita rito na ito ay isang kapaki-pakinabang na kasangkapan na nagpapahusay sa kalidad ng edukasyon at pagkatuto sa iba't ibang larangan. Ang paggamit sa interaktibong biswal ay may malalim na kahalagahan sa pag-aaral dahil ito ay nagbibigay ng mas malinaw na pang-unawa, nagpapalakas ng kritikal na pag-iisip, at nagpapahusay ng karanasan sa edukasyon. Ito ay isang teknolohiya na patuloy na magpapabuti sa paraan ng pag-aaral at pagtuturo para sa kinabukasan.

Ayon sa pag-aaral ni Wang et al (2021), ang isang interactive na visualization tool ay nagagamit para sa pagpapalalim ng pang-unawa sa aktibong proseso ng pag-aaral. Makikita sa kagamitang ito ang mga impormasyon at konsepto sa isang paraan na nagpapadali sa mga gumagamit na maunawaan ang mga aspekto ng pagsasanay, at nagbibigay-daan sa kanila na magkaroon ng masusing pagkukumpara sa iba't ibang diskarte.

Bukod pa rito, inimbestigahan ni Liu (2020) ang paggamit ng interaktibong biswal sa impormasyon ng mga proseso sa edukasyon, na nagpapakita na ang mga mag-aaral na gumamit ng mga diskarte sa paggamit ng materyales na ito ay nakaranas nang pinahusay na bilis ng pag-aaral, kalidad, at nabawasan ang pagkabalisa kumpara sa mga hindi. Ang paggamit ng interaktibong biswal ay isang epektibong paraan upang mapabuti ang proseso ng pag-aaral at magbigay-daan para sa mas matagumpay na pagkatuto.

2.2.2 Katumpakan

Talahanayan 2.2.2
Antas ng Pagtanggap ng Interaktibong Biswal sa Asignaturang Filipino ng Baitang 11 ayon sa Katumpakan

Tagapagpahiwatig (Indicator) ayon sa Katumpakan		VI	Rank
Ang programa ay naglalaman ng wastong impormasyon tungkol sa paksa	3.56	LNK	2.5
Ang programa ay nagbibigay ng pagkakataon sa mag-aaral na makapili nang pinaka -angkop na kasagutan	3.61	LNK	1
Ang mga pamimilian ay may pagkakapareho sa kahulugan subalit may iba't ibang mapanuring gamit.	3.56	LNK	2.5
Ang programa ay tiyak at malinaw ang paglalahad ng impormasyon.	3.50	LNK	4
Ang programa ay naayon sa pagkakasunod-sunod ang mga konsepto.	3.39	MK	5
Pangkalahatang Pagtatasa	**3.52**	**LNK**	

Legend: 3.50 – 4.00 Lubos na Katanggap-tanggap (LNK) 1.50 – 2.49 Katanggap-tanggap (K)
2.50 – 3.49 Mas Katanggap-tanggap (MK) 1.00 – 1.49 Hindi Katanggap-tanggap (HK)

Ang **Katumpakan** ay nakakuha ng **Lubos na Katanggap-tanggap** (**3.52)** sa antas ng pagtanggap ng interaktibong biswal sa asignaturang Filipino ng Baitang 11. Sa karagdagan, ang tagapagpahiwatig "Ang programa ay nagbibigay ng pagkakataon sa mag-aaral na makapili nang pinakaangkop na kasagutan" ang nakakuha ng pinakamataas na mean na **3.61** na may berbal na interpretasyon na **Lubos na katanggap-tanggap**. Ang tagapagpahiwatig na "Ang programa ay naayon sa pagkakasunod-sunod ang mga konsepto" ang nakakuha ng pinakamababang mean na **3.39** at may berbal na interpretasyon na **Mas Katanggap-tanggap**.

Nahinuha na ang talakayang biswal ayon sa Katumpakan ng Baitang 11 ay nakakuha ng Lubos na katanggap-tanggap sa mag-aaral ng Baitang 11 at guro sa Filipino. Ang katumpakan ng interaktibong biswal na ginamit ay nagpakita ng integridad, kredibilidad, kalidad, at kritikal na pag-iisip na kung saan mahalagang bahagi ng modernong edukasyon na nagbigay-daan sa mga mag-aaral na mas mapalalim na maunawaan ang mga konsepto at impormasyong tinalakay sa paaralan.

Sa kanyang pananaliksik, ipinakita ni Dhanil at Mufit (2021) na ang ganitong uri ng materyales sa edukasyon ay may malaking potensyal sa pagpapabuti ng pag-unawa ng mga mag-aaral. Ang interaktibong pag-aaral ay nagbibigay-daan sa mga mag-aaral na makaranas ng tunay na pagtatanong, kuryosidad at pagtatalo sa mga ideya, na nagpapalalim sa kanilang pang-unawa. Sa madaling salita, ito ay nagpapalakas ng cognitive conflict na nagdudulot ng positibong epekto sa pagkatuto. Ayon pa sa kanya na ang modernong paraan ng pag-aaral ay naglalaman ng interaktibong mga elemento na maaaring maging epektibo sa pagpapabuti ng pag-unawa ng mga mag-aaral sa mga komplikadong konsepto. Ang pagsasagawa ng ganitong uri ng pananaliksik ay

nagpapakita ng potensyal ng teknolohiya na maging kakampi ng mga guro sa pagtuturo at pag-aaral ng mga mag-aaral. Sa tulong ng interaktibong biswal, mas naging kaakit-akit at kapansin-pansin ang pag-aaral, na nagpapahusay sa kalidad ng edukasyon at pagkatuto ng mga mag-aaral.

2.2.3 Kaangkupan

Talahanayan 2.2.3
Antas ng Pagtanggap ng Interaktibong Biswal sa Asignaturang Filipino ng Baitang 11 ayon sa Kaangkupan

Tagapagpahiwatig (Indicator) ayon sa Kaangkupan		VI	Rank
Ang mga gawain ay nagkakaiba-iba ayon sa ugali at kakayahan ng mga mag-aaral	3.67	LNK	1
Ang mga gawain ay akma sa paksa	3.56	LNK	2
Ang mga gawain ay may kaugnayan, nagbibigay ng interes at nakagaganyak ng mag-aaral	3.33	MK	5
Ang paggamit ng karagdagang gawain ay angkop sa bilang ng mga mag-aaral	3.50	LNK	3
Ang mga salitang ginamit sa bokabularyo ay angkop sa lebel ng mag-aaral	3.39	MK	4
Pangkalahatang Pagtatasa	**3.49**	**MK**	

Legend: 3.50 – 4.00 Lubos na Katanggap-tanggap (LNK) 1.50 – 2.49 Katanggap-tanggap (K)
2.50 – 3.49 Mas Katanggap-tanggap (MK) 1.00 – 1.49 Hindi Katanggap-tanggap (HK)

Ang **Kaangkupan** ay nakakuha ng **Mas Katanggap-tanggap** (**3.49)** sa antas ng pagtanggap ng interaktibong biswal sa asignaturang Filipino ng Baitang 11. Sa karagdagan, ang mga tagapagpahiwatig na “Ang mga gawain ay nagkakaiba-iba ayon sa ugali at kakayahan ng mga mag-aaral” ay nakakuha ng pinakamataas na mean na **3.67** na may berbal na interpretasyon na **Lubos na Katanggap-tanggap** habang ang tagapagpahiwatig na “Ang mga gawain ay may kaugnayan, nagbibigay ng interes at nakagaganyak ng mag-aaral” ang nakakuha ng pinakamababang mean na **3.33** at may berbal na interpretasyon na **Mas Katanggap-tanggap**.

Nahinuha na nakakuha ng Mas Katanggap-tanggap ayon sa kaangkupan ang interaktibong biswal na ginamit sa Baitang 11. Ang nabuong kontekstwalisado na kagamitan sa pagtuturo ay may mga aktibidad na angkop sa paksa, mga aktibidad na may kaugnayan, kawili-wili, at nakakukuha ng interes ng mag-aaral. Bukod dito, ang wika ay nasa saklaw ng bokabularyo ng mga mag-aaral. Nangangahulugan lamang ito na ang mga aktibidad sa materyal na pagtuturo ay angkop sa mga mag-aaral at nagbibigay ng mga gawaing maaaring ituro. Ang tagumpay ng pagkamit kung ano ang kanilang natutugunan upang makamit sa isang sitwasyon sa pagtuturo ay nakasalalay sa pagiging angkop ng mga materyales sa pagtuturo, kasapatan, at epektibong paggamit ng mga materyales.

Ayon kay Lorbis (2019), na ang mga materyales sa pagtuturo ay maaaring mapataas ang panloob na motibasyon ng mga mag-aaral para sa pag-aaral at mapanatili ang kanilang interes. Lumikha din ito ng mga ugnayan na kapaki-pakinabang para sa

memorya at pagkamalikhain ng mga mag-aaral. Ayon naman sa pag-aaral nina Budiyanto et al. (2021), sa patuloy na pag-usbong ng mga bagong paraan ng pag-aaral at pagtuturo ay nagbibigay-diin sa pangangailangan ng pansin sa iba't ibang aspekto, tulad ng pedagohiko, kakayahan, at dedikasyon, upang mapanatili ang kahalagahan ng mga makabagong programa sa pag-aaral. Ang paggamit ng mga interaktibong biswal o mga makabagong kagamitan ay dapat angkop sa paksa, layunin, kurikulum at lebel ng mag-aaral

2.2.4 Kagamitan

Talahanayan 2.2.4

Antas ng Pagtanggap ng Interaktibong Biswal sa Asignaturang Filipino ng Baitang 11 ayon sa Kagamitan

Tagapagpahiwatig (Indicator) ayon sa Kagamitan		VI	Rank
Ang kagamitang inihanda ay nagpapaisip at nagpapasuri ng mga kritikal na paksa.	3.61	LNK	1.5
Ang Konsepto sa mga kagamitan ay pangkaraniwan at komprehensibo	3.56	LNK	3
Ang mga kagamitan ay nakadaragdag sa kasanayan sa pag-unawa at pagbasa	3.61	LNK	1.5
Ang kagamitan ay nagbibigay ng pagkakataon para mahubog ang kasanayan sa pasasalita/pakikipag-usap.	3.50	LNK	4.5
Ang tekstong kasanayan ay nagbibigay ng wastong impormasyon ayon sa paksang ipinahayag	3.50	LNK	4.5
Pangkalahatang Pagtatasa	**3.56**	**LNK**	

Legend: 3.50 – 4.00 Lubos na Katanggap-tanggap (LNK) 1.50 – 2.49 Katanggap-tanggap (K)
2.50 – 3.49 Mas Katanggap-tanggap (MK) 1.00 – 1.49 Hindi Katanggap-tanggap (HK)

Ang **Kagamitan** ay nakakuha ng **Lubos na katanggap-tanggap** (**3.56)** sa antas ng pagtanggap ng interaktibong biswal sa asignaturang Filipino ng Baitang 11. Ito ay nakakuha ng pangkalahatang pagtatasa na **3.56** na may berbal na interpretasyon na **Lubos na katanggap-tanggap**. Sa karagdagan, ang mga tagapagpahiwatig na “Ang kagamitang inihanda ay nagpapaisip at nagpapasuri ng mga kritikal na paksa” at “Ang mga kagamitan ay nakadaragdag sa kasanayan sa pag-unawa at pagbasa” ay parehas na nakakuha ng pinakamataas na mean na **3.61** na may berbal na interpretasyon na **Lubos na Katanggap-tanggap** habang ang tagapagpahiwatig na “Ang kagamitan ay nagbibigay ng pagkakataon para mahubog ang kasanayan sa pasasalita/pakikipag-usap” at “Ang tekstong kasanayan ay nagbibigay ng wastong impormasyon ayon sa paksang ipinahayag” ay parehas ding nakakuha ng pinakamababang mean na **3.50** at may berbal na interpretasyon na **Lubos na Katanggap-tanggap.**

Nahinuha na Lubos na Katanggap-tanggap ang ginamit na interaktibong biswal sa Baitang 11 ayon sa Kagamitan. Ang materyal ay nagbibigay ng pagkakataon para sa pag-unlad ng kaisipan ng mag-aaral. Ang materyal ay naghahanda sa mga mag-aaral na mag-isip nang lohikal at kritikal, ang mga konsepto sa materyal ay simple at nauunawaan. Nagpapahiwatig lamang na ang binuong materyal sa pagtuturo ay nakatulong sa mga

mag-aaral na mapayaman ang kanilang mga kasanayan sa pag-iisip nang mas mataas na pagkakasunud-sunod. Ang materyal na panturo ay isang kagamitang binuo o nakuha upang tulungan o mapadali ang mga guro sa paghahatid, pag-aayos ng kaalaman, kasanayan, at saloobin sa mga mag-aaral sa loob ng isang sitwasyon sa pagtuturo. Kaya naman, ang materyal sa pagtuturo ay isang kailangang-kailangan na kasangkapan sa proseso ng pagtuturo at pagkatuto.

Sa pagsusuri ni Ribosa at Duran (2022), ipinakita niya ang mga positibong epekto ng mga materyal na nilikha sa pagtuturo. Kasama dito ang mga awdyo o biswal na materyal, tanong, teksto, at edukasyunal na laro, na maaaring mag-ambag sa mas magandang resulta ng pag-aaral. Ang mga pag-aaral na ito ay nagbibigay diin sa kahalagahan ng pagtutok sa madaling paggamit, at pangangailangan ng mga mag-aaral sa pagbuo ng edukasyonal na materyal. Kapag wasto at tamaa ng isang materyal ay mas mapapadali ang pakikilahok at kasanayan ng mga mag-aaral, at mas naihahatid ang edukasyon sa isang mas makabago at epektibong paraan.

Binibigyang-diin Mališů (2020) ang kahalagahan ng multimedia at ugnayan ng mga materyal na pang-edukasyon, na binabanggit na ang mga elementong ito ay nagpapahusay sa pagkatuto ng mag-aaral. Ang ugnayan ng multimedia at mga gawain ay nagdadala ng pagbabago sa paraan ng pag-aaral at pagtuturo, nagpapahusay sa pagkatuto, at nagbibigay-daan sa mga mag-aaral na maging masinop, masuri, at responsableng mga mag-aaral. Ito ay isang pagtutok sa pagpapabuti ng kalidad ng edukasyon at pagpapalaganap ng kaalaman sa mga mag-aaral, na nagbibigay daan sa kanila na maging handa para sa mga kinabukasan na puno ng teknolohiya at impormasyon.

2.2.5 Kahusayan

Talahanayan 2.2.5
Antas ng Pagtanggap ng Interaktibong Biswal sa Asignaturang Filipino ng Baitang 11 ayon sa Kahusayan

Tagapagpahiwatig (Indicator) ayon sa Kahusayan		VI	Rank
Ang programa ay mabilisang nasasagot	3.44	MK	5
Ang programa ay naisasaayos nang buong husay.	3.50	LNK	4
Ang programa ay naisasagawa ayon sa angkop na panahon	3.56	LNK	2.5
Ang programa ay may kaangkupan ang mga pagsasanay sa inilahad na paksa.	3.56	LNK	2.5
Ang programa ay angkop sa malalaking bilang ng mag-aaral.	3.72	LNK	1
Pangkalahatang Pagtatasa	**3.56**	**LNK**	

Legend: 3.50 – 4.00 Lubos na Katanggap-tanggap (LNK) 1.50 – 2.49 Katanggap-tanggap (K)
2.50 – 3.49 Mas Katanggap-tanggap (MK) 1.00 – 1.49 Hindi Katanggap-tanggap (HK)

Ang **Kahusayan** ay nakakuha ng **Lubos na Katanggap-tanggap** (**3.56)** sa antas ng pagtanggap ng interaktibong biswal sa asignaturang Filipino ng Baitang. Sa karagdagan, ang mga tagapagpahiwatig na “Ang programa ay angkop sa malalaking bilang ng ma-aaral” ang nakakuha ng pinakamataas na mean na 3.72 na may berbal na interpretasyon na **Lubos na Katanggap-tanggap** habang ang tagapagpahiwatig na “Ang programa ay mabilisang nasasagot” ang nakakuha ng pinakamababang mean na 3.44 at may berbal na interpretasyon na **Mas Katanggap-tanggap.**

Nahinuha na Lubos na Katanggap-tanggap ang ginamit na Interaktibong biswal sa Baitang 11 ayon sa Kahusayan. Ang tagapagpahiwatig na “Ang programa ay angkop sa malalaking bilang ng mag-aaral” ay nakakuha ng Lubos na Katanggap-tanggap. Sa pamamagitan ng angkop na bilang ito ay nagbibigay-daan sa pagkakaroon ng masusing pag-aaral at mas mataas na kalidad ng edukasyon. Sa pamamagitan ng tamang programa, mas napapabilis ang proseso ng pagtuturo at pagkatuto. Natututugunan ang mga pangangailangan ng mas maraming mag-aaral na may iba't ibang estilo ng pagkatuto at antas ng kahusayan. Ang pagsasaalang-alang ng malaking bilang ng mag-aaral ay kailangang matutukan para sa lalong pagpapalakas ng kalidad ng edukasyon.

Sa pag-aaral ni Zhansugurova (2020), malalim na isinaalang-alang ang mahigpit na kaugnayan ng mga interaktibong biswal na teknolohiya sa proseso ng pag-aaral at sa hangarin ng pagpapabuti ng kahusayan at kalidad ng edukasyon. Ang kanyang pananaliksik ay nagdulot ng mga makabuluhang pagsusuri ukol sa epekto ng mga teknolohiyang ito sa sektor ng edukasyon, at ipinakita ang mga benepisyo at potensyal na nadadala nito sa larangan ng pagtuturo at pag-aaral. Ayon sa kanyang pag-aaral, ang paggamit ng interaktibong materyal na teknolohiya ay may mahalagang papel sa pagpapabuti ng edukasyon sa gitna ng pagtaas ng bilang ng mag-aaral sa kanilang partisipasyon. Ito ay nagbibigay-daan sa mas malawak na tunguhin ng edukasyon, personalisadong pag-aaral, at masuring pagtuturo. Ito ay isang hakbang patungo sa mas makatarungan at mas epektibong edukasyon para sa lahat.

Ikatlong Layunin: Pagtataya sa panimula at panapos na bahagi ng Interaktibong Biswal na nabuo.

Ang mga panimula at panapos na pagtataya ay nilayon upang masuri ang pagtaas ng bilang ng mga mag-aaral na mas tumaas ang kaalaman sa isang partikular na paksa. Gaya ng binigyang-diin ni Kuehn (2023) sa kanyang blog, ang panimula at panapos na pagtataya ay sumasaklaw sa lahat ng paksang pag-aaralan ng mga mag-aaral sa isang kwarter o isang semestre. Sa panahon ng panimulang pagtataya, hindi kinakailangang alam ng mga mag-aaral ang mga sagot sa lahat ng mga tanong. Gayunpaman, dapat silang asahan na gamitin ang dating kaalaman upang ipagpalagay ang mga makatwirang sagot. Kapag kumukuha ng parehong pagsusulit na tinatawag na panapos na pagtataya sa katapusan ng kwarter, dito ay inaasahang ang mga mag-aaral na sasagot ng mas maraming tanong nang tama batay sa pagtaas ng kaalaman at pag-unawa. Sa panapos na pagtataya, may pagtaas sa pagganap ng mga mag-aaral pagkatapos gamitin ang interaktibong biswal, kagamitang panturo at iba pang kagamitan sa pag-aaral.

3.1 Paunang Pagtataya

Talahanayan 3.1
Antas ng Pagkatuto ng Respondante sa Paunang Pagtataya

Tagapagpahiwatig (Indicators)	F	%
Lubhang kalugod-lugod	0	0
Nakalulugod	0	0
Katamtaman/Bahagya	0	0
Maaari nang tanggapin	8	4%
Hindi nakamit ang inaasahang produkto/resulta	192	96%
Total	**200**	**100%**

Legend: ` 90 - 100 Lubhang kalugod-lugod 75 - 79 Maaaring Tanggapin
85- 89 Nakalulugod 74-pababa Hindi nakamit ang inaasahang produkto/resulta
80 - 84 Katamtaman/Bahagya

Maliwanag na 96% o 192 sa 200 ng mga mag-aaral sa Baitang 11 ang hindi nakamit ang inaasahan sa 50-aytem na paunang pagtataya sa Filipino 11. Bukod dito, 4% o 8 Baitang 11 na mga mag-aaral lamang ang nakakamit ang Fairly Satisfactory sa Panimulang Pagtataya.

Ito ay nagpapahiwatig na maraming mag-aaral ang kaunting impormasyon tungkol sa paksang tatalakayin at sinagot nila ang paunang pagsusulit batay sa kanilang dating kaalaman at makatwirang pag-iisip.

Ayon kina Gallardo et al. (2023), inilarawan na ang pagtataya ng mga mag-aaral ay isang makabuluhang aspekto ng proseso ng pagtuturo at pagkatuto. Ipinaliwanag pa nila na ang lawak ng pagkatuto ng mag-aaral sa pamamagitan ng pagsusuri ay lubhang mahalaga dahil nagbibigay ito ng kapaki-pakinabang na puna hindi lamang para sa mga mag-aaral pati na rin sa mga guro. Bilang karagdagan, tinutulungan nito ang mga guro na matukoy kung matagumpay na natugunan ng mga mag-aaral ang mga layunin sa pag-aaral.

3.2 Panapos na Pagtataya

Talahanayan 3.2
Antas ng Pagkatuto ng Respondante sa Panapos na Pagtataya

Tagapagpahiwatig (Indicators)	F	%
Lubhang kalugod-lugod	173	86.50%
Nakalulugod	27	13.50%
Katamtaman/Bahagya	0	0
Maaari nang tanggapin	0	0
Hindi nakamit ang inaasahang produkto/resulta	0	0
Total	**200**	**100%**

Legend: ` 90 - 100 Lubhang kalugod-lugod 75 - 79 Maaaring Tanggapin

85- 89 Nakalulugod 74-pababa Hindi nakamit ang inaasahang produkto/resulta
80 - 84 Katamtaman/Bahagya

Ang 86.50 bahagdan o 173 na mag-aaral ang nakakuha ng Lubhang kalugod-lugod habang 13.50 bahagdan naman ng mag-aaral ang nakakuha ng **Nakalulugod**. Mula sa datos na nakalap, maliwanag na 86.50 bahagdan o 173 sa 200 na mga mag-aaral ay nakapagsagawa nang mas mahusay na pagganap pagkatapos gamitin ang binuo na Tasadong Interaktibong Talakayang Oplan (TITO) para sa Baitang 11 sa Asignaturang Komunikasyon at Pananaliksik sa Wika at Kulturang Pilipino.

Nahinuha na ang Tasadong Interaktibong Talakayang Oplan sa Baitang 11 ay nakatulong sa karamihan ng mga mag-aaral na gumanap nang maayos batay sa resulta ng panapos na pagtataya.

Sinuportahan ito ng pag-aaral ni Dioneda (2019) na nagpapahiwatig ng mga mag-aaral kapag nailantad, naisakonekta ang mga materyal sa pagtuturo at pagkatuto, nagkaroon ng pag-unlad sa kanilang mga puntos at pagganap. Bilang karagdagan, ang lokalisasyon at kontekstwalisasyon ay nakatulong sa mga mag-aaral na mapaunlad ang kanilang kaalaman, kasanayan, at katangian na maging isang mabuting mamamayan.

Makabuluhang pagkakaiba sa pagitan ng antas ng akademikong pagganap ng mga mag-aaral sa paunang pagtataya at panapos na pagtataya.

Ayon kina Pan at Sana (2021), ang parehong uri ng mga pagsubok ay nagpapabuti ng kaalaman para sa impormasyon at kung minsan ay nagpapahusay din ng pag-unawa ng hindi pa nasusubok na impormasyon. Kaya, ang panapos na pagtataya ay hindi lamang paraan ng pagsasanay sa pagsubok; parehong mga pamamaraan ay maaaring maging kapaki-pakinabang para sa pag-aaral. Sa pag-aaral na isinagawa ni Shala (2022) na pinahusay ng mga interaktibong presentasyon ang pakikipag-ugnayan at pagsasaulo ng mga konsepto ng mga mag-aaral sa isang klase ng teknolohiya. Ayon naman kay Santika (2023) ang interaktibong na presentasyon ay batay sa pag-aaral na nakabatay sa problema, na nagpapataas ng motibasyon ng mag-aaral at bisa ng materyal sa pag-aaral. Gaya ng nabanggit sa pag-aaral nina Montalbo at Villanueva (2020), sa paggamit ng kontekstwalisasyon, ang mga mag-aaral ay nabigyan ng “danas” sa aralin at hinayaan silang makarating sa tamang desisyon.

Bilang suporta, ibinahagi nina Bello et al. (2023) na kapag ginamit ang lokalisasyon sa pagtuturo at mga lokal na kagamitan sa pagtuturo sa pagtuturo ng Earth Science, nagkaroon ng pagtaas sa pagganap ng mga mag-aaral. Higit pa rito, sinabi rin niya na ang *localization approach* sa pag-aaral ay isang pagpapahusay, pagbibigay kakayahan, at makabago na diskarte sa pagtuturo ng science. Katulad nito, binanggit ni Rochman (2021) ang mga interaktibong na presentasyon ng *PowerPoint* para sa pag-aaral ng komunikasyon at nakatanggap ng positibong puna mula sa mga eksperto at mga mag-aaral na mapahusay ang mga karanasan sa pag-aaral at mga resulta ng pagtataya. Sinuri naman ni Fatikha (2022) ang paggamit ng interaktibo na *PowerPoint media* sa panahon ng limitadong *face-to-face* na klase at nalaman na pinapataas nito ang sigasig, pang-

unawa, at kakayahang sumagot sa mga tanong ang mga mag-aaral, na kung saan nakita ang pag-unlad ng mga resulta ng pag-aaral at pagtuturo.

Talahanayan 3.3
Pagtataya sa Makabuluhang Pagkakaiba sa Pagitan ng Marka ng Paunang Pagtataya at ng Panapos na Pagtataya

	Paired Differences					
Test	Mean	SD	T	P value	Remarks	Decision
Pre-test and Posttest	-12.780	8.289	-10.902	.000	**Significant**	**Reject H_o**

Mayroong isang makabuluhang pagkakaiba sa pagitan ng mga *average* na kabuoang marka ng mga mag-aaral sa panimulang pagtataya at panapos na pagtataya (*Pretest* at *Posttest*). Ang *probability value* ay .000 ay lubhang mas mababa kaysa sa signipikong lebel na .05, kaya ang hinuha (Hyphothesis) ay di katanggap-tanggap. Samakatuwid, Nahinuha na ang Kagamitang Pampagtuturo na Interaktibong Biswal sa Filipino 11 ay maliwanag na nagpapataas ng pagkatuto ng mga mag-aaral sa Baitang 11 batay sa pagkakaiba ng kanilang pagganap sa panimulang pagtataya at panapos na pagtataya. (*Pretest* at *Posttest)*.

Bilang suporta, ibinahagi nina Bello et al. (2023) na kapag ginamit ang lokalisasyon sa pagtuturo at mga lokal na kagamitan sa pagtuturo sa pagtuturo ng Earth Science, nagkaroon ng pagtaas sa pagganap ng mga mag-aaral. Higit pa rito, sinabi rin niya na ang *localization approach* sa pag-aaral ay isang pagpapahusay, pagbibigay kakayahan, at makabago na diskarte sa pagtuturo ng science.

Katulad nito, binanggit ni Rochman (2021) ang mga interaktibong na presentasyon ng *PowerPoint* para sa pag-aaral ng komunikasyon at nakatanggap ng positibong puna mula sa mga eksperto at mga mag-aaral na mapahusay ang mga karanasan sa pag-aaral at mga resulta ng pagtataya. Sinuri naman ni Fatikha (2022) ang paggamit ng interaktibo na *PowerPoint media* sa panahon ng limitadong *face-to-face* na klase at nalaman na pinapataas nito ang sigasig, pang-unawa, at kakayahang sumagot sa mga tanong ang mga mag-aaral, na kung saan nakita ang pag-unlad ng mga resulta ng pag-aaral at pagtuturo.

Konklusyon

Ang pag-aaral at pagbuo ng TITO: Tasadong Interaktibong Talakayang Oplan ay nagsilbing isang mahalagang hakbang patungo sa pagpapabuti at pagpapahusay ng kalidad ng edukasyon sa Filipino 11. Ang pag-aaral ay masusing inilatag upang tugunan ang pangangailangan para sa isang mas interaktibo at nakakaengganyong paraan ng pagtuturo na nag-uudyok sa mga mag-aaral sa mas aktibong partisipasyon at mag-ambag sa proseso ng pagkatuto. Sa pamamagitan ng paggamit ng TITO: Tasadong Interaktibong Talakayang Oplan, nagawa nitong magbigay ng isang kapaligirang pang-

edukasyon na sumusuporta hindi lamang sa teoretikal na pag-aaral kundi pati na rin sa praktikal na aplikasyon ng mga konseptong natutunan.

Ang antas ng balidasyon ng nabuong TITO: Tasadong Interaktibong Talakayang Oplan ay sinuri batay sa iba't ibang aspekto tulad ng layunin, konsepto, paksa, panuto, pagsasanay, at repleksyon. Ang positibong tugon mula sa mga respondente ay nagresulta ng Napakabisa. Ipinakita na ang matibay na pundasyon at kahalagahan ng programang ito sa edukasyonal na konteksto ay isang patunay na ang maingat na pagsasama-sama ng mga kaugnay na aktibidad at materyales sa pagtuturo ay mahalaga sa pagbuo ng isang epektibong kurikulum.

Sa kabilang banda, ang antas ng pagtanggap sa TITO: Tasadong Interaktibong Talakayang Oplan batay sa mga pamantayan tulad ng nagagamit, katumpakan, kaangkupan, kagamitan, at kahusayan ay nagresulta na Lubos na Katanggap-tanggap. Ito ay nagpapahiwatig na ang mga guro at mag-aaral ay parehong nakita ang malaking halaga at kabuluhan sa paggamit ng TITO: Tasadong Interaktibong Talakayang Oplan sa konteksto ng kanilang akademikong gawain. Ang positibong pagtanggap at pagiging bukas ng isipan ng komunidad ng paaralan sa pagmungkahi ng makabagong estratehiya sa pagtuturo at pag-aaral bilang isang mahalagang kasangkapan sa paghahatid ng mas epektibo at magpapataas ng kalidad ng edukasyon.

Ang isa sa mga pinakamahalagang natuklasan ng pag-aaral ay ang makabuluhang pagkakaiba sa akademikong pagganap ng mga mag-aaral bago at pagkatapos ng implementasyon ng TITO. Ang paghahambing ng mga mean na marka sa panimula at panapos na pagtataya ay nagpapakita ng maliwanag na pagpapabuti sa pag-unawa at pagsanay ng mga mag-aaral sa Filipino 11. Ipinakita nito na ang TITO ay hindi lamang isang epektibong kasangkapang pedagohikal sa pagpapataas ng kaalaman at kasanayan ng mga mag-aaral kundi pati na rin sa pagpapalakas ng kanilang akademikong pagganap.

Ang awtput ng pag-aaral, na ang pagbabahagi ng nabuong interaktibong biswal para sa Filipino 11, ay naglalayong hindi lamang mapahusay ang pagpapatupad ng kurikulum kundi pati na rin magbigay-daan sa mas epektibong pagkatuto. Ang paggamit ng teknolohiya sa edukasyon, sa pamamagitan ng interaktibong biswal at iba pang makabagong pamamaraan, ay mahalaga sa paghahanda sa mga mag-aaral para sa mas kompleks na hamon sa akademiko at propesyonal na mga larangan sa hinaharap. Ang TITO: Tasadong Interaktibong Talakayang Oplan ay isang mahalagang inisyatibo na nagpapahusay sa pagkatuto at nagbibigay ng direksyon para sa hinaharap ng pedagohikal na inobasyon sa Filipino 11.

Layunin ng TITO

Nilalayon ng TITO (Tasadong Interaktibong Talakayang Oplan) na mapalawak ang pag-unawa ng mga mag-aaral sa iba't ibang konsepto at paksang kanilang natututunan. Isa itong hakbang upang pababain ang antas ng kaalaman at gawing mas konkretong maunawaan ang mga kumplikadong ideya at proseso. Ang layunin din nito ay palakasin

ang pang-unawa ng mga mag-aaral at masiguro ang mas pangmatagal ang kaalaman ng kanilang natutuhan. Sa pamamagitan ng interaktibong biswal, nais nitong hikayatin ang aktibong partisipasyon ng mga mag-aaral sa kanilang klase at maging daan para sa personalisadong pag-unlad ng bawat isa. Inaasahan na ang interaktibong biswal ay magbibigay daan sa mas malalim na pang-unawa ng mga mag-aaral sa kanilang mga aralin, nagbibigay ng tiyak na karanasan na nagpapahusay sa kanilang kasanayan, at nagtataguyod ng masusing pakikilahok sa kanilang pag-aaral.

Rekomendasyon

Ang pag-aaral at implementasyon ng TITO: Tasadong Interaktibong Talakayang Oplan ay nagpakita ng positibong epekto sa kalidad ng edukasyon sa Baitang 11. Upang higit pang mapalakas at mapalawak ang paggamit ng programang ito, narito ang ilang rekomendasyon:

Una, kinakailangang patuloy na paunlarin ang TITO sa pamamagitan ng pagsasama ng mga bagong teknolohikal na kaalaman at estratehiya sa pagtuturo. Ang regular na pagsusuri at pagkuha ng feedback mula sa mga guro at mag-aaral ay mahalaga upang masigurong naaayon ang programa sa mga nagbabagong pangangailangan ng edukasyon.

Ikalawa, nararapat na palawakin ang saklaw ng TITO sa iba pang antas ng edukasyon at mga asignatura. Ang pagpapalaganap nito sa iba’t ibang paaralan ay magbibigay-daan upang mas maraming mag-aaral ang makinabang sa interaktibong pamamaraan ng pagtuturo. Ang tagumpay ng programa sa Filipino 11 ay maaaring magsilbing modelo para sa iba pang asignatura at antas.

Ikatlo, mahalaga ang komprehensibong pagsasanay para sa mga guro upang mas epektibong magamit ang TITO. Ang pagbibigay ng sapat na kaalaman sa teknikal na aspeto at pedagohikal na estratehiya ay makakatulong sa mga guro na integrasyon ng programa sa kanilang mga klase. Bukod dito, ang pagtatag ng isang support system para sa mga guro ay makakapagbigay ng pagkakataon para sa patuloy na pagbahagi ng karanasan at kaalaman.

Ikaapat, ang pakikipagtulungan sa komunidad ay kinakailangan upang masigurong matagumpay ang implementasyon ng TITO. Ang pagsasama ng mga magulang, mag-aaral, at iba pang stakeholders sa proseso ng pagpaplano at implementasyon ay magbibigay ng mas malawak na suporta para sa programa. Ang kooperasyon sa mga institusyong pang-edukasyon ay makakatulong din sa patuloy na pag-unlad ng TITO.

Panghuli, ang karagdagang pananaliksik ay mahalaga upang mas maunawaan ang pangmatagalang epekto ng TITO. Ang mga longitudinal at comparative studies ay

magbibigay ng mas malalim na pagsusuri sa bisa ng programa kumpara sa ibang mga interaktibong pamamaraan sa pagtuturo.

Compliance with Ethical Standards

Sa kabuuan ng pag-aaral, tiniyak ng mananaliksik na sundin ang etikal na alituntunin ng paaralan at ang mga etikal na pagsasaalang-alang sa buong papel. Ang mga mag-aaral at guro ay boluntaryong lumahok sa pag-aaral, at nakuha muna ang kanilang pahintulot habang ipinaliwanag ang layunin ng pag-aaral. Ang kanilang mga impormasyon ay pinrotektahan alinsunod sa R.A 10173 o Data Privacy Act 2012, na nag-uutos ng pagpapatupad ng mga hakbang para sa seguridad ng personal na impormasyon. Tanging mga impormasyong may kaugnayan sa pag-aaral ang kinolekta nang walang pagsisiwalat ng pribadong detalye.

Sa pagbuo naman ng interaktibong biswal, mahalaga ang pagkilala at pagrespeto sa intelektwal na pag-aari ng iba. Ginamit ang iba't ibang popular na kultura at medya bilang inspirasyon at kasangkapan upang mas mapalalim at mapayaman ang pagkatuto ng mag-aaral. Gayunpaman, mahalagang bigyang-diin na ang lahat ng mga materyales at konsepto mula sa mga kilalang gawa tulad ng pelikula, telebisyon, video games, at animayson na ginamit sa proseso ng pagtuturo ay hindi pag-aari ng mananaliksik.

Pasasalamat

Nais ng mananaliksik na mag-alay ng kanyang taos-pusong pasasalamat sa mga taong nagdagdag sa pag-unlad ng gawaing pananaliksik na ito. Sa pagsamba, paggalang, at karangalan, nais niyang kilalanin ang tulong na ibinigay sa kanya.

Dr. Vivien E. Untalan, tagapayo sa pananaliksik, para sa kanyang walang kapantay na dedikasyon at serbisyo. Ang kanyang impluwensiyang pampropesyonal ay nagtulak sa mananaliksik na magsikap, at magtuloy sa pag-aaral.

Mr. Alfredo G. Perez Jr. and Dr. Ma. Lorena M. Tagala, kasalukuyan at dating dekano ng LCBA School of Graduate Studies, para sa patuloy na tulong at paggabay;

Dr. Diosdado M. Melanio, Dr. Ma. Lorena M. Tagala, and Dean Alfredo G. Perez Jr., bilang mga panelista sa buong pinal na dipensa at sa tulong na ibinigay para sa pagpapabuti ng pag-aaral;

Mr. Melchor A. Villapando, Istatistisyan ng mananaliksik, para sa kanyang tulong sa paggawa ng istatistikal na pagsusuri, pagbibigay ng mga nakahanay na datos at mga resulta ng pag-aaral;

Mr. Elmer C. Ravina, Punong Guro ng Pagbilao National High School, para sa kanyang pahintulot sa pagsasagawa ng pag-aaral;

Mr. Nick Lester M. Opeña, para sa buong suporta at pagsang-ayon sa paggamit ng hiniram na talatanungan;

Sa kanyang nobya, Bb. Rozanne Millen B. Mañozo, para sa patuloy at walang sawang pagsuporta, at paghihikayat na maisakatuparan ang pananaliksik ng pag-aaral na ito;

Sa kanyang mga Magulang, at Pamilya, na walang sawang panghihikayat,motibasyon, at pagbibigay ng suporta upang maipagpatuloy at matapos ang pag-aaral na ito;

Para sa mga indibidwal na hindi nabanggit, para sa malaking papel na kanilang ginampanan sa pagkamit at pagtupad ng pananaliksik na ito; at higit sa lahat;

Sa Mapagmahal at Pinagmumulan ng lahat ng karunungan at lakas, si Hesus na Diyos, para sa walang limitasyong patnubay, mga pagpapala, at mas mabuting kalusugan at pag-iisip, buong pagpapakumbaba, at nagpapasalamat niyang inialay sa kanya ang pag-aaral na ito ng kaalaman.

ABSTRACT

The main purpose of this study was to investigates tourist satisfaction and expenditures in Panglao, Bohol, Philippines, amidst the new normal brought about by the COVID-19 pandemic. The research aims to profile tourists based on age, gender, and nationality, assess their satisfaction levels, analyze their expenditures, and explore the relationship between satisfaction and expenditures. Utilizing a quantitative research design, data were gathered through surveys distributed to tourists at Alona Beach. The study revealed that most tourists were young adults (18-35 years), with a balanced gender distribution, and primarily composed of Filipinos, Americans, and Koreans. Findings indicated high overall satisfaction with Panglao, attributed to its appealing tourist attractions, although improvements were suggested in accommodations and transportation. Korean tourists reported highly favorable experiences, while American tourists highlighted the affordability of transportation and the potential for enhanced souvenir offerings. Expenditures were found to be satisfactory across nationalities, emphasizing the region's value proposition. A significant correlation was found between tourist satisfaction and expenditures, underscoring the impact of travel experiences on spending behaviors. Based on these insights, recommendations include upgrading transportation systems, adopting tiered pricing for various budgets, embracing sustainable tourism practices, and promoting cultural activities to enhance the overall tourist experience and stimulate local economic growth. This study contributes valuable knowledge for local authorities and businesses in Panglao to refine their strategies, ensuring an enriched tourist experience and fostering the region's sustainable development.

Keywords: *Expenditures, New Normal, Panglao, Bohol, Satisfaction, Tourism*

INTRODUCTION

Bohol, known for its unique land and water formations, is a popular tourist destination that significantly boosts the local economy. The province offers a range of attractions and souvenirs, from keychains to clothing, which contribute to its economic vitality. However, in the new normal, concerns have arisen about tourist expenditures. Complaints about high costs have increased, prompting the Department of Environment and Natural Resources Central Visayas (DENR-7) to investigate the pricing practices of local governments in Panglao and Bohol (Macasero, 2022).

The COVID-19 pandemic has worsened these issues by negatively impacting businesses, increasing operational costs, and reducing sales (Estremera, n.d.). Enterprises have raised prices to recover from the pandemic's economic fallout, leading to a perception of decreased value among tourists.

In 2020, the Department of Tourism reported an average daily expenditure of approximately 6.8 thousand Philippine Pesos per foreign tourist, despite a sharp decline in tourism arrivals due to travel restrictions (Department of Tourism, 2021).

Research indicates that tourists value quality, price, emotional, and social factors, all of which influence their satisfaction and likelihood to return or recommend the destination to others. Relevant legislative frameworks, such as the Consumers Act of the Philippines (Republic Act No. 7394) and the Tourism Act of 2009 (Republic Act No. Risk Management of Quick Service), emphasize the protection of consumer rights, the provision of high-quality services, and the promotion of sustainable tourism practices.

Ensuring tourists' satisfaction and fair treatment under these regulations is essential for the industry's growth. Factors such as service quality, cleanliness, safety, and accessibility significantly influence satisfaction levels (Rohman, 2020). The competitive dynamics of the tourism sector underscore the importance of understanding pre-purchase attributes and their impact on tourist satisfaction (Ledesma et al., 2022).

This study aims to measure tourist satisfaction and expenditures in Bohol amidst the new normal. By assessing the current levels of tourist satisfaction and analyzing the expenditures of tourists and the factors influencing these expenditures, this research seeks to provide insights into how the tourism industry in Bohol can enhance service quality and value. Understanding these aspects is more critical than ever as the tourism industry navigates the challenges of the new normal. The findings aim to help stakeholders in Bohol improve their offerings, ensuring sustainable growth and a thriving tourism sector in the post-pandemic era.

Research Questions

The researchers aimed to find out the tourist satisfactions and expenditures amidst the new normal in Panglao, Bohol.

Specifically, this study sought to answer the following questions:

1. What is the tourists' profile in terms of:
    1.1 age;
    1.2 gender; and
    1.3 nationality?
2. What is the tourists' profile regarding satisfaction in Panglao?
3. What is the tourists' profile on expenditure in Panglao?
4. Is there a significant relationship between tourists' satisfaction and expenditures amidst the new normal?
5. What improvement plan could be proposed based on the findings of the study?

METHODOLOGY

This section focused on the methodology that was utilized in the conduct of the study. This also outlined the research design, the procedure that was followed, the process of collecting the data and the analysis. During the collection process, the ethical consideration was also discussed.

Research Design

The researchers conducted quantitative surveys to achieve the study's goals of understanding tourist satisfaction and expenditures in Panglao, Bohol. Direct participation from both researchers and respondents gathered specific and detailed information, which was meticulously checked and thoroughly analyzed. The findings enabled the researchers to make a scientific interpretation based on the data collected.

Research Environment and Research Participants

This study was conducted in Panglao, a popular public beach situated at the southwest tip of Panglao Island, Bohol, Philippines. It is renowned for its white sand, rocky cliffs, and commercial facilities that line the one kilometer stretch of the beach. Located near a coral reef, Panglao is also a favored spot for scuba diving and snorkeling. The participants of this study were the tourists at Alona Beach, Panglao, Bohol, who were available on the day the study was conducted.

Table 1
Distribution of Respondents
(N=180)

Nationality	No. of Respondents
Filipino	89
American	36
Korean	55
Total	**180**

Research Instrument

This study was conducted using a self-made questionnaire to assess tourists' satisfaction and expenditures in Panglao. The questionnaire was developed based on theories from existing research studies and was designed to capture necessary data for the study. Prior to distribution, the researchers piloted the questionnaire to ensure its effectiveness. It included questions about tourists' overall satisfaction with their stay in Panglao, their expenditures during the trip, and their opinions regarding the impact of the COVID-19 pandemic on their experience. Additionally, demographic questions such as age, gender, and nationality were included.

Data Gathering Procedure

The researchers sent a formal letter to the Municipal Mayor of Panglao, requesting permission to conduct a survey in the popular Alona Beach area. The researchers proceeded with the project only after obtaining approval from their adviser and the High School Principal. Once all necessary approvals were secured, the researchers distributed questionnaires to selected respondents, allowing them sufficient time to respond.

Data Analysis

The following treatment was used in the data analysis. The responses were compiled, tabulated, and tallied. To determine the profile of the respondents in terms of age, gender, and nationality, the researchers employed the percentage formula.

$$P = \frac{f}{n} x\ 100\%$$

Where:

P = simple percentage

f = frequency

In determining the respondents' profile on satisfaction in Panglao and their profile on expenditures, the Weighted Mean was used.

$$WM = \frac{\sum fx}{N}$$

Where:

WM = Weighted Mean

fx = summation of frequency of scale x

N = number of cases

Meanwhile, to determine the significant relationship between the respondents' satisfaction and expenditures amidst the new normal, the Pearson Product Moment Coefficient of Correlation was utilized.

$$r = \frac{n(\sum xy) - (\sum x)(\sum y)}{\sqrt{[n\sum x^2 - (\sum x)^2][n\sum y^2 - (\sum y)^2]}}$$

Where:

r= the Pearson Product Moment Coefficient of Correlation

n = sample size

$\sum xy$ = the sum of the product of x and y

$\sum x$ = summation of x

$\sum y$ = summation of y

$\sum x^2$ = sum of the squares of x

$\sum y^2$ = sum of the squares of y

RESULTS

This chapter presents, analyzes, and interprets the data regarding the research question. The gathered data are tallied and presented in tabulated, textual, and graphical forms, and analyzed in the context of the variables examined in this study.

The first part focuses on profiling respondents in terms of age, nationality, and gender. The second part presents data concerning respondents' satisfaction with expenditures and their overall satisfaction amidst the new normal. The last part discusses data related to significant differences in respondents' perceptions of their satisfaction amidst the new normal.

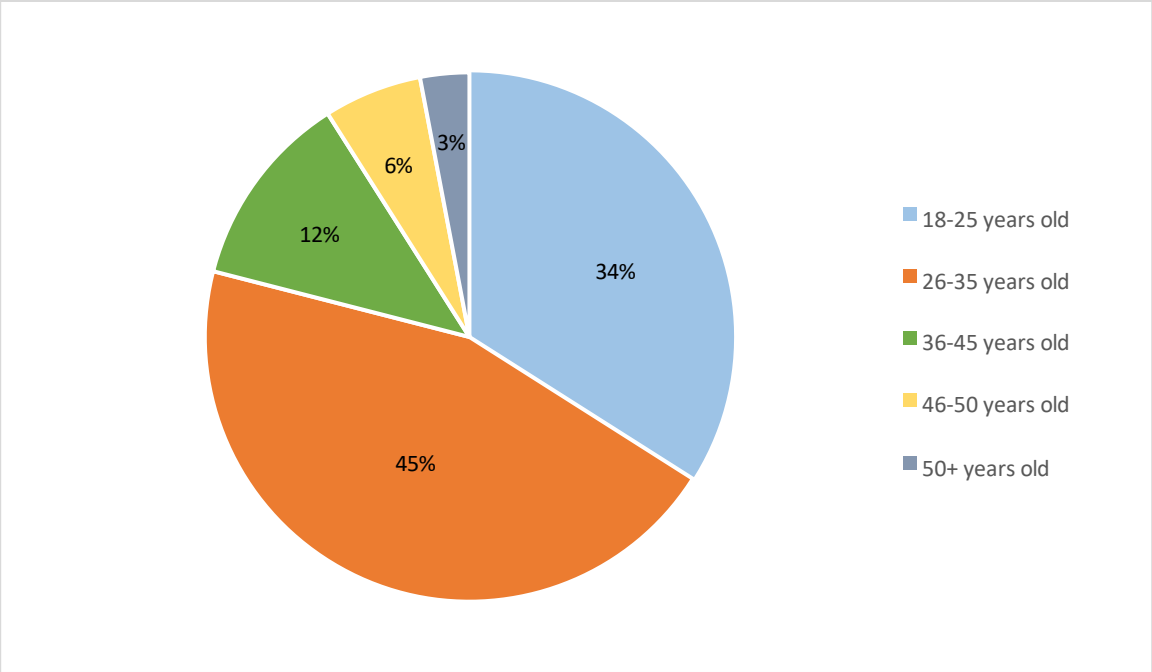

Figure 2. Respondents' Profile on Age (N=180)

Figure 2 presents the respondents' profile on age. As shown in the figure, the ages 26 to 35 years old obtained the highest percentage of 45%, while the ages 50 and above years old obtained the lowest percentage of 3%. This indicates that the majority of respondents in the study fall within the 26 to 35 age group, with a smaller proportion of respondents aged 50 and above.

According to (Department of Tourism, 2022) regarding travel behavior among Filipinos. It examines a wide range of age groups, spanning from younger to older individuals, indicating that travel is a common activity across different generations in the Philippines. The study reports that, on average, Filipinos in the surveyed population make trips relatively frequently, suggesting that travel is not just an occasional activity but is a common practice among Filipinos. Furthermore, the primary purpose of these trips is identified as leisure, indicating that a significant proportion of travelers engage in recreational travel for purposes such as vacations or tourism.

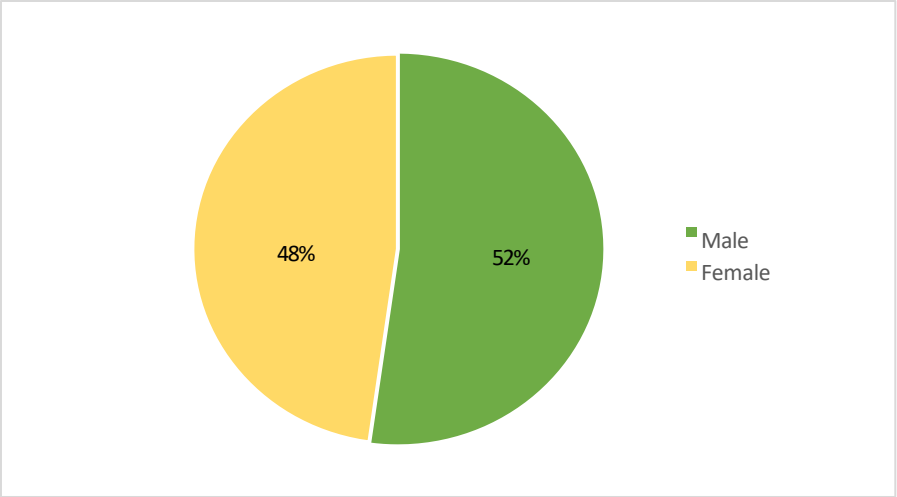

Figure 3. Respondents' Profile on Gender (N=180)

Figure 3 reveals the respondents' profile on gender. It showed that 52% of the participants identified as males, while the remaining 48% identified as females. This indicates that there was a slight majority of male respondents in the study, with a slightly smaller proportion of female respondents.

According to Martin (2020), tourist satisfaction is not uniform and varies based on gender-related preferences and expectations. For instance, safety concerns and travel choices may differ between male and female tourists in the Philippines, impacting their overall satisfaction. Service providers and destination marketers in the country should consider these gender-specific factors to tailor their offerings and enhance the satisfaction of all tourists in the post-pandemic tourism environment.

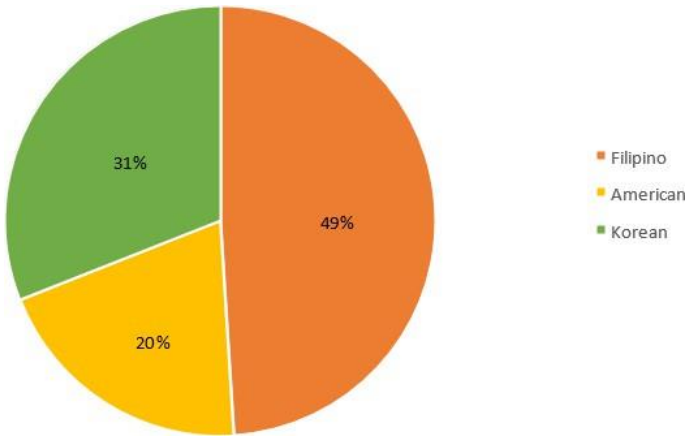

Figure 4. Respondents' Profile on Nationality (N=180)

Figure 4 shows the respondents' profile on nationality. It is revealed that 49% were Filipinos, while 20% were Americans. This indicates that most of the respondents'

nationality were Filipinos. This may be due to the fact that this research is conducted in the Philippines, and most of the population are Filipinos which restricts the diversity of the nationalities of the respondents.

The significant increase in both foreign and local tourist arrivals in Bohol is indicative of a substantial potential boost in tourist expenditure within the region. This surge in arrivals, particularly from South Korea, underscores a strong and consistent flow of spending on accommodations, dining, transportation, and leisure activities. Such expenditure can significantly contribute to the economic growth and sustainability of Bohol's tourism industry (Bohol Tourist Arrivals up by 129% in First 5 Months, 2023).

Table 2
Tourists' Satisfaction Amidst New Normal (N=180)

Statements	WM	DV	RANK
1. The overall travel experience is satisfactory.	4.70	Very Satisfied	1
2. I am satisfied with the accommodations I stayed at during my trip.	4.60	Very Satisfied	6.5
3. The availability of food options made me satisfied.	4.57	Very Satisfied	9
4. The level of customer service I received was satisfactory.	4.61	Very Satisfied	3.5
5. My trip was so satisfactory that I would recommend it to others.	4.59	Very Satisfied	8
6. The trip was satisfactory enough that I would come back here for another trip.	4.60	Very Satisfied	6.5
7. The availability of transportation options are satisfactory.	4.54	Very Satisfied	10
8. The cleanliness and maintenance of the places I visited made me satisfied.	4.61	Very Satisfied	3.5
9. I am satisfied with the use of money during my trip in Panglao.	4.61	Very Satisfied	3.5
10. The safety measures implemented in Panglao is satisfactory.	4.64	Very Satisfied	2
Composite Mean	**4.61**	**Very Satisfied**	

Legend:
4.20–5.00 – Very Satisfied
3.40–4.19 – Satisfied
2.60–3.39 – Neutral
1.80–2.59 – Dissatisfied
1.00–1.79 – Very Dissatisfied

Table 2 shows Tourists' Satisfaction Amidst New Normal. Notably, Statement 1, 'The overall travel experience is satisfactory,' garnered the highest weighted mean of 4.70, indicating that respondents are 'Very Satisfied' with their travel experience. Conversely, Statement 7, 'The availability of transportation options is satisfactory,' achieved the lowest weighted mean of 4.54, although it still signifies that respondents are 'Very Satisfied' with transportation options. The overall weighted mean for all statements stands at 4.61, characterized as 'Very Satisfied.' This implies Panglao as an exceptionally attractive tourist destination.

This positive impression is likely to result in glowing reviews and enthusiastic recommendations, potentially driving increased visitor numbers.

Tourist satisfaction continues to hold a pivotal position as a marketing tool. In the evolving landscape of tourism, tourist satisfaction is more critical than ever. It represents the joy experienced by tourists, serving as a clear indicator of their overall satisfaction. As tourists relish their visits in this transformed environment, their contentment becomes a significant factor influencing their decisions to return for future visits (Fatmawati & Olga, 2023).

Table 3
Tourists' Expenditures Amidst New Normal (N=180)

Statements	WM	DV	RANK
1. The reasonable food prices make me satisfied.	4.56	Very Satisfied	5
2. The affordability of transportation to Panglao compared to other tourist destinations leaves me satisfied.	4.31	Very Satisfied	10
3. The fairness of pricing for buying gifts/souvenirs here is satisfactory.	4.47	Very Satisfied	9
4. The prices of hotels left me satisfied.	4.53	Very Satisfied	7
5. The cost of island hopping is what I am satisfied with.	4.52	Very Satisfied	8
6. The favorable pricing of additional offers and handcraft products at this tourist destination satisfies me.	4.55	Very Satisfied	6
7. Staying at Panglao is worth every peso paid.	4.62	Very Satisfied	3.5
8. The nature of services makes me find them satisfying.	4.62	Very Satisfied	3.5
9. The belief that Panglao values my money and offers fair pricing is what I find.	4.63	Very Satisfied	2
10. I am satisfied with my overall stay.	4.66	Very Satisfied	1
Composite Mean	**4.55**	**Very Satisfied**	

Legend:
4.20–5.00 – Very Satisfied
3.40–4.19 – Satisfied
2.60–3.39 – Neutral
1.80–2.59 – Dissatisfied
1.00–1.79 – Very Dissatisfied

Table 3 shows Tourists' Expenditures Amidst New Normal. Data revealed that statement 2, "The affordability of transportation to Panglao compared to other tourist destinations leaves me satisfied," received a weighted mean of 4.31, placing it as the lowest scoring. On the other hand, statement 10, "I am satisfied with my overall stay", received the highest with a weighted mean of 4.66. Despite being the lowest score, it's still labeled as "Very Satisfied," indicating a high level of satisfaction. While slightly lower

than other statements, overall sentiment is positive. Respondents found Panglao's transportation affordability relative to other tourist destinations satisfactory.

Tourists will try to reduce their travel expenses either by targeting more affordable destinations, seeking special offers or shortening the length of their stay. In relation to this study, tourists would be more cautious about their travel spending as a result of the economic crisis. Thus, even after the crisis, it is critical to consider attractively priced offers that may seduce and attract tourists as long as the offer is tailored to their financial situation (Estremera, 2020).

Table 4
Satisfaction of Filipino Tourists' Amidst New Normal
(N=89)

Statements	WM	DV	RANK
1. The overall travel experience is satisfactory.	4.74	Very Satisfied	1
2. I am satisfied with the accommodations I stayed at during my trip	4.58	Very Satisfied	8.5
3. The availability of food options made me satisfied.	4.60	Very Satisfied	5.5
4. The level of customer service I received was satisfactory.	4.65	Very Satisfied	2
5. My trip was so satisfactory that I would recommend it to others.	4.58	Very Satisfied	8.5
6. The trip was satisfactory enough that I would come back here for another trip.	4.64	Very Satisfied	3
7. The availability of transportation options are satisfactory.	4.58	Very Satisfied	8.5
8. The cleanliness and maintenance of the places I visited made me satisfied.	4.60	Very Satisfied	5.5
9. I am satisfied with the use of money during my trip in Panglao.	4.60	Very Satisfied	5.5
10. The safety measures implemented in Panglao is satisfactory.	4.61	Very Satisfied	4
Composite Mean	**4.62**	**Very Satisfied**	

Legend:
4.20-5.00 – Very Satisfied **1.80-2.59 – Dissatisfied**
3.40-4.19 – Satisfied **1.00-1.79 – Very Dissatisfied**
2.60-3.39 – Neutral

Table 4 shows Tourists' Satisfaction of Filipinos Amidst the New Normal. Data revealed that statement 1, "The overall travel experience is satisfactory," received a weighted mean of 4.74, indicating the highest level of satisfaction among respondents. While the lowest weighted mean is statement 2, "I am satisfied with the accommodations I stayed at during my trip," statement 5, "My trip was so satisfactory that I would recommend it to others," and statement 7, "The availability of transportation options are satisfactory," gaining weighted mean of 4.58.

The overall weighted mean of 4.62 suggests that while tourists in the Philippines generally express a high level of overall satisfaction with their experiences during the new normal, but there is room for improvement in areas such as accommodations, transportation, and recommendations to others.

The satisfaction of tourists visiting the Philippines is an essential factor in the growth of tourism in the region.

Therefore, it is crucial to ensure that tourists visiting the Philippines are satisfied with their experience. This can be achieved by providing quality services and products that meet their needs and expectations. By doing so, we can increase their satisfaction levels and encourage them to revisit in the future (Gök & Sayın, 2015).

Table 5
Expenditures of Filipino Tourists' Amidst New Normal
(N=89)

Statements	WM	DV	RANK
1. The reasonable food prices make me satisfied.	4.58	Very Satisfied	4.5
2. The affordability of transportation to Panglao compared to other tourist destinations leaves me satisfied.	4.24	Very Satisfied	10
3. The fairness of pricing for buying gifts/souvenirs here is satisfactory.	4.52	Very Satisfied	7.5
4. The prices of hotels left me satisfied.	4.49	Very Satisfied	9
5. The cost of island hopping is what I am satisfied with.	4.52	Very Satisfied	7.5

3.40-4.19 – Satisfied
2.60-3.39 – Neutral
1.80-2.59 – Dissatisfied
1.00-1.79 – Very Dissatisfied

Table 5 shows the Expenditures of Filipino Tourists' Amidst New Normal. Among the statements, Statement 8, 'The nature of services makes me find them satisfying,' obtained the highest weighted mean of 4.69, indicating that respondents are 'Very Satisfied' with the quality of services. Conversely, Statement 2, 'The affordability of transportation to Panglao compared to other tourist destinations leaves me satisfied,' received the lowest weighted mean of 4.24, suggesting that respondents are 'Very Satisfied,' although to a slightly lesser extent. The Composite Mean for all statements is 4.55, with a descriptive value of 'Very Satisfied,' implying that, overall, tourists are leaving with positive impressions of their experiences, which can enhance Panglao's reputation as a tourist destination.

According to the Philippine News Agency (2023), the Department of Tourism (DOH) has set ambitious goals for 2023, aiming to attract a substantial number of visitors and generate significant revenue. The article also mentions that the Philippines exceeded its arrivals target for 2022, indicating a growing tourism industry with the potential to contribute significantly to the country's economy.

Table 6 Satisfaction of Korean Tourists' Amidst New Normal (N=36)

Statements	WM	DV	RANK
1. The overall travel experience is satisfactory.	4.71	Very Satisfied	1
2. I am satisfied with the accommodations I stayed at during my trip	4.67	Very Satisfied	3.5
3. The availability of food options made me satisfied.	4.55	Very Satisfied	9
4. The level of customer service I received was satisfactory.	4.60	Very Satisfied	6.5
5. My trip was so satisfactory that I would recommend it to others.	4.65	Very Satisfied	5
6. The trip was satisfactory enough that I would come back here for another trip.	4.60	Very Satisfied	6.5
7. The availability of transportation options are satisfactory.	4.49	Very Satisfied	10
8. The cleanliness and maintenance of the places I visited made me satisfied.	4.58	Very Satisfied	8
9. I am satisfied with the use of money during my trip in Panglao.	4.67	Very Satisfied	3.5
10. The safety measures implemented in Panglao is satisfactory.	4.69	Very Satisfied	2
Composite Mean	**4.62**	**Very Satisfied**	

Legend:
4.20-5.00 – Very Satisfied
3.40-4.19 – Satisfied
2.60-3.39 – Neutral
1.80-2.59 – Dissatisfied
1.00-1.79 – Very Dissatisfied

Table 6 shows the Satisfaction of Korean Tourists' Amidst New Normal. Notably, Statement 1, 'The overall travel experience is satisfactory,' garnered the highest weighted

mean of 4.71, signaling that respondents are 'Very Satisfied' with the entirety of their travel experience. This signifies an overwhelmingly positive impression of Panglao as a tourist destination. On the other hand, Statement 7, 'The availability of transportation options is satisfactory,' received the lowest weighted mean of 4.49. While this indicates a degree of satisfaction, there is room for potential improvements in transportation offerings to further elevate the tourist experience. The Composite Mean for all statements is an impressive 4.62, with a descriptive value of 'Very Satisfied.' This implies that Korean tourists have immensely enjoyed their stay, likely contributing to positive reviews and potential return visits.

With more tourism products and services available in tourist destinations to serve an increasing number of tourists, there is a tendency for mass tourism to develop because of higher tourism density. This may pose threats to sustainability and increase pandemic susceptibility undermining safety, which may lead to a decline in experience, satisfaction, and commendations (Roxas et al., 2020).

Table 7
Expenditures of Korean Tourists' Amidst New Normal
(N=36)

Statements	WM	DV	RANK
1. The reasonable food prices make me satisfied.	4.58	Very Satisfied	6.5
2. The affordability of transportation to Panglao compared to other tourist destinations leaves me satisfied.	4.40	Very Satisfied	10
3. The fairness of pricing for buying gifts/souvenirs here is satisfactory.	4.49	Very Satisfied	9
4. The prices of hotels left me satisfied.	4.58	Very Satisfied	6.5
5. The cost of island hopping is what I am satisfied with.	4.55	Very Satisfied	8
6. The favorable pricing of additional offers and handcraft products at this tourist destination satisfies me.	4.60	Very Satisfied	5
7. Staying at Panglao is worth every peso paid.	4.62	Very Satisfied	4
8. The nature of services makes me find them satisfying.	4.65	Very Satisfied	3
9. The belief that Panglao values my money and offers fair pricing is what I find.	4.75	Very Satisfied	1
10. I am satisfied with my overall stay.	4.71	Very Satisfied	2
Composite Mean	**4.60**	**Very Satisfied**	

Legend:
4.20-5.00 – Very Satisfied
3.40-4.19 – Satisfied
2.60-3.39 – Neutral
1.80-2.59 – Dissatisfied
1.00-1.79 – Very Dissatisfied

Table 7 shows the Expenditures of Korean Tourists' Amidst New Normal. Among the statements, Statement 9, 'The belief that Panglao values my money and offers fair pricing is what I find,' achieved the highest weighted mean of 4.75, signifying a 'Very Satisfied' rating. In contrast, Statement 2, 'The affordability of transportation to Panglao compared to other tourist destinations leaves me satisfied,' received the lowest weighted mean of 4.40, although still indicating 'Very Satisfied' sentiments among respondents. The overall weighted mean for all statements is 4.60, with a descriptive value of 'Very Satisfied.' This implies that Panglao's reputation for transparent and reasonable pricing is a significant asset, likely fostering trust and loyalty among tourists.

According to the Philippine Statistics Authority (2023), data from 2021 to 2022 reflects significant growth in both inbound and domestic tourism expenditure in the Philippines. This upward trend is a promising sign for the country's tourism industry. In conclusion of the study, by analyzing tourist expenditures during this period, valuable insights can be gained to identify areas for improvement and ultimately enhance overall tourist satisfaction.

Table 8
Satisfaction of American Tourists' Amidst New Normal
(N=55)

Statements	WM	DV	RANK
1. The overall travel experience is satisfactory.	4.58	Very Satisfied	3
2. I am satisfied with the accommodations I stayed at during my trip.	4.42	Very Satisfied	10
3. The availability of food options made me satisfied.	4.56	Very Satisfied	4.5
4. The level of customer service I received was satisfactory.	4.53	Very Satisfied	6.5
5. My trip was so satisfactory that I would recommend it to others.	4.53	Very Satisfied	6.5
6. The trip was satisfactory enough that I would come back here for another trip.	4.50	Very Satisfied	9
7. The availability of transportation options are satisfactory.	4.53	Very Satisfied	6.5
8. The cleanliness and maintenance of the places I visited made me satisfied.	4.69	Very Satisfied	1
9. I am satisfied with the use of money during my trip in Panglao.	4.56	Very Satisfied	4.5
10. The safety measures implemented in Panglao is satisfactory.	4.67	Very Satisfied	2
Composite Mean	**4.56**	**Very Satisfied**	

Legend:
4.20–5.00 – Very Satisfied
3.40–4.19 – Satisfied
2.60–3.39 – Neutral
1.80–2.59 – Dissatisfied
1.00–1.79 – Very Dissatisfied

Table 8 shows the Satisfaction of American Tourists' Amidst New Normal. Notably, Statement 8, 'The cleanliness and maintenance of the places I visited made me satisfied,' obtained the highest weighted mean of 4.69, signifying that American tourists are 'Very Satisfied' with the cleanliness and upkeep of Panglao's attractions. Conversely, Statement 2, 'I am satisfied with the accommodations I stayed at during my trip,' received the lowest weighted mean of 4.42, though it still indicates 'Very Satisfied'. The overall weighted mean for all statements is 4.56, with a descriptive value of 'Very Satisfied.' This implies that American tourists have enjoyed a successful and enjoyable experience in Panglao. These positive experiences are likely to translate into positive reviews, recommendations, and potentially repeat visits, ultimately benefiting the local tourism industry and supporting its growth in the long term.

The substantial influx of American tourists to the Philippines in 2022, with approximately 505.1 thousand travelers, underscores the pivotal role of the American market in Philippine tourism. This prominent presence of American tourists is indicative of the country's appeal and attraction to travelers from the United States. However, it's important to note that the COVID-19 pandemic severely disrupted the travel industry, resulting in a notable reduction in international tourist arrivals in 2021. As the tourism sector seeks to recover, it will be essential for the Philippines to prioritize and enhance the satisfaction of American tourists, given their significant contribution to the industry and the potential for their continued support in revitalizing the country's tourism sector (Mondares, 2023).

Table 9 represents the Tourists' Expenditures of Americans Amidst New Normal. The highest-rated aspect in the survey was "I am satisfied with my overall stay," with a score of 4.58. The lowest-rated aspect in the survey was "The fairness of pricing for buying gifts/souvenirs here is satisfactory," which received a score of 4.31. It is categorized as "Very Satisfied," indicating that tourists generally found the pricing for gifts and souvenirs to be fair. Overall, the tourists had a positive travel experience in regard to their expenditures, with a composite mean score of 4.47, categorizing their satisfaction level as "Very Satisfied". This indicates that the generally positive travel experience of tourists regarding their expenditures for gifts and souvenirs may require attention from entrepreneurs to enhance both their businesses and the satisfaction of tourists, considering it was the lowest-rated aspect in the survey, despite being categorized as "Very Satisfied".

The pandemic's economic impact has led to a shift in behavior largely attributed to budget constraints and financial considerations of American tourists in the Philippines. Tourists are now prioritizing price over service quality when making travel decisions. They are more likely to seek cost-effective travel options and value-for-money experiences while being mindful of their expenditures (Allan et al., 2022).

Table 9
Expenditures of American Tourists' Amidst New Normal
(N=55)

Statements	WM	DV	RANK
1. The reasonable food prices make me satisfied.	4.44	Very Satisfied	7
2. The affordability of transportation to Panglao compared to other tourist destinations leaves me satisfied.	4.36	Very Satisfied	9
3. The fairness of pricing for buying gifts/souvenirs here is satisfactory.	4.31	Very Satisfied	10
4. The prices of hotels left me satisfied.	4.53	Very Satisfied	4.5
5. The cost of island hopping is what I am satisfied with.	4.50	Very Satisfied	6
6. The favorable pricing of additional offers and handcraft products at this tourist destination satisfies me.	4.53	Very Satisfied	4.5

Table 10 shows the computed r value of 0.5324 which is greater than the critical value of 0.1463 and the computed p value of < 0.00001. The value indicated that the null hypothesis is to be rejected. This further implies a strong positive correlation (r = 0.5324) between the variables. The critical r value of ± 0.1463 signifies the statistical significance (p < 0.00001) of the relationship and rejecting the null hypothesis (Ho). This is significant for further investigation to understand the nature and real-world implications of this relationship between the tourists' satisfaction and their expenditures.

Table 10
Significant Relationship Between Tourist Satisfaction and Expenditures Amidst New normal
(N=180)

Relationship	Computed r	Critical r value	P – value	Decision
Tourists' Satisfaction VS Expenditures	0.5324	± 0.1463	< 0.00001	Reject Ho

Restaurants and other businesses can consider the accommodations for tourists by preparing a risk management plan to pursue their operations and adapt to the new normal. In the new normal of travel, tourists seek reassurance that their health and safety are a top priority. Businesses that proactively address these concerns by implementing measures such as enhanced sanitation protocols, physical distancing arrangements, and flexible booking options not only mitigate risks but also contribute to a more enjoyable and stress-free experience for tourists (Martín et al., 2022).

DISCUSSION

Findings

Based on the data gathered, the following emerged which served as bases for making the following:

1. Respondents' Profile

On Age. Most of the respondents are comprised of young adults from 18 years old to 35 years old, followed by adults from 36 years old, and then only a few from 50 years old above.

On Gender. In terms of gender, the respondents were half between males and females, with males having a few more than females.

On Nationality. Almost half of the respondents were led by Filipinos, followed by Americans, and then Koreans.

2. Respondents' Satisfaction

On Satisfaction. It indicated that Panglao is an extraordinarily appealing tourist location. This pleasant impression is likely to result in great evaluations and enthusiastic recommendations, perhaps generating increasing visitor numbers.

On Filipino Tourists. While tourists in the Philippines usually express a high degree of overall satisfaction with their experiences during the new normal, implied that there is potential for improvement in areas like as lodgings, transportation, and recommendations to others.

On Korean Tourists. This Indicated that Korean visitors had a fantastic time, which likely contributed to favorable evaluations and future repeat trips.

On American Tourists. This indicated that American visitors had a successful and delightful trip to Panglao. These favorable experiences are likely to transfer into positive evaluations, recommendations, and maybe future trips, ultimately benefiting and boosting the local tourist industry's long-term growth.

3. Respondents' Expenditures

On Expenditures. Respondents evaluated Panglao's transportation affordability to be satisfactory in comparison to comparable tourist locations.

On Filipino Tourists. This indicated that travelers are generally satisfied with their experiences, which can help Panglao's reputation as a tourist destination.

On Korean Tourists. This indicated that Panglao's reputation for clear and affordable pricing is an asset, presumably promoting confidence and loyalty among tourists.

On American Tourists. This indicated that the generally positive travel experience of tourists regarding their expenditures for gifts and souvenirs may require attention from entrepreneurs to enhance both their businesses and tourist satisfaction.

Conclusion

The researchers reached a conclusion that there is a strong correlation between tourists' satisfaction and expenditures, indicating that the experiences they have during their stay, as well as their spending habits in the new normal, significantly impact their overall well-being. This emphasizes the importance of factoring in tourists' socio-emotional well-being when planning their trips, recognizing the profound influence of their experiences and spending habits on their holistic welfare.

Recommendations

Based on the conclusions drawn from our comprehensive analysis, the following recommendations are proposed to enhance tourists' satisfaction and expenditures in Panglao, Bohol:

1. The Private Sectors and Local Government Unit (LGU) may invest in upgrading transportation systems to enhance accessibility for tourists, including efficient shuttle services and improved connectivity to key destinations to reduce travel times, making the region more attractive to visitors.

2. Business owners in Panglao may implement a tiered pricing approach catering to tourists with varying budgets, encompassing both budget-friendly and luxury options in accommodation, dining, and activities to ensure that all tourists find value in their expenditures.

3. The Department of Tourism may embrace sustainable tourism practices to preserve the natural beauty of the region, including implementing eco-friendly measures such as beach clean-up programs, waste reduction, and responsible wildlife encounters to attract eco conscious travelers and ensure the long-term sustainability of the destination.

4. The Local Government Union may promote cultural showcases, art exhibitions, and recreational activities to diversify the tourist experience and extend their stay. By offering engaging and culturally enriching activities, Panglao can encourage tourists to spend more time and resources in the region, benefiting local businesses and enhancing the overall visitor experience.

Compliance with Ethical Standards

This study adhered to ethical standards by obtaining informed consent from all participants, ensuring confidentiality, and maintaining voluntary participation without coercion. No harm came to participants, and the study received ethics committee approval. Researchers declared no conflicts of interest and reported findings transparently and honestly. Cultural sensitivity was respected throughout the research process.

PROPOSED IMPROVEMENT PLAN OF TOURISTS' SATISFACTION AND EXPENDITURES AMIDST NEW NORMAL

Rationale

The COVID-19 pandemic has significantly impacted the tourism sector worldwide, and Panglao is no exception. By implementing this plan, local stakeholders and officials can proactively tackle these challenges and ensure the sustainability and growth of tourism in the area. Regulating pricing practices is crucial for building tourists' trust and confidence in the destination. Fair and transparent pricing practices will not only benefit tourists but also contribute to the long-term success of local businesses.

Prioritizing health and safety measures is essential for Panglao to adapt to the "new normal". Furthermore, continuous awareness campaigns will help educate both locals and tourists about the importance of adhering to health and safety guidelines, creating a sense of responsibility and cooperation within the community. Maintaining high quality standards is paramount for attracting and retaining tourists. Cleanliness and exceptional service will not only satisfy tourists but also generate positive reviews and word-of-mouth recommendations, further enhancing Panglao's reputation as a preferred destination. This will ultimately lead to increased tourist satisfaction and expenditures, contributing to the economic growth and development of the region.

Objectives

This study aims to explicitly realize the following goals:

- To evaluate tourist satisfaction within the new normal by examining contributing factors, overall satisfaction levels, and segment-specific variations.
- To examine the influence of the new normal on tourists' spending habits by investigating the effects of travel restrictions, health protocols, and safety measures and by comparing pre-pandemic and post-pandemic expenditure trends to assess their economic implications on the tourism industry.
- To investigate the correlation between tourist satisfaction and expenditures in the new normal, analyzing whether higher satisfaction levels are associated with increased spending and identifying the specific factors that shape this relationship within the current travel environment.
- To provide recommendations for stakeholders in the tourism industry, this objective seeks to offer actionable insights to enhance tourist satisfaction and stimulate spending in the "new normal." It also aims to suggest adaptive strategies that align with changing consumer preferences and expectations within the post-pandemic tourism landscape.

Mechanics of Implementation

Before putting their plans into action, the researchers need to make sure that the proposed improvement plan has been shared with and evaluated by the research panel.

This step is vital as the panelists' guidance, recommendations, and insights will significantly contribute to enhancing and elucidating the intended deliverables. Once the researchers obtain approval from the panelists, they can proceed with confidence.

Schedule of Implementation

After the proposed program has been approved by the authorities in charge, researchers must submit the improvement plan to the relevant authorities, informing them of the study's findings and recommendations. Once authorization is granted, the program can be implemented.

Monitoring and Evaluation

A monitoring and evaluation tool will be adapted to assess how the tourist satisfaction and expenditures within the new normal can be optimized. Regular assessments will be conducted by the researchers to identify areas of concern among tourists, aiming to improve their overall experience and enhance the financial impact on the local economy. This process will ensure that the tourism strategy aligns with the evolving needs of travelers in this changed environment.

ABSTRACT

This study utilized a descriptive research design to assess the research training needs of faculty members at Passi City College. A sample of 45 faculty members was selected through convenience sampling from a total population of 77. Data were collected using a 25-item Faculty Research Capability-building Instrument, and analysis involved frequency count, percentage, mean, and standard deviation calculations. The study identified the top ten research training needs, including evaluating programs and activities, determining statistical tools, conducting lesson study and writing research lessons, research advising and mentoring, developing and validating research instruments, conducting research for beginners, using quantitative methods, conducting action research for instructional improvement, evaluating extension service impact, and training on intellectual property and patent review. Areas such as conducting mixed methods research, writing terminal reports for extension services, paraphrasing cited texts, assessing community needs for extension services, and conducting qualitative methods were also recognized but deemed slightly less urgent. A strong positive correlation was observed between faculty preferences and the level of research training need. These findings offer valuable insights for Passi City College to design targeted training programs and support faculty in enhancing their research capabilities. However, limitations include the use of convenience sampling and self-reported data. Future research is encouraged to validate these findings in broader contexts.-The study was conducted at Passi City College from March 20 to June 2018.

Keywords: *Assessment, Research, Training Needs, Development Plan*

INTRODUCTION

A tracer study, according to LLego and Bañez (2017), is one means of maintaining the caliber of the curriculum and providing intended use to graduates to boost the quality of a certain course. One role of every educational and academic institution is to trace their graduates to look if the program had an impact to the graduates, institution and society. Also, Hazaymeh & Peña (2013) stated that graduate surveys provide rich experience about the whereabouts of graduates, which might help to broaden perspectives among administrators, faculty and students. Such information like the income, economic sector, current job title, working time, duration of search for the first job, methods of job search, values develop and practice in work, skills acquired are relevant for higher education institutions to note.

The Passi City Local Government established Passi City College on February 3, 2005, through the Special Ordinance No. 2005-02, which was duly approved by the Sangguniang Panlalawigan through a Joint Committee Report No. 01 Series of 2005 on March 28, 2005. Passi City College offers tertiary education to six courses, the Bachelor of Science in Business Administration (BSBA), previously BS Commerce, the Bachelor in Secondary Education (BSED), Bachelor in Elementary Education (BEED), Bachelor of Science in Criminology (BSCRIM), and the Bachelor of Science in Hotel and Restaurant Management (BSHRM).

The college started producing graduates in the year 2008 till 2018. The purpose of this study is to track the career paths of our graduates and, at the same time, to evaluate the strengths and weaknesses of the institution in providing tertiary education to its graduates.

Research Questions

This study aims to keep track of the performance of PCC graduates for school year 2009 – 2018.

Specifically, it seeks to answer the following:

1. What is the profile of the graduate of Passi City College in terms of the following:
   - Year Graduate
   - Course
2. What is the present occupation of graduates of Passi City College?
3. What major line of business are they currently employed in?
4. What is the present employment status of PCC graduates?
5. What is the present job level position of PCC graduates?
6. What competencies PCC graduates find most important to meet the demands of the industry and the challenge of competitiveness?

METHODOLOGY

The study employed the descriptive-survey research. Descriptive-survey research is a type of research that uses surveys to collect data about a population or phenomenon.

The data collected is used to describe the characteristics of the population or phenomenon, such as their demographics, attitudes, or behaviors (Creswell, & Plano Clark, 2017). The respondents of the study were the 152 PCC graduates school year 2009 – 2018. Of which thirteen (13) graduated in 2009, fourteen(14) in 2010, ten (10) in 2011, four (4) in 2012, twelve (12) in 2013, twenty four (24) in 2014, thirty (30) in 2015, twenty three (23) in 2016, twelve (12) in 2017, ten (10) in 2018.

This study makes use of snowball sampling. Snowball sampling (also known as chain referral sampling or network sampling) is a non-probability sampling method in which initial participants recruit subsequent participants, who then recruit more participants, and so on. This creates a chain of referrals that can be used to identify and recruit members of a population that would be difficult to reach through other methods (Heckathorn, (1997). The tools that were utilized by the researchers in gathering the employability of PCC graduates from the school year 2005 – 2017 were the researcher-made Questionnaire – checklist based from the standardized Commision on Higher Education (CHED) tracer study survey questionnaire. To ensure the validity of the instrument, the panel of validators who are experts in the field checked the instrument as to its content and face value. The researchers used a researcher – made questionnaire checklist which was validated by the panel of validators who looked into the content of the instrument.

The researchers produced copies of the instrument and began with the data gathering by personally looking for PCC graduates, using Social Media, and employing the assistance of the Office of the Association of Barangay Captains in Passi City. Cellular phone interview was conducted to those who worked in some distant places, at the same time, using Facebook Messenger. During the interview, the researchers oriented the respondents of what the study is all about. Likewise, statements were clearly stated to ensure the reliability of results. After all the necessary data were gathered, the researcher thanked the respondents for their cooperation. The data gathered were then tabulated, analyzed, and interpreted. The data that were obtained from the study were statistically interpreted through frequency and percentage count. Frequency and Percentage Count was used to describe the profile of the graduate of Passi City College in terms of year graduated and course, their present occupation, major line of business they are currently employed, present employment status, present job level position and the competencies PCC graduates find most important**.** Rank was used to present the competencies PCC graduates find most important in meet the demands of the industry and the challenge of competitiveness.

RESULTS

Profile of the Graduates of Passi City in Terms of Year Graduated. The table presents a comprehensive profile of graduates from Passi City, categorized by the year they graduated, spanning from 2009 to 2018. Across the specified period, a total of 152 graduates were recorded. Examining the distribution across individual years provides insights into the fluctuating trends in graduation numbers. In 2009, there were 13 graduates, constituting 8.6% of the total. The subsequent year, 2010, witnessed a slight

increase with 14 graduates, representing 9.2% of the total. However, 2011 saw a slight decrease with 10 graduates, accounting for 6.6%. The year 2012 marked the lowest number of graduates with only 4, making up 2.6% of the total. In 2013, the number increased slightly to 12 graduates, representing 7.9%. The following year, 2014, experienced a notable surge with 24 graduates, constituting 15.8% of the total, marking a significant increase. In 2015, the number of graduates reached its peak with 30, representing 19.7%. Subsequent years showed fluctuations with 23 graduates in 2016, accounting for 15.1%, and 12 graduates in 2017, also accounting for 7.9%. Finally, in 2018, there were 10 graduates, making up 6.6% of the total. This data illustrates varying graduation rates over the years, with notable fluctuations and occasional peaks, suggesting potential shifts in educational dynamics or population trends within Passi City.

Table 1

Profile of the Graduates of Passi City in Terms of Year Graduated

Date Graduated	Frequency	Percentage
2009	13	8.6
2010	14	9.2
2011	10	6.6
2012	4	2.6
2013	12	7.9
2014	24	15.8
2015	30	19.7
2016	23	15.1
2017	12	7.9
2018	10	6.6
Total	**152**	**100**

Profile of the Graduates of Passi City in Terms of Course. Table 2 outlines the profile of graduates from Passi City College categorized by their respective courses. The data spans across several courses, with a total of 152 graduates recorded. Breaking down the numbers, the Bachelor of Elementary Education (BEED) program stands out with 35 graduates, constituting 23% of the total. Following closely is the Bachelor of Science in Business Administration (BSBA) program, also with 35 graduates, making up another 23%. Meanwhile, the Bachelor of Secondary Education (BSED) program recorded 30 graduates, accounting for 19.7%. Additionally, the Bachelor of Science in Criminology (BSCRIM) program saw 19 graduates, representing 12.5%. The Bachelor of Science in Information Technology (BSIT) program contributed 22 graduates, constituting 14.5%. Meanwhile, the Bachelor of Science in Hotel and Restaurant Management (BSHRM) program and the Bachelor of Science in Commerce program both had smaller numbers, with 7 and 4 graduates, respectively, making up 4.6% and 2.6% of the total. This data offers insights into the distribution of graduates across various academic disciplines within

Passi City College, highlighting the popularity and diversity of educational programs offered by the institution.

Table 2

Profile of the Graduates of Passi City College in Terms of Course

Course	Frequency	Percentage
BEED	35	23
BSED	30	19.7
BSCRIM	19	12.5
BSHRM	7	4.6
BSBA	35	23
BSIT	22	14.5
BS Commerce	4	2.6

Present Occupation of Graduates of Passi City College. Table 3 provides an overview of the present occupations of graduates from Passi City College, detailing the diversity of career paths pursued by its alumni. The data encompasses a total of 152 individuals, each categorized based on their current occupation. Analysis reveals a varied distribution across different occupational categories. The majority of graduates are employed as professionals, with 64 individuals, comprising 42% of the total. Service-related occupations also feature prominently, with 36 graduates, representing 24%, engaged as service workers, shop employees, or market sales workers. Clerical positions are occupied by 17 graduates, constituting 11%, while a smaller number of individuals, totaling 5 each, are categorized as officials of government and special interest organizations, corporate executives, managers, and managing. Additionally, the category of special occupations includes 5 graduates, comprising 3%, while 3 individuals, or 2%, are identified as techniques and associate professionals. Trades and related workers, as well as those categorized as laborers and unskilled workers, each represent 3% and 1%, respectively, with 5 and 1 individual(s) falling under these categories. Notably, 16 graduates, accounting for 11%, currently report having no occupation. This comprehensive breakdown underscores the diverse career paths pursued by graduates of Passi City College, reflecting the institution's role in preparing individuals for a wide range of professional endeavors and contributing to the socioeconomic landscape of the region.

Table 3

Present Occupation of Graduates of Passi City College

Occupation	Frequency	Percentage
Clerks	17	11
laborers and Unskilled Workers	1	1
Officials of Government and Special Interest Organizations, Corporate Executives, Managers, and Managing	5	3

Professionals	64	42
Service Workers and Shop and Market Sales Workers	36	24

Major line of Business PCC Graduates Are Currently Employed. Table 4 offers insights into the major lines of business where graduates of Passi City College (PCC) are presently employed, showcasing the diverse sectors where alumni have found opportunities. The data, encompassing 152 individuals, delineates the distribution of graduates across various industries. Education emerges as the predominant sector, with 46 graduates, constituting 30% of the total, employed in educational institutions. Public administration and defense, along with compulsory social security, also feature prominently, employing 28 graduates, accounting for 18%. Financial intermediation employs 18 graduates, representing 12%, while wholesale and retail trade, including repair services, engage 11 graduates, comprising 7%. Real estate, renting, and business activities employ 8 graduates, making up 5%, while health and social work employ 4 graduates, constituting 3%. Hotels and restaurants, along with other community, social, and personal service activities, each employ 5 graduates, contributing 3% to the total. Manufacturing, electricity, gas, and water supply, as well as transport, storage, and communication, each employ a smaller number of graduates, with 3, 2, and 2 individuals, respectively, making up 2% and 1% each. Construction, private households with employed persons, and those who reported none in terms of line of business each have minimal representation, with 1 individual each, accounting for 1%.

Table 4

Major Line of Business PCC Graduates are Currently Employed

Line of Business	Frequency	Percentage
Construction	1	1

Present Job Placement Status of Graduates of Passi City College. Table 5 illustrates the job placement status of graduates from Passi City College, detailing the distribution across various employment categories. A significant majority, accounting for 59.2% (90 graduates), have secured regular or permanent positions. Those working under contractual arrangements comprise 20.4% (31 graduates) of the total. A smaller proportion, 2.6% (4 graduates), are self-employed, while 2% (3 graduates) hold casual jobs. Additionally, 3.9% (6 graduates) are employed on a temporary basis. Notably, 11.8% (18 graduates) are currently not employed. Overall, the data encompasses 152 graduates, providing a comprehensive overview of their employment status post-graduation.

Table 5

Present Job Placement Status of Graduates of Passi City College

Categories	Frequency	Percent
Regular or Permanent	90	59.2
Contractual	31	20.4
Self-Employed	4	2.6
Casual	3	2
Temporary	6	3.9

Total	152	100

Present Job Level Position of PCC Graduates. TThe table provides insights into the current job level positions held by graduates of Passi City College. A notable portion of the graduates, 43% (66 individuals), occupy professional, technical, or supervisory roles. Those in rank or clerical positions represent 41% (62 individuals) of the total. A smaller segment, 3% (5 graduates), are self-employed. At the higher end of the hierarchy, 2% (3 graduates) hold managerial or executive positions, while 1% (1 graduate) is in a managerial or supervisory role. Additionally, 11% (16 graduates) are not employed at present. This data covers a total of 152 graduates, highlighting the diverse employment levels among the alumni of Passi City College.

Table 6

Present Job Level Position of PCC Graduates

Job Level Position	Frequency	Percentage
Managerial or Executive	3	2
Managerial or Supervisory	1	1

Professional, Technical, or Supervisory	66	43
Rank or Clerical	62	41

Total	**152**	**100**

Competencies PCC Graduates Find Most Important to Meet the Demands of the Industry and the Challenge of Competitiveness. Table 7 identifies the competencies that graduates of Passi City College consider most essential for meeting industry demands and competitive challenges. Leading the list is communication, deemed important by 92% (140 graduates), ranking first. Closely following is human relations, which 91% (139 graduates) find critical, securing the second rank. Problem-solving skills are also highly valued, with 89% (135 graduates) emphasizing their importance, placing them third. Critical thinking is similarly significant, highlighted by 88% (133 graduates), and ranked fourth. Lastly, entrepreneurial skills are noted by 65% (99 graduates), ranking fifth in terms of importance. This data underscores the diverse skill set that graduates believe is necessary to thrive in the professional landscape.

Table 7

Competencies PCC Graduates Find Most Important to Meet the Demands of the Industry and the Challenges of Competitiveness

Competency	Frequency	Percentage	Rank
Communication	140	92	1
Human Relation	139	91	2
Entrepreneurial	99	65	5
Problem-solving	135	89	3
Critical Thinking	133	88	4

DISCUSSION

The analysis of Passi City College graduates reveals a multifaceted overview of their post-graduation trajectories, highlighting variations in employment status, job levels, essential competencies, and industry placement. A comprehensive examination of the data uncovers significant trends and patterns, reflecting the dynamic nature of the graduates' professional journeys.

In terms of job placement status, a considerable proportion of graduates have secured stable employment, with 59.2% (90 individuals) in regular or permanent positions. This indicates a strong alignment between the educational outcomes of Passi City College and the demands of the job market. Contractual employment accounts for 20.4% (31 graduates), suggesting that a notable segment of graduates may be engaged in industries or roles that prefer flexible staffing arrangements. Self-employment, though less common, is pursued by 2.6% (4 graduates), demonstrating entrepreneurial tendencies among a

small subset. Casual and temporary employment are represented by 2% (3 graduates) and 3.9% (6 graduates), respectively, indicating that some graduates may be in transitional phases or engaged in industries with high turnover rates. The unemployment rate among graduates stands at 11.8% (18 individuals), highlighting potential areas for improvement in job readiness or market alignment.

The distribution of job level positions further elucidates the career progression of Passi City College graduates. A significant portion, 43% (66 individuals), hold professional, technical, or supervisory roles, reflecting a high level of competence and the ability to secure specialized positions. Rank or clerical roles are occupied by 41% (62 graduates), indicating that many alumni begin their careers in entry-level positions, which can serve as stepping stones to higher responsibilities. Self-employment is chosen by 3% (5 graduates), aligning with the earlier noted entrepreneurial pursuits. The presence of graduates in managerial or executive positions, though small at 2% (3 individuals), and those in managerial or supervisory roles at 1% (1 graduate), suggests that a few alumni have quickly ascended to leadership roles. However, the 11% (16 graduates) who are not employed underscores a need for enhanced career support and possibly stronger industry connections.

A closer look at the competencies valued by the graduates reveals insights into their perceived requirements for success in the professional world. Communication skills top the list, with 92% (140 graduates) recognizing their importance. This underscores the critical role of effective communication in virtually all professional settings, facilitating teamwork, client interactions, and managerial duties. Human relations, deemed important by 91% (139 graduates), highlight the significance of interpersonal skills in fostering collaborative work environments and building professional networks. Problem-solving skills are emphasized by 89% (135 graduates), reflecting the necessity for graduates to navigate complex challenges and devise innovative solutions in their respective fields. Critical thinking, valued by 88% (133 graduates), further supports the need for analytical and evaluative skills that enable graduates to make informed decisions. Entrepreneurial skills, noted by 65% (99 graduates), indicate a recognition of the growing importance of innovation and business acumen, even among those not directly pursuing entrepreneurial ventures.

The diversity of career paths among Passi City College graduates is evident in their present occupations. Professionals constitute the largest group, with 42% (64 individuals) working in roles that likely require specialized knowledge and skills. Service-related occupations are the second most common, with 24% (36 graduates) engaged in service industries, reflecting the significant role of these sectors in the local economy. Clerical positions are held by 11% (17 graduates), suggesting that administrative and support roles are prevalent entry points for many alumni. Smaller groups of graduates are employed as officials in government or special interest organizations, corporate executives, managers, and in special occupations, each constituting 3% (5 individuals). Technicians and associate professionals, as well as trades and related workers, represent 2% (3 individuals) and 3% (5 individuals), respectively. Laborers and unskilled workers, although minimal at 1% (1 individual), highlight the varied nature of employment

among graduates. The 11% (16 graduates) reporting no occupation aligns with the earlier unemployment figures, reinforcing the need for targeted employment support initiatives.

Examining the major lines of business where graduates are currently employed provides further insights into industry trends. Education emerges as the dominant sector, employing 30% (46 graduates), which is indicative of the strong demand for educators and the college's role in fulfilling this need. Public administration and defense, along with compulsory social security, employ 18% (28 graduates), reflecting significant employment opportunities within the government sector. Financial intermediation, employing 12% (18 graduates), underscores the relevance of financial services and the skills required to thrive in this industry. Wholesale and retail trade, including repair services, engage 7% (11 graduates), highlighting the importance of these sectors in the local economy. Real estate, renting, and business activities employ 5% (8 graduates), while health and social work, employing 3% (4 graduates), indicate essential service sectors. Hotels and restaurants, as well as other community, social, and personal service activities, each employ 3% (5 graduates), reflecting the diversity of service-oriented careers. Smaller numbers of graduates are employed in manufacturing, electricity, gas, and water supply, and transport, storage, and communication, each accounting for 2% to 1%. Minimal representation in construction and private households with employed persons indicates niche employment areas.

The profile of graduates by the year of graduation highlights fluctuating trends over the decade from 2009 to 2018. In 2009, 8.6% (13 graduates) marked the start of the period, with a slight increase to 9.2% (14 graduates) in 2010. A decrease to 6.6% (10 graduates) in 2011 and a further drop to 2.6% (4 graduates) in 2012 represent the lowest figures. The subsequent years saw a gradual increase, with 7.9% (12 graduates) in 2013 and a significant surge to 15.8% (24 graduates) in 2014. The peak occurred in 2015 with 19.7% (30 graduates), followed by fluctuations: 15.1% (23 graduates) in 2016, 7.9% (12 graduates) in 2017, and 6.6% (10 graduates) in 2018. These variations suggest changes in student enrollment, retention rates, and possibly the impact of external factors influencing educational dynamics.

The profile of graduates by course reveals the popularity of specific programs. The Bachelor of Elementary Education (BEED) and the Bachelor of Science in Business Administration (BSBA) programs each produced 23% (35 graduates), indicating strong enrollment and completion rates in these fields. The Bachelor of Secondary Education (BSED) program followed closely with 19.7% (30 graduates), reflecting sustained interest in educational careers. The Bachelor of Science in Criminology (BSCRIM) program accounted for 12.5% (19 graduates), highlighting its appeal. The Bachelor of Science in Information Technology (BSIT) program produced 14.5% (22 graduates), underscoring the relevance of technology-related education. Smaller numbers in the Bachelor of Science in Hotel and Restaurant Management (BSHRM) and the Bachelor of Science in Commerce programs, with 4.6% (7 graduates) and 2.6% (4 graduates) respectively, suggest more niche areas of interest.

Conclusions

Based on the findings from the study, Passi City College has demonstrated its commitment to providing a diverse and comprehensive education, offering various academic pathways that cater to the needs of the job market and industries. The data revealed fluctuations in the number of graduates over the years, indicating potential variations in educational attainment and enrollment levels within the city's educational institutions. This insight aligns with research by Gallardo (2019), Ramos (2020), and Aquino (2019), which emphasizes the importance of adaptability and responsiveness in educational institutions to meet the demands of the ever-changing job market and enhance graduates' employability.

Passi City College's emphasis on education-related programs, particularly Bachelor of Elementary Education (BEED) and Bachelor of Secondary Education (BSED), showcases the institution's dedication to producing qualified educators for the region. This aligns with the Philippine Development Plan 2017-2022 (Government of the Philippines, 2019), which emphasizes the significance of developing a skilled and qualified teaching workforce to improve the quality of education and address the country's educational challenges.

Moreover, Passi City College's inclusion of other fields such as Bachelor of Science in Criminology (BSCRIM), Bachelor of Science in Hotel and Restaurant Management (BSHRM), Bachelor of Science in Business Administration (BSBA), and Bachelor of Science in Information Technology (BSIT) reflects the college's adaptability to industry demands. This mirrors the findings of Carreon (2018) and Hontiveros (2020), highlighting the importance of equipping graduates with relevant skills and knowledge to address skills mismatches and enhance their employability in the job market.

The study also reveals that Passi City College graduates have successfully entered various occupations and sectors, with a notable percentage employed in education, public administration and defense, and financial intermediation. These findings align with the World Bank's World Development Report 2019 (World Bank, 2019), which emphasizes the significance of human capital and skilled workforce development in driving economic growth and productivity.

However, the presence of 11% of unemployed graduates emphasizes the need for continuous career support and counseling services. This finding underscores the importance of strategies to improve employability and reduce the unemployment rate among alumni. Continuous career support and counseling, as suggested by Arambulo (2017) and Van der Velde and Van der Heijden (2018), can enhance graduates' skills, build their confidence, and increase their chances of securing suitable employment opportunities.

The study's focus on essential competencies valued by Passi City College graduates reveals the significance of communication skills, human relations skills, problem-solving skills, critical thinking skills, and entrepreneurial skills. These findings corroborate

research by Eurostat (2021), Organisation for Economic Co-operation and Development (2016), and Blustein (2019), which stress the importance of these competencies in meeting the demands of the modern job market and fostering a skilled and adaptable workforce.

Passi City College has shown success in preparing graduates for diverse career paths and meeting the demands of the job market. The findings of the study provide valuable insights into the college's educational trends and effectiveness in enhancing graduates' employability. By leveraging these findings and aligning their strategies with industry demands, Passi City College can further enhance its educational programs and career support services, ensuring that future graduates have increased opportunities for successful employment and career advancement.

Recommendations

Based on the findings and conclusions of the study, the following recommendations are suggested:

1. For PCC Graduates, it is crucial to continuously develop and enhance their communication, problem-solving, and critical thinking skills to remain competitive in the job market. Engaging in continuous professional development and upskilling opportunities will keep them relevant and adaptable in their respective industries. Graduates should actively seek career support and counseling services offered by the college to improve their employability and explore diverse career opportunities.

2. For Current and Prospective Students, when choosing academic programs, they should consider the demand and market relevance of courses to align with industry needs. Participating in internships, workshops, and industry-related activities will allow them to gain practical experience and develop essential employability skills. Seeking guidance from academic advisors can help them choose courses that best align with their career goals and aspirations.

3. For PCC Administration and Faculty, it is important to regularly review and update the curriculum to ensure it meets current industry demands and fosters the development of key competencies sought by employers. Facilitating partnerships with employers and industry partners will create internship and job placement opportunities for graduates. Strengthening career support services and counseling will enhance graduates' employability and reduce the unemployment rate among alumni.

4. For Employers and Industry Partners, collaborating with PCC to provide input on the skills and competencies required for various job roles will ensure a better match between graduates' skills and industry needs. Offering internship programs and job placement opportunities for PCC graduates will allow them to gain practical experience and transition smoothly into the workforce. Engaging in skill-building initiatives and workshops will support graduates in developing industry-specific knowledge and expertise.

5. For Future Researchers, building upon the existing study's findings to conduct longitudinal research on employment outcomes and career trajectories of PCC graduates will provide valuable insights into the long-term impact of the college's programs. Investigating potential factors influencing fluctuations in graduation rates and unemployment among alumni will help identify strategies for improvement. Conducting studies on the impact of industry-specific training and experiential learning on graduates' employability will further enrich the understanding of effective educational approaches.

6. For Policy Makers and Government Agencies, supporting initiatives that promote industry-academia collaboration to bridge skills gaps and improve graduates' employability will contribute to the overall economic development. Allocating resources to enhance career support services in educational institutions will better address graduates' employability needs and reduce unemployment rates. Promoting policies that incentivize industries to offer internships and job opportunities to fresh graduates will encourage industry engagement with educational institutions.

7. For Accreditation and Quality Assurance Bodies, working closely with educational institutions like PCC to ensure the relevance and quality of academic programs in meeting industry needs will contribute to improved educational outcomes. Incorporating employability-related metrics into accreditation processes will incentivize colleges to focus on graduates' job placement outcomes. Encouraging the integration of industry-specific certifications and credentials into academic programs will enhance graduates' marketability and preparedness for the job market.

8. For the Local Community and Economy, supporting PCC and its graduates by promoting local hiring and talent retention will strengthen the local workforce and foster economic growth. Engaging in partnerships with PCC to offer mentorship programs and industry-driven projects will bridge the gap between academia and the job market, ensuring that graduates are well-prepared for real-world challenges. Recognizing the contributions of PCC graduates in various sectors and industries will reinforce the college's positive impact on the local community and economy.

Compliance with Ethical Standards

In conducting this study, strict adherence to ethical standards was maintained throughout the research process. Informed consent was obtained from all respondents prior to their participation, ensuring they were fully aware of the study's purpose and procedures. Respondents were explicitly informed of their right to withdraw from the study at any time without any negative repercussions. Anonymity was rigorously upheld, with all personal identifiers removed to protect the identities of the participants. The well-being of the respondents was safeguarded at all times, ensuring that their participation did not cause any harm or distress. There were no conflicts of interest influencing the conduct of the study, and the researchers ensured that all findings were presented objectively without bias. Plagiarism was strictly avoided, with all sources and references appropriately cited. The results of the study were utilized solely for academic and research purposes, contributing to the understanding of the employability and professional development of

Passi City College graduates. Through these measures, the researchers ensured the highest standards of ethical integrity in the study.

TULONG, DUNONG, SULONG PROGRAM: ITS IMPACT ON CAMPUS JOURNALISM PERFORMANCE OF A PUBLIC SECONDARY SCHOOL IN SOUTHERN NUEVA VIZCAYA

Vilmar A. Del Rosario

Nueva Vizcaya State University, Bambang, Nueva Vizcaya

https://doi.org/10.5281/zenodo.11637874

ABSTRACT

This study assessed the impact of the "Tulong, Dunong, Sulong Program: Campus Journalism" extension project of the College of Teacher Education of Nueva Vizcaya State University-Bambang Campus. The extension project spearheaded seminars and training to develop skills in campus journalism, such as news writing, feature writing, sports writing, editorial writing, editorial cartooning, photojournalism, and layouting. The beneficiaries were the students and teachers of a public secondary school in Southern Nueva Vizcaya. This mixed-method research utilizing the sequential explanatory design was aimed to explore the attainment of the objectives of the extension project, particularly its relevance and timeliness, its impact on other aspects of the beneficiaries, and its strengths and weaknesses. The data were gathered using the researcher-made quality assurance and measurement evaluation tool (quantitative), document scanning, and through a semi-structured interview (qualitative). Descriptive statistics and thematic analysis were used to analyze the strands of data. The 10 participants were purposively taken: two school paper advisers, three mentors/coaches, and five student journalists. All the training conducted were rated outstanding. Triangulated results showed that the extension project had contributed significantly based on the results of the press conferences participated. There were also improvements in other aspects of the beneficiaries, which were classified as increased productivity in publication, development of skills in journalistic writing, and improvement of academic achievement. The strengths and weaknesses of the project were also unveiled. For strengths, they were generally

classified as provided maximum experience, invited resource speakers/ materials, and cost-effective. Meanwhile, the weaknesses were generally identified as time management, delivery method, and pace and information absorption.

Keywords: *campus journalism, extension project, impact study, Tulong, Dunong, Sulong Program*

INTRODUCTION

Implementing extension programs and services is one of the means by which Higher Education Institutions (HEIs) are directed to induce change in the members of their community. Being one of the premier universities in the Philippines, one of the thrusts of the Nueva Vizcaya State University is Research and Extension Programs. It includes in its general mandate to undertake extension service (RA 9402). Among the university's extension service modalities are programs or projects implemented for community stakeholders with the objective of fostering the development of skills for the efficient and effective transmission of knowledge.

As the pillar of social development, educational institutions have a social duty to strengthen communities and improve lives by transmitting knowledge and technology through training, workshops, seminars, and technical advisors (Codamon-Dugyon, 2016).

The College of Teacher Education (CTE) is one of the four colleges at NVSU-Bambang Campus that specifically targets clients in the education sector whose requirements align with the college's mission and priorities, such as Skills Training and Literacy. Campus journalism, which is related to skills training and literacy, is essential to each institution since it shapes students' abilities and talents in writing and assesses how well schools are able to compete with other institutions. In accordance with the university's mission to transform lives and the community and in response to requests for training and workshops on writing school papers, the CTE, together with The University Gazette, students and faculty of Bachelor of Secondary Education, Bachelor of Elementary Education, Master of Arts in Education, Master of Arts in Teaching, Master of Education in Science Education and Doctor of Education, planned to conduct a Campus Journalism Seminar-Workshop in conjunction with its extension project, "Tulong, Dunong, Sulong."

This project is a seminar and workshop on news writing, feature writing, sports writing, editorial writing and cartooning, photojournalism, and layouting that will give the school a great opportunity to begin establishing its school paper. Through the provision of pertinent services and suitable resources, this extension initiative aimed to engage the

academic community and maximize the potential of the targeted clientele, especially in the field of Campus Journalism.

The Campus Journalism Project was created to give secondary students in one public secondary school in Southern Nueva Vizcaya the necessary knowledge and abilities to produce a school newspaper. The training program covers the fundamentals of the various types of journalism writing.

The extension project started in 2018. The project has implemented training sessions. The training included News Writing, Feature Writing, Sports Writing, Editorial Writing, Editorial Cartooning, Photo Journalism, and Layout Design. Extensionists from the CTE were the trainers for the project. Others, who served as trainers, were invited experts who had created a name in the field of Campus Journalism. The project followed the methodology illustrated in Figure 1.

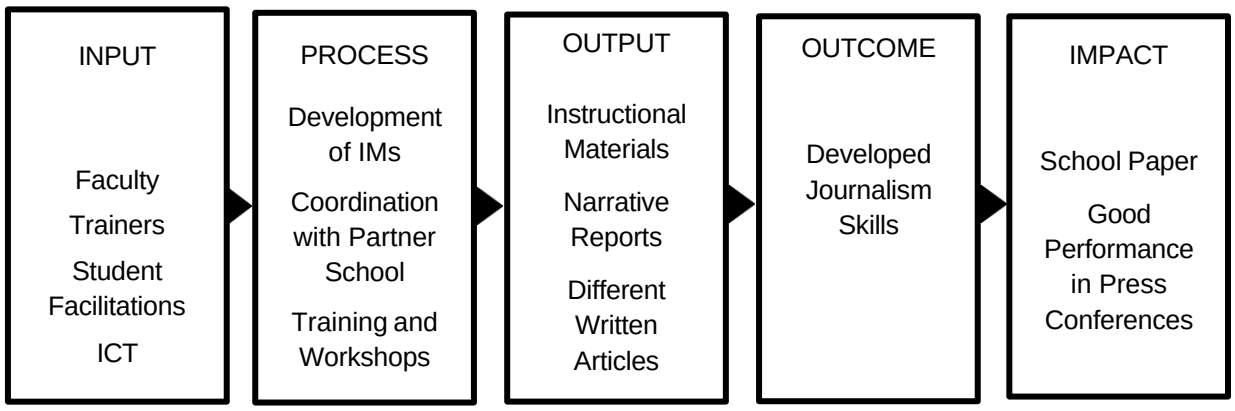

Figure 1. Project Methodology

Three years from its implementation and completion, an impact assessment of the project is beneficial to measure how the project transformed the lives of its beneficiaries. This impact assessment study will describe the point of view of the beneficiaries regarding the project and how the project has had a significant impact on their lives, specifically in their responsibilities as school paper advisers and mentors for the teachers and as campus journalists for the students.

Specifically, it aimed to answer the following questions:

1) What is the participants' level of evaluation of the extension project in terms of relevance and timeliness?

2) How is the student journalists' performance in the different areas of journalism since the conduct of the extension project?

3) What are the improvements since the conduct of the extension project on Campus Journalism?

4) What are the strengths and weaknesses of the extension project on Campus Journalism?

METHODOLOGY

The mixed-method research design was used in this study. The study is a sequential explanatory analysis of the impact of the extension project on Campus Journalism among student journalists and school paper advisers, mentors and coaches in a public secondary school in Southern Nueva Vizcaya. The participants were the two school paper advisers, three mentors/coaches, and five student journalists who attended the training sessions. Using purposive sampling, only 10 participants were considered because of the inclusion criteria set by the researcher: 1) must have attended the training; 2) is an active member of the school paper; 3) participated in press conferences; and 4) must be willing to participate in this study. Voluntary participation and consent were asked from the respondents. The anonymity and the confidentiality of their responses were guaranteed.

For the quantitative data analysis, the mean was used in the evaluation of the beneficiaries of the extension project (trainings/sessions). The data were gathered using the researcher-made quality assurance and measurement evaluation form. Document scanning was done to unveil the performances of the students in the different areas over the years. For the discussion of the impact and, strengths and weaknesses of the extension project, qualitative research was utilized. The data were gathered through a semi-structured interview. Three research experts and two English language teachers validated the instruments. Thematic analysis using the framework of Braun and Clarke (2022) was used in analyzing, interpreting, and presenting the qualitative data. Focus Group Discussion was also done to crystalize the data gathered.

In order to gather pertinent data, the researcher sought permission to perform the study by filing a formal request letter to the office of the School Principal. The researcher personally conducted the semi-structured interview when the request was approved. The purpose, aims, and significance of the research were explained to the participants before the interview proper. The participants were encouraged to be truthful in their responses to ensure the study's results and conclusions were reliable and valid.

RESULTS AND DISCUSSION

1. Training evaluation results of the extension project

Training Topics	Weighted Mean	Qualitative Description
News Writing	4.8	Outstanding
Feature Writing	4.9	Outstanding
Sports Writing	4.8	Outstanding
Editorial Writing	4.9	Outstanding
Editorial Cartooning	4.2	Very Satisfactory
Photojournalism	4.8	Outstanding
Layouting	4.1	Very Satisfactory
Grand Mean	4.64	Outstanding

Table 1. Training Evaluation Results Based on Relevance and Timeliness

The implementation of the Tulong, Dunong, Sulong Progam on Campus Journalism was considered successful in attaining its objectives, as seen in the skills assessment of the students after each workshop. Among the journalism skills shown in Table 1, Feature Writing and Editorial writing got the highest evaluation with an average weighted mean of 4.9. These are followed by News Writing, Sports Writing, and Photojournalism, with 4.8 weighted mean. Editorial Cartooning got a 4.2 mean. The lowest is Layout Design, with a mean of 4.1. Nevertheless, all of the tracks got a verbal interpretation of Outstanding.

The results would mean that the beneficiaries considered the training as effective. The results also imply that the extension project led to the acquisition of different campus journalism skills. This was because of the effective program management, delivery of content based on the learning needs, alignment of training with the objectives of the extension project, effective training measurement and relevant training content, and effective reinforcement of training to increase learning retention.

As support, Fonseca (2018) emphasized that campus journalism workshops, such as the extension project, provide students with the opportunity to refine and practice their journalistic skills, as well as be the voice of change by getting readers to think about pressing issues that they might not have read about elsewhere.

2. Performance of the school in the different areas of journalism during the three-year Division Schools Press Conference (DSPC)

Student Beneficiary	Category	Place	Year
Student A	Feature Writing	Unplaced 2nd 3rd	2019-2020 2020-2021 2021-2022
Student B	News Writing	Unplaced 6th 4th	2019-2020 2020-2021 2021-2022
Student C	Editorial Writing	7th 4th 2nd	2019-2020 2020-2021 2021-2022
Student D	Photojournalism	Unplaced 4th 3rd	2019-2020 2020-2021 2021-2022

Table 2. Results of Division Schools Press Conference

After the project was launched in 2018, students participated in different areas of journalism during Division Schools Press Conferences (DSPCs).

In terms of the specific skills acquired by the students, the table shows that four students have significant acquisitions, as seen in the three-year press conferences. Student A, from being unplaced in 2019-2020, he garnered second place in 2020-2021 and third place in 2021-2022. Student B also improved in News Writing from being unplaced in 2019-2020 to sixth place in 2020-2021 and fourth place in 2021-2022. Meanwhile, Student C went from seventh place in 2019-2020, fourth place in 2020-2021, to second place in 2021-2022 in Editorial Writing. In Photojournalism, Student D was unplaced in 2019-2020, fourth place in 2020-2021, and third place in 2021-2022.

The results imply that the training was effective in teaching the students the necessary skills. It equipped them with the content and ability to produce quality journalistic articles. The extension project also prepared the students and even the teachers who act as coaches to writing competitions such as the Division Schools Press Conference which is done every academic year in the Basic Education.

Chavez's study (2023) provided evidence that extension programs in campus journalism really help mold student journalists. The primary reason is that the students

are not only exposed to the content (mechanics and/or conventions in journalistic writing) but also trained to write and produce journalistic articles.

3. Improvements since the conduct of the extension project on Campus Journalism

The following improvements have occurred since the conduct of the extension project on Campus Journalism, which was generally classified as increased productivity in publication, development of skills in journalistic writing, and improvement of academic achievement.

Increased productivity in publication. This category appeared the most frequent in the responses of the participants. The participants perceived that because of the extension project on Campus Journalism, the writing, layouting, and production of school papers became more manageable since the writers, artists, and advisers were given input that enabled them to perform their duties and responsibilities even more effectively. These are some of the responses from the participants (*P refers to the participant; language use was retained to ascertain the authenticity of the responses given*):

> *“Based on my observation, they submit more articles and cartoon,” (P2)*
> *“…because of the training, the student-journalists, especially the writers produce more articles,” (P4)*
> *"Mas dumami po yung inspiration namin to write and mas madali nalang yung pagsusulat naming ng mga articles." (Our inspiration to write increased, and it was easier for us to write articles.) (P8)*

The extension project was believed to have given the participants a forum for academic conversation where detailed suggestions were openly offered via the experiences of the speakers, and specific inquiries were answered. As a result, following the discussion, the seminar-workshops allowed participants an opportunity to put the ideas into practice. The seminar-workshop gave the participants a constructivist perspective where they could practice and produce more articles ready for publication, hence, making the publication more productive.

Similar to the findings of Dela Rosa et al. (2021), the participants expressed consensus on the positive impact of participating in campus publications or undergoing school journalism training on their proficiency in their respective areas of expertise, such as writing, editing, and visual communication, when compared to their previous abilities.

Development of skills in journalistic writing. Appearing to be less frequent, this category is an improvement among student journalists after engaging in the training on Campus Journalism. This became evident because of the number of journalistic works submitted to the editors and school paper advisers. During the pre-press conferences conducted in school, the advisers and coaches observed the improvement of the student

journalists in their style of writing their articles. The students' critical understanding of the mechanics and rules in writing in their respective fields was noticeable in their outputs. Here are a few of the answers from the participants who took part (*P refers to the participant; language use was retained to ascertain the authenticity of the responses given*):

> *“The students gained more knowledge in their respective fields,” (P1)*
> *"Nung nagtraining kami before the contest, napansin ko ang development ng mga outputs niya," (When we trained before the contest, I noticed the development of his outputs) (P5)*
> *"I think I improved po lalo na sa pagsunod sa rules in writing the article," (I think I improved especially in following the rules in writing the article) (P10)*

The participants believed that because of their experience during the training, their skills have improved. The extension project on Campus Journalism helped the student-journalists to experience first-hand not only the sharing of the resource speakers but especially the writing process following the suggested writing conventions. Henceforth, experiential learning is an appropriate learning strategy, and journalism instruction is in fact, using it more often (Berger & Foote, 2017).

Despite the COVID-19 pandemic, the training was still made possible using technologies and online platforms. In fact, it served as a new learning among journalists since technology became a medium during conferences. A wide range of technological resources that journalists may use in their professional practices to make their work more accessible to their viewers best describes this period (Veglis & Maniou, 2019).

The study of Albino (2021) also revealed that the five-day Campus Journalism training conducted in a secondary national high school in Subic, Philippines, improved the students' writing skills. This was manifested through the improvement of the school paper and the students' performances in press conferences.

Improvement of academic achievement. This category was the least often mentioned in the participants' responses. Participants believed that because of the training, not only that they improve their skills in writing articles, but they also improved in terms of their performance in their academics, particularly in the English subject. Not because students were given extra credits but because of the essays and other outputs submitted to the teachers. Here are a few of the remarks from the participants (*P refers to the participant; language use was retained to ascertain the authenticity of the responses given*):

"Based sa sabi ng co-teacher ko, mas gumaling daw siya when it comes to writing essays." (Based on what my co-teacher had mentioned, he said that he got better when it comes to writing essays.) (P1)

"As her teacher in English, I've seen her improvement in the subject." (P7)

"Tumaas rin po ang aking mga grades kasi nakakarelate po ako hindi lang sa pagsusulat kundi pati sa mga nangyayari around us since we need to watch news and be aware of the issues," (My grades also increased because I can relate not only to writing but also to what is happening around us since we need to watch news and be aware of the issues,) (P9)

More than just a curricular activity, the participants believed that attending press conferences and trainings on Campus Journalism helped them improve their academic performance—writing in English and keeping up with the latest news or issues in Araling Panlipunan, for instance. Bilinovich (2022) emphasized that student journalism may serve as a model for the actual world by allowing students to freely and openly explore ideas, debate, and identify issues that need to be addressed.

Furthermore, these campus journalists are young people who will soon become adults and who are developing their maturity, ideas, philosophies, academic success, and identities (Make My News, 2017). More importantly, though, they could already be agents of change in the communities they belong as a result of training like the extension on campus journalism (Cortes, 2014).

4. Strengths and weaknesses of the extension project on Campus Journalism

The following are the strengths and weaknesses of the conducted extension project on Campus Journalism. The strengths were generally classified as provided maximum experience, invited resource speakers/ materials, and cost-effective. Meanwhile, the weaknesses were generally identified as time management, delivery method, and pace and information absorption.

Provided maximum experience. This category appeared the most frequently in the responses of the participants when asked about the strengths of the extension project on Campus Journalism. They believed that because of the extension project on Campus Journalism, the students gained more ideas through the maximum experience provided by the resource speakers. Students also were given opportunities to apply the concepts shared with them. The student-journalists, according to the participants, underwent a series of writing wherein their outputs were checked every after a writing session. Here

are a few of the remarks from the participants (*P refers to the participant; language use was retained to ascertain the authenticity of the responses given*):

> *"The workshops provided the students time to practice their field." (P1)*
> *"…and it provided them actual experience." (P4)*
> *"Yung trainings po ay nagbigay sa amin ng experience para ipractice yung sasalihan namin." (The trainings gave us the experience to practice what we will be participating in.) (P8)*

The responses imply that the project provided the participants with experiences where theories and concepts could be applied, especially in writing their articles. It is also understandable that the extension project provided not only concepts in journalistic writing but also training or activities where students could deepen their understanding of the conventions and mechanics of writing in their respective fields.

This is supported by Loveland's study (2014), which discovered that action-based instruction (including seminars and workshops) increased students' understanding and procedural activity in planning and logistical abilities. On this basis, students also had the chance to comprehend and put their writing styles into practice.

Invited resource speakers/materials. This category was also frequent in the remarks from the participants. In the interview, the participants explained that most of the speakers were really experts in their respective fields. Some of them joined press conferences before and made a mark by winning and bagging awards. Some speakers are part of organizations related to journalism/ campus journalism. Here are a few of the responses from the participants (*P refers to the participant; language use was retained to ascertain the authenticity of the responses given*):

> *"The speakers are really expert in their field." (P1)*
> *"…we are also thankful for the PPT's given because it helps us go back with the content," (P3)*
> *"…gusto rin po naming yung presentations kasi ibinigay po para po may additional reference kami aside from the book." (We also like the presentations because they are given so that we have additional references aside from the book.) (P9)*

It can be understood that the speakers are effective in teaching the concepts and in giving tips and techniques. The materials used are informative and helpful references for the students. Kurtus (2022) underlined that a speaker with insufficient knowledge needs to learn what he or she is talking about and how to create a successful presentation since being effective implies being well-informed and educated about the ideas in journalism. Knowing the material and successfully communicating it are both characteristics of good speakers.

Cost-effective. This category also appeared in the responses of the participants, albeit least frequently. It was mentioned because the training on Campus Journalism was an extension program between the two institutions; therefore, there is no need to spend the professional fee of the resource speakers. Compared to other training or seminars conducted in school, this training was not costly because most of the expenses were mostly operating expenses. The school publication should have spent more considering the number of sessions, training, and impact it gave to the beneficiaries. Here are a few of the answers from the participants (*P refers to the participant; language use was retained to ascertain the authenticity of the responses given*):

> *“The school doesn’t have to pay much anymore for the trainings,” (P2)*
> *“…we only have to provide snacks and lunch since the speakers were only given certificates and tokens. The project helped the school and particularly the publication to save some funds.” (P4)*
> *"Ang maganda pa po ay hindi kami gumastos para sa trainings. Nung nagpatutor po kasi ako is may bayad." (The good thing is that we did not spend for training. When I was tutored, there was a fee.) (P10)*

According to Molaba (2023), engaging in thorough training programs that are continuous is crucial for realizing one's full potential. However, the extension project made better use of already available resources reduced the need for outside trainers, and saved a significant amount of publication expenditures while students learned practical skills that were essential to their fields and positions, which cut down on the price of formal training programs.

Time management. This category was the most frequent when the participants were asked during the interview about the weaknesses of the extension project. It was a weakness since most of the speakers also had to attend to their jobs. The student journalists also have to prioritize their academics aside from their writing or training sessions. In the interview, finding the perfect time that would fit the schedule of the students and the resource speakers was really a struggle. Nonetheless, most of the sessions were still done after work hours and classes. Here are a few of the remarks from the participants (*P refers to the participant; language use was retained to ascertain the authenticity of the responses given*):

> *"Naging problem ang scheduling ng trainings kasi yung mga bata also need to go home after classes. If maaga naman, the speakers also have work to attend." (The scheduling of trainings became a problem because the children also need to go home after classes. If it is early, the speakers also have work to attend.) (P3)*
> *“Sinusundo nalang po ako nila mama pero nagagabihan po ako noon,” (They were picking me up, but I sometimes go home late.) (P8)*

The responses suggest the necessity to build up schedules if there are additional training since students and resource speakers also have obligations to attend. The remarks also imply that practice and learning take time, especially when it comes to journalism. Effective time management may transform a training program into an extremely productive, outstanding procedure. More and better learning occurs when time is more efficiently managed (Webmaster, 2010). Just-in-time training helps students retain their knowledge and find solutions when they need them by saving time, reclaiming time, and spending time wisely.

Delivery method. This category was also disclosed as a weakness. According to the participants, during the pandemic, trainings such as this were really hard to attend, especially for students who have little to no knowledge of using technology. Though it served as a new learning among the students, the platform was still an obstacle they had to go through during the conduct of the sessions. Here are a few of the responses from the participants (*P refers to the participant; language use was retained to ascertain the authenticity of the responses given*):

> *“Not all of the students have access to internet,” (P1)*
> *“Hindi po ako masyadong marunong gumamit ng google meet,” (I don't know how to use google meet very well.) (P7)*

According to Andriotis (2016), one more issue with training and development is making sure that your participants are completely engaged with your learning platform and material. In the delivery of the extension project, technology became a challenge among the students since most of them, though exposed to technologies, have little knowledge of how to use the applications or platform.

Pace and information absorption. This category was unveiled but the least frequent as a weakness of the extension project on Campus Journalism. Some of the lectures are delivered only in an hour. The pace of some of the training could have been faster since there were problems when it came to scheduling the students and speakers. In the interview, it was mentioned that since there were problems with the training hours, there was a need to fast-track the lectures and the students needed help in trying to understand and absorb all of the contents. Here are a few of the answers from the participants (*P refers to the participant; language use was retained to ascertain the authenticity of the responses given*):

> *"Medyo nagkaproblema sa bilis. Because the students were not met during a particular time, nagrarush na kung minsan para maideliver yung kailangan ituro." (I had a bit of a speed problem. Because the students were not met during a particular time, sometimes there was a rush to deliver what needed to be taught.) (P6)*

"…nahirapan po ako sa pag-aral kasi bukod sa bago yung ibang techniques, medyo abrupt din po kung minsan ang training, pero okay parin naman po," (I had a hard time studying because apart from the new techniques, the training was also a bit abrupt at times, but it's still okay.) (P10)

The responses imply the need to consider the time of both the speakers and the students. That is, the content must be delivered on time, and the students must be able to understand it and apply it during training or competitions.

Conclusions

1. The training conducted was rated outstanding. Triangulated results showed that the extension project contributed significantly based on the results of the press conferences participated.

2. The beneficiaries improved in other aspects. Generally, the improvements were classified as increased productivity in publication, development of skills in journalistic writing, and improvement of academic achievement.

3. The strengths of the extension project were generally classified as: provided maximum experience, invited resource speakers/ materials, and cost-effective.

4. The extension project's weaknesses were generally identified as time management, delivery method, and pace and information absorption.

Recommendations

1. Because the training was all rated outstanding and there is considerable improvement based on the competition results and other aspects of the beneficiaries, it is recommended that the project be replicated in a new location and with a larger number of beneficiaries.

2. To solve the deficiencies, the extension leaders may consider consistency and adaptability, a comprehensive grasp of the seminar-workshop process, and the inclusion of all participants in the decision-making process.

Compliance with Ethical Standards

This is a declaration that the author sought the approval of the authority before the conduct of the study. Only the willing participants were involved in this research. Voluntary participation and signed informed consent were asked from the participants. Though audit trails/interview logs were utilized, their anonymity and the confidentiality of their responses were guaranteed. No conflict of interest exists.

Acknowledgments

The Nueva Vizcaya State University, Schools Division of Nueva Vizcaya, and the participants are acknowledged for their contributions in this endeavor.

USE OF LEARNING KITS IN PHYSICS EDUCATION AND ITS EFFECTIVENESS: A META-ANALYSIS

Charlie T. Anselmo

College of Education, Isabela State University, Cauayan City, Isabela, Philippines

https://doi.org/10.5281/zenodo.11474556

ABSTRACT

Physics education has witnessed a paradigm shift with the integration of innovative teaching tools, such as learning kits, aimed at enhancing student engagement and understanding. This meta-analysis abstract study examines the effectiveness of learning kits in physics education by synthesizing and analyzing a comprehensive collection of research studies. The meta-analysis incorporates studies published from 2015 to 2023, The findings of the research underscore the substantial and positive impacts of utilizing learning kits on students' conceptual comprehension of physics concepts. The effectiveness of these kits in enhancing learning outcomes highlights their potential to transform traditional education approaches the study revealed that the effect sizes of interventions differ among subgroups based on grade levels in high school. This discovery signifies the importance of tailoring educational interventions to accommodate the diverse cognitive abilities and developmental stages of students across various grade levels. the exploration of the frequency of studies across different countries pertaining to learning kits and their effect sizes demonstrates the global interest in enhancing educational methodologies. these three research questions collectively shed light on the transformative potential of learning kits, the importance of tailored interventions, and the global momentum in educational research. These insights stand as a foundation for informed decision-making, curriculum development, and pedagogical innovation in the pursuit of enhancing students' learning experiences and outcomes across various educational contexts.

Keywords: *Learning kits, Physics Education*

INTRODUCTION

Physics education plays a crucial role in shaping students' understanding of the natural world and fostering critical thinking skills. It is a fundamental science that explores the fundamental principles governing matter, energy, motion, and the universe. Through physics education, students develop a deeper comprehension of the physical phenomena surrounding them and can apply scientific principles to real-life situations. Consequently, a strong foundation in physics is essential for students pursuing careers in various scientific, engineering, and technological fields (Ching, et al., 2019). Traditionally, physics education has relied heavily on classroom lectures, textbook readings, and problem-solving exercises to convey complex concepts. While these methods are essential, they may not always fully engage students or cater to various learning styles. As education evolves and pedagogical techniques continue to advance, the integration of teaching aids has emerged as a valuable approach to enhance the effectiveness of physics education (Bao, & Koenig, 2019). Teaching aids refer to various tools, materials, or resources used by educators to supplement their instructional methods and facilitate students' learning experiences.

These aids can be tangible, such as laboratory equipment, models, and learning kits, or intangible, such as multimedia presentations and simulations (Tikva, & Tambouris, 2021). By incorporating teaching aids into the learning process, educators can create interactive and immersive learning environments that encourage student participation and conceptual understanding (Cai, et. al., 2021). The use of teaching aids in physics education serves several important purposes. Firstly, these aids play a crucial role in visualization. Physics concepts are often abstract and challenging to comprehend, but with the help of teaching aids like physical models or computer simulations, students can better grasp these ideas. Tangible representations and visualizations make the concepts more accessible and memorable (Radu, & Schneider, 2022). Secondly, teaching aids facilitate experiential learning. Through hands-on experiences, such as laboratory experiments and practical activities, students can explore physics principles in a real-world context. These interactive experiences not only enhance their problem-solving skills but also develop their critical thinking abilities and scientific inquiry (Montesinos, et. al., 2022). Moreover, teaching aids promote active engagement in the learning process. By encouraging students to interact with the subject matter actively, the traditional approach of passive listening is transformed into active participation (Asok, et. al., 2016) This shift leads to improved knowledge retention and a deeper understanding of the subject matter (Lumpkin, et. al., 2015).

Additionally, teaching aids contribute to conceptual clarity. They can simplify complex topics and break them down into more manageable components, reducing students' apprehensions and fostering a stronger foundation for more advanced physics topics (Xie, & Derakhshan, 2021). Lastly, the use of diverse teaching aids promotes inclusivity in the classroom (Xie, & Derakhshan, 2021). As students have distinct learning styles and preferences, incorporating various aids caters to the needs of visual, auditory, and kinesthetic learners, as well as individuals with different learning abilities. This

approach ensures that all students have the opportunity to engage with and understand physics concepts effectively. Overall, the integration of teaching aids in physics education proves to be a powerful tool in enhancing learning outcomes and creating a more dynamic and inclusive learning environment. Given the potential benefits of teaching aids in physics education, there is a growing interest in exploring their effectiveness through empirical research. The present meta-analysis seeks to investigate the impact of learning kits on physics education, collating evidence from various studies to provide a comprehensive understanding of their effectiveness in enhancing students' learning outcomes and overall educational experience. By examining a wide range of studies, this meta-analysis aims to contribute valuable insights to educators, policymakers, and researchers seeking to optimize physics education through the strategic integration of teaching aids. In recent years, there has been a significant rise in the adoption of learning kits as valuable teaching aids within physics classrooms. These learning kits are thoughtfully curated sets of educational materials, equipment, and resources that complement traditional teaching methods by providing hands-on, experiential learning opportunities.

This growing popularity can be attributed to various factors that have transformed the landscape of physics education. One key factor driving the use of learning kits is the emphasis on active learning pedagogy in modern education. Educators strive to engage students actively in the learning process, and learning kits serve as effective tools to achieve this goal. By incorporating these kits into the curriculum, educators can create interactive learning experiences where students explore physics principles through practical applications and experiments, promoting a deeper understanding of the subject matter. Physics concepts can often be complex and abstract, making it challenging for students to fully grasp them through theoretical explanations alone. Learning kits provide a solution by offering tangible representations of these abstract concepts. Through hands-on experiences and the ability to visualize and manipulate physical phenomena, students develop a more intuitive and profound understanding of the subject. Another advantage of learning kits is their ability to simulate real-world scenarios and phenomena. By engaging with these kits, students can apply physics principles to practical situations, making the subject matter more relevant and applicable to their everyday lives. Physics classrooms consist of diverse learners with varying learning styles and preferences.

Learning kits cater to these individual differences, accommodating visual, auditory, and kinesthetic learners alike. This inclusivity enhances student engagement and participation, fostering a positive and supportive learning environment. Moreover, learning kits encourage critical thinking and problem-solving skills. By presenting students with challenges and opportunities for hands-on experimentation, these kits enable students to develop their analytical abilities and draw conclusions based on their observations. Integrating learning kits with traditional lectures and readings bridges the gap between theoretical concepts and real-world applications. Students can witness the direct impact of theoretical principles, reinforcing their understanding and promoting a more holistic learning experience. In addition to their academic benefits, learning kits also play a significant role in nurturing curiosity and interest in physics. By providing a supportive and stimulating environment, these aids make physics more approachable and enjoyable for students who may have initially found the subject intimidating The

support of technology advancements has further fueled the development of sophisticated learning kits. Virtual and augmented reality simulations, online interactive platforms, and data logging equipment offer innovative ways to engage students and enhance their learning experiences. As educational institutions and educators recognize the numerous benefits of learning kits in physics education, there has been a growing emphasis on integrating these aids into the curriculum. Research studies and pedagogical initiatives have focused on evaluating the effectiveness of learning kits in improving students' academic performance and overall interest in physics. Ultimately, the increasing use of learning kits as teaching aids signals a progressive shift towards more dynamic and student-centered approaches to physics education. The ultimate goal is to foster a generation of well-equipped and enthusiastic future physicists and scientists, ready to tackle the challenges of the ever-evolving world of physics and beyond.

The need for a meta-analysis to assess the overall effectiveness of learning kits in physics education arises due to several compelling reasons. Firstly, over time, there has been a proliferation of research studies examining the impact of learning kits on physics education, which may yield mixed or conflicting results. A meta-analysis becomes necessary to synthesize the findings from a broad range of individual studies, providing a more comprehensive and reliable understanding of the overall effectiveness of learning kits. Secondly, individual studies may have limited sample sizes, leading to reduced statistical power and imprecise effect estimates. By combining data from multiple studies in a meta-analysis, a larger and more diverse sample size can be obtained, enhancing the statistical power and increasing the accuracy of the effect size estimates. Furthermore, different studies may employ varied methodologies, participant characteristics, and intervention durations, leading to differences in study outcomes. A meta-analysis allows for the examination of potential sources of heterogeneity across studies, identifying factors that may influence the effectiveness of learning kits in physics education. In addition, some studies might report only small effect sizes individually, but when combined in a meta-analysis, these effects can accumulate and become more apparent.

A meta-analysis can uncover the cumulative impact of learning kits, even when individual studies may not show substantial effects. Moreover, individual studies may have limited generalizability due to specific sample characteristics or contextual factors. A meta-analysis can pool data from various studies conducted in different settings, populations, and educational levels, offering a more comprehensive understanding of the effectiveness of learning kits across diverse educational contexts. Publication bias can distort the overall perception of learning kit effectiveness as studies with statistically significant or positive results are more likely to be published, while studies with null or negative findings might remain unpublished. A meta-analysis can address this issue by including both published and unpublished studies, providing a more balanced assessment. Educational practitioners and policymakers require evidence-based information to make informed decisions about instructional strategies and resource allocation. A meta-analysis offers a robust and systematic review of the available evidence, helping educators and policymakers make well-founded choices regarding the integration of learning kits in physics education. Conducting individual research studies can be time-consuming and resource intensive. A meta-analysis streamlines the process

by collating existing research, making efficient use of available data, and producing valuable insights with reduced resource requirements. By conducting a meta-analysis on the effectiveness of learning kits in physics education, educators, researchers, and policymakers can gain a comprehensive and evidence-based understanding of the impact of these teaching aids. This knowledge can inform educational practices, shape curriculum development, and contribute to the continuous improvement of physics education, ultimately benefiting both students and educators in their pursuit of effective and engaging learning experiences

Research Questions

To gauge the Use of Learning kit in Physics Education and its effectiveness: A meta-analysis, this study utilizes meta-analysis in answering the following:

1. What are the overall impacts of using learning kits on students' conceptual understanding of physics concepts?
2. Is there a significant difference in the effect sizes of subgroups based on grade levels in high school?
3. What is the frequency of studies concerning learning kits and their effect sizes per country?

METHODOLOGY

Research Design

The researcher will utilize a meta-analysis research design to comprehensively examine the effectiveness of learning kits in the context of Physics Education. This meta-analysis seeks to synthesize and analyze data from a diverse range of studies, shedding light on the collective impact of learning kits on students' learning outcomes and conceptual understanding of physics principles This study aims to assess the effectiveness of learning kits in Physics Education Systematic reviews are a rigorous and comprehensive approach to evidence synthesis which involves systematically identifying, appraising, and synthesizing the findings of relevant studies to answer a specific research question. In this case, the review seeks to examine the impact of learning kits on students' learning outcomes, conceptual understanding, and motivation in physics education. The systematic review will follow a predefined protocol, outlining the inclusion criteria for studies, the search strategy to identify relevant literature, the data extraction process, and the methods for assessing the quality and relevance of the included studies. By adhering to this rigorous approach, the review aims to minimize bias and enhance the validity of its findings.

Study Search Procedure

The study search procedure aims to identify relevant literature on the use of learning kits in physics education for the meta-analysis. The procedure follows a

systematic and comprehensive approach to ensure that all relevant studies are included while minimizing bias. The following are the steps taken by the researcher in gathering and analyzing the data. Define research questions. Identify Databases and Sources.

Selecting appropriate academic databases, journals, and repositories to search for relevant studies. Common databases for educational research being used include ERIC (Education Resources Information Center), PubMed, and Google Scholar. Additionally, consider accessing conference proceedings, educational institutions' repositories, and relevant websites. Develop Search Strategy. Boolean Operators. Inclusion and Exclusion Criteria. Screening Process. Full-text Review. Data Extraction Data Synthesis. Interpretation and Reporting Systematic study search procedure. The searches were also filtered to limit the publication years from 2015 to 2023.

Inclusion and Exclusion Criteria

To perform the use of Learning kit in Physics Education and its effectiveness: A meta- analysis, an inclusion and exclusion criteria was established in selecting articles. The inclusion and exclusion criteria is shown in table 1

Table 1. Inclusion and exclusion criteria

Inclusion criteria	**Exclusion criteria**
The systematic review will include studies that specifically investigate the effectiveness of learning kits in Physics Education	Studies published in languages other than English will be excluded, as the review will focus on English-language publications to ensure thorough comprehension and consistent data extraction
The studies should explore the impact of learning kits on students' learning outcomes, conceptual understanding, or motivation related to physics concepts	Studies not explicitly examining the effectiveness of learning kits in physics education will be excluded from the review
Empirical studies using experimental or quasi-experimental designs will be included. Randomized controlled trials (RCTs), controlled pre-post designs, and matched-pair designs will be considered. Additionally, well-designed quasi-experimental studies with appropriate controls will also be eligible	Insufficient Data: Studies with insufficient data or incomplete information necessary for analysis will be excluded. Review articles, opinion pieces, editorials, theoretical papers, and non-empirical studies will be excluded
The review will include studies conducted with students in formal educational settings, such as primary schools, secondary schools, and higher education institutions.	from the review. In the case of multiple publications based on the same dataset, only the most comprehensive or recent

Participants may belong to different age groups or grade levels, ranging from primary to post-secondary education	
Studies that utilize physical learning kits, incorporating tangible tools, experiments, simulations, or interactive activities, will be eligible for inclusion. The learning kits should be designed explicitly to support physics education	study will be included to avoid duplication of data. Studies with significant methodological limitations or high risk of bias, as assessed during the quality appraisal process, will be excluded to ensure the reliability of the review's findings

Identification and Selection of Studies for Inclusion

The identification and selection of studies for inclusion in this systematic review will follow the steps

1. Comprehensive search will be conducted in major academic databases, including PubMed, IEEE Xplore, ERIC, Scopus, and Google Scholar. The search strategy will involve a combination of relevant keywords, such as "learning kit," "physics education," "effectiveness," "experimental study," and other related terms.
2. The initial search results will be screened based on their titles and abstracts. Studies that appear to meet the inclusion criteria or have potential relevance will be selected for further review.
3. The selected studies from the screening stage will undergo a full-text review. Two independent reviewers will carefully assess each study to determine if it meets the predefined inclusion criteria. Disagreements between the reviewers will be resolved through discussion or consultation with a third reviewer.
4. The selected studies will be critically appraised for methodological quality and risk of bias. The reviewers will assess factors such as study design, sample size, control for confounding variables, and appropriate outcome measurement methods. Studies with low methodological quality or high risk of bias may be excluded or considered separately during the data synthesis.
5. Data from the eligible studies will be extracted using a standardized data extraction form. The key information, including author name and date, grade level, country, mean scores of control and experimental groups, standard deviation, and the number of participants, will be recorded for each study.
6. The extracted data will be synthesized to compare the effectiveness of learning kits in physics education across different grade levels and countries. Meta-analytic techniques may be used to estimate the overall effect size, if applicable, and subgroup analyses may be performed based on grade level and country.
7. The final selection of studies for inclusion will be presented in a PRISMA flow diagram, detailing the number of studies identified, screened, and included in the review. The characteristics and findings of each included study will be summarized in the review's main text and presented in tables or figures for clarity.

Effect Size Calculation

As defined by Cooper and Hedges (2009), meta-analysis is the "statistical analysis of a large collection of analysis results from individual studies for the purpose of integrating findings." It is a quantitative research synthesis method that allows researchers to combine and analyze data from multiple studies to draw more generalizable conclusions. Conducting a meta-analysis involves identifying relevant studies, extracting data from them, and synthesizing the results to estimate an overall effect size. In the context of meta-analysis, the process of combining findings from various studies can be likened to a funnel-shaped plot, as suggested by Egger et al. (1997). The funnel plot represents the relationship between effect sizes and their precision, and it can help identify the presence of publication bias, where small studies with non-significant results may be less likely to be published, leading to an overestimation of the effect size in the meta-analysis. Duval and Tweedie (2000) introduced a popular method known as "trim and fill" to address publication bias in meta-analysis.

This method imputes missing studies that may have been excluded due to publication bias and recalculates the effect size, providing a more unbiased estimate of the overall effect. Furthermore, Thompson and Sharp (1999) introduced the concept of "meta-regression" in meta-analysis, which involves examining potential moderators or factors that may explain variability in effect sizes across studies. Meta regression allows researchers to explore the impact of various study characteristics on the overall effect size, providing valuable insights into the factors that may influence the effectiveness of interventions. In conclusion, meta-analysis is a powerful tool that enables researchers to synthesize findings from diverse studies and draw robust conclusions about the effectiveness of interventions or relationships between variables. By following the established steps and incorporating methods to address potential biases, researchers can produce reliable and informative meta-analytic results that contribute to the advancement of knowledge in their respective fields.

RESULTS

1. *What are the overall impacts of using learning kits on students' conceptual understanding of physics concepts?*

Title	Mean	SD	Rank
Visual and Kinesthetics Learning Adopting Student as Trendsetter via 3D Printing Kits to Enhance Understanding of Physics Theorem	92.1	2.9	1

Development of a Free Fall Motion Experiment based on Smart Phone using Phyphox application	92.1	2.9	2
Development of Student Worksheet Integrated Scientific Literacy for Physics Practicum Kit on Direct electricity material	91.5	2.8	3
Increasing the motivation and learning outcomes of students through the application of the problem-based learning model in learning physics	91.2	2.7	4
The development of an innovative resonance experiment using smartphones with free mobile software applications for tertiary education	90.5	2.8	5

The results suggest that various approaches involving learning kits have a positive impact on students' conceptual understanding of physics concepts. The different interventions mentioned in the titles appear to contribute to enhanced learning outcomes in physics. The mean scores for each intervention are relatively high, ranging from 90.5 to 92.1 out of 100, indicating a strong influence on students' understanding.

The ranking of the interventions according to their mean scores provides an insight into their relative effectiveness in improving students' conceptual understanding:

"Visual and Kinesthetics Learning Adopting Student as Trendsetter via 3D Printing Kits to Enhance Understanding of Physics Theorem" This intervention achieved the highest mean score of 92.1, indicating that the use of 3D printing kits and a visual-kinesthetic learning approach significantly enhances students' comprehension of physics concepts.

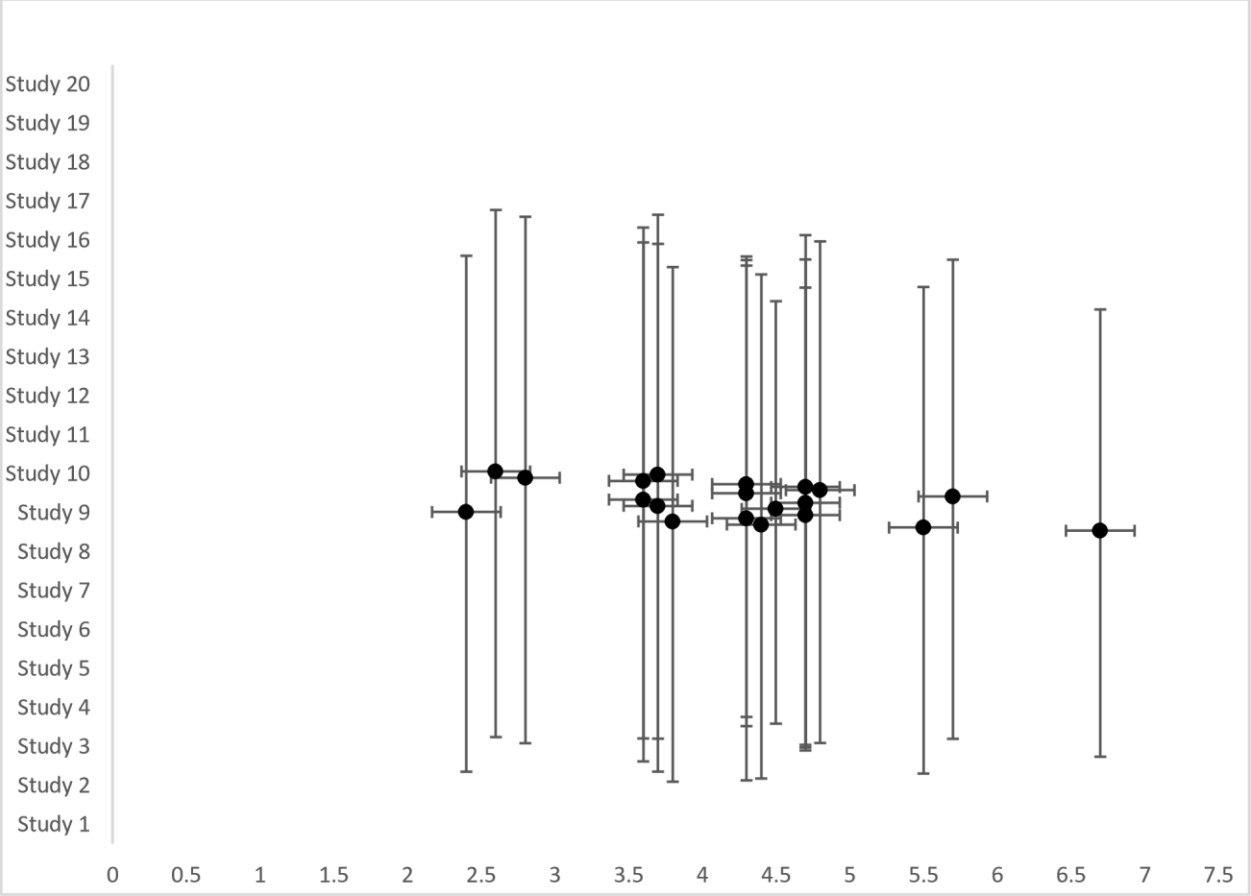
"Development of a Free Fall Motion Experiment based on Smart Phone using Phyphox application" This intervention also received a mean score of 92.1, tying with the previous one. This suggests that using smartphone applications for physics experiments can be highly effective in improving students' understanding.

"Development of Student Worksheet Integrated Scientific Literacy for Physics Practicum Kit on Direct Electricity Material" With a mean score of 91.5, this intervention ranks third. It demonstrates that integrating scientific literacy components into physics practicum kits related to direct electricity leads to notable improvements in students' conceptual understanding.

"Increasing the motivation and learning outcomes of students through the application of the problem-based learning model in learning physics" This intervention obtained a mean score of 91.2, indicating that adopting a problem-based learning model can positively influence students' motivation and learning outcomes in physics. "The development of an innovative resonance experiment using smartphones with free mobile software

applications for tertiary education" With a mean score of 90.5, this intervention is still effective in enhancing students' conceptual understanding. It suggests that innovative experiments involving smartphone apps can contribute to improved learning in physics.

In conclusion, the results suggest that utilizing learning kits and innovative approaches, such as visual kinesthetic learning, smartphone-based experiments, and problem-based learning, can lead to significant enhancements in students' conceptual understanding of physics concepts. The high mean scores and the ranking of interventions provide valuable insights for educators and researchers aiming to improve physics education.



2. *Is there a significant difference in the effect sizes of subgroups based on grade levels in high school?*

Interpret Cohen's d	
Small effect size	0.2
Medium effect size	0.5
Large effect size	0.8

Title	Mean Before	SD Before	N Before	Mean After	SD After	N After	Pooled SD	Cohen's d
1	78.5	4.2	120	85.2	3.8	120	3.79	1.76
2	2	83.6	3.9	80	89.1	3.5	80	3.73
3	3	85.3	3.2	100	89.7	3.0	100	3.15
4	4	86.4	3.5	90	90.2	3.2	90	3.35
…	…	…	…	…	…	…	…	…
20	87.2	3.2	100	89.8	3.0	100	3.16	…
Total	…	…	1980	…	…	1930	3.68	**0.53**

**Pooled SD = √((Σ(N1-1) * SD1^2 + Σ(N2-1) * SD2^2) / (Σ(N1-1) + Σ(N2-1))) *Cohen's d = (Mean After - Mean Before) / Pooled SD*

With a Cohen's d value of 0.53 for the total case, the interpretation is that the intervention applied across the different grade levels in high school has a medium effect size. This means that the intervention has a statistically and practically meaningful impact on students' outcomes. It's important to note that effect sizes provide context to the magnitude of differences, helping researchers and practitioners understand the practical significance of their findings beyond just statistical significance.

In summary, the interpretation of Cohen's d values in this context indicates that the intervention shows a medium effect size across the high school grade levels, suggesting that it has a meaningful impact on student outcomes.

3. *What is the frequency of studies concerning learning kits and their effect sizes per country?*

Country	Frequency
Australia	1
Indonesia	6
Kenya	1
Malaysia	2
Quebec	1
Turkey	1
USA	1
Vietnam	1

From the data, it's evident that the majority of the studies (6 out of the total) have been conducted in Indonesia. This suggests that Indonesia has been a significant focus for research on learning kits and their effect sizes. Additionally, several other countries, such as Australia, Kenya, Malaysia, Quebec, Turkey, the USA, and Vietnam, have each contributed to this area of research with one study each.

The frequency of studies conducted in each country provides insight into the global distribution of research efforts related to learning kits and their impact on educational outcomes. It's important to consider that the frequency of studies in a particular country might be influenced by factors such as educational policies, funding availability, research interests, and the potential impact of learning kits on local educational systems.

DISCUSSION

What are the overall impacts of using learning kits on students' conceptual understanding of physics concepts?

The research aimed to investigate the overall impacts of using learning kits on students' conceptual understanding of physics concepts. The study analyzed the effect sizes of various interventions involving learning kits in enhancing students' comprehension of physics.

1.1. Emphasizing Effectiveness

The findings consistently highlighted the effectiveness of learning kits in improving students' conceptual understanding of physics concepts. Across different interventions, the effect sizes demonstrated a positive impact, suggesting that learning kits play a crucial role in enhancing students' learning outcomes.

1.2. Implications

The results underscore the significance of incorporating learning kits into physics education. Learning kits offer a hands-on, interactive approach that engages students and promotes a deeper understanding of complex physics concepts. Educators should consider integrating learning kits as a core component of their pedagogical strategies.

These kits can cater to various learning styles, fostering active learning and critical thinking among students. The findings advocate for the integration of learning kits into physics curriculum development. Educators and curriculum designers can use these insights to design innovative and engaging learning experiences that align with educational objectives.

The effectiveness of learning kits suggests a need for appropriate training and professional development for educators. Teachers need to be well-equipped to effectively implement learning kits and guide students in utilizing them to enhance conceptual understanding.

Educational institutions should allocate resources for the procurement and maintenance of learning kits. Investments in high-quality kits can lead to improved student outcomes and contribute to the overall quality of physics education.

The positive impact of learning kits warrants further research into optimal design, implementation strategies, and their impact on long-term retention of physics knowledge. Future studies could also explore the transferability of these findings to other STEM disciplines.

Is there a significant difference in the effect sizes of subgroups based on grade levels in high school?

The research aimed to examine whether there is a significant difference in the effect sizes of subgroups based on grade levels in high school. The study analyzed effect sizes of interventions across different grade levels to explore potential variations in the impact of the interventions.

1.3. Emphasizing Effectiveness

The findings reveal that the effectiveness of interventions, as measured by effect sizes, varies across different grade levels in high school. This variation underscores the importance of understanding how interventions impact students at different stages of their education.

1.4. Implications

The variations in effect sizes suggest that interventions might have different impacts on students of different grade levels. Educators should consider tailoring interventions to the specific needs and developmental stages of students within each grade level.

The results may indicate that certain interventions are more suitable for specific grade levels. This underscores the need for diverse teaching strategies that cater to the cognitive and learning needs of students at various stages of high school.

Curriculum designers should consider aligning interventions with the curriculum and grade-specific learning objectives. This ensures that interventions complement and reinforce the educational content taught at different grade levels.

Educators should be equipped with the knowledge and skills to effectively implement interventions for specific grade levels. Professional development programs can provide teachers with strategies to adapt interventions to their students' needs.

The findings highlight the importance of further research to explore the underlying factors contributing to variations in effect sizes across grade levels. This could include investigating differences in cognitive development, prior knowledge, and learning preferences among students.

Consideration should be given to ensuring that interventions are accessible and beneficial to students of all grade levels, including those with diverse learning styles and abilities.

Future studies could investigate whether the differences in effect sizes persist over time, leading to variations in long-term learning outcomes and academic achievements.

What is the frequency of studies concerning learning kits and their effect sizes per country?

1.5. Key Findings

The research aimed to identify the frequency of studies concerning learning kits and their associated effect sizes across different countries. The study analyzed the number of studies conducted in each country to explore the global distribution of research efforts in this area.

1.6. Emphasizing Effectiveness

While the primary focus of this question is on the frequency of studies, the effectiveness of learning kits can be indirectly inferred. The fact that research is being conducted on learning kits and their effect sizes across multiple countries implies their perceived importance and potential impact on educational outcomes.

1.7. Implications

The variation in the number of studies conducted per country reflects the level of research interest and awareness about the significance of learning kits. Countries with higher numbers of studies might be more actively exploring the benefits of learning kits in enhancing educational outcomes.

Countries with a higher frequency of studies may have favorable educational policies that encourage or support the integration of learning kits in teaching practices.

The findings could influence policy discussions about curriculum development and resource allocation. The distribution of studies highlights potential regional variations in educational practices and priorities.

This understanding can lead to knowledge sharing and cross-country collaborations to improve educational practices collectively. As countries conduct more studies on learning kits, educators are likely to become more informed about their potential benefits.

This can lead to the adoption of effective pedagogical strategies that incorporate learning kits for enhanced teaching and learning experiences. The research frequency underscores the importance of evidence-based educational practices. As more studies are conducted, educators and policymakers have access to a growing body of research

to guide their decisions and strategies. Countries with fewer studies might benefit from exploring the potential benefits of learning kits.

Policymakers and educational institutions can consider investing in research to assess the effectiveness of learning kits in their specific contexts.

Countries with varying levels of research activity can collaborate to share insights, methodologies, and best practices related to the integration of learning kits. This can lead to more comprehensive and effective approaches.

Conclusions

In conclusion, the research undertaken to address the three distinct questions regarding the impacts of learning kits on students' conceptual understanding of physics, the potential differences in effect sizes across grade levels in high school, and the frequency of studies related to learning kits and their effect sizes per country have yielded valuable insights into the realm of education and pedagogy. The findings of the first research question underscore the substantial and positive impacts of utilizing learning kits on students' conceptual comprehension of physics concepts. The effectiveness of these kits in enhancing learning outcomes highlights their potential to transform traditional education approaches. The implications of this research are far-reaching, emphasizing the need to incorporate learning kits as essential tools within the pedagogical arsenal.

This approach not only enhances students' understanding but also necessitates curriculum adaptation, teacher training, and resource allocation to harness the full potential of these kits. Addressing the second research question, the study revealed that the effect sizes of interventions differ among subgroups based on grade levels in high school. This discovery signifies the importance of tailoring educational interventions to accommodate the diverse cognitive abilities and developmental stages of students across various grade levels. The implications extend to curriculum designers and educators, urging them to adopt strategies that align with the distinct needs of each subgroup.

This consideration ultimately supports the cultivation of effective learning experiences that cater to the unique challenges and growth trajectories of students at different points in their education journey. Lastly, the exploration of the frequency of studies across different countries pertaining to learning kits and their effect sizes demonstrates the global interest in enhancing educational methodologies. The variation in research frequency provides insights into the priorities, educational policies, and collaborative efforts of different nations. This offers opportunities for knowledge exchange, cross-country partnerships, and the potential for collective progress in educational practices. These findings emphasize the significance of evidence-based decision-making and collaborative platforms in shaping the future of education.

Recommendations

Based on the findings and implications of the conducted research on the impacts of using learning kits on students' conceptual understanding of physics concepts, the differences in effect sizes based on grade levels in high school, and the frequency of studies concerning learning kits and their effect sizes per country, the following recommendations are offered: Embrace and integrate learning kits as an integral part of educational strategies in physics classrooms. Capitalize on their proven effectiveness to enhance students' conceptual understanding and foster active learning experiences. Collaborate with curriculum designers to ensure that learning kits are aligned with grade-specific educational objectives. This alignment facilitates a seamless integration of kits into the curriculum, reinforcing core concepts and enhancing learning outcomes. Recognize the variation in effect sizes across different grade levels and design interventions that cater to the specific cognitive development and learning needs of each subgroup.

Tailored interventions maximize impact and support more effective educational experiences. Offer comprehensive teacher training programs that equip educators with the skills to effectively implement learning kits in the classroom. Professional development opportunities should address diverse grade levels and teaching methodologies. Allocate resources to procure high-quality learning kits that align with educational goals. Prioritize investment in these tools to ensure sustainability, and periodically assess and update kits to reflect evolving educational standards. Foster collaboration among countries with varying research frequencies on learning kits. Establish platforms for sharing insights, methodologies, and best practices to collectively enhance the effectiveness of learning kit integration. Encourage educational institutions, policymakers, and educators to base decisions on evidence from research studies. Stay updated with emerging research to inform teaching strategies and ensure they are aligned with the latest findings. Conduct longitudinal studies to track the long-term effects of learning kits on students' conceptual understanding and academic achievements. This would provide a more comprehensive understanding of the sustained impact over time. Prioritize the development of learning kits that are accessible to diverse learners, including those with varying learning styles and abilities. Ensure that no student is left behind due to barriers in using these tools. Continue conducting research on the effectiveness of learning kits across various educational contexts and subject areas. Investigate advanced methodologies, interdisciplinary applications, and their potential influence on broader educational reform.

Compliance with Ethical Standards

The researcher declares that there was no conflict of interest in the conduct of the study, that plagiarism was strictly avoided, that there was no bias in the interpretation of the findings and that the results were used purely for research purposes.

ABSTRACT

This study explores the utilization and organoleptic evaluation of pastry products made from arrowroot *(Maranta arundinacea)* flour, aiming to assess their acceptability and nutritional value while examining age-based preferences and shelf-life. Employing an experimental approach, baked products including pies, tarts, and cakes were meticulously developed from arrowroot flour. Sensory evaluations involving 120 participants across various age groups and food experts revealed high acceptability ratings, indicating widespread satisfaction with the products' appearance, aroma, taste, and texture. Statistical analyses further demonstrated no significant differences in acceptability among different age groups, underscoring the broad appeal of arrowroot-based pastries. Additionally, nutritional analyses showcased enhanced protein and fat content in the baked products compared to raw flour, augmenting their dietary value. However, observations on shelf-life delineated varying longevity, with pies and tarts maintaining quality for up to 10 days while cakes exhibited shorter viability. In conclusion, arrowroot flour emerges as a promising ingredient for crafting nutritious and palatable pastry products, suggesting avenues for product diversification and consumer education to capitalize on its culinary and nutritional benefits.

Keywords: *Arrowroot flour, pastry products, organoleptic evaluation, age-based preferences, sensory evaluation, shelf-life*

INTRODUCTION

Food is the most fundamental need in the hierarchy of human requirements. As the human population increased significantly during the 18th century, Thomas Malthus expressed great concern about the sustainability of food availability. Despite the growing human population, a total collapse in the food supply has not yet occurred, primarily due to the periodic emergence of new technologies that boost agricultural productivity and prevent a Malthusian crisis. However, none of these technologies, including the Green Revolution of the 1960s, has been genuinely sustainable, mainly due to their adverse environmental and social impacts (Kesavan & Swaminathan, 2018).

The modern economy is a structured system of activities conducted for financial gain, focusing on individuals pursuing common objectives, which makes modern society possible. A significant aspect of this economy is baking, a process that involves using high heat for an extended period, typically in an oven. Heat transforms batters and dough into baked items with a crisp, dry crust and a soft center. Although baking can be done at home, in bakeries, and in restaurants for daily meals and local consumption, industrialization has automated baking in large factories. Baked foods, especially bread, are frequent and significant from both economic and cultural standpoints, making baking a fundamental skill crucial for nutrition.

Baked goods are widely sold at bakeries, marketplaces, grocery stores, and farmers' markets. However, the regional climate conditions in tropical countries like the Philippines are less favorable for profitable wheat production. Consequently, the Philippines relies entirely on imported wheat for its baked goods.

Arrowroot *(Maranta arundinacea L.)*, locally known as *"Sagu"* among Ilocanos and *"Uraru"* among Tagalogs, is a low perennial herb found in rainforest areas, growing to about two feet in height. It has small white flowers and fruits and is primarily cultivated for the starch in its rhizome. This starch can serve as a healthier substitute for cornstarch, being finely ground, white, and powdery. It is the only starch product that contains calcium ash, essential for maintaining the body's acid-alkali balance (Fallon, 2000).

Arrowroot is grown mainly for its starchy tubers, which must be processed within 48 hours of harvest to prevent decay. The tubers are bathed in hot water, peeled to remove the fibrous covering, and then grated into a rough pulp. This process breaks down the stiff cells enclosing the starch. The pulp is washed over screens to separate the starch from the fibrous particles. The settled starch is centrifuged or filtered, promptly dried, and powdered. About 20% of the root's starch is extracted, with the remaining 78% being natural starch (Cecil, 1992; Kay et al., 1987). Arrowroot starch, one of the cleanest natural carbohydrates, has a high maximum viscosity and is used in desserts, pastries, jellies, and various meal preparations. It is particularly suitable for infants and people with special dietary needs due to its high digestibility. Industrial uses include glue and cosmetics, and it has several ethnomedical applications (Göhl, 1982; Ecocrop, 2015; Kay et al., 1987).

Roots and tubers undergo preparation and cooking before consumption, ranging from simple boiling to complex fermentation, drying, and baking. These crops are crucial for the nutrition of millions of people living in temperate zones, the tropics, and subtropics, where most of the world's population resides, often in undernourishment (FAO, 1990). Compared to cereals and legumes, root and tuber crops generally require less maintenance, fewer production inputs, and are less susceptible to pests and diseases. They are often farmed for subsistence, with only the surplus sold. Most are consumed fresh after boiling or roasting. Processing these crops yields various products, reduces post-harvest losses, improves flavor, and removes anti-nutritional elements like cyanide (Akaroda, 1992). Utilizing indigenous root crops in baked goods can reduce the cost of wheat flour importation and boost the local economy. Incorporating native root crops like arrowroot flour in baking can make inexpensive and nutrient-dense baked goods accessible and affordable to a large population, thereby reducing malnutrition in the nation.

This study aimed to examine the viability of using arrowroot flour as a versatile ingredient in baking. It assessed its effect on the final product's texture, taste, and overall quality through a series of controlled experiments and sensory evaluations. The researcher hopes to provide insightful information about the opportunities and challenges of incorporating arrowroot flour into baked goods, potentially closing the gap in sustainable and local food production.

Research Questions

This study aimed to develop pastry products (Pie and Tart) made from arrowroot flour and determine its acceptability.

Specifically, it sought to answer the following questions:

1. What are the processes involved in developing baked products (*Pie, Tart, and Cake)* using arrowroot flour?
2. What is the acceptability level of pastry products (*Pie, Tart, and Cake*) made from arrowroot flour in terms of:
   a. appearance/ color;
   b. aroma;
   c. taste, and
   d. texture?
3. What is the general level of acceptability of pastry products such as pie, tart, and cake made from arrowroot flour as evaluated by different age groups of respondents?
   a. children;
   b. teenagers;
   c. adults; and
   d. food experts
4. Is there a significant difference in the general level of acceptability of pie, tart, and cake made from arrowroot flour as perceived by the evaluators according to their age groups?
5. What is the nutritive value of pie, tart, and cake made from arrowroot flour?

6. What is the shelf–life of baked products made from arrowroot flour at room temperature?

METHODOLOGY

To conduct the study, tools, supplies, equipment, and materials were used.

1. Tools and Equipment

Preparation tools, measuring tools, mixing tools, cutting tools, baking pans, and equipment used in the conduct of the study are shown below.

Table 1. Tools and equipment needed in the preparation of Arrowroot pie, tart, and cake.

Preparatory Tools	Measuring Tools	Mixing Tools	Cutting Tools	Cooking Tools	Equipment
Flour Sifter	Measuring Spoons	Wire Whisk	Knife	Pie Pan	Oven
Utility Tray	Measuring Cups	Spoon	Dough Cutter	Gas Range	Dough Roller
Rolling Pin	Weighing Scale	Mixing Bowls	Chopping Board	Casserole	Blender
Bowl				Frying Pan	
Plate					
Kneading Table					
Grater					
Spatula					

The table shows the ingredients used in the production of baked products using arrowroot flour.

Table 2. Proportion of ingredients used in the preparation of Pie from arrowroot flour

Ingredients	Measurement
Arrowroot flour	1 ¼ C
Salt	½ tsp
Unsalted Butter	½ C
Sugar	¼ C
Cold water	¼ C
Arrow Root Pie Filling	
Egg whites	3 pcs.
Egg yolks	3 pcs.
Condensed Milk	396 G
Coconut Cream	396 G
Arrow root Halaya	½ C

Salt	¼ tsp.

Table 4. Proportion of Ingredients used in the preparation of Cake from arrowroot flour

Ingredients	Measurement
Arrowroot flour	1 ½ C
Cocoa Powder	1 C
Baking Powder	1 tsp
Baking Soda	1 tsp
White Sugar	1 C
Brown Sugar	¾ C
Salt	½ tsp
Oil	¾ C
Milk	1 C
Egg	1 Large Pc.
Vanilla	1 tsp
Coffee	1 tsp
Hot Water	¾ C

Legend: C- Cup Tbsp – Tablespoon pc – Piece tsp – teaspoon

Method Used in the Study

The study utilized an experimental research design to develop baked products (Pie and Tart) made from arrowroot flour. Furthermore, it used a survey method to determine the acceptability of the developed products in terms of appearance/color, aroma, taste, and texture.

Developmental Procedures

This study used arrowroot flour. The developmental procedures began with selecting the arrowroot crops, which were then dried, finely ground, and sifted to become arrowroot flour. After the preparation of the arrowroot flour, the preparation of baked products followed.

Preparation of Arrowroot Flour

The preparation for arrowroot flour began with selecting and washing the local root crops. After ensuring they were clean, the crops were dried completely. Once dried, they were finely ground using a food processor until they reached a powdery consistency. The ground root crops were then sifted to remove any coarse particles, resulting in a smooth, fine flour.

Preparation of Pie, Tart, and Cake Products

The preparation of baked products from arrowroot flour began with sifting to remove dirt, and insects, and to separate and break up coarse particles. Next, the ingredients were measured exactly according to the standard recipe. Selecting the best quality ingredients was essential to ensure the final product's quality. Following this, the ingredients were mixed and combined into a homogenous mass to form the product.

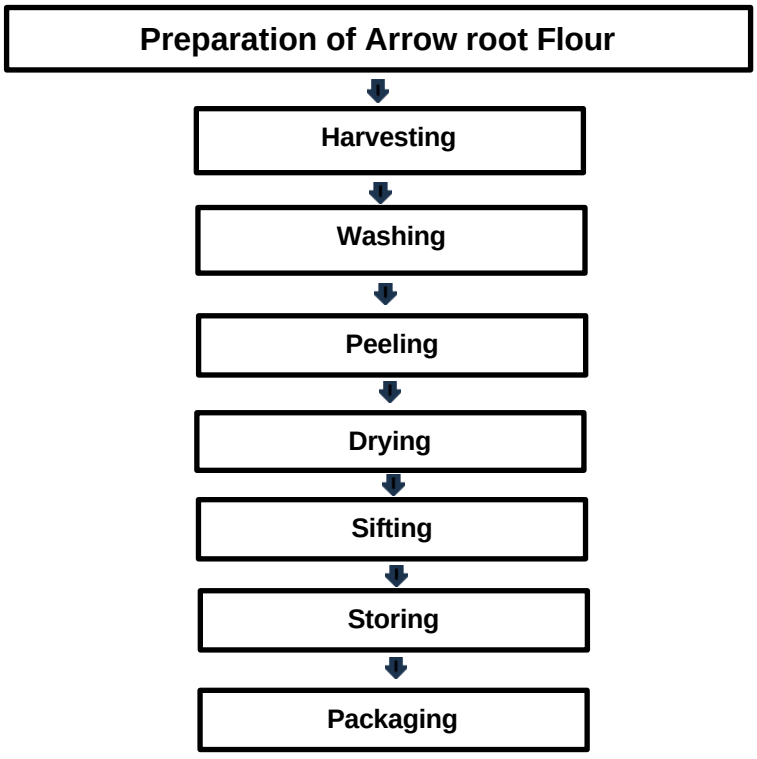

Figure 2. Process Diagram of the Preparation of Arrowroot Flour for Pastry Products

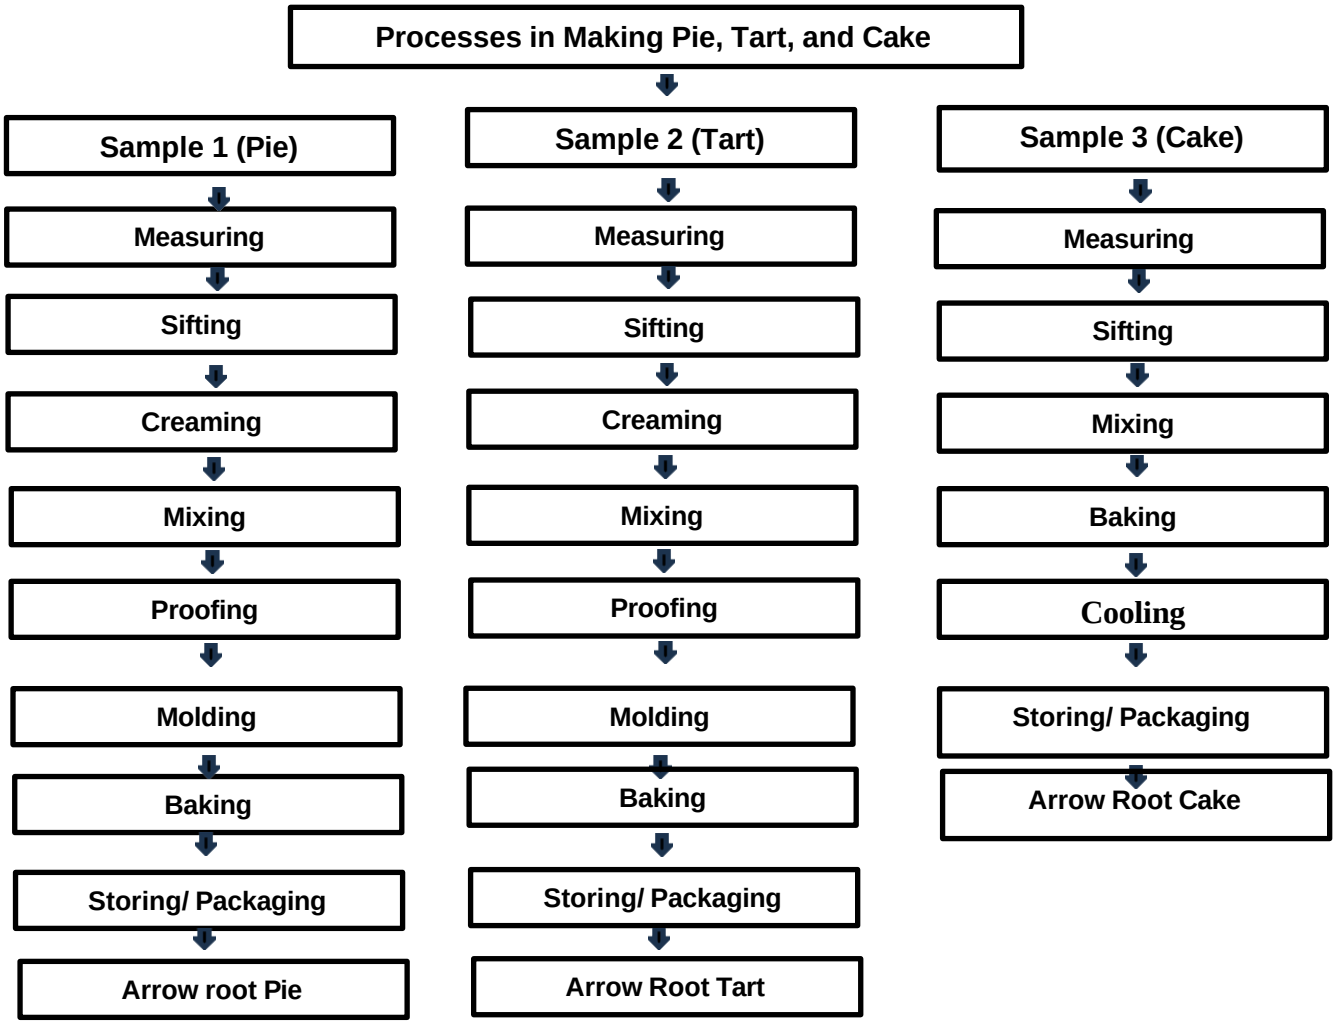

Fig. 2. Flow Diagram in the Making of Pastry Products from Arrow Root Flour

Data Gathering Instrument

The conducted study employed rubrics for evaluation, as well as a questionnaire, which respondents used to rate the treatment. These rubrics were chosen due to their suitability in measuring the acceptability of the products across various dimensions, including aroma, appearance, taste, texture, and overall acceptability.

Data Gathering Procedure

The respondents, including children, teenagers, adults, and food experts, were asked to perform a sensory evaluation of the developed products. After obtaining permission, the questionnaires were distributed. The researchers explained the directions for completing the questionnaires to the evaluators. Once completed, the questionnaire

checklists were retrieved by the researchers. The sensory assessment questionnaire checklist was used to compile data on the acceptability of arrowroot pie, tart, and cake.

Sensory Evaluation

The finished products were subjected to organoleptic/sensory evaluation. One hundred twenty (120) participants from varied age groups were purposely selected and oriented on how to evaluate the products using an evaluation form. The evaluators included children and adults from the Municipality of San Mariano, Isabela, as well as teenagers, adults, and Food Technology teachers from the Municipality of Cabatuan, Isabela, along with selected bakeshops in both municipalities. The study was conducted during the second semester of the 2023-2024 school year.

Each participant was asked to taste the baked products made from arrowroot flour. The data collection involved using a score sheet to determine the acceptability level of these baked products. Participants' responses were gathered using a Nine (9) point Hedonic Scale, as shown in Table 5, to assess the level of acceptability of the baked products made from arrowroot flour.

Table 5. The Range of Numerical Rating and its Descriptive Equivalent

SCALE	NUMERICAL RATING	DESCRIPTIVE RATING
9	8.50 – 9.00	Like Extremely
8	7.50 – 8.00	Like Very Much
7	6.50- 7.00	Like Moderately
6	5.50- 6.00	Like Slightly
5	4.50 – 5.00	Neither Like nor Dislike
4	3.50 – 4.00	Dislike Slightly
3	2.50 – 3.00	Dislike Moderately
2	1.50 – 2.00	Dislike Very Much
1	0.50- 1.00	Dislike Extremely

RESULTS

Product Development

The following were the procedures followed by the researcher in the making of the pastry products (Pie, Tart, and Cake).

Procedure for the Flakey Pie and Tart Crust

The procedure for making the flaky pie and tart crust began by measuring all the necessary ingredients. The dry ingredients were combined in a mixing bowl, and then

unsalted butter, cut into small pieces, was added to the mixture. A little water was gradually incorporated into the mix. Care was taken not to over-mix the dough. Once all the ingredients were mixed, the dough was formed into an oval or circle shape, wrapped in clean, clear plastic wrap, and placed in the refrigerator for about 30 minutes. After the chilling period, the dough was taken out, and a rolling pin dusted with flour was used to flatten it. The dough was then divided according to the required sizes and placed into pie and tart molds, making it ready for baking.

For the Arrowroot Pie and Tart Filling

The procedure for making the arrowroot pie and tart filling began by preparing and combining all the necessary ingredients for the filling. Arrowroot was then added to the mixture, and all the ingredients were thoroughly mixed. The filling was spooned into the prepared pie and tart crusts. The oven was preheated for about 20 minutes at 200 degrees Celsius. After preheating, the pies and tarts were baked for up to 30 minutes, or until the desired texture was achieved.

Figure 3. Materials and ingredients for the pastry products made from Arrowroot flour are carefully prepared

For the Arrow Root Cake

To prepare the arrowroot cake, the first step involved preparing and measuring all the required materials and ingredients. Once measured, both the dry and wet ingredients were combined in a mixing bowl. Carefully, the dry and wet ingredients were mixed until they formed a homogeneous mixture. Meanwhile, the baking pan was prepared by lining it with parchment paper, ensuring the inside was well-covered to prevent sticking. As the mixed ingredients were sifted into the baking pan, they were evenly spread to create a uniform layer. Following this preparation, the oven was preheated for approximately 20 minutes to reach the required temperature. Once the oven was properly preheated, the

filled baking pan was placed inside for the baking process. The cake was baked until it reached the desired level of doneness. After baking, the cake was removed from the oven and allowed to cool. Finally, once cooled, the arrowroot cake was carefully packed for storage or serving, ready to be enjoyed.

Figure 4. The Arrowroot Tart as a Final Product

Acceptability of Baked Products (Pie, Tart, and Cake) made from Arrowroot Flour

Table 6. Acceptability level of baked products (Pie, Tart, and Cake) made from arrowroot flour in terms of appearance/ color, aroma, taste, and texture

Variant	Criteria	Mean	Standard Deviation	Description
Pie	Appearance/Color	8.20	0.74	Like Very Much
	Aroma	8.24	0.73	Like Very Much
	Taste	8.34	0.85	Like Very Much
	Texture	8.15	0.84	Like Very Much
	Overall Rating	**8.23**	0.63	Like Very Much
Tart	Appearance/Color	8.24	0.62	Like Very Much
	Aroma	8.29	0.57	Like Very Much
	Taste	8.30	0.70	Like Very Much
	Texture	8.25	0.66	Like Very Much
	Overall Rating	**8.2708**	0.51	Like Very Much
Cake	Appearance/Color	8.37	0.72	Like Very Much

	Aroma	8.35	0.70	Like Very Much
	Taste	8.46	0.71	Like Very Much
	Texture	8.33	0.77	Like Very Much
	Overall Rating	**8.3771**	.60893	Like Very Much

The table presents the acceptability levels of baked products, namely pies, tarts, and cakes, made from arrowroot flour, evaluated across various criteria including appearance/color, aroma, taste, texture, and overall rating.

For pies, the mean scores for appearance/color, aroma, taste, texture, and overall rating are 8.20, 8.24, 8.34, 8.15, and 8.23 respectively, with standard deviations ranging from 0.63 to 0.85.

Similarly, the mean scores for tarts are slightly higher, with appearance/color at 8.24, aroma at 8.29, taste at 8.30, texture at 8.25, and overall rating at 8.2708, with standard deviations ranging from 0.51 to 0.70.

Cakes received the highest mean scores, with appearance/color at 8.37, aroma at 8.35, taste at 8.46, texture at 8.33, an overall rating at 8.3771, and standard deviations from 0.60893 to 0.77.

All three types of baked products made from arrowroot flour received high acceptability ratings, with mean scores indicating that the respondents "Like Very Much" across all criteria. The standard deviations suggest relatively consistent agreement among respondents regarding the quality of the baked products. In general, it can be concluded that baked products made from arrowroot flour, including pies, tarts, and cakes, are highly acceptable in terms of appearance, aroma, taste, texture, and overall satisfaction among consumers.

Hence, this finding is similar to the study of Singh & Iraj (2023) that the experimental preserved had the greatest average score for overall acceptability and largely approved by the panelists, products were organoleptically evaluated using the nine-point scorecard method or Hedonic Rating System.

General Acceptability of Baked Products (Pie, Tart, and Cake) made from Arrowroot Flour across Age Groups

Table 7. General level of acceptability of baked products such as pie, tart, and cake made from arrowroot flour as evaluated by different age groups of respondents

Variant	Respondents	Mean	Standard Deviation	Description
Pie	Children	8.11	0.71	Like very much
	Teenagers	8.28	0.66	Like very much
	Adults	8.33	0.53	Like very much
	Food Experts	8.21	0.63	Like very much

Tart	Children	8.19	0.51	Like very much
	Teenagers	8.34	0.64	Like very much
	Adults	8.25	0.42	Like very much
	Food Experts	8.30	0.45	Like very much
Cake				
	Children	8.25	0.73	Like very much
	Teenagers	8.35	0.67	Like very much
	Adults	8.56	0.48	Like extremely
	Food Experts	8.34	0.50	Like very much

The table presents the general level of acceptability of baked products, specifically pies, tarts, and cakes made from arrowroot flour, as evaluated by different age groups of respondents, including children, teenagers, adults, and food experts. For pies, the mean scores for children, teenagers, adults, and food experts are 8.11, 8.28, 8.33, and 8.21 respectively, with standard deviations ranging from 0.53 to 0.71. Similarly, for tarts, the mean scores are 8.19 for children, 8.34 for teenagers, 8.25 for adults, and 8.30 for food experts, with standard deviations ranging from 0.42 to 0.64. For cakes, children rated them at 8.25, teenagers at 8.35, adults at 8.56, and food experts at 8.34, with standard deviations ranging from 0.48 to 0.73.

Overall, across all age groups and baked product types, the mean scores indicate a high level of acceptability, with respondents consistently rating the products as "Like very much" or even "Like extremely" in the case of adult respondents evaluating cakes. The standard deviations suggest relatively consistent agreement among different age groups and food experts regarding the quality and acceptability of baked products made from arrowroot flour. Therefore, it can be concluded that these products are generally well-received across various age groups and among food experts, indicating their broad appeal and quality.

This finding is similar to the study conducted by (Gonzales & Mariano, 2022) in terms of its appearance, aroma, texture, color, and overall acceptability.

Comparison in the Level of Acceptability of Pie and Tart made from Arrowroot as Perceived by the Groups of Respondents

Table 8. Comparison in the level of acceptability of pie and tart made from arrowroot flour as perceived by the evaluators according to their age groups

Variant	F-value	p-value	Comparison	Decision	Remark
Pie	0.71	0.55	p-value > 0.05	Accept Ho	No significant difference
Tart	0.48	0.69	p-value > 0.05	Accept Ho	No significant difference
Cake	1.33	0.27	p-value > 0.05	Accept Ho	No significant difference

The analysis suggests that there is no significant difference in the general level of acceptability of pie and tart made from arrowroot flour among different age groups of evaluators. For pies, the F-value is 0.71 with a p-value of 0.55, indicating that the p-value is greater than 0.05. Similarly, for tarts, the F-value is 0.48 with a p-value of 0.69. Lastly, for cakes, the F-value is 1.33 with a p-value of 0.27. In all cases, the p-values are greater than the commonly used significance level of 0.05. Therefore, the null hypothesis (Ho) is accepted, indicating that there is no significant difference in the general level of acceptability of these baked products among different age groups of evaluators. This implies that regardless of age, respondents perceive pies, tarts, and cakes made from arrowroot flour similarly in terms of acceptability.

The findings above are similar to the findings of Claros& Palomar (1998) who found that arrowroot flour can be used as an ingredient in baked products.

Nutritive Value of Pie, Tart, and Cake Made from Arrowroot Flour

Arrowroot flour and baked goods made from it, such as pies, tarts, and cakes, have different nutritional profiles. Arrowroot flour itself is quite low in nutrients, containing 0.72% crude protein, 0.18% crude fiber, 0.48% crude fat, 12.08% moisture content, and 0.39% crude ash. In contrast, the baked products made from arrowroot flour show significantly higher nutritional values. They contain 2.15% crude protein, 0.22% crude fiber, 18.44% crude fat, 27.82% moisture content, and 1.33% crude ash.

Shelf-life of Pastry Products (Pie, Tart, and Cake) Made from Arrowroot Flour

The shelf-life of pastry products made from arrowroot flour, including pies, tarts, and cakes, varied in terms of their appearance, aroma, taste, and texture over time.

Arrowroot Pies and Tarts

On day 1, the products maintained their freshness, with no noticeable changes in appearance, aroma, taste, or texture. From day 2 to day 3, the products remained consistent in all aspects. From day 4 to day 10, the products continued to maintain their quality without significant changes. By day 11, the appearance began to change, showing signs of inflated filling. From day 12 to day 13, although the products were still edible, there were noticeable changes in appearance, with the filling showing signs of inflation. From day 15 to day 20, the texture of the filling became wet, making it less appetizing. While the crust remained compact, the filling was no longer edible. And, by day 21 to day 22, the pies and tarts were no longer edible due to mold growth in the filling.

Arrowroot Cakes

On day 1 and day 2, the cakes maintained their freshness, appearance, color, taste, and texture similar to freshly baked products. From day 3 to day 5, the cakes began

to show signs of moisture, with the appearance becoming wet. Additionally, mold growth started to develop, rendering the arrowroot cake inedible beyond this point.

Conclusions

The study confirms that arrowroot flour is an excellent ingredient for pies, tarts, and cakes, achieving high acceptability across all sensory criteria and age groups. The products made from arrowroot flour also show enhanced nutritional value. Despite a limited shelf-life, arrowroot-based baked goods offer a nutritious and appealing alternative for health-conscious consumers and the food industry.

Recommendations

In view of the findings and conclusions of the study, the following are recommended:

1. Given the high acceptability of arrowroot-based pies, tarts, and cakes, it is recommended for food technologists, food teachers, and students to experiment with other pastry products using arrowroot flour, such as cookies, muffins, and bread, to broaden the product range.

2. Methods to extend the shelf-life of arrowroot-based baked goods, such as incorporating natural preservatives or optimizing packaging techniques, to maintain product quality for a longer duration should be investigated.

3. The researcher should market the nutritional benefits of arrowroot flour products to health-conscious consumers, emphasizing the higher protein and fat content in baked goods compared to raw flour.

4. Educational campaigns highlighting the benefits of arrowroot flour, its nutritional advantages, and the sensory appeal of the products made from it, to increase consumer awareness and demand be conducted.

5. There should be a collaboration with food teachers, culinary experts, and nutritionists to develop new recipes and enhance the quality of existing products, ensuring they meet both culinary standards and consumer preferences.

6. The researcher is encouraged to collaborate with government agencies like the Department of Science and Technology (DOST) and the Department of Trade and Industry (DTI) for the promotion of arrowroot flour as a sustainable ingredient,

highlighting its environmental benefits compared to other conventional flours, to appeal to environmentally-conscious consumers.

Compliance with Ethical Standards

The author hereby declares that this study was conducted in full compliance with ethical standards, including obtaining informed consent from all respondents. Respondents were given the freedom to withdraw from the study at any time without any consequences. The anonymity of the respondents was strictly maintained throughout the research process, and their well-being was safeguarded at all times. He affirms that there is no conflict of interest in the conduct of this study. Furthermore, plagiarism was strictly avoided, and the study's findings were interpreted without any bias. The results of this study are used purely for research purposes.

Acknowledgments

The researcher would like to extend his heartfelt gratitude to his research adviser for her invaluable guidance, to the participants of this study for their essential contributions, and to the researcher's family and friends for their unwavering support. He is also deeply thankful to his colleagues for their encouragement, and most importantly to God for providing him with the strength and perseverance to complete this work.

ABSTRACT

This study aims to determine the immediate achievement and knowledge retention levels among students who utilize the digital mind mapping application and to ascertain the effect of utilizing digital mind mapping on students' immediate achievement level in terms of pretest and direct post-test, as well as on students' knowledge retention level in terms of direct post-test and delayed post-test. This research study employed a one-shot pretest-posttest pre-experimental research design. Data were gathered from thirty-six (36) seventh-grade students of Tongantongan National High School through pretest, direct post-test, and delayed post-test questionnaires. The data were subjected to descriptive statistics such as the mean, percentage and frequency and analyzed using Paired t-test at 0.05 level of significance. The result of the study revealed that the students have poor immediate achievement level and knowledge retention level. Furthermore, the paired t-test analysis showed that there is a significant difference in students' immediate achievement level in terms of pretest and direct post-test, and there is also significant difference in students' knowledge retention level in terms of direct post-test and delayed post-test. It indicates that despite the students' poor achievement and retention level, the utilization of the digital mind mapping application has a positive effect on enhancing students' ability to acquire and retain knowledge. The overall result encourages higher authority, curriculum experts, and educators to leverage technology and consider utilizing digital mind mapping application as a method in optimizing the students' achievement and retention level.

Keywords: *digital mind map, immediate achievement, knowledge retention*

INTRODUCTION

The 21st century marks a remarkable shift in education, where learning and teaching intertwine with the dynamic pace of innovation and technology. It's an era where classrooms extend beyond four walls into a digital realm of endless possibilities. With the ever-changing world of technology, classrooms are gaining more technology and having to incorporate it into student learning. As education becomes more digitized, using technological tools to organize educational content becomes critical to the success of education (Arisoy, 2022).

One of the problems that stimulated the making of this study is the poor academic achievement scores and declining student retention rates within the Filipino student population. According to the 2018 PISA International Report, Filipino students scored an average of 353 points in mathematical literacy, which is notably less than the Organization for Economic Cooperation and Development (OECD) average of 489 points, indicating a below Level 1 proficiency (OECD, 2019). The 2019 Trends in International Mathematics and Science Study (TIMSS), assessed the performance of Grade four students in math and science proficiency, it ended up with the lowest rank out of the 58 countries that were part of the study (Sison, 2022). These achievement tests are heavily influenced by the students' effectiveness to attain and retain knowledge. As student teachers, these findings are very visible in the classroom setting, especially the students of Tongantongan National High School. Prior to the conduct of study, students showed an unsatisfying academic performance especially in achieving the intended learning outcomes and retaining knowledge. With an average percentage mean score of 43 percent, a total of 140 Grade-7 students did not meet the expectation in their summative test on the topic Motion in One Dimension. This result is alarming because Grade 7 students, as the first year in high school curriculum, are expected to grasp fundamental concepts pivotal to subsequent high school curricular progression.

In the context of education, immediate achievement refers to the initial and tangible outcomes or knowledge gained shortly by the learners after engaging a new learning experience while retention is the person's ability to remember information they have learned, whether it is for a short or extended duration (Bawaneh, 2019). Instead of memorizing, educators want their students to retain knowledge spanning for more than a week after the implementation of innovation, intervention, or strategy (Akanbi et al., 2021; Meyer et al., 2019; Granito & Chernobilsky, 2012). When the students struggle to meet the learning outcomes and retain essential knowledge in Mathematics and Science, it not only affects their test scores but also impedes their ability to advance in these subjects, leading to lower international rankings.

In connection to this problem, educators are actively exploring strategies to assist students in transferring knowledge from their short-term memory to their long-term

memory (Valderama & Oligo, 2021). One of the solutions is the integration of an effective note-taking strategy such as Mind mapping developed by Tony Buzan in 1974. A mind map is a graphical representation of a topic or idea that aids in the teaching and learning process in the classroom (Anas et al., 2018). Mind mapping highlights the necessary facts and overall structure of a subject. Mind mapping helps an individual see connections and provide overview of key points. Several studies implied the significant effects of mind mapping in enhancing students' academic performance especially in Physics subject (Akanbi et al., 2021; Bawaneh, 2019).

This action research aims to discover the effects of the implementation of Digital Mind Mapping as instructional strategies to enhance the learners' acquisition and retention of knowledge, ultimately fostering better educational outcomes for Filipino students. The results and findings of this study will be beneficial in the field of education, considering the evident poor academic achievements and declining students' retention rate in the country which lead to poor academic performances. Thus, the schools' administrators and teachers will be guided on what to emphasize and utilize in order to increase students' immediate achievement and retention rate in improving their academic performance and life-long success.

The purpose of this study was to determine the immediate achievement and knowledge retention levels among the students exposed to digital mind mapping application, assess the statistical significant difference of the students' immediate achievement level in terms of pretest and direct post-test, and ascertain the statistical significant difference of the students' knowledge retention level in terms of direct post-test and delayed post-test. The research was conducted at Tongantongan National High School with Grade 7 Archimedes students serving as the primary research participants.

Research Questions

This action research generally aims to investigate the effect of the utilization of digital mind mapping application in enhancing students' immediate achievement and knowledge retention. Specifically, it seeks to answer the following questions:

1. What is the immediate achievement level of students exposed to digital mind mapping application in terms of pretest and direct post-test?
2. What is the level of knowledge retention of the students exposed to digital mind mapping application in terms of direct post-test and delayed post-test?
3. Is there a significant difference on students' immediate achievement level exposed to digital mind mapping application in terms of pretest and direct post-test?
4. Is there a significant difference on students' knowledge retention level exposed to digital mind mapping application in terms of direct post-test and delayed post-test?

Hypotheses

To answer the stated problems, the study aims to test the following null hypothesis at 0.05 level of significance:

H_{01}: There is no significant difference on students' immediate achievement level exposed to digital mind mapping application in terms of pretest and direct post-test.

H_{02}: There is no significant difference on students' knowledge retention level exposed to digital mind mapping application in terms of direct post-test and delayed post-test.

METHODOLOGY

Locale of the Study

The study was implemented within the premises of Tongantongan National High School, which is located at P-8, Tongantongan, Valencia City, Bukidnon.

Sampling Method

A purposive sampling method was utilized in identifying the research participants. The students observed were the Grade-7 Archimedes students, with overall 36 participants, taking Physics subject focusing on the topic of Waves particularly the types of waves and anatomy of waves. The researchers chose Grade 7 students, the first year in high school curriculum, as they are expected to grasp fundamental concepts pivotal to subsequent high school curricular progression.

Innovation and Intervention

The innovation of this action research is to investigate the effect of using digital mind mapping application in enhancing students' immediate achievement and knowledge retention. The digital mind mapping application employed was the Nice Mind Application, an offline application that can be downloaded from the Play Store freely. This application was selected because of its accessibility, smooth navigation features, pre-designed templates, customization options, and intuitive and user-friendly interface. In this study, the phases of implementation of the digital mind mapping application to the students were modified from the study of Bawaneh (2019) as follows:

1. Pre-Intervention Assessment – The students underwent a pretest to assess their baseline knowledge before taking the topic about the types and anatomy of waves.
2. Introduction of the Innovation – Digital mind mapping application was introduced and taught to the students including its purpose, key elements, examples, and steps-by-step process.

3. Assisted Intervention –The students, along with the teacher created digital mind maps based on previous lesson, which served as examples.
4. Independent Practice – The students independently practiced utilizing the mind mapping application. They were given homework to create digital mind maps about the types and anatomy of waves. During the class discussion, students used their pre-made mind maps as means of instructional materials.
5. Feedback Session – This phase also highlighted the process of providing feedback to students based on their independent practice. Some of the mind maps contained misconceptions that need to be corrected. Students were given time to revise and modify their prepared mind maps during the class discussion.
6. Post-Intervention Assessment – After all sessions, the students took a direct post-test to assess the outcome or changes resulting from the utilization of the digital mind mapping application. Four weeks after the implementation of the intervention, students underwent a delayed post-test to ascertain the effect of using mind mapping in students' retention level.

Data Collection Method

In this study, the researchers used pre-test, direct post-test, and delayed post-test questionnaires. Before conducting the research, the researchers provided the participants with consent forms to ensure their voluntary participation and to safeguard their rights throughout the research process. The subject was Physics taken by seventh-grade students at Tongantongan National High School. The questionnaires were disseminated among the participants, who were required to respond both prior to and subsequent to the teaching process and planned intervention.

Research Instrument

The researchers employed a 20-item questionnaire modified from the learners' textbook and was verified by the corresponding Cooperating Teacher and School Principal. Table of Specifications was provided to ensure the validity of the said test questionnaire. These questionnaires were designed to capture comprehensive insights into the students' immediate achievement and knowledge retention, spanning a scope of areas relevant to the topic of Waves.

Data Analysis

The data gathered from the pretest, direct post-test, and delayed post-test were subjected to descriptive statistics analysis, such as mean, percentage and frequency, to interpret the students' level of immediate achievement and knowledge retention. The students' immediate achievement level and knowledge retention level will be interpreted by adopting the DepEd Order No. 8 series of 2015 grading scale, as presented in table 1 and table 2. The scaling has minimal modifications including the range of raw scores that was adopted from the study of Ollero (2023) and qualitative interpretation from the study of Dumale and Gurat (2023).

Table 1. Qualitative Scale of the Students' Immediate Achievement

Raw Score	Grading Scale	Descriptive Rating	Qualitative Interpretation
16.8-20.0	90-100	Outstanding	Outstanding IA
15.2-16.7	85-89	Very Satisfactory	Very satisfying IA
13.6-15.1	80-84	Satisfactory	Satisfying IA
12.0-13.5	75-79	Fairly Satisfactory	Fairly satisfying IA
0.00-11.9	Below 75	Did Not Meet Expectations	Poor IA

Legend: IA – Immediate Achievement

Table 2. Qualitative Scale of the Students' Knowledge Retention

Raw Score	Grading Scale	Descriptive Rating	Qualitative Interpretation
16.8-20.0	90-100	Outstanding	Outstanding KR
15.2-16.7	85-89	Very Satisfactory	Very Satisfying KR
13.6-15.1	80-84	Satisfactory	Satisfying KR
12.0-13.5	75-79	Fairly Satisfactory	Fairly Satisfying KR
0.00-11.9	Below 75	Did Not Meet Expectations	Poor KR

Legend: KR – Knowledge Retention

A paired t-test was then utilized to ascertain the presence of any statistically significant differences between the students' pretest-posttest results following exposure to digital mind mapping applications, specifically in the context of enhancing immediate achievement and knowledge retention. This statistical device was employed to test the following hypotheses at 0.05 level of significance: there is no significant difference in students' immediate achievement level exposed to digital mind mapping application in terms of pretest and direct post-test; and there is no significant difference in students' knowledge retention level exposed to digital mind mapping application in terms of direct post-test and delayed post-test.

Scope and Limitation

This action research employed a one-shot pretest-posttest pre-experimental research design in order to investigate the effect of utilizing digital mind mapping application in enhancing students' immediate achievement and knowledge retention. The purposively selected participants are the thirty-six (36) seventh-grade students of Tongantongan National High School. Moreover, the intervention utilized only one digital mind mapping application which the Nice Mind Application. The researchers followed a systematic procedure in implementing the intervention using the modified phases of Bawaneh (2019). Furthermore, the data gathered through pre-test, direct post-test, and delayed post-test using the verified 20-item questionnaire, spanning a scope limited only to the types of waves and anatomy of waves. These questionnaires were designed to capture comprehensive insights into the students' immediate achievement and knowledge retention.

RESULTS AND DISCUSSION

This part presents the students' immediate achievement level and knowledge retention level after the exposure to Digital Mind Mapping Application. It includes the Inferential Analysis in order to conclude the structured hypotheses.

Students' Immediate Achievement Level

Table 3 presents the students' immediate achievement level when exposed to digital mind mapping application. It shows the result of the utilization of mind mapping application through pre-test and direct post test scores. This encompasses the ability of the students to attain the intended learning outcomes in a short range of time. Immediate achievement is comparable to the short-term mastery of the students in acquiring new knowledge.

Table 3. Students' Immediate Achievement in Relation to Pretest and Direct Post-test Scores

Score Range	Pretest		Direct Post-test		Descriptive Rating
	N	%	N	%	
16.8-20.0	0	0	0	0	Outstanding
15.2-16.7	0	0	0	0	Very Satisfactory
13.6-15.1	0	0	2	6	Satisfactory
12.0-13.5	0	0	5	14	Fairly Satisfactory
0.00-11.9	36	100	29	80	Did Not Meet Expectations
Total	36	100	36	100	
Overall Mean	6.67		8.72		
Std. Deviation	1.93		3.27		
Descriptor	DNME		DNME		

Legend:

Range	Descriptive Rating	Qualitative Interpretation
16.8-20.0	Outstanding	Outstanding Immediate Achievement
15.2-16.7	Very Satisfactory	Very Satisfying Immediate Achievement
13.6-15.1	Satisfactory	Satisfying Immediate Achievement
12.0-13.5	Fairly Satisfactory	Fairly Satisfying Immediate Achievement
0.00-11.9	Did Not Meet Expectations	Poor Immediate Achievement

The pretest scores highlight the baseline level of proficiency among the students prior to the intervention. It further reveals that 100 percent of the students, with a total number of 36 students, scored below 12. This shows an overall mean of 6.67 and standard deviation of 1.93. The students' result in their pretest suggests a clear need for intervention such as the digital mind mapping application in improving student outcomes.

On the other hand, the direct post-test scores of the students depict a positive outcome after the utilization of mind mapping application. The percentage of the students who scored below 12 declined to 80 percent. Moreover, some students show progress in their performance. Five students (14 percent) obtained a fairly satisfying achievement level while 2 students (6 percent) garnered a satisfying achievement level. The overall mean of students' direct post-test scores is 8.72 and standard deviation of 3.27. Notwithstanding the increase in students' performance from pretest to direct post-test, the

achievement level is still not satisfactory. The immediate achievement level of the students in terms of pretest and direct post-test scores did not meet the expectations and interpreted as “poor” immediate achievement.

This outcome corresponds with the Philippine ranking in the Programme for International Assessment (PISA) 2018. According to the result, only 22% of the 7, 233 15-year-old Filipino students who participated in PISA achieved the minimum level of competency in science literacy. This performance in the science assessment places the Philippines near the bottom of the 79 countries and economies that participated in PISA 2018. This shows that Filipino students have poor immediate achievement as reflected in their poor academic performance.

As observed during the implementation of the study, the poor immediate achievement of the students may be influenced by their poor reading skills and comprehension, as well as their short attention span. According to the study of Imam (2016), regular reading is suggested to enhance comprehension and boost student performance. It indicates that the students’ ability to read highly affect their comprehension and performance. Additionally, independent reading often fosters strong comprehension skills and critical thinking abilities. The benefits extend beyond academia, as reading skills acquired in youth persist into adulthood. However, individuals with limited attention spans face challenges in deeply engaging with academic materials, leading to fragmented learning experiences and compromised comprehension. Whether listening to lectures, tackling dense textbooks, or solving complex problems, their ability to sustain focus is hindered, impacting their capacity for meaningful understanding (Akbasli et al., 2016). Shortened attention spans correlate with lower test scores, difficulty retaining information, and struggles in synthesizing disparate concepts into cohesive understanding.

Students’ Knowledge Retention Level

Table 4 exhibits the outcome with regard to students' retention of knowledge when exposed to digital mind mapping application. This displays the percentage and score range of the students who received direct post-test and a delayed post-test intervention. This section will reveal the ability of the students to recall and retain knowledge four weeks after the intervention, with the direct post-test serving as our baseline.

The same data are used for the direct post-test, wherein the overall mean is 8.72 and standard deviation of 3.27. Table 4 further reveals that the majority of students (24 out of 36 students, constituting 66 percent) still scored below 12 in their delayed post-test. Most of the students did not meet expectations. Delayed post-test result exhibits notable findings. Specifically, five students (14 percent) garnered fairly satisfying scores and another five students (14 percent) secured satisfying scores. Furthermore, a new result was obtained wherein one student attained very satisfying score and another one who got an outstanding score. Regardless of this progress, with an overall mean of 10.53 and standard deviation of 3.35, the knowledge retention level of the students is still not satisfactory. The knowledge retention level of the students in terms of direct post-test and

delayed post-test scores did not meet the expectations and interpreted as “poor” knowledge retention.

Table 4. Students’ Knowledge Retention in Relation to Direct Post-test and Delayed Post-test

Score Range	Direct Post-test		Delayed Post-test		Descriptive Rating
	N	%	N	%	
16.8-20.0	0	0	1	3	Outstanding
15.2-16.7	0	0	1	3	Very Satisfactory
13.6-15.1	2	6	5	14	Satisfactory
12.0-13.5	5	14	5	14	Fairly Satisfactory
0.00-11.9	29	80	24	66	Did Not Meet Expectations
Total	36	100	36	100	
Overall Mean	8.72		10.53		
Std. Deviation	3.27		3.35		
Descriptor	DNME		DNME		

Legend:

Range	Descriptive Rating	Qualitative Interpretation
16.8-20.0	Outstanding	Outstanding Knowledge Retention
15.2-16.7	Very Satisfactory	Very Satisfying Knowledge Retention
13.6-15.1	Satisfactory	Satisfying Knowledge Retention
12.0-13.5	Fairly Satisfactory	Fairly Satisfying Knowledge Retention
0.00-11.9	Did Not Meet Expectations	Poor Knowledge Retention

This outcome affirms the investigation of Dumale and Gurat (2023) stating that Grade 12 students enrolled in the course subject 'statistics and probability' exhibited a poor retention rate in solving sample problems and sample probabilities. Furthermore, they noted that students demonstrated a poor retention rate across all learning competencies related to sampling distribution of the sample mean, with the exception of illustrating random sampling.

Retention of information is a crucial aspect of the learning process. One major factor that affects the students’ poor retention is having poor note-taking strategies. Benzer et al. (2022) defines note-taking as summarizing what one has understood in one's own words to remember it later. As observed during the implementation of the study, many students don’t know the most effective way to take notes in class. As a result, students are often left with study notes that are missing information, hard to understand, or unorganized (Peverly & Wolf, 2019). Furthermore, Peverly and Wolf's study indicates that students who actively engage with the material while taking notes have the chance to deeply encode the information into their memory.

Inferential Analysis on Students’ Immediate Achievement Level

Table 5 depicts the paired t-test analysis on students’ immediate achievement when exposed to digital mind mapping application. It shows the effect of the utilization of mind mapping application through analyzing the difference between the students’ pre-test and direct post test scores. This result aims to reject the first null hypothesis stating that

there is no significant difference in students' immediate achievement level exposed to digital mind mapping application in terms of pretest and direct post-test.

Table 5. Paired T-test Analysis on Students' Immediate Achievement Level

	Paired Difference		t	Sig (2-tailed)
	Mean	Std. Deviation		
Direct posttest-Pretest	2.0556	3.2509	3.7939	0.0006**

It resulted in a mean difference of 2.0556, a standard deviation of 3.2509, and a t-value of 3.7939. It indicates that significant number of students showcased improvements in direct post-test. The overall mean scores from pretest to direct post-test increased from 6.67± 1.93 to 8.72± 3.27. With a p-value of 0.0006, this manifests a highly significant enhancement in students' immediate achievement following the intervention of the digital mind mapping application. This implies that despite the students' initially poor achievement level, the utilization of the digital mind mapping application has a positive effect on the students' immediate achievement in terms of pretest and direct post-test.

Mind mapping effectively enhances students' immediate achievement because of its collaborative feature for brainstorming and seamlessness to construct ideas. According to a study by Suharto et al. (2023), the implementation of mind maps significantly enhances learners' ability to grasp material more rapidly, thereby saving time during collaborative tasks. Additionally, mind mapping helps students to better understand the relationships between different concepts, which facilitates deeper comprehension. As it encourages active participation and a clearer visualization of ideas. The collaborative nature of mind mapping thus not only fosters a more interactive learning environment but also contributes to more efficient and effective educational outcomes. Collaboration significantly enhances student performance, as evidenced by the study conducted by Chan and Ko (2019). The research indicates that interactivity within collaborative learning environments markedly improves learners' outcomes.

This outcome reinforces the study of Bawaneh (2019) who investigated the effectiveness of mind maps compared to conventional teaching methods for Jordanian tenth graders learning electric energy concepts. The results revealed that students who learned using mind maps exhibited significantly greater immediate achievement and retention of electric energy concepts compared to those using conventional methods. In the local context, the result also supports the study of Geolin (2024) who assessed the status of mind mapping as a strategy in teaching Grade 7 Chemistry at Zapatera National High School, Sikatuna St., Brgy. Zapatera, Cebu City, Cebu, Philippines. The result states that Mind Mapping as a strategy evidently showed a vital connection to the improvement of Junior High School performance in Chemistry. It is more effective in both teaching and learning process as compared to the chalk talk method.

Inferential Analysis on Students' Knowledge Retention Level

Table 6 portrays the paired t-test analysis on students' knowledge retention when exposed to digital mind mapping application. It shows the effect of the utilization of mind mapping application through analyzing the difference between the students' direct post test and delayed post-test scores. This result aims to reject the second null hypothesis stating that there is no significant difference in students' knowledge retention level exposed to digital mind mapping application in terms of direct post-test and delayed post-test.

Table 6. Paired T-test Analysis on Students' Knowledge Retention Level

	Paired Difference		t	Sig (2-tailed)
	Mean	Std. Deviation		
Delayed Posttest-Direct Posttest	1.8046	2.4590	4.4055	0.0000**

The data shows a mean difference of 1.8046, a standard deviation of 2.4590, and a t-value of 4.4055. It reveals that there is a significant difference between the students' pre-test and direct post test scores. The overall mean scores from direct post-test to delayed post-test increased from 8.72± 3.27 to 10.53± 3.35. With a highly statistically significant p-value of 0.0000, the increase in average scores from direct post-test to delayed post-test unveils a significant positive effect of the utilization of mind mapping application in enhancing students' knowledge retention in science or their ability to retain knowledge over time. This conveys that despite the students' initially poor retention level, the utilization of the digital mind mapping application significantly contributed to the improvement of students' knowledge retention level.

The positive effect of digital mind mapping application lies in the fact that it is an effective note-taking tool for studying and accessible for tech-savvy 21st century learners. According to the Grand Canyon University (2023), technology can transform classrooms into engaging environments. One-to-one device initiatives allow for a smoother integration of tech into lessons, while interactive software and gamified learning with badges and achievements make lectures, responses, and the overall learning process more fun and motivating for students. According to the study of Flietstra (2023), students performed most highly when they were given autonomy in their notetaking style or were told exactly what to write down. It was found that students who took notes using mind maps scored higher on an achievement test than students who took notes traditionally. The study concludes that mind mapping is an effective note-taking strategy (Madu & Metu, 2012). Moreover, mind maps were more effective than concept maps for learning organic chemistry (Imam & Olorundare, 2023). Lastly, in the study about the impact of educational technology on students' performance in secondary schools, students reported mostly positive experiences with educational technology (Murad et al., 2019).

The results of this study are consistent with the analysis of Akanbi et al. (2021) who investigated the effectiveness of mind maps in improving physics knowledge

retention for senior secondary school students. The findings revealed that students who learned with mind maps exhibited significantly better retention compared to the control group who used conventional methods. Additionally, the study of Nacilla and Dolotallas (2019) revealed that forty Grade 8 students of Cabalantian National High School who learned with mind maps scored significantly higher on the posttest compared to the lecture group in Biology.

Conclusions

The students' level of immediate achievement is poor. Eighty percent of the students failed to meet the intended learning outcomes.

Students have a poor level of knowledge retention. Sixty-six percent of the students have a low span of retention and are unable to reach the expected rate of retention.

The inferential analysis rejects the first null hypothesis stating that there is no significant difference in students' immediate achievement level exposed to digital mind mapping application in terms of pretest and direct post-test. These findings provide strong evidence that the digital mind mapping application has effectively contributed to enhancing student achievement levels.

The paired t-test analysis rejects the second null hypothesis stating that there is no significant difference in students' knowledge retention level exposed to digital mind mapping application in terms of direct post-test and delayed post-test. This significant increase in scores from the direct post-test to delayed post-test suggests that the digital mind mapping application effectively enhanced students' ability to retain knowledge over time.

Recommendations

The result of this study reveals poor immediate achievement level and poor knowledge retention level among students. This calls the attention of higher authority, experts, and educators to give ample consideration and effort in enhancing students' ability to immediately acquire knowledge and retain information. As per obtained results, the researchers would like to recommend to consider utilizing digital mind mapping as a method in maximizing the students' immediate achievement and retention level. This recommendation aims to leverage technology, specifically mobile applications, to promote effective presentation of information, knowledge construction, collaboration, and note-taking practices among students in the classroom setting.

This study suggests that further research should employ quasi-experimental design to explore the effectiveness of digital mind mapping application in optimizing learning outcomes. Additionally, researchers recommend investigating the correlation between immediate achievement and knowledge retention under the intervention of digital mind mapping application. Moreover, this study proposes to determine the

significant difference in the effectiveness between digital mind maps and conventional mind maps. Furthermore, this study hypothesizes that a student's learning style may influence how well mind mapping benefits their learning.

Compliance with Ethical Standards

Prior to the implementation of the study, researchers applied for a research permit from the Institutional Ethics Review Committee (IERC) and asked for approval from the school head to formally conduct the study. Additionally, the researchers requested permission from the class adviser for assistance in conducting the research and provided the participants with the consent form to ensure their voluntary participation and safeguard their rights throughout the research. All the participants were Grade 7 Archimedes students enrolled in Tongantongan National High School, with their identities hidden, and accessible only to the researchers. The study was conducted within a school government institution, prioritizing privacy and confidentiality. Only the researchers had access to participants' information, ensuring clarity by providing only the necessary questionnaires. Although the research caused specific risks, especially involving students and the school, it also presented benefits for both researchers and institutions. It offered recommended solutions to identified problems within the institution, enabling the management to create trust and confidence in the researchers.

Acknowledgments

The following people contributed to the success of the study, and the researchers would like to sincerely thank them. Specifically, they wish to express gratitude to:

Mrs. Garin B. Come, the Classroom-Based Action Research Adviser, for providing the opportunity to conduct the research and offering guidance and support throughout the process. She instructed them in research methods and how to effectively present their findings. They were deeply inspired by her vision, sincerity, and encouragement.

Ms. Raihana U. Toke, the Classroom-Based Action Research Proposal Adviser, for guiding them at every stage of their journey and generously dedicating her time for consultations in the making of their action research proposal.

The faculty, staff, and students of Tongantongan National High School, for their active cooperation and participation in the study.

The parents, siblings, and other family members, for their moral, spiritual, and financial support. The researchers are grateful for their love and encouragement, which fueled their commitment to the study.

Above all, to the Almighty God, for granting them the knowledge, wisdom, and courage to complete this study.

VALUES INTEGRATION IN TEACHING DIFFERENT SUBJECTS IN PUBLIC SECONDARY SCHOOLS IN PILILLA, RIZAL: BASIS FOR ACTION PLAN DEVELOPMENT

Mary Jane C. Rosero, LPT, MAEd

Department of Education, Pililla National High School, Pililla, Rizal, Philippines
School of Graduate Studies, The National Teachers College, Manila, Philippines

https://doi.org/10.5281/zenodo.12494852

ABSTRACT

The study aims to determine the level of effectiveness of values integration in teaching the different subjects in public secondary schools in Pililla, Rizal. Descriptive research design was applied utilizing a questionnaire checklist to determine the level of effectiveness of values integration in teaching the different subjects with respect to classroom management, delivery of lesson, learning application, and learning assessment and personal traits. The questionnaire checklist was administered after permission to conduct the study was granted. The data were tallied, tabulated, analyzed and interpreted. The study concluded that perception of the teacher-respondents on the level of effectiveness of values integration in teaching different subjects differ significantly in terms of age, length of service, and subjects handled. On the other hand, sex, educational attainment and position title are not significant.

Keywords: *Quantitative, Values Integration, Public Secondary Schools, Rizal*

INTRODUCTION

Education is already a part man`s life. Education and man coexist because man learns as he continues to live and live as he continues to learn. It only becomes complicated by

the fact that there is no clear consensus about what is important about being and becoming educated.

Moreover, education is the primary agent of transformation towards sustainable development. Furthermore, it is regarded as the single potent factor that leads to the improvement of the individual as well as the society. As provided in Article XIV, section 1 of the 1987 Philippines Constitution: “The state shall protect and promote the right of all citizens to quality education at all levels and shall take appropriate steps to make such education accessible to all.”

The goal of Philippine Education is academic excellence, work experience efficiency and values internalization. Thus, the Philippine educational system is mandated to contribute to the maximum attainment of national development and unity with the framework based on a free and democratic system.

Values are behind all human goals. They are linked with the basic human needs. They emerge in the course of time through one’s exposure to people and different life conditions. One may be conscious of one’s values, reflecting on them regularly or one may be driven by unexpressed and unconscious desires. An individual may be motivated by undertakings that offer short term benefits or driven by momentary desires.

In recognition of this important role of the school in the society, Article XIV Section 3.2 of the 1987 Philippine Constitution states that: “All educational institutions shall inculcate patriotism and nationalism, foster love of humanity, respect for human rights; appreciation of the role of national heroes in the historical development of the country, teach the rights and duties of citizenship, strengthen ethical and spiritual values, develop oral character and personal discipline, encourage critical and creative thinking, broaden scientific and technological knowledge and promote vocational efficiency. This stressed that the educational thrusts of the Philippine Educational System are designed to update the school curricula and incorporate Filipino values that would adapt in the light of on-going changes, to the present needs and demands involving social and economic transformation and nation-building and relevance to the world of work.

In recent research on classroom management, Nie and Lau (2009) explored the differential associations of care and behavioral control with various student outcomes. Their study utilized a large sample of 3,196 Grade 9 students from 117 classes in Singapore to examine these relationships. Through hierarchical linear modeling, they found that both care and behavioral control were positively related to student engagement, even when controlling for gender and socioeconomic status. Moreover, while behavioral control negatively predicted classroom misbehavior, care positively predicted students' satisfaction with school. These findings suggest that an effective classroom management strategy should integrate both care and behavioral control to enhance student engagement, reduce misbehavior, and increase satisfaction with school. This aligns with the self-determination theory, highlighting the importance of addressing both the emotional and behavioral needs of students in achieving multiple classroom management goals (Nie & Lau, 2009).

In navigating the complexities of our educational system, it's crucial to acknowledge the intrinsic relationship between education and values, as highlighted by Gray (2010). Instead of assigning blame for issues that arise, Gray advocates for a proactive approach, emphasizing the importance of recognizing, addressing, and resolving problems. Central to this approach is the implementation of Character Education in Schools, which Gray argues is essential for combating the crisis of character within our educational institutions. By integrating moral teachings into the curriculum and fostering collaboration among stakeholders, including parents, legislators, communities, media, and the educational system, character education programs can instill values that promote responsible citizenship and moral development among students, thus paving the way for a more ethically grounded society.

As mentioned in the K to 12 Philippine Basic Education Curriculum Framework is crafted to cater to the multifaceted needs of both the local and global community, with a primary focus on key aspects: poverty alleviation and holistic human development, moral fortification, cultivation of national identity, cultivation of productive citizenship, environmental sustainability, and global collaboration. It endeavors to empower individuals through quality education, aiming to diminish poverty and foster comprehensive human growth. Emphasizing the infusion of moral values and ethical principles, it aims to build a foundation of character and integrity in learners. Additionally, it aspires to instill a profound sense of national pride, identity, and love for the country, fostering a strong nationalistic spirit. Moreover, it seeks to equip students with the requisite knowledge, skills, and values to actively engage in nation-building and contribute positively to society. By integrating environmental education and advocating for global partnerships, it seeks to promote responsible environmental stewardship and foster collaboration with the global community to address mutual challenges and achieve shared progress. In essence, the K to 12 curriculum framework endeavors to cultivate well-rounded individuals who are not only academically proficient but also socially responsible and globally conscious citizens (Ocampo, 2014).

Incorporating character education into the core academic curriculum is a pivotal aspect of successful character education programs. While many programs assert integration, they often merely insert character lessons between academic subjects. However, Berkowitz (2012) advocates for a deeper integration by leveraging existing character content within academic curricula. This approach involves mining the character-related themes inherent in subjects like language arts and social studies and seamlessly integrating character-based lessons into these academic domains. For instance, programs like the Child Development Project and Facing History and Ourselves offer models of integration, with the former featuring a multicultural literature curriculum and the latter focusing on historical genocide within its history curriculum. By intertwining character content with academic lessons and employing character-building methods, educators can foster a more holistic approach to character education that permeates throughout the academic experience.

According to Thornberg and Oğuz (2013), values education primarily focuses on adherence to societal values and norms, with an emphasis on how to treat others and

self-responsibility. The study found that teachers typically did not adopt a critical approach, instead highlighting their role as good models in daily interactions with students. Values education was described as an integral part of everyday social interactions using common language, and there was a noted lack of professional knowledge in this domain among teachers.

According to Pala (2011) character education can be initiated at any grade level. It is important to set a strong foundation during the earlier grades and to reinforce and build upon that foundation during the later grades. To be effective, character education must include the entire school community and must be infused throughout the entire school curriculum and culture. He concluded in his study that the development of socialization skills and integration of character education are an important part of a child's academic success. Character education efforts may be effective when implemented rigorously and with a scientific foundation. Schools should focus on teaching character within the regular curriculum.

Moreso,the increasing political, social, and scientific focus on the moral aspects of teaching extends to teacher education. Willemse, Lunenberg, and Korthagen (2005) present an exploratory study on preparing student teachers for moral education. They describe the design of goals, program components, and teaching and learning methods for a segment of the first-year curriculum at a primary education teacher training institute. The study involved feedback from teacher educators who implemented the curriculum and student teachers who participated in it, assessing whether they recognized the intended moral aspects. Additionally, the study measured the curriculum's impact on student teachers' learning through pre- and post-tests. The findings suggest a need for greater emphasis on the implicit and unplanned aspects of preparing student teachers for moral education.

A study by Benninga (2003) entitled "The Relationship of Character education Implementation and Academic Achievement in Elementary Schools," was a large study including data from 651 schools. The results indicate that a composite summary score of character education criteria is positively correlated with academic indicators across years. The elementary schools in the sample with solid character education programs defined by our six criteria and their eleven indicators not only show positive relationships with academic indicators that same year, but also evidence positive correlations across the next two academic years. The cited study is related to the present study as it focused on character education and its relationship to academic performance which is the same focus as that of the present study.

The DepEd Values Education Program gears mainly in translating values from the abstract into practical. The importance behind this program is that when values are subjected into a book or in a classroom seem to be in abstract way, but its effectiveness is said to be true when such values are transmitted to real life. In public secondary schools' values education is integrated in teaching the different subjects. Integration of values education in the different subjects depends for its success on the teacher`s creativity in making use of the situation to facilitate the student`s values development. In

the study of Kariuki and Williams (2006) examined the correlation between character traits and academic performance among AFJROTC cadets, utilizing a sample of 20 male and 20 female cadets from Sullivan South High School.Their research revealed a significant positive relationship between character traits, particularly moral behavior, and academic performance as measured by grade point average.These findings align with current literature suggesting that character education programs can positively influence both behavior and academic outcomes among students in similar educational contexts.Understanding the impact of character traits on academic performance underscores the importance of integrating character education into school curricula to foster holistic student development and improve educational outcomes.

As England (2009) found out in his study that character education is an important element that must be included in California K12 public schools to increase student achievement and facilitate a safe and effective learning environment.He concluded that when implementing character education, program elements should be studied to obtain the desired outcome wanted from the program. Hence teachers need to be trained or re-trained. Thus, the researcher conceived this study to determine the effectiveness of values integration in teaching the different subject.

Research Questions

The general research question that this study attempts to address is the effectiveness of values integration in teaching the different subjects in public secondary schools in Pililla, Rizal.

1. What is the profile of the teacher-respondents in terms of: Age, sex, educational attainment, length of service, position title, and subjects handled?
2: What is the level of effectiveness of values integration in teaching the different subjects with respect to classroom management, delivery of lessons, learning application, learning assessment and personal traits.
3: Is there a significant difference in the perception of the respondents on the level of effectiveness of values integration in teaching the different subjects with respect to the different aspects in terms of their profile?
4: What action plan may be proposed to enhance the values integration in teaching the different subjects?

METHODOLOGY

This quantitative research employed a descriptive survey approach using a questionnaire checklist developed by the researcher to evaluate the integration of values in teaching different subjects. The study was conducted in public secondary schools in Pililla, Rizal, including Bugarin National High School, Hulo National High School, Malaya National High School, Pililla National High School, and Quisao National High School in School Year 2014-2015. The respondents comprised 161 teachers from these five public secondary schools, determined through a stratified sampling method.

The questionnaire checklist consisted of two parts: the first part dealt with the personal profile of the respondents, and the second part focused on various aspects of the effectiveness of values integration in teaching different subjects. Each aspect included 10 items. Respondents rated each item on a scale of 1-5, with 1 indicating "Not effective" and 5 indicating "Very Much Effective." The questionnaire was pretested with 15 teachers from Tanay National High School, yielding an r-value of .83, indicating that the instrument is both valid and reliable.

To interpret the data gathered, several statistical tools were applied. Frequency and percentage distribution were used to determine the profile of the respondents. The weighted mean was employed to assess the perception of respondents on the effectiveness of values integration in teaching different subjects. Additionally, one-way analysis of variance (ANOVA) was used to determine significant differences in perceptions based on the respondents' profiles.

RESULTS AND DISCUSSION

The Profile of the Respondents

Table 1 presents the frequency and percentage distribution of the teacher-respondents in terms of the selected variable.

Table 1
Frequency and Percentage Distribution of the Teacher-Respondents in Terms of the Selected Variables

AGE	f	%
50 years old and above	29	18
40-49	48	30
30-39	39	24
29 years and below	45	28
Total	**161**	**100**

SEX	f	%
Male	38	24
Female	123	76
Total	**161**	**100**
Educational Attainment	**f**	**%**
Pd.D./Ed. D units	2	1
MA Graduate	28	17
With MA units	91	57
Bachelor's Degree	40	25
Total	**161**	**100**
Length of Service	**f**	**%**
30 years and above	39	24
20-29	48	30
10-19	45	28
9 years and below	29	18
Total	**161**	**100**
Position Title	**f**	**%**
Master Teacher I	5	3
Teacher III	23	14
Teacher II	39	24
Teacher I	94	59
Total	**161**	**100**
Subjects Handled	**f**	**%**
English	34	21
Science	47	29
TLE	36	22
Mapeh	44	27
Mathematics	47	29
Filipino	48	30
Araling Panlipunan	48	17
Edukasyon sa Pagpapakatao	36	22

As shown in table 1, out of 161 teacher respondents, 30 percent are ages 40-49 years old, 28 percent are ages 29 years old and below, 24 percent are ages 30-39 years old, and the rest have ages 50 years old and above. In terms of sex, most of the respondents are female with 123 or 76 percent out of 161 teacher respondents. With regards to their educational attainment, the majority are pursuing graduate education with 57 percent having earned units in master's degree and 1 percent have doctoral units. Only 25 percent have not earned units in graduate education. In terms of length of service, most of the respondents have been in the service for 10 years and above with 30 percent for 20-29 years, 28 percent for 10-19 years and 24 percent of 30 years and above and the remaining percentage have been in the service for 9years and below. In terms of position title, most of the respondents are in Teacher I, II and III positions. With regards to the subjects handled, some teachers are teaching more than 1 subject.

The Level of Effectiveness of Values Integration in Teaching the Different Subjects

Table 2 presents the computed weighted mean on the level of effectiveness of values integration in teaching the different subjects with respect to classroom management.

Table 2

Computed Weighted Mean on the Level of Effectiveness of Values Integration in Teaching the Different Subjects with Respect to Classroom Management

Classroom Management The Teacher…	**W$\bar{x}$**	**VI**	**Rank**
1. Practices punctuality and finishes tasks on time.	**3.51**	**VE**	**10**
2. Devotes time to work and does things in an orderly manner	**3.82**	**VE**	**8**
3. Praises students and gives rewards on accomplishments.	**4.01**	**VE**	**7**
4. Presents challenging learning tasks.	**4.13**	**VE**	**5**
5. Responds to and provides learning activities for students according to growth and behavioral developments levels.	**4.06**	**VE**	**6**
6. Maintains order and discipline in the classroom.	**4.15**	**VE**	**4**
7. Shows interest in students' problems and needs.	**4.23**	**VE**	**3**
8. Gives constructive criticism on students.	**4.43**	**VE**	**2**
9. Makes oneself available to students for assistance.	**4.52**	**VME**	**1**
10. Help develop self confidence among students.	**3.68**	**VE**	**9**
OVERALL W$\bar{x}$	**4.05**	**VE**	

Legend VME - Very Much Effective VE- Very Effective E-Effective

As reflected from the table, with respect to classroom management, the overall weighted mean obtained is 4.05 interpreted Very Effective. Among the items, first in rank is "makes oneself available to students for assistance" with weighted mean of 4.52 interpreted Very Much Effective. All other items are interpreted Very Effective with the last in rank is "Practice punctuality and finishes tasks on time" with a weighted mean of 3.51. The table indicates that the teachers manage their student`s behavior in the classroom for an effective teaching learning process. This implies that teachers apply values integration in teaching the different subjects through effective classroom management.

Table 3 presents the computed weighted mean on the level of effectiveness of values integration in teaching the different subjects with respect to delivery of lesson.

Table 3

Computed Weighted Mean on the Level of Effectiveness of Values Integration in Teaching the Different Subjects with Respect to Delivery of Lesson

Delivery of Lesson The Teacher…	**$W\bar{x}$**	**VI**	**Rank**
1. Presents the lesson accurately and systematically	**4.04**	**VE**	**9**
2. Exhibits thorough and broad knowledge of lesson	**4.13**	**VE**	**4**
3.shows awareness of current issues/concern in his/her field	**4.06**	**VE**	**7**
4.relates the lesson with other areas of knowledge and community affairs	**4.12**	**VE**	**5**
5.integrates values formation in the lesson	**4.27**	**VE**	**1**
6.exhibits mastery of the lesson and enthusiasm in teaching	**4.11**	**VE**	**6**
7.presents ideas/concepts clearly and convincingly	**3.81**	**VE**	**10**
8.gives comprehensive explanation	**4.05**	**VE**	**8**
9.provides a variety of learning activity	**4.22**	**VE**	**2**
10.presents lesson logically.	**4.17**	**VE**	**3**
OVERALL $W\bar{x}$	**4.10**	**VE**	

As reflected in table 3, with respect to delivery of lesson, all items are interpreted Very Effective with an overall weighted mean of 4.10. First in rank is integrates values formation in the lesson" with weighed mean of 4.27. Last in rank is "presents ideas/concepts clearly and convincingly" with a weighted mean of 3.81. The results suggest that teachers believe that values integration in the delivery of lessons is very effective in the teaching-learning process. This implies that teachers see to it that in the daily routine, values integration in teaching the different subjects is done.

Table 4 presents the computed weighted mean on the level of effectiveness of values integration in teaching the different subjects with respect to learning application.

Table 4

Computed Weighted Mean on the Level of Values integration in Teaching Different Subjects with Respect to Learning Application

Learning ApplicationThe Teacher…	**$W\bar{x}$**	**VI**	**Rank**
1.adjusts the activities to the learning capacities, interests and comprehension to students	**3.79**	**VE**	**9**
2.uses different methods and techniques of teaching, adjusting them to the degrees of physical and mental growth of the students and to the lesson.	**4.11**	**VE**	**6**
3.teaches in an interesting manner with comprehensive explanation	**4.01**	**VE**	**8**
4.accepts students` comments for further discussion and analysis even when the point of view is different	**4.13**	**VE**	**5**
5.recognizes the principle of individual differences.	**4.09**	**VE**	**7**

6.utilizes varied strategies in presenting lessons	**4.16**	**VE**	**4**
7.utilizes educational technology in teaching	**3.71**	**VE**	**10**
8.provides differentiated activities for learners	**4.68**	**VME**	**1**
9.provides remediation activities to slow learners	**4.38**	**VE**	**3**
10.modifies teaching procedures when necessary	**4.41**	**VE**	**2**
OVERALL W$\bar{x}$	**4.15**	**VE**	

As shown in table 4, with respect to learning application, the overall weighted mean is 4.15 interpreted Very Effective. First in rank is “provides differentiated activities for learners” with a weighted mean of 4.68 interpreted very Much Effective. All other items are interpreted Very Effective with last in rank is “utilizes educational technology in teaching” with a weighted mean of 3.71. The data reveal that in teaching the different subjects, values integration is emphasized in the application of learning. This implies that values developed among students are applied in their day-to-day activities.

Table 5 presents the computed weighted mean on the level of effectiveness of values integration in teaching different subjects with respect to earning assessment.

Table 5
Computed Weighted Mean on the Level of Effectiveness of Values Integration in Teaching the Different Subjects with Respect to Learning Assessment

Learning Assessment The Teacher…	**W$\bar{x}$**	**VI**	**Rank**
1.define aims to be accomplished and holds his class responsible for their accomplishment	**4.03**	**VE**	**3**
2.gives remedial measures for learners to attain the desired level of learning	**4.01**	**VE**	**4**
3.analyzes errors/weaknesses of students	**3.83**	**VE**	**5**
4.asks and distributes questions that call for different levels of thinking	**3.76**	**VE**	**7**
5.uses modern instructional devices to make the lesson more interesting	**3.68**	**VE**	**8**
6. Utilizes the blackboard to explain further the lesson	**3.78**	**VE**	**6**
7.presents lesson using the appropriate instructional materials	**3.01**	**E**	**10**
8.conducts the class in a conducive atmosphere which encourages students to participate actively in the class discussion.	**4.13**	**VE**	**2**
9.uses appropriate language frequently	**3.16**	**VE**	**9**
10uses illustrations to stipulate interest to the lesson.	**4.19**	**VE**	**1**
OVERALL W$\bar{x}$	**3.76**	**VE**	

Table 5 depicts that with respect to learning assessment, the overall weighted mean obtained is 3.76 interpreted Very Effective. First in Rank is “uses illustrations to stipulate

interest to the lesson." with a weighted mean of 4.19 interpreted Very Effective while "presents lesson using the appropriate instructional materials", with a weighted mean of 3.01 interpreted Effective. Findings indicate that in the assessment of student`s learning, values integration is being applied. This implies that in the evaluation of student`s learning, values development among the learners is taken into consideration.

Table 6 presents the computed weighted mean on the level of effectiveness of values integration in teaching the different subjects with respect to personal traits.

Table 6

Computed Weighted Mean on the Level of Effectiveness of Values Integration in Teaching the Different Subjects with Respect to Personal Traits

Personal Traits The Teacher…	**$\bar{WX}$**	**VI**	**Rank**
1.controls and manages emotions effectively	**3.83**	**VE**	**6**
2.shows patience in managing students behavior	**4.09**	**VE**	**4**
3.manifests positive attitudes towards constructive comments, suggestions and recommendations	**3.62**	**VE**	**8**
4.shows sensitivity to other`s feelings and emotions	**4.13**	**VE**	**3**
5.lets feeling lead to healthy choices and happiness	**3.01**	**E**	**10**
6.stays calm in emergency situation	**3.74**	**VE**	**7**
7.Does not get angry easily	**3.84**	**VE**	**5**
8.understands feeling of individuals	**3.14**	**E**	**9**
9.exhibits good temper	**4.26**	**VE**	**1**
1. Shows consideration to students	**4.17**	**VE**	**2**
OVERALL $\bar{WX}$	**3.78**	**VE**	

Table 6 depicts that with respect to personal traits, the overall weighted mean is 3.78 interpreted Very Effective. Eight out ten items are interpreted Very Effective with first in rank is "exhibits good temper", with a weighted mean of 4.26. Two items interpreted as Effective with last in rank is" Let's feeling lead to healthy choices and happiness", with a weighted mean of 3.01. The findings reveal that teachers possess the necessary desirable traits as teachers. This implies that they serve as role models to their students in values development.

Table 7 presents the composite table on the level of values integration in teaching the different subject.

Table 7

Composite Table on the Level of Values Integration in Teaching the Different Subjects.

Aspects	$W_{\bar{x}}$	VI	Rank
Classroom Management	**4.05**	**VE**	**3**
Delivery of Lesson	**4.10**	**VE**	**2**
Learning of Application	**4.15**	**VE**	**1**
Learning Assessment	**3.76**	**VE**	**5**
Personal Traits	**3.78**	**VE**	**4**
OVERALL $W_{\bar{x}}$	**3.97**	**VE**	

As shown in table 7, the composite weighted mean obtained is 3.97 interpreted Very Effective. Among the aspects, first in rank is “Learning of Application” with an overall weighted mean of 4.15 interpreted Very Effective. All the other aspects are interpreted Very Effective with last in rank is “Learning Assessment”, with a weighted mean of 3.76. It could be deduced from the results that integration of values in teaching different subjects is very effective as perceived by-teachers. This implies that teachers play a great part in the values development among students.

The Significant Difference on the Perception of the Respondents on the Level of Effectiveness of Values Integration in Teaching the Different Subjects with Respect to the Different Aspects in Terms of their Profile

Table 8 presents the computed F-values on the perception of the respondents on the level of effectiveness of values integration in teaching the different subjects with respect to the different aspects in terms of their profile.

Table 8

Computed F-values on the Perception of the Respondents on the Level of Effectiveness of Values Integration in Teaching the Different Subjects With Respect to the Different Aspects in Terms of their Profile

Classroom Management	3.67	**.006**	**Rejected**	**Significant**
Delivery of Lesson	4.69	**.014**	**Rejected**	**Significant**
Learning Application	3.96	**.007**	**Rejected**	**Significant**
Learning Assessment	4.48	**.003**	**Rejected**	**Significant**
Personal Traits	**4.89**	**.007**	**Rejected**	**Significant**
Position Title	**Fcomp**	**P-value**	**Ho**	**VI**
Classroom Management	1.58	**.389**	**Accepted**	**Not Significant**
Delivery of Lesson	1.39	**.987**	**Accepted**	**Not Significant**
Learning Application	1.79	**.453**	**Accepted**	**Not Significant**
Learning Assessment	1.36	**.458**	**Accepted**	**Not Significant**
Personal Traits	**1.59**	**.916**	**Accepted**	**Not Significant**
Subjects Handled	**Fcomp**	**P-value**	**Ho**	**VI**

Classroom Management	3.67	**.006**	**Rejected**	**Significant**
Delivery of Lesson	4.69	**.014**	**Rejected**	**Significant**
Learning Application	3.96	**.007**	**Rejected**	**Significant**
Learning Assessment	4.48	**.003**	**Rejected**	**Significant**
Personal Traits	**4.89**	**.007**	**Rejected**	**Significant**

It could be gleaned from the table that in terms of age, length of service and subjects handles, the computed F-values in all aspects obtained probability values less than .05. This rejects the null hypothesis stating that there is no significant difference on the perception of the teacher -respondents on the level of effectiveness of values integration in teaching the different subjects in terms of age, length of service and subjects handled. On the contrary, in terms of sex, educational attainment and position title, the null hypothesis is accepted since all aspects, the probability values are greater than .05. Findings indicate that sex, educational attainment and position title have no bearing on the teacher`s perception regarding values integration. Findings imply that teachers age, length of service and subjects handled are significant in their perception on values integration.

Summary

Based on the analysis and interpretation of data most of the teacher respondents are females with ages 31 years old and above pursuing graduate education and have been in the service for15 years and above. Some of them are handling one or more subjects.

Values Integration in teaching the different subject is very effective with respect to classroom management, delivery of lesson, learning application, learning assessment and personal traits. In terms of sex, educational attainment and position title the null hypothesis as accepted while in terms of age, length of service and subjects handled, the null hypothesis is rejected.

Conclusions

Based on the study it can be concluded that perception of the teacher -respondents on the level of effectiveness of values integration in teaching the different subjects differ significantly in terms of age, length of service and subjects handled. On the other hand, sex, educational attainment and position title are not significant.

Recommendations

Based on the findings and conclusions drawn the following recommendations offered:

1. Values integration in teaching the different subjects in secondary schools should be strengthened for better student development.
2. Students should be exposed to a variety of activities that will enhance their values development.
3. The proposed action plan is recommended for implementation
4. Further studies considering other variables may be conducted

Compliance with Ethical Standards

This is a declaration by the author/s in his/their own words and in paragraph form which includes compliance with obtaining informed consent, the respondents' freedom to withdraw from the study at any time, anonymity of the respondents was maintained, the respondents' well-being was safeguarded, no conflict of interest exists in the conduct of the study, plagiarism was strictly avoided, there was no bias in the interpretation of the findings and that the results were used purely for research.

Acknowledgments

I am profoundly grateful to Almighty God for His strength and guidance throughout this journey. To my mother and siblings, your unwavering support has been my pillar of strength. I extend my deepest appreciation to my colleagues for their invaluable insights. To my beloved husband, children, daughter-in-law, and grandson, your love and understanding have been the driving force behind my perseverance. A special thank you to my professor and Dean for their support and encouragement. Thank you all, and to God be the glory.

ABSTRACT

This descriptive study assessed the student's vocabulary competence in learning English as a Second Language among the Grade 7 Students of Agdahon Farm School in the School Year 2023-2024. The respondents of this study were the fifty-four (54) students taken via total enumeration. The instrument used was a validated and reliability-tested researcher-made questionnaire. Frequency count, percentage, rank, mean, and standard deviation were the descriptive statistics used, while Mann Whitney-U Test and Wilcoxon W. were the inferential statistical tools used. The criterion for rejection and non-rejection of the null hypothesis was set at 0.05 alpha level. Results revealed that the level of vocabulary competence among the respondents as a whole was "Moderate". When classified in terms of competencies, in Commonly Mispronounced words, respondents had a "proficient" level of vocabulary while in Context Clues, Commonly Confused words, and Words with Multiple Meaning, respondents had a "moderate" level of vocabulary. Moreover, the results emphasized that mobile phones were the most prevalent media used among the twelve categories of media, while the least prevalent was the personal computer. There existed a significant difference in the level of vocabulary competence among the respondents when classified as commonly used media. However when classified as to sex, the level of vocabulary competence among the respondents is not significantly different. Finally, based on the result of the study, a handbook entitled, Glossaurus: "An Epic Journey through the Enchanted Lexicon Woods" focusing on vocabulary skills enhancement, was developed.

Keywords: *ESL, Vocabulary Gaps, Learning English*

INTRODUCTION

Graves and Watts-Taffe (2015) found that vocabulary gaps are a major problem for learners, especially in schools, and can harm student performance in a variety of academic subjects. In the study of Beck et al. (2015), vocabulary competence is influenced by four factors: exposure to language, instruction in vocabulary, cognitive abilities, and motivation. Also, the presence of various dialects in the Philippines can influence vocabulary proficiency among Filipinos. The study of Pacris (2018), determined that the use of regional dialects in daily conversations can limit exposure and practice of standardized vocabulary.

The study of Santos and Alampay (2022), stated that school resources are an important factor in promoting vocabulary development in Filipino students. Schools should be provided with the necessary resources to support teachers in delivering effective vocabulary instruction. The local secondary education institution has implemented several programs to enhance the vocabulary skills of students. However, it has been observed that students, specifically in rural areas still need help in vocabulary acquisition, including the exposure to English outside the classroom and the large and complex nature of the English vocabulary.

The purpose of this study is to assess the vocabulary competence of the Grade 7 students of Agdahon Farm School and identify the areas that need improvements, which was used as a basis for the creation of a handbook entitled, Glossaurus: "An Epic Journey through the Enchanted Lexicon Woods" that is specifically geared to provide English as Second Language Learners (ESL) with practical strategies for improving their vocabulary skills.

Research Questions

This study aims to assess the student's vocabulary competence in learning English as a Second Language among the Grade 7 Students of Agdahon Farm School in the School Year 2023-2024.

Specifically, it seeks to answer the following:

1. What is the profile of the respondents when classified as to commonly used media and sex?
2. What is the most prevalent media used by the respondents in terms of gadgets, printed materials, and online media platforms?
3. What is the level of vocabulary competence among the respondents as a whole and in terms of competencies such as commonly mispronounced words, context clues, commonly confused words, words with multiple meanings?
4. What is the level of vocabulary competence among the respondents when classified as to sex?
5. Is there a significant difference in the level of vocabulary competence among the respondents when classified as to commonly used media and sex?
6. What learning tool can be developed to enhance the vocabulary competence of the respondents?

METHODOLOGY

The study employed the descriptive research design to determine and assess the vocabulary competence in learning English as a second language among the Grade 7 Students of Agdahon Farm School in the School Year 2023-2024. In a descriptive study, as defined by Creswell and Creswell (2018), descriptive research design is a research method that aims to systematically collect and analyze data to describe a population, situation, or phenomenon. The respondents of the study were the fifty-four (54) Grade 7 Students of Agdahon Farm School enrolled in the School Year 2023-2024 taken via total enumeration. They are classified according to commonly used media and sex.

In this study, the researchers utilized a researcher-made vocabulary assessment tool. To ensure the validity of the instrument, the panel of validators who are experts in the field checked the instrument as to its content and face value. The validated instrument was subjected to reliability by administering face-to-face pilot testing to twenty-seven (27) Grade 7 students of Passi National High School Annex Sablogon Campus. After the assessment tool undergoes the pilot testing, items for commonly mispronounced words, commonly confused words, and polysemy words with multiple meanings, and context clues in the vocabulary assessment tool are refined to improve the readability, clarity, and the selection of response options.

Following the revision of the assessment tool, the researchers produced copies of the revised instrument and began with the data gathering of the respondents which are the fifty-four (54) Grade 7 students of Agdahon Farm School. The respondents are informed that the data acquired are kept strictly confidential and used only for the study. After all the necessary data were gathered, the researcher thanked the respondents for their cooperation. The data gathered are tallied, analyzed, and interpreted using Statistical Package for Social Sciences (SPSS). Specifically, the researchers employed the following procedures: descriptive statistics, which include the mean, frequency count, standard deviation, and rank; and inferential statistical tools such as U-test and H-Test. Frequency count and Percentage were used to determine the profile of the respondents when classified as to their commonly used media and sex. Mean and Standard Deviation were used to determine the level of vocabulary competence of the respondents. Rank was used to determine the most prevalent media the respondents are exposed to. Wilcoxon W. was used to determine the significant difference in the level of vocabulary competence among the respondents when classified as to commonly used media. Mann Whitney-U Test was used to determine the significant difference in the level of vocabulary competence among the respondents when classified as sex.

RESULTS

Profile of the Respondents. Table 1 outlines that when respondents were categorized according to commonly used media, the results revealed that in terms of gadgets, eight (8) or 14.8% used laptops, fifty-two (52) or 96.3% used mobile phones, and four (4) or 7.4% used Ipad. In terms of written media, forty-nine (49), or 90.7 used books, five (5), or

9.3% used magazines, thirteen (13), or 24.1% used newspapers, four (4), or 7.4% used encyclopedias, and twenty-one (21) or 38.9% used dictionary. In terms of online media platforms, fifty (50) or 92.6% used Facebook, eleven (11) or 20.4% used Instagram, and nine (9) or 81.5% used Tiktok. When categorized according to sex, there were thirty (30), or 55.6% males and twenty-four (24), or 44.4% females.

Most Prevalent Media Used by the Respondents at Home. Another objective of this study was to determine the prevalent media used by the respondents at home. The table 3 represents the overall findings for the most prevalent media used, ranked from one (1) to twelve (12). Mobile Phone (F=52; P=96.3) made it to rank 1, rank 2 was Facebook (F=50; P=92.6), rank 3 was Books (F=49; P=90.7), rank 4 was Tiktok (F=44; P=81.5), rank 5 was Dictionary (F=21; P=38.9), rank 6 was Newspaper (F=13; P=24.1), rank 7 was Instagram, rank 8 was Twitter (F=9; P=16.7), rank 9 was Laptop(F=8; P=14.8), rank 10 was Magazine(F=5; P=9.3), rank 11.5 was Encyclopedia(F=4; P=7.4), rank 11.5 Ipad(F=4; P=7.4), and the least prevalent media used by the respondents was Personal Computer (F=0; P=0).

Table 2
Most Prevalent Media Used by the Respondents at Home

Media	Frequency	Percent	Rank
Laptop	8	14.8	9
Mobile Phone	52	96.3	1
Ipad	4	7.4	11
Books	49	90.7	3
Magazine	5	9.3	10
Newspaper	13	24.1	6
Encyclopedia	4	7.4	11

Facebook	50	92.6	2
Instagram	11	20.4	7
Twitter	9	16.7	8
Tiktok	44	81.5	4
Total	54	100	

Level of Vocabulary Competence among the Respondents as a Whole and in terms of Competencies such as Commonly Mispronounced Words, Context Clues, Commonly Confused Words, Words with Multiple Meanings. The primary goal of this study was to determine the level of Vocabulary Competence of the Respondents. As shown in Table 3, the result indicated that the vocabulary competence among the respondents as a whole is “Moderate” (4.02 to 6.02) (M=5.28; SD=1.85).

Table 3
Level of Vocabulary Competence among the Respondents as a Whole and in terms of Competencies such as Commonly Mispronounced Words, Context Clues, Commonly Confused Words, Words with Multiple Meaning

Variables	N	Minimum	Maximum	Mean	SD	Level
Commonly Mispronounced Words	54	0	10	6.39	2.42	Proficient
Context Clues	54	1	10	4.56	2.26	Moderate
Commonly Confused Words	54	1	9	5.06	1.90	Moderate

Words with Multiple Meanings	54	0	10	5.13	3.00	Moderate
As a Whole	54	1.5	8.5	5.28	1.85	Moderate

Note: *The instrumentation was made based on: "Very Low" (0.00 to 2.00), "Low" (2.01 to 4.01), "Moderate" (4.02 to 6.02), "Proficient" (6.03 to 8.04), "Highly Proficient" (8.05 to 10.00).*

Level of Vocabulary Competence among the Respondents when Classified as to Sex. Table 4 offers insights that when respondents were classified as to sex, the results revealed that males had a mean of 5.3667 and a standard deviation of 1.66445 (M=5.3667; SD=1.66445). The female had a mean of 4.8333 and a standard deviation of 2.08341 (M=4.8333; SD=2.08341). This result showed that both male (M=5.3667; SD=1.66445) and female (M=4.8333; SD=2.08341) respondents had a "Moderate" (4.02 to 6.02)

Table 4
Level of Vocabulary Competence among the Respondents when Classified as to Sex

Sex	Mean	N	SD
Male	5.3667	30	1.66445
Female	4.8333	24	2.08341
Total	5.1296	54	1.86309

Note: *The instrumentation was made based on: "Very Low" (0.00 to 2.00), "Low" (2.01 to 4.01), "Moderate" (4.02 to 6.02), "Proficient" (6.03 to 8.04), "Highly Proficient" (8.05 to 10.00).*

Level of Vocabulary Competence among the Respondents when Classified as to Commonly Used Media. Table 5 shows that there was a significant difference in the level of vocabulary competence among the respondents when classified as to commonly used media (-24.666^{b}; p=.000).

Table 5
Difference in the Level of Vocabulary Competence among the Respondents when Classified as to Commonly Used Media

DISCUSSION

This study investigated the student's vocabulary competence in learning English as a Second Language. The researcher's initial findings revealed the level of vocabulary competence of the English as Second Language learners. Subsequently, the results showed that when respondents were categorized according to commonly used media, the results revealed that in terms of gadgets, eight (8) or 14.8% used laptop, fifty-two (52) or 96.3% used mobile phone, and four (4) or 7.4% used Ipad. In terms of written media, forty-nine (49) or 90.7 used books, five (5) or 9.3% used magazine, thirteen (13) or 24.1% used newspaper, four (4) or 7.4% used encyclopedia, and twenty-one (21) or 38.9% used dictionary. In terms of online media platforms, fifty (50) or 92.6% used Facebook, eleven (11) or 20.4% used Instagram, nine (9) or 81.5% used Tiktok. When categorized according to sex, there were thirty (30) or 55.6% males and twenty-four (24) or 44.4% females. This result indicated that the majority of respondents and Grade 7 students in Agdahon Farm School were male. It also implied that students primarily rely on mobile phones for consuming media due to their convenience and versatility. Traditional media

formats, such as books and newspapers, are still relevant but challenged by online sources. Social media platforms, particularly Facebook and TikTok, are the dominant forces in online media engagement.

Concerning the prevalent media used by the respondents at home, results indicate that mobile phones are the most prevalent media used by the respondents at home, followed by Facebook, books, TikTok, and dictionaries. Newspapers, Instagram, Twitter, laptops, magazines, encyclopedias, and iPads are less prevalent, and personal computers are the least prevalent. Therefore, these results concluded that mobile phones are playing an increasingly important role in the respondents, even when they are at home.

Moving on to respondent classifications based on competencies, Commonly Mispronounced words had a mean of 6.39 and a standard deviation of 2.42. Context Clues had a mean of 4.56 and a standard deviation of 2.26, Commonly Confused words gained a weighted mean of 5.06 and a standard deviation of 1.90, and Words with Multiple Meanings had a mean of 5.13 and a standard deviation of 3.00. This indicates that in Commonly Mispronounced words, respondents had a “proficient” (6.03 to 8.04) level of vocabulary while in Context Clues, Commonly Confused words and Words with Multiple Meaning; respondents had a “moderate” (4.02 to 6.02) level of vocabulary. Generally, these results implied that respondent demonstrated a strong understanding of proper pronunciation. On the other hand, respondents encountered greater difficulty in interpreting context clues, identifying differences between commonly confused words, and understanding multiple meanings of a single word.

In the level of vocabulary competence among the respondents when classified as to sex, the results revealed that male had a mean of 5.3667 and a standard deviation of 1.66445 (M=5.3667; SD=1.66445). The female had a mean of 4.8333 and a standard deviation of 2.08341 (M=4.8333; SD=2.08341). This suggests that both male (M=5.3667; SD=1.66445) and female (M=4.8333; SD=2.08341) respondents had a “Moderate” *(4.02 to 6.02) level of* vocabulary competence.

Meanwhile, the researchers’ findings revealed a significant difference in the level of vocabulary competence among the respondents when classified as to commonly used media. This means that students find different media tools as effective and efficient platforms in improving their vocabulary competence. In contrast, the results showed that there was no significant difference in the level of vocabulary competence among the respondents when classified as to vocabulary competence among the respondents when classified as to sex (-1.386; p=.166). The results indicated that vocabulary competences of male and female are not comparable with each other.

Conclusions

Based on the findings from the study, it reveals a clear preference for mobile phones as the primary media device among the respondents. This finding aligns with broader trends highlighting the dominance of mobile technologies in media consumption. A study by

Lenthang and Hing (2019) supports this notion, demonstrating a significant shift towards mobile media consumption compared to traditional media formats.

Furthermore, this study revealed a clear preference for mobile phones as the primary media device among the respondents. This finding aligns with broader trends highlighting the dominance of mobile technologies in media consumption. This study found out that mobile phones are the most prevalent media used by the respondents. This result is corroborated by the study of Cabreza and Villalon (2015) in the Philippines specifically examines smartphone use for media consumption among college students. While this study focuses on a slightly older age group, it provides valuable data on the dominance of mobile phones within the Philippine context, potentially extending this trend to senior high school students.

The concluded investigation also revealed an overall "Moderate" level of vocabulary competence among the respondents. This suggests that they generally understand and use words appropriately, but there are areas for improvement. Commonly mispronounced words: Respondents' competence demonstrates a "Proficient" level. Context clues: the "Moderate" level suggests respondents can often use context to understand unfamiliar words, but additional practice could enhance their ability to do so consistently and efficiently. Confused words and words with multiple meanings: Both areas show "Moderate" competence, implying some understanding but potential confusion at times. These findings align with the study of Alviar et al. (2020), who used various instruments to assess the vocabulary of 320 Philippine Grade 7 students. They found similar results, concluding that students generally demonstrated proficiency in recognizing basic words but grappled with more complex vocabulary and nuanced meanings. This moderate level of vocabulary competence can be attributed, in part, to the learning environment students' encounter.

The study also revealed that both male and female respondents had a “Moderate” level of vocabulary competence. This suggests potential for improvement, particularly in areas like understanding nuanced meanings and using vocabulary in context. As highlighted by Stahls (2016) comprehensive review of vocabulary development practices, educators can prioritize strategies that address these challenges. By incorporating etymology, context clues, and differentiated instruction, educators can equip students with the tools to build a deeper understanding and usage of words. Additionally, Nation (2013) emphasizes the importance of encountering vocabulary multiple times and in various contexts for language learners to achieve deeper understanding and usage.

The study identified a significant difference in vocabulary competence based on the respondents' commonly used media. This mirrors the findings in the study of Zheng and Warschauer (2017) that there is a statistically significant difference in vocabulary acquisition between students who read on-screen and those who read printed materials. This directly translates to the idea that the type of media students use can significantly impact their vocabulary development. Interestingly, the study showed no significant difference in vocabulary competence based on the respondents' sex. These findings align with the study of Navarro and Guzman (2015) that found no significant sex differences in

English language proficiency among senior high school students in the Philippines, supporting the notion of similar vocabulary competence across genders.

This study embarked on a mission to develop and evaluate an innovative learning tool, "Glossaurus: An Epic Journey through the Enchanted Lexicon Woods," aimed at enhancing the vocabulary competence of students. This meticulously crafted handbook serves as a comprehensive guide, offering a curated list of common words along with their meanings and pronunciations, inviting students on an engaging adventure through the enchanting realm of language.

Recommendations

Based on the findings and conclusions of the study, the following recommendations are suggested:

1. For the Department of Education (DepEd), it is recommended that the Department of Education (DepEd) should create engaging resources to strengthen areas like interpreting context clues, distinguishing commonly confused words, and understanding words with multiple meanings. These resources can be integrated into the "Glossaurus" learning tool or offered as separate activities like worksheets, quizzes, or games.
2. For Teachers, it is recommended that the teachers should understand students' media habits and learning styles to create personalized vocabulary activities and offer targeted support. Combine text-based activities with audio, video, and interactive platforms to cater to various learning preferences and keep students engaged. Teachers can utilize "Glossaurus" as a learning tool that will help them effectively build vocabulary knowledge in their students across different competencies, ultimately enhancing students' vocabulary across various domains.
3. For Learners, it is best if learners should not hesitate to ask teachers or classmates for clarification on unfamiliar words or pronunciation struggles. Embrace seeking help as part of the learning process. Learners should go beyond mobile phones and explore diverse media sources like books in the libraries, educational apps, and websites to broaden vocabulary exposure.
4. For Future Researchers, vocabulary gaps are relevant topics in academics. Further studies and progress in the field are necessary to keep track of the vocabulary skills of the learners. Future researchers could use the provided data and information in this study to re-assess the learning tool entitled, "Glossaurus: An Epic Journey through the Lexicon Woods". The researchers recommend conducting further study to make effective and broader findings in the vocabulary competence of the learners.

Compliance with Ethical Standards

In conducting this study, strict adherence to ethical standards was maintained throughout the research process. Informed consent was obtained from all respondents prior to their participation, ensuring they were fully aware of the study's purpose and procedures.

Respondents were explicitly informed of their right to withdraw from the study at any time without any negative repercussions. Anonymity was rigorously upheld, with all personal identifiers removed to protect the identities of the participants. The well-being of the respondents was safeguarded at all times, ensuring that their participation did not cause any harm or distress. There were no conflicts of interest influencing the conduct of the study, and the researchers ensured that all findings were presented objectively without bias. Plagiarism was strictly avoided, with all sources and references appropriately cited. The results of the study were utilized solely for academic and research purposes, contributing to the understanding of the students. Through these measures, the researchers ensured the highest standards of ethical integrity in the study.
